Partner users are Salesforce users with limited capabilities. They are external to your organization but sell your products or services through indirect sales channels. They are associated with a particular partner account, have limited access to your organization's data, and log in via a partner portal.

The following table shows the storage per license as well as which features the partner user can access on the portal.

	<b>Gold Partner License Type</b>
Storage per license	5 MB of data storage per user
Documents	Yes
My Account Profile	Yes
Leads	Yes
Custom Objects	Yes
Approvals	Yes. Users can submit records for approval and view the status of approval requests in the Approval History related list on record detail pages, but can't be assigned as approvers.
Accounts	Yes
Opportunities	Yes
Salesforce CRM Content (Read Only)	Yes
Reports	Yes
Delegated External User Administration	Yes
Email	Yes
Cases	Yes

## Setting Partner Portal Role and User Defaults

 **Note:** Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can set these partner portal role and user defaults:

- [Set the default number of roles for partner portal accounts](#) on page 1749
- [Enable Partner Super User Access](#) on page 1750

SEE ALSO:

- [Partner Portal Overview](#)
- [Partner Portal Settings](#)

## Roles Per Partner Portal Account

 **Note:** Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can set the default number of roles for partner portal accounts. This benefits your partner portal by reducing the number of unused roles. You can set up to three roles; the system default is three.

For example, if you currently have three roles created when an account is enabled for your partner portal, but only need one role for new accounts, you can reduce the number of roles to one.

To set the number of roles per partner portal account:

1. From Setup, enter *Partners* in the *Quick Find* box, then select **Settings**.
2. Click *Set Portal Role and User Defaults*.
3. In the *Portal Role and User Defaults* page, click **Edit**.
4. In the *Number of Roles* drop-down list, set your default number of roles per partner portal account.
5. Click **Save**.

## Enabling Partner Super User Access

 **Note:** Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You must have a partner portal enabled to use Partner Super User Access.

To enable Partner Super User Access:

1. Click From Setup, enter *Partners* in the *Quick Find* box, then select **Settings**.
2. In the Partner Relationship Management Settings page, click **Set Portal Role and User Defaults**.
3. Click **Edit** and select the *Enable Partner Super User Access* checkbox.

You can disable Partner Super User Access by deselecting the *Enable Partner Super User Access* checkbox. However, if you reenable this feature, all users who were assigned Super User Access before the feature was disabled will automatically gain Super User Access again. See [Assigning Partner Super User Access](#) for more information.

## Tracking Partner Activity

 **Note:** Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Tracking partner activity is important to ensure that your leads and opportunities are being managed effectively. Using the `Partner Account` field on leads and opportunities, you can create custom reports and list views that help you track the work partner users are doing.

 **Tip:** When creating a list view or report, to include all leads or opportunities associated with a partner account, use "Partner Account not equal to" and leave the third field in the filter blank.

Tips for tracking partner user activity:

- Create list views to indicate partner lead and opportunity activity during the last week.
- Create a dashboard showing the number of leads created in the last week that are owned by partners.
- Create a list view of leads assigned to partners that have not been updated recently.
- Create forecast reports on partner user opportunities.
- Use the lead `Last Transferred Date` field to search for leads that have not been acted upon in a timely fashion.
- If you are using customizable forecasting, assign a user as a forecast manager for each partner role in your forecast hierarchy. Assigning someone as a forecast manager means that all forecasts from users below that user in the forecast hierarchy roll up to that person.

-  **Note:** When you transfer a partner portal user to another account:
- Opportunities on each account are automatically recalculated through your organization's [forecast hierarchy](#).
  - Opportunities owned by the partner portal user remain in the previous account.

## Setting Options for Selling

### Enterprise Territory Management

Enterprise Territory Management helps you model your sales territories into a logical but flexible structure that connects sales reps to the accounts they sell to.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management. Enterprise Territory Management and Collaborative Forecasts can both be enabled and used at the same time in your Salesforce organization, but the two features are not currently integrated to work together.

Salesforce's original territory management feature lets you grant users access to accounts based on criteria such as postal code, industry, revenue, or a custom field relevant to your business. Enterprise Territory Management builds upon the original feature by introducing territory types, territory models, and territory model states. These components let you create and preview multiple territory structures and strategies before you activate and implement the one that works best.

Enterprise Territory Management also offers easier assignments between territories, accounts, and opportunities. Custom reports help you organize your territory model for optimum coverage, assess territory effectiveness, and modify your model if necessary. Your team can use Chatter to collaborate as you design and build your territory model.

For comprehensive instructions for implementing this feature, see the *Enterprise Territory Management Implementation Guide*.

SEE ALSO:

[Enterprise Territory Management Implementation Guide](#)

### Enterprise Territory Management Concepts

Learn about the features and related concepts that make Enterprise Territory Management so powerful and easy to use. Understanding these concepts will help you model your territories more effectively.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

IN THIS SECTION:

[Territory Type](#)

Territory types help you organize your territories by key characteristics important to your company. Every territory you create must have a territory type. Territory types are used for organizing and creating territories *only*: they do not appear on territory model hierarchies.

[Territory Type Priority](#)

Specifying and managing territory type priority information helps you choose the appropriate territory type for territories you create or edit. There are no predefined priority options, so your organization should create its own priority scheme. For example, *001* may indicate that a territory type is the highest priority or the lowest. Make sure your scheme can scale as you add more territory types.

[Territory](#)

Territories organize groups of accounts and the Salesforce users who work with those accounts. Territories are created based on territory types.

### Territory Model

A territory model represents a complete territory management system for your organization. Modeling lets you create and preview multiple territory structures and different account and user assignments before you activate the model that works best.

### Territory Hierarchy

The territory hierarchy shows a model's territory structure and serves as its main interaction point. Start from the hierarchy to create, edit, and delete territories; run assignment rules for territories, and navigate to territory detail pages for more information. From the hierarchy, you can also assign territories to opportunities, run assignment rules at the model level, and activate or archive the model.

### Territory Model State

Territory model state indicates whether a territory is in the planning stage, in active use, or archived. Your organization can have only one `active` territory model at a time, but you can create and maintain multiple models in `planning` or `archived` state to use for additional modeling or reference.

### How do Permissions Affect Feature and Data Access in Enterprise Territory Management?

When implementing Enterprise Territory Management, make sure you understand how the feature's permissions affect administration and provide access to records and data.

## Territory Type

Territory types help you organize your territories by key characteristics important to your company. Every territory you create must have a territory type. Territory types are used for organizing and creating territories *only*: they do not appear on territory model hierarchies.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

For example, you might create a territory type called *Universal Telco Named Accounts*, then from that type, create territories that include named accounts. Or you might create a territory type called *US Geographic*, and from that type create territories based on states or regions.

When you create a territory type, make sure the label and description clearly indicate what kinds of territories should belong to that type.

## Territory Type Priority

Specifying and managing territory type priority information helps you choose the appropriate territory type for territories you create or edit. There are no predefined priority options, so your organization should create its own priority scheme. For example, *001* may indicate that a territory type is the highest priority or the lowest. Make sure your scheme can scale as you add more territory types.

When you create a new territory, you select a territory type from the `Territory Type` lookup field. From the lookup, you can view the territory type's assigned priority.

 **Example:** Your organization uses territory type priority to reflect your sales strategy for the year. Your organization expects more opportunities within the US east coast than the US west coast in the coming year, so the East Coast territory type is assigned priority *001* and the West Coast territory type is assigned *005*. These priority assignments help those creating territory records make the right territory type choice. At mid-year, you project unexpected growth opportunities in the Great Lakes region, so you create a new territory type called Great Lakes and assign it priority *003* to reflect the change in your sales strategy.

## Territory

Territories organize groups of accounts and the Salesforce users who work with those accounts. Territories are created based on territory types.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

The territory record shows you assigned users, manually assigned accounts, and rules that assign accounts automatically. A territory can have both parent and child territories. Depending on how your organization assigns accounts, an account may be assigned to more than one territory.

## Territory Model

A territory model represents a complete territory management system for your organization. Modeling lets you create and preview multiple territory structures and different account and user assignments before you activate the model that works best.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Each territory model features a graphical hierarchy. The hierarchy shows your model's territory structure (including parent and child territories) and lets you create, edit, and delete territories and view their detail pages. Your organization can create and modify up to four different territory models at a time, but only one model can be active at any time. Activate the model you want to use to finalize its user and account assignments.

## Territory Hierarchy

The territory hierarchy shows a model's territory structure and serves as its main interaction point. Start from the hierarchy to create, edit, and delete territories; run assignment rules for territories, and navigate to territory detail pages for more information. From the hierarchy, you can also assign territories to opportunities, run assignment rules at the model level, and activate or archive the model.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

The name and state of the territory model appear at the top node of the hierarchy (1). Parent and child territories are nested beneath the model name (2). Create or edit new child territories or run their assignment rules (3). Run the filter that assigns territories to opportunities (4). Run assignment rules for all territories in the model (5). Hover to learn when rules were last run (6). Set the model's state to *Active* or *Archive* (7). Toggle to a sorted list view and back to tree view (8).

## Territory Model State

Territory model state indicates whether a territory is in the planning stage, in active use, or archived. Your organization can have only one *active* territory model at a time, but you can create and maintain multiple models in *planning* or *archived* state to use for additional modeling or reference.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Some states reflect a territory model's lifecycle and others indicate errors in processing when states are changed.

### Lifecycle State

### Definition

Planning

The default state for every new territory model you create. The *Planning* state lets you preview a model's territory hierarchy before deploying it. Users have no territory-related access to accounts in models that are in the *Planning* state.

Active

The state of a territory model after you activate it and all processing is complete. Only *one* model

### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

**Lifecycle State****Definition**

Archived

in your Salesforce organization can be active at a time.

A model in `Active` state lets users view model details, including hierarchies, territories, and all assigned accounts and users. Users assigned to territories within an active model can access and modify accounts they are assigned to within that model.

The state of a territory model after you archive it and all processing is complete. An archived model no longer provides account access to users, but it does let administrators view hierarchy and rule assignments as they were configured when the model was active. Only the *active* model can be archived, and archived models cannot be reactivated.

When you archive a territory model or delete a territory on an active model, the `Territory` field is reset to a blank value on opportunity records with those territories assigned.

**Error State****Definition**

Activation Failed

An error occurred during activation. Check your email for more information from Salesforce.

Archiving Failed

An error occurred during activation. Check your email for more information from Salesforce.

## How do Permissions Affect Feature and Data Access in Enterprise Territory Management?

When implementing Enterprise Territory Management, make sure you understand how the feature's permissions affect administration and provide access to records and data.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Make sure user permissions provide the appropriate level of access for users. For example, you might want Sales Operations managers and selected Sales managers to be able to manage territories. If so, assign them the "Manage Territories" permission. Anyone who will also create account assignment rules also needs the "View All" permission on Accounts.

**Users who need to:****Require these permissions, roles, or ownership:**

- Create territory models and all related records (such as territory types)
- View and manage territory models in all states: `Planning`, `Active`, and `Archived`

Manage Territories

**EDITIONS**

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

**Users who need to:****Require these permissions, roles, or ownership:**

- Activate, archive, delete, or clone territory models
- View territory information on territory-assigned account records for territories in models in *all* states (*Planning*, *Active*, and *Archived*)

- Create or edit account assignment rules

Manage Territories AND View All on Accounts

 **Note:** Which fields are available for account assignment rules depends on account field-level security settings, if any. For example, a user has the appropriate permissions for creating account assignment rules, but her profile prevents her from viewing the Account object's *Annual Revenue* field. She will not be able to create account assignment rules that include that field.

- View the Salesforce Setup tree, including territories settings
- View the territory model in *Active* state, including its related records (such as territory types and assignment rules) and other elements (such as the territory hierarchy)
- View the names of all account records assigned to territories in the *Active* territory model
- View territory information on territory-assigned account records for territories in models in the *Active* state only

View Setup and Configuration

 **Note:** View Setup and Configuration is enabled by default for the Standard User profile.

View data for models in *Planning* and *Archived* states on reports that include territories, assigned records, or rules

Manage Territories

Manually assign a territory to an opportunity

Sharing access for the opportunity's account. Users who have sharing access to the account can assign any active territory to the opportunity. Those who do not can assign only a territory that is also assigned to the opportunity's account.

 **Note:** For manual territory assignments, Salesforce suggests opportunities assigned to the territory's account, but those with sharing access can search for and assign any territory in the active territory model.

When a territory is assigned to an opportunity, that opportunity is shared with all Salesforce users assigned to that territory's parent in the territory model hierarchy.

## Manage Your Organization's Sales Territories

Use Enterprise Territory Management to manage and maintain your organization's sales territories. Create territory types, build a model, and then add and test your account assignment rules. When you're satisfied with your model, activate it, then assign users and accounts. Roll it out to your organization, and then run reports to assess its impact and make adjustments if necessary.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Before you begin building your territory model, plan your approach. Choose organizing characteristics such as industry, annual revenue, or location information to divide your organization's accounts into logical segments that work for the way you do business.

### IN THIS SECTION:

#### [Enable Enterprise Territory Management](#)

Starting with Winter '15, Enterprise Territory Management is ready to be enabled by administrators in new Salesforce organizations. Organizations created before Winter '15 need to call [salesforce.com](https://salesforce.com) to enable the feature. Enterprise Territory Management cannot be enabled in existing organizations that have Customizable Forecasting enabled.

#### [Define Enterprise Territory Management Settings](#)

Define and configure settings for Enterprise Territory Management.

#### [Use Chatter to Collaborate on Territory Models](#)

Enable Chatter Feed Tracking on the Territory Model object to collaborate on model development directly within model records. Your team can post and respond to comments, attach files, and get notifications when model states change or key fields are updated.

#### [Build a Territory Model](#)

A territory model organizes all the elements of your organization's territory management plan, including a territory hierarchy, account assignments, and user assignments. Keep your model in the `planning` state as you build your hierarchy, define assignment rules for territories, add users to territories, and run your rules to see the resulting account assignments.

#### [Manually Assign One or More Territories to an Account](#)

Assign one or more territories to an account directly from the account record. Only territories that belong to models in `planning` or `active` state can be assigned to accounts.

#### [Manually Assign One or More Assignment Rules to a Territory](#)

Assign one or more object assignment rules to a territory directly from the territory record. Available rules come from the territory model the territory belongs to.

#### [Manually Assign a Territory to an Opportunity](#)

On an opportunity record, you can assign and track the territory whose assigned sales reps work that opportunity. Manual territory assignments are controlled by your sharing access to the opportunity's assigned (parent) account. When you assign a territory to an opportunity, that opportunity is shared with all Salesforce users assigned to that territory's parent in the territory model's hierarchy.

#### [Run the Opportunity Territory Assignment Filter](#)

The opportunity territory assignment filter automatically assigns territories to opportunities based on the filter logic in the Apex class.

#### [Clone a Territory Model](#)

Cloning lets you make a copy of a territory model that you can use to test out different territory characteristics. The new model includes the original's territories, assignment rules, users, and manually assigned accounts. Only models in `planning`, `active`, or `archived` state can be cloned. When cloning is complete, the new model is in `planning` state.

### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To manage territories:

- "Manage Territories"

[Assign Users to Territories](#)

Assign users to the territories they will operate in to sell products and services. You can assign users to territories that belong to models in `Active` or `Planning` state, though assignments made within `Planning` state models are for planning purposes only: they *do not* affect user access to records.

[Identify Territory Users by Territory Role](#)

Keep track of user functions within territories by creating territory roles and assigning them to territory users as needed. Users can even have different roles in different territories.

[Activate a Territory Model](#)

When you're satisfied with the structure of your territory model and its territory account assignments, you're ready to activate it. Remember that you can also maintain models in `Planning` and `Archived` states for further modeling and reference.

[Configure Enterprise Territory Management Permissions and Access for Administrators and Users](#)

An important step in implementing Enterprise Territory Management is making sure the right users can access the right territory model elements, records, and record elements.

[Run Assignment Rules for a Territory](#)

Run account assignment rules for any territory that has rules defined and belongs to a territory model in `Planning` or `Active` state. If your territory is in `Planning` state, running rules lets you *preview* account assignments. If your territory is in `Active` state when you run rules, accounts are assigned to territories according to your rules.

[Find Out Which Territories an Assignment Rule Applies To](#)

If you use rules to assign accounts to territories, it can be helpful to find out which territories a single rule applies to.

### USER PERMISSIONS

To enable Enterprise Territory Management:

- "Customize Application"

## Define Enterprise Territory Management Settings

Define and configure settings for Enterprise Territory Management.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

### IN THIS SECTION:

#### [Define Default User Access for Territory Records](#)

Specify the *default* settings for how users can access and modify records associated with the sales territories you set up. The access provided by default settings can be modified when you create or edit an individual territory.

#### [Enable Filter-Based Opportunity Territory Assignment](#)

Enable and configure filter-based assignment of territories to opportunities..

## Define Default User Access for Territory Records

Specify the *default* settings for how users can access and modify records associated with the sales territories you set up. The access provided by default settings can be modified when you create or edit an individual territory.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

The standard record access settings apply to accounts and opportunities. If your organization uses *Private* default internal access for contacts or cases, you can also set access for those records.

1. From Setup, enter *Territories* in the **Quick Find** box, then select **Settings**.
2. Select the default access levels you want for accounts and opportunities.
3. If applicable, select the default access levels for contacts and cases.
4. Click **Save**.

## Enable Filter-Based Opportunity Territory Assignment

Enable and configure filter-based assignment of territories to opportunities..

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From Setup, enter *Territories* in the **Quick Find** box, then select **Settings**.
2. Enable Filter-Based Opportunity Territory Assignment.
3. If your organization is using the Apex code Salesforce provides, first create the class and then return to this Settings page and enter the class name:  
*OppTerrAssignDefaultLogicFilter*. If you opt to use your own code for the Apex class, you'll come back and enter the name of the class that you create.
4. If you want to run the filter-based opportunity territory assignment job when opportunities are created, select that option.
5. Save your settings.

## Use Chatter to Collaborate on Territory Models

Enable Chatter Feed Tracking on the Territory Model object to collaborate on model development directly within model records. Your team can post and respond to comments, attach files, and get notifications when model states change or key fields are updated.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

After you enable and configure Chatter Feed Tracking, anyone with access to a territory model record can use Chatter to collaborate on that model. Those who follow the record will get updates in their own Chatter feeds when tracked fields are updated.

1. Make sure Chatter has been enabled for your organization.
2. From Setup, enter *Feed Tracking* in the **Quick Find** box, then select **Feed Tracking**.
3. Select the Territory Model object. Enable Feed Tracking, then select the territory model fields you want to track.
4. Click **Save**.  
The Chatter feed appears at the top of your organization's territory model records.
5. Make sure to tell others who maintain territory models that they can now use Chatter to follow and collaborate on territory models directly from model records.

## Build a Territory Model

A territory model organizes all the elements of your organization's territory management plan, including a territory hierarchy, account assignments, and user assignments. Keep your model in the `planning` state as you build your hierarchy, define assignment rules for territories, add users to territories, and run your rules to see the resulting account assignments.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management. Enterprise Territory Management and Collaborative Forecasts can both be enabled and used at the same time in your Salesforce organization, but the two features are not currently integrated to work together.

### IN THIS SECTION:

#### 1. [Create Territory Types](#)

Territory types help you categorize and define individual territories. Creating territory types is the first step in building your territory model in Salesforce.

#### 2. [Create a Territory Model Record](#)

The first step in building your territory model is creating the record that connects the other elements, including territories, user assignments, and account assignments. When you create a territory model record, Salesforce generates a territory hierarchy for it.

#### 3. [Create Territories](#)

Create territories as you build your organization's territory model. When you create a territory, it appears on the model's territory hierarchy.

#### 4. [Create and Preview Territory Account Assignments](#)

You assign accounts to territories by either creating rules that assign them automatically or adding them manually. Rules can be configured to apply to both parent territories and their descendents. Manual assignments apply only to the territory where they are made.

## Create Territory Types

Territory types help you categorize and define individual territories. Creating territory types is the first step in building your territory model in Salesforce.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Examples of territory types you might create include *Named Accounts*, *Direct Accounts*, and *Overlay Sales*.

1. From Setup, enter *Territory Types* in the `Quick Find` box, then select **Territory Types**.
2. Click **New Territory Type**.
3. Enter a label and a description. In your description, make sure you clearly indicate what kinds of territories should belong to that type.
4. Specify a territory type priority.

[Territory Type Priority](#)

## Create a Territory Model Record

The first step in building your territory model is creating the record that connects the other elements, including territories, user assignments, and account assignments. When you create a territory model record, Salesforce generates a territory hierarchy for it.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Your organization's Salesforce edition determines the number of territory models you can create in production and sandbox orgs. This limit includes models created by cloning.

Edition	Number of Models in Production Orgs	Number of Models in Sandbox Orgs
Developer	4	4
Enterprise	2	2
Performance	4	4
Unlimited	4	4

1. From Setup, enter *Territory Models* in the Quick Find box, then select **Territory Models**.
2. Click **New Territory Model**.
3. Define the label and description fields.
4. Click **Save**.

- AND
- "Manage Territories"

## Create Territories

Create territories as you build your organization's territory model. When you create a territory, it appears on the model's territory hierarchy.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

By default, each territory model can have up to 1,000 territories.

1. Open the territory model where you want to create the territory.
2. If you need to, select **Tree View** from the drop-down to show the model's territory hierarchy, including any existing territories.
3. To create a top-level territory, hover over the territory model name and click **Create Territory**. To create a child territory from an existing territory, hover over the territory name and click **Create Territory**.
4. On the New Territory page, define the territory: give it a meaningful label, choose its territory type. If the territory requires *different* user access for accounts and opportunities than the *default* user access for those records, define the territory's user access levels.
5. Click **Save**.

## Create and Preview Territory Account Assignments

You assign accounts to territories by either creating rules that assign them automatically or adding them manually. Rules can be configured to apply to both parent territories and their descendents. Manual assignments apply only to the territory where they are made.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Before you commit to your model's account assignments, you should preview them by running assignment rules and related reports while the model is in `Planning` state. When you're satisfied with your planned account assignments, change the model to `Active` state. Then, run assignment rules again so that your territories include affected accounts that were created or updated during the activation process.

### IN THIS SECTION:

#### [Use Rules to Assign Accounts to Territories](#)

Create and run rules that automatically assign new or edited accounts to territories. A rule identifies one or more characteristics you use to define that territory, and tells Enterprise Territory Management to assign accounts with those characteristics to that territory automatically. If your territory is in `Planning` state, running rules lets you *preview* account assignments. If your territory is in `Active` state when you run rules, accounts are assigned to territories according to your rules.

#### [Manually Assign Accounts to a Territory](#)

Accounts that are not assigned to territories by rules can be assigned manually to more or more territories, one territory at a time. Manual assignment is useful for accounts that have unique characteristics and therefore can't be assigned by rules.

#### [Preview Territory Account Assignments](#)

Before you activate a territory model, you should preview and validate its territory account assignments. Preview assignments by running assignment rules when the model is in `Planning` state. Also verify your manual assignments.

### Identify Users in Territories Assigned to an Account

Accounts and users are assigned to territories independently, but when an account is assigned to a territory, that territory's users have access to the account. It's easy to find out who those users are by looking at the account record.

## Use Rules to Assign Accounts to Territories

Create and run rules that automatically assign new or edited accounts to territories. A rule identifies one or more characteristics you use to define that territory, and tells Enterprise Territory Management to assign accounts with those characteristics to that territory automatically. If your territory is in `Planning` state, running rules lets you *preview* account assignments. If your territory is in `Active` state when you run rules, accounts are assigned to territories according to your rules.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

 **Tip:** It's a best practice *not* to assign a rule to a territory if that rule is a child of another rule *already assigned* to the territory. To find out what rules apply to a territory, just open the territory's record detail page and look at the Assignment Rules Assigned to this Territory related list. If a rule has `Apply to Child Territories` selected, do not assign the rule separately to child territories.

1. From the territory model hierarchy, open the territory where you want to create a rule.
2. On the detail page, in the Assignment Rules Defined in this Territory related list, click **New**.
3. On the rule edit page, enter a name for the new rule and define selection criteria.
4. If you want the rule to also apply to the current territory's descendents, select the **Apply to child territories** checkbox.
5. If you want the rule to run automatically whenever a user creates or edits an account, select the **Active** checkbox.
6. Click **Save** to save the rule and return to the territory detail page.
7. (Optional) In the Assignment Rules Defined in This Territory related list, click **Run Rules**. You'll receive an email when the process is complete.

 **Example:** Rules can work together within and across territories and child territories. For example, you create a territory called Western States, with child territories Washington, Oregon, and California. From the Western States territory record, you create a rule that assigns accounts in Washington, Oregon, and California to that territory. You apply that rule to child territories and then, from the California territory record, you create a rule that assigns accounts in far northern California to the Oregon territory.

"Manage Territories"

## Manually Assign Accounts to a Territory

Accounts that are not assigned to territories by rules can be assigned manually to more or more territories, one territory at a time. Manual assignment is useful for accounts that have unique characteristics and therefore can't be assigned by rules.

-  **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.
1. From the territory model hierarchy, open the territory where you want to assign one or more accounts.
  2. On the territory's detail page, in the Manually Assigned Accounts related list, click **Add Accounts** to see a list of your organization's accounts. Adjust the list view if you need to.
  3. In the `Available` related list, select the checkbox for each account you want to assign. If you need to view more records, click **More** beneath the list. Each selected account appears in the Selected related list.
  4. Click **Assign**.

## Preview Territory Account Assignments

Before you activate a territory model, you should preview and validate its territory account assignments. Preview assignments by running assignment rules when the model is in `Planning` state. Also verify your manual assignments.

-  **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.
-  **Important:** To protect data quality, you cannot modify a territory until you receive the email confirming that the rules have been run successfully. If rules do not run successfully, follow instructions provided in the email for troubleshooting specific issues.
1. Open the record for the territory model whose assigned accounts you want to preview and click **View Hierarchy**.
  2. Verify that the model is in `Planning` state.
  3. Click **Run All Rules**.  
When rules are finished running, we'll send an email to let you know. Processing may take some time, depending on the size and complexity of your organization.
  4. From the territory model hierarchy, open each territory and descendent affected assignment rules. Also open territories that have manual account assignments.
  5. On the territory detail page, click **View Accounts** to see assigned accounts. The `Method` column indicates how each account was assigned: by a rule or manually.
-  **Note:** If you make changes to the rules for a territory, you must run rules again to view those changes. In this case, you may want to run rules on that territory only. To do so, navigate to the territory's detail page, scroll to the Assignment Rules Defined in this Territory related list, and click **Run Rules**.

## Identify Users in Territories Assigned to an Account

Accounts and users are assigned to territories independently, but when an account is assigned to a territory, that territory's users have access to the account. It's easy to find out who those users are by looking at the account record.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Open the account record that has territories assigned.
2. Identify the users from the Users in Assigned Territories related list.

 **Note:** The `Modified Date` field in this related list tells the last time the user territory association record was modified. It may or may not indicate when the user was assigned to the territory.

 **Example:** Six sales reps are assigned to the East Coast territory. Because XYZ Publishing is also assigned to the East Coast territory, the six sales reps in the territory appear in the Users in Assigned Territories related list on the XYZ Publishing account record.

To view territories assigned from the **Active** territory model that are assigned to an account:

- "View Setup and Configuration"

## Manually Assign One or More Assignment Rules to a Territory

Assign one or more object assignment rules to a territory directly from the territory record. Available rules come from the territory model the territory belongs to.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Territories can have up to 15 assignment rules each.

1. Open the territory you want to assign rules to.
2. On the territory's detail page, in the **Assignment Rules Assigned to This Territory** related list, click **Assign Rules** to see a list of rules available in the model.
3. In the **Available** related list, hover over the names of available rules to view the details of their criteria. Select the checkbox for each rule you want to assign to the territory. If you need to view more rules, click **More** beneath the list. Each selected rule appears in the **Selected** related list.
4. Apply selected rules to child territories as appropriate.
5. Click **Assign**.

## Manually Assign a Territory to an Opportunity

On an opportunity record, you can assign and track the territory whose assigned sales reps work that opportunity. Manual territory assignments are controlled by your sharing access to the opportunity's assigned (parent) account. When you assign a territory to an opportunity, that opportunity is shared with all Salesforce users assigned to that territory's parent in the territory model's hierarchy.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Users who *have* sharing access to the opportunity's account can assign *any* territory from the active model to the opportunity. Those who *do not* can assign *only* a territory that is *also* assigned to the opportunity's account. For manual territory assignments, Salesforce suggests opportunities assigned to the territory's account, but those with sharing access can search for and assign any territory in the active territory model.

1. Open the opportunity record.
2. In the **Territory** field, specify the territory you want to assign.
3. Save the opportunity record.

 **Example:** The Utel.com account has six opportunities and two territories (East Coast and West Coast). They can assign East Coast, West Coast, or any other territory within the active model to any or all of those six opportunities. One of their sales reps has sharing access to the account assigned to one of the opportunities, so she can assign any territory to that opportunity. For the other five opportunities, she does not have sharing access to assigned accounts, for each of those, she can only assign a territory that is already assigned to the opportunity's assigned account.

## Clone a Territory Model

Cloning lets you make a copy of a territory model that you can use to test out different territory characteristics. The new model includes the original's territories, assignment rules, users, and manually assigned accounts. Only models in `Planning`, `Active`, or `Archived` state can be cloned. When cloning is complete, the new model is in `Planning` state.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

After the cloning process is complete, the new territory model it creates is in `Planning` state.

1. Open the territory model you want to clone.
2. Click **Clone**.
3. Define the label and description fields.
4. Click **Save**.  
The model state changes to `Cloning` while Salesforce processes your request. Cloning may take some time, depending on the size and complexity of your model. When the process is complete, we'll send you an email to let you know

### USER PERMISSIONS

To clone a territory model:

- "View Setup and Configuration"
- AND
- "Manage Territories"

## Assign Users to Territories

Assign users to the territories they will operate in to sell products and services. You can assign users to territories that belong to models in `Active` or `Planning` state, though assignments made within `Planning` state models are for planning purposes only: they *do not* affect user access to records.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From the territory model hierarchy, open the territory where you want to assign users.
2. On the territory's detail page, in the Assigned Users related list, click **Manage Users**.
3. On the Assign Users page, select or search for the user you want to add.
4. Click **Save**.

## Identify Territory Users by Territory Role

Keep track of user functions within territories by creating territory roles and assigning them to territory users as needed. Users can even have different roles in different territories.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

 **Example:** For example, you might create roles like Territory Owner, Sales Manager, Product Specialist, or Sales Representative.

### IN THIS SECTION:

#### [Define a Picklist for Territory User Roles](#)

Add territory roles to the `UserTerritoryAssociation` object's `Role in Territory` picklist so you can select roles for territory users. The `Role in Territory` picklist you define can be used for all territories in `Active` or `Planning` state.

## Define a Picklist for Territory User Roles

Add territory roles to the UserTerritoryAssociation object's `Role in Territory` picklist so you can select roles for territory users. The Role in Territory picklist you define can be used for all territories in `Active` or `Planning` state.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From the object management settings for user territory associations, go to the fields area.
2. Click **Role in Territory**, and then click **New**.
3. Enter the picklist values you want and click **Save**.  
The values you entered are now available for selection from the `Role in Territory` picklist on the territory's Users Assigned edit page.

## Assign Territory Roles to Users

Assign territory roles to identify the roles of users within territories.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure you have created a Role in Territory picklist so you have some roles to select for users.
2. Open the record of the territory where you want to assign territory roles.
3. In the Assigned Users list, click **Edit** next to the name of a user to whom you're assigning a territory role.
4. From the `Role in Territory` picklist, select the user's territory role.
5. Click **Save**.

## Activate a Territory Model

When you're satisfied with the structure of your territory model and its territory account assignments, you're ready to activate it. Remember that you can also maintain models in `Planning` and `Archived` states for further modeling and reference.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

 **Important:** Only one model can be in the `Active` state at one time in your organization, and you can only activate a model that is in the `Planning` state. After activating a model, you cannot reset it to `Planning` state; you can only set it to `Archived` state.

1. If you need to, preview account assignments before activating the model.
2. Open the record for the territory model you want to activate and click **View Hierarchy**.
3. Click **Activate**.

The model state changes to `Activating` while Salesforce processes your request. Activation may take some time, depending on the size and complexity of your model. When the process is complete, we'll send you an email to let you know.

## Configure Enterprise Territory Management Permissions and Access for Administrators and Users

An important step in implementing Enterprise Territory Management is making sure the right users can access the right territory model elements, records, and record elements.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure you understand how permissions affect territory model and record access in Enterprise Territory Management.
2. Assign user permissions as needed.
3. Add the Assigned Territories related list to your account page layouts. This list lets administrators manually assign territories to accounts and it lets users can identify which territories are assigned to their accounts. Make sure the related list includes the standard and custom fields (if any) that administrators and users need to view.
4. Add the Users in Assigned Territories related list to your account page layouts. This list lets administrators and users see all users assigned to the territories that are assigned to an account, according to their permissions. Make sure the related list includes the standard and custom fields (if any) that administrators and users need to view.
5. Add the `Territory` field to your Opportunity page layouts. This field lets administrators and sales managers manually assign a territory to an opportunity from a list of the territories assigned to the opportunity's account. Add the `Territory Name` and `Territory Description` fields to Opportunity list views and reports so that users can identify assigned territories there.

### EDITIONS

## Run Assignment Rules for a Territory

Run account assignment rules for any territory that has rules defined and belongs to a territory model in `Planning` or `Active` state. If your territory is in `Planning` state, running rules lets you *preview* account assignments. If your territory is in `Active` state when you run rules, accounts are assigned to territories according to your rules.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Open the hierarchy for the territory model the territory model belongs to.
2. In the tree view or list view, find the territory you want to run rules for.
3. In list view, click **Run Rules**. In tree view, hover over the territory name and then click **Run Rules**. If you want to view the territory record's details, including its assigned rules, *before* you run its rules, open the record and then click the **Run Rules** button in the Assignment Rules Assigned to This Territory related list.

### USER PERMISSIONS

To run rules within your territories:

- "Customize Application"
- AND
- "Manage Territories"

## Find Out Which Territories an Assignment Rule Applies To

If you use rules to assign accounts to territories, it can be helpful to find out which territories a single rule applies to.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From Setup, enter *Territory Models* in the `Quick Find` box, then select **Territory Models** to view a list of your organization's territory models.
2. Find the model in which the rule operates and click **View Rules** to see a list of all the rules associated to the model and its territories.
3. Click the rule name and look for the territories it applies to in the Assigned Territories related list.

## Create Custom Report Types for Enterprise Territory Management Reports

Organizations using Enterprise Territory Management can run reports that show account assignments, user assignments, and more. Set up custom report types so sales managers and other users can create the reports they need.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure you're familiar with custom report types and the general steps for creating and maintaining them.
2. Create custom report types relating these objects and configuring them as necessary. Make all fields available for reporting. Add each report to the Territory Management report type category. Provide a clear name and description for each report type so users who create reports can understand which one to use for their needs.

Report (Topics for selected reports are linked)	A (Primary Object)	B	C
<a href="#">Accounts assigned to territories</a>	Accounts	Territories	–
		Select <b>"A" records must have related "B" records.</b>	
Accounts not assigned to territories	Accounts	Territories	–
		Select <b>"A" records may or may not have related "B" records.</b>	
Territories with assigned accounts	Territory Models	Territories	Territory-Assigned Records
			Select <b>"B" records must have related "C" records.</b>
<a href="#">Territories without assigned accounts</a>	Territory Models	Territories	Territory-Assigned Records
			Select <b>"B" records may or may not have related "C" records.</b>

## Report on Accounts Assigned to Territories

Manage account assignments to sales territories by reporting on which accounts have been assigned to territories. See which accounts belong to which territories.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure your organization has a custom report type that links the Accounts and Territories objects. It should specify that the Accounts object *must* have related Territory records and it should make all fields on these objects available for reporting.
2. Create your report: click the Reports tab, then click **New Report**.
3. From the Territory Management category, select the custom report type created for this report.
4. Click **Create**.
5. Make sure that the Accounts field *Account Name* and the Territories field *Label* appear on the report. If they do not, add them.
6. (Optional) Filter the report results. To show data from territory models in *Active* state *only*, from the **Filters** drop-down list, select *Field Filter*. Configure the filter options to show *Territory Model: Label equals <name of active territory model>* and then click **OK**. From the **Show** field, to filter by account ownership, select *My accounts, My team's accounts, or My territory teams' accounts*. To filter by user territory assignment, select *My territories' accounts*.

 **Important:** If you later activate a different territory model, make sure you update the territory model name variable in this report.

7. Add any other fields you find useful for this report.
8. Save the report and run it.
9. (Optional) Summarize information by Accounts field *Account Name* to show each account along with the number of territories it's assigned to.

## Report on Territories With Assigned Users

Manage user assignments to sales territories finding out which territory models' territories have users assigned. See which assigned users belong to which territories.

-  **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.
1. Make sure your organization has a custom report type that links the Territory Models, Territories, and Users objects. It should specify that the Territory object *must* have related Users records and make all fields on these objects available for reporting.
  2. Create your report: click the Reports tab, then click **New Report**.
  3. From the Territory Management category, select the custom report type created for this report.
  4. Click **Create**.
  5. Make sure that the Territory Models field *Label*, the Territories field *Label* , and the Users field *Full Name* appear on the report. If they do not, add them.
  6. If you want to show data from territory models in *Active state only*, from the *Filters* drop-down list, select *Field Filter*. Configure the filter options to show *State equals Active* and then click **OK**.
  7. Add any other fields you find useful for this report.
  8. Save the report and run it.
  9. (Optional) Summarize information by Territory object field *Label* to show each territory with the users assigned to it.

## Report on Summarizable Account Fields by Territory

Gauge territory size by reporting on summarizable account data, such as annual revenue or number of employees.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure your organization has a custom report type that links the Accounts and Territories objects. It should specify that the Accounts object *must have* at least one Territory object record and should make all fields on these objects available for reporting.
2. Create your report: click the Reports tab, then click **New Report**.
3. From the Territory Management category, select the custom report type created for this report.
4. Click **Create**.
5. Select *Matrix Format* for the report.
6. From the Territories field list, select the *Label* field. Drag it to create a row grouping.
7. From the Accounts field list, select the *Account Name* field. Drag it to create a row grouping.
8. From the Accounts field list, select summarizable fields, such as *Annual Revenue* and *Employees*, to show those totals. Drag them into the summarizable fields area. When prompted, select the *Sum* checkbox.
9. (Optional) Filter the report results. From the **Show** field, to filter by account ownership, select *My accounts*, *My team's accounts*, or *My territory teams' accounts*. To filter by user territory assignment, select *My territories' accounts*.
10. Add any other fields you find useful for this report.
11. Run the report and make sure it shows the data and the arrangement you want.
12. Summarize information by the Territories field *Label* to total all the summarizable field values by territory.
13. Save the report.

## Archive a Territory Model

Archiving a territory model deactivates it in your organization, but the model remains in your territory model list, where you can reference its associated assignment rules and the resulting account-to-territory assignments generated by the rules. You can only archive a model that is in the **Active** state. After archiving a model, you cannot return it to the **Active** state or the **Planning** state.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From Setup, enter *Territory Models* in the **Quick Find** box, then select **Territory Models**.
2. Click **Edit** next to the territory model you want to archive.
3. Choose **Archiving** from the **State** drop-down.  
The model state changes to **Archiving** while Salesforce processes your request. When processing is complete, the model state changes to **Archived**, and you receive a confirmation via email. This may take some time, depending on the size and complexity of your organization.

## Delete a Territory Model

Delete a territory model if your organization no longer actively uses the model for territory management or reference. You can't delete an active territory: the model must be in **Planning** or **Archived** state.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Deleting a territory model also deletes all its associated territories and account assignments. You can't cancel the process or restore a deleted model. The process may take several hours, so we'll send you an email when it's complete.

1. From Setup, enter *Territory Models* in the **Quick Find** box, then select **Territory Models**.
2. Find the model in the list. Check the value in the **State** column to make sure the model is in the **Planning** or **Archived** state.
3. Click **Del**.
4. Later, check your email for confirmation that the deletion process is complete.

## View and Manage Assignment Rules at the Territory Model Level

If you want to view and manage account assignment rules at a high level, you can. Start from the territory model record to create, edit, or view rules for the model's territories. From the model-level list of rules, you can view rule criteria, or open a rule record to find out which territories it's assigned to, if any.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From Setup, enter *Territory Models* in the **Quick Find** box, then select **Territory Models**.
2. Click **View Rules** next to the territory model whose rules you want to manage.
3. On the Assignment Rules list view, you can create a new rule, open a rule record for complete details, or hover over the rule name to view its criteria.

[Find Out Which Territories an Assignment Rule Applies To](#)

## Activating Assignment Rules and Applying them to Descendant Territories

The ability to apply an assignment rule to descendant territories is available at the territory level only. You cannot apply assignment rules to descendants at the territory model level. Therefore, you only get the option to apply a rule to descendant territories if you access the rule's record from an individual territory.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

With this restriction in mind, make sure you create or edit a rule record from the appropriate place. Starting from the territory record gives you the most options. Make sure you activate all assignment rules you want to use: inactive rules *do not* affect assignments for associated territories or any descendant territories they have been applied to.

 **Example:** For example, you have a territory model called US, and its hierarchy has two territories: Eastern States and Western States. The Eastern States territory has an assigned rule called Eastern States Accounts. If you open the record for the territory model, US, then click **View Rules** and from there click **Edit** to edit the Eastern States Accounts rule record, the final step lets you activate the rule.

If you start from the Eastern States territory record, then click **Edit** next to the Eastern States Accounts rule record, in addition to the step where you activate or deactivate the rule, you'll see an additional step that lets you apply the rule to the Eastern States territory's descendants.

## Disable Enterprise Territory Management

If you wish, you can disable Enterprise Territory Management for your organization and use another means of record sharing.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

 **Important:** If you disable Enterprise Territory Management, your users lose record access that's based on territory assignments, and your organization no longer has access to territory management data. If you re-enable Enterprise Territory Management, you may lose data that had previously been available through the feature.

1. If you haven't already, [archive your active territory model](#) before disabling Enterprise Territory Management.
2. From Setup, enter *Territories* in the **Quick Find** box, then select **Settings**.
3. Click **Disable Territory Management 2.0**.

- "Customize Application"

# Customizing Territories to Help Your Users Manage Accounts

## Enabling Territory Management

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

Territory management is not enabled by default in Salesforce. To request territory management for your organization, contact Salesforce.

 **Note:** Territory Management is available only with [Customizable Forecasts](#) and not supported with the [Winter '12 release of Forecasts](#). If Territory Management is enabled, you can no longer use the [Winter '12 release of Forecasts](#).

You must meet the following prerequisites before enabling territory management:

- Your organization must be using customizable forecasting in order to enable territory management. If you do not know whether you have customizable forecasting, see [Do I Have Customizable Forecasting?](#) on page 1462.
- Follow the steps in the [Deploying Territory Management Guide](#) to prepare your organization for territory management.

After you have completed the prerequisites, you will be ready to turn on territory management for your organization:

1. In Salesforce, from Setup, enter *Territory* in the **Quick Find** box, then select **Territory Settings**.
2. Optionally, change the organization-wide territory management settings that are configurable from the Territory Settings page. See [Configuring Territory Management Settings](#) on page 1785.
3. There are two different options for enabling territory management, which depend on your preference to retain or purge preexisting forecast data. Click either **Enable Territory Management** or **Enable Territory Management from Scratch**.

### What the Enable Territory Management Button Does

When you click this button, your organization's current forecast hierarchy and forecast data are automatically copied to the territory hierarchy as follows:

- The name of your organization is set as the top of the territory hierarchy.
- For each role in the forecast hierarchy, a corresponding territory is created in the new territory hierarchy.
- Manual forecast sharing settings on the roles are copied to the new territory. For more information on manual forecast sharing, see [Manually Sharing a Forecast](#) on page 1909.
- Active Salesforce users are added to territories based on their roles.
- Opportunities are assigned to the opportunity owner's territory.
- Accounts are not assigned anywhere in the territory hierarchy.
- Until you add or edit territories, your forecasts will work the same as they did before you enabled territory management.

### What the Enable Territory Management from Scratch Button Does

When you click this button, the following occurs:

- All preexisting forecast data is deleted.
- An empty territory hierarchy is created.

Using this button is only recommended when you are setting up a brand new organization in Salesforce that does not have an existing forecast hierarchy.

### EDITIONS

- Developer

### USER PERMISSIONS

To enable territory management:

- "Manage Territories"

 **Warning: Irreversible data loss** can result from clicking **Enable Territory Management from Scratch**.

4. Configure territory-related fields, page layouts, and user permissions:
  - From the object management settings for accounts:
    - Go to the fields area to set the field-level security of the `Territories` and `Exclude from territory assignment rules` fields.
    - Go to Page Layouts to add those fields to account page layouts. Also, for each account page layout, you can set whether users can choose to run account assignment rules when they save accounts, and whether account assignment rules should run by default whenever accounts are saved.
  - From the object management settings for opportunities:
    - Go to the fields area to set the field-level security of the `Territory` field.
    - Go to Page Layouts to add the field to opportunity page layouts.
  - Using permission sets or profiles, grant the “Manage Territories” permission to users who will be administrators of the territory hierarchy. Users that had the “Customize Application” permission before you enabled territory management are automatically given the “Manage Territories” permission.
5. To begin working with your new territory hierarchy, from Setup, enter `Hierarchy` in the `Quick Find` box, then select **Territory Hierarchy**. See [Building Your Territory Hierarchy](#) on page 1786.

## Configuring Territory Management Settings

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

You can set default account, contact, opportunity, and case access levels for new territories, as well as whether forecast managers can administer the territories located below them in the territory hierarchy.

1. From Setup, enter `Territory` in the `Quick Find` box, then select **Territory Settings**.
2. Choose default access levels for accounts, contacts (depending on your organization-wide default setting), opportunities, and cases. These are the access levels that will be selected by default when a new territory is created. For descriptions of these fields, see [Territory Fields](#) on page 1790.

 **Note:** These settings are not retroactive and do not affect territories that already exist. When creating or editing an individual territory, you can override these default access levels. See [Creating Territories](#) on page 1789.

3. Optionally, check `Forecast managers can manage territories`. When this box is checked, forecast managers can administer subordinate territories: they can manage users, manually add accounts, and manage account assignment rules for territories that are below their immediate territory. Also, they can add child territories to both

### EDITIONS

## Building Your Territory Hierarchy

-  **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.
-  **Note:** If you clicked the **Enable Territory Management** button to [enable territory management](#), your existing forecast hierarchy was used as the basis of the territory hierarchy.

To work with your organization's territory hierarchy, from Setup, enter *Hierarchy* in the **Quick Find** box, then select **Territory Hierarchy**. The following terms are used when referring to territories in the hierarchy.

### Parent Territory

A territory that is located immediately above another territory in the hierarchy. A territory has exactly one parent territory in the hierarchy, except for the top-level territory which does not have a parent.

### Child Territory

A territory that is immediately below another territory in the hierarchy. A parent territory can have an unlimited number of child territories.

### Sibling Territory

Child territories that share the same parent territory.

Choose an option from the drop-down list to change how the territory hierarchy is displayed:

#### Show in tree view

See a visual representation of the parent-child relationships between your territories. Click **Expand All** to see all territories, or **Collapse All** to see only top-level territories. To expand or collapse an individual node, click the plus (+) or minus (-) icon.

#### Show in sorted list view

See a territory list that you can sort alphabetically by territory name, parent territory (**Reports to**), or description.

To show a filtered list of items, select a predefined list from the **View** drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the **View** drop-down list and click **Edit**.

#### Show in list view

See a list of territories and their children, grouped alphabetically by the name of the top-level territory. The columns are not sortable. This view is not available for hierarchies with more than 1,000 territories.

### USER PERMISSIONS

To view territories:

- "View Setup and Configuration"

To edit territories:

- "Manage Territories"

OR

You are a forecast manager, Forecast managers can manage territories is selected, and you are working below your position in the territory hierarchy.

Each view provides links for you to create, edit, and delete territories.

SEE ALSO:

[Managing Territories](#)

[Displaying and Editing Territories](#)

## Displaying and Editing Territories

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

From the territory detail page, you can view and modify different aspects of the territory, including related territories, assigned users, and included accounts.

### Displaying Territories

1. From Setup, enter *Hierarchy* in the **Quick Find** box, then select **Territory Hierarchy**.
2. Select the name of the territory you want to view.

### Viewing Related Territories

The *Hierarchy* list at the top of the territory detail page shows how this territory is related to the top-level territory in the territory hierarchy. To see the names of other territories who share the same parent territory as this one, refer to the *Siblings* list immediately below. In either list, you can click a territory name to view that territory. The territory detail page also includes a Child Territories related list; see [Working with Territory Related Lists](#) on page 1788.

### Editing Territories

To update an existing territory, click **Edit**, and then change the fields you want to modify. For more information, see [Territory Fields](#) on page 1790 and [Create Custom Territory Fields](#) on page 1791.

If an edit to a territory affects a very large amount of data, you will be sent a confirmation email when the operation has completed.

 **Note:** When you edit groups, roles, and territories, sharing rules are automatically recalculated to add or remove access as needed.

### Cloning Territories

Click **Clone** to create a new territory with the same standard and custom field values as the current territory. The cloned territory will have the same parent territory as the original territory. However, assigned users, account assignment rules, and manually assigned accounts are not cloned.

 **Note:** If you have read-only access to a field, the value of that field is not carried over to the cloned record.

### Viewing Accounts Assigned to a Territory

Click **View Accounts** to see a list of the accounts that have been assigned to this territory and territories below it in the territory hierarchy. The list includes both manually assigned accounts and accounts that were assigned via rules.

#### EDITIONS

## Working with Territory Related Lists

Each territory detail page has the following related lists:

- **Assigned Users** - Lists the users in the territory. See [Managing Users in Territories](#) on page 1792.
  - **Inherited Account Assignment Rules** - Lists the account assignment rules for this territory that are defined in a parent territory. See [Managing Account Assignment Rules](#) on page 1796.
  - **Account Assignment Rules Defined in This Territory** - Lists the account assignment rules for this territory. See [Managing Account Assignment Rules](#) on page 1796.
  - **Manually Assigned Accounts** - Lists the accounts that have been manually added to this territory. See [Manually Assigning Accounts to Territories](#) on page 1804.
  - **Child Territories** - Lists the territories located immediately below this territory in the territory hierarchy. Click **Add Territory** to create a new child territory for this territory. Click a child territory name to view that territory's detail page.
-  **Note:** Hover over the links at the top of a detail page to display the corresponding related list and its records. If Chatter is enabled, hover links display below the feed. An interactive overlay allows you to quickly view and manage the related list items. Click a hover link to jump to the content of the related list. If hover links are not enabled, contact your Salesforce administrator.

## Creating Territories

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

You can create up to 500 territories for your organization. To create a new territory:

1. From Setup, enter *Hierarchy* in the *Quick Find* box, then select **Territory Hierarchy**.
2. Click **Add Territory**. You can also click **Add Territory** from the Child Territories related list of a territory detail page.
3. Define the new territory by entering or changing fields. For descriptions of territory fields, see [Territory Fields](#) on page 1790.

The required standard fields for territories are *Label*, *Territory Name*, and *Parent Territory*. Territories can also have custom fields. For more information, see [Create Custom Territory Fields](#) on page 1791.

4. Click **Save** to finish or **Save & New** to create more territories.

## Territory Fields

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

A territory has the following fields, listed in alphabetical order.

Field Name	Description
Account Access	Sets how much access territory members have to the territory's accounts: view only, view and edit, or view, edit, transfer and delete.
Case Access	Sets how much access territory members have to cases on the territory's accounts, regardless of who owns the cases: no access, view only, or view and edit.
Confine Opportunity Assignment	Select this checkbox to prevent the opportunities in this territory from being moved out of this territory and its child territories when account assignment rules are run.
Contact Access	Sets the level of access territory members have to contacts on the territory's accounts, regardless of who owns the contacts. The options are no access, view only, or view and edit.
Forecast Manager	The user to whom forecasts from child and lower-level territories roll up. Only modifiable by clicking <b>Change</b> on the territory detail page. If enabled via the Territory Settings page, a forecast manager can administer lower territories in the hierarchy.
Label	The name used to refer to the territory in any user interface pages.
Opportunity Access	Sets how much access territory members have to opportunities on the territory's accounts, regardless of who owns the opportunities: no access, view only, or view and edit.
Parent Territory	Territory immediately above this territory in the territory hierarchy. The parent territory must be an existing territory. Use the lookup icon to select the parent territory.
Sharing Groups	Read-only and only displays on the territory detail page. For every territory, two sharing groups are created; one for the territory, and another for the territory and its children. Click <b>Territory</b> to see the users who are in the sharing

### USER PERMISSIONS

To create or edit custom territory fields:

- "Manage Territories"

OR

You are a forecast manager, Forecast managers can manage territories is selected, and you are working below your position in the territory hierarchy.

## Deleting Territories

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

You can only delete territories that do not have any child territories. When a territory is deleted, the following items are no longer associated with that territory:

- All users, whether or not `Active in Territory` is checked
- All accounts, whether assigned manually or by account assignment rules
- All opportunities

To delete a territory:

1. From Setup, enter *Hierarchy* in the `Quick Find` box, then select **Territory Hierarchy**.
2. Click **Del** next to a territory in the hierarchy. Alternatively, select the name of a territory and click **Delete**.

 **Note:** Restoring an account or opportunity from the Recycle Bin restores the territory assignment, but it does not trigger the evaluation of account assignment rules. If account assignment rules changed while the record was in the Recycle Bin, the restored record may have territories that are inconsistent with the new rules.

SEE ALSO:

[Displaying and Editing Territories](#)

[Building Your Territory Hierarchy](#)

## Managing Users in Territories

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

A territory can have an unlimited number of users, and a user can be assigned to an unlimited number of territories.

In the context of a specific territory, users have both an `Active` status and an `Active in Territory` status:

### Active

An active user is able to log in to Salesforce.

Deactivated users, such as employees who are no longer with your company, are disabled from logging in to Salesforce. Deactivated users continue to own opportunities and appear in forecasts and territories. When users are deactivated, their opportunity forecast overrides, adjusted total overrides, and manager's choice overrides on subordinates' forecasts are frozen. However, the manager of a deactivated user can apply manager's choice overrides to that user's forecasts. Rollup amounts are kept current. If a deactivated user is later reactivated, the user can resume normal work as before. If "Allow Forecasting" is disabled for a user who is deactivated, the user is removed from any territories her or she is assigned to.

Users can set their active status by modifying their personal information page in their personal settings.

### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To assign users to territories:

- "Manage Territories"
- AND
- "Manage Users"

### Active in Territory

Users with `Active in Territory` checked on the territory detail page have open opportunities, closed opportunities, or no opportunities at all in that territory. Users with `Active in Territory` deselected have been transferred out of or removed from the territory, but retain ownership of opportunities in the old territory.

To view the territories to which you belong, view the Territories related list on your personal information page. To view this related list for any user, from Setup, enter `Users` in the `Quick Find` box, then select **Users**.

### Adding Users to Territories

To add users to a territory:

1. From a territory detail page, click **Add Users**.
2. To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views.
3. Select and deselect checkboxes in the Action column to move users between the Available and Selected areas. Also, you can:
  - Click a letter to view users who correspond to that letter.
  - Click **All** to display all users who match the criteria of the current view.
  - Click **select shown** to move all users that are shown on the current list page to the Selected area below.
  - Click **deselect shown** or **deselect all** to move users from the Selected area to the Available area.

**Note:** Users already assigned to the territory will not appear in the Available users list even if they meet the list view criteria.

4. When the Selected area includes all users that you want to assign to the territory, click **Assign**.

### Removing Users from Territories

You can remove a user from a territory and choose who will receive his or her open opportunities:

1. In the Assigned Users related list on the territory detail page, click **Remove** next to the user's name.
2. Click the `New Owner` lookup icon () to select a recipient for any open opportunities the user may have.
3. Alternatively, leave the `New Owner` field blank. One of the following results will occur:
  - If the parent territory has a forecast manager, then that forecast manager takes ownership of the user's open opportunities. Also, the forecast manager is assigned to the territory with `Active in Territory` unchecked.
  - If the parent territory does not have a forecast manager, then the user remains in the territory with `Active in Territory` unchecked.
4. Click **Save**.

If very large amounts of data are affected, you will be sent a confirmation email when the operation has completed.

### Transferring Users Between Territories

The user transfer wizard allows you to move a user from one territory to another, choose which open opportunities the user will continue to own, and designate a recipient for open opportunities the user leaves behind.

To transfer a user to another territory:

1. In the Assigned Users related list on the territory detail page, click **Transfer** next to the user's name.

2. Click **Select** next to the territory to which you are transferring the user. If necessary, expand or collapse nodes in the territory hierarchy to display the desired destination territory.
3. Click the **New Owner** lookup icon () to select the user who will take ownership of the open opportunities that the transferred user does not keep. Click **Next** to proceed.

If you skip this step and choose not to select a recipient, the forecast manager of the parent territory of the user's former territory automatically receives the open opportunities that the user does not keep. If there is no forecast manager in the parent territory of the user's former territory, then the user being moved retains ownership of his or her opportunities.

4. Choose a list view of the user's open opportunities.
5. Click **Select** and **Deselect** to move opportunities between the Available and Selected areas. Also, you can:
  - Click a letter to view opportunities that correspond to that letter.
  - Click **All** to display all opportunities that match the criteria of the current view.
  - Click **select shown** to move all opportunities that are shown on the current list page to the Selected area below.
  - Click **deselect shown** or **deselect all** to move opportunities from the Selected area to the Available area.

6. When the Selected area shows the opportunities that you want the user to retain after the transfer, click **Transfer**.  
If very large amounts of data are affected, you will be sent a confirmation email when the operation has completed.

 **Note:** If you transfer the forecast manager out of a territory, that territory will no longer have a forecast and any opportunity overrides for that territory that were created by forecast managers above it in the territory hierarchy will be deleted. See [Overriding Customizable Forecasts](#) on page 1467.

## Viewing Assigned Users Lists

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

The assigned users list page displays a list of users assigned to the selected territory. From this page, you can view detailed user information, remove users from territories, transfer users between territories, and access other related information.

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. The default `View` is your last selected user view.
- Click a username to view the user detail.
- Click **Remove** next to a username to [remove the user from the territory](#).
- Click **Transfer** next to a username to [transfer the user between territories](#).

SEE ALSO:

[Territory Management Overview](#)

[Managing Account Assignment Rules](#)

## Adding Forecast Managers to Territories

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

Consider the following before assigning the forecast manager for a territory:

- A territory can have only one forecast manager. See [Assigning Forecast Managers in Your Forecast Hierarchy](#) on page 1907.
- Forecasts from child and lower-level territories roll up to forecast managers.
- If a territory has no forecast manager, there is no forecast for that territory.
- Forecast managers can receive opportunities when users are transferred out of or removed from a territory.
- Forecast managers can receive opportunities when account assignment rules are run.
- On the territory settings page, you can enable forecast managers to act as delegated administrators for territories below them in the hierarchy.

To assign or change the forecast manager for a territory:

1. On the territory detail page, click **Change** next to the `Forecast Manager` field.
2. Select a name from the drop-down list to specify the territory's forecast manager.  
On the right, a tree view of the territory hierarchy allows you to see the child and lower-level territories whose forecasts will roll up to the forecast manager.

## Managing Account Assignment Rules

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

You can create account assignment rules that automatically move accounts and their associated opportunities and cases into territories based on any standard or custom account field, such as zip code, state, industry, revenue, or number of employees. Each rule consists of multiple rows of criteria that specify exactly how the accounts are assigned.

Account assignment rules are governed by the following:

- A territory can have inherited account assignment rules, meaning that the rules were created somewhere higher in the territory hierarchy and consequently also impact the given territory.
- A territory can have locally defined account assignment rules, meaning that the rule was created at the given territory.
- If a territory doesn't have any inherited or locally-defined account assignment rules, then it only contains accounts that were [manually added](#).
- If an account matches all inherited and locally-defined account assignment rules for multiple territories on the same branch of the hierarchy, then the account is assigned to the lowest matching territory.
- If an account matches a territory's inherited account assignment rules but not all of the territory's locally-defined rules, then the account isn't assigned to the territory, but is evaluated for child territories.

For example, you have three territories:

- Territory A has four rules marked "Apply to child territories", and is a parent of territory B.
  - Territory B has three rules not marked "Apply to child territories", and is a parent of territory C.
    - Territory C has two rules.

If you assign an account that matches all of territory A's and territory C's rules but only one of territory B's rules, then the account is assigned to territory C. However, if territory B's rules are marked "Apply to child territories," then the account is assigned only to territory A.

### Working with Account Assignment Rules

Click **Run Rules** on the territory detail page to evaluate the active inherited, locally defined rules shown on the page against all existing accounts in your organization. The rules for all subordinate territories are also evaluated—that is, when you run rules on the top-level territory, all rules in the entire hierarchy are evaluated. When you click **Run Rules**, an icon (  ) displays next to the button for all affected territories to indicate that rules are being processed. An email confirmation is sent when processing is complete.

#### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

#### USER PERMISSIONS

To manage account assignment rules:

- "Manage Territories"

OR

You are a forecast manager, Forecast managers can manage territories is selected, and you are working below your position in the territory hierarchy.

 **Note:** To protect data quality, you can't modify a territory while the processing icon displays.

Click **Manage Rules** on the territory detail page to access the Manage Account Assignment Rules page, where you can create, edit, preview, and run account assignment rules:

- Click **New** to create a new rule, or **Edit** to edit an existing rule. See [Creating and Editing Account Assignment Rules](#) on page 1801.
- Use the `Active` checkbox to set a locally-defined rule as active or inactive.

Active account assignment rules automatically evaluate accounts and assign them to territories when:

- An account is created using the Salesforce user interface, the Force.com API, or a client such as Connect Offline.
  - An account is imported using an import wizard.
  - An account is created by the conversion of a lead.
  - An account is edited and saved if the `Select by default` checkbox is selected for the “Evaluate this account against territory rules on save” checkbox option under **Layout Properties**. If the account assignment rule initiates an opportunity ownership change, you must have transfer access on the opportunity.
  - An account is edited and saved via the Force.com API.
  - **Run Rules** is clicked on a territory detail page, provided the `Exclude from territory assignment rules` checkbox on the account is deselected.
  - **Save & Run Rules** is clicked on the manage account assignment rules page for a territory, provided the `Exclude from territory assignment rules` checkbox on the account is deselected.
  - Duplicate accounts are merged.
- Click a rule name to see the details of that rule, including its active status and criteria. From a rule detail page you can edit, delete, or clone a rule.
  - Click **Preview** to see the accounts that would be assigned to this territory and its child territories if the rules currently marked active were run. See [Previewing Account Assignments](#) on page 1803.
  - Click **Save** to save the current active status of locally-defined rules.
  - Click **Save & Run Rules** to save the current active status of locally-defined rules and evaluate the inherited and locally-defined rules shown on the page against all existing accounts in your organization. Running account assignment rules affects accounts in the Recycle Bin.

Click **Edit** on the territory detail page to toggle the `Confine Opportunity Assignment` checkbox. When it is selected, the territory's opportunities remain in the territory or its child territories when you run account assignment rules. The following exceptions apply:

- If an opportunity's account moves to only one of the territory's children, then the opportunity follows the account and is reassigned to the account's new territory. This includes when an account moves to multiple territories and only one of the new territories is a child of the original territory.
- If an opportunity's account moves to more than one of the territory's children, then the opportunity's territory field is set to blank.
- If an opportunity's account moves completely out of the territory and its children, then the opportunity's territory field is set to blank.

 **Tip:** You can also manage account assignment rules using the Data Loader or the Web services API.

## Account Assignment Rules and Opportunities

Several factors determine how account assignment rules assign opportunities to territories, including:

- Whether the account associated with the opportunity is assigned to one or more territories
- Whether the opportunity owner is a member of the same territory as the account

- The number of users assigned to the territory
- Whether a forecast manager is assigned to the territory

 **Note:** If you're updating an account which triggers an account assignment rule that is part of territory management, you must have transfer access on the opportunity if the account assignment rule initiates a change in the opportunity ownership.

### Accounts with One Territory

If the account associated with the opportunity is assigned to only one territory, use the following table to determine how the opportunity's territory is assigned:

<b>Opportunity Owner Belongs to Same Territory as Account</b>	<b>Number of Users Assigned to Territory</b>	<b>A Forecast Manager is Assigned to the Territory</b>	<b>Results</b>
Yes	1	N/A	The opportunity is assigned to the same territory as the account. The opportunity owner is unchanged.
No	1	N/A	The opportunity is assigned to the same territory as the account and the opportunity owner is the sole member of the territory.
No	0	N/A	The opportunity is assigned to the same territory as the account and the opportunity owner is added as an inactive member of the territory. The owner of the opportunity remains unchanged.
Yes	>1	Yes	The opportunity is assigned to the same territory as the account and the forecast manager becomes the opportunity owner.
Yes	>1	No	The opportunity is assigned to the same territory as the account. The owner of the opportunity remains unchanged if the opportunity owner has <b>Active in Territory</b> selected on the territory detail page.
No	>1	Yes	The opportunity is assigned to the forecast manager of the territory.
No	>1	No	The opportunity is assigned to the same territory as the account and the opportunity owner is added as an inactive member of the territory. The owner of the opportunity remains unchanged.

### Accounts with Multiple Territories

If the account associated with the opportunity is assigned to more than one territory, use the following table to determine how the opportunity's territory is assigned:

<b>Opportunity Owner's Territory Membership</b>	<b>Results</b>
Opportunity owner has one territory in common with the account	The opportunity is not assigned to any territories. The opportunity owner can assign the opportunity to the territory that he or she has in common with the account.
Opportunity owner has more than one territory in common with the account	The opportunity is not assigned to any territories. The opportunity owner can assign the opportunity to any territory that he or she has in common with the account.
Opportunity owner has no territories in common with the account	The opportunity is not assigned to any territories. The opportunity owner cannot assign the opportunity to any territories.

### Territory Assignments for Standard Users

If the user creating the opportunity is a standard user, Salesforce automatically assigns a territory to a new opportunity only if the user and account have exactly one territory in common. For example, James, who is a standard user assigned to the Westlake territory only, creates an opportunity on the Filmore, Inc. account. Filmore, Inc. belongs to the Westlake territory and one other territory. Because James and Filmore, Inc., have exactly one territory in common, the new opportunity is assigned to the Westlake territory. If James belonged to the account's other territory, the opportunity would not be assigned to a territory.

Use the following table to determine when a territory will be assigned to an opportunity created by a standard user.

<b>Number of Territories Assigned to User</b>	<b>Number of Territories Assigned to Account</b>	<b>Opportunity Owner Belongs to Same Territory as Account</b>	<b>Results</b>
1	1	Yes	The opportunity is assigned to the territory in common.
>1	1	Yes	The opportunity is assigned to the account's territory if the user belongs to that same territory.
1	>1	Yes	The opportunity is assigned to the user's territory if the account is associated with that same territory.
>1	>1	Yes	The opportunity is not assigned to any territories. The opportunity owner can assign the opportunity to any territory that he or she has in common with the account.
N/A	N/A	No	The opportunity is not assigned to any territories.

### Territory Assignments for Administrators

A user who is an administrator or has "Manage Territories" permission can view all territories.

If the user is an administrator, a territory-delegated administrator, or a user with the "Manage Territories" permission, Salesforce automatically assigns a territory to a new opportunity only if the administrator, the account, and the account's parent accounts have exactly one

territory in common. For example, Jennifer is an administrator who manages the Northlake and Westlake territories. She creates an opportunity on the Richmond Brothers account. Richmond Brothers is associated with the Northlake and Southlake territories. Richmond Brothers has one parent account, Zyman Products, which is assigned to the Northlake and Eastlake territories. Because Jennifer, Richmond Brothers, and Zyman Products have only the Northlake territory in common, the new opportunity is assigned to the Northwest territory. If Richmond Brothers or Zyman Products also belonged to the Westlake territory, the opportunity would not be assigned to a territory. Use the following table to determine when a territory will be assigned to an opportunity created by an administrator.

<b>Number of Territories Administrator Manages</b>	<b>Number of Territories Assigned to Account</b>	<b>Number of Territories Assigned to Account's Parent Account(s)</b>	<b>Opportunity Owner Manages Same Territory as Account and Parent Account(s)</b>	<b>Results</b>
1	1	1	Yes	The opportunity is assigned to the territory in common.
>1	1	1	Yes	The opportunity is assigned to the territory in common.
1	>1	1	Yes	The opportunity is assigned to the territory in common.
1	1	>1	Yes	The opportunity is assigned to the territory in common.
>1	>1	1	Yes	The opportunity is assigned to the parent account's territory if the administrator and the account have no other territories in common. The opportunity owner can manually assign the opportunity to any territory that he or she has in common with the account
1	>1	>1	Yes	The opportunity is assigned to the administrator's territory if the account and the account's parent account(s) have no other territories in common. The opportunity owner can manually assign the opportunity to any territory that he or she has in common with the account
>1	1	>1	Yes	The opportunity is assigned to the account's territory if the administrator and the account's parent account(s) have no other territories in common. The opportunity owner can manually assign the opportunity to any territory that he or she has in common with the account
>1	>1	>1	Yes	The opportunity is assigned to the administrator's territory if the administrator, the account, and the account's parent account(s) have no other territories in common. The opportunity owner can manually assign the opportunity to any territory that he or she has in common with the account.

Number of Territories Administrator Manages	Number of Territories Assigned to Account	Number of Territories Assigned to Account's Parent Account(s)	Opportunity Owner Manages Same Territory as Account and Parent Account(s)	Results
N/A	N/A	N/A	No	The opportunity is not assigned to any territories.

[Assigning Opportunities to Territories](#)

## Creating and Editing Account Assignment Rules

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

A territory can have a maximum of 15 account assignment rules, including both active and inactive rules. To create or edit an account assignment rule:

1. From Setup, enter *Hierarchy* in the **Quick Find** box, then select **Territory Hierarchy**.
2. Select the territory you want to modify.
3. Click **Manage Rules** in the Account Assignment Rules related list.
4. Click **New** to create a new account assignment rule. To edit an existing account assignment rule, click **Edit**.
5. Enter a name for the rule. Rule names must be unique and can have a maximum of 80 characters.
6. Define filter criteria that accounts must match to be included in the territory.

If your organization uses multiple languages, use your organization's default language when specifying your criteria. When you use picklists to specify filter criteria, the selected values are stored in the organization's default language. If you edit or clone existing filter criteria, first set the **Default Language** on the Company Information page to the same language that was used to set the original filter criteria. Otherwise, the filter criteria may not be evaluated as expected.

7. Optionally, check the **Apply to child territories** box that makes the rule applicable to child territories
8. Optionally, check the **Active** box to activate the rule. Inactive rules never run.

Active account assignment rules automatically evaluate accounts and assign them to territories when:

- An account is created using the Salesforce user interface, the Force.com API, or a client such as Connect Offline.
- An account is imported using an import wizard.
- An account is created by the conversion of a lead.

### EDITIONS

Available in: Salesforce Classic

Available in:

- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To create or edit account assignment rules:

- "Manage Territories"

OR

You are a forecast manager, Forecast managers can manage territories is selected, and you are working below your position in the territory hierarchy.

- An account is edited and saved if the `Select by default` checkbox is selected for the `Evaluate this account against territory rules on save` checkbox option under **Layout Properties**. If the account assignment rule initiates an opportunity ownership change, you must have transfer access on the opportunity.
- An account is edited and saved via the Force.com API.
- **Run Rules** is clicked on a territory detail page, provided the `Exclude from territory assignment rules` checkbox on the account is deselected.
- **Save & Run Rules** is clicked on the manage account assignment rules page for a territory, provided the `Exclude from territory assignment rules` checkbox on the account is deselected.
- Duplicate accounts are merged.

9. Click **Save** to finish, or **Save & New** to save the rule and begin defining another rule.

**Tip:** By creating at least one account assignment rule at the top of your territory hierarchy that applies to child territories, you can build a hierarchy where all accounts match the top-level criteria and subordinate territories differentiate accounts by more specific criteria.

Similarly, if your organization uses divisions, create a rule at the top of your territory hierarchy that filters accounts by division and applies to child territories.

## Manually Assigning Accounts to Territories

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

As an alternative to creating and running account assignment rules, you can add accounts to territories manually:

1. On the territory detail page, click **Add Accounts** on the Manually Assigned Accounts related list.
2. Choose a view from the drop-down list, or click **Create New View** to build a new custom view.
3. Click **Select** and **Deselect** to move accounts between the Available and Selected areas. Also, you can:
  - Click a letter to view accounts that correspond to that letter.
  - Click **All** to display all accounts that match the criteria of the current view.
  - Click **select shown** to move all accounts that are shown on the current list page to the Selected area below.
  - Click **deselect shown** or **deselect all** to move accounts from the Selected area to the Available area.
4. When the accounts in the Selected area includes all accounts that you want to manually add to the territory, click **Assign**.

 **Note:** Manually adding accounts and running account assignment rules are completely independent. A manually added account remains in a territory until it is manually removed. There is nothing to prevent assignment rules also adding the account to the territory.

### USER PERMISSIONS

To manually add accounts to territories:

- "Manage Territories"

AND

"Edit" on accounts

OR

You are a forecast manager, Forecast managers can manage territories is selected, you are working below your position in the territory hierarchy, and you have "Edit" on accounts.

## Customizing Options for Selling

### Restricting Price and Quantity Editing on Opportunity Products

To ensure that opportunity products use the price from the associated price book, remove the `Sales Price` field from the opportunity products page layout.

To use a quantity of one for all opportunity products, remove the `Quantity` field from the opportunity products page layout.

 **Note:** If you cannot remove these fields from the page layout, contact Salesforce to enable this option.

SEE ALSO:

[Automatically Activate and Deactivate Product Prices with Their Products](#)

### Customizing Big Deal Alerts

Your organization can use alerts that automatically send an email notification for opportunities with large amounts. Customize this alert to send an email when an opportunity reaches a threshold. Your threshold consists of an opportunity amount and probability. For example, you may want to send an email to your team that an opportunity of \$500,000 has reached a probability of 90%.

SEE ALSO:

[Activating Big Deal Alerts](#)

### Activating Big Deal Alerts

You can activate one opportunity alert for your organization. The alert message resembles the opportunity detail page including the page layout and language from a selected user.

Before you begin, you may want to decide which user has the page layout and language settings that you would like included in all alerts. This user must also have the “View All Data” permission.

1. From Setup, enter *Big Deal Alert* in the `Quick Find` box, then select **Big Deal Alert**.
2. Enter a name for the alert.
3. Enter a `Trigger Probability` and `Trigger Amount` in the corporate currency. An opportunity alert is triggered for opportunities with this probability and amount or greater. The alert triggers only for those opportunities that meet both the trigger probability and trigger amount threshold settings.

#### EDITIONS

#### USER PERMISSIONS

To restrict price and unit editing:

- “Customize Application”

#### EDITIONS

Available in: Salesforce Classic

Available in:

- Group
- Professional
- Enterprise
- Performance
- Unlimited
- Developer

#### USER PERMISSIONS

To activate big deal alerts:

- “Customize Application”

 **Note:** An opportunity can trigger a big deal alert even if it is in a currency that is different from the corporate currency. The `Amount` on an opportunity is converted to corporate currency and compared to the `Trigger Amount`. If you are using advanced currency management, dated exchange rates will be used.

4. Check the `Active` box if you would like to activate the new alert immediately after you save.
5. Enter the `From Email Name`.
6. Enter the `From Email Address`.

 **Note:** The From address must be either one of your verified organization-wide email addresses or the email address listed in your Salesforce profile.

7. Select a user that provides the appropriate opportunity page layout, language, and currency settings for the content of the emails. This user must have the “View All Data” permission.

For organizations that use multiple currencies, all alerts include the amount in the currency of the opportunity. If the opportunity currency is different than the currency of the user selected in this step, both currencies are included in the email.

Enter a list of email recipients separated by commas. You can also include `CC:` and `BCC:` recipients but all must be valid email addresses.

The `BCC:` field is not available if your organization has enabled compliance BCC emails.

8. Check the `Notify Opportunity Owner` box if you would like to include the owner of the opportunity in the alert emails.
9. Click **Save**.

 **Note:** An opportunity alert sends a notification the first time an opportunity reaches the threshold. So, an opportunity that reaches the threshold with 90% probability will not trigger additional alerts if the probability subsequently goes higher. However, an opportunity that already triggered an alert and then fell below the threshold can trigger a second alert if it crosses that threshold again.

When working remotely in Connect Offline, you can make changes to opportunities that trigger alerts. These alert messages will be sent when you update your data.

SEE ALSO:

[Customizing Big Deal Alerts](#)

## Enable Opportunity Update Reminders

Updated and accurate opportunities drive precise forecasts. Ensure that your opportunities are up to date by enabling managers to schedule opportunity update reminders—automated opportunity reports that managers can customize for their teams. For example, a manager can schedule a weekly report of all the opportunities for the current fiscal quarter owned by anyone on the team and have the report distributed to everyone on the team.

1. From Setup, enter *Update Reminders* in the **Quick Find** box, then select **Update Reminders**.
2. Click **Edit**.
3. Select **Enable Update Reminders for My Organization**. Deselect it to disable the feature.
4. Optionally, select **Automatically Activate Reminders for Users with Direct Reports** to schedule opportunity update reminders for all users who have direct reports.

 **Note:** Partner and customer portal users assigned Executive roles are considered direct reports of their account owners. If an account owner is activated to receive opportunity update reminders, partner and customer portal users assigned as Executives to the account receive opportunity update reminders, even if they don't have access to the opportunity. To avoid reminders being sent to these users, remove them from the Executive role.

5. Click **Save**.
6. Select the boxes next to the users you want to activate, then click **Activate**. Optionally, check the box in the column header to select all currently displayed items. Activated users can schedule opportunity update reminders. Any user that has direct reports can be activated. To deactivate users, select them and click **Deactivate**.

### SEE ALSO:

[Prompting for Products on Opportunities](#)

## Enabling and Configuring Similar Opportunities

The Similar Opportunities feature allows users to find Closed/Won opportunities that match the attributes of an opportunity they're currently viewing, and add them to the Similar Opportunities related list on that opportunity's record. Enable and configure this feature so your users can quickly access information about past opportunities that may be helpful for the deals they're currently working on. You can also modify the search criteria that Salesforce uses to identify similar opportunities and the opportunity record fields that are displayed in the Similar Opportunities related list.

1. From Setup, enter *Similar Opportunities* in the **Quick Find** box, then select **Similar Opportunities**.
2. Click **Edit**.
3. Select **Enable Similar Opportunities** to add the Similar Opportunities related list to opportunity detail pages.

### EDITIONS

### USER PERMISSIONS

To enable opportunity update reminders:

- "Customize Application"  
OR "Manage Users"

To activate or deactivate opportunity update reminders:

- "Manage Users"

### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To enable similar opportunities:

- "Customize Application"

- Select three to ten opportunity fields or related lists that you want Similar Opportunities searches to match against, and then click **Add**. Use CTRL+click to select multiple items individually or SHIFT+click to select a range of items.

 **Note:** A Similar Opportunities search is an *OR* search, so Closed/Won opportunities that contain *any* of the specified attributes are matches. The more search criteria you select, the more similar opportunities will be identified in a search.

- Select up to 15 opportunity fields to display in the Similar Opportunities related list. The selected fields appear in the list as columns, which you can arrange using the **Top**, **Up**, **Down**, and **Bottom** arrows.

 **Important:** When deciding which opportunity fields to display, consider that users can see all of the information that is displayed in a Similar Opportunities related list, even if the list includes records that aren't ordinarily accessible because of sharing rules and permissions.

- Click **Save**.
- Add the Similar Opportunities related list to the opportunity page layout.

SEE ALSO:

[Finding Similar Opportunities](#)

## Defining Similar Opportunities Search Criteria

If your organization uses the Similar Opportunities feature, you need to select the opportunity fields or related lists that are used as search criteria.

You can use these standard fields and related lists.

Standard Fields	Standard Related Lists
Account Name	Competitors
Close Date	Contact Role
Lead Source	Partner
Opportunity Owner	Products
Primary Campaign Source	Opportunity Team
Private	
Probability (%)	
Quantity	
Type	

You can also select any custom opportunity field, except those with these field types.

- Auto-number
- Currency
- Formula
- Picklist (multi-select)
- Roll-up summary

## Prompting for Products on Opportunities

Customize Salesforce to prompt users to select a product when creating an opportunity. Enabling this option makes it easier for users to add products while creating an opportunity.

1. From Setup, enter *Opportunity Settings* in the **Quick Find** box, then select **Opportunity Settings**.
2. Check **Prompt users to add products to opportunities** to have Salesforce prompt users to select a product when creating an opportunity.
3. Click **Save**.
4. We recommend making the **Amount** field on the opportunity read only to ensure your opportunity amounts are driven from the products on the opportunity.

 **Note:** If enabled, replaces the **Save** button with a **Save & Add Product** button on the opportunity creation page.

SEE ALSO:

[Products, Price Books, and Schedules Overview](#)

## Automatically Activate and Deactivate Product Prices with Their Products

When you deactivate a product, you can have all related prices for that product automatically de-activated as well. Likewise, if you activate a product, you can have all the prices for that product automatically activated.

1. From Setup, enter *Product Settings* in the **Quick Find** box, then select **Product Settings**.
2. Check **When changing active flag on a product...** to have Salesforce automatically change the active flag on all related prices whenever the active flag is changed on the related product.

If you want related prices to keep their status unchanged when users activate or deactivate a product, leave this field unchecked.

3. Click **Save**.

## Using Product Families

Use the `Product Family` picklist to categorize your products. For example, if your company sells both hardware and software, you can create two product families: Hardware and Software.

If your organization has customizable forecasting, your users can have a different quota for hardware sales and software sales. Users can also view forecasts for opportunities with hardware products separate from opportunities that include software products.

To begin using product families:

- Customize the `Product Family` picklist to include the different categories of products you sell.
- For each product in your price books, edit the product and select the appropriate `Product Family` value.
- If your organization has customizable forecasting, set a different quota for each product family for your users.
- If your organization has customizable forecasting, consider changing your forecast settings to display a particular forecast family value by default when your users click the Forecasts tab.

[Products, Price Books, and Schedules Overview](#)

## Enable Product Schedules

Create default revenue and quantity schedules for products that are delivered or paid for over a period of time. In addition, administrators can enable schedule settings that allow users to create schedules for individual products on opportunities.

To enable schedules for your organization:

1. From Setup, enter `Product Schedules` in the `Quick Find` box, then select **Product Schedules Settings**.
2. Select the appropriate checkboxes to enable quantity and revenue schedules for your organization. Note that disabling a schedule type automatically deletes all existing schedule information from products.

For a definition of each schedule type, see [Products, Price Books, and Schedules Overview](#) on page 1309.

3. For each schedule type you enable, select whether to automatically enable that schedule type for every product in your price books. This option automatically selects the `Quantity Scheduling Enabled` or `Revenue Scheduling Enabled` checkboxes on every product in your price books.
4. Click **Save**.

For greater control of schedules on a product-by-product basis, administrators can also determine which schedule types users can establish for each product.

 **Note:** Enabling or disabling schedules does not affect archived products.

If schedules are referenced in Apex, only one of the schedule types (quantity or revenue) can be disabled. For example, if Apex references the schedule object (represented as `OpportunityLineItemSchedule` in the code), one of the schedule types can be disabled, but not both.

## Help Sales Reps Manage Their Meetings and Tasks

### Help Your Sales Reps Manage Events and Tasks Together

Give sales reps a more accurate perspective on their leads, contacts, opportunities, and accounts. Use combined activities settings to help them manage and track meetings and tasks overall. Options differ for Lightning Experience, Salesforce Classic, and Salesforce1.

IN THIS SECTION:

[Considerations for Customizing the Activity Composer and the Activity Timeline in Lightning Experience](#)

Note these considerations for customizing the activity composer and the activity timeline for opportunities, leads, accounts, and contacts. In some Salesforce orgs, the activity composer doesn't include activities with custom record types unless you edit global action layouts. If you customize the display and order of fields in the activity timeline, be aware of the behavior of certain fields.

[Considerations for Activity Reminder Setup in Salesforce Classic](#)

Let users set individual preferences for displaying event and task reminders in a small browser window. Disabling reminders stops the display of all reminders and erases users' settings. If you re-enable reminders later, users receive reminders only for activities created or updated after you re-enable the setting.

[Considerations for Enabling Shared Activities \(Multiple Contacts on an Activity\)](#)

Use Shared Activities to let users relate multiple contacts—up to 50—to each event or task. This feature adds information about events and tasks—open activities and activity history—to contact detail pages. Be aware of considerations for enabling Shared Activities. For example, you can't disable Shared Activities in Activity Settings, and we recommend adding the `Name` related list to activity page layouts. Also be aware of limitations of leaving Shared Activities disabled, such as lack of support for activity custom lookups and creation of duplicate tasks for sent email.

[Guidelines for Enabling Shared Activities \(Multiple Contacts on an Activity\)](#)

To include related contacts alongside other event and task details, include the `Name` related list in the event and task detail page layouts.

SEE ALSO:

[Customization Options for Managing Events and Tasks Together](#)

## Considerations for Customizing the Activity Composer and the Activity Timeline in Lightning Experience

Note these considerations for customizing the activity composer and the activity timeline for opportunities, leads, accounts, and contacts. In some Salesforce orgs, the activity composer doesn't include activities with custom record types unless you edit global action layouts. If you customize the display and order of fields in the activity timeline, be aware of the behavior of certain fields.

### To Display Activity Composer Actions, Select Custom Record Types

Suppose that you've created custom record types for calls, events, or tasks. As long as the default record type remains selected in each global action layout, the activity composer omits that activity's tab. To display the tabs, edit each global action layout and change the record type from the default to a custom record type.

### What Happens When You Customize the Display and Order of Fields in the Activity Timeline

In the activity timeline, you can customize the display and order of fields for events, tasks, and logged calls using event and task compact layouts. However, even if you remove certain fields from a layout, they remain in the timeline because they contain critical activity information. For example, suppose that you remove the due date, the date and time, or the task status fields from the compact layouts. The event start date and time, the task checkbox, the task due date, and the call logging date still appear on activities in the timeline. The description field on events and the comments field on tasks also always appear in the timeline, although they aren't available in the compact layout. The remaining fields visible in the timeline reflect the fields you include in the compact layout.

SEE ALSO:

[Guidelines for Customizing the Task List in Lightning Experience](#)

#### EDITIONS

Available in Lightning Experience in: **Developer, Enterprise, Group, Performance, Professional,** and **Unlimited** Editions

## Considerations for Activity Reminder Setup in Salesforce Classic

Let users set individual preferences for displaying event and task reminders in a small browser window. Disabling reminders stops the display of all reminders and erases users' settings. If you re-enable reminders later, users receive reminders only for activities created or updated after you re-enable the setting.

#### EDITIONS

Available in Salesforce Classic in: **All Editions Except Database.com**

## Considerations for Enabling Shared Activities (Multiple Contacts on an Activity)

Use Shared Activities to let users relate multiple contacts—up to 50—to each event or task. This feature adds information about events and tasks—open activities and activity history—to contact detail pages. Be aware of considerations for enabling Shared Activities. For example, you can't disable Shared Activities in Activity Settings, and we recommend adding the `Name` related list to activity page layouts. Also be aware of limitations of leaving Shared Activities disabled, such as lack of support for activity custom lookups and creation of duplicate tasks for sent email.

Be aware of these considerations for enabling Shared Activities:

### Can't Be Disabled in Activity Settings

If you enable Shared Activities, or if it's enabled by default in your Salesforce org, you can't disable it.

### Process of Enabling Shared Activities

The process of enabling Shared Activities takes up to 48 hours, depending on the volume of activity in your Salesforce org. During this process, users can continue working with events and tasks. The Activity Settings page in Setup displays messages about both the status and what to do in case the process doesn't finish.

#### EDITIONS

Available in Lightning Experience in: **Contact Manager, Personal, Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Available in Salesforce Classic in: **All Editions Except Database.com**

### Displaying Related Contacts Alongside Other Activity Details

To include a list of related contacts on event and task detail pages, ensure that the `Name` related list is included on event and task page layouts. In some Salesforce orgs, the `Name` related list is included in the layouts by default.

The items in the `Name` related list aren't made up of fields, so they don't adhere to field-level security settings.

### Visualforce Display of Events

If a Visualforce page uses the standard controller to display Shared Activities events, use API version 26.0 or later.

Consider these limitations of leaving Shared Activities disabled:

#### Only One Contact per Activity

If you don't enable Shared Activities, then you can't relate an activity to multiple contacts.

#### Limitations in Custom Reports Based on Activity Relationships

If you don't enable Shared Activities, then custom reports based on activity relationships work as follows:

- They show only invitees to an event but not the organizer
- They don't show events to which no one has been invited

#### No Support for Activity Custom Lookups

If you don't enable Shared Activities, custom report types that use activity custom lookup field relationships aren't supported.

#### Duplicate Records for Email

If you don't enable Shared Activities and you send an email to multiple contacts, Salesforce creates a closed task for each contact. In other words, Salesforce creates duplicate records instead of just one task corresponding to the email.

#### “Controlled by Parent” Sharing Model Required for Activity Access

A user can't access an activity assigned to another user unless you've applied the “Controlled by Parent” sharing model to the related record type. For example, suppose a user wants to view an event on a contact. The user can't see the event unless you've applied the “Controlled by Parent” sharing model to contacts. (The user needs the “View All” object-level permission on contacts regardless of whether Shared Activities is enabled.)

## Guidelines for Enabling Shared Activities (Multiple Contacts on an Activity)

To include related contacts alongside other event and task details, include the `Name` related list in the event and task detail page layouts.

### EDITIONS

Available in Lightning Experience in: **Contact Manager, Personal, Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Available in Salesforce Classic in: **All** Editions Except **Database.com**

## Help Your Sales Reps Manage Events and Calendars

Optimize the way your sales reps manage their meetings and scheduling. Options differ for Lightning Experience, Salesforce Classic, and Salesforce1.

## IN THIS SECTION:

[Set Up Cloud Scheduler in Salesforce Classic](#)

The **New Meeting Request** button is enabled by default on page layouts. It lets your users use Cloud Scheduler to request meetings with customers. If enabled, the button appears on the Open Activities related list on the detail pages of contacts, leads, and person accounts.

[Create and Manage a Public Calendar or a Resource Calendar in Salesforce Classic](#)

Use a public calendar to manage group activities. For example, track a group's events, such as marketing events, product releases, or training classes, or schedule a common activity, such as team vacations. Use a resource calendar to schedule the use of a shared resource such as a conference room or an overhead projector.

[Event Fields](#)

Event records have standard fields for tracking and recording event details.

## SEE ALSO:

[Customization Options for Events and Calendars](#)

## Set Up Cloud Scheduler in Salesforce Classic

The **New Meeting Request** button is enabled by default on page layouts. It lets your users use Cloud Scheduler to request meetings with customers. If enabled, the button appears on the Open Activities related list on the detail pages of contacts, leads, and person accounts.

Use the following methods alone or in combination to control whether the **New Meeting Request** button is displayed on detail page layouts. Note that the button is also available in the Calendar section on the Home tab when the Requested Meetings subtab is enabled, and it isn't affected by these add or remove actions.

### Cloud Scheduler Quick Setup

To add or remove the **New Meeting Request** button on multiple page layouts:

1. From Setup, enter *Cloud Scheduler* in the Quick Find box, and then select **Cloud Scheduler**.
2. If you're adding the button and the new user interface theme isn't already enabled, enable it on the User Interface page in Setup.
3. Click **Add Button** to add the **New Meeting Request** button to the Open Activities related list on all eligible page layouts. Eligible layouts have fewer than four buttons in the Open Activities related list (to prevent unintended crowding). Click **Remove Button** to remove the button from all current page layouts.

 **Note:** If you want finer control over whether the button displays on individual page layouts, consider using the [manual setup method](#) instead of or in combination with the quick method.

### Cloud Scheduler Manual Setup

To add or remove the **New Meeting Request** button on individual page layouts:

1. If you're adding the button and the new user interface theme isn't already enabled, enable it on the User Interface page in Setup. See [Customizing User Interface Settings](#).
2. Add or remove the **New Meeting Request** button to the Open Activities related list on the page layouts you want.
  - Contacts

#### EDITIONS

Available in Salesforce Classic in: **All Editions Except Personal Edition and Database.com**

#### USER PERMISSIONS

To customize page layouts and activity settings:

- "Customize Application"

- Leads
- Person Accounts (if enabled)

Before users can request a meeting with a person account, you must add the `Email` field to the page layout. From the object management settings for person accounts, go to Page Layouts.

 **Note:** If you have multiple page layouts and want to affect all or most of them, consider using the [quick setup method](#) instead of or in combination with the manual method.

## Cloud Scheduler Optional Settings

You can optionally enable these settings to make Cloud Scheduler even more useful.

- Ask your users to install [Salesforce for Outlook](#).

We recommend that users sync their calendar events between Salesforce and Outlook so they can propose meeting times based on their availability displayed in their Salesforce calendar.

- Add your company logo to the meeting requests sent to invitees.
- Show requested meetings in the Calendar section on the Home tab.

The Requested Meetings subtab is displayed by default. If you remove the **New Meeting Request** button from all page layouts, we recommend that you also remove the Requested Meetings subtab because your users can't request meetings.

- Enable your Partner users to request meetings using Cloud Scheduler. The customPartner User profile must have [the correct user permissions](#) on page 1815, and it must be active and assigned to your Partner users.

## User Permission Requirements

Users must have the "Send Email" and "Edit Events" permissions to request meetings. These permissions are automatically selected in most standard profiles.

If users don't have the required permissions, they:

- Can't see the **New Meeting Request** button on the Open Activities related list.
- Can't edit, reschedule, or cancel requested meetings.

## Field-Level Security Requirements

In most cases, there's no need to change field-level security settings to allow users to request meetings. However, if you've changed the default field-level security settings for certain profiles in your Salesforce org, refer to the following table to make sure those changes don't prevent users from requesting meetings.

 **Note:** In permission sets and the enhanced profile user interface, the setting labels differ from those in the original profile user interface and in field-level security pages for customizing fields.

Object	Field	Required Field-Level Security Settings		Description
		Permission Sets and Enhanced Profile User Interface	Original Profile User Interface and Customize Field Pages	
Event	Name	Read and Edit	Visible (with Read-Only <i>not</i> selected)	<p>If this field isn't readable, the <b>New Meeting Request</b> button isn't displayed on the Open Activities related list, and an "insufficient privileges" message is displayed when a user tries to change (confirm or reschedule) or view a requested meeting.</p> <p>If this field is readable but not editable, the <b>New Meeting Request</b> button isn't displayed on the Open Activities related list, and requested meetings open as read-only (preventing users from confirming or rescheduling the meeting).</p>
	Description	Read	Visible	<p>By default, when a requested meeting is confirmed, the last message sent from the meeting organizer is displayed in the <code>Description</code> field for the new event.</p> <p>However, if field-level security for the <code>Description</code> field isn't readable, then the last message isn't displayed in the <code>Description</code> field even if field-level security is later set to readable.</p>

## IN THIS SECTION:

[Guidelines for Adding Custom Logos to Meeting Requests in Salesforce Classic](#)

You can display a custom logo in communications such as meeting requests. Use these guidelines for custom logo images.

## SEE ALSO:

[Activities](#)

## Guidelines for Adding Custom Logos to Meeting Requests in Salesforce Classic

You can display a custom logo in communications such as meeting requests. Use these guidelines for custom logo images.

A custom logo appears in the following locations:

- Email requests sent to invitees when you request a meeting or schedule an event
- Meeting response pages where invitees select the times they can meet
- Event response pages where invitees accept or decline the event

When you use a custom logo, keep the following in mind:

- The image must be smaller than 20 KB and formatted as a .gif, .jpeg, or .png file.
- For best results, use an image smaller than 130 pixels wide, 100 pixels high, and 72 pixels per inch. Automatic resizing may prevent larger images from displaying correctly in some email clients.
- You must first upload your logo to the Documents tab to make it externally available.

### Note:

- Other users can replace the logo if it's in the Shared Documents folder. To prevent unwanted changes, create a folder accessible only to system administrators and upload the logo there.
- You can't use a logo that is stored in the My Personal Documents folder or marked `Internal Use Only`.
- You can't delete a custom logo from the Documents tab when it's being used in meeting requests. You must first either select another image to use as your logo or uncheck the option to display a custom logo in meeting requests.

[How Cloud Scheduler Works in Salesforce Classic](#)

## Create and Manage a Public Calendar or a Resource Calendar in Salesforce Classic

Use a public calendar to manage group activities. For example, track a group's events, such as marketing events, product releases, or training classes, or schedule a common activity, such as team vacations. Use a resource calendar to schedule the use of a shared resource such as a conference room or an overhead projector.

You can create an unlimited number of calendars.

- View and edit your existing public calendars and resource calendars.

From Setup, enter *Public Calendars and Resources* in the Quick Find box, then select **Public Calendars and Resources**.

- Create a public calendar or a resource calendar.
  1. Click **New**, name the calendar, select **Active**, and save the calendar.
  2. Click **Sharing**. Add the public groups, roles, or people you want to share the calendar with.
  3. In `Calendar Access`, specify the way you want to share the calendar by selecting one of the following:

### Hide Details

Other people can see whether given times are available, but they can't see any other information about events in the calendar.

### EDITIONS

Available in Salesforce Classic in: **All Editions Except Database.com**

### USER PERMISSIONS

To customize activity settings:

- "Customize Application"

### EDITIONS

Available in Salesforce Classic in: **All Editions Except Personal Edition and Database.com**

### USER PERMISSIONS

To manage public calendars:

- "Customize Application"

To manage resource calendars:

- "Customize Application"

To view a related record on an event:

- Users must have "Read" permission

**Hide Details and Add Events**

Other people can see whether given times are available, but they can't see details of events. Other people can insert events in the calendar.

**Show Details**

Other people can see detailed information about events in the calendar.

**Show Details and Add Events**

Other people can see detailed information about events in the calendar, and they can insert events in the calendar.

**Full Access**

Other people can see detailed information about events in the calendar, insert events in the calendar, and edit existing events in the calendar.

- Delete a public calendar.
  1. From Setup, enter *Public Calendars and Resources* in the Quick Find box, then select **Public Calendars and Resources**.
  2. Click **Del** next to the name of a calendar.

Ensure that users have the appropriate "Read" or "Edit" permissions. For example, an event invitee who doesn't have "Read" permission on opportunities can't view the opportunity associated with the event.

[Activities](#)

## Event Fields

Event records have standard fields for tracking and recording event details.

IN THIS SECTION:

[Event Fields in Lightning Experience](#)

These standard fields for tracking and recording event details are available in Lightning Experience.

[Event Fields in Salesforce Classic](#)

These standard fields for tracking and recording event details are available in Salesforce Classic.

## Event Fields in Lightning Experience

These standard fields for tracking and recording event details are available in Lightning Experience.

Field	Description
Activity Currency	Indicates the default currency for all currency amount fields in the activity. Amounts are displayed in the activity currency. They are also converted to the user's personal currency. Available only in orgs in which multiple currencies are used.
All-Day Event	By selecting this checkbox, a user specifies that the event lasts all day.

### EDITIONS

Available in Lightning Experience in: **Developer, Enterprise, Group, Performance, Professional,** and **Unlimited** Editions

Field	Description
Assigned To	<p>Indicates the assigned owner of the event. By default, the event is assigned to the user who created it.</p> <p>On an event detail page or list view, <code>Assigned To</code> denotes the event creator. However, if an event invitee views a report on Activities with Contacts, <code>Assigned</code> denotes the viewer as the invitee.</p> <p>This field isn't available in Personal Edition.</p>
Created By	Indicates the user who created the event, including the creation date and time. Read only.
Date	Indicates the planned date of the event. This field is displayed only if multiday events are disabled.
Description	Contains a note describing the event. This field holds up to 32 KB of data.
Division	Indicates the division to which the activity belongs. This value is automatically inherited from the related account, lead, case, or custom object, if any. Otherwise, the activity belongs to the global division. Available only in orgs in which divisions are used to segment data.
Duration	Represents the length of an event spanning less than a full day, in hours and minutes. This field appears only if multiday events are disabled.
Email	Contains the email address of the contact or lead related to the event. This field is automatically filled in with the value from the related contact or lead record.
End	Indicates the planned end date and time of the event. This field appears only if multiday events are enabled.
Event Record Type	Contains the name of the field that determines what picklist values are available for the record. Available in Enterprise, Unlimited, Performance, and Developer Editions.
Last Modified By	Contains the name of the user who last changed the event, including the modification date and time. Read only.
Name	Contains the name of the contact or lead related to the event. If Shared Activities is enabled in your org, a user can relate up to 50 contacts to a non-recurring event. This field is visible only to users with the "Read" permission for contacts and leads. Relating a contact to an event can affect the account to which Salesforce relates the event. See the <code>Related To</code> field.
Location	Indicates the location of the event.

Field	Description
Phone	Contains the phone number of the contact or lead related to the event. This field is automatically filled in with the value from the related contact or lead record.
Private	Indicates whether users other than the event owner can see the event details when viewing the event owner's calendar. However, users with the "View All Data" or "Modify All Data" permission can see private event details in reports and searches, or when viewing other users' calendars. Exported data files always contain private events. Events with invitees and events being added or changed in another user's calendar can't be marked private. Private events can't be related to other records.
Public	<p> <b>Note:</b> Before Summer '13, this field was called <code>Visible in Self-Service</code>.</p> <p>This checkbox specifies whether a past event is visible in the Self-Service portal.</p> <p> <b>Note:</b> Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.</p> <p>If Communities is enabled in your org, the value in this field specifies whether the event is visible to external users in communities. If the event is owned by an external user, that user sees the event in the community regardless of whether the event is marked public.</p> <p>This field is not visible by default. A Salesforce admin can expose it.</p>
Related To	<p>Represents the record that the event is related to, such as an account, an opportunity, or a custom object. This field is available only when a user relates the event to a contact, not to a lead. The record is visible only to users with the "Read" permission for the type of record the event is related to.</p> <p>If you relate the event to an object other than an account, Salesforce determines the account on the event as follows.</p> <ul style="list-style-type: none"> <li>• Suppose you relate the event to an opportunity, a contract, or a custom entity that belongs to an account. Salesforce uses that object's account as the account for the event.</li> <li>• Suppose you relate the event to any other kind of object, and you also relate the event to a contact. Salesforce uses the primary contact's account as the account for the event.</li> <li>• If you leave the <code>Related To</code> field empty, then Salesforce doesn't relate an account to the event.</li> </ul>

Field	Description
Show Time As	Picklist. Determines how the event appears when another user views your calendar: busy, out of office, or free.
Start	Planned start date and time of event. This field appears only if multiday events are enabled.
Subject	Contains the subject of the event; for example, "Meeting." A user can enter a subject or select from a list of previously defined subjects.
Time	Indicates the start time of a planned event. This field appears only if multiday events are disabled.
Type	Indicates the event type; for example, email or meeting. Limit for values in the picklist is 40 characters.

### Event Fields in Salesforce Classic

These standard fields for tracking and recording event details are available in Salesforce Classic.

Field	Description
Activity Currency	Indicates the default currency for all currency amount fields in the activity. Amounts are displayed in the activity currency. They are also converted to the user's personal currency. Available only in orgs in which multiple currencies are used.
All-Day Event	By selecting this checkbox, a user specifies that the event lasts all day.
Assigned To	Indicates the assigned owner of the event. By default, the event is assigned to the user who created it.  On an event detail page or list view, <b>Assigned To</b> denotes the event creator. However, if an event invitee views a report on Activities with Contacts, <b>Assigned</b> denotes the viewer as the invitee.  This field isn't available in Personal Edition.
Create Recurring Series of Events	By selecting this checkbox, a user can set up a series of recurring events.
Created By	Indicates the user who created the event, including the creation date and time. Read only.

#### EDITIONS

Available in Salesforce Classic in: **All Editions Except Database.com**

Events with invitees not available in: **Personal Edition**

Field	Description
Date	Indicates the planned date of the event. This field is displayed only if multiday events are disabled.
Description	Contains a note describing the event. This field holds up to 32 KB of data.
Division	Indicates the division to which the activity belongs. This value is automatically inherited from the related account, lead, case, or custom object, if any. Otherwise, the activity belongs to the global division. Available only in orgs in which divisions are used to segment data.
Duration	Represents the length of an event spanning less than a full day, in hours and minutes. This field appears only if multiday events are disabled.
Email	Contains the email address of the contact or lead related to the event. This field is automatically filled in with the value from the related contact or lead record.
End	Indicates the planned end date and time of the event. This field appears only if multiday events are enabled.
Event Record Type	Contains the name of the field that determines what picklist values are available for the record. Available in Enterprise, Unlimited, Performance, and Developer Editions.
Last Modified By	Contains the name of the user who last changed the event, including the modification date and time. Read only.
Name	Contains the name of the contact or lead related to the event. If Shared Activities is enabled in your org, a user can relate up to 50 contacts to a non-recurring event. This field is visible only to users with the "Read" permission for contacts and leads. Relating a contact to an event can affect the account to which Salesforce relates the event. See the <code>Related To</code> field.
Location	Indicates the location of the event.
Phone	Contains the phone number of the contact or lead related to the event. This field is automatically filled in with the value from the related contact or lead record.
Private	Indicates whether users other than the event owner can see the event details when viewing the event owner's calendar. However, users with the "View All Data" or "Modify All Data" permission can see private event details in reports and searches, or when viewing other users' calendars. Exported data files always contain private events. Events with invitees and events being added or changed in another user's calendar can't be marked private. Private events can't be related to other records.

Field	Description
Public	<p> <b>Note:</b> Before Summer '13, this field was called <code>visible_in_Self-Service</code>.</p> <p>This checkbox specifies whether a past event is visible in the Self-Service portal.</p> <p> <b>Note:</b> Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.</p> <p>If Communities is enabled in your org, the value in this field specifies whether the event is visible to external users in communities. If the event is owned by an external user, that user sees the event in the community regardless of whether the event is marked public.</p> <p>This field is not visible by default. A Salesforce admin can expose it.</p>
Related To	<p>Represents the record that the event is related to, such as an account, an opportunity, or a custom object. This field is available only when a user relates the event to a contact, not to a lead. The record is visible only to users with the "Read" permission for the type of record the event is related to.</p> <p>If you relate the event to an object other than an account, Salesforce determines the account on the event as follows.</p> <ul style="list-style-type: none"> <li>• Suppose you relate the event to an opportunity, a contract, or a custom entity that belongs to an account. Salesforce uses that object's account as the account for the event.</li> <li>• Suppose you relate the event to any other kind of object, and you also relate the event to a contact. Salesforce uses the primary contact's account as the account for the event.</li> <li>• If you leave the <code>Related To</code> field empty, then Salesforce doesn't relate an account to the event.</li> </ul>
Response	<p>Optional field; allows users invited to an event to enter a note when they accept or decline the event. This field isn't available in Personal Edition.</p>
Select Invitees	<p>Lets you relate up to 1,000 people (invitees) and resources to the event. When you search for people or resources to invite to an event, the Available list displays up to 300 results.</p>
Show Time As	<p>Picklist. Determines how the event appears when another user views your calendar: busy, out of office, or free.</p>
Start	<p>Planned start date and time of event. This field appears only if multiday events are enabled.</p>

Field	Description
Subject	Contains the subject of the event; for example, "Meeting." A user can enter a subject or select from a list of previously defined subjects.
Time	Indicates the start time of a planned event. This field appears only if multiday events are disabled.
Type	Indicates the event type; for example, email or meeting. Limit for values in the picklist is 40 characters.

## Help Your Sales Reps Manage Their Tasks

Optimize the way your sales reps manage their work. Options differ for Lightning Experience, Salesforce Classic, and Salesforce1.

### IN THIS SECTION:

#### [Guidelines for Customizing the Task List in Lightning Experience](#)

You can customize task fields and actions in the task list.

#### [Considerations for Event and Task Layout \(Record Types\)](#)

Record types determine a record's layout and picklist values. You can define one or more record types for users to choose from when they create an event or a task.

#### [Display Option for Users to Receive Email Notification of Task Assignments in Salesforce Classic](#)

Display the option **Email me when someone assigns me a task** in your users' personal settings. With this option, users can choose whether to receive email notifications whenever someone assigns them a task.

#### [Task Fields](#)

Task records have standard fields for tracking and recording task details.

#### [Email Tracking in Salesforce Classic](#)

If you use HTML email templates in Salesforce Classic, enable Salesforce to track outbound HTML emails as a type of completed task. If you disable this option, Salesforce no longer stores email tracking information. However, email tracking reports remain on the Reports tab. To display email statistics to your users, add the HTML Email Status related list to the relevant page layouts.

### SEE ALSO:

[Customization Options for Tasks](#)

## Guidelines for Customizing the Task List in Lightning Experience

You can customize task fields and actions in the task list.

### Fields in Task List Items

In the task list, you can customize the display and order of fields for individual tasks using task compact layouts. However, even if you remove certain fields from a layout, they remain in the task list because they contain critical task information. For example, suppose that you remove the status and due date fields from a compact layout. The task checkbox and the due date still appear on tasks in the list. The remaining fields visible in the list reflect the fields you include in the compact layout.

## Display Option for Users to Receive Email Notification of Task Assignments in Salesforce Classic

Display the option **Email me when someone assigns me a task** in your users' personal settings. With this option, users can choose whether to receive email notifications whenever someone assigns them a task.

Salesforce displays the option in users' personal settings by default. See [Considerations for Email Notification of Task Assignments in Salesforce Classic](#) on page 1826 for the effects of displaying and removing the option in your org.

- To remove the option from users' personal settings, go to Setup, enter *Activity Settings* in the **Quick Find** box, and then deselect **Enable user control over task assignment notifications**.

#### EDITIONS

Available in Salesforce Classic in: **All** Editions Except **Database.com**

#### IN THIS SECTION:

[Considerations for Email Notification of Task Assignments in Salesforce Classic](#)

When the setting **Enable user control over task assignment notifications** is enabled in Setup, users see the option **Email me when someone assigns me a task** in their personal settings. Both the setting and the option are enabled by default. If you disable the setting in Setup, Salesforce hides the option from users. Enabling or disabling the setting has specific effects on users of Salesforce1 and Salesforce Classic, on Communities users, on partner portal users, on users who are assigned tasks via workflow task rules, and on users who are assigned tasks through the API and Apex. If you migrate a Salesforce org, consider disabling **Enable user control over task assignment notifications** in Setup during migration to avoid excessive email notifications.

### Effects of Enabling and Disabling the Feature in Setup

Users Affected	Effects of Enabling the Feature in Setup	Effects of Disabling the Feature in Setup
Users of Salesforce1, including Communities users	In <b>My Settings &gt; Notifications</b> , the <b>Assigns you a task</b> checkbox is displayed.	In <b>My Settings &gt; Notifications</b> , the <b>Assigns you a task</b> checkbox isn't displayed.
Users of Salesforce Classic, including Communities users	<ul style="list-style-type: none"> <li>On the Create Task page, the <b>Send email notification</b> and <b>Make this the default setting</b> checkboxes aren't displayed.</li> <li>On the Reminders &amp; Alerts page in the user's personal settings, the <b>Email me when someone assigns me a task</b> checkbox is displayed, and it's selected by default.</li> </ul>	<ul style="list-style-type: none"> <li>On the Create Task page, the <b>Send email notification</b> and <b>Make this the default setting</b> checkboxes are displayed, and email notifications are sent according to whether the checkboxes are selected.</li> <li>The <b>Email me when someone assigns me a task</b> checkbox isn't displayed.</li> </ul>
Partner portal users	<ul style="list-style-type: none"> <li>On the Create Task page, the <b>Send email notification</b> and <b>Make this the default setting</b> checkboxes aren't displayed.</li> <li>Email notifications are sent whenever someone assigns a task to a user (partner portals have no settings page for admins or users).</li> </ul>	On the Create Task page, the <b>Send email notification</b> and <b>Make this the default setting</b> checkboxes are displayed, and email notifications are sent according to whether the checkboxes are selected.
Users who are assigned tasks that are generated by workflow task rules	<ul style="list-style-type: none"> <li>On the New Task page for workflow tasks, the <b>Notify Assignee</b> checkbox isn't displayed.</li> <li>Suppose a Salesforce admin selected the <b>Notify Assignee</b> checkbox before Winter '15, when this feature was released. Task assignees who deselect the option to receive email notifications still receive no notifications.</li> </ul>	Email notifications are sent to task assignees according to workflow task rules.

Users Affected	Effects of Enabling the Feature in Setup	Effects of Disabling the Feature in Setup
Users who are assigned tasks through the API	<p>You must use an API to set the <code>triggerUserEmail</code> value. The default value for <code>triggerUserEmail</code> is false.</p> <ul style="list-style-type: none"> <li>If <code>triggerUserEmail = true</code>, notifications are sent according to individual users' settings.</li> <li>If <code>triggerUserEmail = false</code>, email notifications aren't sent when a task is assigned.</li> </ul>	<ul style="list-style-type: none"> <li>If <code>triggerUserEmail = true</code>, email notifications are sent to all users when tasks are assigned.</li> <li>If <code>triggerUserEmail = false</code>, email notifications aren't sent when a task is assigned.</li> </ul>
Users who are assigned tasks through Apex	Notifications that are sent through Apex are sent in the context of the request header.	If any value in the request header is set so that email notifications are sent, then email notifications are sent to users when tasks are assigned. Apex processes the header sequentially from the first line to the last. If any statement in the request header indicates that a task notification is required, an email notification is sent regardless of statements later in the header.

## Task Fields

Task records have standard fields for tracking and recording task details.

### IN THIS SECTION:

#### [Task Fields in Lightning Experience](#)

These standard fields for tracking and recording task details are available in Lightning Experience.

#### [Task Fields in Salesforce Classic](#)

These standard fields for tracking and recording task details are available in Salesforce Classic.

## Task Fields in Lightning Experience

These standard fields for tracking and recording task details are available in Lightning Experience.

Field	Description
Activity Currency	Indicates the default currency for all currency amount fields in the task. Amounts are displayed in the task currency and are also converted to a user's personal currency. Available only in orgs in which multiple currencies are used.
Assigned To	Indicates the assigned owner of a task. By default, the task is assigned to the user who

### EDITIONS

Available in Lightning Experience in: **Developer**, **Enterprise**, **Group**, **Performance**, **Professional**, and **Unlimited** Editions

Field	Description
	created it. This field isn't available in Personal Edition.
Call Duration	Indicates the duration of a call in seconds.
Call Object Identifier	Indicates the ID of a call logged in Salesforce through Salesforce computer-telephony integration (CTI) with a third-party telephony system. This field is often populated with the ID stored in the telephony system. Limit is 255 characters.
Call Result	Represents the result of a given call; for example, "we'll call back" or "call unsuccessful." Limit is 255 characters. A Salesforce admin can customize the selections in the picklist.
Call Type	Indicates the call type: inbound, internal, or outbound. A Salesforce admin can customize the selections in the picklist.
Comments	Contains a description of the task. This text field can hold up to 32 KB of data. If Spell Checker is enabled in your org, a user can spell-check the contents of the field.
Created By	Indicates the user who created the task, along with the task creation date and time. Read only.
Division	Indicates the division to which the task belongs. This value is automatically inherited from the related account, lead, case, or custom object, if any. Otherwise, the task belongs to the global division. Available only in orgs in which divisions are used to segment data.
Due Date	Indicates the date when the task is due.
Email	Contains the email address of the contact or lead associated with the task. This field is automatically filled in with the value from the related contact or lead record.
Last Modified By	Indicates the user who last changed the task, along with the task modification date and time. This field is read only.
Name	Contains the name of the contact or lead related to the task. If Shared Activities is enabled in your org, a user can relate up to 50 contacts to a non-recurring task. This field is visible only to users who have the "Read" permission for contacts and leads. Relating a contact to a task can affect the account to which Salesforce relates the task. See the Related To field.
Phone	Contains the phone number of the contact or lead related to the task. This field is automatically filled in with the value from the related contact or lead record.
Priority	Indicates the urgency of the task; for example, low, medium, or high. A Salesforce admin can customize the selections in the picklist.

Field	Description
Public	<p> <b>Note:</b> Before Summer '13, this field was called <code>visible in Self-Service</code>.</p> <p>By selecting this checkbox, a user can specify that the completed task is visible in the Self-Service portal.</p> <p> <b>Note:</b> Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.</p> <p>If Communities is enabled in your org, this field specifies whether a task is visible to external users in communities. If the task is owned by an external user, that user sees the task in the community regardless of whether it's marked Public.</p> <p>This field is not visible by default; a Salesforce admin can make it visible.</p>
Related To	<p>Indicates the record that the task is related to, such as an account or an opportunity. This field is available only when a user relates the task to a contact, not to a lead. The record is visible only to users with the "Read" permission for the type of record the task is related to.</p> <p>If a user relates the task to an object other than an account, Salesforce determines the account on the task as follows.</p> <ul style="list-style-type: none"> <li>• Suppose a user relates the task to an opportunity, a contract, or a custom entity that belongs to an account. Salesforce uses that object's account as the account for the task.</li> <li>• Suppose a user relates the task to any other object type and also to a contact. Salesforce uses the primary contact's account as the account for the task.</li> <li>• If a user leaves the <code>Related To</code> field empty, Salesforce doesn't relate an account to the task.</li> </ul>
Status	<p>Indicates the status of a task; for example, "not started" or "completed." A Salesforce admin can customize the selections in the picklist.</p>
Subject	<p>Contains the subject of a task; for example, "Email quote to customer." A user can enter a subject or select from a picklist of previously defined subjects.</p>
Task Record Type	<p>Contains the name of the field that determines what picklist values are available for the record. Available in Enterprise, Unlimited, Performance, and Developer Editions.</p>
Type	<p>Indicates the task type; for example, Email or Meeting. Limit for values in the picklist is 40 characters.</p>

## Task Fields in Salesforce Classic

These standard fields for tracking and recording task details are available in Salesforce Classic.

Field	Description
Activity Currency	Indicates the default currency for all currency amount fields in the task. Amounts are displayed in the task currency and are also converted to a user's personal currency. Available only in orgs in which multiple currencies are used.
Assigned To	Indicates the assigned owner of a task. By default, the task is assigned to the user who created it. This field isn't available in Personal Edition.
Call Duration	Indicates the duration of a call in seconds.
Call Object Identifier	Indicates the ID of a call logged in Salesforce through Salesforce computer-telephony integration (CTI) with a third-party telephony system. This field is often populated with the ID stored in the telephony system. Limit is 255 characters.
Call Result	Represents the result of a given call; for example, "we'll call back" or "call unsuccessful." Limit is 255 characters. A Salesforce admin can customize the selections in the picklist.

## Increase Productivity

### Set Up Notes

To let your users take rich text notes, set up Notes, our enhanced note-taking tool.

Consider these items before setting up Notes.

- After Notes is enabled for your organization, new notes are created using Notes. Notes created with the old note-taking tool open in the old note-taking tool.
- If you disable Notes, users won't be able to access notes that were created with Notes.
- Notes is not available for users with a Partner Portal or Customer Portal license.

Walk Through It

1. Make sure that the [Notes related list is included on your page layouts](#).
2. Make sure that Chatter is enabled. From Setup, enter *Chatter Settings* in the Quick Find box, then select **Chatter Settings**. Under Chatter Settings, select **Enable**.
3. Make sure that Notes is enabled. From Setup, enter *Notes Settings* in the Quick Find box, then select **Notes Settings**. Then, make sure **Enable Notes** is selected.
4. To let users take notes from the Chatter publisher and the Salesforce1 action bar, add the **New Note** quick action to Quick Actions in the Salesforce Classic Publisher and Salesforce1 and Lightning Experience Actions sections on the global publisher layout.
5. If you've overridden the global publisher layout on any of your object page layouts, add the **New Note** quick action to your custom layouts, too.
6. To let your users easily take notes in Salesforce1:
  - a. Make sure your users can create tasks from notes in Salesforce1. From Setup, enter *Activity Settings* in the Quick Find box, then select **Activity Settings**. Select **Allow Creation of Tasks from Notes**.

#### EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in:

## Configure Page Layouts for Notes

If you've been using Salesforce prior to Winter '16, you need to make a few adjustments to your page layouts so that users can view their notes.

1. Make sure you're familiar with how to edit page layouts.
2. Select the object, and then the layout your users use.
3. From the list of page element categories, select **Related Lists**.
4. Drag the Notes related list on to the page where you want it to appear.  
If your users have been using the old note-taking tool, keep the Notes & Attachments related list so that they can access old notes. Notes taken with the enhanced version of Notes appear in the Notes related list.
5. Save the layout, and confirm that you want to overwrite users' related list customizations.
6. Repeat these steps for other objects you use Notes with.

## Customizing Options for Leads

### Setting Up Lead Management

Success in sales starts by building a strong pipeline of leads. A lead is a prospect who is interested in your company.

Using leads can give your sales staff instant access to the latest prospects and ensures that no leads are ever dropped. Successful lead management helps sales and marketing manage the inbound lead process, track lead sources, and analyze return on their marketing investment.

To get started using lead management, from Setup:

- Go to the object management settings for leads. From the fields section, create custom lead fields that track information specific to your company. Also, map your custom lead fields to account, contact, and opportunity fields so that the data gets converted when users convert leads. Edit the `Lead Status` picklist to choose the default status for new and converted leads.
- Enter `Lead Settings` in the `Quick Find` box, then select **Lead Settings** to specify your default lead settings.
- Enter `Assignment Rules` in the `Quick Find` box, then select **Lead Assignment Rules** to set up lead assignment rules that automatically assign leads.
- Enter `Web-to-Lead` in the `Quick Find` box, then select **Web-to-Lead** to automatically capture leads from your website.

To create sales queues for leads or custom objects, from Setup, enter `Queues` in the `Quick Find` box, then select **Queues**.

### Managing Leads

Before your organization begins using leads, you can perform the following setup:

- Customize the default Lead Settings.
- Create lead queues to help manage the distribution of leads.
- Set up lead assignment rules to automatically assign leads.
- Set up Web-to-Lead to automatically capture leads from your website.
- Import your organization's existing leads.
- Create custom lead fields.
- Map custom lead fields to other custom fields for lead conversion.
- Edit the `Lead Status` picklist to choose the default status for new and converted leads.

## Define Default Settings for Lead Creation

Optimize lead management features for your sales teams so they can nurture leads efficiently and prevent duplicate records when it's time to convert the leads to contacts, accounts, and opportunities.

1. From Setup, enter *Lead Settings* in the *Quick Find* box, then select **Lead Settings**, and then click **Edit**.
2. Define the default lead owner and lead conversion settings.
3. Save your settings.

## Map Custom Lead Fields for Lead Conversion

Get the most out of records created from the leads your sales teams convert when you map custom lead fields to the fields of records they're converted to.

When sales reps convert qualified leads, the information from the standard lead fields appears in standard fields of the contact, account, and opportunity fields. If you set up custom lead fields, you specify how that custom information converts to custom fields in accounts, contacts, and opportunities.

1. From the object management settings for leads, go to the fields section, then click **Map Lead Fields**.
2. For each custom lead field, choose a custom account, contact, or opportunity field into which you want the information inserted when you convert a lead.
3. Save your work.

## Guidelines for Mapping Custom Lead Fields for Lead Conversion

Learn the best practices for mapping custom lead fields to custom fields in contacts, accounts, and opportunities. Mapping custom fields helps your sales reps retain that important information when they convert qualified leads to track new potential deals.

Make sure to	It's good to know that
Map custom lead fields to other custom fields of the same data type.	Specifically, map numeric lead fields to other numeric fields, or map long text area fields to other long text area fields. Some exceptions include: <ul style="list-style-type: none"> <li>You can map between text and picklist fields. But your data truncates if the mapped text field is not large enough to hold the entire lead picklist value.</li> <li>You can map field types <i>Text</i> or <i>Text Area</i> to long text area fields.</li> <li>You can map auto-number fields to field types <i>Text</i>, <i>Text Area</i>, or <i>Picklist</i>.</li> <li>Do not map custom formula fields to other formula fields or any other type of field.</li> </ul>
Map custom lead field types <i>Number</i> , <i>Currency</i> , or <i>Percent</i> to other number, currency, or percent fields of the same length and decimal places.	For example, your lead currency field has a length of 3 and 2 decimal places. Map it to another custom currency field with a length of 3 and 2 decimal places.
Not change data types for custom lead fields	If you change data types for custom fields, Salesforce deletes the lead mappings for those custom fields.

## Guidelines for Setting Up Web-to-Lead

Get Salesforce ready to gather information from your company's website and automatically generate up to 500 new leads a day.

<b>If you want to</b>	<b>Make sure to</b>
Track special lead information that standard fields for Salesforce leads don't accommodate	Create custom lead fields and specify how you want them to map to custom fields for accounts, contacts, and opportunities during lead conversion.
Automatically send prospects email after they've submitted information through your website	Create public email templates. If you plan to set up email response rules to use different email templates depending on the information submitted, create one default template to send when none of your response rules apply.
Set the default status for new and converted leads	Use the <code>Lead Status</code> picklist to do so.
Assign leads to sales reps and queues	<ul style="list-style-type: none"> <li>• Create lead queues if you want to assign leads to queues instead of individual sales reps.</li> <li>• Indicate the default owner of leads that fail to meet the criteria in your assignment rule using <code>Customize Lead Settings</code>.</li> <li>• Determine how web-generated leads get assigned to users or queues by creating a lead assignment rule and activating it. If the rule is inactive, all web-generated leads get assigned to the default owner you specify in <code>Lead Settings</code>.</li> </ul>

### USER PERMISSIONS

To set up Web-to-Lead:

- "Customize Application"

[Web Lead Concepts](#)

[Generate Leads from Your Website for Your Sales Teams](#)

## Generate Leads from Your Website for Your Sales Teams

Automatically generate up to 500 leads per day with the prospecting data from your company's website visitors. When you set up Web-to-Lead, Salesforce captures prospects who provide contact information. You can also redirect prospects to other Web pages that are critical to campaign success.

1. From Setup, enter *Web-to-Lead* in the **Quick Find** box, then select **Web-to-Lead**.
2. Click **Edit** to enable or change Web-to-Lead settings.
3. If you want automate email replies to prospects, select a default response template. If you set up response rules to use different email templates based on the information prospects provide, the default response template is used when no auto-response rules apply. Templates must be marked *Available for Use*.
4. Save your changes.
5. To create a form that captures prospect details on your website, click **Create Web-to-Lead Form**, and then select fields you want to include
6. Select fields to include on your Web-to-Lead form. Use the Add and Remove arrows to move fields between the Available Fields list and the Selected Fields list, and use the Up and Down arrows to change the order of the fields on your form.
  - Select the **Campaign** field.
  - For organizations using multiple currencies, add the **Lead Currency** field if you add currency amount fields, otherwise all amounts will be captured in your corporate currency.
  - Use a custom multi-select picklist to allow potential customers to express interest in several products.
  - For organizations using lead record types, select the **Lead Record Type** field if you want users to select a record type for Web-generated leads.
7. If your organization uses the Translation Workbench or has renamed tabs, select the language for the form labels displayed on your Web-to-Lead form. The source of your Web-to-Lead form is always in your personal language.
8. Specify the complete URL to which users should be directed after they submit their information—for example, your company's home page for a thank you page—and click **Generate**.
9. Copy the generated HTML code and provide it to your company's webmaster to incorporate into your website.
10. Click **Finished**.

To test the Web-to-Lead form, add the line `<input type="hidden" name="debug" value="1">` to your code. This line redirects you to a debugging page when you submit the form. Remove this line before releasing the Web-to-Lead page to your website.

Leads generated from your website are initially marked with the "default status" specified by the **Lead Status** picklist. For Web leads generated as part of a campaign, the member status of the new leads is set to the **Member Status** value specified in the form, or to the "default" member status if the **Member Status** field is not included in the form.

In addition, new leads are marked as "Unread," and are changed to "Read" when viewed or edited by the lead owner. Users can select the My Unread Leads list view to quickly locate their new leads.

 **Note:** The format for date and currency fields captured online is taken from your organization's default settings - **Default Locale** and **Currency Locale**.

The daily limit for Web-to-Lead requests is 500. If your organization exceeds its daily Web-to-Lead limit, the Default Lead Creator (specified in the Web-to-Lead setup page) receives an email containing the additional lead information. See [How many leads can we capture from our website?](#) on page 1264 for additional information on Web-to-Lead limits.

### EDITIONS

Available in: Salesforce Classic

### USER PERMISSIONS

To set up Web-to-Lead:

- "Customize Application"

If a new lead cannot be generated due to errors in your Web-to-Lead setup, Customer Support is notified of the problem so that we can help you correct it.

Salesforce runs field validation rules before creating records submitted via Web-to-Lead and only creates records that have valid values.

All universally required fields must have a value before a record can be created via Web-to-Lead.

Salesforce doesn't support rich text area (RTA) fields on Web-to-Lead forms. If you use RTA fields on your forms, any information entered in them is saved as plain text when the lead is created.

An opportunity team is a set of users that often work together on sales opportunities. A typical opportunity team might include the account manager, the sales representative, and a pre-sales consultant.

When [team selling is enabled](#), you can customize opportunity teams for your organization.

- Create a custom field for the opportunity team that will appear on the Opportunity Team Member page and can be included in opportunity team reports. You can create a maximum of 50 custom fields.

**Note:** If you delete a custom field, filters that use the custom field are also deleted, and the result of assignment or escalation rules that rely on the custom field's data might change.

- Define and activate validation rules that opportunity team data must meet before a user can save the record.
- Create workflow rules.
- [Define opportunity team roles](#) for your organization.
- [Globally replace existing team roles](#).

- Add a custom button or link to the opportunity team.
- [Customize the Opportunity Team Member page layout](#), adding custom fields, buttons, links, or customizable related lists.
- Edit the Opportunity Team related list properties on each page layout.

To display opportunity team member information on a parent page, you must link the team member and the parent. For example, to display team member information on the related account detail page, add a custom lookup field called Account to the [Opportunity Team editor](#) on page 1848, and then set this field to the parent account for each opportunity team member.

- Create custom report types for opportunity teams.
- Define and activate Apex code that executes before or after specific data manipulation language (DML) events occur, such as before opportunity team records are inserted into the database, or after records have been deleted.

 **Note:** There are a few limitations for opportunity teams.

- You can't create a look up from an object, such as an account, to an opportunity team member.
- Validation rules and Apex triggers aren't supported when a user adds his or her default opportunity team on an opportunity.

SEE ALSO:

[Opportunity Teams](#)

[Enabling Team Selling](#)

## Enabling Team Selling

Enabling team selling gives your users access to create and use opportunity teams on opportunities.

1. From Setup, enter *Opportunity Team Settings* in the Quick Find box, then select **Opportunity Team Settings**.
2. Select **Enable Team Selling**, and click **Save**.
3. Select the opportunity page layouts that will display the new Opportunity Team related list.
4. To ensure that users with customized page layouts see the related list, select **Add to users' customized related lists**.
5. Click **Save**.

When team selling is enabled, you can add custom fields, custom buttons and links, validation rules, workflow rules, and Apex triggers to opportunity teams. You can also edit opportunity team page layouts, create custom report types for opportunity teams, and enable Opportunity Splits.

### USER PERMISSIONS

To enable team selling:

- "Customize Application"

## Customizing Opportunity Team Roles

Every opportunity team member has a role in that opportunity, like Account Manager or Sales Rep. You can customize the opportunity team roles for your organization.

1. From Setup, enter *Team Roles* in the *Quick Find* box, then select **Team Roles**.
2. Edit the picklist values for existing team roles. (If the Opportunity Owner role exists, leave that unchanged; it's needed for opportunity splits.)

 **Note:** Opportunity teams share roles with account teams. So if you remove an opportunity team role, that role will no longer be listed as an account team role.

SEE ALSO:

[Customizing Opportunity Teams](#)

## Replacing Opportunity Team Roles

If you've changed your opportunity team roles, you can globally update the values in all existing records, replacing the picklist values. From Setup, enter *Replace Team Roles* in the *Quick Find* box, then select **Replace Team Roles**.

If the Opportunity Owner role exists, leave that unchanged; it's needed for opportunity splits.

 **Note:** Opportunity teams share roles with account teams. So if you remove an opportunity team role, that role will no longer be listed as an account team role.

## Edit Multi-Line Layouts for Opportunity Teams

You can specify which fields appear on the Opportunity Team Member multi-line page. To view this page, [add a new member](#) to an opportunity team.

1. From the object management settings for opportunity teams, go to Page Layouts.
2. Next to the name of an opportunity team page layout, click **Edit**.
3. Click **Edit Multi-Line Layout** in the top right corner.
4. Move fields between Available Fields and Selected Fields.
  - To customize which fields display in the layout, select one or more fields in Available Fields and click **Add** or **Remove**.
  - To sort fields in the layout, select one or more fields in Selected Fields and click **Up** or **Down**.
  - To select multiple fields individually, use CTRL+click.
  - To select multiple fields as a group, use SHIFT+click.
5. Click **Save** to apply your changes.

SEE ALSO:

[Customizing Opportunity Teams](#)

## Disabling Team Selling

 **Note:** If Opportunity Splits is enabled, you must disable that feature before you can disable team selling. Disabling Opportunity Splits permanently deletes all split data from your organization.

1. Delete any custom fields, custom buttons and links, page layouts, validation rules, workflow rules, or Apex triggers that you've added to opportunity teams. You must also delete any custom reports that include opportunity team information and uninstall any Apex packages that use opportunity teams.
2. From Setup, enter *Opportunity Team Settings* in the Quick Find box, then select **Opportunity Team Settings**.
3. Select **Disable Team Selling** and click **Save**.
4. Select **Yes** at the prompt and click **OK**. All opportunity teams assigned to opportunities and all default opportunity teams are permanently deleted.

 **Note:** You can't disable team selling if team members are referenced in Apex. In Apex code, the `Team Member` field is represented as `OpportunityTeamMember`.

## Prerequisites for Enabling Opportunity Splits

Before you enable Opportunity Splits, there are a few conditions to check for and evaluate.

### Available time

Enabling Opportunity Splits starts a process that sets up splits on every opportunity in your organization, not just the open ones. Depending on the number of opportunity records you have, this process can take hours. You can still work with Salesforce while the process is ongoing, but a better option may be to start the process at the end of the day and let it run overnight.

### Inactive currencies

If your organization has inactive currencies that have been active in the past, chances are you have opportunity records that use those currencies. Those records will still be part of the split enablement process, but the fact that the currency is inactive will cause the process to fail. There are a few things that you can do to help prevent the failure or fix it if it happens.

- Change the inactive currency of the associated opportunity records to an active currency.
- Make the inactive currency active during the splits enablement (you can make it inactive again once the process is complete).
- Delete the opportunities with the inactive currency. This solution works best if your organization has just a few opportunities with an inactive currency and you don't need them for reporting or historical purposes.

### Mass operations in progress

If you're running a mass operation, such as Mass Transfer or Mass Reassign Team Member, enabling Opportunity Splits at the same time could cause the enablement to fail. The solution is to make sure any mass operation is complete before you start to enable Opportunity Splits.

## Enable Opportunity Splits and Split Types

Enabling Opportunity Splits changes existing opportunity records in your organization. The process can take time, depending on the number of records, but it makes splits available for every opportunity.

 **Note:** You must enable team selling before you can enable Opportunity Splits.

When you enable Opportunity Splits, a script applies the changes. If your organization contains a lot of opportunities, the script may take several hours to complete. While it's running, you can still perform other tasks in Salesforce. Automated email notifications keep you up to date on the script's status.

Here's how the opportunity record changes when you enable Opportunity Splits:

- The opportunity owner is included on each opportunity team. Because the Opportunity Owner role is essential for splits, you can't remove it.
- If you enable split types that total 100%, new opportunity split records include a default entry for the owner, who initially receives 100% of the split amount. (These additional records require more data storage. To see how this extra storage requirement affects your organization, search for "Monitoring Resources" in the Salesforce Help.)

 **Note:** The script temporarily disables triggers, workflows, and validation rules for opportunity team records, mass reassignment of opportunity team members, and mass transfer of accounts and opportunities.

1. From Setup, enter *Opportunity Splits* in the **Quick Find** box, then select **Settings**.
2. Click **Set up Opportunity Splits**.
3. To better reflect your business process, do any of the following.

#### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

#### USER PERMISSIONS

To enable opportunity splits:

- "Customize Application"

- Rename or deactivate the default Revenue and Overlay splits, which are based on the Opportunity—Amount field. (These default split types can't be deleted.)
- Click **Add a new split type** to split another currency field, and specify whether splits must total 100% of that field.

 **Tip:** You can't have more than five split types, including inactive split types. To rename, temporarily deactivate, or permanently delete split types at any time, simply return to the Opportunity Splits setup page and click **Edit Split Types**. Deleting split types will also delete the splits data but deactivating will not.

4. Click **Save**.
5. Select the page layouts to display the Opportunity Splits related list.
6. To ensure that users with customized page layouts see the related list, select `Add to users' customized related lists`.
7. Click **Save**.
8. After Salesforce displays a message indicating that splits are enabled, click **Let users add members to opportunity teams while editing splits** to enable quicker changes to those teams. (When this option is deselected, users must be added to the Opportunity Team before they can be added to an Opportunity Split.)

 **Tip:** To let users include splits in forecasts, see [Enable Forecast Types for Collaborative Forecasts](#).

#### SEE ALSO:

[Enabling Team Selling](#)

[Change a Record's Owner](#)

[Replacing a Team Member on Multiple Records](#)

[Removing a Team Member from Multiple Records](#)

## Create Custom Split Types for Opportunity Splits

Create custom opportunity splits on opportunity currency fields to better reflect your business operations.

Contact Salesforce to have custom split types enabled for your organization.

 **Note:** Changes to opportunity split types are completed by a background process. You'll be notified by email when the process is finished. We recommend not editing any splits on your opportunities until changes are complete.

1. From Setup, enter *Opportunity Splits* in the Quick Find box, then select **Settings**, then click **Edit Split Types**.
2. Click **+ Add a new split type**.
3. If you don't want the split type to be visible to users yet, deselect **Active**.
4. Enter a name for the split type. The name is visible to users when the split type active.
5. Select a field to split. You can split most currency fields created on opportunities, including custom currency fields and roll-up summary fields, but not formula currency fields.
6. If you want the splits for this type to total 100%, select **Totals 100%**.

Credit for team members who are directly responsible for the opportunity should usually total 100%.

#### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Unlimited
- Performance
- Developer

#### USER PERMISSIONS

To create custom split types for opportunities:

- "Customize Application"

7. Click **Save**.

## Edit Multi-Line Layouts for Opportunity Splits

Customize the fields that Salesforce displays when users edit opportunity splits.

 **Note:** You can't add rich text fields or multi-select picklists to the multi-line layout for opportunity splits. Rich text fields and multi-select picklists can only be edited on the opportunity split detail page.

1. From the object management settings for opportunity splits, go to Page Layouts.
2. Next to the name of a layout, click **Edit**.
3. Click **Edit Multi-Line Layout** in the top-right corner, then add and arrange the fields you want to display.
4. Click **Save**.

## Deactivate or Delete Split Types

Temporarily hide split types, or remove them permanently.

*Deactivating* a split type removes it from the Salesforce interface but keeps the underlying data so you can quickly reactivate it at a later date.

*Deleting* a split type permanently removes all related data. Typically, you'll delete split types if you've reached the maximum of five and want to replace one type with another. However, you might also delete a little-used split type to reduce storage requirements for your organization.

1. From Setup, enter *Opportunity Splits* in the Quick Find box, then select **Settings**.
2. Click **Edit Split Types**
3. Do one of the following, and then click **Save**.
  - To deactivate a split type, deselect the checkbox in the Active column.
  - To delete a split type, click  in the Delete column. (If your organization contains a lot of opportunities, the script that deletes split types may take several hours.)

### USER PERMISSIONS

To disable or delete split types:

- "Customize Application"

## Disable Opportunity Splits

If your organization isn't using them, you can completely disable Opportunity Splits. However, disabling also deletes some types of related data and is a process you can't undo.

If you completely disable Opportunity Splits, here's what happens.

- Splits on all opportunities in your organization are deleted.
- Split reports are deleted.
- Custom reports built using split report templates will still appear in the Reports tab, but you won't be able to access them.

 **Warning:** Disabling Opportunity Splits is irreversible; you won't be able to retrieve lost splits data.

1. From Setup, enter *Opportunity Splits* in the Quick Find box, then select **Settings**.
2. Click **Disable Opportunity Splits**.

If your organization contains a lot of opportunities, the script that disables splits may take several hours.

SEE ALSO:

[Disabling Team Selling](#)

[Deactivate or Delete Split Types](#)

## Reassigning Team Members on Multiple Records

If your organization uses account teams or opportunity teams, you can make changes to a team member on multiple records at a time. Using Salesforce, you can add, remove, or replace a team member on any record that contains that team member.

- [Adding a Team Member to Multiple Records](#)

## Removing a Team Member from Multiple Records

1. From Setup, enter *Mass Reassign* in the **Quick Find** box, then select **Mass Reassign Account Teams** or **Mass Reassign Opportunity Teams**.

If you don't see these options in Setup, click **Mass Reassign Account Teams** from the Tools section at the bottom of the Accounts page, or click **Mass Reassign Opportunity Teams** from the Tools section at the bottom of the Opportunities page.

2. Select **Remove** and click **Next**.
3. Enter your criteria to find the records you want to change.
4. Click **Next**.
5. Select the checkboxes next to the records you want to change.
6. Click **Next**.
7. Select the existing team member you want to remove.
 

 **Note:** If Opportunity Splits is enabled, and you remove a team member assigned to a split that must total 100%, the removed member's percentage transfers to the opportunity owner. You can't remove the opportunity owner.
8. Select a role. The team member is removed only if he or she has this role. Or, select **Any Role** to remove the team member regardless of role.
9. Select reassignment options to assign any activities, opportunities, cases, or contacts to the owner.

# Managing Currencies

## Manage Multiple Currencies

Your organization can set up the ability to use multiple currencies in opportunities, forecasts, quotes, reports, and other data.

1. [Enable multiple currencies](#) for your organization.
2. To designate your corporate currency, from Setup, enter *Manage Currencies* in the **Quick Find** box, then select **Manage Currencies**, and then click **Change Corporate**.
3. To activate more currencies for your organization, click **New** in the Active Currencies related list.
4. To use dated exchange rates, [enable advanced currency management](#).
5. Set conversion rates for new currencies. See [Edit Conversion Rates](#). If you have enabled advanced currency management, see [Editing Dated Exchange Rates](#) on page 1862.

## Using Multiple Currencies

International organizations can use multiple currencies in opportunities, forecasts, reports, quotes, and other currency fields. The administrator sets the “corporate currency,” which reflects the currency of the corporate headquarters. The administrator also maintains the list of active currencies and their conversion rates relative to the corporate currency. The active currencies represent the countries in which the organization does business. Only active currencies can be used in currency amount fields.

Each user has a personal currency, which is used as the default currency in quotas, forecasts ([depending on which forecasting version you use](#)), opportunities, quotes, and reports. Users can also create opportunities and enter amounts using other active currencies.

All standard and custom object records with currency fields have a field that specifies the currency to use for all amount fields in that record. (Click **Edit** to display this editable **Currency** field on a record.) For example, you can set the **Account Currency** to “USD-U.S. Dollars” so that the **Annual Revenue** shows in dollars for one of your American accounts. All currency amounts are displayed in the default currency of the record. Administrators can choose whether to also display, in parentheses, the user’s personal currency if it is different from the currency of the record. When you change the default currency of a record, currency amounts are not converted. They just display the new currency code.

 **Note:** If your organization uses [advanced currency management](#), the opportunity close date determines which conversion rate to use when displaying currency amounts.

Depending on the forecasting version you have, forecast currency amounts are converted to the user’s personal currency. Additionally, for managers, their team’s opportunities, forecasts, quotes, and other data are converted and rolled up to the manager’s personal currency. The manager can also drill down to see the data in the native currency. All conversion and roll-ups happen automatically.

Amounts in reports are shown in their original currencies, but can be displayed in any active currency. You can change the currency used for report totals by selecting a currency from **Show > Currencies**. The default value is your personal currency. For any amount, you can choose to display the **Converted** column—for example, **Annual Revenue Converted**—which shows amounts in the currency you select.

Custom formula fields are not tied to any particular currency. If the result of a formula field is a currency amount, it displays in the currency of the associated record. This rule is also true for cross-object formulas that reference merge fields with different currencies, and formulas in workflow rules and approval processes. However, workflow rules and approval processes that use filters instead of formulas convert all currency values to the corporate currency.

## Enable Multiple Currencies

To enable multiple currencies in your organization:

1. Familiarize yourself with the [implications of enabling multiple currencies](#).
2. In Setup, enter *Company Information* in the `Quick Find` box, then select **Company Information** and click **Edit**. Ensure that your selected currency locale is the default currency that you want to use for current and future records. Enable **Allow Support to Activate Multiple Currencies**, and then save your changes.

 **Note:** This setting is used to verify the specific organization that's approved for multi-currency activation. It doesn't submit a request to Salesforce. Submit the request via your normal support process.

3. To enable multiple currencies, contact Salesforce. Be prepared to provide the following information.

- The organization ID (production or sandbox)
- Confirmation that you understand that your current currency locale will become the default currency stamp for current and future records (USD, EUR, GBP, and so on)
- Confirmation that you understand that multiple currencies can't be disabled once enabled
- Confirmation that you're a system administrator authorized on behalf of your organization to request multi-currency enablement
- Confirmation that you consent to the lockout of this organization for a certain period, depending on your organization's data usage volume

 **Note:** For large organizations, multiple currencies are sometimes enabled over the weekend to avoid performance issues during the work week.

## Implications of Enabling Multiple Currencies

Enabling multiple currencies introduces permanent changes in your organization. Before proceeding, be aware of these implications to ensure a smooth transition for your organization.

- After enabled, multiple currencies can't be disabled for your organization.
- Work with your Salesforce representative to determine the best time for multi-currency enablement. The enablement process temporarily locks your organization, preventing any integration processing and user logins. The lockout duration depends on the data space used by your organization. This table shows the lockout durations and recommended times for enablement.

Used Data Space (excluding files)	Estimated Organization Lockout Duration	Recommended Time for Enablement
Less than 100 MB	Less than 2 minutes	Anytime
100 MB to 2 GB	Up to 1 hour	After 5 p.m. (local time)
Over 2 GB	Several hours	After 5 p.m. on Friday (local time)

- Upon enablement, all existing records are stamped with a default currency code that you provide in your enablement request. For example, if your organization contains records using USD and EUR, switch them all to the same default currency before enablement. Support for this type of conversion is also available as a Salesforce paid implementation service.
- Standard and custom objects, such as Account, Lead, Case, Opportunities, Opportunity Products, Opportunity Product Schedules, and Campaign Opportunities, have currency fields that support multiple currencies. Reports related to these objects and fields also support multiple currencies. By default, page layouts for these objects have multi-currency-compatible fields in which you can specify the currency for the record. Typically, these fields are available only when creating a record or editing an existing record. The selected currency is used for the primary amount field.
- After enablement, the primary currency displays as usual and, optionally, a secondary currency amount appears in parentheses. The primary currency is typically the default corporate currency, unless it's overridden at the record level. The amount shown in parentheses is the user's personal default currency, calculated based on the conversion rate settings defined in your organization. To control whether the converted currency amount appears, enable or disable parenthetical currency conversion from the Manage Currencies page.
- In reports, the primary currency reflects either the default corporate currency or the currency selected for the record. The secondary currency reflects the personal default currency of the user running the report, or the currency specified in the report criteria.
- Users can specify a personal default currency on their personal information page. If parenthetical currency conversion is enabled, the personal default currency displays as the secondary currency amount (converted amount). Changing the personal default currency updates the converted amount in real time.
- After a currency is added to an organization's list of supported currencies, it can't be deleted from the administrator's list of currencies, even when it's deactivated. The presence of inactive currencies in the administrator's list is a cosmetic issue that doesn't affect end users. A deactivated currency isn't visible to end users, but remains visible to administrators. Salesforce recommends that you keep this issue in mind during testing and use only those currencies that you eventually plan to use in your organization.
- After enablement, all currency fields display the ISO code of the currency before the amount. For example, \$100 displays as USD 100.

 **Note:** If you have only one currency in your multi-currency organization, you can set a preference to display currency symbols instead of ISO codes. To display currency symbols, search Setup for *User Interface*, and then select **Show currency**

### EDITIONS

Available in: Salesforce Classic

- Developer
- Database.com

**symbols instead of ISO codes** in the Currency Display Settings section of the User Interface settings page. If you later enable more currencies in your organization, ISO codes display and this preference is no longer available. This preference applies only in the standard Salesforce user interface.

- By default, all converted amounts in your organization rely on the current conversion rates defined for your organization. Conversion rates must be set and updated manually. Changing the exchange rate automatically updates converted amounts on all records, including on closed opportunities.

You can opt to use dated exchange rates by using [advanced currency management](#) to track historical exchange rates. Advanced currency management allows you to maintain a list of exchange rates by date range. Converted currency amounts on opportunities display based on the specified Close Date, regardless of the opportunity stage. If the Close Date changes to a different exchange rate period, changing the Close Date impacts converted amounts.

 **Note:** Dated exchange rates aren't used in forecasting, currency fields in other objects, or currency fields in other types of reports.

## Activating and Deactivating Currencies

Organizations that have enabled multiple currencies must specify which currencies are supported.

- **Active currencies**—These represent countries in which your organization does business. Only active currencies can be entered in opportunities, forecasts, and other items. Once you activate a currency, you can never permanently delete it.
- **Inactive currencies**—These are currencies that your organization no longer uses. You may have existing records that use inactive currencies, but you cannot enter new amounts in inactive currencies.

To activate new currencies:

1. From Setup, enter *Manage Currencies* in the **Quick Find** box, then select **Manage Currencies**.
2. Click **New** in the Active Currencies related list.
3. Select a currency. Currencies are alphabetized using their ISO currency code.
4. Enter the conversion rate relative to your corporate currency.
5. Specify the number of decimal places to show for amounts in this currency.
6. Click **Save**.

To activate a currency from the list of inactive currencies, click **Activate** next to the currency.

To deactivate a currency, click **Deactivate** next to the currency. Deactivating a currency does not alter amounts in items that use that currency. However, you can no longer enter new amounts using the inactive currency.

[About Advanced Currency Management](#)

[Administrator setup guide: Using Multiple Currencies](#)

## About Advanced Currency Management

Advanced currency management allows you to manage dated exchange rates within opportunities using Salesforce. Dated exchange rates allow you to map a conversion rate to a specific date range. For example, the exchange rate on January 1 was 1 USD to 1.39 AUD, but on February 1, it changed to 1 USD to 1.42 AUD. Your opportunities that closed between January 1 and February 1 use the first exchange rate (1 = 1.39), while opportunities that closed after February 1 used the second exchange rate (1 = 1.42).

Dated exchange rates are defined using a start date and a conversion rate. Each rate is in effect until either the end of time or the day before the next start date for that currency. The time between one start date and the next start date is called the exchange rate date range. These ranges can be as small as a day and as large as all of time.

To enable or disable advanced currency management, see [Enabling or Disabling Advanced Currency Management](#) on page 1860.

When advanced currency management is first enabled, your existing exchange rates automatically become the first set of dated exchange rates. These rates will be valid for all time, until you define another set of exchange rates. For more information, see [Editing Dated Exchange Rates](#) on page 1862.

If you disable advanced currency management, all currency conversions will use the static conversion rate. See [Edit Conversion Rates](#) on page 1861.

 **Note:** Although dated exchange rates aren't supported in Lightning Experience or Salesforce1, some limited functionality is available. Opportunities display the correct amount if the CloseDate field is on the page layout for opportunities. Because page layouts control who sees what on object records, only users who have this page layout assigned to them see the correct amount. Otherwise, the amount shown reflects the original amount before a dated exchange rate was applied.

## Advanced Currency Management Considerations

- Dated exchange rates are used for opportunities, opportunity products, opportunity product schedules, campaign opportunity fields, opportunity splits, and reports related to these objects and fields. Dated exchange rates are not used in forecasting, currency fields in other objects, or currency fields in other types of reports.
- Organizations with advanced currency management support roll-up summary fields between two advanced currency management objects. For example, roll-up summary fields are supported from an opportunity line object to its opportunity object, because both are advanced currency management enabled. However, if you enable advanced currency management, you can't create roll-up summary fields that calculate currency on the opportunity object rolling up to the account object, and you can't filter on the opportunity currency field on the account object. All existing currency-related roll-up summary fields on the opportunity object are

### EDITIONS

To change currencies:

- "Customize Application"

disabled and their values are no longer calculated. If your organization enables advanced currency management, you should delete any currency roll-up summary fields using opportunities and accounts or opportunities and custom objects.

- Campaign opportunity fields use dated exchange rates when calculating the amount in the campaign currency, but are not used when converting those amounts to the user currency.
- Cross-object formulas always use the static conversion rate for currency conversion.
- If advanced currency management is enabled, you can't bind Visualforce pages that use `<apex:inputField>` or `<apex:outputField>` components to currency fields that support advanced currency management.

## Enabling or Disabling Advanced Currency Management

To enable advanced currency management:

1. Enable multiple currencies for your organization. For more information, see [Manage Multiple Currencies](#) on page 1855.
2. From Setup, enter *Manage Currencies* in the Quick Find box, then select **Manage Currencies**.
3. Click **Enable**.
4. When prompted, select *Yes, I want to enable Advanced Currency Management* and click **Enable**.

When advanced currency management is first enabled, your existing exchange rates automatically become the first set of dated exchange rates. These rates will be valid for all time, until you define another set of exchange rates.

To disable advanced currency management:

1. From Setup, enter *Manage Currencies* in the Quick Find box, then select **Manage Currencies**.
2. Click **Disable**.
3. When prompted, select *Yes, I want to disable Advanced Currency Management* and click **Disable**.

If you disable advanced currency management, all currency conversions will use the static conversion rate. See [Edit Conversion Rates](#) on page 1861.

When advanced currency management is enabled, Visualforce `<apex:inputField>` and `<apex:outputField>` components cannot display currency fields.

- "Customize Application"

## Edit Conversion Rates

You can manage static exchange rates between your active and inactive currencies and the corporate currency by editing the conversion rates. These exchange rates apply to all currency fields used in your organization. In addition to these conversion rates, some organizations use dated exchange rates for opportunities and opportunity products.

1. Search Setup for Manage Currencies.
2. If you use advanced currency management, click **Manage Currencies**.
3. In the Active Currencies or Inactive Currencies list, click **Edit Rates**.
4. Enter the conversion rate between each currency and your corporate currency.
5. Click **Save**.

When you change the conversion rates, currency amounts are updated using the new rates. Previous conversion rates are not stored. All conversions within opportunities, forecasts, and other amounts use the current conversion rate.

If your organization uses advanced currency management, you can also manage dated exchange rates for currency fields on opportunities and opportunity products.

### Note:

- You cannot track revenue gain or loss based on currency fluctuations.
- Changing conversion rates causes a mass recalculation of roll-up summary fields. This recalculation can take up to 30 minutes, depending on the number of records affected.
- You can also change a conversion rate via the API. However, if another roll-up summary recalculation for the same currency field is in progress, the age of that job affects the recalculation job that you triggered. Here's what happens when you request a currency rate change via the API, and a related job is in progress.
  - If the other recalculation for the same currency field was kicked off less than 24 hours ago, your currency rate change isn't saved. You can try again later or instead change the currency rate from Manage Currencies in Setup. Initiating the change from Setup stops the old job and triggers your recalculation to run.
  - If the other recalculation job was kicked off more than 24 hours ago, you can save your currency rate change and your job starts.

To check the status of your recalculation job, see the Background Jobs page in Setup.

## Editing Dated Exchange Rates

To add new dated exchange rates:

1. From Setup, enter *Manage Currencies* in the Quick Find box, then select **Manage Currencies**.
2. Click **Manage Dated Exchange Rates**.
3. Click **New Exchange Rates**.
4. Enter the date that the exchange rates go into effect.
5. Enter the exchange rates.

 **Note:** The exchange rates will default to the current exchange rate. If you do not want to set a new exchange rate for a currency, delete the exchange rate (leave the field blank).

6. Click **Save** to save the new dated exchange rates.

To view existing dated exchange rates:

1. From Setup, enter *Manage Currencies* in the Quick Find box, then select **Manage Currencies**.
2. Click **Manage Dated Exchange Rates**.
3. Select the date range you want to view either by entering the date and clicking **Go!**, or by selecting **Previous Range** or **Next Range**.

To delete a dated exchange rate for a particular currency:

1. From Setup, enter *Manage Currencies* in the Quick Find box, then select **Manage Currencies**.
2. Click **Manage Dated Exchange Rates**.
3. Click the name of the currency you want to edit.
4. Click **Del** for the date range you want to delete.

If the date range you want is not displayed, enter it in the *Show all rates with start dates between* fields and click **Go!**.

To edit your dated exchange rates for a particular currency:

1. From Setup, enter *Manage Currencies* in the Quick Find box, then select **Manage Currencies**.
2. Click **Manage Dated Exchange Rates**.
3. Click the name of the currency you want to edit.
4. Click **Edit** for the date range you want to edit. If the date range you want is not displayed, enter it in the *Show all rates with start dates between* fields and click **Go!**.
5. Edit the exchange rate, setting it to the new value for the date range, and click **Save**.

# Customizing Options for Quotes

## Enabling Quotes

To enable Quotes for your organization:

1. From Setup, enter *Quotes Settings* in the *Quick Find* box, then select **Quotes Settings**.
2. Select *Enable Quotes*.
3. Click **Save**.
4. Select *Opportunity Layout* to display the Quotes related list on the standard opportunity page layout.
5. Optionally, select *Add to users' customized related lists* to add the Quotes related list to all opportunity page layouts users have customized.
6. Click **Save** to finish.

## Disabling Quotes

Select *Disable Quotes* to disable the feature for your organization.

 **Important:** You can't disable quotes if your records have any references to quotes, quote line items, or quote PDFs from any application customizations, including formula fields, triggers, workflow rules, and approval processes. You must remove these references before you can disable quotes. You can't disable quotes if you have any quotes synced with an opportunity. You must first stop syncing all quotes before you can disable the feature.

## Quote Templates Overview

Watch a Demo:  [Using Quote Templates](#) (1:42 minutes)

Use quote templates to design, preview, and activate custom templates for the quotes you send to your customers.

Choose standard and custom fields from Quote and quote-related objects, such as Account and Opportunity, and arrange the data in groups or tables. You can also add and format rich-text content such as signature blocks and terms and conditions, display your company logo or other images, and create repeating headers and footers.

Users select quote templates from their quote records, generate quote PDFs, and email them to their customers.

The quote templates feature looks and works a lot like the enhanced page layout editor, so if you're familiar with editing page layouts, you'll find the template editor just as easy to use.

### Important:

- If you create a Developer or Developer Pro sandbox for your organization, templates that contain `Text / Image` fields cannot be opened for editing within the sandbox.

SEE ALSO:

[Enabling Quotes](#)

[Quotes Overview](#)

## Creating Quote Templates

1. From Setup, enter `Templates` in the `Quick Find` box, then select **Templates** under Quotes.
2. Click **New** and select an existing template, such as `Standard Template`, on which to base your new template.
3. Give your new template a name.
4. On the template editor, drag the elements you want, and then fill in the details. If you want to add:
  - One or more Quote fields or fields from related objects, use a section and add fields to it.
  - Text that you can edit and format, such as terms and conditions, use `Text / Image Field`.
  - An image, such as your company logo, use `Text / Image Field`.
  - A table of Quote fields or fields from a different object, such as Quote Line Item, use a list.
5. Click **Quick Save** to save your changes and continue working on the template.
6. Click **Save and Preview** to preview your template.
7. Click **Save** when you're finished.
8. Return to the Quote Templates page and click `Activate`.

## Customizing Quote PDFs with Quote Templates

Use quote templates to design, preview, and activate custom templates for the quotes you send to your customers.

#### **Note:**

- Text fields can't be used on quote templates if the default value for the field exceeds 255 characters.
- Quote PDFs do not support right-to-left languages. The text aligns to the left side of the page instead of the right.

#### Navigating the Quote Templates Editor

The template editor has two parts: a palette at the top and a template layout below.

The palette contains the elements you can add to the layout, including list and section, and fields that you can add to sections.

- Click  beneath the palette to expand or collapse it.
- In the left column, select an object to display its fields on the palette.
- Use **Quick Find** to easily locate items on the palette.

#### Working with the Quote Templates Editor

- To add an element to the template, drag it from the palette to the layout. Use a section to add and arrange fields from the quote object. Use a list to create a table with fields from another object, such as quote line item. The **Text/Image Field** lets you enter text or upload an image, such as your company logo.
- Press CTRL+click to select multiple fields and SHIFT+click to select a range.
- To remove an element from the layout, drag it back to the palette, or hover over its title bar and click .
- When you drag a section, select **Hide Title** if you don't want the section's title to appear on the template or the PDF.
- For any section, (including a header or footer), you can change the number of columns, adjust field alignment, and hide or show field labels. Click  and make the changes you want.
- To step backward or forward, click **Undo** and **Redo**.
- To change the properties of any component on the layout, double-click its title bar or click .
- To rename the template, click **Quote Template Properties**.
- To preview your template, click **Save and Preview**.
- To save your changes and continue editing the template, click **Quick Save**.

#### EDITIONS

#### USER PERMISSIONS

To create quote templates:

- "Customize Application"

To view quote templates:

- "View Setup and Configuration"

- To save your changes when you're finished editing the template, click **Save**. Don't navigate away from the template before clicking **Save** or you'll lose your changes.

## SEE ALSO:

[Quote Templates Overview](#)

[Creating Quote Templates](#)

## Viewing and Editing Quote Templates

- From Setup, enter *Templates* in the **Quick Find** box, then select **Templates** under Quotes.
- Click **Edit** next to the template you want.
- If you need to edit the template name, click **Quote Template Properties** and enter the new name in the **Template Name** field. Click **OK**.

 **Note:** You can't rename a quote template if you're using Salesforce Professional Edition.

- You can:
  - Add or edit sections (for fields), text, images, and lists as needed.
  - Redesign the template header or footer.
  - Change, hide, or show the title of a section, list, header, or footer after it's in place by clicking . Edit the title and select or deselect **Hide Title**.
  - Hide field labels in sections and the header and footer.
  - Change the number of columns (one or two) in sections.
  - Change field alignment (left or right) in sections.
- Click **Save** when you're finished.

Alternately, you can save your changes in a copy of the original template by clicking **Save As**.

 **Note:** The **Save As** option isn't available in Salesforce Professional Edition. To make a copy of a template in Professional Edition, click **New** on the Quote Templates page then select the existing template that you want to duplicate.

## Adding Fields to Quote Templates

Customize your quote templates by adding fields to the header, footer, or body.

On your quote template, you can display standard and custom fields from the quote object and these related objects: account, contact, opportunity, organization, and user. Use a **Text/Image Field** to display a graphic, such as your company logo, or text that can be formatted, such as a signature block. To add fields to a header or footer, just drag them into place. To add fields to the body of your template, drag a section component first.

### Note:

- Quote templates can't include text areas if the default value for the field exceeds 255 characters.
- In some cases, a field may not appear on the quote templates palette or on a PDF created from a template.
  - Text fields can't be used on quote templates if the default value for the field exceeds 255 characters.
  - If a user is unable to view or update a field because of field-level security settings, that field won't appear on PDFs created from a template, even if the template includes that field. Read-only fields will appear on PDFs.
  - A field that appears on a quote page layout but does not have a value for a given quote will appear on the quote templates palette, but won't appear on PDFs created from that quote.
  - Quote line item fields that don't contain data won't appear as columns in a list when a PDF is created, even if the template includes that field. For example, if no quote line items offer a discount, the `Discount` column won't appear, even if the list includes the `Discount` field.
  - If a related list is not included on a quote page layout, it won't appear on the template palette or any PDFs for quotes that use that page layout.

### Adding Fields to Headers and Footers

1. If you need to change the number of columns in your header or footer, click  and select the number (one or two) that you want.
2. Drag the fields you want into the header or footer. Press CTRL+click to select multiple fields and SHIFT+click to select a range.
3. If you want to add rich text or an image, drag the **Text/Image Field**.
4. If you need to change field alignment within a column, click  and select left or right alignment.
5. If you want to hide field labels, click  and select the **Hide** checkbox.
6. Use the **Blank Space** field to add vertical space anywhere on the template.

### Adding Fields to the Template Body

1. Drag a section component from the palette to the template.
2. Enter a title for the section. Select **Hide Title** if you don't want the title to appear on the template or PDF. Click **OK**.
3. Select an object from the palette to display its fields.
4. Drag the fields you want into the section. Press CTRL+click to select multiple fields and SHIFT+click to select a range.
5. If you want to add rich text or an image, drag the **Text/Image Field**.

[Using Headers and Footers on Quote Templates](#)

## Adding Lists to Quote Templates

Use lists in your quote template to arrange and display fields from quote line item or any other standard or custom object that has a lookup relationship to the quote object. A list looks like a table, with field names appearing as columns. You can add lists to the body of your quote template but not to the header or footer.

-  **Note:** In some cases, a field may not appear on the quote templates palette or on a PDF created from a template.
- Text fields can't be used on quote templates if the default value for the field exceeds 255 characters.
  - If a user is unable to view or update a field because of field-level security settings, that field won't appear on PDFs created from a template, even if the template includes that field. Read-only fields will appear on PDFs.
  - A field that appears on a quote page layout but does not have a value for a given quote will appear on the quote templates palette, but won't appear on PDFs created from that quote.
  - Quote line item fields that don't contain data won't appear as columns in a list when a PDF is created, even if the template includes that field. For example, if no quote line items offer a discount, the `Discount` column won't appear, even if the list includes the `Discount` field.
  - If a related list is not included on a quote page layout, it won't appear on the template palette or any PDFs for quotes that use that page layout.

1. Drag a list from the palette to the template.
2. Enter a title for the list. Select **Hide Title** if you don't want the title to appear on the template or PDF.
3. In the `Object` field, select the object whose fields you want to appear in the list.
4. Use the **Add** and **Remove** arrows to move columns from the Available Fields list to the Selected Fields list. Use the **Up** and **Down** arrows to change the order of the columns. A list can include up to 10 fields.
5. Click **OK**.

To view quote templates:

- "View Setup and Configuration"

## Adding Rich Text to Quote Templates

Use the quote templates text/image field to add text you can format, such as your organization's address or terms and conditions. You can also insert images, like your company logo. You can use text/image fields in the body of your template, and also in the header and footer.

### Rich Text Restrictions

Text formatting is not available in the `Text/Image Field` for Unicode languages such as Arabic and Japanese. To make these languages visible in plain text, contact Salesforce and ask to enable the feature for foreign character support for rich text area fields in Quote PDFs.

The maximum number of characters you can use in the quote templates `Text/Image Field` is 32,000, which includes the hidden HTML characters used to format text.

Text fields can't be used on quote templates if the default value for the field exceeds 255 characters.

1. Drag a `Text/Image Field` into place in the header, the footer, or any section in the body.
2. Type or paste your text into the field, then format it however you like.
3. Click **OK**.

**Tip:** Use a text/image field to create a [signature block](#).

## Adding Images to Quote Templates

Use the quote templates text/image field to insert images, like your company logo. You can use text/image fields in the body of your template, and also in the header and footer.

You can store images for uploading in either your own file system or in Salesforce CRM Content.

If you store images on the Documents tab or the Static Resources page, you'll get a Web address you can use to insert the image.

**Note:** If you need to insert an image from a *public* Web address outside the Salesforce application (such as your company's website), contact Salesforce and ask to have the public URL whitelisted for your organization.

### Image Size Considerations

If you insert an image that's too large, it will be cropped when users create quote PDFs from the template. To prevent cropping, click **Save and Preview** after you insert an image, then resize the image if you need to.

### Inserting an Uploaded Image

1. If you want to use an image stored in Salesforce CRM Content, locate the image and download it to your local file directory.
2. Drag a `Text/Image Field` into place in the header, the footer, or any section in the body.
3. Select **Hide Title** if you don't want the title to appear on the template or PDF.
4. Click the image icon, then click **Browse...** and locate the image in your file directory.
5. Click **Open** and the image appears in the field. You can resize it by dragging the sizing handles, which show the image's height and width in pixels.

6. Click **OK**.
7. Click **Save and Preview** to see how the image will look in PDFs created from the template.

### Inserting an Image from a Salesforce Web Address

1. If you need to, upload the image to the Documents tab or define a static resource.
2. Drag a `Text/Image Field` into place in the header, the footer, or any section in the body.
3. Select **Hide Title** if you don't want the title to appear on the template or PDF. Click **OK**.
4. On the Documents tab or the Static Resources page, open the image's detail page, click **View File**, and copy its URL.
5. Return to the quote template editor and click  in the title bar of the text/image field.
6. Click the image icon, then click the Web Address tab.
7. Paste the URL into the **URL** field, then click **Insert**. The image appears in the field. You can resize it by dragging the sizing handles, which show the image's height and width in pixels.
8. Click **OK**.
9. Click **Save and Preview** to see how the image will look in PDFs created from the template.

 **Important:** If the image is removed from the Documents tab or Static Resources page, where it is stored, the template displays a message that the image is not available. Restore the image, then open the template, delete the error message image, and repaste the URL.

[Using Headers and Footers on Quote Templates](#)

## Using Headers and Footers on Quote Templates

Use headers and footers to show standard, repeating information on your quote template, such as your company logo, your company address, the date the quote was created, or the quote number. Headers and footers can span the width of the template or be divided into two equal columns.

A header or footer is essentially a section: you can add fields to it and show or hide its title. You can't remove a header or footer or add more sections to it.

-  **Note:** In some cases, a field may not appear on the quote templates palette or on a PDF created from a template.
- Text fields can't be used on quote templates if the default value for the field exceeds 255 characters.
  - If a user is unable to view or update a field because of field-level security settings, that field won't appear on PDFs created from a template, even if the template includes that field. Read-only fields will appear on PDFs.
  - A field that appears on a quote page layout but does not have a value for a given quote will appear on the quote templates palette, but won't appear on PDFs created from that quote.
  - Quote line item fields that don't contain data won't appear as columns in a list when a PDF is created, even if the template includes that field. For example, if no quote line items

### EDITIONS

offer a discount, the `Discount` column won't appear, even if the list includes the `Discount` field.

- If a related list is not included on a quote page layout, it won't appear on the template palette or any PDFs for quotes that use that page layout.

1. If you need to change the number of columns in your header or footer, click  and select the number (one or two) that you want.

**Tip:** To display an image that spans the width of a page, use a one-column header or footer. For terms and conditions text, use a one-column footer.

2. Select an object and drag the fields you want into the header or footer. Press CTRL+click to select multiple fields and SHIFT+click to select a range.

If you want to use an image, such as your company logo, or include extended information, such as terms and conditions, use a `Text/Image Field`.

3. If you need to change field alignment within a column, click  and select left or right alignment.
4. If you want to hide field labels, click  and select the `Hide` checkbox.
5. Select **Hide Title** if you don't want the title to appear on the template or PDF.
6. Click **OK**.

## Previewing Quote Templates

Preview your quote templates to make sure the quote PDFs users create will look the way you want them to.

**Note:** Preview shows templates in system administrator profile view. The preview and the template show any rich text and images you've added. Other data is simulated.

Text fields displayed in a related list in a quote PDF are truncated to less than 256 characters. This limitation occurs on rich text area fields, other types of text fields, standard fields, and custom fields.

1. Open the template you want to preview. Edit the template if you need to.
2. Click **Save and Preview**.

**Important:** **Save and Preview** saves changes to your template, so after you preview, you can't undo them.

3. In the Template Preview overlay, verify that the content and layout are correct.
4. Click **Close**.

## Tips for Using Quote Templates

Enhance your quotes by mastering quote templates.

### Understanding Template Field Names

To help you understand the information you'll get when you select fields for your template, some field names provide additional information that does not appear on PDFs created from the template.

Object	Object Field	Template Field Name	PDF Field Name
User	First Name, Last Name	Prepared By (Name)	Prepared By
User	Email	Prepared By (Email)	E-mail
User	Phone	Prepared By (Phone)	Phone
User	Fax	Prepared By (Fax)	Fax
Company Information	Address	Organization (Address)	Company Address
Quote Documents	Hidden. The date the PDF was generated and saved in the quote documents object.	Quote PDF (Created Date)	Created Date

### EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To create quote templates:

- "Customize Application"

To view quote templates:

- "View Setup and Configuration"

### Creating a Totals Section

Use a totals section to show grand total amounts for your quote.

1. Create the section. You have a couple of options.

- Select *Standard Template* when you create a new template. The standard template contains a totals section, and you can modify it as you wish.
- Drag a section onto the layout of any template, then drag total-related fields (such as `Subtotal` and `Grand Total`) to the right half of the section. Hide the title if you are placing the section directly beneath a list.

2. Click  and select right field alignment.

 **Note:** Fields within sections have different alignment than columns within lists, so if you place your totals section beneath a list, its field values will not line up beneath the rightmost list values.

For example, your template might include a list of quote line items, including a `Total Price` column at the far right that shows the total for each line item. If you add a totals section beneath the list, and include `Subtotal`, `Total Price`, and `Grand Total` fields, their values will show the total of all line items, but the amounts will not line up beneath the list's `Total Price` column.

### Creating a Signature Block

Use a signature block to create signature and date lines so your customers can sign off on their quotes.

1. Drag a `Text/Image Field` into the footer of your template. Use two columns for the footer if you want to right-align your signature block or create two.
2. Enter a label for each line you want to create. For example:
  - Signature
  - Name
  - Title
  - Date
3. Use the underscore key to create a line after each label.
4. Click **OK**.

### Hiding Field Labels

You can show field content without labels in quote template sections, headers, and footers. Just click  and select the `Hide` checkbox. Field names appear in gray on the quote template editor, but they don't appear on quote PDFs. Click **Save and Preview** to see how PDFs will look.

### Sandbox Restrictions for Quote Templates

If you create a Developer or Developer Pro sandbox for your organization, templates that contain `Text/Image` fields cannot be opened for editing within the sandbox.

# Customizing Options for Contracts

## Customizing Contract Settings

Customize Salesforce to handle your internal contract management process. To access the contract settings page, from Setup, enter *Contract Settings* in the Quick Find box, then select **Contract Settings**. You can perform the following tasks in the Contract Settings page.

### Enabling Contract Expiration Notices

Set an option to automatically send email notifications to account and contract owners when a contract expires. To activate these expiration notices:

1. Select the `Send contract expiration notice emails...` option.
2. Click **Save**.

Remove the check on this option and click **Save** to stop sending expiration notices.

### Disabling Auto-Calculation of Contract End Dates

Your contracts may not have end dates or you may prefer to have users enter them manually. If so, disable auto-calculation of contract end dates:

1. Remove the check in the `Auto-calculate Contract End Date` option.
2. Click **Save**.
3. View your page layout and field-level security settings for `Contract End Date`, `Contract Start Date`, and `Contract Term` to ensure your users can read or edit them as needed.
  - To enable auto-calculation, check this option and click **Save**. If Salesforce auto-calculates `Contract End Date`, it does not display on the contracts edit page.

 **Note:** If **Auto-calculate Contract End Date** is enabled but `Contract Start Date` or `Contract Term` is empty, `Contract End Date` will be blank.

### Tracking History for all Statuses

The default is to track history for contracts with a status of either **In Approval Process** or **Activated**. To track history for contracts for all statuses:

1. Select the `Track history for all statuses` option.
2. Click **Save**.

# Customizing Options for Orders

## Customizing Order Settings

Customize Salesforce to handle your internal order management process.

Specify the following order settings from the Order Settings page in Setup.

### IN THIS SECTION:

#### [Enable Orders](#)

To let your users track and manage customer requests for products or services, enable orders for your organization.

#### [Enable Reduction Orders](#)

To let your users process returns or reductions on orders that have been activated, enable reduction orders for your organization.

#### [Enable Negative Quantities for Order Products](#)

To let your users add order products with quantities of less than zero, enable negative quantities for your organization.

### SEE ALSO:

[Orders Overview](#)

## Enable Orders

To let your users track and manage customer requests for products or services, enable orders for your organization.

1. From Setup, enter *Order Settings* in the Quick Find box, then select **Order Settings**.
2. Select **Enable Orders** if it isn't already selected.
3. Click **Save**.
4. Select which page layouts should have an Orders related list, and save.
5. Use profiles or permission sets to assign user and object permissions to the appropriate users.

If you later disable orders, all of your existing order-related data will be hidden from view. If for some reason you need to access that data again, you can re-enable orders to view it.

### SEE ALSO:

## Enable Reduction Orders

To let your users process returns or reductions on orders that have been activated, enable reduction orders for your organization.

Before you can enable this setting, orders must be enabled for your organization.

1. From Setup, enter *Order Settings* in the Quick Find box, then select **Order Settings**.
2. Select **Enable Orders** if it isn't already selected.
3. Select **Enable Reduction Orders**.
4. Click **Save**.
5. Using a profile or permission set, assign the necessary permissions to the appropriate users.

To create reduction orders, users need the "Create Reduction Orders" user permission. To add order products to reduction orders, users need field-level access to these order product fields: *Start Date*, *End Date*, and *Original Order Product*.

Consider adding the Reduction Order Products related list to your page layouts for order products.

If this setting is later disabled, the "Create Reduction Orders" permission is hidden from all profiles or permission sets but no data is hidden from view. Users won't be able to create or activate reduction orders, but they will still be able to view and edit existing ones. If you disable reduction orders, also disable any record types or page layouts specific to reduction orders. If you weren't using record types, remove fields specific to reduction orders from your page layouts. These include *Original Order* and *Reduction Order* on the Order object and *Original Order Product* and *Available Quantity* on the Order Product object, as well as any custom fields.

### SEE ALSO:

[Permission Sets](#)

## Enable Negative Quantities for Order Products

To let your users add order products with quantities of less than zero, enable negative quantities for your organization.

Before you can enable this setting, orders must be enabled for your organization.

1. From Setup, enter *Order Settings* in the Quick Find box, then select **Order Settings**.
2. Select **Enable Orders** if it isn't already selected.
3. Select **Enable Negative Quantity**.
4. Click **Save**.

## Configuring Collaborative Forecasts

### Forecasts Setup Overview

#### USER PERMISSIONS

To view Forecast Setup:	"View Setup and Configuration"
To edit Forecast Settings:	"Customize Application"
To enable Forecasts users:	"Manage Internal Users" AND "Customize Application"
To manage quotas:	"Customize Application" AND "Manage Quotas"
To upload quota data to Salesforce:	"Manage Quotas" AND "View All Forecasts"

#### EDITIONS

Available in: Salesforce Classic

Available in: **Professional** (no Opportunity Splits or Custom Field forecasts), **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

When you set up Collaborative Forecasts, you enable forecast users, define your forecast hierarchy, choose one or more forecast types, and specify other forecast settings.

#### Important:

- This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).
- For Forecasts features to function correctly, don't disable the new user interface theme for your organization. Additionally, [Territory Management](#) and custom fiscal years must not be enabled.
- For best viewing results, keep the `Tab Bar Organizer` enabled when using Collaborative Forecasts.

If your organization is migrating to Collaborative Forecasts, see [Planning Your Migration from Customizable Forecasting to Collaborative Forecasts](#) on page 1429. To set up the forecasts feature, you need to:

- [Enable users](#) who need to use forecasts.
- [Set up your forecasts hierarchy](#) to determine how forecasts roll up within your organization and who can view and adjust them. To do this, from Setup, enter `Forecasts Hierarchy` in the `Quick Find` box, then select **Forecasts Hierarchy**. The forecast hierarchy is based entirely on the role hierarchy, but also specifies which users are forecast managers.

- [Enable one or more forecast types](#). You can have up to 4 forecast types in your organization.
- Select the fields that appear in the opportunity pane for each forecast type.
- [Enable quotas](#) to make this functionality available in your organization.
- [Enable forecasts adjustments](#) for your organization and for specific user profiles to make this functionality available in your organization.
- [Choose whether to use individual forecast category rollups](#) on page 1889 or [enable cumulative forecast rollups](#).
- [Define your forecast range](#). You can select the period and default range for your organization.
- [Customize your forecast categories](#) if your organization uses specific terminology.
- Set a [forecast currency](#) if your organization uses multiple currencies. You can select either your organization's corporate currency or the forecast owner's personal currency.
- Make sure the Forecasts tab is visible to forecasting users.

## SEE ALSO:

[Collaborative Forecasts Overview](#)

[Define Forecasts Settings](#)

[Disable Collaborative Forecasts Functionality](#)

## Define Forecasts Settings

### USER PERMISSIONS

To view Forecast Setup:	"View Setup and Configuration"
To edit Forecast Settings:	"Customize Application"
To enable Forecasts users:	"Manage Internal Users" AND "Customize Application"
To manage quotas:	"Customize Application" AND "Manage Quotas"
To upload quota data to Salesforce:	"Manage Quotas" AND "View All Forecasts"

### EDITIONS

Available in: Salesforce Classic

Available in: **Professional** (no Opportunity Splits or Custom Field forecasts), **Enterprise, Performance, Unlimited, and Developer** Editions

Choose the types of forecasts you want in your organization and the details that appear on the Forecasts tab so your sales reps can see the revenue and quantity projections from their sales pipeline.

### Important:

- This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).
- For Forecasts features to function correctly, don't disable the new user interface theme for your organization. Additionally, [Territory Management](#) and custom fiscal years must not be enabled.
- For best viewing results, keep the `Tab Bar Organizer` enabled when using Collaborative Forecasts.

If you're an existing organization using [Customizable Forecasts](#) and want to use Collaborative Forecasts, contact your Salesforce representative.

Additionally, Salesforce recommends that you review the documentation prior to setting up Collaborative Forecasts. If you later change certain settings, you can lose some data.

For a more detailed step-by-step explanation of setting up Collaborative Forecasts and why you'd want to enable certain functionality, see the [Forecasts Administrator's Workbook](#).

1. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**. If forecasts is not already enabled, select **Enable Forecasts**.
2. If your organization does not yet have any forecast types enabled, click **Add a Forecast Type**. If you want to enable an additional forecast type, click **Add another forecast type**.
3. [Select the forecast type](#) that you want to add. Depending on your organization's other configurations, you can choose Opportunities, Opportunity Splits, Overlay Splits, Product Families, or a custom opportunity currency field.
4. Select the forecast measurement you want to use—Revenue or Quantity. If you want forecasts for both, add separate forecast types for each.  
Not every forecast type supports both measurements. For example, Opportunity Splits forecasts only work with revenue.
5. [Select the fields that appear in the opportunity pane](#) of a forecast page.  
You can choose a different set of fields for each forecast type.
6. Click **OK**.
7. Optionally, [enable forecasts adjustments](#) for your organization and for specific users.\*
8. Optionally, [enable cumulative forecast rollups](#).
9. Under Configure the Default Forecast Display, select a Forecast Period, either monthly or quarterly.\*
10. Under Configure the Default Forecast Display, use the drop-down lists to select a beginning period and the number of periods you want to display.
11. If you need to, customize your [Forecast Categories](#).
12. If your organization uses multiple currencies, select the [currency](#) in which your users will forecast.
13. Optionally, [enable quotas](#) for your organization.
14. Click **Save**.

Now you can [enable users](#) who need to use forecasts and [set up your forecasts hierarchy](#) to determine how forecasts roll up within your organization, and who can view and adjust them.

\* You can return to the Forecasts Settings page to make changes. However, making changes can affect your data.

- If you disable adjustments, adjustment data is purged.
- If you change your forecast period, both quota and adjustment data is purged.
- If you change your data source settings, both quota and adjustment data is purged.
- If you disable either revenue or quantity forecasts, both quota and adjustment data is purged.

[Forecasts Setup Overview](#)

[Disable Collaborative Forecasts Functionality](#)

## Enabling Users for Forecasts

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

1. From Setup, enter *Users* in the *Quick Find* box, then select **Users**.
2. For each user you want to enable, click **Edit**.
3. Under General Information, select *Allow Forecasting*.
4. Click **Save**.

Enabled users are available in the forecasts hierarchy.

You can also enable additional users or disable users you've already enabled when you configure your forecast hierarchy.

SEE ALSO:

- [Collaborative Forecasts Overview](#)
- [Enable Partner Portal Users to Add Collaborative Forecasts Opportunities](#)
- [Forecasts Setup Overview](#)

## Enable Partner Portal Users to Add Collaborative Forecasts Opportunities

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

Before beginning, make sure that you've:

- Enabled partner portals for your organization and created a partner portal.
- Created a partner profile and assigned it to your partner portal.
- Enabled an account as a partner and enabled partner portal login for a contact of that account.

If your organization works with partners, you can include the figures from partner user opportunities in users' forecasts. Follow these steps to add partner portal users to the forecast hierarchy.

1. From Setup, enter *Users* in the *Quick Find* box, then select **Users** and select the partner portal contact you created.
2. Make sure that the *Active* and *Allow Forecasting* checkboxes are selected.
3. Enable the partner portal user in the forecast hierarchy and make sure the person is assigned to an active forecast manager.

Opportunities that a partner portal user creates can roll up to the forecast of the account owner; note that the account owner must be the person's forecast manager in the forecast hierarchy for the opportunities to roll up into the forecast. For example, say Gordon Johnson:

- Owns a partner account called Acme
- Has an Acme contact named Anne Smith
- Anne is a partner portal user
- Anne reports to Gordon in the forecasts hierarchy

### EDITIONS

Available in: Salesforce Classic

Available in: **Professional** (no Opportunity Splits or Custom Field forecasts), **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

### USER PERMISSIONS

To enable Forecasts users:

- "Manage Users"
- AND
- "Customize Application"

### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To enable Forecasts users:

- "Manage Internal Users"
- AND
- "Customize Application"

To assign partner profiles to partner portals:

- "Customize Application"

If Anne adds opportunities in her portal, Gordon sees those opportunities in his forecast; because Gordon is Anne's forecast manager, Gordon can adjust forecast amounts based on her opportunities and see how she's tracking against her quota. However, it's important to note that partner portal users don't have access to the Collaborative Forecasts tab or any of its functionality.

[Collaborative Forecasts Overview](#)

[Forecasts Setup Overview](#)

## Set Up Your Forecast Hierarchy

Your forecast hierarchy lists all forecast users and determines how their forecasts roll up through your organization. Keep your forecast hierarchy up-to-date to ensure that forecast managers see all subordinates' forecast amounts.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

When you assign a user as a forecast manager, all forecasts and adjustments from the manager's subordinates in the hierarchy roll up into his or her forecasts. It's important to always assign a forecast manager to the top level of the forecast hierarchy.

1. From Setup, enter *Forecasts Hierarchy* in the *Quick Find* box, then select **Forecasts Hierarchy**. Click **Expand All** to see the roles available in your organization.
2. Click **Enable Users** and click **Add** and **Remove** to move users between the Available Users list and the Enabled Users list. If you previously enabled a user from Setup by entering *Users* in the *Quick Find* box, then selecting **Users** and editing a user page to allow forecasting, the name already appears in the Enabled Users list.
3. If you need to select a forecast manager for each manager role in the hierarchy, click **Edit Manager** next to the role, then select a name from the *Forecast Manager* drop-down list.
4. Click **Save**.

 **Note:** Be sure each sales manager with subordinates is designated as a forecast manager in your forecast hierarchy. This ensures that the forecast visibility rolls up to every level of the hierarchy.

If you want users to be able to adjust forecasts, [enable adjustments](#) on page 1888 next.

Organizations with API access can upload quotas for Collaborative Forecasts users and display them alongside users' forecast amounts. To simply enable quotas for your organization, API access is not needed.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

A quota is the sales goal assigned to a user on a monthly or quarterly basis. A manager's quota equals the amount the manager and team are expected to generate together. The quota rollup is done manually by users and managers, and either revenue or quantity data can be used. If your organization has more than one type of forecast enabled, each forecast type maintains its own separate quota information. Follow these steps to enable quotas for Collaborative Forecasts in your organization.

1. From Setup, enter *Forecasts Settings* in the *Quick Find* box, then select **Forecasts Settings**.
2. Under Quotas, select *Show Quotas*.
3. Click **Save**.

 **Note:** If you disable Collaborative Forecasts, quotas are also disabled. Additionally, when you change your data source or disable revenue or quantity forecasts, related quotas are purged.

Available in: **Professional** Edition with the "API Enabled" permission

Load quota data for forecasts with the Data Loader or the API.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

To upload quotas for users in your organization, you can use either the Data Loader application or the Salesforce APIs. The Data Loader provides a simple point-and-click method for adding, inspecting, and editing data in your organization. The APIs provide additional flexibility but require you to write code. To use either method, your organization must have API access enabled. See [Data Loader](#) on page 632 for more details about Data Loader.

### Add Quotas with the Data Loader

Before you upload quotas, consider which version of the Data Loader you are using. For Data Loader v.30 and later, you'll need to specify the forecast type of each quota you plan to upload.

#### If you are using Data Loader v.30 or later:

1. Query the User object to get the IDs of your users.
2. Make note of the names and IDs of the users for whom you want to upload quotas.
3. Query the ForecastingType object to get the IDs of your forecast types.
4. Make note of the IDs of the forecast types your organization is using.

#### If you are using Data Loader v.29 or earlier:

1. Query the User object for your users' IDs.
2. Make note of the names and IDs of the users for whom you want to upload quotas.
3. Prepare a .csv file with user names, IDs, and quotas (either amount or quantity), and the start date of each quota's forecast period. If you use both revenue and quantity forecasts, specify the quotas for each on separate rows of your .csv file.
4. Upload your quotas .csv file using the Data Loader.

**If you are using Data Loader v.30 or later:****If you are using Data Loader v.29 or earlier:**

---

5. Prepare a .csv file with user names, user IDs, forecasting type names, Forecasting Type IDs, quotas (either amount or quantity), and the start date of each quota's forecast period.

---

6. Upload your quotas .csv file using the Data Loader.

---

**1.** Query the User object for your users' IDs.

Use the Data Loader to retrieve your users' IDs.

**a.** From Setup, enter *Data Loader* in the *Quick Find* box, then select **Data Loader**.

**b.** Download and install the Data Loader application.

**c.** Launch the Data Loader.

**d.** Click **Export**.

**e.** Enter your user name and password and click **Log in**.

**f.** Click **Next**.

**g.** Select the User object from the list.

**h.** Choose a file name and destination for the exported data.

**i.** Click **Next**.

**j.** Select the *Id* and *Name* fields.

**k.** Click **Finish** and then click **Yes**.

**l.** Click **View Extraction**.

**m.** Click **Open in external program**.

**n.** Save the file in the .csv format. You'll add user names and IDs to your quotas spreadsheet before uploading it.

**2.** If you are using Data Loader v.30 or later, query the ForecastingType object to get the IDs of your forecast types.

**a.** If you haven't already, from Setup, enter *Data Loader* in the *Quick Find* box, then select **Data Loader**, then download and install the Data Loader application.

**b.** Launch the Data Loader.

**c.** Click **Export**.

**d.** Enter your user name and password and click **Log in**.

**e.** Click **Next**.

**f.** Click **Show all Salesforce objects**.

**g.** Select the Forecasting Type object from the list.

**h.** Choose a file name and destination for the exported data.

**i.** Click **Next**.

**j.** Select the *Id* and *DeveloperName* fields.

**k.** Click **Finish** and then click **Yes**.

**l.** Click **View Extraction**.

m. Click **Open in external program**.

n. Save the file in the .csv format.

o. Note the `DeveloperName` and `Id` values for each of your active forecast types. Your organization may not be using all of the forecast types that appear in the results. See the list below if you're not sure which forecast type a specific `DeveloperName` refers to.

- `OpportunityRevenue` : Opportunities - Revenue
- `OpportunityQuantity` : Opportunities - Quantity
- `OpportunitySplitRevenue` : Opportunity Revenue Splits - Revenue
- `OpportunityOverlayRevenue` : Opportunity Overlay Splits - Revenue
- `OpportunityLineItemRevenue` : Product Families - Revenue
- `OpportunityLineItemQuantity` : Product Families - Quantity
- The name of a custom opportunity split type that has been enabled as a forecast type. Custom split types are based on currency fields, which can only contain revenue amounts.

p. Add columns for `DeveloperName` and `Id` to your quota spreadsheet and add the name and ID of the forecast type of your quotas to each row. The name is not necessary for uploading quotas, but will help you know which forecast type you are working with in each row.

3. Prepare your quota spreadsheet for upload.

- If you are using Data Loader v.30 or later, create a .csv file with columns for User Name, User ID, Forecast Type Name, Forecast Type ID, Quota Amount, Quota Quantity, Currency Code, and forecast period Start Date [YYYY-MM-DD].
- If you are using Data Loader v.29 or earlier, create a .csv file with columns for User Name, User ID, Quota Amount, Quota Quantity, Currency Code, and forecast period Start Date [YYYY-MM-DD]. If you use both revenue and quantity forecasts, specify the quotas for them on separate rows of your .csv file.

You don't actually need the User Name or Forecast Type Name columns, but including them makes it much easier for you to understand the contents of your .csv file.

User Name	User ID	Forecast Type Name (for Data Loader v.30 or later)	Forecast Type ID (for Data Loader v.30 or later)	Quota Amount	Quota Quantity	Currency Code	Start Date
Kevin Bailey	00599000000Hofh	OpportunityRevenue	0DbD00000001eQBKAY	250000		USD	2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityRevenue	0DbD00000001eQBKAY	250000		USD	2012-04-01
Kevin Bailey	00599000000Hofh	OpportunityRevenue	0DbD00000001eQBKAY	250000		USD	2012-05-01
Kevin Bailey	00599000000Hofh	OpportunityQuantity	0DbD00000001eQAKAY		500		2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityQuantity	0DbD00000001eQAKAY		500		2012-04-01
Kevin Bailey	00599000000Hofh	OpportunityQuantity	0DbD00000001eQAKAY		500		2012-05-01

If your forecast `Data Source` is product families, include a column for Product Family as well.

User Name	User ID	Forecast Type Name (for Data Loader v.30 or later)	Forecast Type ID (for Data Loader v.30 or later)	Product Family	Quota Amount	Quota Quantity	Currency Code	Start Date
Kevin Bailey	00599000000Hofh	OpportunityLineItemRevenue	0DbD00000001eQ9KAI	Hardware	250000		USD	2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityLineItemRevenue	0DbD00000001eQ9KAI	Software	150000		USD	2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityLineItemRevenue	0DbD00000001eQ9KAI	Services	50000		USD	2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityLineItemQuantity	0DbD00000001eQ8KAI	Hardware		500		2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityLineItemQuantity	0DbD00000001eQ8KAI	Software		300		2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityLineItemQuantity	0DbD00000001eQ8KAI	Services		100		2012-03-01

4. Use the Data Loader to upload your quota information to Salesforce.
  - a. If you haven't already, launch the Data Loader.
  - b. Click **Insert**.
  - c. Log in with your user name and password.
  - d. Click **Next**.
  - e. Click **Show All Salesforce Objects**.
  - f. Select the Forecasting Quota object from the list.
  - g. Click **Browse** and choose the .csv file you want to upload.
  - h. Click **Next**.
  - i. Click **OK** in the Data Selection dialog box that opens.
  - j. Click **Create or Edit a Map**.
  - k. Map these columns to fields in the ForecastingQuota object as shown in the table.

Column headers in CSV file	ForecastingQuota fields
User ID	QuotaOwnerID
Quota Amount	QuotaAmount
Quota Quantity	QuotaQuantity
Currency Code	CurrencyIsoCode
Start Date	StartDate
Product Family (needed only when the forecast data source is Product Families)	ProductFamily
Forecast Type ID (needed only for Data Loader v.30 or later)	ForecastingTypeID

- l. Click **OK**.
- m. Click **Next**.

- n. Click **Browse** and choose the directory where you want to save the log file containing messages about the success or failure of the upload.
- o. Click **Finish**.
- p. Click **Yes** to proceed with the upload.
- q. Click **OK**.

As a best practice, load quota data in the quota owner's [personal currency](#). Note that you can still upload quota data using the API even if `Show Quotas` is disabled. If your Data Loader time zone setting is ahead of quota owners' time zones, the month can be off by one. To avoid this problem, use a date greater than or equal to the third day of each month when inserting quotas.

### Uploading Quotas with the API

When uploading quota information with the API, be sure to use the correct API version, depending on the type of quota data you are working with. If your organization has more than one type of forecast enabled, each forecast type maintains its own separate quota information.

When importing...	Use API version...
Revenue quotas for opportunity-based forecasts	25.0 or later
Quantity quotas for opportunity-based forecasts	28.0 or later
Revenue quotas for opportunity splits-based forecasts	29.0 or later
Revenue or quantity quotas for product family-based forecasts	29.0 or later
Quotas in organizations with more than one forecast type enabled	30.0 or later

## Enabling Forecasts Adjustments

Administrators can enable managers to adjust subordinates' forecasts, all forecast users to adjust their own forecasts, or both.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

Before enabling adjustments, make sure you've [set up your forecast hierarchy](#).

1. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**.
2. If you want to allow forecast managers to adjust their subordinates' forecast amounts, under **Enable Forecast Adjustments**, select **Enable Manager Adjustments**.
3. If you want to allow all forecast users to adjust their own forecast amounts, under **Enable Forecast Adjustments**, select **Enable Owner Adjustments**.

 **Note:** If your organization uses product family forecasts, you can't adjust your own product family forecast amounts.

4. Click **Save**.
5. From Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles**.
6. Find a profile for which you want adjustments enabled.
7. If you're using the enhanced profile user interface, click **App Permissions** and click **Edit**.
8. Select **Override Forecasts** and click **Save**.

If your organization has more than one type of forecast enabled, each forecast type maintains its own separate adjustments.

- "Manage Users"
- AND
- "Customize Application"

## Disabling Forecasts Adjustments

Turn off forecast adjustments if you no longer want forecast managers to adjust subordinates' forecast amounts or forecast owners to adjust their own forecasts.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

 **Warning:** Disabling forecasts adjustments purges existing adjustments for all forecast types. Before disabling adjustments, see [Understanding Adjustments Purges](#). Since disabling certain functionality can result in purged quota and adjustment data, consider exporting your data before disabling anything. When you complete your setting changes, you can import the data back into Salesforce.

1. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**.
2. To prevent forecast managers from adjusting subordinates' forecast amounts, under **Enable Forecast Adjustments**, deselect **Enable Manager Adjustments**.
3. To prevent all forecast users from adjusting their own forecast amounts, under **Enable Forecast Adjustments**, deselect **Enable Owner Adjustments**.
4. Click **Save**. You don't need to update user permissions because adjustments are now disabled for your entire organization.

 **Example:** Say you have forecast managers who adjusted forecast amounts for some direct reports. After you disable adjustments for your organization, the next time the managers view their respective forecast rollups, no adjustments will appear.

### EDITIONS

Available in: Salesforce Classic

- "Customize Application"

## Cumulative Forecast Rollups Overview

As an administrator, you can choose between two methods of rolling up opportunities into forecasts for your sales teams.

- Individual forecast category rollups, which combine the opportunities from each individual forecast category into separate forecast amounts for each category.
- Cumulative forecast rollups, which combine opportunities from more than one forecast category into cumulative forecast amounts.

The default rollup setting for organizations is individual forecast category rollups. If you choose Cumulative Forecast Rollups in Setup, the way opportunities roll up to forecast amounts is different. The column names on the Forecasts tab are also different. See the differences for yourself.

Category rollup method	Column name in the Forecasts tab	Opportunities that roll up to it
<b>Individual</b>	Pipeline	Pipeline
	Best Case	Best Case
	Commit	Commit
	Closed	Closed
<b>Cumulative</b>	Open Pipeline	<ul style="list-style-type: none"> <li>• Pipeline</li> <li>• Best Case</li> <li>• Commit</li> </ul>

Category rollup method	Column name in the Forecasts tab	Opportunities that roll up to it
	Best Case Forecast	<ul style="list-style-type: none"> <li>• Best Case</li> <li>• Commit</li> <li>• Closed</li> </ul>
	Commit Forecast	<ul style="list-style-type: none"> <li>• Commit</li> <li>• Closed</li> </ul>
	Closed Only	Closed

### Advantages of Cumulative Forecast Rollups

With individual forecast category rollups, each total and subtotal represents opportunities from only one of the individual forecast categories. This type of rollup means that if forecast users want to know the total that they're going to actually bring for the month or quarter, they need to add the Best Case, Commit, and Closed forecast amounts together themselves.

<b>Example: Individual forecast rollup</b>				
Forecast amounts	Closed	Commit	Best Case	Pipeline
	\$50	\$100	\$150	\$200
Opportunities	Closed	Commit	Best Case	Pipeline
	\$50	<ul style="list-style-type: none"> <li>• \$50</li> <li>• \$50</li> </ul>	<ul style="list-style-type: none"> <li>• \$50</li> <li>• \$50</li> <li>• \$50</li> </ul>	<ul style="list-style-type: none"> <li>• \$50</li> <li>• \$50</li> <li>• \$50</li> <li>• \$50</li> </ul>

With Cumulative Forecast Rollups, the forecast columns show cumulative amounts from the opportunities in the named forecast category, as well as subsequent categories in your sales funnel. This view makes it easier for sales teams to see the total numbers they're likely to bring in, saving them from combining the category totals themselves.

For example, this table shows the cumulative forecast rollup amounts when there are four Pipeline, three Best Case, two Commit, and one Closed opportunity, each worth \$50.

<b>Example: Cumulative forecast rollup</b>				
Forecast amounts	Closed Only	Commit Forecast	Best Case Forecast	Open Pipeline
	\$50	\$150	\$300	\$450
Opportunities	Closed	Commit	Best Case	Pipeline
	\$50	<ul style="list-style-type: none"> <li>• \$50</li> <li>• \$50</li> </ul>	<ul style="list-style-type: none"> <li>• \$50</li> <li>• \$50</li> <li>• \$50</li> </ul>	<ul style="list-style-type: none"> <li>• \$50</li> <li>• \$50</li> <li>• \$50</li> <li>• \$50</li> </ul>

**Example: *Cumulative* forecast rollup**

- \$50

 **Note:** Forecast Historical Trending can't be used in organizations that use Cumulative Forecast Rollups.

## Enable Cumulative Forecast Rollups for Sales Reps and Managers

Your organization can use either Cumulative Forecast Rollup columns or individual forecast category columns.

Be aware that changing the forecast column display purges all adjustments to Commit and Best Case forecast amounts, but not quota data.

1. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**.
2. Enable Cumulative Forecast Rollups.

## Selecting a Forecast Currency

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

Before selecting a forecast currency, review information in [Working With Multiple Currencies in Forecasts](#).

1. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**.
2. Under Forecast Currency, choose a forecast currency option.
3. Click **Save**.

## Forecast Types Overview

Give users the flexibility of having up to four types of forecasts, so they can predict sales from multiple perspectives.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

Here are the types of forecasts you can let your users choose from.

Forecast Type	How is the rollup calculated?
Opportunities - Revenue	The rollup is based on the opportunity Amount field.
Opportunities - Quantity	The rollup is based on the opportunity Quantity field.
Product Families - Revenue	The rollup is based on the opportunity Amount field, and forecast amounts are separated by product family. To use a Product Family forecast, your organization must also use Opportunity Products and Product Families.
Product Families - Quantity	The rollup is based on the opportunity Quantity field, and forecast amounts are separated by product family. To use a Product Family forecast, your organization must also use Opportunity Products and Product Families.
Opportunity Splits - Revenue	The rollup is based on the opportunity Amount field and each sales team member's split percentage. For Opportunity Splits - Revenue forecasts, the split percentages for each opportunity must total 100%. To use opportunity splits forecasts, Opportunity Teams, Opportunity Splits, and the Revenue split type must be enabled.
Overlay Splits - Revenue	The rollup is based on the opportunity Amount field and each overlay sales team member's split percentage. For Overlay Splits - Revenue forecasts, the split percentages do not need to total 100%. To use overlay splits forecasts, Opportunity Teams, Opportunity Splits, and the Overlay split type must be enabled.
Custom Opportunity Currency Field - Revenue	The rollup is based on the amount in the custom opportunity currency field that you specify. To use custom opportunity currency field forecasts, Opportunity Teams and Opportunity Splits must be enabled. A custom split type for the field must also be enabled, even if you don't intent to split credit for the field amount.

### EDITIONS

Available in: Salesforce Classic

Available in: **Professional** (no Opportunity Splits or Custom Field forecasts), **Enterprise, Performance, Unlimited, and Developer** Editions

Forecast Type	How is the rollup calculated?
Expected Revenue - Revenue	The rollup is based on the amount in the opportunity Expected Revenue field. To forecast on the Expected Revenue field, Opportunity Teams and Opportunity Splits must be enabled. A custom split type for the field must also be enabled, even if you don't intent to split credit for the field amount.

## Opportunities

Use an opportunity revenue forecast if you want to forecast on the amount field of opportunities. Use an opportunity quantity forecast if you want to forecast on the quantity field of opportunities.

## Product Families

Use a product family forecast if your organization groups its products and services into families and needs to forecast based on those families. With product families, keep in mind the following.

- The Amount column appears in the opportunity list on the Forecast page.
- You can forecast on revenue, or quantity, or both.
- Forecast users will be able to view individual product family forecasts for each sales rep below them in the forecast hierarchy.
- Your organization must use Opportunity Products and Product Families.
- Users should populate the Product Family field on each product record. Forecasts for products without a Product Family value appear in a forecast row titled Products Not Categorized. (If an opportunity lacks line items, the opportunity amount or quantity also appears in this row.)
- Adjustments can be made to the forecasts for a sales rep's product family forecasts, but not directly to their total forecast for all product families.
- You can set separate product family quotas for each sales rep, but not a single quota for each sales rep.

## Opportunity Splits

Use an opportunity splits revenue forecast if your sales organization uses team selling and opportunity splits. With opportunity splits, keep in mind the following.

- The Forecasted Amount and Split % columns appear in the opportunity list on the Forecast page.
- You can forecast on revenue, but not on quantity.
- Your organization must have Team Selling, Opportunity Splits, and the Revenue split type enabled.

## Overlay Splits

Use overlay splits to track revenue from sales team members who help close opportunities, but are not directly responsible for them.

- The overlay splits on a specific opportunity do not have to total 100%.
- You can forecast on revenue, but not on quantity.
- Your organization must have Team Selling, Opportunity Splits, and the Overlay split type enabled.

## Custom Opportunity Currency Fields

If your organization uses any custom currency fields on opportunities, you can forecast on the amounts in those fields.

- Because the field must be a custom currency field, you can forecast on revenue, but not quantity.
- You can forecast on the custom field whether or not it includes opportunity splits.
- Regardless of whether the field uses splits, your organization must have Team Selling, Opportunity Splits, and a custom split type enabled for the field.

### Expected Revenue

The Expected Revenue field on opportunities is useful if there is often a difference between the value of the Amount field and the actual revenue brought in by the opportunity. If your sales team can anticipate this difference, they may want to use the Expected Revenue field, and forecast on it.

- You can forecast on revenue, but not quantity.
- You can forecast on the Expected Revenue field whether or not you use opportunity splits with it.
- Regardless of whether you use splits with the Expected Revenue field, your organization must have Team Selling, Opportunity Splits, and a custom split type enabled for it.

When you enable more than one type of forecast, Custom Forecast Views lets you customize the opportunity information that’s displayed for each forecast.

Here’s an example—your sales team forecasts revenue from both opportunities and product families. You’ll enable both opportunity and product family forecasts based on revenue.

Here you can see the Opportunities Revenue forecast page, which shows revenue totals for each sales rep in each forecast rollup.

The screenshot shows the Salesforce 'Valerie Jones Forecast' page. At the top, there is a navigation bar with tabs for Home, Chatter, Leads, Accounts, Contacts, Opportunities, Reports, Dashboards, Forecasts, and Edit Quotas. Below the navigation bar, there is a user profile for Valerie Jones and a forecast type dropdown menu set to 'Opportunities Revenue in U.S. Dollar'. The main content is a table with the following data:

	Quota	Closed	Commit	Best Case	Pipeline
<b>Total: 1 Quarter</b> (Change)	USD 950,000.00	USD 600,000.00 63.2%	USD 560,050.00 59.0%	USD 1,257,501.00 132.4%	USD 2,579,419.00 271.5%
<b>[-] FQ4 FY 2013</b>	<b>USD 950,000.00</b>	<b>USD 600,000.00 63.2%</b>	<b>USD 560,050.00 59.0%</b>	<b>USD 1,257,501.00 132.4%</b>	<b>USD 2,579,419.00 271.5%</b>

## Enable Forecast Types for Collaborative Forecasts

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

A forecast type is a forecast configured to use a specific type of data. The opportunity `Amount` field, opportunity splits, overlay splits, custom opportunity fields, or product families can be used. Each forecast type also specifies a measurement—either revenue or quantity. With opportunities and product families, you can set up forecast types for both quantity and revenue. With opportunity splits the only choice is revenue. Before you add forecast types, be sure you [understand the details](#) of each.

1. From Setup, enter *Forecasts Settings* in the `Quick Find` box, then select **Forecasts Settings**.
2. If your organization:
  - Doesn't yet have any forecast types enabled, click **Add a Forecast Type**.
  - Already has at least one forecast type enabled, click **Add another forecast type**.
3. From the Forecast Type menu, choose the data source you want to use for the forecast.
4. Choose the Forecast Measurement you want to use: Revenue or Quantity. If you want both, add separate forecast types for each.
5. Choose the columns you want to display in the related opportunities list on the Forecast tab for the forecast type. If your forecast data source is opportunities or product families, the `Amount` field appears by default. If your data source is opportunity splits, the `Forecasted Amount` and `Split %` fields appear by default. You can change the selected fields for each forecast type even after it has been enabled. Depending on whether your forecast type uses the revenue or quantity measurement, consider adding `Amount` or `Quantity` to the pane.
6. Click **OK** and then **Save**.

Repeat this procedure for each forecast type you want to add. When you enable a forecast type, the initial calculation of the new forecast can take some time, depending on the number of opportunities, users, and product families in your organization.

 **Warning:** If you disable a forecast type, all related quota and adjustment information is purged.

## Enable Revenue Splits Forecasts for Sales Managers

Help your sales teams track revenue from opportunities with multiple sales reps when you add Revenue Splits Forecasts to your organization.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

Before you enable Revenue Splits Forecasts, make sure you've enabled:

- Collaborative Forecasts
- Team Selling and Opportunity Splits
- The Revenue opportunity split type

With those features enabled, you're ready to enable Overlay Splits Forecasts.

1. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**.
2. If your organization:
  - Doesn't yet have any forecast types enabled, click **Add a Forecast Type**.
  - Already has at least 1 forecast type enabled, click **Add another forecast type**. You can enable up to 4 forecast types.
3. From the Forecast Type menu, choose **Opportunity Revenue Splits**. Revenue is the only forecast measurement available for overlay splits.
4. Choose the columns you want to display in the related opportunities list on the Forecast tab for the overlay forecast. To make it easy for forecast users to see the split amounts on each opportunity, include the Split column.
5. Click **OK** and then **Save**.

## Enable Overlay Splits Forecasts for Sales Managers

Help your sales teams track revenue from overlay sales roles when you add Overlay Forecasts to your organization.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

Before you enable Overlay Forecasts, make sure you've enabled:

- Collaborative Forecasts
- Team Selling and Opportunity Splits
- The Overlay opportunity split type

With those features enabled, you're ready to enable Overlay Splits Forecasts.

1. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**.
2. If your organization:
  - Doesn't yet have any forecast types enabled, click **Add a Forecast Type**.
  - Already has at least one forecast type enabled, click **Add another forecast type**. You can enable up to four forecast types.
3. From the Forecast Type menu, choose **Opportunity Overlay Splits**. Revenue is the only forecast measurement available for overlay splits.

4. Choose the columns you want to display in the related opportunities list on the Forecast tab for the overlay forecast. Include the Split column to make it easy for forecast users to see the split amounts on each opportunity.
5. Click **OK** and then **Save**.

## Enable Custom Field Forecasts for Sales Managers

To enable a custom field forecast, first enable a custom split type for the field, and then add a forecast for it.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

For each custom opportunity field your sales teams want to forecast on, first enable a custom split type—even if the field doesn't include splits. When a sales rep creates an opportunity, the rep automatically receives a 100% split for any 100% validated custom split type you enable. So even if you don't intend to split the custom field, the forecast rollup always includes 100% of the amount in the custom field.

Before you enable custom field forecasts, make sure you've enabled:

- Collaborative Forecasts
- At least one custom opportunity currency field
- Team Selling and Opportunity Splits
- A custom opportunity split type based on the custom field (For details on enabling split types, see [Enable Opportunity Splits and Split Types](#) on page 1849.)

With those features enabled, you're ready to enable a custom field forecast.

1. From Setup, enter *Forecasts Settings* in the Quick Find box, then select **Forecasts Settings**.
2. If your organization:
  - Doesn't yet have any forecast types enabled, click **Add a Forecast Type**.
  - Already has at least one forecast type enabled, click **Add Another Forecast Type**. Enable up to four forecast types.
3. From the Forecast Type menu, choose the name of the custom opportunity split type you created based on your custom opportunity field. Revenue is the only forecast measurement available for custom field forecasts.
4. Choose the columns you want to display in the related opportunities list on the Forecast tab for the custom field forecast. Include the Split column to make it easy for forecast users to see the split amounts on each opportunity.
5. Click **OK** and then **Save**.

## Defining Your Organization's Forecast Date Range

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

The Collaborative Forecasts rollup table displays forecast amounts for individual months or quarters and a range of months or quarters, depending on the organization's Collaborative Forecasts settings. Six months or four quarters is the default. Users can forecast up to 12 months or eight quarters in the future or past. In the forecasts page, the period selected by default in the rollup table is the current month or quarter if the forecast range includes the current month or quarter. If not, then the first month or quarter is selected by default in the rollup table instead.

The forecast date range for the organization becomes the default for all Collaborative Forecasts users. Users can use this default or they can set a different date range display for their own forecasts. Once users change their individual forecast date range displays, administrators can't override them. However, when changing the *period* display from monthly to quarterly or quarterly to monthly, the change is reflected in all users' forecasts.

 **Warning:** If you change the period setting from monthly to quarterly or quarterly to monthly, or you change the standard fiscal year, all adjustments and quotas are purged. These changes trigger a forecast recalculation that can take significant time, depending on the quantity of data in your organization.

1. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**.
2. Under Configure the Default Forecast Display, use the drop-down lists to select a beginning period and the number of periods you want to display.
3. Click **Save**.

- "Customize Application"

## Selecting Fields that Appear in the Collaborative Forecasts Opportunity Pane

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

 **Tip:** If you add an opportunity field to the opportunity pane and it's not visible to Forecasts users, check the field-level security setting for the specific user profile and field. If the forecast is based on that field, the Forecasted Amount column shows the value of the field or the value of the field's split that contributes to the forecast, regardless of field-level security.

When a user selects a forecast amount in the rollup table, the list of opportunities that roll up to that amount appears below the table. Administrators select up to 15 standard and custom fields that appear in the opportunity pane, for each enabled forecast type. Users see the fields selected based on their field level security settings. `Opportunity Name` is a required field. Additionally, we recommend adding `Forecast Category` to the pane.

When selecting fields, keep in mind the fields used in the forecast rollup. An opportunity-quantity forecast rolls up based on the opportunity's `Quantity` field, while opportunity-revenue forecasts roll up based on the opportunity's `Amount` field. For opportunity splits-revenue forecasts, the rollup is based on the opportunity's `Amount` field and the split % assigned to the sales rep. For custom opportunity field forecasts, the rollup is based on the custom field amount. For product families-revenue forecasts, the rollup is based on the sum of the `Total Price` field for all opportunity line items in that product family, while product family-quantity forecasts roll up based on the `Quantity` field for all opportunity line items in that product family. For opportunities without opportunity line items or with line items that don't have a product family specified, the totals roll up into the Products Not Categorized row on the Forecasts page. Depending on whether your forecast type uses the revenue or quantity measurement, consider adding `Amount` or `Quantity` to the pane.

If your forecast data source is opportunities or product families, the Amount field appears by default. If your data source is opportunity splits, the Forecasted Amount and Split % fields appear by default. You can change the selected fields for each forecast type even after it has been enabled.

1. From Setup, enter `Forecasts Settings` in the `Quick Find` box, then select **Forecasts Settings**.
2. Click the name of the forecast type whose opportunity fields you want to edit.
3. Under Select fields to display in the list of related opportunities, select fields and click **Add** and **Remove** to move them between the Available Columns list and the Selected Columns list. To determine field order in the layout, select fields and click **Up**, **Down**, **Top**, or **Bottom**.
4. Click **OK**.

## Customize Forecasts Categories

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

A forecast category is the category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can customize forecast category names for your organization.

1. From the management settings for opportunities, go to Fields.
2. Click `Forecast Category`.
3. Click **Edit** for any value you want to edit in the Forecasts Category Picklist Values.
4. Enter a forecast category name.
5. Click **Save**.

New forecast category names appear on opportunity records and forecasts.

## Disable Collaborative Forecasts Functionality

To disable Collaborative Forecasts, first contact Salesforce.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

Before disabling Collaborative Forecasts or any of its functionality, be sure you understand how your forecast data will be affected.

 **Tip:** Since disabling certain functionality can result in purged quota and adjustment data, consider exporting your data before disabling anything. When you complete your setting changes, you can import the data back into Salesforce. Note that if you change your period setting from monthly to quarterly or quarterly to monthly, you *cannot* import your quota or adjustments data back into Salesforce because the existing values will not align with your new periods.

If you disable...	These items are purged...

## Configuring Customizable Forecasts

### Setting Up Customizable Forecasting

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

Sales forecasts represent the best estimate of how much revenue you can generate. They give your managers and executives a view of your overall business no matter how dispersed your sales teams are.

Because forecasting is so universal, customizable forecasting is a flexible solution for even the most advanced requirements. Get started using customizable forecasting in Setup by entering *Forecasts (Customizable)* in the **Quick Find** box, then selecting **Forecasts (Customizable)**:

- Click **Edit Forecast settings for your company** to customize the default settings for your organization. See [Define Customizable Forecast Settings](#).
- Click **Batch submit forecasts for your users** to set up batch submission. See [Submit Customizable Forecasts in Batches](#).
- Click **Set up the forecasting hierarchy for your company** to set up your initial forecast hierarchy. Refer to [Set Up Your Forecast Hierarchy](#).

## Define Customizable Forecast Settings

Once you enable Customizable Forecasts for your organization, you need specify the settings that are most appropriate to how you run your business.

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

Define the following settings for your organization:

- **Forecast Data Aggregation** determines the type of data that is displayed on forecasts.
- **Forecast Summary Default View** determines the default product family, date start, date range, and forecast numbers for default forecasts.
- **Forecast Data Sharing** determines whether forecast data can be shared.

To set forecast options:

1. From Setup, enter *Forecasts* in the *Quick Find* box, then select **Forecasts Settings**.
2. Select *Forecast Revenue* if you want forecasts to include revenue amount. If you disable this setting, you lose all revenue overrides on your forecasts.
3. Select *Forecast Quantity* if you want forecasts to include quantity totals. If you disable this setting, you lose all quantity overrides on your forecasts.
4. Choose a *Forecast Period*. If you do not have custom fiscal years enabled, choose monthly or quarterly depending on your organization's forecasting cycle. The month or quarter start date is based on Greenwich Mean Time (GMT). If you have enabled custom fiscal years, you can choose to forecast by fiscal period or by fiscal quarter. The forecast period you choose determines the time increment your organization uses for quotas and forecasts. If you choose monthly, you can still see totals by quarters but, if you choose quarterly, monthly forecast totals are not available. If you change this setting, you lose all overrides and forecasts, including all forecast history.
5. Choose a *Forecast Date* that determines how opportunity amounts contribute to forecasts:
  - If you want the entire opportunity amount to contribute to the forecast period for that date, choose *Opportunity Close Date*. If your organization does not use products, this option is the only one available.
  - If you want the amount of the product on the opportunity to contribute to the forecast period that corresponds with the *Product Date*, choose *Product Date*. When no products exist on an opportunity or the product date is blank, Salesforce uses the *Opportunity Close Date* in the user's forecast instead.
  - If you want the individual revenue schedule amounts to contribute to the forecast periods that correspond with the schedule dates, choose *Schedule Date*. If a product does not have a revenue schedule, Salesforce uses the *Product Date* in the user's forecast instead.
6. Choose a *Forecast Type*:
  - Choose *Use Overall Forecast* if your organization does not use products. Your users have one forecast and one quota for each period. If your organization does not use products, this option is the only one available.
  - Choose *Use Product Families* if your users have one quota and one forecast for each product family. See [Using Product Families](#).
7. Choose a default view for your users. This setting determines what forecast product family, date start, date range, and forecast totals to display for users when they first click the Forecasts tab. Users can change their view but the default remains the same for all users.
8. Enable or disable forecast sharing by selecting or deselecting *Enable Forecast Sharing*.
9. Click **Save**.

If you have enabled forecast sharing, you are prompted to choose who can share existing forecast views. The options are:

### EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To define forecast settings:

- "Customize Application"

- `Require Administrator assistance for forecast sharing` - Only administrators can share existing forecast data.
- `Forecast managers can share their own forecast data` - Administrators can share existing forecast data, and existing forecast managers can also share their own views.

 **Note:** This choice applies to existing forecasting views only; it is not a default setting for your organization. Each time you edit or assign a forecast manager in the role hierarchy, define who can share that view.

If you have chosen to disable forecast sharing, you are prompted to confirm your choice.

Customizable Forecasting includes five standard report types. You can't create custom report types with Customizable Forecasting.

#### SEE ALSO:

[Setting Up Customizable Forecasting](#)

[Manually Sharing a Forecast](#)

[Set Your Fiscal Year](#)

## Set Your Fiscal Year

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

Your fiscal year determines your monthly or quarterly forecasting cycle, the month it starts, and whether the `Fiscal Year` is named for the starting or ending year. For example, if your fiscal year starts in April 2015 and ends in March 2016, your fiscal year setting can be either 2015 or 2016.

To set your fiscal year for customizable forecasting:

1. Begin by archiving your data. We recommend running your weekly or monthly data export before setting the fiscal year, because changing the setting affects your opportunity and forecast data.
2. From Setup, enter `Fiscal Year` in the `Quick Find` box, then select **Fiscal Year**.
3. Choose a `Forecast Period` of monthly or quarterly depending on your organization's forecasting cycle. The month or quarter start date is based on Greenwich Mean Time (GMT).

The forecast period you choose determines the time increment your organization uses for quotas and forecasts. If you choose monthly, you can still see totals by quarters but, if you choose quarterly, monthly forecast totals are not available.

4. Choose a `Fiscal Year Start Month` that represents the beginning of your organization's fiscal year.
5. Select a `Fiscal year is based on` option that represents how your organization refers to a fiscal year. For example, if your fiscal year starts in April 2015 and ends in March 2016 and is called `Fiscal Year 2016`, choose `The ending month`. The last month determines how your organization refers to that fiscal year.
6. Do not check `Apply to all forecasts and quotas` unless you want to change the fiscal year settings of forecasts created before you enabled customizable forecasts. Checking this option changes your historical forecast data.
7. Click **Save**.

## Set Up Your Forecast Hierarchy

Your forecast hierarchy lists all forecast users and determines how their forecasts roll up through your organization. Keep your forecast hierarchy up-to-date to ensure that forecast managers see all subordinates' forecast amounts.

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

Your forecast is based on the role hierarchy by default, or the territory hierarchy if your organization has territory management.

When customizable forecasting is enabled for your organization, it automatically generates a forecast hierarchy based on your organization's role hierarchy. The forecast hierarchy becomes based on your territory hierarchy only when you enable territory management. To customize your forecast hierarchy:

- Make sure that all the appropriate users are in your forecast hierarchy. If any are not and should be, see [Enabling Users for Customizable Forecasting](#).
- Make sure that the appropriate users are the assigned forecast manager whenever there is more than one user in a role or territory in your forecast hierarchy. Each user at the bottom of your forecast hierarchy can be a forecast manager. However, above that, a single user must be chosen as the forecast manager for forecasts to roll up to that user. See [Assigning Forecast Managers in Your Forecast Hierarchy](#).
- Share forecast manager views with other users. See [Manually Sharing a Forecast](#).

Be sure each sales manager with subordinates is designated as a forecast manager in your forecast hierarchy. This ensures that the forecast visibility rolls up to every level of the hierarchy.

If `Nonforecasting` appears next to a role or territory in the forecast hierarchy, it means that a forecast manager has not been assigned to that role or territory.

 **Note:** When you remove a user from the forecast hierarchy or the role hierarchy, all of their quota and override data is permanently deleted.

## Enabling Users for Customizable Forecasting

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

To enable users for customizable forecasting if your organization does not use territory management:

1. From Setup, enter *Forecasts Hierarchy* in the **Quick Find** box, then select **Forecasts Hierarchy**.
2. Click **Enable Users** next to a role to view a list of users assigned to that level.
3. Select a user and click **Add** to enable the user for customizable forecasting. To disable a user, select the user and click **Remove**.
4. Click **Save**.

 **Note:** When you remove a user from the forecast hierarchy or the role hierarchy, all of their quota and override data is permanently deleted.

To enable a user for customizable forecasting if your organization uses territory management:

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Click **Edit** next to the user's name.
3. Select **Allow Forecasting**.
4. Click **Save**.
5. [Add the user to a territory](#).

Customizable Forecasting includes five standard report types. You can't create custom report types with Customizable Forecasting.

 **Note:** To view a list of users for a territory, select the territory name in the territory hierarchy or run a territory report. For more information on territory reports, see [Territory Reports](#).

If you add more than one user to a role or territory, make sure that the appropriate user is the assigned forecast manager for that role or territory. See [Assigning Forecast Managers in Your Forecast Hierarchy](#)

## Assigning Forecast Managers in Your Forecast Hierarchy

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

After users are enabled for customizable forecasting, assign a user as a forecast manager for each role in your forecast hierarchy. Assigning someone as a forecast manager means that all forecasts from users below that user in the forecast hierarchy roll up to that person. For example, an executive and executive assistant may have the same role, but the executive is the assigned forecast manager in the forecast hierarchy because all subordinates' forecasts roll up to the executive. Both the executive and executive assistant can submit forecasts, but forecasts of other users do not roll up to the executive assistant.

If a role in the forecast hierarchy has no forecast manager, that role and all its subordinate roles are not included in your forecasts.

If `Nonforecasting` appears next to a role or territory in the forecast hierarchy, it means that a forecast manager has not been assigned to that role or territory.

1. From Setup, enter `Forecasts (Customizable)` in the `Quick Find` box, then select **Forecasts Hierarchy**.
2. Click **Assign Manager** or **Edit Manager** next to a role to assign a user as the forecast manager of that role.

Roles without roles below them cannot have forecast managers unless your organization has [territory management](#), which supports forecast managers at all levels.

3. Choose a user to be assigned as the forecast manager of the selected role. If no users are available for the role, enable the appropriate user; see [Enabling Users for Customizable Forecasting](#).
4. If forecast sharing is enabled, choose the sharing settings:
  - Choose `Require Administrator assistance for forecast sharing` to limit forecast sharing for this view to administrators. This is the default option.
  - Choose `Forecast managers can share their own forecast views` to allow the administrator or the forecast manager to share this view.
5. Click **Save**.

## Enabling Customizable Forecasting

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

Enabling customizable forecasting for your organization allows your forecast users to view and submit their customizable forecasts from the Forecasts tab based on your customizable forecast settings. Customizable Forecasting includes five standard report types. You can't create custom report types with Customizable Forecasting.

1. From Setup, enter *Forecasts Hierarchy* in the *Quick Find* box, then select **Forecasts Hierarchy**.
2. Click **Enable Customizable Forecasting**. If this option is not available, customizable forecasting is already enabled for your organization. After you enable customizable forecasting, three new user permissions are available:

Permission	Description
Override Forecasts	Allows users to override their own forecasts and forecasts for users below them in the forecast hierarchy. All standard profiles except Read Only receive this permission.
Edit Personal Quota	Allows users to change their individual quotas. All standard profiles except Read Only receive this permission.  Users with the "Manage Users" permission can always edit any quota. Users can always edit the quotas of users that report directly to them.
View All Forecasts	Allows users to view any forecast regardless of their place in the forecast hierarchy. The System Administrator profile includes this permission.

3. Choose the appropriate opportunity page layouts that you want to include the new Opportunity Forecasts related list. Optionally, choose the *Append . . .* option to add this related list to page layouts even if users have customized them.
4. Click **Save**.
5. Enable or disable these permissions where necessary..

 **Note:** With customizable forecasts, your forecasts still depend on how your *Opportunity* Stage picklist values map to Forecast Categories.

## Manually Sharing a Forecast

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

Your administrator defines your organization's forecasting hierarchy, which determines which users can view the forecast data. However, your administrator can manually extend sharing privileges for forecast data, and you may be able to manually extend sharing privileges for your own forecast data as well. Manual forecast sharing can only increase access to forecast data; it cannot restrict access for users who already have access. To manually share a forecast, you must be an administrator or a forecast manager who has been given access to share your forecast data.

To see which users can view your forecast or to share your forecast data, do one of the following:

- From Setup, enter *Forecasts Hierarchy* in the **Quick Find** box, then select **Forecasts Hierarchy**, then click **Share** next to the view you want to share.
- Click **Sharing** on the forecast home page to share your own forecast data.

The User and Group Sharing list shows you all the users who currently have access to this forecast data. It also details the level of access they have, whether they can submit a forecast, and the reason they have that access. The reasons a user might have access to forecast data are:

Reason	Description
Administrator	The user is an administrator, or has the "Modify All Data" permission.
Delegated Forecast Manager	A user has access to forecast data that was granted via the <b>Sharing</b> button on the forecast.
Forecast Manager	A user has access due to being a forecast manager in the forecast hierarchy.
Owner	The owner can always see his or her own forecast data.
View All Forecasts Permission	The user has the "View All Forecasts" permission.

On the Forecast Sharing Detail page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the **View** drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the **View** drop-down list and click **Edit**.
- Click **Add** to grant other users or groups access to the forecast data.

 **Note:** Manual sharing extends to the opportunity data that makes up the forecast. If a user has permission to override forecast data, then the user also has permission to override the opportunity forecast data.

- Click **Expand List** to [view all users that have access](#) to the forecast data.
- For manual sharing rules that you created, click **Edit** or **Del** next to an item in the list to edit or delete the access level.

## Submit Customizable Forecasts in Batches

Submitting forecasts takes a snapshot of forecast data and makes that data available in forecast history and reports. Save time by submitting multiple forecast at once.

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

To submit multiple forecasts at once:

1. From Setup, enter *Batch Submit* in the *Quick Find* box, then select **Batch Submit Forecasts**.
2. Choose the appropriate forecast period.
3. Select the users that have forecasts you want to submit and click **Add** to add them to the list of *Selected Users for Batch Submit*. Select more than one at a time using **CTRL+click**.
4. Click **Submit**.
5. Click **OK**.

Users can also submit their forecasts individually by clicking **Submit** from their forecast.

## Enabling Business Networks for Collaboration Across Organizations

### Enable Salesforce to Salesforce

 **Warning:** Enabling Salesforce to Salesforce is not reversible, however, you control the information you share and the connections you share with. You can stop sharing or modify sharing settings at any time. By enabling Salesforce to Salesforce, you agree to allow salesforce.com to process updates to information in your organization that is shared with other organizations. Salesforce to Salesforce allows you to share your data with third-party recipients, and those recipients may in turn use Salesforce to Salesforce to share your data with further third-party recipients unknown to you. You are responsible for ensuring that appropriate contractual or other legal arrangements are in place between you and your recipients to limit those recipients' use and disclosure of your shared data.

To enable Salesforce to Salesforce:

1. From Setup, enter *Salesforce to Salesforce Settings* in the *Quick Find* box, then select **Salesforce to Salesforce Settings**.
2. Click **Edit**.
3. Select **Enable**.
4. Click **Save**.

When you enable Salesforce to Salesforce, a new user named "Connection User" is created. This user does not count towards the number of used licenses for your organization, and is not included in any user management view.

### EDITIONS

Available in: Salesforce Classic

Available in:

- Contact Manager
- Group
- Professional
- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To enable Salesforce to Salesforce:

- "Modify All Data"

When your business partner updates a shared record, the `Last Modified By` field on the record in your organization displays `Connection User`, allowing you to easily track all changes made by your business partners.

The Connection User is automatically assigned to the Partner Network profile. The Partner Network profile cannot be modified and is not included in any profile management view.

After Salesforce to Salesforce is enabled:

1. Create a permission set with the “Manage Connections” permission enabled and the Connection tab set to `Visible`, and assign the permission set to users who will be working with Salesforce to Salesforce connections.

We also recommend giving the “Manage Queues” user permission to all users with the “Manage Connections” user permission. This lets users create and manage queues for connections without needing assistance from an administrator.

2. [Configure Salesforce to Salesforce settings](#), such as communication templates for sending invitations to your business partners.
3. Add the External Sharing related list to page layouts for the appropriate profiles.

 **Note:** This related list can be made available to all users, not just users with the “Manage Connections” permission.

4. Optionally, create custom list views on the External Sharing related list and give access to the appropriate users, so that they can view and accept shared records.
5. Optionally add the Received Connection Name and Sent Connection Name columns to the related lists on the page layouts of the desired objects.
6. [Create and manage connections with your business partners](#).

SEE ALSO:

[Finding Out if Your Partners Use Salesforce](#)

## Configure Salesforce to Salesforce

You can configure Salesforce to Salesforce to use communication templates for interacting with your business partners. In addition, you can configure the email address and name used on the templates. To configure any of these settings:

1. From Setup, enter *Salesforce to Salesforce Settings* in the `Quick Find` box, then select **Salesforce to Salesforce Settings**.
2. Click **Edit** and modify the following settings:

Setting	Description
From Email Address	The email address from which all Salesforce to Salesforce communication templates are sent, for example, “partner@acme.com.” Salesforce sends the emails automatically, but they appear to your contacts as if they were sent from this email address. If a contact responds to a communication template, the response is sent to this address.

### EDITIONS

Available in: Salesforce Classic

Available in:

- Contact Manager
- Group

## Setting Up Salesforce-Integrated Email

### Setting Up Email Relaying

Email relaying is using an email server to send email that did not originate on the email server. Companies set up email relaying to:

- Route all email through their own email servers to avoid the appearance of email spoofing by Salesforce. Email spoofing is the forging of email headers to make messages appear as if they came from someone other than the original sender.
- Store copies of all email as required by government regulations in various industries.
- Apply existing content filters that scan messages for data and content that is not approved to be sent out through company email.
- Run outbound email through antivirus software before sending it to customers.
- Append data such as company-wide disclaimers at the bottom of email messages.

You can set up email relaying for Salesforce-generated email by configuring Salesforce to automatically route email through your company's Simple Mail Transfer Protocol (SMTP) server. Contact Salesforce to enable email relaying for your organization.

 **Warning:** If you plan to activate both bounce management and email relaying, check with your email administrator to ensure that your organization's email server allows the relaying of email sent from Salesforce; otherwise, the email you send from Salesforce may not get

#### EDITIONS

Available in: **Salesforce Classic**

- Performance
- Unlimited
- Developer

#### USER PERMISSIONS

To configure email relaying:

- "Modify All Data"

delivered. For more information on bounce management, see [Configure Deliverability Settings](#) on page 1916.

To set up email relaying:

1. From Setup, enter *Email Relay Activation* in the Quick Find box, then select **Email Relay Activation**.
2. Configure the following settings:

Setting	Description
Email Host	<p>The host name or IP address of your company's SMTP server. Obtain this information from your email administrator.</p> <p> <b>Important:</b> If you plan to use Transport Layer Security (TLS) with this connection, enter the host name instead of the IP address. TLS requires the host name for verifying certificates.</p> <p>For host names, use the following format:</p> <pre>&lt;mail server&gt;.&lt;domain&gt;.&lt;domain extension&gt;</pre> <p>For example:</p> <pre>mail.acme.com</pre>
Port	<p>The port number of your company's SMTP server. Obtain this information from your email administrator. Email relaying is supported on port numbers 25, 587, 10025, and 11025.</p>
TLS Setting	<p>Specifies whether Salesforce uses TLS for SMTP sessions. Select one of the following options:</p> <ul style="list-style-type: none"> <li>• <b>Preferred</b> (default): If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. If TLS is unavailable, Salesforce continues the session without TLS.</li> <li>• <b>Required</b>: Salesforce continues the session only if the remote server offers TLS. If TLS is unavailable, Salesforce terminates the session without delivering the email.</li> <li>• <b>Preferred Verify</b>: If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. Before the session initiates, Salesforce verifies the certificate is signed by a valid certificate authority, and that the common name presented in the certificate matches the domain or mail exchange of the current connection. If TLS is available but the certificate is not signed or the common name does not match, Salesforce disconnects the session and does not deliver the email. If TLS is unavailable, Salesforce continues the session without TLS.</li> <li>• <b>Required Verify</b>: Salesforce continues the session only if the remote server offers TLS, the certificate is signed by a valid certificate authority, and the common name presented in the certificate matches the domain or mail</li> </ul>

Setting	Description
	exchange to which Salesforce is connected. If any of these criteria are not met, Salesforce terminates the session without delivering the email.
Restrict Relay to Domains	Specifies whether to restrict the email relaying functionality to certain domains. If you select this option, enter the names of those domains separated by commas in the text field below. (The asterisk (*) wildcard is allowed; for example, *.subdomains.com matches john@aco.subdomains.com and john@bco.subdomains.com (but not john@subdomains.com)). This causes Salesforce to route email to your company's SMTP server only if the email is addressed to one of the listed domains. If you select the checkbox but do not list any domains, Salesforce routes all email to your company's SMTP server.
Active	Enables email relaying for your organization. If you deselect this checkbox, Salesforce keeps the email relay configuration but does not route email to your company's email server.

### 3. Click **Save**.

Salesforce recommends sending a test message each time you change the email relay configuration.

## Enable Email to Salesforce

If you use a company-provided or third-party email account, you can use Email to Salesforce to assign emails to leads, contacts, opportunities, and other records in Salesforce. When composing, forwarding, or replying to email, simply enter your Email to Salesforce address in the **BCC** field or any recipient field. Salesforce receives a copy of the email and, depending on your configuration, adds it to either the Activity History related list of the matching records or to the [My Unresolved Items](#) page, where you can manually assign it.

1. From your personal settings, enter *Email to Salesforce* in the **Quick Find** box, then select **My Email to Salesforce**.
2. Click **Edit**.
3. Select the **Active** checkbox.

#### EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **All Editions** except **Database.com**

#### USER PERMISSIONS

To enable or disable Email to Salesforce:

- "Modify All Data"

4. Optionally, select the `Advanced Email Security Settings` checkbox to configure Email to Salesforce to verify the legitimacy of the sending server before processing a message. Email to Salesforce uses the following [authentication protocols](#) to verify the sender's legitimacy:

- SPF
- SenderId
- DomainKeys

If the sending server passes at least one of these protocols and does not fail any protocols, Email to Salesforce accepts the email. If the server fails a protocol or does not support any of the protocols, Email to Salesforce ignores the email.

 **Tip:** Before you select `Advanced Email Security Settings`, ensure that the senders you expect to use Email to Salesforce support at least one of the listed authentication protocols.

5. Click **Save**.

6. Optionally, click **Send Notification Email** to notify users that Email to Salesforce is activated, or click **Skip This Step**.

After enabling Email to Salesforce, Salesforce creates a unique Email to Salesforce address for each user. To view their unique Email to Salesforce address and customize their settings, users can go to the My Email to Salesforce page in their personal settings. For more information, see [What's Email to Salesforce?](#) on page 1515.

SEE ALSO:

[What's Email to Salesforce?](#)

[Find Your Personal Settings](#)

## Enabling Compliance BCC Emails

If your organization evaluates all outbound email messages for compliance, you can enable compliance BCC emails to automatically send a hidden copy of each outbound email message to an email address you specify. Enabling compliance BCC emails prevents users from editing the BCC field on any email and disables their `Automatic Bcc` setting under My Email Settings.

To enable compliance BCC emails for your organization:

1. From Setup, enter `Compliance BCC Email` in the `Quick Find` box, then select **Compliance BCC Email**.
2. Select the `Enable` checkbox.
3. Enter your compliance email address.
4. Click **Save**.

 **Note:** The BCC email is automatically sent to the address you specify for any emails your users send, excluding system emails such as password reset or import completion notifications.

### EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To enable or disable compliance BCC email:

- "Customize Application"

## Configure Deliverability Settings

To improve the deliverability of email you send from Salesforce, configure your organization's email deliverability settings. Email deliverability is the likelihood of a company's or individual's email reaching its intended recipient. This likelihood is adversely affected by:

### Bounced email

Email that is addressed to an invalid recipient and returned to the sender. If a sender sends several email messages that bounce, the email server might slow or block the delivery of all email from that sender.

### Noncompliant email

Email that does not comply with a recipient's email security framework, such as the Sender Policy Framework (SPF), which verifies that the `FROM` address in an email message is not forged.

 **Warning:** If you plan to activate both bounce management and email relaying, check with your email administrator to ensure that your organization's email server allows the relaying of email sent from Salesforce; otherwise, the email you send from Salesforce may not get delivered. For information on email relaying, see [Setting Up Email Relaying](#) on page 1912.

To configure the email deliverability settings for your organization:

1. From Setup, enter *Deliverability* in the `Quick Find` box, then select **Deliverability**.
2. To control the type of email your organization sends, change the `Access level` in the `Access to Send Email` section. You may not be able to edit the `Access level` if Salesforce has restricted your organization's ability to change this setting.
  - `No access`: Prevents all outbound email to and from users.
  - `System email only`: Allows only automatically generated emails, such as new user and password reset emails.
  - `All email`: Allows all types of outbound email. Default for new, non-sandbox organizations.

 **Tip:** The `System email only` setting is especially useful for controlling email sent from sandboxes so that testing and development work doesn't send test emails to your users.

  - Newly created sandboxes default to `System email only`.
  - Sandboxes created before Spring '13 default to `All email`.
3. Select the `Activate bounce management` checkbox to help ensure that the email addresses you have for your contacts, leads, and person accounts are correct, and that the email your users send to those addresses is not impeded due to excessive email bounces.
 

When bounce management is activated and a user sends an email to a contact, lead, or person account with an invalid email address, Salesforce displays an alert next to that email address and prevents users from sending email to the address until it is updated or confirmed. Also, the email bounces to Salesforce instead of the sender's personal email account.

 **Tip:** Use the Bounced Contacts and Bounced Leads standard reports to view a list of email all addresses that have bounced email. The report includes the reason the email was bounced, the date the bounce occurred, and the contact, lead, or person account that bounced the email.
4. Select the `Show bounce alert next to all instances of the email address` checkbox to configure Salesforce to search all lead, contact, and person account records for instances of any email address that bounces an email and to display a bounce alert next to each instance. If you do not select this option, Salesforce only displays the bounce alert on the record from which the email was originally sent.

### EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **All Editions** except **Database.com**

### USER PERMISSIONS

To configure email deliverability:

- "Customize Application"

5. Select the `Return bounced email to sender` checkbox to configure Salesforce to send a copy of the bounced email header to the sender. If you do not select this option, only Salesforce receives the bounced email header. In either case, for security purposes Salesforce does not return the body of the bounced email to the sender. This option applies to all users in your organization and cannot be enabled per user or per email.
6. Select the `Enable compliance with standard email security mechanisms` checkbox to automatically modify the envelope `From` address of every email you send from Salesforce to comply with email security frameworks that your recipients might implement, such as SPF.

Many recipient email systems enforce SPF to verify whether an email is legitimate. SPF checks the envelope `From` address of an inbound email to verify legitimacy. If this feature is enabled, Salesforce changes the envelope `From` address to a Salesforce email address to verify the sender's legitimacy. The header `From` address remains set to the sender's email address.

 **Note:** For more information on SPF, see [www.openspf.org](http://www.openspf.org).

7. Select the `Enable Sender ID compliance` checkbox to comply with the Sender ID framework. This will automatically populate the `Sender` field in the envelope of every email you send from Salesforce with `no-reply@Salesforce`. This enables receiving mail servers using the Sender ID email authentication protocol to verify the sender of an email by examining the `Sender` and `From` headers of an inbound email through a DNS lookup. All replies will still be delivered to the sender's email address. If you do not select this checkbox, the `Sender` field is set to `null` and email delivery fails when a recipient email system performs a Sender ID check.

 **Note:**

- We recommend enabling Sender ID compliance only if you have recipients using the Sender ID email authentication protocol, which isn't widely used.
- If you enable Sender ID compliance, the recipient's email client (not Salesforce) may append the phrase "Sent on behalf of" to the `From` field of email received from Salesforce.
- For more information on Sender ID, see [www.microsoft.com/mscorp/safety/technologies/senderid/default.aspx](http://www.microsoft.com/mscorp/safety/technologies/senderid/default.aspx).

8. If you want Salesforce to send users a status email when their [mass emails](#) are complete, select `Notify sender when mass email completes`.
9. To specify how Salesforce uses the Transport Layer Security (TLS) protocol for secure email communication for SMTP sessions, choose one of the following:
  - `Preferred` (default): If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. If TLS is unavailable, Salesforce continues the session without TLS.
  - `Required`: Salesforce continues the session only if the remote server offers TLS. If TLS is unavailable, Salesforce terminates the session without delivering the email.
  - `Preferred Verify`: If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. Before the session initiates, Salesforce verifies the certificate is signed by a valid certificate authority, and that the common name presented in the certificate matches the domain or mail exchange of the current connection. If TLS is available but the certificate is not signed or the common name does not match, Salesforce disconnects the session and does not deliver the email. If TLS is unavailable, Salesforce continues the session without TLS.
  - `Required Verify`: Salesforce continues the session only if the remote server offers TLS, the certificate is signed by a valid certificate authority, and the common name presented in the certificate matches the domain or mail exchange to which Salesforce is connected. If any of these criteria are not met, Salesforce terminates the session without delivering the email.

 **Note:** If you select a setting other than `Preferred` (the default setting), select `Restrict TLS to these domains` and specify a comma-separated domain list. The asterisk (\*) wildcard is allowed; for example, `*.subdomains.com`

matches `john@aco.subdomains.com` and `john@bco.subdomains.com` (but not `john@subdomains.com`). If you don't specify domains, Salesforce uses the TLS setting you specify for all outbound emails, which may result in emails not being delivered.

#### 10. Click **Save**.

[Testing Email Deliverability](#)

## Organization-Wide Addresses

If your organization requires users to share a common email alias, you can define a list of *organization-wide addresses* for each user profile. Organization-wide addresses define a common email address that a user profile can use. When sending email from Salesforce, users with these profiles can choose a different `From` address than the email address they have defined. Replies are delivered to the organization-wide address.

For example, assume your organization has several users under a single Support Profile. A Support Profile can be associated with an email address called `support@acme.com` and a `Display Name` of *Acme Support*. When Support Profile users send an outbound email through Salesforce, they can choose to have their `From` address appear as `support@acme.com` instead of their own Salesforce email address.

The highlighted sections in the following image represents the changes to the `From` address and `Display Name` that the recipient of an email might see:

```
Date: Wed, 22 Apr 2009 18:44:19 +0000
From: Acme Support <support@acme.com>
Sender: <no-reply@salesforce.com>
To: "friend@xyz.com" <friend@xyz.com>
Message-ID: <21746402.461240425859813.JavaMail.sfdc@na1-app1-12-sfm.ops.sfdc.net>
Subject: Here is your data
```

After an organization-wide address is verified, it is available as a `From` address when sending an email or an email alert.

To display the list of defined organization-wide addresses, from Setup, enter *Organization-Wide Addresses* in the `Quick Find` box, then select **Organization-Wide Addresses**. From this page you can:

- Click **Add** to [create a new organization-wide address](#).
- Click **Edit** to change any of the fields associated with the alias:
  - `Display Name` is the word or phrase users who receive your email will see as the sender of the email.
  - `Email Address` is the email address that is used when sending an outbound email.
  - `Allowed Profiles` lists the profiles which use the email address as an alias.

### EDITIONS

Available in: Salesforce Classic

Available in: **All Editions** except **Database.com**

### USER PERMISSIONS

To configure organization-wide addresses:

- "Modify All Data"

- **Status** shows the current stage of verification. When you add a new organization-wide address, it must be verified as a valid email address before becoming available for use. If you have not received your verification email, click **Resend** to have another one sent.
- Click **Del** to remove the alias.
- 📌 **Note:** You cannot use an organization-wide address to send a mass email or a Stay-in-Touch request. You cannot delete or change an organization-wide email address if it is used by an email alert. Organization-wide addresses can't be used in scheduled reports, scheduling dashboards for refresh, sending mail merge emails, and sending meeting requests to contacts and leads.

SEE ALSO:

[Managing Organization-Wide Email Footers](#)

## Defining Organization-Wide Addresses

To define an organization-wide address for a user profile:

1. From Setup, enter *Organization-Wide Addresses* in the **Quick Find** box, then select **Organization-Wide Addresses**.
  2. Click **Add**.
  3. Enter a **Display Name**. The display name identifies how your name appears on outbound emails. The maximum length is 300 characters.
  4. Enter the **Email Address** you would like to use as an alias. This can be any standard email address. The maximum length is 270 characters.
  5. Select **Allow All Profiles to Use this From Address** if you want every user profile in your organization to be able to use the new **From** address. Otherwise, select **Allow Only Selected Profiles to Use this From Address** to choose from existing user profiles.
  6. Click **Save** to save your changes, or **Save and New** to define another organization-wide address. A verification email is sent to the new email address which includes a link that you click to complete the verification process. The **From** address will not be available for use until you access the email and click this link. Click **Cancel** to return to the previous page without saving.
- 📌 **Note:** Organization-wide addresses can't be used in scheduled reports, scheduling dashboards for refresh, sending mail merge emails, and sending meeting requests to contacts and leads.

To use an organization-wide address, [send an email](#) or set up an email alert, and choose your organization-wide address from the drop-down list.

## Managing Organization-Wide Email Footers

You can create personalized footers or disclaimers that appear at the bottom of all outgoing email messages sent from Salesforce or the API. You can create a separate email footer for each encoding and choose default footers for single and mass email. The defaults are used when no footer matches an outgoing email's encoding.

### Creating Email Footers

1. From Setup, enter *Email Footers* in the **Quick Find** box, then select **Email Footers**.
2. Click **New**.
3. Enter a name.
4. Choose if you want the footer to be available for single emails, mass emails, or both.
5. Select the email encoding. The email encoding determines which emails the footer appears on. For each encoding you can have one active single email footer and one active mass email footer.
6. Enter the text of the footer.

 **Note:** Footers are text only; HTML tags aren't rendered. Maximum is 32 KB.

### Editing Email Footers

1. From Setup, enter *Email Footers* in the **Quick Find** box, then select **Email Footers**.
2. To edit an email footer, either click **Edit** next to a footer or on the footer detail page.
3. Edit the footer information and click **Save**.

### Choosing Default Email Footers

You can choose one default footer for single email and one for mass email. These defaults are used when no footer matches an outgoing email's encoding.

1. From Setup, enter *Email Footers* in the **Quick Find** box, then select **Email Footers**.
2. Using **Default for Single Mail** and **Default for Mass Mail**, select default footers.
3. Click **Save**.

 **Note:** If you don't click **Save**, your default footer choice is lost when you leave the page.

### Deactivating Email Footers

You can deactivate an email footer without deleting it.

1. From Setup, enter *Email Footers* in the **Quick Find** box, then select **Email Footers**.
2. Uncheck the **Single** and **Mass** checkboxes next to the footer.
3. Click **Save**.

#### EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **All Editions** except **Database.com**

#### USER PERMISSIONS

To create and edit email footers:

- "Modify All Data"

## Testing Email Deliverability

Salesforce sends email from many different IP addresses. The number of addresses depends on your data center and appears on the Test Deliverability page. If your organization blocks any of these IP addresses, users might not receive all email sent from Salesforce. You can check whether your organization is receiving email from every Salesforce IP address.

1. From Setup, enter *Test Deliverability* in the **Quick Find** box, then select **Test Deliverability**.
2. Enter your business email address.
3. Click **Send**. Salesforce sends a test message from all IP addresses to your business email address. Each test message specifies the IP address from which it was sent.
4. To make sure that you received all test messages, check your business email account.

If you didn't receive all the test messages, your organization's email administrator must whitelist the Salesforce IP ranges on your organization's email server. Whitelisting an IP address allows the email server to receive email from an IP address that is otherwise blocked. For a current list of Salesforce IP ranges, see [What are the Salesforce IP Addresses to whitelist?](#)

Salesforce maintains separate IP addresses for inbound and outbound email. The IP addresses used for outbound email don't accept inbound email connections.

## Deleting Email Attachments Sent as Links

You can find and delete attachments sent as links. Recipients who subsequently click on the attachment link see a message asking them to contact the email sender to view the attachment. You can search only within your organization's email retention period (typically 30 days, but contact Salesforce Support for your organization's details).

To find and delete email attachments sent as links:

1. From Setup, enter *Attachments* in the **Quick Find** box, then select **Delete Attachments Sent as Links**.
2. Enter either of these.
  - File name (optional), username, and date range:
    - Optionally, attachment file name, including the file extension (for example, *ThisYearResults.pdf*). You can use wildcards (for example, *ThisYearRes* would find *ThisYearResults.pdf*).
    - Sender's username
    - Date range during which the email was sent
  - Attachment URL: Click the attachment link (.html) in the email to open it in a browser, and copy and paste the URL.
3. Click **Search**.
  - Search results show up to 100 matching entries.

Available in: Salesforce Classic and Lightning Experience

Available in: **All Editions** except **Database.com**

### USER PERMISSIONS

To test email deliverability:

- "Modify All Data"

### EDITIONS

Available in: Salesforce Classic

Available in: **All Editions** except **Database.com**

### USER PERMISSIONS

To delete email attachments sent as links:

- "Modify All Data"

- If the attachment was sent using mass email, search results show one entry for every 100 emails sent—delete one of these entries to delete the attachment.
4. In Search Results, click **Del** next to the attachment you want to delete. Recipients who subsequently click on the attachment link see a message asking them to contact the email sender to view the attachment.

 **Note:** You cannot recover deleted attachments from the Recycle Bin.

## Monitoring the Mass Email Queue

Use the mass email queue to view the status of scheduled mass emails and cancel mass emails if necessary.

You can view the mass emails that you've scheduled on the Mass Emails page in your personal settings. If you have permission to view all mass emails in your organization, from Setup, enter *Mass Emails* in the Quick Find box, then select **Mass Emails**.

From these pages, you can:

- Click **Cancel** to cancel a pending mass email.
- Click **Stop** to stop a mass email that Salesforce is in the process of sending.
- Click **Del** to delete the record of a sent or canceled mass email from the queue.
- Click the name of the mass email to view details about an individual mass email.

The mass email queue shows the number of recipients that the mass email was addressed to and sent to. These numbers may differ because:

- The mass email would cause your organization to exceed its daily mass email limit. Salesforce does not send the message to any of the intended recipients in this case.
- One or more selected recipients opted out of receiving mass email after the mass email was scheduled but before it was processed.
- One or more selected recipient email addresses were removed from the contact or lead after the mass email was scheduled but before it was processed.
- The user who sent the mass email was deactivated after the mass email was scheduled but before it was processed. Salesforce does not send mass emails scheduled by a user who is deactivated.

## Create a DKIM Key

Use the DKIM (DomainKeys Identified Mail) key feature to enable Salesforce to sign outbound emails sent on your organization's behalf. A valid signature provides recipients confidence that the email was handled by a third party such as Salesforce in a way authorized by your organization.

When you create a DKIM key, Salesforce generates a public and private key pair. You must publish the public key in the DNS, which tells recipients that you, as the owner of the domain, have authorized the use of this key to sign your mail. Salesforce uses the private key to create DKIM signature headers on your outgoing email. Then, recipients of the mail, can compare the signature header with the public key in the DNS to determine that the mail was signed with an authorized key. If your domain also publishes a Domain-based Message Authentication, Reporting and Conformance (DMARC) policy, recipients can use the DKIM signature to verify that the mail conforms to DMARC.

To create a new key:

1. From Setup, enter *DKIM Keys* in the `Quick Find` box, then select **DKIM Keys**.
2. Click **Create New Key**.
3. For Selector, enter a unique name.
4. Enter your Domain name.
5. Select the type of Domain Match you'd like to use.
6. Click **Save**.
  - The key defaults to Inactive state. Make sure you add the public key to the DNS record before activating the key. DKIM signing is active whenever you have an active DKIM key.
  - You can't have more than one active DKIM key per domain name. You might have multiple active DKIM keys if your organization sends mail from more than a single domain or if you use `subdomains` under your organizational domain and have specified domain matching at the `subdomain` level.
  - When you insert or update a domain key, it's possible that the change affects existing DKIM keys. For example, if you've set `DomainMatch` to `DomainAndSubdomains` for the `example.com` domain, and you then set `DomainMatch` to `SubdomainsOnly` for the `mail.example.com` domain, either key could be used. Here's how we resolve conflicts in the case when domain keys overlap.
    1. If two keys are equally specific about matching for the same domain, the new key replaces and deactivates the existing key.
    2. If a new key is more specific about matching than an existing key, the new key is used and the existing key is modified to no longer apply to the case covered by the new key. For example, because `DomainOnly` and `SubdomainsOnly` are more specific than `DomainAndSubdomains`, a new `DomainOnly` key would change the `DomainMatch` for an existing `DomainAndSubdomains` key to become `SubdomainsOnly`.
    3. If multiple keys have different domains that match the sending domain, the key with the longest domain name is used. In case of a tie, the most specific key is used.

For information about DKIM, see <http://dkim.org>

### USER PERMISSIONS

Manage DKIM Keys

- Customize Application

## Import a DKIM Key

Use the DKIM (DomainKeys Identified Mail) key feature to enable Salesforce to sign outbound emails sent on your organization's behalf.

Some companies have multiple Salesforce organizations, and users in those organizations share a domain name in their email address. Therefore, companies that want Salesforce to sign the email sent by those users sometimes want to share DKIM keys. You can do that using this page.

First, create the key and ensure it's working for one organization. To import and use it in another organization, copy the selector name, domain name, and public and private key data from the working key. You can get this data from the detail page for the key you want to import. After you've copied the key data, log in to the target organization and follow these steps to import the key.

1. From Setup, enter *DKIM Keys* in the **Quick Find** box, then select **DKIM Keys**.
2. Click **Import a Key**.
3. Enter the same selector name you copied from the original organization.
4. Enter the same domain name you copied from the original organization.
5. Paste in the public and private key data you copied into their respective fields.
6. Select the type of Domain Match you'd like to use. Most likely you'll use the same value that was selected for the key in the original organization.
7. Click **Save**.

Because the public and private key data worked for the original organization, you can typically activate the key in the target organization immediately.

 **Note:** The private key data is an encrypted form of the private key data that's used to sign emails. It's decrypted internally when signing emails. Therefore, it can be used only within Salesforce. For example, you can't take the public and private key data and plug it into an external mail system.

# Working with Mail Merge Templates

## Managing Mail Merge Templates

Mail merge templates define the content of a form letter or other mail merge document. They include variables called merge fields where data from your records—for example a contact's name and address—displays in the generated document.

As an administrator, you're responsible for building mail merge templates in Microsoft Word and uploading them to Salesforce to make them available for your users. See the following topics:

- [Creating New Mail Merge Templates](#) explains how to build a new mail merge template from a blank Word document.
- [Modifying Existing Mail Merge Templates](#) explains how to download sample templates and modify them to meet your unique business needs.
- [Uploading Mail Merge Templates to Salesforce](#) explains how to upload completed mail merge templates to Salesforce.

 **Tip:** [Download sample mail merge templates](#) to help you get started.

### SEE ALSO:

[Mail Merge Overview](#)

[Merge Fields for Mail Merge Templates](#)

[Sending Single Mail Merge Documents](#)

### EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **All Editions** except **Database.com**

### USER PERMISSIONS

To upload mail merge templates:

- "Manage Public Templates"

To edit mail merge templates:

- "Manage Public Templates"

## Create Visualforce Email Templates

1. Do one of the following:
  - If you have permission to edit public templates, from Setup, enter *Email Templates* in the **Quick Find** box, then select **Email Templates**.
  - If you don't have permission to edit public templates, go to your personal settings. Enter *Templates* in the **Quick Find** box, then select **Email Templates** or **My Templates**—whichever one appears.

2. Click **New Template**.

3. Choose **Visualforce** and click **Next**.

You can't send a mass email using a Visualforce email template.

4. Choose a folder in which to store the template.
5. Select the **Available For Use** checkbox if you would like this template offered to users when sending an email.
6. Enter an **Email Template Name**.
7. If necessary, change the **Template Unique Name**. This is a unique name used to refer to the component when using the Force.com API. In managed packages, this unique name prevents naming conflicts on package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the **Template Unique Name** field, a developer can change certain components' names in a managed package and the changes are reflected in a subscriber's organization.
8. Select an **Encoding** setting to determine the character set for the template.
9. Enter a **Description** of the template. Both template name and description are for your internal use only.
10. Enter the subject line for your template in **Email Subject**.
11. In the **Recipient Type** drop-down list, select the type of recipient that will receive the email template.
12. In the **Related To Type** drop-down list, optionally select the object from which the template will retrieve merge field data.
13. Click **Save**.
14. On the Viewing Email Templates page, click **Edit Template**.
15. Enter markup text for your Visualforce email template.

 **Note:** If you are including an image, we recommend uploading it to the Documents tab so that you can reference the copy of the image that is on our server. For example:

```
<apex:image id="Logo" value="https://na7.salesforce.com/servlet/servlet.ImageServer?id=015D0000000Dpwc&oid=00DD0000000FHgG&lastMod=127057656800" height="64" width="64"/>
```

16. Click **Version Settings** to specify the version of Visualforce and the API used with this email template. If your organization has installed managed packages from the AppExchange, you can also specify which version of each managed package to use with this email template. Generally, you should use the default value for all versions. This associates the email template with the most recent version of Visualforce, the API, as well as each managed package. You can specify an older version of Visualforce and the API to

### EDITIONS

Available in: Salesforce Classic

Available in: **Contact Manager, Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Mass email not available in: **Personal, Contact Manager,** and **Group** Editions

### USER PERMISSIONS

To create or change Visualforce email templates:

- "Customize Application"

To create or change public email template folders:

- "Manage Public Templates"

maintain specific behavior. You can specify an older version of a managed package if you want to access components or functionality that differs from the most recent package version.

17. Click **Save** to save your changes and view the details of the template, or click **Quick Save** to save your changes and continue editing your template. Your Visualforce markup must be valid before you can save your template.

 **Note:** The maximum size of a Visualforce email template is 1 MB.

You can't send a mass email using a Visualforce email template. The `{!Receiving_User.field_name}` and `{!Sending_User.field_name}` merge fields work only for mass email and are unavailable in Visualforce email templates.

 **Tip:**

- Click **Send Test and Verify Merge Fields** to view a sample of the template populated with data from records you choose and send a test email. If the email template includes encrypted data, keep in mind that the data displays encrypted within the generated email and when viewing the Visualforce template page. It doesn't display in plain text for security purposes.
- To translate Visualforce email templates based on recipients' or related objects' languages, use the `<messaging:emailTemplate>` tag's `language` attribute (valid values: Salesforce supported language keys, for example, "en-US"). The language attribute accepts merge fields from the email template's `recipientType` and `relatedToType` attributes. You create custom language fields for use in the merge fields. The Translation Workbench is required to translate email templates.

## Create HTML Email Templates

To create an HTML email template:

1. Do one of the following:
  - If you have permission to edit public templates, from Setup, enter *Email Templates* in the **Quick Find** box, then select **Email Templates**.
  - If you don't have permission to edit public templates, go to your personal settings. Enter *Templates* in the **Quick Find** box, then select **Email Templates** or **My Templates**—whichever one appears.
2. Click **New Template**.
3. Choose **HTML (using Letterhead)** and click **Next**.
4. Choose a folder in which to store the template.
5. Select the **Available For Use** checkbox if you would like this template offered to users when sending an email.
6. Enter an **Email Template Name**.
7. If necessary, change the **Template Unique Name**. This is a unique name used to refer to the component when using the Force.com API. In managed packages, this unique name prevents naming conflicts on package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the **Template Unique Name** field, a developer can change certain components' names in a managed package and the changes are reflected in a subscriber's organization.
8. Select a **Letterhead**. The letterhead decides the logo, page color, and text settings of your email.
9. Select the **Email Layout**. The email layout determines the columns and page layout of the message text. Click **View Email Layout Options** to see samples.
10. Select an **Encoding** setting to determine the character set for the template.
11. Enter a **Description** of the template. Both template name and description are for your internal use only. The description is used as the title of any email activities you log when sending mass email.
12. Click **Next**.
13. Enter the **Subject** to appear in the email you send.
14. Enter the text to appear in the message you send. Click any section and begin entering text for your message. To prevent users from editing a section when using this template, click the padlock icon.
15. Change the style of your text by selecting the text and using the format toolbar. See [Using the Format Toolbar](#) on page 1539 for instructions on the format toolbar.
16. Optionally, enter merge fields in the template subject and body. These fields will be replaced with information from your lead, contact, account, opportunity, case, or solution when you send an email.
17. Click **Next**.
18. Optionally, enter the text-only version of your email or click **Copy text from HTML version** to automatically paste the text from your HTML version without the HTML tags. The text-only version is available to recipients who are unable to view HTML emails.

## Merge Fields for Email Templates

A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

You can use merge fields in the subject and body of custom HTML templates.

### Syntax and Formatting

The syntax consists of an open curly brace and exclamation point, followed by the object name, a period, the field name and a closing curly brace. For example, if you want to include the account number of your recipient, you could enter `ID: {!Account.AccountNumber}`, and your recipient's email will display `ID: 001234567890123`.

The syntax for a merge field may differ, depending on where you're using it in Salesforce. To ensure that you're using the correct syntax, select merge fields from the drop-down list in the editor where you're using the merge field. Most merge fields for email templates correspond directly with email template fields.

#### **Important:**

- If a standard object and custom object have matching names or labels, only the standard object's fields display when you select from Available Merge Fields.

For example, if you have a custom object and a standard object both called `Quote`, you won't be able to select the custom object. To ensure that you can select merge fields from either object, add a character to make the custom object's name and label unique, such as `Quote2`.

- If two or more custom objects have matching names or labels, only one of the objects displays when you select from Available Merge Fields. Ensure that all custom objects have unique names and labels so that you can select merge fields from any of the objects.

HTML and Visualforce email templates not available in: **Personal Edition**

## Tips

### General Tips

- Don't use a hyperlink formula field in the subject of an email template or in the body of a text email template.
- In email templates, you can add substitute text to any merge field. Substitute text displays in a sent email if the merge record does not contain data for that field. To add substitute text, place a comma after the field name and enter the text before the closing bracket, for example: `Dear {!Contact.FirstName, Valued Customer}`. When you save the template, the merge field appears in the template as `Dear {!BLANKVALUE(Contact.FirstName, "Valued Customer")}`. In this example, if there is no information in the `First Name` field of the contact record, the email you create with your template will begin with "Dear Valued Customer".
- The `{!Receiving_User.field_name}` and `{!Sending_User.field_name}` merge fields work only for mass email and are unavailable in Visualforce email templates.
- User fields are also known as `Sending User` fields for administrators and users with the "Manage Users" permission. Use them in email templates when referencing the person sending the email.
- Administrators and users with the "Manage Users" permission can use Receiving User merge fields for email templates to reference the recipient of the email.
- The `Created Date` and `Last Modified Date` fields display only the date, not the date and time.
- If your template contains a merge field for which there is no data in a particular record, that field does not appear in the email you send. To find blank fields, modify your recipient list view to search for the merge fields you are using in your template, and enter the criterion "<field> equals," leaving the third field blank. Edit those records that have blank fields before you send your emails.

### Accounts

When account merge fields are included in an email template and this template is selected after a contact is added to the email `To` field, the account merge fields are populated from the contact's account, not the case's account.

### Approvals

- Approval process merge fields can be used in email templates, but not mail merge templates.
- With the exception of `{!ApprovalRequest.Comments}`, approval merge fields named `{!ApprovalRequest.field_name}` in email templates return values only in approval assignment emails and email alerts for approval processes. When used in other emails—including email alerts for workflow rules—the approval merge fields return `null`.
- The `{!ApprovalRequest.Comments}` merge field returns only the most recently entered comment in emails for an approval step that requires unanimous approval from multiple approvers.
- When creating an approval process, the current user or creator of the process can specify a submitter. If you use custom email templates with merge fields, you need to account for the possibility that the current user and the submitter aren't the same user. For example, you may need to change current user references of `{!User.<field_name>}` to a specified submitter reference `{!ApprovalRequestingUser.<field_name>}`.

### Campaigns

- Campaign and campaign member merge fields can be used in email templates, but not mail merge templates.
- Campaign member merge fields cannot be used with other types of merge fields in the same email template. For example, if you create an email template using a campaign member merge field and you want to include the title of the recipient, use `{!CampaignMember.Title}` instead of `{!Lead.Title}` or `{!Contact.Title}`.

### Cases

If you have enabled Email-to-Case or On-Demand Email-to-Case, you can create email templates that support agents can use to respond to case emails. These templates can include merge fields that display information from the original email in the response.

### Connection Finder

Custom email templates must contain the survey URL. `{!Contact.PartnerSurveyURL}` is available as a contact merge field when creating templates.

### Contacts

Templates with contact merge fields can be used to generate email documents for leads. Likewise, you can use lead templates to generate contact emails and documents.

 **Note:** You can only use standard fields when generating email for leads or contacts.

### Opportunities

Merge fields for products on opportunities are only available to organizations that have enabled products and can only be used in mail merge templates, but not email templates.

### Workflow

To use merge fields from user records in email templates, select from the following merge field types:

- **User Fields**—Use these merge fields to represent the sending user. Merge fields named `{!User.field_name}` return values from the user record of the person who created or updated the record that triggered the workflow rule.
- **Workflow Target User Fields**—Use these merge fields only in email templates for workflow rules on the User object. Merge fields named `{!Target_User.field_name}` return values from the user record that was created or updated to trigger the workflow rule.

This release contains a beta version of workflow on the User object that is production quality but has known limitations. To provide feedback and suggestions, go to [IdeaExchange](#).

[Merge Fields Overview](#)

## Merge Fields for Visualforce Email Templates

A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

### Syntax and Formatting

Merge fields for Visualforce email templates use the same expression language as formulas:

```
{!Object_Name.Field_Name}
```

#### EDITIONS

Available in: Salesforce Classic

Available in: **Contact Manager, Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Mass email not available in: **Personal, Contact Manager,** and **Group** Editions

For example, you can start your email template with `Hello, {!Contact.FirstName}`. When you send the template, each recipient will see their first name in place of the merge field. If your recipient's first name is John, he will see `Hello, John!` when he opens the email.

## Tips

- You can't send a mass email using a Visualforce email template. `{!Receiving_User.field_name}` and `{!Sending_User.field_name}` are used for mass email and aren't available for Visualforce email templates.
- To translate Visualforce email templates based on recipients' or related objects' languages, use the `<messaging:emailTemplate>` tag's language attribute. Valid values are Salesforce-supported language keys, such as "en-us" for English (US). The language attribute accepts merge fields from the email template's `recipientType` and `relatedToType` attributes. You create custom language fields for use in the merge fields. The Translation Workbench is required to translate email templates.

[Developer's Guide: Visualforce Developer's Guide](#)

## Merge Fields for Mail Merge Templates

A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

### Syntax and Formatting

Mail merge templates are created by uploading documents to Salesforce from your desktop. The syntax for these merge fields is `OBJECT_FIELD_NAME` or `FIELD_NAME`. Merge fields for mail merge templates must:

- Be unique
- Contain only letters, numbers, and the underscore (`_`) character
- Not exceed 40 characters

For example: `AccountNumber`. To ensure you're using the correct syntax, use Connect for Office to insert merge fields into your mail merge template.

### Compatibility with Other Features

- For opportunity mail merges, you can use contact merge fields to merge additional information about a related contact.
- Merge fields for products on opportunities are only available to organizations that have enabled products.
- Approval process merge fields can be used in email templates, but not mail merge templates.
- Campaign and campaign member merge fields cannot be used in mail merge templates.

## Tips

Templates with contact merge fields can be used to generate mail merge documents for leads. Likewise, you can use lead templates to generate contact documents.

### EDITIONS

This feature available to manage from: both Salesforce Classic and Lightning Experience

Available in: **All Editions** except **Database.com**

 **Note:** You can only use standard fields when generating mail merge documents for leads or contacts.

SEE ALSO:

[Mail Merge Overview](#)

[Merge Fields Overview](#)

## Managing Version Settings for Visualforce Email Templates

To aid backwards-compatibility, each Visualforce email template is saved with version settings for the specified version of Visualforce and the API. If the Visualforce email template references installed managed packages, the version settings for each managed package referenced by the Visualforce component are saved too. This ensures that as Visualforce, the API and the components in managed packages evolve in subsequent versions, a Visualforce email template is still bound to versions with specific, known behavior.

A package version is a number that identifies the set of components uploaded in a package. The version number has the format *majorNumber.minorNumber.patchNumber* (for example, 2.1.3). The major and minor numbers increase to a chosen value during every major release. The *patchNumber* is generated and updated only for a patch release. Publishers can use package versions to evolve the components in their managed packages gracefully by releasing subsequent package versions without breaking existing customer integrations using the package.

To set the Salesforce API and Visualforce version for an existing Visualforce email template:

1. Do one of the following:
  - If you have permission to edit public templates, from Setup, enter *Email Templates* in the **Quick Find** box, then select **Email Templates**.
  - If you don't have permission to edit public templates, go to your personal settings. Enter *Templates* in the **Quick Find** box, then select **Email Templates** or **My Templates**—whichever one appears.
2. Click the **Email Template Name** for the Visualforce email template.
3. Click **Edit Template** and then click **Version Settings**.
4. Select the **Version** of the Salesforce API. This is also the version of Visualforce used with this template.
5. Click **Save**.

To configure the package version settings for a Visualforce email template:

1. Do one of the following:
  - If you have permission to edit public templates, from Setup, enter *Email Templates* in the **Quick Find** box, then select **Email Templates**.
  - If you don't have permission to edit public templates, go to your personal settings. Enter *Templates* in the **Quick Find** box, then select **Email Templates** or **My Templates**—whichever one appears.
2. Click the **Email Template Name** for the Visualforce email template.
3. Click **Edit Template** and then click **Version Settings**.
4. Select a **Version** for each managed package referenced by the Visualforce email template. This version of the managed package will continue to be used by the Visualforce email template if later versions of the managed package are installed, unless you manually update the version setting. To add an installed managed package to the settings list, select a package from the list of available

### EDITIONS

## Managing Cloud-Based Email Integration

### Administering Exchange Sync (Beta)

#### Exchange Sync (Beta) Syncs your Microsoft® Items

Help users keep their contacts and events in sync between your Microsoft® Exchange server and Salesforce without installing and maintaining software.

-  **Note:** Exchange Sync is currently available as a beta feature, which means it's a high-quality feature with known limitations. Check out our [Exchange Sync Implementation Guide](#) to set up the feature at your company.

When you set up your users' contacts and events to sync between your company's email system and Salesforce, you help your users increase their productivity, because there's no need for them to duplicate their work between the two systems.

You decide whether your users sync both contacts and events by defining sync settings in Salesforce. You can also determine whether users' records sync between your Exchange servers and Salesforce in both directions, or just one.

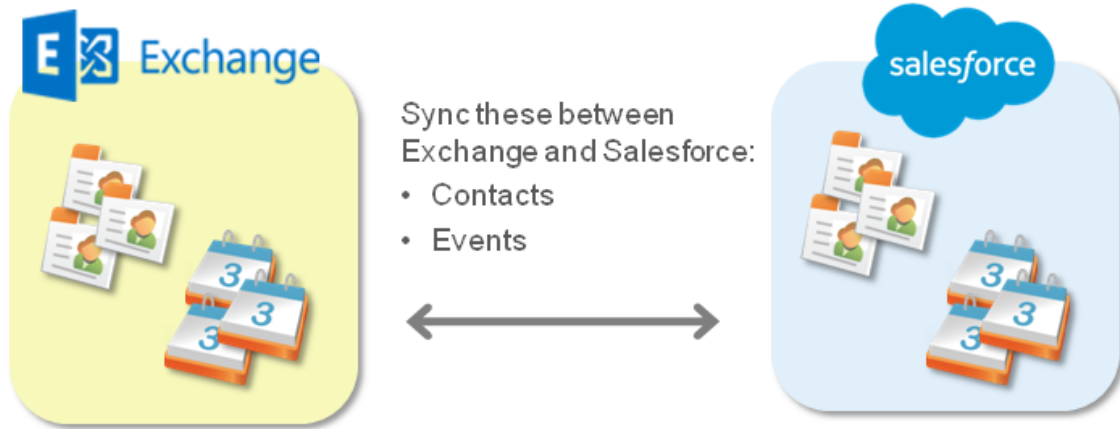

Your users can sync records they create and maintain either at their desks or on their mobile devices.

#### EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

At this time, Exchange Sync doesn't:

- Sync recurring events
- Sync invitees included in events
- Let users delete records from both systems in one action

However, your users can manage these actions as they always have—by manually updating recurring events, adding event invitees, and deleting records in both systems.

### Exchange Sync System Requirements

Before setting up your users to sync contacts and events with Exchange Sync, make sure your Microsoft® Exchange-based server meets these system requirements.

Your company must be running	With these settings enabled
Exchange Server 2010 - Service Pack 3	<ul style="list-style-type: none"> <li>• Exchange Web Services (EWS) on an SSL connection</li> <li>• Exchange Autodiscover Service</li> <li>• Basic authentication</li> </ul>
Exchange Server 2013 - Service Pack 1	
Exchange Online, Office 365® - Enterprise Editions

## See the Big Picture for Setting Up Exchange Sync

Set up Exchange Sync at your organization so your users can sync contacts and events between your company's Microsoft® Exchange server and Salesforce. You'll complete several steps to prepare the systems to communicate, both on your Exchange server and in Salesforce.

Complete these steps to set up Exchange Sync for your organization.

1. [Prepare your Exchange server for Exchange Sync](#) by enabling a few settings.
2. [Set up an Exchange service account](#) so your server can communicate with Exchange Sync.
3. [Run the Microsoft® Remote Connectivity Analyzer using Exchange Sync parameters](#) to test that you set up your Exchange server correctly.
4. [Set up Salesforce to communicate with Exchange](#) by enabling Exchange Sync and providing your service account credentials in Salesforce.
5. [Prepare your users to manage calendar events they don't want to sync](#).
6. [Define your users' sync settings](#) in Exchange Sync configurations.
7. [Prepare your users to manage email contacts they want to sync](#).

SEE ALSO:

- [Exchange Sync \(Beta\) Syncs your Microsoft® Items](#)
- [Salesforce for Outlook and Email Connect Success Community](#)

## Prepare Your Microsoft® Exchange Server for Exchange Sync

The first step in setting up Exchange Sync is to enable several settings on your Exchange server, including Exchange Web Services, Exchange Autodiscover Service, and Basic authentication.

These instructions vary depending on the version of Microsoft® Exchange your company uses. For more support, visit Microsoft's support website, search for the keywords mentioned here, and follow the instructions intended for your Exchange version.

Complete the following steps on your Exchange server.

1. Enable Exchange Web Services (EWS) on an SSL connection.
  - Make sure your Exchange server has a signed certificate from one of the [Salesforce-approved Certificate Authorities](#).
  - If your organization has configured a firewall, allow an inbound connection to your Exchange client access server on ports 80 and 443.
2. Enable Exchange Autodiscover Service.
3. Enable Basic authentication. You can enable additional authentication methods, but Exchange Sync requires Basic authentication to run.

Now you're ready to [set up an Exchange service account](#).

## Set up a Microsoft® Exchange Service Account to Communicate with Exchange Sync

After you've enabled Exchange Web Services and Exchange Autodiscover Service on your Exchange server, you'll create a service account with impersonation rights for the mailbox of each Exchange Sync user.

Before setting up an Exchange Service account, make sure you've [enabled the appropriate Exchange server settings to set up Exchange Sync](#).

To set up an Exchange service account, you'll complete these steps on your Exchange server.

Watch a Demo:

-  [Set Up an Exchange Sync Service Account from the Exchange Admin Center](#)
-  [Set Up an Exchange Sync Service Account at the Command Line](#)

 **Note:** For more support, visit Microsoft®'s support website, search for the keywords mentioned here, and follow the instructions intended for your Exchange version.

1. Create an Exchange user with a mailbox that will act as the service account. You'll use this email address for this mailbox to configure Exchange impersonation for the service account.
2. Using Exchange Management Shell, enter the commands that enable service account impersonation for your version of Exchange. If you receive a pipeline error message, wait a few minutes and re-enter the command to let your server process the requests.

- If you're using Exchange 2010 or 2013:

- a. Enable the Active Directory extended permission for `ms-Exch-EPI-Impersonation` on all Client Access servers.

```
Get-ExchangeServer | where {$_IsClientAccessServer -eq $TRUE} | ForEach-Object
{Add-ADPermission -Identity $_.distinguishedname -User (Get-User -Identity
<EnterExchangeSyncServiceAccountEmailAddress> | select-object).identity
-extendedRight ms-Exch-EPI-Impersonation}
```

- b. Enable the Active Directory extended rights for `ms-Exch-EPI-May-Impersonate` to let your service account impersonate all accounts on your Exchange server. You'll set a filter later that lets you limit the users the service account syncs with Salesforce.

```
Get-MailboxDatabase | ForEach-Object {Add-ADPermission -Identity $_.distinguishedname
-User <EnterExchangeSyncServiceAccountAddress> -ExtendedRights
ms-Exch-EPI-May-Impersonate}
```

- If you're using Exchange Online offered by Microsoft Office 365™:

- a. Enable customization on your Exchange server.

```
Enable-OrganizationCustomization
```

3. Using Exchange Management Shell, enter these commands to configure your service account to impersonate the group of users who'll sync with Exchange Sync.

- a. Create a management scope to define a filter that groups together the Exchange users who'll sync with Exchange Sync. For example, if you want only your sales representatives to sync, and their Exchange mailboxes all have the same value `SALES` for

### EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To set up a service account to communicate with Exchange Sync:

- Administrative access to your company's Exchange server

the filterable property `Department`, you'd enter `Department -eq 'Sales'` in place of `<ChooseRecipientFilter>`.

```
New-ManagementScope -Name:<ChooseExchangeSyncScopeName>
-RecipientRestrictionFilter:{<ChooseRecipientFilter>}
```

- b. Create a management role assignment that restricts the service account to impersonate only the users you defined in the management scope.

```
New-ManagementRoleAssignment -Name:<ChooseExchangeSyncRoleAssignmentName>
-Role:ApplicationImpersonation -User:<EnterExchangeSyncServiceAccountAddress>
-CustomRecipientWriteScope:<EnterExchangeSyncScopeName>
```

After you've set up your service account, [run the Microsoft® Remote Connectivity Analyzer using Exchange Sync parameters](#) to make sure you've set up your server for Exchange Sync. We recommend that you wait a few minutes after completing these tasks to let your Exchange server process the changes you've made. Otherwise, the Remote Connectivity Analyzer may show a failed test summary, even though you've configured setup correctly.

## Run the Microsoft® Remote Connectivity Analyzer Using Exchange Sync Parameters

If your Exchange Sync users can't sync their items, make sure your Exchange administrator has set up your server correctly by running the Remote Connectivity Analyzer—Microsoft's free, web-based tool—to test your connection and troubleshoot setup issues.

Before you run the Remote Connectivity Analyzer, make sure that you've [enabled the appropriate Exchange server settings](#) and then [set up an Exchange service account](#). We recommend that you wait a few minutes after completing those tasks to let your Exchange server process the changes you've made. Otherwise, the Remote Connectivity Analyzer may show a failed test summary, even though you've configured setup correctly.

1. Visit Microsoft's website and search for the Remote Connectivity Analyzer.
2. On the `Exchange Server` tab, select the **Service Account Access (Developers)**.
3. Click **Next**.
4. Complete the test fields:

For this Test Field	Type this parameter
Target mailbox email address	The Exchange email address of an Exchange Sync user for whom you'd like to test sync connectivity
Service Account User Name (Domain\User Name or UPN)	The service account domain\user name or UPN you've set up for Exchange Sync
Service Account Password	The service account password you've set up for Exchange Sync

5. Select `Use Autodiscover` to detect server settings.
6. Select `Test predefined folder`.
7. Choose `Contacts` if you'd like to test sync connectivity for this user's contacts, or `Calendar` for this user's events.
8. Check `Use Exchange Impersonation`.

### EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To get the necessary parameters to run the test:

- Administrative access to your company's Microsoft® Exchange server

9. In the `Impersonated User` field, type the same Exchange email address you specified for `Target mailbox email address`.
10. For `Impersonated user identifier`, select `SMTP Address`.
11. Check the `I understand that I must use the credentials of a working account...` acknowledgment.
12. Type the analyzer verification code and click **verify**.
13. At the top of the page, click **Perform Test**.  
Running the test usually takes less than 30 seconds. When the test is complete, the analyzer displays a summary evaluating the sync connectivity for the Exchange user you've specified.
14. Take action based on the test results.
  - If the test summary displays "Connectivity Test Successful" or "Connectivity Test Successful with Warnings," it's likely that you've set up your service account correctly, and you're ready to [provide your service account credentials to Salesforce](#).
  - If the test summary displays "Connectivity Test Failed," review the test details to troubleshoot setup issues. You might want to return to instructions on how to [set up Exchange Sync](#) correctly.
  - If you still are unable to set up Exchange Sync, or if you complete setup successfully but your users are still unable to sync their records, run the test again, and save the test details as HTML. You can provide these details to Salesforce Customer Support to evaluate your setup if you need to file a case.

## Set up Salesforce to Communicate with Microsoft® Exchange

After running the Remote Connectivity Analyzer, you'll log in to Salesforce to enable Exchange Sync and provide the service account credentials you created in Exchange. This task lets Exchange and Salesforce communicate.

1. From Salesforce Setup, enter `Exchange Sync` in the `Quick Find` box, then select **Exchange Sync Setup**.
2. Under `Enable Exchange Sync`, click **Edit**.
3. Check `Enable Exchange Sync` and click **Save**.
4. Type the service account user name you created in Exchange, including your company's domain and top-level domain. For example, if you created the Exchange user `svcacct` to act as your user account mailbox, `yourcompany` is your company's domain name, and `.com` is your company's top-level domain, you would provide your user name in either of these formats:
  - `svcacct@yourcompany.com`
  - `yourcompany.com\svcacct`

Depending on how your company has set up your network configuration, you might be required to test both formats to successfully set up Exchange Sync.
5. Enter your service account password.
6. Click **Save**.

Next you'll [tell your users it's time to choose which calendar events they want to prevent from syncing](#).

### EDITIONS

Available in:

### USER PERMISSIONS

To access Exchange Sync setup in Salesforce:

- "View Setup and Configuration"

## Tell Users How to Prevent Calendar Events from Syncing to Salesforce

Tell your Exchange Sync users that it's time to choose which Exchange calendar events they don't want to sync with Salesforce. We recommend users choose those events before you add users to Exchange Sync configurations and begin the sync process.

If you set up users to sync events from Salesforce to Exchange only, you can skip this step and begin to [define sync settings for your users](#).

Users might not want to sync some calendar events—like personal events—with Salesforce.

In the next step, you'll define user sync settings in Exchange Sync configurations, which starts syncing your users' items. At that time, if you set up users to sync events from Exchange to Salesforce or to sync both ways, all of your users' events sync to Salesforce automatically—unless you tell users to manage their events now.

Tell users that they can prevent syncing some events from Exchange to Salesforce by assigning the private option to those events in their calendar applications.

If users don't assign the private option to their events before syncing begins, users can still delete the events from Salesforce, but they'll have to delete those events manually.

When you're sure that users have assigned the private option to the events that they don't want to sync, you're ready to [define sync settings for your users](#) to kick off the sync process.

## Define Sync Settings for Exchange Sync Users

After users prepare their events to sync with Salesforce, you'll define sync settings for groups of users in Exchange Sync configurations. This step kicks off the sync process for your users.

Before defining sync settings in Exchange Sync configurations, make sure that you're Exchange administrator has [run the Microsoft® Remote Connectivity Analyzer using the Exchange Sync parameters](#).

Defining sync settings lets you control which of your users can sync contacts and events. You can also control which direction your users sync, and create filters to limit certain records from syncing.

1. From Salesforce Setup, enter *Exchange Sync Configurations* in the Quick Find box, then select **Exchange Sync Configurations**.

### USER PERMISSIONS

To access Exchange Sync setup in Salesforce:

- "View Setup and Configuration"

To create, edit, or delete Exchange Sync configurations:

- "Manage Email Client Configurations"

2. Click **New Exchange Configuration**.
3. Enter the name of the configuration. For example, if you're creating a configuration for users in a particular region, enter a unique name for it, and then select **Active**.

4. Assign users and profiles to this configuration.

5. Indicate the sync direction for your users' contacts.

**Data Settings**

Contacts

Sync Direction: Sync both ways

Conflict Behavior: Salesforce always wins

[Edit Field Mappings](#)

If an Exchange contact matches multiple Salesforce contacts, sync it with the Salesforce contact that:

- Has the most recent activity
- Was last updated
- Has the oldest creation date

- If you need to change field mappings between Salesforce and Exchange contacts, click **Edit Field Mappings**.
- Indicate the sync direction for your users' events.

**Events**

Sync Direction: Exchange to Salesforce

Conflict Behavior: Exchange always wins

[Edit Field Mappings](#)

- If you need to change field mappings between Salesforce and Exchange events, click **Edit Field Mappings**.
- Click **Save**.
- Set filters to specify the contacts users can sync. You are required to set filters based on your users' record ownership. You'll choose whether you want to:
  - Limit contacts that users sync to only what users own, choose **Selected Contacts**, and then select **User's Records**. Make sure you select both of these settings together, or no contacts sync for users in this configuration.
  - Let users sync all contacts they can see in Salesforce, choose **All Contacts**.

**Contact Filters** ! Required Information

Filter the contacts users of this configuration can sync. Contacts can be filtered by the records they're related to.

**Filter By Record Ownership**

Sync:  Selected Contacts  All Contacts

**Contacts**

User's Records

Set additional sync filters, if you wish. For example, to prevent contacts from outside your users' territories from syncing, create sync filters for specific fields on users' contact records. Note that contact filters don't apply to contacts syncing from Exchange to Salesforce.

**Filter By Additional Objects and Fields (Optional)**

Object	Field	Operator	Value	
Contact	Mailing Country	not equal to	United States	AND
Contact	Mailing Country	not equal to	Japan	AND
--None--	--None--	--None--		AND
--None--	--None--	--None--		AND
--None--	--None--	--None--		AND

[Add Row](#) [Remove Row](#)

**Other Contacts to Include**

Sync contacts users follow in Chatter

- Specify the specific events users can sync from Salesforce to Exchange. Enter a filter in the `Greater or equal to` field to limit the events users can sync to these time frames.
  - TODAY**—Syncs events that end on or after today. The start time is 12:00 a.m.

- *LAST MONTH*—Syncs events that ended on or after the first day of last month.
- *LAST N DAYS*—Syncs events that ended on or after a specified number of days ago, such as *LAST 30 DAYS*. You can sync events that ended up to 180 days ago.

## 12. Click **Save**.

Contact and event syncing has begun for users in this Exchange Sync configuration.

Now it's time to [tell users to choose the email contacts they want to sync with Salesforce](#) and move those contacts into the Salesforce\_Sync folders in their email applications.

### SEE ALSO:

[How Exchange Sync Manages Sync Conflicts with Salesforce for Outlook](#)

[How Can I Avoid Syncing Data Between My Salesforce Organizations?](#)

## Tell Users How to Sync Email Contacts with Salesforce

Tell your Exchange Sync users that it's time to manage the Exchange email contacts that they want to sync with Salesforce.

If you've set up your users to sync contacts from only Salesforce to Exchange, you can skip this step—your users' contacts and events are already syncing.

After you define users' sync settings by adding them to Exchange Sync configurations and make the configurations active, Exchange Sync creates a folder that's called Salesforce\_Sync as a subdirectory under the Contacts directory in each user's email account.

Users who are syncing contacts from Exchange to Salesforce or syncing both ways can choose which email contacts sync to Salesforce by moving those contacts into the Salesforce\_Sync folder.

Tell users to move their contacts to the Salesforce\_Sync folder now.

## Manage Exchange Sync Users

### Assign Users to Exchange Sync Configurations

To get your Exchange Sync users' contacts and events to sync, you'll have to add them to an Exchange Sync Configuration. You can do this in Salesforce by adding individual users, or multiple users with user profiles.

Before you assign a user to an Exchange Sync configuration, consider how that user's records sync if they're already mentioned in another configuration:

- If you assign an individual user to two Exchange Sync configurations, the user is removed from the first configuration automatically and assigned to the new one.
- If you assign a user to two Exchange Sync configurations as both an individual user and as part of a profile, the user is not removed from either configuration, but the user's records will sync according to the configuration that lists the user individually.
- If you assign a user to one Exchange Sync configuration and one configuration, the user is not removed from either configuration, but the user's records will sync according to the Exchange Sync configuration.

Users observe the assignments you've created, added, or removed the next time Exchange Sync runs a sync cycle.

To assign a user to an Exchange Sync configuration,

1. From Setup, enter *Exchange Sync Configurations* in the **Quick Find** box, then select **Exchange Sync Configurations**.
2. If you're modifying an existing Exchange Sync configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Exchange Configuration**, and then complete the required fields.
3. In the Assign Users and Profiles section, select either *Profiles* or *Users* in the **Search** drop-down list.
4. If you don't see the member you want to add, enter keywords in the search box and click **Find**.
5. Select members from the Available Members box, and click **Add** to add them to the group. If all available users are assigned to this configuration, the Users list is empty and you can only assign profiles.
6. To remove members, select those members and click **Remove**.
7. Click **Save**.

## How Can I Avoid Syncing Data Between My Salesforce Organizations?

If your company uses Exchange Sync in multiple Salesforce organizations, make sure the data in those organizations remains separate by being mindful about how you set up your Exchange Sync configurations.

You're using multiple organizations if you either:

- Test new features in a sandbox organization before setting up the feature in your live organization.
- Maintain separate Salesforce organizations for different divisions of your company.

To prevent Exchange Sync from syncing contacts and events between your Salesforce organizations, don't add the same user to Exchange Sync configurations in more than one organization.

We don't recommend marking an Exchange Sync configuration as inactive to prevent data from syncing between your Salesforce organizations. While marking a configuration as inactive prevents it from syncing a user's data, you risk forgetting that user is included in multiple Exchange Sync configurations, and marking the configuration as active later.

**Example:** You're testing Exchange Sync features in your sandbox organization, so you add user Marianne Schumacher to an Exchange Sync configuration in the sandbox organization. After you're satisfied with how you've set up Exchange Sync features for Marianne, you're ready to add her to an Exchange Sync configuration in your live organization.

Before you add Marianne to an Exchange Sync configuration in your live organization, remove her from the configuration in your sandbox organization. Otherwise, Exchange Sync can sync contacts and events between Marianne's email application, the sandbox organization, and the live organization, saving test and live data to all three data sources.

## Fix Sync Issues for Exchange Sync Users

If an Exchange Sync user has trouble syncing between Microsoft® Exchange and Salesforce, you can troubleshoot sync issues by checking your users' sync statuses or running an Exchange Sync error report. If you find a sync issue that a user can't overcome, then you can reset that user's sync process for them.

- [Check Exchange Sync Users' Sync Statuses](#)

## Check Exchange Sync Users' Sync Statuses

If your users can't sync, you can check their sync statuses—and the sync status of your Exchange Sync setup—to learn where sync is failing.

1. From Setup, enter *Exchange Sync Status* in the **Quick Find** box, then select **Exchange Sync Status**.
2. Type the name of the user whose sync status you'd like to check, and click **Check Status**. The sync status for that user is displayed.

In some cases, you may need to reset sync for a user.

If you need help interpreting sync statuses, or need recommendations on correcting sync issues, check out [Exchange Sync Statuses](#).

### SEE ALSO:

- [Build and Run an Exchange Sync Error Report](#)
- [Reset Sync for Exchange Sync Users](#)

## Build and Run an Exchange Sync Error Report

If your Exchange Sync users can't sync, you can build and run an error report to discover what's causing sync to fail in your organization, and for which users. The report details provide suggestions to help you troubleshoot sync issues.

First, you'll create a custom report type using an Exchange Sync Error Report custom object we've set up for you in Salesforce. Then, you'll create an Exchange Sync error report. Finally, you'll run your report to help your users fix those pesky sync errors they're experiencing.

1. [Create a custom report type](#). Set the **Primary Object** to **ExchangeSyncError**.
2. Create your Exchange Sync error report. From the Reports tab, click **New Report**. Set the **Report Type** to the Exchange Sync report type you created in step 1, and click **Create**.
3. Save and run your Exchange Sync error report. From the unsaved report, click **Save**, complete the required fields, and click **Save and Run Report**. Salesforce generates a list of errors sync errors found in your organization, or displays "Grand Totals (0 records)" if the report couldn't identify any sync errors.

If the report couldn't identify any errors, but users still can't sync, contact Salesforce.

## Reset Sync for Exchange Sync Users

If a user has trouble syncing between Microsoft Exchange and Salesforce, you can reset that user's sync process. This process clears out and then restores the connections between a user's Exchange and Salesforce records. Resetting the sync process won't affect information stored in those records.

1. Make sure that your user's `Salesforce_Sync` folder contains only the contacts the user wants to sync with Salesforce, and the events the user doesn't want to sync are marked as `Private` in the user's calendar application.
2. From Salesforce Setup, enter `Exchange Sync Status` in the `Quick Find` box, then select **Exchange Sync Status**.

### EDITIONS

Available in: both Salesforce Classic and Lightning Experience

- Enterprise
- Performance
- Unlimited
- Developer

The screenshot shows the Salesforce Setup interface. On the left is a navigation menu with 'Exchange Sync Status' highlighted and circled in red, with a red box containing the number '2'. The main content area is titled 'Exchange Sync Status' and contains the following sections:

- System Sync Status**: Includes a 'Configuration Setup' table with columns for the item and its status.
 

Configuration Setup	Status
Microsoft Exchange service account provided:	s2xsvcacc@s2xdomain.com
Salesforce recognizes Microsoft Exchange service account:	✓
Users in active Salesforce Exchange configurations:	2
Users with linked Microsoft Exchange and Salesforce email addresses:	0
- Contacts**: Shows sync activity for 'Last sync activity' (Mon Dec 08 07:03:32 GMT 2014) and 'Records synced in last 60 minutes' (0) and 'last 24 hours' (0).
- Events**: Shows sync activity for 'Last sync activity' (Mon Dec 08 07:03:32 GMT 2014) and 'Records synced in last 60 minutes' (0) and 'last 24 hours' (0).
- User Sync Status**: Includes a 'User Sync Status' section with a description and a form. The form has a 'User:' input field, a 'Check Status' button, and a 'Reset Sync' button. A red box containing the number '3' is positioned above the 'Reset Sync' button.

3. Type a user's name, and click **Reset Sync**.

During the next sync cycle, Exchange Sync will sync:

- All contacts from the user's `Salesforce_Sync` folder in Exchange to Salesforce, excluding contacts that fall outside of the filters you set in the user's Exchange configuration.
- All events from the user's calendar in Exchange to Salesforce, excluding events that fall outside of the filters you set in the user's Exchange configuration, or events the user marked as `Private` in Exchange.

### Exchange Sync Statuses

Understanding Exchange Sync statuses helps you assess and correct Exchange Sync errors that appear on the Exchange Sync status page in Salesforce.

### System Sync Statuses

**Table 7: Configuration Setup Statuses**

If	Provides this status	This status means that
Microsoft Exchange service account provided:	<i>Your Service Account User Name</i>	You've saved your service account credentials in Salesforce, and Exchange Sync has recognized a valid service account. This status doesn't necessarily mean that the service account is set up to sync using Exchange Sync. If you continue to have sync errors, we recommend that you use Microsoft's Remote Connectivity Analyzer tool to test your connection and troubleshoot setup issues.
	None	Exchange Sync couldn't save your service account credentials. Verify that you've provided the correct service account ID and password and that you've set up a valid service account in Microsoft Exchange.
Salesforce recognizes Microsoft Exchange service account:		Exchange Sync has recognized that the service account that you provided is valid. This status doesn't necessarily mean that the service account is set up to sync using Exchange Sync. If you continue to have sync errors, we recommend that you use Microsoft's Remote Connectivity Analyzer tool to test your connection and troubleshoot setup issues.
		Exchange Sync couldn't recognize the service account credentials. Check to make sure that you've set up a valid

## User Sync Statuses

**Table 10: Configuration Setup Statuses**

<b>If</b>	<b>Provides this status</b>	<b>This status means that</b>
User assigned to active Exchange configuration:		This user is set up to sync in an active Exchange Sync configuration.
		This user isn't set up to sync in an active Exchange Sync configuration.
User recognized by Exchange service account:		This user is represented by the service account that you've set up in Exchange, and Exchange Sync can communicate with your Exchange service account.
		This user isn't represented by the service account that you've set up in Exchange, or Exchange Sync can't communicate with the Exchange service account that you provided. Check your Exchange service account setup to verify that you've set up a valid service account and that it accurately represents this user.
User's reset sync status:	Marked for reset	You've reset this user for sync, but the reset hasn't started. Your reset request is in the system queue and will be completed when the system is available.
	Reset in progress	The reset sync process is in progress. When reset is complete, "User's reset sync status" is no longer displayed on this page.

Table 11: Contacts Statuses

If	Provides this status	This status means that
Salesforce_Sync folder found:		The Salesforce_Sync folder was found in this user's email account under the Contacts directory.
		Exchange Sync can't find the Salesforce_Sync folder on your Exchange server or can't create it automatically for this user. You can create the folder Salesforce_Sync for this user as a subdirectory under the Contacts directory in this user's email account.
Salesforce and Exchange email addresses linked:		This user's Microsoft Exchange email address has mapped to the user's Salesforce email address correctly.
		This user's Microsoft Exchange email address hasn't mapped to the user's Salesforce email address correctly. Reset sync for this user.
Salesforce to Exchange sync status:	Not started	This user's contacts hasn't started syncing from Salesforce to Exchange.
	Initial sync in progress	This user's contacts are syncing from Salesforce to Exchange for the first time. This initial sync might take several hours.
	Initial sync completed	This user's contacts have completed syncing from Salesforce to Exchange for the first time.
	Sync in progress	This user's contacts are syncing from Salesforce to Exchange right now.
	In sync	This user's contacts have completed syncing from Salesforce to Exchange.
	Exchange configuration not set to sync	This user isn't set up to sync contacts from Salesforce to Exchange in an active Exchange Sync configuration.
Exchange to Salesforce sync status:	Not started	This user's contacts have not started syncing from Exchange to Salesforce yet.
	Initial sync in progress	This user's contacts are syncing from Exchange to Salesforce for the first time. This initial sync might take several hours.
	Initial sync completed	This user's contacts have completed syncing from Exchange to Salesforce for the first time.

<b>If</b>	<b>Provides this status</b>	<b>This status means that</b>
	Sync in progress	This user's contacts are syncing from Exchange to Salesforce.
	In sync	This user's contacts have completed syncing from Exchange to Salesforce.
	Exchange configuration not set to sync	This user isn't set up to sync contacts from Exchange to Salesforce in an active Exchange Sync configuration.
Records in sync	The number of contacts that are syncing for this user	This user has this number of contacts syncing between Exchange and Salesforce. If this user's contacts are syncing as expected, this number matches the number of contacts in this user's Salesforce_Sync folder.

**Table 12: Event Statuses**

<b>If</b>	<b>Provides this status</b>	<b>This status means that</b>
Calendar folder found:		The calendar folder was found in this user's email account.
		Exchange Sync can't find the user's calendar folder on your Exchange server.
Salesforce and Exchange email addresses linked:		This user's Microsoft Exchange email address has mapped to the user's Salesforce email address correctly.
		This user's Microsoft Exchange email address hasn't mapped to the user's Salesforce email address correctly. Reset sync for this user.
Salesforce to Exchange sync status:	Not started	This user's events haven't started syncing from Salesforce to Exchange.
	Initial sync in progress	This user's events are syncing from Salesforce to Exchange for the first time. This initial sync might take several hours.
	Initial sync completed	This user's events have completed syncing from Salesforce to Exchange for the first time.
	Sync in progress	This user's events are syncing from Salesforce to Exchange right now.
	In sync	This user's events have completed syncing from Salesforce to Exchange.

If	Provides this status	This status means that
	Exchange configuration not set to sync	This user isn't set up to sync events from Salesforce to Exchange in an active Exchange Sync configuration.
Exchange to Salesforce sync status:	Not started	This user's events haven't started syncing from Exchange to Salesforce.
	Initial sync in progress	This user's events are syncing from Exchange to Salesforce for the first time. This initial sync might take several hours.
	Initial sync completed	This user's events have completed syncing from Exchange to Salesforce for the first time.
	Sync in progress	This user's events are syncing from Exchange to Salesforce.
	In sync	This user's events have completed syncing from Exchange Salesforce.
	Exchange configuration not set to sync	This user isn't set up to sync events from Exchange to Salesforce in an active Exchange Sync configuration.
Records in sync	The number of contacts that are syncing for this user	This user has this number of events syncing between Exchange and Salesforce. If this user reports difficulty syncing only some events, verify that the user is set up to sync events as expected in the user's Exchange Sync configuration and that the user didn't assign the <code>private</code> option to the event. Also remember that at this time, Exchange Sync doesn't sync all-day events, recurring events, or invitees on events.

# Administering Salesforce App for Outlook

## Salesforce App for Outlook

Get your sales teams to stay on top of important sales opportunities. Using Microsoft® Outlook® Web App (OWA), Outlook 2016, or Outlook 2013, along with Microsoft Office 365™, sales teams can manage their sales more efficiently. Your sales reps can add email and attachments to Salesforce records. Also, they can create contacts, or view them along with leads, person accounts, users, accounts, opportunities, and cases—directly in their email applications.

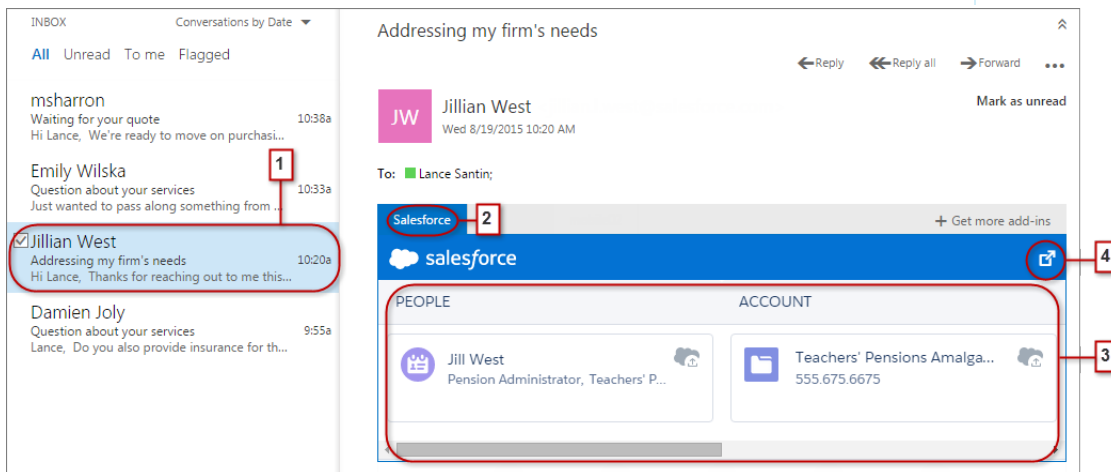

First, you enable Salesforce App for Outlook, and then your sales team members complete their short setup procedures. After that, teammates select an email in their email applications (1) and then select **SALESFORCE** (2). That's when they see related contacts, leads, and users, as well as related accounts, opportunities, and cases (3).

### EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

Sales reps can select the record to see more details about it in their email application. Or they can get complete details about the record or the email added to it directly in Salesforce (4).

## Set Up Sales Teams to See Salesforce Records in Microsoft® Email Applications

Help your sales teams get ready to create Salesforce contacts, and view contacts, leads, person accounts, and users, along with related accounts, opportunities, and cases directly in Outlook Web App (OWA), Outlook 2016, and Outlook 2013.

1. From Salesforce Setup, enter *Salesforce App for Outlook Settings* in the Quick Find box, then select **Salesforce App for Outlook Settings**.

### EDITIONS

Available in: Salesforce Classic and Lightning Experience

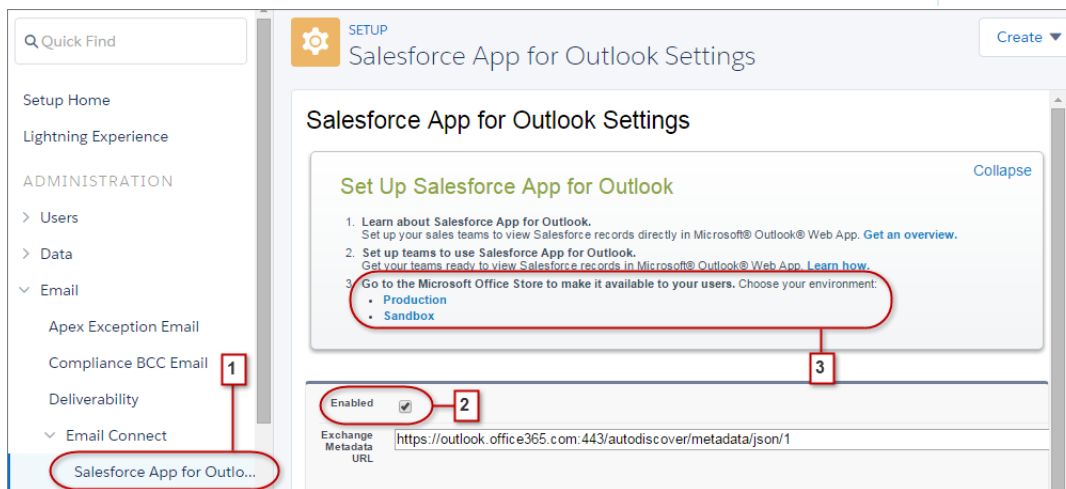

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To enable Salesforce App for Outlook

- “Customize Application”

2. Enable the app, and then save your changes.

After the whitelist and mapping sections appear, there's no need for you to change them.

**Tip:** Help your sales teams help themselves! From the Microsoft Office Store, make Salesforce App for Outlook available for your sales teams to install. That way, you spend less time installing the app for fewer teammates.

## Choosing an Email Integration Product

### Which Microsoft® Email Integration Product Is Right for My Company?

Now that we've introduced Email Connect, our latest email integration product that includes Exchange Sync and the Salesforce App for Outlook, you may be wondering how Email Connect compares with our legacy products, Salesforce for Outlook and Email to Salesforce. Compare the products' system requirements to learn which product—or combination of products—is the best fit for your company.

Whether you're preparing to migrate from a retired product like Connect for Outlook, or considering Salesforce email integration for the first time, you'll help your sales professionals streamline the work they do between their Microsoft-based email and Salesforce when you set up Email Connect, Salesforce for Outlook, or Email to Salesforce.

Each email integration feature is unique, and compatible with different Microsoft products. You can introduce just one of these features to your users—or a combination—depending on which best fits your company's needs.

#### EDITIONS

This feature available to manage from: both Salesforce Classic and Lightning Experience

Email Connect is available in: **Enterprise, Performance, Unlimited, and Developer Editions**

Salesforce for Outlook is available in: **All Editions**

Email to Salesforce is available in: **All Editions**

### Sync Between Email Applications and Salesforce

Give your users the confidence that their records are up-to-date—whether users are working in their email app, or in Salesforce. Depending on the combination of email integration products you choose, you can help users keep contacts, events, and tasks in sync between their Microsoft email and Salesforce. To set up your users to sync items, consider either Exchange Sync or Salesforce for Outlook sync.

### Experience Salesforce Directly from Email Applications

Set up your users to view and create Salesforce records, or add emails to Salesforce, without ever leaving their email apps. To set up your users to work with Salesforce records directly from their email, consider the Salesforce App for Outlook, the Salesforce for Outlook side panel, or Email to Salesforce.

### Compare Microsoft Email Integration Products

Determine which features are best for you and your teams. First, compare the system requirements to learn which features are compatible with your company's computing environment. Then, take a look at our feature overviews to learn what each feature does.

If you're working with	This product lets you experience Salesforce directly from your email app	This product lets you add emails to Salesforce records	This product lets you sync contacts and events	This product lets you sync tasks

## Running Multiple Email Integration Features Simultaneously

### Considerations for Running Email Connect and Salesforce for Outlook Simultaneously

Depending on your company's computing environment and the email integration solutions your users are looking for, you can set up features from both Email Connect and Salesforce for Outlook to meet those needs. Before you begin set up, get up to speed on the feature limitations you face and learn how Salesforce manages sync conflicts between the two systems.

## IN THIS SECTION:

[Limitations for Running Email Connect and Salesforce for Outlook Simultaneously](#)

While you can enable both the Email Connect feature Salesforce App for Outlook and the Salesforce for Outlook Side Panel in the same organization, users can't run both Outlook integration features at the same time.

[How Exchange Sync Manages Sync Conflicts with Salesforce for Outlook](#)

Learn how Salesforce manages sync conflicts when users are assigned to sync the same records for both features.

## EDITIONS

Available in: Salesforce Classic and Lightning Experience

Email Connect available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

Salesforce for Outlook available in: **All** Editions

## Limitations for Running Email Connect and Salesforce for Outlook Simultaneously

While you can enable both the Email Connect feature Salesforce App for Outlook and the Salesforce for Outlook Side Panel in the same organization, users can't run both Outlook integration features at the same time.

To prevent your users from juggling multiple email integration features at one time, Salesforce automatically disconnects the Salesforce for Outlook side panel when users connect to Salesforce App for Outlook. Salesforce App for Outlook users can still download, install, and sync with Salesforce for Outlook, but only the Salesforce App for Outlook can run in Outlook.

### SEE ALSO:

- [Which Microsoft® Email Integration Product Is Right for My Company?](#)
- [How Exchange Sync Manages Sync Conflicts with Salesforce for Outlook](#)

## How Exchange Sync Manages Sync Conflicts with Salesforce for Outlook

Learn how Salesforce manages sync conflicts when users are assigned to sync the same records for both features.

 **Note:** Exchange Sync is currently available as a beta feature, which means it's a high-quality feature with known limitations. Check out our [Exchange Sync Implementation Guide](#) to set up the feature at your company.

If you're migrating your users from Salesforce for Outlook to Exchange Sync, or have set up your Exchange Sync users to use the Salesforce side panel, you'll have assigned users to configurations for both products.

If you've assigned a user to sync the same records with conflicting settings in both an Outlook configuration and an Exchange Sync configuration, Salesforce automatically gives preference to the settings you've set for that kind of record in the Exchange Sync configuration.

Because Salesforce gives preference by record, not by configuration, there's a chance that a user set up to sync through both features might end up syncing some kinds of records with Salesforce for Outlook, and some with Exchange Sync.

For example, if a user is assigned to sync contacts, events, and tasks in an Outlook configuration and contacts and events in an Exchange Sync configuration, then the users' tasks would sync with Salesforce for Outlook, and the users' contacts and events would sync with Exchange Sync.

Though Salesforce manages these conflicts for you, we recommend disabling Salesforce for Outlook sync settings for your Exchange Sync users.

This best practice prevents you from losing track of which users are syncing from each feature, in case your configuration settings become more complicated over time.

 **Note:** You can set up your Exchange Sync users to work with their records from the Salesforce Side Panel, even though it's a Salesforce for Outlook feature. You can set this up by adding those Exchange Sync users to an Outlook configuration with disabled sync, and [enabling the Side Panel option](#) on page 1569.

## Available Salesforce for Outlook Features by Salesforce Edition

Your Salesforce edition determines which features users can access.

Some features must be enabled manually.

	Contact Manager, Group Editions	Professional, Enterprise, Performance, Unlimited, and Developer Editions
Contacts, Events, and Tasks sync between users' Salesforce and Microsoft® Outlook®	✔	✔
Administrator can set sync directions, filters, and features enabled for users through Outlook Configurations.		✔
Users have access to the side panel.	✔	✔
Users can create new records directly in the side panel publisher with the side panel publisher.	✔	✔
Administrator can create publisher layout menus specifically for the side panel, without impacting other publisher layouts.		✔

**Contact Manager, Group Editions****Professional, Enterprise,  
Performance, Unlimited, and  
Developer Editions**

Administrator can create multiple side panel publisher layouts and assign them to different user profiles.

## Outlook Configurations and Outlook Publisher Layouts

Help Salesforce for Outlook users easily maintain their records between Microsoft® Outlook® and Salesforce by creating separate settings for groups of users with different needs. To do so, from Setup, enter *Outlook Configurations* in the Quick Find box, then select **Outlook Configurations**.

### Salesforce for Outlook Configurations

Salesforce for Outlook configurations include settings for the data that Salesforce for Outlook users can sync between Microsoft® Outlook® and Salesforce. Administrators can create separate configurations for different types of users, and give users permission to edit some of their own settings. For example, an opportunity team might want to sync everything, while a manager might want to sync only events.

In addition, you can set up your users to create, view, and work with Salesforce records directly in Outlook from the Salesforce Side Panel. The side panel allows users to easily add Outlook emails, events, and tasks to related Salesforce records. Here's how:

[Using the Salesforce Side Panel to Work with Records in Microsoft® Outlook®](#)

### Outlook Publisher Layouts

Users can create accounts, cases, leads, opportunities, and even custom objects directly from the side panel using the side panel publisher. To set up your users to work with the side panel publisher, you'll create the quick actions that you want to appear in your users' publisher menus, add those quick actions to the appropriate publisher layouts, and assign the publisher layouts to the right users.

#### EDITIONS

This feature available to manage from: both Salesforce Classic and Lightning Experience

Available in all editions

#### USER PERMISSIONS

To view configurations:

- "View Setup and Configuration"

To create, edit, or delete configurations:

- "Manage Email Client Configurations"

## Create Salesforce for Outlook Configurations

1. From Setup, enter *Outlook Configurations* in the Quick Find box, then select **Outlook Configurations**.
2. Click **New Outlook Configuration**.
3. Enter a name and description of the configuration.
4. Select **Active** to activate the configuration.
5. Select **Notify of product updates** so that users can see when upgrades for Salesforce for Outlook are available to download.
6. Depending on the configuration, you'll need to define some or all of these settings.
  - [Assigned users and profiles](#)
  - [Email-related options for the Salesforce Side Panel, as well as add email and create cases](#)
  - [Sync direction](#)
  - [Conflict behavior](#)
  - [Field mappings](#)
  - [Matching criteria](#)
  - [Modification permissions](#)
  - [Advanced settings](#)
7. Click **Save**.
8. [Define data sets](#).

When users log in to Salesforce from the Salesforce for Outlook setup wizard, these settings take effect immediately. If you deactivate a configuration and the assigned users are listed on another active configuration through a profile, the active configuration is used the next time they open Outlook.

This feature available to manage from: both Salesforce Classic and Lightning Experience

Available in all editions

### USER PERMISSIONS

To view configurations:

- "View Setup and Configuration"

To create, edit, or delete configurations:

- "Manage Email Client Configurations"

## Assign Users to Salesforce for Outlook Configurations

After you define basic information for a Salesforce for Outlook configuration, you select the Salesforce for Outlook users that the configuration's settings will apply to.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.
3. In the Assign Users and Profiles section, select either *Profiles* or *Users* in the **Search** drop-down list.
4. If you don't see the member you want to add, enter keywords in the search box and click **Find**.
5. Select members from the Available Members box, and click **Add** to add them to the group. If all available users are assigned to this configuration, the Users list is empty and you can only assign profiles.
6. To remove members, select those members and click **Remove**. If removed users are assigned to another active configuration through a profile, that other configuration is used the next time they open Outlook. Otherwise, removed users are unable to use Salesforce for Outlook.
7. Click **Save**. All changes take effect the next time data syncs for the users in this configuration. If you assign a user who is already assigned to a different configuration, that user is removed from the other configuration and assigned to this one. If an assigned user is also part of a profile assigned to another active configuration, the configuration that lists the user directly is used.

Available in all editions

### USER PERMISSIONS

To view configurations:

- "View Setup and Configuration"

To create, edit, or delete configurations:

- "Manage Email Client Configurations"

## Define Data Settings for Salesforce for Outlook

Data settings control the sync behavior and email functionality of Salesforce for Outlook. You can define the following settings using the Data Settings fields in a Salesforce for Outlook configuration.

- [Email-related options for the Salesforce Side Panel, as well as add email and create cases](#)
- [Sync direction](#)
- [Conflict behavior](#)
- [Field mappings](#)
- [Matching criteria](#)
- [Modification permissions](#)

## Set Up Email Options for Salesforce for Outlook

Help your sales teams track important Microsoft® Outlook® emails related to Salesforce contacts and leads. And get those contacts and leads to appear directly in Outlook.

From Outlook configuration email options, you can set up users to:

- Display the Salesforce Side Panel in Microsoft® Outlook®
- Add Outlook emails, attachments, events, and tasks to Salesforce records
- Specify how sales teams add emails to person accounts based on team preferences—as either contacts or accounts
- Create Salesforce cases from Outlook emails

## Enable the Salesforce Side Panel

Enabling the Salesforce Side Panel lets your users select an email or event in Outlook and see Salesforce contacts and leads that are related to that email or event.

1. From Setup, enter *Outlook Configurations* in the Quick Find box, then select **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.
3. Select *Side Panel*.
4. Click **Save**.

## Enable Side Panel Users to Add Emails, Attachments, Events, and Tasks to Records

If you've enabled the side panel for your users, the **Add Email** setting lets them add Outlook emails and their attachments (✉), events (📅), and tasks (☰) to their Salesforce records directly from the side panel. You can also enable **Allow users to select attachments** (🔗), which lets users choose specific attachments to add to Salesforce, instead of automatically including them all.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.
3. Select **Side Panel**.
4. Select **Add Email**.
5. Click **Save**.
6. Select **Allow users to select attachments** to let users choose specific attachments to add to Salesforce.

## Enable Users Who Aren't Working in the Side Panel to Add Emails and Attachments to Records

If you haven't enabled the side panel for your users, the **Add Email** setting adds the **Add Emails** and **Send and Add** buttons to the Outlook ribbon, and lets your users add up to 10 emails simultaneously to Salesforce.

Emails that you add using Salesforce for Outlook are saved in Salesforce and assigned to other records based on your My Email to Salesforce settings.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.
3. Deselect **Side Panel**.
4. Select **Add Email**.
5. Click **Save**.
6. If you don't have My Email to Salesforce enabled, click **Enable** in the popup message to enable it.

## Enable Users Who Aren't Working in the Side Panel to Create Cases from Outlook

If you haven't enabled the side panel for your users, the **Create Cases** setting adds the drop-down list button to Outlook, and lets your users create Salesforce cases from Outlook emails. If you have enabled the side panel for your users, you can set up users for the Side Panel Publisher, which allows them to create various kinds of Salesforce records directly from the side panel.

 **Note:** Before you can enable the Create Case feature, review and complete the procedures in [Set Up Create Case for Salesforce for Outlook Users](#) on page 1971. Then, return to this topic to complete the following procedure.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.
3. Deselect **Side Panel**.
4. Select **Create Case**. Then, choose one of the following links.
  - **Recommended: Choose an Existing Create Case Destination**, which lets you choose existing destinations. You can choose up to 10 destinations for each Outlook configuration.
  - **Create a New Create Case Destination**. If you need to create a new one, you need to first save your work, create the new destination, and then return to the Outlook Configuration page to complete the Create Case setup requirements.

5. Click **Save**.

## Learn How Enabling Recurring Events Affects Users

Your Salesforce and API users can expect the following changes after you enable the Salesforce for Outlook Recurring Events feature.

For	You should know that
Salesforce users	<p>Changes made to a series don't affect past events.</p> <p>Changes made to the following fields in an event series override changes previously made to single events.</p> <ul style="list-style-type: none"> <li>• Event start or end time</li> <li>• All-day event</li> <li>• Frequency</li> <li>• Recurrence start date, if a user sends updates to invitees</li> </ul> <p>In addition, if users change any of those fields, all events in the series are deleted and re-created. As a result, the status of all invitees is reset to Not Responded.</p>
API users	<p>After users start syncing recurring events, the following read-only API objects appear in the API.</p> <ul style="list-style-type: none"> <li>• EventRecurrenceException</li> <li>• TaskRecurrenceException</li> </ul>

## SEE ALSO:

## Set Up Create Case for Salesforce for Outlook Users

The Create Case feature in Salesforce for Outlook lets users create cases in Salesforce from emails in Microsoft® Outlook®. As an administrator, you can create Email-to-Case destinations that appear in the drop-down list button **Create Cases** in Outlook. For each destination, you choose the assignee, which can be either individual users or queues. You can add up to 10 destinations for each Outlook configuration. When users create cases, they can add up to 10 emails simultaneously for each destination.

## EDITIONS

This feature available to manage from: both Salesforce Classic and Lightning Experience

Available in all editions

Before Salesforce for Outlook users can create cases from Outlook emails, you'll need to perform the following procedures.

1. If you haven't already done so, enable and configure On-Demand Email-to-Case.
2. Define Email-to-Case destinations (also known as email routing addresses).
3. Enable the Create Case feature in your configurations, which adds the **Create Cases** drop-down list button in Outlook.

Salesforce for Outlook assigns a category to the emails that Salesforce for Outlook users add as cases to Salesforce. This category, *Added to Salesforce as a case*, makes it easy for users to search for emails they added as cases to Salesforce.

## Define Sync Directions for Your Salesforce for Outlook Users

Set sync directions for users who want to sync contacts, events, and tasks between Microsoft® Outlook® and Salesforce.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. Create or edit a configuration, and select one of these sync directions under Data Settings for each object being synced.
  - *Don't sync*—Outlook and Salesforce records aren't synced, and you can't select an Outlook folder to sync within the setup wizard.
  - *Salesforce to Outlook*—When data first syncs, a record in Salesforce creates or updates a record in Outlook. During future syncs, changes made to Salesforce records appear in Outlook, regardless of whether the Outlook version of the record has changed. In addition, deleting a synced record in Salesforce deletes its Outlook counterpart. Outlook changes are never sent to Salesforce. The required conflict behavior setting for this option is *Salesforce always wins*.
  - *Outlook to Salesforce*—During its first sync, a record in Outlook creates or updates a record in Salesforce. During future syncs, changes made to Outlook records appear in Salesforce, regardless of whether the Salesforce version has changed. In addition, deleting a synced record in Outlook deletes its Salesforce counterpart. Salesforce changes are never sent to Outlook. The required conflict behavior setting for this option is *Outlook always wins*. This option isn't available for contacts.
  - *Sync both ways*—When records sync, changes to Outlook records are reflected in Salesforce, and vice versa. If records conflict, the conflict behavior setting determines which record wins.
3. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

- "Manage Email Client Configurations"

## Customize the Fields Your Sales Reps Sync Between Salesforce and Outlook

You can customize the fields that your sales reps sync with Salesforce for Outlook by editing your reps' field mappings in Outlook Configurations. You can also add custom Outlook or Salesforce fields you want them to sync.

Field mappings define which Salesforce and Outlook fields correspond when items sync between the two systems. Salesforce comes with a set of default mappings. You can change some of them for your users. You can also decide whether users are allowed to edit their own field mappings in their personal settings, or if only admins can do it.

You can also set up Salesforce for Outlook to sync custom Salesforce or Outlook fields you've already created in those systems.

You can map these custom field types:

- Outlook text fields
- Salesforce text fields
- Some Salesforce picklist fields

Follow these steps to edit default field mappings or set up custom field mappings for your Salesforce for Outlook users.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. Select an Outlook Configuration you'd like to edit, or create a new one.
3. Under Data Settings, click **Edit Field Mappings** under *Contacts*, *Events*, or *Tasks* to display all the fields for records on that object.
4. Review which Salesforce fields are mapping to each Outlook field.
5. Edit the Salesforce or Outlook field mappings you'd like to change, or create mappings for custom fields. Salesforce for Outlook lets you edit any field mapping with a picklist. You can add more mappings at the bottom of the list. You can remove mappings by clicking the X next to the mapping.
 

 **Warning:** If you map a custom field that is universally required, make sure that it has a default value to avoid errors. Also, mapping custom fields that require validation by Salesforce can cause sync errors. For example, if you map a custom Salesforce field that requires a unique value, you could see a sync error if you enter a non-unique value in the Outlook field.
6. Click **Save**. Field mappings begin syncing on an items the next time that items is updated in either Salesforce or Outlook.

### SEE ALSO:

## Define Matching Criteria for Salesforce for Outlook

If Salesforce for Outlook finds multiple matching contacts when a contact first syncs from Outlook, we pick a Salesforce contact based on the matching criteria you define here.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. Edit a configuration, and select one of these matching criteria options under Data Settings for contacts.
  - **Most recent activity**—Choose the Salesforce contact that shows the most recent activity (such as a phone call or email), as shown in the contact's Activity History related list. This is the default matching option.
  - **Last updated**—Choose the Salesforce contact that was most recently modified.
  - **Oldest**—Choose the Salesforce contact that has the earliest creation date.
3. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

If we don't find a matching contact in Salesforce, we create a new contact that syncs with the Outlook contact. We then either automatically assign the synced contact to a Salesforce account, leave it unassigned, or place it in the user's My Unresolved Items page to be manually assigned.

### SEE ALSO:

- [Create Salesforce for Outlook Configurations](#)

## Let Users Modify Salesforce for Outlook Settings

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. Edit a configuration, and select any of the following options under Data Settings for each object being synced. You can allow users to modify:
  - **Whether object is synced**
  - **Sync direction**
  - **Conflict behavior**
  - **Field mappings**
3. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

You can overwrite users' modifications any time by selecting **Overwrite configuration changes made by users** in a configuration. After you save the updated configuration, the new settings replace the existing settings for users of the configuration the next time their data syncs.

## Assign Users' Sync Folders in Microsoft® Outlook®

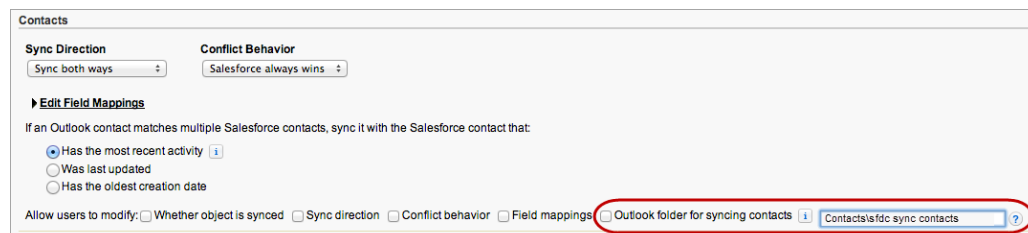

You can assign your Salesforce for Outlook users' contact, event, and task sync folders in Outlook to simplify their setup process and keep sync folders consistent across your company. You can specify Outlook sync folders from Salesforce Outlook configurations.

By default, users can change the Outlook folders where their Salesforce contacts, events, and tasks sync from the Settings menu in their Salesforce for Outlook system tray. You can prevent users from changing their Outlook sync folders when you clear this default setting for contacts, events, and tasks, and assign specific Outlook sync folders from users' Outlook configurations.

 **Note:** Assigning Outlook sync folders might create Outlook directory folders for all of the users in your Outlook configuration. Salesforce for Outlook can't remove Outlook sync folders from your users' Outlook directories after they've been created. If you reassign a different folder later, the original folder remains in users' local Outlook directories until users delete the folder.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. Open an Outlook configuration.
3. To assign a folder where users sync contacts, in Data Settings, deselect **Outlook folder for syncing contacts** on the *Allow users to modify:* setting.
4. In the text box that appears, type the name of the Outlook folder where you want your users' contacts to sync with Salesforce. Type the name of a common folder that exists in the Outlook directory for each of your users, at the same directory level as the Outlook default contacts folder. Folder names are case sensitive. If you type the name of a folder that doesn't exist at that level for each user, Salesforce creates the folder in Outlook for those users. To have Salesforce for Outlook sync with a nested Outlook folder, type a filepath, including backslashes (\).

For example, to assign the Outlook folder "sfdc\_sync\_contacts" as a nested directory under your users' default Outlook contacts folder, type *Contacts\sfdc\_sync\_contacts* in the *Outlook folder for syncing contacts* text box, where *Contacts* is your users' default contacts folder, and *sfdc\_sync\_contacts* is the folder where you want your users' Salesforce contacts to sync.

The screenshot shows the 'Contacts' configuration page. It includes sections for 'Sync Direction' (set to 'Sync both ways') and 'Conflict Behavior' (set to 'Salesforce always wins'). Below these is the 'Edit Field Mappings' section, which has three radio button options: 'Has the most recent activity' (selected), 'Was last updated', and 'Has the oldest creation date'. At the bottom, there are checkboxes for 'Allow users to modify' with sub-options for 'Whether object is synced', 'Sync direction', 'Conflict behavior', and 'Field mappings'. The 'Field mappings' checkbox is checked, and the corresponding text box contains 'Contacts\sfdc\_sync\_contacts', which is circled in red.

If the folder exists in your users' Outlook directories, Salesforce for Outlook syncs your contacts with it. If the folder doesn't exist, Salesforce for Outlook creates a folder at "Contacts\sfdc\_sync\_contacts."

### EDITIONS

Available for set up in: both Salesforce Classic and Lightning Experience

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To create and edit Outlook configurations:

- "Configure Application"

5. Click **Save**.
6. Instruct your users to save their Salesforce for Outlook settings again to confirm the changes that you’ve made to their systems. To do so, instruct your users to:
  - a. In the settings wizard, right-click the Salesforce for Outlook icon (📧) in their system tray, and then click **Settings**.
  - b. Click **Next** from Review Your Sync Direction.
  - c. Click **Next** from Control Which Outlook Items Sync.
  - d. Click **Save** from Syncing Private Items.

Salesforce for Outlook locates Outlook folders that exist in your users’ Outlook directories or creates them for your users.

7. Instruct your users to move the Outlook contacts that they want to sync to the folder that you specified.

To change the Outlook folder locations where users sync events and tasks with Salesforce, repeat steps 3 through 7 in the events and tasks sections.

## Define Advanced Settings for Salesforce for Outlook

Use advanced settings in a Salesforce for Outlook configuration to customize the default behavior of Salesforce for Outlook, such as setting the maximum size of the sync log. Click **Edit** to change the value of an advanced setting or **Remove** to remove it from the configuration.

1. From Setup, enter *Outlook Configurations* in the Quick Find box, then select **Outlook Configurations**.
2. If you’re modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.
3. Click **Add Advanced Setting** in the Advanced Settings section of an Outlook configuration.
4. Choose one of these settings and enter a value.

Advanced Setting	This setting indicates
HTTPTimeout	The number of seconds Salesforce for Outlook waits while trying to establish an HTTP connection with Salesforce. The value must be between 15 and 360 seconds, and the default is 30.

### EDITIONS

## Set Up Users to Create Records Directly from the Salesforce Side Panel

If your users generate sales prospects while they're working in Microsoft® Outlook®, set them up to use the Salesforce Side Panel Publisher so they can create records directly from the side panel.

You can set up your Salesforce for Outlook users to create accounts, cases, leads, opportunities, and even custom objects directly from the side panel using the side panel publisher. Here's how it looks.

To set up your users to work with the side panel publisher, you'll create the quick actions that you want to appear in your users' publisher menus, add those quick actions to the appropriate publisher layouts, and assign the publisher layouts to the right users.

Your Salesforce edition determines which side panel features your users can access and how you'll set up your users to use the side panel publisher.

1. Verify that you've [set up Create a Record global actions](#) for each action you want to be available in your users' side panel publisher menus.
2. Add the actions to the appropriate publisher layout.
  - For Contact Manager or Group Editions, you'll [add actions to your users' side panel publisher menus with the global publisher layout editor](#). If you're already using the global publisher layout for other Salesforce features, you'll notice that any actions you add for the side panel are displayed for all features. The side panel publisher, however, displays only actions with the action type `Create a Record`.
  - For Professional, Enterprise, Performance, Unlimited, or Developer Editions, you'll [add actions to your users' side panel publisher menus with the side panel publisher layout editor](#). You can also create multiple side panel publisher layouts to give different users access to different side panel publisher menus.
3. Assign side panel publisher layouts to your users.
  - For Contact Manager or Group Editions, you'll [assign your global publisher layout to user profiles](#) to give users access.

### EDITIONS

This feature available to manage from: Salesforce Classic and Lightning Experience

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To display the Salesforce Side Panel:

- "Side Panel" in Outlook configurations

To create actions and customize side panel publisher layouts:

- "Customize Application"

To view side panel publisher layouts:

- "View Setup"

- For Professional, Enterprise, Performance, Unlimited, or Developer Editions, you'll [assign your side panel publisher layout to user profiles](#) to give users access.

[Assign Salesforce Side Panel Publisher Layouts to User Profiles](#)

[View Salesforce Records in Microsoft® Outlook®](#)

## Create Quick Actions for the Salesforce Side Panel Publisher

Take the first step in preparing your Salesforce for Outlook users to create records directly from the Salesforce Side Panel. You'll set up `Create a Record` global quick actions for each kind of record you want to appear in users' Side Panel Publisher menus.

The Salesforce Side Panel Publisher is a menu that lets users create accounts, cases, contacts, leads, opportunities or custom objects records directly from the side panel. You'll choose which quick actions appear in users' side panel publisher menus by creating global `Create a Record` actions for each kind of record.

 **Note:** You can use global actions for several types of publisher menus found in Salesforce, like the ones for the Home page or the Chatter tab. If you've already set up global `Create a Record` actions for the kinds of records you want available to your users, there's no need to set up the actions again—you'll find these actions already available to add to all publisher layouts.

If you haven't created global `Create a Record` actions for the kinds of records you want available to your users, you'll have to do so now.

1. From Setup, enter `Global Actions` in the `Quick Find` box, then select **Global Actions**.
2. Click **New Action**.
3. Select `Action Type` **Create a Record**.  
Only `Create a Record` actions appear in the side panel publisher menu.
4. Select a `Target Object` for the type of record you want available to users with this action.  
If the `Target Object` requires a `Record Type`, make sure that the users you'll assign to this action also have access to that record type.
5. Enter a `Label` for the new action that tells your users what it does.
6. Click **Save**.
7. From the Action Layout Editor, drag the fields you want to appear on the side panel publisher record detail page.  
If any of these fields are marked as required for this type of record elsewhere in your organization, make sure to include the fields in this action, too. This is because Salesforce won't let your users save records from the side panel publisher if the required fields aren't included in the record detail. The action layout editor displays red asterisks next to required fields.

After creating your `Create a Record` actions, the next step to setting up the side panel publisher for your users is to add your global actions to the appropriate side panel publisher layout. For Contact Manager or Group Editions, you'll [add actions to your users'](#)

### EDITIONS

This feature available to manage from: both Salesforce Classic and Lightning Experience

Available in all editions

### USER PERMISSIONS

To set up global quick actions:

- "Customize Application"

To display the Salesforce Side Panel:

[side panel publisher menus with the global publisher layout editor](#). For Professional, Enterprise, Performance, Unlimited, or Developer Editions, you'll [add actions to your users' side panel publisher menus with the side panel publisher layout editor](#).

SEE ALSO:

[Set Up Users to Create Records Directly from the Salesforce Side Panel](#)

[Customize Side Panel Publisher Menu Layouts for Different Salesforce for Outlook Users](#)

## Customize Side Panel Publisher Menu Layouts for Different Salesforce for Outlook Users

Take the second step in preparing your Salesforce for Outlook users to create records directly from the Salesforce Side Panel. Set up different side panel publisher menus for specific users by customizing multiple publisher layouts with different sets of global quick actions.

Before you can customize side panel publisher layouts for your users, make sure you [set up Create a Record global quick actions](#) for each kind of record you want to appear in users' side panel publisher menus.

Some Salesforce editions let you create multiple publisher layouts so that users with different job responsibilities can have access to publisher menus with different sets of quick actions. This lets different types of users create only the records that apply to their job responsibilities. For example, sales representatives may need to create only contacts and opportunities, but sales managers may need to create contacts, opportunities, cases, and leads.

You can set up different side panel publisher menus for sales representatives and sales managers by customizing publisher layouts with specific sets of global actions for the different groups of users.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. From the Outlook Publisher Layouts related list, click **New**. Give your new layout a name, and then click **Save**.
3. From the Outlook Configurations page, click **Edit** to add the global actions to your new layout.
4. From the Outlook Side Panel Publisher Layout Editor, drag the global actions you want to use into the Quick Actions in the Salesforce Classic Publisher section. For help using the publisher layout editor feature, see [Add Actions to Global Publisher Layouts](#).

After you add actions to a publisher layout, the final step to setting up the side panel publisher for users is to give them access by assigning publisher layouts to the appropriate user profiles. For Contact Manager or Group Editions, you'll [assign your global publisher layout to user profiles](#) to give users access. For Professional, Enterprise, Performance, Unlimited, or Developer Editions, you'll [assign your side panel publisher layout to user profiles](#) to give users access.

## Assign Salesforce Side Panel Publisher Layouts to User Profiles

Some Salesforce editions let you customize multiple side panel publisher menu layouts so that users with different job responsibilities can create different kinds of records directly from the Salesforce Side Panel. After you've created your layout, give your users access to the layout by assigning it to their user profiles.

For Contact Manager or Group Editions, you'll [assign your global publisher layout to user profiles](#) to give users access. For Professional, Enterprise, Performance, Unlimited, or Developer Salesforce Editions, you'll assign Salesforce Side Panel Publisher Layouts to your user profiles like this.

1. From Setup, enter *Outlook Configurations* in the Quick Find box, then select **Outlook Configurations**.
2. From the *Outlook Publisher Layouts* related list, click **Publisher Layout Assignment > Edit Assignment**.
3. Select a user profile by clicking anywhere on its row in the table.
4. From the Publisher Layout to Use drop-down, select the layout that you want to assign to the highlighted profile.
5. Click **Save**.

## Define Data Sets for Salesforce for Outlook

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records will sync. Each configuration must have a data set in order for users to sync with Outlook.

The Outlook Configuration detail page shows a summary of the configuration's current filters.

1. From Setup, enter *Outlook Configurations* in the Quick Find box, then select **Outlook Configurations**.
2. Click the name of an Outlook configuration.
3. In the Data Sets related list, click **Edit**.
4. Specify filters.
5. To see how many items will sync, you can check the data set size.
6. Click **Save**.

## Learning about Data Sets for Salesforce for Outlook

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records will sync.

### Knowing What Syncs

Salesforce for Outlook syncs records based on definitions in data sets, along with records related to them.

### Understanding Limits to Data Sets

When using data sets, users can sync up to 5,000 records per filter between Microsoft® Outlook® and Salesforce at a time. This means that if users have more than 5,000 records to sync based on the configuration of their data sets, Salesforce for Outlook won't sync some of them. In addition, users may find that syncing these large quantities of records may slow down the sync process. You can, however, increase the limits for the number of records users can sync. Just keep in mind that you can't reduce the likelihood of the sync process slowing down.

### Increasing Limits to Data Sets

If your users are working with more than 5,000 records, you can configure their data sets so that they can sync larger quantities of records. To do this, you'll edit data sets to include additional filters. For example, under Filter By Record Ownership in the Contact Filters section, choose **Selected Contacts**. Then, choose **User's Records** under Contacts, Contacts on Opportunities, and Contacts on Accounts. Because the data set now has three filters, your users can now sync up to 15,000 contact records.

Keep in mind that these various filters you set up won't necessarily select records that are mutually exclusive. Therefore, the sync process might not sync exactly 15,000 records. To avoid this situation, you can further refine the group of contacts you want to sync. Just define additional parameters under Filter By Additional Objects and Fields.

After defining the filters, you can get a record count for your users in the Data Set Size section. To do so, enter a user, and then click **Get Record Count**. If your users still exceed sync limits for the filters you set up, your users may find that the sync process selects records in a random fashion.

### About Person Accounts

If your organization enabled person accounts and your users have more than 5,000 records in Salesforce, data sets work in a different way. Specifically, Salesforce runs a query first on person accounts that match filter criteria, and then on contacts assigned to these accounts. So it's possible for the sync process to reach the 5,000 record limit (including person accounts and contacts) and not include some of the contacts your users would expect to sync.

---

Available in all editions

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records will sync. For example, you may want to let certain users sync all contacts, but let other users sync only contacts related to their opportunity teams. In addition, you can filter by the fields in the records, such as letting users sync only contacts related to specific accounts and opportunities.

The Outlook Configuration detail page shows a summary of the configuration's current filters.

1. [Define a data set](#) for a configuration.
2. Under Filter By Record Ownership, specify the contacts users can sync.
3. If you choose **Selected Contacts**, you can further limit which contacts users sync.

For	To allow users to sync	Select
Contacts	All contacts that they own	User's Records
	All contacts they and their subordinates in the role hierarchy own	User's Team's Records
Contacts on Opportunities	Contacts related to their opportunities	User's Records
	Contacts related to opportunities that they and their subordinates in the role hierarchy own	User's Team's Records
	Contacts related to opportunities of which they are members of opportunity teams, but not opportunities that users own	User's Opportunity Teams' Records
Contacts on Accounts	Contacts related to their accounts	User's Records
	Contacts related to accounts they and their subordinates in the role hierarchy own	User's Team's Records
	Contacts related to accounts of which they are a team member, but not accounts that users own	User's Account Teams' Records

4. Under Filter By Additional Objects and Fields, add field-level filters you need.
  - a. Select an object and a field within that object.
  - b. Select the correct filter operator.

- c. Enter a value for the selected field.
5. To add a new filter, click **Add Row**; to delete the last one in the list, click **Remove Row**.
6. Under Other Contacts to Include, you can choose to have Chatter contacts automatically sync for users of this configuration. To do this, select `Sync contacts users follow in Chatter`.

## Salesforce for Outlook Contact Filters

Contact filters control the number of records that Salesforce for Outlook users can sync between Outlook and Salesforce. Note the following when using contact filters.

- The criteria you specify are AND based. That is, if you specify more than one criterion, the result includes only records that match all of the criteria.
- If entering a date, use the format allowed by your `LocalE` setting. You can also use special date values like TODAY, NEXT WEEK, NEXT YEAR, LAST <number> DAYS, and so on.
- Place quotation marks around numbers or other data that includes commas. For example `Amount equals "10,000"` returns records that have an amount of \$10,000 but `Amount equals 10,000` returns \$10,000 as well as \$10 and \$0.
- When you use the "less than," "greater than," "less or equal," or "greater or equal" operators on fields that have numeric values, records with blank or "null" values are returned as if their value is zero (0).
- To limit results to records that are blank or contain "null" values for a particular field, choose the field and the "equals" or "not equal to" operators, leaving the third field blank. For example, `Amount equals` returns records with blank amount fields. You can search for blank values or other specified values at the same time. For example, `Amount equals 1,,2` returns records where the `Amount` is blank or contains the value "1" or "2". For example, if you create a workflow filter for accounts with the criteria `Annual Revenue less than 100000`, account records match if their `Annual Revenue` is blank.
- To search for phone numbers, include the exact phone number formatting or example, `Phone starts with (561)`.
- Separate search terms by commas to filter by more than one value. You can enter up to 80 characters, including commas and spaces. For example, to search for accounts in California, New York, or Washington, use `State contains CA,NY,WA`.
- When you filter on standard long text area fields, such as `Description`, only the first 1000 characters of the field are searched.
- You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration's filters.
- If you need to reference user information in your contact filters, you can add the following merge fields to them.

### EDITIONS

This feature available to manage from: both Salesforce Classic and Lightning Experience

Available in all editions

#### Merge Field

#### Description

`$User.ID`

References the ID of the current user. This merge field can be applied to fields that contain a user lookup. The valid operators for this merge field are Equals and Not Equal To. When creating mobile view filters that reference an owner field, you can only use the `$User.ID` merge field.

<b>Merge Field</b>	<b>Description</b>
<code>\$User.Username</code>	References the username of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.
<code>\$User.Firstname</code>	References the first name of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.
<code>\$User.Lastname</code>	References the last name of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.
<code>\$User.Fullname</code>	References the first and last name of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.

## Enter Event Filters for Exchange Sync and Salesforce for Outlook

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records will sync. For example, most users may sync only current and future events, while some users may need to also sync past events. Salesforce for Outlook syncs events based on their end dates rather than their start dates. For example, if you're syncing current and future events only, a two-day event that started yesterday still syncs.

The Data Sets section of the Outlook Configuration detail page shows a summary of the configuration's current event filters.

1. [Define a data set](#) for a configuration.
  2. Under Events, enter one of these filters in the `Greater or equal to` field.
    - *TODAY*—Syncs events that end on or after today. The start time is 12:00 a.m.
    - *LAST MONTH*—Syncs events that ended on or after the first day of last month.
    - *LAST N DAYS*—Syncs events that ended on or after a specified number of days ago, such as *LAST 30 DAYS*.
  3. You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration's filters.
  4. Save the data set.
-  **Note:** The following items don't sync: all-day events beginning on the first day you're configured to sync, and event attendees. Multiday events sync as single events in either direction. Multi-day events do sync.

## Create Task Filters for Salesforce for Outlook

Specify which tasks sync between Microsoft® Outlook® and Salesforce for your sales teams.

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records will sync. For example, most users may sync past-due tasks, while other users sync only current and future tasks. Salesforce for Outlook syncs tasks based on their due dates rather than their start dates. For example, if you're syncing current and future tasks only, a task that started yesterday still syncs.

The Data Sets section of the Outlook Configuration detail page shows a summary of the configuration's current task filters.

1. [Define a data set](#) for a configuration.
2. Under Tasks, enter one of these filters in the `Greater or equal to` field.
  - *TODAY*—Syncs tasks that are due on or after today. The start time is 12:00 a.m.
  - *LAST MONTH*—Syncs tasks that were due on or after the first day of last month.
  - *LAST N DAYS*—Syncs tasks that were due on or after a specified number of days ago, such as *LAST 30 DAYS*.
3. Choose whether recurring Salesforce tasks sync to Outlook.

4. You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration's filters.
5. Save the data set.

-  **Note:** Salesforce for Outlook doesn't sync every kind of task. These kinds of tasks never sync:
- Recurring Outlook tasks to Salesforce
  - Completed tasks, if marked as completed before Salesforce for Outlook syncs
  - Tasks created automatically when you flag an email or contact for follow-up

## Sample Exchange Sync and Salesforce for Outlook Data Sets

Because users with the same role usually have similar data sync requirements, many administrators create sync configurations based on the positions in their organization. Below are sample data sets for common Salesforce groups. Your Salesforce for Outlook and Exchange Sync users have unique needs, but you can use these examples as a reference to help you get started creating Outlook configurations (for Salesforce for Outlook users) and Exchange Sync configurations (for Exchange Sync users).

### EDITIONS

This feature available to manage from: both Salesforce Classic and Lightning Experience

Available in all editions

### Sales Manager

Sales managers usually need to see records they own and the records of the users who report to them. In addition, they need to see the latest contact information for anyone associated with large deals in the pipeline and any upcoming meetings that might be related to these deals. They may also like to have their Chatter contacts in Outlook.

Sample Outlook Configuration for Sales Managers:

```
Contacts
Contacts: User's Records, User's Team's Records
Contacts on Opportunities: User's Team's Records
Contacts on Accounts: User's Team's Records
Contacts in Chatter: Records User is Following

Events
Events: User's Records
Date greater or equal TODAY

Tasks
Tasks: User's Records
Date greater or equal TODAY
```

### Sales Engineer

Sales Engineers often only need the contacts owned by them and the other members of their opportunity teams. They may also want their Chatter contacts, a record of the past month's meetings, and a schedule of all future meetings.

Sample Outlook Configuration for Sales Engineers:

```
Contacts
Contacts: User's Records
Contacts on Opportunities: User's Opportunity Teams' Records
Contacts in Chatter: Records User is Following

Events
Events: User's Records
Date greater or equal LAST MONTH

Tasks
Tasks: User's Records
Date greater or equal LAST MONTH
```

### Account Executive

Account executives need to see contacts related to their accounts and opportunities. The opportunities are filtered so only contacts related to open opportunities with a probability over 40% sync. They'd also like to sync their Chatter contacts, all future meetings, and all meetings from the last two months.

Sample Outlook Configuration for Account Executives:

```

Contacts
Contacts on Opportunities: User's Records
 (Probability (%) greater than 40) AND (Stage not equal to Closed Won,Closed Lost
Contacts on Accounts: User's Records
Contacts in Chatter: Records User is Following

Events
Events: User's Records
 Date greater or equal LAST 60 DAYS

Tasks
Tasks: User's Records
 Date greater or equal LAST 60 DAYS

```

## Check the Size of Salesforce for Outlook Data Sets

You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration's filters. If the numbers are too high or low, you can adjust the filters and check the size again. The maximum record count is 5000 per object.

1. Define a data set for a configuration.
2. Under Data Set Size, click the lookup icon next to the `User` field.
3. Select a user. To test maximum size, choose a user who owns a lot of records, even one who may not be currently assigned to the configuration.
4. Click **Get Record Count**. The number of records that would sync between Outlook and Salesforce for that user appear.
5. Adjust the filters or selected user and retest the data set as needed. Nothing is saved until you click **Save**.

# Uninstalling Connect for Outlook

## Connect for Outlook is Retired

**!** **Important:** Connect for Outlook was retired in Winter '16. This means the product no longer saves your emails or syncs your contacts, events, and tasks between Microsoft® Outlook® and Salesforce. But don't worry! You'll be even more productive when you uninstall Connect for Outlook and migrate to one of our latest email integration features, Email Connect or Salesforce for Outlook. Talk to your Salesforce administrator to learn which feature is compatible with your environment.

Our legacy email integration application, Force.com Connect for Microsoft Outlook, let you interact with Salesforce from Microsoft® Outlook® 2007 and earlier.

### SEE ALSO:

# Connect Offline

## Desktop Client Access

Connect Offline and Connect for Office are desktop clients that integrate Salesforce with your PC. As an administrator, you can control which desktop clients your users can access as well as whether users are automatically notified when updates are available. To set permissions for Salesforce for Outlook, use the “Manage Email Client Configurations” permission.

You can set users' access to desktop client by editing their profiles.

The desktop client access options are:

Option	Meaning
Off (access denied)	The respective client download page in users' personal settings is hidden. Also, users can't log in from the client.
On, no updates	The respective client download page in users' personal settings is hidden. Users can log in from the client but can't upgrade it from their current version.
On, updates w/o alerts	Users can download, log in from, and upgrade the client, but don't see alerts when a new version is made available.
On, updates w/alerts	Users can download, log in from, and upgrade the client. They can see update alerts, and can follow or ignore them.
On, must update w/alerts	Users can download, log in from, and upgrade the client. When a new version is available, they can see an update alert. They can't log in from the client until they have upgraded it.

Connect Offline is the only client available with Developer Edition. In Personal, Group, and Professional Editions, all users have the system default “On, updates w/o alerts” for all clients.

 **Note:**

- Desktop client access is available only for users whose profiles have the “API Enabled” permission.

If users can see alerts and they have logged in to Salesforce from the client in the past, an alert banner automatically appears in the Home tab when a new version is available. Clicking the banner opens the Check for Updates page, where users can download and run installer files. From their personal settings, users can also access the **Check for Updates** page, regardless of whether an alert has occurred.

- Developer

## Install Connect Offline

### Allocating Connect Offline Licenses

For organizations using Performance, Unlimited, Enterprise, and Developer Editions, Salesforce provides one Connect Offline license for each Salesforce license. Organizations using Professional Edition must purchase Connect Offline licenses separately. Users without a Connect Offline license can use for a 30-day trial period.

To allocate a Connect Offline license to a user within your organization, edit the user's record and select the `Offline User` checkbox. Users must have this checkbox selected to use Force.com Connect Offline.

### Verifying System Requirements

The system requirements for Connect Offline are:

- Microsoft® Internet Explorer® 6, 7, or 8 (We don't support other browsers, including Mozilla® Firefox®, Apple® Safari®, and Google Chrome™.)
- Microsoft Windows® 2000, Windows XP, Windows Vista®, or Windows 7
  -  **Note:** The 32-bit version of Internet Explorer 8 with its Compatibility View option is required for the 64-bit version of these operating systems.
- 256 MB of RAM (512 MB recommended)
- 20 MB of disk space minimum (250 MB recommended depending on the size of the briefcase)
- Intel® Pentium® II processor, 500 MHz or above

### Installing an Individual Client

To download and install the Connect Offline client:

1. From your personal settings, enter `Connect Offline` in the `Quick Find` box, then select **Connect Offline**.
2. Click **Install Now**.

 **Note:** You must have administrator privileges on the computer on which you install Connect Offline.

3. Click **Yes** when prompted to install and run the client.
4. Follow the prompts in the setup wizard to complete the installation.
5. Log in to Connect Offline to verify the installation.

### Deploying Connect Offline System-Wide

If your organization uses Windows, network administrators can install Connect Offline on several machines at once. For mass deployments, go to the Connect Offline page in your personal settings and click the link to download the zipped MSI package.

 **Tip:** The login history lists the version of Connect Offline that each user is using.

#### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

Available for an additional cost in: **Professional** Edition

#### USER PERMISSIONS

To view records in Connect Offline:

- "Read" on the appropriate type of record such as accounts, contacts, or opportunities

To update records in Connect Offline:

- "Create," "Edit," or "Delete" on the appropriate type of record such as accounts, contacts, or opportunities

## Updating Connect Offline

Salesforce periodically releases Connect Offline updates and notifies users according to settings in their user profiles.

[Troubleshoot Connect Offline](#)

[Find Your Personal Settings](#)

## Sample Offline Data Sets

Many administrators create briefcase configurations based on the functional groups in their organization because users in the same group usually have similar offline requirements for data. Below are sample data sets for common Salesforce groups. Your Connect Offline users have unique needs, but you can use the examples as a reference to help you get started with data sets in briefcase configurations.

### Sales Manager

Sales managers usually need to see records they own and also the records of their subordinates. They also tend to closely monitor large deals in the pipeline.

This briefcase configuration allows sales managers to see:

- The opportunities they own
- The opportunities owned by users who report to them in the role hierarchy
- All opportunities scheduled to close in the current quarter with an amount greater than \$100,000
- All accounts related to the opportunities
- A subset of their contact and activity records

#### Sample Briefcase Configuration for Sales Managers

Object	Ownership Filter	Field Filter	Max Records	Order By
Opportunity	User's Team's Records	(Close Date equals THIS QUARTER) AND (Amount greater than "\$100,000")	No Limit	
Account	All Records		No Limit	
Contact	User's Records		500	Last Activity (Decending)
Task	User's Records	Closed equals False	No Limit	
Event	All Records	Date equals TODAY OR Date equals NEXT 30 DAYS	No Limit	

### Sales Engineer

The sales engineer briefcase configuration retrieves opportunities owned by the other members of the user's opportunity team, but does not include the user's records. The sales engineer briefcase configuration is opportunity-based because all accounts and contacts included in the briefcase are related to the opportunities. The sales engineers would see:

- Up to 5000 opportunities they own and up to 5000 opportunities that list them on the opportunity team. These opportunities must be either open or have a close date in the current month, the past two months, or up to 24 months in the future. If more than 5000 opportunities exist, the 5000 most recently modified records are synchronized.
- All accounts, contacts, and opportunity products related to those opportunities

- A subset of tasks and events related to those opportunities

### Sample Briefcase Configuration for Sales Engineers

Object	Ownership Filter	Field Filter	Max Records	Order By
Opportunity	User's Sales Team's Records	Closed equals False	No Limit	
└─ Account	All Records		No Limit	
└─ Contact	All Records		No Limit	
└─ Task	All Records	Due Date equals LAST 30 DAYS OR Due Date equals NEXT 30 DAYS	No Limit	
└─ Event	All Records	Date equals LAST 30 DAYS OR Date equals NEXT 30 DAYS	No Limit	
Task	User's Records	Closed equals False	No Limit	
Event	User's Records	Date equals TODAY OR Date equals NEXT 30 DAYS	No Limit	

## Account Executive

The account executive briefcase configuration is account-based, which means the briefcase includes the user's accounts and opportunities related to those accounts. The opportunities are filtered so that only open opportunities scheduled to close in the current quarter are synchronized. The Task and Event child data sets retrieve all activities related to those opportunities, not just the user's activities. Only open tasks and events from a two-month window are sent to the briefcase. The Task and Event parent data sets pull down just the user's activities and restrict the activities to open tasks and events scheduled for the next 30 days. The Contact data set delivers the user's contact records, but limits the record count to the 500 most recently active contacts.

### Sample Briefcase Configuration for Account Executives

Object	Ownership Filter	Field Filter	Max Records	Order By
Account	User's Records		No Limit	
└─ Opportunity	User's Records	(Closed equals False) AND (Close Date equals THIS QUARTER)	No Limit	
└─ Event	All Records	(Date equals LAST 30 DAYS) AND (Date equals NEXT 30 DAYS)	No Limit	
└─ Task	All Records	Due Date equals LAST 30 DAYS OR Due Date equals NEXT 30 DAYS	No Limit	
Contact	User's Records		500	Last Activity (Decending)
Task	User's Records	Closed equals False	No Limit	
Event	User's Records	Date equals TODAY OR Date equals NEXT 30 DAYS	No Limit

## Monitoring Email

### What Are Email Logs?

Email logs are CSV files that contain information about all email sent through Salesforce over the last 30 days. Logs contain data such as:

- The email address of each email sender and recipient
- The date and time each email was sent
- The delivery status of each email
- Any error code associated with each email

You can use email logs to troubleshoot encountered errors.

To manage email logs, from Setup, enter *Email Log Files* in the **Quick Find** box, then select **Email Log Files**.

- To request a new email log, click **Request an Email Log**. Due to the volume of email processed through Salesforce, requests are queued in the order that they are received. Email logs should be available within 30 minutes of your request.
  - The pending email log requests list provides the status on email log requests that have not yet completed. You can have a maximum of three pending log requests at any time.
  - The email log errors list provides descriptions for requests that failed.
    - To resubmit a request that failed, click **Resubmit**.
    - To delete a request that failed, click **Del**.
-  **Warning:** You cannot resubmit a failed request if it requires data that has exceeded the 30 day limit, or if you already have three pending requests.
- To download an email log, click **Download (.zip)**. Email logs are CSV files contained within a compressed file that contains a maximum of 100,000 records. Since email log requests return up to 500,000 records, there may be up to five .zip files to download. Logs contribute to your overall file storage limits.
  - To delete an email log, click **Del**.

For a summary of the information returned from an email log, see [Viewing Email Logs](#) on page 1998.

### Requesting an Email Log

To request a new email log for your organization:

1. From Setup, enter *Email Log Files* in the **Quick Find** box, then select **Email Log Files**.
2. Click **Request an Email Log**.

You can have a maximum of three pending log requests at one time. If you already have three pending requests, you cannot request another log until at least one of those requests completes.

3. Enter a **Start Time** and **End Time** range for the email log you want to retrieve. Email logs are available for messages sent within the past 30 days prior to your request.

 **Note:** Each email log can span a maximum of seven days. To see email log data from a period of time greater than seven days, create multiple requests.

#### EDITIONS

Available in: Salesforce Classic

Available in: **All Editions** except for **Database.com**

#### USER PERMISSIONS

To access email logs:

- “Modify All Data”

#### EDITIONS

Available in: Salesforce Classic

Available in: **All Editions** except for **Database.com**

#### USER PERMISSIONS

To access email logs:

- “Modify All Data”

4. Optionally, you can filter an email log to only include rows where a specific domain name or email address appears in a field, such as `Recipient` or `Message ID Header`. To enter more than one filter term, separate each value with a comma. If you leave this field blank, the log is not filtered and all email addresses are returned within the specified time range.
5. Enter the email addresses that you want to receive notification when the email log request is complete. Separate each email address with a comma.

To clear a request and return to the email log overview page, click **Cancel**.

Available in: **All Editions** except for **Database.com**

### USER PERMISSIONS

To access email logs:

- "Modify All Data"

Column	Field	Description	Example
		<p>twenty minutes after that, and so on.</p> <p><b>P - Permanent Failure</b> The email could not be delivered.</p>	
D	Recipient	The email address of the person to whom the email is sent	admin@acme.com
E	Sender	The email address of the person who sent the email	user@acme.com
F	Remote Host	The IP address of the application server that delivered the email to the email server	10.0.0.1
G	Bytes Transferred	The size of the email	11856
H	User ID	The Salesforce ID of the user who sent the email	00540000000rSXT
I	Message ID Header	The ID header at the beginning of every email	21749386. 106091224027705044. JavaMail. sfdc@na2-app4-2-sjl. ops.sfdc.net
J	Retry Count	The number of attempts made to deliver the email	11
K	Seconds in Queue	The number of seconds the email had to wait before being delivered	300
L	Delivery Stage	<p>The final stage the delivery was in before it was logged. Below are the values of the stages in the order that they appear during the SMTP sequence:</p> <p><b>BANNER</b> The SMTP connection response</p> <p><b>EHLO</b> The beginning of the session with the mail server</p> <p><b>STARTTLS</b> Establishes a secure communication session with the email server</p>	during RCPT TO

Column	Field	Description	Example
		<p><b>MAIL FROM</b> Announces the sender of the email</p>	
		<p><b>RCPT TO</b> Announces the recipient of the email</p>	
		<p><b>DATA</b> Announces that the subsequent text is the email message</p>	
		<p><b>BODY</b> The state when the body of the email is being sent to the recipient</p>	
		<p><b>RSET</b> Resets the server state, ending the session</p>	
		<p>In addition, there are responses that may appear at any point during the delivery sequence:</p>	
		<p><b>while not connected</b> The client is trying to establish a connection</p>	
		<p><b>while idle</b> The client has connected, but is not sending or receiving any commands</p>	
		<p><b>reading confirmation</b> A command was sent and the client is waiting for a response</p>	
		<p><b>handshaking TLS</b> An error occurred while trying to establish a secure connection</p>	
		<p><b>out of band bounce</b> The receiving server accepted a command, but then for an unknown reason rejected it</p>	
		<p><b>in unknown state</b> An unknown error has occurred</p>	

<b>Column</b>	<b>Field</b>	<b>Description</b>	<b>Example</b>
M	Relay Address	The hostname of the designated relay system	relay.my.org
N	Relay Port	The port of the designated relay system	587

Column	Field	Description	Example
0	Delivery Status Notification	<p>After every delivery stage, a three-digit response code is sent from the mail server. The first number indicates whether the command was successful or unsuccessful; the second digit indicates the type of error; and the third provides additional information to resolve the potential problem.</p> <p>The five possible values of the first digit are:</p> <p><b>1xx - Positive Preliminary reply</b> The command was accepted, but no response has been sent</p> <p><b>2xx - Positive Completion reply</b> The requested action has successfully completed</p> <p><b>3xx - Positive Intermediate reply</b> The command was accepted, but the requested action needs more information</p> <p><b>4xx - Transient Negative Completion reply</b> The command was not accepted and the requested action did not occur. However, the error condition is temporary and the action may be requested again.</p> <p><b>5xx - Permanent Negative Completion reply</b> The command was not accepted and the requested action did not occur</p> <p>Every email service provider implements the codes differently, so there is no comprehensive list for what the second or third digits indicate.</p>	421 no adequate servers

Column	Field	Description	Example
		For more information on these codes, view the official SMTP documentation, section 4.2.1: <a href="http://www.ietf.org/rfc/rfc2821.txt?number=2821">http://www.ietf.org/rfc/rfc2821.txt?number=2821</a>

[What Are Email Logs?](#)

## Troubleshooting with Inbound Email Snapshots

Take a snapshot of inbound email messages so you can more easily troubleshoot inbound email errors.

Inbound email snapshots capture a copy of inbound email messages, helping you diagnose issues with email services such as Email to Salesforce, Email-to-Case, and Apex email services. Request a snapshot by specifying criteria for the email's To and From addresses, and when an inbound message meets that criteria, the snapshot records a single copy that you can view and download. The email itself is processed normally without alteration. Snapshots contain the:

- Sender's address
- Inbound email service address
- Date and time of the snapshot
- Full message contents, including headers and attachments

To access inbound email snapshots, from Setup, enter *Email Snapshots* in the *Quick Find* box, then select **Email Snapshots**.

- To request an inbound email snapshot, enter criteria for the To address (required) and From address (optional). Then click **Request Snapshot**.

The requested snapshot is added to the list of Pending and Completed Snapshots. As soon as an inbound message meets your specified criteria, we take a snapshot and complete the request.

- To view a completed snapshot:

Option	Description
View snapshot details	Click <b>Show Details</b> to see when the snapshot was taken, the sender's address, and the inbound email service address. Click <b>Hide Details</b> to collapse the details section.
Download the snapshot	Click <b>Download</b> then either open the email as a .txt file or save it to your computer.

Consider these tips when using inbound email snapshots:

- You can have a maximum combined total of 25 pending and completed snapshots. Delete some to free up space for new snapshots. You can delete any pending or completed snapshot, even if someone else originally requested it.

### EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **All Editions** except for **Database.com**

### USER PERMISSIONS

To request, view, download, and delete email snapshots:

- "Modify All Data"

- Deleted snapshots are permanently deleted. They're not moved to the Recycle Bin.
- When specifying criteria for the To address, keep these tips in mind.
  - The criteria apply to any of the addresses specified in an email's To, CC, or BCC fields (not only the To field).
  - Inbound email service addresses always end in *salesforce.com*.
  - You may want to look up the addresses your organization uses. This table summarizes where to find them.

Type of inbound email address	Where to find addresses
The user's unique Email to Salesforce address	From the user's personal settings, enter <i>Email to Salesforce</i> in the <b>Quick Find</b> box, then select <b>Email to Salesforce</b> to view the unique address assigned to them by Email to Salesforce.
Email routing addresses for Email-to-Case or On-Demand Email-to-Case	From Setup, enter <i>Email-to-Case</i> in the <b>Quick Find</b> box, then select <b>Email-to-Case</b> to open the Email-to-Case settings page. View the Routing Addresses section.
Your organization's email service addresses	From Setup, enter <i>Email Services</i> in the <b>Quick Find</b> box, then select <b>Email Services</b> , then the name of an email service.

- You can use an asterisk (\*) wildcard in both the local-part of the email address (the part before the @ symbol) and in the domain-part (the part after the @ symbol). Spaces, commas, and semicolons aren't valid characters. Each address field can contain a maximum of 255 characters.
- You can click **Request Snapshot** multiple times if you want to request more than one snapshot with identical criteria.
- If you believe a snapshot should have completed but it still shows Pending status, try refreshing the page.
- Snapshots don't expire. Requested snapshots can remain in Pending status indefinitely if no inbound emails match the specified criteria. Completed snapshots persist until you delete them.

# Set Up Work.com

## Work.com Implementation Overview

Work.com is a suite of sales-management and service-management tools that help managers and teams learn faster and perform better.

Work.com has various features to help your sales and service teams. This includes recognition tied to real rewards, detailed goals and real-time coaching, and full-featured performance reviews.

After you receive your Work.com licenses, you'll need to set up Work.com by performing the following activities.

- Assign a Work.com administrator to complete the setup process.
- Enable preferences for Work.com features.
- Set up permissions to Work.com features with profiles or permission sets.
- Assign Work.com licenses to users.
- Configure Work.com features for your organization.

### SEE ALSO:

[Prerequisites](#)

[Assign a Work.com Administrator](#)

[Enable Work.com Features](#)

[Work.com Feature Access](#)

[Work.com License Types](#)

[Work.com Feature Overview](#)

## Prerequisites

### USER PERMISSIONS

To enable Work.com features:	"Customize Application"
To assign permission sets:	"Assign Permission Sets"
To assign profiles:	"Manage Users"
To set field-level security:	"Manage Profiles and Permission Sets" AND "Customize Application"
To view the Calibration tab:	"Enable Work.com Calibration"

Plan out your implementation before enabling Work.com in your organization.

Administrators should make the decisions outlined in the [Business Decision Checklist](#) before enabling Work.com.

### EDITIONS

Available in: Salesforce Classic

**Work.com** is available as an add-on license for **Professional Edition**, **Enterprise Edition**, **Unlimited Edition**, or **Developer Edition**, and is included in **Performance Edition**.

### EDITIONS

Available in: Salesforce Classic

**Work.com** is available as an add-on license for **Professional Edition**, **Enterprise Edition**, **Unlimited Edition**, or **Developer Edition**, and is included in **Performance Edition**.

Before beginning the implementation process, Salesforce must enable Work.com permissions and provision Work.com licenses for your organization. Your Salesforce contact will coordinate this with you, but you can check if your organization has available Work.com licenses. In Setup, enter *Company Information* in the **Quick Find** box, then select **Company Information**, and check for Work.com User under **Feature Licenses**.

 **Note:** It is recommended that you enable Chatter regardless of the edition your organization is using. Many Work.com features use the Chatter feed to notify and interact with users. To confirm Chatter is enabled, from Setup, enter *Chatter Settings* in the **Quick Find** box, then select **Chatter Settings**, and verify that Chatter Settings is enabled.

SEE ALSO:

[Assign a Work.com Administrator](#)

## Enable Work.com

### Assign a Work.com Administrator

Before enabling Work.com in your organization, you must assign a Work.com user feature license to the person who will be the system administrator and responsible for setting up Work.com for your organization.

If you're the administrator setting up Work.com, assign the license to yourself.

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Find the name of the person who will be the system administrator and click **Edit** next to their name.
3. In the right-hand column, select the **Work.com User** checkbox.
4. Click **Save**.

We strongly recommend that you create a separate Work.com Administrator profile with limited access because the standard Salesforce System Administrator profile is so powerful. For more information, see the [Create Your Work.com Administrator Profile](#).

SEE ALSO:

[Enable Work.com Features](#)

#### EDITIONS

Available in: Salesforce Classic

Available in:

#### USER PERMISSIONS

To assign a Work.com administrator:

- "Customize Application"

## Enable Work.com Features

Administrators can enable preferences for Work.com features on the Work.com Settings page.

All the settings except for Thanks Settings and Skills Settings require a Work.com license.

1. From Setup, enter *Work.com Settings* in the Quick Find box, then select **Work.com Settings**.
2. Select the Work.com features you want to enable:

For users that purchased Work.com prior to the Spring '15 release, the features that appear differ depending on whether you have add-on licenses to **Work.com Motivate**, **Work.com Align**, or **Work.com Perform**.

Feature	Section	Description
Enable Thanks	<b>Thanks Settings</b>	Enable Thanks to allow users to recognize others with thanks badges on the Chatter feed.  If you disable this setting, users no longer see the Thanks action in the Chatter publisher. However, they can still see previously created Thanks posts.
Restrict Custom Badge Creators	<b>Thanks Settings</b>	By default, all users can create custom badges. This setting restricts badge creation to users that have the "Create" permission on the Reward object.
Enable Rewards	<b>Recognition Settings</b>	Enable Rewards to tie tangible rewards to badges. Reward creators can upload gift codes to create Reward funds. See the "Reward Funds" topic for more information about creating rewards.
Enable Manager Groups for Coaching	<b>Coaching Settings</b>	Enable manager groups to give managers access to the coaching spaces of the users that report to them. To enable this setting, the Manager Groups setting must first be enabled in Setup, under <b>Sharing Settings</b> .
Enable Manager Groups for Goals	<b>Goal Settings</b>	Enable manager groups to give managers access to the goals of the users that report to them. To enable this setting, the Manager Groups setting must first be enabled in Setup, under <b>Sharing Settings</b> .
Enable Calibration	<b>Perform Settings</b>	Enable Calibration to see and update performance across teams and individuals.

**Note:** For **Performance Edition** organizations, Calibration is not available for the following profiles: Contract

### EDITIONS

Available in: Salesforce Classic

### USER PERMISSIONS

To enable Work.com features:

- "Customize Application"

Feature	Section	Description
		Manager, Marketing User, Read Only, and Solution Manager.
Enable Skills	<b>Skills Settings</b>	Enable Skills to allow users to add skills to their profiles and endorse the skills of other users. Enabling this setting replaces the Knowledgeable About widget on Chatter profiles.
Restrict Skill and Endorsement Editing to Record Detail Pages	<b>Skills Settings</b>	Disables inline editing of skills and endorsements on Chatter profiles, and restricts editing to record detail pages. Recommended if you have customized these objects with custom required fields.   <b>Note:</b> Don't enable this setting if you want to use skills in Chatter profiles.
Enable Automatic Skill Feed Posts	<b>Skills Settings</b>	Enable to automatically create Chatter feed posts when a user adds a new skill.
Enable Suggested Skills	<b>Skills Settings</b>	Enable Suggested Skills to have the skills widget suggest skills for users to add based on their Chatter Topics activity.

### 3. Click **Save**.

SEE ALSO:

[Work.com Feature Access](#)

## Work.com Feature Access

Once Work.com is enabled for your organization, grant users access to Work.com features using either profiles or permission sets.

Administrators can grant users access to Work.com features with either profiles or permission sets.

 **Note:** Professional Edition organizations will need to grant access through existing profiles.

- A profile contains user permissions and access settings that control what users can do within their organization. Each user can only have one profile. Refer to [Recommended Work.com Profiles](#) for more information about creating profiles.
- A permission set is a collection of settings and permissions that gives users access to various tools and functions. Permission sets extend users' functional access without changing their profiles. Refer to [Recommended Work.com Permission Sets](#) for more information about creating the proper permission sets.

### EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

If your organization has provisioned Work.com Only user licenses, they come with a standard Work.com Only profile. Keep in mind that you can't modify the standard profile, but you can clone it and modify the cloned profile.

#### SEE ALSO:

[Recommended Work.com Permission Sets](#)

[Assign Work.com Permission Sets](#)

[Recommended Work.com Profiles](#)

[Assign Work.com Profiles](#)

[Work.com License Types](#)

## Assign Work.com Permission Sets

Assign permission sets with Work.com access to your users from Setup.

Before you can assign permission sets to your users, you must create permission sets with Work.com access. Refer to [Recommended Work.com Permission Sets](#) for more information.

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Select a user.
3. In the Permission Set Assignments related list, click **Edit Assignments**.
4. To assign a permission set, select it from the Available Permission Sets box and click **Add**. To remove a permission set assignment, select it from the Enabled Permission Sets box and click **Remove**.

You can also assign permission sets to many users at the same time. For more information, see "Assign a Permission Set to Multiple Users" in the Salesforce Help.

#### Note:

- The Permission Set Assignments page shows permission sets with no associated license and permission sets that match the user's license. For example, if a user's license is Chatter Only, you can assign permission sets with the Chatter Only license and permission sets with no associated license to that user.

If you assign a permission set with no associated user license, all of its enabled settings and permissions must be allowed by the user's license, or the assignment will fail.

- Some permissions require users to have *permission set licenses* before the user can have those permissions. For example, if you add the "Use Identity Connect" permission to the "Identity" permission set, only users with the Identity Connect permission set license can be assigned the "Identity" permission set.

5. Click **Save**.

#### EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

#### USER PERMISSIONS

To assign permission sets:

- "Assign Permission Sets"

## Assign Work.com Profiles

Assign profiles with Work.com access to your users from Setup.

Before you can assign profiles to your users, you must create profiles with Work.com access. Refer to [Recommended Work.com Profiles](#) for more information.

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Click **Edit** next to a user.
3. From the **Profile** drop-down, select the profile you would like to assign.
4. Click **Save**.

## Work.com License Types

After granting access to Work.com features with permission sets or profiles, assign users a Work.com license.

Work.com has two types of licenses.

- Work.com Only user licenses are for users who don't have a Salesforce license and will only use the Work.com features in your organization.
  -  **Note:** Work.com Only user licenses have limited administrator functionality. Assign Work.com User Feature licenses instead for users who will be administering performance summary cycles or other Work.com features.
- Work.com User Feature licenses are for users who also have a Salesforce license.

You may want to configure Work.com features before assigning licenses to all users. For example, you may want to initially limit licenses to Work.com administrators to avoid exposing certain features prior to your launch date.

# Configure Work.com Features

## Work.com Feature Overview

Most Work.com features require the Work.com add-on, but some are freely available to Sales Cloud users.

Users can access the Skills and Thanks features (excluding Rewards) without Work.com. Other features require the Work.com add-on.

**Table 13: Work.com Features Available**

Feature	Requires Work.com Add-On
Recognition: Create and give thanks badges	
Recognition: Create and give rewards badges	✓
Skills: Share and endorse skills	
Goals: Define and track your work	✓
Coaching: Give real-time coaching	✓
Feedback: Give and offer feedback	✓
Performance: Track performance data	✓
Calibration: Visualize and change performance data	✓

### EDITIONS

[Assign Publisher Layout to Profiles](#)

## Configure Thanks in the Chatter Publisher and Salesforce1 Action Bar

You can change the position of the Thanks action in the Chatter publisher and the Salesforce1 action bar, or even hide Thanks for specific profiles.

To modify the Chatter publisher, actions in the publisher must be enabled.

1. From Setup, enter *Chatter Settings* in the **Quick Find** box, then select **Chatter Settings**.
2. Confirm that **Enable Actions in the Publisher** is selected in the Actions in the Publisher section. If it isn't enabled, click **Edit**, select **Enable Actions in the Publisher**, and click **Save**.
3. From Setup, enter *Publisher Layouts* in the **Quick Find** box, then select **Publisher Layouts**.
4. Click **Edit** next to the Global Publisher Layout.
5. Drag the **Thanks** action to where you want it to appear in the Chatter publisher or the Salesforce1 action bar.
6. Click **Save**.

You can hide Thanks for specific users by changing profile visibility settings.

- "Customize Application"

## Assign Publisher Layout to Profiles

Assign the publisher layout with Thanks to user profiles. People with these profiles can thank their coworkers directly from the publisher.

If not everyone in your organization should have this feature, create another layout without Thanks and assign it to a profile. People with that profile won't see Thanks in their publisher.

1. From Setup, enter *Publisher Layouts* in the **Quick Find** box, then select **Publisher Layouts**.
2. Click **Publisher Layout Assignment**.
3. Click **Edit Assignment**.
4. Select a user profile by clicking anywhere on its row in the table.  
You can assign a global publisher layout to multiple profiles by using SHIFT+click to select adjacent profiles and CTRL+click to select non-adjacent profiles.
5. From the Publisher Layout to Use drop-down, select the global publisher layout that you want to assign to the highlighted profile.
6. Click **Save**.

## Enable Feed Tracking for Coaching

Track updates for coaching spaces, so users can receive notifications about important changes.

Determine which coaching updates should notify people and select the associated fields for tracking.

1. From Setup, enter *Feed Tracking* in the **Quick Find** box, then select **Feed Tracking**.
2. Click on the Coaching object.
3. Click the **Enable Feed Tracking** checkbox.
4. Select the fields you would like to track.

 **Tip:** For coaching, it's helpful to track Inactive and All Related Objects.

5. Click **Save**.

## Enable Feed Tracking for Metrics

Track updates for goals so users can receive notifications about important changes.

Determine which metric updates should notify people and select the associated fields for tracking.

1. From Setup, enter *Feed Tracking* in the **Quick Find** box, then select **Feed Tracking**.
2. Click on the Metric object.
3. Click the **Enable Feed Tracking** checkbox.
4. Select the fields you would like to track.

 **Tip:** For metrics, it's helpful to track Comment, Completion Date, Current Value, Due Date, Goal, Initial Value, Owner Name, Status, Target Value, and All Related Objects.

5. Click **Save**.

SEE ALSO:

[Goals and Coaching Features](#)

## Enable History Tracking for Goal Fields

Track changes to the Goal object for auditing purposes.

We recommend tracking the Completion Date, Due Date, Owner Name, Progress, Start Date, Status, and Description fields.

1. From the object management settings for goals, go to the fields area.
2. Click **Set History Tracking**.
3. Select up to 20 fields to track.
4. Click **Save**.

## Configure Key Company Goals

Key company goals give everyone in your organization visibility into a company-wide goal. Work.com administrators and people who have been granted access have the ability to create key company goals.

Alternatively, you can also set field-level security using permission sets.

1. From the object management settings for goals, go to the fields area.
2. Click on the **Key Company Goal** field label.
3. Click **Set Field-Level Security**.
4. Ensure the **Visible** checkbox is selected for all profiles with goals access.
5. Ensure the **Read-Only** checkbox is not selected for profiles that should be able to create key company goals.
6. Click **Save**.

## Performance Summary and Calibration Features

Set up Calibration reports to compare and update performance ratings in your organization.

Work.com performance summaries gather feedback about people in your organization with a custom questionnaire. You can create, deploy, and share different performance summaries across your organizations by managing performance summary cycles. Once users have submitted performance summary details, you can see and update performance ratings across the organization with the Calibration feature.

You can create and deploy performance summary cycles from the **Performance Cycles** tab. Users with the Performance Cycle Manager permission set or profile will be able to access the **Performance Cycles** tab.

For detailed information about creating and deploying performance summary cycles, refer to [Performance Summary Cycles Overview](#) in the Salesforce Help. For more information about the Calibration feature, refer to the [Calibration Overview](#) topic.

## Set Up Calibration Reports

Calibration reports are populated with data from performance summary cycles. They are designed for managers and executives to review overall performance of their teams or organizations. Before using the Calibration feature, you must create a report that loads the performance summary data.

Define your own calibration report or download the calibration reports package from the Package Installation page.

- [Production Calibration Report Package](#)
- [Sandbox Calibration Report Package](#)

1. On the Calibration tab, select a calibration report from the drop-down list.
2. Click **View/Edit Report**.
3. Click **Save As**.
4. Type a name, an optional description, unique name, and specify the report folder.  
If the report is saved to a public folder, anyone with permission to view the folder sees this report, but each user will only see performance summaries they have access to. If the report is saved to "My Personal Custom Reports," only you will see the Calibration report.
5. Click **Save & Return to Report**.

**Tip:** You can also create a new report. Once a report meets specific criteria, it automatically appears in the Calibration drop down.

- The report must be a **Work.com Calibration** report type.
- The report must be in a **Summary Format**, grouped by Feedback Question Name and then by Feedback.
- These columns should be listed in the report:
  - Performance Cycle ID
  - Feedback Request ID
  - Feedback ID
  - Subject: User ID
  - Subject: Full Name (or Subject: First Name and Subject: Last Name)
- The report must be filtered to only view one performance summary cycle.

Once you've downloaded the package or created a report that meets the criteria, it automatically appears in the Calibration drop-down.

# Configure Work.com Reports

## Work.com Report and Dashboard Overview

Use reports and dashboards to see how Work.com features are being used in your organization.

Salesforce reports and dashboards are available for all Work.com users. Administrators should install the reporting package that applies to their Work.com edition. The Work.com reporting package contains:

- Custom report types for Work.com objects
- Custom fields for Work.com objects
- Example dashboards

Install one of the following packages based on the Work.com edition you purchased. For example, if your organization has Work.com Align, only install the Align package. Refer to your product contract to confirm which Work.com edition you have.

### Note:

- Make sure you've enabled the features related to your Work.com edition prior to installing the package. The package will only install correctly if you've enabled the features beforehand.
- If you purchased Work.com after the Spring '15 release, install the Work.com Perform package.
- It is not possible or necessary to install all the packages.

Production Packages:

- [Work.com Motivate](#)
- [Work.com Align](#)
- [Work.com Perform](#)
- [Thanks and Skills Reports and Dashboards](#)

Sandbox Packages:

- [Work.com Motivate](#)
- [Work.com Align](#)
- [Work.com Perform](#)
- [Thanks and Skills Reports and Dashboards](#)

## Work.com Report and Dashboard Details

The Work.com reports and dashboards included in the reporting package are a good starting point. Use these examples to create reports and dashboards that are useful to your organization.

### Work.com Perform Package Reports

These reports are available after installing the [Work.com Perform](#) package. Work.com reports are organized in folders based on features:

- Work.com Coaching Reports
- Work.com Goal Reports
- Work.com Performance Summary Reports
- Work.com Recognition Reports
- Work.com Skills Reports

#### EDITIONS

Available in: Salesforce Classic

**Table 14: Work.com Coaching Reports**

Report Name	Description
Coaching Activities (Tasks and Events)	Tasks and events related to coaching spaces
Coaching Activities Team - Last 30 Days	Coaching activities of your team over the last 30 days
Coaching Activity Last 30 Days	Coaching activities over the last 30 days sorted by department
Coaching Coverage Report	The percentage of users that have coaching spaces by department
Coaching Events by Relationship	Events related to coaching spaces
Coaching Relationships	All coaching spaces in your organization

**Table 15: Work.com Goal Reports**

Report Name	Description
All Goals	All goals in your organization
All Metrics	All metrics in your organization
Goals Created by Date	Goals sorted by the date they were created
Key Company Goal Progress	Key company goals, their status, and other details
Metrics Flagged as Behind or Critical	Metrics with a Status of Behind or Critical
Stale Goals	Goals that haven't been modified in 30 days
Work.com Team Goals Progress	Your team's goals and their progress

**Table 16: Work.com Performance Summary Reports**

Report Name	Description
All Active Users with a Manager	All active users with a manager in your org

Report Name	Description
Manager Questions - X	The manager questions asked in a performance summary
Performance Answers by Question - Q1	Sample report for tracking performance cycle activity
Performance Answers by Question - Q3	Sample report for tracking performance cycle activity
Performance Summaries by Department	Performance summaries grouped by department
Performance Summaries with Answers - Q1	Sample report for tracking performance cycle activity
Performance Summaries with Answers - Q3	Sample report for tracking performance cycle activity
Performance Summary Cycle Status Update	The request status across different performance summaries
Self Summary Questions - X	The questions asked in self summaries
Summary Cycle Details	The percentage of participants per performance cycle
Summary Cycle Details - Submitted	The percentage of submitted requests per performance cycle

**Table 17: Work.com Recognition Reports**

Report Name	Description
Badges Given - By Date Given	Thanks badges given grouped by the date each badge was given
Breakdown of Badges Given	Thanks badges given grouped by individual badges and the role of the badge giver
Breakdown of Badges Received	Thanks badges received grouped by individual badges and the role of the badge recipient
Reward Funds Given	The amount of each reward fund that has been distributed
Reward Funds Remaining	The amount of each reward fund that is still remaining
Thanks by Giver	Thanks badges given by each user
Thanks Given - Recipient Data	Thanks badges received by each user
Thanks Received by Role	Thanks badges received by each role

**Table 18: Work.com Skills Reports**

Report Name	Description
Most Endorsed People	Users with the most skill endorsements
Most Skilled People	Users with the most associated skill records
New Skill Creation By Date	Skills arranged by the date they were created
Skill Endorsements By Date	Endorsements arranged by the date they were created
Skills Added To Profiles By Date	Skills arranged by the date they were associated with different user profiles

Report Name	Description
Top Skills	Skills arranged by the number of people with the skill

## Work.com Perform Package Dashboards

These dashboards are available after installing the [Work.com Perform](#) package:

- Work.com Coaching Dashboards
- Work.com Performance Summary Dashboards
- Work.com Recognition Dashboards
- Work.com Skills Dashboards

**Table 19: Work.com Coaching Dashboards**

Report Name	Description
Company Coaching Dashboard	Displays coaching coverage and activity across your company
Company Goals Dashboard	Displays Key Company Goals and the number of goals created
Manager Coaching Dashboard	Displays coaching and goals related to your team

**Table 20: Work.com Performance Summary Dashboards**

Report Name	Description
Performance Cycle Dashboard	Displays statistics about the participants, questions, and progress of a specific performance cycle

**Table 21: Work.com Recognition Dashboards**

Report Name	Description
Recognition Dashboard	Displays badge statistics and users giving and receiving badges
Recognition with Rewards Dashboard	Displays badge and rewards statistics and users giving and receiving badges

**Table 22: Work.com Skills Dashboards**

Report Name	Description
Skills Dashboard	Displays skills statistics for your organization

## SEE ALSO:

[Work.com Feature Access](#)

[Assign Work.com Permission Sets](#)

## Recommended Work.com Profiles

Create different profiles for different types of Work.com users.

Create a new profile for each type of Work.com user. For more information about creating profiles, see either [Working with Profiles in the Original Profile Interface](#) or [Work in the Enhanced Profile User Interface Overview Page](#) depending on whether you have the Enable Enhanced Profile User Interface preference turned on.

 **Note:** Professional Edition organizations will need to grant access through existing profiles. The Work.com Only User, Chatter Only User, and Standard User profiles grant basic access to Work.com objects. The System Administrator profile grants users full administrative access to all Work.com features.

Use the tables below to assign the appropriate object settings and system permissions for each profile.

### Standard User

The Standard User profile gives a user all the basic Work.com functionality.

# Manage Work.com Features

## Enable or Disable Work.com Settings

On the Work.com Settings page, you can enable and disable features like Thanks, Rewards, Calibration, and Skills for your organization.

All the settings except for Thanks Settings and Skills Settings require a Work.com license. Work.com is available as an add-on license for **Professional Edition**, **Enterprise Edition**, or **Unlimited Edition** and is included in **Performance Edition**.

1. From Setup, enter "Work.com Settings" in the **Quick Find** box, then select **Work.com Settings**.
2. Select the Work.com feature you want to enable or deselect the feature you want to disable.

Feature	Section	Description
Enable Thanks	<b>Thanks Settings</b>	Enable Thanks to allow users to recognize others with thanks badges on the Chatter feed.  If you disable this setting, users no longer see the Thanks action in the Chatter publisher. However, they can still see previously created Thanks posts.
Restrict Custom Badge Creators	<b>Thanks Settings</b>	By default, all users can create custom badges. This setting restricts badge creation to users that have the "Create" permission on the Reward object.
Enable Rewards	<b>Recognition Settings</b>	Enable Rewards to tie tangible rewards to badges. Reward creators can upload gift codes to create Reward funds. See the "Reward Funds" topic for more information about creating rewards.
Enable Manager Groups for Coaching	<b>Coaching Settings</b>	Enable manager groups to give managers access to the coaching spaces of the users that report to them. To enable this setting, the Manager Groups setting must first be enabled in Setup, under <b>Sharing Settings</b> .
Enable Manager Groups for Goals	<b>Goal Settings</b>	Enable manager groups to give managers access to the goals of the users that report to them. To enable this setting, the Manager Groups setting must first be enabled in Setup, under <b>Sharing Settings</b> .

### EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To edit Work.com settings:

- "Customize Application"

Feature	Section	Description
Enable Calibration	<b>Perform Settings</b>	<p>Enable Calibration to see and update performance across teams and individuals.</p> <p> <b>Note:</b> For <b>Performance Edition</b> organizations, Calibration is not available for the following profiles: Contract Manager, Marketing User, Read Only, and Solution Manager.</p>
Enable Skills	<b>Skills Settings</b>	<p>Enable Skills to allow users to add skills to their profiles and endorse the skills of other users. Enabling this setting replaces the Knowledgeable About widget on Chatter profiles.</p>
Restrict Skill and Endorsement Editing to Record Detail Pages	<b>Skills Settings</b>	<p>Disables inline editing of skills and endorsements on Chatter profiles, and restricts editing to record detail pages. Recommended if you have customized these objects with custom required fields.</p> <p> <b>Note:</b> Don't enable this setting if you want to use skills in Chatter profiles.</p>
Enable Automatic Skill Feed Posts	<b>Skills Settings</b>	<p>Enable to automatically create Chatter feed posts when a user adds a new skill.</p>
Enable Suggested Skills	<b>Skills Settings</b>	<p>Enable Suggested Skills to have the skills widget suggest skills for users to add based on their Chatter Topics activity.</p>

**3.** Click **Save**.

## Work.com Editions and Permissions

Most Work.com features require the Work.com add-on, but Skills and Thanks functionality (excluding Rewards) are freely available to Sales Cloud users. The permissions and preferences necessary for different tasks are broken up by feature area.

### General Work.com Administrator Tasks

This includes tasks for administering and implementing Work.com.

Administrator Task	Preferences and Permissions Required
Enable Work.com features:	"Customize Application"
Assign a Work.com administrator:	"Customize Application"
Assign permission sets:	"Assign Permission Sets"
Assign profiles:	"Manage Users"
Assign user licenses:	"Manage Users"
Assign user feature licenses	"Manage Users"
Set up actions:	"Customize Application"
Customize fields tracked in feeds:	"Customize Application"
Set field-level security:	"Manage Profiles and Permission Sets" "Customize Application"

#### EDITIONS

Available in: Salesforce Classic

**Work.com** is available as an add-on license for **Professional Edition**, **Enterprise Edition**, **Unlimited Edition**, or **Developer Edition**, and is included in **Performance Edition**.

### Thanks and Reward Tasks

This includes tasks for Work.com end users, such as viewing and creating thanks badges and rewards.

End User Task	Preferences and Permissions Required
View the Badges tab:	No additional user permissions needed
Build a badge:	"Create" on Documents The "Restrict Custom Badge Creator" setting is disabled by default. If the setting is enabled, users need the "Create Custom Badge Definitions" permission.
View Reward Funds:	"Read" on Reward Funds
Create Reward Funds:	"Create" on Rewards "Create" on Reward Funds
View Reward Fund Types:	"Read" on Reward Fund Types

End User Task	Preferences and Permissions Required
Create Reward Fund Types:	"Create" on Reward Fund Types "Read" and "Create" on Reward Funds "Read" and "Create" on Rewards

## Skills Tasks

This includes tasks for Work.com end users using skills.

End User Task	Preferences and Permissions Required
Add skills:	"Create" on Skills and Skill Users
Remove skills:	"Read" on Skills "Delete" on Skill Users
Add endorsements to skills:	"Create" on Endorsements "Read" on Skills and Skill Users

## Goal Tasks

This includes tasks for Work.com end users using goals.

End User Task	Preferences and Permissions Required
View goals:	"Read" on Goals and Goal Links
Create goals:	"Create" on Goals and Goal Links
Edit goals:	"Edit" on Goals and Goal Links
Delete goals:	"Delete" on Goals and Goal Links

## Metric Tasks

This includes tasks for Work.com end users using metrics.

End User Task	Preferences and Permissions Required
View metrics:	"Read" on Metrics
Create metrics:	"Create" on Metrics
Link metrics to reports:	"Create" on Metric Data Links

## Coaching Tasks

This includes tasks for Work.com end users using coaching spaces.

End User Task	Preferences and Permissions Required
View coaching spaces:	"Read" on Coaching
Create coaching spaces:	"Create" on Coaching
Set coaching to Inactive:	"Edit" on Coaching

## Feedback Tasks

This includes tasks for Work.com end users using feedback.

End User Task	Preferences and Permissions Required
View Feedback:	"Read" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests
Create Feedback:	"Create" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests
Edit or submit Feedback:	"Edit" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests
Delete Feedback (only for administrators with MAD/VAD permissions)	"Delete" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests

## Performance Summary Tasks

This includes tasks for Work.com end users using performance summaries.

End User Task	Preferences and Permissions Required
View performance summaries:	"Read" on Performance Cycles
Create performance summaries:	"Create" on Performance Cycles
Answer and submit performance summaries:	"Create," "Read," and "Edit" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests "Read" on Performance Cycles
Add peers to performance summaries	"Create," "Read," and "Edit" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests "Read" on Performance Cycles

## Performance Summary Cycle Tasks

This includes tasks for Work.com administrators managing performance summary cycles.

Administrator Task	Preferences and Permissions Required
Create a performance summary cycle:	"Create," "Read," "Edit," "Delete," "View All," and "Modify All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles
Add people to a performance summary cycle:	"View Setup and Configuration" "Create," "Read," "Edit," "Delete," "View All," and "Modify All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles
Delete people from a performance summary cycle:	"Create," "Read," "Edit," "Delete," "View All," and "Modify All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles
Edit a performance summary cycle:	"Create," "Read," "Edit," "Delete," "View All," and "Modify All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles
View the Calibration tab:	"Enable Work.com Calibration"
Edit performance ratings:	"Create," "Read," and "Edit" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests "Read" on Performance Cycles "Enable Work.com Calibration"

## Performance Summary Cycles Overview

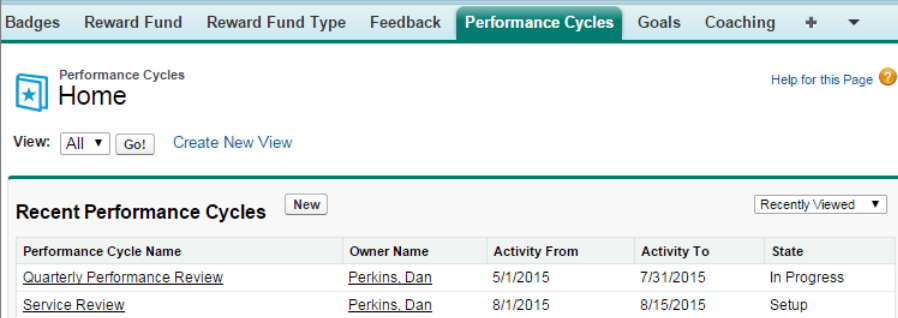

Use Work.com performance summary cycles to create, deploy, and share performance summaries across your company.

In a typical performance summary cycle, you perform the following activities:

1. Plan—Create a performance summary cycle and add the people you want reviewed.
2. Deploy—Make the performance summaries available for users to complete.
3. Evaluate—Write performance summaries and submit them.
4. Calibrate—Optionally compare and update submitted performance summaries with the Calibration feature.
5. Share—Share the submitted performance summaries with summary subjects.
6. Finish—End the performance summary cycle.

Click the Performance Cycles tab to see a list of recently viewed performance cycles.

 **Note:** If the Performance Cycles tab isn't displayed, select Work.com from the Force.com app drop-down menu at the top-right or click  to the right of your current tabs and select it from the All Tabs page.

Performance Cycle Name	Owner Name	Activity From	Activity To	State
<a href="#">Quarterly Performance Review</a>	<a href="#">Perkins, Dan</a>	5/1/2015	7/31/2015	In Progress
<a href="#">Service Review</a>	<a href="#">Perkins, Dan</a>	8/1/2015	8/15/2015	Setup

Click **New** to create a performance cycle, or click the name of a cycle to see more details.

### EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

- [Add People to a Performance Summary Cycle](#)
- [Delete People from a Performance Summary Cycle](#)
- [Deploy a Performance Summary Cycle](#)
- [Performance Summary Cycle Actions](#)

## Create a Performance Summary Cycle

Create a Work.com performance summary cycle from the Performance Cycles page to gather feedback about people in your organization.

1. Click the Performance Cycles tab.

If the Performance Cycles tab isn't displayed, select Work.com from the Force.com app drop-down menu at the top-right or click  to the right of your current tabs and select it from the All Tabs page.

2. Click **New**.

**Note:** You can also create performance cycles by clicking **Clone** on another performance cycle's detail page, but cloning a cycle copies only the cycle name, activity start date, and activity end date. Question sets, due dates, and other details are not copied.

3. Enter a cycle name, an activity start date, and an activity end date.
4. Click **Save**.
5. Click **New Feedback Question Set**.
6. Enter a question set name, feedback type, and due date.

Question sets group questions according to their intended audience. For example, a performance summary about Bill Jones could have up to four different audiences:

- Manager Summary—Questions for Bill's manager. By default, every cycle must include a manager summary.
- Self Summary—Questions for Bill.
- Peer Summary—Questions for Bill's peers.
- Skip Level Summary—Questions for Bill's direct reports.

7. Click **Save**.
8. Click **New Feedback Question**.
9. Enter question details.

You can specify rules for each question:

- Optional—The person writing the summary isn't required to answer this question.
- Confidential—The subject of the summary won't see the submitted answer. This rule isn't available for self summaries.

### EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer Editions**

Performance summaries require a license to **Work.com**, which is available as an add-on license for **Professional Edition, Enterprise Edition, Unlimited Edition,** or **Developer Edition**, and is included in **Performance Edition**.

### USER PERMISSIONS

To view performance summaries:

- "Read" on Performance Cycles

To create a Performance Summary Cycle:

- "Create," "Read," "Edit," "Delete," "Modify All," and "View All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles

You can also add instructions at the beginning of each question.

**10.** Click **Save**.

**11.** Add additional question sets and questions, as needed.

Once you're done adding questions, add people to the performance summary cycle.

[Deploy a Performance Summary Cycle](#)

## Add People to a Performance Summary Cycle

Add people to a performance summary cycle manually or through a CSV file.

You can only add people to summary cycles with a state of Setup or In Progress.

1. Click the Performance Cycles tab.

If the Performance Cycles tab isn't displayed, select Work.com from the Force.com app drop-down menu at the top-right or click  to the right of your current tabs and select it from the All Tabs page.

2. Click a performance summary cycle.

3. In the Feedback Requests section, add users to the performance cycle.

- To manually enter subjects, click **Add Subject**. Enter the user's name and click **Save**.
- To upload subjects through a CSV file, click **Upload Subject CSV**, then select **Choose File**. Select a CSV file, click **Upload**, and save your changes.

The CSV file should contain a list of either user IDs (example: 005R0000000DjZW) or usernames (example: john@acme.com) in the first column. The data should begin on the second row, because the first row is seen as the header row and is not uploaded.

**Tip:** Many organizations have specific requirements about participation in a performance summary cycle. Use the Users report to narrow down the list of users you want to add to performance summaries and obtain the usernames there.

The Job Tracker displays the status of the CSV upload. Additionally, you can confirm the users included in a performance summary cycle in the Feedback Requests section.

### EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Performance summaries require a license to **Work.com**, which is available as an add-on license for **Professional Edition, Enterprise Edition, Unlimited Edition, or Developer Edition**, and is included in **Performance Edition**.

### USER PERMISSIONS

To view performance summaries:

- "Read" on Performance Cycle

To add people to a Performance Summary Cycle:

- "View Setup and Configuration"

AND

"Create," "Read," "Edit," "Delete," "Modify All," and "View All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles

## Delete People from a Performance Summary Cycle

If you added someone you don't need to evaluate, delete them from the performance summary cycle.

You can only delete people from summary cycles with a state value of Setup.

1. Click the Performance Cycles tab.  
If the Performance Cycles tab isn't displayed, select Work.com from the Force.com app drop-down menu at the top-right or click  to the right of your current tabs and select it from the All Tabs page.
2. Click a performance summary cycle.
3. In the Feedback Requests section, click **Del** in the Action column of the subject you want to delete.

### SEE ALSO:

[Performance Summary Cycles Overview](#)

### EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Performance summaries require a license to **Work.com**, which is available as an add-on license for **Professional Edition, Enterprise Edition, Unlimited Edition, or Developer Edition**, and is included in **Performance Edition**.

### USER PERMISSIONS

To view performance summaries:

- "Read" on Performance Cycle

To delete people from a Performance Summary Cycle:

- "Create," "Read," "Edit," "Delete," "Modify All," and "View All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles

## Deploy a Performance Summary Cycle

Deploy a performance summary cycle to make the summaries available for people to complete.

 **Note:** You can't edit questions or cycle details after a performance summary cycle is deployed, but you can add more people.

1. Click the Performance Cycles tab.

If the Performance Cycles tab isn't displayed, select Work.com from the Force.com app drop-down menu at the top-right or click  to the right of your current tabs and select it from the All Tabs page.

2. Click a performance summary cycle.

3. Click **Deploy**.

Any inactive users are automatically removed prior to cycle deployment. When deployment is complete, you'll receive a detailed email that describes the cycle deployment and any users that were removed. You can add them back again later, if necessary.

Once deployed, a manager summary is assigned to the manager of each person added to the cycle. If the cycle contains self summaries, the self summary is assigned to the associated person. Each person assigned a summary receives an email notification and can start working on their summaries.

### USER PERMISSIONS

To edit a Performance Summary Cycle:

- "Create," "Read," "Edit," "Delete," "Modify All," and "View All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, Performance Cycles

## Performance Summary Cycle Actions

Different actions are available on a performance cycle's detail page depending on the cycle's state.

Action	Available In	Description
Edit	Setup	Allows user to edit a performance cycle's name, activity start date, and activity end date.
Deploy	Setup	Deploys the summary cycle and associated summaries. Changes the summary cycle status to In Progress.
Delete	Setup	Deletes a summary cycle and the associated summaries.
Finish	In Progress	Completes a performance summary cycle and changes the summary cycle status to Finished. This also removes declined summaries and summaries that were not submitted.
Clone	Setup, In Progress, Finished	Clones a summary cycle. This copies the cycle name, activity start date, and activity end date. However, question sets, due dates, people, and other details are not copied.
Share All	In Progress	Shares the submitted performance summaries with the summary subjects. This doesn't include questions marked Confidential.

## Calibration Overview

Use Work.com calibration reports to visualize, compare, and update performance ratings across your entire company.

 **Note:** For **Performance Edition** organizations, Calibration is not available for the following profiles: Contract Manager, Marketing User, Read Only, and Solution Manager.

Calibration reports are populated with data from performance summary cycles. They are designed for managers and executives to review overall performance of their teams or organizations. You can quickly identify high and low performers, and depending on user permissions, make changes to a person's individual performance ratings directly in the calibration report.

Create your own calibration report or download the calibration reports package from the Package Installation page.

- [Production Calibration Report Package](#)
- [Sandbox Calibration Report Package](#)

Access calibration reports from the Calibration tab. Note that you can only view the results for a single performance summary cycle at a time.

The Distribution Graph shows the distribution of ratings for each multiple choice question. Select different questions in the drop-down list to view the associated rating distribution.

The Employees in Graph section shows the performance summary details for users included in the performance review. You can filter and sort each column. Filtering the columns also updates the distribution graph. You can also add custom columns to filter performance summary details by location, department, or other measures. View individual performance summaries by clicking on the View column.

### SEE ALSO:

### EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Calibration requires a license to **Work.com**, which is available as an add-on license for **Professional Edition, Enterprise Edition, Unlimited Edition, or Developer Edition**, and is included in **Performance Edition**.

### USER PERMISSIONS

To view the Calibration tab:

- "Enable Work.com Calibration"

To edit performance ratings:

- "Create," "Read," and "Edit" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests

AND

"Read" on Performance Cycles

## Create a Calibration Report

Create a calibration report by copying an existing report or creating a new report that meets the proper criteria.

Alternatively, you can download the calibration report package from the Package Installation page.

- [Production Calibration Report Package](#)
- [Sandbox Calibration Report Package](#)

1. On the Calibration tab, select a calibration report from the drop-down list.
2. Click **View/Edit Report**.
3. Click **Save As**.

4. Type a name, an optional description, unique name, and specify the report folder.

If the report is saved to a public folder, anyone with permission to view the folder sees this report, but each user will only see performance summaries they have access to. If the report is saved to “My Personal Custom Reports,” only you will see the Calibration report.

5. Click **Save & Return to Report**.

**Tip:** You can also create a new report. Once a report meets specific criteria, it automatically appears in the Calibration drop down.

- The report must be a **Work.com Calibration** report type.
- The report must be in a **Summary Format**, grouped by Feedback Question Name and then by Feedback.
- These columns should be listed in the report:
  - Performance Cycle ID
  - Feedback Request ID
  - Feedback ID
  - Subject: User ID
  - Subject: Full Name (or Subject: First Name and Subject: Last Name)
- The report must be filtered to only view one performance summary cycle.

### EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Calibration requires a license to **Work.com**, which is available as an add-on license for **Professional Edition, Enterprise Edition, Unlimited Edition, or Developer Edition**, and is included in **Performance Edition**.

### USER PERMISSIONS

To view the Calibration tab:

- “Enable Work.com Calibration”

## Customize a Calibration Report

Enhance your calibration report with additional columns and filters.

Calibration reports use Salesforce reporting. You can filter and specify additional custom columns for your calibration report. The columns display in the order you specify. However, the sort order in reports doesn't apply in calibration reports.

1. On the Calibration tab, select a calibration report from the drop-down list.
2. Click **View/Edit Report**.
3. Click **Customize**.
4. Add filters and columns to your report, as necessary.
  - The following columns are required and can't be removed from calibration reports:
    - Performance Cycle ID
    - Feedback Request ID
    - Feedback ID
    - Subject: User ID
    - Subject: Full Name (or Subject: First Name and Subject: Last Name)
5. Click **Save**.

**Example:** Some common uses include:

- Filter by Performance Summary Cycle for the required performance summary cycle
- Filter by Department to create a report for the department
- Filter by Location to create a report for that location

## Update Performance Summary Details

Easily update performance summary details directly in the calibration report.

You can only update performance summaries you have access to. If you have “Modify All Data” or “View All Data” permissions for performance summaries, then you can see the ratings of performance summaries before they are submitted. The only editable fields are the multiple choice questions answered by a user’s manager, and do not include peer, self, or skip level summaries. Once the performance summary is finalized and shared with the user, answers can’t be edited.

1. On the Calibration tab, select a calibration report from the drop-down list.
2. On the Employees in Graph section, double-click the rating to you want to change.  
You can only change ratings on a submitted performance summary.
3. Select the new value.
4. Click **Save**.

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

Administrators can change object permissions for the skill and endorsement objects to suit the needs of their organization. For example, you can configure object settings so users can't create skills, and only skills created by an administrator can be assigned to others. By default, supported user profiles have the ability to see, create, edit, and remove skills, and administrators have "Modify All Data" and "View All Data" permissions.

Additionally, administrators can change some skills settings on the Work.com Settings page. From Setup, enter *Work.com Settings* in the Quick Find box, then select **Work.com Settings**.

#### Edit Skills and Endorsements via record detail pages

Disables inline editing of skills and endorsements on Chatter profiles. Recommended if you have customized these objects with custom required fields.

 **Note:** Don't enable this setting if you want to use skills in Chatter profiles.

#### Generate feed posts when users add a new skill

Automatically creates a Chatter feed post when a user adds a new skill to a profile.

#### Enable Suggested Skills

Automatically suggests skills based on users' Chatter topics.

You can also install a package with additional reports and dashboards for thanks and skills features:

- [Thanks and Skills Reports and Dashboards \(Production Package\)](#)
- [Thanks and Skills Reports and Dashboards \(Sandbox Package\)](#)

#### SEE ALSO:

- [Skills Overview](#)
- [Skills Limitations](#)
- [Object Permissions](#)
- [Edit Object Permissions in Profiles](#)
- [Enable or Disable Work.com Settings](#)
- [Work.com Report and Dashboard Overview](#)

## Skills Limitations

Skills and endorsements have special behaviors and limitations.

Note the following restrictions:

- The Skills feature is not supported in Communities.
- All skill records are visible to users with the “Read” permission on Skills.
- Skill User and Endorsement records can only be deleted by the owner and users with the “Modify All Data” permission.
- To restore the users and endorsements associated with a deleted skill, retrieve the skill from the recycle bin. Creating a skill with the same name will not restore the prior associations.
- Users can only endorse others, not themselves. Users can’t be endorsed more than once by the same person on the same skill.

Administrators can endorse users on behalf of other users through the API.

- Users can’t see the skills widget on a Chatter profile page unless Chatter is enabled and users have the “Read” permission on Skills and Skill Users.

# SUPPORT YOUR CUSTOMERS

## Welcome, Support Agents

---

This documentation is for support agents and other users who want to use Salesforce customer service and support features, also known as the Service Cloud. It's organized by tasks so that you can quickly find information about features that will help you provide customer service. For example, information about emailing customers is located in a section named Responding to Customers, rather than a section that includes the feature name, Email-to-Case. However, you can search this documentation by keywords to find a feature name or support solution. Note that this documentation doesn't include many tasks for setting up features. For those, please refer to the documentation, *Set Up and Maintain Customer Support Tools*.

Together, *Support Your Customers* and *Set Up and Maintain Customer Support Tools* contains the information you need to set up and deliver customer service with Salesforce.

## Tracking Customer Inquiries

---

### Cases

#### Cases

A case is a customer's question or feedback. Support agents can review cases to see how they can deliver better service. Sales reps can use cases to see how they affect the sales process. Responding to cases keeps your customers happy and enhances your brand.

Your administrator can set up communication channels to gather cases from customers' preferred forms of contact. Channels include Communities for online forums, Email-to-Case for emails, Web-to-Case for websites, Salesforce Call Center for phone calls, and more. Some channels aren't available for Lightning Experience.

From the Cases home page, you can create, locate, and edit cases and also sort and filter cases and queues using standard and custom list views.

 **Tip:** If a Salesforce console is set up, you can use its dashboard-like interface to respond to multiple cases faster. If entitlements are set up, you can check whether customers are eligible for support or if cases are close to violating a milestone. If Salesforce to Salesforce is set up and cases are shared with external contacts, choose one of the list views to see cases that

#### EDITIONS

Available in both: Salesforce Classic and Lightning Experience

- Unlimited
- Developer

### USER PERMISSIONS

To view cases:

- "Read" on cases

To create cases:

- "Create" on cases

## Viewing Case Lists

The cases list page displays a list of cases in your current view. To show a filtered list of items, select a predefined list from the `view` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `view` drop-down list and click **Edit**.

If the Salesforce console is set up, view case lists by selecting Cases from the navigator tab (if Cases is available).

- Click **Edit** or **Del** to [edit or delete a case](#).
- If Chatter is enabled, click  or  to follow or stop following a case in your Chatter feed.
- Click **New Case** or select **Case** from the Create New drop-down list in the sidebar to [create a case](#).
- Select the box next to one or more cases and then use the buttons at the top of the view to [close the cases, take ownership of them, or change the case status or owner](#).

 **Note:** Cases with a red arrow have been automatically escalated via your organization's escalation rules.

## Taking Ownership of Cases

To take ownership of cases in a queue, view the queue list view, check the box next to one or more cases, and then click **Accept**. Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations can grant additional access to cases beyond what the sharing model allows.

 **Note:** The organization-wide sharing model for an object determines the access users have to that object's records in queues:

### Public Read/Write/Transfer

Users can view and take ownership of records from any queue.

### Public Read/Write or Public Read Only

Users can view any queue but only take ownership of records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

### Private

Users can only view and accept records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

Regardless of the sharing model, users must have the "Edit" permission to take ownership of records in queues of which they are a member. Administrators, users with the "Modify All" object-level permission for Cases, and users with the "Modify All Data" permission, can view and take records from any queue regardless of the sharing model or their membership in the queue.

- "Read" on cases

To create cases:

- "Create" on cases

## Changing Multiple Cases

From any case list page, administrators can “mass update” multiple cases at once. From any queue list view, users can take ownership of one or more cases if they are a member of that queue, if they are higher in the role or territory hierarchy than a queue member, or if the organization’s default sharing for cases is Public Read/Write/Transfer. Simply check the boxes next to the desired cases and click the appropriate button. The following actions are possible:

- **Accept**—Assigns you as the owner of the selected cases in a queue list view. Any attached open activities are transferred to you as well. In organizations that do not have the Public Read/Write/Transfer sharing model for cases, you can take cases only from queues of which you are a member or if you are higher in the role hierarchy than a queue member.
- **Change Owner**—Assigns the cases to the one user or queue you specify. Any attached open activities are transferred to the new owner as well. When putting cases in a queue, the open activities are not transferred.

In addition to the required user permissions for this feature, you must have read sharing access to the cases you are updating.

 **Note:** When you change case ownership, any associated open activities that are owned by the current case owner are transferred to the new owner.

- **Close**—Closes the selected cases using the values you specify. You can set a common `Status` and `Reason` and add any comments.

You must have the “Manage Cases” permission and read/write sharing access to the cases to use this feature.

- **Change Status**—Changes the `Status` of the cases to the value you set.

You must have the “Manage Cases” permission and read/write sharing access to the cases to use this feature.

SEE ALSO:

[Guidelines for Working with Cases](#)

### EDITIONS

Available in: Salesforce Classic

Available in:

- Group
- Professional
- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To change case owner:

- “Transfer Cases” OR “Transfer Record”

AND

“Edit” on cases

To close and change the status of cases:

- “Manage Cases”

## Creating Cases

You can create cases in various ways:

- Your administrator can set up Web-to-Case and either Email-to-Case or On-Demand Email-to-Case to automatically capture cases from your website and customer emails.
- Your customers can log their own cases from a community, Customer Portal, Self-Service portal, or Chatter Answers.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

- You can create cases manually from the Cases tab, the Cases related list, or, depending on how your administrator has set up your organization, in the feed on record detail pages.
- If you have an answers community, you can [escalate an unanswered or problematic question](#) into a new case.

You may have to verify that contacts are eligible to receive customer support, or that a service contract includes an entitlement, before you create or update cases. If so, see [Verifying Entitlements](#) on page 2160.

To create a new case for a support email or phone call:

1. Use Search to find the individual's account and then locate the contact in the Contacts related list.

If the contact doesn't exist, create a new contact for that account.

2. Click **New** in the Cases related list of the contact.

If your organization uses record types, you might be prompted to choose a `Record Type` when creating a case. Different record types can have different fields and different picklist values.

3. Enter information for the case.

When you enter or select a contact for the `Contact Name` field, the `Account Name` field defaults to the account associated with the contact when you save the case. However, you can change the account in the `Account Name` field during subsequent updates.

4. To associate the case with an asset:

- a. Click the **Asset** lookup icon. Initially, the asset lookup lists all assets for the contact if one is selected. Enter search criteria and click **Go!** to refine this list.
- b. Select an asset from the assets listed to associate it with the case.
- c. If you do not find a matching asset, click **New** to create a new asset from the lookup dialog and associate it with the new case. The **New** button displays if your organization has enabled Quick Create and you have the "Create" permission on assets.
- d. To associate the new asset with a product, enter your product search criteria and click **Go!** or select a product from the list of matches. Click **Skip** if you do not want to associate the asset with a product.
- e. Enter the asset details and click **Save**.

5. If enabled by your administrator, you can associate the case with another case. Simply type the case number of the parent in the `Parent Case` field. Alternatively, you can click the lookup icon to search for a case's case number.

When a case is associated with a parent case it signifies a relationship between cases, such as a grouping of similar cases for easy tracking, or a division of one case into multiple cases for various users to resolve.

### EDITIONS

Available in: Salesforce Classic

Case assignment rules, Web-to-Case, Email-to-Case, and the Self-Service portal are available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions.

### USER PERMISSIONS

To view cases:

- "Read" on cases

To create cases:

- "Create" on cases

6. Depending on how your organization is set up, you may be able to:
    - Deselect `Visible in Self-Service Portal` if you don't want the case to be available in the Self-Service portal.
    - Select `Assign using active assignment rules` to automatically assign the case using your organization's active assignment rule. If `Assign using active assignment rules` is selected and no assignment rule criteria is met, the case is assigned to the Default Case Owner. If you do not select the checkbox, you are assigned as the owner.  
  
If `Assign using active assignment rules` is selected by default and you deselect it, you override your organization's default assignment rules and you're assigned as the owner.
    - Select `Send notification email to contact` to automatically send an email to the contact indicating that the case was created.
  7. If Spell Checker is enabled for your organization, click **Check Spelling** to spell-check the contents of the `Description` field. Spell Checker does not support all the languages that Salesforce supports. For example, Spell Checker doesn't support Thai, Russian, and double-byte languages, such as Japanese, Korean, or Chinese.
  8. Click **Save** to save the case, or click **Save & New** to save the case and create another. Alternatively, click **Save & Close** to save and close the case immediately. This sets the `Closed When Created` field on the case, which indicates that the case was closed during creation.
-  **Note:** When you save a newly-created case with the assignment rule box checked, the record type of the case might change, depending on what behavior your administrator specified for assignment rules.

If your organization uses divisions, the division of a new case is automatically set to the division of the related contact.

[Solving Cases](#)

## Guidelines for Working with Cases

A case is a customer question or feedback. The fields and related lists you see on a case are determined by your customizations or features set up by your administrator. Learn how you can get the most out of working with cases.

### Updating Cases

When you change a contact, the account doesn't update to the contact's account, but you can edit the account yourself.

Contacts who are portal users can only view cases associated with the account on their contact record.

When you change an account, manual shares on a case are deleted for users who don't have read access on the new account.

If set up, select **Send notification email to contact** to let the contact know that you've updated the case. An email is sent only if you have access to the contact.

If set up, select **Assign using active assignment rules** to reassign a case using an assignment rule. If the case doesn't match rule criteria, it's reassigned to your organization's default case owner.

If set up, click **Sharing** to share a case with other users, groups, or roles.

If set up, close a case by selecting Closed under **STATUS**. Otherwise, click **Close Case** and change any fields as needed. If knowledge article submissions are set up, click **Save and Create Article** to store information that would help others close similar cases. When the draft article you submit is published, it's attached to the case and available in the knowledge base for easy reference.

If set up, a Web-to-Case Information section lists information entered by the customer who created the case from a website form.

### Using Case Related Lists

To reply and work with cases created from Email-to-Case, use the Emails related list.

To view the required steps in a support process or to add the date of a completed milestone, use the Case Milestones related list.

To find articles from your organization's knowledge base to help solve a case, use the Articles related list. To initiate a search, type keywords. Attach relevant articles to the case to track solutions and help others solve similar cases. Attached articles appear on the related list. If you create a draft article while closing a case, the article appears on the related list after the draft article is published.

To find solutions (version 1.0 of articles) to help solve a case, use the Solutions related list. If solution categories are set up, choose them to refine your search, along with keywords. If suggested solutions are set up, click **View Suggested Solutions** to see relevant solutions. The solutions are suggested based on relevancy and case similarity.

### Replying to Cases from Chatter Answers (Not Available in Lightning Experience)

To reply to a case converted from a question on a web community, type your response in the Chatter-like feed, and click **Answer Customer**. Your response is tracked on the Case Comments related list.

#### EDITIONS

Available in: Salesforce Classic and Lightning Experience

Case assignment rules, case escalation rules, web-to-case, and customer portals are available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions.

#### USER PERMISSIONS

To view cases:

- "Read" on cases

To update cases:

- "Edit" on cases

Case comments marked `Public` display as private messages from customer support in Chatter Answers. They don't display to the entire community. For example, if a support agent adds a public case comment, it displays only to the case's contact private messages in Chatter Answers. Support agents can read all private and public case comments.

**SEE ALSO:**

- [Case Fields](#)

- [Case Teams](#)
- [Case Comments](#)
- [Assigning Cases](#)
- [Working with Case Emails](#)
- [Using the Case Milestones Related List](#)
- [Using the Chatter Answers Q&A Tab](#)

## Case Comments

Case comments let you and your support agents add, edit, and delete public and private comments on a case. All comments appear in the Case Comments related list.

Comments can remain private or be made publicly available to a case's contact on the Customer Portal, Self-Service portal, or Chatter Answers. You can also set up your portal or Web community to let customers comment on their cases. When a portal user adds a comment, the case owner receives an email. A comment icon () remains on the case heading until the case owner views it.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

To edit, delete, or make public your existing case comments:

- "Edit Case Comments"

## Creating and Editing Case Comments on Case Detail Pages

1. Click **New** or **Edit** on the Case Comments related list.
2. Optionally, select `Public` to enable comment notifications to the contact on the case, and to let the contact view the comment on the Customer Portal or Self-Service.
3. Type comments in `Comment`.

4. Click **Save**.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

 **Note:** If you publish cases and case comments to external contacts via Salesforce to Salesforce, all public case comments are automatically shared with a connection when you share a case. To stop sharing a comment, select **Make Private**.

 **Tip:** On the Case Comments related list:

- Click **Del** to delete an existing comment.
- Click **Make Public** or **Make Private** to change the public status of a comment on the Customer Portal or Self-Service portal. Case comments marked `Public` display as private messages from customer support in Chatter Answers. They don't display to the entire community. For example, if a support agent adds a public case comment, it displays only to the case's contact private messages in Chatter Answers. Support agents can read all private and public case comments.

To edit or delete case comments added by other users:

- "Modify All" on cases

To edit, delete, or make public your existing case comments:

- "Edit Case Comments"

## Creating and Editing Case Comments on Case Edit Pages

1. Click **New** on the Cases tab to create a case, or select an existing case and click **Edit**.
2. Type your comments in `Internal Comments`.
3. Optionally, select `Send Customer Notification` to email the contact on the case of your new public comment.
4. Click **Save**.

An email is sent to the case owner whenever a case comment is created or updated.

**Note:** `Send Customer Notification` displays on case edit pages when:

- An administrator has enabled case comment notification to contacts on [Support Settings](#) or [Self-Service Portal settings](#) pages.
- The comment is marked `Public`.
- There's a contact on the case.
- The contact on the case has a valid email address.

To edit, delete, or make public your existing case comments:

- "Edit Case Comments"

## Case History

The Case History related list of a case detail page tracks the changes to the case. Any time a user modifies any of the standard or custom fields whose history is set to be tracked on the case, a new entry is added to the Case History related list. All entries include the date, time, nature of the change, and who made the change. Modifications to the related lists on the case are not tracked in the case history.

 **Note:** Changes to the `Closed When Created` field are only tracked when the field is updated via the Force.com API.

In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, for automated case changes that result from Web-to-Case or case assignment or escalation rules, the user listed in the history is the `Automated Case User` chosen in the Support Settings.

SEE ALSO:

[Cases](#)

## Case Fields

Depending on your page layout and field-level security settings, some fields may not be visible or editable.

Field	Description
	Indicates that an escalation rule escalated a case. The escalation icon disappears when a case is closed or no longer meets escalation rule criteria.
	Indicates that a customer added a comment to a case from a web portal. The icon appears until the case owner views the case.
<code>Account Name</code>	Name of the account associated with a case's contact. The name is added when you link the case to a contact and save the case. When updating a case, you can add a different account.
<code>Asset</code>	The customer's product model. On edit pages, this field shows only assets associated with a case's contact, but you can use inline editing to see a list of all assets on a case.
<code>Business Hours</code>	Indicates the hours at which escalation actions or entitlement processes run on a case.
<code>Case Currency</code>	The currency for all currency amounts on a case. Amounts display in the case currency and are also converted to your personal currency. Only

Field	Description
	available for organizations that use multiple currencies.
Case Division	The division to which a case belongs. Division is inherited from a case's contact. If it has no contact, it's set to the default global division. Only available in organizations that use divisions to segment data.
Case Number	Unique number assigned to the case. Numbers starts at 1000 and are read only, but administrators can change the format. Case numbers often increase sequentially, but sometimes they skip numbers in a sequence.
Case Owner	User assigned to own a case.
Case Record Type	Field name that determines the picklist values available on a case. Record types are often related to a support process.
Closed by Self-Service User	Indicates if a case's contact closed the case from a web portal. This field is read only.
Closed When Created	Indicates if a case was closed during creation using the <b>Save and Close</b> button. This field is read only.
Contact Email	Email address of a case's contact. The address is added when you add a contact to a case. This field is read only.
Contact Mobile	Mobile phone number of a case's contact. The number is added when you add a contact to a case. This field is read only.
Contact Name	Name of a case's contact.
Contact Phone	Phone number of a case's contact. The number is added when you add a contact to a case. This field is read only.
Created By	User who created a case, including creation date and time. This field is read only.
Custom Links	Lists of custom links for cases created by an administrator.
Date/Time Closed	Date and time that a case was closed. This field is read only.
Date/Time Opened	Date and time that a case was opened. This field is read only.
Description	Description of a case,- usually a customer question or feedback. This field can store up to 32 KB of data, but only the first 255 characters display in reports.
Entitlement Name	Name of an entitlement added to a case. Only available if entitlements are set up.
Entitlement Process Start Time	The time the case entered an entitlement process. If you have "Edit" permission on cases, you can update or reset the time. When you reset the time: <ul style="list-style-type: none"> <li>• Closed or completed milestones aren't affected</li> </ul>

Field	Description
	<ul style="list-style-type: none"> <li>Incomplete milestones are recalculated based on the new start time</li> </ul> <p>If an entitlement process applies to a case, this field appears.</p>
Entitlement Process End Time	The time a case exited an entitlement process. If an entitlement process applies to a case, this field appears.
Internal Comments	Internal notes related to a case. Each comment can store up to 4 KB of data and appears on the Case Comments related list. Comments marked "public" can appear on web portals.
Milestone Status	A milestone is a step in an entitlement process. If an entitlement process applies to a case, this field appears.
Milestone Status Icon	<p>Indicates a milestone's status on a case by displaying one of the following icons:</p> <ul style="list-style-type: none"> <li> Compliant</li> <li> Open Violation</li> <li> Closed Violation</li> </ul> <p>If an entitlement process applies to a case, this field appears.</p>
Modified By	User who last changed a case, excluding any changes made to a case's related list items. This field also includes the date and time of the change. This field is read only.
Origin	Source of a case, for example, phone, email, or web. Administrators set field values, and each value can have up to 40 characters. When editing a case created from a community with quick actions, add an origin because it isn't set by default.
Parent Case	A case above one or more related cases in a case hierarchy. A case number identifies a parent case, and a parent case must exist before you can add it to another case.
Priority	Urgency of a case. Administrators set field values, and each value can have up to 20 characters.
Product	Name of a case's product. This field is only available if entitlements are set up to include products.
Question	A question on the Q&A tab that is related to a case. This field is populated when you create a case from a question or a question is escalated to a case.
Reason	The reason a case was created. Administrators set field values.
Status	Status of a case, for example, open or closed. Administrators set field values.
Stopped	Lets you stop an entitlement process on a case, which might be necessary if you're waiting for a customer's response. You can stop

Field	Description
	an entitlement process up to 300 times. If an entitlement process applies to a case, this field appears.
Stopped Since	Shows the date and time an entitlement process was stopped on a case. If an entitlement process applies to a case, this field appears.
Subject	Brief description of the customer's question or feedback, for example, <code>Printing Gives Error on Internet Explorer</code> .
Timeline	<p>How far along a case is to reaching an entitlement process's milestones. You can click or hover your mouse pointer over each milestone to view its details. These icons represent milestones:</p> <ul style="list-style-type: none"> <li>•  Completed milestone</li> <li>•  Violated milestone</li> </ul> <p>You can drag the Handle icon () along the Timeline Zoom tool to view past and future milestones. If an entitlement process applies to the case, this field appears.</p>
Type	Type of case, for example, question or problem. Administrators set field values.
Visible in Self-Service Portal	Indicates if a case is visible to users in a web portal. If you want web-generated cases visible in a portal, include this field in Web-to-Case setup.
Web Company	Company name provided by a customer who created a case from Web-to-Case or Email-to-Case.
Web Email	Email address provided by a customer who created a case from Web-to-Case or Email-to-Case.
Web Name	Customer's name as provided by a customer who created a case from Web-to-Case or Email-to-Case.
Web Phone	Phone number provided by the customer who created a case from Web-to-Case or Email-to-Case.

## How is the “Age” calculated in case reports?

The Age of an open case is the time that has elapsed from its creation to the present. The Age of a closed case is the elapsed time from its creation to the time it was closed. Case reports display a drop-down list labeled “Units” that lets you choose to view the Age in days, hours, or minutes.

[Web-to-Case FAQ](#)

## Using the Case Milestones Related List

The Case Milestones related list on a case detail page displays a list of milestones that automatically apply to the case due to an entitlement process. Milestones are required steps in your support process. They're metrics that represent service levels to provide to each of your customers. Examples of milestones include First Response and Resolution Times on cases.

### Note:

- `No records to display` appears in the related list if no milestones apply to the case.
- The related list contains fields that your company has chosen to display, based on its business processes. Depending on your company's requirements, you may see some or all of the following fields.

### Action

Lists the actions you can perform on the milestone. For example, if you have the “Edit” permission on cases, you can click **Edit** to select the milestone completion date.

 **Note:** Customer Portal users can't edit case milestones.

### Milestone

The name of a set of steps in an entitlement process that applies to the case. Users with the “Manage Entitlements” permission can click a milestone's name to view the entitlement process, case criteria, time triggers, and actions associated with it.

The following table lists the types of actions associated with milestones:

Action Type	Description
 Success Actions	The actions to take when a milestone successfully completes.
 Warning Actions	The actions to take when a milestone is near violation.
 Violation Actions	The actions to take when a milestone is violated.

Administrators can set up milestones to automate the following for each action type:

Automation Type	Description	Example
Task	Assigns a task to a specific user. You can specify the task's <code>Subject</code> , <code>Status</code> , <code>Priority</code> , and <code>Due Date</code> .	Create a task for a support rep to call a customer when a first response is violated.

### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions with the Service Cloud

### USER PERMISSIONS

To view case milestones:

- “Read” on cases

To edit case milestones:

- “Edit” on cases

Automation Type	Description	Example
Email Alert	Emails a specific template to a designated recipient.	Notify case owners when their cases are near violation of a first response.
Field Update	Changes the value of a selected field. You can specify a value or create a formula for the new value.	Update the case <code>Priority</code> field to <i>High</i> when a first response is near violation.
Outbound Message	Sends a message to a designated endpoint. You can also specify a username and the data you want to include in the message.	Send data about parts or services to an external system after a first response is successful.

**Start Date**

The date and time that the milestone tracking started.

**Target Date**

The date and time to complete the milestone.

**Completion Date**

The date and time the milestone was completed.

**Target Response**

Shows the time to complete the milestone. Automatically calculated to include any business hours on the case. Depending on your company's business requirements, the time can appear in minutes, hours, or days.

**Time Remaining**

Shows the time that remains before a milestone violation. Automatically calculated to include any business hours on the case. Depending on your company's business requirements, the time can appear in minutes, hours, or days.

**Elapsed Time**

Shows the time it took to complete a milestone. Automatically calculated to include any business hours on the case. Elapsed Time is calculated only after the Completion Date field is populated. Depending on your company's business requirements, the time can appear in minutes, hours, or days.

**Violation**

Icon () that indicates a milestone violation.

**Time Since Target**

Shows the time that has elapsed since a milestone violation. Automatically calculated to include any business hours on the case. You can choose to display the time in days, hours and minutes, or minutes and seconds.

**Completed**

Icon () that indicates a milestone completion.

Because they're part of a case's history, completed milestones remain on a case even if they're no longer applicable.

## Searching for Cases

1. Enter your search terms in the sidebar or header search box.
2. Click **Search**.
3. From the search results, click an item to open it or click **Edit**, if available.

You can also create a case list view to find cases that match specific criteria.

SEE ALSO:

[Cases](#)

## Cloning Cases

The **Clone** button on a case quickly creates a new case using information from the existing case, for example, when you need to log multiple issues for a customer on a support call.

1. Click **Clone** on an existing case.
2. Enter or change any information for the new case.
3. Check the box to assign the case automatically using your active assignment rule.
4. Click **Save**.

 **Note:** If you have read-only access to a field, the value of that field is not carried over to the cloned record.

## Deleting Cases

To delete a case, click **Del** next to the case on the cases list page, or click **Delete** on the case detail page. The **Del** link and **Delete** button do not display for users who do not have the “Delete” permission on cases.

When you delete a case, all related events and tasks, case comments, and attachments are also deleted. Associated contacts, accounts, and solutions are not deleted with the case. The deleted case is moved to the Recycle Bin. If you undelete the case, any related items are also restored.

 **Note:** If you delete an event, task, case comment, or attachment from a case—and then delete the case—the event, task, case comment, or attachment cannot be restored via undelete.

[Cases](#)

## Assigning Cases

You can assign cases to users or queues in a variety of ways.

- **Using an Assignment Rule for Web-to-Case, Email-to-Case, or On-Demand Email-to-Case**

In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, web- and email-generated cases are automatically assigned to users or queues based on criteria in your active case assignment rule.

Cases that do not match the assignment rule criteria are automatically assigned to the `Default Case Owner` specified in the Support Settings.

- **Using an Assignment Rule when Creating or Editing a Case**

In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, when creating or editing a case, you can check a box to assign the case automatically using your active case assignment rule. An email is automatically sent to the new owner if your administrator specified an email template in the matching rule entry. If you want this checkbox to be selected by default, your administrator can modify the appropriate page layout. If required, your administrator can edit the page layout to hide the assignment checkbox but still force case assignment rules.

- **Changing Ownership of Multiple Cases (administrators only)**

From any case list page, an administrator, or a user with the “Manage Cases” permission, can manually assign one or more cases to a single user or queue.

- **Taking Cases from a Queue**

To take ownership of cases in a queue, go to the queue list view, check the box next to one or more cases, and click **Accept**.

 **Note:** The organization-wide sharing model for an object determines the access users have to that object's records in queues:

**Public Read/Write/Transfer**

Users can view and take ownership of records from any queue.

### EDITIONS

- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To delete cases:

- “Delete” on cases

### EDITIONS

Available in: Salesforce Classic

The case assignment options vary according to which Salesforce Edition you have.

### USER PERMISSIONS

To view cases:

- “Read” on cases

To take ownership of cases from queues:

- “Edit” on cases

**Public Read/Write or Public Read Only**

Users can view any queue but only take ownership of records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

**Private**

Users can only view and accept records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

Regardless of the sharing model, users must have the “Edit” permission to take ownership of records in queues of which they are a member. Administrators, users with the “Modify All” object-level permission for Cases, and users with the “Modify All Data” permission, can view and take records from any queue regardless of the sharing model or their membership in the queue.

- **Changing Ownership of One Case**

To transfer a single case you own or have read/write privileges to, click **Change** next to the `Case Owner` field on the case detail page, and specify a user, partner user, or queue. Make sure that the new owner has the “Read” permission on cases. The **Change** link displays only on the detail page, not the edit page.

In Group, Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, check the `Send Notification Email` box to automatically send an email to the new case owner.

- **Creating a Case Manually (default assignment)**

When you create a case from the Cases tab, you are automatically listed as the case owner, unless the assignment rule checkbox is displayed and you select it to enable the assignment rule. If it’s selected by default, you can override the assignment rule and assign yourself as the owner by deselecting the checkbox.

[Changing Multiple Cases](#)

## Sharing Cases

Your administrator defines the default sharing model for your entire organization. You can change this model to extend sharing to more users than the default set by your administrator. However, you cannot change the sharing model to make it more restrictive than the default.

To view and manage sharing details, click **Sharing** on the case detail page. The Sharing Detail page lists the users, groups, roles, and territories that have sharing access to the case. On this page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- Click **Add** to grant access to the record for other users, groups, roles, or territories.
-  **Note:** To share a case with another user, that user must have access to the account associated with the case and the “Read” permission on cases.
- Click **Expand List** to view all users that have access to the record.

### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited

## Case Feed

### Case Feed Overview

Case Feed gives support agents a more streamlined way of creating, managing, and viewing cases. It includes actions and a Chatter feed. The actions let agents create case notes, log calls, change the status of cases, and communicate with customers. The feed displays important case events in chronological order, so it's easy to see the progress of each case.

Agents assigned to a Case Feed page layout see a page that looks like this each time they view a case:

#### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

The screenshot shows a Salesforce Case Feed interface for a case titled "Having issues syncing between devices, which ...". The interface is divided into several sections:

- 1 Highlights Panel:** Located at the top left, it displays customer information (Edward Stamos, Acme, (212) 555-5555), case details (Case Number 00001009, Created Date 7/9/2013 10:32 AM), and case metadata (Status New, Priority Medium, Case Owner Karen Williams).
- 2 Feed and Detail Views:** A tabbed interface with "Feed" selected and "Details" as an alternative view.
- 3 Publisher:** A row of action buttons including Email, Log a Call, Portal, Change Status, and Post.
- 4 Articles Tool:** A section for finding and attaching Knowledge articles to the case.
- 5 Feed Filters:** A search bar and "Show All Updates" dropdown to filter feed items.
- 6 Feed Item:** A call log entry from Karen Williams stating: "Edward called and reported that his phone is using iOS 6.1, so that shouldn't be the issue here. I'm going to escalate to Patrick so he can do more troubleshooting."
- 7 Followers:** A section showing the case owner (Karen Williams) and a "Show All (1)" link.
- 8 Custom Links:** A section with a "Google" link.

- **Highlights Panel (1)**—Provides an overview of the most important information about a case, such as the contact information, case name, case description, status, priority, and case owner. Agents can use the column dividers to resize sections of the highlights panel so they can see more of the info that's most relevant.
- **Feed and Detail Views (2)**—From the feed view, which includes the publisher and feed, agents can easily switch to the case detail view to see more in-depth information and work with related lists.
- **Publisher (3)**—Contains the actions agents use to work with cases, such as the Email, Case Note, and Change Status actions.
- **Articles Tool (4)**—Lets agents find Knowledge articles that can help them resolve cases, and then attach them to a case or email them to customers.
- **Feed Filters (5)**—Help agents quickly find specific information in the feed by limiting the feed items that appear.

- **Feed (6)**—Offers a chronological view of the case’s history. Feed items are created for:
  - Incoming and outgoing email related to the case
  - Comments related to the case on a customer portal or Chatter Answers
  - Calls logged about the case
  - Changes to the case status
  - Comments made on the case
  - Links or files added to the case
  - Milestone activity related to the case
  - Case actions that result from workflow events
  - New tasks and events related to the case, and updates to existing ones
- **Follow Button and Followers List (7)**—Let agents follow the case so they’re notified in Chatter of updates to it, and let them see other followers.
- **Custom Buttons and Links (8)**—Give agents access to more tools and functionality.

Administrators can customize most aspects of Case Feed, including

- The fields in the highlight panel
- The actions that appear and the fields they include
- The feed filters that are available and where on the page the list appears
- The width of the feed
- The tools, custom buttons, and custom links that are available, and where on the page they appear

[View and Edit Cases from the Case Detail Page in Case Feed](#)

## Using Feed Filters in Case Feed

Feed filters make it easy for support agents to see all updates of one type, such as all call logs or all email messages, when working with cases in Case Feed. By using filters, agents can find the information they need more quickly, without having to browse through each case event.

When [creating or editing feed layouts](#), administrators can specify which filters are available:

- Choosing only **All Updates** automatically shows all events on a case and hides the list of individual feed filters. Use this option if you want support agents to see the complete history of a case.
- Choosing only one type of feed filter automatically shows only case events of that type and hides the list of individual feed filters. For example, if you select only **All Emails**, the feed for each case shows the email messages related to the case but not case notes, portal replies, or other activities. This option is useful for agents who provide support primarily by one channel—phone, email, or portal—and who need to see case events only for that channel.
- Choosing more than one type of feed filter shows a list of available filters in the left sidebar of the Case Feed page or above the feed in the center of the page, with the first filter selected by default. For example, if you make the **All Emails**, **Status Changes**, and **Portal Answers** filters available, the feed for each case shows, by default, the email messages related to the case; users

### EDITIONS

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

can click the other filters to see other types of case events. Use this option if your agents tend to provide support in one channel but also need to be able to see other types of case updates.

In addition, administrators can specify how and where the list of feed filters appears:

- As a fixed list in the left column.
- As a floating list in the left column. With this option, the feed filters list remains visible as users scroll down the page. This can be useful with long feeds, as it lets agents quickly filter case activities from anywhere on the page, without having to scroll to the top.
- As a drop-down list in the center column.
- As in-line links in the compact feed view. This option is available only for compact feed view.

[Case Feed Overview](#)

## Case Feed and Related Lists

In the traditional case interface, support agents complete tasks such as logging calls and sending emails primarily by working with related lists. In Case Feed, agents can do several of these tasks directly in the feed.

Here's an overview of the most common related lists included in the traditional case interface, the tasks agents do from them, and where agents can complete those tasks in Case Feed.

### Activity History

Task	Case Feed Feature Agents Use for this Task
Logging a call	Log a Call action in the publisher
Viewing call logs	Call log feed items
Creating and replying to customer emails	<ul style="list-style-type: none"> <li>• Email action in the publisher</li> <li>• Emails related list</li> </ul>
Viewing emails	<ul style="list-style-type: none"> <li>• Email feed items</li> <li>• Activity History related list</li> <li>• Emails related list</li> </ul>

### Approval History

[Printable View in Case Feed](#)

## Printable View in Case Feed

Use the printable view option to view and print a comprehensive list of the information related to a case.

Printable view, which you access by clicking  on any Case Feed page, displays information in the following order:

1. Case details
2. Contents of related lists that are included on the Case Detail page
3. Internal notes

## Notes and Tips

- Depending on the related lists that are included on the Case Detail page, certain case events, such as email messages and logged calls, may not appear in the printable view. To ensure that emails and call logs are included, customize your Case Detail page layouts for Case Feed users to add the `Activity History` related list. To include public portal posts, add the `Case Comments` related list.
- Internal notes are listed under the heading **Chatter** on the printable view page.
- Related lists that don't have data in them aren't displayed in the printable view, even if they're included in the Case Detail page layout.
- If your Case Detail page layout includes custom links and buttons, they appear in the case details section in the printable view.

## EDITIONS

# Case Hierarchies

## Viewing Case Hierarchies

A case hierarchy shows you cases that are associated with one another via the `Parent Case` field. When a case is associated with a parent case it signifies a relationship between cases, such as a grouping of similar cases for easy tracking, or a division of one case into multiple cases for various users to resolve. In the case hierarchy, cases are indented to show that they are related to the parent case above them.

- To view the hierarchy for a case, click **View Hierarchy** next to the `Case Number` field on the case detail page.
- To specify that a case is associated with another case, edit the case and type the case number of the parent in the `Parent Case` field. Alternatively, you can click the lookup icon to search for a case's case number.
  -  **Note:** A parent case must exist before it can be entered and saved in the `Parent Case` field.
- To create a new case that is automatically associated with a case whose detail page you are viewing, click the **New** button on the Related Cases related list. From the **New** drop-down button, you can choose to create either a blank case or a case with information from the parent case.

### USER PERMISSIONS

To view cases:

- "Read" on cases

To view parent cases:

- "Read" on cases

## Related Cases

If set up by your administrator, case detail pages include a Related Cases related list, which displays all of the cases directly below a parent case in a case hierarchy. Cases can be associated with each other via the `Parent Case` lookup field on a case edit page. When a case is associated with a parent case it signifies a relationship between cases, such as a grouping of similar cases for easy tracking, or a division of one case into multiple cases for various users to resolve.

From the Related Cases related list, click:

- **New** and choose from the drop-down button to [create either a blank case or a case with information from the parent case](#).
- **Edit** to [modify an existing case](#).
- **Cls** to [close an existing case](#).

To perform mass actions from the Related Cases related list, select the checkboxes next to the cases you wish to update, and click:

- **Close** to close the selected cases using the values you specify.
- **Change Owner** to assign the cases to the one user or queue you specify.
- **Change Status** to change the `status` of the cases to the value you specify.

# Resolving Customer Inquiries

---

## Solving Customer Inquiries

### Solving Cases

To solve a case:

1. [View the case](#).
2. [Find an article](#) or [find a solution](#) that answers the case's question.
3. Attach the article or solution to the case by clicking **Select** next to a reviewed solution in the list of solutions. Or, click the title of an unreviewed solution and choose **Select** on the solution detail page.
4. Email the solution to the contact by clicking **Send Email** in the Activity History related list.
  - a. Click **Select Template** and choose a template.

You or your administrator can create email templates that automatically include the case description, solution detail, solution attachments, and other fields.
  - b. Fill in the email fields.
  - c. Click **Send**.

The emailed solution or article is logged as an activity in the Activity History related list.
5. [Close the case](#).

## Using Suggested Articles to Solve Cases

Suggested articles help knowledge base users solve cases quickly. As soon as a new case is saved, the search engine automatically looks for articles that have keywords in common with the case subject. The user working the case can scan the articles and attach them to the case if needed, or initiate another search with different keywords. Articles attached to the case appear on the Articles related list, which also provides a **Find Articles** button to search the knowledge base at any time.

To enable suggested articles:

1. From Setup, enter *Support Settings* in the *Quick Find* box, then select **Support Settings**.
2. Click **Edit** and choose **Enable suggested articles**. Suggested articles and suggested solutions cannot be enabled at the same time.
3. Choose each audience (channel) that should receive suggested articles when submitting a case. Suggested articles are available for the internal app and the portals.
4. When you're done with the Support Settings page click **Save**.

 **Note:** If you don't find a solution in the suggested articles, you can [create an article](#) by clicking **New**.

[Salesforce Knowledge Overview](#)

## Use Actions to Work with Cases in Case Feed

Case Feed actions make it easy for support agents to do tasks like send email, post to portals and communities, log calls, change case status, and write case notes, all on the same page.

Actions appear in the publisher at the top of the feed.

Here are some common Case Feed actions. Depending on how your administrator has set up your organization, you might not see all of these actions.

- Use the Email action to [respond to customers by email](#). In some organizations, the Email and Portal actions are combined in an Answer Customer action.

### EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

### USER PERMISSIONS

To change support settings:

- "Manage Cases"
- AND
- "Customize Application"

To view articles:

- "Read" on the article's article type

### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

- The Log a Call action lets you create a record of the details of a phone call. Call logs are visible only to other users in your organization, not to customers.
-  **Note:** If you're using a SoftPhone, completed calls and call notes are logged automatically in the case's feed, as are interaction log entries whose `STATUS` is Completed.
- With the Portal action, you can [post replies to a customer portal or a Chatter Answers community](#).
- Use the Change Status action to escalate, close, or make other changes to the status of a case.
- The Question action lets you search for and create questions.
- The Post, File, and Link actions are the same ones you're used to seeing in Chatter.
  - Use the Post action to create case notes to share information about the case or get help from others in your organization. (Notes created with the Post action aren't included in the Case Comments related list on the case detail page.)
  - Add a PDF, photo, or other document to the case with the File action. (Documents you add with File aren't included in the Attachments related list on the case detail page.)
  - Use the Link action to share a link that's relevant to the case.

SEE ALSO:

[Case Feed Overview](#)

## Find, Attach, and Email Articles with the Case Feed Articles Tool

Knowledge articles can help you solve cases more quickly by providing in-depth troubleshooting steps and other detailed information. Use the articles tool in Case Feed to search for articles relevant to the case you're working with, attach articles to the case, and email them to customers.

-  **Note:** Before you can use the articles tool, your administrator needs to [set up and configure Salesforce Knowledge](#).

### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To use articles in Case Feed:

- "Manage Cases"

AND

"Read" on at least one article type

- Click  to open the articles tool.
- By default, the tool shows articles with keywords or phrases similar to the subject and description of the case you're working with. If you don't see the article you want, type new terms in the search box and click **Search Again**, or click **Advanced Article Search** for more options.
- Click the title of an article to open it in a new window if you want to see more information about it than just the title and the summary.
- When you find the article you want, choose what you want to do with it:
  - Select `Email to customer` to attach the article to a message as a PDF.
  - Select `Attach to case` to include the article as a case attachment.

## Closing Cases

You can close a case from several locations and, depending on the settings for your organization, create a solution or article while closing the case.

1. Click **Close Case** on the case detail page, **Cl**s on the Cases related list, or **Save & Close** while editing the case.
 

If enabled by your administrator, you can select `Closed` from the `Status` field on case edit pages and click **Save** without having to follow any more steps.
2. Select the `Status`, `Case Reason`, and any other fields as needed.
3. If your organization uses solutions, you can fill in the `Solution Details` for the case. Remove the check from `Submit to public solutions` if you do not want to submit the solution for review by your solution managers. Leaving this field checked automatically links the case to the solution.
4. If there is a contact associated with this case, select the `Notify contact on case close` checkbox to send an email based on the Case Close Template to the contact when the case is closed.
5. Click **Save** or **Save and Create Article**. The article option is available if your organization uses [Salesforce Knowledge](#) and [article submission during case close](#) is enabled.

An administrator or user with the "Manage Cases" permission can close multiple cases at one time using the **Close** button on the cases list page. This is recommended for cases that are similar and have the same solution.

### EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

If articles are associated with a case, users working on the case can attach PDF versions of the articles to an email simply by choosing a template you create. This capability is available if [Email-to-Case or On-Demand-Email-to-Case](#) is set up and the Email related list is visible on case page layouts.

## Creating an Email Template that Converts Articles to PDF Files

To allow users working on a case to automatically attach article PDFs to an email message:

1. From Setup, enter *Email Templates* in the *Quick Find* box, then select **Email Templates**.
2. Click **New Template** to create a template from scratch or click **Edit** next to an existing template. The new or edited template must include the *Articles as PDFs* case field.
3. For example, If you want to edit the *SUPPORT: Case Response with Solution (SAMPLE)* template to include articles instead of solutions, complete these steps:
  - a. Click **Edit** next to the *SUPPORT: Case Response with Solution (SAMPLE)* template.
  - b. Change the *Email Template Name* to *SUPPORT: Case Response with Article (SAMPLE)*.
  - c. Modify the *Template Unique Name* as needed.
  - d. Choose **Case Fields** from the *Select Field Type* drop-down menu.
  - e. Choose **Articles as PDFs** from the *Select Field* drop-down menu.
  - f. Copy the value from the *Copy Merge Field Value* field and paste it in the email body.
4. Click **Save**.

On the case detail page in the Emails related list, users can now click **Send an Email** and choose the new template. Articles associated with the case are automatically converted to PDF attachments, and the attachments can be previewed or deleted if needed before the email is sent.

-  **Note:** Both the article and the knowledge base must be in the same language. For example, if your knowledge base language is English but you want a Japanese article converted into a PDF, change your knowledge base language to Japanese (in Setup, enter *Knowledge* in the *Quick Find* box, select **Knowledge Settings**, then click **Edit**) before converting the article.

## Notes on Field Visibility in Article PDFs

Consider the following information when using email templates that include the **Articles as PDFs** function:

- The fields that appear in article PDFs are determined by your profile if the `Use a profile to create customer-ready article PDFs on cases` checkbox (from Setup, enter *Knowledge Settings* in the *Quick Find* box, then select **Knowledge Settings**) is not selected. If you can see all fields in the original article, all fields also appear in the automatically generated PDF. If field-level security restricts you from seeing a field on an article, that field and its data do not appear in the article's PDF.
- If the `Use a profile to create customer-ready article PDFs on cases` checkbox is selected and a profile is chosen from the **Profile** menu (from Setup, enter *Knowledge Settings* in the *Quick Find* box, then select **Knowledge Settings**), the chosen profile determines which fields appear in automatically generated PDFs. For example, if you are sending article PDFs to customers, you might choose the Customer Portal User profile to ensure that internal-only fields do not appear in article PDFs.
- Fields in the Properties section of an article, including `First Published`, `Last Modified`, `Last Published`, and `Summary`, are not included in any PDF version regardless of setting or profile.

# Responding to Customers

## Emailing Customers

### Working with Case Emails

Cases generated via Email-to-Case or On-Demand Email-to-Case display in an Emails related list. The Emails related list includes all emails sent by your customer regarding a particular case, as well as the email threads between you and your customer. The first 77 characters of an email message appear in the related list so that you can see what the message is about without having to click on it.

To work with Email-to-Case or On-Demand Email-to-Case emails:

- Click **Send An Email** to send an email to a contact, another user, or any other email address.
- Click **Reply** to respond to an email. The email response automatically includes the email body as received from the customer. Enter your response and click **Send**.

When you reply to email messages in the Email related list on cases, the `From:` field on your email may display to recipients as `no-reply@salesforce.com` or `support@company.com`. This is due to how the recipients' email applications receive `Sender` and `From` headers on inbound email. By default, an `Enable Sender ID compliance` setting is selected for your organization, which enables email messages sent from Salesforce to comply with email applications that require `Sender` headers for delivery.

- Click **To All** to respond to all participants on an email thread.
- Click the subject of the email to view the email. From the email, you can reply to the sender, reply to everyone, forward the email, or delete it.
- While viewing an email, you can display a list of all the emails associated with the case by clicking **Email Message List**, and you can navigate to the case's other emails by clicking **Next** or **Previous**.

**Note:** The **Email Message List**, **Next**, and **Previous** links are not available in the Customer Portal and partner portal.

- While viewing an email, click **Forward** to forward it. The email automatically includes the email body as received from the customer. Optionally, enter text and click **Send**.
- If the original email was an HTML email, you can click the **Click here to view HTML version** link to see the HTML version. If you want to see the entire email header, click the **Click here to view original email headers** link.
- To view any attachments contained in incoming emails, go to the Attachments related list of the email. To view attachments sent with outbound emails, view the Attachments related list of outbound emails.

The size limit for an attachment is 5 MB. The user who configured the email agent can view its log file to see if any attachments exceeded the size limit.

- Click **Del** to delete an email. Note that a deleted email can be retrieved from the Recycle Bin. However, if you delete an email from a case, then delete the case, you will not be able to retrieve the deleted email from the Recycle Bin.

In the Email related list, emails are listed in the order received according to the most recent. Emails in the related list display one of the following statuses:

#### EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

#### USER PERMISSIONS

To view cases:

- "Read" on cases

To work with case emails:

- "Edit" on cases

Email Status	Description
<b>New</b> 📧	An inbound email that has not been read. The contents of the <code>Subject</code> field display in bold for emails with a <code>New Status</code> .
<b>Read</b> 📧	An inbound email that has been read but not replied to.
<b>Sent</b> 📧	An outbound email.
<b>Replied</b> 📧	An inbound email that has been replied to. Replying to a sent email gives it a replied status.

When a case contains a new (unread) email, an “Email” task associated with that case is automatically created in the case owner's task list with the email subject displayed. The owner can easily see the new task on the Home tab or from the Open Activities related list of the case. From the task, the owner can click a link to view the email associated with the case. When the user responds to the email, the task is removed from the owner's task list and added to the case's Activity History related list. The user can also move an email task to which they have not responded to the Activity History related list by changing its status to “Completed.”

 **Note:** When inbound emails create a new case and your assignment rules route that case to a queue, the “Email” task is assigned to the user configured in the email agent.

If an inbound email does not contain the email address of an existing contact, then the `Web Name` field on the case is automatically updated with the name in the `From` field of the email, and the `Web Email` field on the case is automatically updated with the address provided in the inbound email.

 **Tip:** When running the Cases with Emails report, add the `Is Incoming` field to the report to see the cases received via Email-to-Case.

## Send and Reply to Email from Case Feed

Use the features of the Case Feed email action to save time when writing messages and customize the emails you send to customers.

-  **Note:**
- The email action in Case Feed is available only if your organization uses Email-to-Case.
  - Depending on how your administrator has set up Case Feed, some of the options described below might not be available to you or might look different.

Here's how to use the email action:

### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To send emails:

- “Send Email”

1. Depending on which action appears, click **Answer Customer** and select `Email`, or just click `Email`. To write a reply to a message, click **Reply** or **Reply All** below an email message in the feed.
2. If your department uses email templates, [choose one for your message](#).
3. Select a **From** address.  
If this field doesn't appear as a picklist, your administrator has already defined a From address.
4. The email address of the contact who created the case automatically appears in the `To` field, as long as the creator is an existing contact. To add more recipients, click  to look up an address, or type or paste email addresses or names in the `To` field.
  - When you enter an email address or name that matches one contact or user, the address appears as a button with the person's name.
  - To add several addresses at once, copy and paste them separated by spaces or commas. These email addresses appear as buttons, and, if they're associated with a contact or user, show the contact's name.
  - When you enter an email address that matches multiple contacts or users, the address appears as a button. Clicking the button brings up a list of people associated with the email address so you can choose the one you want to associate with the message.
5. If you need to copy other people on the message, click **Add Cc** or **Add Bcc**.
6. By default, the email subject is the name of the case it's related to. You can edit the subject if you need to.
7. [Use the rich text editor](#) to add formatting to your message.
8. Create your message. If your department uses Quick Text messages, you can [add them in the body of your email](#).
9. If your administrator has enabled email drafts, you can click **Save** to save a copy of your message without sending it. When you save a message as a draft, any agent with access to the case can edit it.
10. Click **Attach File** or drag and drop files in the attachments pane to add files to the message.
11. Optionally, [attach an article to the message](#).
12. Click **Send Email**.

Note: Depending on how your administrator has set up Case Feed, this button may have a different name.

**Tip:** Click and drag  in the bottom right corner to change the height of the message pane. Make it larger so you can see more of what you're writing, or make it smaller so you can see more of the case history in the feed without scrolling. Once you resize the message pane, it appears in the new size each time you write an email, until you resize it again.

#### SEE ALSO:

[Post on Cases and Community Questions with the Community Action in the Case Feed](#)

[Case Feed Overview](#)

[Use Quick Text in Case Feed](#)

## Add Images and Files to Email Messages in Case Feed

Give customers comprehensive information to help resolve their issues more quickly by attaching files to email messages, and add inline images to include pictures that enhance your text.

For example, if you're working on a case that requires a customer to try a few different solutions to resolve an issue, you might attach a how-to video or a document with multiple sets of detailed troubleshooting steps. If the customer has to follow a particular set of troubleshooting steps very carefully, you could use inline images after each step in the body of a message.

- To add an inline image, click  in the toolbar of the Case Feed email publisher and upload or link to the image you want. Each image you embed must be no larger than 1 MB, and in .png, .jpg, .jpeg, .jpe, .jfif, .png, or .gif format. The total size of your email message, including images and text, can be no more than 12 MB.

**Note:** You need to use the rich text editor in the email publisher to embed images. You can't embed images in plain text messages.

- To attach files to an email, click **Upload files** to choose a file from your computer or Salesforce, or to use a file that's already attached to the case, or drag and drop files to the attachments area at the bottom of the email publisher. You can attach up to a total of 10 MB to each email message. Salesforce supports all file types.

**Note:** Drag-and-drop functionality is available only on browsers that support HTML5.

- Click **Files**: to see a list of the attachments you've added.
- Click  next to an attachment to remove it.

When the recipient of your email views the message, any images you've embedded appear in the body of the email. If the total size of everything you've attached to the message is greater than 3 MB, all of the attachments appear as links, which the recipient can use to download the files. If the total attachment size is less than 3 MB, each file appears as an attachment.

**Example:** For example, let's say you're a support agent for an appliance company, and you're working on a case for a customer who's having trouble with the ice maker on her fridge. You could email the customer step-by-step instructions for troubleshooting the ice maker and include an image after each step, and could attach two documents: a PDF of the user manual for the fridge (a 2 MB file) and a list of maintenance tips to keep the fridge working well (a 10 KB file). When the customer receives the email, she'll see:

- The images embedded in the body of the email message so she can refer to them one at a time as she works through the troubleshooting steps

#### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

#### USER PERMISSIONS

To send emails with attachments or inline images:

- "Send Email"

- The user manual and list of maintenance tips as attachments to the message, as their total size is less than 3 MB

If you also attached a troubleshooting video (a 2.5 MB file), all three of the attachments would appear to the customer as links, as the total size of all attachments would be greater than 3MB.

#### SEE ALSO:

[Send and Reply to Email from Case Feed](#)

[Find, Attach, and Email Articles with the Case Feed Articles Tool](#)

[Customize Emails with the Rich Text Editor in Case Feed](#)

## Use Email Templates in Case Feed

Templates help you ensure consistency, save time, and include basic information, such as a customer's name and their case number, all with one click. If your administrator has created text, HTML, or Visualforce email templates, or if you've created your own templates, you can use them when emailing customers in Case Feed.

For best results, we recommend using the [rich text editor](#) when working with email templates.

-  **Note:** Depending on how your administrator has set up Case Feed, you may see a pre-loaded template when you use the Email action. Use the steps below to choose a different template if needed.

To use a template:

1. Depending on which action appears, click **Answer Customer** and select `Email`, or just click `Email`.
2. Click `Select a Template`.
3. Choose the folder that has the template you want.
4. Click the name of the template to add it to the email.

#### Tip:

- If you choose more than one text or HTML template, each template is added in the order you choose it. If you choose a Visualforce template after choosing another template, it replaces the earlier template.
- If the template you choose has attachments, they're included with the message.
- If the template you choose has merge fields, only the case-related fields are merged.
- To remove a template, click . This also deletes any text you've entered and removes all template attachments.

5. [Finish writing and sending your message.](#)

- "Send Email"

## Work with Draft Emails in Case Feed

With draft emails, support agents can save messages they write to customers without having to send them immediately, and administrators can create approval processes for email messages.

Drafts are only supported if your administrator has enabled them.

As a support agent, you might want to save a message as a draft while you gather additional information about the issue you're solving, confirm troubleshooting steps with a colleague, or take a break and log out of Salesforce. To save an email as a draft, click **Save** under the text box when you're writing an email.

 **Note:** Drafts aren't auto-saved.

Each case can have only one draft email associated with it, so if you're working on a case with a draft you or someone else has saved, you won't be able to write another email until that draft is sent or discarded. When you view a case with a draft associated with it, you see a notification with the name of the user who wrote the draft and a link to view it. Any agent or supervisor with access to a case can edit the draft email, unless it's awaiting approval.

If your company uses approval processes for email messages, when you submit a message, it's sent to a supervisor for review. (Depending on how your administrator has set up approval processes, you may have the option of submitting the message for review or sending it without review.) When a supervisor approves the message, it's sent to the customer. If your email isn't approved, a message with an explanation appears at the top of the publisher when you click **Email** while viewing the case. You can edit the message and resubmit it.

### SEE ALSO:

[Review and Approve Email Drafts](#)

## Review and Approve Email Drafts

Depending on how your administrator has set up draft emails and approval processes for your organization, you may need to review and approve messages written by the agents you oversee before those messages are sent to customers.

When an agent submits a message for approval, you receive an email notification with a link to the case that includes the message. A notice appears at the top of the publisher when you click **Email**. Click **View email** to go to the message detail page. On that page:

- Click **Unlock Record** to make the message editable.
- Click **Delete** if you want to discard the draft.
- Click **Approve/Reject** in the Approval History related list to approve or reject the message.
- Click **Reassign** to assign the approval to another supervisor.

If you approve the message, it's sent to the customer. If you reject it, you have the option of writing a note explaining why. This note appears above the publisher on the case page when the agent clicks **Email**, along with a notice that the draft has been rejected.

## Customize Emails with the Rich Text Editor in Case Feed

The rich text editor lets you customize the emails you send to customers. Use it to format text, add bulleted or numbered lists, and add images and links.

### Accessing the Editor

The rich text editor appears when you click **Email**, or **Answer Customer** and then **Email**, in the publisher on the Case Feed. You won't see the editor if:

- Your administrator hasn't enabled it.
- You used the plain text editor the last time you wrote an email in Case Feed. Just click the toggle icon  to switch to rich text.

### Tips on Using the Rich Text Editor

- The rich text editor is available only for the Email action.
- If you enter HTML and other kinds of markup in the editor, it won't render when you send a message.
- To delete a message, click .

## Use Quick Text in Case Feed

Quick Text helps you respond to customers and update cases more quickly. Insert pre-written messages, such as greetings and common troubleshooting steps, into customer communications like emails and portal posts, and insert pre-written notes into case status changes and call logs. In Case Feed, you can use Quick Text with the Email, Portal, Change Status, and Log a Call actions.

 **Note:** Only Quick Text messages assigned to the channel for the action you're working with are available in that action. For example, only messages assigned to the Email channel are available in the Email action.

1. Choose the Email, Portal, Change Status, or Log a Call action.
2. In the body of the action, type ; ; .  
A list of Quick Text messages appears, with the messages you've used most recently at the top.
3. To see additional messages, type a word or phrase.  
A list of messages that include those words appears.
4. To see the title and full text of a message, click it once or highlight it using the arrow keys on your keyboard.  
The full message appears at the bottom of the Quick Text list.
5. To select a message, double-click it or highlight it and press ENTER.  
If the message you select contains merge fields, they are resolved when you add the message.

## Phoning Customers

### Salesforce CRM Call Center System Requirements

Salesforce CRM Call Center requires the installation of a light-weight computer-telephony integration (CTI) adapter on every Salesforce user's machine. The **minimum** system requirements for an adapter are:

- For adapters built with CTI version 4.0 or higher:
  - Microsoft® Internet Explorer® 8; Mozilla® Firefox® 3.5; Apple® Safari® 4; Google Chrome™ 10.0 (Internet Explorer 11 isn't supported)
  - Microsoft Windows® XP (with Microsoft .NET framework)
- For adapters built with previous versions of CTI:
  - Internet Explorer 7 or 8; Firefox 3.5 or 3.6 (Safari, Chrome, and Internet Explorer 11 aren't supported)
  - For Windows 7 32-bit, 32-bit Internet Explorer 8; Firefox 3.5 or 3.6
  - For Windows 7 64-bit, 64-bit Internet Explorer 8; Firefox 3.5 or 3.6
  - 256 MB of RAM (512 MB recommended)
  - 20 MB of disk space minimum
  - Intel® Pentium® II processor, 500 MHz or above
  - Windows XP

 **Note:** If you're using a CTI adapter built with version 4.03 of the CTI Toolkit, a popup window displays when using Firefox or Chrome browsers. This popup window must display on your machine to stay connected to Salesforce CRM Call Center.

#### SEE ALSO:

[Call Center Overview](#)

[Using the SoftPhone](#)

[Tip sheet: Getting Started with your SoftPhone](#)

### SoftPhone Overview

A SoftPhone is a customizable call-control tool that appears to users assigned to a call center with machines on which CTI adapters have been installed. A SoftPhone's functionality, user interface, and location are determined by the version of the CTI Toolkit with which it was built. See:

### About CTI 1.0 and 2.0 SoftPhones

A SoftPhone is a customizable call-control tool that appears to users assigned to a call center with machines on which CTI adapters have been installed. SoftPhones built with versions 1.0 or 2.0 of the CTI Toolkit display in the sidebar of every Salesforce page. Although administrators and developers can customize CTI 1.0 or 2.0 SoftPhones, they usually include the following components:

#### EDITIONS

Available in: Salesforce Classic

- Available in:
- Professional
  - Enterprise

  - Developer

The screenshot shows a SoftPhone interface with the following components labeled on the right:

- Call center state area:** A dropdown menu at the top showing "On a Call".
- Phone line header:** A section titled "Line 1 On Call".
- Call information area:** A section containing call details: "Dialed Number 9055551212", "Duration 04:43", "Account Global Media", and "Contact Jon Amos".
- Call button area:** A section containing call control buttons: "End Call", "Hold", "Transfer", "Conference", and "New Line".
- Current call log area:** A section titled "Current Call Log" with a note "Log will auto-save when call ends." and a form for logging the call with fields for Subject, Name, Related To, and Comments.
- Recent calls area:** A section titled "Last Call" showing a summary of the most recent call with fields for Subject, Name, and Related To.
- My Calls Today report:** A link labeled "My Calls Today" at the bottom.
- SoftPhone logo:** A circular logo at the bottom right of the interface.

**Call center state area**

Includes a drop-down list that lets you specify whether you're ready to receive calls. See [Changing Your Call Center State](#) on page 2111.

**Phone line header**

Shows the status of the phone line. A status icon changes colors and blinks (●), and provides a text description. You can click the name of the line (Line 1) to show or hide the line's dial pad and call information area.

**Call information area**

Shows data related to the call, such as the phone number the customer used to dial, the duration of the call, and links to any records associated with the call.

**Call button area**

Shows buttons that let you make call commands, such as dialing, hanging up, putting a caller on hold, transferring, conferencing, and opening a second line while on a call. See [Using the SoftPhone](#) on page 2109.

**Current call log area**

Displays log information for the call. By default, the `Subject` field includes the date and time of the call, but users can edit this field. The `Name` field lets users specify a related contact, lead, or person account, while the `Related To` field lets them attach an additional record to the call log once the call ends. Users can enter additional information about the call in the `Comments` text box. Call logs are saved in an activity record that can be retrieved from the recent calls area of the SoftPhone, or the Activity History related list of the associated records. See [Creating Call Logs in the SoftPhone](#) on page 2105.

**Recent calls area**

Displays saved logs for calls that have recently completed. Click a log's `Subject` to open its detail page, or click a log's `Name` or `Related To` link to open its associated record. Click **Edit** to reopen a call log for editing in the SoftPhone.

**My Calls Today report**

Opens a report of all the calls you've made or received in the last day.

**SoftPhone logo**

Displays a customizable logo for each CTI adapter.

**Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the [CTI Toolkit](#) with which your SoftPhone was built. See your administrator for details.

## About CTI 3.0 and 4.0 SoftPhones

A SoftPhone is a customizable call-control tool that appears to users assigned to a call center with machines on which CTI adapters have been installed. SoftPhones built with versions 3.0 and 4.0 of the CTI Toolkit display in the footer of the Salesforce console or in the sidebar of every Salesforce page. Although administrators and developers can customize CTI 3.0 and 4.0 SoftPhones, they usually include the following components:

### Call center state area

Includes a drop-down list that lets you specify whether you're ready to receive calls. See [Changing Your Call Center State](#) on page 2111.

### Phone line header

Shows the status of the phone line. A status icon changes colors and blinks (●), and provides a text description. You can click the name of the line (Line 1) to show or hide the line's dial pad and call information area.

### Call information area

Shows data related to the call, such as the phone number the customer used to dial, the duration of the call, and links to any records associated with the call.

### Call button area

Shows buttons that let you make call commands, such as dialing, hanging up, putting a caller on hold, transferring, conferencing, and opening a second line while on a call. See [Using the SoftPhone](#) on page 2109.

### My Calls Today report

Opens a report of all the calls you've made or received in the last day.

### SoftPhone logo

Displays a customizable logo for each CTI adapter.

## Editing Personal SoftPhone Settings

You can control personal SoftPhone settings within Salesforce. To change your settings, from your personal settings, enter *SoftPhone* in the **Quick Find** box, then select **My SoftPhone Settings**.

The following settings are available:

Setting	Description
Automatically log in to your call center when logging into Salesforce	Select this option if you want Salesforce to use saved login information to automatically <a href="#">log you in to your SoftPhone</a> .
If only one record found on incoming call	Choose one of the following options to specify how a record should be displayed when it is the only one that matches an incoming call: <ul style="list-style-type: none"> <li>• <b>Always open the record automatically.</b> This option displays the record in the main Salesforce window, overwriting whatever was there before. All unsaved changes from your previous record are lost.</li> <li>• <b>Never open the record automatically.</b> This option does not display the matching record. To view it you must click on the record's link in the SoftPhone.</li> </ul>

## Answering a Call Using the SoftPhone

When logged in to a SoftPhone, you can receive a call when:

- The call originates from a queue and your call center state is set to Ready for Calls
- The call is dialed directly to your extension and you are not already on a call

You can tell that you have an incoming call if you see a flashing red button and the words “Incoming Call,” “Incoming Transfer,” or “Incoming Conference” next to the name of a telephone line in your SoftPhone.

Details about the call, if any, are displayed just above the **Answer** button, and typically include the phone number of the caller and the number that the caller dialed to reach you. When the caller's phone number can be matched with a number in an existing Salesforce record, a link to that record is also displayed. Likewise, if your call center prompts callers to enter an account number or other data before being connected with a representative, your SoftPhone searches for records that contain that information and automatically displays links to matching results.

To answer an incoming call, you can:

- Click **Answer** in the SoftPhone.
- Use your physical telephone set to pick up the call.

When you answer a call, the **Call Duration** clock starts ticking, and your call center state is automatically set to Busy. If you do not answer the call, the system forwards it to another user and your call center state is automatically set to Not Ready for Calls.

Once you have answered a call, you can:

- [Log comments and associate Salesforce records with the call](#)
- [Put the caller on hold](#)
- [Transfer the call to another call center user](#)
- [Conference another call center user into the call](#)
- [End the call](#)

If your SoftPhone supports multiple lines and you answer Line 2 while speaking on Line 1, Line 1 is automatically put on hold.

 **Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the [CTI Toolkit](#) with which your SoftPhone was built. See your administrator for details.

 **Tip:** *Screen pops* are pages that display when incoming calls match the phone number of an existing Salesforce record. The following table describes when screen pops display (they can only display when your call center state is set to Ready for Calls):

Screen Pops On	Display	Don't Display
Edit pages		
Detail pages		
Detail pages when inline editing is in use		
Edit pages and detail pages in the <a href="#">Salesforce Console</a>

## Creating Call Logs in the SoftPhone

Every external call that you make or receive with a SoftPhone automatically generates a call log activity record. You can view these call logs in the Activity History related list of any Salesforce record that is associated with the call or by running a report. Automatically generated call log records include values for:

- The call center user who received or initiated the call
- The phone number of the contact who called or who was called by the call center user
- The date on which the call took place
- The duration of the call, in seconds
- Whether the call was inbound or outbound
- The call center system's unique identifier for the call

You can associate up to two records, edit the subject, and add comments to a call log while the call is underway. To do so:

1. Associate up to two the records with the call log:
  - When you view or create a contact, lead, or person account, a `Name` drop-down list appears in the call log. Use this list to select a single contact, lead, or person account record to associate with the call.
  - When you view or create any other type of Salesforce record, a `Related to` drop-down list appears in the call log. Use this list to select a single record of any other type to associate with the call.

 **Note:** Custom object records can only be associated with a call log if the custom object tracks activities.

By default, the most recently viewed records are selected in the `Name` and `Related to` lists unless you manually choose a different record. The records that you choose in these lists will include the call log in their Activity History related lists once the call ends. These records are also displayed with the call if it is transferred to or conferenced with another Salesforce CRM Call Center user.

2. Edit the `Subject` and `Comments` fields with information about what happened during the call.

After the call ends, the call log is automatically saved as a completed task. You can quickly access the saved call logs for calls that were just completed by expanding the `Last N Calls` section of the SoftPhone. Up to three of your last calls are displayed in this list with your most recent call displayed first:

- To modify a recent call log, click **Edit** next to the call log's `Subject` field.
- To view a saved call log, click the call log's `Subject`.
- To view a record that is associated with a call log, click the name of the record.

### EDITIONS

Available in: Salesforce Classic

## Putting a Caller on Hold Using the SoftPhone

[Salesforce CRM Call Center](#) allows you to put any caller on hold so that the caller can't hear you speaking. To put a caller on hold, click **Hold** in the SoftPhone line that is currently active. The **Hold Time** clock that shows how long the caller has been waiting automatically starts, and the line light icon (●) begins to blink yellow.

- Callers are automatically put on hold whenever you initiate a [call transfer](#), dial a number on a second line, or initiate a [conference call](#).
- If you click **Hold** while on a conference, your line becomes mute but other conference participants can still speak to one another.

To resume the call, click **Retrieve from Hold**. If you want to end the call without retrieving the caller from hold, click **End Call**.

 **Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the [CTI Toolkit](#) with which your SoftPhone was built. See your administrator for details.

To put a caller on hold:

- Member of a call center

## Transferring a Call Using the SoftPhone

To transfer a call to another call center user or to an external phone number:

1. [Attach any relevant Salesforce records](#) to the call that you want to transfer. For example, if you created a case for the call, save it, and make sure that it is selected in one of the `Related To` fields of the current call log. By doing this, the user to whom you are transferring the call will have access to the case in his or her SoftPhone.
2. Click **Transfer** in the SoftPhone line that you want to transfer. You remain on the line with your first caller and a new dial pad becomes active.
3. Use the dial pad, your keyboard, or the [call center directory](#) to enter the phone number of the person to whom the call should be transferred.
4. Click **Initiate Transfer**. Your first caller is automatically put on hold while you are on the call with the destination number. If a number you dial is busy, a message appears and you have the option to dial again or cancel the call.
5. When you are ready to transfer your first caller to the destination number, click **Complete Transfer**. If you no longer want to transfer the call, click **Cancel Transfer**.

Once you complete a transfer, your line is immediately freed and you return to the Ready for Calls state.

SEE ALSO:

## Making a Conference Call Using the SoftPhone

To initiate a conference call with another call center user or an outside phone number:

1. While on a call, click **Conference** in the SoftPhone line that is currently active. Your caller is automatically put on hold and a new dial pad becomes active.
2. Use the dial pad, your keyboard, or the [phone directory](#) to enter the phone number of the person who you want to include in the conference.
3. Click **Initiate Conference**. Your first caller remains on hold while you are on the call with the destination number. If a number you dial is busy, a message appears and you have the option to dial again or cancel the call.
4. Once you have connected with the second caller and are ready to start the conference, click **Complete Conference**. The second caller joins the first on your original telephone line and all three of you can speak freely to one another. If you no longer want to conference the call after dialing the second number, click **Cancel Conference** to hang up on the second caller and return to your original caller.

### Note:

- If you click **Hold** while on a conference, your line becomes mute but other conference participants can still speak to one another.

## Wrapping Up a Call Using the SoftPhone

When you are ready to end a call:

1. [Update the associated call log](#). For example, if you created a case or viewed a contact while you were on the call, verify that they are selected in one of the `Related To` fields of the log, and use the `Comments` text box to enter any notes about the call.  
Call logs are not created for internal calls.
2. Click **End Call** in the active SoftPhone line or use your physical phone set to hang up. This terminates the call and frees the line.
3. If wrap up codes are not enabled, your call center state is set back to Ready for Calls and the log for your call is automatically saved.
4. If wrap up codes are enabled, your [call center state](#) is set to Wrap Up and a set of reason codes are displayed in the SoftPhone. While in this state you cannot receive any incoming calls.
  - a. Select the reason code that best represents the outcome of the call.
  - b. Optionally make any additional modifications to your call log.
  - c. Click **Done**. Your call center state returns to Ready for Calls, and the log for your call is automatically saved.

All saved call logs are placed in the Last N Calls section of the SoftPhone for quick reference. You can review details of these call logs by clicking any of the associated links:

- The `Subject` link (for example, "Call 6/01/2006 12:34 PM") opens the call log details page.
- Either of the `Related To` links opens the detail page for the specified record.

 **Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the [CTI Toolkit](#) with which your SoftPhone was built. See your administrator for details.

## Using the SoftPhone

The Salesforce CRM Call Center SoftPhone appears in the left sidebar of your Salesforce window or in the footer of the Salesforce console. You can use the SoftPhone to:

- [Log in to your call center](#)
- [Modify your call center state](#) to show whether you are ready to receive a new call
- [Dial a phone number](#) by using the built-in SoftPhone, or by clicking the  icon next to any phone number associated with a contact, lead, activity, or account
- [Look up a phone number](#) in your custom call-center directory
- [Answer a phone call](#) from another call center user or an external number
- [Put a caller on hold](#)
- [Initiate a conference call](#) with another call center user or an external number
- [Transfer a phone call](#) to another call center user or an external number
- [Add comments to or associate Salesforce records with an automatic call log](#) to quickly record information related to a call
- [Edit personal Salesforce CRM Call Center settings](#) to customize the behavior of your SoftPhone

You can't collapse the sidebar if you're a Salesforce CRM Call Center user and working within the [Console tab](#).

 **Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the [CTI Toolkit](#) with which your SoftPhone was built. See your administrator for details.

## Logging In to the SoftPhone

[Salesforce CRM Call Center](#) requires you to first log in to Salesforce and then to log in separately to your organization's phone system. The phone system login is located in the sidebar and only appears if you are:

- Assigned to a call center in Salesforce
- Using a machine on which an appropriate CTI adapter is installed. (You can quickly verify that an adapter is installed by looking for the  icon in the system tray of your computer. The system tray is located next to the clock in the lower-right corner of your monitor.)

If a phone system login does not appear, contact your administrator.

Depending on the phone system that your organization uses, the login prompts you to enter your user ID, password, and other credentials. Once you have entered these values, click **Log In** to complete the connection to your phone system.

To automatically log in to your phone system without having to click the **Log In** button:

1. From your personal settings, enter *SoftPhone* in the **Quick Find** box, then select **My SoftPhone Settings**.
2. Select **Automatically log in to your call center when logging into Salesforce**. Once you have logged in to your phone system, Salesforce remembers your login information and automatically makes a connection to your phone system whenever you log in to Salesforce.

 **Note:** If you explicitly log out of the phone system at any time while you are logged in to Salesforce, automatic log in is turned off for the remainder of your Salesforce session. To reenable automatic log in, log out of Salesforce and then log back in.

After logging in to a phone system, your call center state is automatically set to Not Ready for Calls. If you want to receive calls, you must [change your call center state](#) to Ready for Calls.

 **Tip:** If you're using a CTI adapter built with version 4.0 of the [CTI Toolkit](#), you'll be automatically logged out of the SoftPhone after 8 hours if you have one browser tab open and go to an external Web page, or to a Salesforce page without a sidebar (such as a dashboard). Automatic-logout times can vary because they're based on how your administrator has configured your SoftPhone. To stay logged in, make sure you have at least one browser tab open to a Salesforce page with a sidebar, such as Home or Cases. Automatic logout doesn't occur in the Salesforce console.

## Changing Your Call Center State

While logged in to [Salesforce CRM Call Center](#), there may be times when you do not want to receive calls on your SoftPhone, or when you need to step away from your desk. To avoid receiving calls

when you do not want them, you can set your call center state next to the  icon in the SoftPhone. Possible values for call center state include:

Call Center State	Description
Ready for Calls	You are not currently on a call, and you are prepared to receive the next direct or queued call.
Not Ready for Calls	You are not currently on a call, and you are not prepared to receive the next queued call. In this state you can still receive calls that are dialed directly to your extension.
On a Call	You are currently connected to a caller and cannot receive either a direct or a queued call.
Wrap-Up	You are currently on a call, and you wish to go directly to the Not Ready for Calls state when the call is complete.
Log Out	You want to log out from your call center phone system and remain logged in to Salesforce. After you select this option, Salesforce CRM Call Center automatically closes the connection to your call center and displays the <a href="#">SoftPhone login screen</a> .

When you first log in to Salesforce CRM Call Center, your call center state is automatically set to Not Ready for Calls. You must choose Ready for Calls from the drop-down list before you can receive any calls.

 **Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the [CTI Toolkit](#) with which your SoftPhone was built. See your administrator for details.

## Using the Call Center Directory

Every call center has an associated call center directory that includes the name and number of every user that belongs to that call center, as well as other phone numbers that are related to records in your system.

To use your call center directory:

1. In the SoftPhone, click the name of the open line that you want to use. This action opens the dial pad for that line. Click  next to the dial pad to open your call center directory.
2. Search the call center directory for a phone number:
  - a. In the **Pick an object** drop-down, choose the type of record that you want to search. Any object with a phone number field is included in this list.
  - b. In the **Search** text box, type all or part of the name for which you are searching.
  - c. Click **Go** to view a list of only those records that include your search text.
3. When you find the phone number that you want, click its associated record name to automatically enter the number into the SoftPhone.
4. Click **Dial** to make the call.

SEE ALSO:

## Making a Call Using the SoftPhone

In [Salesforce CRM Call Center](#) there are three ways to make a call:

- [Dialing a number manually](#)
- [Using the call center directory](#)
- [Using click-to-dial](#)

While on a call, you can also make a call on a second phone line by clicking **New Line**. The new line allows you to enter a new phone number while remaining connected to your original caller. Once you click **Dial**, your original call is placed on hold, and your new call begins.

If you make a call while your [call center state](#) is set to Ready for Calls, your state moves directly to Not Ready, and you must enter Not Ready reason codes.

To end a call that you just dialed, click **End Call**. Some phone systems don't allow you to end a call from a SoftPhone before it is answered. In these cases, an **End Call** button isn't displayed, and you must use your physical phone set to terminate the call.

If a number you dial is busy, a message appears and you have the option to dial again or cancel the call.

### Making a Call Using the Call Center Directory

To make a call in [Salesforce CRM Call Center](#) using the call center directory:

1. In the SoftPhone, click the name of the open line that you want to use. This action opens the dial pad for that line.
2. Click  next to the dial pad to open your call center directory.
3. [Use the directory](#) to locate the number that you want to dial.
4. When you have found the number, click the name associated with the number to automatically enter the number into the dial pad.
5. Click **Dial** or press the Enter key on your keyboard.

 **Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the [CTI Toolkit](#) with which your SoftPhone was built. See your administrator for details.

### Making a Call Using Click-to-Dial

To make a call directly from the phone field of a contact, lead, activity, or account using [Salesforce CRM Call Center](#):

1. Locate the number that you want to dial in a contact, lead, activity, or account.
2. Click the  button to the right of the number. The number is automatically dialed in the first open SoftPhone line.
  - A number that has already been clicked cannot be clicked again for five seconds.
  - The  button does not appear next to fax numbers.

 **Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the [CTI Toolkit](#) with which your SoftPhone was built. See your administrator for details.

## Checking the Version of Your CTI Adapter

To check which version of the CTI adapter you've installed on your machine:

1. Run the CTI adapter from where it's installed. For example, from the Start menu, select **All Programs > salesforce.com > CTI Adapter 2.0 > Salesforce Adapter 2.0**.
2. Right-click the  icon in the system tray of your computer. The system tray is located next to the clock in the lower-right corner of your screen.
3. Click **About...**

The version of your CTI adapter displays under **CTI Connector**.

 **Note:** If you're using a CTI adapter built with version 4.03 of the CTI Toolkit, a popup window displays when using Firefox or Chrome browsers. This popup window must display on your machine to stay connected to Salesforce CRM Call Center.

## Replying to Portals and Web Communities

### Viewing Community Activity for Ideas and Questions

Activity statistics, such as how many posts you've made and how many likes you've received in Ideas and Questions appear on your profile page so that others can learn about your participation in the community.

Click your name anywhere around the application to view your profile. If available, you can also click the Profile tab or *Your Name* > **My Profile** at the top of the page. View other people's profiles by clicking their name.

Community Activity appears on the Overview tab of your profile and shows how your activity stacks up to other people's. You can also evaluate the activity of other members of the community when you look at their profile.

- Comments and ideas you've voted on

Click **Ideas** to navigate back to the Ideas tab.

## Working with Customer Portal Users

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

 **Note:** High-volume portal users are available for customer portals or communities intended for many thousands to millions of users. See [About High-Volume Portal Users](#) on page 2337.

Some common tasks when managing Customer Portal users include:

- [Setting up the Customer Portal for users](#)
- Enabling Customer Portal users individually from the Contacts tab
- [Disabling and deactivating Customer Portal users](#)
- [Changing Customer Portal users' information and roles](#)
- Changing Customer Portal users' accounts
- Merging Customer Portal users
- [Resetting Customer Portal users' passwords](#)
- Viewing Customer Portal users' user licenses
- [Granting high-volume portal users access to object's records](#)
- [Sharing high-volume portal users' records with Salesforce users](#)
- Managing Customer Portal users' permissions and access settings
- [Assigning profiles to a Customer Portal](#)
- [Delegating Customer Portal user management and case and contact management to portal users](#)
- Reporting on Customer Portal users

 **Tip:** To troubleshoot issues for Customer Portal users, click **Manage External User** and choose **Log in to Portal as User** on the portal user's contact detail page. This selection opens a new browser window and automatically logs you into the portal as the portal user. This option also ensures that the portal is configured appropriately.

The **Log in to Portal as User** button is only available if you have the "Edit Self-Service Users" permission and "Edit" access on the account. The **Log in to Portal as User** button does not display for inactive portal users.

## Post on Cases and Community Questions with the Community Action in the Case Feed

The Community action in the case feed is your default option for responding to customers on cases that originated from a community or customer portal.

To post on cases in a customer portal or community:

1. Click **Answer Customer** on the Case Feed page.
2. Click  and select **Community**.  
Depending on how your administrator has set up Case Feed, you may be able to click **Community** without first having to click **Answer Customer**.
3. Enter the message to the customer.

## Answers Overview

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

## Answers Terminology

The following terms are used when describing answers features and functionality:

### Answers

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

### Best Answer

When a member of an answers community asks a question and other community members post a reply, the asker can mark one of the replies as the best answer. The best answer then appears directly under the question (above the other replies). Identifying the best answer helps other community members with the same question quickly find the most relevant, useful information.

### Community

Communities are customizable public or private spaces for employees, end-customers, and partners to collaborate on best practices and business processes.

### Data Category for Answers

On the Answers tab, *data categories* allow users to classify questions in an answers zone. For example, if you have a zone for hardware products, your data categories may include laptops, desktops, and printers. Zone members can quickly browse within a specific category to find answers to their questions. Administrators can use data categories to control access to questions.

### Idea

Ideas are suggestions posted by the members of an ideas community and are organized by zones. For example, if the focus of a particular zone is "Ideas for car features," an appropriate idea for that zone might have the title "Insulated cup holders that keep your

## EDITIONS

To vote for replies:

- "Read" on questions

beverage hot or cold.” Or, if the focus of a particular zone is “Ideas for our company’s employee benefits,” an appropriate idea for that zone might have the title “On-site day care.”

### Question

An issue posted to an answers community. When a community member asks a question, other community members post replies to help resolve the question.

### Reply

The response to a question in an answers community. When community members reply to a question, the person who asked the question can mark one of the replies as the best answer to resolve and close the question.

### Vote, Reply

In an answers community, a vote means you either like or dislike a reply to a question.

### Zone

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions.

## Icon Descriptions

Icon	Description
	A question that has been resolved. To resolve a question, the person who asked the question <a href="#">chooses a reply as the best answer</a> .
	A question that community members have replied to. For example, this icon represents a question with four replies. If a question has no replies, a “0” appears in this icon.
	A reply to a question.
	A reply that has been marked as the best answer to a question.

## Using Answers

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

On the Answers tab you can:

- [Ask a question](#)
- [Find an answer to a question](#)
- [Reply to a question](#)
- [Vote for a reply](#)
- [Identify a reply as the best answer to your question](#)
- [View all of your questions and replies](#)
- [Convert a reply into an article in the knowledge base](#)
- [Escalate a question to a case](#)

The right side of the answers home page provides a snapshot of recent activity by showing the most recently asked and the most recently replied questions, as well as questions that have been open for more than a week.

Only administrators have full read, create, edit, and delete permissions for answers. Standard and portal users can delete their own questions and replies if no one has replied or voted.

## Asking a Question

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

To ask a question:

1. From the Answers tab, enter your question and click **Ask**.  
Salesforce searches the titles and descriptions of the other questions in the zone and lists ones that are similar to yours. If your question has already been asked, click the question title to view the replies that other zone members have posted to that question.  
Alternatively, click **Start Over** to clear the similar questions results and ask another question.
2. If your question has not already been asked, click **Continue**.
3. Enter a description of your question. Use the [HTML editor](#) to format your text or upload an image.
4. Select a category for your question. If you do not assign a category, community members may have difficulty finding your question, as they must use search or [view all questions in the community](#).
5. Click **Post Question**.

After asking your question, wait for community members to post replies. Then you can [choose a reply as the best answer](#) to resolve your question.

## Creating Questions from the Questions Tab

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

 **Note:** Since your administrator determines the fields on questions, some fields might not be included in the following steps.

You can use the Questions tab in both the application and the console to ask questions of the zones that you moderate and manage. Asking community members for input or opinions is an easy way to assess interest in topics or create engagement in the community.

To post a question to the community from the Questions tab:

1. Click **New Question** from the Questions list view page or click **New** from the Recent Questions list on the Questions overview page.
2. Select a zone for your question.
3. Add a title for your question.
4. Optionally, enter a description of your question.

Use the rich text editor to format your text or upload an image. To ensure that your images appear correctly in the feed, Salesforce recommends that they be less than 450 pixels wide.

5. Select a category for your question.

Questions must be assigned to a category to appear in the community. Questions that don't have a category are still visible to the owner of the question, but not to other members of the community.

6. Click **Save**.

## Editing and Deleting a Question

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

Standard users can delete their own questions if the questions have not received replies. Once a question receives a reply, the owner of the question can no longer delete it. As the Salesforce administrator, you can edit or delete any question posted to a community. For example, you may want to monitor your answers community and edit or delete questions that contain inappropriate content or offensive language.

To edit or delete a question:

1. Click the question title to view the question detail page.
2. Click **Edit** or **Delete** at the top of the page. When editing a question, you can change the title or description and select a different category for the question. When deleting a question, the question (and all associated replies) goes to the Recycle Bin.

Another way to prevent offensive language is to create a validation rule that prevents users from entering specific words when asking a question.

To create validation rules, from the object management settings for Chatter Answers question and Chatter Answers reply, go to Validation Rules.

## Finding and Viewing Questions

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

There are a couple ways to find a question:

- [Browse all questions within a community or category.](#)
- Search for a question using the search field on the Answers tab. This field searches the title and description fields for both questions and replies and displays matching results.

Once you've found your question, click the question title to view the question detail page, which lists all the replies for the question. The question detail page lists the number of community members who liked and disliked each reply, and also shows the best answer to the question (if one has been chosen).

From the question detail page, you can:

- [Reply to the question.](#)
- [Vote for a reply.](#)
- [Choose a reply as the best answer.](#) You can only choose a best answer if you asked the question or are a Salesforce administrator.

If a question has already been resolved, you can click **Mark as Not Answered** above the question to re-open it.

- Sort replies by
  - Newest—Shows the most recently posted replies at the top of the list.
  - Oldest—Shows the oldest replies at the top of the list.
  - Most Votes—Shows the replies with the greatest number of “likes” and “dislikes” (added together) at the top of the list.

## Browsing Questions within a Zone or Category

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

To view all questions within a zone or category, go to the Answers tab and click the zone name or category that appears below the *Get an Answer* heading.

### Browsing Questions within a Zone

After clicking the zone name to view all questions within that zone, you can:

- [Ask a question.](#)
- Filter questions so you only see the open or resolved questions. A question is considered resolved when the person who asked the question selects one of the replies as the best answer. Community members can continue to post replies and vote for replies even when the question has been resolved.
- Sort questions by:
  - Recent Activity—Shows the questions that have the most recent replies at the top of the list
  - Newest—Shows the questions that have been most recently asked at the top of the list
  - Oldest—Shows the oldest questions at the top of the list
- Click **Reply** below a question to [post a reply](#).
- Click a category to view all the questions associated with that category.

All the categories within your zone appear under the zone name at the top of the page.

The [question icons](#) identify whether the question has been resolved or is still open.

### Browsing Questions within a Category

When community members ask a question, they associate a single category with their question to make it easier to find within the community. To browse all questions associated with a category, click the category name to display the category detail page.

You can click on a category from the following locations:

- When [viewing a question](#), the categories associated with that question appear below the question description.
- When browsing questions within a zone, all the categories in the zone appear below the zone name.
- On the [answers home page](#), all the categories in the zone appear below the zone name.

From the category detail page, you can:

- [Ask a question](#) that is automatically associated with the category you are viewing.
- View all questions associated with that category, or filter the questions so you only see the open or resolved questions. A question is considered resolved when the person who asked the question selects one of the replies as the best answer. Community members can continue to post replies and vote for replies even when the question has been resolved.
- Sort questions by:

### EDITIONS

Available in: **Salesforce Classic**

Data categories and answers are available in: **Enterprise, Performance, Unlimited, and Developer Editions.**

### USER PERMISSIONS

## Editing and Deleting a Reply

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

Standard users without the "edit" and "delete" permissions on the answers object cannot edit or delete their replies. However, as the Salesforce administrator, you can edit or delete any reply posted to a community. For example, you may want to monitor your answers community and edit or delete replies that contain inappropriate content or offensive language.

To edit or delete a reply:

1. Click the question title to view a list of all replies for the question.
2. Click **Edit** or **Delete** next to the reply you want to change or remove. When deleting a reply, the reply goes to the Recycle Bin.

Another way to prevent offensive language is to create a validation rule that prevents users from entering specific words when posting a reply.

To create validation rules, from the object management settings for Chatter Answers question and Chatter Answers reply, go to Validation Rules.

## Voting for a Reply

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

When you vote on a reply, you contribute to the answers community by identifying the replies that contains the most helpful (and unhelpful) information. When other community members look for an answer to a question, they can quickly look at the number of "likes" and "dislikes" a reply has received and make a more informed decision about which reply to read.

In addition, the more votes a reply receives the easier it is for the person who asked the question to [choose a reply as the best answer](#).

When [viewing a question](#), review the replies and click **Like** to voice your approval of a reply or **Dislike** if a reply contains incorrect or unhelpful information. Your vote (either a +1 or -1) is included in the Like or Dislike total for that reply. You can't vote for your own reply and you can only vote once for each reply.

## Choosing the Best Answer to a Question

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

After you ask a question, you should monitor the replies posted by other community members and eventually choose one of the replies as the best answer. The best answer is highlighted directly below the question so it's easy to find, which helps community members quickly identify the most useful resolution to the question.

Only Salesforce administrators and the person who asked the question can mark a reply as the best answer.

To choose the best answer:

1. From the Answers tab, find your question and click its title.
2. Decide which reply is the best answer, and click **Choose as Best Answer**.

To identify the best answer, look at the votes ("likes" and "dislikes") for each reply. The reply with the most "likes" probably contains the most useful information. If a question has many replies, try sorting the replies by **Most Votes** so the replies with the most likes and dislikes appear at the top of the list.

After you choose a best answer:

- The question is marked as "resolved". Community members can continue to post and vote on replies for resolved questions.
- If another reply that you like better is posted in the future, simply choose that reply as the best answer to replace the old best answer.
- You can remove the best answer status of the reply at any time. Removing the best answer status from a reply makes it a regular reply.

## Viewing Your Questions and Replies

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

Once you become an active community member, you can view a list of all the questions you asked and replies you posted by clicking **My Questions & Replies** at the top of any page in the Answers tab.

When viewing a list of your questions, you can quickly identify which questions you resolved and which questions are still open. (Resolved questions have a best answer.) You can sort your questions by:

- **Newest**—Shows your most recently asked questions at the top of the list
- **Recent Activity**—Shows your most recently asked questions and your questions that have the most recent replies at the top of the list
- **Oldest**—Shows your oldest questions at the top of the list

When viewing a list of your replies, the question title appears as a link followed by your reply. You can sort your replies by:

- **Newest**—Shows your most recently posted replies at the top of the list.
- **Oldest**—Shows your oldest replies at the top of the list.
- **Most Votes**—Shows your replies that have received the greatest number of "likes" and "dislikes" (added together) at the top of the list.

The following table describes the icons displayed on the page:

Icon	Description
	A question that has been resolved. To resolve a question, the person who asked the question <a href="#">chooses a reply as the best answer</a> .
	A question that community members have replied to. For example, this icon represents a question with four replies. If a question has no replies, a "0" appears in this icon.
	A reply to a question.
	A reply that has been marked as the best answer to a question.

## Creating an Article from a Reply

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

In an answers community, you may want to turn a particularly helpful answer into an article in your [knowledge base](#). To create an article:

1. Click the question title to view a detail page showing the question and its replies.
  2. On the reply you want to add to the knowledge base, click **Promote to Article**.
  3. Edit your article. The fields that appear depend on the default article type assigned to replies, but the following is true for all article types:
    - The `title` field contains the title of the question.
    - The `summary` field contains the reply.
    - You can make new data category selections for the article. Unlike answers, articles support multiple category groups.
-  **Note:** An administrator can [change the article type and assignee](#).
4. Click **Save**. The original reply now has a status message indicating its association with an article. When the article is published, the message on the reply includes a link to the article.

## Escalating a Question to a Case

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

If a question remains unresolved or its reply isn't satisfactory, administrators and trusted community members can escalate the question to a case. After a case is created, the question detail page provides a link to the case for the life of the question. This link also shows the status of the case.

 **Note:** Closing the case does not mark the question as resolved, and resolving the question does not close the case. The case and the question must be updated separately.

To escalate a question to a case:

1. Click the question title.
2. On the question detail page, click **Escalate to Case**. This button only appears if an administrator has [configured the appropriate case settings](#).
3. Update the case fields if you want to change any default values. The question title automatically becomes the case `Subject`.
4. Click **Save**. You are returned to the question detail page and the case is now available for the `Case Owner` to resolve.

## Ideas Overview

Ideas is a community of users who post, vote for, and comment on ideas. An Ideas community provides an online, transparent way for you to attract, manage, and showcase innovation.

**Tip:** Salesforce offers its own Ideas community for Salesforce users to submit product feedback and suggest new features. To visit, go to <http://ideas.salesforce.com>.

## Ideas Terminology

The following terminology is used for Ideas:

### Category, Ideas

Categories are administrator-defined values that help organize ideas into logical sub-groups within a zone. The View Category drop-down list on the Ideas tab allows users to filter ideas by category, and the Categories picklist on the Post Ideas page lets users add categories to their ideas. For example, if your ideas zone has the focus "Improvements to our clothing line," then you might set up categories such as "Shirts," "Jackets," and "Slacks." Each organization has one common set of categories that can be added or removed from each zone. An administrator defines separate categories for their ideas and answers zones.

### Comment

Comments are plain text responses to posted ideas that enable discussions about the ideas. On the Ideas tab, the Comments subtab lists the comments that have most recently been submitted. On the detail page of an idea, comments are sorted in chronological order from oldest to newest.

### Community

Communities are customizable public or private spaces for employees, end-customers, and partners to collaborate on best practices and business processes.

### Community Expert

A community expert is a member of the community who speaks credibly and authoritatively on behalf of your organization. When a community expert posts a comment or idea, a unique icon (👤) displays next to his or her name so other community members can easily identify credible information within the community. The Salesforce administrator can designate as many community experts as necessary.

### Demote

If you dislike an idea, you can click **demote** to subtract 10 points from its overall score and decrease the idea's overall popularity ranking. You cannot demote the same idea more than once, and after you demote an idea you cannot promote it. An idea can have negative overall points if more users demote the idea than promote it.

### Half-life

The half-life setting determines how quickly old ideas drop in ranking on the Popular Ideas subtab, to make room for ideas with more recent votes. A shorter half-life moves older ideas down the page faster than a longer half-life. This setting affects all zones in your organization.

### Idea

Ideas are suggestions posted by the members of an ideas community and are organized by zones. For example, if the focus of a particular zone is "Ideas for car features," an appropriate idea for that zone might have the title "Insulated cup holders that keep your beverage hot or cold." Or, if the focus of a particular zone is "Ideas for our company's employee benefits," an appropriate idea for that zone might have the title "On-site day care."

### Idea Themes

Idea Themes provide a forum in which you invite community members to post ideas about specific topics so that community members can solve problems or propose innovations for your company.

## EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

## USER PERMISSIONS

To view the Ideas tab:

- "Read" on ideas

To view and vote for ideas:

- "Read" on ideas

To create ideas and add comments to ideas:

- "Create" on ideas

To edit ideas and edit comments on ideas:

- "Edit" on ideas

**Point**

A point is a unit of measurement that represents the popularity of an idea. Each vote for an idea is worth ten points (promote adds 10 points and demote removes 10 points). An idea's total number of points displays to the left of the idea.

**Popular Ideas**

On the Popular Ideas subtab, ideas are sorted by an internal calculation that reflects the age of an idea's positive votes. Regardless of an idea's static total number of points, ideas with newer positive votes display higher on the page than ideas with older positive votes. This allows you to browse ideas that have most recently gained popularity, with less precedence given to long-established ideas that were positively voted on in the past.

**Portal**

If your organization has a [Customer Portal](#) or partner portal, you can add the Ideas tab to either or both portals so that portal users can participate in their own Ideas communities. The Zone list at the top of the Ideas tab lists all the available zones, and each zone contains its own unique group of ideas.

**Promote**

If you agree with or like an idea, click **promote** to add 10 points to the idea. You cannot promote the same idea more than once and you cannot promote an idea that you have already demoted. Salesforce automatically adds your promote vote to any idea you post.

**Recent Activity**

Your Recent Activity page contains a summary of all the recent activity that relates to your participation within a zone. For example, this page lists all the ideas and comments you have posted to a zone as well as the ideas you have voted on. You can view your Recent Activity page by clicking your nickname located on the right side of the Ideas tab.

**Status**

An idea's status helps zone members track the progress of the idea. For example, "Under Review", "Reviewed", "Coming Soon", and "Now Available" are common status values an administrator can define and assign to ideas. An idea's status appears next to the idea's title for all zone members to see.

**Top All Time Ideas**

On the Top All-Time subtab, ideas are sorted from most number of points to fewest. This allows you to see the most popular ideas in the history of your Ideas zone.

**Vote, Idea**

In an ideas community, a vote means you have either promoted or demoted an idea. After you vote on an idea, your nickname displays at the bottom of the idea's detail page to track that your vote was made. You can use your Recent Activity page to see a list of all the ideas you have voted on.

**Zone**

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions.

## Using Ideas

Ideas is a community of users who post, vote for, and comment on ideas. An Ideas community provides an online, transparent way for you to attract, manage, and showcase innovation. You can:

- [Post ideas](#)
- [View ideas](#) or [Idea Themes](#)
- [Search for ideas](#)
- [Vote for ideas](#)
- [Comment on ideas](#)
- [View recent activity and replies](#)
- [Subscribe to syndication feeds](#)

Each time you click the Ideas tab, the Popular Ideas subtab displays ideas in all categories. To change your current view, click one of the other subtabs like Recent Ideas or Top All-Time. Click  **List** to toggle back to the list view.

## Viewing Ideas

The following sections describe how to view ideas:

- [Accessing the Ideas Tab in Salesforce](#)
- [Accessing the Ideas Tab in a Portal](#)
- [Browsing Popular Ideas](#)
- [Browsing Recent Ideas](#)
- [Browsing Top Ideas of All Time](#)
- [Viewing Ideas by Category](#)
- [Viewing Ideas by Status](#)
- [Browsing Ideas in Other Zones](#)
- [Viewing the Details of an Idea](#)

### Accessing the Ideas Tab in Salesforce

In Salesforce, the Ideas tab is available by default in the Community app. You can select this app from the Force.com app menu in the top right corner of any Salesforce page.

Note that your administrator may have customized your profile to also display the Ideas tab in other apps. Also, your administrator may have renamed the Ideas tab to an alternate tab name.

Click  **Tab** to display the Ideas tab. Click  **List** to toggle back to the list view.

 **Tip:** The Zone list at the top of the Ideas tab lists all the available zones, and each zone contains its own unique group of ideas.

### Accessing the Ideas Tab in a Salesforce.com Community

If your organization has created a Salesforce.com Community, your administrator can display the Ideas tab to the community by adding it to the list of selected tabs during setup of the community.

### Accessing the Ideas Tab in a Portal

If your organization has portal users who have access to a Customer Portal or partner portal, your portal's administrator can display the Ideas tab on either type of portal. The ideas that display in a portal are either created through a portal or are created internally in Salesforce and published for display in a portal.

### Browsing Popular Ideas

On the Popular Ideas subtab, ideas are sorted by an internal calculation that reflects the age of an idea's positive votes. Regardless of an idea's static total number of points, ideas with newer positive votes display higher on the page than ideas with older positive votes. This allows you to browse ideas that have most recently gained popularity, with less precedence given to long-established ideas that were positively voted on in the past.

### Browsing Recent Ideas

The Recent Ideas subtab lists the ideas that have most recently been submitted. Newer ideas display above older ideas.

#### EDITIONS

- Performance
- Unlimited
- Developer

#### USER PERMISSIONS

To view the Ideas tab:

- "Read" on ideas

To view and vote for ideas:

- "Read" on ideas

To create ideas and add comments to ideas:

- "Create" on ideas

To edit ideas and edit comments on ideas:

- "Edit" on ideas

### Browsing Top Ideas of All Time

The Top All-Time subtab lists the ideas with the most points. The difference between the Top All-Time subtab and the Popular Ideas subtab is that the Top All-Time subtab displays the top ideas of all time by number of points, whereas the Popular Ideas subtab uses an algorithm to display the ideas that have received the most recent positive votes.

### Viewing Ideas by Category

Categories are administrator-defined values that help organize ideas into logical sub-groups within a zone. The View Category drop-down list on the Ideas tab allows users to filter ideas by category, and the `Categories` picklist on the Post Ideas page lets users add categories to their ideas.

To browse ideas by category, select a category from the `View Category` drop-down list. Alternatively, click the category link at the bottom of the idea description, next to the user who posted the idea.

### Viewing Ideas by Idea Themes

You can view all of the ideas that are posted to an idea theme. From the Idea Themes detail page, you can manage an idea theme and its related ideas.

### Viewing Ideas by Status

An idea's status helps zone members track the progress of the idea. For example, "Under Review", "Reviewed", "Coming Soon", and "Now Available" are common status values an administrator can define and assign to ideas. An idea's status appears next to the idea's title for all zone members to see.

To view all ideas of a particular status, go to the Ideas tab and select a value from the `Status` drop-down list. Alternatively, click the status link next to an idea to view all ideas in the zone with that status.

### Browsing Ideas in Other Zones

Administrators can create multiple zones with each zone having its own unique list of ideas. For this reason, it is important to verify you are viewing the correct zone when browsing ideas. To browse ideas in a specific zone, select a zone from the list of zones the top of the page.

### Viewing the Details of an Idea

Click the title of an idea to open the detail page of that idea. The detail page of an idea includes the following sections:

- The details of the idea, including its full text and number of points
- The related idea theme and the zone to which it belongs.
- All [comments](#) that have been submitted for the idea
- An area for adding a new comment
- A list of the last 100 users who have voted (promoted or demoted) for the idea, sorted left to right from most recent vote to oldest vote

- If you are an administrator, the detail page lets you edit, delete, and merge ideas.

## SEE ALSO:

- [Ideas Overview](#)
- [Voting on Ideas](#)
- [Commenting on Ideas](#)
- [Posting and Editing Ideas](#)
- [Using Ideas](#)
- [Tip sheet: Using Salesforce Ideas](#)

## Voting on Ideas

In an ideas community, a vote means you have either promoted or demoted an idea. If you agree with or like an idea, click **promote** to add 10 points to the idea. You cannot promote the same idea more than once and you cannot promote an idea that you have already demoted. Salesforce automatically adds your promote vote to any idea you post.

If you dislike an idea, you can click **demote** to subtract 10 points from its overall score and decrease the idea's overall popularity ranking. You cannot demote the same idea more than once, and after you demote an idea you cannot promote it. An idea can have negative overall points if more users demote the idea than promote it.

To vote on an idea:

1. On the Ideas tab, locate an idea you want to promote or demote.
2. To add 10 points to the idea, click **promote** next to the idea. To subtract 10 points from the idea, click **demote**. After you have voted, your Nickname displays at the bottom of the idea's detail page to track that your vote was made.

 **Note:** When you [post a new idea](#), you automatically cast a vote for that idea and 10 points are added to the idea's score.

## Commenting on Ideas

Comments are plain text responses to posted ideas that enable discussions about the ideas. On the Ideas tab, the Comments subtab lists the comments that have most recently been submitted. On the detail page of an idea, comments are sorted in chronological order from oldest to newest.

### Adding Comments to Ideas

Add comments to ideas to share your thoughts and opinions with other community members:

1. On the Ideas tab, locate an idea on which you want to add a comment.
2. Click either the title of the idea or the **Comments** link below the idea description.
3. On the detail page for the idea, type your comments into the text entry area in the Add Your Comment section. You can enter up to 4,000 characters.

If your organization has enabled the HTML editor for Ideas, the description can include HTML and reference online images. If the HTML editor is not enabled, use plain text only.

4. Click **Post** to submit your comment.

Your newly added comment displays in the Comments related list on the idea detail page.

### Editing Comments on Ideas

To edit a comment that you have submitted on an idea:

1. On the detail page of the idea, click **Edit** next to your comment.
2. Modify your comment as desired.
3. Click **Apply** to save your work.

### Deleting Comments on Ideas

Deleting comments on ideas requires the "Delete" permission on ideas.

1. On the detail page of the idea, click **Del** next to your comment.
2. Click **OK**.

### Viewing Recently Posted Comments

To view the comments that have most recently been posted in your Ideas community, click the Comments subtab and select a zone in which to view comments. Click the text of a comment to view the detail page of the appropriate idea.

On the Comments subtab:

- Comments are listed in chronological order from newest to oldest.
- The title of the idea on which the comment was posted displays above the comment.
- The alias of the user who posted the comment displays next to the comment text.

## Viewing Your Recent Activity Page

Your Recent Activity page contains a summary of all the recent activity that relates to your participation within a zone. To view your Recent Activity page, go to the Ideas tab and click your Nickname link on the right side of the page. To view the Recent Activity page of another member of the zone, click the community member's name that appears below any idea or comment they have posted. You can view activity for the different zones you have access to by selecting a zone from the `zone` list.

The Recent Activity page uses the following icons to identify the various types of activity:

-  identifies the ideas you have submitted.
-  identifies the ideas you have voted on.
-  identifies the comments you have posted to ideas as well as the comments other users have posted to your ideas.

For additional detail, click the following links located on the left side of the Recent Activity page:

- Ideas Submitted lists the ideas you have posted to this zone. The most recent idea appears first.
- Ideas Voted On lists the ideas in this zone that you have either promoted or demoted.
- Recent Replies displays the most recent comment posted to each of your ideas, as well as the most recent comment posted to each idea you have previously commented on. This section is not displayed when viewing another community member's recent activity.

To quickly determine the number of recent replies you have received, look next to the recent replies icon () in the upper right corner of the Ideas tab. This icon only appears when you have received a new reply.

 **Note:** You can't upload your own picture to replace the default image.

## Subscribing to Syndication Feeds for Ideas

Syndication feeds enable users to subscribe to changes within Ideas and receive updates in external news readers. For users to be able to subscribe to Ideas syndication feeds, the following prerequisites are necessary:

- Ideas must be exposed publicly using Force.com sites.
- The `Categories` field must be enabled in Ideas. This field is enabled by default for some organizations.

To subscribe to a syndication feed, click the feeds icon () on the following Ideas pages:

- [Popular Ideas](#) subtab
- [Recent Ideas](#) subtab
- [Top All-Time](#) subtab
- [Comments](#) subtab

This feed lists comments separately even when they belong to the same idea, whereas the Comments subtab groups comments for a single idea together and only shows the number of recent comments for that idea.

- [Recent Activity page](#)

To subscribe to a feed that includes all the comments posted by a specific community member, click the community member's name that appears below any idea or comment he or she has posted. Then click the feeds icon on the community member's Recent Activity page. When you subscribe to another community member's Recent Activity feed, the feed only includes recent comments from that community member and no other user.

-  **Note:** Child ideas (ideas that have been merged with a master idea) are not included in any feeds. Only master ideas are included.

- "Edit" on ideas

## Posting and Editing Ideas

### Posting Ideas

1. Use the search box in the sidebar to search for existing ideas that match your idea. This helps reduce the number of duplicate ideas in the community. If no existing ideas match your idea, proceed to the next step.
2. Create a new idea using one of the following options:
  - On the Ideas tab, select the appropriate community from the Community list at the top of the page and click **Post Idea**.
  - From the Ideas list view, click **New Idea**, then select a community, and click **Continue**.
  - From the sidebar, select **Idea** from the **Create New** drop-down list, select a community, and click **Continue**.
3. If you're posting the idea to an [idea theme](#), select one from the list. You can only post ideas to idea themes that exist within your community.
4. Enter a title for your idea no longer than 255 characters.
 

After you enter the title, Salesforce searches the community for ideas with the same words in their title or description and then displays the top five matching ideas. If one of these ideas looks similar to your own, click that idea's title to open its detail page in a new window. From the detail page, you can read a description of the idea and vote for it instead of posting your duplicate idea to the community. If none of the ideas in the list are similar to your idea, proceed with the following steps to post your unique idea.
5. In the description area, enter the details of your idea.
 

If your organization has enabled the HTML editor for Ideas, the description can include HTML and reference online images. If the HTML editor is not enabled, use plain text only.
6. Choose one or more categories for your idea.
7. If you are an administrator, optionally choose a status for your idea. The **Status** drop-down list is only visible to administrators.
8. If enabled by your administrator, you can add an attachment to your idea:
  - Click **Browse** to locate and attach a file from your computer.
 

You can attach any supported file types, including Microsoft® PowerPoint® presentations and Excel® spreadsheets, Adobe® PDF files, image files, audio files, and video files. The maximum attachment size is determined by your organization.
  - Optionally, type a title for the file. If you don't enter a title, the filename appears as the attachment's title.
9. Click **Post**.

Your new idea displays at the top of the Recent Ideas subtab, and your vote (promote) is automatically applied to the idea. Each vote is always worth 10 points.

 **Tip:** Use the following writing tips to make your idea easier for others to read and understand:

- Use complete sentences.
- Be as concise and direct as possible.
- Check your spelling and punctuation.

[Tip sheet: Using Salesforce Ideas](#)

## Merging Ideas

### Overview

As more users contribute to a zone, the number of duplicate ideas often increases. Duplicate ideas make it difficult to measure feedback because votes and comments are spread out over many similar ideas. The best way to resolve this issue is to merge duplicate ideas together so one idea becomes the master to one or more child ideas.

Note the following about merging ideas.

- Once you merge ideas they cannot be separated.
- All votes belonging to child ideas are transferred to the master idea. If the same community member votes for two ideas that are eventually merged, only the vote for the master idea is kept; the vote for the child idea is discarded.
- Users can only vote for and add comments to a master idea.
- You cannot merge ideas in separate zones.
- Deleting a parent idea automatically deletes all child ideas. Child ideas cannot be deleted individually.
- The master idea does not inherit the status and category values of its child ideas.
- When an idea is merged and becomes a child idea, the child idea still appears on the Ideas Submitted page but not on any other pages in a zone member's [Recent Activity](#).
- Merged ideas don't appear in the list of submitted ideas on the Idea Themes detail page and aren't counted in the `Submitted Ideas` field.
- When you merge a child idea, you can no longer edit the Idea Theme field.
- A child idea that has been merged is still visible to the user who submitted the idea from the Ideas Submitted list on the user's Recent Activity page.

### Merging Ideas

To locate duplicate ideas and merge them together:

1. On the Ideas tab, click the title of an idea that you want to merge.

### EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To merge multiple ideas:

- “Edit” on ideas

2. On the idea's detail page, click **Find Duplicates**. Salesforce searches all the ideas within the zone and displays the five ideas with titles that most closely match the current idea's title.
3. If the Possible Duplicates list does not contain any ideas that you want to merge, enter keywords in the `Search for Duplicates` field and click **Search**. Salesforce displays a new list of possible duplicate ideas.
4. From the Possible Duplicates list, select the ideas that you want to merge.  
To view the details of a possible duplicate idea, click the idea's title. Use your browser's back button to return to the search results.
5. Click **Merge with Current Idea**.
6. Select the idea that you want to be the master idea, and click **Merge**.
7. Click **OK** to complete the merge.

## Tips on Using Ideas

### USER PERMISSIONS

To view the Ideas tab:	"Read" on ideas
To view and vote for ideas:	"Read" on ideas
To create ideas and add comments to ideas:	"Create" on ideas
To edit ideas and edit comments on ideas:	"Edit" on ideas
To create communities:	"Customize Application"

### EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

Consider the following information when setting up and using Ideas:

- To monitor the activity of Ideas, you can:
  - Create a workflow rule or trigger based on the number of comments an idea receives. You cannot create a workflow rule or trigger based on an idea's vote total or vote count. You also cannot create a trigger that inserts or deletes a comment when the Idea object is updated.
  - Create a custom report based on an idea's vote score or number of comments.
- When posting an idea or comment, you can include a URL in the idea's description or comment field, but you cannot attach a file or add a note to an idea.
- Master detail relationships are not supported.
- Ideas does not support workflow tasks, outbound messages, and approvals.
- Ideas does not support custom links.
- The Ideas detail page does not contain related lists.
- The data export feature archives all your Ideas data with the exception of deleted ideas and deleted comments.
- You cannot create activities and events for Ideas.
- When using standard or custom Idea fields, note the following:
  - History tracking is not supported.
  - Field dependencies and roll-up summary fields are not supported.
  - Formula fields are not available for the Community object.

## Tips for Using the HTML Editor

The HTML editor gives users WYSIWYG HTML editing capabilities, allowing them to:

- Insert an image
- Insert hyperlinks
- Change paragraph alignment
- Create bulleted and numbered lists

### Implementation Tips

- HTML tags you enter into the HTML editor will display to users as text.
- In related lists, search results, and hover details, Salesforce does not display text with HTML formatting or images.
- Hyperlinks open in a new browser window when users click on them. The HTML editor supports HTTP, HTTPS, and mailto hyperlinks.
- To insert an image, click  and either browse to an image file or specify the image's web address. Enter a description that appears when a user hovers over the image and when the image is not available. The image must have a URL that Salesforce can access.
- Images do not show up in list views and reports.
- You cannot disable individual features of the HTML editor. For example, you cannot disable its hyperlink and image capabilities.
- The HTML editor supports all languages that Salesforce supports.
- For security purposes, the HTML editor only allows the tags and attributes listed in [Supported HTML Tags and Attributes](#) on page 2145. Salesforce automatically removes unsupported tags and attributes when you save an idea description or comment. Salesforce also removes potentially malicious HTML. Note that Salesforce does not notify users when unsupported or potentially malicious HTML is removed.
- The HTML editor does not support JavaScript or Cascading Style Sheets (CSS).

### Supported HTML Tags and Attributes

The HTML editor supports the following tags:

<a>	<dt>	<q>
<abbr>	<em>	<samp>
<acronym>	<font>	<small>
<address>	<h1>	<span>
<b>	<h2>	<strike>
<bdo>	<h3>	<strong>
<big>	<h4>	<sub>
<blockquote>	<h5>	<sup>
 	<h6>	<table>
<caption>	<hr>	<tbody>
<cite>	<i>	<td>
<code>	<img>	<tfoot>

<code>&lt;col&gt;</code>	<code>&lt;ins&gt;</code>	<code>&lt;th&gt;</code>
<code>&lt;colgroup&gt;</code>	<code>&lt;kbd&gt;</code>	<code>&lt;thead&gt;</code>
<code>&lt;dd&gt;</code>	<code>&lt;li&gt;</code>	<code>&lt;tr&gt;</code>
<code>&lt;del&gt;</code>	<code>&lt;ol&gt;</code>	<code>&lt;tt&gt;</code>
<code>&lt;dfn&gt;</code>	<code>&lt;p&gt;</code>	<code>&lt;ul&gt;</code>
<code>&lt;div&gt;</code>	<code>&lt;pre&gt;</code>	<code>&lt;var&gt;</code>
<code>&lt;dl&gt;</code>		

The above tags can include the following attributes:

<code>alt</code>	<code>face</code>	<code>size</code>
<code>background</code>	<code>height</code>	<code>src</code>
<code>border</code>	<code>href</code>	<code>style</code>
<code>class</code>	<code>name</code>	<code>target</code>
<code>colspan</code>	<code>rowspan</code>	<code>width</code>

The above attributes can include URLs that begin with the following:

- `http:`
- `https:`
- `file:`
- `ftp:`
- `mailto:`
- `#`
- `/` for relative links

### Enabling the HTML Editor in Ideas

The HTML editor is enabled by default for most organizations. If your organization does not have the HTML editor already enabled, an administrator can enable it as described in [Customizing Ideas Settings](#) on page 2395.

 **Warning:** Once you enable the HTML editor, you cannot disable it.

Before enabling the HTML editor, note the following:

- Each HTML idea description has a maximum size of the 32 KB. Each comment has a maximum size of 4 KB.
- If you use the HTML editor to edit and save an idea description or comment that was in text format, Salesforce saves the description or comment in HTML format.

- In list views and search results, Salesforce displays only the first 255 characters of an idea's description or comment. This number includes HTML tags.

## Idea Themes

Watch a Demo:  [Encourage Collaboration with Idea Themes](#)

Idea Themes lets you invite community members to post ideas about specific topics so that members can solve problems or propose innovations for your company. For example, to engage with your community and create excitement around the launch of a new product, you can ask members to work together to create the product's name. Community members collaborate and add ideas to the idea theme, while you monitor their activities as they vote and comment on each other's ideas until they find a winner.

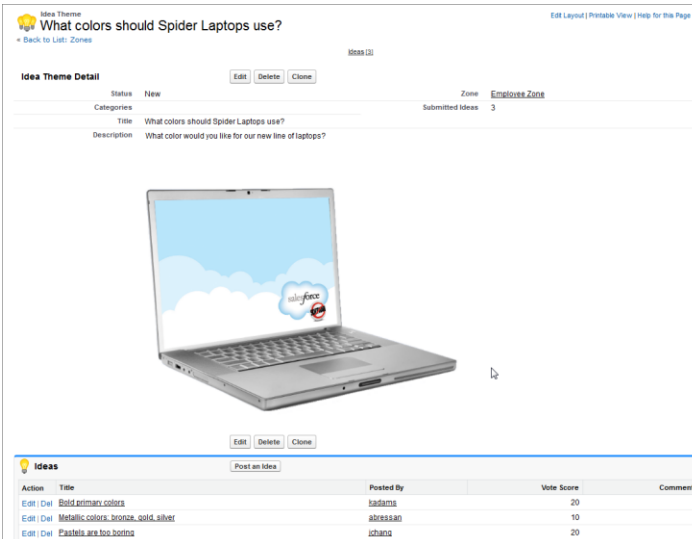

When you create an idea theme, you can add pictures, videos, and other multimedia content to showcase or explain the idea that you're presenting to the community. You can also view and manage the list of ideas that have been posted to the idea theme.

## EDITIONS

## Using Idea Themes

Click the Idea Themes tab to view, filter, moderate, and create themes from lists.

- Click **Create New View** to define your own custom list views. To edit or delete any view you created, select it from the View drop-down list and click **Edit**. If your organization has multiple communities, we recommend you add `Community` to your views so that you can see the name of the community associated with each idea theme. Adding the `zone` field to the view also helps with managing multiple zones.
- Click **New Idea Theme** from the Idea Themes list view page or click **New** from the Recent Idea Themes list on the Idea Themes overview page to [create a new idea theme](#).
- Click  to refresh a list that's been updated.
- Click **Edit** or **Del** to [edit](#) or delete an idea theme.

 **Note:** Deleting an idea theme also deletes the ideas that are associated with it. Conversely, undeleting an idea theme also undeletes the ideas that are associated with it.

[Managing Idea Themes](#)

## Creating and Editing Idea Themes

You can use the Idea Themes tab in both the application and the console to create and edit Idea Themes for the communities that you manage.

1. Click **New Idea Theme** from the Idea Themes list view page or click **New** from the Recent Idea Themes list on the Idea Themes overview page.
2. Select a zone for the idea theme and click **Continue**.
3. Select the idea theme's **Status**.
4. Select a category for the theme.
5. Add a title for the idea theme.
6. Optionally, enter a description of the theme.  
Use the HTML editor to format your text or add an image or video.
7. Click **Save**.

## Using the Chatter Answers Q&A Tab

Chatter Answers is a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience.

Chatter Answers lets your customers:

- Post, browse, and reply to questions using the Q&A tab.
- Delete their own questions and replies.
- Flag questions and replies as spam, hateful, or inappropriate.
- Receive emails when their questions are answered or when best answers are chosen for questions they're following.
- Collaborate publicly or privately with support agents to resolve issues related to open cases.
- Search and review articles from Salesforce Knowledge.
- Like a post or Salesforce Knowledge article to help determine its popularity.
- Upload photos of themselves to their user profiles.
- View other users' total number of posts and number of replies marked as best answers by others.

### EDITIONS

### USER PERMISSIONS

To view the Idea Themes tab:

- "Read" on Idea Themes

To create and edit Idea Themes:

- "Create" on Ideas

### EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

### USER PERMISSIONS

To view questions:

- "Read" on questions

To ask and reply to questions:

- "Create" on questions

To view cases:

- "Read" on case

To change cases:

- "Edit" on case

- 1. Search:** Customers can search for existing questions before they post their own.
- 2. Filter and Sort:** Community members and support agents can select different viewing options for questions in the feed. Searches in the Chatter Answers Q&A tab can be filtered to show questions based on:
  - **All Questions** shows all questions in the zone, as well as Salesforce Knowledge articles, when enabled.
  - **Unanswered Questions** shows all questions that don't have replies.
  - **Unsolved Questions** shows all questions that don't have a best answer.
  - **Solved Questions** shows all questions that have a best answer, as well as Salesforce Knowledge articles, when enabled.
  - **My Questions** shows all questions you've asked and are following.

You can then sort the results based on the following options:

- **Date Posted** sorts questions with the most recently asked questions appearing first.
  - **Recent Activity** sorts questions with the most recent replies and comments appearing first.
  - **Most Popular** sorts questions that have received the most likes, upvotes, and followers appearing first.
- 3. Question:** Customers can post a question to the community for help. Other members of the community can post answers or follow the question to receive email notifications on subsequent posts.
  - 4. Browse by Category:** If categories are enabled in the community, members can click the category name to show questions related to that category.
  - 5. Reputation:** Community members can earn points and ratings that display on hover over their photos in the feed
  - 6. Comment:** Community members and support agents can comment on the question, and the customer or agent can select a comment as the best answer.

Chatter Answers lets service organizations:

- Create multiple communities and organize them into different zones, with each zone having its own focus and questions.
- Brand and customize communities.
- Give agents the opportunity to respond to customers publicly or privately.
- Automate the creation of cases from questions using an Apex trigger and workflow rules.
- Deflect customer inquiries through participation.
- Encourage participation by publicly displaying user statistics.
- Moderate questions and answers from the Q&A tab in the internal Salesforce application or from the community.

A customer's question is typically answered on the Q&A tab using one of these processes:

<b>Question Answered by a Similar Question with a Best Answer</b>	<b>Question Answered by the Members within the Community</b>	<b>Question Answered by a Support Agent</b>	<b>Question Answered by a Salesforce Knowledge Article</b>
<ol style="list-style-type: none"> <li>1. A customer types a question or keyword into the Chatter Answers Q&amp;A tab and clicks <b>Post Your Question</b>.</li> <li>2. A similar question with a best answer appears in search results.</li> <li>3. The customer selects that question, and views the answer.</li> </ol>	<ol style="list-style-type: none"> <li>1. A customer types a question or keyword into the Chatter Answers Q&amp;A tab and clicks <b>Post Your Question</b>.</li> <li>2. No similar questions display in search results.</li> <li>3. The customer continues to enter a description of the question and clicks <b>Post to Community</b> to post a public question.</li> <li>4. A community member or support agent reads the question and adds a comment, which answers the customer's question.</li> </ol>	<ol style="list-style-type: none"> <li>1. A customer types a question or keyword into the Chatter Answers Q&amp;A tab and clicks <b>Post Your Question</b>.</li> <li>2. No similar questions display in search results.</li> <li>3. The customer continues to enter a description of the question and selects <b>Post Privately to Representative</b> to post a private question.</li> <li>4. The private question is converted to a case.</li> <li>5. A support agent reads the case and adds a private comment, which answers the customer's question.</li> </ol>	<ol style="list-style-type: none"> <li>1. A customer types a question or keyword into the Chatter Answers Q&amp;A tab and clicks <b>Post Your Question</b>.</li> <li>2. A similar Salesforce Knowledge article with an answer displays in search results.</li> <li>3. The customer selects the article, and views the answer.</li> </ol>

[Chatter Answers Terminology](#)

## Chatter Answers Terminology

The following terms are used when describing Chatter Answers features and functionality.

### Answers

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

### Article

*Articles* capture information about your company's products and services that you want to make available in your knowledge base.

### Best Answer

When a member of an answers community asks a question and other community members post a reply, the asker can mark one of the replies as the best answer. The best answer then appears directly under the question (above the other replies). Identifying the best answer helps other community members with the same question quickly find the most relevant, useful information.

### Flag

An icon that users can click on a question or reply to report it as spam, hateful, or inappropriate.

### Follow

A subscription to a question that lets you receive emails when someone answers or comments on a specific question.

### Like

To show support or indicate quality or usefulness for a question, answer, or knowledge article.

### Popular

Each question's popularity is based on the number of users who **Like** it within a certain amount of time.

### Question

An issue posted to an answers community. When a community member asks a question, other community members post replies to help resolve the question.

### Question, Private

An issue posted to an answers community, but marked **Private** so that only support agents can view and respond to it.

### Reply

The response to a question in an answers community. When community members reply to a question, the person who asked the question can mark one of the replies as the best answer to resolve and close the question.

### Topics

The sidebar that lists data categories from which your customers can browse questions and replies. For example, if you have a zone for hardware products, your topics may include laptops, desktops, and printers.

### Vote, Reply

In an answers community, a vote means you either like or dislike a reply to a question.

### Zones

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions

## EDITIONS

Available in: **Salesforce Classic**

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

SEE ALSO:

[Using the Chatter Answers Q&A Tab](#)

## Using Chatter Answers

### USER PERMISSIONS

To view questions:	"Read" on questions
To ask and reply to questions:	"Create" on questions
To view cases:	"Read" on case
To change cases:	"Edit" on case
To manage Chatter Answers (Customer Portal) users:	"Edit Self-Service Users"
To ask a private question:	"Read" on account

### EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

Chatter Answers lets you work with questions and cases that originate from customers in a zone. Once a customer posts a question to the zone, you or other customers can reply. Questions are converted to cases when they're marked `Private`, or after a time specified by your administrator.

With Chatter Answers, you can:

- [Reply to questions converted to cases.](#)
- Create custom views for cases converted from questions by filtering on `Case Origin`.
- Upload a photo to your profile so that customers can see who you are.
- [Work with Chatter Answers users, who are essentially Customer Portal users.](#)
- Assign the Chatter Answers User feature license to portal users who don't self-register so that they can access your community.
- Use the Q&A tab to moderate questions and to:
  - Review lists of questions.
  - Answer questions or add replies to questions.
  - Escalate a question to a case.
  - Delete questions or replies.
  - Select best answers for questions.
  - Promote helpful replies to Salesforce Knowledge articles.

 **Note:** We recommend that you assign a support agent to review public questions from the Q&A tab. Agents can't click **Flag** next to questions or replies that are spam, hateful, or inappropriate, but they can edit and delete questions or replies from a zones via the Q&A tab if they have the "Delete" permission on questions.

 **Tip:** To moderate many questions quickly, we recommend that support agents review questions from pinned lists on the Salesforce console (this requires adding the Q&A tab to the console's Navigation tab).

To ask and reply to questions:	"Create" on questions
To delete questions and replies:	"Delete" on questions
To escalate a question to a case:	"Create" on cases
To edit questions:	"Edit" on questions

### EDITIONS

Available in: Salesforce Classic

Answers is available in: **Enterprise, Performance, Unlimited, and Developer** Editions.

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

The Questions tab lets you view, search, filter, moderate, and create questions from lists.

- Search for questions by typing two or more letters of a question in the Search All Questions box. As you type, questions that match your search terms appear.
- Select predefined list views from the View drop-down list. Some predefined lists from which you can filter questions include:
  - Questions with Best Replies
  - Questions without Best Replies
- Click **Create New View** to define your own custom list views. To edit or delete any view you created, select it from the View drop-down list and click **Edit**.
- Click **New Question** from the Questions list view page or click **New** from the Recent Questions list on the Questions overview page to create a new question.
- Click  to refresh a list that's been updated.
- After you select a question from the list:
  - Type an answer or comment and click **Answer Customer & Zone** to reply to customers.
  - Click  and choose:
    - **Delete** to delete the question from the community.
    - **Escalate to Case** to create a case from the question.
    - **Edit** to edit the fields in an existing question.
  - Click  on one of the question's replies and choose:
    - **Delete** to delete the reply from the community.
    - **Promote to Article** to add the reply as a draft article to the knowledge base (available if it's set up by your administrator).
    - **Edit** to edit the fields in an existing reply.
  - If the question is private, meaning only support agents can view and answer it, you can click the case link to view the case automatically associated with the question.

 **Note:** The Questions tab is intended for Chatter Answers, but you can also use it to view questions from the answers feature.

SEE ALSO:

[Questions Home](#)

## Searching for Questions and Answers in the Chatter Answers Q&A Tab

Search the Chatter Answers Q&A tab to find questions and replies, best answers, and Salesforce Knowledge articles that can help find answers quickly. Searching in the Q&A tab might help you avoid posting redundant questions.

1. In the Q&A tab, enter your question in the search box.
2. Click the magnifying glass to view matching questions and articles from within the zone. If enabled, Salesforce Knowledge articles appear in the results, as well.

Searches in the Chatter Answers Q&A tab can be filtered to show questions based on:

- **All Questions** shows all questions in the zone, as well as Salesforce Knowledge articles, when enabled.
- **Unanswered Questions** shows all questions that don't have replies.
- **Unsolved Questions** shows all questions that don't have a best answer.
- **Solved Questions** shows all questions that have a best answer, as well as Salesforce Knowledge articles, when enabled.
- **My Questions** shows all questions you've asked and are following.

You can then sort the results based on the following options:

- **Date Posted** sorts questions with the most recently asked questions appearing first.
- **Recent Activity** sorts questions with the most recent replies and comments appearing first.
- **Most Popular** sorts questions that have received the most likes, upvotes, and followers appearing first.

 **Note:** From the header search box at the top of the page you can search more objects than from within the Q&A tab. Global searches by internal users return results from all questions that are available within the organization. Searches performed by all other users in Salesforce Communities return results from the questions that are available within the community.

### EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

### USER PERMISSIONS

To view questions:

- "Read" on questions

## Choose the Best Answer to a Question

After you ask a question, you should monitor the replies posted by other community members and eventually choose one of the replies as the best answer. The best answer is highlighted directly below the question so it's easy to find, which helps community members quickly identify the most useful resolution to the question.

Only Salesforce administrators and the person who asked the question can mark a reply as the best answer.

To choose the best answer:

1. From the Q&A tab, find your question and click its title.
2. Decide which reply is the best answer, and click **Choose as Best Answer**.

To identify the best answer, look at the votes (“likes” and “dislikes”) for each reply. The reply with the most “likes” probably contains the most useful information. If a question has many replies, try sorting the replies by **Most Votes** so the replies with the most likes and dislikes appear at the top of the list.

After you choose a best answer:

- The question is marked as “resolved”. Community members can continue to post and vote on replies for resolved questions.
- If another reply that you like better is posted in the future, simply choose that reply as the best answer to replace the old best answer.
- You can remove the best answer status of the reply at any time. Removing the best answer status from a reply makes it a regular reply.

## Replying to Chatter Answers Email Notifications

When you receive an email notification, you can post a response back to the community by replying to the email.

When you receive email notifications related to a question, you can conveniently reply directly from your email and the reply appears as an answer on the Q&A tab. You'll receive an email notification for the following events:

- Someone answers a question you've asked or are following.
- Customer support or a moderator selects a best answer for a question you've asked or are following.

 **Note:** To reply to email notifications, your administrator must enable email replies on the Chatter Answers Settings page.

Consider these tips when sending email replies:

- Replies must be sent from the email address specified on your profile. If you use email aliases or email forwarding services that send replies from a different email address, your replies won't be processed.
- If replies contain your personal email signature, the signature text is treated as part of your comment. Default signatures inserted by mobile devices, such as `sent from my iPhone`, are automatically removed from replies. Before replying, delete custom signatures and any extra text you don't want posted to the community.
- Attachments in replies are ignored.
- Posts that include rich text or other types of markup appear as plain text in the body of the email notification.
- Automated messages such as “out of office” responses are ignored by the system.

### EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

### USER PERMISSIONS

To view questions:

- “Read” on questions

To ask and reply to questions:

- “Create” on questions

### EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

- Before replying, check the email address that displays in the **To** field of your email. Valid addresses contain tokens, or long character strings, both before and after the @symbol, such as `w8t27apy1@j321imd9gbs.d8rx.d.chatter.salesforce.com`. Some email applications may automatically use the **From** address from the original email, such as `ReplyToQ&A@<your.com>.com`, which is not a valid address for receiving replies. If you see this shortened address in the **To** field of your reply email, replace it with the valid reply-to address in the email header information. For example, in an application such as IBM® Lotus Notes®:
  1. Open the original email.
  2. Click **View > Show > Page Source**.
  3. In the `ReplyToQ&A` section, copy the email address that looks like:  
`w8t27apy1@j321imd9gbs.d8rx.d.chatter.salesforce.com`.
  4. Paste the reply-to address in the **To** field of your reply email.

## Resolving Customer Inquiries with Others

### Adding Case Team Members

To add individual case team members or predefined case teams to a case:

1. View the case.
2. In the Case Team related list, click **Update Case Team Members**.
3. To add individual members to the case team:
  - a. Select the type of user from the **Team Member** picklist (either User, Contact, Portal User, or Partner User), and click the lookup icon () to choose a specific user.  
  
Portal User and Partner User only display if a partner portal or [Customer Portal](#) is enabled for your organization.  
  
High-volume portal users can't be added to teams.
  - b. Select the case team role to apply to the team member from the `Member Role` picklist.  
  
Every member of a case team has a role that he or she plays for the case, such as "Customer Contact" or "Case Manager." Roles determine access to the case, like Read Only or Read/Write access, and whether the member in the role is visible to users in the Customer Portal.
4. To add an existing case team, click the lookup icon () in the Predefined Case Teams section and choose a specific team.
5. Click **Save**.

### Tips on Adding Users to Case Teams

Consider the following when adding users to case teams:

- You cannot add a user to a case team if he or she is already on the case team. For example, if you add a predefined team to a case that includes a member already on the team, then that member is automatically removed from the predefined team when it is added to the case.
- Contacts can only view cases via a Customer Portal.

#### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

#### USER PERMISSIONS

To set up case teams:

- "Customize Application"
- AND
- "Manage Users"

To add team members:

- "Edit" on cases

- Customer Portal users can view the Case Team related list if it is included on case page layouts associated with their profile. However, Customer Portal users cannot update case teams or view case team role details on cases.
- You can filter case lists by case teams where you are a member. Simply select the **My Case Teams** filter on case list views. You can also report on case teams in which you are a member. After you run a case report, select **My team's cases** from the **View** filter.
- The possible access levels a case team member can have on a case, as defined by your administrator via case team roles, include:

Access Level	Description
Read/Write	User can view and edit the record, and add associated records, notes, and attachments to it.
Read Only	User can view the record, and add associated records to it. They cannot edit the record or add notes or attachments.
Private	User cannot access the record in any way.

## Updating Case Team Members

You can update case team members on a case.

1. View the case.
2. On the Case Team related list, click **Update Case Team Members**.
3. Optionally:
  - Click the **Remove** link next to an existing team member or predefined case team to remove that member or team from the case.
  - Click the **Add 1 Row** link to add a new row with which you can add a case team member or predefined case team.
  - On existing team member rows, you can:
    - Select the type of user from the **Team Member** picklist (either User, Contact, Portal User, or Partner User), and click the lookup icon () to choose a specific user.
    - Select the case team role to apply to the team member from the **Member Role** picklist.

Every member of a case team has a role that he or she plays for the case, such as “Customer Contact” or “Case Manager.” Roles determine access to the case, like Read Only or Read/Write access, and whether the member in the role is visible to users in the Customer Portal.
  - On existing predefined case team rows, you can click the lookup icon () to add a specific case team.
4. Click **Save**.

## Tips on Updating Case Team Members

Consider the following when updating case team members:

### EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

### USER PERMISSIONS

To set up case teams:

- “Customize Application”
- AND
- “Manage Users”

To add team members:

- “Edit” on cases

- You cannot add a user to a case team if he or she is already on the case team. For example, if you add a predefined team to a case that includes a member already on the team, then that member is automatically removed from the predefined team when it is added to the case.
- When you remove a user or a predefined case team from a case, you can add the user or predefined case team back to the case at any time.
- Contacts can only view cases via a Customer Portal.
- If you deactivate a user, Salesforce prompts you to remove him or her from case teams.
- Customer Portal users can view the Case Team related list if it is included on case page layouts associated with their profile. However, Customer Portal users cannot update case teams or view case team role details on cases.
- The possible access levels a case team member can have on a case, as defined by your administrator via case team roles, include:

Access Level	Description
Read/Write	User can view and edit the record, and add associated records, notes, and attachments to it.
Read Only	User can view the record, and add associated records to it. They cannot edit the record or add notes or attachments.
Private	User cannot access the record in any way.

## Case Team Fields

A case team member has the following fields, listed in alphabetical order.

Field	Description
Case Access	The level of access that a team member has to the case. The access level can be Read/Write, Read Only, or Private; but it cannot be less than your organization's default case sharing access.
Member Name	The name of a user listed as part of the case team.
Member Role	The role that the team member plays for the case, for example, "Case Manager."
Visible in Customer Portal	Indicates whether the case team member displays in the Customer Portal.

# Creating and Verifying Service Agreements

## Entitlements

### Entitlements Overview

Entitlements help you determine if your customers are eligible for customer support so you can create cases for them. A customer may be eligible for support based on a particular asset, account, or service contract. You can use entitlements on their own or in conjunction with entitlement processes, which are timelines that contain all of the steps (or milestones) that your support team must complete in order to resolve cases.

Depending on how entitlements are set up, you can view and create them on the Entitlements tab or from the Entitlements related list on accounts, contacts, assets, or service contracts. Click **Create Case** on the Entitlements related list to create a case that automatically includes the correct entitlement, account, contact, and asset.

If set up, the Entitlements or Entitlement Template related lists let you add existing entitlements to contacts and products.

 **Note:** Entitlements don't automatically apply to cases created with Web-to-Case or Email-to-Case. If needed, you can add entitlements to these features using Apex code.

#### SEE ALSO:

[Setting Up Entitlements](#)

[Entitlement Management Overview](#)

[Getting Started with Entitlement Management](#)

### Verifying Entitlements

You may have to verify that contacts are eligible to receive customer support, or that a service contract includes an entitlement, before you create or update cases. Depending on how entitlements are set up, you can verify them from these locations:

Verify Entitlements From	To Confirm That	Steps To Verify
<a href="#">Entitlements tab</a>	A specific entitlement is available.	<ol style="list-style-type: none"> <li>1. Click the Entitlements tab.</li> <li>2. Click an entitlement name.</li> </ol>
Accounts	At least one contact on the account is eligible for support.	<ol style="list-style-type: none"> <li>1. View an account.</li> <li>2. Confirm that an entitlement is on the Entitlements related list.</li> </ol>
Contacts	Specific contacts are eligible for support.	<ol style="list-style-type: none"> <li>1. View a contact.</li> </ol>

#### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

#### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

#### USER PERMISSIONS

To view entitlements:

- "Read" on entitlements

Verify Entitlements From	To Confirm That	Steps To Verify
		<ol style="list-style-type: none"> <li>2. Confirm that an entitlement is on the Entitlements related list.</li> </ol>
Assets	Specific assets (purchased products) are eligible for support.	<ol style="list-style-type: none"> <li>1. Locate an asset from a related list or an assets list view on the Products tab.</li> <li>2. Click the asset name.</li> <li>3. Confirm that an entitlement is on the Entitlements related list.</li> </ol>
Service contracts	A specific service contract includes customer support.	<ol style="list-style-type: none"> <li>1. Click the Service Contracts tab.</li> <li>2. Click a service contract name.</li> <li>3. Confirm that an entitlement is on the Entitlements related list.</li> </ol>

 **Note:** After you verify an entitlement, you can click **Create Case** to create a new case associated with the entitlement. The case automatically includes any account, contact, or asset information from the entitlement.

## Displaying and Editing Entitlements

### Displaying Entitlements

To view an entitlement's details, use the Entitlements tab, list pages, or the Entitlements related list on:

- Accounts
- Contacts
- Assets
- Service contracts

The Entitlements related list shows all the entitlements associated with that item.

To view an entitlement template's details, use the Entitlement Templates related list on products.

Your administrator determines where you can view entitlements and entitlement templates.

### Editing Entitlements

To update an entitlement, click **Edit**, change the fields, and click **Save**.

Use inline editing to edit fields directly on the detail page. If inline editing isn't enabled, contact your administrator.

#### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

#### USER PERMISSIONS

To view entitlements:

- "Read" on entitlements

To change entitlements:

- "Edit" on entitlements

### Entitlements Related Lists

The lower portion of an entitlement displays information related to it, including cases, contacts, milestones, history, activities, notes, and attachments.

You can click:

- Items to display their details
- **Show [number] more** to increase the number of items in the list
- **Go to list** to display a page with the entire list.

### Sharing

You can't share entitlements. If an entitlement has an account, its sharing is inherited from account sharing.

### Printing Entitlements

To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.

SEE ALSO:

[Entitlement Management Overview](#)

## Entitlement Process Fields

Here are an entitlement process' fields. Some of these fields may not be visible or editable depending on your page layout and field-level security settings.

Field	Description
Timeline	<p>How far along a case is to reaching an entitlement process's milestones. You can click or hover your mouse pointer over each milestone to view its details. These icons represent milestones:</p> <ul style="list-style-type: none"> <li>•  Completed milestone</li> <li>•  Violated milestone</li> </ul> <p>You can drag the Handle icon () along the Timeline Zoom tool to view past and future milestones. If an entitlement process applies to the case, this field appears.</p>

### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions with the Service Cloud

Field	Description
	When adding the <code>Timeline</code> field to case page layouts, click the wrench icon (🔧) next to it and select <code>Show Label</code> so the field name displays on cases.
<code>Entitlement Process Start Time</code>	The time the case entered an entitlement process. If you have “Edit” permission on cases, you can update or reset the time. When you reset the time: <ul style="list-style-type: none"> <li>• Closed or completed milestones aren’t affected</li> <li>• Incomplete milestones are recalculated based on the new start time</li> </ul>
<code>Entitlement Process End Time</code>	The time a case exited an entitlement process.
<code>Stopped</code>	Lets you stop an entitlement process on a case, which might be necessary if you’re waiting for a customer’s response.
<code>Stopped Since</code>	Shows the date and time an entitlement process was stopped on a case.

## Viewing Entitlement Lists

The entitlements list page displays a list of entitlements. To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**. In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations that have set up the console, you can view entitlement lists via the console’s list view.

Depending on your user permissions on entitlements, you may see these buttons and links:

Button or Link	Description
<b>New Entitlement</b>	Click to create a new entitlement.
<b>Create Case</b>	Click to create a new case associated with the entitlement.
<b>Edit</b>	Click to edit an entitlement.
<b>Del</b>	Click to delete an entitlement.

### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

### USER PERMISSIONS

To view entitlement lists:

- “Read” on entitlements

To create entitlements:

- “Create” on entitlements

## Searching for Entitlements

1. Enter your search terms in the sidebar or header search box.
2. Click **Search**.
3. From the search results, click an item to open it or click **Edit**, if available.

You can also create an entitlements list view to find entitlements that match specific criteria.

SEE ALSO:

[Entitlement Management Overview](#)

## Creating Entitlements

Entitlements specify if a contact or account is eligible to receive customer support.

To create entitlements:

1. Click **New** on the Entitlements tab or **New Entitlement** from the Entitlements related list on accounts, assets, or service contracts.

Your administrator determines where you can create entitlements.

**Note:**

- To add existing entitlements to contacts, click **Add Entitlements** on the Entitlements related list.
- To add entitlement templates to products, click **Add Entitlement Template** on the Entitlement Templates related list.

You can't create new entitlements on contacts or products.

2. Enter the following details:

Field	Description
Account Name	The name of the account associated with the entitlement.
Asset Name	The name of the asset associated with the entitlement. Assets represent specific products purchased by customers.
Business Hours	The entitlement's supported <a href="#">business hours</a> . Business hours on a case take precedence over business hours on entitlements. Business hours on entitlements only add business hours to cases created from entitlements. For example, if you add an entitlement with business hours to a case that already has business hours, the entitlement's business hours are ignored.

### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

### USER PERMISSIONS

To view entitlements:

- "Read" on entitlements

### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

### USER PERMISSIONS

To create or clone entitlements:

- "Create" on entitlements

Field	Description
Per Incident	Lets you limit the number of cases the entitlement supports.
Cases Per Entitlement	The total number of cases the entitlement supports. This field is only available if <code>Per Incident</code> is selected.
Contract Line Item	The name of the contract line item (product) associated with the entitlement.
End Date	The last day the entitlement is in effect.
Entitlement Name	The entitlement's name. We recommend using a descriptive name , such as <i>Phone Support</i> . This helps users better understand entitlements when they see them on related lists for accounts, contacts, and assets.
Service Contract	The name of the service contract associated with the entitlement. To quickly find a service contract in the lookup dialog box, select criteria from the <code>Filter by</code> fields. Administrators can set lookup filters to restrict filter values and results.
Start Date	The first day the entitlement is in effect.
Entitlement Process	The entitlement process associated with the entitlement. Entitlement processes are timelines that include all of the steps (milestones) that your support team must complete to resolve cases. Each process includes the logic necessary to determine how to enforce the correct service level for your customers.
Remaining Cases	The number of cases the entitlement can support. This field decreases in value by one each time a case is created with the entitlement. This field is only available if <code>Per Incident</code> is selected.
Status	The entitlement's status. Status is determined by your organization's current system date and the entitlement's <code>Start Date</code> and <code>End Date</code> . The status is: <ul style="list-style-type: none"> <li>• Active if the system date is greater than or equal to the <code>Start Date</code> and less than or equal to the <code>End Date</code>.</li> <li>• Expired if the system date is greater than the <code>End Date</code>.</li> <li>• Inactive if the system date is less than the <code>Start Date</code>.</li> </ul>
Status Icon	Represents the entitlement's status by displaying one of the following icons: <ul style="list-style-type: none"> <li>•  Active</li> </ul>

Field	Description
	<ul style="list-style-type: none"> <li>•  Expired</li> <li>•  Inactive</li> </ul>
Type	The type of entitlement, such as Web or phone support. Administrators can customize this field's values.

### 3. Click **Save**.

**Tip:** Click **Clone** on an entitlement to quickly create a new entitlement from an existing one. This helps you create multiple entitlements for a customer.

#### USER PERMISSIONS

To delete entitlements:

- “Delete” on entitlements

## Using the Entitlements Related List

The Entitlement related list displays a list of entitlements that apply to accounts, contacts, assets, or service contracts. Entitlements help you determine if your customers are eligible for customer support. You can use entitlements to verify if you can create cases for a customer.

Administrators determine an Entitlements related list's availability and contents. The following options and information display by default:

### New Entitlement

Click this button to add a new entitlement to an account, contact, asset, or service contract.

### Action

The actions you can perform on the entitlement:

- Click **Create Case** to create a new case that automatically includes the correct entitlement, account, contact, or asset.
- Click **Edit** to change the entitlement.
- Click **Del** to remove the entitlement.

### Entitlement

The entitlement's name. Click to view the entitlement's details.

### Start Date

The first day the entitlement is in effect.

### End Date

The last day the entitlement is in effect.

### Status

The entitlement's status.

### SEE ALSO:

[Verifying Entitlements](#)

[Entitlement Management Overview](#)

[Cases](#)

### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

### USER PERMISSIONS

To view entitlements on accounts, contacts, assets, or service contracts:

- "Read" on accounts, contacts, assets, or service contracts

To edit entitlements on accounts, contacts, assets, or service contracts:

- "Edit" on accounts, contacts, assets, or service contracts

To create cases:

- "Create" on cases

To change entitlements:

- "Edit" on entitlements

## Using the Contacts Related List on Entitlements

The Contacts related list on entitlements displays a list of contacts eligible to receive customer support. Your company may not allow you to provide support to customers unless they're on this list.

Administrators determine the Contacts related list's availability and content. The following options and information display by default:

### Add

Click this button to add contact(s) to the entitlement.

To search for contacts, enter a name or part of a name in the text entry field and click **Go!**. Check the boxes next to the contacts you want to add to the entitlement and click **Insert Selected**. Click **Done** to add the selected people.

### Action

The actions you can perform on the contact:

- Click **Create Case** to create a new case that automatically includes the correct entitlement, account, contact, or asset.
- Click **Remove** to remove the contact from the entitlement.

### Contact Name

The contact's name. Click to view the contact's details.

### Added By

The name of the user who added the contact to the entitlement.

Accounts are parent records of contacts. The same visibility and sharing settings that apply to the parent account apply to contacts. Associating a contact to an entitlement doesn't share the entitlement record with the contact or the related portal or community user.

SEE ALSO:

[Entitlement Management Overview](#)

## Using the Milestones Related List on Entitlements

The Milestones related list on entitlements displays a list of milestones that apply to an entitlement. Milestones are required steps in your support process. They're metrics that represent service levels to provide to each of your customers. Examples of milestones include First Response and Resolution Times on cases.

Administrators determine the Milestones related list's availability and contents. The following information displays by default:

### Order

The order in which the milestone is processed if a case matches the criteria of more than one milestone in an entitlement process.

### Name

The milestone's name.

### Description

The milestone's description.

### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

### USER PERMISSIONS

To view contacts on entitlements:

- "Read" on entitlements
- AND

"Read" on contacts and "Read" on entitlement contacts

To create cases:

- "Create" on cases

To change entitlements:

- "Edit" on entitlements

### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

### USER PERMISSIONS

To view milestones on entitlements:

- "Read" on entitlements

**Criteria**

The criteria a case must meet for a milestone to apply to it. For example, *Priority equals High*.

**Minutes to Complete Milestone**

The amount of time to successfully complete the milestone. This field only displays the milestone's `Time Trigger (Minutes)`; it doesn't track whether the milestone status is complete or in violation on cases.

## SEE ALSO:

[Entitlement Management Overview](#)

## Entitlements Home

Clicking on the Entitlements tab displays the Entitlements home page.

- To show a filtered list of items, select a predefined list from the `view` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `view` drop-down list and click **Edit**.
- If your administrator has set up the console to include entitlements, click the Console tab to find, view, and edit entitlements and their associated records on one screen.
- In the **Recent Entitlements** section, select an item from the drop-down list to display a brief list of the top entitlements matching that criteria. From the list, you can click any entitlement name to go directly to the entitlement. Toggle the **Show 25 items** and **Show 10 items** links to change the number of items that display. The fields you see are determined by the Entitlements Tab search layout defined by your administrator and by field-level security settings. The Recent Entitlements choices are:

Recent Entitlements Choice	Description
<b>Recently Viewed</b>	The last ten or twenty-five entitlements you viewed, with the most recently viewed entitlement listed first. This list is derived from your recent items and includes records owned by you and other users.

- In the **Recent Entitlements** section, click **New** to create a new entitlement.
- In the **Reports** section, click **Go to Reports** to create customized reports that include entitlements.

## Service Contracts

### Displaying and Editing Service Contracts

#### Displaying Service Contracts

To view a service contract's details, click a service contract on the Service Contracts tab, list pages, or the Service Contracts related list on:

- Accounts
- Contacts

The Service Contracts related list shows all the service contracts associated with that item.

Your administrator determines where you can view service contracts.

#### Editing Service Contracts

To update a service contract, click **Edit**, change the fields, and click **Save**.

Use inline editing to edit fields directly on the detail page. If inline editing isn't enabled, contact your administrator.

#### Service Contracts Related Lists

The lower portion of a service contract displays its related information, including entitlements, contract line items, history, activities, notes, and attachments.

You can click:

- Items to display their details
- **Show [number] more** to increase the number of items in the list
- **Go to list** to display a page with the entire list.

#### Sharing

Click **Sharing** to share a service contract with other users, groups, or roles. See [Sharing Service Contracts](#) on page 2177.

#### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

#### USER PERMISSIONS

To view service contracts:

- "Read" on service contracts

To change service contracts:

- "Edit" on service contracts

## Printing Service Contracts

To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.

To create service contracts:

- “Create” on service contracts

## Searching for Service Contracts

1. Enter your search terms in the sidebar or header search box.
2. Click **Search**.
3. From the search results, click an item to open it or click **Edit**, if available.

You can also create a custom list view to find service contracts that match specific criteria.

SEE ALSO:

[Entitlement Management Overview](#)

## Creating Service Contracts

Service contracts are agreements between you and your customers for a type of customer support. Service contracts can represent different kinds of customer support, such as warranties, subscriptions, or service level agreements (SLAs).

To create service contracts:

1. Click **New** on the Service Contracts tab or **New Service Contract** from the Service Contracts related list on accounts or contacts.

Your administrator determines where you can create service contracts.

2. Enter the following details:

Field	Description
Account Name	The name of the account that purchased or owns the service contract.
Activation Date	The initial day the service contract went into effect (whereas <code>Start Date</code> may include a renewal date).
Approval Status	An approval process status field.
Billing City	City portion of billing address. Up to 40 characters are allowed in this field.
Billing Country	Country portion of billing address. Entry is selected from a picklist of standard values, or entered as text. Up to 80 characters are allowed if the field is a text field.
Billing State	State or province portion of billing address. Entry is selected from a picklist of standard

### EDITIONS

### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

### USER PERMISSIONS

To create or clone service contracts:

- "Create" on service contracts

Field	Description
	values, or entered as text. Up to 80 characters are allowed if the field is a text field.
Billing Zip	Zip or postal code portion of billing address. Up to 20 characters are allowed in this field.
Contact Name	Name of the contact associated with the service contract. Select from the drop-down list.
Contract Name	Name of the service contract.
Contract Number	Automatically-generated number identifying the service contract. (Read only)
Created By	User who created the service contract. (Read only)
Created Date	The date the service contract was created (whereas <b>Activation Date</b> is the initial day the service contract went into effect and <b>Start Date</b> may include a renewal date).
Currency	The currency for all amount fields in the service contract. Available only for organizations that use multiple currencies.  You can't change the currency on a service contract that has contract line items.
Description	Description of the service contract. Up to 32 KB of data are allowed in this field.
Discount	Weighted average of all contract line item discounts on the service contract. Can be any positive number up to 100. (Read only)
End Date	The last day the service contract is in effect.
Grand Total	Total price of the service contract plus shipping and taxes. (Read only)
Last Modified By	User who most recently changed the service contract. (Read only)
Line Items	Number of contract line items (products) on the service contract.
Service Contract Owner	Assigned owner of the service contract.
Shipping and Handling	Total shipping and handling costs for the service contract.
Shipping City	City portion of primary mailing or shipping address. Up to 40 characters are allowed in this field.
Shipping Country	Country portion of primary mailing or shipping address. Entry is selected from a picklist of standard values, or entered as text. Up to 80 characters are allowed if the field is a text field.

Field	Description
Shipping State	State or province portion of primary mailing or shipping address. Entry is selected from a picklist of standard values, or entered as text. Up to 80 characters are allowed if the field is a text field.
Shipping Street	Primary mailing or shipping street address of account. Up to 255 characters are allowed in this field.
Shipping Zip	Zip or postal code portion of primary mailing or shipping address. Up to 20 characters are allowed in this field.
Special Terms	Any terms that you have specifically agreed to and want to track in the service contract.
Start Date	The first day the service contract is in effect.
Status	<p>The status of the service contract.</p> <p>Status is determined by your organization's current system date and the service contract's <code>Start Date</code> and <code>End Date</code>. The status is:</p> <ul style="list-style-type: none"> <li>• Active if the system date is greater than or equal to the <code>Start Date</code> and less than or equal to the <code>End Date</code>.</li> <li>• Expired if the system date is greater than the <code>End Date</code>.</li> <li>• Inactive if the system date is less than the <code>Start Date</code>.</li> </ul>
Status Icon	<p>Represents the service contract's status by displaying one of the following icons:</p> <ul style="list-style-type: none"> <li>•  Active</li> <li>•  Expired</li> <li>•  Inactive</li> </ul>
Subtotal	Total of the service contract line items (products) before discounts, taxes, and shipping are applied. (Read only)
Tax	Total taxes for the service contract.
Term (months)	Number of months that the service contract is in effect.
Total Price	Total of the contract line items (products) after discounts and before taxes and shipping. (Read only)

3. Click **Save**.

-  **Tip:** Click **Clone** to quickly create a new service contract from the existing one. This helps you create multiple service contracts for a customer.

- [Entitlement Management Overview](#)
- [Searching for Service Contracts](#)

## Deleting Service Contracts

To delete a service contract, click **Del** next to the service contract on the service contract list page, or click **Delete** on the service contract detail page.

Deleting a service contract moves it to the Recycle Bin. Any notes, attachments, activities, or contract line items associated with the service contract are also deleted. If you undelete the service contract, any associated items are undeleted.

 **Note:**

- The **Del** link and **Delete** button only display for users with the “Delete” permission on service contracts.
- You can't delete service contracts with active or expired entitlements.

## SEE ALSO:

- [Entitlement Management Overview](#)
- [Searching for Service Contracts](#)

## Sharing Service Contracts

Your administrator sets the default sharing model for your organization. You can extend sharing to more users than the default set by your administrator. However, you can't make the sharing model more restrictive than the default.

To view and manage sharing details, click **Sharing** on a service contract's detail page. The Sharing Detail page lists the users, groups, roles, and territories that have sharing access to the service contract. On this page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the **view** drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the **view** drop-down list and click **Edit**.
- Click **Add** to grant access to the record for other users, groups, roles, or territories.
-  **Note:** Users must have the “Read” permission on service contracts for you to share service contracts with them.
- Click **Expand List** to view all users that have access to the record.

## EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

## USER PERMISSIONS

To delete service contracts:

- “Delete” on service contracts

## EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

## USER PERMISSIONS

To view service contracts:

- “Read” on service contracts

- For manual sharing rules that you created, click **Edit** or **Del** next to an item in the list to edit or delete the access level.

## Using the Service Contracts Related List on Accounts or Contacts

The Service Contracts related list displays a list of service contracts that apply to accounts or contacts. Service contracts are agreements between you and your customers for a type of customer support. Service contracts can represent different kinds of customer support, such as warranties, subscriptions, or service level agreements (SLAs).

Administrators determine the Service Contracts related list's availability and content. The following options and information display by default:

### New Service Contract

Click this button to create a new service contract for an account or contact.

### Action

The actions you can perform on the service contract:

- Click **Edit** to update a service contract.
- Click **Del** to delete a service contact.

### Contract Number

Automatically-generated number identifying the service contract.

### Start Date

The first day the service contract is in effect.

### End Date

The last day the service contract is in effect.

### Status

The status of the service contract.

SEE ALSO:

[Deleting Service Contracts](#)

### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

### USER PERMISSIONS

To view service contracts on accounts:

- "Read" on accounts

To view service contracts on contacts:

- "Read" on contacts

To create service contracts:

- "Create" on service contracts

To change service contracts:

- "Edit" on service contracts

## Service Contracts Home

Clicking on the Service Contracts tab displays the service contracts home page.

- To show a filtered list of items, select a predefined list from the `view` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `view` drop-down list and click **Edit**.
- If your administrator has set up the console to include service contracts, click the Console tab to find, view, and edit service contracts and their associated records on one screen. See [Displaying the Agent Console](#) on page 2278.
- In the **Recent Service Contracts** section, select an item from the drop-down list to display a brief list of the top service contracts matching that criteria. From the list, you can click the name of any service contract to go to it. Toggle the **Show 25 items** and **Show 10 items** links to change the number of items that display. The fields you see are determined by the Service Contracts Tab search layout defined by your administrator and by field-level security settings. The Recent Service Contract choices are:

Recent Service Contract Choice	Description
<b>Recently Viewed</b>	The last ten or twenty-five service contracts you viewed, with the most recently viewed service contract listed first. This list is derived from your recent items and includes records owned by you and other users.

- In the **Recent Service Contracts** section, click **New** to create a new service contract.
- In the **Reports** section, click **Go to Reports** to create customized reports that include service contracts.
- In the **Tools** section, click **Transfer Service Contracts** to transfer multiple service contracts from one user to another.

## Service Contract History

The Service Contract History related list tracks the changes on a service contract. Any time a user modifies any of the standard or custom fields, a new entry is added to the related list. All entries include the date, time, nature of the change, and who made the change. Modifications to the related list itself aren't tracked.

# Contract Line Items

## Displaying and Editing Contract Line Items

### Displaying Contract Line Items

To view a contract line item's details, click a service contract on the Service Contracts tab, list pages, or the Service Contracts related list on:

- Accounts
- Contacts

The Contract Line Items related list shows all the contract line items associated with a service contract.

Your administrator determines if contract line items display on service contracts.

### Editing Contract Line Items

To update a contract line item, click **Edit**, change the fields, and click **Save**.

### Contract Line Items Related Lists

The lower portion of a contract line item displays information related to it, including entitlements, history, activities, notes, and attachments.

You can click:

- Items to display their details
- **Show [number] more** to increase the number of items in the list
- **Go to list** to display a page with the entire list.

### Sharing

You can't share contract line items. Sharing for contract line items is inherited from [service contract sharing](#). For example, users with the "Read" permission on service contracts inherit the "Read" permission on contract line items.

### Printing Contract Line Items

To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions with the Service Cloud

### USER PERMISSIONS

To view contract line items:

- "Read" on contract line items

To change contract line items:

- "Edit" on contract line items

## Searching for Contract Line Items

1. Enter your search terms in the sidebar or header search box.
2. Click **Search**.
3. From the search results, click an item to open it or click **Edit**, if available.

 **Note:** You *can't* create contract line item list views to find contract line items that match specific criteria.

SEE ALSO:

[Entitlement Management Overview](#)

## Adding Contract Line Items

Contract line items are specific products covered by a service contract.

To add contract line items to a service contract:

1. Click **Add Line Item** in the Contract Line Items related list.
2. Select a price book if prompted. If only the standard price book is activated, it's automatically assigned to the service contract.
3. Select one or more products from the list, or search for a product and then click the product name.
4. Enter the attributes for each product. Your administrator may have customized this page to include fields specific to your business.
5. Enter the `Sales Price` for the product. The Sales Price defaults to the List Price specified in the price book assigned to the opportunity. Depending on your user permissions, you may be able to override this value. You might want to give a discount, for example.
6. Enter the number of products at this price in the `Quantity` box.
7. Click **Save**.

## Using the Contract Line Items Related List

The Contract Line Items related list displays a list of products covered by a service contract. Service contracts are agreements between you and your customers for a type of customer support. Service contracts can represent different kinds of customer support, such as warranties, subscriptions, or service level agreements (SLAs).

Administrators determine the Contract Line Item related list's availability and contents. The following options and information display by default:

### Add Line Item

Click this button to add a contract line item (product) to the service contract.

### Action

The actions you can perform on the contract line item:

- Click **Edit** to change the contract line item.
- Click **Del** to remove the contract line item.

### Line Item Number

Automatically-generated number that identifies the contract line item.

### Product Name

The product's name. Click to view the product's details.

### Start Date

The first day the service contract is in effect.

### End Date

The last day the service contract is in effect.

### Status

The status of the service contract.

### Asset Name

Name of the asset associated with the contract line item.

Products represent the items your company sells whereas assets represent the specific products your customers have purchased.

### Quantity

Number of units of the contract line item (product) included in the service contract.

### Sales Price

Price to use for the contract line item (product).

### SEE ALSO:

## Contract Line Item Fields

Here's a contract line item's fields. Some of these fields may not be visible or editable depending on your page layout and field-level security settings.

Field	Description
Asset Name	Name of the asset associated with the contract line item.  Products represent the items your company sells whereas assets represent the specific products your customers have purchased.
Created By	User who created the contract line item. (Read only)
Created Date	The date the contract line item was created.
Description	Description of the contract line item. Up to 32 KB of data are allowed in this field. Only the first 255 characters display in reports.
Discount	Discount you apply to the contact line item. You can enter a number with or without the percent symbol and you can use up to two decimal places.
End Date	The last day the contract line item is in effect.
Last Modified By	User who most recently changed the contract line item. (Read only)

### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

### USER PERMISSIONS

To view contract line items:

- "Read" on contract line items

To set up which fields are tracked:

- "Customize Application"

### EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

Field	Description
Line Item Number	Automatically-generated number that identifies the contract line item. (Read only)
List Price	Price of the contract line item (product) within the price book including currency. (Read only)
Product	The name of the contract line item (product) as listed in the price book.
Quantity	Number of units of the contract line item (product) included in the service contract. Value must be one or greater.
Sales Price	Price to use for the contract line item. Initially, the sale price for a contract line item (product) added to an opportunity or quote is the contract line item's list price from the price book, but you can change it here.
Service Contract	Name of the service contract associated with the contract line item.
Start Date	Start date of the contract line item.
Status	The status of the contract line item. Status is determined by your organization's current system date and the contract line item's <code>Start Date</code> and <code>End Date</code> . The status is: <ul style="list-style-type: none"> <li>• Active if the system date is greater than or equal to the <code>Start Date</code> and less than or equal to the <code>End Date</code>.</li> <li>• Expired if the system date is greater than the <code>End Date</code>.</li> <li>• Inactive if the system date is less than the <code>Start Date</code>.</li> </ul>
Status Icon	Represents the contract line item's status by displaying one of the following icons: <ul style="list-style-type: none"> <li>•  Active</li> <li>•  Expired</li> <li>•  Inactive</li> </ul>
Subtotal	Contract line item's sales price multiplied by the quantity.
Total Price	Contract line item's sales price multiplied by the quantity minus the discount.

# Accessing Knowledge

## Solutions

### Solutions Overview

A solution is a detailed description of a customer issue and the resolution of that issue. Solution managers, administrators, and users with the appropriate permissions can create, review, and categorize solutions. They can also publish solutions to the Self-Service portal and make solutions public.

The Solutions tab displays a home page that lets you quickly locate and manage solutions. If your organization uses solution categories, you can browse for and find solutions by category. You can also sort and filter solutions using standard and custom list views.

Administrators, and users with the “Import Solutions” permission, can import solutions.

 **Note:** By default, solutions are created and displayed in text format. Administrators can enable HTML solutions so that all solutions are displayed in HTML format and created using an HTML editor.

#### SEE ALSO:

[Solutions Home](#)

[Tips on Writing Solutions](#)

[HTML Solutions Overview](#)

[Tip sheet: Tips & Hints for Solutions](#)

### Searching for Solutions

You can find solutions by:

- Searching from the Cases Tab
- Searching from the Solutions Tab
- Browsing for Solutions
- Searching Using Global Search
- Create Custom List Views in Salesforce Classic

When you search for solutions, all standard text fields on solutions are searched, as well as the following custom field types:

- Auto-number
- Text
- Text area
- Long text area
- Email
- Phone

#### EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

#### EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

#### USER PERMISSIONS

To view solutions:

- “Read” on solutions

- Any field set as an external ID

Be aware of these behaviors in solution searches:

- Solution Search returns solutions that include all or any of your keywords. For example, searching for *data loader* may return results with just *data*, just *loader*, or both keywords in any order. Items that include more of your keywords are listed higher in results, and items that contain your keywords as a phrase or near each other are also listed higher.
- Solution Search can stem—or find variants of your search terms. For example, searching for *creating* finds solutions containing *create*, *created*, and *creating*.

 **Note:** This behavior applies only to the type of word you search for: a search for a noun matches variants of the noun form, a search for a verb matches variants of the verb form, and so on.

- You can use search wildcards and operators to improve your Solution Search results.
- If any search terms match words in a solution title, the solution is boosted in the search results.
- The numbers displayed in parentheses and brackets alongside search results indicate the number of matching solutions found. For example, if you search for *Truck* and *Truck (35)* displays, then your organization has 35 solutions with the term *Truck*.

## Searching from the Cases Tab

1. On a case detail page in the Solutions related list, enter keywords related to a possible solution in the search box. You can use search wildcards and operators in your query.
2. If your organization uses categories, select a category in which to search.
3. Click **Find Solution**. The search returns a list of relevant solutions.
  - Click column headings to sort the results in ascending or descending order.
    - Sorting applies across all search results for a particular object, including those on subsequent pages.
    - You can't click on column headings for multi-select picklist fields because you can't sort the multi-select picklist field type.
  - If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently.
  - If solution summaries and inline category breadcrumbs are enabled for your organization, search results display up to 150 characters of the solution details and up to 150 characters of the category trail to which the solution belongs.
  - Note that if HTML Solutions is enabled, all tags and images are removed from solution details.
  - If [suggested solutions](#) is enabled, click **View Suggested Solutions** to view relevant solutions using a formula that automatically scores the relevancy of each solution to the particular case via word frequency, word proximity, case similarity, and related solutions.
4. If search results filters are enabled for your organization, you can filter the search results. Click the **Show Filters** link in the appropriate results related list, enter the filter criteria, and click **Apply Filters**.

## Searching from the Solutions Tab

1. On the Solutions tab, enter keywords related to a possible solution in the search box at the top of the page. You can use search wildcards and operators in your query.
2. If your organization uses categories, select a category in which to search.
3. Click **Find Solution**. The search returns a list of matching records.
 

Click column headings to sort the results in ascending or descending order.

 **Note:** Sorting applies across all search results for a particular object, including those on subsequent pages. You can't click on column headings for multi-select picklist fields because you can't sort the multi-select picklist field type.

If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently. If solution summaries and inline category breadcrumbs are enabled for your organization, search results display up to 150 characters of the solution details and up to 150 characters of the category trail to which the solution belongs. Note that if HTML Solutions is enabled, all tags and images are removed from solution details.

4. If search results filters are enabled for your organization, you can filter the search results. Click the **Show Filters** link in the appropriate results related list, enter the filter criteria, and click **Apply Filters**.
5. From the list, select a record to jump directly to that record. If you do not find a matching record, browse for a relevant solution using categories.

The fields you see in search results are determined by the search layout defined by your administrator and by your field-level security settings (available in Enterprise, Unlimited, Performance, and Developer Editions only).

## Browsing for Solutions

1. In the Browse Solutions section of the Solutions tab, click a solution category to view a list of solutions in that category and its subcategories.
2. Optionally, use the drop-down list to sort the solutions by category, most commonly used, or recently updated.
3. Select a record from the results to jump directly to that record.

## Searching Using Global Search

1. Enter your search terms in the header search box.  
You can use search wildcards and operators in your query.
2. Select **Search Options...** from the drop-down and select `Solutions` to narrow your search results.
3. Click **Search**.

## Displaying and Selecting Solutions

### USER PERMISSIONS

To view solutions:	"Read" on solutions
To attach a solution to a case:	"Read" on solutions and cases AND "Edit" on cases
To change unpublished solutions:	"Edit" on solutions

### EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

To delete unpublished solutions:	“Delete” on solutions
To change published solutions:	“Manage Published Solutions”
To delete published solutions:	“Manage Published Solutions”

### Displaying Solutions

When you have located a solution, either by searching from a case or from the solutions home or list pages, click the solution title to display detailed information. If hover details are enabled, hover over any lookup field on the detail page to view key information about a record before clicking into that record’s detail page.

### Viewing Solution Updates and Comments (Chatter)

Display a Chatter feed of updates, comments, and posts about the solution.

### Selecting Solutions

To attach the solution to your case, click **Select** from the solution detail page or the search results list. The solution is automatically added to the case. The **Select** option is available only if you searched for a solution from within a case, or you searched for solutions to add to your Self-Service portal Home page.

### Editing and Deleting Unpublished Solutions

Users with the “Edit” permission on solutions can update unpublished solutions by clicking **Edit**, changing the necessary fields, and then clicking **Save**. To delete an unpublished solution, a user with the “Delete” permission on solutions can click the **Delete** button.

**Note:** If HTML Solutions is enabled for your organization, and you open a text solution with the HTML editor and save it, the solution will become an HTML solution.

### Editing and Deleting Published Solutions

The ability to edit and delete published solutions is restricted to users who have the “Managed Published Solutions” permission, such as solution managers and administrators.

**Note:** Translated solutions inherit the record type of the master solution from which they are translated. You cannot change the record type of translated solutions.

### Solution Related Lists

Below the solution details is information related to the solution, including a history of changes to the solution, open and closed activities, attachments, related cases, translated solutions, and the categories to which the solution belongs. The related lists you see are determined by your personal customization, and by any customization your administrator has made to page layouts or your permissions to view related data.

**Note:** The size limit for a file attached to a solution is 5 MB. You cannot upload solution attachments with the following file extensions: htm, html, htt, htx, mhtm, mhtml, shtm, shtml, acgi.

Hover over the links at the top of a detail page to display the corresponding related list and its records. If Chatter is enabled, hover links display below the feed. An interactive overlay allows you to quickly view and manage the related list items. Click a hover link to jump to the content of the related list. If hover links are not enabled, contact your Salesforce administrator.

### Printing Solutions

To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.

**Note:** If HTML solutions is enabled for your organization, any HTML formatting applied in your solution details will appear in the Printable View.

To return to the last list page you viewed, click **Back to list** at the top of the solution detail page. If your organization has enabled collapsible page sections, use the arrow icons next to the section headings to expand or collapse each section on the detail page.

SEE ALSO:

- [Solution History](#)
- [Solution Fields](#)

To view solution lists:

- "Read" on solutions

To create solutions:

- "Create" on solutions

To change solutions:

- "Edit" on solutions

To delete solutions:

- "Delete" on solutions

## Creating Solutions

You can create a new solution in the following ways:

- Create a new solution from the sidebar or Solutions tab:

1. Select **Solution** from the Create New drop-down list in the sidebar, or click **New** next to **Recent Solutions** on the solutions home page.

If multilingual solutions is enabled for your organization, you can create a translated solution by clicking **New** on the Translated Solutions related list of the master solution you want to translate. Translated solutions inherit the record type of the master solution from which they are translated. You cannot change the record type of translated solutions.

2. If multilingual solutions is enabled for your organization, select the language for the solution from the `Language` picklist.

The languages available are the languages supported by Salesforce. The `Language` picklist excludes languages already used in the master solution or in other translated solutions associated with the master solution.

3. Enter the solution title, details, and any other information.

**Tip:** In solution searches, if any search terms match words in a solution title, the solution is boosted in the search results. Thus, it's a good idea to write a solution title with relevant words that users are likely to use in searches.

If HTML Solutions is enabled for your organization, you can enter solution details in an HTML editor. The HTML editor allows you to use a toolbar to insert images and format the text and paragraphs in your solution.

4. If Spell Checker is enabled for your organization, click **Check Spelling** to spell-check the solution. Spell Checker only checks the details of a solution, not the title.

For organizations with multilingual solutions, spelling is checked in the language you selected from the `Language` picklist. Spell Checker does not support all the languages that Salesforce supports. For example, Spell Checker doesn't support Thai, Russian, and double-byte languages, such as Japanese, Korean, or Chinese.

5. Click **Save**.

**Note:** Images in HTML solution details will not show up in list views and reports.

- Create a new solution while closing a case:

1. Choose **Close Case** on a case detail page, or click **Save & Close** while editing a case.
2. Enter the title and details under **Solution Information**, and check `Submit to knowledge base` to submit the solution for review by your solution managers.
3. Click **Save**.

## Tips on Writing Solutions

To assist users in solving their cases, it is important to write good solutions. Review the guidelines below, and also see the [Tips & Hints for Solutions](#) document.

### Reusable

- Include all facts and symptoms of the problem.
- Include any necessary analysis or troubleshooting ideas.
- Include a concise, accurate description of the cause and resolution of the problem.
- Include only one cause and one resolution per solution. If there are a number of steps to the resolution, number each step and put it on a separate line.
- Make sure the text is clear and in the language of the intended audience—both customer support users and your customers.
- Make sure the title properly describes the problem or question.
- Associate as many relevant solutions to a particular case as possible to increase the usefulness of the suggested solutions feature. Suggested solutions are found using a formula that automatically scores the relevancy of each solution to a particular case via the number of times the solution is related to similar cases.

**Note:** Use a consistent format to ensure that all solutions are reusable. You can determine the best format for your organization, but make sure each solution contains a title, the symptoms of the problem, the cause of the problem, and the resolution to the problem.

### Findable

- Make sure the solution can be found by multiple troubleshooting paths and by different people who will describe problems in different ways.
- Make sure the solution is unique and can exist as a discrete piece of knowledge.
- Make sure the solution is meaningful to your organization and is worth sharing with your customers.
- Make sure the solution includes words that customers use so that when they log their own cases via the Self-Service Portal or the Customer Portal, the suggested solutions feature can return useful results based on word frequency. For example, if customers use the word “hub” for “router,” include “hub” in the solution to increase the likelihood of it being returned in the results of suggested solutions.

**Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

### Technically Accurate

- Make sure the solution is accurate and up-to-date.
- Make sure the level of technical detail is appropriate for the intended audience.

## Sample Solution

This example provides a clear solution to a specific problem.

```
How do I change an account's billing information?
```

```
Problem-Users aren't sure how to change an account's billing information, such as the credit card number or payment type.
```

```
Solution-Change billing information in the active contract on the account.
```

- ```
1. Open an account by clicking its name on the Accounts home page or an Accounts related list.  
2. Scroll to the Contracts related list and click Edit next to the active contract on the
```

```
account.
3. Enter the correct billing information.
4. Click Save.
```

SEE ALSO:

[Creating Solutions](#)

Reviewing Solutions

Solution managers, administrators, and users with the “Edit” permission on solutions can review existing solutions. Solution managers, administrators, and users with the “Manage Published Solutions” can publish solutions.

1. Click **Edit** on the solution detail page.
2. Edit the necessary information, and change the `Status` to Reviewed.
3. Check `Visible in Self-Service Portal` to make the solution available in your organization’s customer Self-Service portal and Salesforce Customer Portal.

 **Note:** The `Status` picklist field on a solution does not need to be set to Reviewed for a solution to be visible in the Customer Portal; a solution is visible in the Customer Portal if the `Visible in Self-Service Portal` checkbox is selected on a solution.

4. Optionally, check `Visible in Public Knowledge Base` to also make the solution available to users accessing public solutions.

This field only applies to solutions, not articles in the [public knowledge base](#).

5. Click **Save**.

For organizations with multilingual solutions, if you modify a master solution that has translated solutions, the Translated Solutions Status page displays. From there, you can adjust the statuses of translated solutions and notify users to update those translations.

USER PERMISSIONS

To review solutions:

- “Edit” on solutions

To publish solutions:

- “Manage Published Solutions”

Deleting Solutions

To delete a solution, click **Del** next to the solution on the solutions list page, or click **Delete** on the solutions detail page. The **Del** link is displayed only for solution managers, administrators, and users with the “Manage Published Solutions” or “Delete” permission on solutions.

When you delete a solution, all related history and attachments are also deleted. The solution is moved to the Recycle Bin. Associated cases are not deleted with the solution, but the case associations are removed and are not restored if you later undelete the solution.

For organizations with multilingual solutions enabled:

- Deleting a master solution does not delete the translated solutions associated with it. Instead, each translated solution becomes a master solution.
- Deleting a translated solution removes the association with its master solution.
- Undeleting a master or translated solution from the Recycle Bin does not restore its associations with other master or translated solutions. You can manually restore the associations by modifying the `Master Solution` lookup field on the edit page of translated solutions.
- After deleting a translated solution, you can create a new translated solution in the same language. However, you will not be able to undelete the original translated solution from the Recycle Bin until you delete the second translated solution.

SEE ALSO:

[Solutions Overview](#)

Categorizing Solutions

Use solution categories to group similar solutions together. Each solution can belong to more than one category. Once your solutions are categorized, you can browse for and find solutions by category from the Solutions tab or when solving a case. Customers can also browse published solutions by category in public solutions, the Self-Service portal, and the Customer Portal.

Administrators, and users with the “Manage Categories” permission, can categorize solutions prior to enabling solution categories for the entire organization. Once solution category browsing is enabled, all users with the appropriate permissions can categorize solutions.

If multilingual solutions is enabled for your organization, translated solutions inherit solution categories from their master solutions. The categories on a translated solution are synchronized with the categories on the master solution. To modify a translated solution's categories, you have to modify the categories of its master solution.

1. View the solution you want to categorize.
2. Click **Select Categories** in the Solution Categories related list.
This related list is not visible unless your administrator has defined and enabled categories.
3. In the solution category hierarchy, click **Select** to add a category to the solution. Repeat until you have added all applicable categories.

We recommend that you limit the number of categories to which a solution belongs. If you put solutions into only the most relevant categories, they will be easier for users and customers to find.

If necessary, click **Deselect** to remove a category from the solution.

Setting Multilingual Solution Statuses

After you modify a master solution, you can adjust the statuses of each translated solution associated with it and notify users to update those translations, if necessary:

1. Choose a status for the translated solution from the `Status` picklist. For example, Draft, Reviewed, or Duplicate. The picklist values available for you to choose from are set by your administrator.
2. Select the `Out of Date` checkbox to indicate that the master solution has been updated and that the translated solution may need translating. The translated solution will be marked `Out of Date` on the Translated Solution related list of the master solution.
3. Select the `Send Notification` checkbox if you want the last active user who created or modified the solution to receive an email notifying them that the master solution has been updated and that the translated solution may need translating.

The user displayed in the `Notification Recipient` column will receive the email. Email notices are system-generated and cannot be modified. The email notification is in the language of the notification recipient.

4. Click **Save**.

Solutions Home

Clicking on the Solutions tab displays the solutions home page.

- Under **Find Solutions**, enter keywords to search for a solution. If your organization uses categories, optionally select a category in which to search. If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently.
- In the **Browse Solutions** section, click a category name to view a list of solutions in that category and its subcategories.
- To show a filtered list of items, select a predefined list from the `view` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `view` drop-down list and click **Edit**.
- In the **Recent Solutions** section, select an item from the drop-down list to display a brief list of the top solutions matching that criteria. From the list, you can click any solution name to go directly to the solution detail. Toggle the **Show 25 items** and **Show 10 items** links to change the number of items that display. The fields you see are determined by the “Solutions Tab” search layout defined by your administrator and by your field-level security settings (available in Enterprise, Unlimited, Performance, and Developer Editions only). The Recent Solutions choices are:

| Recent Solutions Choice | Description |
|-------------------------|---|
| Recently Viewed | The last ten or twenty-five solutions you viewed, with the most recently viewed solution listed first. This list is derived from your recent items and includes records owned by you and other users. |

- In the **Recent Solutions** section, click **New** to create a solution.
- Under **Reports**, click any report name to display that report. The Solution List report allows you to report on any solution field.

What is a solution manager?

A solution manager can edit, delete, and make solutions visible in the Self-Service Portal and Customer Portal and visible in public solutions. Typically, these individuals are product experts with excellent written communication skills and advanced knowledge in a particular area of your product. To designate one or more users as solution managers, your administrator can assign those users to the Solution Manager profile when creating or editing the users' personal information.

SEE ALSO:

[Solutions FAQ](#)

Why are solutions used?

Solutions provide a quick means to identify and resolve a customer issue. By capturing customer issues and structuring findable, reusable solutions, your customer support team can leverage existing knowledge to provide answers to issues that have been solved previously, increasing customer satisfaction and your team's productivity.

SEE ALSO:

[Solutions FAQ](#)

What is the difference between a solution and a FAQ?

A FAQ serves mostly as a useful tip for how the product or service is supposed to work. Solutions answer customer questions when the product or service is not working as expected. Because customers' expectations may not always be accurate, a solution may describe how the product or service is supposed to work (very similar to a FAQ), help troubleshoot a problem, or provide a work-around to a bug or product limitation.

SEE ALSO:

[Solutions FAQ](#)

How can I write good solutions?

A good solution is reusable, easy to find, and technically accurate. For more information, download [Tips & Hints for Solutions](#).

SEE ALSO:

[Solutions FAQ](#)

What should I look for when I review solutions?

Solution managers can use these guidelines when reviewing solutions:

1. **Structure:** The solution should include a clear title, the symptom(s), cause, and resolution.
2. **Language:** The solution should be clear and easy to read in the language of the customer.
3. **No Customer-Specific Information:** Solutions should never contain customer-specific information.
4. **Technically Accurate:** The solution should accurately and effectively solve the problem posed by the customer.
5. **Professional:** Check for spelling and correct sentence structure.
6. **Sensitivity:** The solution should not contain any confidential or proprietary information that you wouldn't want a competitor to read.

SEE ALSO:

[Solutions FAQ](#)

What are the Visible in Self-Service Portal and Visible in Public Knowledge Base checkboxes on a solution?

The `Visible in Self-Service Portal` and `Visible in Public Knowledge Base` checkboxes, when selected, indicate that a solution is available for external use on your organization's Self-Service Portal and Customer Portal and public solutions. Solutions available for external use are regarded as published.

Visible in Public Knowledge Base only applies to solutions, not articles in the [public knowledge base](#).

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

[Solutions FAQ](#)

Salesforce Knowledge

Salesforce Knowledge Overview

Salesforce Knowledge is a knowledge base where users can easily create and manage content, known as articles, and quickly find and view the articles they need. After you [set up Salesforce Knowledge](#) in your organization, users can write, edit, publish, and archive articles using the Articles Management tab or find and view published articles using the Articles tab. Customers and partners can access articles if Salesforce Knowledge is enabled in the Customer Portal or partner portal. You can also create a public knowledge base so website visitors can view articles.

Salesforce Knowledge provides the following features and tasks to help you efficiently manage your knowledge base and its users:

Using Article Types

Article types are custom containers for your articles. Every article belongs to a type that determines its content and structure. Administrators define article types by creating custom fields to capture article data, grouping or reorganizing the fields as needed on the layout, and choosing an article-type template. The article-type template determines how the layout appears

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

to viewers of the published article, and administrators can choose unique templates for different audiences and article types. Salesforce provides two standard article-type templates, Tab and Table of Contents, and you can use Visualforce to create custom templates.

Categorizing Articles

Data categories classify articles in Salesforce Knowledge. This classification helps users find articles and allows administrators to control article visibility. After data categories have been set up, [article managers](#) can assign the relevant categories to draft articles. When end users are searching for published articles in any channel—Internal App, Customer, Partner, or Public Knowledge Base—they can use the categories to help locate information. If your organization uses a role hierarchy, access to data categories is determined by the user's role.

Managing Articles

On the Article Management tab, article managers can create new articles as well as find and manage existing articles in any phase of the knowledge life cycle:

1. Create and save a new article.
2. Reassign the article to an editor, translator, reviewer, or any other collaborator as needed. That person can reassign the article as many times as necessary until the content is ready for publication. If an approval process is set up for the article type, you or the person you reassign to submits the article for approval. The article is routed to the appropriate approver or set of approvers, who either approve or reject it.
3. [Publish](#) the completed draft to one or more channels, depending on the audiences you've configured: the Articles tab in your Salesforce organization, a customer portal, a partner portal, or a public knowledge base. You can schedule the article to be published on a future date.
4. Update the article as needed. When modifying a published article, you can either remove it from publication so that the original is no longer visible to users, or leave the original published and work on a copy until you're ready to replace the original with your update.
5. [Archive](#) the article when it is obsolete to remove it from publication. As with publishing an article, you can archive immediately or on a future date.
6. Delete the article as needed, or turn it into a draft and begin a new publishing cycle.

Creating Articles

Authors create articles by selecting an article type, writing content, assigning categories, and choosing one or more channels. Depending on the article type, several fields may be available for different types of data.

Supporting Multiple Languages

With multiple languages for Salesforce Knowledge you can lower support costs by translating articles into the languages your audience prefers. After an administrator [selects your language settings](#), two translation methods are available: translating articles in-house using the editing tool in the knowledge base, or sending articles to a localization vendor. Different languages can use different methods. For example, you may want to export articles to a vendor for French translations, but assign articles to a Salesforce Knowledge user for Spanish translations.

Using Articles to Solve Cases

Salesforce Knowledge and cases combine to provide a powerful customer support tool. To search the knowledge base directly from a case and attach related articles to the case for convenient reference, add the Articles related list to case page layouts. When closing a case, support agents can easily create a new article to capture important information and help solve future cases more quickly.

Searching for Articles

Finding articles in Salesforce Knowledge is quick and easy. Enter a search term on the Articles tab to initiate a full-text search of the knowledge base and narrow your search by selecting specific article types and categories. When the beta version of search spell correction is enabled, the system searches and retrieves alternate spellings for English search terms. You can filter search results by language, validation status, and category and sort the list view according to several criteria such as highest-rated or most-viewed. On the Article Management tab you can search for a specific article within the chosen list view. The Article Search component allows you to search for articles from the Home tab.

Rating Articles

Internal app, Customer Portal, and partner portal users can rate articles on a scale of 1 to 5 stars and view the average rating for an article. Average ratings are not static. Every 15 days, if an article has not received a new vote, its average moves up or down according to a half-life calculation. This change ensures that over time, older or outdated articles don't maintain artificially high or low ratings compared to newer, more frequently used articles. Articles without recent votes trend towards an average rating of 3 stars. The Articles tab also allows users to compare the ratings for different articles and sort the list view according to highest or lowest rated articles.

Note: Articles with no votes have the same average rating as articles with 3 stars.

SEE ALSO:

[Salesforce Knowledge Terminology](#)

Salesforce Knowledge Terminology

The following terms are used when describing Salesforce Knowledge features and functionality.

Archived Article

Archived articles were published but later removed from public visibility. Article managers can view and manage archived articles on the Article Management tab by clicking the **Articles** tab in the View area and choosing **Archived Articles**. Archived articles are not visible in the Articles tab (in any channel) or the public knowledge base. Articles can be archived manually or automatically via an expiration date.

Article

Articles capture information about your company's products and services that you want to make available in your knowledge base.

Article Manager

Salesforce uses the term *article manager* to represent a specific type of user. Article managers can access the Article Management tab to create, edit, assign, publish, archive, and delete articles. Article managers are sometimes referred to as knowledge managers. Article managers require the "Manage Articles" user permission. The Article Management tab is not visible to users without "Manage Articles."

Article Type

All articles in Salesforce Knowledge are assigned to an *article type*. An article's type determines the type of content it contains, its appearance, and which users can access it. For example, a simple FAQ article type might have two custom fields, `QUESTION` and `ANSWER`, where article managers enter data when creating or updating FAQ articles. A more complex article type may require dozens of fields organized into several sections. Using layouts and templates, administrators can structure the article type in the most effective way for its particular content. User access to article types is controlled by permissions. For each article type, an administrator can grant "Create," "Read," "Edit," or "Delete" permissions to users. For example, the article manager might want to allow internal users to read, create, and edit FAQ article types, but let partner users only read FAQs.

Article-Type Layout

An *article-type layout* enables administrators to create sections that organize the fields on an article, as well as choose which fields users can view and edit. One layout is available per article type. Administrators modify the layout from the article-type detail page.

Article-Type Template

An *article-type template* specifies how the sections in the article-type layout are rendered. An article type can have a different template for each of its four channels. For example, if the Customer Portal channel on the FAQ article-type is assigned to the Tab template, the sections in the FAQ's layout appear as tabs when customers view an FAQ article. For the Table of Contents template, the sections

EDITIONS

Available in: **Salesforce Classic**

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

defined in the layout appear on a single page (with hyperlinks) when the article is viewed. Salesforce provides two standard article-type templates, Tab and Table of Contents. Custom templates can be created with Visualforce.

Category Group for Articles

In Salesforce Knowledge, a *category group* organizes data categories into a logical hierarchy. For example, to classify articles by sales regions and business units, create two category groups, Sales Regions and Business Units. The Sales Regions category group could consist of a geographical hierarchy, such as All Sales Regions as the top level, North America, Europe, and Asia at the second level, and so on up to five levels. When creating articles, authors assign the relevant categories to the article. End users searching for articles can search and filter by category.

Channel

A channel refers to the medium by which an article is available. Salesforce Knowledge offers four channels where you can make articles available.

- Internal App: Salesforce users can access articles in the Articles tab depending on their role visibility.
- Customer: Customers can access articles if the Articles tab is available in a community or Customer Portal. Customer users inherit the role visibility of the manager on the account. In a community, the article is only available to users with Customer Community or Customer Community Plus licenses.
- Partner: Partners can access articles if the Articles tab is available in a community or partner portal. Partner users inherit the role visibility of the manager on the account. In a community, the article is only available to users with Partner Community licenses.
- Public Knowledge Base: Articles can be made available to anonymous users by creating a public knowledge base using the *Sample Public Knowledge Base for Salesforce Knowledge* app from the AppExchange. Creating a public knowledge base requires Sites and Visualforce.
- Your own website. Articles can be made available to users through your company website.

Data Category for Articles

In Salesforce Knowledge, *data categories* are a set of criteria organized hierarchically into category groups. Articles in the knowledge base can be classified according to multiple categories that make it easy for users to find the articles they need. For example, to classify articles by sales regions and business units, create two category groups, Sales Regions and Business Units. The Sales Regions category group could consist of a geographical hierarchy, such as All Sales Regions as the top level, North America, Europe, and Asia at the second level, and so on up to five levels. Authors assign categories to articles. Administrators can use data categories to control access to articles.

Draft Article

Draft articles are in-progress articles that have not been published, which means they are not visible on the Articles tab (in any channel) or in a public knowledge base. Article managers can access draft articles on the Article Management tab by clicking the **Articles** tab in the View area and choosing **Draft Articles**. You can filter draft articles by those assigned to you or those assigned to anyone (all draft articles for your organization). Draft articles can be assigned to any user involved in the editorial work.

Draft Translation

Draft translations are in-progress translations of articles into multiple languages. They have not been published, which means they are not visible on the Articles tab (in any channel) or in a public knowledge base. Article managers can access draft translations on the Articles Management tab by clicking the **Translations** tab in the View area and choosing **Draft Translations**. You can filter draft translations by those assigned to you, those assigned to a translation queue, or those assigned to anyone (all draft translations in your organization). Translations can be assigned to any user who can publish Salesforce Knowledge articles.

Knowledge Agent

Salesforce uses the term *knowledge agent* to represent a specific type of user. Knowledge agents are article consumers in the internal Salesforce Knowledge app. These users can access the Articles tab to search for and view articles, but they cannot create, edit, or manage articles.

Published Article

Published articles are available on the Articles tab in the internal app and, if applicable, in the Customer Portal, partner portal, and public knowledge base. To remove a published article, you can archive it or change its status to "draft" on the Article Management

tab. To access published articles on the Articles Management tab, click the **Articles** tab in the View area and choose **Published Articles**.

Published Translation

Published translations are articles translated into multiple languages that are available on the Articles tab in the internal app and, if applicable, in the Customer Portal, partner portal, and public knowledge base. To remove a published translation, you can archive it or change its status to “draft” on the Article Management tab. To access published translations on the Articles Management tab, click the **Translations** tab in the View area and choose **Published Translations**.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

Use federated search to search all your resources at once.

To search Salesforce Knowledge and your external data sources:

1. Enter your search terms in the Search box.

You can use search wildcards and operators in your search terms. If your organization has any auto-complete options enabled, you can select from the suggestions.

 **Note:** In the auto-complete drop-down article titles have a paper icon while the keywords have a magnifying glass icon.

2. Click the search icon or press *Enter* on your keyboard.
3. Optionally, select filters to refine your search results.

Depending on the source you are searching, filter by language, data category, article status, article type, and article validation. Click **Reset** to return all filters to their default setting.

- When **All** is selected, you can filter by language and data category, depending on what your organization supports.
 - When **Articles** or **My Draft** is selected you can filter by:
 - Article status: Published, Draft, and Draft Translations
 - Language: Values depend on those supported in your organization
 - Data categories: Values depend on those created in your organization
 - Article type: Values depend on those created in your organization
 - Validation Status: No Filter (all articles), Not Validated (articles that are not validated), Validated (validated articles), and any other values supported in your organization such as in review.
 - When an external source is selected, there are no filters and the general article information displayed is controlled by your external object search layout.
4. For articles, you can sort by:
 - Published Date
 - Best Rating
 - Most Viewed
 - Title: A to Z
 - Title: Z to A
 5. View information by clicking on the article or external source title. Below the title you can find general article information such as: new article indication, article number, article type, validation status, last published date, article view comparison, and article rating comparison.
 6. Use the drop-down by each article to follow or unfollow, [edit](#), [publish](#), and [delete](#) an article, depending on your permissions.

Searching for Articles

- [Searching for Articles in the Articles Tab](#)
- [Searching for Articles in the Article Management Tab](#)
- [Searching for Articles from Cases](#)
- [Searching for Articles Using Global Search](#)

Searching for Articles in the Articles Tab

By default the Articles tab displays articles that were created or modified during the last 30 days. To find an article, use the search tools in the sidebar. When the beta version of search spell correction is enabled, the system suggests an alternative search term if it can't find the original search term in the English dictionary. Click the link for the search term you want and you'll see the results for that term.

1. Enter your search terms in the Search box. You can use search wildcards and operators in your search terms.

 **Note:** If you click **Go** without entering a search term or selecting an article type, validation status, or category, your search results contain articles that were created or modified in the last 30 days. An empty search does not return all published articles in the knowledge base.

2. Optionally, select one or more [article types](#) that you want to search for.
3. Click **Go**.
4. Optionally, [select filters](#) to refine your search results.

 **Tip:** If your Home tab includes an article search component, you can also search for articles from the Home tab. Enter your search terms in the `Find Articles` field.

Searching for Articles in the Article Management Tab

On the Article Management tab you can view articles in any phase of the publishing life cycle and then search for a specific article within the chosen list view. The default list view on the Article Management tab contains draft (unpublished) articles that are assigned to you. When the beta version of search spell correction is enabled, the system searches and retrieves alternate spellings for English search terms.

To find an article, use the search tools in the View area.

1. Click the `Articles` tab.
2. Choose **Draft Articles**, **Published Articles**, or **Archived Articles**. You can filter draft articles by those assigned to you or those assign to anyone (all draft articles for your organization).
3. Optionally, enter your search terms in the `Find in View` box. You can use search wildcards and operators in your search terms. `Find in View` is not supported for archived articles. Click **Go**.
4. Click **Go**.
5. Optionally, [select filters](#) to refine your search results.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To view published articles in the Articles tab or Articles related list:

- "Read" on the article type

To view draft, published, or archived articles in the Article Management tab:

- "Manage Articles"

AND

"Read" on the article type

Searching for Translations in the Article Management Tab

On the Article Management tab you can view translations in any phase of the article translation cycle and then search for a specific translation within the chosen list view.

To find an article, use the search tools in the View area:

1. Click **Translations**.
2. Choose **Draft Translations** or **Published Translations**. You can filter draft translations by those assigned to you, those assigned to a translation queue, or those assigned to anyone (all draft translations in your organization).
3. Optionally, enter your search terms in the **Find in View** box. You can use search wildcards and operators in your search terms. **Find in View** is not supported for archived articles. Click **Go**.
4. Click **Go**.
5. Optionally, [select filters](#) to refine your search results.

Searching for Articles from Cases

Use the Articles related list on the case detail page to search for [Salesforce Knowledge articles](#) that may help you solve the case. If you find relevant articles, you can attach them to the case, where they are easily accessible for the life of the record or until detached or deleted. If your organization translates articles, you can add a translated version of an article to a case.

If you don't find a solution in the suggested articles, you can [create an article](#) by clicking **New**. When the beta version of search spell correction is enabled, the system searches and retrieves alternate spellings for English search terms.

1. On the case detail page, click **Find Articles** from the Articles related list. The case subject is used automatically as a search term to provide an initial list of search results.
2. In the sidebar of the Articles page, narrow your search results by article type or category.
3. Optionally, [select filters](#) to refine your search results.
4. When you find an article that's relevant to the case, select the article's checkbox and then click **Attach to Case** or **Attach and Go to Case**.

 **Note:** You can't attach or detach an article from the Articles page. Instead, return to the case detail page and attach or detach the article from the Articles related list.

Searching for Articles Using Global Search

When using global search, you can select **Search Options** from the drop-down and select **Articles** to narrow your search results.

If you're in a multiple language Salesforce Knowledge organization, global search article results are in your default personal language. If your default personal language is not supported by Salesforce Knowledge, your results are in your organization's knowledge base default language.

 **Note:** Global search only returns published articles, not draft or archived articles.

Using Filters to Narrow Your Results List

After you've retrieved your search results, you can narrow the results list by using filters.

- Use the Article Language filter to search for articles by language within your results.
- If your organization uses [categories](#), you can filter the list view by selecting one or more categories.

**Note:**

- If an article has no categories, it displays only when you choose the `No Filter` option in the category drop-down menu.
 - When searching for articles or article translations, selecting a category automatically includes the parent and children of that category and any grandparents, up to and including the top level. Sibling categories are not included. For example, if a category hierarchy has the levels All Products, Switches, Optical Networks, and Metro Core, selecting "Optical Networks" from the category drop-down menu returns articles assigned to any of the four categories. However, if the Switches category has a sibling category called Routers, selecting "Optical Networks" does not return articles classified within Routers. Category visibility settings may limit the specific articles you can find.
 - If your organization uses roles, users who are not assigned to a role can only view uncategorized articles.
 - If you only have access to one category in a category group, the category drop-down menu for that category group does not display on the Articles tab.
- If enabled, select a validation status to narrow the search by the article's state in the publication cycle.

Understanding Article Search Results

How search works for articles depends on your use of search options, search terms, wildcards, and operators.

Salesforce Knowledge article search uses the same custom search algorithms that are available throughout Salesforce, which include mechanisms such as tokenization, lemmatization, and stopword lists, to return relevant search results, with this exception.

Operators

When you don't specify an operator in your article search, the search engine will determine the best operator to use.

Many searches use "AND" as the default operator. This means that when you search for multiple terms, all of the terms need to match to generate a result. Matching on all terms tends to produce search results that are more relevant than searches using the "OR" operator, where matches on any of the search query terms appear in the results.

If the search engine doesn't return any results that match all of the terms, it looks for matches using the "OR" operator. With the "OR" operator, the search engine boosts documents that contain more terms from the search query, so that they appear higher in the results list.

The Order of Articles in the Results List

Many factors influence the order in which articles appear in the results list. Salesforce evaluates your search terms and your data to move more relevant matches higher in your list of results. Some of these factors include:

EDITIONS

Available in: **Salesforce Classic**

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To view published articles in the Articles tab or Articles related list:

- "Read" on the article type

To view draft, published, or archived articles in the Article Management tab:

- "Manage Articles"

AND

"Read" on the article type

Frequency

This algorithm calculates the frequency with which a term appears within each article. The algorithm then weighs them against each other in order to produce the initial set of search results.

Relevancy

Articles that are frequently viewed or that are frequently attached to cases appear higher in the results. Article ownership and recent activity also boost an article in the results list.

Proximity of Terms

Articles that contain all of the keywords in a search are ranked highest, followed by those with fewer keywords, followed by those with single keyword matches. Terms that are closer together in the matched document, with few or no intervening words, are ranked higher in the list.

Exact Matches

Matches on exact keywords are ranked higher than matches on synonyms or lemmatized terms.

Title Field

If any search terms match words in an article title, the article is boosted in the search results.

Token Sequence

If the search term is broken up into multiple tokens because it contains both letters and numbers, the system boosts matches based on the same sequence of tokens. That way, exact matches are ranked higher than matches on the tokens with other tokens in between.

[Searching for Articles](#)

Example of Article Search Results

When you [search for articles](#), you can narrow your search results by selecting categories. The following table is an in-depth example of how filtering by categories works. This example uses the sample category groups [Products](#) and [Geography](#) and three sample articles. Assume that the user performing the search has access to all categories.

Table 38: Example: How Filtering by Categories Narrows Article Search Results

| If you select these category filters... | An article assigned to All Countries AND Laptop is... | An article assigned to Canada AND Computers is... | An article assigned to Europe only is... |
|---|--|--|--|
| All Countries
AND
All Products | <p>FOUND. Reasons:</p> <ul style="list-style-type: none"> All Countries is an exact match. Selecting All Products automatically includes Laptop. | <p>FOUND. Reasons:</p> <ul style="list-style-type: none"> Canada is a child of All Countries. Computers is a child of All Products. | <p>NOT FOUND. Reasons:</p> <ul style="list-style-type: none"> Europe is a child of All Countries, but all filter criteria must be met. The article is not assigned to a Products category. To retrieve this article, choose No Filter from the category drop-down menu. |
| Asia
AND
Computers | <p>FOUND. Reasons:</p> <ul style="list-style-type: none"> All Countries is the parent of Asia. Laptop is a child of Computers. | <p>NOT FOUND. Reasons:</p> <ul style="list-style-type: none"> Canada and Asia are not in the same parent/child hierarchy (that is, they are in different branches of the category hierarchy). Computers is an exact match, but all filter criteria must be met before an article is displayed. | <p>NOT FOUND. Reasons:</p> <ul style="list-style-type: none"> Europe and Asia are siblings rather than members of the same parent/child hierarchy. If an article is not assigned to a category, "No Filter" must be selected in the corresponding category drop-down menu to retrieve the article. |
| France
AND
Enterprise Electronics | <p>NOT FOUND. Reasons:</p> <ul style="list-style-type: none"> Laptop is not in a parent/child relationship with | <p>NOT FOUND. Reasons:</p> <ul style="list-style-type: none"> Canada and France are not members of the same parent/child | <p>NOT FOUND. Reasons:</p> <ul style="list-style-type: none"> Europe is the parent of France but all filter criteria must be met. |

 - China
 - Japan
 - India
 - Europe
 - France
 - United Kingdom
 - Poland

SEE ALSO:

[Searching for Articles](#)

[Lemmatization Behavior with Salesforce Knowledge Article Searches](#)

Lemmatization Behavior with Salesforce Knowledge Article Searches

Lemmatization is the process of grouping together the different forms of a word so they can be analyzed as a single term. With lemmatization, search can match other forms of a search term. For example, a search for *running* matches items that contain *run*, *running*, and *ran*. This behavior applies only to the type of word you search for: a search for a noun matches variants of the noun form, a search for a verb matches variants of the verb form, and so on.

 **Note:** Lemmatization is available only for articles that are marked as being in one of these languages: Danish, Dutch, English, French, German, Hebrew, Italian, Korean, Norwegian, Portuguese, Romanian, Russian, Spanish, or Swedish. Additionally, the search must be initiated by a user who is viewing the application in one of these languages. You can edit the default language for your organization on the Company Information page.

With lemmatization enabled, search terms typically undergo lemmatization, but note these details and exceptions.

Wildcards

If a search phrase includes an asterisk (*), none of the search terms undergo lemmatization. For example, a search for *quenching bev** doesn't match *quench* or *quenched*.

Exact Phrase Searches

If a search includes a phrase within quotation marks (" "), then the search terms undergo lemmatization. For example, a search for *"drink juice" delicious* matches *drank juices* and *deliciously*.

Synonyms

A defined synonym does not undergo lemmatization in search results. However, the search term does. For example, if this synonym group is defined:

quenched, drink orange juice

Then a search for *quench* matches *quench*, *quenched*, *quenching*, and *drink orange juice*, but doesn't match *drinking orange juice*.

Promoting an Article in Users' Search Results

Associate keywords with articles to optimize search results in Salesforce Knowledge. Users who search for these keywords see the article first in their search results. Promoted search terms are useful for promoting an article that you know is commonly used to resolve a support issue when a user's search contains certain keywords.

Articles must be in published status for you to manage their promoted terms.

1. In the Article Management tab, select **Published Articles** in the View section, and then click the title of the published article that you want to promote for a search term.
2. In the Promoted Search Terms related list, click **New Promoted Term**.
3. Enter the keywords that you want to associate with the article.
 - You can associate the same term with multiple articles. If the user's search matches the promoted term, all associated articles are promoted in search results, ordered by relevancy.
 - The maximum number of characters per promoted term is 100. For best results matching users' search terms, limit each promoted term to a few keywords.
4. Click **Save**.

 **Example:** For example, if an article addresses a common support issue such as login problems, you can associate the terms *password* and *password change*. Article search matches a promoted term whenever all keywords within the term occur within the user's search terms, in any sequence. Each keyword must match exactly. For example:

- The promoted term *password* matches a search for *change password*.
- The promoted term *password change* matches a search for *how do I change my password* but doesn't match *forgot password*.
- The promoted term *password* doesn't match a search for *change passwords*.

Consider these limitations and general limits when you use promoted search terms.

- Your organization can create a maximum of 2,000 promoted terms. For best results, use them selectively, which means create a limited number of promoted terms and a limited number of promoted articles per term.
- If your organization translates articles into multiple languages, each promoted term is associated with one article version and the article version's language. If you need equivalent promoted terms to be associated with each translation, you must specify promoted terms for each translation. For example, associate *change password* with an English language article version and *changer mot de passe* with a French language article version.
- The end user's language setting determines the scope of the article search. Search results exclude article versions and any associated promoted terms that are not in the user's language.

Viewing Articles

Viewing and Editing an Article from the Articles Tab

To view a published article, click on its title in the Articles tab. The article's format and content depend on the article type chosen by your administrator, but all articles provide an expandable Properties header that contains the following information:

- **Article Audience**—The article's data categories. This field is only visible if you've defined data categories.
- **Article Number**—A unique number automatically assigned to the article.
- **Channels**—The channels the article appears in. Channels include:
 - Your internal app
 - Your partner portals
 - Your Customer Portals
 - Your public knowledge base
- **First Published**—Date and time the article was published originally.
- **Last Modified**—Date and time of the last major or minor update to the article.
- **Last Published**—Date and time of the last major update to the article. An author indicates a major update by flagging the article as new when it is republished.
- **Summary**—Short description of the article.
- **Validation Status**—Shows whether the article has been validated or not.

When enabled on the Knowledge Settings page, users can edit the current version of an article by clicking **Edit** and modifying it on the [article edit page](#).

The header also provides the ability to rate the article on a scale of one to five stars and view the article's average rating. Averages aren't static. Every 15 days, if an article hasn't received a new vote its average rating moves up or down according to a half-life calculation. This change ensures that over time, older or outdated articles don't maintain artificially high or low ratings compared to newer, more frequently used articles. Articles without recent votes trend towards an average rating of three stars. You can rate each article only once.

If your organization uses Chatter, you can display a Chatter feed of updates, comments, and posts about the article.

Viewing an Article from the Article Management Tab

On the list view page for draft, published, or archived articles:

- Click the article's title to view a read-only version of the article detail page. Click **Edit** to [update the article](#).
- Click **Preview** to see how the article appears for end users. From the Channel drop-down menu you can choose any channel where the article is visible except the public knowledge base.

 **Note:** Voting and Chatter information is not available when previewing a Knowledge article.

Salesforce Knowledge Article Versions

Article versions allows you to save an older version of a published article and then see which version of the article is associated with a case. To save the previous version, select the `Flag as new version` checkbox when publishing a new version. The previously published version is saved and the new version is published with the next sequential version number as an identifier.

When an article is attached to a case and a new version of the article is published, the system identifies the version attached to the case as being outdated. For example, if Version 2 is attached to a case and a third version is published, the article attached to the case becomes Version 2 (outdated). This notation ensures that there is a permanent record of which content was associated with the case.

When you click the version number in the Article View, and the Article or Translation Detail pages, you'll see the Version History list. In this list you can:

- View the list of archived versions.
- Click a version's title to view that version of the article.
- Expand the version to view its field change history (if you have history tracking enabled for the article type and for fields).

By default, the system stores up to ten versions of an article, plus any versions that are attached to cases.

When several versions of an article exist, you can restore an older version and republish it. Click `Revert to Draft Version` to copy the archived version's content into a draft article, then republish it as a new version. You can also restore the older version of any associated translations at the same time.

 **Note:** When there is an existing draft for the article, the option to revert isn't available.

You can delete an older, outdated version of a published article by selecting `Delete This Version` from the article detail page.

1. On the `Article Management` tab, in the left-side `View` panel, select the **Articles** tab.
2. Select **Published Articles**.
3. In the published articles list, click on the title of the article you want to delete.
4. In the left-side `Article Properties` panel, click the version number.
5. In the pop-up, click the version number you want to delete.
6. Click `Delete This Version`. Salesforce warns you when the version is associated with a case. If you delete the article version, it will no longer be attached to the case. Translated article versions are dependent on the master language article. If the master language version is deleted, the translated versions are also deleted.
7. To delete the version, click **Delete**.

Versions also appear in custom reports, allowing you to find and read the article version attached to a case.

- "Manage Articles"
- AND
- "Create," "Read," "Edit," and "Delete" on the article type

To submit articles for translation:

- "Manage Articles"
- AND
- "Create," "Read," and "Edit" on the article type

To submit articles for approval:

- Permissions vary depending on the approval process settings

Creating and Editing Articles

Creating Articles

To create an article:

1. On the Article Management tab or from the Articles related list within a case, click **New**.
2. If your knowledge base supports multiple languages, choose the language you're using.
3. Choose an [article type](#), enter the article title, and click **OK**.
4. Edit the article's fields, and select a validation status. If your article contains a rich text area field you can add some formatting such as bulleted lists, links, and images.
5. In the Categories area, choose the [categories](#) to associate with your article:
 - Click **Edit** next to a category group to open the category selection dialog box.
 - In the `Available Categories` list expand the category hierarchy to select a category.
 - Click **Add** to move a selected category to the `Selected Categories` list—you can have up to 8 data categories from a data category group assigned to an article.

Note: You cannot add both a category and its child categories to the `Selected Categories` list. When you add a category to an article:

- Child categories in the `Available Categories` list are unavailable unless you remove the parent from the `Selected Categories` list.
- Child categories in the `Selected Categories` list disappear from that list.

Users searching for articles can find them by selecting an exact category or by selecting a parent or child category.

- Click **OK**.
6. In the Channels area, select where your article will be available once published:
 - **Internal App:** Salesforce users can access articles in the Articles tab depending on their role visibility.
 - **Customer:** Customers can access articles if the Articles tab is available in a community or Customer Portal. Customer users inherit the role visibility of the manager on the account. In a community, the article is only available to users with Customer Community or Customer Community Plus licenses.
 - **Partner:** Partners can access articles if the Articles tab is available in a community or partner portal. Partner users inherit the role visibility of the manager on the account. In a community, the article is only available to users with Partner Community licenses.
 - **Public Knowledge Base:** Articles can be made available to anonymous users by creating a public knowledge base using the *Sample Public Knowledge Base for Salesforce Knowledge* app from the AppExchange. Creating a public knowledge base requires Sites and Visualforce.
 - **Your own website.** Articles can be made available to users through your company website.
 7. Click **Quick Save** to save your changes and remain on this page. Alternatively, click **Save** to save your changes, close the article, and go to the Article Management tab.
 8. Optionally:
 - [Create an assignment](#) for a user to edit or review the article.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To create articles:

- "Manage Articles"
- AND
- "Create" and "Read" on the article type

To edit draft articles:

- "Manage Articles"
- AND
- "Read" and "Edit" on the article type

To edit published or archived articles:

- "Manage Articles"
- AND
- "Create," "Read," and "Edit" on the article type

- [Publish the article](#).
- Submit the article for approval. If you have the “Publish Articles” article action and an approval process is set up for an article, you'll see both **Publish...** and **Submit for Approval** buttons.

Editing Articles and Translations

In addition to user permissions on the article type, you also need the “Edit Published and Archived Articles” article action to edit articles or translations.

To edit an article:

1. Click **Edit** on the Article Management tab, or click **Edit** on an article or translation detail page.
2. If it is a published article or translation, choose whether to leave it published while you work on a draft copy, or whether to remove the original article from publication and work on it directly. If you work on a copy, publishing the copy replaces the last published version of the article. If you work on the original article, it is unavailable in the channels until you republish it.
3. Edit the article's fields, and select a validation status. If your article contains a rich text area field you can add some formatting such as bulleted lists, links, and images.
4. In the Categories area, choose the [categories](#) to associate with your article:
 - Click **Edit** next to a category group to open the category selection dialog box.
 - In the `Available Categories` list expand the category hierarchy to select a category.
 - Click **Add** to move a selected category to the `Selected Categories` list—you can have up to 8 data categories from a data category group assigned to an article.

 **Note:** You cannot add both a category and its child categories to the `Selected Categories` list. When you add a category to an article:

 - Child categories in the `Available Categories` list are unavailable unless you remove the parent from the `Selected Categories` list.
 - Child categories in the `Selected Categories` list disappear from that list.

Users searching for articles can find them by selecting an exact category or by selecting a parent or child category.

 - Click **OK**.
5. In the Channels area, select where your article will be available once published:
 - Internal App: Salesforce users can access articles in the Articles tab depending on their role visibility.
 - Customer: Customers can access articles if the Articles tab is available in a community or Customer Portal. Customer users inherit the role visibility of the manager on the account. In a community, the article is only available to users with Customer Community or Customer Community Plus licenses.
 - Partner: Partners can access articles if the Articles tab is available in a community or partner portal. Partner users inherit the role visibility of the manager on the account. In a community, the article is only available to users with Partner Community licenses.
 - Public Knowledge Base: Articles can be made available to anonymous users by creating a public knowledge base using the *Sample Public Knowledge Base for Salesforce Knowledge* app from the AppExchange. Creating a public knowledge base requires Sites and Visualforce.
 - Your own website. Articles can be made available to users through your company website.
6. Click **Quick Save** to save your changes and remain on this page. Alternatively, click **Save** to save your changes, close the article, and go to the Article Management tab.
7. Optionally:

- [Create an assignment](#) for a user to edit or review the article.
- [Publish the article](#).

Implementation Tips

- When applying categories, choose the categories that a user would naturally look for as they navigate. Users only find an article if they select its explicitly applied category, the parent of that category, or a child of that category.
- Multiple users can edit the same article at the same time. If that occurs, your changes may be overwritten by a colleague without warning, even if you save your work frequently. To avoid accidental data loss, instruct all users who edit articles to only edit the articles they're assigned.

Best Practices

- Assign articles to the users who should work on them next. Enter assignment instructions that are direct, brief, and clear. Specify a due date to set expectations of when the assignment needs to be completed. If your knowledge base team consistently uses assignments in this manner, you can easily track the progress of your organization's draft articles by looking at the draft articles views on the Article Management tab.
- Make sure to assign yourself the articles you want to work on.

Smart links to Salesforce Knowledge Articles

Smart linking from one article to another.

Smart links automatically adjust when the name or URL of an article is changed. For example, when the URL Name of an article is changed, Salesforce Knowledge automatically updates the article's URL based on the channel, adds the site prefix for a public knowledge base, and adds the community name for the community portal. There are two ways to create a smart link in the rich text editor to a Salesforce Knowledge article within another article:

- [Search for the article.](#)
- [Enter the article URL.](#)

Important: Smart links are based on the channels they are in. Therefore, you can't add a smart link to an article in another channel. For example, an article on your public knowledge base can't link to an article only published in your internal channel.

Smart links to Salesforce Knowledge Articles through Search

Smart linking from one article to another using the Link Article dialog in the rich text editor.

When creating or editing an article, you can use a keyword search to create a smart link in a rich text area field.

1. Place your cursor where you'd like to place the link.

2. Click the link icon, . The Link Article dialog appears.

3. Optionally, select which language to search.

If no language is selected, Salesforce Knowledge returns those articles in your knowledge base's default language that are related to your keyword search.

4. Optionally, select the publish status type to search.

- Online (default if no publish status is selected)
- Draft
- Draft translations (if your knowledge base supports multiple languages)

5. Enter article keywords into the search bar.

6. Click the search icon at the end of the search bar. The top 20 related articles display.

7. Select the article to reference in a smart link from the article list.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To create articles:

- "Manage Articles"
- AND
- "Read" and "Create" on the article type

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To create articles:

- "Manage Articles"
- AND
- "Read" and "Create" on the article type

Important: Smart links are based on the channels they are in. Therefore, you can't add a smart link to an article in another channel. For example, an article on your public knowledge base can't link to an article only published in your internal channel.

8. Optionally, click **Go to Article** to view the article in another window and ensure it is the correct reference.

9. Optionally, click the Target tab and select where the referenced article will display.

- **Not Set:** Opens the linked article in the same frame as it was clicked.
- **Frame:** Opens the linked article in a designated frame.
- **New Window (_blank):** Opens the linked article in a new window or tab.
- **Topmost Window (_top):** Opens the linked article in the full body of the window.
- **Same Window (_self):** Opens the linked article in the same frame as it was clicked.
- **Parent Window (_parent):** Opens the linked article in the parent frame.

10. Click **OK**.

Note: Smart links add more characters than what is displayed. If you see an error that you have surpassed the character limit, have your administrator increase the limit.

Smart links to Salesforce Knowledge Articles with URLs

Smart linking from one Salesforce Knowledge article to another by manually entering the article URL in the rich text editor.

When creating or editing an article, you can manually create a smart link in a rich text area field.

1. Highlight the content or place your cursor where you'd like to place the link.

2.

Click the link icon,

3. Select Link Type **URL**.

4. Select Protocol **<other>**.

5. Enter the article URL as: `/articles/[language]/[articleType]/[URLName]`.

For example, for an English article in a multiple language knowledge base, of article type FAQ, with a URL Name of About-Passwords the article URL is:

`/articles/en_US/FAQ/About-Passwords`. Add a language only if your Salesforce Knowledge base supports multiple languages.

Important: Smart links are based on the channels they are in. Therefore, you can't add a smart link to an article in another channel. For example, an article on your public knowledge base can't link to an article only published in your internal channel.

6. Optionally, click the Target tab and select where the referenced article will display.

- **Not Set:** Opens the linked article in the same frame as it was clicked.
- **Frame:** Opens the linked article in a designated frame.
- **New Window (_blank):** Opens the linked article in a new window or tab.
- **Topmost Window (_top):** Opens the linked article in the full body of the window.
- **Same Window (_self):** Opens the linked article in the same frame as it was clicked.
- **Parent Window (_parent):** Opens the linked article in the parent frame.

- "Manage Articles"

AND

"Read" and "Create" on the article type

7. Click **OK**.

Note: Smart links add more characters than what is displayed. If you see an error that you have surpassed the character limit, have your administrator increase the limit.

Assigning Draft Articles

Working on draft articles is often a team effort: different members of the editorial staff create drafts, review the text and formatting, add graphics, and so on. With Salesforce Knowledge, you assign draft articles to collaborators once you're finished with your task.

For example, say you create an article and assign it to yourself with the instruction "Write content before the 10th" (as described in step 1 in [Example draft article assignment](#)). On the 10th, your article is complete but you need help from a visual designer. You assign your article to your visual designer with the instruction "Finalize the visual design before the 20th" (step 2). When the visual designer opens the Article Management tab, he or she sees the new assignment by selecting **Draft Articles Assigned to Me**. When the visual design is finished, the designer reassigns the article back to you for a final check. The article now displays with a new instruction: "Please review the article before publishing" (step 3). Finally, you review the article and decide to [schedule its publication](#) on the 31st.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To create draft articles:

- "Manage Articles"

AND

"Create" and "Read" on the article type

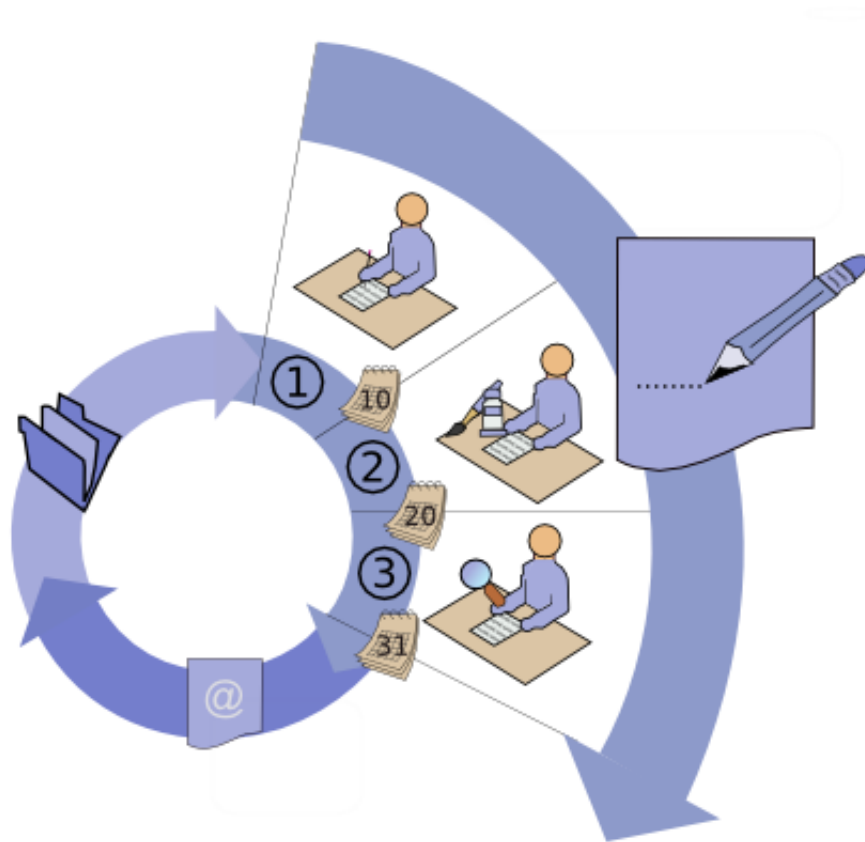

To assign draft articles:

- "Manage Articles"

AND

"Read" and "Edit" on the article type

Example draft article assignment

An assignment is a draft article that has been assigned to another user for editing. Assignments may contain brief instructions and a due date. When you [create an article](#), a new assignment is automatically attached to it. You can edit the assignment, enter the instructions, choose an assignee, and specify a due date. Articles can only have one assignment at a given time. Note that all users with sufficient permissions can edit an article, even if they're not the assignee.

To display your assignments on the Manage Articles tab:

1. Click the **Articles** tab in the view area.
2. Select **Draft Articles**.
3. Filter articles by those assigned to **Me**. You can see a list of all draft articles for your organization by filtering by those assigned to **Anyone**.

To assign or reassign an article:

1. In a **Draft Articles** list, select the checkbox next to an article and click **Assign...**. Alternatively, click **Assign...** from the article detail page or the article edit page.
2. Choose a user.
3. Enter instructions for the assignment.
4. Choose a due date.
5. Check **Send Email** to send an email to the selected users with instructions included.

 **Note:** When you select multiple articles, every assigned user receives one email for every 10 articles assigned.

- Click **OK**.

Best Practices

- If your editorial process involves several draft stages and collaborative tasks, use assignments to manage these steps.
- Multiple users can edit the same article at the same time. If that occurs, your changes may be overwritten by a colleague without warning, even if you save your work frequently. To avoid accidental data loss, instruct all users who edit articles to only edit the articles they're assigned.
- Make sure to assign yourself the articles you want to work on.

[Publishing Articles and Translations](#)

[Creating and Editing Articles](#)

Publishing Articles and Translations

Publishing articles and translations makes them visible in all [channels](#) selected. If you publish an article that has translations, all versions of the article are published.

In addition to permissions on an article's article type, you also need the "Publish Articles" or "Publish Translated Articles" article action to publish an article or translation. Alternatively, if your organization has implemented approval processes, you'll be able to publish an article after it has been approved. Note that approval processes aren't available for translations.

- On the Article Management tab, filter the articles in the view area, select an article or articles, and click **Publish...** Alternatively, click **Publish...** on either the detail page or edit page of an article.
- Select `Publish article(s) now` or `Schedule publication on` to choose the date to publish the article.
- If the article has previously been published, select the `Flag as new version` checkbox to make the new article icon (✳) display next to your article in the selected channels. Users from these channels can see that this article has been modified since the last time they've read it. This checkbox is not available when you publish an article for the first time, as the icon displays by default for new articles.

If the draft being published is a working copy of a currently published article, it is published as a new version of the original.

- Click **OK**.

Articles you scheduled for publication at a later date continue to appear in the Draft Articles filter, now with the pending icon (🕒) next to the article title. Hover over the icon to see the publication date.

Note:

- If you [assign](#) an article that is scheduled for publication, you also cancel the scheduled publication.
- Scheduling a publication removes any assignment information. The user who scheduled the publication is assigned to the article.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To publish articles:

- "Manage Articles"

AND

"Create," "Read," "Edit," and "Delete" on the article type

To publish translated articles:

- "Manage Articles"

AND

"Create," "Read," "Edit," and "Delete" on the article type

- Conflicts may occur when different users perform actions on the same articles simultaneously. Depending on who performs the action first, the articles will not be available for subsequent users though the articles still display momentarily in the articles list. Performing an action on these articles results in a conflict error message.
- If you have the “Publish Articles” article action and an approval process is set up for an article, you'll see both **Publish...** and **Submit for Approval** buttons.

 **Tip:** To cancel a scheduled publication, click **Cancel Publication** on the article or translation detail or edit page.

[Viewing Articles](#)

[Creating and Editing Articles](#)

Deleting Articles and Translations

Deleting an article or translation permanently removes it from the knowledge base. You can delete draft articles, draft translations of articles, or archived articles.

Note:

- To delete published article and translations, first remove them from publication by choosing edit or archive.
- When a user without delete access cancels the editing on published article, the newly created article draft is not deleted automatically.

To delete articles and translations:

1. On the Article Management tab, click the **Articles** tab in the View area.
2. Select Draft Articles or Archived Articles, select the article you want to delete, and click **Delete**. Alternatively, click **Delete** on the detail page of a draft or archived article or draft translation.
3. Click **OK**.

Deleting articles moves them to the Recycle Bin, where you can undelete them if you change your mind. If you delete an article with translations, the translations are also moved to the Recycle Bin. However, if you delete a single translation, you can't undelete it. Deleting an article or translation may fail if another user or the system simultaneously modifies it while the deletion is being processed. You'll receive an error message if this occurs.

Note:

- Conflicts may occur when different users perform actions on the same articles simultaneously. Depending on who performs the action first, the articles will not be available for subsequent users though the articles still display momentarily in the articles list. Performing an action on these articles results in a conflict error message.
- If you delete a draft article that is a working copy of a currently published article, the original published version is not affected but the draft version is permanently removed. It does not go to the Recycle Bin. You can edit the published version to work again on a draft copy.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To delete a draft, published, or archived article

- “Manage Articles”

AND

“Read,” “Edit,” and “Delete” on the article type

- When a user without delete access cancels editing a published article, the newly created article draft is not deleted automatically.

SEE ALSO:

[Salesforce Knowledge Terminology](#)

[Archiving Articles and Translations](#)

Managing Articles and Translations

The Article Management tab is your home page for working with articles throughout the publishing cycle as they are created, assigned to collaborators, translated, published, and archived. In addition to having the correct permissions on an article's article type, you also need [article actions](#) to complete some tasks.

| Article Action | Lets You |
|---------------------------------|--|
| Publish Articles | Publish articles. |
| Publish Translated Articles | Publish translated articles. |
| Submit Articles for Translation | Submit articles for translation. |
| Archive Articles | Archive articles, including translated articles. |

The Article Management tab defaults to the Articles view.

Article Publishing Cycle

Articles move through a publishing cycle, which is depicted in the graphic below:

1. Create and save a new article.
2. Reassign the article to an editor, translator, reviewer, or any other collaborator as needed. That person can reassign the article as many times as necessary until the content is ready for publication. If an approval process is set up for the article type, you or the person you reassign to submits the article for approval. The article is routed to the appropriate approver or set of approvers, who either approve or reject it.
3. **Publish** the completed draft to one or more channels, depending on the audiences you've configured: the Articles tab in your Salesforce organization, a customer portal, a partner portal, or a public knowledge base. You can schedule the article to be published on a future date.
4. Update the article as needed. When modifying a published article, you can either remove it from publication so that the original is no longer visible to users, or leave the original published and work on a copy until you're ready to replace the original with your update.
5. **Archive** the article when it is obsolete to remove it from publication. As with publishing an article, you can archive immediately or on a future date.
6. Delete the article as needed, or turn it into a draft and begin a new publishing cycle.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To create, edit, or delete articles:

- "Manage Articles"

AND

"Create," "Read," "Edit," or "Delete" on the article type

To publish or archive articles:

- "Manage Articles"

AND

"Create," "Read," "Edit," and "Delete" on the article type

To submit articles for translation:

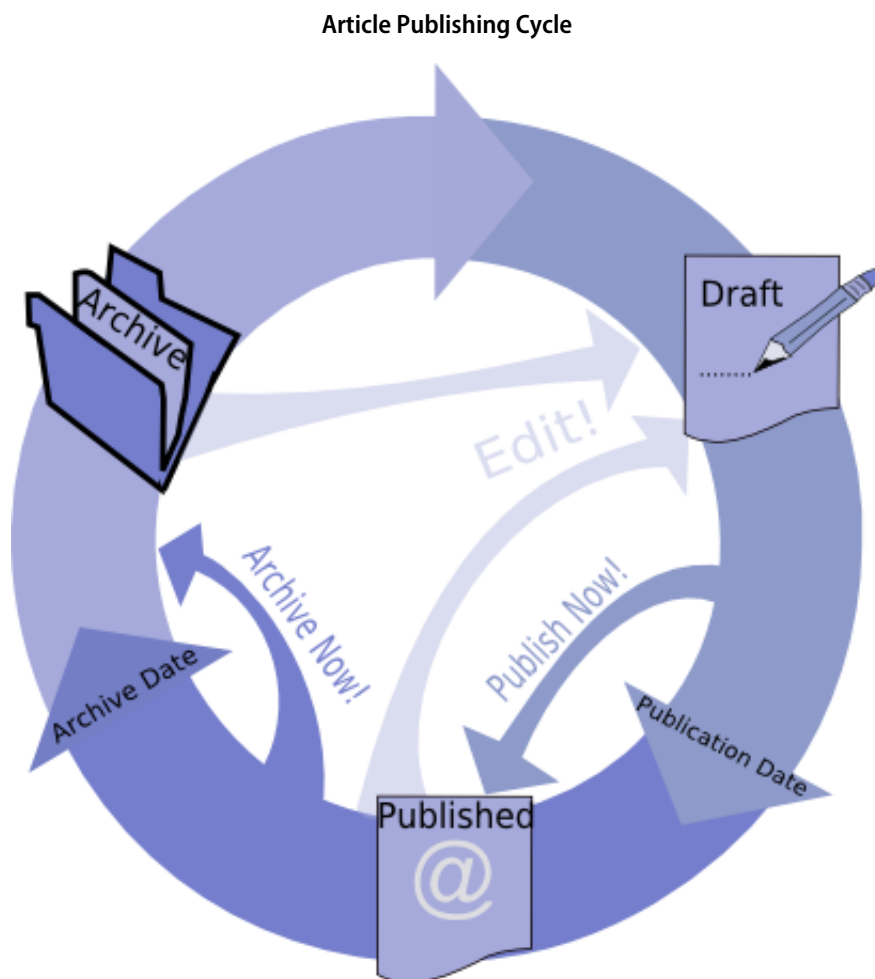

- "Manage Articles"

AND

"Create," "Read," and "Edit" on the article type

To submit articles for approval:

- Permissions vary depending on the approval process settings

Choosing Articles to View

To specify which articles appear in the list view, use the following options in the sidebar:

- In the View area, select [Draft Articles](#), [Published Articles](#), or [Archived Articles](#). You can filter draft articles by those assigned to you or those assigned to anyone (all draft articles for your organization).
- If applicable, click the Translations tab in the View area, and select [Draft Translations](#) or [Published Translations](#). You can filter draft translations by those assigned to you, those assigned to a translation queue, or those assigned to anyone (all draft translations in your organization).
- To refine the current view, you must first select an article language filter and then enter a keyword or phrase in the `Find in View` field. The `Find in View` field is inactivated for archived articles.
- In the Filter area, choose a category from a drop-down menu to filter the current view.

Choosing Columns

To modify which columns display, click **Columns**. The following columns are available depending on what is selected in the view area:

| Column | Description | View |
|--------------------------|---|--|
| Action | Displays the actions available for the article or translation. | All articles and translations |
| All User Ratings | Average ratings from users of your internal Salesforce organization, Customer Portal, partner portal, and your public knowledge base. | Published and archived articles and published translations |
| Archived Date | Date the article was archived. | Archived articles |
| Article Number | Unique number automatically assigned to the article. | All articles and translations |
| Article Title | Click to view the article. | All articles |
| Assigned to | The user who is assigned work on the article. | Draft articles and translations |
| Assignment Details | Instructions for the assignment. | Draft articles and translations |
| Assignment Due Date | Date to complete work on the article. If the date has passed, it displays in red. | Draft articles and translations |
| Created Date | Date the article was written. | Draft articles and translations |
| Customer Ratings | Average ratings from users on the Customer Portal and the public knowledge base. | Published and archived articles and published translations |
| Language | The language an article is translated into. | Draft and published translations |
| Last Action | The date and type of the last action taken on a translation. | Draft and published translations |
| Last Modified by | Last person to update the article. | Draft articles and translations |
| Last Modified Date | Last date the article was edited. | All articles and translations |
| Most Viewed by all Users | Average views from users of your internal Salesforce organization, Customer Portal, partner portal, and your public knowledge base. | Published and archived articles and published translations |
| Most Viewed by Customers | Average views from users on the Customer Portal and the public knowledge base. | Published and archived articles and published translations |
| Most Viewed by Partners | Average views from users on the partner portal and the public knowledge base. | Published and archived articles and published translations |
| Partner Ratings | Average ratings from users of your partner portal and public knowledge base. | Published and archived articles and published translations |
| Published Date | Date the article was published. | Published articles and translations |
| Source Article | The original article before translation. Click on the article title to view the article. | Draft and published translations |

| Column | Description | View |
|--------------------|---|---|
| Translated Article | The title of the translated article. Click on the translation title to edit the translation. | Draft and published translations |
| Translation Status | Status in the translation cycle. Hover over the icon(s) to view the status for each translation. If a translation has been published, there are separate tabs for draft and published translations. | Articles submitted for translation |
| Type | The article's type, such as FAQ or Product Description, that determines what information the article contains. | All articles |
| Validation Status | Shows whether the content of the article has been validated. | All articles and translations, when enabled |
| Version | The article's version. Hover over the version number to view details about other versions of the article. | All articles |

Article and Translation Management Tasks

To create and manage articles and translations:

- Enter a search term or use the category drop-down menu to [find an article](#) or translation.
- Click **New** to create a new article.
- Select an article or translation and click **Publish...** to [make it visible in the selected channels](#). If you have the "Publish Articles" article action and an approval process is set up for an article, you'll see both **Publish...** and **Submit for Approval** buttons.
- Click **Edit** next to an article or [translation](#) to modify its content or properties.
- Click **Preview** next to an article or translation to see how it will appear for end users. From the `Channel` drop-down menu you can choose any channel where an article is visible except the public knowledge base.

 **Note:** Voting and Chatter information is not available when previewing a Knowledge article.

- Click the version number of the article or translation to see a list of its other versions.
- Select an article or translation and click **Assign...** to change the owner of an article or translation.
- Select an article or translation and click **Delete** to send an article or translation to the Recycle Bin.
- Select an article and click **Archive...** to [archive a published article](#).
- If [multiple languages for Salesforce Knowledge](#) is set up, select an article or articles and click **Submit for Translation**.

Submitting Articles for Translation

If your knowledge base [supports multiple languages](#), the Submit for Translation option is available.

To submit articles for translation from the Article Management tab:

1. Select an article or articles and click **Submit for Translation**.
2. Optionally, select a due date for one translation or all translations. You can set due dates for each language. Due dates appear on the Translations list view. They display in red if the date is passed.

3. Select from the languages supported by your knowledge base.
4. Optionally, change the assignee. You can assign the article to another knowledge base user for translation, or assign the article to a queue for export to a translation vendor.
5. If you want email notifications sent to the assignees, check `Send notification email`.
6. Click **Save**.

Once translations are submitted, users with the “Manage Articles” permission can manage them on the **Article Management** tab. To view submitted translations, select **Translations** in the View area. You can edit, preview, publish, assign, and delete translations.

 **Tip:** The related links area of the **Article Management** tab takes you directly to the setup pages for exporting articles for translation (**Export Articles for Translation**) and importing translations (**Import Article Translations**).

- [Publishing Articles and Translations](#)
- [Creating and Editing Articles](#)
- [Searching for Articles](#)
- [Viewing Articles](#)

The Articles or Knowledge Tab

Find out which Salesforce Knowledge tab are you using and what you can do on each.

There are two tabs for searching Salesforce Knowledge articles: the [Knowledge](#) tab or the [Articles](#) tab. The one you use depends on when your organization started using Salesforce Knowledge or if it adopted the Knowledge tab.

The Knowledge tab

If the search bar is at the top of the main frame of the page you are using the Knowledge One on the Knowledge tab.

EDITIONS

Available in: **Salesforce Classic**

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To view articles:

- “Read” on the article type

To create articles:

- “Manage Articles”

AND

“Read” and “Create” on the article type

The Knowledge tab merges functionality of the old Articles tab and the Article Management tab and uses federated search to search all your resources at once. On the Knowledge tab, you can:

- [Search](#) all your Salesforce Knowledge articles and any of your external data sources, such as Microsoft® SharePoint®.
- [Filter](#) articles by language and data categories.
- Sort articles by published date, rating, most viewed, and title.
- Use the **Create Article** drop-down to select an article type and [create an article](#).
- Use the drop-down by each article to follow or unfollow, [edit](#), [publish](#), and [delete](#) an article, depending on your permissions.

Also, when you use case feed, the Knowledge tab layout is applied to the article sidebar.

To switch to the Knowledge One and the Knowledge tab, have your administrator add the `Knowledge One` permission to your [profile](#) or [permission set](#).

The Articles tab

If the search bar is in the left-side panel of the page you are using the Articles tab.

The Articles tab presents a list of your Salesforce Knowledge published articles. On the Articles tab, you can:

- [Search for published articles](#)
- [View published articles](#)
- [Create an article](#)
- [Customize the article information displayed](#)

 **Note:** Community members without the Knowledge One permission cannot access Knowledge through Communities. They also can't access Knowledge in communities via the Salesforce1 mobile browser and downloadable apps.

[Viewing Articles](#)

Customizing the Article Tab

Select the article information displayed and sort the articles on that information.

The Article tab default list view contains articles that were created or updated during the last 30 days. To choose what article information is displayed and sort articles by that information:

1. Click the **Columns** drop-down.
2. Click the article information you want to display.

New columns are placed at the far right of the article list. Available columns include:

| Column | Description |
|--------------------------|---|
| Agent Ratings | The average rating given to the article by knowledge agents using the internal app. |
| All User Ratings | The average rating cast by knowledge agents, partners, and customers. Visitors to the public knowledge base cannot rate articles. For details about user ratings, see Viewing Articles on page 2218. |
| Article Number | Unique number automatically assigned to the article. Numbering for articles starts at "000001000." You can't change the format and numbering for this field. |
| Article Title | The article's title. This column can't be removed. |
| Customer Ratings | The average rating that customers have given the article. This option only displays if your organization exposes articles via the Customer Portal. |
| Most Viewed by Agents | Comparative indicator calculated by adding knowledge agent views. |
| Most Viewed by all Users | Comparative indicator calculated by adding views from all relevant channels: knowledge agents (internal users), Customer Portal users, partner portal users, and visitors to the public knowledge base. |
| Most Viewed by Customers | Comparative indicator calculated by adding Customer Portal user views. |
| Most Viewed by Partners | Comparative indicator calculated by adding partner portal views. |
| Most Viewed by Visitors | Comparative indicator calculated by adding public-knowledge-base visitor views. |
| New | Flag that indicates whether you have viewed an article. |
| Partner Ratings | The average rating that partners have given the article. This option only displays if your organization exposes articles via the partner portal. |
| Published Date | Date the article was published. |
| Type | Article type assigned to the article. Article types determine the content and format of each article. |
| Validation Status | Shows whether the content of the article has been validated. |

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To view articles:

- "Read" on the article type

 **Note:** You can only select one information column at a time.

3. Drag the column headers in the order you want them displayed.
4. Click a column header to sort the list according to that column's value.
You can sort by any column except `Type`.
5. Click the arrow at the bottom of the page to change the number of articles that display on the page at one time.

[The Articles or Knowledge Tab](#)

[Salesforce Knowledge Overview](#)

Translating Articles within Salesforce Knowledge

Depending on the status of your translation and [the article actions assigned to you](#), you can do the following from the translation detail page.

| Action | Description | Article Status |
|------------------|---|---|
| Archive | Archiving removes published translations that are obsolete so they no longer display to agents and customers on your organization's Salesforce Knowledge channels. | To archive a translation, archive its master article. |
| Assign... | Assigning changes the owner of the translation. | Draft translations |
| Delete | Deleting a translation permanently removes it from the knowledge base.

 Note: You can't undelete a draft translation. | Draft translations |
| Edit | Editing modifies the translation's content or properties. | Draft and published translations |
| Preview | Previewing shows how the translation appears to end users.

 Note: Voting and Chatter information is not available when previewing a Knowledge article. | Draft and published translations |

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To work with translated articles:

- "Manage Articles"

AND

"Create," "Read," "Edit," or "Delete" on the article type (depending on the action)

| Action | Description | Article Status |
|-------------------|--|--------------------|
| Publish... | Publishing translations makes them visible in all channels selected. | Draft translations |

To translate an article within Salesforce:

1. Click the **Article Management** tab and select **Translations** in the View area.
2. Select **Draft Translations**.
3. Optionally, change the **Assigned To** filter to view articles that are not assigned to you for translation. For example, you may want to view articles assigned to a translation queue.
4. Click **Edit** next to the article and language you want to translate.
5. Enter your translation.
6. Click **Save**.

Note: You can also edit a published translation. It reverts to draft status until you republish it, although you can choose to keep the existing version published while you update it.

Tracking Article History

You can track the history of certain fields in articles. If you have history tracking enabled for an article type and its fields, open an article of that type and click **Version** to see a version history list. You can also set tracking for the article type and track the full history of an article and its versions. Article events are tracked for up to 18 months.

The system records and displays field updates, publishing workflow events, and language versions for the master article and any translations. When you track old and new values, the system records both values as well as the date, time, nature of the change, and the user who made the change. When you track only the changed values, the system marks the changed field as having been edited; it doesn't record the old and new field values. This information is available in the Version History list and the fields are available in the Article Version History report.

Article history respects field, entity, and record-level security. You must have at least "Read" permission on the article type or the field to access its history. For data category security, Salesforce determines access based on the categorization of the online version of an article. If there is no online version, then security is applied based on the archived version, followed by the security of the draft version.

1. From Setup, enter *Knowledge* in the **Quick Find** box, then select **Knowledge Article Types**.
2. Create an article type or edit one from the Article Types list.
3. Click **Set History Tracking**.
4. Choose the fields you want to track.
Salesforce begins tracking history from that date and time. Changes made before that date and time are not tracked.
5. Click **Save**.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To create, edit, or delete article types:

- "Customize Application"
AND
"Manage Salesforce Knowledge"

Setting an Article's Field-Level Security

Field-level security lets administrators restrict users' access to specific fields on detail and edit pages. For example, you can make a "Comment" field in an article visible for Internal App profiles but not for Customer Portal profiles.

If using both [article-type layout](#) and field-level security to define field visibility, the most restrictive field access setting always applies. For example, if a field is hidden in the article-type layout, but visible in the field-level security settings, the layout overrides security settings and the field won't be visible. Some user permissions override both page layouts and field-level security settings. For example, users with the "Edit Read Only Fields" permission can always edit read-only fields regardless of any other settings.

 **Important:** Field-level security doesn't prevent searching on the values in a field. When search terms match on field values protected by field-level security, the associated records are returned in the search results without the protected fields and their values.

To define field-level security:

1. Define security via a permission set, profile, or field.
 - For permission sets or profiles:
 - a. From Setup, either:
 - Enter *Permission Sets* in the **Quick Find** box, then select **Permission Sets**, or
 - Enter *Profiles* in the **Quick Find** box, then select **Profiles**
 - b. Select a permission set or profile.
 - c. Depending on which interface you're using, do one of the following:
 - Permission sets or enhanced profile user interface—In the **Find Settings...** box, enter the name of the object you want and select it from the list. Click **Edit**, then scroll to the Field Permissions section.
 - Original profile user interface—In the Field-Level Security section, click **View** next to the object you want to modify, and then click **Edit**.
 - For fields:
 - a. From Setup, enter *Knowledge Article Types* in the **Quick Find** box, then select **Knowledge Article Types**.
 - b. Select the article type that contains the field to modify.
 - c. Select the field and click **Set Field-Level Security**.
2. Specify the field's access level.
 -  **Note:** These field access settings override any less-restrictive field access settings on the article-type layouts.
3. Click **Save**.

After setting field-level security, you can [modify the article-type layouts](#) to organize the fields on detail and edit pages.

EDITIONS

Available in: Salesforce Classic

AND
"Manage Salesforce Knowledge"

Using Unified Help Desks

Use a Salesforce Console

Use a Salesforce Console

Get more done faster using a console's enhanced interface to work with records.

Unlike standard Salesforce pages, all items you click in a console display as tabs. Along with the efficiency of tab-based navigation, a console helps you:

- [Work with many records simultaneously](#)
- [View most recently used tabs and bookmarks](#)
- [Resize pinned lists to see more information](#)
- [Navigate more quickly using keyboard shortcuts](#)
- [Work across multiple monitors](#)

A console's dashboard-like interface organizes related data all on one screen so that you can:

- [Search for records](#)
- [Jot notes on records using the interaction log](#)
- [See when records you're viewing have been edited by others](#)
- [Use a SoftPhone to make and receive calls](#)

Additionally, with a Salesforce console for service, you can:

- [Find Salesforce Knowledge articles to solve cases](#)
- [Chat with customers using Live Agent](#)

 **Note:** If your administrator adds [custom console components](#), additional functionality might be available for you in the sidebars and footers of a console.

Salesforce Console Tabs

Any items you click on in a console display as tabs. Tabs let you see all the information you need on one screen without losing context.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions with the Service Cloud

Available in: **Performance** and **Developer** Editions with the Sales Cloud

Available in: **Enterprise** and **Unlimited** Editions with the Sales Cloud for an extra cost

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions with the Service Cloud

Available in: **Performance** and **Developer** Editions with the Sales Cloud

Available in: **Enterprise** and **Unlimited** Editions with the Sales Cloud for an extra cost

Console Tabs

(1) The navigation tab lets you select objects and records to work with. (2) Primary tabs display the main work items in a console, such as an account. (3) Subtabs display related items on a primary tab, such as an account's contact. Use tabs to navigate within the console as you do your work.

Warning: Browsers' back buttons aren't supported for a console and might not work as expected. Console tabs are saved in browser tabs until you close them.

When you close browser tabs, you lose any open console tabs. If your administrator sets up saved user sessions for a console, when you log back into Salesforce, any of your previously open console tabs and console components automatically appear again. Additionally, if you resize any sidebar components, interaction logs, or close the global search header, those customizations appear again too.

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions with the Service Cloud

Available in: **Performance** and **Developer** Editions with the Sales Cloud

Available in: **Enterprise** and **Unlimited** Editions with the Sales Cloud for an extra cost

A Console's Primary Tabs and Subtabs

(1) A primary tab is the main item to work on, such as an account. (2) A subtab is a related item on a primary tab, such as an account's contact. Salesforce doesn't limit the number of tabs you can display.

When viewing tabs,  appears on tabs where you haven't saved changes, except for reports, Visualforce pages, or your organization's setup pages.  appears on tabs where you need to fix errors. If your administrator has added external domains to a console's whitelist, tabs can display pages outside of Salesforce. New tabs don't appear when you click a custom button or change a record's type, owner, or territory; instead, the current tab goes to the item you selected.

You can do a variety of things with tabs from the tab bar by clicking  and selecting an option, such as closing tabs, refreshing tabs, showing keyboard shortcuts, and more. To rearrange a tab, drag it to a new position along the tab bar. Tabs maintain their status as primary tabs or subtabs, meaning that you can't move primary tabs to the subtabs bar or vice versa. Rearranging tabs isn't available for Internet Explorer[®] 7.

If your administrator has turned on multi-monitor components, you can pop out primary tabs from your browser and drag them to any location on your screen to personalize the way you work. Just click  and select **Pop out primary tabs**. To return primary tabs to their original browser, click  and select **Pop tabs back into console**.

To copy the URL of a console tab and send it to another user, click  and select  next to the tab's name. If you're sending the URL to a non-console user, choose to create a standard Salesforce URL from the Link to Share dialog box. Then, press CTRL+C to copy the URL. To add a new tab to your console in which to paste a URL you've copied, click . In the text box, press CTRL+V to paste the URL, then click **Go!**. You can paste a console URL or a standard Salesforce URL into a new tab.

To pin a frequently visited primary tab to the tab bar for quick access, click  and select . When a tab is pinned, it's moved to the front of the tab bar and its text is removed to provide more screen space. To unpin a tab, click  and select .

To bookmark a favorite or occasionally visited tab for quick access, click  and select . When a tab is bookmarked, it's moved to the History component in the footer (formerly named Most Recent Tabs). To remove a bookmarked tab, click  and select , or click **Remove** next to the tab in the History component. See [View Bookmarks or Recently Used Tabs in a Salesforce Console](#) on page 3654.

 **Warning:** If you click **Cancel** on a newly created item that you haven't saved, the item and its tab are deleted and aren't sent to the Recycle Bin.

 **Note:** If your administrator adds [custom console components](#), additional functionality might be available for you to work with in the sidebars next to tabs.

 **Tip:** To reopen the last tab you closed, press SHIFT+C or click  and select **Reopen last-closed tab**. You can reopen up to ten closed tabs.

[Salesforce Console Tabs](#)

[Use a Salesforce Console](#)

View Bookmarks or Recently Used Tabs in a Salesforce Console

If set up by your administrator, you can quickly access any primary tabs that you've bookmarked or recently used in a console without having to search Salesforce.

 **Note:** With Summer '15, Most Recent Tabs was renamed History and bookmarks were added to it to give you a more streamlined experience for finding and retrieving tabs. These features aren't available in Internet Explorer® 7 and 8.

To view any bookmarked or recently used primary tabs, click **History** in the console's footer. Then click the Bookmarks or Recent Tabs column and select a tab. You can get each tab's URL to send it to another user, or remove bookmarks and clear recently used tabs to start from scratch. Next to each recent tab, you can access up to ten subtabs when they're available. Items that don't display as tabs, such as meeting request overlays, don't display in the History footer.

Work with Keyboard Shortcuts in a Salesforce Console

Keyboard shortcuts let you quickly perform actions by pressing keys instead of having to use a mouse.

Keyboard shortcuts can make working with a console more efficient. For example, instead of typing case details and then using a mouse to click **Save**, an administrator can create a shortcut so that you can type case details and press CTRL+S to save cases without switching to your mouse. Only administrators can create or customize shortcuts.

To view an overlay that lists shortcuts for a console, press SHIFT+K or click  and select **Show Keyboard Shortcuts**. If a shortcut appears dimmed on the overlay, it hasn't been enabled or it's been customized.

Keyboard shortcuts aren't case sensitive, even when you press SHIFT before a letter key. For example, SHIFT+b is the same as SHIFT+B. If CTRL, ALT, or SHIFT is in a keyboard shortcut, the sequence of those keys doesn't matter. For example, CTRL+ALT+A is the same as ALT+CTRL+A.

SEE ALSO:

[Use a Salesforce Console](#)

Guidelines for Working with Salesforce Console Multi-Monitor Components

Move portions of a console to different areas of your computer screens so that you can view data in ways that help you work best.

After an administrator turns on multi-monitor components, you can pop out and drag primary tabs and Open CTI SoftPhones to other locations on your screens. You can also move the History component, Live Agent chats (but not the footer component), and any custom console components or Force.com Canvas components in a console's footer. To use multi-monitor components, you might need to update your browser's settings to: (1) allow popup windows; (2) open links in windows, not tabs.

To pop out and drag primary tabs, click  and select **Pop out primary tabs**. To return primary tabs to their original browser, click  and select **Pop tabs back into console**.

To pop out and drag components in a console's footer, click the items and select . To return items to their original browser, click . To refresh a popped out footer component, right-click on it and choose **Reload** or **Refresh**. When you refresh a popped out footer component, it's returned to the console's footer.

If pinned lists are set up, a playground appears as a blank area next to lists and it says `Drag Footer Components Here`. Use this area to keep track of Salesforce windows among several applications on your screens.

 **Important:** Popped out items close and lose their positions on your screens when you: (1) log out of Salesforce; (2) click **Setup**; (3) click a link to leave a console; (4) refresh or close your browsers.

 **Note:** You can't pop out SoftPhones built with versions 3.0 or 4.0 of the CTI Toolkit.

 **Tip:** Any items popped out of the console have blue headings to help you locate them among other windows on your screens. To use keyboard shortcuts from popped out components, focus on the correct window. For example, if you're focused on a window with the navigation tab, the default shortcut to go to primary tabs, key command P, won't work.

Add Notes to Records in a Salesforce Console

The interaction log helps you quickly add notes to records on a console's primary tabs.

If you're assigned to an interaction log layout, you can access the log from a console's footer. Logs appear on items that have an Activity History related list, such as accounts and contacts, but not solutions. Logs aren't available for reports, dashboards, Salesforce CRM Content, the Article Management tab, or Visualforce pages.

To show or hide the interaction log, hover over the log's border and click  or . To resize the interaction log and a detail page, drag the bar in between them. To help you quickly save notes on customers, when a contact appears on a subtab, the contact's name is added to the log's `Name`. However, you can change the `Name` before you save a log. When you click **Clear Log** to remove notes or a `Subject`, any saved notes aren't removed—they're stored on the record's Activity History related list. For easy review and retrieval, all logs are saved as tasks on records' Activity History related list.

 **Note:** Administrators can customize the fields that appear on logs.

 **Tip:** If you use a SoftPhone, click **Add Call Data** to add a call's date and time to the log. When screen popup windows appear from inbound calls, click **End Call** to end the call and save any updates that you've made to the log.

SEE ALSO:

[Use a Salesforce Console](#)

View Push Notifications in a Salesforce Console

Push notifications are visual indicators that appear when a record or field you're viewing was changed by others.

After an administrator configures push notifications, visual indicators for record or field changes appear on lists and detail pages. When changes happen, detail pages automatically refresh and show updates, or notifications appear as dialog boxes. Lists display notifications as:

Push Notifications for Lists

(1) Yellow when a record changes. (2) Blue if it's the last item you viewed. (3) Bold and italic when a field specified by an administrator changes.

 **Note:** These objects and their fields are available for push notifications: accounts, contacts, cases, leads, opportunities, campaigns, tasks, and custom objects.

SEE ALSO:

[Use a Salesforce Console](#)

Use a SoftPhone with a Salesforce Console

A SoftPhone in a console lets you view records related to phone calls, as well as receive, place, and transfer calls.

You can access a SoftPhone if you're assigned to a call center using a CTI adapter built with version 3.0 or 4.0 of the [CTI Toolkit](#), or if you're using a call center built with [Open CTI](#).

Click  to display a SoftPhone from the footer of a console. Use the interaction log to write notes in call logs. A call log is an activity record that automatically generates when you use a SoftPhone, and it tracks the phone number, caller, date, time, and duration of the call. You can view call logs in the Activity History related list of any record associated with the call.

 **Important:** Data might not save properly when you: (1) Refresh your browser during a call; (2) use a SoftPhone in multiple browsers simultaneously; (3) switch to a SoftPhone in a browser without a console.

 **Note:** If you're using a CTI adapter built with version 4.0 of the CTI Toolkit,  displays in the footer even when you're not connected to the adapter.

 **Tip:** You can hide the SoftPhone by clicking , but you can't move it away from the footer of a console. You can also resize the height of a SoftPhone by dragging the bar on top of it. When you click **End Call**, any updates you've made to the interaction log are saved before the call ends.

Find Knowledge Articles in a Salesforce Console

If Salesforce Knowledge and the Knowledge sidebar is set up by an administrator, articles automatically appear when you select a case in a console.

To help you solve cases faster, suggested articles appear in the sidebar as you type details into a case's `subject`. Only articles updated within the last 30 days appear, but you can view older articles by specifying a search term or filtering search results. To filter articles by a specific category, language, or validation status, click  and choose filter options. To access these filters, validation status and multilingual articles must be enabled. An administrator determines which languages are available for articles. The columns available in the sidebar are `New`, `Article Title`, and `Most Viewed`. You can drag the bar in between the columns to resize them, but you can't add, remove, or rearrange columns.

To find articles to help you solve a case, click , type keywords into `Search`, and click **Go**. To attach an article to a case, click the checkbox next to the article and click **Attach to Case**. You can only attach an article to a saved case.  displays next to an article already attached to a case.

To change the number of articles displayed, click the article count indicator in the lower left corner of the sidebar and choose a setting. You can view 10, 25, 50, 100, or 200 articles at a time. When you change this setting, you return to the first page of the list.

To show or hide the sidebar, hover over the scrollbar and click  or . You can drag the bar in between the articles sidebar and a detail page to resize the width of either one.

Live Chat for Support Agents

Welcome to Live Agent for support agents! Live Agent is a comprehensive chat solution that makes it easy for you to support customers.

As a support agent, you assist dozens of customers with their support issues every day. Live Agent is a chat solution that's fully integrated with the rest of Salesforce, making it easy for you to access all the information you need about your customers in a single workspace. In addition, Salesforce leverages the power of the Service Cloud, giving you access to important tools like a knowledge base and pre-defined support messages, that let you assist your customers and close cases more quickly.

Whether you're a seasoned veteran or new to Live Agent, there are several tools at your disposal that make it easy to assist multiple customers at the same time with chat. Let's get started.

IN THIS SECTION:

1. [Change Your Live Agent Status](#)

Change your Live Agent status to control when you're available to receive new and transferred chats.

2. [Assist Customers with Chat](#)

Use Live Agent chat in the Salesforce console to help customers with their issues with the support of robust customer service tools.

EDITIONS

Available in: **Salesforce Classic**

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

Change Your Live Agent Status

Change your Live Agent status to control when you're available to receive new and transferred chats.

In Live Agent, you can set your online status to online, away, or offline. When you exit Live Agent, your status automatically changes to offline and any active chat sessions end.

1. Click the Live Agent footer widget to open the chat monitor.
2. Click the drop-down arrow in the upper right corner of the chat monitor to view your status options.
3. Select your status.

IN THIS SECTION:

[Live Agent Statuses](#)

Live Agent statuses define how you can interact with customers while you're online, away, or offline.

[Live Agent Statuses](#)

Live Agent statuses define how you can interact with customers while you're online, away, or offline.

Live Agent Statuses

Live Agent statuses define how you can interact with customers while you're online, away, or offline.

| Status | Description |
|---------|--|
| Online | You can receive and accept incoming chats and transfers. |
| Away | You can continue any chat sessions you've already started, but you can't accept incoming chats or transfers. |
| Offline | You can't accept incoming chats or transfers, and no chats can be routed to you. |

Assist Customers with Chat

Use Live Agent chat in the Salesforce console to help customers with their issues with the support of robust customer service tools.

Of course you can chat with customers using Live Agent, but using Live Agent in the Salesforce console gives you access to several other Service Cloud products that let you assist customers in a comprehensive way.

IN THIS SECTION:

[Chat with Customers](#)

Accept incoming chat requests to begin chatting with customers.

[Access Customer Details during a Chat](#)

When you accept a chat request, a details tab for that chat opens automatically. The details tab includes information about the visitor and lets you look up records related to the chat, such as contacts and cases.

[Send Quick Text Messages in Chats](#)

Send pre-written messages to chat customers to send common messages more quickly.

[Transfer Files During a Chat](#)

Give customers the ability to upload and transfer files during a chat so they can easily share more information about their issues.

[Transfer Chats](#)

There are several ways you can transfer chats to agents. Transfer a chat session to a specific agent, send a transfer request to all available agents with a particular skill, or send a transfer request to all agents who are associated with a particular chat button.

[Send a Chat Conferencing Request](#)

As wise as support agents are, sometimes a single support agent doesn't have all the information that's required to solve a customer's problem. Chat conferencing lets you invite one or more agents into your customer chats. That way, your agents can turn boring chats into veritable support parties for your customers—all without disrupting the flow of conversation! Send a chat conferencing request to ask another agent to join you in a customer chat.

[Attach Articles to Live Agent Chats](#)

Use the Knowledge One widget to find articles that help solve customer issues during chats.

[Attach Records to Chat Transcripts](#)

Search for or create records to attach to a chat transcript as you chat with customers.

[Request Help with a Chat](#)

When you need help with a chat, you can raise a virtual flag to alert a supervisor. Supervisors are alerted that you need help, and they can respond directly via the console.

[Block Unwanted Chat Customers](#)

You can block chats from troublesome customers right from the Salesforce console. For example, if a customer is using abusive language or sending spam messages, you can block that user from starting a new chat.

[End a Chat Session](#)

End a chat session after you've finished chatting with a customer and updating the records related to their chat.

[View Customer Records](#)

Salesforce automatically creates some records when a chat ends. These records store information about chat customers and their interactions with agents.

Salesforce automatically creates some records when a chat ends. These records store information about chat customers and their interactions with agents.

Chat with Customers

Accept incoming chat requests to begin chatting with customers.

When you receive a new chat or transfer request, the pending request appears in your chat monitor. You can see the deployment or website the chat came from, the customer's name (if it's available), and the number of minutes the request has been waiting to be answered.

You can chat with several customers at the same time. Each chat sessions opens in a separate primary tab.

1. In the chat monitor, click **Accept** on the chat request.
The chat log opens in a new primary tab.
2. Type your message to the customer in the message field.
3. Click **Send** or hit ENTER on your keyboard to send your message to the customer.
4. Click **End Chat** when you're done assisting the customer.
If the customer ends the chat first, a notice appears in the chat log.

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

Access Customer Details during a Chat

When you accept a chat request, a details tab for that chat opens automatically. The details tab includes information about the visitor and lets you look up records related to the chat, such as contacts and cases.

- To search for a record, type a name in the relevant box in the Related Entities section of the page, then click . To associate a record you find to the chat, select it from the search results list and click **Save**.

In older organizations, you could access records and visitor details from the Related Entities panel during chats. However, starting with Summer '14, the Related Entities panel in the details tab isn't available for new Live Agent customers. Existing customers will continue to have access to the Related Entities panel.

- Once you associate an existing record to the chat, click the name of the record to open it in a new tab.
- To create a new record, click **New Case**, **New Lead**, **New Contact**, or **New Account**.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To search for and view a record:

- "Read" on the object
- AND
- "Create" on Live Chat Transcripts

To create a new record:

- "Create" on the object
- AND
- "Create" on Live Chat Transcripts

To edit a record:

- "Edit" on the object
- AND
- "Create" on Live Chat Transcripts

To delete a record:

- "Delete" on the object
- AND
- "Create" on Live Chat Transcripts

Send Quick Text Messages in Chats

Send pre-written messages to chat customers to send common messages more quickly.

Quick Text lets you respond to customers more efficiently by letting you insert predefined messages, such as greetings or common troubleshooting steps, into your chat messages.

 **Note:** If you don't have access to Quick Text, contact your administrator.

1. While chatting with a customer, type ; in the message field.
A list of Quick Text messages appears. The messages you've used most recently appear at the top of the list.
2. To see additional Quick Text messages that are available, type a word or phrase.
A list of messages that include those words appears.
3. To see the title and full text of a message, click it once or highlight it using the arrow keys on your keyboard.
The full message appears at the bottom of the Quick Text list.
4. To select a message and add it to your chat, double-click it or highlight it and hit ENTER on your keyboard.
5. To send the message, click **Send** or hit ENTER on your keyboard.

SEE ALSO:

[Create Quick Text Messages](#)

Transfer Files During a Chat

Give customers the ability to upload and transfer files during a chat so they can easily share more information about their issues.

For example, if a customer is receiving an error when they try to complete a process, they can upload and transfer a screenshot of the error message to the agent.

Before a customer can upload a file, you must associate the chat with a record, such as a case or a contact. Since the chat transcript isn't created until you end the chat, you can't attach a customer's file directly to the transcript during the chat.

1. Click  to search for or create a record to attach to the chat.
2. Click the file transfer icon ().

 **Note:** A customer can't upload a file until you initiate the file transfer by clicking the file transfer icon. This helps prevent customers from uploading unsolicited or potentially dangerous files into the chat.
3. Select the record you chose in the first step to attach the transferred file to.
The customer receives a prompt to upload their file to the chat window.
4. When the customer has sent the file through the chat, click the link in the chat log to view the file.

Transfer Chats

There are several ways you can transfer chats to agents. Transfer a chat session to a specific agent, send a transfer request to all available agents with a particular skill, or send a transfer request to all agents who are associated with a particular chat button.

You may need to transfer chat sessions to other agents if a customer has an issue another agent can solve, or because you need to pass along some of your chat sessions to accept new requests. When you transfer a chat to a skill group, it's available to all online agents with that skill, regardless of their capacities and how many active sessions they're already engaged in.

When an agent transfers a chat, any records attached to the chat transcript will open in the other agent's workspace when another agent accepts the chat. This way, the agent who accepts the transferred chat has all the information to start assisting the customer right away, without having to search for related records.

If an agent tries to transfer a chat, but has open records that are unsaved or unattached to the chat transcript, the first agent will be prompted to save those changes before completing the chat transfer. This way, the agent who accepts the transfer will see the most up-to-date details about the customer.

If the accepting agent does not have permission to view certain records or objects, those items will not open in the transferred workspace.

1. While chatting with a customer, click **Transfer**.
2. Choose the skill group or chat button queue to which you want to transfer the chat.

Note: You can transfer a chat to a skill group or a chat button queue, but not both.

3. Select All Qualified Agents to send the transfer request to all online agents in the skill group, or choose the name of a specific agent.
4. If the transfer is accepted, you don't need to do anything else. If it's rejected, you can try transferring it to a different agent or skill group.

Warning: When another agent accepts your transfer request, your chat workspace closes automatically, including the chat log and any related subtabs. Make sure to save any changes to these records before you transfer the chat, since any unsaved changes will be lost when the workspace closes.

EDITIONS

Available in: **Salesforce Classic**

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

Send a Chat Conferencing Request

As wise as support agents are, sometimes a single support agent doesn't have all the information that's required to solve a customer's problem. Chat conferencing lets you invite one or more agents into your customer chats. That way, your agents can turn boring chats into veritable support parties for your customers—all without disrupting the flow of conversation! Send a chat conferencing request to ask another agent to join you in a customer chat.

 **Note:** You can conference in a single agent, or send a request to all agents and the first to accept will join the conference. You can conference multiple agents into a chat, but you need to send each request individually.

1. While you're chatting with a customer, click .
2. Select the skill group of the agents that you want to transfer into the chat.
3. Select whether to send the conference request to all agents with that skill or to a specific agent.
4. Click **Conference** to send the conference request.

If the agent accepts the conference request, you see a notification in the chat log, and that agent can start chatting with you and the customer. If the agent declines the request, you see a notification above the chat log. The customer receives a notification when an agent joins or leaves a conference.

5. If you decide to exit the conference, click **Leave**, and then click **Leave** again.

If the other agent leaves the conference, you'll see a notification in the chat log.

Any saved and attached records will open for other agents who join the conference. But only the originating or longest-attending agent will be able to attach other records. If the longest-attending agent attaches or removes records during the conference, other agents won't see these changes in their workspaces.

For more about transferring chats and workspaces, see [Transfer Chats](#).

- "Enable Live Agent Chat Conference"

Attach Articles to Live Agent Chats

Use the Knowledge One widget to find articles that help solve customer issues during chats.

The Knowledge One widget is only available if your organization uses Knowledge and your administrator has included the tool in your Salesforce console app.

1. When chatting with a visitor, click an article from the list in the Knowledge One widget. A tab with the full text of the article opens.
2. To search for a specific article in the list, type a word or phrase in the text box in the widget and click  or press ENTER.
 - Alternatively, click  at the top of the widget to search all articles, including those not in the list. The main widget search gives you the option of limiting your results to specific types of articles.
 - To filter your search results, click **Filters** and choose how you want to restrict your search.
3. When you find the article you want, click , then click **Share**. The text of the article appears in the chat text box.
4. Click **Send** or press ENTER on your keyboard to send the article to the visitor.

 **Note:** You can only send articles to visitors if your administrator has set up a Chat Answer field on articles. If this field isn't set up, you can view articles but can't include them in chats.

- "Read" on the article type

Attach Records to Chat Transcripts

Search for or create records to attach to a chat transcript as you chat with customers.

Find existing records or create new ones to associate with a transcript as you chat with customers. For example, you can create a new case based on the customer's issue, or search for the customer's existing contact record and attach these records to the transcript for later reference. You can attach standard or custom records to your chat transcripts.

1. While chatting with a customer, click  to attach a record to the transcript.
 -  **Note:** You can only attach one of each type of record to a chat transcript. For example, you can't attach more than one case to a single transcript.
2. To search for an existing record:
 - a. Click the search icon () in the records window next to the type of record you want to search for.
 - b. Type the name of the record and hit ENTER.
The record opens in a new tab.
 - c. Click the attach icon () again.
 - d. Select the check box next to the record you searched for to link it to the chat transcript.
3. To create a new record:
 - a. Click the create icon () next to the type of record you want to create.
 - b. Complete the information in the new record and save it.
The record will automatically link to the transcript once the record is created.
4. After you complete the chat with the customer, exit the chat.
5. If prompted, click **Save**.
The records you linked are now attached to the transcript. You can access them from the transcript's detail view.

Request Help with a Chat

When you need help with a chat, you can raise a virtual flag to alert a supervisor. Supervisors are alerted that you need help, and they can respond directly via the console.

1. In the interaction pane, click the  icon.
2. Enter a message briefly explaining what help you need.
3. Click **Raise Flag**.

Either you or a supervisor can lower the flag when your issue is resolved.

If you don't see the  icon in your console, contact your Salesforce administrator to enable it.

Block Unwanted Chat Customers

You can block chats from troublesome customers right from the Salesforce console. For example, if a customer is using abusive language or sending spam messages, you can block that user from starting a new chat.

Blocking a chat ends the chat and blocks any new chat requests coming from that user's IP (Internet Protocol) address.

If your organization is receiving many spam chats from a particular region, your administrator can block entire ranges of IP addresses.

1. In the interaction pane, click the  icon.
2. (Optional) Enter a comment explaining why you're blocking this visitor.
3. Click **Block**.

When you click **Block**, you immediately end the chat, and the visitor sees a notification that an agent ended the chat. If multiple agents are engaged in a conference, **Block** immediately ends the conference, and the other agents are also notified.

If you don't see the  icon in your console, contact your Salesforce administrator to enable it. Only an administrator can unblock an IP address.

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

End a Chat Session

End a chat session after you've finished chatting with a customer and updating the records related to their chat.

After you end a chat with a customer, the primary and secondary tabs related to that chat remain open in your console. Close them to save your work and free up space to take on more chats.

1. Close the primary tab for the chat.
2. If prompted, click **Save**.

View Customer Records

Salesforce automatically creates some records when a chat ends. These records store information about chat customers and their interactions with agents.

These records are mostly used internally to provide an audit trail about your customers and their chats with agents. However, you can access these records yourself if you ever need them.

1. To access customer records in the Salesforce console, select the type of record you want to view from the Salesforce console navigation list.
A list of those records will appear in the main window.

IN THIS SECTION:

[Live Agent Session Records](#)

Every time your agents log into Live Agent, a Live Agent session record is automatically created. These session records store information about your agents' and customers' interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers.

[Live Chat Visitor Records](#)

Every time an agent chats with a customer, Salesforce automatically creates a visitor record that identifies the customer's computer.

[Live Chat Transcripts](#)

A live chat transcript is a record of a chat between a customer and an agent. Salesforce automatically creates a transcript for each chat session.

[Live Agent Session Records](#)

Every time your agents log into Live Agent, a Live Agent session record is automatically created. These session records store information about your agents' and customers' interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers.

[Live Chat Visitor Records](#)

Every time an agent chats with a customer, Salesforce automatically creates a visitor record that identifies the customer's computer.

[Live Chat Transcripts](#)

A live chat transcript is a record of a chat between a customer and an agent. Salesforce automatically creates a transcript for each chat session.

Live Agent Session Records

Every time your agents log into Live Agent, a Live Agent session record is automatically created. These session records store information about your agents' and customers' interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers.

Use Live Agent sessions to find and edit information about your support agents' chats with customers. For example, you can create a list called "Today's Sessions" to view chat activity that occurred in one day.

You can associate session records with cases, accounts, contacts, and leads or link them with other objects through custom lookup fields.

 **Note:** If you have the correct permissions, you can create, view, edit, or delete session records, just like other record types in Salesforce. However, session records are meant to provide a paper trail for the chats between your agents and customers, so we don't recommend tampering with these records in most cases.

Live Chat Visitor Records

Every time an agent chats with a customer, Salesforce automatically creates a visitor record that identifies the customer's computer.

Each new visitor is associated with a session key, which Salesforce creates automatically. A session key is a unique ID that is stored in the visitor record and on the visitor's PC as a cookie. If a customer participates in multiple chats, Salesforce uses the session key to link the customer to their visitor record, associating that record to all related chat transcripts.

 **Note:** If you have the correct permissions, you can create, view, edit, or delete visitor records, just like other record types in Salesforce. However, visitor records are meant to provide a paper trail that associates your customers with their chat transcripts, so we don't recommend tampering with these records in most cases.

Live Chat Transcripts

A live chat transcript is a record of a chat between a customer and an agent. Salesforce automatically creates a transcript for each chat session.

When a chat ends successfully—that is, when the chat is ended by a customer or an agent—the chat transcript is created as soon as the agent closes the chat window and any related tabs.

If a chat is disconnected or experiences another error, Salesforce still creates a chat transcript for it, though it takes up to 30 minutes to create the transcript after the chat is disconnected.

You can associate a transcript with cases, accounts, contacts, and leads, or you can link it to other objects.

 **Note:** If you have the correct permissions, you can create, view, edit, or delete chat transcripts, just like other record types in Salesforce. However, chat transcripts are meant to provide a paper trail for the chats between your agents and customers, so we don't recommend tampering with these records in most cases.

IN THIS SECTION:

Live Chat Transcript Fields

Live chat transcript fields help you track information about your agents' chats with customers.

A live chat transcript has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields might not be visible or editable.

| Field | Definition |
|-----------------|---|
| Abandoned After | The amount of time in seconds an incoming chat request went unanswered by an agent before the chat was disconnected by the customer |
| Account Name | The name of the account associated with the transcript |

| Agent Skill | The skill associated with the live chat button used to initiate the chat |
| Body | The transcribed chat between an agent and a visitor |
| Browser | The type and version of the browser used by the visitor |
| Browser Language | The visitor's browser language selection |
| Case | The case associated with the chat |
| Chat Button | The chat button that the visitor clicked to initiate the chat |
| Chat Duration | The total duration of the chat in seconds |
| Contact Name | The name of the contact that participated in the chat
Note that contacts and visitors are not the same. See Live Chat Visitor for more information. |
| Created By | The user who created the transcript, including creation date and time (Read only) |
| Created Date | The date and time the transcript was created (Read only) |
| End Time | The time the chat ended |
| Ended By | Indicates whether the visitor or the agent ended the chat |
| Last Modified By | The user who last modified the transcript, including date and time (Read only) |
| Last Modified Date | The date and time the transcript was last modified (Read only) |
| Lead | The name of the lead that was generated by the chat or discussed during the chat |
| Deployment | The deployment from which the visitor initiated the chat |
| Live Chat Transcript | Unique, numerical identifier automatically assigned to the transcript.
Administrators can modify the format and numbering for this field.
Transcript numbers usually increase sequentially, but sometimes they can skip numbers in a sequence. |
| Live Chat Visitor | Unique, numerical identifier automatically assigned to the visitor.
Administrators can modify the format and numbering for this field. |

| Field | Definition |
|-------------------------------|--|
| Location | <p>Visitor numbers usually increase sequentially, but sometimes they can skip numbers in a sequence.</p> <p>Note that visitors and contacts are different: a visitor might be a contact, but this is not a requirement, and there is no relationship between contacts and visitors.</p> |
| Owner | <p>The name of the transcript owner. By default, the owner is the user who originally created the transcript (for example, the agent who answered the chat).</p> <p>You can select a different user as the owner, or assign the transcript to a queue. When assigning transcripts to other users, make sure those users have the "Read" permission on live chat transcripts.</p> |
| Platform | The user's operating system |
| Referring Site | <p>Site the visitor was on before they came to your website.</p> <p>For example, if the visitor used Google to search for your organization's website, the referring site is Google.</p> |
| Request Time | The time that the visitor initially requested the chat |
| Screen Resolution | The screen resolution used by the visitor |
| Start Time | The time that the agent answered the chat request |
| Status | Completed or Missed. A missed chat was requested but not answered |
| User Agent | A string that identifies the type of browser and operating system the visitor used |
| Visitor Average Response Time | The average time that it took a visitor to respond to an agent comment |
| Visitor Maximum Response Time | The maximum time it took a customer to respond to an agent's message |
| Visitor IP Address | The IP address of the computer that the visitor used during the chat |
| Visitor Message Count | The number of messages a visitor sent during the chat |
| Wait Time | The total amount of time a chat request was waiting to be accepted by an agent |

Live Chat Transcript Events

Live chat transcript events automatically track events that occur between your agents and customers during chats.

You can edit live chat transcripts to track events that occur between your agents and customers during live chats. You can add the following events to a live chat transcript:

| Event | Description |
|----------------------------------|--|
| Chat Requested | Visitor requested a chat |
| Queued | Chat request was placed in queue |
| Routed (Push) | Chat request was routed to agent |
| Routed (Choice) | Chat request was routed to all available, qualified agents |
| Accepted | Chat request was accepted by agent |
| Critical Wait Alert Time Reached | Agent failed to respond to the customer's message before reaching the critical wait alert time |
| Critical Wait Alert Cleared | Agent responded to the customer's message after the critical wait alert was received |
| Transfer Requested | Agent requested chat transfer |
| Transfer Accepted | Chat transfer was accepted by agent |
| Transfer Request Canceled | Chat transfer request was canceled by the agent who sent the request |
| Transfer Request Declined | Chat transfer request was declined by the agent who received the request |
| Transferred to Button | Chat was transferred to a button |
| Transfer to Button Failed | Chat transfer to button was unsuccessful |
| Chat Conference Requested | Agent sent a request to start a conference |
| Chat Conference Canceled | Conference request was canceled |
| Chat Conference Declined | Conference request was declined by an agent |
| Agent Joined Conference | An agent joined the conference |
| Agent Left Conference | An agent left the conference |
| File Transfer Requested | A file transfer was requested |
| File Transfer Canceled by Agent | File transfer was canceled by an agent |

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

| Event | Description |
|-----------------------------------|--|
| File Transfer Canceled by Visitor | File transfer was canceled by the visitor |
| File Transfer Succeeded | File transfer was successful |
| File Transfer Failed | File transfer failed |
| Canceled (Blocked) | An attempted chat was blocked via an IP blocking rule |
| Blocked by Agent | An agent blocked an active chat (creating an IP blocking rule) |
| Declined (Manual) | Chat request was declined by agent |
| Declined (Time-Out) | Chat request timed out while assigned to agent |
| Canceled (No Agent) | Chat request was canceled because no qualified agents were available |
| Canceled (No Queue) | Chat request was canceled because there was no room in queue |
| Canceled by Visitor | Visitor clicked Cancel Chat |
| Agent Left | Agent left chat |
| Visitor Left | Visitor left chat |
| Ended by Agent | Agent clicked End Chat |
| Ended by Visitor | Visitor clicked End Chat |
| Other | Another event occurred |

Live Chat for Support Supervisors

Welcome to Live Agent for support supervisors! Live Agent is a comprehensive chat solution that makes it easy for your agents to support customers. With Live Agent's supervisor tools, you can easily monitor your agents' activities, assist your agents in chats, and view data on your agents' chat sessions.

As a support supervisor, you oversee your employees to ensure that they provide the best customer support possible. Live Agent is a chat solution that's fully integrated with the rest of Salesforce, making it easy for you to access the information you need about your agents and their chat activity in a single workspace.

Whether you're a seasoned veteran or new to Live Agent, there are several tools at your disposal that make it easy to support and monitor your chat agents as they work with customers. Let's get started.

IN THIS SECTION:

[The Live Agent Supervisor Panel](#)

The Live Agent supervisor panel is your one-stop shop to find information about your department's chat buttons and chat agents. From the supervisor panel, you can monitor agents' chat activities as they chat with customers and view customer traffic on specific chat buttons, all in real time. The supervisor panel is conveniently located in the Salesforce console, so it's easy to access it without switching out of the app.

[Assign Skills to Agents](#)

Assign skills to your agents as the expertise of your team evolves.

[Report on Live Agent Sessions](#)

Gain insight into your agents' chat activities by building reports about Live Agent chat sessions.

Access the Supervisor Panel

Access the supervisor panel conveniently from the Salesforce console to easily monitor your agents' chat activity.

- To access the supervisor panel in the Salesforce console, select **Live Agent Supervisor** in the console's navigation list.

The supervisor panel appears in the main console window, giving you access to real-time information about your organization's chat buttons and agents.

Agent Status List

The agent status list in the supervisor panel gives you access to real-time information about your agents' chat activity.

| Agent Detail | Description |
|--------------------------|--|
| Agent Name | The name of the agent.
 Note: If a red flag appears next to the name, the agent has requested help. Respond via the chat detail module (far right). |
| Status | The agent's Live Agent status. |
| Action | The actions you can take to change the agent's status. |
| No. Chats in Progress | The number of chats that an agent is engaged in. |
| No. Requests Assigned | The number of pending chat requests that are currently assigned to the agent. |
| Time Elapsed Since Login | The amount of time the agent has been logged in to Live Agent. |

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To use the Live Agent supervisor panel in the Salesforce console:

- Access to the Live Agent supervisor tab in a user profile or permission set, and included in a Salesforce console app

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

| Agent Detail | Description |
|----------------------------------|--|
| Time Elapsed Since Last Accept | The amount of time since the agent last accepted a chat request. |
| Message to Supervisor (optional) | The private message that the agent sent with a help flag. |

Expand each agent's name to see details about the customers they're chatting with.

| Customer Detail | Description |
|-----------------|---|
| Visitor Name | The name of the customer, if available. |
| IP | The IP address of the customer's device. |
| Network | The customer's network, if available. |
| Browser | The type of internet browser the customer is using to connect to their chat window. |
| City | The city the customer is chatting from. |
| Country | The country the customer is chatting from. |
| Duration | The amount of time the customer has been engaged in a chat with the agent. |
| Action | The actions you can take to view the customer's chat with the agent. |

SEE ALSO:

[Live Agent Statuses](#)

Queue Status List

The queue status list in the supervisor panel gives you access to real-time information about your organization's chat buttons and queues.

| Queue Detail | Description |
|--------------|--|
| Button Name | The name of the chat button. |
| ID | The unique Salesforce ID of the chat button. |
| Queue Length | The number of chats that are waiting to be assigned to an agent. |
| Longest Wait | The longest amount of time a customer chat has waited to be connected to an agent. |

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Monitor Your Agents' Chats

View your agents' chats from the supervisor panel as they help customers. You can monitor agents' performance and give them real-time feedback and help as they serve customers.

1. In the Agent Status list, click  to expand the information about the agent whose chat you want to view. If an agent has requested help, you see a red flag next to the name and a private message (far right) if the agent entered one.
2. To view a chat, click **View** in the Action column of the chat you want to monitor.
The chat monitor opens in the Agent Status list.
3. To send a private message to an agent as the agent is chatting with a customer, type your message in the message field and press **Enter**.

The agent can see your message in the chat log, but the message is invisible to the customer.

When you finish monitoring your agent's chat, click  again to collapse the chat monitor.

To remove a flag after you've provided help, click **Lower Flag**.

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To use the Live Agent supervisor panel in the Salesforce console:

- Access to the Live Agent supervisor tab in a user profile or permission set, and included in a Salesforce console app

To view agents' chats:

- "Agent Sneak Peek Enabled" in your Live Agent configuration

To send whisper messages to agents:

- "Whisper Messages Enabled" in your Live Agent configuration

Assign Skills to Agents

Assign skills to your agents as the expertise of your team evolves.

1. In Setup, enter *skills* in the **Quick Find** box, then select **Skills**.
2. Click the name of the skill you want to assign.
3. Click **Edit**.
4. Select either the profiles (recommended) or individual users who have this skill.
5. Click **Save**.

If you don't have access to the Skills page, ask your Salesforce administrator about enabling this permission. Only your administrator can create skills.

Report on Live Agent Sessions

Gain insight into your agents' chat activities by building reports about Live Agent chat sessions.

You can create a custom report type for Live Agent chat sessions and use it to run reports on your agents' sessions using the Report Builder. These Live Agent session reports can provide insight about your agents' chat activities—for example, whether or not your agent team is able to handle all chat requests from your customers.

1. Create a custom report type using Live Agent Sessions as the primary object.
2. Create a new Live Agent report using the Report Builder.
3. Customize your report to include the columns of information you want to feature.
4. Save or run the report.

Console Tab

Agent Console

The Agent console in the console tab makes it easier to find related information with less switching between pages.

 **Tip:** The Salesforce console improves the Agent console by providing you with more options and more advanced technologies. See [Salesforce Console](#).

The Agent console in the console tab combines a list view and related records into one screen so that you can access more information at a glance and with fewer clicks. You can set up the Agent console to display the information most important to your work according to your business needs.

Before setting up or using the Agent console, review [Agent console terminology](#).

SEE ALSO:

[Agent Console FAQ](#)

[Displaying the Agent Console](#)

[Navigating within the Agent Console](#)

[Tip sheet: Using the Console](#)

Agent Console Concepts

Review the following terminology used to describe the components of the Agent console:

Frames

Separate sections of the console, each displaying a different record, list view, or other page.

List View

The console's top frame, which is a list view of records based on specific criteria. The list views you can select to display in the Console tab are the same list views defined on the tabs of other objects. You cannot create a list view within the console.

Detail View

The Agent console's center frame, which is the detail page view of any record selected from any of the console's other frames. The detail view displays the same page layouts defined for the object's detail pages. When a record is displayed in the detail view, it is highlighted in the list view.

Mini View

The Agent console's right frame which displays the records associated with the record displayed in the detail view. The fields displayed in the mini view are defined in the mini page layouts by an administrator. The mini view does not display if the record in the detail view does not have any records associated with it.

Sidebar

The Agent console's left frame, which displays recent items, the Recycle Bin, and other components, just like the sidebar displayed on every Salesforce page. To show or hide the sidebar in the console, click the border of the left frame.

Related Objects

Objects chosen by an administrator to display in the Agent console's mini view when records of a particular type are shown in the console's detail view. For example, when a case is in the detail view, an administrator can choose to display an associated account, contact, or asset in the mini view.

Mini Page Layouts

A subset of the items in a record's existing page layout that administrators choose to display in the Agent console's Mini View and in Hover Details. Mini page layouts inherit record type and profile associations, related lists, fields, and field access settings from the page layout.

Console Layout

Objects chosen by an administrator to display in the list view frame of the Agent console. For example, if an administrator adds cases to a console layout, then users whose profiles are assigned to that console layout can see list views of cases in the console's list view frame.

SEE ALSO:

[Agent Console](#)

[Displaying the Agent Console](#)

[Navigating within the Agent Console](#)

[Tip sheet: Using the Console](#)

Navigating within the Agent Console

What you click in the Agent console determines which frame a record displays in.

In the detail view, clicking:

- Buttons or links on the record displays the record in the detail view.
- Email this page** (✉) displays a link to the record in an email.
- Link to this page** (🔗) displays the record and the URL of the record in a new browser window.
- Printable View** (🖨) displays a printable view of the record in a popup window.
- Customize Page** (🔧) allows you to customize the display of related lists in the detail view of the record.
- Help for this page** (🔍) displays an online help page for the record.

In the mini view, clicking:

- Links displays the record in the detail view. Associated records display in the mini view.
- View** displays the entire record in the detail view.
- Edit** displays a mini edit page in the mini view.

To edit a field not displayed on the mini edit page, click **View** to display the entire record in the detail view, and then click **Edit** from the detail view.

- Show more** below a related list displays more of the records included in the related list in the mini view. **Show more** displays an additional five records every time you click it, up to a maximum of 100.

Note: The mini view does not display if the record in the detail view does not have any records associated with it.

In the list view, clicking:

- A link displays the record in the detail view.
- Refresh** reloads the list view with any updates that have occurred to the records since you began viewing the list.
- A column heading sorts that column in ascending order. Click the heading a second time to sort in descending order.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

- A letter at the bottom of the list view filters your list view records by the letter.
- **fewer** or **more** at the bottom of the list view displays a shorter or longer list.
- **Previous Page** or **Next Page** at the bottom of the list view displays the previous or next page of items on the list.
- For more information, see [Using the Agent Console List View](#).

In the sidebar, clicking:

- The border of the left frame opens the sidebar in the console. Click the border of the left frame a second time to hide the sidebar.
- A record under **Recent Items** displays the record in the detail view.
- **Calendar** displays the calendar in the detail view.
- **Recycle Bin** displays the Recycle Bin in the detail view.

Tip: Clicking the back or forward buttons on your browser cycles you through pages in the console. You will not immediately exit the console by clicking them.

Note: Not all pages open within the console. For example, clicking **Printable View**, **Check Spelling**, **Help for this Page**, lookup icons, email addresses, and custom links set to open in a new browser window all open outside of the console in a new browser window or popup.

Drag-and-drop editing is not available for calendar views in the Agent console.

Using the Agent Console List View

The Agent console's list view allows you to quickly perform actions within Salesforce without leaving the console.

Display list views

From the drop-down list in the top left of the list view frame, select an object, and then a list view of the object to display in the console's list view frame. You cannot create a list view within the console.

Click **Refresh** to reload the list view with any updates that have occurred to the records since you began viewing the list. The refresh button automatically changes colors when record updates have occurred.

Records italicize in the list view when you edit them in the detail view. This shows you the records you have edited.

Search

Enter keywords in the search box above the list view and click **Go!** to use advanced search across all the searchable records you can access in your organization. Terms in an advanced search are treated as separate words rather than a phrase and can be found in different indexed fields within a record. So, searching for *Pat Powers* in advanced search will find a contact named "Pat P Powers," as well as a contact named "Pat Smith" with an email address of "smith@powers.com.". Search results display in the detail view.

Create records

From the New drop-down list, select any object to create a new record. New record pages display in the detail view.

View recent items

From the Recent Items drop-down list, you can choose to display any of the 10 records you most recently viewed. Recent items display in the detail view.

Perform mass actions

Select the checkbox next to items in the list view, and from the Mass Action drop-down list, choose the action you want to perform on all the selected records.

If you perform a mass action on more than 200 records while using Internet Explorer, you might be automatically logged out of Salesforce.

 **Note:** No data displays in the console if the selected list view does not contain any records.

Agent Console FAQ

- [How is the Console tab different from other tabs in Salesforce?](#)
- [How do I view the Agent console?](#)
- [Why do I only see the list views of certain objects in the Agent Console?](#)
- [Can I view more than one Agent console?](#)
- [Is the Agent console the same thing as the Salesforce console?](#)

How is the Console tab different from other tabs in Salesforce?

The Console tab is just like other tabs in Salesforce except that the console can display records from several different Salesforce tabs all on one Console tab. This specialized display is called the Agent console, and it allows you to have all the information you need on one tab when interacting with Salesforce. By using the Agent console in the Console tab, you can quickly find, view, and edit records, such as cases, accounts, and contacts, with fewer clicks and without switching back and forth between screens.

SEE ALSO:

[Agent Console FAQ](#)

How do I view the Agent console?

You can view the Agent console by clicking the Console tab. You can only access the Agent console if your administrator has assigned your user profile to a console layout and granted you access to the Console tab. You can customize your display to make the Console tab visible in your tab sets.

SEE ALSO:

[Agent Console FAQ](#)

Why do I only see the list views of certain objects in the Agent Console?

The list views of objects you can display in the Agent console are defined by your administrator in the console layout assigned to your user profile.

SEE ALSO:

[Agent Console FAQ](#)

Can I view more than one Agent console?

No. You can only view one Agent console. However, your administrator can customize many different Agent console layouts to display a variety of objects in the Agent console's list view, and then assign those console layouts to different user profiles to satisfy business needs for different users.

[Agent Console FAQ](#)

Using Social Customer Service

Social Action Tips

An agent can use the social action to respond to customer cases or leads publicly and through direct messages.

Once an administrator has enabled social customer service and assigned social handles, agents can use the social action to send comments, retweets, replies and direct messages to social customers and social leads. The fields on the social action are optional. However, we recommend at least these fields.

| Field | Description |
|------------------------|--|
| In Reply To | The social post you are replying to and its content. Use the Reply, Retweet, and Comment links in the feed to add content to a specific item in the feed. |
| Managed Social Account | You must have access to the managed social account by a profile or permission set. Use the drop-down to change to another account you have access to. |
| Message Type | By default the message type is set to Reply for inbound posts. Use the drop-down to change to another valid message type. |
| Content | All outbound content must be unique for the interaction, you can't send the same content in the same conversation. All Twitter replies must start with a handle: @[social handle]. |

EDITIONS

Available in: Salesforce Classic

Social Customer Service is available in **Enterprise**, **Performance**, and **Unlimited** editions.

USER PERMISSIONS

To send and receive social media posts or messages:

- "Social Objects"
- AND
- "Social Publisher"
- AND
- Case Feed enabled
- AND
- Social account

If your posts require approval before they are sent, you can click **Submit for Approval** to start the review process. You can **Recall** it before it is approved or rejected. If a post is rejected you can **Retry** a rewritten post. When your post is approved, it is automatically published.

Here are some tips for working with social networks.

- If Quick Text is enabled, agents can create ready-to-send responses to social customers. See [Enable Quick Text](#) and [Create Quick Text Messages](#).
- URLs in a social post are turned into clickable links.

- When deleting posts, consider that Twitter Direct Messages behave like to emails. For example, the sender can delete their direct message from a conversation view. However, receiver has that direct message in their conversation view until they choose to delete it.
- Speaking of Twitter Direct Messages, Twitter has a preference to "Receive Direct Messages from Anyone". Therefore, depending on if this permission is set on your or the recipient's account, you may not have to be following each other to direct message.
- Agents can use the **View Source** link to go to the original post within its social network.
- In Salesforce1, agents can see and reply to social content from mobile devices.
- You should only manually change the Status picklist field on social posts if you are working with outbound posts. Provided your organization's configuration includes the Status field on the layout of inbound social post record detail pages, manually setting the Status field on an inbound social post can result in confusing items in the case feed. For example, if you change the Status of an inbound post to Sending, the Reply link in the case feed item disappears until you change the status back to None.

For Twitter accounts, agents can use case and lead feeds to see the content they are responding to, retweet, mark as favorite and follow tweets, send replies to tweets and direct messages, and delete tweets managed by your social accounts.

For Facebook accounts, cases and leads are created from your managed Facebook page and agents can use the feeds to see the content they are replying to, like posts and comments, send posts, comments, replies, and private messages, and delete posts managed by your social accounts.

Here are tips for dealing with some possible error messages.

| Message | Action |
|---|--|
| You can't send a direct message to this Twitter user because he or she is not following you. | Use a reply to ask the Twitter user to follow your managed social account. Once they are following you, send them a direct message. |
| Whoops! You already said that... Change your message and try again. | You can't post the same text twice. Change your content and send again. |
| Your content is too long. | Reduce your content to 140 characters or less. For Twitter replies, the handle is included in the character count. |
| Twitter replies must begin with a handle. | The content field for a Twitter reply must be in the form: @[sender's handle] message text.

Ensure there is a space between the sender's handle and your message. |
| Your response message type must be compatible with the original post's message type. | Change the message type to match the original message. |
| Your login to Radian6 or Social Studio has failed. The username or password may be incorrect. Update your credentials or reset your password. | An administrator must edit the Radian6 or Social Studio credentials on the Social Customer Management settings page.

 Note: When an administrator makes a copy of or refreshes a Sandbox organization, a new organization is created, with a new ID, making the Radian6 or Social Studio login invalid. |

Message

Your post did not send.

Action

We recommend creating a workflow to notify the case owner that an attempt to send a response via Twitter has failed.

How to Reconnect a Social Account

Reconnect your social account for Social Customer Service.

Your social account can be disconnected from Social Customer Service if your social media network provider's connect, or token, has expired. Many providers have expiration policies of 60 to 90 days.

1. From Setup, enter *Social Customer Management* in the Quick Find box, then select **Settings**.
2. On the *Social Accounts* tab, click **Reauthorize** in the *Action* column.
The social network opens and asks you to authenticate the account. Once your account is reauthenticated, you are returned to the *Social Accounts* tab.

EDITIONS

Available in: Salesforce Classic

Social Customer Service is available in **Enterprise**, **Performance**, and **Unlimited** editions.

USER PERMISSIONS

To administer Social Customer Service:

- "Manage Users"

AND

"Customize Application"

To create case feed items:

- Feed Tracking for All Related Objects on the Case object

To send and receive social media posts or messages:

- Case Feed enabled

AND

Access to a social account

Managing Social Posts

A social post is a Salesforce object that represents a post on a social network such as Facebook or Twitter.

The Social Posts tab or object is a collection of information about a post from a person or company on a social network, such as Twitter or Facebook. The available information for a post varies depending on the social network. You can view and manage social posts.

 **Note:** For inbound posts, setting a Status picklist value on the social post detail page does not stay with the post, as this field is for outbound posts only.

1. Click the **Social Posts** tab.
2. Optionally, select a view.

The list defaults to those recently viewed. Select a **View** or create a new one to filter the list of posts. If your organization has moderation enabled, select **Social posts without case** to view and either create a case for or ignore posts. You can also create a new view to fit your needs.

3. Click on the social post name you'd like to manage or click **New Social Post** to create a post. If you selected a view you can click **Edit** or **Del** (delete) as appropriate.

 **Note:** On the Social Post tab, you can only create, edit, and delete posts in your Salesforce organization, not on the social networks.

4. To manage posts without cases, select the posts you'd like to either create a case for or ignore and click **Create Case** and **Ignore** as appropriate.

For example, an agent can ignore a Facebook post of "I love you guys!" as it does not warrant a case.

If you are using the Social Customer Service Starter Pack, you can enable case moderation on the Social Accounts tab in Setup, see [Set up Social Customer Service](#) on page 2717. To enable moderation through Radian6 or Social Studio see, [Enable Moderation for Social Customer Service](#) on page 2720.

5. If you have [Approvals enabled](#), Social Posts tab has a `Social posts pending approval` list view that allows you to review multiple pending posts and approve or reject them as desired.

 **Note:** Once approvals are enabled, the Approve Posts and Reject Posts buttons remain on the Social Posts tab. However they don't work for inbound and posts not needing approval.

 **Tip:** If you approve a post from the Social posts pending approval list view and a system interruption, session timeout, or other unexpected issue prevents the post from being published on the intended social network, an error message displays on the individual case only, not on the list view. To help honor any commitments your company may have regarding response times on social networks, after approving posts from the list view, we recommend checking the posts' statuses to ensure they were sent successfully and don't need to be resent.

On the social post detail page you can:

- View, edit, and create the post's content and information.

 **Note:** The information varies depending on the social network the persona is from.

Don't forget to click **Save** to save changes or create a new post.

- If your organization has moderation enabled, you can create a case for a post or ignore it if it does not warrant a case.
- Delete the post in your Salesforce organization.

EDITIONS

Available in: **Salesforce Classic**

Social personas and posts are available in: **Enterprise, Performance, Unlimited,** and **Professional** Editions.

USER PERMISSIONS

To install and deploy Social Studio (Radian6) for Salesforce:

- "Customize Application"

 **Note:** Social posts are not deleted when their parent record, usually a case, is deleted. Similarly, if a social post is associated with an account, contact, or lead through the polymorphic Who field, deleting any of those related records does not affect the social post.

You can reply to a social post from the case feed only, not the Social Posts tab.

Managing Social Personas

A social persona is a Salesforce object that represents a contact's profile on a social network such as Facebook, LinkedIn, or Twitter.

The Social Personas tab or object is a collection of publicly available information about a person or company from Twitter or Facebook. A Persona is relative to the social network and there can be multiple personas attached to a single contact. You can edit or delete a persona but you can't manually create a social persona from Salesforce. The personas are created from public information on social networking sites. You can view and manage your social personas.

 **Note:** Social persona fields may have maximum character lengths set by standard or custom Salesforce limits. For example, the first name field is limited to 40 characters. If a social persona with a first name longer than 40 characters is created from an inbound social post the first name is truncated at the 40th character.

1. Click the **Social Personas** tab.
2. Optionally, select a view.

The list defaults to those recently viewed. Select **All** in the `view` drop-down to show all social personas in your organization. You can also create a new view to fit your needs.

3. Click on the social handle you'd like to manage.
If you selected a view, click **Edit** or **Del** (delete) as appropriate.

 **Warning:** If you delete a social persona through Contacts 2.0, all related social posts are also deleted.

On the social persona detail page you can:

- View and edit the contact's available information for that social network.

 **Note:** The information varies depending on the social network the persona is from.

- Delete the social persona from your organization.
- Create, edit, and delete [social posts](#).
- View which social network created the persona, in the `Source App` field. This field is set on creation and is not updateable. Social Personas created prior to Summer 15 do not have this field.

 **Warning:** There is no field level security and you can't control who can create, read, edit, or delete Social Personas. Anyone in your organization can see all the data on a Social Persona object.

EDITIONS

Available in: Salesforce Classic

Social personas and posts are available in: **Enterprise, Performance, Unlimited, and Professional** Editions.

USER PERMISSIONS

- "Customize Application"

SET UP AND MAINTAIN CUSTOMER SUPPORT TOOLS

Welcome, Support Administrators

This documentation is for administrators who want to set up Salesforce customer service and support features, also known as the Service Cloud. It's organized by tasks so that you can quickly find information about setting up features that solve support issues for your company. For example, information about setting up self-service websites is located in a section named Creating Web and Social Channels, rather than a section that includes the feature names, Customer Portal or Chatter Answers. However, you can search this documentation by keywords to find a feature name or support solution. Note that this documentation doesn't include many feature-specific concepts or overviews. For those, please refer to the documentation, *Support Your Customers*.

Together, *Set Up and Maintain Customer Support Tools* and *Support Your Customers* contain the information you need to set up and deliver customer service with Salesforce.

Setting Up Customer Channels

Creating Email Channels

Email-to-Case and On-Demand Email-to-Case Overview

Email-to-Case and On-Demand Email-to-Case help your company efficiently resolve customer inquiries via email. Salesforce automatically creates cases and auto-populates case fields when customers send messages to email addresses you specify.

There are a few differences between Email-to-Case and On-Demand Email-to-Case.

Email-to-Case

Email-to-Case requires downloading the Email-to-Case agent. This lets you keep all email traffic within your network's firewall and accept emails larger than 25 MB. You must install this agent on your local machine before Salesforce can process your company's support emails.

On-Demand Email-to-Case

Unlike Email-to-Case, On-Demand Email-to-Case uses Apex email services to convert email to cases, without requiring you to download and install an agent behind your network's firewall. Use On-Demand Email-to-Case if you're not concerned about keeping email traffic within your firewall, and you don't need to accept attachments larger than 25 MB from customers.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Email-to-Case and On-Demand Email-to-Case are available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions.

| Email-to-Case Setting | Description |
|--|---|
| Insert Thread ID in the Email Subject | to an email, the text version of the message is copied to the email editor, instead of the HTML version. |
| Insert Thread ID in the Email Body | Adds the thread ID to the subject of email. The thread ID is a unique number that identifies the organization and case associated with the outgoing email. It helps ensure that replies to the original email are associated with the correct case. |
| Place User Signatures before Email Threads | Adds the thread ID to the body of email.
Adds the user signature after the reply, but before the email thread. If this setting isn't selected, the user signature is placed at the bottom of the email thread. |

Use Unique Email Subject and Email Body IDs

Make sure the subject line and body of your outgoing emails are unique.

 **Warning:** If the `Email Subject ID` and `Email Body Text ID` are the same, Email-to-Case creates an infinite loop of emails related to each case. If these settings are not selected, Email-to-Case eventually could stop accepting new emails.

To exclude the thread ID from email, deselect both the `Insert Thread ID in the Email Subject` and `Insert Thread ID in the Email Body` checkboxes. A new case is created when a support agent responds to an outbound case email.

Routing Address Settings for Email-to-Case and On-Demand Email-to-Case

You can define your email routing address settings after you add and verify your email routing addresses for Email-to-Case and On-Demand Email-to-Case.

| Setting | Description |
|------------------------|--|
| Routing Name | The name for the routing address—for example, Gold Support or Standard Support. |
| Email Address | <p><i>Email-to-Case source only:</i> The inbound email address for this On-Demand Email-to-Case routing address. Email sent to this address creates new cases using the specified settings. The email address must be unique.</p> <p>Note that this is the email address to which you will provide a link on your company's support website.</p> |
| Save Email Headers | <p><i>Email-to-Case source only:</i> Select this checkbox to save the email routing information associated with each email submitted as a case. Saving email routing information counts towards your organization's overall storage limit.</p> <p>To view email headers from an email converted to a case, see Working with Case Emails on page 2092.</p> |
| Accept Email From | To limit the email addresses and domains available for On-Demand Email-to-Case, entering them in this field. Leave it blank to allow On-Demand Email-to-Case to receive email from any email address or domain. |
| Create Task from Email | <p><i>Email-to-Case source only:</i> Select this checkbox to automatically assign a task to the case owner when an email is submitted as a case.</p> <p>Assignment rules automatically assign owners to a case; however, if a case does not match assignment rule criteria, then the user in the <code>Default Case Owner</code> field on the Support Settings page is assigned to the case.</p> |
| Task Status | <p><i>Email-to-Case source only:</i> Choose a status from this drop-down list with which to predefine the <code>Status</code> field on tasks automatically assigned to case owners when email is submitted as cases.</p> <p>This setting is only available if you selected the <code>Create Task from Email</code> checkbox.</p> |

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Email-to-Case and On-Demand Email-to-Case are available in:

Professional, Enterprise, Performance, Unlimited, and **Developer** Editions.

| Setting | Description |
|---------------|---|
| Case Owner | <i>Outlook source only:</i> The owner of the case, which can be either an individual user or a queue. |
| Case Priority | The priority assigned to cases created from emails sent to this email routing address. |
| Case Origin | The value assigned to the Case Origin field for email sent to this email routing address. |

 **Note:** The `Priority` and `Case Origin` fields auto-populate the case via the routing address settings when the routing address is included in either the `To`, `CC`, or `BCC` fields of an inbound email.

Creating Web and Social Channels

Web Cases

Get Ready to Capture Cases with Web-to-Case

Gather customer support requests directly from your company's website and automatically generate up to 5,000 new cases a day with Web-to-Case. This can help your organization respond to customers faster, improving your support team's productivity.

Before you set up Web-to-Case:

- Create custom case fields, if needed.
- Create a default email template for the automated notification that will be sent to your customers when they submit a case.
- Create case queues if you wish to assign incoming cases to queues as well as to individual users.
- [Customize Support settings](#) on page 2544 to select the default owner of cases that don't meet the criteria in your assignment rule.
- Create an active case assignment rule to determine how web-generated cases are assigned to users or put into queues. If you do not set an active assignment rule, all web-generated cases are assigned to the default owner you specify in the Support Settings.

Next, you're ready to [set up Web-to-Case](#) on page 2296.

USER PERMISSIONS

To set up Web-to-Case:

- "Customize Application"

Set Up Web-to-Case

Gather customer support requests directly from your company's website and automatically generate up to 5,000 new cases a day with Web-to-Case. Setting up Web-to-Case involves enabling the feature, choosing settings, and adding the Web-to-Case form to your website.

 **Note:** Before you start, review [Get Ready to Capture Cases with Web-to-Case](#) and [Web-to-Case Notes and Limitations](#) for information on prerequisites and things to consider as you set up Web-to-Case.

1. From Setup, enter *Web-to-Case* in the **Quick Find** box, then select **Web-to-Case**.
2. Select **Enable Web-to-Case**.
3. Choose a default case origin.
4. Select a default response template for automatically notifying customers that their case was created.

If you set up response rules to use different email templates based on the information submitted, the default email template is used when no response rules apply. Leave this option blank if you do not wish to send emails when no response rules apply. This template must be marked as "Available for Use."

5. Select **Hide Record Information** to hide the record information in the email sent to customers if the case creation fails.
6. Enter an email signature if you'd like to use a different signature than the default.
7. Click **Save**.

To generate HTML code that your webmaster can use on your website to handle Web-to-Case support requests from your customers, see [Generate Web-to-Case HTML Code](#).

USER PERMISSIONS

To set up Web-to-Case:

- "Customize Application"

Generate Web-to-Case HTML Code

Generate HTML code that your webmaster can insert into your company's website to capture cases in a Web form. Whenever someone submits information on any of those Web pages, a case will be created.

You must have Web-to-Case enabled. For instructions on setting up Web-to-Case, see [Set Up Web-to-Case](#) on page 2296.

1. From Setup, enter *Web-to-Case HTML Generator* in the **Quick Find** box, then select **Web-to-Case HTML Generator**.
2. Use the Add and Remove arrows to move fields between the Available Fields list and the Selected Fields list to select the fields to include on your Web-to-Case form. Use the Up and Down arrows to change the order of the fields on your form.

For organizations using multiple currencies, add the *Case Currency* field to the HTML if you add any other currency amount fields, otherwise all amounts will be captured in your corporate currency. For organizations using record types on cases, select the *Case Record Type* field if you want users submitting Web-generated cases to select specific record types.
3. If your organization uses the Self-Service portal or the Customer Portal and you want Web-generated cases to be visible to users in these portals, select *Visible in Self-Service Portal*.
4. Specify the complete URL to which customers should be directed after they submit their information. For example, the URL can be for a "thank you" page or your company's home page.
5. If your organization uses the Translation Workbench or has renamed tabs, select the language for the form labels displayed on your Web-to-Case form. The source of your Web-to-Case form is always in your personal language.
6. Click **Generate**.
7. Copy the generated HTML code and provide it to your company's webmaster so he or she can incorporate it into your website.
8. Click **Finished**.

 **Tip:** Use a custom multi-select picklist to allow customers to report cases on several products at a time.

If you want to test the Web-to-Case form, add the line `<input type="hidden" name="debug" value="1">` to the code. This line redirects you to a debugging page when you submit the form. Don't forget to remove it before releasing the Web-to-Case page to your website.

Web-to-Case Notes and Limitations

Learn more about how Web-to-Case works to be sure you set it up in the most effective way for your company.

Keep these considerations in mind as you decide how to set up Web-to-Case.

- Whenever possible, Web-generated cases are automatically linked to the relevant contact and account based on the customer's email address.
- Salesforce runs field validation rules before creating records submitted via Web-to-Case and only creates records that have valid values. All universally required fields must have a value before a record can be created via Web-to-Case.
- The format for date and currency fields captured online is taken from your organization's default settings - *Default Locale* and *Currency Locale*.

- Salesforce doesn't support rich text area (RTA) fields on Web-to-Case forms. If you use RTA fields on your forms, any information entered in them is saved as plain text when the case is created.
- If your organization exceeds its daily Web-to-Case limit, the default case owner (specified in your Support Settings page) will receive an email containing the additional case information.

- [How do I avoid Web-to-Case spam?](#)

What is the maximum number of web cases we can capture?

In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, you can capture up to 5,000 cases in a 24-hour period. If your company generates more case requests than that, click **Help & Training** at the top of any page and select the My Cases tab to submit a request for a higher limit directly to Salesforce Customer Support.

When your organization reaches the 24-hour limit, Salesforce stores additional requests in a pending request queue that contains both Web-to-Case and Web-to-Lead requests. The requests are submitted when the limit refreshes. The pending request queue has a limit of 50,000 combined requests. If your organization reaches the pending request limit, additional requests are rejected and not queued. Your administrator receives email notifications for the first five rejected submissions. Contact Salesforce Customer Support to change your organization's pending request limit.

SEE ALSO:

[Web-to-Case FAQ](#)

Who owns new web-generated cases?

Your administrator can set an active case assignment rule to automatically assign web-generated cases to users or queues based on specific criteria in those cases. Cases that do not match any of the assignment rule criteria are assigned to the Default Case Owner specified in the Support Settings.

- Developer

How do I specify which information to capture?

When you generate the HTML for your company's website, you can choose which standard or custom case fields for which you want to gather information. You must create the custom case fields prior to generating the HTML code. From Setup, enter *Web-to-Case* in the `Quick Find` box, then select **Web-to-Case** to set up the feature and generate the HTML.

SEE ALSO:

[Web-to-Case FAQ](#)

Can I capture cases from multiple web pages?

Yes. Insert the generated HTML code into the web pages from which you want to capture cases. Whenever someone submits information on any of those web pages, a case will be created.

SEE ALSO:

[Web-to-Case FAQ](#)

How can our webmaster test the Web-to-Case page?

Add the following line to your Web-to-Case code if you want to see a debugging page when you submit the form. Don't forget to remove this line before releasing the Web-to-Case page on your website.

```
<input type="hidden" name="debug" value="1">
```

SEE ALSO:

[Web-to-Case FAQ](#)

What status and origin are assigned to Web-generated cases?

New Web cases are marked with the default status that your administrator selected from the `Case Status` picklist values. The default value for the `Origin` field is determined by your administrator when setting up Web-to-Case.

SEE ALSO:

[Web-to-Case FAQ](#)

How can I be sure that cases won't be lost?

If your organization exceeds its daily Web-to-Case limit, the Default Case Owner (specified in the Support Settings) will receive an email containing the additional case information. If a new case cannot be generated due to errors in your Web-to-Case setup, Customer Support is notified so that we can assist you in correcting it.

If your organization is using On-Demand Email-to-Case, Salesforce ensures that your cases won't be lost if users submit them during a scheduled Salesforce downtime.

SEE ALSO:

[Web-to-Case FAQ](#)

How is the “Age” calculated in case reports?

The Age of an open case is the time that has elapsed from its creation to the present. The Age of a closed case is the elapsed time from its creation to the time it was closed. Case reports display a drop-down list labeled “Units” that lets you choose to view the Age in days, hours, or minutes.

Customer Portals

Setting Up Your Customer Portal

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

A Salesforce Customer Portal provides an online support channel for your customers—allowing them to resolve their inquiries without contacting a customer service representative. With a Customer Portal, you can customize and deliver a visually stunning user interface to your customers, and use the following Salesforce features to help you and your customers succeed:

- Determine which pages and fields customers see with page layouts and field-level security
- Manage customers with profiles, permission sets, roles, and sharing rules
- Provide and organize documents via Salesforce CRM Content or the Documents tab
- Create a knowledge base for your customers using [Salesforce Knowledge](#)
- Allow customers to participate in [Ideas](#) communities.
- Display and collect data that is unique to your organization with custom objects
- Display custom s-controls and content from other websites via Web tabs
- Provide customized reports via the Reports tab

 **Note:** High-volume portal users are available for customer portals or communities intended for many thousands to millions of users. See [About High-Volume Portal Users](#) on page 2337.

EDITIONS

Available in: **Salesforce Classic**

Available in:

USER PERMISSIONS

To set up and update the Customer Portal:

- “Customize Application”

Setting up your Customer Portal consists of the following steps:

1. [Enable the Customer Portal.](#)
2. [Create one or more portals.](#)

For each portal:

- a. [Configure the settings and communication templates.](#)

You can standardize the communication templates sent to the users of all your Customer Portals by clicking the **Set Default Email Templates for All Customer Portals** link on the Tools section of the Customer Portal Setup page. For more information, see [Creating Multiple Customer Portals](#) on page 2307.

The [Convert Portal User Access wizard](#) automatically displays after the first time you save settings for your first portal, whether it is the Customer Portal or partner portal. You can use this wizard to help ensure that records and folders owned by Salesforce users are not shared with portal users.

- b. [Customize the fonts and colors.](#)
 - c. [Customize the available tabs and tab order.](#)
 - d. [Configure portal languages.](#)
3. Optionally, if [available to your portal user licenses](#), you can enable [Salesforce CRM Content, Ideas, Answers, Entitlement Management](#) or [Salesforce Knowledge](#) as needed.
 4. [Create Customer Portal profiles.](#)

For each profile:

- a. Customize page layouts. See [Customize Your Customer Portal Pages](#).

For set up tips and general information about Salesforce Customer Portal pages, see [Setup Tips and Considerations for Customer Portal Pages](#) on page 2328.

- b. Customize list views.

Customer Portal users can automatically see any list view with visibility settings marked `Visible to all users`. We recommend that you create specific list views on all objects accessible to portal users, and then assign portal users to only the list views you want them to view.

- c. Customize search layouts.

The search layouts in your Salesforce organization are the same search layouts used in your Customer Portal. Verify that search layouts on objects accessible to portal users only include fields you want them to view in search results.

5. Set up workflow:

- a. Set up workflow rules or case assignment rules to automatically assign cases created by portal users to Salesforce users or queues by using the criteria `Current User: User Type contains Customer Portal`.

For case assignment rules to work on the Customer Portal, select the `Select Case Assignment checkbox` by default checkbox on case page layouts assigned to portal profiles. Portal users cannot view these checkboxes on the Customer Portal. Note that assignment rules trigger when a case is created *and* when it is edited. To prevent cases from being automatically reassigned when edited by portal users, add a rule entry using the criteria `Current User: User Type contains Customer Portal` and select the `Do Not Reassign User` checkbox

- b. Create workflow alerts or case auto-response rules to automatically respond to portal users when they create a case on your portal.

6. [Configure portal user access.](#)

7. [Grant high-volume portal users access to objects.](#)
8. Optionally, enable single sign-on.
9. [Enable login on each Customer Portal.](#)
10. Add a link on your organization's website to the portal.

Users can navigate to your Customer Portal after you copy the `Login URL` from your portal's settings and paste it into the HTML of your website. For more information, see [Enable Customer Portal Login and Settings](#) on page 2308.

11. Enable contacts to use your portal.

To learn more about implementing a Customer Portal, see [Preparation for Setting Up Your Portal](#) on page 2368.

 **Note:** Contact Salesforce about activating a Customer Portal for your organization.

What customer portals can I create with Salesforce?

Salesforce provides three ways to help you manage your customers. The following table briefly describes the differences between them:

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

	Chatter Answers	Salesforce Customer Portal	Self-Service Portal
Purpose	Provides customers with a Web Community to resolve their inquiries with other community members or by contacting a support agent	Provides customers with an online support channel to resolve their inquiries without contacting a support agent	Provides customers with an online support channel to resolve their inquiries without contacting a support agent
User Interface	Highly customizable via a point-and-click editor and Visualforce pages, as well as functionality from Salesforce features such as Answers, Customer Portal, Force.com Sites, and Salesforce Knowledge	Highly customizable via a point-and-click editor, as well as functionality similar to Salesforce such as permissions, custom objects, sharing rules, and Web tabs	Customizable via a cascading style sheet (CSS) or point-and-click editor
Supported Record Types	<ul style="list-style-type: none"> • Articles • Cases • Questions (answers) 	<ul style="list-style-type: none"> • Activities • Assets • Cases • Documents • Solutions 	<ul style="list-style-type: none"> • Cases • Solutions

	Chatter Answers	Salesforce Customer Portal	Self-Service Portal
		<ul style="list-style-type: none"> • Custom objects 	
Quantity	Contact Salesforce for more information	Contact Salesforce for more information	One
Administrator Controls	<ul style="list-style-type: none"> • Customize the look and feel of the community • Moderate questions and answers • Generate usernames and passwords • Manage Customer Portal user information • Manage Customer Portal users via permissions, roles, and sharing rules 	<ul style="list-style-type: none"> • Customize the look and feel of the Customer Portal • Generate Customer Portal usernames and passwords • Manage Customer Portal user information • Manage Customer Portal users via permissions, roles, and sharing rules 	<ul style="list-style-type: none"> • Generate Self-Service usernames and passwords • Manage Self-Service user information
User Controls	Users can click Edit My Settings after they sign in to change their: <ul style="list-style-type: none"> • Community username • Community password • Locale • Language • Time zone • Notification settings • Contact information 	Users can use the Customer Portal Welcome component to change their: <ul style="list-style-type: none"> • Portal username • Portal password • Locale • Language • Time zone • Contact information 	None

 **Note:** Contact Salesforce to activate a specific portal for your organization.

Enabling Your Customer Portal

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

To enable the Salesforce Customer Portal:

1. From Setup, enter *Customer Portal Settings* in the Quick Find box, then select **Customer Portal Settings**.
2. Click **Edit**.
3. Select **Enable Customer Portal**.
4. Click **Save**.
5. Continue [setting up the portal](#).

Tips on Enabling the Customer Portal

Consider the following when enabling the Customer Portal:

- After you enable the Customer Portal, you can [create multiple Customer Portals](#) to satisfy the various business needs of your customers.
- These items become available after you enable the Customer Portal:
 - The High Volume Customer Portal, Authenticated Website, Customer Portal Manager, and Customer Portal User profiles, if you purchased [user licenses](#) for them.
 - The **Enable Customer Portal User** and **View Customer Portal User** buttons on contact and person account records.
 - The All Customer Portal Users and All Internal Users groups along with the Roles and Internal Subordinates sharing rule category.
- After you enable a Customer Portal, you cannot disable it. However, you can prevent users from logging into it. See [Enable Customer Portal Login and Settings](#) on page 2308.

About the Convert Portal User Access Wizard

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Because Customer Portal and partner portal users appear in the role hierarchy but are external contacts who should not have access to your organization's internal data, you must configure your organization's sharing settings to prevent inappropriate access by portal users. When setting up a Customer Portal or partner portal, you can use the Convert Portal User Access wizard to help ensure that no records or folders are shared with a portal user. The wizard affects the following:

Sharing Rules

The Convert Portal User Access wizard converts any sharing rules that include the Roles, Internal and Portal Subordinates data set category to include the Roles and Internal Subordinates data set category instead.

The Roles and Internal Subordinates data set category allows you to create sharing rules that include all users in a specified role plus all of the users in roles below that role, excluding any Customer Portal and partner portal roles.

Only organization-wide sharing rules are updated when you convert Roles, Internal and Portal Subordinates to Roles and Internal Subordinates. The Roles, Internal and Portal Subordinates category for queues, public groups, list views, documents, and manual sharing created on specific records by clicking the **Sharing** button is not converted to Roles and Internal Subordinates.

-  **Note:** The Roles, Internal and Portal Subordinates data set category is only available in your organization after you create at least one role in the role hierarchy.

The Roles and Internal Subordinates data set category is only available in your organization after you create at least one role in the role hierarchy *and* enable a portal.

Folder Sharing

The Convert Portal User Access wizard also enables you to automatically convert the access levels of any report, dashboard, or document folders that are accessible to Roles, Internal and Portal Subordinates to a more restrictive access level: Roles and Internal Subordinates. This helps prevent Customer Portal and partner portal users from accessing folders. Using the wizard is more efficient than locating various folders in Salesforce and setting their access levels individually.

The wizard does not convert folders that are accessible to all users or accessible to public groups. You must manually update the access levels on those folders.

When you first save a Customer Portal or partner portal, Salesforce automatically displays the Convert Portal User Access wizard.

Using the Convert Portal User Access Wizard

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

When setting up a Customer Portal or partner portal, you can use the Convert Portal User Access wizard to help ensure that no records or folders are shared with a portal user.

To use the wizard:

1. For the Customer Portal, from Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**. For the partner portal, from Setup, enter *Partners* in the **Quick Find** box, then select **Settings**.
2. Click the **Convert Portal User Access** link.
3. Select the checkboxes next to the sharing rules you want to convert to Roles and Internal Subordinates.

If there are no sharing rules to convert but you want to convert the access level for folders, proceed to the following step.

4. Click **Next**.
5. Select the checkboxes next to the folders whose access levels you want to change to Roles and Internal Subordinates.

The wizard does not convert folders that are accessible to all users or accessible to public groups. You must manually update the access levels on those folders.

A particular folder may display on multiple rows in the wizard. This is because the wizard displays a row for each Role, Internal and Portal Subordinates category to which a folder is shared.

6. Click **Next**.
7. Click **Save** to apply your selected changes.

Creating Multiple Customer Portals

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

After you have [enabled the Salesforce Customer Portal](#), you can create multiple Customer Portals to satisfy the various business needs of your customers.

To create more than one Customer Portal:

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Click **New**.
3. Follow the same steps used to set up your organization's first Customer Portal. See [Setting Up Your Customer Portal](#) on page 2300.

-  **Note:** Contact Salesforce for information about the number of Customer Portals you can activate for your organization.

Before you begin creating multiple Customer Portals for your organization, review the following implementation tips and best practices.

Implementation Tips

- Portal users can only log into Customer Portals assigned to their profile. To assign a profile to a Customer Portal, select the name of a portal from the Customer Portal Setup page, click **Edit Profiles** in the Assigned Profiles section, and select the **Active** checkbox next to the profile you want to assign to the portal.
A portal user can access all the Customer Portals assigned to his or her profile with one username and password.
You can view the number of active users associated with each profile assigned to a Customer Portal by creating a custom summary report and adding **Profile** to your report columns.
- The login URL of each Customer Portal you create contains a unique identifier, such as `portalId=060D00000000Q1F`. The unique identifier determines the specific portal a user can access. If a user accesses a login URL that does not contain a unique identifier, they are automatically directed to the login URL of the first Customer Portal you created. Note that portal users can only log into a Customer Portal via the portal's login page and not through the Salesforce login page.
- The settings on the following items apply to both your organization *and* your Customer Portals:
 - List views
 - Search layouts
 - Case assignment rules
 - Workflow alerts

Best Practices

- Because you can uniquely customize the fonts, colors, email templates, and login message of each Customer Portal you create, you can build a Customer Portal for each product and customer service level supported by your organization. For example, if your organization provides gold, silver, and bronze levels of customer support, then you could create a unique Customer Portal for each.

-  **Note:** JavaScript and CSS code are automatically removed from HTML files used as the portal login message.

EDITIONS

Available in: **Salesforce Classic**

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To create multiple Customer Portals:

- "Customize Application"

- You can standardize the communication templates sent to the users of all your Customer Portals by clicking the **Set Default Email Templates for All Customer Portals** link on the Tools section of the Customer Portal Setup page. These settings determine the email templates to use when sending email notifications, such as a new case comment or a reset password, to portal users whose profiles are associated with more than one Customer Portal.

By default, sample templates are automatically selected for you in the `New User Template`, `New Password Template`, and `Lost Password Template` lookup fields. However, sample templates are not selected for you in the `New Comment Template` and `Change Owner to Portal User Template` lookup fields. Unless you select templates for these fields, users whose profiles are associated with more than one Customer Portal will not receive email notifications when new comments are added to their cases or when they become the new owner of a record in the Customer Portal. Email templates must be marked as `Available for Use` to be sent to portal users.

Tip: Because the default email templates are sent to users of multiple Customer Portals, we recommend that you create default email templates that do not contain portal-specific branding.

- You cannot delete a Customer Portal, but you can prevent users from logging into a portal by deselecting the `Login Enabled` checkbox. For more information, see [Enable Customer Portal Login and Settings](#) on page 2308.
- You can create multiple Customer Portals that display different tabs for users with the same profile, as long as the profile has access to each object displayed on a tab. For more information, see [Customizing Your Customer Portal Tabs](#) on page 2318.

USER PERMISSIONS

To enable login and settings for the Customer Portal:

- "Customize Application"

Setting	Description
	Furthermore, an error may occur if you name a Customer Portal “partner portal” Customer Portal
Description	A description of the Customer Portal as displayed on the portal's detail and edit pages. The description of the Customer Portal is not displayed in the portal.
Login Enabled	<p>Allows users to log in to the Customer Portal.</p> <p>We recommend that you do not select this checkbox until you have completed the steps described in Setting Up Your Customer Portal.</p> <p> Note: Users must be able to log in to the Customer Portal, be within their user profile's restricted IP range, and be within designated Login Hours in order to be able to reset their passwords.</p>
Administrator	<p>Click the lookup icon () to choose a default administrator for your Customer Portal. All email notifications regarding users who self-register for your Customer Portal will be sent to this Salesforce user.</p> <p>Notifications include information about registration errors and any other issues self-registering customers may experience, such as inadvertently entering duplicate email addresses, creating duplicate contact records, and exceeding your organization's user license limit.</p> <p>When choosing an administrator for your Customer Portal, you can only select users that have the “Edit Self-Service Users” permission. Furthermore, you cannot deactivate a user selected as a portal administrator.</p>

Portal Default Settings

Setting	Description
Login URL	<p>The URL of the Web page that displays when users log in to your Customer Portal.</p> <p>You can click this URL to log in to your portal and interact with it.</p> <p>Insert this URL into your website so users can access the login page to your Customer Portal.</p> <p>The login URL of each Customer Portal you create contains a unique identifier, such as portalId=060D00000000Q1F. The unique identifier determines the specific portal a user can access. If a user accesses a login URL that does not contain a unique</p>

Portal Default Settings

Setting	Description
	identifier, they are automatically directed to the login URL of the first Customer Portal you created. Note that portal users can only log into a Customer Portal via the portal's login page and not through the Salesforce login page.
Logout URL	The URL of the Web page that displays when users log out of the Customer Portal—for example, "http://www.acme.com." If a logout URL is not specified, portal users return to the login page when they log out.
Top-Level Category for Portal	The top-level category accessible by customers in the Customer Portal. Customers can view all solutions marked <code>Visible in Self-Service Portal</code> in this category and its subcategories. This field is available only if you have enabled solution browsing. See Customizing Solution Settings on page 2697.
Enable Self-Close Case from Suggested Solutions	Allows users to close cases in the Customer Portal directly from suggested solutions. For example, when a user views a suggested solution that helps them solve a case, he or she can click Yes, please close my case if this setting is enabled.
Show Action Confirmation	Allows users to view confirmation messages after they complete an action in the Customer Portal. For example, after a user creates a case in your Customer Portal, he or she views the message "Case has been submitted" if this setting has been enabled. Confirmation messages may help users clearly understand actions they have completed in your Customer Portal.
HTML Messages Default Language	Specifies the language that portal HTML messages are displayed in when custom language portal HTML messages are not configured. This setting is only available for organizations that have multiple languages enabled.

Email Notification Settings

Setting	Description
From Email Address	The email address from which all Customer Portal communication templates are sent—for example, "support@acme.com." Salesforce sends the emails automatically, but they appear to portal users as if they were sent from this email address. If a portal user responds to a communication template, the response is sent to this address.

Email Notification Settings

Setting	Description
From Email Name	The name associated with the “From” Email Address—for example, “Acme Customer Support.”
New User Template	The email template used to send a username and initial password to all newly enabled and self-registering Customer Portal users. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as <code>Available for Use</code> .
New Password Template	The email template used to send a new password to existing Customer Portal users when you reset their passwords. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as <code>Available for Use</code> .
Lost Password Template	The email template used to send a new password to existing Customer Portal users when they reset their own passwords by clicking Forgot your password? on the login page of the Customer Portal. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as <code>Available for Use</code> .
New Comment Template	The email template used to send a notification to Customer Portal users when a public comment is added to one of their cases. This template must be marked as <code>Available for Use</code> .
Change Owner to Portal User Template	The email template used to send a notification to Customer Portal users when they become the new owner of a record in the portal. This template must be marked as <code>Available for Use</code> .

 **Note:** You can standardize the communication templates sent to the users of all your Customer Portals by clicking the **Set Default Email Templates for All Customer Portals** link on the Tools section of the Customer Portal Setup page. For more information, see [Creating Multiple Customer Portals](#) on page 2307.

 **Tip:** If you plan to use the same communication template for different objects, such as the Change Owner to Portal User Template, we recommend that you include text and merge fields on the template that are appropriate for both objects. For example, if your organization has a Warranty custom object and a Training custom object, and you want to use the Change Owner to Portal User Template for both, the text and merge fields on the template should read: “A new record has been assigned to you. Id: {!Training.Id}{!Warranty.Id}.” When the template is sent, only the relevant merge fields will display.

Look and Feel

Setting	Description
Header	A text or HTML file that allows you to incorporate your organization’s branding into the header of your Customer Portal.

Look and Feel

Setting	Description
	<p>Click the lookup icon () to choose a file that has been uploaded to a publicly accessible folder on the Documents tab.</p> <p>The files you include in the <code>Header</code> and <code>Footer</code> lookup fields can have a combined size of up to 10 KB.</p> <p>We recommend that you do not add a header <i>and</i> a logo to your portal because they may not display properly together.</p> <p>You can position the logout link anywhere on the header by using the HTML tag: "<code>Logout</code>."</p>
Footer	<p>A text or HTML file that allows you to incorporate your organization's branding into the footer of your Customer Portal.</p> <p>Click the lookup icon () to choose a file that has been uploaded to a publicly accessible folder on the Documents tab.</p> <p>The files you include in the <code>Header</code> and <code>Footer</code> lookup fields can have a combined size of up to 10 KB.</p>

Login Message	<p>A text or HTML file that allows you to incorporate your organization's branding into the header of the login page, forgot password page, and change password page of your Customer Portal. Click the lookup icon () to choose a file that has been uploaded to a publicly accessible folder on the Documents tab.</p> <p>The file you include in the <code>Login Message</code> lookup field can be up to 2 KB.</p> <p> Note: JavaScript and CSS code are automatically removed from HTML files used as the portal login message.</p>

Self-Registration Settings

Setting	Description
Self-Registration Enabled	<p data-bbox="836 304 1445 367">Allows existing contacts to register themselves for access to your Customer Portal.</p> <p data-bbox="836 388 1445 724">When you select this checkbox and add the <code>Allow Customer Portal Self-Registration</code> checkbox to contact page layouts, contacts whose records are marked <code>Allow Customer Portal Self-Registration</code> can view a self-registration area on the Login page of your Customer Portal. From the self-registration area, users can enter their email address and click Submit to receive an automatically assigned username and password for logging in to your Customer Portal. Other email notifications sent to users regarding their registration status include:</p> <ul data-bbox="836 745 1445 1480" style="list-style-type: none"> <li data-bbox="836 745 1445 840">• Existing user, from which the user can enter another email address or click a Forgot Password? link to retrieve his or her password. <li data-bbox="836 850 1445 1060">• New user, which informs the user that the email address he or she submitted does not match an existing contact in your organization. If an administrator has implemented Web-to-Case or Web-to-Lead to capture new user information, then the user can click a link to enter his or her information on the appropriate form. <li data-bbox="836 1071 1445 1165">• Internal error, which informs the user that an error occurred during the self-registration process and that your portal's administrator has been notified about the error. <li data-bbox="836 1176 1445 1480">• Ineligible user, which informs the user that he or she is not eligible for self-registration to your Customer Portal. This notification is sent when a submitted email address matches a contact that does not have the <code>Allow Customer Portal Self-Registration</code> checkbox selected. It is also sent when a submitted email address does not match any contacts, and your administrator has not set up Web-to-Lead or Web-to-Case to capture new user information. <p data-bbox="836 1501 1445 1606">Ensure that all required custom fields on users have default values. Otherwise, users who self-register for your Customer Portal will receive an error message.</p> <p data-bbox="836 1627 1445 1753">Note that person account users cannot self-register for your Customer Portal. When person account users self-register for your Customer Portal, they receive an email notification that instructs them to contact the portal administrator.</p>

Self-Registration Settings

Setting	Description
New User Form URL	<p>Allows you to specify the URL of a Web-to-Lead or Web-to-Case form for users who self-register for access to your Customer Portal.</p> <p>The URL to this form is offered via the template selected in the <code>Registration Error Template</code> field to self-registering users who lack an existing contact record, so that their information can be captured and converted to a contact.</p>
Registration Error Template	<p>The email template sent to users who self-register for your Customer Portal, but experience a registration error, or need to complete a Web-to-Case or Web-to-Lead form to register for your portal. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as <code>Available for Use</code>.</p> <p>The <code>From Email Address</code> and <code>From Email Name</code> fields on Customer Portal settings specify who this template is sent from.</p>
Default New User License	Click the lookup icon () to choose a default portal user license for users who self-register for your Customer Portal.
Default New User Role	Click the lookup icon () to choose a default portal role for users who self-register for your Customer Portal.
Default New User Profile	<p>Click the lookup icon () to choose a default portal profile for users who self-register for your Customer Portal.</p> <p>You cannot delete the profile selected as the default portal profile.</p>

4. Click **Save** to save your Customer Portal settings.

[Setting Up Your Customer Portal](#)

Customize Your Customer Portal Fonts and Colors

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can customize the fonts and colors of the Salesforce Customer Portal to reflect your company's branding. Your portal's fonts and colors are specified in a portal "color theme." Select a predefined color theme and, optionally, customize it to better match your branding. You can click the **See examples** link to see all of the theme attributes you can customize.

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Select the name of your Customer Portal.
3. Click **Change Portal Fonts and Colors**.
4. Select a color theme from the **Color Theme** drop-down list. Select Custom from the **Color Theme** drop-down list to create your own theme from scratch. A preview of the color theme you select is automatically displayed in the Preview sections.
5. Optionally, customize the color of any theme you select by either:
 - Entering a hexadecimal value into any theme attribute, or
 - Clicking the hexadecimal value of any theme attribute and selecting a color from the point-and-click editor

When you customize a theme, it is automatically renamed Custom when saved. You can customize the following options, which, when customized, automatically display in the Preview sections:

Tab Styles

Theme Attribute	Description
Current Tab Text	Text color of the tab users have selected.
Current Tab Background	Background color of the tab users have selected.
Current Tab Border	Border color of the tab users have selected.
Other Tab Text	Text color of the tabs users have not selected.
Other Tab Background	Background color of the tabs users have not selected.
Other Tab Border	Border color of the tabs users have not selected.
Tab Bar Background	Background color behind all tabs.

Page Styles

Theme Attribute	Description
Page Background	Portal background color, excluding search, related lists, recent items, solution categories, document folders, and the Create New drop-down list.

EDITIONS

Available in: Salesforce Classic

Available in:

USER PERMISSIONS

To change the fonts and colors of the Customer Portal:

- "Customize Application"

Page Styles

Theme Attribute	Description
Text	Text color, size, and font on all portal items, except for tabs, buttons, headers, and field labels. Optionally, you can change the number in the percent field to increase or decrease the size of all portal items. Additionally, you can change the font of all portal items, except for tabs, buttons, headers, and field labels from the drop-down list.
Field Label Text	Text color of the field names on records. Optionally, you can change the font of the text from the drop-down list.
Link	Text color of all links.
Link Hover	Text color of all links when a user hovers the mouse over them.
Field Separator	Color of the lines that separate fields on records.
Bottom Border	Color of the line bordering the bottom of the portal.

Section Styles

Theme Attribute	Description
Header Background	Background color of all headings, including search, recent items, related lists, solution categories, documents folders, and the selected tab.
Section Header Text	Text color and font on the headers of search, related lists, recent items, solution categories, and document folders. Optionally, you can change the font of the text from the drop-down list.
Left Border	Border to the left of search, related lists, recent items, solution categories, document folders, and the Create New drop-down list. Optionally, you can change the number in the pixel field to increase or decrease the thickness of the border. Additionally, you can select the style of the line displayed for the border from the drop-down list.
Right Border	Border to the right of search, related lists, recent items, solution categories, document folders, and the Create New drop-down list. Optionally, you can change the number in the pixel field to increase or decrease the thickness of the border. Additionally,

Section Styles

Theme Attribute	Description
	you can select the style of the line displayed for the border from the drop-down list.
Top Border	<p>Border above search, related lists, recent items, solution categories, document folders, and the Create New drop-down list.</p> <p>Optionally, you can change the number in the pixel field to increase or decrease the thickness of the border. Additionally, you can select the style of the line displayed for the border from the drop-down list.</p>
Bottom Border	<p>Border underneath search, related lists, recent items, solution categories, document folders, and the Create New drop-down list.</p> <p>Optionally, you can change the number in the pixel field to increase or decrease the thickness of the border. Additionally, you can select the style of the line displayed for the border from the drop-down list.</p>
Section Background	Background color of search, related lists, recent items, solution categories, document folders, and the Create New drop-down list.

List Styles

Theme Attribute	Description
List Header Text	<p>Text color of the field names selected as column headings on list views.</p> <p>Optionally, you can change the font of the text from the drop-down list.</p>
Header Underline	Color of the lines underneath column headings on related lists and list views.
Separator	Color of the lines between records on list views.
Row Highlight	Color of a record when a user hovers the mouse over it on list views.

- Click **Save** to save all changes to the theme values.

Tip: Changes are visible to Customer Portal users when they refresh their browsers. Therefore, we recommend updating your portal color theme at times when users are least likely to visit your Customer Portal.

 **Note:** To customize the header, footer, and logo of your Customer Portal, see [Enable Customer Portal Login and Settings](#) on page 2308.

[Customizing Your Customer Portal Tabs](#)

Customizing Your Customer Portal Tabs

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

The Salesforce Customer Portal can display the following tabs:

- Answers
- Articles
- Ideas
- Home
- Cases
- Reports
- Solutions
- Web tabs
- Entitlements
- Custom objects
- Service contracts
- Chatter Answers
- Documents from the Documents tab
- Salesforce CRM Content tabs: Libraries, Content, and Subscriptions

Additionally, the Customer Portal can display the following tabs to [delegated external user administrators](#):

- Accounts
- Contacts

To choose which tabs display to users logged in to a Customer Portal, and to customize the order in which tabs display to portal users:

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Select the name of the Customer Portal whose tabs you want to customize.
3. Click **Customize Portal Tabs**.
4. To add or remove tabs, select a tab title, and click the **Add** or **Remove** arrow to add or remove the tab to or from the Selected Tabs box. To change the order of the tabs, select a tab title in the Selected Tabs box, and click the **Up** or **Down** arrow.
5. Optionally, from the **Default Landing Tab** drop-down, you can select which tab to display to users when they log into your portal.

EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To customize Customer Portal tabs:

- "Customize Application"

6. Click Save.

You can further specify which tabs users can access by editing tab settings in users' associated profiles and permission sets.

 **Tip:** You can [create multiple Customer Portals](#) that display different tabs for users with the same profile, as long as they have access to each object displayed on a tab.

To make the following tabs visible in the Customer Portal, use the steps above and change the tab visibility setting to Default On in all Customer Portal profiles.

Allowing Portal Users to View Web Tabs

To allow portal users to view Web tabs, simply create Web tabs and assign them to Customer Portal profiles.

Granting Portal Users Access to the Documents Tab

To allow portal users to view a Documents tab, grant Customer Portal users access to the folders on your Salesforce Documents tab that contain the files you want them to view.

Allowing Portal Users to View the Reports Tab

To allow portal users to view a Reports tab:

1. Grant portal users access to the folders on your Salesforce Reports tab that contain the reports you want them to run.
2. Set the organization-wide default sharing model to Private on objects you want portal users to report on.
3. Assign portal users to permission sets or profiles that include the "Run Reports" permission.

When you add the Reports tab to your Customer Portal, portal users:

- Cannot customize reports or filter report results; they can only run reports.
- Can export reports to Excel if they have the "Export Reports" permission.
- Do not have access to the Unfiled Public Reports and My Personal Custom Reports folders.
- Will receive an insufficient privileges error if they run a report that contains objects they do not have permission to view.

Providing Portal Users with Access to the Ideas Tab

To allow portal users to access the Ideas tab, configure Ideas to display in the portal. For more information, see [Creating and Editing Zones](#) on page 2388 and [Enabling Ideas in the Customer Portal](#) on page 2322.

If your organization has the Ideas and Answers Portal license, hide the Reports tab in the Customer Portal. Otherwise, your Customer Portal users receive an Insufficient Privileges message when they click the Reports tab. For information on hiding tabs, see [Customizing Your Customer Portal Tabs](#) on page 2318.

Allowing Portal Users to Access Salesforce CRM Content Tabs

To allow portal users to access Salesforce CRM Content, see [Enabling Salesforce CRM Content in the Customer Portal](#) on page 2320.

Enabling Salesforce CRM Content in the Customer Portal

USER PERMISSIONS

To set up and update the Customer Portal:	"Customize Application"
To create and edit profiles:	"Manage Profiles and Permission Sets"
To manage Customer Portal users:	"Edit Self-Service Users"
To create Salesforce CRM Content library permissions:	"Manage Salesforce CRM Content" OR "Manage Content Permissions"
To add users to a Salesforce CRM Content library:	"Manage Salesforce CRM Content" OR Manage Library checked in your library permission definition

EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Salesforce CRM Content is available in the Customer Portal. Two levels of access to Salesforce CRM Content can be granted to Customer Portal users:

- Portal users without a Salesforce CRM Content feature license can download, rate, comment on, and subscribe to content if they have the "View Content on Portals" user permission. They cannot view potentially sensitive data such as usernames and download, version, and subscriber history. The content delivery feature is not available to portal users.
- Portal users with a Salesforce CRM Content feature license can access all Salesforce CRM Content features granted by their library permission(s), including contributing content, moving and sharing content among libraries, and deleting content. They can also view Salesforce CRM Content reports. The content delivery feature is not available to portal users.

Enabling Salesforce CRM Content for Non-Licensed Users

After you have [enabled your Customer Portal](#), complete the following steps to enable Salesforce CRM Content in your portals. Use these steps if you have not purchased Salesforce CRM Content feature licenses for your portal users.

1. Update Customer Portal profiles:
 - a. Clone the Customer Portal User or Customer Portal Manager profile.
 - b. In the cloned profiles, add the "View Content in Portals" user permission.
 - c. Change the tab visibility for the Libraries, Content, and Subscriptions tabs from Tab Hidden to Default On.
 - d. Assign the cloned profiles to your Customer Portal users.
2. Determine what privileges your portal users will have in each Salesforce CRM Content library by creating one or more library permissions.

 **Note:** A library permission can only grant privileges that a user's feature license or profile permits. For example, even though `Tag Content` is a library permission option, selecting it does not allow portal users without a Salesforce CRM Content feature license to tag content.

3. Determine which libraries you want your portal users to have access to. Ensure that confidential content is not available in these libraries.
4. Add portal users to libraries. Portal users with the Customer Portal User profile or a clone of that profile can only be added to a library as part of a public group. Portal users with the Customer Portal Manager profile or a clone of that profile can be added to a library individually.
5. [Add the Salesforce CRM Content tabs](#) to each Customer Portal.

 **Note:** The Documents tab is not part of Salesforce CRM Content.

Enabling Salesforce CRM Content for Licensed Users

After you have [enabled your Customer Portal](#), complete the following steps to enable Salesforce CRM Content in your portals. Use these steps if you have purchased Salesforce CRM Content feature licenses for your portal users

1. Update Customer Portal profiles:
 - a. Optionally, clone the Customer Portal User and Customer Portal Manager profile to include the "Create Libraries" user permission if you want to allow portal users to create and administer new libraries.
 - b. In your standard or cloned Customer Portal profiles, change the tab visibility for the Libraries, Content, and Subscriptions tabs from Tab Hidden to Default On.
 - c. Assign the cloned profiles to your Customer Portal users as needed.
2. Select the `Salesforce CRM Content User` checkbox on the user detail page for each Customer Portal user.
3. Determine what privileges your portal users will have in each Salesforce CRM Content library by creating one or more library permissions.

 **Note:** A library permission can only grant privileges that a user's feature license or profile permits. For example, even though `Tag Content` is a library permission option, selecting it does not allow portal users without a Salesforce CRM Content feature license to tag content.

4. Determine which libraries you want your portal users to have access to. Ensure that confidential content is not available in these libraries.
5. Add portal users to libraries. Portal users with the Customer Portal User profile or a clone of that profile can only be added to a library as part of a public group. Portal users with the Customer Portal Manager profile or a clone of that profile can be added to a library individually.
6. [Add the Salesforce CRM Content tabs](#) to each Customer Portal.

 **Note:** The Documents tab is not part of Salesforce CRM Content.

[Setting Up Your Customer Portal](#)

Enabling Ideas in the Customer Portal

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Ideas is available in the Customer Portal.

After you have [set up your Customer Portal](#), follow the steps below to enable Ideas in your portal.

1. Create zones in the Ideas context that are active and configured to display in the portal. For more information, see [Creating and Editing Zones](#) on page 2388.
2. Add the Ideas tab to your Customer Portal. For more information, see [Customizing Your Customer Portal Tabs](#) on page 2318.
3. If your organization has the Ideas and Answers Portal license, hide the Reports tab in the Customer Portal. Otherwise, your Customer Portal users receive an Insufficient Privileges message when they click the Reports tab. For information on hiding tabs, see [Customizing Your Customer Portal Tabs](#) on page 2318.

SEE ALSO:

[Setting Up Your Customer Portal](#)

Enabling Entitlement Management in the Customer Portal

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the Customer Portal to provide your customers with access to their entitlements and service contracts. Contract line items don't display in the Customer Portal.

-  **Note:** High-volume customer portal users do not have access to service contracts and entitlements.

After you have [set up entitlement management](#) and [enabled a Customer Portal](#), complete the following steps to add entitlement management to your portals.

1. Update Customer Portal profiles:
 - a. Clone Customer Portal profiles and enable the "Read" permission on entitlements or service contracts.
 - b. Optionally, on the profiles of [delegated external user administrators](#), enable the "Create" and "Delete" permissions on entitlement contacts. This lets delegated external user administrators update entitlement contacts.
 - c. In the cloned profiles, verify that the tab visibility for the Entitlements or Service Contracts tabs are Default On.

EDITIONS

Available in: Salesforce Classic

USER PERMISSIONS

To set up and update the Customer Portal:

- "Customize Application"

To create and edit profiles:

- "Manage Profiles and Permission Sets"

To customize Ideas:

- "Customize Application"

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To set up and update the Customer Portal:

- "Customize Application"

To create and edit profiles:

- "Manage Users"

To manage Customer Portal users:

- "Edit Self-Service Users"

2. At the bottom of the customer portal detail page, click **Edit Profiles** and activate the new profiles.
3. Customize case page layouts to add the `Entitlement Name` lookup field. This lets portal users add entitlements to cases.
 -  **Tip:** *Don't* add the following entitlement process fields to case page layouts for portal users because portal users shouldn't access information related to your internal support processes: `Entitlement Process Start Time`, `Entitlement Process End Time`, `Stopped`, and `Stopped Since`.
4. Optionally, customize related lists on accounts and contacts to add Entitlements. This lets delegated external user administrators create cases automatically associated with the right entitlements.
5. [Add the Entitlements or Service Contract tabs](#) to each Customer Portal.
6. Assign the cloned profiles to your Customer Portal users:
 - a. To create a new Customer Portal user, click **Manage External User** and choose **Enable Customer User** on the contact detail page. To update an existing user, click **Manage External User** and choose **View Customer User**.
 - b. For a new user, select the cloned profile from the **Profile** drop-down menu. For an existing user, click **Edit** and then select the profile.
 - c. Click **Save**.

[Setting Up Your Customer Portal](#)

Enabling Salesforce Knowledge in the Customer Portal

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the Customer Portal to provide your customers with access to Salesforce Knowledge articles. Portal users can view and rate articles but cannot create or edit articles.

After you have [set up Salesforce Knowledge in your organization](#) and [enabled your Customer Portal](#), complete the following steps to enable Salesforce Knowledge in your portals.

1. Update Customer Portal profiles:
 - a. Clone the Customer Portal User or Customer Portal Manager profiles and enable the "Read" permission for article types you want to share with customers.
 - b. In the cloned profiles, verify that the tab visibility for the Articles tab is Default On.
2. At the bottom of the customer portal detail page, click **Edit Profiles** and activate the new profile.
3. Assign the cloned profiles to your Customer Portal users:
 - a. To create a new Customer Portal user, click **Manage External User** and choose **Enable Customer User** on the contact detail page. To update an existing user, click **Manage External User** and choose **View Customer User** on the contact detail page.
 - b. For a new user, select the cloned profile from the **Profile** drop-down menu. For an existing user, click **Edit** and then select the profile.
 - c. Click **Save**.
4. [Add the Articles tab](#) to each Customer Portal.
5. If you want your Customer Portal users to have different category group visibility settings than the account owner, [change the visibility settings for the Customer Portal user](#).

By default, Customer Portal users inherit their data category access from the account owner. For example, if the account owner has a role of CEO and the CEO role has full access to all the data categories in a category group, then Customer Portal users can also access all categories in that group. In some cases, you may want to limit which categories a Customer Portal user can access.

6. If you have high-volume portal users, [make the categories these users need to access visible by default](#). Because high-volume portal users don't have roles, they can only access categorized articles if the associated data categories have been made visible to all users regardless of role.
7. Notify users who create articles that they must select **Customer Portal** as a channel option when creating or modifying an article. If the Customer Portal channel is not selected, the article will not be published in the portal.
8. To allow users to search for articles from the Home tab, add the Article Search component to the home page layout. Ensure that you assign the layout to the Customer Portal profiles.

To view Salesforce Knowledge articles:

- "Read" on the article's article type

Enabling Answers in the Customer Portal

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the Customer Portal to provide your customers with access to an answers community.

To enable answers in your portal:

1. [Set up your Customer Portal.](#)

When [customizing your portal fonts and colors](#), note that answers only supports the following changes:

- All tab styles
- The following page styles:
 - Page Background
 - Text
 - Link
 - Link Hover

2. [Set up answers](#), making sure that your answers community is configured to display in the Customer Portal.

3. [Add the Answers tab](#) to your Customer Portal.

4. Create Customer Portal users:

- a. On the contact detail page, click **Manage External User** and then choose **Enable Customer User**.
- b. Enter the required information, making sure to select the correct Customer Portal profile from the **Profile** drop-down menu.
- c. Click **Save**.

5. If you want your Customer Portal users to have different category group visibility settings than the account owner, [change the visibility settings for the Customer Portal user](#).

By default, Customer Portal users inherit their category access from the account owner. For example, if the account owner has a role of CEO and the CEO role has full access to all the data categories in the category group assigned to answers, then Customer Portal users can also access all categories in the answers community. In some cases, you may want to limit which categories a Customer Portal user can access.

6. If you have high-volume portal users, [make the data categories these users need to access visible through permission sets or profiles](#).

7. If your organization has the Ideas and Answers Portal license, hide the Reports tab in the Customer Portal. Otherwise, your Customer Portal users receive an Insufficient Privileges message when they click the Reports tab. For information on hiding tabs, see [Customizing Your Customer Portal Tabs](#) on page 2318.

Customize Your Customer Portal Pages

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can customize your Salesforce Customer Portal pages just as you customize pages in Salesforce: with page layouts.

Page layouts control the layout and organization of buttons, fields, s-controls, Visualforce, custom links, and related lists. They also help determine which fields are visible, read only, and required. Page layouts can include s-controls and Visualforce pages that are rendered within a field section when the page displays. You can control the size of the s-controls and Visualforce pages, and determine whether or not a label and scroll bars display.

Customer Portal users view the layouts assigned to their profile when they log in to your Customer Portal. You can customize the following objects' page layouts for your portal:

- Home
- Tasks
- Events
- Cases
- Assets
- Accounts
- Solutions
- Contacts
- Entitlements
- Custom Objects
- Service Contracts

Customizing Portal Page Layouts

From the object management settings for the object whose page layout you want to edit, go to Page Layouts.

By default, Customer Portal users have "Read" permissions on accounts, contacts, assets, products and price books, so that they can view their account name and choose a contact and asset for the cases they create on your portal. They may also have "Update" or "Create" permissions for assets and accounts, depending on the type of customer portal.

-  **Note:** Customer Portal users can't view the tags section of a page, even if it is included in a page layout.

To display a custom object in your Customer Portal, you must:

- Select the `Available for Customer Portal` checkbox on the custom object. You cannot assign a portal profile to a custom-object page layout unless this checkbox is selected.
- Grant user permissions to the custom object on permission sets or profiles assigned to portal users.

EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited

Configuring Multilingual HTML Messages for Customer Portals

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

If your organization has multiple languages enabled, you can upload HTML messages in any of the languages supported by Salesforce and configure the messages to display in the portal based on portal user language settings. For example, you can upload an HTML message in French to display on the Home tab for portal users with French language settings, and an HTML message in English to display on the Home tab for portal users with English language settings.

Note the following before configuring multilingual HTML messages:

- Before you can add a multilingual HTML message to a portal, you must upload the HTML-formatted file in the Documents tab.
- Even if configured, portal HTML messages will not display on the Ideas, Reports, Content, or Solutions tabs.

To configure multilingual HTML messages:

1. To configure a display language for the Customer Portal, from Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Click the name of the portal to edit.
3. Click **Add New Language** in the Assigned Languages related list.
4. Select a language from the **Language** drop-down list.
5. Click the lookup icon () next to a tab name, then select the HTML message to display on that tab. Optionally repeat this step for each tab that you want to display an HTML message.
6. Click **Save**.

Setup Tips and Considerations for Customer Portal Pages

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Consider the following set up tips and general information about Salesforce Customer Portal pages.

Setting Up Cases

- When setting up your Customer Portal, clone the page layout for cases (Case Layout), and rename it *Portal Case Layout*. This allows you to easily differentiate between case page layouts for internal users and case page layouts for portal users.
- By default, new cases are accessible in the Customer Portal, but you can include the `Visible in Self-Service` checkbox on case page layouts so that you can deselect the checkbox to prevent a case from being displayed.
- Do not select the `Show Case Email Notification` and `Show Case Email Notification by default` checkboxes on case page layouts. These features only apply to Salesforce users.
- Do not add the `Internal Comments` field to case page layouts assigned to portal profiles because portal users may view comments intended only for Salesforce users.
- Include the `Asset` field on case page layouts if you want portal users to be able to associate cases with an asset related to their account.
- Include the `Contact Name` lookup field on case page layouts so that users with "Edit" permissions on that field can change a case's contact to another portal user in the same account.
- If a portal user is the owner of a case, the `Contact Name` field on the case must be the contact associated with the same portal user who owns the case. You can't specify a different contact, even if they're associated with the same portal account.
- Do not select the `Show solution information section`, `Show Contact Notification checkbox`, and `Select Contact Notification checkbox by default` checkboxes on close-case page layouts because their functions only apply to Salesforce users.
- Create case record types to set the default value of the `Case Origin` picklist field for cases logged on your Customer Portal.
- For case assignment rules to work on the Customer Portal, select the `Select Case Assignment checkbox by default` checkbox on case page layouts assigned to portal profiles. Portal users cannot view these checkboxes on the Customer Portal. Note that assignment rules trigger when a case is created *and* when it is edited. To prevent cases from being automatically reassigned when edited by portal users, add a rule entry using the criteria `Current User: User Type contains Customer Portal` and select the `Do Not Reassign User` checkbox.
- Portal users can view all the values in the `Type`, `Status`, `Priority`, and `Case Reason` picklist fields unless you create record types for cases that contain separate picklist values for them.
- You can prevent portal users from submitting cases with attachments by removing the **Submit & Add Attachment** button from case page layouts:
 1. Edit a case page layout with the enhanced page layout editor.
 2. Click **Layout Properties**.
 3. Deselect **Show Submit & Add Attachment Button**.
 4. Click **OK**.
 5. Click **Save**.

EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise

- Unlimited
- Developer

Cases

- Portal users need the “Read” permission on contacts to create cases.
- Portal users cannot edit the value of the `STATUS` picklist field on cases.
- Portal users can edit and delete attachments they have added to their cases, but portal users cannot edit and delete attachments added to cases by Salesforce users.
- The **Delete** and **Sharing** buttons on case detail pages are not available to portal users.
- The **Email Message List**, **Next**, and **Previous** links are not available to Customer Portal users when they view emails from the [Email related list](#) on case detail pages. The Email related list is only available in organizations where Email-to-Case or On-Demand Email-to-Case is enabled.
- Optionally, you can create case auto-response rules to automatically respond to portal users when they create a case on your portal.
- Portal users can view, search, and create notes and attachments on cases.
- When creating a case, a portal user bypasses the Suggested Solutions page and is directed to their case if:
 - No relevant suggested solutions match the case.
 - He or she creates the case by clicking **Submit & Add Attachment**.

Note that suggested solutions are only available in organizations where they are enabled. For more information on suggested solutions, see [Suggested Solutions Overview](#) on page 2696. For more information about how Customer Portal users can self-close their own cases from suggested solutions, see [Enable Customer Portal Login and Settings](#).

- If [Salesforce Knowledge](#) is enabled, you can add the Articles related list to case page layouts assigned to portal users so that they can find articles that help them solve their cases.
- If Chatter is enabled for your organization, feed attachments are included in the Notes and Attachments related list. Portal users can download feed attachments, but can’t preview, edit, or delete them.

Solutions

- The `STATUS` picklist field on solutions is not available to portal users.
- The `STATUS` picklist field on a solution does not need to be set to Reviewed for a solution to be visible in the Customer Portal; a solution is visible in the Customer Portal if the `Visible in Self-Service Portal` checkbox is selected on a solution.
- If you enable [solution categories](#) for your organization, solution categories are also available in your Customer Portal. Uncategorized solutions do not display in the solution categories of your Customer Portal, but they do display in your portal’s search and list views.
- The [top solutions feature](#) is not available for your Customer Portal, but you can create links on your Customer Portal home page to your organization’s most relevant solutions.

Home Page

- Include the Customer Portal Welcome component on home page layouts assigned to Customer Portal users. Each Customer Portal user who logs in to your portal receives a welcome message with his or her name. The users can also change their own portal username, password, locale, language, time zone, and contact information. When portal users change information about themselves their user records are updated but their contact records aren’t automatically updated with those changes.

Note that Customer Portal users who have the “Is Single Sign-On Enabled” permission cannot change their usernames from the Customer Portal Welcome component.

- When designing home page layouts for your Customer Portal, we recommend adding the following components: Search, Solution Search, Recent Items, Customer Portal Welcome, and a custom HTML Area component that includes your corporate branding in the wide column.

- Create custom components to put on the home page layouts of your Customer Portal, such as links to custom list views, specific documents, and top solutions.
- Custom component names do not display in the wide section of the home page in the Customer Portal.
- You can position the logout link anywhere on the header by using the HTML tag: “Logout.” For more information on the header, see [Enable Customer Portal Login and Settings](#) on page 2308.
- We recommend *not* adding the following components to your Customer Portal home page layouts because they are for Salesforce users: `Tasks`, `Calendar`, `Product Search`, `Recent Items`, `Dashboard Snapshot`, `Messages & Alerts`, and `Items To Approve`.

Activities

- Portal users can't be assigned to activities.
- Portal users can view completed tasks and past events marked `Visible in Self-Service` that are associated with objects they have permission to view.

Documents

Verify that none of your organization's internal documents on the Documents tab are available in folders accessible to portal users.

Reports

- Portal users can run reports if they have the “Run Reports” permission.
- Portal users can export reports if they have the “Export Reports” permission.
- The Report Options section does not display on report results for portal users because portal users cannot customize report results. Also, the Generated Chart section, which includes the **Edit**, **Large**, **Medium**, and **Small** links, does not display on report results.
- Report results for portal users only include links to objects the portal users have permission to access.
- Portal users can only report on objects set to Private in the organization-wide default sharing model. Some objects, such as solutions and articles, are not included in the sharing model and cannot be reported on by Customer Portal users.
- Portal users will receive an insufficient privileges error if they run a report that contains objects they do not have permission to view.
- By default all users, including portal users, can view report folders. To prevent portal users from viewing report folders, update the sharing settings on report folders to the All Internal Users group.

Custom Objects

- When you deselect the `Available for Customer Portal` checkbox on a custom object, the custom object is no longer available on the Customer Portal, and all of the permissions for the custom object are automatically removed from portal profiles. If you select the `Available for Customer Portal` checkbox on a custom object again, you must update the permissions for the custom object on portal profiles.

Note: If you configure custom object access at a later time, permission sets retain their configuration.

- Portal users can view, search, and create notes and attachments on custom objects.
- If Chatter is enabled for your organization, feed attachments are included in the Notes and Attachments related list. Portal users can download feed attachments, but can't preview, edit, or delete them.

Articles

For setup information, see [Enabling Salesforce Knowledge in the Customer Portal](#) on page 2324.

Assets

- Portal users can create, view, and update assets associated with their accounts.

- Assets are only visible to portal users if you include the `Assets` lookup field on case page layouts. From case detail pages, portal users can view an asset by clicking it in the `Asset` field.
- Portal users can view and search attachments on assets.
- If Chatter is enabled for your organization, feed attachments are included in the Notes and Attachments related list. Portal users can download feed attachments, but can't preview, edit, or delete them.

Salesforce CRM Content

- Portal users with a Salesforce CRM Content feature license can perform any tasks granted by their library permission.
- Portal users with the "View Content on Portals" user permission have view-only access to Salesforce CRM Content.
- Portal users with the "Create Libraries" user permission can create and administer libraries.

For more information, see [Enabling Salesforce CRM Content in the Customer Portal](#) on page 2320.

Answers

For setup information, see [Enabling Answers in the Customer Portal](#) on page 2325. When [customizing your portal fonts and colors](#), note that answers only supports the following changes:

- All tab styles
- The following page styles:
 - Page Background
 - Text
 - Link
 - Link Hover

Ideas

For setup information, see [Enabling Ideas in the Customer Portal](#) on page 2322.

Accounts

Only users with delegated external user administrator rights can view the Accounts tab and their account's detail page in your Customer Portal. See [Delegating Customer Portal User Administration and Portal Super User](#) on page 2354.

 **Note:** Customer portal users don't see the Notes & Attachments related list on accounts.

Contacts

Only users with delegated external user administration rights can view their account's contacts. See [Delegating Customer Portal User Administration and Portal Super User](#) on page 2354.

Only users with the "Portal Super User" permission can view the Contacts tab and edit and detail pages for contacts in your Customer Portal. See [Delegating Customer Portal User Administration and Portal Super User](#) on page 2354.

 **Note:** Customer portal users don't see the Notes & Attachments related list on contacts.

Entitlements

- For set up information, see [Enabling Entitlement Management in the Customer Portal](#) on page 2322.
- Add the "Read" permission on entitlements to custom portal profiles; assign the profiles to portal users who need access to entitlements. See [Configuring User Access to the Customer Portal](#) on page 2345.
- Add the `Entitlement Name` lookup field to case page layouts so that portal users can add entitlements to cases.
- *Don't* add the following entitlement process fields to case page layouts for portal users because portal users shouldn't access information related to your internal support processes: `Entitlement Process Start Time`, `Entitlement Process End Time`, `Stopped`, and `Stopped Since`. See [Case Fields](#) on page 2068.

- Optionally, add the Entitlements tab to your Customer Portal so that portal users can view entitlements associated with their accounts and create cases from entitlements.
- Add the Entitlements related list to account and contact page layouts so that delegated external user administrators can create cases automatically associated with the right entitlements. See [Delegating Customer Portal User Administration and Portal Super User](#) on page 2354.

Service Contracts

- For set up information, see [Enabling Entitlement Management in the Customer Portal](#) on page 2322.
- Grant the “Read” permission on service contracts to the portal users who need access to service contracts. See [Configuring User Access to the Customer Portal](#) on page 2345.
- Add the Service Contracts tab to your Customer Portal so that portal users can view the details of their service contracts. See [Customizing Your Customer Portal Tabs](#) on page 2318.
- Contract line items don't display in the Customer Portal.

Flows

- You can include Force.com flows in your Customer Portal by embedding them in a Visualforce page.
- Users can run only flows that have an active version. If the flow you embed doesn't have an active version, users see an error message. If the flow you embed includes a subflow element, the flow that is referenced and called by the subflow element must have an active version.
- When you make a flow available to site or portal users, point them to the Visualforce page that contains the embedded flow, not the flow itself. Site and portal users aren't allowed to run flows directly.

[Customize Your Customer Portal Pages](#)

Customer Portal Setup Limits

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Contact Salesforce for information about the number of Customer Portals and Customer Portal user licenses you can activate.

The maximum number of custom objects you can include in a Customer Portal is determined by the total number of custom objects your Edition allows.

Also, user licenses control the number of custom objects a portal user can see in a Customer Portal. For information, contact Salesforce.

Enable Single Sign-On for Portals

Single sign-on is a process that allows network users to access all authorized network resources without having to log in separately to each resource. Single sign-on allows you to validate usernames and passwords against your corporate user database or other client application rather than having separate user passwords managed by Salesforce.

You can set up Customer Portals and partner portals to use [SAML single sign-on](#), so that a customer only has to login once.

 **Note:** Single sign-on with portals is only supported for SAML 2.0.

To enable single sign-on for portals:

1. In addition to the [SAML sign-on information](#) that must be gathered and shared with your identity provider, you must supply your information provider with the Organization ID and the Portal ID. In the SAML assertion that is sent from your identity provider, the `portal_id` and `organization_id` must be added as attributes.

 **Note:** You can leave these attributes blank to differentiate between portal and platform users. For example, when blank, the user is a regular platform user and when populated, the user is a portal user.

- a. From Setup, enter *Company Information* in the Quick Find box, then select **Company Information** and copy the ID located in the `Salesforce Organization ID`.
- b. For Customer Portals, from Setup, enter *Customer Portal Settings* in the Quick Find box, select **Customer Portal Settings**, click the name of the Customer Portal, and then copy the ID located in the `Portal ID`.
- c. For partner portals, from Setup, enter *Partners* in the Quick Find box, then select **Settings**. Next, click the name of the partner portal, and copy the ID located in the `Salesforce Portal ID`.

To set sharing rules:

“Manage Sharing”

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Managing Customer Portal users is similar to managing regular Salesforce users. General user administration concepts like profiles and page layouts still apply. Review the following advice for managing Customer Portal users:

- [Customer Portal Profiles](#)
- [Customer Portal Sharing Rules](#)
- [Customer Portal Role Hierarchy](#)
- [Customer Portal User Licenses](#)

 **Note:** High-volume portal users include both the High Volume Customer Portal and Authenticated Website license types.

Customer Portal Profiles

The profiles you assign to Customer Portal users define permissions for them to perform different functions within a Customer Portal, such as whether they can view, create, edit, or delete cases and custom object records.

When you enable a Customer Portal, the following profiles are automatically created if you purchased [user licenses](#) for them:

- High Volume Customer Portal
- Authenticated Website
- Customer Portal User
- Customer Portal Manager

The settings on Customer Portal profiles are similar. However, you can grant users with the Customer Portal Manager profile greater access to data via the Customer Portal role hierarchy and sharing rules (neither of which apply to [high-volume portal users](#)). You can also clone and customize each profile to suit the various support requirements of specific customers. You can also use permission sets to grant additional permissions and access settings to Customer Portal users.

Depending on the user licenses you purchased, you can configure Customer Portal profiles for custom objects, [Salesforce CRM Content](#), reporting, and customer support functionality, such as cases and solutions.

 **Important:** For portal users to be able to view their new cases, the **New Cases Visible in Portal** support setting must be selected. From Setup, enter *Support Settings* in the Quick Find box, select **Support Settings**, then select **New Cases Visible in Portal**.

Customer Portal Sharing Rules

After you enable a Customer Portal, the following groups and sharing rule category are created:

Groups and Sharing Rule Category	Description
----------------------------------	-------------

All Customer Portal Users group	Contains all Customer Portal users, except for high-volume portal users.
---------------------------------	--

Groups and Sharing Rule Category	Description
All Internal Users group	Contains all Salesforce users in your organization.
Roles and Internal Subordinates sharing rule category	<p>Lets you create sharing rules with specific Salesforce users in your organization by role plus all of the users in roles below that role, excluding any Customer Portal and partner portal roles.</p> <p>Because high-volume portal users don't have roles, they aren't included in this or any other sharing rule category.</p>

You can use these groups and the sharing rule category to create sharing rules that:

- Grant Customer Portal or Salesforce users access to specific data (except for high-volume portal users, because you can't include them in any groups or sharing rules)
- Link Customer Portal users and Salesforce users
- Link Customer Portal users from different accounts as long as they have the Customer Portal Manager user license

Customer Portal Role Hierarchy

When you enable a Customer Portal on an account, the system creates a role hierarchy for the account's portal users. The portal roles are unique for each account and include the account's name—or example, "Account A Customer User." In your organization's overall role hierarchy, this account-specific hierarchy is directly below the account owner.

The roles in a portal role hierarchy are fixed. You cannot customize them or add new ones. They are:

- Executive—for contacts
- Manager—for contacts
- User—for contacts
- Person Account—for person accounts

 **Note:** All users in a customer portal role (Executive, Manager, and User roles) have read access to all portal-enabled contacts under their portal account even when the contact sharing model is private.

As you enable customers as Customer Portal users, the system automatically assigns roles based on the [user license](#). Person accounts always have the Person Account role. Contacts with the High Volume Customer Portal or Authenticated Website license do not have a role.

If access to contacts are set to private, high-volume portal users only have access to their own contact and those they are granted access to.

Role hierarchies ensure that portal users from different accounts never see each other's data. Even though high-volume portal users aren't included in role hierarchies, they're restricted from seeing records that aren't associated with their account or contact, and they can only see objects to which they've been [granted access](#). You can, however, create sharing rules so that users with the Customer Portal Manager license from different accounts can see each other's data.

Accounts with different portal types—Customer Portal *and* partner portal—have a separate role hierarchy for each portal. Role names include the portal type with which they are associated. For example, if Account A has both a Customer Portal and a partner portal, then roles for the Customer Portal are named "Account A Customer User" and roles for the partner portal are named "Account A Partner User."

To view the roles assigned to your Customer Portal users, create a custom report, choose Administrative Reports, select Users as the data type, and add `Role` to your report columns. Note that you can't report on roles for high-volume portal users because they don't have roles.

 **Note:** You cannot create a Customer Portal user associated with an account owned by a partner user.

Customer Portal User Licenses

A user license determines the baseline of features that the user can access. Every user must have exactly one user license.

You can assign the following user licenses to Customer Portal users:

- High Volume Customer Portal
- Authenticated Website
- Customer Portal Manager Custom
- Customer Portal Manager Standard (not available for new customers)

These user licenses determine the available Customer Portal profiles. They also determine users' positions in the Customer Portal role hierarchy.

The following table shows the Customer Portal user licenses with their associated profiles and positions in the Customer Portal role hierarchy.

User License	Profiles	Roles and Sharing
High Volume Customer Portal and Authenticated Website Both user licenses are high-volume portal users (Available to purchase)	High Volume Customer Portal or Authenticated Website profile, or a profile cloned and customized from one of these.	High-volume portal users don't have roles. See About High-Volume Portal Users on page 2337. Can't share but can transfer records they own. Can't transfer cases from non-high-volume portal users to them. Can't include in: <ul style="list-style-type: none"> • Personal groups or public groups. • Sharing rules. • Account teams, opportunity teams, or case teams. • Salesforce CRM Content libraries. • High-volume portal users can't access standard Account and Contact detail pages. However, you can create a custom solution, using tools like Visualforce or the API, where they can access those records. Can access custom objects depending on profile settings.
Customer Portal Manager Custom (Available to purchase)	Customer Portal Manager profile or a profile cloned and customized from the Customer Portal Manager profile.	Can assign to either the Executive, Manager, or User role. Can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy; and they can view and edit cases where they are listed in the <code>Contact Name</code> field. Can have data shared to them just like other Salesforce users. <ul style="list-style-type: none"> • Can access custom objects depending on profile settings. • Can access reports depending on profile settings.

User License	Profiles	Roles and Sharing
Customer Portal Manager Standard	Customer Portal User profile or a profile cloned and customized from the Customer Portal User profile.	<ul style="list-style-type: none"> Can access Salesforce CRM Content depending on feature license and profile settings. See Enabling Salesforce CRM Content in the Customer Portal on page 2320. Can receive the “Portal Super User” and “Delegated External User Administrator” permissions. <p>Can only assign to either the Executive, Manager, or User role.</p> <p>Can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy; and they can view and edit cases where they are listed in the <code>CONTACT</code> <code>NAME</code> field.</p> <p>Can have data shared to them just like other Salesforce users.</p> <ul style="list-style-type: none"> Can access custom objects depending on profile settings. Can receive the “Portal Super User” permission. Can access Salesforce CRM Content depending on feature license and profile settings. See Enabling Salesforce CRM Content in the Customer Portal on page 2320. <p> Note: This license is not available for new customers.</p>

 **Note:** Person accounts enabled as Customer Portal users are automatically assigned the Person Account role, which you cannot change. Person accounts are automatically assigned to this role because they include a single user, so multiple roles are not necessary for their account. Furthermore, all person accounts owned by the same user are assigned the same role.

About High-Volume Portal Users

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

High-volume portal users are limited-access portal users intended for organizations with many thousands to millions of portal users. Unlike other portal users, high-volume portal users don't have roles, which eliminates performance issues associated with role hierarchy calculations. High-volume portal users include both the High Volume Customer Portal and Authenticated Website license types.

EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

Characteristics

High-volume portal users:

- Are contacts enabled to access a Customer Portal.
- Are assigned to the High Volume Customer Portal or Authenticated Website license.
- Only share the records they own with Salesforce users in the high-volume portal users sharing group.

Access to Records

High-volume portal users can access records if any of the following conditions are met:

- They have “Update” access on the account they belong to.
- They own the record.
- They can access a record’s parent, and the organization-wide sharing setting for that record is Controlled by Parent.
- The organization-wide sharing setting for the object is Public Read Only or Public Read/Write.
- They access the account or contact that they’re enabled under via the API (not via the standard account or contact detail page).

Administrators can create sharing sets to grant high-volume portal users additional access to records; see [Granting High-Volume Portal Users Access to Records](#) on page 2340.

Limitations

- High-volume portal users can’t manually share records they own or have access to.
- You can’t transfer cases from non-high-volume portal users to high-volume portal users.
- High-volume portal users can’t own accounts.
- You can’t add case teams to cases owned by high-volume portal users.
- You can’t include high-volume portal users in:
 - Personal groups or public groups.
 - Sharing rules.
 - Account teams, opportunity teams, or [case teams](#).
 - Salesforce CRM Content libraries.
 - High-volume portal users can’t access standard Account and Contact detail pages. However, you can create a custom solution, using tools like Visualforce or the API, where they can access those records.

These limitations also apply to records owned by high-volume portal users.

- You can’t assign high-volume portal users to territories.

SEE ALSO:

[Sharing Records Owned by High-Volume Portal Users to Salesforce Users](#)

[Granting High-Volume Portal Users Access to Records](#)

[Sharing Set Overview](#)

Sharing Set Overview

Grant portal or community users access to records that are associated with their accounts or contacts using sharing sets, based on their user profiles.

Previously, a sharing set granted access to any record that has a lookup field to an account or contact that matches the user's account or contact. With Spring '14, you can also determine how access is granted using an access mapping in the sharing set, which supports indirect lookups from the user and target record to the account or contact. You can determine the objects to use in the access mapping, and they must both either point to an account or contact.

For example, you might want to use a sharing set if you would like to:

- Grant users access to all cases related to their account or contact record.
- Grant users access to all cases related to a parent account or contact that is identified on the user's account or contact record.

You can use sharing sets to grant access to accounts, contacts, cases, service contracts, users, and custom objects. Sharing sets can be used with these user profiles:

- Authenticated Website
- Customer Community User
- Customer Community Login User
- High Volume Customer Portal
- High Volume Portal
- Overage Authenticated Website User
- Overage High Volume Customer Portal User

The following example shows an access mapping on a sharing set, which grants portal or community users access to all cases associated with the entitlements on their account, even if they are not directly associated with the case.

EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

Example:

1. Account lookup on portal or community user
2. Related account on entitlement
3. Entitlement lookup on case

 **Note:** Portal or community users gain access to all order entitlements and order items under an account to which they have access. To share records owned by high-volume portal users, use a share group instead.

SEE ALSO:

- [Granting High-Volume Portal Users Access to Records](#)
- [Granting High-Volume Portal or Community Users Access to User Records](#)
- [About High-Volume Community Users](#)
- [Grant High-Volume Community Users Access to Records](#)
- [Share Records Owned By High-Volume Community Users](#)

Granting High-Volume Portal Users Access to Records

Grant users access to records based on their profiles using sharing sets.

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

A sharing set grants high-volume portal users access to any record that has a lookup field to an account or contact that matches the user's account or contact.

You can also grant access to records via an access mapping in a sharing set, which supports indirect lookups from the user and target record to the account or contact. For example, grant users access to all cases related to another account that's identified on the users' contact records.

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. In the Sharing Sets related list, click **New** to create a sharing set, or click **Edit** next to an existing sharing set.

EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To grant high-volume portal users access to records:

- "Customize Application"

3. In the Sharing Set Edit page, fill in the **Label** and **Sharing Set Name** fields. **Label** is the sharing set label as it appears on the user interface. **Sharing Set Name** is the unique name used by the API.
4. Enter a description.
5. Select the profiles of the users to whom you want to provide access.
6. Select the objects you want to grant access to.

The Available Objects list excludes:

- Objects with an organization-wide sharing setting of Public Read/Write
- Custom objects that don't have an account or contact lookup field

7. In the Configure Access section, click **Set Up** or **Edit** next to an object name to configure access for the selected profiles, or click **Del** to remove access settings for an object.

 **Note:** Objects with **Set Up** in the Action column aren't configured for high-volume portal user access. Until you configure an object, high-volume portal users have limited or no access to its records. For more information on access, see [About High-Volume Portal Users](#) on page 2337.

8. Grant access based on an account or contact lookup:
 - Select a value in the User drop-down list to determine the account or contact lookup on the user.
 - Select the a value in the Target Object field to determine the account or contact lookup on the target object.

For example, to grant access to all cases associated with an account identified on the user's contact record, select `Contact.Account` and `Account` respectively.

 **Note:** Both selected fields must point to either an account or contact. For example, `Contact.Account` and `Entitlement.Account` both point to an account.

9. Choose an access level of Read Only or Read/Write. (If the object's organization-wide sharing setting is Public Read Only, then only Read/Write is available.)
10. Click **Update**, then click **Save**.

Your settings apply to all of your organization's Customer Portals or sites.

[About High-Volume Portal Users](#)

[Sharing Set Overview](#)

Granting High-Volume Portal or Community Users Access to User Records

Grant users access to other users using sharing sets.

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can create a sharing set to grant high-volume portal users access to internal users or other users in the same portal, enabling them to see or edit the target user records.

With Spring '14, you can also grant access to users in other portals through an indirect lookup to an account or contact.

To grant access to selected users in the same portal, you would typically create a sharing set if you deselected the `Portal User Visibility` checkbox on the Sharing Settings page.

To create a sharing set to grant access to other users:

1. From Setup, enter *Customer Portal Settings* in the `Quick Find` box, then select **Customer Portal Settings**.
2. In the Sharing Settings for High-Volume Portal Users related list, click **New** to create a sharing set, or click **Edit** next to an existing sharing set.
3. In the Sharing Set Edit page, fill in the **Label** and **Sharing Set Name** fields. **Label** is the sharing set label as it appears on the user interface. **Sharing Set Name** is the unique name used by the API.
4. Select the profiles of the users you want to have access.
5. Select the User object.
Target users can be other high-volume portal or community users or internal users.
6. In the Configure Access section, click **Set Up** or **Edit** next to the User object to configure access for the selected profiles, or click **Del** to remove access settings for an object.
7. Grant access based on an account or contact lookup:
 - Select a value in the User drop-down list to determine the account or contact that's related to the user, either by a direct lookup or indirect lookup via an intermediate object.
 - Select a value in the Target User drop-down list to determine the account or contact that's related to the target user, either by a direct lookup or indirect lookup via an intermediate object.

For example, to grant access to target users associated with another account identified on the user's account record, select `Account.Parent` and `Account` respectively.

 **Note:** Both selected fields must point to either an account or contact. For example, `Account.Parent` and `Contact.Account` both point to an account.

8. Choose an access level of `Read Only` or `Read/Write`. (If the User object's organization-wide sharing setting is Public Read Only, then only Read/Write is available.)
9. Click **Update**, then click **Save**.

Your settings apply to all of your organization's Customer Portals or sites.

 **Example:** The following example grants your portal users access to users whose contacts are related to the accounts identified on the portal users' managers records. In other words, the account field on the portal user's manager record must match the

EDITIONS

USER PERMISSIONS

To grant high-volume portal users access to records:

- "Customize Application"

account field identified on the target user's contact

record.

1. Manager lookup on portal user
2. Account lookup on manager
3. Account lookup on contact
4. Contact lookup on target user

In this example, to grant access to the target users, you would select *Manager.Account* and *Contact.Account* in the User and Target User drop-down list respectively.

[Controlling Who Community or Portal Users Can See](#)
[Sharing Set Overview](#)

Sharing Records Owned by High-Volume Portal Users to Salesforce Users

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

High-volume portal users are limited-access portal users intended for organizations with many thousands to millions of portal users. Unlike other portal users, high-volume portal users don't have roles, which eliminates performance issues associated with role hierarchy calculations. Because high-volume portal users are not in the role hierarchy while Salesforce users are, a *share group* allows you to specify the Salesforce users who can access records owned by high-volume portal users. Each Customer Portal has its own share group.

To specify the Salesforce users who can access records owned by high-volume portal users:

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Click the name of a Customer Portal.
3. Click the Share Group Settings subtab.

EDITIONS

Available in: **Salesforce Classic**

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To share records owned by high-volume portal users to Salesforce users:

- "Customize Application"

4. Click **Activate** to turn on the share group.

Activating the share group can take a while. An email is sent to you when the process finishes.

 **Note:** Deactivating a share group removes *all* Salesforce users' access to records owned by high-volume portal users. An email isn't sent to you when the deactivation process finishes.

5. Click **Edit** to add Salesforce users to the share group:
 - a. From the `Search` drop-down list, select the type of member to add.
 - b. If you don't see the member you want to add, enter keywords in the search box and click **Find**.
 - c. Select members from the Available Members box, and click **Add** to add them to the group.
 - d. Click **Save**.

[About High-Volume Portal Users](#)

Viewing Sharing Sets for High-Volume Portal Users

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Administrators can create sharing sets to grant high-volume portal users access to objects based on their profiles. To view detailed information about a sharing set:

1. From Setup, enter *Customer Portal Settings* in the `Quick Find` box, then select **Customer Portal Settings**.
2. In the Sharing Settings for High-Volume Portal Users related list, click the name of a sharing set.

The Sharing Set detail page shows the profiles included and the access granted to objects in the set. On this page, you can do any of the following:

- To edit the sharing set, click **Edit**.
- To remove the sharing set, click **Delete**.
- To view the details of an included profile, click its name.
- To change or remove access settings for an object, click the **Edit** or **Del** link next to the object name.

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

When setting up a Salesforce Customer Portal for the first time, configure the following before enabling users to access your portal:

1. Set up your portal as described in [Setting Up Your Customer Portal](#).
2. Assign Customer Portal profiles to a portal:
 - a. Select the name of a portal from the Customer Portal Setup page.
 - b. Click **Edit Profiles** in the Assigned Profiles section.
 - c. Select the **Active** checkbox next to the profile you want to assign to the portal.

Portal users can only log into Customer Portals assigned to their profile. If you are [creating multiple portals](#), you must assign profiles to each portal you want users to access.
3. Set the organization-wide defaults in your organization's sharing model to Private on accounts, contacts, contracts, assets, and cases. This ensures that portal users can only view and edit data related to their accounts.

 **Tip:** To maintain Public organization-wide default behavior for Salesforce users, while ensuring that portal users can only view and edit data related to their accounts, you can create self-referencing sharing rules of "All Internal Users" to "All Internal Users".

4. Optionally, set sharing rules for portal users (with the exception of high-volume portal users). This lets you share records between portal users and Salesforce users or vice-versa.

 **Note:** If your organization uses sharing rules that share to Roles, Internal and Portal Subordinates, then update those sharing rules to share to Roles and Internal Subordinates instead. This is to help ensure that no records owned by a Salesforce user are accidentally shared with a portal user.

The Roles and Internal Subordinates data set category allows you to create sharing rules that include all users in a specified role plus all of the users in roles below that role, excluding any Customer Portal and partner portal roles.

You can easily convert sharing rules that include Roles, Internal and Portal Subordinates to include Roles and Internal Subordinates instead by using the Convert Portal User Access wizard. Furthermore, you can use this wizard to convert any publicly accessible report, dashboard, and document folders to folders that are accessible by all users except for portal users.

5. Verify that portal users are not added to any queues and are not included in any public groups added to queues. This is because portal users added to queues may be able to access records from accounts to which they are not related.
6. Optionally, add the Welcome component to home page layouts assigned to portal users.
The Welcome component allows portal users to receive a welcome message with their name, plus the ability to change their own portal username, password, locale, language, time zone, and contact information. For details, see [Setup Tips and Considerations for Customer Portal Pages](#) on page 2328.
7. Optionally, allow contacts to register themselves for access to your portal. See [Enable Customer Portal Login and Settings](#) on page 2308.

SEE ALSO:

[About Customer Portal User Management](#)

[Administrator setup guide: Salesforce Customer Portal Implementation Guide](#)

Enabling the Customer Portal for Contacts and Person Accounts

To allow a customer to access your Salesforce Customer Portal, you must enable the customer's contact or person account record as a Customer Portal user.

You can either [disable or deactivate Customer Portal users](#) at any time.

To enable the Customer Portal for a customer:

1. Click **Manage External User** and choose **Enable Customer User** from the drop-down button on the contact or person account detail page.
2. Verify the general information and locale settings, and enter any missing information. Note that the customer's `Username` defaults to his or her `Email`.
3. Select a portal user license. The user license you choose determines the permission sets, user profile, and role hierarchy options you can select for the Customer Portal user. See [Customer Portal User Licenses](#) on page 2336.
4. Select `Generate new password and notify user immediately` to email a Customer Portal username and password to the customer.
If your organization uses multiple Customer Portals, a portal user can access all the Customer Portals assigned to his or her profile with one username and password. See [Creating Multiple Customer Portals](#) on page 2307.
5. Click **Save**.

To troubleshoot or confirm the portal configuration, on the contact detail page, click **Manage External User** and choose **Log in to Portal as User**. This opens a new browser window and logs you into the portal as the partner user.

Tips on Enabling the Customer Portal for Contacts

Consider the following when enabling the Customer Portal for contacts:

EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To enable Customer Portal users, or to log in as a portal user:

- "Edit" on the account associated with the Customer Portal user
- AND
- "Edit Self-Service Users"

- To view or edit an enabled contact's access to your Customer Portal, on the contact detail page, click **Manage External User** and choose **View Customer User**.
- You cannot enable the contact for the Customer Portal unless the owner of the contact's account is associated with a role in your organization.
- The first time you enable a contact for the Customer Portal on an account, you cannot assign the contact to a portal role. The contact is automatically assigned to the Customer User role, which includes the name of the contact's account. You can update contact's portal role later.

This behavior doesn't apply to [high-volume portal users](#) because they don't have roles and aren't included in the role hierarchy.

- A contact can be either a partner or Customer Portal user, but not both. If a user is a partner user *and* a Customer Portal user, then you need to create two contact records for the user so that he or she can have a separate username and password for each portal. However, a contact can be a Self-Service user as well as a partner *or* Customer Portal user. Any data created or owned by a Self-Service user can be visible to a partner or Customer Portal user associated with the same contact.

Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

- You cannot delete an active Customer Portal user; you can only disable or deactivate his or her access to the Customer Portal.

The following table describes whether you can delete contacts that are associated with portal users:

State of Portal User Associated to Contact	Can You Delete the Contact?
Active portal user	No. This is to ensure that the contact is available if you choose to reactivate the portal user.
Inactive portal user	No. This is to ensure that the contact is available if you choose to reactivate the portal user.
Disabled portal user	Yes. Deleted contacts are sent to the Recycle Bin.

- You can [change the account on the contact](#) at any time.
- You can [merge contacts](#) enabled to use a Customer Portal.
- The user's `Nickname` defaults to his or her email alias unless you specify otherwise. For example, if the user's `Email` is "jsmith@company.com," the user's `Nickname` defaults to "jsmith" when you click **Save**.
- Delegated administrators can't assign the High Volume Customer Portal license to contacts.
- When you create a Customer Portal user from a contact, the Chatter Answers User permission is automatically selected for the user. However, when you create a Customer Portal user from the API, the Chatter Answers User permission is not automatically selected for the user.

Tips on Enabling the Customer Portal for Person Accounts

Consider the following when enabling the Customer Portal for person accounts:

- After the person account is enabled, click **Manage External User** and choose **View Customer User** on the person account detail page to view or edit a person account's access to your Customer Portal.
- You can't delete a person account enabled to use a Customer Portal.
- You can't import person accounts to be automatically enabled to use a Customer Portal. For more information on importing person accounts, see [Import My Person Accounts](#) on page 623.

- Person account users can't self-register for a Customer Portal. When they try to do so, they receive an email notification that instructs them to contact the portal administrator. See [Enable Customer Portal Login and Settings](#) on page 2314.
- You can't merge person accounts enabled to use a Customer Portal.

Roles Per Customer Portal Account

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can set the default number of roles for Customer Portal accounts. This benefits your customer portal by reducing the number of unused roles for Customer Portal accounts. You must have a Customer Portal enabled to use this functionality.

For example, if you currently have three roles created when an account is enabled for your Customer Portal, but only need one role for new accounts, you can reduce the number of roles to one. You can set up to three roles for Customer Portal accounts. The default number of roles for Customer Portal accounts is three.

To set the number of roles per Customer Portal account:

1. From Setup, enter *Customer Portal Settings* in the Quick Find box, then select **Customer Portal Settings**.
2. Click **Set number of roles per Portal Account**.
3. Click **Edit**.
4. In the **Number of Roles** drop-down list, set your default number of roles per Customer Portal account.
5. Click **Save**.

The number of roles for existing portal accounts doesn't change with this setting.

- "Customize Application"

Disabling and Deactivating Portal Users

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

There are two ways in which you can remove a customer's access to your Salesforce Customer Portal or partner portal. As described in detail below, *disabling* a portal user is permanent, while *deactivating* a portal user is not:

Disabling a portal user

Disabling a portal user includes the following actions:

- Termination of the user's access to your portal
- Removal from all groups, teams, and sharing rules with which the user is associated.
- Permanent loss of the portal user's association with the contact

If you later re-enable a contact for portal access, a new portal user is created that is not related to the previous portal user record in any way.

- The `Role` on the portal user record is removed.
- For partner users, the partner user role becomes obsolete. As a result:
 - The user's data no longer rolls up to the partner account owner role
 - Opportunities owned by that user are removed from your organization's forecast hierarchy

 **Note:** Before disabling a partner user, we recommend transferring opportunities owned by that user to an active user.

We recommend disabling a portal user if:

- A contact was accidentally enabled as a portal user
- The portal user is associated with a duplicate contact
- You do not want a contact to access the portal in the future

 **Note:** Salesforce doesn't delete user records, including portal user records. While you can't re-enable a disabled portal user, you can view and update the record for a disabled user in Setup by entering `Users` in the `Quick Find` box, then selecting **Users**.

Deactivating a portal user

Deactivating a portal user prevents that user from logging into your portal and gives you the option to remove the user from any teams in which he or she is a member (for example, [case teams](#) and account teams). When you deactivate a portal user, the portal user record does *not* permanently lose its association with the contact. You can reactivate the portal user at any time.

 **Note:** When a delegated external user administrator deactivates a portal user, the administrator doesn't have the option to remove the portal user from any teams that user is a member of.

We recommend deactivating a portal user if you may reactivate the portal user in the future.

If a user on an account team has Read/Write access (**Account Access**, **Contact Access**, **Opportunity Access**, and **Case Access**) and is deactivated, the access will default to Read Only if the user is reactivated.

EDITIONS

Available in: Salesforce Classic

Customer Portal is available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer Editions**

Partner Portal is available in: **Enterprise**, **Performance**, and **Unlimited Editions**

USER PERMISSIONS

To disable or deactivate Customer Portal users:

- "Edit" on the account associated with the Customer Portal user
- AND
- "Edit Self-Service Users"

To disable or deactivate partner portal users:

- "Edit" on the account associated with the partner portal user

AND

"Manage External Users"

Disabling a Portal User

To disable a portal user:

1. On the contact detail page, click **Manage External User** and choose either **Disable Customer User** or **Disable Partner User**. On the account detail page of a person account, click **Manage External Account** and choose **Disable Customer Account**.

Person accounts are not available for the partner portal.

2. Click **OK**.

Deactivating a Portal User

To deactivate a portal user:

1. For the Customer Portal, click **Manage External User** and choose **View Customer User** on the contact or person account detail page. For the partner portal, click **Manage External User** and choose **View Partner User** on the contact detail page.

Person accounts are not available for the partner portal.

2. Click **Edit**, and deselect the `Active` checkbox.

To reactivate a portal user at any time, select the `Active` checkbox.

3. Click **Save**.

 **Note:** You can't mass deactivate portal users.

Tips on Disabling and Deactivating Portal Users

Consider the following when disabling or deactivating portal users (*disabling* is permanent; *deactivating* is not):

- You can't delete an active portal user; you can only disable or deactivate his or her access to the portal.
- The following table describes whether you can delete contacts that are associated with portal users:

State of Portal User Associated to Contact	Can You Delete the Contact?
Active portal user	No. This is to ensure that the contact is available if you choose to reactivate the portal user.
Inactive portal user	No. This is to ensure that the contact is available if you choose to reactivate the portal user.
Disabled portal user	Yes. Deleted contacts are sent to the Recycle Bin.

- To delete a portal-enabled contact, first disable the portal user, then delete the contact.
- Cases associated with a portal user are not updated in any way when you disable or deactivate the portal user. For example, if a portal user owns a case, and the portal user is disabled, he or she remains the owner of the case until the case is updated with a new owner.
- Before you disable a partner user, we recommend that you transfer any opportunities owned by the user to another user who will remain active. This is because when you disable a partner user, any opportunities he or she owns are removed from your organization's forecast hierarchy (the partner user's role becomes obsolete).
- After you disable a portal user, it may take Salesforce up to ten seconds to disable the user. During that time, a portal user may still perform actions on a portal.

- You can remove the **Disable Customer User** and **Disable Partner User** buttons from contact page layouts at any time. Doing so would prevent users with the “Edit Self-Service Users” or “Manage External Users” permissions from disabling portal users.
- A disabled or deactivated portal user does not count against your organization’s available user licenses. However, disabling or deactivating a portal user does not reduce the number of licenses for which your organization is billed; you must change your organization’s license count to change your billing.
- To disable *all* portal users associated with an account and permanently delete all of the account’s portal roles and groups:
 - Click **Manage External Account** and choose **Disable Partner Account** on a partner portal account.
 - Click **Manage External Account** and choose **Disable Customer Account** on a Customer Portal account or Customer Portal person account.

You can remove the **Disable Customer Account** and **Disable Partner Account** buttons from account page layouts at any time. Doing so would prevent users with the “Edit Self-Service Users” or “Manage External Users” permissions from disabling portal accounts.

- When you disable a portal user or portal account, the change is tracked in the setup audit trail.
- Portal roles are not removed from disabled portal users associated with person accounts. However, you can remove the portal roles manually:
 1. From Setup, enter `Users` in the `Quick Find` box, then select **Users**.
 2. Select the name of a disabled portal user.
 3. Click **Edit**.
 4. Select `None` from the `Role` drop-down list.
 5. Click **Save**.

SEE ALSO:

[Enabling the Customer Portal for Contacts and Person Accounts](#)

Disabling Customer Accounts

Disabling a customer account disables external users associated with the account. We recommend disabling a customer account only if the account was accidentally enabled.

You can’t delete customer accounts, but you can disable them. Disabling the account permanently disables up to 100 external users associated with the account and removes them from all communities, groups, teams, permission sets, and sharing rules that they’re associated with. This includes both active and inactive external users. Additionally, roles and groups associated with the account are permanently deleted and you won’t have the option to restore them from the Recycle Bin.

 **Note:** You can’t disable an account if there are more than 100 active or inactive external users associated with it. You must disable the users before disabling the account.

1. Go to the Account detail page for the account you want to disable.
2. Click **Manage External Account**, then click **Disable Customer Account**.
3. Click **OK** to confirm.

If you decide to re-enable the account in the future, you can re-enable individual contacts as Customer Portal users. Re-enabling a contact for a Customer Portal creates a new customer portal user record and role that is not associated with the previous customer portal user record and role. You can’t restore deleted roles and groups.

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can edit Salesforce Customer Portal user information for contacts associated with accounts you have permission to access. To edit information for a Customer Portal user:

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Click **Edit** next to a user's name.
3. Change the necessary information and click **Save**.

Tips for Editing Customer Portal User Information

Consider the following when editing Customer Portal user information:

- Create a custom list view to display only Customer Portal users by filtering on the Customer Portal Manager and Customer Portal User license types. For example, use the criteria "License Type equals Customer Portal User, Customer Portal Manager."
- When generating a new password for a user, the new password is automatically sent to the user's email address and email verification is not enforced.
- When changing a user's email address to a new email address, email confirmation isn't enforced.
- Include the Customer Portal Welcome component on home page layouts assigned to Customer Portal users so that, upon logging in to the portal, they receive a welcome message with their name. From the component, a user can change their own portal username, password, locale, language, time zone, and contact information. When portal users change information about themselves, their user record is updated but their contact record is not automatically updated with those changes.

Resetting Customer Portal User Passwords

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

If a Salesforce Customer Portal user loses his or her password, the user can click the **Forgot your password?** link on the Customer Portal login page to have a new password emailed to him or her.

To reset a Customer Portal user's password:

1. From Setup, enter *Users* in the *Quick Find* box, then select **Users**.
2. Select the checkbox next to the user's name. Optionally, to change the passwords for all currently displayed users, check the box in the column header to select all rows.
3. Click **Reset Password**. The user receives an email that contains a link and instructions to reset the password.

 **Tip:** You can include the Customer Portal Welcome component on home page layouts assigned to Customer Portal users. Each Customer Portal user who logs in to your portal receives a welcome message with his or her name. The users can also change their own portal username, password, locale, language, time zone, and contact information. When portal users change information about themselves their user records are updated but their contact records aren't automatically updated with those changes.

USER PERMISSIONS

To reset Customer Portal users' passwords:

- "Edit Self-Service Users"

Delegating Customer Portal User Administration and Portal Super User

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can delegate some administrative rights to Customer Portal users with the Customer Portal Manager Custom user license. Delegated external user administrators can do the following for external users, including both customer users and partner users, associated with their own account:

- Create new external users
- Edit existing external users
- Reset passwords for external users
- Deactivate existing external users

 **Note:** When a delegated external user administrator deactivates a portal user, the administrator doesn't have the option to remove the portal user from any teams that user is a member of.

Delegated external user administrators can also view their account's detail page, along with contacts and cases related to their account via the Accounts tab. In addition, delegated external user administrators receive the "Portal Super User" permission. This permission lets delegated external user administrators do the following for their own account:

- View, edit, and transfer all cases
- Create cases for contacts
- View and edit all contacts, whether portal enabled or not
- View account details when they're the contact on a case
- Report on all contacts, whether portal enabled or not, if the Reports tab is added to your Customer Portal and the user has the "Run Reports" permission

You can add just the "Portal Super User" permission to the profiles of external users (except for high-volume portal users) so that they have access to their account and can view and edit all of its cases and contacts without having the ability to manage other external users. However, super users can't view the Contacts tab on the Customer Portal without the Delegated External User Administrator permission. To edit contacts, super users must select a contact from a case record. For more information, see:

- [Delegating External User Administration Rights](#)
- [Providing Users with the "Portal Super User" Permission](#)
- [Tips on Setting Up Delegated Customer Portal User Administration](#)

Delegating External User Administration Rights

 **Note:** You must use the original profile user interface to delegate administration rights for external users. If you're using the enhanced profile user interface, disable it temporarily in the User Interface settings to complete this procedure.

To delegate External User Administration Rights:

1. From Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles** and click a custom Customer Portal profile.
You can't add delegation rights or the "Portal Super User" permission to the standard Customer Portal Manager, Customer Portal User, or High Volume Customer Portal profiles.

EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To manage Customer Portal users:

- "Delegated External User Administrator"

To create, edit, and delete profiles:

- "Manage Profiles and Permission Sets"

To view and edit all cases and contacts for an account:

- "Portal Super User"

2. Click **Edit**.
3. Select **Delegated External User Administrator**.
When you select **Delegated External User Administrator**, the **Portal Super User** is automatically selected after you click **Save**.
4. Click **Save**.
5. In the Delegated External Users Profiles related list, click **Edit**.
6. Select the external user profiles you want users with this profile to be able to administer. An external user delegated administrator can manage external users with Customer Portal, partner portal, or Communities profiles, as long as the users with the profile are under the same account.
7. Click **Save**.

To change which profiles a delegated Customer Portal user administrator can edit:

1. From Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles** and click a custom Customer Portal profile.
2. Click **Edit** in the Delegated External User Profiles related list.
3. Select the external user profiles you want this profile to be able to administer.
4. Click **Save**.

Delegated Customer Portal administrators can perform the following tasks from a contact's detail page:

- Click **Enable Customer Portal User** to allow a contact to use a Customer Portal.
- Click **View Customer Portal User** to view the Customer Portal user's details. From a Customer Portal user's detail page, delegated Customer Portal users can:
 - Click **Edit** to edit a Customer Portal user's details.
 - Click **Reset Password** to reset the Customer Portal user's password.
 - Click **Edit** and deselect the **Active** checkbox to deactivate the user.

Providing Users with the "Portal Super User" Permission

To provide users with the "Portal Super User" permission:

1. From Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles** and click a custom Customer Portal profile.
You can't add the "Portal Super User" permission to the standard Customer Portal Manager, Customer Portal User, or High Volume Customer Portal profiles.
2. Click **Edit**.
3. Select **Portal Super User**.
4. Click **Save**.

 **Tip:** To report on profiles with the "Portal Super User" permission:

1. Note the names of profiles with the "Portal Super User" permission.
2. Select the Reports tab.
3. From the Administrative Reports folder, select the All Active Users report.

Tips on Setting Up Delegated Customer Portal User Administration

Consider the following when setting up delegated Customer Portal User Administration:

- On the profile of users you are granting delegated portal administration:
 - Add the “Create” and “Edit” permissions on contacts so that delegated portal administrators and users with the “Portal Super User” permission can create and update contacts related to their account.
 - Set the Accounts and Contacts tab settings to Default On so that delegated portal administrators can view the Accounts and Contacts tabs and easily manage contacts related to their accounts.
 - Add the Accounts and Contacts tabs to your Customer Portal.
 - Set field-level security and page layouts so that delegated Customer Portal user administrators and portal super users can only access the account, contact, and case fields you specify.
-  **Note:** To allow portal super users to create cases for contacts other than themselves, set the field-level security on the `Contact Name` field on cases to Editable.
- Customer Portal users are prevented from viewing related lists to objects they don't have access to. For example, if a Customer Portal user views a contact, and the contact page layout includes the Opportunities related list, the portal user can't view the Opportunities related list because portal users don't have access to opportunities.
 - Delegated Customer Portal user administrators can update portal users on any account to which they are transferred.

Customer Portal Health

Portal Health Check Overview

Customer Portals and partner portals let you collaborate with and provide services to your customers and partners. With portals, you share and capture information from third-party users. To ensure that you don't expose more information than intended, it's important to follow best practices for portal implementation.

Your customers and partners can access your information via portals in many ways. With portal health check reports, you can easily monitor this access. Portal health check reports show your security-related portal settings and provide information you can use to improve portal security.

 **Note:** Portal health check reports show sensitive user permissions, object permissions, and field permissions granted through profiles, as well as organization-wide sharing settings and sharing rules. Your portal users can also access records via the following means, which aren't included in portal health check reports.

- Permission sets
- Manual sharing
- Apex managed sharing
- Territories
- List views
- Groups
- Queues
- Teams
- Content libraries

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

USER PERMISSIONS

To view portal health check reports:

- “Customize Application”
AND
“Manage Users”
AND
“Modify All Data”

- Folders

To view portal health check reports, from Setup, enter *Portal Health Check* in the **Quick Find** box, then select **Portal Health Check**, then click the report you want.

The following reports are included:

- Administrative and User Permissions
- Object Access and Field-Level Security
- Sharing Organization-Wide Defaults
- Sharing Rules

 **Note:** The portal health check reports don't include information for criteria-based sharing, high-volume portal users, or Self-Service portal users.

Viewing the Administrative and User Permissions Report

User permissions are powerful, as they expand users' access to data. It's important to use caution when setting permissions for a profile.

The Administrative and User Permissions report—one of the [portal health check reports](#)—shows portal profiles and their critical permission settings.

 **Note:** This report doesn't show permissions granted through permission sets.

For each profile, the report lists the number of portal users assigned to it, and the following permission settings:

- Delegated External User Administrator
- Send Email
- Convert Leads
- Edit Events
- Edit Opportunity Product Sales Price
- Edit Tasks
- Transfer Cases
- Portal Super User
- API Enabled
- Password Never Expires
- Create Workspaces
- View Content in Portals
- Export Reports
- Run Reports

 **Note:** Depending on your organization's settings, some permissions may not appear in the report.

From the report, you can drill down to portal profile detail pages, where you can edit or clone a profile, or view the users assigned to a profile.

To view this report:

1. From Setup, enter *Portal Health Check* in the **Quick Find** box, then select **Portal Health Check**.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

- Unlimited
- Developer

USER PERMISSIONS

To view portal health check reports:

- "Customize Application"
- AND
- "Manage Users"
- AND
- "Modify All Data"

2. Click **Administrative and User Permissions**.

From the report page, you can do any of the following:

- To view a profile detail page, click the profile name.
- To show a filtered list of items, select a predefined view from the drop-down list.
- To return to the list of reports, click **Back to list: Portal Health Check Reports**.

SEE ALSO:

[Portal Health Check Overview](#)

Viewing the Object Access and Field-Level Security Report

Object permissions specify the access that users have to standard and custom objects. The following object permissions respect the sharing model:

- Read—Users can only view records of this type.
- Create—Users can read and create records.
- Edit—Users can read and update records.
- Delete—Users can read, edit, and delete records.

Field-level security specifies the access that users have to specific fields in object records.

The Object Access and Field-Level Security report—one of the [portal health check reports](#)—shows the number of portal profiles that can access each standard and custom object in your organization. You can view each object's field-level security settings and permissions. The object-specific reports list portal profiles, showing the number of users assigned to each profile, the number of visible fields in an object, and the object permissions. You can drill down to portal profile detail pages, where you can edit or clone a profile, or view the users assigned to a profile. You can also drill down to field-level security detail pages, where you can edit the settings.

 **Note:** The Object Access and Field-Level Security report doesn't show permissions granted through permission sets.

To view this report:

1. From Setup, enter *Portal Health Check* in the **Quick Find** box, then select **Portal Health Check**.
2. Click **Object Access and Field-Level Security**.
3. From the report page, click an object name to view its field-level security settings and permissions by profile.

On the object detail page, you can do any of the following:

- To view a profile detail page, click the profile name.
- To view a profile's field-level security detail page, click **visible fields**.
- To return to the high-level object access and field-level security report, click **Object Access and Field-Level Security**.

From both report pages, you can do any of the following:

- To show a filtered list of items, select a predefined view from the drop-down list.

- To return to the list of reports, click **Back to list: Portal Health Check Reports**.

SEE ALSO:

[Portal Health Check Overview](#)

Viewing the Sharing Organization-Wide Defaults Report

Organization-wide default settings specify each object's default access level for users in your organization. If an object's default access level is Public, users with enabled object permissions ("Read," "Create," "Edit," or "Delete") may be able to access records that they don't own. For example, if the default access setting for the account object is Public Read/Write, then any user with the "Read" permission on the account object can view any account record. When setting organization-wide defaults, you want to make sure you don't let portal users see objects they shouldn't access.

The Sharing Organization-Wide Defaults report—one of the [portal health check reports](#)—lists standard and custom objects and the default access setting for each object. You can use this report to review and edit the organization-wide default settings that may expose records to portal users.

To view this report:

- From Setup, enter *Portal Health Check* in the **Quick Find** box, then select **Portal Health Check**.
- Click **Sharing Organization-Wide Defaults**.

The report lists the default access setting for each object. If an object's default access is Public, Show Details (for calendar), or Use (for price book), any portal users with enabled object permissions can access other users' records, and the Security column indicates a weak organization-wide default setting. You can view the specific object permissions granted to portal profiles in the [Object Access and Field-Level Security report](#).

If the object's default access is Private, Hide Details (for calendar), or No Access (for price book), the Security column indicates a strong organization-wide default setting.

 **Note:** Even with a strong organization-wide default setting, portal users may have access to other users' records through exceptions such as sharing rules.

If **Grant Access Using Hierarchies** is checked, any user above a record owner in a territory or role hierarchy can access the owner's records for that object.

From the report page, you can do any of the following:

- To change the organization-wide sharing settings for any object, click **Edit**, then change the settings on the Organization-Wide Sharing Defaults Edit page.
- To show a filtered list of items, select a predefined view from the drop-down list.
- To return to the list of reports, click **Back to list: Portal Health Check Reports**.

To view portal health check reports:

- "Customize Application"
- AND
- "Manage Users"
- AND
- "Modify All Data"

To set default sharing access:

- "Manage Sharing"

Viewing the Sharing Rules Report

Administrators can use sharing rules to give users access to records they don't own. In a sharing rule, records owned by a set of users (such as a group, role, or territory) are shared with another set of users. When creating sharing rules, you want to make sure you don't let portal users see records they shouldn't access.

The Sharing Rules report—one of the [portal health check reports](#)—lists all sharing rules that give portal users access to records they don't own. It shows the number of portal users who may get access to records as a result of each sharing rule, and lets you edit access levels for each rule. For some types of user sets (like groups, roles, and territories), you can drill down to detail pages, where you can edit, delete, or manage the users in the set.

To view this report:

1. From Setup, enter *Portal Health Check* in the **Quick Find** box, then select **Portal Health Check**.
2. Click **Sharing Rules**.

The Number of Portal Users Affected column shows the number of portal users who may get access as a result of the sharing rule. This number includes portal users specified in the rule and, if **Grant Access Using Hierarchies** is enabled for the object, any portal users above them in the role or territory hierarchy. If any users in this set have enabled object permissions (“Read,” “Create,” “Edit,” or “Delete”), they can access records exposed by the rule.

Note:

- The Sharing Rules report doesn't include criteria-based sharing rules.
- The Sharing Rules report doesn't check portal users' object permissions. You can view the specific object permissions granted to portal profiles in the [Object Access and Field-Level Security report](#).

From the report page, you can do any of the following:

- To change the access level in a sharing rule, click **Edit**, then change the settings on the sharing rule edit page.
- To view the details of a user set in a sharing rule, click the link in the Owned By or Shared With column.
- To show a filtered list of items, select a predefined view from the drop-down list.
- To return to the list of reports, click **Back to list: Portal Health Check Reports**.

Note: Account and account territory sharing rules can grant access to contacts, opportunities, and cases associated with the shared accounts. The Sharing Rules report shows access levels only for top-level objects, not associated objects.

Self-Service Portal

Self-Service Jump Start

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Get your Self-Service portal running quickly using the **Jump Start** button. It automates the setup process by choosing some default settings for you.

 **Note:** You can't save any JavaScript as part of your custom code, and [can only use certain HTML elements and attributes](#).

1. From Setup, enter *Self-Service Portal* in the **Quick Find** box, select **Settings**, then click **Jump Start**.
 2. Review the process and click **Continue**.
 3. Choose a color theme.
 4. Edit the default settings as needed and click **Save**.
 5. Test your Self-Service portal by:
 - a. Clicking **Generate** to retrieve a test username and password.
 - b. Clicking **Access Self-Service Portal** to preview your pages.
 - c. Optionally, click **Invite** to notify other users how to log in and preview your pages.
 6. Enable your Self-Service portal by copying the link provided in the **Enable Self-Service...** section to an appropriate place on your website.
 7. Click **Done** when finished.
 8. Enable your customers to use your Self-Service portal. See [Managing Self-Service Users](#) on page 2383.
-  **Tip:** To make changes to your settings, see [Enable Self-Service Features and Settings](#) on page 2363. The Self-Service Jump Start automatically enables the **Enable Self-Service** button on contact detail pages.

Enable Self-Service Features and Settings

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

1. From Setup, enter *Self Service Portal* in the **Quick Find** box, then select **Settings**.
2. Click **Self-Service Setup** on the Self-Service Settings page.
3. Set the following options:

Setting	Description
Login Enabled	Allows users to log into the Self-Service portal.
Edit Self-Service Users	Displays the Enable Self-Service button on contact detail pages. Or, for contacts in which Self-Service is already enabled, the View Self-Service button displays.
Logout URL	The URL of the web page that will be displayed when users log out of the Self-Service portal, for example, <code>http://www.acme.com</code> . If a logout URL is not specified, the Logout button does not display to users.
Default Case Origin	The default origin assigned to all cases submitted via the Self-Service portal. Available values are taken from your organization's Case Origin picklist. You can assign different default origins for cases submitted via Self-Service and Web-to-Case.
New Cases Visible in Portal	Automatically selects the Visible in Self-Service Portal checkbox for all new cases, including cases created via Web-to-Case, Email-to-Case, and On-Demand Email-to-Case. Regardless of this default, users creating new cases can manually set the Visible in Self-Service Portal checkbox.
Enable Solution Browsing	Enables solution categories in the Self-Service portal so that customers can browse solutions by category. If multilingual solutions is enabled, you can translate solution categories.
Top-Level Category for Self-Service Portal	The top-level category accessible by customers in the Self-Service portal. Customers can view all solutions marked

"Customize Application"

Setting	Description
	<p>Visible in Self-Service Portal in this category and its subcategories.</p> <p>Leave this blank to let customers view all solutions marked Visible in Self-Service Portal in all categories.</p>
Case Record Type	The record type to assign to any case submitted via the Self-Service portal.
"From" Email Address	<p>The email address from which all new user and password emails will be sent, for example, support@acme.com. When this field is blank, Salesforce uses:</p> <ul style="list-style-type: none"> • The Automated Case User's email address for users who receive an email with a temporary password by clicking Forgot your password? on the Login Page of the Self-Service portal. The Automated Case User is specified on the Support Settings page in Setup. • The email address of the user who last posted a comment for users who receive a case comment notification email.
"From" Email Name	<p>The name that will be associated with the "From" Email Address, for example, "Acme Customer Support." When this field is blank, Salesforce uses:</p> <ul style="list-style-type: none"> • Your organization's name for users who receive an email with a temporary password by clicking Forgot your password? on the Login Page of the Self-Service portal. • The name of the user who last posted a comment for users who receive a case comment notification email.
New User Template	The email template used to send a username and initial password to all newly-enabled Self-Service users. Self-Service automatically selects a sample template for you, but you can modify the sample or create your own email template. This template must be marked as "Available for Use."
New Password Template	The email template used to send a new password to existing Self-Service users when you reset their passwords or when they reset their own passwords by clicking Forgot your password? on the Login Page of the Self-Service portal. Self-Service automatically selects a sample template for you, but you can modify the sample or create your own email template. This template must be marked as "Available for Use."
Enable Notification Email on New Case Comment	<p>When selected, indicates that the Send Customer Notification option on a case comment is displayed.</p> <p>Even if this checkbox is not selected, the Send Customer Notification option still displays on cases if you have enabled email notifications to contacts who are not members</p>

Setting	Description
	of your Self-Service portal. See Customize Support Settings on page 2544.
New Comment Template	The email template used to send a notification to Self-Service users when a public comment is added to one of their cases. Self-Service automatically selects a sample template for you, but you can modify the sample or create your own email template. This template must be marked as "Available for Use." Note that case owners are sent a separate notification that you can't customize.
Enable Case Auto-Response Rules for Self-Service Cases	Indicates if cases submitted through your Self-Service portal will trigger your auto-response rules.
Case Creation Template	The email template to use when cases submitted through your Self-Service portal do not match any auto-response rules.
Maximum Page Width	The maximum pixel width of the Self-Service pages from Salesforce. If hosting the portal yourself, this is the width of the inner HTML frame on your Self-Service login page.
Minimum Page Height	The minimum pixel height of the Self-Service pages from Salesforce.
Style Sheet URL	The complete, publicly accessible URL of your organization's Self-Service style sheet, for example, "http://www.acme.com/styles/selfservice.css." See Customizing Your Self-Service Look and Feel on page 2366. If you use a predefined color theme, leave this field blank.
Color Theme	Use one of Salesforce's color themes if you do not have your own style sheet to use. Click the View link to see template settings. To change the fonts and colors of one of Salesforce's color themes, see Customizing Your Self-Service Fonts and Colors on page 2367.
Case Single Term	Term used on the Self-Service portal instead of "case" (singular form).
Case Plural Term	Term used on the Self-Service portal instead of "cases" (plural form).
Solution Single Term	Term used on the Self-Service portal instead of "solution" (singular form).
Solution Plural Term	Term used on the Self-Service portal instead of "solutions" (plural form).

4. Click **Save** to save your Self-Service settings.

Customizing Your Self-Service Fonts and Colors

-  **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

You can customize the fonts and colors of the Self-Service portal to reflect your company's branding. Your portal's fonts and colors are specified in a portal "color theme." Select a predefined color theme and customize it using a point-and-click editor.

1. From Setup, enter *Fonts and Colors* in the **Quick Find** box, then select **Fonts and Colors**. Salesforce offers predefined themes that you can customize. Click **Preview** to view any theme.

2. Select the color theme you want to customize.

From the color theme page, you can:

- Click the **Reset to Default** link to remove all customizations from a theme.
- Click the **Back to All Themes** link to return to the list of color themes.
- Click **Preview** *Theme Name* to view the theme you are customizing.

3. Choose a portal page to customize. Color themes are customized page-by-page with some page elements being shared by multiple pages.

From the portal page, you can:

- Click **See Examples** to see all of the elements that you can customize.
- Click **Clear** next to an element to remove customizations.
- Click **Preview** *Theme Name* to view the theme you are customizing.
- Click the **Back to All Pages** link to return to the list of all portal pages.

4. Click **Edit** next to the visual element you want to customize. Some elements are visible only on the selected portal page, and some are shared across multiple portal pages. Changes you make to shared elements affect all pages.

-  **Note:** Depending on the visual element, you can customize attributes using a point-and-click editor or a custom style sheet editor which lets you modify the cascading style sheets (CSS) directly. Choose the [click here](#) link to switch between the two. If you are using the point-and-click editor, select the **Show advanced attributes** box to access the [click here](#) link. We recommend that only users familiar with cascading style sheets (CSS) define them.

5. Edit the visual element as desired.

If you are using the point-and-click editor:

- Click **Edit** next to a basic or advanced attribute. If you do not see the advanced attributes, select the **Show advanced attributes** box.
- In the popup window, change the attribute as needed.
- Click **OK** to confirm your changes in the popup window.

If you are using the custom style sheet editor, enter valid CSS code.

For a list of all the page attributes you can edit, see [Self-Service Page Attributes](#) on page 2380.

6. Click **Save** to save all changes to the visual element and its attributes. Customizations are not visible to your Self-Service users until you set the color theme as active.

7. Repeat these steps to customize all visual elements and their attributes as necessary.

Preparation for Setting Up Your Portal

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Before setting up your [Self-Service portal](#) or your [Salesforce Customer Portal](#):

EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To modify Self-Service pages:

- "Manage Self-Service Portal"
- AND
- "Customize Application"

- **Build your public solutions** - Review and mark your solutions as `Visible in Self-Service Portal`. Only solutions marked `Visible in Self-Service Portal` can appear in the Self-Service portal or the Customer Portal. For your Self-Service portal only, identify the top five solutions you want to feature on the Home Page.
- **Determine the information to show and collect** - Decide which case fields will be available when users view their cases. You should also decide which fields should be required when users submit cases online and which picklist values users can select when they solve their own cases with suggested solutions. (See [Case Fields](#) on page 2068.)
- **Designate the portal's location** - Choose where to add your portal's login URL on your corporate website. To locate the login URL for your Self-Service portal, see [Generating Login HTML](#); to locate the login URL for your Customer Portal, see [Enable Customer Portal Login and Settings](#) on page 2308.
- **Customize your portal communication templates** - Decide which email templates to send to users to communicate a variety of information, such as reset passwords, notifications when public comments are added to cases, and case auto-responses with suggested solutions.
- **Customize and distribute the portal tip sheet** - Download the [Using the Self-Service Portal and Customer Portal](#) tip sheet and edit it to match your portal's branding and features, such as suggested solutions and the ability to attach files to submitted cases. Then distribute the document to your customers who want to learn how to answer their own inquiries using your portal.

SEE ALSO:

[Customize the Self-Service Style Sheet](#)

Customize the Self-Service Style Sheet

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Select a predefined color theme, or download a sample Self-Service color theme so you can customize it. This color theme allows you to incorporate your organization's branding into your Self-Service portal.

 **Note:** To customize the Self-Service color theme using a point-and-click editor, see [Customizing Your Self-Service Fonts and Colors](#) on page 2367.

1. From Setup, enter `Self-Service Portal` in the `Quick Find` box, then select **Settings**.
2. Click **Self-Service Setup**.
3. Click the **View Color Theme Options** link in the page settings section.
4. Find a set of fonts and colors you like and click **Download This Color Theme**.
To use a predefined color theme without customizing it, simply click **Select This Color Theme**.
5. Save the color theme you downloaded and give it to your webmaster if it needs more customization. The downloaded color theme is a CSS style sheet that your webmaster can edit.
6. Store the downloaded style sheet in a publicly accessible location and enter the URL for your style sheet in the `Style Sheet URL` field.
7. Click **Save**.

[Customizing Your Self-Service Pages](#)

Customize the Self-Service Portal Home Page

Customize the Self-Service home page to include the features you want users to see when they log in to your Self-Service portal.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

1. From Setup, enter *Self-Service Portal* in the **Quick Find** box, then select **Settings**.
2. In the Portal Pages list, click **Edit** next to Home Page.
3. Choose the features you want to enable:

Feature	Description
Show Top Solutions List	Lists the titles of up to five solutions of your choice on the Home Page.
Show My Open Cases	Lists the open cases of the Self-Service user who is logged in.
Show Message	The message that will be displayed at the top of the home page. You can enter a message of up to 32,000 characters including any HTML tags.

Enable the Solutions Page

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

You can enable the Self-Service Solutions Page from the Self-Service Portal Pages related list. The Solutions Page allows users to see solutions that have been marked `Visible in Self-Service Portal` and any files attached to those solutions.

1. To enable this page, click **Edit** on the Solutions Page line.
2. Select the `Show Solution Page` checkbox.
3. Check `Show Message` to display a message at the top of the Solutions Page.
4. If you enabled the message, enter your message in the text box, using the formatting toolbar to format the size, color, or font.

Optionally, check `Show HTML` to view your page message in HTML code. You can't save any JavaScript as part of your custom code, and [can only use certain HTML elements and attributes](#).

5. Optionally, insert any merge fields for data that you want to replace dynamically.
6. Click **Save**.
7. To see how your Solutions Page will look, click **Preview** on the Solutions Page line. If you have customized the Self-Service style sheet, the preview shows your custom styles.

USER PERMISSIONS

To modify Self-Service pages:

- "Manage Self-Service Portal"

AND

"Customize Application"

Customize the Self-Service Portal Log a Case Page

The Log a Case Page on the Self-Service portal lets users submit new cases to your customer support team. Customize the page by creating a page message, adding merge fields, and choosing the case fields you want to include.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

New cases submitted from this page are automatically created in Self-Service and assigned to the support representative or queue defined by your case assignment rules.

1. From Setup, enter *Self-Service Portal* in the **Quick Find** box, then select **Settings**.
2. In the Portal Pages list, click **Edit** next to Log a Case Page.
3. Select the **Show Log a Case Page** checkbox.
4. Select **Show Message** to display a message on this page.
5. If you enabled a page message, enter it in the text box, using the formatting toolbar to change the size, color, or font.
Select **Show HTML** to view and edit your page message in HTML. You can't save any JavaScript as part of your custom code, and [can only use certain HTML elements and attributes](#).
6. Optionally, insert merge fields for data that you want to replace dynamically.
7. Click **Save**.
8. To change the fields that display on the page, click the **Page Layout** link.

 **Note:** If a case field is tied to a validation rule, the rule can prevent Self-Service portal users from logging a case if they do not have access to fill in that field. Consider making those fields visible on the Log A Case page.

9. Click **Save** at any time to finish.
10. To see how your Log a Case Page will look, click **Preview** next to Log a Case Page in the Portal Pages list. If you have customized the Self-Service style sheet, the preview shows your custom styles.

USER PERMISSIONS

To modify Self-Service pages:

- "Manage Self-Service Portal"

AND

"Customize Application"

Customize the View Cases Page

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

You can enable and customize the View Cases Page from the Self-Service Portal Pages related list. The View Cases Page allows users to view their open and closed cases, related solutions, completed activities, comments, and (optionally) to add comments to their cases.

1. Click **Edit** on the View Cases Page line.
2. Select the `Show View Cases Page` box to allow users to view their open and closed cases.
3. Select `Add Comments to Cases` to allow users to add comments to their cases. When a user adds a comment, an email is automatically sent to the case owner.
4. Select `Add Attachments to Cases` to allow users to upload files to their cases. When a user adds an attachment, an email is automatically sent to the case owner.

When editing the page layout for the View Cases Page, add the Case Attachments related list to allow Self-Service users to view the files they've added to their cases. Be aware that this related list also shows any files that support reps have added to the case.

5. Check `Show Message` to display a message on this page.
6. If you enabled the message, enter your message in the text box, using the formatting toolbar to format the size, color, or font.

Optionally, check `Show HTML` to view your page message in HTML code. You can't save any JavaScript as part of your custom code, and [can only use certain HTML elements and attributes](#).

7. Optionally, insert any merge fields for data that you want to replace dynamically.
8. Click **Save**.
9. To change the fields and related lists that display on the page, click the **Page Layout** link.

Add the Case Activities related list to allow Self-Service users to view public, completed activities related to their cases. You also need to set field-level security to visible for the `Visible in Self-Service Portal` checkbox on activity page layouts so support reps will be able to display or hide completed activities in the Self-Service portal by clicking `Make Public` or `Make Private` in the case's Activity History related list.

10. Click **Save** at any time to finish.
11. To see how your View Cases Page will look, click **Preview** on the View Cases Page line. If you have customized the Self-Service style sheet, the preview shows your custom styles.

 **Tip:** To hide specific cases from users in the portal, you can deselect the `Visible in Self-Service Portal` checkbox on the case.

 **Note:** View Cases pages list cases in descending order via the `Case Number` field. Portal users cannot change this order; nor can they sort case columns in the Self-Service portal.

Customize the Suggested Solutions Page

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

You can enable and customize the Suggested Solutions Page from the Self-Service Portal Pages related list. The Suggested Solutions Page displays up to ten relevant solutions that may help users solve a particular case. When submitting a case or viewing cases in the Self-Service portal, users can view suggested solutions and close their cases themselves.

To customize the Suggested Solutions Page:

1. Click **Edit** on the Suggested Solutions Page line.
2. Select `Show Suggested Solutions Page` to enable the page in the Self-Service portal.
3. Select a `Self-Closed Case Status` to show in the `Status` field for cases closed by Self-Service users. You must select at least one "Closed" value for this field.
4. Choose the maximum number of suggested solutions to display to users at one time. You can show a maximum of ten.
5. Select the `Self-Closed Case Reasons` that Self-Service users can choose from when they self-close their cases.
6. Check `Show Message` to display a message on this page.
7. If you enabled the message, enter your message in the text box, using the formatting toolbar to format the size, color, or font.

Optionally, check `Show HTML` to view your page message in HTML code.

You can't save any JavaScript as part of your custom code, and [can only use certain HTML elements and attributes](#).

8. Optionally, insert any merge fields for data that you want to replace dynamically..
9. Click **Save**.
10. To see how your Suggested Solutions Page will look, click **Preview** on the Suggested Solutions Page line. If you have customized the Self-Service style sheet, the preview shows your custom styles.

Self-Service Page Attributes

-  **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

The following is a list of Self-Service page attributes which can be modified with the point-and-click editor:

Page Attribute	Description
Color	The color of the text.
Bold	The bolded value of the text. For example, whether the text is bolded or not.
Font size	The size of the text.
Font	A specific style of type in which letters are displayed.
Font Family	A prioritized list of font family names for an element. Web browsers use the first font value recognized.
Underline	The underline value of the text. For example, whether the text is underlined or not.
Border Color	The color of a border.
Border Style	The style of a border, such as dotted, dashed, or solid.
Border Width	The width of a border.
Bottom Border Width	The width of a bottom border.

EDITIONS

USER PERMISSIONS

To set up the Self-Service portal:

- "Manage Self-Service Portal"

To modify Self-Service pages:

- "Manage Self-Service Portal"

AND

"Customize Application"

Page Attribute	Description
Padding	The amount of space between the border and the element.
Padding Top	The amount of space to put between the top border and the element.
Padding Right	The amount of space to put between the right border and the element.
Padding Left	The amount of space to put between the left border and the element.
Padding Bottom	The amount of space to put between the bottom border and the element.
Height	The height of the element.
Line Height	The height of a line.
Background Color	The background color of the element.
Background Repeat	The format in which the background image displays. For example, whether the image displays repeatedly in a horizontal or vertical format.
Background Image	The background image of the element. The relative or absolute URL which hosts the image must be inside the surrounding URL() syntax. For example, <code>url (/sserv/img/tabBg_gray.gif)</code> .

Generating Login HTML

-  **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

After enabling and customizing your Self-Service portal, generate the URL or HTML code where users will log in to your Self-Service portal.

1. From Setup, enter *Self-Service Portal* in the **Quick Find** box, then select **Settings**.
2. Click **Generate Login HTML**.
3. Insert the URL or HTML code provided into your portal's Web page.
4. Click **Finished** to return to the Self-Service Settings page.

-  **Note:** You can't be logged into Salesforce and the Self-Service portal at the same time, with the same browser. For example, if you log into Salesforce and then the Self-Service portal using the same browser, your Salesforce session becomes invalid. Conversely, if you log into the Self-Service portal and then Salesforce using the same browser, your Self-Service portal session becomes invalid.

SEE ALSO:

[Setting Up Self-Service](#)

Using the Portals Tab

-  **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

The Portals Tab is where you set up an online support channel for your Self-Service customers - allowing them to resolve their inquiries without contacting a customer service representative.

Clicking on the Portals tab displays the portals home page. From there, you can:

- View your customer Self-Service portal home page.
- Click on your Self-Service portal pages to see how your customers will interact with them.
- Under **Reports**, click any report name to jump to that report.
- Select any of the links under **Tools** to access utilities for managing your Self-Service portal and Self-Service users.

-  **Note:** The Portals tab does not include the Customer Portal.

Managing Self-Service Users

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Manage your Self-Service user information from a single place and make changes to more than one user at a time. Before your customers can take advantage of the Self-Service portal, you must enable Self-Service access for each contact. You can enable access for one contact at a time from the Contacts tab or for multiple contacts via the Self-Service setup pages.

- To enable Self-Service users individually from the Contacts tab, select a contact and click **Enable Self-Service** on the contact's detail page.
- To enable multiple Self-Service users at once, see [Enabling Multiple Self-Service Users](#) on page 2384.
- To change Self-Service user information, see [Editing Self-Service User Information](#) on page 2385.
- To reset Self-Service user passwords, see [Resetting Self-Service User Passwords](#) on page 2386.

Enabling Multiple Self-Service Users

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

You can perform mass actions for Self-Service user management such as enabling Self-Service access for many contacts at once. Each contact must have an email address and must be associated with an account to be a Self-Service user.

To enable new users for your Self-Service portal:

1. From Setup, enter *Users* in the *Quick Find* box, then select **Users**.
2. Click **Enable New User(s)**.
3. Enter search criteria to compile a list of the contacts you want to enable and click **Search**.
4. Select the contacts you want to enable and click **Next**.
5. Modify Self-Service user information as necessary.
6. Select the *Super User* checkbox to enable the contact as a Self-Service super user who can view case information, add comments, and upload attachments for all cases submitted by anyone in his or her company.
7. Click **Save**.

Zones for Salesforce Communities and Customer Portals

Using Zones to Organize Communities

 **Note:** Starting with the Summer '13 release, Chatter Answers and Ideas “communities” have been renamed to “zones.”

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions. Zones are shared by the Ideas, Answers, and Chatter Answers applications, allowing you to view and create zones from those locations. Professional Edition organizations can have only one internal zone. All other editions can have up to 50 zones shared between Ideas, Answers, and Chatter Answers.

 **Note:** If you need more than 50 zones, contact Salesforce.

You can display a zone to the following types of users:

- Salesforce Communities users.
- Public users (requires setting up a Force.com site).
- Internal Salesforce users. Salesforce users can access all zones regardless of whether the community is internal-only or displayed in a portal.
- Customer Portal or partner portal users.
- Salesforce console users.

 **Note:** You cannot use Salesforce sharing rules to restrict access to zones. When you create a zone, you can restrict access by selecting the portal where the zone should appear. Only the users assigned to that portal (and internal Salesforce users) will be able to access that unless you expose it publicly using Force.com sites.

Users will see zones, search results, and content that are associated with the context defined by their user profile:

- Community users see the zones associated with the community they're signed in to.
- Internal users with permission to see Ideas can see all internal-only zones in the organization. If internal users sign in to a community, they see only those zones associated with that community.
- Internal users with permission to see Chatter Answers can see all internal-only zones for the organization in the Q&A tab. If internal users sign in to a community, they see only those zones associated with that community.
- Portal users can see the zones associated with their portal.
- Portal users with access to both a portal and a community can see the zones associated with the portal or community that they are currently signed in to.
- Users who are accessing the portal or community through an API can access all zones that they have access to in all contexts.
- Global searches in the internal application performed by internal users return results from all ideas that are available within the organization. Searches performed by all other users in Salesforce Communities return results from the ideas that are available within the community.

Creating and Editing Zones

Zones are shared by the Ideas, Answers, and Chatter Answers applications, allowing you to view and create zones from those locations. Answers can only have one zone displayed at a time. Supported editions allow up to 50 zones per organization.

To create a new zone or edit the details of an existing zone:

1. From Setup, enter *zones* in the **Quick Find** box, then select **Zones** under **Answers**, **Ideas Zones**, or **Chatter Answers Zones**.
2. Click **Edit** next to the zone you want to change or **New** to create a new zone.
3. Enter a unique name for your zone that clearly identifies the zone's purpose.
4. Optionally, enter a description in plain text. HTML and other markup languages are not supported.
5. Select the **Active** checkbox to display the zone to your community.

You can't delete zones, so if you need to hide a zone, make sure **Active** isn't selected. All active zones are automatically available from the Ideas tab, but you can only assign one active zone to Answers.

6. Select the **Username Format** to specify how usernames appear in posted questions and answers throughout the zone. Chatter Answers uses the Username Format for questions and answers only. Ideas uses the Nickname for usernames within a community rather than the Username Format within in a zone.

 **Note:** For Chatter Answers, first names are used for users in the Customer Support Agents Group even if Nickname is selected as the Username Format for the zone.

7. Specify where you want this zone displayed.

- **Community** lets you select a community in which to display the zone. For Chatter Answers only, you can also select **Visible Without Authentication** to allow guest users to view activity within the zone through the community without signing in.
- **Internal Only** displays the zone to internal users only. Portal and Salesforce Communities members can't see internal zones.
- **Portal** lets you select from a list of existing portals.

To make a zone publicly available, you must select the Customer Portal that you plan to expose publicly using Force.com sites. Chatter Answers is supported on Force.com sites. Answers isn't supported on Force.com sites.

 **Note:** If you re-assign a zone to another community, the items associated with that zone move to the new community, as well. Users who are logged in to the original community can't view the items that have been moved to the new community, including from the Recent Items section of the sidebar column. If the zone is moved back to the original community, the ability to view those items is restored.

8. To set up zones for Chatter Answers, follow these steps:

- a. Select **Enable for Chatter Answers** to associate the zone with Chatter Answers.
- b. Select **Enable Private Questions** to let customers post their questions privately to customer support (create cases). If you don't select this setting, support agents can still initiate private communications with customers.
- c. In **Visualforce Page That Hosts Your Zone's Feeds**, click  and choose the Visualforce page on which questions, replies, and knowledge articles display.

EDITIONS

Available in: Salesforce Classic

Ideas zones available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Answers zones available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Chatter Answers zones available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To create or edit a zone:

- "Customize Application"

The page you choose must include either the `chatteranswers:allfeeds` component or a combination of the following components: `chatteranswers:aboutme`, `chatteranswers:guestsignin`, `chatteranswers:feedfilter`, `chatteranswers:feeds`, `chatteranswers:searchask`, `chatteranswers:datacategoryfilter` so that the zone is linked to your Force.com site correctly. If you don't choose a Visualforce page, one is automatically generated when you save your zone. The generated page includes your zone's ID so that topics, questions, and replies are associated with your specific zone and can display on it. The page is named after your zone with a suffix of "_main," for example, `ZoneName_main`. The page also includes a language attribute that matches your organization's default language.

You can use the `NoSignIn` Boolean attribute in the `chatteranswers:allfeeds`, `chatteranswers:aboutme`, `chatteranswers:feeds` or `chatteranswers:searchask` components to remove all sign-in links from your zone. Use this option when you have an external sign-in path and want to ensure that your users follow it instead of the standard Chatter Answers sign-in. When the `NoSignIn` Boolean attribute is `true`, users can still search and view publicly accessible content for the zone. If they already have a valid session, they can still post questions, replies, vote, and flag content.

- d. In `Site That Hosts Your Zone`, click  and choose the Force.com site on which you want to host the zone.
 - If you associated the zone with a portal, you can enter a Force.com site domain.
 - If you associated the zone with a Salesforce Community that does not require authentication for users to view zone activity, we populate the Force.com site domain for you.
 - e. Optionally, in `Email Notification URL`, customize the URL that's included in email notifications sent from the zone.

The email notification URL is generated automatically to be adapted to the visibility settings of the zone, but it can be modified to fit specific needs or use cases. If you have a customized login page, enter its URL. For example, if you've created a login page from which users can access multiple zones, you can customize `Email Notification URL` to redirect users to that page from email notifications.

 **Note:** If you have an existing URL for email notifications for an internal zone and subsequently set up a custom domain using `My Domain`, you must manually update the Email Notification URL. To update the URL, clear the existing URL so that the field is blank. Save the page, and the system populates the field with the new `My Domain` URL.
 - f. In `Customer Support Agents Group`, select the public group of users who will act as support agents for the zone. These users will have a headset icon next to their username in the zone.
 - g. Optionally, in `Header` or `Footer`, click  and choose a text or HTML file that incorporates your organization's branding into the headers or footers of email notifications sent from the zone.

You can only choose a file that has been uploaded to a publicly accessible folder on the Documents tab and marked `Externally Available Image`. The files you include in the fields can have a combined size of up to 10 KB.
 - h. Select the data categories that you want exposed to the zone from the list of pre-defined data categories.
9. To set up Ideas for the zone, use the `Experts group` field to select the public group of experts who will monitor the zone for Ideas.
 10. Click **Save**.

Answers Communities

Setting Up Answers

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

To set up answers:

1. [Enable answers and set the default zone.](#)
2. [Create a category group](#) for answers and [add data categories](#) to the category group.

 **Note:** Even though you can create up to five hierarchy levels of categories in a category group, only the first level of categories is supported in your answers community. Child categories below the first level are not displayed in the community, and community members can't assign these child categories to questions.
3. [Assign the data categories to your answers community.](#)
4. [Review the category group visibility settings](#) to decide how you want to restrict access to categories and categorized questions in the answers community.
5. Using roles, permission sets, or profiles:
 - a. [Customize data category group visibility.](#)
 - b. (Optional) [Designate default category group visibility](#) for users without visibility through roles, permission sets, or profiles.
6. (Optional) To allow community members who work with cases to [escalate an unanswered or problematic question to a new case](#):
 - a. From the object management settings for cases, go to Page Layouts. Then edit the case page layouts to include the `Question` field.
 - b. From the object management settings for cases, go to Fields. Then ensure that field-level security for the `Question` field makes the field visible in the necessary profiles.

Only community members who have permission to create cases will see an **Escalate to Case** option on questions.
7. (Optional) If your organization uses Salesforce Knowledge, users can convert particularly helpful replies into articles in the knowledge base. From Setup, enter *Knowledge Settings* in the Quick Find box, then select **Knowledge Settings** and ensure that `Allow users to create an article from a reply` is checked.
8. (Optional) Create validation rules for questions and replies to prevent offensive language from being posted to the answers community. To create validation rules, from the object management settings for Chatter Answers question and Chatter Answers reply, go to Validation Rules.
9. (Optional) Create workflow rules for questions. For example, you may want to create a workflow rule that sends the community administrator an email whenever a question has ten or more replies but no best answer. Questions do not support approval processes or workflow tasks.
10. (Optional) Create reports for your answers community.
11. (Optional) [Enable answers in your Customer Portal](#) or enable answers in your partner portal.

EDITIONS

Available in: Salesforce Classic

Data categories and answers are available in: **Enterprise, Performance, Unlimited,** and **Developer Editions.**

USER PERMISSIONS

To customize answers settings:

- "Customize Application"

 **Tip:** Any custom fields you create for questions or replies can't display in the Salesforce user interface. However, you can add custom fields to questions or replies for API integration purposes. For example, add a custom text field to questions and use the API to populate that text field with the name of the country from which each question is posted.

[Setting Up Answers](#)

Enabling Answers and Assigning the Default Zone

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

To enable the answers feature:

1. From Setup, enter *Answers Settings* in the Quick Find box, then select **Answers Settings**.
2. Click **Edit**.
3. Use the **Enable Answers** checkbox to enable answers.

Enabling answers adds the Answers tab to the Community application and creates a zone named Internal Zone.

4. Select the default zone for the Answers tab. You can only display one answers zone at a time. You can either use Internal Zone as the default or [create a new zone](#) and use it as the default.
5. Click **Save**.

Assigning Data Categories to Answers

 **Note:** Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

In an answers zone, a *category group* provides one or more categories that help organize questions for easy browsing. If the category group contains a hierarchy, only the first-level categories display on the Answers tab. For example, if you're a computer manufacturer you might create a Products category group for your Products zone that has four categories: Performance Laptops, Portable Laptops, Gaming Desktops, and Enterprise Desktops. Zone members can choose one of the categories to assign to a question.

The following example shows how the categories within a category group appear on the Answers tab.

EDITIONS

Available in: **Salesforce Classic**

Answers is available in: **Enterprise, Performance, Unlimited, and Developer** Editions.

USER PERMISSIONS

To customize answers settings:

- "Customize Application"

Answers tab displaying categories

1. The zone assigned to answers.
2. When you assign a category group to answers, the data categories within the group appear beneath the zone name on the Answers tab. Zone members can assign these categories to their questions and browse within categories to see related questions. The name of the category group isn't displayed within the answers community.

The name of the category group is not displayed in the answers community; however, all the categories within the group appear below the zone name on the Answers tab.

To assign a category group to answers:

1. [Create a category group](#) for answers and [add data categories](#) to the category group.

We recommend naming the category group the same as the answers community so other administrators understand where the category group is being used.

 **Note:** Even though you can create up to five hierarchy levels of categories in a category group, only the first level of categories is supported in your answers community. Child categories below the first level are not displayed in the community, and community members can't assign these child categories to questions.

2. From Setup, enter *Data Category Assignments* in the **Quick Find** box, then select **Data Category Assignments** under Answers. The category group assignments page only displays after you [enable answers](#).

3. Click **Edit**.

4. Select the category group you want to assign to your answers zone.

 **Note:** If you change the category group for answers later, all the existing categories associated with your questions are removed. The questions in your answers community become uncategorized until community members assign the new categories to them.

5. Click **Save**.

You receive an email after the save process completes.

[What Are Data Categories?](#)

Ideas Communities

Encourage Idea Creation and Sharing in Salesforce Communities

Add your Ideas users to Salesforce Communities to take advantage of new ways to collaborate.

Create more engagement and collaboration around Ideas as you enable your customers to post and comment on Ideas right from their Salesforce Communities home page. Adding Ideas to Salesforce Communities lets your users reap the benefits of a vibrant, creative partnership between community members. Communities are customizable, public or private spaces for employees, customers, and partners to collaborate on best practices and business processes. When you enable Ideas in Salesforce Communities, you give your community members the ability to create ideas and idea themes and have a dialog around them. You can create public communities that let your customers or partners exchange ideas, as well as private internal communities that are specific to your employees.

Moderating and managing ideation communities can be assigned to internal community members, depending on their privileges. Internal users can moderate both internal and external communities because they have access to internal communities as well as any public communities that they have permission to access.

To organize your community into smaller groups, you can create zones within a community that reflect special interests, product groupings, or types of customers. Zones are shared by the Ideas, Answers, and Chatter Answers applications, allowing you to view and create zones from those locations. For example, if you're a computer manufacturer you can create a community named Laptop Products and another named Desktop Products. Within each of those communities, you can create zones that are specific to different aspects of the products.

Community members have visibility into different zones based on their user profiles:

- Community users see the zones associated with the community they're signed in to.

EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To customize Ideas settings for Salesforce Communities:

- "Customize Application"

- Internal users with permission to see Ideas can see all internal-only zones in the organization. If internal users sign in to a community, they see only those zones associated with that community.
- Internal users with permission to see Chatter Answers can see all internal-only zones for the organization in the Q&A tab. If internal users sign in to a community, they see only those zones associated with that community.
- Portal users can see the zones associated with their portal.
- Portal users with access to both a portal and a community can see the zones associated with the portal or community that they are currently signed in to.
- Users who are accessing the portal or community through an API can access all zones that they have access to in all contexts.
- Global searches in the internal application performed by internal users return results from all ideas that are available within the organization. Searches performed by all other users in Salesforce Communities return results from the ideas that are available within the community.

Managing Ideas

Ideas is a community of users who post, vote for, and comment on ideas. Consider it an online suggestion box that includes discussions and popularity rankings for any subject. To further organize your community into smaller groups, you can create zones within a community that reflect special interests, product groupings, or types of customers.

You can display Ideas to internal Salesforce users, a Salesforce.com Community, Customer Portal or partner portal users, or to public users (requires setting up a Force.com site). You can also manage Ideas from the console.

Professional Edition organizations can have only one internal zone. All other editions can have up to 50 zones shared between Ideas, Answers, and Chatter Answers.

As an administrator, you can:

- Control whether ideas are enabled for your organization and customize the [half-life](#) of ideas. See [Customizing Ideas Settings](#).
- Create zones to organize ideas. See [Creating and Editing Zones](#).
- Create [Idea Themes](#) that let you invite community members to post ideas about specific topics so that members can solve problems or propose innovations for your company.
- Define picklist values for the `Categories` and `Status` fields. See [Define Picklist Values for the Categories and Status Fields](#).
- Specify the layout of custom fields. See [Set Page Layouts for Ideas](#).
- Make idea reports available to your users.
- Customize idea search layouts.
- Merge ideas to reduce the number of duplicate ideas.
- Assign a status to an idea.
- Delete a vote through the API to erase all history that the vote ever occurred.

Specifically, deleting a vote does the following:

- Removes 10 points from the idea's overall score

EDITIONS

Available in: **Salesforce Classic**

Available in:

- Professional

Customizing Ideas Settings

To manage organization-wide settings for Ideas:

1. From Setup, enter *Ideas Settings* in the Quick Find box, then select **Ideas Settings**.

2. Click **Edit**.

3. Use the **Enable Ideas** checkbox to enable or disable Ideas for your organization.

Disabling Ideas removes the Ideas tab and users will no longer be able to access active zones, but these zones will reappear on the Ideas tab the next time you enable Ideas.

4. Optionally, select **Enable Text-Formatting, Images and Links** to enable the Ideas HTML editor, which gives users WYSIWYG HTML editing and image referencing capabilities when they post or comment on ideas.

Warning: Once you enable the Ideas HTML editor, you cannot disable it. If you do not see the **Enable Text-Formatting, Images and Links** checkbox, the Ideas HTML editor is enabled for your organization by default.

5. If your organization does not already have the multi-select **Categories** field enabled, click the **Enable** button located below the Categories message at the top of the page. This button is not displayed if your organization already has the **Categories** field enabled.

If the **Categories** field is already enabled, the **Enable Categories** checkbox is selected. Once the field is enabled, you cannot disable it.

6. Select **Enable Reputation** to let users earn points and ratings based on their activity in each zone.

7. Select an **Ideas User Profile** type for all user profiles in the zone.

User Profile Type	Description
Chatter profile	The user's Chatter profile is the default user profile type. If you select this option and a user doesn't have a Chatter profile, then the Ideas zone profile is used.
Ideas zone profile	The profile that the user sets up for the Ideas zone. This profile type is used for Ideas zones in portals.
Custom profile with a Visualforce page	You can specify a Visualforce page for a custom profile for all Ideas users in the zone. If you select this profile type, you must specify a Visualforce page in Custom Profile Page .

8. In the **Half-Life (in Days)** field, enter a number of days.

EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To customize Ideas settings:

- "Customize Application"

The half-life setting determines how quickly old ideas drop in ranking on the Popular Ideas subtab, to make room for ideas with more recent votes. A shorter half-life moves older ideas down the page faster than a longer half-life.

 **Note:** This field does not appear if Ideas is disabled. To modify the `Half-Life (in Days)` field, save your changes after enabling ideas, and then click **Edit** on the Ideas Settings page.

9. Click **Save**.

SEE ALSO:

[Enable Idea Themes](#)

[Managing Ideas](#)

[Administrator setup guide: Salesforce Ideas Implementation Guide](#)

[Encouraging Innovation with Idea Reputation](#)

Encouraging Innovation with Idea Reputation

Reward the most influential and innovative members of your Ideas community by acknowledging their participation and contribution to the community. By enabling Reputation in Ideas, and then choosing level names and thresholds, you let users earn points and ratings that reward and encourage frequent, meaningful activity in the community. As community members engage more frequently, they improve the overall quality of ideas, which means that everyone reaps the benefits of a vibrant, creative partnership with your customers.

Users are awarded points for many activities including:

- Creating an idea
- Receiving a comment on their idea
- Receiving an upvote on their idea or comment
- Commenting on someone else's idea

Reputation points are calculated separately for each zone, and for the cumulative activity within the entire organization. Users who participate in different zones will have different reputation values for each zone based on their activity in that zone. When users are logged into the internal application, their reputation score is based on their participation in all zones to which they belong.

Ideas comes with the following pre-defined reputation levels that apply to all zones and to the internal application. Using the API, reputation levels and points for each level can be added or edited to reflect the levels of participation in your community.

Name	Points per Level
Observer	0 – 99
Contributor	100 – 399
Influencer	400 – 1499
Thought Leader	1500+

EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

Reputation levels are available through the API and can be displayed in custom Ideas implementations. To add or edit reputation level names, points per level, or other attributes of a reputation in any of your zones, use the `IdeaReputation` and `IdeaReputationLevel` objects in the API. You can create up to 25 different reputation levels for each zone.

SEE ALSO:

[Customizing Ideas Settings](#)

Designating Community Experts

Designate your star users as experts in their communities.

A community expert is a member of the community who speaks credibly and authoritatively on behalf of your organization. When a community expert posts a comment or idea, a unique icon (★👤) displays next to his or her name so other community members can easily identify credible information within the community. The Salesforce administrator can designate as many community experts as necessary.

If you want to have experts within your community, create a public group that includes these users. Then, during the setup process you will designate this public group as your community experts.

Before you select a public group to be community experts, note the following:

- A community expert can be an employee of your organization who is responsible for providing official responses to the community, or a community expert can be someone outside your organization who is active within the community and knowledgeable about the subject matter.
- The only difference between a community expert and other community members is the unique icon that displays next to the community expert's name. Community experts do not have any extra permissions beyond what is specified in their user profile and permission sets.
- Community experts must be part of a public group and that public group must be specified in the `Experts Group` drop-down list. You may need to create a public group for each community if the experts within those communities are different.
- If a community is displayed in a Customer Portal or partner portal, you can use a cascading style sheet (CSS) to change the icon associated with the community expert. When creating a new portal, specify your CSS in the `Header` of your portal and use the `expertUserBadge` class to reference the new background image for the community expert. We recommend the community expert icon be no larger than 16 by 16 pixels.

Set Page Layouts for Ideas

When you create a custom field for Ideas, you can add it to the Additional Information section that appears on the Post Idea and Idea Detail pages.

You can specify the order in which a custom field appears in the Additional Information section as well as remove a custom field from these pages without permanently deleting the field from the system. Although it's possible to move standard fields onto the page layout, by default they already appear in the Idea Detail section at the top of the page and their order is not customizable. However, you can drag the `STATUS` field to the Additional Information section to have the status of an idea appear in the page layout.

 **Note:** The label and layout of the Additional Information section can't be customized.

1. From the object management settings for ideas, go to Page Layouts.
2. Click **Edit**.
3. Select a custom field from the box on the right and drag it to the Additional Information section. Custom fields appear in the order they are placed in the Additional Information section.
4. To display an idea's status to zone members, select the `STATUS` field and drag it to the Additional Information section.
5. To let users add files to ideas, select the `ATTACHMENTS` field and drag it to the Additional Information section. Make sure you've set field-level security for your users.
6. Click **Save**.

Adding Apex Triggers to Idea Comments

Adding Apex triggers to Idea Comments lets you perform actions related to comments that users post to an idea.

A trigger is a set of Apex code that fires at a particular time in the lifecycle of a record. You can add Apex triggers to comments in Ideas to better manage ideas in your community.

Use triggers on comments to perform actions such as:

- Send an email notification to the moderator or other user when a comment is left on an idea.
- Send an email notification to the user with the contents of their comment.
- Notify the moderator when a specified number of comments is reached for an idea.
- Prevent posting of comments with specific words.

Migrating to the Community Application

If your organization enabled Ideas prior to the Winter '10 release, we recommend that you migrate to the new Community application. The Community application:

- Replaces the Ideas application in the Force.com app menu.
- Includes the Ideas and Answers tabs.

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

 **Warning:** Once you migrate to the Community application, you cannot return to the old Ideas application. The Ideas tab with all your existing data will still be available in the new Community application.

To migrate to the Community application:

1. From Setup, enter *Ideas Settings* in the Quick Find box, then select **Ideas Settings**.
The Community message appears at the top of the Ideas Settings page. If the Community message does not appear, the Community application is already enabled for your organization.
2. Click **Enable** below the Community message. Salesforce checks your organization for any custom objects named Community. If such an object exists, you must delete or rename the object before enabling the Community app.
3. Click **Enable** when Salesforce confirms it's okay to migrate to the Community application.

Customizing Ideas Standard and Custom Fields

USER PERMISSIONS

To define picklist values:	"Customize Application"
To set field level security:	"Customize Application"
To define or change field validation rules:	"Customize Application"
To create Ideas custom fields:	"Customize Application"
To enable attachments for ideas:	"Customize Application"

Administrators can customize Ideas standard and custom fields to meet the needs of an organization's unique requirements:

- Define picklist values for the Categories and Status fields.
- Click the name of a standard or custom field to set field-level security.
- Click the name of a custom field to set validation rules.
- Create a custom field for Ideas. Custom fields appear in the Additional Information section on the Post Idea and Idea Detail pages.
- Add the Attachment field to the layout and set field-level security. Users can attach all supported file types, including Microsoft® PowerPoint® presentations and Excel® spreadsheets, Adobe® PDF files, image files, audio files, and video files. The maximum attachment size is determined by your organization.

Select Picklist Values and Defaults for a Zone

After you define picklist values for the `Categories` and `Status` fields, you can add and remove picklist values from these fields on a per-zone basis and specify a default value. This allows you to customize the `Categories` and `Status` fields based on the unique purpose of a zone. For information, see [Define Picklist Values for the Categories and Status Fields](#) on page 2400.

To add or remove picklist values from a specific zone:

1. From Setup, enter `Zones` in the `Quick Find` box, then select **Zones**.
2. Click the name of the zone.
3. In the `Idea Picklists Available for Editing` section, click **Edit** next to the `Categories` or `Status` field.
4. To remove a picklist value, select the value from the `Selected Values` list and click **Remove**.
5. To add a picklist value to the zone, select the value from the `Available Values` list and click **Add**.
6. To specify a default value for the field, use the `Default` drop-down list.
7. Click **Save**.

Define Picklist Values for the Categories and Status Fields

Overview

For members of a zone to assign categories to an idea or be able to view an idea's status, the Ideas administrator needs to define picklist values for the `Categories` and `Status` fields. These fields are only available in an ideas community and not in an answers community.

Categories are administrator-defined values that help organize ideas into logical sub-groups within a zone. The `View Category` drop-down list on the `Ideas` tab allows users to filter ideas by category, and the `Categories` picklist on the `Post Ideas` page lets users add categories to their ideas.

An idea's status helps zone members track the progress of the idea. For example, "Under Review", "Reviewed", "Coming Soon", and "Now Available" are common status values an administrator can define and assign to ideas. An idea's status appears next to the idea's title for all zone members to see.

 **Note:** If the `Category` field is displayed (instead of `Categories`), then your zone members can only assign a single category to an idea. To allow them to assign multiple categories to an idea, from Setup, enter `Ideas Settings` in the `Quick Find` box, then select **Ideas Settings** and enable `Categories`.

- "Customize Application"

Defining Picklist Values

To define picklist values for the `Categories` and `Status` standard fields:

1. From Setup, enter `Ideas` in the `Quick Find` box, then select **Fields**.
2. Click **Edit** next to the `Categories` or `Status` standard field.
3. On the picklist edit page, click **New** to add new picklist values to the standard field. You can also edit, delete, reorder, and replace picklist values.

 **Note:** Once you add picklist values to the `Categories` or `Status` field, the field will always require at least one picklist value. This means you can delete picklist values until there is one remaining for the field.

4. Add one or more picklist values (one per line) in the provided text area.
5. Select the zones that you want to include the new picklist values.
6. Save your changes.
7. To specify a default value for the `Categories` or `Status` fields, see [Select Picklist Values and Defaults for a Zone](#).

 **Note:** Do not use the **Edit** link on the Fields page to specify a default value for `Categories` or `Status`. You can only specify a default value from the Zone Detail page.

8. To display an idea's status to zone members, select the `Status` field and drag it to the Additional Information section. You can find this field from Setup by entering `Ideas` in the `Quick Find` box, then selecting **Fields**.

Once you select this checkbox, you can assign a status to any idea when you post a new idea or edit an existing idea.

[Managing Ideas](#)

[Select Picklist Values and Defaults for a Zone](#)

[Find Object Management Settings](#)

Enabling the Categories Field

Organizations using the `Category` field can switch to the multi-select `Categories` field that allows zone members to associate more than one category with an idea. The `Category` field only allows one category to be associated with an idea.

 **Warning:** Once you enable the `Categories` field, you cannot disable it. Also, enabling the `Categories` field automatically disables the old `Category` field in Salesforce and the API.

When you enable the `Categories` field, Salesforce automatically does the following:

- Checks your organization's workflow rules, triggers, validation rules, custom fields, and Apex code and lists any area that references the `Category` field. You must manually fix or remove these references before Salesforce allows you to enable the `Categories` field.
- Automatically moves all picklist values and search layouts from the old `Category` field to the new `Categories` field.
- Ensures each idea is associated with the appropriate picklist value in the new `Categories` field.
- Makes the new `Categories` field available in Salesforce and the API.

EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To customize Ideas settings:

- "Customize Application"

To enable the `Categories` field:

1. From Setup, enter `Ideas Settings` in the `Quick Find` box, then select **Ideas Settings**.
2. Click **Enable** located below the `Categories` message at the top of the page. This button is not displayed if your organization already has the `Categories` field enabled.

Salesforce checks your organization's workflow rules, triggers, validation rules, custom fields, and Apex code for references to the `Category` field and lists any areas where this reference needs to be removed.

3. If you need to remove references to the `Category` field, click **Cancel**. Once you have removed the references, try enabling the `Categories` field again.

Note: For validation and workflow rules you must delete the rule or fix the `Category` reference within the rule. It is not sufficient to deactivate the rule. If you need to delete a custom field that references the `Category` field, make sure to erase the field after it has been deleted.

4. Read the information in the pop-up window, and click **Enable**. It may take several minutes for Salesforce to enable the new field.
5. Fix any custom reports that reference the old `Category` field.

Chatter Answers Communities

Chatter Answers Implementation Overview

 **Note:** We recommend that advanced Salesforce administrators and developers set up and maintain Chatter Answers, as it involves several Salesforce features.

Chatter Answers is a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Before administrators can set up Chatter Answers, their organizations must have implemented [Data Categories](#). If you want Salesforce Knowledge articles to display in your zones, then administrators need to implement [Salesforce Knowledge](#).

Unlike other Salesforce features, Chatter Answers spans across several areas of setup. There isn't one location in Salesforce where you can update and configure all of the settings related to Chatter Answers. For example, configuring Chatter Answers might require you to update Customer Portal settings from Setup by entering *Customer Portal Settings* in the **Quick Find** box, then selecting **Customer Portal Settings**, as well as Force.com Site settings by entering *Sites* in the **Quick Find** box, then selecting **Sites**.

Setting up Chatter Answers also includes customizing or maintaining:

- [Cases](#)
- [Case assignment rules](#)
- Workflow rules on cases or questions
- Apex triggers on questions
- Visualforce pages
- [Customer Portal users](#)
- Organization-wide sharing defaults
- Feature licenses

Customizing the appearance of your Chatter Answers zone to match your company's branding involves creating or updating Visualforce pages and adding them to the Force.com Site used to host your zone.

SEE ALSO:

[Setting Up Chatter Answers](#)

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

Setting Up Chatter Answers

 **Note:** The steps below are general guidelines for setting up Chatter Answers. Chatter Answers integrates several Salesforce features, including features administrators may have implemented already, so each Chatter Answers implementation may be different. Contact Salesforce for specifics on your implementation.

Before administrators can set up Chatter Answers, their organizations must have implemented [Data Categories](#). If you want Salesforce Knowledge articles to display in your zones, then administrators need to implement [Salesforce Knowledge](#).

1. [Enable Chatter Answers](#).
2. [Configure email notification settings](#).
3. [Implement a Customer Portal](#) (if one doesn't already exist for your organization).
4. [Configure your organization's Customer Portal for Chatter Answers](#).
5. [Configure high-volume portal users for self-registration](#).
6. [Implement a Force.com site](#) (if one doesn't already exist for your organization and you want to use a site).
7. [Configure your organization's Force.com site for Chatter Answers](#).
8. [Configure cases for Chatter Answers](#).
9. [Set Questions tab visibility](#).
10. Optionally:
 - [Assign data categories to Chatter Answers](#).
 - [Configure Salesforce Knowledge for Chatter Answers](#).
 - [Add Chatter Answers to your Customer Portals or Partner Portals](#).
11. [Configure one or more zones](#).
12. [Troubleshoot any setup issues](#).

 **Important:** After you set up Chatter Answers, it may not work properly if you change any of the configurations in the features mentioned above. If certain configuration issues are detected, Salesforce sends email notifications to the [Site Contact user](#).

 **Tip:**

- You can [add custom fields](#) to questions or replies for API integration purposes only. For example, add a custom text field to questions and use the API to populate that text field with the name of the country from which each question is posted. Any custom fields you create for questions or replies can't display in the Salesforce user interface.
- You can customize fields, page layouts, buttons and links, Apex triggers, and validation rules for questions and replies for Chatter Answers from Setup by entering "Chatter Answers" in the [Quick Find](#) box, then selecting **Chatter Answers** and choosing the appropriate setting.
- You can rename `Customer Support` on your zones' user interface. For example, you can change "Customer Support" to "Acme Support." Just edit the Customer Support label on the Question object.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

USER PERMISSIONS

To set up Chatter Answers:

- "Customize Application"
- AND
- "Manage Users"
- AND
- "Edit Self-Service Users"

- You can rename the Chatter Answers tab in your portal, as well.

SEE ALSO:

[Chatter Answers Implementation Overview](#)

[Chatter Answers Implementation Guide](#)

Enable Chatter Answers

Enable Chatter Answers to set up Chatter Answers zones.

- From Setup, enter *Chatter Answers Settings* in the **Quick Find** box, then select **Chatter Answers Settings**.
- Click **Edit**.
- Select **Enable Chatter Answers**.
- Optionally, select:

Option	Description
Show Chatter Answers in Portals	Lets you add Chatter Answers as a tab to your Customer Portal or Partner Portal. If you choose this option, you must add the Chatter Answers tab to each portal and assign the Chatter Answers User license to portal users. If you only want to display Chatter Answers in your portals, then you don't need to set up a Force.com site to host Chatter Answers. However, a site lets guest users access some Chatter Answers data without a login, whereas portals do not.
Optimize Question Flow	Lets users filter search results by articles or questions before they post a question to any of your Chatter Answers zones. Also, adds Title and Body fields to questions for easier text input and scanning. This setting is turned on automatically when you enable Chatter Answers.
Enable Rich Text Editor	Lets zone members use the rich text editor to format text and upload images when posting questions and replies. This setting is turned on automatically when you enable Chatter Answers.

 **Note:** Optimize Question Flow must be enabled to select this option.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

USER PERMISSIONS

To enable Chatter Answers:

- “Customize Application”

Option	Description
Show Search/Ask Publisher Inline	<p>Embeds the Search/Ask Publisher inline instead of using a pop-up window.</p> <p> Note: Optimize Question Flow must be enabled to select this option.</p>
Enable Reputation	<p>Lets users earn points and ratings that display as hover text on their profile pictures. Reputation is enabled across all zones. This setting is turned on automatically when you enable Chatter Answers.</p>
Allow Posting Answers via Email	<p>Lets users post answers by replying to email notifications.</p>
Enable Facebook Single Sign On	<p>Lets users sign in to your Chatter Answers zones with their Facebook logins. If you choose this setting, your zones display an option to Sign in with Facebook next to your zones' Sign In. When a user signs in to Chatter Answers with a Facebook login, the first name, last name, and the photo associated with the Facebook account is used in posts to your zones.</p> <p>When you enable this feature, you must define and enable a Facebook authentication provider in your organization's security controls.</p>
Facebook Authentication Provider	<p>Lets you choose an existing Facebook authentication provider after you select Enable Facebook Single Sign On. You must choose a Facebook authentication provider to implement Facebook Single Sign On for your Chatter Answers zones. This setting is ignored if you have associated the Chatter Answers zone to a Chatter community with a different Facebook authentication provider.</p>
Custom Profile Page	<p>Lets you select a custom Visualforce page for users' profiles for Chatter Answers on a public Chatter community site. You must have Visible without authentication set for the zone in order for the user profile pages to be used. The following attributes are passed to the custom Visualforce page that you select:</p> <ul style="list-style-type: none"> • <code>communityId</code>. This attribute indicates which zone the currently selected feed item, such as a question or a reply, belongs to. • <code>userId</code>. This attribute indicates the owner of the currently selected feed item, such as a question or a reply. • <code>showHeader</code>. This attribute is a Boolean value that specifies whether the Salesforce tab header is included in the page. If this attribute is set to true, the Salesforce tab header is displayed.

5. Click **Save**.

After you enable Chatter Answers, several items are automatically added to your organization for use with setting up zones:

- A Q&A tab where internal users and administrators can view and use Chatter Answers. Administrators can rename this tab.
- Standard permission settings for Questions on user profiles so that you can grant users permissions to questions and replies.
- Visualforce pages that you can add to a Force.com site, a tab in a Community, or a Customer Portal so that users can register, sign in, and view feed items on a zone.
- An Apex class named `ChatterAnswersRegistration` with a method for customizing Account creation for portal users.
- An Apex trigger for questions named `chatter_answers_question_escalation_to_case_trigger` so that questions with specified attributes are automatically escalated to cases.
- A workflow field update named `chatter_answers_num_subscriptions_above_` so that when a question is escalated to a case, `Priority` on questions is updated.
- Two workflow rules, `chatter_answers_no_best_reply_within_time_limit_wf` and `chatter_answers_num_subscriptions_above_limit_wf`, which you can customize and activate so that questions without best replies or questions with a specified number of followers are automatically escalated to cases.

Visualforce Pages for Chatter Answers

After you enable Chatter Answers, the Visualforce pages below are automatically added to your organization. You can use these pages to set up and configure Chatter Answers.

Visualforce page	Description
<code>ChatterAnswersAgentView</code>	The Visualforce component that displays questions on case detail pages when questions are converted to cases. This component is optional and offers an alternative to the case detail page.
<code>ChatterAnswersChangePassword</code>	The page where users can change their passwords to your zone.
<code>ChatterAnswersForgotPassword</code>	The forgot password page for your zone.
<code>ChatterAnswersForgotPasswordConfirm</code>	The forgot password confirmation page for your zone.
<code>ChatterAnswersHelp</code>	The online help page displayed to users when they click Need Help?
<code>ChatterAnswersLogin</code>	The login page for your zone.
<code>ChatterAnswersRegistration</code>	The page where users can self-register for access to your zone.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

Visualforce page

When you create a zone, the following page is added to your organization: *Community Name_main*
(Home Page)

Description

The page that includes the question, reply, and Salesforce Knowledge article feeds for your zone. This page is also used to determine the community from which email notifications are sent to users.

This page is automatically generated when you save a new zone without choosing *Visualforce Page That Hosts Your Community's Feeds*. The generated page includes your zone's ID so that topics, questions, and replies are associated with your specific zone and can display on it. The page is named after your zone with a suffix of "_main," for example, *ZoneName_main*. The page also includes a language attribute that matches your organization's default language.

[Setting Up Chatter Answers](#)

[Visualforce](#)

[Customizing Chatter Answers using Visualforce Pages](#)

Customizing Chatter Answers using Visualforce Pages

You can create a Visualforce page that displays a Chatter Answers zone customized for your users.

By using a Visualforce page, you can add custom widgets to Chatter Answers, such as announcements or ads, which let you extend your branding and change the experience for users. You can also control the arrangement of elements on the page. Your customers can access your custom Chatter Answers zone through a Force.com site, a tab in a Community, or a Customer Portal to which you've added the Visualforce page. When internal users access a Chatter Answers zone that uses a Visualforce page, they see only the zone that is related to the page; they can't switch zones as they can when using the standard Q&A tab.

 **Note:** You can't customize the Chatter Answers Q&A tab with a Visualforce page, but you can add a Visualforce tab in your organization and create an internal Chatter Answers experience with your custom Visualforce page.

In order to display the zone, the Visualforce page you create must include either the `chatteranswers:allfeeds` component or a combination of the following components: `chatteranswers:aboutme`, `chatteranswers:guestsignin`, `chatteranswers:feedfilter`, `chatteranswers:feeds`, `chatteranswers:searchask`, `chatteranswers:datacategoryfilter`.

Example: Custom Visualforce Page using the `chatteranswers:allfeeds` Component

The `chatteranswers:allfeeds` component provides an out-of-the-box Chatter Answers Visualforce page. A page that uses the `chatteranswers:allfeeds` component includes the following Chatter Answers elements:

- Chatter Answers sign in
- Chatter Answers profile

EDITIONS

Available in: **Salesforce Classic**

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

- Data category filters
- The Search/Ask bar
- Feed filters
- The questions feed

For example, the following Visualforce page including the `chatteranswers:allfeeds` component has all of the Chatter Answers elements in the standard arrangement for a zone without any other custom widgets.

```
<apex:page>
  <body>
    <chatteranswers:allfeeds communityId="09aD00000000K7c"/>
  </body>
</apex:page>
```

Example: Custom Visualforce Page using All of the Chatter Answers Page Components

Using the Chatter Answers page components allows you to pick and choose which elements of your Chatter Answers zone appear to your customers. You can use as few as one component or you can customize your page to use all of them. You can include the following components:

- `chatteranswers:aboutme`
- `chatteranswers:guestsignin`
- `chatteranswers:feedfilter`
- `chatteranswers:feeds`
- `chatteranswers:searchask`
- `chatteranswers:categoryfilter`

Using the Chatter Answers page components instead of the `chatteranswers:allfeeds` component allows you more flexibility over the arrangement of the elements on the page. For example, the following Visualforce page includes all of the standard Chatter Answers elements, but they appear in a different order on the resulting page than they do when you use the `chatteranswers:allfeeds` component. In this example, the Search/Ask component and the feed filter appear below the feed instead of above it.

```
<apex:page language="en_US" showHeader="false" cache="true">
  <body>
    <div class="csMini">
      <div class="threecolumn">
        <div class="leftContent">
          <chatteranswers:guestsignin />
          <chatteranswers:aboutme communityId="09aD00000000cfE"/>
          <chatteranswers:categoryfilter communityId="09aD00000000cfE"/>
        </div>
        <div class="mainContent">
          <div class="lowerMainContent" id="lowerMainContent">
            <div id="rightContent" class="rightContent"></div>
            <div id="centerContent" class="centerContent">
              <chatteranswers:feeds communityId="09aD00000000cfE"/>
              <chatteranswers:searchask communityId="09aD00000000cfE"/>
              <chatteranswers:feedfilter />
            </div>
          </div>
        </div>
      </div>
    </div>
  </body>
</apex:page>
```

```

    </div>
    <div class="clearingBox"></div>
  </div>
</div>
</body>
</apex:page>

```

Configuring a Customer Portal for Chatter Answers

 **Note:** Even if you don't plan on using a Customer Portal, you must configure one for Chatter Answers to authenticate users who sign in to your Chatter Answers zone.

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Click **Edit** next to the Customer Portal you want to configure for Chatter Answers.
3. Click **Login Enabled** to let customers sign in to Chatter Answers.
4. In **From Email Address**, type the address from which all email communications from your Chatter Answers zone are sent. For example, support@acme.com.
5. In **From Email Address Name**, type the name associated with the **From Email Address**. For example, Acme Customer Support.
6. Click **Self-Registration Enabled** to let customers register themselves for access to Chatter Answers.
7. In **Default New User License**, choose the portal user license that's automatically assigned to customers who self-register. We recommend you choose the High Volume Customer Portal license.
8. In **Default New User Profile**, choose the profile that's automatically assigned to customers who self-register. We recommend you [choose the profile you cloned and customized for self-registration](#).
9. Click **Save**.
10. Assign the profile you selected as the **Default New User Profile** to your Customer Portal so that users can sign in to your zone:
 - a. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
 - b. Select your portal's name.
 - c. In the Assigned Profiles section, click **Edit Profiles**.
 - d. Click **Active** next to the profile you selected as the **Default New User Profile**.
 - e. Click **Save**.

Configuring a Force.com Site for Chatter Answers

 **Note:** Configuring a Force.com site is recommended for self-service communities.

Configure a Force.com site for Chatter Answers to host a domain and publicly display some of your Salesforce data, such as questions, replies, and Salesforce Knowledge articles.

1. From Setup, enter *Sites* in the **Quick Find** box, then select **Sites**.
2. Click **Edit** next to the name of the site you want to configure for Chatter Answers.
3. Click **Active** to activate the site.
You can activate the site after you've finished [setting up Chatter Answers](#).
4. In **Active Site Home Page**, choose a Visualforce page as the home page for your site.
5. Click **Save**.
6. Click **Edit** on the Site Visualforce Pages related list.
 - a. Use the **Add** and **Remove** buttons to enable the following Visualforce pages for your site:
 - ChatterAnswersAgentView
 - ChatterAnswersChangePassword
 - ChatterAnswersForgotPassword
 - ChatterAnswersForgotPasswordConfirm
 - ChatterAnswersHelp
 - ChatterAnswersLogin
 - ChatterAnswersRegistration
 - b. Click **Save**.
7. Click **Public Access Settings** to grant guest users (unauthenticated, non-Customer Portal users) access to cases, questions, and Salesforce Knowledge articles.
 - a. Click **Edit** on the profile for Chatter Answers users.
 - b. In Standard Object Permissions, click **Read** on Cases and Questions.
 - c. Optionally, if you want articles to display in Chatter Answers, click **Read** on articles types in Article Type Permissions.
 - d. Click **Save**.
8. Click **Edit** next to a category group in the Category Group Visibility Settings related list to grant users access to the categories so that they can browse questions, replies, and Salesforce Knowledge articles.
 - a. Next to **Visibility**, click **All Categories**.
 - b. Click **Save**.
9. Return to the site and select its name from Setup by entering *Sites* in the **Quick Find** box, then selecting **Sites**.
10. Click **Login Settings** to enable user authentication for the site.
 - a. Click **Edit**.
 - b. In **Enable Login For**, choose the Customer Portal you created for Chatter Answers.
 - c. Click **Save**.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

USER PERMISSIONS

To create and edit Force.com sites:

- "Customize Application"

After you configure your Force.com site for Chatter Answers, you can replace the default Visualforce pages that make up your community with customized ones. The Visualforce pages are automatically set to your site's URL so that portal users can navigate to them.

 **Note:** To make your site's page URLs short and easy to remember, you can use the Chatter Answers URL rewriter. The following pages use the URL rewriter:

- ChatterAnswersHelp
- ChatterAnswersLogin
- ChatterAnswersRegistration
- ChatterAnswersForgotPassword

Chatter Answers is also compatible with custom URL rewriters for sites.

1. From Setup, enter *Sites Settings* in the **Quick Find** box, then select **Sites Settings**.
2. Click **Edit** next to a site.
3. Choose the pages to replace. If you replace the *Change Password Page*, the *Change Password Page* for your site is automatically updated too.
4. Click **Save**.

 **Note:** Internet Explorer 8 users receive a security warning if you customize with URLs that don't include https://.

Configuring Cases for Chatter Answers

Configure case features for Chatter Answers so that cases are created, escalated, and accessed by the appropriate users of your Chatter Answers zones.

1. Set your organization-wide sharing defaults to `Private on Account`, `Controlled by Parent on Contact`, and `Private on Case` to prevent users from accessing each others' information.
2. Set field-level security on `Question` on cases to `Visible` for profiles assigned to your Customer Portal so that users can access their private questions.
3. Update `Origin` on cases with the value in the Question trigger so that support agents can see which cases originated from Chatter Answers.
4. Create a case assignment rule where `Case Origin` equals the value of Chatter Answers so that cases created from private questions are assigned to support agents.
5. [Grant high-volume portal users access to cases](#) so that they can access their private questions on Chatter Answers.

SEE ALSO:

[Setting Up Chatter Answers](#)

Setting Q&A Tab Visibility

Set the visibility of the Q&A tab to `Default On` so that support agents can view, search, filter, and moderate questions posted to your Chatter Answers zones.

1. From Setup, enter `Profiles` in the `Quick Find` box, then select **Profiles**.
2. Select a support agent profile.
3. Depending on which user interface you're using, do one of the following:
 - Enhanced profile user interface—In the **Find Settings...** box, enter the name of the tab you want and select it from the list, then click **Edit**.
 - Original profile user interface—Click **Edit**, then scroll to the Tab Settings section.
4. Specify the visibility of the Q&A tab to `Default On`.
5. (Original profile user interface only) To reset users' tab customizations to the tab visibility settings that you specify, select **Overwrite users' personal tab customizations**.
6. Click **Save**.

Assigning Data Categories to Chatter Answers

Assign a data category group to Chatter Answers so that it's available to all of your Chatter Answers zones. You configure each zone with a top-level data category (topic) in which customers and support agents can categorize and filter questions and knowledge articles.

1. From Setup, enter *Data Category Assignments* in the **Quick Find** box, then select **Data Category Assignments** under Chatter Answers.
2. Click **Edit**.
3. Select a category group.
4. Click **Save**.

 **Note:** Each zone in Chatter Answers can be associated with a top-level category. For a zone to be visible to a customer, the customer's user profile must have visibility to that zone's top-level data category. In addition, if a customer has visibility to child data categories but not to the top-level data category associated with a zone, the zone won't be visible to them.

SEE ALSO:

[What Are Data Categories?](#)

Configuring Salesforce Knowledge for Chatter Answers

To display Salesforce Knowledge articles in your Chatter Answers zones, you must:

1. [Implement Data Categories](#) (if you haven't done so already).
2. [Implement Salesforce Knowledge](#) (if you haven't done so already).
3. Configure both for Chatter Answers.

You configure each zone with a top-level data category (topic) in which customers and support agents can categorize and filter questions and knowledge articles.

1. If you use role-based data category visibility, [set the Default Data Category Visibility to All Categories](#) so that customers not included in your organization's role hierarchy, such as high-volume portal users, can access categories that include questions and Salesforce Knowledge articles.

Alternatively, use permission sets or profiles to [set data category visibility](#).

2. [Create one category group for all of your communities](#) so that you're less likely to reach the limit of three active data categories. Then add a child category for each community; and add child categories to those categories to provide topics.
3. [Activate the category group you want available to Chatter Answers](#) so that users can access it.
4. [Grant "Read" permissions to specific article types](#) on the profiles of Chatter Answers users so that they can access articles from your zones.

EDITIONS

Adding Chatter Answers to a Portal

You can add Chatter Answers to an existing Customer Portal or Partner Portal so that portal users can access Chatter Answers zones from one of your established channels. After users log in to one of your portals, they can access Chatter Answers from a tab and choose which zone to view from a drop-down list. If you only want to display Chatter Answers in your portals, then you don't need to set up a Force.com site to host Chatter Answers. However, a site lets guest users access some Chatter Answers data without a login, whereas portals do not.

The following occurs to Chatter Answers when it appears in a portal:

- Chatter Answers displays as a tab, which you can rename.
- A drop-down list lets portal users switch between all of your Chatter Answers zones.
- The **My Settings** link for users is replaced by **Enable Emails** and **Disable Emails**.
- **Sign In** and **Sign Up** are removed because portal users can only view Chatter Answers after they've logged in to your portal.
- Chatter Answers displays a look and feel, which you can't customize.
- The **Need help?** link is removed.
- If you display Chatter Answers with a Visualforce page on a portal, the option for users to switch zones in a portal isn't available.

SEE ALSO:

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

Add Chatter Answers to a Customer Portal

You can add Chatter Answers to an existing Customer Portal so that portal users can access Chatter Answers zones from one of your established support channels.

1. Enable Chatter Answers for portals:
 - a. From Setup, enter *Chatter Answers Settings* in the Quick Find box, then select **Chatter Answers Settings**.
 - b. Click **Edit**.
 - c. Select *Show Chatter Answers in Portals*.
 - d. Click **Save**.

2. Edit Customer Portal user profiles to support Chatter Answers.

Using the enhanced profile user interface, follow these steps:

 - a. From Setup, enter *Profiles* in the Quick Find box, then select **Profiles**.
 - b. Click **Edit** next to a portal user profile.
 - c. In the Apps section of the page, select **Object Settings**.
 - d. On the Object Settings page, select **Q&A**.
 - e. In Tab Settings, select *Default On*.
 - f. Click *Save* and navigate back to the Objects Settings page.
 - g. Select **Questions and Answers**, and in the Object Permissions section select *Read* and *Create*.
 - h. Click **Save**.

Using the original profile interface, follow these steps:

 - a. From Setup, enter *Profiles* in the Quick Find box, then select **Profiles**.
 - b. Click **Edit** next to a portal user profile.
 - c. In Tab Settings, select *Default On* for **Q&A**.
 - d. In Standard Object Permissions, select *Read* and *Create* on Questions.
 - e. Click **Save**.

3. Add the Chatter Answers User feature license to Customer Portal users:
 - a. From Setup, enter *Users* in the Quick Find box, then select **Users**.
 - b. Click **Edit** next to a portal user.
 - c. In the General Information area, select *Chatter Answers User*.
 - d. Click **Save**.

4. Add Chatter Answers as a tab to your Customer Portal:
 - a. From Setup, enter *Customer Portal Settings* in the Quick Find box, then select **Customer Portal Settings**.
 - b. Click the name of a Customer Portal.
 - c. Click **Customize Portal Tabs**.
 - d. Select Q&A and click the **Add** arrow to move it into the Selected Tabs box.
 - e. Click **Save**.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance,** and **Unlimited** Editions.

USER PERMISSIONS

To add Chatter Answers to a Customer Portal:

- “Customize Application”

5. Optionally, rename the Q&A tab for your Customer Portal:
 - a. From Setup, enter *Rename Tabs and Labels* in the `Quick Find` box, then select **Rename Tabs and Labels**.
 - b. Click **Edit** next to Questions.
 - c. Click **Next**.
 - d. In Other Labels, rename Q&A. You can only rename it as *Singular*, not *Plural*.
 - e. Click **Save**.

SEE ALSO:

[Adding Chatter Answers to a Portal](#)

Adding Chatter Answers to a Partner Portal

You can add Chatter Answers to an existing Partner Portal so that portal users can access Chatter Answers zones from one of your established partner channels.

1. Enable Chatter Answers for portals:
 - a. From Setup, enter *Chatter Answers Settings* in the `Quick Find` box, then select **Chatter Answers Settings**.
 - b. Click **Edit**.
 - c. Select `Show Chatter Answers in Portals`.
 - d. Click **Save**.
2. Edit Partner Portal user profiles to support Chatter Answers:
 - a. From Setup, enter *Profiles* in the `Quick Find` box, then select **Profiles**.
 - b. Click **Edit** next to a portal user profile.
 - c. In the Apps section of the page, select **Object Settings**.
 - d. On the Object Settings page, select **Q&A**.
 - e. In Tab Settings, select `Default On`.
 - f. Click `Save` and navigate back to the Objects Settings page.
 - g. Select **Questions and Answers**, and in the Object Permissions section select `Read and Create`.
 - h. Click **Save**.
3. Add the Chatter Answers User feature license to Partner Portal users:
 - a. From Setup, enter *Users* in the `Quick Find` box, then select **Users**.
 - b. Click **Edit** next to a portal user.
 - c. In the General Information area, select `Chatter Answers User`.
 - d. Click **Save**.
4. Add Chatter Answers as a tab to your Partner Portal:
 - a. From Setup, enter *Partners* in the `Quick Find` box, then select **Settings**.
 - b. Click the name of a Partner Portal.
 - c. Click **Customize Portal Tabs**.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

USER PERMISSIONS

To add Chatter Answers to a Partner Portal:

- “Customize Application”

- d. Select Chatter Answers and click the **Add** arrow to move the Chatter Answers tab into the Selected Tabs box.
 - e. Click **Save**.
5. Optionally, rename the Chatter Answers tab for your Partner Portal:
 - a. From Setup, enter *Rename Tabs and Labels* in the Quick Find box, then select **Rename Tabs and Labels**.
 - b. Click **Edit** next to Questions.
 - c. Click **Next**.
 - d. In Other Labels, rename Q&A. You can only rename it as *Singular*, not *Plural*.
 - e. Click **Save**.

[Adding Chatter Answers to a Portal](#)

Adding a Custom Visualforce Page to Display Chatter Answers

Use a Visualforce page to provide a custom Chatter Answers experience for your customers.

You must have a Visualforce page created that includes either the `chatteranswers:allfeeds` component or a combination of the following components: `chatteranswers:aboutme`, `chatteranswers:guestsignin`, `chatteranswers:feedfilter`, `chatteranswers:feeds`, `chatteranswers:searchask`, `chatteranswers:categoryfilter`.

To add a custom Visualforce page for displaying Chatter Answers:

1. From Setup, enter *Tabs* in the Quick Find box, then select **Tabs** to display a list of your organization's Visualforce tabs.
2. In the Visualforce section, click **New** to create a new Visualforce tab.
3. Select the Visualforce page you want to use and add details for the other fields on the page.
4. Click **Next**.
5. Select which user profiles can see the tab.
6. Select the custom apps from which the tab will be available.
7. Click **Save**.

To add the Visualforce tab as a Community tab, make sure the page is available in the community's tabs.

To add the Visualforce tab to a Customer Portal, make sure the Visualforce tab is configured to show in the portal.

You don't need to add the Visualforce tab to a Force.com site. Just make sure that you have created the Visualforce page with Chatter Answers components before you set up the site.

To add a Visualforce tab:

- "Customize Application"

Troubleshooting Chatter Answers Setup

After you set up a Chatter Answers community, you can view a snapshot of all of its configurations on one page so that you don't have to visit several pages in setup to diagnose issues.

1. From Setup, enter *Sites Settings* in the **Quick Find** box, then select **Sites Settings**.
2. In the Site Snapshot column, click **View** next to the Force.com site associated with your community.
3. Click  to show or  to hide various settings.
4. Click **Go!** to go to a specific page in setup where you can change settings.

Example: For example, you can use a site snapshot to see if the Force.com site hosting your community is marked **Active** or to verify the names of the user profiles assigned to your Customer Portal.

Chatter Answers Users Overview

Because Chatter Answers integrates several features with the Customer Portal, managing Chatter Answers users is similar to managing Customer Portal users. Use the following to manage the data and functions that are accessible to Chatter Answers users:

- Profiles, permissions, and access settings determine a user's permission to perform different functions, such as adding comments to a case.
- User licenses define which profiles and permission sets are available to a user, such as the High Volume Customer Portal (Service Cloud Portal User) or Customer Portal Manager Custom license.
- Feature licenses entitle a user to additional Salesforce features, such as Chatter Answers.
- Field-level security defines which fields users can access, such as fields on Salesforce Knowledge articles.
- **Sharing sets** let you selectively grant record access to defined groups of high-volume portal users.

Chatter Answers excludes some features typically available to Customer Portal users, such as:

- Ideas
- Groups
- Teams
- Reports
- Content
- Page layouts
- Custom objects
- Delegated external user administration
- Customer Portal role hierarchy (available, but not used)
- Customer Portal sharing rules, except for high-volume portal users

EDITIONS

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

USER PERMISSIONS

To view Setup:

- "View Setup and Configuration"

To set up Chatter Answers:

- "Customize Application"

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

Chatter Answers users can only access the following records from your zone:

- Cases
- Questions
- Replies (answers)
- Salesforce Knowledge articles

Chatter Answers is designed to support one user language for each zone that you create. When you [enable Chatter Answers](#), the Visualforce pages automatically added to your organization inherit your organization's default language. However, you can change the language attribute on each Visualforce page. Users who self-register for your zone inherit your organization's default language. Guest users view your zone in the language specified in the Visualforce pages, no matter the language chosen for their browsers.

 **Note:**

- Chatter Answers users can't change their language, timezone, or locale settings.
- Portal users must have the Chatter Answers User feature license to use Chatter Answers. This feature license is automatically assigned to high-volume portal users who self-register for Chatter Answers. You can manually assign the license to users who don't self-register by editing a user and clicking `Chatter Answers User`.
- Authenticated Website User profiles don't have access to Chatter Answers.

Internal users with permission to see Chatter Answers can see all zones in the Q&A tab in their organization. If internal users sign in to a community, they see only those zones associated with that community.

SEE ALSO:

[Setting Up Chatter Answers](#)

Encouraging Participation with Chatter Answers Reputation

Tap into the expertise and knowledge of your most active community members by rewarding their activity. By enabling reputations, you let users earn points and ratings that display in hover details over a user's photo in the feed. As your star posters engage more frequently, they improve the overall content in your community and provide better answers for users who are searching for help with an issue. This means that users who are searching for a solution can be confident that an answer from an expert can be trusted, which means fewer support calls for your organization.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

The screenshot shows a user interface for a customer support tool. On the left, there are navigation options: 'New here?' with a 'Sign Up' button, 'Have an account?' with a 'Sign In' button, 'Best Answers', 'Open Questions', and 'Topics' including 'Video Conferencing', 'General Questions', 'VX5', and 'Cirrus View'. The main content area features a search bar with the text 'What would you like to know?'. Below the search bar, a user profile for 'Antony Passemard' is highlighted with a red box. The profile shows a 'Newbie' status, '5 Total Posts', and '1 Best Answer'. Below the profile, a question is posted: 'I need 4 webcams in the same room (one per person). Is this possible?' dated July 11, 2012, with 1 like and 0 follows. An answer from 'Sarah Patel' is visible below, dated July 11, 2012, with 0 likes and 0 follows. A 'Show 3 answers' button is at the bottom of the answer section.

Users earn points when their posts receive votes or are selected as having resolved the question in any of the zones to which they belong. When they earn enough points, the hover details show their reputation as well as the number of posts and questions they've resolved in that zone. Reputation points are calculated separately for each zone, and for the cumulative activity within the entire organization. Users who participate in different zones will have different reputation values for each zone based on their activity in that zone. When users are logged into the internal application, their reputation score is based on their participation in all zones to which they belong. Chatter Answers comes with the following pre-defined reputation levels that apply to all zones:

Name	Points per Level	Color
Newbie	0 – 499	Green
Smartie	500 – 1999	Blue
Pro	2000 – 4999	Purple
All Star	5000+	Orange

To add or edit reputation level names or points per level in any of your zones, use the `ChatterAnswersReputationLevel` object in the API. You can create up to 25 different reputation levels for each zone. Colors for the different reputation levels can be changed at the stylesheet (CSS) level.

Chatter Answers Implementation Tips

Consider the following information when planning and implementing Chatter Answers.

- We recommend that advanced Salesforce administrators and developers set up and maintain Chatter Answers, as it involves several Salesforce features.
- Before administrators can set up Chatter Answers, their organizations must have implemented [Data Categories](#). If you want Salesforce Knowledge articles to display in your zones, then administrators need to implement [Salesforce Knowledge](#).
- You can customize fields, page layouts, buttons and links, Apex triggers, and validation rules for questions and replies for Chatter Answers from Setup by entering “Chatter Answers” in the `Quick Find` box, then selecting **Chatter Answers** and choosing the appropriate setting.
- After you enable Chatter Answers, several items are automatically added to your organization for use with setting up zones:
 - A Q&A tab where internal users and administrators can view and use Chatter Answers. Administrators can rename this tab.
 - Standard permission settings for Questions on user profiles so that you can grant users permissions to questions and replies.
 - Visualforce pages that you can add to a Force.com site, a tab in a Community, or a Customer Portal so that users can register, sign in, and view feed items on a zone.
 - An Apex class named `ChatterAnswersRegistration` with a method for customizing Account creation for portal users.
 - An Apex trigger for questions named `chatter_answers_question_escalation_to_case_trigger` so that questions with specified attributes are automatically escalated to cases.
 - A workflow field update named `chatter_answers_num_subscriptions_above_` so that when a question is escalated to a case, `Priority` on questions is updated.
 - Two workflow rules, `chatter_answers_no_best_reply_within_time_limit_wf` and `chatter_answers_num_subscriptions_above_limit_wf`, which you can customize and activate so that questions without best replies or questions with a specified number of followers are automatically escalated to cases.
- You can add Chatter Answers to an existing Customer Portal or Partner Portal so that portal users can access Chatter Answers zones from one of your established channels.
- Chatter Answers is designed to support one user language for each zone that you create. When you [enable Chatter Answers](#), the Visualforce pages automatically added to your organization inherit your organization’s default language. However, you can change the language attribute on each Visualforce page. Users who self-register for your zone inherit your organization’s default language. Guest users view your zone in the language specified in the Visualforce pages, no matter the language chosen for their browsers.
- You can rename `Customer Support` on your zones’ user interface. For example, you can change “Customer Support” to “Acme Support.” Just edit the Customer Support label on the Question object.
- Questions escalated to cases display a Chatter-like feed on case detail pages. The case detail page also includes a Customer View section that lets support agents reply publicly or privately to the thread posted to the zone.
- Case comments marked `Public` display as private messages from customer support in Chatter Answers. They don’t display to the entire community. For example, if a support agent adds a public case comment, it displays only to the case’s contact private messages in Chatter Answers. Support agents can read all private and public case comments. .
- Chatter Answers sends email to users when they:
 - Sign up for an account.
 - Follow a question (answers or comments).
 - Receive an answer or comment to their question.
 - Receive a private reply to their question from customer support.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

- Internet Explorer 8 users receive a security warning if you customize with URLs that don't include https://.
- Before you make a zone public, add at least 20 frequently asked questions, answers, or articles. This content will generate conversations.
- Create Salesforce Knowledge articles that contain:
 - Your support organization's phone number so that customers can contact your support agents directly.
 - Terms and conditions for zone members, such as when support agents might delete customers' questions and comments.
- Chatter Answers uses the following API objects:
 - Case
 - ChatterAnswersActivity
 - ChatterAnswersReputationLevel
 - Community (Zone)
 - Question
 - QuestionReportAbuse
 - QuestionSubscription
 - Reply
 - ReplyReportAbuse

Escalating a Question to a Case in Chatter Answers

If a question in Chatter Answers isn't resolved or its replies aren't satisfactory, administrators and trusted community members such as moderators can escalate the question to a case.

After a case is created, the question detail page provides a link to the case for the life of the question. This link also shows the status of the case.

To escalate a question to a case:

1. Click the question title.
2. Click the triangle next to the question to display the drop-down menu, and click **Escalate to Case**.
 -  **Note:** This option only appears if the user has permission to create cases. Users created from contacts cannot escalate questions to cases.
3. Update the case fields if you want to change any default values. The question title automatically becomes the case subject.
4. Click **Save**. You are returned to the question detail page, and the case is now available for the Case Owner to resolve.
 -  **Note:** Closing the case does not mark the question as resolved, and resolving the question does not close the case. The case and the question must be updated separately.

Chatter Answers Best Practices

Consider the following tips when planning and using Chatter Answers.

- We recommend that you tell support agents that:
 - The `Case Origin` field lists Chatter Answers on any case converted from a question.
 - If they answer a question privately, they can't convert it to a public answer.
- We recommend that you assign a support agent to review public questions from the Q&A tab. Agents can't click **Flag** next to questions or replies that are spam, hateful, or inappropriate, but they can edit and delete questions or replies from a zones via the Q&A tab if they have the "Delete" permission on questions.
- To moderate many questions quickly, we recommend that support agents review questions from pinned lists on the Salesforce console (this requires adding the Q&A tab to the console's Navigation tab).
- To see a list of cases converted from questions, we recommend that administrators or support agents create a case view where `Case Origin` equals Chatter Answers.
- Because photos added to profiles display externally on Chatter Answers, we recommend that support agents choose photos that match their company's policies and branding.

Creating Phone Channels

Salesforce Open CTI Overview

Salesforce CRM Call Center seamlessly integrates Salesforce with third-party computer-telephony integration (CTI) systems. Before the introduction of Open CTI, Salesforce users could only use the features of a CTI system after they installed a CTI adapter program on their machines. Yet such programs often included desktop software that required maintenance and didn't offer the benefits of cloud architecture. Open CTI lets developers:

- Build CTI systems that integrate with Salesforce without the use of CTI adapters.
- Create customizable SoftPhones (call-control tools) that function as fully integrated parts of Salesforce and the Salesforce console.
- Provide users with CTI systems that are browser and platform agnostic, for example, CTI for Microsoft® Internet Explorer®, Mozilla® Firefox®, Apple® Safari®, or Google Chrome™ on Mac, Linux, or Windows machines.

Developers use Open CTI in JavaScript to embed API calls and processes; Open CTI is only available for use with JavaScript pages. To use Open CTI, developers should have a basic familiarity with:

- CTI
- JavaScript
- Visualforce
- Web services
- Software development
- The Salesforce console

[Salesforce Open CTI Overview](#)

Salesforce CTI Toolkit Overview

Developers use a CTI (computer-telephony integration) toolkit provided by Salesforce to build CTI adapters that integrate Salesforce with third-party CTI systems. The CTI Toolkit helps developers build CTI adapters that Salesforce CRM Call Center users install on their machines so they can use the features of a CTI system through the [Salesforce SoftPhone](#).

There are three versions of the CTI Toolkit. Each version provides users with different Salesforce CRM Call Center functionality. However, Salesforce only distributes CTI Toolkit version 4.0 or higher. The following table lists the functionality available in CTI adapters built with each CTI Toolkit:

Functionality	Version 1.0 or Higher	Version 2.0 or Higher	Version 3.0 or Higher	Version 4.0 or Higher

[Call Center Overview](#)

[Designing a Custom SoftPhone Layout](#)

Call Center Overview

Salesforce CRM Call Center seamlessly integrates Salesforce with third-party computer-telephony integration (CTI) systems. After a lightweight CTI adapter program has been installed on a Salesforce user's machine, the user can use the features of a CTI system through the [Salesforce SoftPhone](#), a customizable call-control tool that appears in the footer of the Salesforce console or in sidebar of every Salesforce page.

The SoftPhone allows Salesforce users to:

- Make calls by dialing a number in the SoftPhone, choosing a number in an online directory, or clicking a phone number in any contact, lead, activity, or account
- Receive calls
- Quickly view all Salesforce records that are related to the call, such as contacts, cases, or accounts
- Transfer calls
- Initiate conference calls
- Put callers on hold
- Attach records to calls
- Generate automatic call logs

Administrators can configure Salesforce CRM Call Center by:

- Modifying SoftPhone layouts and assigning them to selected user profiles
- Adding phone numbers to call center directories

Developers can use Salesforce CRM Call Center code libraries to:

- Customize the functionality of existing CTI adapters
- Build new CTI adapters for phone systems that are not yet supported

For information on:

- Working with Salesforce CRM Call Center as a call center user, see [Using the SoftPhone](#) on page 2109 and [Use a SoftPhone with a Salesforce Console](#) on page 3659
- Deploying and customizing Salesforce CRM Call Center as an administrator, see [Setting Up Salesforce CRM Call Center](#) on page 2430
- Customizing and building CTI adapters as a developer, see the [CTI Toolkit Developer's Guide](#)
- Building cloud-based CTI systems as a developer, see [Salesforce Open CTI Overview](#) on page 2426

[Developer guide: CTI Toolkit Developer's Guide](#)

Setting Up Salesforce CRM Call Center

Before Salesforce users can access [Salesforce CRM Call Center features](#), an administrator must perform the following tasks:

1. [Install a computer-telephony integration \(CTI\) adapter](#) on every call center user machine. Salesforce CRM Call Center features are not available on machines that do not have an adapter installed.
2. [Define a new call center record](#) for every CTI system in use at your organization.
3. [Assign Salesforce users to the appropriate call center](#). A Salesforce CRM Call Center user must be associated with a call center to view the SoftPhone user interface.
4. Optionally:
 - [Configure call center phone directories](#) with additional directory numbers and updated phone number search layouts.
 - [Customize SoftPhone layouts](#) for different user profiles, so that the SoftPhone of a salesperson might show related leads, accounts, and opportunities, while the SoftPhone of a support rep might show related cases and solutions.
 - If you're using CTI adapters built with version 4.0 of the CTI Toolkit, [enable HTTPS for your call center](#).

USER PERMISSIONS

To manage call centers, call center users, call center directories, and SoftPhone layouts:

- "Manage Call Centers"

Deploying Adapters to Call Center Machines

Except for call centers built with Open CTI, any machine that uses Salesforce CRM Call Center must have a *CTI adapter* installed. A CTI adapter is a light-weight software program that controls the appearance and behavior of a Salesforce SoftPhone. The [CTI Developer's Toolkit](#) version determines a SoftPhone's functionality.

Because a CTI adapter communicates directly with an individual CTI system, an organization must use a different CTI adapter for each type of CTI system that is in use. For example, if an organization wants to integrate one call center that runs Cisco IPCC Enterprise™ and one call center that runs Cisco IPCC Express™, the organization must have two CTI adapters available. A call center user's machine only requires the SoftPhone CTI adapter for the call center to which it connects.

To download a SoftPhone CTI adapter, visit [AppExchange](#). Adapter installation packages include both the adapter setup files and a [call center definition file](#) that can be used in conjunction with the adapter.

To install a CTI adapter on a single machine, run the CTI adapter's `Setup.exe` application as a Windows administrator user.

To deploy a CTI adapter to all the machines in a call center at once, use the `.msi` file that is packaged with the installer and your preferred Software Management System.

Once a CTI adapter is installed, you can perform the following operations:

- Start the CTI adapter application by clicking **Start > Programs > salesforce.com > <Your CTI System Name> Adapter**. You can verify that the CTI adapter is running by looking for the  icon in the system tray of the computer.
- Stop the CTI adapter application by right-clicking the CTI adapter system tray icon () and choosing **Exit**.
- Modify CTI adapter log settings by right-clicking the CTI adapter system tray icon () and choosing **Logging...**. In the CTI Log Settings dialog:
 - Select the types of messages that you want to log. Keep log levels at **Low - Errors** unless you are troubleshooting an issue with your adapter.
 - Specify the location for the two log files that the CTI adapter generates. For more information on these files, see the [CTI Toolkit Developer's Guide](#).

Call Center Definition Files

A call center definition file specifies a set of fields and values that are used to define a call center in Salesforce for a particular [CTI adapter](#). Salesforce uses call center definition files in order to support the integration of Salesforce CRM Call Center with multiple CTI system vendors.

By default, any CTI adapter installation package includes a default call center definition file that works specifically with that adapter. This XML file is located in the adapter installation directory and is named after the CTI system that it supports. For example, the Cisco IPCC Enterprise™ adapter's default call center definition file is named `CiscoIPCCEnterprise7x.xml`.

The first instance of a call center for a particular CTI adapter must be defined by [importing the adapter's call center definition file](#) into Salesforce. Subsequent call centers can be created by [cloning the original call center](#) that was created with the import.

If your organization modifies an adapter or builds a new one, you must customize the adapter's call center definition file so that it includes any additional call center information that is required. For example, if you are building a CTI adapter for a system that supports a backup server, your call center definition file should include fields for the backup server's IP address and port number. CTI adapters for systems that do not make use of a backup server do not need those fields in their associated call center definition files.

 **Note:** Once a call center definition file has been imported into Salesforce, the set of fields that were specified in the file cannot be modified. The values assigned to those fields, however, can be changed within Salesforce.

See the following topics for information about creating and importing a call center definition file:

- To create a call center definition file for a custom CTI adapter, see [Creating a Call Center Definition File](#) on page 2432.
- To view a sample call center definition file, see [Sample Call Center Definition File](#) on page 2433.
- To import a call center definition file into Salesforce, see [Importing a Call Center Definition File](#) on page 2434.

Importing a Call Center Definition File

To create your first call center for a [CTI adapter](#) that was just installed, you can import the adapter's default [call center definition file](#) into Salesforce:

1. From Setup, enter *Call Centers* in the **Quick Find** box, then select **Call Centers**.
2. Click **Import**.
3. Next to the **Call Center Definition File** field, click **Browse** to navigate to the default call center definition file in your CTI adapter installation directory. This XML file is named after the type of CTI system that the adapter supports. For example, the Cisco™ IPCC Enterprise adapter's default call center definition file is named `CiscoIPCCEnterprise7x.xml`. Click **Open** to enter the path in the **Call Center Definition File** field.
4. Click **Import** to import the file and return to the All Call Centers page. The new call center record is listed with the other call centers in your organization.

 **Note:** If you receive the error **A call center with this internal name already exists**, a call center definition file for this CTI adapter has already been imported into Salesforce. To create additional call center records for this CTI adapter, [clone the adapter's existing call center](#), or [modify the call center definition file](#) to include a different value for `reqInternalName`.

5. Click **Edit** next to the name of the new call center to modify the call center's settings.

To create additional call centers for a particular CTI adapter, see [Cloning a Call Center](#) on page 2439.

Call Center Definition XML Format

A [call center definition file](#) consists of three XML elements: `callCenter`, `section`, and `item`. The following list provides details about the properties and attributes of each element:

`callCenter`

This element represents a definition for a single call center phone system. At least one `<callCenter>` element must be included in every call center definition file. A `<callCenter>` element consists of one or more `<section>` elements.

`section`

This element represents a grouping of related data fields, such as server information or dialing prefixes. When a call center is edited in Salesforce, fields are organized by the section to which they are assigned. A `<section>` element belongs to a single `<callCenter>` element, and consists of one or more `<item>` elements.

Attributes:

Name	Type	Required?	Description
<code>sortOrder</code>	Positive Integer	Required	<p>The order in which the section should appear when the call center is edited in Salesforce. For example, a section with <code>sortOrder="1"</code> comes just before a section with <code>sortOrder="2"</code>.</p> <p>The values for <code>sortOrder</code> must be non-negative integers, and no numbers can be skipped within a single call center definition. For example, if there are three section elements in a call center definition file, one <code><section></code> element must have <code>sortOrder="0"</code>, one <code><section></code> element must have <code>sortOrder="1"</code>, and one <code><section></code> element must have <code>sortOrder="2"</code>.</p>
<code>name</code>	String	Required	<p>The internal name of the section as defined in the Salesforce database. You can use this value to refer to the section when writing custom adapter or SoftPhone code.</p> <p>Names must be composed of only alphanumeric characters with no white space or other punctuation. They are limited to 40 characters each.</p> <p>Names beginning with <code>req</code> are reserved for required Salesforce sections only (see Required Call Center Elements and Attributes on page 2437). Other reserved words that cannot be used for the <code>name</code></p>

EDITIONS

Name	Type	Required?	Description
			attribute include <code>label</code> , <code>sortOrder</code> , <code>internalNameLabel</code> , and <code>displayNameLabel</code> .
<code>label</code>	String	Optional	The name of the section when viewed in Salesforce. Labels can be composed of any string of UTF-8 characters. They are limited to 1000 characters each.

item

This element represents a single field in a call center definition, such as the IP address of a primary server or the dialing prefix for international calls. When call centers are edited in Salesforce, each `<item>` element is listed under the section to which it belongs. You can have multiple `<item>` elements in a `<section>` element.

Attributes:

Name	Type	Required?	Description
<code>sortOrder</code>	Positive Integer	Required	<p>The order in which the item should appear when the call center is edited in Salesforce. For example, an item with <code>sortOrder="1"</code> comes just before an item with <code>sortOrder="2"</code>.</p> <p>The values for <code>sortOrder</code> must be non-negative integers, and no numbers can be skipped within a single call center definition. For example, if there are three item elements in a call center definition file, one <code><item></code> element must have <code>sortOrder="0"</code>, one <code><item></code> element must have <code>sortOrder="1"</code>, and one <code><item></code> element must have <code>sortOrder="2"</code>.</p>
<code>name</code>	String	Required	<p>The internal name of the item as defined in the Salesforce database. You can use this value to refer to the item when writing custom adapter or SoftPhone code.</p> <p>Names must be composed of only alphanumeric characters with no white space or other punctuation. They are limited to 40 characters each.</p> <p>Names beginning with <code>req</code> are reserved for required Salesforce sections only (see Required Call Center Elements and Attributes on page 2437). Other reserved words that cannot be used for the <code>name</code> attribute include <code>label</code>, <code>sortOrder</code>, <code>internalNameLabel</code>, and <code>displayNameLabel</code>.</p>

Name	Type	Required?	Description
label	String	Optional	The name of the item when viewed in Salesforce. Labels can be composed of any string of UTF-8 characters. They are limited to 1,000 characters each.

[Call Center Definition XML Format](#)

[Creating a Call Center Definition File](#)

[Required Call Center Elements and Attributes](#)

[Specifying Values for <item> Elements](#)

[Sample Call Center Definition File](#)

Required Call Center Elements and Attributes

There must be one `<section>` that includes `<item>` elements with the following names in every [call center definition file](#):

<code><item></code> Name	Description
reqInternalName	Represents the unique identifier for the call center in the database. It must have a <code>sortOrder</code> value of 0, and its value must be specified in the call center definition (see Specifying Values for <item> Elements on page 2438). A value for <code>reqInternalName</code> must be composed of no more than 40 alphanumeric characters with no white space or other punctuation. It must start with an alphabetic character and must be unique from the <code>reqInternalName</code> of all other call centers defined in your organization.
reqDisplayName	Represents the name of the call center as displayed in Salesforce. It must have a <code>sortOrder</code> value of 1. A value for <code>reqDisplayName</code> has a maximum length of 1,000 UTF-8 characters.
reqDescription	Represents a description of the call center. A value for <code>reqDescription</code> has a maximum length of 1,000 UTF-8 characters.
reqProgId	Represents the Program ID (<code>progId</code>) of the CTI adapter that should be used for this call center. This value is specified in the default call center definition file that comes bundled with every CTI adapter installer, or in the base COM class of a custom CTI adapter.
reqVersion	Represents the version of the CTI Toolkit with which the adapter was built. This element is available for call centers built with CTI Toolkit versions 3.0 or higher.

EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

<item> Name	Description
reqAdapterUrl	Represents the location of where the CTI adapter is hosted. For example, <code>http://localhost:11000</code> . This element is available for call centers built with CTI Toolkit versions 4.0 or higher.

You can add additional <item> elements to this section if needed.

SEE ALSO:

- [Creating a Call Center](#)
- [Creating a Call Center Definition File](#)
- [Call Center Definition XML Format](#)
- [Required Call Center Elements and Attributes](#)
- [Specifying Values for <item> Elements](#)
- [Sample Call Center Definition File](#)

Specifying Values for <item> Elements

With the exception of the `reqInternalName` <item>, whose value must always be specified in a [call center definition file](#), you can specify <item> values either in the call center definition file or in Salesforce once the definition file has been imported.

To specify a value for an <item> element in a call center definition file, place the value between the opening and closing tags of the <item>. For example:

```
<item sortOrder="0" name="reqInternalName" label="Call Center Internal Label">MyCallCenter</item>
```

sets the value of the `reqInternalName` <item> to `MyCallCenter`. Note that any <item> value other than the value for `reqInternalName` can be edited in Salesforce after the call center definition is imported.

Creating a Call Center

A call center in [Salesforce CRM Call Center](#) corresponds to a single computer-telephony integration (CTI) system already in place at your organization. Salesforce users must be assigned to a call center record before they can use any Salesforce CRM Call Center features.

There are two ways to create a call center record in Salesforce:

- [Import a call center definition file into Salesforce](#). Use this method to create your first call center for a CTI adapter that was just installed.
- [Clone an existing call center definition](#). Use this method to create additional call centers for a particular CTI adapter. For example, if you already have a call center record for a Cisco IPCC Enterprise™ call center based in one location, you can clone that record for a Cisco IPCC Enterprise call center based in another location.

To view a list of call centers that have already been created, from Setup, enter *Call Centers* in the **Quick Find** box, then select **Call Centers**.

SEE ALSO:

[Setting Up Salesforce CRM Call Center](#)

[Call Center Definition Files](#)

[Managing Call Centers](#)

[Displaying and Editing a Call Center](#)

[Managing Call Center Users](#)

[Administrator tip sheet: Getting Started with Setting Up Call Centers](#)

Cloning a Call Center

To create more than one call center for a particular CTI adapter, you can clone an existing one. For example, if you already have a call center record for a Cisco IPCC Enterprise™ call center based in one location, you can clone that record for a Cisco IPCC Enterprise call center based in another location.

To clone a call center:

1. From Setup, enter *Call Centers* in the **Quick Find** box, then select **Call Centers**.
2. Click the name of the call center that you want to clone.
3. Click **Clone**. This action opens a new call center for editing with the same fields and values as the original call center. Only the **Internal Name** field is left intentionally blank to allow you to provide a new name. The **Internal Name** field is limited to 40 alphanumeric characters and must start with an alphabetic character. **Internal Name** must be unique for every call center defined in your organization. For more information, see [Call Center Fields](#) on page 2441.
4. Make any additional changes to the new call center as necessary.
5. Click **Save** to save the new call center, or click **Cancel** to return to the All Call Centers page without saving the cloned call center.

Displaying and Editing a Call Center

A call center in [Salesforce CRM Call Center](#) corresponds to a single computer-telephony integration (CTI) system already in place at your organization. Salesforce users must be assigned to a call center record before they can use any Salesforce CRM Call Center features.

To view call center details:

1. From Setup, enter *Call Centers* in the **Quick Find** box, then select **Call Centers**.
2. Click the name of the call center that you want to view.

From the Call Center Detail page you can:

- Click **Edit** to modify the properties of the call center.
- Click **Delete** to erase the call center record from Salesforce. When you delete a call center, all associated [directory numbers](#) are also deleted. Any users associated with the call center must be reassigned to another call center to continue using Salesforce CRM Call Center features .
- Click **Clone** to [create a duplicate copy of the call center](#) with the same fields and values as the current call center.
- Click **Manage Call Center Users** to [designate Salesforce users as members of this call center](#).

 **Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the [CTI Toolkit](#) with which your SoftPhone was built. See your administrator for details.

Call Center Fields

All call centers include the following required fields, though additional fields may be available depending on the content of the [call center definition file](#) that was used to create the call center:

Field	Description
Internal Name	Represents the unique identifier for the call center in the database. <code>Internal Name</code> must be composed of no more than 40 alphanumeric characters with no white space or other punctuation. It must start with an alphabetic character and must be unique from the <code>Internal Name</code> of all other call centers defined in your organization. Once a value for <code>Internal Name</code> has been saved for a call center, it cannot be changed.
Display Name	Represents the name of the call center as displayed in Salesforce. It must have a <code>sortOrder</code> value of 1. <code>Display Name</code> has a maximum length of 1,000 UTF-8 characters.
Description	Represents a description of the call center. <code>Description</code> has a maximum length of 1,000 UTF-8 characters.
CTI Connector ProgId	Represents the Program ID (progId) of the CTI adapter that should be used for this call center. This value is specified in the default call center

Adding a Number to a Call Center Directory

To customize call center directories by adding additional directory numbers, either to a single call center or to all defined call centers in your organization:

- From Setup, enter *Directory Numbers* in the **Quick Find** box, then select **Directory Numbers**. From this page, you can:
 - Click **Edit** to edit an existing additional directory number.
 - Click **Del** to delete an existing additional directory number.
 - Click the name of an existing additional directory number to view its details in the Additional Directory Number Detail page. From this page you can click **Edit** to edit the number, click **Delete** to delete it, or click **Clone** to quickly create a new additional directory number with the same information as the existing number.
- Click **New** to define a new additional directory number.
- In the **Name** field, enter a label that identifies the additional directory number.
- In the **Phone** field, enter the phone number, including any international country codes. Dialing prefixes, such as 9 or 1, do not need to be included.
- In the **Call Center** field, select the call center directory to which you want to add the new directory number. To add the number to every call center directory in your organization, choose -- Global --.
- In the **Description** field, optionally enter text that provides further information about the additional directory number.
- Click **Save** to save the number and return to the All Additional Directory Numbers page. Alternatively, click **Save & New** to save the number and create another.

 **Tip:** If you have a large number of directory numbers to define, use the Data Loader to create them in one step.

Customizing SoftPhone Layouts

A SoftPhone is a customizable call-control tool that appears to users assigned to a call center with machines on which CTI adapters have been installed. Similar to page layouts, you can design custom SoftPhone layouts and assign them to Salesforce CRM Call Center users based on their user profile. See:

- [Designing a Custom SoftPhone Layout](#)
- [Assigning a SoftPhone Layout to a User Profile](#)

SEE ALSO:

[Setting Up Salesforce CRM Call Center](#)

[Managing Call Centers](#)

[Administrator tip sheet: Getting Started with Setting Up Call Centers](#)

Designing a Custom SoftPhone Layout

In a [SoftPhone layout](#) you can control the call-related fields that are displayed and the Salesforce objects that are searched for an incoming call. To design a custom SoftPhone layout:

1. From Setup, enter *SoftPhone Layouts* in the **Quick Find** box, then select **SoftPhone Layouts**.
2. Click **New** to create a new SoftPhone layout definition, or click **Edit** next to the name of an existing layout definition to view or modify it.
3. In the **Name** field, enter a label that uniquely identifies your SoftPhone layout definition.
4. In the **Select Call Type** picklist, choose the type of call for which the currently displayed SoftPhone layout should be used. Every SoftPhone layout definition allows you to specify different layouts for inbound, outbound, and internal calls. These three layouts are grouped together in a single SoftPhone layout definition.
5. In the **Display these call-related fields** section, click **Edit** to add, remove, or change the order of fields in the currently-displayed SoftPhone layout:
 - To add a field to the SoftPhone layout, select it in the Available list and click **Add**.
 - To remove a field from the SoftPhone layout, select it in the Selections list and click **Remove**.
 - To change the order of a field in the SoftPhone layout, select it in the Selections list and click **Up** or **Down**.

Any changes that you make are automatically updated in the SoftPhone layout preview image on the right side of the page. To hide the Available and Selections lists, click **Collapse**.

Phone-related fields only appear in a user's SoftPhone if a valid value for that field is available. For example, if you add a Caller ID field to the layout of an outbound call, Caller ID will not appear.

6. In the **Display these Salesforce Objects** section, click **Add/Remove Objects** to add, remove, or change the order of links to call-related objects.

USER PERMISSIONS

To view, create, edit, or delete a SoftPhone layout:

- "Manage Call Centers"

7. Below the list of selected objects, click **Edit** next to each `If single <Object> found, display row` to specify the fields that should be displayed in the SoftPhone layout if a single record for that object is the only record found. You can add, remove, or change the order of fields.
8. In the `Screen Pop Settings` section (for inbound call types), click **Edit** next to each type of record-matching row to specify which screens should display when the details of an inbound call match or don't match existing record(s) in Salesforce. The following table describes each record-matching row and its screen pop options:

Record-Matching Row	Description	Screen Pop Options
Screen pops open within	Use to set where screen pops display.	<p>Existing browser window Select to display in open browser windows.</p> <p>New browser window or tab Select to display in new browser windows or tabs.</p> <p>Users' browsers may handle these settings differently:</p> <ul style="list-style-type: none"> • Internet Explorer 6.0 always displays screen pops in new windows. • Internet Explorer 7.0 displays screen pops based on what users select in its tabs settings. • Firefox 3.5 displays screen pops based on what users select in its tabs settings.
No matching records	Use to set the screen pop options for when the details of an inbound call don't match any existing Salesforce records.	<p>Don't pop any screen Select if you don't want any screen to display.</p> <p>Pop to new Select to display a new record page you specify from the drop-down list.</p> <p>Pop to Visualforce page Select to display a specific Visualforce page.</p> <p>The CTI adapter passes data from the call to the Visualforce page via a URL. This includes at least <code>ANI</code> (the caller ID) and <code>DNIS</code> (the number that the caller dialed). The URL can pass additional data to the Visualforce page if necessary.</p>
Single-matching record	Use to set the screen pop options for when the details of an inbound call match one existing Salesforce record.	<p>Don't pop any screen Select if you don't want any screen to display.</p>

Record-Matching Row	Description	Screen Pop Options
		<p>Pop detail page Select to display the matching record's detail page.</p> <p>Pop to Visualforce page Select to display a specific Visualforce page.</p> <p>The CTI adapter passes data from the call to the Visualforce page via a URL. This includes at least <code>ANI</code> (the caller ID) and <code>DNIS</code> (the number that the caller dialed). The URL can pass additional data to the Visualforce page if necessary.</p>
Multiple-matching records	Use to set the screen pop options for when the details of an inbound call match more than one existing Salesforce record.	<p>Don't pop any screen Select if you don't want any screen to display.</p> <p>Pop to search page Select to display a search page.</p> <p>Pop to Visualforce page Select to display a specific Visualforce page.</p> <p>The CTI adapter passes data from the call to the Visualforce page via a URL. This includes at least <code>ANI</code> (the caller ID) and <code>DNIS</code> (the number that the caller dialed). The URL can pass additional data to the Visualforce page if necessary.</p>

To hide expanded record-matching rows, click **Collapse**.

This section only displays if your CTI adapter was built using the [CTI Developer's Toolkit 2.0 or higher](#).

9. Configure SoftPhone layouts for any remaining call types in the `Select Call Type` picklist.
10. Click **Save**.

 **Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the [CTI Toolkit](#) with which your SoftPhone was built. See your administrator for details.

Assigning a SoftPhone Layout to a User Profile

Once you have [defined one or more custom SoftPhone layouts](#), you can assign them to user profiles:

1. From Setup, enter *SoftPhone Layouts* in the **Quick Find** box, then select **SoftPhone Layouts**.
2. Click **Layout Assignment**.
3. For each user profile that appears in the page, select the SoftPhone layout that the profile should use. Profiles are only listed in this page if they include users that are currently assigned to a call center, or if they have already been assigned a custom SoftPhone layout.
4. Click **Save**.

 **Note:** Call center users will see their newly assigned SoftPhone layout the next time they log into Salesforce.

Enabling HTTPS in a Call Center

With CTI adapters built with version 4.0 of the CTI Toolkit, you can specify a secure URL, or one that uses the secure hypertext transfer protocol (HTTPS), for your call center. Using HTTPS provides added security for your call center, and also helps prevent the Mixed Content warnings that can appear in your browser if your Salesforce organization uses the HTTPS protocol but your call center does not.

To enable HTTPS:

1. From Setup, enter *Call Centers* in the **Quick Find** box, then select **Call Centers**.
2. Click the name of a call center.
3. Click **Edit**.
4. Type the secure URL for your adapter in **CTI Adapter URL**. For example, `https://localhost:11000`.
5. Click **Save**.

 **Important:** In addition to specifying a secure URL on the Call Center Settings page, you also need to make changes to the CTI adapter's configuration file, and create and install a new certificate for the CTI adapter. For more information, see the [CTI Toolkit Developer's Guide](#).

 **Note:** Previous versions of CTI are secure but use Windows® technologies that are different than those in CTI 4.0.

Managing Call Center Users

A Salesforce user cannot view Salesforce CRM Call Center features unless an administrator has assigned the user to a call center. See the following for instructions:

- [Adding a User to a Call Center](#)
- [Removing a User from a Call Center](#)

Every call center user has access to a set of [personal SoftPhone settings](#) that specify:

- Whether the user should be automatically logged into his or her SoftPhone when he or she logs into Salesforce
- How a record should be displayed when it is the only one that matches an incoming call

To change the default personal SoftPhone settings for all new call center users, use the Force.com API.

Adding a User to a Call Center

To add a user to a call center in [Salesforce CRM Call Center](#):

1. From Setup, enter *Call Centers* in the **Quick Find** box, then select **Call Centers**.
2. Click the name of the call center to which you want to assign the Salesforce user.
3. In the Call Center Users related list, click **Manage Call Center Users**.
4. Click **Add More Users**.
5. Specify search criteria to find the Salesforce users who should be assigned to the call center.
6. Click **Find** to display the list of Salesforce users that meet your search criteria. All users who already belong to a call center are excluded from search results because a user can only be assigned to one call center at a time.
7. Select the checkbox next to each user who should be assigned to the call center and click **Add to Call Center**.

Alternatively, you can change a particular user's call center in the User Edit page:

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Click **Edit** next to the name of the user.
3. Modify the *Call Center* field as appropriate. You can change the user's call center by clicking the lookup icon (🔍) and choosing a new call center, or you can remove the user from his or her current call center by deleting the call center name from the field.

Creating Web-Chat Channels

Live Chat for Administrators

Welcome to Live Agent for administrators! Live Agent is a comprehensive chat solution that makes it easy for your organization's agents and support supervisors to assist customers. With Live Agent, your support organization can leverage the comprehensive customer service tools that are available in the Salesforce console while providing real-time chat support.

As an administrator, you can set up and customize Live Agent for your users, including agents and support supervisors. Live Agent is easy to set up and highly customizable, so you can enable a suite of features that your agents and supervisors can leverage when they assist customers.

A few major steps are involved in enabling, setting up, and deploying Live Agent in your organization. Let's get started.

IN THIS SECTION:

[Create a Basic Live Agent Implementation](#)

Before you customize Live Agent, you need to create the basic Live Agent implementation for your organization. After you complete the basic setup steps, you'll have a functioning Live Agent implementation that your agents can use to chat with customers.

[Customize Your Live Agent Implementation](#)

After you set up your basic Live Agent implementation, customize it with solutions that are appropriate for your agents, supervisors, and customers. Live Agent offers several options for customizing your implementation declaratively, which means that no coding is required.

[Set Up Live Agent in the Salesforce Console](#)

After you set up and customize your basic Live Agent implementation, add it to the Salesforce console so that your agents and supervisors can start using chat to assist customers. Additionally, you can set up some other features in the Salesforce console to create an even more robust chat experience for your agents and your customers.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To set up Live Agent:

- "Customize Application"

To create user profiles or permission sets:

- "Manage Profiles and Permission Sets"

Create a Basic Live Agent Implementation

Before you customize Live Agent, you need to create the basic Live Agent implementation for your organization. After you complete the basic setup steps, you'll have a functioning Live Agent implementation that your agents can use to chat with customers.

IN THIS SECTION:

1. [Enable Live Agent](#)

Get started with Live Agent by enabling it for your organization. After you enable Live Agent, you can customize it.

2. [Create Live Agent Users](#)

Before your users can assist customers with chat, you need to assign the users as Live Agent users. Live Agent users are support agents and supervisors who have the Salesforce permissions to assist customers with chat.

3. [Create and Assign Live Agent Skills](#)

Skills identify your agents' areas of expertise. When you assign an agent to a skill, that agent receives chat requests that are related to the agent's skill areas. You can also empower your supervisors to assign skills to agents.

4. [Create Live Agent Configurations](#)

Live Agent configurations define the Live Agent functionality that's available to your agents and support supervisors when agents chat with customers. Create Live Agent configurations to control the functionality of Live Agent in the Salesforce console.

5. [Create Live Agent Deployments](#)

A deployment is a place on your company's website that's enabled for Live Agent. Create deployments to implement Live Agent and control its functionality on your website.

6. [Create Chat Buttons](#)

Create chat buttons to enable customers to request a chat with an agent directly from your website.

7. [Customize Your Live Agent Branding with Force.com Sites](#)

To customize your Live Agent implementation with branding images, use a Force.com site to upload the images for your chat window and chat buttons.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To set up Live Agent:

- "Customize Application"

To create user profiles or permission sets:

- "Manage Profiles and Permission Sets"

Enable Live Agent

Get started with Live Agent by enabling it for your organization. After you enable Live Agent, you can customize it.

1. From Setup, enter *Live Agent Settings* in the *Quick Find* box, then select **Live Agent Settings**.
2. Select **Enable Live Agent**.
3. Click **Save**.

Create Live Agent Users

Before your users can assist customers with chat, you need to assign the users as Live Agent users. Live Agent users are support agents and supervisors who have the Salesforce permissions to assist customers with chat.

All Live Agent users need the **API Enabled** administrative permission enabled on their associated profile before they can use Live Agent.

1. From Setup, enter *Users* in the *Quick Find* box, then select **Users**.
2. Click **Edit** next to a user's name.
3. Select **Live Agent User**. If you don't see this checkbox, verify that your organization has purchased enough Live Agent feature licenses.
4. Click **Save**.

After creating users, make sure that you assign them a Live Agent configuration and associate them with the appropriate skills.

IN THIS SECTION:

[Permissions for Live Agent Support Agents](#)

You need to enable a few specific permissions for Live Agent support agents so that they have access to all the tools that they'll need to provide help to customers.

[Permissions for Live Agent Support Supervisors](#)

You must enable certain permissions for Live Agent support supervisors so that they have all the tools they need to monitor agents' activities and review customers' information.

Create and Assign Live Agent Skills

Skills identify your agents' areas of expertise. When you assign an agent to a skill, that agent receives chat requests that are related to the agent's skill areas. You can also empower your supervisors to assign skills to agents.

1. From Setup, enter *Skills* in the **Quick Find** box, then select **Skills**.
2. Click **New**.
3. Enter a name for the skill.

For example, you can create a skill that's called "Accounts" for agents who specialize in questions about customer accounts.

4. In the Assign Users area, select the users whom you want to associate with the skill.
5. In the Assign Profiles area, select the profiles that you want to associate with the skill.
6. Click **Save**.

To enable supervisors to assign skills, enable the "Assign Live Agent Skills to Users" permission on their profiles, or assign it to individual users via a permission set. When supervisors have this permission, they can go to **Setup > Customize > Live Agent Skills** and update the assigned profiles or users under each skill.

Create Live Agent Configurations

Live Agent configurations define the Live Agent functionality that's available to your agents and support supervisors when agents chat with customers. Create Live Agent configurations to control the functionality of Live Agent in the Salesforce console.

For efficiency, create profiles and users before you create configurations. That way, you can create a configuration and assign it to users and profiles at the same time.

Live Agent configurations enable you to control your users' access to certain Live Agent features. You can create multiple configurations that define Live Agent's functionality for multiple types of users. For example, you might create a configuration specifically for experienced agents that gives them more permissions than new agents have, or you might create a configuration for support supervisors that gives them the permissions that they need to monitor their employees.

1. To get started with creating a configuration, in Setup, enter *Live Agent Configurations* in the **Quick Find** box, then select **Live Agent Configurations**.
2. Click **New**.
3. Choose the settings for your Live Agent configuration.
4. Click **Save**.

Supported Browsers for Live Agent Notifications

Live Agent notifications help agents respond to chats efficiently by alerting agents when certain events occur. The types of chat notifications that are supported are determined by the web browsers your agents use.

Live Agent Configuration Settings

Live Agent configuration settings control the functionality that's available to agents and their supervisors while agents chat with customers.

Apply settings when you create or edit a Live Agent configuration.

Basic Information

Configure the basic functionality that's available to agents when they chat with customers.

Setting	What It Does
Live Agent Configuration Name	Names the configuration. This configuration name, or a version of it, automatically becomes the Developer Name.
Developer Name	Sets the API name for the Live Agent configuration.
Chat Capacity	Indicates how many chats an agent who is assigned to this configuration can be engaged in at the same time.
Sneak Peek Enabled	Indicates whether agents can see what a chat customer is typing before the customer sends a chat message.
Request Sound Enabled	Indicates whether to play an audio alert when the agent receives a new chat request.
Disconnect Sound Enabled	Indicates whether to play an audio alert when a chat is disconnected.
Notifications Enabled	Indicates whether to display a desktop alert when an agent receives a new chat request.
Custom Agent Name	Sets the agent's name as it appears to customers in the chat window.
Auto Greeting	Sets a customized greeting message that the customer receives automatically when an agent accepts the customer's chat request. Optionally, use merge fields to customize the information in your greeting by using the Available Merge Fields tool. For example, you can personalize the chat experience by using

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Setting	What It Does
	<p>merge fields to include the customer's name in the greeting.</p> <p> Note: If you specify an automatic greeting message in both your Live Agent configuration and in an individual chat button, the message that's associated with your chat button overrides the message that's associated with your configuration.</p>
Auto Away on Decline	<p>Sets the agent's Live Agent status to "Away" automatically when the agent declines a chat request.</p> <p>This option applies only when agents are assigned to chat buttons that use push routing.</p>
Auto Away on Push Time-Out	<p>Sets an agent's Live Agent status to "Away" automatically when a chat request that's been pushed to the agent times out.</p> <p>This option applies only when agents are assigned to chat buttons that use push routing.</p>
Critical Wait Alert Time	<p>Determines the number of seconds that the agent has to answer a customer's chat before the chat tab alerts the agent to answer it.</p>
Agent File Transfer Enabled	<p>Indicates whether an agent can enable customers to transfer files through a chat.</p>
Visitor Blocking Enabled	<p>Indicates whether an agent can block visitors from an active chat within the Salesforce console. See Let Your Agents Block Visitors by IP Address.</p>
Assistance Flag Enabled	<p>Indicates whether an agent can send a request for help ("raise a flag") to a supervisor.</p>

Chatlets

Chatlets are tools that are available only to organizations that use Live Agent in the Live Agent console. The Live Agent console is no longer supported, so we don't recommend setting up chatlets. But don't worry—if you use Live Agent in the Salesforce console, you don't need chatlets.

Assign Users

Assign eligible users to the configuration to give them access to Live Agent functionality. Later, you'll see that you can also assign profiles to a configuration. If a user is assigned a configuration at the profile and user levels, the user-level configuration overrides the configuration that's assigned to the profile.

 **Warning:** Users can be assigned to only one Live Agent configuration at a time. If you assign the same user to a second Live Agent configuration, the system removes that user from the first Live Agent configuration without warning you. So make sure that you know exactly which Live Agent configuration each user should be assigned to!

For example, let's say that User A is assigned to Live Agent Configuration A. Then, you create Live Agent Configuration B and accidentally assign User A to it. Salesforce automatically removes User A from Live Agent Configuration A and reassigns the user to Live Agent Configuration B without notifying you.

Setting	What It Does
Available Users	Indicates the users who are eligible to be assigned to the configuration.
Selected Users	Indicates the users who are assigned to the configuration.

Assign Profiles

Assign eligible profiles to the configuration to give users who are associated with the profiles access to Live Agent functionality. If a user is assigned a configuration at the profile and user levels, the user-level configuration overrides the configuration that's assigned to the profile.

Setting	What It Does
Available Profiles	Indicates the user profiles that are eligible to be assigned to the configuration.
Selected Profiles	Indicates the user profiles that are assigned to the configuration.

Supervisor Settings

Supervisor settings determine the Live Agent functionality that's available to support supervisors. In addition, these settings determine the default filters that apply to the Agent Status list in the supervisor panel.

Setting	What It Does
Chat Monitoring Enabled	Indicates whether supervisors can monitor their agents' chats in real time while their agents interact with customers.
Whisper Messages Enabled	Indicates whether supervisors can send private messages to agents while agents chat with customers.
Agent Sneak Peek Enabled	Indicates whether supervisors can preview an agent's chat messages before the agent sends them to the customer.
Default Agent Status Filter	Determines the default agent status, such as Online, Offline, or Away, by which to filter agents in the supervisor panel. When supervisors view the Agent Status list in the supervisor panel, they see a list of agents who have that status.

Setting	What It Does
Default Skill Filter	Determines the default skill by which to filter agents in the supervisor panel. When supervisors view the Agent Status list in the supervisor panel, they see a list of agents who are assigned to that skill.
Default Button Filter	Determines the default button by which to filter agents in the supervisor panel. When supervisors view the Agent Status list in the supervisor panel, they see a list of agents who are assigned to that button.
Assigned Skills	Determines the skills that are visible to supervisors in the supervisor panel. When supervisors view the Agent status list in the supervisor panel, they see a list of agents who are assigned to these skills. If you don't select any skills, the Agent Status list displays agents who are assigned to any skill.

Chat Conference Settings

Determine whether agents can invite other agents to join them in a customer chat. Chat conferencing lets your agents include multiple agents in a single chat. That way, your agents can help your customers get the solutions that they need without making your customers wait for their chats to be transferred.

Note: Chat conferencing does not support the Related Entities panel. If you attempt to use it with chat conferencing, important details might not be saved on your record.

Setting	What It Does
Chat Conferencing Enabled	Indicates whether agents can invite other agents to join them in customer chats.

Chat Transfer Settings

Determine how agents can transfer chats to other agents.

Setting	What It Does
Chat Transfer Enabled	Indicates whether agents can transfer chats to other agents.
Chat Transfer to Skills	Determines the skill groups to which agents can transfer chats. Agents can transfer chats to available agents who are assigned to those skills.

Supported Browsers for Live Agent Notifications

Live Agent notifications help agents respond to chats efficiently by alerting agents when certain events occur. The types of chat notifications that are supported are determined by the web browsers your agents use.

Two types of chat notifications are available in Live Agent.

Chat request notifications

Notifies an agent when the agent receives a chat request; available as audio notifications and desktop notifications

Disconnect notifications

Notifies an agent when the agent is disconnected from Live Agent; available as audio notifications only

Browser	Version	Audio Notifications Supported?	Desktop Notifications Supported?
Google Chrome™	Most recent stable version	Yes	Yes
Mozilla® Firefox®	Most recent stable version	Yes	Yes
Apple® Safari®	6.x on Mac OS X	Yes	Yes
Windows® Internet Explorer®	9	Yes	No

Create Live Agent Deployments

A deployment is a place on your company's website that's enabled for Live Agent. Create deployments to implement Live Agent and control its functionality on your website.

To customize the chat window that your customers see, you first need to create a Force.com site to host your custom images.

A deployment consists of a few lines of JavaScript that you add to a Web page. Your organization can have a single Live Agent deployment or multiple deployments. For example, if you have a single service center that supports multiple websites, creating a separate deployment for each site enables you to present multiple chat windows to your visitors.

1. From Setup, enter *Deployments* in the **Quick Find** box, then select **Deployments**.
2. Click **New**.
3. Choose the settings for your deployment.
4. Click **Save**.
Salesforce generates the deployment code.
5. Copy the deployment code, and then paste it on each Web page where you want to deploy Live Agent. For best performance, paste the code immediately before the closing body tag (that is, `</body>`).

EDITIONS

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To create deployments:

- "Customize Application"

 **Note:** If you're using security zones in Internet Explorer 8 or 9, verify that your deployment and any website that hosts that deployment are in the same security zone. Due to an issue with Internet Explorer, it's not possible to launch a chat window from a website that's in a different security zone. For more information on security zones, refer to Internet Explorer help.

IN THIS SECTION:

[Live Agent Deployment Settings](#)

Live Agent deployment settings control the functionality that's available to agents and their supervisors while agents chat with customers.

[Permitted Domains and Live Agent Deployments](#)

To enhance security and minimize the number of illegitimate chat requests that you receive, use the permitted domains option when you create Live Agent deployments. There are a few considerations to keep in mind when you use permitted domains.

Live Agent Deployment Settings

Live Agent deployment settings control the functionality that's available to agents and their supervisors while agents chat with customers.

Apply settings when you create or edit a Live Agent deployment.

Basic Information

Configure the basic functionality that's available on a particular Live Agent deployment.

Setting	What It Does
Live Chat Deployment Name	Names the deployment. This deployment name, or a version of it, automatically becomes the Developer Name.
Developer Name	Sets the API name for the Live Agent deployment.
Chat Window Title	Sets the name of the chat window as it appears to customers.
Allow Visitors to Save Transcripts	Indicates whether customers can save copies of their chat transcripts after they finish chatting with an agent.
Allow Access to Pre-Chat API	Indicates whether developers can access and implement the pre-chat API.  Warning: The pre-chat API gives developers access to potentially personal information that customers provide in pre-chat forms, such as the customer's name and email address.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012
Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Setting	What It Does
Permitted Domains	<p>Determines the domains that can host the deployment.</p> <p>When using permitted domains:</p> <ul style="list-style-type: none"> List as many domains as you need to, but only one per line. Use only the domain and subdomain. For example, use xyz.domain.com, domain.com, or www.domain.com. Don't include http:// or mappings to specific pages within a domain, such as domain.com/page. Make sure that you specify all the domains that you want to allow to host the deployment. To make the deployment usable on any domain, leave the Permitted Domains field empty.

Chat Window Branding

You can optionally customize your chat windows with custom images by associating your deployment with a Force.com site and its static resources.

Setting	What It Does
Branding Image Site	<p>Determines the Force.com site that's associated with the deployment.</p> <p>By associating your deployment with a Force.com site, you can customize your deployment with branding images. Store your branding images as static resources with your Force.com site.</p>
Chat Window Branding Image	Sets the custom graphic that appears in the customer's chat window.
Mobile Chat Window Branding Image	Sets the custom graphic that appears in the customer's chat window when the customer accesses chat from a mobile site.

Permitted Domains and Live Agent Deployments

To enhance security and minimize the number of illegitimate chat requests that you receive, use the permitted domains option when you create Live Agent deployments. There are a few considerations to keep in mind when you use permitted domains.

There are a few guidelines for using permitted domains.

- List as many domains as you need to, but only one per line.
- Use only the domain and subdomain—for example, xyz.domain.com, domain.com, or www.domain.com. Don't include http:// or mappings to specific pages within a domain, such as domain.com/page.
- Specify all the domains that you want to allow to host the deployment.
- To make the deployment usable on any domain, leave the Permitted Domains field empty.

Create Chat Buttons

Create chat buttons to enable customers to request a chat with an agent directly from your website.

Before you create chat buttons, you need to:

- Create skills. Each chat button is associated with a particular skill or set of skills so that chats that are initiated from the button are routed to the appropriate agents.
- Create a Force.com site and static resources to use custom images for the online and offline versions of your button. If you don't have a Force.com site, you can specify online and offline button images or text by modifying the code that's generated when you create a button.

You need to create the buttons that visitors click to start chats. Like a deployment, a button consists of several lines of JavaScript that you copy and paste into Web pages. A single deployment can have multiple buttons; each button enables you to refine the chat experience for visitors. For example, your service deployment might have buttons for personal computer, laptop, or tablet issues. Each button is mapped to a skill or set of skills to ensure that visitors' inquiries go to only those agents who can solve the visitors' problems.

1. From Setup, enter *Chat Buttons* in the **Quick Find** box, then select **Chat Buttons & Invitations**.
2. Click **New**.
3. Select Chat Button from the **Type** field.
4. Choose the remaining settings for your chat button.
5. Click **Save**.
6. Copy the button code, and then paste it on each Web page where you've deployed Live Agent. Make sure that you paste the code in the area on the page where you want the button to appear.

Tip: Because the code changes with each modification, remember to copy and paste the code each time that you update the button.

Chat Button Settings

Chat button settings control the behavior of the chat buttons that customers use to interact with agents.

Apply settings when you create or edit a Live Agent chat button.

Basic Information

Configure the basic functionality that's available on a particular Live Agent chat button.

Setting	What It Does
Type	<p>Determines the type of button that you want to create.</p> <p> Warning: When you create a chat button to host on your website, you must set this option to Chat Button.</p>
Name	<p>Names the chat button.</p> <p>This button name, or a version of it, automatically becomes the Developer Name.</p>
Developer Name	Sets the API name for the chat button.
Routing Type	Determines how incoming chat requests are routed to agents with the appropriate skills.
Skills	Associates skills with the button. Incoming chat requests that originate from the button are routed to agents with the skills that you specify.
Language	Sets the default language for text in the chat window.
Push Time-Out	Sets the amount of time that an agent has to respond to a chat request before the request times out and is routed to another agent.
Enable Customer Time-Out	Indicates whether chats are ended if the customer doesn't respond within a specified period.
Customer Time-Out (seconds)	Sets the amount of time that a customer has to respond to an agent message before the session ends. The timer stops when the customer sends a message. The timer resets to 0 each time the agent sends a message.
Customer Time-Out Warning (seconds)	Sets the amount of time that a customer has to respond to an agent message before a warning appears and a timer begins a countdown. The

EDITIONS

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Setting	What It Does
	warning disappears (and the timer stops) each time the customer sends a message. The warning disappears (and the timer resets to 0) each time the agent sends message. The warning value must be shorter than the time-out value (we recommend at least 30 seconds).
Enable Queue	Indicates that queuing is enabled. Queuing allows incoming chat requests to wait in a queue until an agent with the appropriate skills is available to accept the chat.
Queue Length Per Agent	Determines the number of chat requests per agent that can be placed in the agent's queue.
Overall Queue Length	Determines the maximum number of chat requests that can be placed in the queue.
Custom Agent Name	Sets the agent's name as it appears to customers in the chat window.
Auto Greeting	<p>Sets a customized greeting message that the customer receives automatically when an agent accepts the customer's chat request.</p> <p>Optionally, use merge fields to customize the information in your greeting by using the Available Merge Fields tool. For example, you can personalize the chat experience by using merge fields to include the customer's name in the greeting.</p> <p> Note: If you specify an automatic greeting message in both your Live Agent configuration and in an individual chat button, the message that's associated with your chat button overrides the message that's associated with your configuration.</p>

Chat Button Customization

You can optionally customize your chat button with custom images by associating your deployment with a Force.com site and its static resources.

Setting	What It Does
Site for Resources	Determines the Force.com site that's associated with the chat button. By associating your button with a Force.com site, you can customize the button with branding images. Store your branding images as static resources with your Force.com site.
Online Image	Sets the custom button graphic that appears when the chat button is unavailable.
Offline Image	Sets the custom button graphic that appears when the chat button is available for customers to request new chats.

Setting	What It Does
Custom Chat Page	Replaces the standard Live Agent chat window with a custom chat window page that you've developed. Use this option only to use a chat window other than the default chat window that Live Agent provides.
Pre-Chat Form Page	Directs Live Agent to the Force.com page that hosts your customized pre-chat form that customers see before they begin a chat with an agent.
Pre-Chat Form URL	Directs Live Agent to the URL of the Web page that hosts your pre-chat form.
Post-Chat Page	Directs Live Agent to your customized post-chat page that customers see after they complete a chat.
Post-Chat Page URL	Directs Live Agent to the URL of the Web page that hosts your post-chat page.

Chat Routing Options

Routing options in Live Agent enable you to specify how incoming chat requests are directed to agents.

Routing Option	Description
Choice	Incoming chat requests are added to the queue in Live Agent in the Salesforce console and are available to any agent with the required skill.
Least Active	Incoming chats are routed to the agent with the required skill who has the fewest active chats. This option is a push option, which means that incoming chats are routed, or "pushed," to agents. You can specify the amount of time that an agent has to answer a chat request before it's routed to the next available, qualified agent.
Most Available	Incoming chats are routed to the agent with the required skill and the greatest difference between chat capacity and active chat sessions. For example, if Agent A and Agent B each have a chat capacity of five, and Agent A has three active chat sessions while Agent B has one, incoming chats will be routed to Agent B. This option is a push option, which means that incoming chats are routed, or "pushed," to agents. You can specify the amount of time that an agent has to answer a chat request before it's routed to the next available, qualified agent.

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Chat Queuing Options

Queuing options in Live Agent let you control how incoming chat requests are handled when no agents are available.

For each Live Agent chat button or invitation that you create, you can enable queuing to put incoming chat requests on hold if no agents with the required skills are available to accept the requests. You can also specify the maximum number of requests in a queue. By enabling queues and setting limits for them, you can control how incoming chat requests are handled, which helps agents manage chat backlogs.

With queuing enabled, your company can accept incoming chat requests even when agents are at capacity, and you can specify the maximum number of requests to accept. This helps agents work effectively and limits the amount of time that customers spend waiting to chat.

The way that chat queuing works is determined by chat routing options.

Queuing Option	With This Routing Option	Results
Queuing is not enabled	Choice	<ul style="list-style-type: none"> • Users see the online version of your chat button and can submit new requests unless there are no agents with the required skill who are available or all online agents have reached capacity. • Incoming chat requests are added to the Live Agent widget. • When agents have capacity for new chat sessions, they can select incoming requests from the list.
Queuing is not enabled	Least Active or Most Available	<ul style="list-style-type: none"> • Users see the online version of your chat button and can submit new requests unless there are no agents with the required skill who are available or all online agents have reached capacity. • When agents have the capacity for new chat sessions, requests are routed to them.

Customize Your Live Agent Branding with Force.com Sites

To customize your Live Agent implementation with branding images, use a Force.com site to upload the images for your chat window and chat buttons.

To customize your chat window and chat buttons, you need to create one or more Force.com sites and then upload the images that you want to use as static resources. Static resources enable you to upload content that you can reference in a Visualforce page. Each static resource has its own URL that Salesforce uses to access the images when the chat window loads.

1. Create a Force.com site to host your images.

When you create a Force.com site for your Live Agent deployment, you need to provide only the following information.

- A site label and site name
- A site contact
- The active site's home page
- A site template

2. Upload your branding images as static resources.

Customize Your Live Agent Implementation

After you set up your basic Live Agent implementation, customize it with solutions that are appropriate for your agents, supervisors, and customers. Live Agent offers several options for customizing your implementation declaratively, which means that no coding is required.

IN THIS SECTION:

[Create Automated Chat Invitations](#)

Set up automated chat invitations that appear as animated pop-ups on your website to invite customers to chat with an agent.

[Pre-Chat Forms and Post-Chat Pages](#)

Pre-chat forms and post-chat pages in Live Agent enable you to exchange information with customers who contact your company through chat.

[Create Quick Text Messages](#)

Quick Text messages enable agents to include standardized notes with case updates and to send common responses to customers without having to type the responses each time. Create custom messages for your agents to use when they email and chat with customers.

[Set Visibility for the Supervisor Tab through Profiles](#)

The Live Agent supervisor panel is your supervisors' one-stop shop for finding information about their organizations' chat buttons and chat agents. Make the Live Agent supervisor tab visible to users who are assigned to specified profiles.

[Set Visibility for the Live Agent Sessions Tab through Permission Sets](#)

Session records store information about your agents' and customers' interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers. Make the Live Agent sessions tab visible to users who are assigned to specified permission sets.

[Set Visibility for the Live Agent Sessions Tab through Profiles](#)

Session records store information about your agents' and customers' interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers. Make the Live Agent sessions tab visible to users who are assigned to specified profiles.

[Block Sensitive Data in Chats](#)

Sensitive data rules let you block specific patterns, such as credit card, Social Security, phone and account numbers, or even profanity. You can choose to remove the text or replace it with your preferred characters.

[Let Your Agents Block Visitors by IP Address](#)

Help your agents avoid troublesome customers by blocking chats from specified IP addresses.

[Create an IP Blocking Rule to Block Chat Visitors](#)

Help your agents avoid troublesome customers by blocking chats from specified IP addresses.

To set up Live Agent:

- "Customize Application"

To create user profiles or permission sets:

- "Manage Profiles and Permission Sets"

Create Automated Chat Invitations

Set up automated chat invitations that appear as animated pop-ups on your website to invite customers to chat with an agent.

Before you create automated invitations, you need to:

- Create skills. Each chat button is associated with a particular skill or set of skills so that chats that are initiated from the button are routed to the appropriate agents.
- Create a Force.com site and static resources to use custom images for the online and offline versions of your button. If you don't have a Force.com site, you can specify online and offline button images or text by modifying the code that's generated when you create a button.

Automated invitations can be set to trigger based on certain criteria, such as whether a customer remains on a Web page for more than a specified amount of time. Invitations can be associated with specific skills, which ensures that customers will be routed to the appropriate agent when they accept an invitation to chat.

1. From Setup, enter *Chat Buttons & Invitations* in the **Quick Find** box, then select **Chat Buttons & Invitations**.
2. Click **New**.
3. Under **Type**, select Automated Invitation.
4. Click **Save**.
5. Copy the invitation code, and then paste it on each Web page where you've deployed Live Agent. Make sure that you paste the code in the area on the page where you want the invitation to appear.

Tip: Because the code changes with each modification, remember to copy and paste the code each time that you update the invitation.

IN THIS SECTION:

[Automated Invitation Settings](#)

Automated invitation settings control the behavior of the invitations that are sent to your customers to prompt them to chat with agents while they visit your website.

Automated Invitation Settings

Automated invitation settings control the behavior of the invitations that are sent to your customers to prompt them to chat with agents while they visit your website.

Apply settings when you create or edit a Live Agent automated invitation.

Setting	What It Does
Type	<p>Determines whether to create a chat button or automated invitation.</p> <p> Warning: When creating an automated chat invitation, you must set this option to Automated Invitation.</p>
Active	Determines whether the automated invitation is “active” or can automatically be sent to customers.
Name	<p>Names the invitation.</p> <p>This invitation name, or a version of it, automatically becomes the Developer Name.</p>
Developer Name	Sets the API name for the invitation.
Routing Type	Determines how incoming chat requests that originate from the invitation are routed to agents with the appropriate skills.
Skills	Associates skills with the invitation. Incoming chat requests that originate from the invitation will be routed to agents with the skills that you specify.
Language	Sets the default language for text in the chat window.
Push Time-Out	Sets the amount of time that an agent has to respond to a chat request before the request “times out” and is routed to another agent.
Enable Queue	Indicates that queuing is enabled, allowing incoming chat requests to wait in a queue until an agent with the appropriate skills is available to accept the chat.
Queue Length Per Agent	Determines the number of chat requests per agent that can be placed in the agent’s queue.
Overall Queue Length	Determines the maximum number of chat requests that can be placed in the queue.
Custom Agent Name	Sets the agent’s name as it appears to customers in the chat window.
Auto Greeting	<p>Sets a customized greeting message that the customer receives automatically when an agent accepts the customer’s chat request from an invitation.</p> <p>Optionally, use merge fields to customize the information in your greeting by using the Available Merge Fields tool. For example, you can personalize the chat experience by using merge fields to include the customer’s name in the greeting.</p> <p> Note: If you specify an automatic greeting message in your Live Agent configuration and in an invitation, the message</p>

Setting	What It Does
	that's associated with your invitation will override the message that's associated with your configuration.

Invitation Animation

Customize your invitation's animations to determine how the animation will appear to customers.

Setting	What It Does
Display Time	Determines how long the invitation will be displayed to customers before it disappears.
Allow invitation to be triggered again after accepting	Indicates whether the invitation can be sent to the customer again after the customer has accepted a previous invitation.
Allow invitation to be triggered again after rejecting	Indicates whether the invitation can be sent to the customer again after the customer has rejected a previous invitation.
Animation	<p>Determines the type of animation for your invitation. Depending on which animation you choose, you'll be prompted to select the positions where the invitation will appear on-screen to customers.</p> <p> Note: Animations won't render for agents using Internet Explorer versions 9 and below.</p>

Invitation Customization

You can optionally customize your invitation with custom images by associating your deployment with a Force.com site and its static resources.

Setting	What It Does
Site for Resources	Determines the Force.com site that's associated with the invitation. By associating your invitation with a Force.com site, you can customize the invitation with branding images. Store your branding images as static resources with your Force.com site.
Online Image	Sets the custom button graphic that appears when the invitation is unavailable.
Offline Image	Sets the custom button graphic that appears when the invitation is available for customers to request new chats.
Custom Chat Page	Replaces the standard Live Agent chat window with a custom chat window page that you've developed. Use this option only to use a chat window other than the default chat window that Live Agent provides.

Setting	What It Does
Pre-Chat Form Page	Directs Live Agent to the Force.com page that hosts your customized pre-chat form that customers see before they begin a chat with an agent.
Pre-Chat Form URL	Directs Live Agent to the URL of the Web page that hosts your pre-chat form.
Post-Chat Page	Directs Live Agent to your customized post-chat page that customers see after they complete a chat.
Post-Chat Page URL	Directs Live Agent to the URL of the Web page that hosts your post-chat page.

Sending Rule

Create sending rules for your invitation to determine when to trigger and send the invitation to customers. You can include multiple criteria in your sending rule. Additionally, if your sending rule requires more complicated logic, you can apply Boolean operators to your sending rule.

Setting	What It Does
Criteria	Sets the criteria to be evaluated by the sending rule. For example, you can create a rule that sends the invitation based on how many seconds a customer has been viewing a Web page.
Operator	Sets the operator to evaluate your criteria. For example, you can create a rule that sends the invitation when a customer has been on a page for more than a specified number of seconds.
Value	Sets the value to evaluate the formula against. For example, you can create a rule that sends the invitation when a customer has been on a page for more than 30 seconds.

Pre-Chat Forms and Post-Chat Pages

Pre-chat forms and post-chat pages in Live Agent enable you to exchange information with customers who contact your company through chat.

Pre-chat forms and post-chat pages offer a standardized way of collecting information from customers who contact your company through chat. These forms and pages also offer a standardized way of sharing information with customers after their chat sessions are finished. In addition, by using these forms and pages, you can customize the chat experience for your users.

By using pre-chat forms, you can collect information from a customer, such as a name or a description of a problem, after the customer requests to chat with an agent. This information can help direct chat requests efficiently and can reduce the amount of time that agents need to spend collecting information before beginning a chat session. You can also use this information to customize a customer's experience while the customer chats with an agent, such as including the customer's first name in the chat window.

EDITIONS

Available in: **Salesforce Classic**

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

By using post-chat pages, you can share information with customers at the end of a chat session. For example, you can direct your customers to another Web page after they complete a chat with an agent, and you can forward them to a survey about their chat experience.

You have to create pre-chat forms and post-chat pages programmatically, using Live Agent's APIs. For information on creating customized pre-chat forms and post-chat pages, see the [Live Agent Developer's Guide](#) (English only).

Create Quick Text Messages

Quick Text messages enable agents to include standardized notes with case updates and to send common responses to customers without having to type the responses each time. Create custom messages for your agents to use when they email and chat with customers.

1. Click the **Quick Text** tab.
2. Click **New**.
3. If you have more than one Quick Text record type, select a record type for the new message, and then click **Continue**.
4. Type a message name.
5. Type the message.
It can include line breaks, lists, and special characters and can be up to 4,096 characters.
6. Click **Available Merge Fields** to display the merge field selector.
7. Select the channels in which you want the message to be available.
Depending on which features are enabled in your organization, these channels might be available.
 - **Email**—the Case Feed Email action
 - **Live Agent**—Live Agent in the Salesforce console
 - **Portal**—a community or a customer portal
 - **Phone**—the Case Feed Log a Call action
 - **Internal**—the Case Feed Change Status action
8. Select a category.
9. Optionally, select a subcategory.
10. Click **Save**.

 **Tip:** Click **Test and Verify Merge Fields** to view a sample of the quick text, populated with data from records that you choose.

USER PERMISSIONS

To create Quick Text messages:

- "Create," "Read," "Edit," and "Delete" on Quick Text

Set Visibility for the Supervisor Tab through Profiles

The Live Agent supervisor panel is your supervisors' one-stop shop for finding information about their organizations' chat buttons and chat agents. Make the Live Agent supervisor tab visible to users who are assigned to specified profiles.

1. From Setup, enter *Profiles* in the *Quick Find* box, then select **Profiles**.
2. Click **Edit** next to the profile that you want to give access to the supervisor tab.
3. Set the visibility of the Live Agent supervisor tab to *Default On*.
4. Click **Save**.

After you give your users permission to access the Live Agent supervisor tab, set up access to the Live Agent supervisor panel in the Salesforce console.

Set Visibility for the Live Agent Sessions Tab through Permission Sets

Session records store information about your agents' and customers' interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers. Make the Live Agent sessions tab visible to users who are assigned to specified permission sets.

Alternatively, you can give users access to the Live Agent sessions tab through profiles.

1. From Setup, enter *Permission Sets* in the *Quick Find* box, then select **Permission Sets**.
2. Click the name of a permission set, or create a permission set.
3. Click **Object Settings**.
4. Click **Live Agent Sessions**.
5. Click **Edit**.
6. In Tab Settings, select *Available* and *Visible*.
7. Click **Save**.

Set Visibility for the Live Agent Sessions Tab through Profiles

Session records store information about your agents' and customers' interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers. Make the Live Agent sessions tab visible to users who are assigned to specified profiles.

Alternatively, you can give users access to the Live Agent sessions tab through permission sets.

1. From Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles**.
2. Select a support agent profile.
3. Click **Edit**.
4. Set the visibility of the Live Agent sessions tab to **Default On**.
5. Click **Save**.

Block Sensitive Data in Chats

Sensitive data rules let you block specific patterns, such as credit card, Social Security, phone and account numbers, or even profanity. You can choose to remove the text or replace it with your preferred characters.

1. In Setup, enter *Sensitive Data* in the **Quick Find** box, then select **Sensitive Data Rules**.
2. Click **New**.
3. Write each pattern as a JavaScript regular expression (regex), and choose your preferred settings. The regex is case-sensitive.
4. Click **Test Your Pattern**.
5. Enter some text in the format of the data you want to block, such as 123-45-6789 for a Social Security number.
6. Preview your results to ensure that the rule is working correctly.
7. Select the roles for which you want to enforce this rule.
8. Click **Save**.

You can block the text from agents, supervisors, customers, or all of these. When a rule is triggered, it logs one or more of these chat transcript events:

- Sensitive data blocked (Agent)
- Sensitive data blocked (Supervisor)
- Sensitive data blocked (Visitor)

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To create sensitive data rules:

- "Customize Application"

 **Note:** Sensitive data is visible while someone's typing, but it is masked when the person sends it. So if you want to mask customer information from agents, we recommend disabling Agent Sneak Peek (under **Setup > Customize > Live Agent > Live Agent Configurations**).

Sensitive data rules apply to the auto-greeting and any quick text that you have enabled. They don't apply to the agent name or other standard text in the chat window.

Let Your Agents Block Visitors by IP Address

Help your agents avoid troublesome customers by blocking chats from specified IP addresses.

You can enable your agents to block chat requests from specified IP addresses while they work in the console. For example, if a customer is using abusive language or sending spam messages, the agent can block that user from starting a new chat.

An agent action blocks chats from an individual IP address.

Blocked visitors will see a message indicating that chat isn't available.

If a customer attempts to request a chat from a blocked IP address, the chat won't enter a queue, nor will it be routed to agents. In addition, you can modify or delete blocking rules.

1. In Setup, enter *Live Agent Configurations* in the Quick Find box, then select **Live Agent Configurations**.
2. Click **Edit** next to the configuration that you want to modify.
3. Under **Basic Information**, select **Visitor Blocking Enabled**.
4. Click **Save**.

As an administrator, you can also block individual IP addresses Or, if your organization is receiving spam chats from a particular region, you can block entire IP ranges. See [Create an IP Blocking Rule](#) for more information.

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

Set Up Live Agent in the Salesforce Console

After you set up and customize your basic Live Agent implementation, add it to the Salesforce console so that your agents and supervisors can start using chat to assist customers. Additionally, you can set up some other features in the Salesforce console to create an even more robust chat experience for your agents and your customers.

IN THIS SECTION:

[Add Live Agent to the Salesforce Console](#)

Adding Live Agent to the Salesforce console enables agents and supervisors to chat with customers and access other customer service tools in one place.

[Set Up Chat Answers from Knowledge Articles](#)

If your organization uses Salesforce Knowledge, you can enable your agents to answer customer questions by using information from your knowledge base. Set up chat answers on articles so that agents can search for articles from Live Agent in the Salesforce console and include the information in chats.

[Add the Supervisor Panel to the Salesforce Console](#)

Add the supervisor panel to the Salesforce to make your support supervisors' work easier. That way, supervisors can access information about their agents without having to switch between workspaces.

Add Live Agent to the Salesforce Console

Adding Live Agent to the Salesforce console enables agents and supervisors to chat with customers and access other customer service tools in one place.

Before you add Live Agent to a Salesforce console app, you need to create a Salesforce console app if you don't have one set up.

After you set up Live Agent, add it to a Salesforce console app. After Live Agent is set up in the console, your agents can interact with chat customers. With the Salesforce console, your agents and supervisors can access Live Agent and other Service Cloud products in one place to provide customers fast and efficient customer service.

1. From Setup, enter `Apps` in the `Quick Find` box, then select **Apps**.
2. Click **Edit** next to the name of the Salesforce console app in which you want to set up Live Agent.
3. Select `Include Live Agent in this App`.
4. Choose the records or pages that you want to open as subtabs of chat sessions in the chat workspace.
5. Optionally, if your organization has Knowledge enabled, select `Include Suggested Articles from Knowledge in Live Agent` to display the Knowledge One widget in the chat workspace.
6. Click **Save**.

EDITIONS

USER PERMISSIONS

To add Live Agent to the Salesforce console:

- "Customize Application"

You can run multiple Salesforce apps at the same time. However, if you log in to another Salesforce app while you're logged in to a Salesforce console app, you can't accept new chat requests.

SEE ALSO:

[Salesforce Console](#)

Set Up Chat Answers from Knowledge Articles

If your organization uses Salesforce Knowledge, you can enable your agents to answer customer questions by using information from your knowledge base. Set up chat answers on articles so that agents can search for articles from Live Agent in the Salesforce console and include the information in chats.

To give support agents the ability to include information from Knowledge articles in chat sessions by using the Knowledge One widget, you need to add a custom field that's called "Chat Answer" to article types. This field stores information from the article that's appropriate to share with customers during a live chat. Using this field can be helpful for articles that are too long for an agent to include easily in a response.

Create the custom field as a Text, Text Area, or Text Area (Long). The Rich Text Field option is not supported. You need to add this custom field to each article type that contains information that you want operators to access from the Knowledge One widget.

1. From Setup, enter *Knowledge Article Types* in the **Quick Find** box, then select **Knowledge Article Types**.
2. Create or edit an article type.
3. Click **New** in the Fields related list.
4. Select **Text**, **Text Area**, or **Text Area (Long)**.
Don't select **Text Area (Rich)**.
5. Click **Next**.
6. Enter *Chat Answer* in Field Label.
Make sure that Field Name is populated automatically with Chat_Answer. (You can use a different name for the Field Label.)
7. Click **Next**.
8. Specify security settings, and then click **Next**.
Make the Chat Answer field visible to authors, editors, and live chat agents. Hide it from portal users or other users who don't need access to it.
9. Select **Yes**, add this custom field to the layout, and then click **Save**.

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To set up the Knowledge One widget:

- "Customize Application"
- AND
- "Manage Knowledge"

Add the Supervisor Panel to the Salesforce Console

Add the supervisor panel to the Salesforce to make your support supervisors' work easier. That way, supervisors can access information about their agents without having to switch between workspaces.

1. In Setup, enter `Apps` in the `Quick Find` box, then select **Apps**.
2. Click **Edit** next to the Salesforce console app that you want to add the supervisor panel to.
3. In the Choose Navigation Tab Items section, add `Live Agent Supervisor` to the Selected Items list.
4. Click **Save**.

Live Agent Console

The Live Agent console is a legacy feature that agents could use to chat with customers before Spring '13. Salesforce no longer supports the Live Agent console. If your organization still uses it, we recommend migrating to Live Agent in the Salesforce console as soon as possible, because the Live Agent console will eventually be discontinued.

To upgrade to Live Agent in the Salesforce console, see [Live Chat for Administrators](#). The Salesforce Help walks you through the end-to-end process of setting up Live Agent in the Salesforce console, including implementing and customizing it for your organization.

Live Agent Console Limitations

The Live Agent console provides only limited access to some features and doesn't include Live Agent features that were released after Spring '13.

To upgrade to Live Agent in the Salesforce console, see [Live Chat for Administrators](#). The Salesforce Help walks you through the end-to-end process of setting up Live Agent in the Salesforce console, including implementing and customizing it for your organization.

Agent Features

The Live Agent console doesn't provide support for some of the agent features that agents use during chats in the Salesforce console.

Feature	Supported?	Notes
Attaching articles to chats	Yes	None
Attaching records to transcripts	Yes	This feature is supported with the CRM chatlet, a legacy plug-in for the Live Agent console.
Quick Text	Yes	None
Transferring chat requests	Yes	None
Chat conferencing	No	None
Critical wait alert times	No	None
Knowledge chat answers	No	None
Transferring files	No	None
Autogreetings	Limited	The Live Agent console supports autogreetings that are specified in Live Agent configurations only; it doesn't support autogreetings that are specified in your chat button settings.
Custom agent names	Limited	The Live Agent console supports custom agent names that are specified in Live Agent configurations only; it doesn't support custom agent names that are specified in your chat button settings.

Supervisor Features

The Live Agent console was originally designed only for agents' interactions with customers. As a result, the Live Agent console doesn't support any supervisor features that are supported in the Salesforce console.

Welcome to Omni-Channel!

Omni-Channel is a comprehensive customer service solution that lets your call center route any type of incoming work item—including cases, chats, phone calls, or leads—to the most qualified, available agents in your organization. Omni-Channel integrates seamlessly into the Salesforce console.

Omni-Channel is a flexible, customizable feature, and you can configure it declaratively—that is, without writing code. Use Omni-Channel to manage the priority of work items, which makes it a cinch to route important work items to agents quickly. Manage your agents' capacity to take on work items so that they're given only the number of assignments that they can handle. You can also define which agents can work on different types of assignments. For example, you can create one group of agents to respond to leads and sales inquiries, and another group that helps customers with support questions.

Best of all, Omni-Channel routes all these assignments to the correct agents automatically. Agents no longer have to pick and choose work assignments manually from a queue, which saves everyone in your call center time, effort, and brainpower. Because it's easier for agents to work on their assignments, they can assist your customers faster and more effectively and close assignments more quickly.

Let's get started!

IN THIS SECTION:

1. [Enable Omni-Channel](#)

Enable Omni-Channel to gain access to the objects that you'll need to set up the feature in your organization.

2. [Create Service Channels](#)

Service channels let you turn nearly any Salesforce object such as a case, lead, SOS session, or even a custom object into a work record. Omni-Channel then plucks these work items from their queues like flowers from the garden of agent productivity and routes them to your agents in real time.

3. [Create Routing Configurations](#)

Routing configurations determine how work items are routed to agents. Use them to prioritize the relative importance and size of work items from your queues. That way, the most important work items are handled accordingly, and work is evenly distributed to your agents. To start routing work items to agents, create routing configurations and assign them to queues.

4. [Associate Routing Configurations and Agents with Queues](#)

Queues are a classic element of Salesforce that help your teams manage leads, cases, and custom objects. Omni-Channel supercharges your queues to be able to route work items to your agents in real time. Agents don't have to select work items manually from queues because Omni-Channel routes work items to agents automatically and in real time!

5. [Create Presence Configurations](#)

Let's focus on agents for a minute. Presence configurations determine how much work agents can take on and what Omni-Channel behaviors they can access while they assist customers. Your organization can have multiple configurations for different groups of agents who support different channels.

EDITIONS

Available in: Salesforce Classic

Omni-Channel is available in: **Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To set up Omni-Channel:

- "Customize Application"

To modify permission sets and profiles:

- "Manage Profiles and Permission Sets"

6. [Create Presence Statuses](#)

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline.

7. [Give Users Access to Presence Statuses with Permission Sets](#)

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. After you create presence statuses, make them available to agents who are assigned to certain permission sets.

8. [Give Users Access to Presence Statuses with Profiles](#)

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. After you create presence statuses, make them available to agents who are assigned to certain profiles.

9. [Add the Omni-Channel Widget to the Salesforce Console](#)

After you get Omni-Channel all set up for your organization, it's time to add the Omni-Channel widget to the Salesforce console so that your agents can start receiving work.

10. [Control Visible Work Item Details in the Omni-Channel Widget with Compact Layouts](#)

Ever wanted to customize the information that your agents see when they get a new work item in the Omni-Channel widget? You can! Just customize primary compact layout for that work item's object.

11. [Test It Out!](#)

Now that you've got Omni-Channel set up and enabled, test your implementation to make sure it's working correctly.

12. [Enabling Omni-Channel with Your Existing Live Agent Implementation](#)

So you've decided to take your customer service to the next level with Live Agent. That's great! If you're already supporting your customers with Live Agent chat, there are a few things you need to know before you start managing chat traffic with Live Agent in Omni-Channel.

13. [Updating from the Omni-Channel Pilot to Omni-Channel GA with Your Live Agent Implementation](#)

Does your organization use the Omni-Channel pilot to route chats from Live Agent? As you probably know, Omni-Channel is now generally available. We've changed the way Omni-Channel and Live Agent work together that streamline your implementation process. You should know a few details about these changes beforehand to make sure your update goes off without a hitch.

Enable Omni-Channel

Enable Omni-Channel to gain access to the objects that you'll need to set up the feature in your organization.

1. From Setup, enter *Omni-Channel Settings* in the **Quick Find** box, then select **Omni-Channel Settings**.
2. Select **Enable Omni-Channel**.
3. Click **Save**.

Create Service Channels

Service channels let you turn nearly any Salesforce object such as a case, lead, SOS session, or even a custom object into a work record. Omni-Channel then plucks these work items from their queues like flowers from the garden of agent productivity and routes them to your agents in real time.

Service channels let you manage sources of work and their priority compared to other work items. After you create service channels, you'll associate them with queues, which determine how work items are routed to your agents. You can create service channels for support channels, such as cases or SOS calls, or for sales channels, such as leads.

1. In Setup, enter *Service Channels* in the **Quick Find** box, select **Service Channels**, then click **New**.
2. Specify the settings for your service channel.
3. Click **Save**.

IN THIS SECTION:

[Service Channel Settings](#)

Customize your service channel settings to define how your organization receives work from various sources, such as chat, email, SOS calls, or social channels.

[Supported Objects for Omni-Channel](#)

Omni-Channel turbocharges your agents' productivity by assigning records to them in real time. But which objects and records does Omni-Channel support?

Service Channel Settings

Customize your service channel settings to define how your organization receives work from various sources, such as chat, email, SOS calls, or social channels.

Setting	What It Does
Service Channel Name	Names the service channel. This service channel name, or a version of it, automatically becomes the <code>API Name</code> .
API Name	Sets the API name for the service channel.
Related Object Type	The type of record that's associated with this service channel. For example, if you have a service channel for Web cases set the <code>Related Object Type</code> to <code>Case</code> . For a complete list of objects that service channels support, see Supported Objects for Omni-Channel .
Work Item Component	(Optional) Opens the specified custom console footer component when an agent accepts a work item request. For example, open a

Routing Configuration Settings

Customize your routing configuration settings to define how work items are pushed to agents.

Basic Information

Setting	What It Does
Routing Configuration Name	Names the service routing configuration. This routing configuration name, or a version of it, automatically becomes the Developer Name.
Developer Name	Sets the API name for the service channel.

EDITIONS

Available in: Salesforce Classic

Omni-Channel is available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer Editions**

Routing Settings

Setting	What It Does
Routing Priority	<p>The order in which work items from the queue that is associated with this routing configuration are routed to agents. Objects in queues that have a lower number are routed to agents first.</p> <p>For example, if you set the priority for highly qualified leads to <i>1</i> and the priority for less qualified leads to <i>2</i>, highly qualified leads are routed and assigned to agents before less qualified leads.</p> <p>On the backend, we identify agents with available capacity, then we assign work to them based on the following, in order:</p> <ol style="list-style-type: none"> 1. The priority of the queue that the work item came from 2. The amount of time that the work item has been waiting in the queue 3. Members of the queue who are available to receive new work items from the queue <p>When the work item is assigned to an agent, the owner of the object changes from the queue to the agent. If an agent declines the work item, we reassign it back to the queue with its original age so that it can be properly rerouted.</p>
Routing Model	Determines how incoming work items are routed to agents who are assigned to the configuration's service channel.

Work Item Capacity

Setting	What It Does
Capacity Weight	<p>Indicates the amount of an agent's overall capacity that's consumed when the agent is assigned a work item from queues that are associated with this configuration.</p> <p>The <code>Capacity</code> setting in the presence configuration the agent is assigned to determines the agent's overall capacity. When the agent is assigned a work item from the queue that's associated with this configuration, the <code>Capacity Weight</code> is subtracted from the agent's overall capacity. Agents can be assigned work items until their overall capacity reaches 0.</p> <p>You can select a <code>Capacity Weight</code> or a <code>Capacity Percentage</code>, but not both.</p>
Capacity Percentage	<p>The percentage of an agent's overall capacity that's consumed when the agent is assigned a work item from queues that are associated with this configuration.</p> <p>The agent's overall capacity is determined by the <code>Capacity</code> setting in the presence configuration that the agent is assigned to. When the agent is assigned a work item from the queue that's associated with this configuration, the <code>Capacity Percentage</code> is deducted from the agent's overall capacity until the agent has 0% capacity remaining.</p> <p>You can select a <code>Capacity Weight</code> or a <code>Capacity Percentage</code>, but not both.</p>

Omni-Channel Routing Model Options

Routing model options in Omni-Channel let you specify how incoming work items are directed to agents.

In Omni-Channel, work items are automatically routed or "pushed" to agents who are assigned to the appropriate queue.

Routing Option	Description
Least Active	<p>Incoming work items are routed to the agent who's working on the fewest open work items. For example, if Agent A has an overall capacity of 10, and Agent B has an overall capacity of 3, and Agent A has 3 active work items while Agent B has 1 active work item, incoming work items will be routed to Agent A. The agent's overall capacity is determined by which presence configuration that agent is assigned to.</p>

EDITIONS

Available in: Salesforce Classic

Omni-Channel is available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Routing Option

Most Available

Description

Incoming work items are routed to the agent with the greatest difference between work item capacity and open work items. For example, if Agent A and Agent B each have an overall capacity of 5, and Agent A has 3 active work items while Agent B has 1, incoming work items will be routed to Agent B. The agent's overall capacity is determined by which presence configuration that agent is assigned to.

Associate Routing Configurations and Agents with Queues

Queues are a classic element of Salesforce that help your teams manage leads, cases, and custom objects. Omni-Channel supercharges your queues to be able to route work items to your agents in real time. Agents don't have to select work items manually from queues because Omni-Channel routes work items to agents automatically and in real time!

The work items in the queue are assigned the priority that you specified in the routing configuration that you created earlier. If your organization already uses them, you can reuse queues that are available in your organization. That way, you can route work items in real time to the agents who are assigned to those queues.

If your organization doesn't use queues, create at least one to integrate with Omni-Channel. You can also create multiple queues to handle the different types of work items. For example, you might create one queue for incoming cases and another queue for incoming leads.

For routing to work correctly, assign each of your agents to the queue from which they are receiving work items.

For more information about queues, see "Queues Overview" in the Salesforce Help.

1. In Setup, enter *Queues* in the **Quick Find** box, then select **Queues**.
2. Create a queue or edit an existing one.
3. In the **Routing Configuration** field, look up the routing configuration that you want to associate with the queue.
4. In the Queue Members section, add agents to the **Selected Users** field.
These agents will receive work items from this queue.
5. Click **Save**.

USER PERMISSIONS

To set up Omni-Channel:

- "Customize Application"

Create Presence Configurations

Let's focus on agents for a minute. Presence configurations determine how much work agents can take on and what Omni-Channel behaviors they can access while they assist customers. Your organization can have multiple configurations for different groups of agents who support different channels.

When you enable Omni-Channel in your organization, Salesforce creates a presence configuration for you, called the Default Presence Configuration. All your agents are assigned to that configuration automatically. However, you can create a presence configuration and assign individual agents to it to customize Omni-Channel settings for a subset of your agents. If you reassign agents to a custom presence configuration, they're excluded from the Default Presence Configuration.

1. In Setup, enter *Presence* in the **Quick Find** box, select **Presence Configurations**, then click **New**.
2. Choose the settings for your presence configuration.
3. Click **Save**.

IN THIS SECTION:

[Presence Configuration Settings](#)

Customize your presence configuration settings to define the Omni-Channel settings that are assigned to agents.

Presence Configuration Settings

Customize your presence configuration settings to define the Omni-Channel settings that are assigned to agents.

Basic Information

These settings configure the basic functionality that's available to agents when they're signed in to Omni-Channel.

Setting	What It Does
Presence Configuration Name	Names the presence configuration. This configuration name, or a version of it, automatically becomes the <code>Developer Name</code> .
Developer Name	Sets the API name for the configuration.
Capacity	Determines the agent's maximum capacity for work. The size of the work item that you specified in the routing configuration consumes the agent's capacity.
Automatically Accept Requests	Automatically accepts work assignments that are pushed to an agent. These work items open automatically in the agent's workspace, so the

Setting	What It Does
	agent doesn't have to accept these work items manually from the Omni-Channel footer widget. If <code>Allow Agents to Decline Requests</code> is enabled, you can't use this setting.
<code>Allow Agents to Decline Requests</code>	Allows agents to decline incoming work items. If <code>Automatically Accept Requests</code> is enabled, agents can't decline requests.
<code>Update Status on Decline</code>	Automatically changes the agent's status to the status that you specify when the agent declines a work item. This setting is available only if <code>Allow Agents to Decline Requests</code> is enabled.

Assign Users

Assign eligible users to the configuration to give them access to Omni-Channel functionality. Later, you'll see that you can also assign profiles to a configuration. If a user is assigned a configuration at the profile and user levels, the user-level configuration overrides the configuration that's assigned to the user's profile.

 **Warning:** Users can be assigned to only one presence configuration at a time. If you assign the same user to a second presence configuration, the system removes that user from the first presence configuration without warning you. So make sure that you know which presence configuration assignment is required for each user!

For example, let's say that User A is assigned to Presence Configuration A. Then, you create Presence Configuration B and assign User A to it without realizing that the user was assigned to another presence configuration. Salesforce removes User A from Presence Configuration A and reassigns the user to Presence Configuration B without notifying you.

Setting	What It Does
<code>Available Users</code>	Indicates the users who are eligible to be assigned to the configuration.
<code>Selected Users</code>	Indicates the users who are assigned to the configuration.

Assign Profiles

Assign eligible profiles to the configuration to give users who are associated with the profiles access to Omni-Channel functionality. If a user is assigned a configuration at the profile and user levels, the user-level configuration overrides the configuration that's assigned to the user's profile.

Setting	What It Does
<code>Available Profiles</code>	Indicates the user profiles that are eligible to be assigned to the configuration.
<code>Selected Profiles</code>	Indicates the user profiles that are assigned to the configuration.

Create Presence Statuses

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline.

A presence status can encompass one or more channels of work items. For example, you might create a presence status called “Available for Web Support” that includes service channels for chats and emails. When agents are signed in to that presence status, they can receive incoming chats and emails. Genius!

1. In Setup, enter *Presence* in the *Quick Find* box, select **Presence Statuses**, then click **New**.
2. Choose the settings for your presence status.
3. Click **Save**.

IN THIS SECTION:

[Presence Status Settings](#)

Customize your presence status settings to define which service channels are assigned to difference statuses. Agents can sign in to Omni-Channel with different statuses depending on the types of work that they’re available to receive.

Presence Status Settings

Customize your presence status settings to define which service channels are assigned to difference statuses. Agents can sign in to Omni-Channel with different statuses depending on the types of work that they’re available to receive.

Basic Information

Use these settings to name your presence status.

Setting	What It Does
Status Name	Names the presence status. This presence status name, or a version of it, automatically becomes the API Name.
API Name	Sets the API name for the presence status.

Status Options

These settings indicate whether agents are online or busy when they use this status.

Setting	What It Does
Online	Lets agents who use this status receive new work items.
Busy	Lets agents who use this status appear away and indicates that they’re unable to receive new work items.

Give Users Access to Presence Statuses with Profiles

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. After you create presence statuses, make them available to agents who are assigned to certain profiles.

Alternatively, you can give users access to presence statuses through permission sets.

1. In Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles**.
2. Click the name of the profile to which you want to give access to statuses.
Don't click **Edit** next to the profile name. If you do, you won't see the correct page section where you can enable statuses.
3. In the Enabled Service Presence Status Access section, click **Edit**.
4. Select the presence statuses that you want to associate with the profile.
Agents who are assigned to this profile can sign in to Omni-Channel with any of the presence statuses that you make available to them.
5. Click **Save**.

Add the Omni-Channel Widget to the Salesforce Console

After you get Omni-Channel all set up for your organization, it's time to add the Omni-Channel widget to the Salesforce console so that your agents can start receiving work.

The Omni-Channel widget appears in the bottom right corner of the Salesforce console. From there, agents can change their presence status and triage their incoming work assignments.

 **Note:** If your organization uses Live Agent to manage chats, you can either use the Live Agent widget or the Omni-Channel widget to manage chats, but not both. To learn more about managing Live Agent, see [Enabling Omni-Channel with Your Existing Live Agent Implementation](#).

1. From Setup, enter *Apps* in the **Quick Find** box, then select **Apps**.
2. Click **Edit** next to the Salesforce console app that you want to add the Omni-Channel widget to.
3. In the Choose Console Components section, add Omni-Channel to your list of selected items.
4. Click **Save**.

Control Visible Work Item Details in the Omni-Channel Widget with Compact Layouts

Ever wanted to customize the information that your agents see when they get a new work item in the Omni-Channel widget? You can! Just customize primary compact layout for that work item's object.

If you look closely, you'll notice that a few fields are visible by default on new work item requests. For example, if your agent receives a request to manage a case, the request features the case's priority, status, and case number by default. An object's primary compact layout controls all of the visible fields in the Omni-Channel widget. But what if you want to see more information, such as the case's owner or its subject? Just edit the primary compact layout so that it includes the fields that you want to appear in the widget.

 **Tip:** The Omni-Channel widget is, well, compact, so there's only so much room to display fields on work item requests. While you can technically put up to 10 fields on a compact layout, the Omni-Channel widget will only display 4 fields. As a best practice, select up to 4 of the most important fields that you want to expose on work item requests, then add those to your compact layout.

1. Decide which object's compact layout you want to edit.
2. From the management settings for the object whose work item you want to edit, select **Compact Layouts**, and then select **New**. For example, to edit the compact layout for cases, go to the object management settings for cases, select **Compact Layouts**, then select **New**.
3. Select the settings for your compact layout, including the fields that you want it to include. The fields that you pick appear in the Omni-Channel widget when an agent receives a request.
4. Click **Save**.
5. Change the primary compact layout to your new layout by clicking **Compact Layout Assignment > Edit Assignment**.
6. Select your new compact layout from the Primary Compact Layout drop-down list.
7. Click **Save**.

Test It Out!

Now that you've got Omni-Channel set up and enabled, test your implementation to make sure it's working correctly.

To test your implementation, route a work item to yourself through the Salesforce console.

1. Log in to the Salesforce console.
Make sure that you log in as a user who's enabled to use Omni-Channel. For the sake of testing the feature, make sure that you're the only agent who's signed in to Omni-Channel.
2. In the Omni-Channel widget, change your status so that you can receive incoming work items.
3. In the console, navigate to the record that corresponds to your current presence status's channels. For example, if you're logged in with a status that's called "Available for Cases," navigate to a list of your open cases in the console. We'll assume that your "Available for Cases" status is associated with a cases service channel. After all, it wouldn't make much sense if your "Available for Cases" status made you available for, say, leads, would it?
4. Select the checkbox next to the record that you want to route to yourself.
5. Click **Change Owner**.

You'll be redirected to the Change Case Owner page.

6. Select *Queue* from the *Owner* list.
7. Enter the name of the queue that you associated with your routing configuration.

Sit back and relax. You'll see an incoming request notification in the Omni-Channel widget within a few seconds.

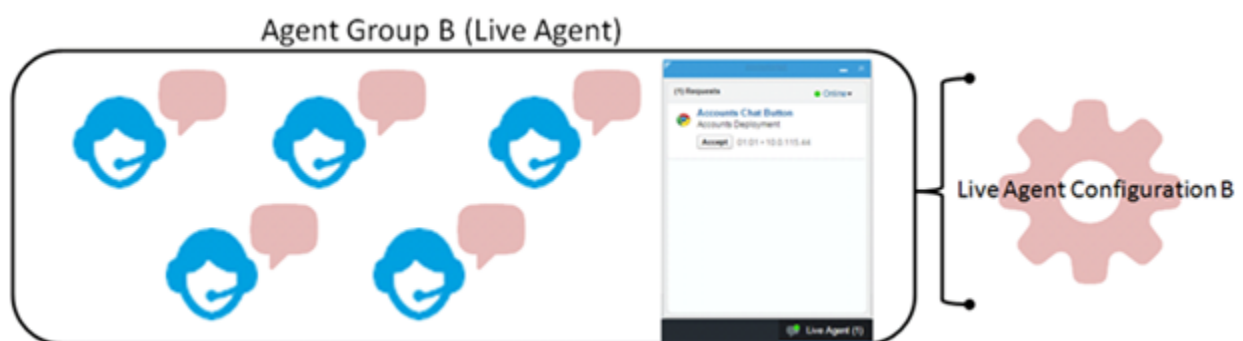

Enabling Omni-Channel with Your Existing Live Agent Implementation

So you've decided to take your customer service to the next level with Live Agent. That's great! If you're already supporting your customers with Live Agent chat, there are a few things you need to know before you start managing chat traffic with Live Agent in Omni-Channel.

As you know, Live Agent is powered by Live Agent Configurations, which control the behaviors and settings that are available to Live Agent users. Similarly, Omni-Channel uses Presence Configurations to control the behaviors and settings that are available to Omni-Channel users. You can integrate Live Agent with Omni-Channel. That way, chats are routed just like other work items, and your agents are able to accept or reject chat requests from the Omni-Channel widget. In that case, your Live Agent users also become Omni-Channel users, so your chat agents need to be associated with both a Live Agent Configuration and a Presence Configuration.

Luckily, Salesforce does some of the heavy lifting for you when you enable Omni-Channel with your current Live Agent implementation. For each Live Agent Configuration that you already have in your organization, Salesforce creates a corresponding Presence Configuration for you. If you have multiple Live Agent Configurations in place, Salesforce creates a different Presence Configuration for each Live Agent Configuration.

Let's say you already have Live Agent enabled, and you have 20 agents who handle chats. These agents are assigned to a Live Agent Configuration.

When you enable Omni-Channel, Salesforce creates a new Presence Configuration for you that corresponds to your Live Agent Configuration. Salesforce automatically assigns all 20 of your chat agents to the new Presence Configuration. That way, there's no disruption to your agents' workflow when you enable Omni-Channel, and they can start accepting chats through the Omni-Channel widget in the console right away.

Updating from the Omni-Channel Pilot to Omni-Channel GA with Your Live Agent Implementation

Does your organization use the Omni-Channel pilot to route chats from Live Agent? As you probably know, Omni-Channel is now generally available. We've changed the way Omni-Channel and Live Agent work together that streamline your implementation process. You should know a few details about these changes beforehand to make sure your update goes off without a hitch.

As you know, Live Agent is powered by Live Agent Configurations, which control the behaviors and settings that are available to Live Agent users. Similarly, Omni-Channel uses configurations called Presence Configurations that control the behaviors and settings that are available to Omni-Channel users. Even though Live Agent chats can be integrated into the Omni-Channel widget in the Salesforce console, configurations for Live Agent and Omni-Channel act mostly independently in Omni-Channel.

Now that Omni-Channel is GA, you probably notice a few changes in your organization and your Live Agent and Presence Configurations.

First, Salesforce automatically creates a new Presence Configuration that corresponds to each of your existing Live Agent Configurations. All of the users who are associated with the original Live Agent Configurations will be automatically assigned to the corresponding Presence Configuration, unless those users are already assigned to a Presence Configuration that you've previously created.

Say what? Let's break it down with an example.

 **Example:** BestTech uses both chat and email-generated cases to manage their support traffic. BestTech was giddy when they found out about Omni-Channel, because it allows their agents to manage customer traffic and cases in real time. The company signed up for the pilot right away.

Until BestTech knew how Omni-Channel would work in their call center, they split their chat agents into two groups. The first group, Agent Group A, managed chats with Live Agent integrated into Omni-Channel, so chat requests came in through the Omni-Channel widget. Agent Group B continued to manage chats with Live Agent only.

EDITIONS

Available in: Salesforce Classic

Omni-Channel is available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and **Developer** Edition organizations that were created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Agent Group A (Omni-Channel)

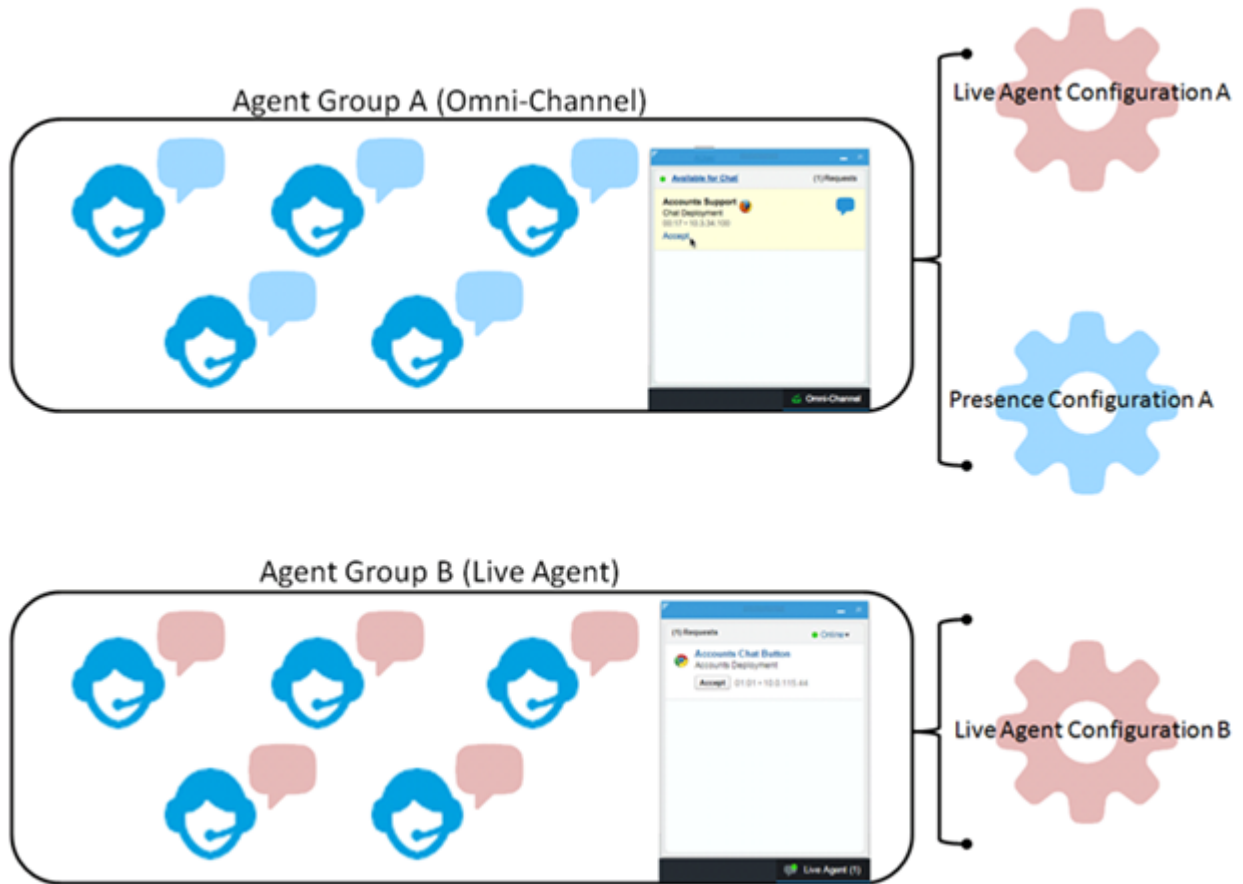

Agent Group B (Live Agent)

BestTech continued to manage their chat agents' settings with Live Agent Configurations. The agents who used Live Agent with Omni-Channel were assigned to Live Agent Configuration A. The chat agents who were still using only Live Agent were assigned to Live Agent Configuration B.

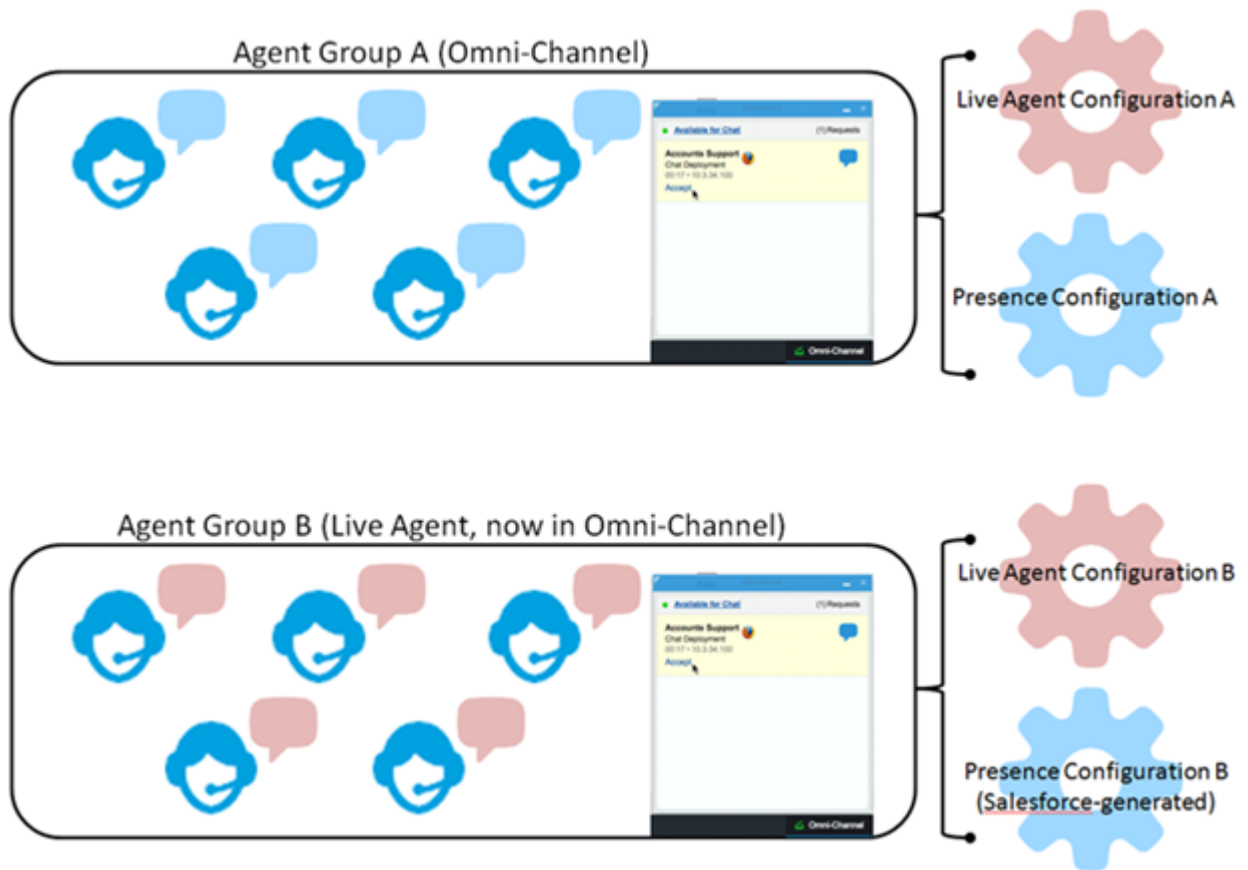

In addition, BestTech had to create a Presence Configuration for Agent Group A, called Presence Configuration A, to manage those agents' Omni-Channel settings. All the agents from Agent Group A were assigned to Presence Configuration A.

BestTech was very happy with their integrated Live Agent and Omni-Channel implementation, so they decided to enable Omni-Channel for their entire organization when the product went GA.

Because the agents in Agent Group A were already assigned to an existing Presence Configuration, Salesforce didn't change any configurations related to those agents. They remained assigned to Live Agent Configuration A and Presence Configuration A. They continued to manage chats with the Omni-Channel widget.

However, since the agents in Agent Group B weren't yet assigned to a Presence Configuration, Salesforce automatically created a new Presence Configuration—Presence Configuration B—and assigned all the agents in Agent Group B to it. That way, the agents in that group could continue to manage their chats without disruption after the upgrade to the newest version of Omni-Channel. After the upgrade, chats were routed to the Omni-Channel widget, which Agent Group B could then access in the console.

Supported Objects for Omni-Channel

Omni-Channel turbocharges your agents' productivity by assigning records to them in real time. But which objects and records does Omni-Channel support?

Omni-Channel currently supports routing for the following objects and records.

- Cases
- Chats
- SOS video calls
- Knowledge articles
- Social posts
- Orders
- Leads
- Custom objects

EDITIONS

Available in: Salesforce Classic

Omni-Channel is available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Fields for Agent Work Records

Every time an object is routed to an agent through Omni-Channel, Salesforce creates an Agent Work record that logs information about the work assignment and how it's routed through Omni-Channel. Agent Work records contain fields that help you track information about the assignments your agents are working on. If the same work item is routed multiple times, that work item is associated with multiple Agent Work records.

An Agent Work record has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields might not be visible or editable.

Field	Definition
Accept Date	The date and time that the work item was accepted by an agent.
Agent Capacity when Declined	The amount of an agent's capacity that was available when the agent declined the work item.
Agent Work ID	The Salesforce ID of the Agent Work record.
Assign Date	The date and time that the work item was assigned to an agent and pushed to the agent's Omni-Channel widget.
Close Date	The date and time that the agent closed the console tab associated with the work item, setting the Agent Work record's status to "Closed."
Created By	The name of the agent who accepted the work item.
Created Date	The date that the work item was created.
Decline Date	The date that an agent declined the work item.
Last Modified Date	The date the work item was last modified.
Name	The unique, Salesforce-generated number of the Agent Work record.
Percentage of Capacity	The percentage of capacity that the work item consumes of the agent's total, possible capacity.
Queue	The Salesforce queue from which the work item was routed.
Request Date	The date and time that the Salesforce object was assigned to the queue, creating the associated work item.
Service Channel	The Service Channel that's associated with the work item.
Speed to Answer	The amount of time in seconds between the time the work item was created (the Request Date) and the time the work item was accepted by an agent (the Accept Date).
Status	The status of the Agent Work record—including, "Assigned," "Opened," "Closed," or "Declined."
Units of Capacity	The number of units of an agent's capacity that the work item consumes of the agent's total, possible capacity.
User	The name of the agent to whom the work item was routed.

Field	Definition
Work Item	The name of the work item that's associated with the Agent Work record—for example, "Case 123456."

Fields for User Presence Records

Every time agents change their Presence Statuses in Omni-Channel, Salesforce creates a User Presence record to log all of the agents' activities while they're signed logged in with that status. User Presence records contain fields that help you track information about your agents' availability.

A User Service Presence record has the following fields, listed in alphabetical order. Depending on your field-level security settings, some fields might not be visible or editable.

Field	Definition
At Capacity Duration	The amount of time in seconds that the agent was working at 100% of the agent's capacity, as indicated in the agent's Presence Configuration.
Configured Capacity	The agent's overall capacity, as indicated in the agent's Presence Configuration.
Created By	The name of the agent who set the Presence Status in Omni-Channel.
Created Date	The date when the User Presence record was created.
Idle Duration	The amount of time in seconds that the agent was assigned no work items.
Is Away	Indicates whether the agent's status is a "busy" status.
Is Current Status	Indicates whether the agent's Presence Status in the Service Presence Status field is the agent's current Presence Status.
Last Modified Date	The date the User Presence record was last modified.
Service Presence Status	The API name of the Presence Status the agent used to log in to Omni-Channel.
Status Duration	The amount of time in seconds that the agent's status was set to the Presence Status indicated by the Status Name field.
Status End Date	The date and time that the agent logged out of Omni-Channel or changed to another Presence Status.
Status Start Date	The date and time that the agent set the Presence Status.
User	The name of the agent who is signed in to Omni-Channel.
User Presence ID	The autogenerated Salesforce ID of the User Presence record.
Alias	The agent's custom name.
Username	The agent's Salesforce username.

Field	Definition
Status Name	The name of the Presence Status the agents used to log in to Omni-Channel.

How Does Omni-Channel Routing Work?

Do data models make your heart skip a beat? Want to understand the ins and outs of how Omni-Channel routes work items to your agents? Then we have a treat for you. Omni-Channel pushes work items to the right agent at the right time so that your support team can efficiently help customers with their problems. But how does routing work under the hood? Let's dive in.

Omni-Channel routes work through two separate processes.

- First, when a new work item is assigned to an Omni-Channel queue, Omni-Channel attempts to route it to an agent. Omni-Channel routes work items by the priority of the queue that they're assigned to, so the most important work items are pushed to agents first. Next, items are routed based on how long they've been sitting in the queue. The oldest work items are pushed to agents before more recent ones. (We'll get into the details of how that happens in a minute.)
- Second, when an agent's ability to receive work changes (perhaps they come back from "away" status, or they finish another work item), Omni-Channel tries to find a work item that can be routed to that agent.

EDITIONS

Available in: **Salesforce Classic**

Omni-Channel is available in: **Enterprise, Performance, Unlimited, and Developer Editions**

Routing New Work Items

When a work item is created, it gets assigned to a queue. If that queue is associated with a Routing Configuration, it's added to a list of items that are still waiting to be routed to agents.

Then Omni-Channel determines which agents are available and how much work each agent is currently working on. This information comes from the `UserServicePresence` API object, which tracks an agent's current capacity for work items.

Routing Pending Work Items

When a new work item is added to the list of pending items, Omni-Channel determines whether it can immediately route the work item to an agent.

First, we identify if any agents are online with a Presence Status that's linked to the correct Service Channel. Let's say your organization receives a new case that's assigned to an Omni-Channel queue. Omni-Channel determines if there's a Service Channel for cases. Then we check which agents are online with a status that lets them receive new cases.

Scenario	What Happens
No agents are available.	If there isn't an agent online who has the right status, we keep our work item in the list of items that need to be assigned to an agent.
Agents are available, but don't have capacity for new work.	If there are one or more agents who are available, we check to see if any of those agents have the capacity to take on a new work item. If there are no agents with enough capacity for more work, we leave the work item in the list.

Scenario	What Happens
Agents are available and have capacity for more work.	<p>If there are agents that 1) are available and 2) have capacity to work on the item, we check which agent is going to be the proud parent of the work item based on your organization's routing settings.</p> <p>If your routing configuration uses the Least Active routing model, we look for the agent who currently has the least amount of work compared to other agents who could take on the work item. We then route the work item to that agent.</p> <p>If your routing configuration uses the Most Available routing model, we look for the agent who has the largest gap between the maximum amount of work that they can handle and the amount of work that they are working on. We then route the work item to that agent.</p> <p>But what if there's a tie between two or more agents? In that case, to the agent who has been waiting the longest amount of time for a new work item. After all, we wouldn't want anyone on our support staff getting lazy.</p>

When an Agent's Ability to Receive Work Changes

When an agent logs in to Omni-Channel, finishes a work item, or changes status, Omni-Channel checks to see if there is any work that those agents can take on.

Scenario	What Happens
The agent is away.	We move on with our lives without performing any more checks.
The agent is available, but doesn't have capacity for work.	We quit while we're ahead.
The agent is available and has capacity for more work	<p>We look at the list of work items that are waiting to be routed to an agent. We check to see if the agent is qualified to work on any of the objects, based on how much of the agent's capacity the objects will take up, and the service channel that's associated with the agent's status. For example, if the agent is online with a status that makes them available for cases, we check to see if there are any cases in our list.</p> <p>If the list has work items that the agent is qualified to work on, the item with the highest priority is routed to the agent. If two or more items have the same priority, the oldest one is routed.</p>

Rerouting a Work Item

Sometimes an agent declines a work item or becomes unavailable before the agent can start working on it. In that case, the work item is rerouted until it finds a safe and loving home in the arms of a capable, qualified agent.

First, Salesforce automatically changes the owner of the work item to the queue from which the object was originally routed. We then try to route the work item to a different agent (Agent B) than the agent who declined it (Agent A). However, the work item can be routed

to Agent A again if Agent A changes his or her status, or if we attempted to route the work item to Agent B at least once. We do this until our work item finds a safe and loving home in the arms of a capable, qualified agent.

And our agents, their work items, and your customers, live happily ever after.

Set Up SOS Video Chat and Screen-Sharing

Want to connect with your customers in a whole new way? SOS is the Service Cloud's mobile support solution. With SOS, you can add a help button to your native iOS or Android mobile application so your customers can connect with agents over a one-way video and two-way audio chat.

Gone are the days when your customers had to connect with a nameless, faceless agent over the phone. With one click, your customers can video chat with agents who provide personalized, in-app guidance with screen-sharing and annotations.

EDITIONS

Available in: Salesforce Classic

SOS is available for an additional cost in:
Enterprise, Performance, Unlimited, and Developer Editions

SOS is integrated into the Salesforce console for the Service Cloud. Your agents can access cases, account records, and customer information quickly and easily during their video calls. Agents can also draw on customers' screens during an SOS session, giving your customers in-app guidance to solve their problems. Your customers get a comprehensive, personal support experience, and your agents have the information they need in the console to solve customer issues.

Even better, SOS is fully integrated into Omni-Channel, the Service Cloud's routing engine. Use Omni-Channel to customize how work items—including SOS video calls—are routed to your agents. Route SOS calls to the most available, capable agents in your organization in real time.—no third-party routing engine required!

For more information on integrating SOS into your mobile applications, see the *SOS iOS SDK*.

Before you set up SOS, [enable Omni-Channel in your organization](#).

IN THIS SECTION:

1. [Create an SOS Presence Status](#)

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Create a presence status that lets your agents indicate that they're online and available to receive SOS calls.

2. [Give Users Access to SOS Presence Statuses with Permission Sets](#)

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Give SOS agents access to the SOS presence status so they can start receiving SOS calls.

3. [Give Users Access to Your SOS Presence Statuses with Profiles](#)

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Give SOS agents access to the SOS presence status so they can start receiving SOS calls.

4. [Create an SOS Routing Configuration](#)

Routing configurations determine how work items are routed to agents. They let you prioritize the relative importance and size of work items from your queues. That way, the most important work items are handled accordingly, and work is evenly distributed to your agents. Create an SOS routing configuration to determine how SOS calls are dispersed to your agents.

5. [Create an SOS Queue](#)

Queues are a classic element of Salesforce that help your teams manage leads, cases, service contracts, and custom objects. Omni-Channel supercharges queues to route work items to agents in real time. Create an SOS queue to funnel SOS calls to SOS agents. We'll associate the SOS queue with the SOS routing configuration we created earlier.

6. [Update Your Salesforce Console Settings](#)

After you get SOS all set up for your organization, it's time to a few settings in your Salesforce console so that your agents can start receiving work.

7. [Create an SOS Deployment](#)

Create an SOS deployment to integrate your SOS settings from Salesforce into your mobile application.

Create an SOS Presence Status

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Create a presence status that lets your agents indicate that they're online and available to receive SOS calls.

A presence status can be associated with one or more channels of work items. Associate the SOS presence status with the SOS service channel. That way, your agents can receive SOS calls when they're signed in with the SOS presence status.

1. From Setup, enter *Presence* in the *Quick Find* box, select **Presence Statuses**, then click **New**.
2. Name your status.
Let's call our status "Available for SOS." A version of that name becomes the Developer Name automatically.
3. In the Status Options section, select **Online**.
4. In the Service Channels section, add SOS to the Selected Channel list.
5. Click **Save**.

Give Users Access to SOS Presence Statuses with Permission Sets

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Give SOS agents access to the SOS presence status so they can start receiving SOS calls.

Alternatively, you can give users access to presence statuses through profiles.

1. From Setup, enter *Permission Sets* in the *Quick Find* box, then select **Permission Sets**.
2. Click the name of the permission set that contains your SOS agents.
3. Click **Service Presence Statuses Access**.
4. Click **Edit**.
5. Select the SOS presence status that we created earlier, "Available for SOS."
6. Click **Save**.

- "Manage Profiles and Permission Sets"

Give Users Access to Your SOS Presence Statuses with Profiles

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Give SOS agents access to the SOS presence status so they can start receiving SOS calls.

Alternatively, you can give users access to presence statuses through permission sets.

1. From Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles**.
2. Click the name of the profile that contains your SOS agents.
Don't click **Edit** next to the profile name. If you do, you won't see the correct page section where you can enable statuses.
3. In the Enabled Service Presence Status Access section, click **Edit**.
4. Select your SOS presence status, "Available for SOS," to associate it with the profile.
5. Click **Save**.

Create an SOS Routing Configurations

Routing configurations determine how work items are routed to agents. They let you prioritize the relative importance and size of work items from your queues. That way, the most important work items are handled accordingly, and work is evenly distributed to your agents. Create an SOS routing configuration to determine how SOS calls are dispersed to your agents.

After you create this configuration, we'll create an SOS queue for your SOS calls. Then, we'll associate our routing configuration with our SOS queue so that your agents can receive calls after we get SOS set up.

1. From Setup, enter *Routing* in the **Quick Find** box, select **Routing Configurations**, then click **New**.
2. Name your routing configuration.
Let's call our routing configuration "SOS Routing Configuration." A version of that name becomes the Developer Name automatically.
3. Set your routing priority.
If SOS calls are the most important or the only work items your agents handle, set your routing priority to *1*. That priority ensures that SOS calls are routed to your agents before other types of work items.
4. Select your [routing model](#).
5. Set the value of the **Percentage of Capacity** field to *100*.
Agents can accept only one SOS call at a time, so SOS calls take 100% of an agent's capacity.
6. Click **Save**.

Create an SOS Queue

Queues are a classic element of Salesforce that help your teams manage leads, cases, service contracts, and custom objects. Omni-Channel supercharges queues to route work items to agents in real time. Create an SOS queue to funnel SOS calls to SOS agents. We'll associate the SOS queue with the SOS routing configuration we created earlier.

The work items in the SOS queue are assigned the priority that you specified in the SOS routing configuration that you created earlier.

For routing to work correctly, assign each of your agents to a queue from which they'll be receiving work items.

For more information about queues, see "Queues Overview" in the Salesforce Help.

1. From Setup, enter *Queues* in the *Quick Find* box, then select **Queues**.
2. Click **New**.
3. In the *Label* field, name your queue.
Let's call our queue "SOS Queue." A version of this name becomes the *Queue Name* automatically.
4. In the *Routing Configuration* field, look up and select the routing configuration that you created earlier, "SOS Routing Configuration."
5. In the Supported Objects section, add *SOS Session* to the list of selected objects.
6. In the Queue Members section, add each of the agents to whom you want to route SOS calls to the *Selected Users* field.
7. Click **Save**.

Update Your Salesforce Console Settings

After you get SOS all set up for your organization, it's time to a few settings in your Salesforce console so that your agents can start receiving work.

You need to add the Omni-Channel and SOS widgets to your console, as well as whitelist the URL *salesforceliveagent.com*.

The SOS and Omni-Channel widgets appear in the footer of the Salesforce console. From the Omni-Channel widget, agents can change their presence status and triage their incoming work assignments, including SOS calls. When an agent accepts an SOS call, the call opens in the SOS widget, where agents can view the customer's screen.

You also need to whitelist the URL *salesforceliveagent.com* to make sure your calls aren't blocked by your company's firewalls. This ensures that all of your customers' SOS calls make it safely to your agents.

1. From Setup, enter *Apps* in the *Quick Find* box, then select **Apps**.
2. Click **Edit** next to the Salesforce console app that you want to add the Omni-Channel and SOS widgets to.
3. In the Choose Console Components section, add Omni-Channel and SOS to your list of selected items.
4. In the *Whitelist Domain* field, add *salesforceliveagent.com* to the list of whitelisted domains.
5. Click **Save**.

Create an SOS Deployment

Create an SOS deployment to integrate your SOS settings from Salesforce into your mobile application.

When you create an SOS deployment, your deployment is assigned a unique ID number. Your mobile developers use this deployment ID to integrate your SOS settings in Salesforce into SOS in your mobile application.

1. From Setup, enter *SOS Deployments* in the **Quick Find** box, then select **SOS Deployments**.
2. Click **New**.
3. Choose the settings for your deployment.
4. Click **Save**.
5. Copy the SOS Deployment ID from the detail page and send it to your mobile developers. To integrate the SOS deployment with a mobile application, mobile developers use the *SOS iOS SDK*.

IN THIS SECTION:

[SOS Deployment Settings](#)

SOS deployment settings control how your Salesforce SOS settings integrate into your mobile application.

SOS Deployment Settings

SOS deployment settings control how your Salesforce SOS settings integrate into your mobile application.

Apply settings when you create or edit an SOS deployment.

Setting	What It Does
SOS Deployment Name	Names the deployment. This deployment name, or a version of it, automatically becomes the API Name .
API Name	Sets the API name for the Live Agent deployment.
Activate Deployment	Activates the deployment so customers can request SOS calls when SOS is deployed in your mobile application.
Voice-Only Mode	Disables video functionality and allows agents and customers to communicate with audio only.
Enable Backward-Facing Camera	Allows the customer to relay video from the customer's backward-facing mobile camera to agents.

Setting	What It Does
Queue	Determines the queue that you want to route incoming SOS calls to.
Session Recording Enabled	Automatically records SOS sessions.
Session Recording Storage Provider	Determines the data storage provider that stores your SOS session recordings. Available only if session recording is enabled.
Session Recording Storage Provider API Key	The ID of the access key that's associated with your Amazon S3 storage account. Available only if session recording is enabled.
Session Recording Storage Provider API Secret	The ID of the access secret that's associated with your Amazon S3 storage account. Available only if session recording is enabled.
Session Recording Storage Provider Bucket	The name of the Amazon S3 bucket where you want to store your SOS session recordings. Available only if session recording is enabled.

Setting Up the Support Agent Experience

Setting Up a Unified Help Desk

Agent Console in the Console Tab

Setting up the Agent Console

Get started with the Agent console quickly.

 **Tip:** The Salesforce console improves the Agent console by providing you with more options and more advanced technologies. See [Salesforce Console](#).

You can quickly set up the Agent console so that users have all the information they need on one screen when working with Salesforce. To set up the Agent console:

1. [Create console layouts](#) to define what objects are available to users in the console's list view frame.
2. [Choose the related objects](#) to show in the mini view.
3. [Define mini page layouts](#) to customize the fields and related lists of the objects that display in the console's mini view.
4. [Assign profiles](#) to a console layout to provide users access to specific objects in the console's list view.
5. Add the Agent console to custom apps so that users can access the console from specific apps.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To set up the Agent console:

- "Customize Application"

 **Note:** You can't add the Agent console to partner portals or customer portals.

Visualforce pages might not display properly in the Agent console, as there is no cross-domain communication between Salesforce and Visualforce domains.

SEE ALSO:

[Tip sheet: Using the Console](#)

Creating Agent Console Layouts

To create a layout for the Agent console:

1. From Setup, enter *Console Layouts* in the **Quick Find** box, then select **Console Layouts**.
2. Click **New** and optionally choose an existing layout to clone.
3. Enter a name for the new layout.
4. Click **Save**.
5. Click **Edit** in the Selected List Views section.
6. To add or remove objects to the layout, select an object, and click the **Add** or **Remove** arrow.

To change the order of the objects as they will appear in the console's list view frame, select an object in the Selected List box, and click the **Up** or **Down** arrow.

A user can only view objects in the console's list view frame if those objects are added to the console layout to which their profile is assigned.

7. Click **Save**.
8. Next, [choose the related objects](#) to show in the mini view of the console.

Managing Console Layouts for the Agent Console

Console layouts define what objects are available to users in the Agent console's list view frame. For example, if you want users to see list views of cases and contacts in the console, then you would add both cases and contacts to a console layout, and then assign that console layout to the appropriate user profiles. A user can only view objects in the console's list view frame if those objects are added to the console layout to which their profile is assigned.

From the console layouts list page, accessed in Setup by entering *Console Layouts* in the **Quick Find** box, then selecting **Console Layouts**, you can:

- Click **New** to [create layouts](#).
- Click **Edit** to [modify a layout](#).
- Click **Del** to [delete a layout](#).
- Click **Console Layout Assignment** to [assign console layouts to profiles](#).

SEE ALSO:

[Setting up the Agent Console](#)

Choose Related Objects for the Agent Console's Mini View

While you can choose which related objects appear in the Agent console's mini view, you can only choose objects with a lookup or master-detail relationship on the primary object. For example, from the cases object, you can choose account and contact because cases have account and contact lookup fields.

1. From the object management settings for the object whose page layout you want to edit, go to Page Layouts.

The standard or custom object you choose in this step represents the record in the detail view of the console, and the related objects in the mini view will be records associated with it.

2. Next to a page layout name, click **Edit**.
3. In the page layout header, click **Mini Console View**.
4. To select which related objects will be displayed in the mini view, select a field name, and click **Add** or **Remove**. You can select objects only if they are defined as lookup relationships and those lookup fields are included on the page layout. To change the order of the related objects in the mini view, select a field name in Selected Relationship Fields, and click **Up** or **Down**. Click **Save** when finished.
5. Click **Save**.
6. Next, [define mini page layouts](#) to specify the fields and related lists to show for the related objects in the mini view.

 **Tip:** The fewer related objects you add to the Agent console's mini view, the easier it is for users to read the information displayed. The console can also process data faster when fewer related objects are added to the mini view.

SEE ALSO:

[Setting up the Agent Console](#)

[Find Object Management Settings](#)

Defining Mini Page Layouts for the Agent Console

You can define mini page layouts for the records that appear in the mini view of the Agent console, hover details, and event overlays. A mini page layout contains a subset of the items in an existing page layout. Mini page layouts inherit record type and profile associations, related lists, fields, and field access settings from their associated page layout. The visible fields and related lists of the mini page layout can be further customized, but the other items inherited from the associated page layout cannot be changed on the mini page layout itself.

The event mini page layout is used for the event detail and edit overlays, not the Console tab. Related lists on mini page layouts only display in the Console tab, not hover details.

1. From the object management settings for the object whose page layout you want to edit, go to Page Layouts.
2. Next to a page layout name, click **Edit**.
3. In the page layout header, click **Mini Page Layout**.
4. Select which fields and related lists will be displayed for this type of record in the mini view. For each related list you select, choose which fields to display in that related list.
 - You can select all of the available fields and up to five related lists to display in the console; however, it is recommended that you only select a few so that users do not have to scroll to find information.
 - Selected fields and related lists display in the console even when they do not contain content.
 - Fields marked `Always Displayed` or `Always on Layout` on page layouts are automatically included on the mini page layout and cannot be removed unless they are removed from the page layout.
 - Field properties on the page layout determine field properties on the mini page layout. For example, if a field is read-only on the page layout, that same field will be read-only on the mini page layout. To change the field properties of fields on the mini page layout, you must change the field properties of fields on the page layout. Note that the console respects field-level security in organizations where it is available.
 - To add or remove fields, select a field name, and click **Add** or **Remove**. To change the order of the fields, select a field name in Selected, and click **Up** or **Down**. Click **Save** when finished.
 - The order of related lists on the page layout determines the order of related lists on the mini page layout. To change the order of related lists on the mini page layout, you must change the order of related lists on the page layout, then select the mini page layout and click **Save**.
5. Click **Save**.

[Setting up the Agent Console](#)

[Find Object Management Settings](#)

Assign Layouts for the Agent Console

After you [create console layouts](#), assign which layouts users see in the Agent console on the console tab. A user's profile determines which console layout is seen.

To assign console layouts:

1. From Setup, enter *Console Layouts* in the **Quick Find** box, then select **Console Layouts**.
2. Click **Console Layout Assignment**.
3. Select a console layout to assign to a profile via the drop-down list.
4. Select the Console tab visibility settings for a profile via the drop-down list. You can only select Console tab visibility settings for profiles assigned to a console layout.
5. Click **Save**.

 **Note:** Enterprise, Unlimited, Performance, and Developer Edition users with the "Customize Application" permission can assign a console layout to a profile via the profile detail page. From Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles**, select a profile name, then click **Edit** in the Console Settings section.

Case Feed

Set Up Case Feed

Prerequisites and Basic Setup

Before you enable and customize Case Feed:

- Decide which actions and tools you need:
 - To use the Email action, [set up Email-to-Case](#).
 - To use the Portal action, set up [a customer portal](#), a partner portal, or [Chatter Answers](#).
 - To use the articles tool, [set up Salesforce Knowledge](#).
- [Review how cases are upgraded and know what to expect](#) when you enable Case Feed actions and feed items.

When you're ready, [enable Case Feed actions and feed items](#).

 **Note:** In organizations created prior to Winter '14, you also need to:

- Enable Chatter and actions in the publisher.
- Enable feed tracking on cases. On the feed tracking page, turn off tracking for the Status field. This prevents duplicate feed items when agents update a case's status using the Change Status action.

Customizing Page Layouts

Choose what you want to appear on Case Feed page layouts based on your company's needs and how your support agents work.

- [Create layouts for case detail and close case pages](#) and [highlights panels](#).
- [Create layouts for feed view pages](#) to specify which actions, fields, and tools agents see when they're working with cases.

Giving Users Access

The easiest way to give users access to Case Feed is to assign them to profiles that use the feed-based case page layouts you create.

In organizations created prior to Spring '14, you may also be able to give users access in two other ways:

- [By creating permission sets](#) and [assigning them to users](#)
- [Through custom profiles](#)

Setting up Case Feed: Adding More Functionality

Follow these optional steps to add more functionality to Case Feed.

- To let agents include short, pre-written messages in their emails, [set up Quick Text](#) and [create Quick Text messages](#).
- To give agents the option of emailing customers to let them know when questions they've posted to a portal have been answered, [enable portal email notifications](#).
- To let agents save email messages as drafts before sending them, and to make it possible to create approval actions for email, [enable email drafts](#).
- Create text, HTML, or Visualforce email templates to help agents save time and increase consistency.

[Enable Actions in the Chatter Publisher](#)

[Assign Page Layouts from a Customize Page Layout or Record Type Page](#)

Enable Case Feed Actions and Feed Items

Enabling Case Feed actions and feed items gives your users access to some standard actions they'll need when working with cases, such as Email and Change Status, and to feed items related to those actions.

 **Note:** In Salesforce organizations created after the Winter '14 release, Case Feed actions and feed items are automatically enabled.

1. From Setup, enter *Support Settings* in the **Quick Find** box, then select **Support Settings**.
2. Click **Edit**.
3. Select **Enable Case Feed Actions and Feed Items**.
4. Click **Save**.

Once you enable Case Feed actions and feed items, your cases are upgraded to the new user interface automatically. We recommend waiting until this upgrade process is finished before giving users access to Case Feed.

Create Permission Sets for Case Feed

After you enable Case Feed for your organization, create a permission set to give users access to it.

1. Create a permission set for Case Feed.

[Walk Through It](#)

2. On the Permission Set page, click **App Permissions**.
3. Select `Use Case Feed`. Optionally, select any other permissions you want to include in the set.
4. Click **Save**.

Tip: If you have an existing permission set, you can edit it to include the `Use Case Feed` permission.

SEE ALSO:

[Set Up Case Feed](#)

[Assign Case Feed to Users](#)

Assign Case Feed to Users

After you've enabled Case Feed in your organization and created a permission set that includes it, assign that permission set to users.

1. From Setup, enter `Users` in the `Quick Find` box, then select **Users**.
2. Select a user's name.
3. In the Permission Set Assignments list, click **Edit Assignments**.
4. Select the permission set you want in the `Available Permission Sets` list, and then click **Add**.
5. Click **Save**.

"Customize Application"

Give Users Access to Case Feed through Custom Profiles

Instead of giving users access to Case Feed through permission sets, you can create a custom profile that includes the `Use Case Feed` user permission.

1. Create a new profile.
2. On the Profile page, click **Edit**.
3. In General User Permissions, select `Use Case Feed`.
4. Click **Save**.
5. Assign users to the profile.

Example:

 **Note:** Case Feed is automatically enabled and assigned to all standard profiles in Salesforce organizations created after the Winter '14 release. To disable Case Feed on a profile, deselect `Use Case Feed`.

SEE ALSO:

[Set Up Case Feed](#)

Case Feed Upgrade Results

When you enable Case Feed for your organization, an upgrade process converts active cases to the new interface and creates feed items for activity on those cases.

During the upgrade process, users won't notice anything different. After the process is complete, users for whom you've enabled Case Feed see existing and new cases in the new interface, while users without Case Feed continue to see traditional cases.

Here's what happens when cases are upgraded to the new interface:

- The 5000 most recent, active cases in your organization are converted to the Case Feed interface. How long this takes varies depending on the number of cases being converted and the complexity of the data they contain. For example, cases with multiple email messages or other attachments may take longer to convert than other cases.
- Older cases are also upgraded if they have comments, emails, or logged calls that were added to the case within the date range that applies to the original 5000 converted cases. You can have up to 500 cases with current comments, up to 500 with current emails, and up to 500 with current logged calls for a total of 1500 additional converted cases.
- The following items are added to the feed for each case:
 - Up to 60 email messages.
 - Up to 60 private and public comments. These are converted from comments to Chatter posts during the upgrade.
 - Up to 60 logged calls. Some logged calls that were created before you upgraded to Case Feed may appear in the feed as tasks.
- The Case Feed interface is enabled for all new cases, giving users access to the publisher and feed.
- The Case Detail view becomes available, and contains additional information about the case, including items that remain in their current related lists.

You'll receive an email message once the upgrade process has finished.

Best Practices

- For the smoothest upgrade experience, we recommend enabling Case Feed in a full-copy sandbox organization before you enable it in your production organization. This helps you determine how long the case conversion process takes and lets you review some sample cases in the new user interface.
- After you enable Case Feed in your production organization, wait until the upgrade process has finished to give users access. We recommend first assigning Case Feed to a single user, who can review some of the converted cases to be sure the upgrade process was successful, and then making it available to other users.

SEE ALSO:

[Set Up Case Feed](#)

[Enable Case Feed Actions and Feed Items](#)

Enable Portal Reply Email Notifications in Case Feed

If your organization uses a portal or community, support agents can use the Community action in Case Feed to respond to customers. Enabling portal reply email notifications gives agents access to the `Send Email` option in the Community action.

1. From Setup, enter `Support Settings` in the `Quick Find` box, then select **Support Settings**.
2. Click **Edit**.
3. Select `Enable Case Comment Notification to Contacts`.
4. Select a template for email notifications.
5. Click **Save**.

Emails sent to external users include a link to the community. If the user receiving the email is a member of multiple active communities, the link goes to the oldest active community. If the user is already logged in to a community and clicks the link in the email, the link goes to that community. If the user is not a member of any community, the link goes to the internal organization. If the user is a member of a portal and a community, the link goes to the community.

AND

"Customize Application"

Highlight Externally Visible Feed Items in Case Feed

You can highlight feed items in Case Feed that are visible to external users. Now support agents can easily distinguish between feed items that are visible only to internal users and items that are visible to external users.

By default, Case Feed doesn't distinguish feed items according to who can see them.

You must enable both the `Enable Community Case Feed` and `Highlight Externally Visible Feed Items` settings for the highlighting to work properly.

When the `Enable Community Case Feed` and `Highlight Externally Visible Feed Items` settings are enabled, the following feed items are highlighted in the case feed:

- Public emails sent to or received from the email address for contact person on a case
- Public case comments
- All social posts (such as Facebook posts)
- Questions escalated from Communities
- Tasks that have the `All with Access` or `Public` settings
- Events that have the `All with Access` or `Public` settings
- Chatter posts that have the `All with Access` or `Public` settings

When only `Highlight Externally Visible Feed Items` is enabled, then the following feed items are highlighted in the case feed:

- Incoming and outgoing email feed items that are sent to, or received from, the email address for the contact person on a case

When only `Enable Community Case Feed` is enabled, then no feed items are highlighted.

This setting is only available for compact feed.

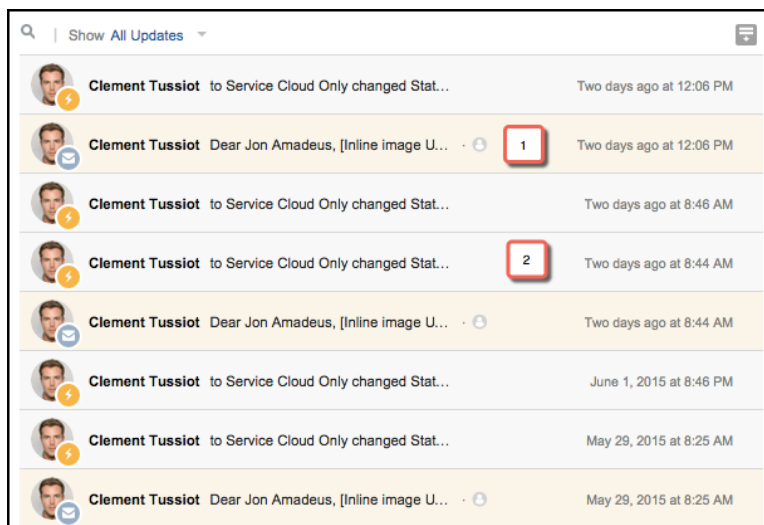

EDITIONS

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

- ""
- ""

1. Feed items that are highlighted in orange are visible to external users, such as customers.
 2. Feed items that are not highlighted are visible only to internal users, such as support agents.
1. Enable the `Highlight Externally Visible Feed Items` setting.
 - a. From your object management settings for cases, go to `Page Layouts`.
 - b. Select the feed-based page layout that you want to edit, and click **Edit**.

- c. Scroll to the Feed View settings and select `Highlight Externally Visible Feed Items`.
2. Enabled the `Enable Community Case Feed` setting.
 - a. From your object management settings for cases, go to Support Settings.
 - b. Select `Enable Community Case Feed`.

Enable Email Drafts in Case Feed

Draft emails let support agents who use Case Feed write and save messages without having to send them immediately. This option also makes it possible to implement approval processes so messages can be reviewed by supervisors or senior agents before they're sent to customers.

Before enabling draft emails, [set up Email-to-Case](#) and [Case Feed](#).

1. From Setup, enter `Support Settings` in the `Quick Find` box, then select **Support Settings**.
2. Click **Edit**.
3. Select `Enable Email Drafts`.
4. Click **Save**.

 **Note:** Changes to fields other than `To`, `From`, `CC`, `BCC`, and `Subject` in the Email action aren't saved when a message is saved as a draft. We recommend removing any additional fields from the Email action if you plan to use draft emails.

[Create Approval Processes for Email Drafts](#)

Add Custom Components to Case Feed

Use Visualforce pages as custom components in Case Feed to give support agents easy access to special tools or functionality while they're working with cases.

For example, you might create a map component that lets agents see where a customer is located, or a tool agents can use to look up the products related to cases they're working on. You can use any Visualforce page that includes the standard case controller as a custom component.

Once you've created a Visualforce page to use as a custom component, add it to the Case Feed layout.

1. How you access the Case Feed Settings page depends on what kind of page layout you're working with.
 - For a layout in the Case Page Layouts section, click **Edit**, and then click **Feed View** in the page layout editor.
 - For a layout in the Page Layouts for Case Feed Users section, click  and choose `Edit feed view`. (This section appears only for organizations created before Spring '14.)
2. In the Other Tools and Components section, click **+ Add a Visualforce page** and choose the page you want.

The width of the component is determined by the width of the column it's in. To make the component look best, we recommend setting the width of the Visualforce page to 100%.

3. Set the height of the component.
4. Choose where you want the component to appear on the page.

 **Tip:** Components in the right column are hidden when agents view the Case Detail page, so use the left column for any components you want to be accessible all the time.

SEE ALSO:

[Set Up Case Feed](#)

Add Custom Actions in Case Feed

Include custom actions in the Case Feed publisher to give support agents easy access to the additional tools and functionality they need when working with cases.

Actions in Case Feed let support agents perform tasks like emailing customers, writing case notes, and changing the status of a case. Using Visualforce pages, you can create custom actions that offer agents more functionality. For example, you might create a Map and Local Search action that lets agents look up the customer's location and find nearby service centers.

You can use any Visualforce page that uses the standard case controller as a custom action.

 **Note:** If you've opted to use the advanced page layout editor to configure the publisher for a Case Feed layout, see [Configure the Case Feed Publisher with the Enhanced Page Layout Editor](#) for instructions on adding actions.

1. From the object management settings for cases, go to Page Layouts.
2. How you access the Case Feed Settings page depends on what kind of page layout you're working with.
 - For a layout in the Case Page Layouts section, click **Edit**, and then click **Feed View** in the page layout editor.
 - For a layout in the Page Layouts for Case Feed Users section, click  and choose **Edit feed view**. (This section appears only for organizations created before Spring '14.)
3. Click **+ Add a Visualforce Page** in the list of custom actions.
4. Select the page you want to add as an action.
5. Specify the height of the action in pixels.
6. Click **Save**.

Create Custom Feed Filters for Case Feed

Custom feed filters help support agents focus on the items that are most relevant for them.

1. From Setup, enter *Cases* in the **Quick Find** box, then select **Feed Filters**.
2. Click **New**.
3. In the Feed Filter Information section, enter the filter label, name, and description.
4. In the Feed Filter Criteria section, define how to populate this filter. You can create more refined filters using the OR function.

Field	Description
Feed Item Type	Specifies the feed type to include in the filter. For example, the Created Record feed item type shows feed items about new records.
Related Object	Specifies the object associated with the selected feed item. The list includes all objects related to the Case object. The objects in the list vary depending on how your organization is set up. For example, if you selected Created Record as the feed item type, you might select Case as the related object. This filter then shows new Cases.
Visibility	Specifies whether to include a feed item in the filter based on the feed item's visibility. The visibility depends on the security and sharing settings for the related object. Visibility can include either All Users or Internal Users. For example, suppose that you selected Case Comment Feed as the feed item type and Internal Users as the visibility. This feed filter then shows case comments made by internal users.

5. Click **Save**.
6. After you define your custom feed filters, add the filters to the list of selected filters in the Feed Filter Options section of the page layout's Feed View settings.

Example: To create a filter that shows interactions with a customer, you could define a filter named Customer Interaction that uses the following criteria.

- Criterion 1: Case Comment feed item type with visibility set to All Users
- Criterion 2: Email Message feed item type with visibility set to All Users
- Criterion 3: Chatter post feed item type with visibility set to All Users

When an agent applies this filter, the case feed shows only Case Comment, Email Message, and Chatter feed items that are visible to both external and internal users. Everything else is filtered out.

Case Feed Page Layouts Overview

Customize the feed view, detail view, highlights panel, and close case page to specify the fields, tools, and functionality support agents see when they're working with cases.

There are four types of page layouts you can customize in Case Feed:

- Feed views, which users see when managing and interacting with cases.
- Detail views, which users see when they click **View Case Details**.
- Highlights panels, which appear at the top of both feeds and case detail pages.
- Close case views, which appear when users close cases from the case detail page.

From the object management settings for cases, you can create, edit, and assign all four types of layouts by going to Page Layouts.

SEE ALSO:

[Find Object Management Settings](#)

Customize the Highlights Panel in Case Feed

The highlights panel appears at the top of the feed detail views and shows the most important information about a case. Edit the highlights panel to include the fields that are most important for your support agents.

1. From the object management settings for cases, go to Page Layouts.
2. In Page Layouts for Case Feed users, click  next to a layout and choose **Edit detail view**.
3. Hover your mouse pointer over the Highlights Panel until the  icon appears, then click it.
4. On the Highlights Panel Properties page, click a box to edit the fields in it.
5. Use the drop-down list to choose the type of information to include in each field. To leave a field blank, choose **None**. You can't move or delete **Case Number** or **Created Date**.
6. Click **OK**.

Create and Edit Feed Layouts in Case Feed

Feed view page layouts determine which actions, fields, and tools users see when they're working with cases in Case Feed. You can create different layouts and assign them to different user profiles. For example, you might have one layout for agents and another for supervisors.

 **Note:** Before creating a new feed view page layout, you need to create a new case detail page layout.

1. From the object management settings for cases, go to Page Layouts.
2. How you access the Case Feed Settings page depends on what kind of page layout you're working with.
 - For a layout in the Case Page Layouts section, click **Edit**, and then click **Feed View** in the page layout editor.
 - For a layout in the Page Layouts for Case Feed Users section, click  and choose **Edit feed view**. (This section appears only for organizations created before Spring '14.)

If you've already opted to use the advanced page layout editor to configure the publisher for a layout, choose **Edit detail view** to add, change, or remove actions.
3. [Choose the tools, components, and options for your feed view page.](#)
4. Click **Save**.

Once you've created or edited feed view page layouts, assign them to profiles.

USER PERMISSIONS

To create and edit page layouts:

- "Customize Application"

To assign page layouts:

- "Manage Users"

Option	Use It to...	Notes
Enable Compact Feed View in the Console	Update the overall look and feel of the feed view and compress feed items when agents view cases in Salesforce console tabs or subtabs.	Compact feed lets agents see more information about a case with much less scrolling than they need to do when working with cases in the standard feed view. This option is only available if you have Actions in the Publisher and Use Page Layout Editor to Configure Actions enabled.
Highlight Externally Visible Feed Items	Indicate which feed items are visible to external users by changing the background color of the feed item to orange.	This option is only available for compact feed. When this setting and the Enable Community Case Feed setting are both enabled, the following feed items are highlighted in the case feed: <ul style="list-style-type: none"> • Public emails sent to or received from the email address for contact person on a case • Public case comments • All social posts • Questions escalated from Communities • Tasks that have the All with Access/Public setting • Events that have the All with Access/Public setting • Chatter posts that have the All with Access/Public setting See also Set Up the Community Case Feed .

Publisher Options

Option	Use It to...	Notes
Use Page Layout Editor to Configure Actions	Make the advanced page layout editor the default for choosing the actions that appear in the Case Feed publisher.	This setting appears only if your organization has Actions in the Publisher enabled.
Automatically Collapse Publisher	Automatically reduce the height of the publisher when it's not in use, showing more of the feed below. The publisher expands to its normal height as soon as an agent clicks inside it.	This setting is automatically enabled in organizations created after Summer '14 and is only available if you have Actions in the Publisher and Use Page Layout Editor to Configure Actions enabled.

Choosing and Configuring Actions

Option	Use It to...	Notes
Menu Placement	Choose whether you want the publisher menu to appear in the center column or the left column.	This setting appears only if you <i>haven't</i> selected Use Page Layout Editor to Configure Actions .

Option	Use It to...	Notes
Custom Actions	Select up to 10 custom Visualforce pages to add to the publisher as actions. Pages must use the standard case controller.	This setting appears only if you <i>haven't</i> selected Use Page Layout Editor to Configure Actions.
Select Action	Select actions to include in the Case Feed publisher, and choose the order in which the actions appear.	This setting appears only if you <i>haven't</i> selected Use Page Layout Editor to Configure Actions.

Log a Call Action

Option	Use It to...	Notes
Select Action Fields	Select fields to include in the Log a Call action.	Log a Call automatically includes the Customer Name field. You can't include rich text area fields in Case Feed actions.

Change Status Action

Option	Use It to...	Notes
Select Action Fields	Select fields to include in the Change Status action.	The Change Status action automatically includes the Current Status and Change to fields. If you add the Status field to the action, it will automatically replace these two fields. You can't include rich text area fields in Case Feed actions.

Email Action

Option	Use It to...	Notes
Select Action Fields	Select fields to include in the Email action.	Any fields you add appear below the email body field in the action. You can't include rich text area fields in Case Feed actions.
Select Header Fields	Select fields to include in the header of the Email action.	The Email header automatically includes the From, To, Bcc, and Subject fields.
Select Email Tools	Choose the tools to make available to agents when they use the Email action.	The Templates, File Attachments, and Address Lookup Buttons tools are included automatically.

Option	Use It to...	Notes
Enable Rich Text Editor	Make the rich text editor available to agents so they can include formatting, such as bolded or underlined text, bulleted or numbered lists, links, and inline images in their email messages.	Agents can click  in the editor's menu bar to switch to plain text mode.
Require Use of Rich Text Editor	Prevent agents from switching to plain text mode when they write email.	This setting helps ensure that agents write and send only formatted emails, not plain text messages.
Specify From Address(es)	Automatically include specific email addresses in the From field.	To use multiple addresses, separate them with commas. They'll appear as a picklist in the Email action header. You can use only Salesforce-validated email addresses as From addresses.
Allow Collapsible Body Field	Automatically collapse the email body field until an agent clicks inside it. Having the body collapsed by default makes it easier for agents to see more of what's below the email action on the page.	Once an agent expands the email body, it will stay expanded until the page is reloaded, even if the agent clicks on other actions or elsewhere on the page.
Allow Collapsible Email Header	Automatically collapse the email header until an agent clicks  to expand it.	With this setting enabled, agents can expand and collapse the header as needed while they work.
Exclude Email Thread from Drafts	Exclude the previous emails in the thread when composing emails in the feed.	This prevents the previous emails in the thread from being incorporated in the outbound email message.
Replace Send Email Button with	Choose a button to replace the standard Send Email button. This can be useful if you want to label the button something else, change how it looks, or include custom functionality, such as triggering a workflow when an agent sends a message.	You can use any custom button you've created for cases, except those that have s-controls as content sources.

Case Feed Tools

Option	Use It to...	Notes
Select Case Feed Tools	Choose which tools to make available to agents when they use Case Feed.	The Articles tool is included by default, but it won't appear on the Case Feed page unless your organization uses Salesforce Knowledge.

Articles Tool

Option	Use It to...	Notes
Enable Email PDF Attachments	Give agents the ability to attach Knowledge articles to email messages as PDFs.	This setting appears only if your organization uses Salesforce Knowledge. If you use Knowledge and <i>don't</i> enable this setting, agents will be able to attach articles only to cases, not to email messages.
Use Case Feed Articles Tool in the Console	Replace the Knowledge sidebar in the Salesforce console with the Case Feed articles tool.	This setting appears only if your organization uses Salesforce Knowledge. If you use Knowledge and <i>don't</i> enable this setting, we recommend hiding either the Case Feed articles tool or the Knowledge sidebar in the Salesforce console so agents see only one of those tools when they're working with cases in the console.

Other Tools and Components

Option	Use It to...	Notes
Custom Components	Select up to 10 custom Visualforce pages to add as components. You can use as a custom component any Visualforce page that uses the standard case controller.	Once you add a Visualforce page, you can specify its height and choose where on the page you want it to appear.
Choose Placement	Specify where on the page you want tools and components like custom buttons, custom links, and the followers list to appear. You can also choose to hide anything your agents don't need access to.	<p>Custom links and buttons are only available as right sidebar components on the feed view page layout if you've added them to the related case detail page layout.</p> <p>The Milestone Tracker is available only if you've enabled entitlement management in your organization.</p> <p>The Topics list is available only if you've enabled topics on cases.</p>

Filter Options

Option	Use It to...	Notes
Filters Appear	Specify where and how feed filters appears: <ul style="list-style-type: none"> As a fixed list in the left column As a floating list in the left column As a drop-down list in the center column 	Choose "As a floating list in the left column" if you want the feed filters list to remain visible as users scroll down the page. This can be useful with long feeds, as it lets agents quickly filter case activities from anywhere on the page, without having to scroll to the top.

Option	Use It to...	Notes
Select Filters	Choose the filters to include in the feed filters list, and specify the order of the list.	We recommend putting the filters agents are likely to use most often at the top of the list.

SEE ALSO:

[Configure the Case Feed Publisher with the Enhanced Page Layout Editor](#)

Add the Attachment Component to Case Feed

Add the attachment component to the Case Feed page so your support agents can quickly view and manage all of the files associated with a case.

Access to all of the files associated with a case is critical to support agents when they're helping your customers. The attachment component lets agents view and manage all of the Chatter files, attachments from emails, and case attachment related list files for a case, all on the Case Feed page. Using the attachment component, agents can quickly attach a file to an email and download a file.

Agents can toggle between a view of the most recent attachments for a case across all sources and a view of all of the files associated with a case sorted by their creation date.

1. From the object management settings for cases, go to Page Layouts.
2. How you access the Case Feed Settings page depends on what kind of page layout you're working with.
 - For a layout in the Case Page Layouts section, click **Edit**, and then click **Feed View** in the page layout editor.
 - For a layout in the Page Layouts for Case Feed Users section, click  and choose **Edit feed view**. (This section appears only for organizations created before Spring '14.)
3. In the Other Tools and Components section, select **Files**, and specify where on the page you want it to appear.
4. Click **Save**.

Add the attachment component to your custom pages by including the `<support:caseUnifiedFiles>` component in a Visualforce page, or [add it as a Salesforce console component](#) to make it available to agents without having to take up space on a Case Feed page.

Add the Case Experts Component (Pilot) to Case Feed

Easily identify the experts on case topics so agents can collaborate to solve customer issues quickly.

 **Note:** Case Experts is currently available through a pilot program. For information on enabling Case Experts for your organization, contact salesforce.com.

Using the power of topics on cases, support agents can be endorsed as experts on specific topics. Agents endorsed as experts can help other agents who might be less knowledgeable on the topic. To establish case experts in your organization, you must have Chatter and topics for cases enabled.

To enable Case Experts, display the Experts component on Case Feed.

1. From the object management settings for cases, go to Page Layouts.
2. How you access the Case Feed Settings page depends on what kind of page layout you're working with.
 - For a layout in the Case Page Layouts section, click **Edit**, and then click **Feed View** in the page layout editor.
 - For a layout in the Page Layouts for Case Feed Users section, click  and choose `Edit feed view`. (This section appears only for organizations created before Spring '14.)
3. In the Other Tools and Components section, select **Case Experts**, and specify where on the page you want it to appear.
4. Click **Save**.

Add the experts component to your custom pages by including the `<apex: support : caseExperts>` component in a Visualforce page.

Configure the Case Feed Publisher with the Enhanced Page Layout Editor

If your organization uses the actions in the publisher feature, you can use the enhanced page layout editor to choose the actions that appear in the Case Feed publisher.

 **Note:** This option is selected by default for new Salesforce organizations that use Case Feed, and for organizations that enable Case Feed after the Summer '13 release.

1. From the object management settings for cases, go to Page Layouts.
2. How you access the Case Feed Settings page depends on what kind of page layout you're working with.
 - For a layout in the Case Page Layouts section, click **Edit**, and then click **Feed View** in the page layout editor.
 - For a layout in the Page Layouts for Case Feed Users section, click  and choose `Edit feed view`. (This section appears only for organizations created before Spring '14.)
3. Select `Use Page Layout Editor to Configure Actions`.
4. Click **Save**.
5. To access the page layout editor:
 - For a layout in the Case Page Layouts section, click **Edit**.
 - For a layout in the Page Layouts for Case Feed Users section, click  and choose `Edit detail view`. (This section appears only for organizations created before Spring '14.)

- Performance
- Unlimited
- Developer

USER PERMISSIONS

To configure the Case Feed publisher:

- "Customize Application"

6. In the page layout editor, click  in the Quick Actions in the Salesforce Classic Publisher section.
7. In the palette, click **Quick Actions**.
8. Drag the actions you want to the Quick Actions in the Salesforce Classic Publisher section. You can also drag actions to change the order in which they appear and drag off actions you don't want.
On the Case Feed page, up to approximately five or six actions are displayed in the publisher; the rest are included in the More drop-down list.
9. Click **Save**.

If you've previously used the Case Feed Settings page to configure the publisher, you see these differences when you switch to the enhanced page layout editor:

- The actions list appears at the top of the publisher. You can no longer position the actions list to the left of the publisher.
- The Answer Customer action has been divided into its two component actions: Email and Portal.
- The actions list looks more like the Chatter publisher on other pages.
- The standard Chatter actions—Post, File, Link, Poll, Question, and Thanks—automatically appear in the publisher layout, and they replace the Write Case Note action. You can change the sequence of these actions and remove any you don't need.
- The Feed View/Details drop-down list replaces the View Case Detail action.
- Custom actions you previously added to the Case Feed publisher aren't available. Create new custom actions and add them to the publisher. These new actions must use `publisher.js` rather than `interaction.js`.
- The Case Detail page expands to full width, making it easier to see all of your related lists and other information.

[Find Object Management Settings](#)

Convert Page Layouts for Case Feed Users to Case Page Layouts

As of Spring '14, we've made creating and customizing case layouts easier by replacing page layouts for Case Feed users with feed-based layouts for case pages. By converting your older page layouts, you can use the advanced page layout editor to manage them and can assign Case Feed to users more easily.

 **Note:** Page layouts for Case Feed users are available only in organizations created prior to Spring '14.

Feed-based case layouts include the same features as page layouts for Case Feed users: a feed, which includes a publisher with actions, feed filters, tools such as an articles tool, and sidebar components such as custom buttons and links; a highlights panel; and a detail page, with related lists and other in-depth information about the case. You can use the standard page layout assignment tool to assign feed-based case page layouts to users, which means you no longer have to use permission sets or custom profiles to give users access to Case Feed.

To convert page layouts for Case Feed users to feed-based case layouts:

1. From the object management settings for cases, go to Page Layouts.
2. Click  next to a layout in the Page Layouts for Case Feed Users list and choose `Convert to case page layout`.

EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To create and edit page layouts:

- "Customize Application"

To assign page layouts:

- "Manage Users"

We recommend using this option so you can review the converted layout before you delete the original, but to save time, you can choose `Convert to page layout and delete`.

3. The converted layout appears in the Case Page Layouts list with the prefix `Converted:`. Click **Edit** next to it.
4. In the page layout editor, confirm that the layout includes the elements you want. To see and edit what's included in the feed view, including feed filters and sidebar components, click **Feed View**.
5. Once you're happy with the case page layout, click **Page Layout Assignment** in the Case Page Layouts list to assign it to the appropriate user profiles.

 **Note:** For custom profiles with the `Use Case Feed` permission, or profiles with permission sets that include `Use Case Feed`, these page assignments won't take effect until you remove the permission or permission set. If your organization was created between Winter '14 and Spring '14, you can't remove `Use Case Feed` from standard profiles, so these assignments won't take effect until you delete all of your page layouts for Case Feed users.

6. Click  next to the older version of the layout in the Page Layouts for Case Feed Users list and choose **Delete**. In the confirmation that appears, click **OK**.
7. If there are users assigned to the layout you delete, you're prompted to choose another layout as a replacement. This is only a formality: Once you assign users to a case page layout, that's what they'll see.

If you have multiple layouts for Case Feed users, we recommend converting and deleting them all at the same time. Once you delete the last of your older layouts, the Page Layouts for Case Feed Users list will disappear.

Enable Default Email Templates in Case Feed

Use default email templates in Case Feed to give support agents easy access to the templates they need based on the types of cases they're working on.

Before you can enable default email templates, you need to create text, HTML, or Visualforce templates, and create an Apex class that contains template selection logic.

Default email templates make it easy for support agents to respond to customers more quickly, more accurately, and with greater consistency. The email templates are preloaded, so agents don't need to browse for the templates they need before writing email. You can create as many templates as needed and assign them based on your company's needs. For example, if your support center handles issues related to multiple products, you can create a specific template for each product and preload the appropriate template based on a case's origin, subject, or other criteria.

To enable default email templates:

1. From Setup, enter *Support Settings* in the **Quick Find** box, then select **Support Settings**.
2. Click **Edit**.
3. Select **Enable default email templates**.
4. Choose the Apex class that contains your template selection logic.
5. Click **Save**.

Create Approval Processes for Email Drafts

Approval processes determine how your organization handles draft email messages—specifying, for example, which messages require approval and whether approvers are automatically assigned. Create customized approval processes based on your company's needs.

1. Enable draft emails.

Though you can create approval processes for email messages without this step, those processes won't be triggered until your organization has email drafts available.

2. Create a send action.

Send actions ensure that email messages are sent once they've been approved.

3. Create approval processes.

Be sure to choose Email Message from the Manage Approval Processes For: drop-down list.

4. To give certain users, such as senior support agents, the ability to choose whether to submit an email message for approval or simply send the message, assign them to a profile that has the `Bypass Email Approval` permission selected.

SEE ALSO:

[Create an Approval Process](#)

[Enable Default Email Templates in Case Feed](#)

Rename Actions and Feed Filters in Case Feed

Rename Case Feed actions and feed filters so they match the terms your company uses.

For example, if your company refers to your portal as a customer community, you might rename the Portal action "Customer Community."

1. From Setup, enter *Rename Tabs and Labels* in the `Quick Find` box, then select **Rename Tabs and Labels**.
2. Click **Edit** next to Cases in the list of standard tabs.
3. Click **Next**.
4. Find the label you want to change in the Other Labels list.
5. Type the new name for the label in the text box next to it.
6. If the new label begins with a vowel sound, check `Starts with vowel sound`.
7. Click **Save**.

Set Up Customer Support

If your organization uses cases and solutions, set up automated support features to make your support processes more efficient.

From Setup:

- Enter *Business Hours* in the **Quick Find** box, then select **Business Hours** to set your organization's support hours.
- Enter *Assignment Rules* in the **Quick Find** box, then select **Case Assignment Rules** to create rules for automatically routing cases.
- Enter *Business Hours* in the **Quick Find** box, then select **Escalation Rules** to create rules for automatically escalating cases.
- Enter *Support Settings* in the **Quick Find** box, then select **Support Settings** to customize email templates and defaults for automated support features.
- Enter *Auto-Response Rules* in the **Quick Find** box, then select **Case Auto-Response Rules** to set up rules that send email to customers when they submit cases from one of the following.
 - A Web-to-Case form
 - An Email-to-Case message
 - An On-Demand Email-to-Case message
 - A Customer Portal
 - A Self-Service portal
- Enter *Email-to-Case* in the **Quick Find** box, then select **Email-to-Case** to set up the ability to capture customer emails as cases. The setup specifies how the content of each customer email automatically populates case fields.

For support features related to solutions, from Setup, enter *Solution* in the **Quick Find** box, then:

- Select **Solution Categories** to set up categories so your users can categorize the solutions they create.
- Select **Solution Settings** to enable specific options for solutions.

For additional support features, from Setup, enter *Self-Service* in the **Quick Find** box, then:

- Select **Public Solutions** to set up public solutions for your customers to use when searching for solutions.
- Select **Web-to-Case** to set up the ability to capture cases from your website.
- Select **Settings** under Self-Service Portal to set up your organization's web portal for your customers to log cases and search for solutions.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

For support features related to a Salesforce Customer Portal, from Setup, enter *Customer Portal* in the **Quick Find** box, then:

- Select **Customer Portal Settings** to set up your organization's Customer Portal so that your customers can log cases, search for solutions, and access any custom objects you may have created for them.

For support features related to [Salesforce CRM Call Center](#), from Setup, enter *Call Center* in the **Quick Find** box, then:

- Select **Call Centers** to set up new call centers and manage the users who are assigned to them.
- Select **Directory Numbers** to set up additional phone numbers that can be searched in a call center user's phone directory.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

The available support setup options vary according to which Salesforce Edition you have.

- Select **SoftPhone Layouts** to set up the layouts that are used to display call information in a call center user's SoftPhone.

To create support queues for cases or custom objects, from Setup, enter *Queues* in the *Quick Find* box, then select **Queues**.

The support features include the ability to notify customers when their case is created manually or via the web, or when their case is resolved. You can also automatically notify users when a case is escalated, created, or re-assigned. To use notification emails, you must create email templates for each type of notification.

Customize Support Settings

Choose default templates for common tasks like creating and closing cases, and enable automated features to make your support processes more efficient.

To work with these settings, from Setup, enter *Support Settings* in the *Quick Find* box, then select **Support Settings**, and then click **Edit**.

Field	Description
Default Case Owner	The user or queue automatically assigned to all cases that don't match any case assignment rule entries. This user must be <i>Active</i> .
Notify Default Case Owner	Select this checkbox to notify the default case owner when a case is assigned to him or her. If the new owner is a queue, the notification is sent to the queue email address. Notifications are system-generated and can't be modified.
Record Type Setting	Indicates which record type to assign to cases created by users applying assignment rules. Select either: <ul style="list-style-type: none"> • Keep the existing record type if you want new cases to keep the creator's record type • Override the existing record type with the assignee's default record type if you want to overwrite the creator's record type on new cases
Automated Case User	The user listed in the Case History related list for automated case changes. Automated case changes may occur from assignment rules, escalation rules, On-Demand Email-to-Case, or

EDITIONS

USER PERMISSIONS

To change support settings:

- "Manage Cases"

AND

"Customize Application"

Field	Description
Case Creation Template	cases logged in the Self-Service portal. This user must have the System Administrator profile or the "Modify All Data" and "Send Email" permissions.
Case Assigned Template	The template used to notify contacts that their case was created manually by a support agent. The notification is optional; it's triggered by a checkbox on the case edit page. This template must be <code>Available for Use</code> .
Case Close Template	The template used to notify users that a case was manually assigned to them by an administrator or another user. The notification is optional; it's triggered by a checkbox on the Change Case Owner page. This template must be <code>Available for Use</code> .
New Cases Visible in Portal	Automatically selects the <code>Visible in Self-Service Portal</code> checkbox for all new cases, including cases created via Web-to-Case, Email-to-Case, and On-Demand Email-to-Case. Regardless of this default, users creating new cases can manually set the <code>Visible in Self-Service Portal</code> checkbox. If you're using Salesforce Communities, this setting does not apply for partner or customer users viewing cases in communities. New case visibility in communities is controlled by sharing rules.
Enable Case Comment Notification to Contacts	Select this checkbox to notify contacts who aren't Self-Service portal users when a case comment has been modified or added to a case. If you select this setting, click <code>Case Comment Template</code> and choose the email template to use for these notifications. This template must be <code>Available for Use</code> .
Notify Case Owner of New Case Comments	Select this checkbox to notify the case owner when a user adds a public or private comment to a case. If you select this setting, case owners can't opt out of receiving these notices. (Notices aren't sent to inactive case owners.)
Early Triggers Enabled	Select this checkbox to enable early triggers for escalation rules and their actions. You can set up an escalation rule to perform an action when a case has been unresolved for a specific number of hours. The <code>Age Over</code> hour you specify determines when Salesforce performs the escalation action. Enable early triggers to ensure that your escalation actions are triggered before the <code>Age Over</code> hour you specify.

Field	Description
Enable Suggested Solutions	Select this checkbox to enable the Suggested Solutions button on case detail pages so agents can propose specific solutions to help resolve cases.
Enable Suggested Articles	Select this option to provide suggested articles on the Articles related list. You can make suggested articles available in all Salesforce Knowledge channels except the public knowledge base.
Send Case Notifications from System Address	<p>Select this checkbox to specify that case comment, attachment, and assignment notifications sent to case owners are sent from a system address, rather than the address of the user who updated the case.</p> <p>System notifications display a "From" email address of "noreply@salesforce.com", and an email "Name" related to the message, such as "Case Comment Notification".</p> <p>You can select this checkbox to prevent Self-Service or Customer Portal users who update their cases from receiving "out-of-office" emails from case owners.</p>
Notify Case Owners when Case Ownership Changes	<p>Select this checkbox to automatically select Send Notification Email on cases when users change a case owner to another user. This helps prevent users from forgetting to notify other users that they're the new owner of a case.</p> <p>Selecting this setting <i>doesn't</i> automatically select Send Notification Email when users change a case owner to a queue.</p>
Show Closed Statuses in Case Status Field	<p>Select this checkbox to add closed statuses to the Status field on cases so agents can close cases without having to click the Close Case button and update information on close case page layouts.</p> <p>Selecting Show Closed Statuses in Case Status Field doesn't remove the Close button from case list views. Instead, it adds Closed to the list of statuses available for users to choose from when they select multiple cases and click Change Status on case list views.</p>
Hide Save & Close Button and Cls Links	After selecting Show Closed Statuses in Case Status Field as described above, you can select this checkbox so that the Save & Close button on case edit pages and Cls links on Cases related lists don't display unnecessarily. Instead, users close cases via the Status field and Save button.
Size of Email Feed Item Body	<p>Control the size of email feed items by setting a character limit on the email feed item body. You can set the character limit to:</p> <ul style="list-style-type: none"> • Small = 400 characters (default) • Medium = 1200 characters

Field	Description
	<ul style="list-style-type: none"> • Large = 5000 characters • Custom = a value between 400 and 5000 characters <p>If an email feed item body exceeds the character limit, users can click More to see the rest of the email feed item body.</p>
Blank Lines in Email Feed Item Body	Select this checkbox to save space in Case Feed by removing blank lines in the body of email feed items.
Collapse Previous Emails in Email Feed Item Body	Select this checkbox to show only the most recent email in the email feed item body. Users can click More to see previous emails in the thread.
Enable Default Email Templates or the Default Handler for Email Action	Select this checkbox to specify an Apex class that loads a default email template in the Case Feed. Or, you can select this checkbox to specify the default values for the email fields that the Case Feed can automatically populate in emails.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

[Set Up Customer Support](#)

Set Business Hours

Specify the hours when your support team is available to serve customers. This helps make your department's processes, such as escalations and milestones, more accurate.

Setting business hours lets you apply specific time zones and locations to:

- Milestones in entitlement processes
- Entitlement processes
- Cases
- Case escalation rules

You can also make the `Business Hours` field available on the Case Layout page so that your support agents can set the times a support team is available to work on the case. By default, business hours are set 24 hours, seven days a week in the default time zone specified in your organization's profile.

Additionally, users with the "Customize Application" permission can add business hours to escalation rules so that when the details of a case match the criteria of an escalation rule, the case is automatically updated and escalated with the times and location on the rule. For example, a case updated with Los Angeles business hours escalates only when a support team in Los Angeles is available.

To set business hours:

1. From Setup, enter `Business Hours` in the `Quick Find` box, then select **Business Hours**.

EDITIONS

Available in: Salesforce Classic

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To set business hours:

- "Manage Business Hours Holidays"

2. Click **New Business Hours**.**3.** Type a name for the business hours.

We recommend using a name that will remind users of a location or time zone when they view business hours on a case, entitlement process, or milestone. For example, if your business hours are for a support center in San Francisco, you could use the name *San Francisco Business Hours*.

4. Click **Active** to allow users to associate the business hours with cases, escalation rules, milestones, and entitlement processes.**5.** Optionally, click **Use these business hours as the default** to set the business hours as the default business hours on all new cases.

Default business hours on cases can be updated with business hours on escalation rules if the cases match escalation rule criteria and the rule is set to override business hours.

6. Choose a time zone to associate with the business hours in the **Time Zone** drop-down list.**7.** Set your business hours for each day of the week.

- If your support team is available during the entire day every day of the week, select the **24 hours** checkbox.
- Choose the start and end times for the business hours. If the time you want isn't available, click the field and type it in.
- Leave the business hours start and end times blank and the **24 hours** checkbox deselected to indicate that the support team is not available at all that day.

8. Click **Save**.

After you have set business hours, you can associate them with:

- Escalation rules, so that when the details of a case match the criteria of an escalation rule, the case is updated and escalated with the business hours on the rule.
- Holidays, so that business hours and any escalation rules associated with business hours are suspended during the dates and times specified in holidays.
- Milestones, in entitlement processes so that business hours can change with the severity of a case.
- Entitlement processes, so that you can use the same entitlement process for cases with different business hours.

[Set Up Support Holidays](#)

[Set Up Customer Support](#)

Guidelines for Setting Business Hours

To make your support processes more accurate, define when your support team is available to help customers. There are a few guidelines to keep in mind as you set business hours.

- After you set business hours, add the **Business Hours** lookup field to case layouts and set field-level security on the **Business Hours** field. This lets users view and update the business hours on a case.
- Business hours on a case are automatically set to your organization's default business hours, unless the case matches the criteria on an escalation rule associated with different business hours.
- Salesforce automatically calculates daylight savings times for the time zones available for business hours, so you don't have to configure rules to account for time zones.

EDITIONS

Available in: **Salesforce Classic**

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

- Business hours on a case include hours, minutes, and seconds. However, if business hours are less than 24 hours, the system ignores the seconds for the last minute before business hours end. For example, suppose it is 4:30 PM now, and business hours end at 5:00 PM. If you have a milestone with a 30-minute target, it's more common to say that the target is 5:00 PM, not 4:59 PM. To accommodate this, the system stops counting seconds after 5:00. If seconds were counted from 5:00:00-5:00:59, the 30-minute target would occur after the 5:00:00 PM target cut-off and would roll over to the next day.
- Escalation rules only run during the business hours they're associated with.
- You can update cases associated with business hours that are no longer active. without having to reactivate business hours.
- You can't include the `Business Hours` field in list views or reports.
- You can create multiple business hours for support teams that operate in the same time zone but at different hours.
- For simplicity, we recommend that you create one set of business hours per support center.
- You can't deactivate business hours that are included in escalation rules. You must first remove them from the escalation rules.
- You can associate up to 1000 holidays with each set of business hours.
- Keep in mind that there's a hierarchy to the application of business hours. Business hours applied to a milestone override business hours applied to an entitlement process, which override business hours applied to a case. If no business hours are set on the milestone, then the Entitlement Process Business Hours are used. If neither the Milestone Business Hours nor the Entitlement Process Business Hours are set, then the business hours on the case are used.

[Set Up Support Holidays](#)

Set Up Support Holidays

Holidays let you specify the dates and times your customer support team is unavailable. After you create a holiday, you can associate it with business hours to suspend business hours and escalation rules during holiday dates and times.

For example, you could create a holiday called New Year's Day that begins at 8 p.m. on December 31 and ends at 9 a.m. on January 2. Escalation rules and entitlement milestones wouldn't apply during the holiday.

1. From Setup, enter `Holidays` in the `Quick Find` box, then select **Holidays**.
2. Click **New**, or click **Clone** next to the name of an elapsed holiday.
You can only clone elapsed holidays.
3. Type a name for the holiday.
4. Type a date for the holiday.
If you want the holiday to span more than one day:
 - a. Select the `Recurring Holiday` checkbox.
 - b. Enter the first day of the holiday in the `Start Date` field.
 - c. Deselect the `No End Date` checkbox in the `End Date` field.
 - d. Enter the last day of the holiday in the `End Date` field.
5. Optionally, you can:

EDITIONS

[Set Business Hours](#)

[Set Up Customer Support](#)

Guidelines for Creating Support Holidays

Holidays let you specify the dates and times your customer support team is unavailable. There are a few guidelines to keep in mind as you set up and work with holidays.

- You can associate up to 1000 holidays with each set of business hours.
- Holidays automatically acquire the time zone of the business hours with which they are associated. For example if you associate a holiday to business hours that are in Pacific Standard Time, the holiday will take effect for those business hours in Pacific Standard Time
- You can only add business hours marked as `Active` to holidays.
- Holiday names don't need to be unique. For example, you could create multiple holidays named *New Year's Day*.
- Currently, report results do *not* take holidays into account.
- If you schedule a holiday to recur on a specific day of every month, the holiday will only recur on months that have that specific day. For example, if you schedule a holiday on the 31st day of every month, then the holiday will only recur on months that have 31 days. If you want a holiday to recur on the last day of every month, choose last from the `On day of every month` drop-down list.

Set Up Assignment Rules

Define conditions that determine how leads or cases are processed.

1. From Setup, enter *Assignment Rules* in the **Quick Find** box, then select either **Lead Assignment Rules** or **Case Assignment Rules**.
2. Choose **New**, and then give the rule a name. Specify whether you want this to be the active rule for leads or cases created manually and via the web and email. Then click **Save**.
3. To create the rule entries, click **New**. For each entry, you can specify:

Field	Description
Order	<p>Sets the order in which the entry will be processed in the rule, for example, 1, 2, 3.</p> <p>Salesforce evaluates each entry in order and tries to match the criteria of the entry. As soon as a match is found, Salesforce processes the item and stops evaluating the rule entries for that item. If no match is found, the item is reassigned to either the default Web-to-Lead owner, the administrator doing a lead import, or the default case owner.</p>
Criteria	<p>Specifies conditions that the lead or case must match for it to be assigned. Enter your rule criteria.</p> <ul style="list-style-type: none"> • Choose <code>criteria are met</code> and select the filter criteria that a record must meet to trigger the rule. For example, set a case filter to <code>Priority equals High</code> if you want case records with the <code>Priority</code> field marked High to trigger the rule. <p>If your organization uses multiple languages, enter filter values in your organization's default language. You can add up to 25 filter criteria, of up to 255 characters each.</p> <p>When you use picklists to specify filter criteria, the selected values are stored in the organization's default language. If you edit or clone existing filter criteria, first set the <code>Default Language</code> on the <code>Company Information</code> page to the same language that was used to set the original filter criteria. Otherwise, the filter criteria may not be evaluated as expected.</p> <ul style="list-style-type: none"> • Choose <code>formula evaluates to true</code> and enter a formula that returns a value of "True" or "False." Salesforce triggers the rule if the formula returns "True." For example, the formula <code>AND (ISCHANGED (Priority), ISPICKVAL (Priority, "High"))</code> triggers a rule that changes the owner of a case when the <code>Priority</code> field is changed to High. <p>If your condition uses a custom field, the rule entry will be deleted automatically if the custom field is deleted.</p>

EDITIONS

Lead Assignment Rules available in: **Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Case Assignment Rules available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To create assignment rules:

- "Customize Application"

Field	Description
User	<p>Specifies the user or queue to which the lead or case will be assigned if it matches the condition. Users specified here cannot be marked “inactive” and they must have “Read” permission on leads or cases.</p> <p> Note: You can't revoke the “Read” permission on leads or cases for users assigned to a rule.</p> <p>If your organization uses divisions, leads are assigned to the default division of the user or queue specified in this field. Cases inherit the division of the contact to which they are related, or are assigned to the default global division if no contact is specified.</p>
Do Not Reassign Owner	<p>Specifies that the current owner on a lead or case will not be reassigned to the lead or case when it is updated.</p>
Email Template	<p>Specifies the template to use for the email that is automatically sent to the new owner. If no template is specified, no email will be sent. When assigning a lead or case to a queue, the notification goes to the <code>Queue Email</code> address specified for the queue and all queue members.</p>
Predefined Case Teams	<p>Specifies the predefined case team(s) to add to a case when it matches the condition. A case team is a group of people that work together on a case, such as a support rep, support manager, and a product manager.</p> <p>Click the Lookup icon () to select a predefined case team to add to the assignment rule. To add more predefined case teams, click Add Row to add a new row with which you can add a predefined case team.</p>
Replace any existing predefined case teams on the case	<p>Specifies that any existing predefined case teams on the case are replaced with the predefined case teams on the condition, when a case matches the condition.</p>

After creating the entry, click **Save**, or **Save & New** to save the entry and create more entries.

 **Tip:** Create an error-proof rule by always creating the last rule entry with no criteria. This rule entry catches any leads or cases that the previous rule entries didn't assign.

Managing Assignment Rules

Create assignment rules to automate your organization's lead generation and support processes.

- **Lead Assignment Rules**—Specify how leads are assigned to users or queues as they are created manually, captured from the web, or imported via the Data Import Wizard.
- **Case Assignment Rules**—Determine how cases are assigned to users or put into queues as they are created manually, using Web-to-Case, Email-to-Case, On-Demand Email-to-Case, the Self-Service portal, the Customer Portal, Outlook, or Lotus Notes.

Typically, your organization will have one rule for each overall purpose—for example, one lead assignment rule for importing and a different lead assignment rule for web-generated leads; or one case assignment rule for standard use and one case assignment rule for holiday use. For each rule type, only one rule can be in effect at any time.

Each rule consists of multiple rule entries that specify exactly how the leads or cases are assigned. For example, your standard case assignment rule may have two entries: cases with "Type equals Gold" are assigned to "Gold Service" queue, and cases with "Type equals Silver" are assigned to "Silver Service" queue.

To create an assignment rule, from Setup, enter *Assignment Rules* in the Quick Find box, then select **Lead Assignment Rules** or **Case Assignment Rules**.

Sample Assignment Rule

The following case assignment rule assigns a case to a specific queue based on the account rating:

Rule Name — *Hot Account Assignment*

Rule Entries:

Order	Criteria	Assign To
1	<code>ISPICKVAL(Account.Rating, "Hot")</code>	<i>Tier 1 Support Queue</i>
2	<code>OR(ISPICKVAL(Account.Rating, "Warm") , ISPICKVAL(Account.Rating, "Cold"))</code>	<i>Tier 2 Support Queue</i>

USER PERMISSIONS

To create or change assignment rules:

- "Customize Application"

Set Up Auto-Response Rules

Send automatic email responses to lead or case submissions based on the record's attributes. Set up auto-response rules to send quick replies to customers to let them know someone at your company received their inquiry or details about their issue.

Create auto-response rules for leads captured through a Web-to-Lead form and for cases submitted through a:

- Self-Service portal
- Customer Portal
- Web-to-Case form
- Email-to-Case message
- On-Demand Email-to-Case message

Create as many response rules as you like based on any attribute of the incoming lead or case. Keep in mind that you can activate only one rule for leads and one for cases at a time. Sales and service reps can find the email responses in the Activity History related list of the lead or contact and in the Email related list on cases.

Creating Auto-Response Rules

To create a Web-to-Lead response rule, from Setup, enter *Auto-Response Rules* in the **Quick Find** box, then select **Lead Auto-Response Rules**. To create a response rule for cases, from Setup, enter *Auto-Response Rules* in the **Quick Find** box, then select **Case Auto-Response Rules**. On the Auto-Response Rules page:

1. Click **New**.
2. Enter the rule name.
3. Check the active box to make this rule the only one activated.
4. Click **Save**.
5. Create rule entries.

Creating Response Rule Entries

1. Click **New** from the rule detail page.
2. Enter a number to specify the order this entry should be processed.

The rule processes entries in this order and stops processing at the first matching entry and then sends the email using the specified email template. If no response rules apply, the rule uses the default template you specify on the Web-to-Case or Web-to-Lead Settings page.

Note: To create an error-proof rule, always create the last rule entry with no criteria. This rule entry will catch any leads or cases that the previous rule entries did not. This is especially important for Email-to-Case and On-Demand Email-to-Case which don't have default templates.

3. Enter your rule criteria:
 - Choose *criteria are met* and select the filter criteria that a record must meet to trigger the rule. For example, set a case filter to *Priority equals High* if you want case records with the *Priority* field marked High to trigger the rule.

If your organization uses multiple languages, enter filter values in your organization's default language. You can add up to 25 filter criteria, of up to 255 characters each.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in:

- Professional
- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To create auto-response rules:

- "Customize Application"

When you use picklists to specify filter criteria, the selected values are stored in the organization's default language. If you edit or clone existing filter criteria, first set the `Default Language` on the Company Information page to the same language that was used to set the original filter criteria. Otherwise, the filter criteria may not be evaluated as expected.

- Choose `formula evaluates to true` and enter a formula that returns a value of "True" or "False." Salesforce triggers the rule if the formula returns "True." For example, the formula `AND (ISPICKVAL (Priority, "High"), Version < 4.0)` triggers a rule that automatically responds with the selected template if the `Priority` field on a case is set to High and the value of a custom field named `Version` on the case is less than four.
4. Enter the name to include on the From line of the auto-response message.
 5. Enter the email address to include on the From line of the auto-response message. This must be either one of your verified organization-wide email addresses or the email address in your Salesforce user profile, and must be different from the routing addresses you use for Email-to-Case.
 6. If you want, enter a reply-to address.
 7. Select an email template.
 8. If you're creating a response rule entry for Email-to-Case, select `Send response to all recipients` to send auto-response messages to anyone included in the `To` and `Cc` fields in the original message.
 9. Save your work.

[Differences Between Auto-Response Rules and Workflow Alerts](#)

Differences Between Auto-Response Rules and Workflow Alerts

Auto-response rules and workflow email alerts provide similar functionality. The following table lists some of the differences between workflow alerts and auto-response rules to help you determine which process to use:

Type of Process	Designed For	Runs When	Sends Email To	Number of Emails Sent
Workflow email alerts	Notifications to interested parties.	A case or lead is created or edited.	Anyone you choose.	<p>Sends one email per email alert. Each workflow rule can have up to:</p> <ul style="list-style-type: none"> • 10 email alerts as immediate actions • 10 email alerts per time trigger as time-dependent actions • 10 time triggers

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Auto-response rules are available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Workflow is available in: **Professional, Enterprise, Performance, Unlimited, Developer, and Database.com** Editions

Type of Process	Designed For	Runs When	Sends Email To	Number of Emails Sent
Auto-response rules	Initial response to the contact who created a case or the person who submitted the lead on the Web.	A case or lead is created.	Contact on a case or the person who submitted the lead on the Web.	Sends one email based on the first rule entry criteria it matches in a sequence of rule entries.

Setting Up Escalation Rules

Each rule defines a condition that determines how cases are processed.

To create an escalation rule:

1. From Setup, enter *Escalation Rules* in the **Quick Find** box, then select **Escalation Rules**.
2. Choose **New**, and give the rule a name. Specify whether you want this to be the active escalation rule. Click **Save**.
3. To create the rule entries, click **New**. For each entry, you can specify the following:

Field	Description
Order	<p>Sets the order in which the entry will be processed in the rule, for example, <i>1, 2, 3</i>.</p> <p>Salesforce evaluates each entry in order and tries to match the criteria of the entry. As soon as a match is found, Salesforce processes the item and stops evaluating the rule entries for that item. If no match is found, the case is simply not escalated.</p>
Criteria	<p>Specifies conditions that the case must match for it to be escalated.</p> <p>You can enter your rule criteria:</p> <ul style="list-style-type: none"> • Choose <i>criteria are met</i> and select the filter criteria that a record must meet to trigger the rule. For example, set a case filter to <i>Priority equals High</i> if you want case records with the <i>Priority</i> field marked High to trigger the rule. <p>If your organization uses multiple languages, enter filter values in your organization's default language. You can</p>

USER PERMISSIONS

To create escalation rules:

- "Customize Application"

Field	Description
	<p>add up to 25 filter criteria, of up to 255 characters each.</p> <p>When you use picklists to specify filter criteria, the selected values are stored in the organization's default language. If you edit or clone existing filter criteria, first set the <code>Default Language</code> on the Company Information page to the same language that was used to set the original filter criteria. Otherwise, the filter criteria may not be evaluated as expected.</p> <ul style="list-style-type: none"> Choose <code>formula evaluates to true</code> and enter a formula that returns a value of "True" or "False." Salesforce triggers the rule if the formula returns "True." For example, the formula <code>AND (ISCHANGED (Priority) , ISPICKVAL (Priority, "High"))</code> triggers a rule that changes the owner of a case when the <code>Priority</code> field is changed to High. <p>Note that if your condition uses a custom field, the rule entry will automatically be deleted if the custom field is deleted.</p>
Specify business hours criteria	<p>Specifies how business hours apply to an escalated case:</p> <ul style="list-style-type: none"> <code>Ignore business hours</code> - Select this field to ignore business hours when escalating a case. <code>Use business hours specified on case</code> - Select this field to use the existing business hours on a case when escalating it. <code>Set business hours</code> - Select this field and click the lookup icon () to select predefined business hours to apply to a case when escalating it. <p>Escalation actions only run during the business hours with which they are associated.</p>
Specify how escalation times are set	<p>Determines what field applies to your <code>Age Over</code> number of hours. Your <code>Age Over</code> setting can be based on the number of hours since:</p> <ul style="list-style-type: none"> A case was created The case was created unless it has been modified; once modified, the case will never get escalated The most recent time a case was modified <p>For example, if you choose <code>Based on last modification time of the case</code> and your <code>Age Over</code> setting is 5, cases will get escalated 5 hours after the most recent last modified time and date as long as the case is open.</p>

4. After creating the entry, click **Save**, or **Save & New** to save the entry and create more entries.
5. After you create the last entry, click **Save**. The escalation rule and a list of one or more rule entries are displayed.
 -  **Note:** To create an error-proof rule, always create the last rule entry with no criteria. This rule entry will catch any cases that the previous rule entries did not assign.
6. Specify what action you want to be taken when one of the escalation rule entries is true. Click **Edit** next to the name of one of the rule entries.
7. Click **New** to add an escalation action. You can specify up to five actions for each rule entry, to escalate the case over increasing periods of time. For each escalation action, you can specify the following:

Field	Description
Age Over	Specifies the number of hours after which a case should be escalated if it has not been closed. This time is calculated from the date field set in the <code>Specify how escalation times are set</code> field. No two escalation actions can have the same number in this field.
Assign To	Specifies the user, partner user, or queue to which the case will be assigned if it matches the condition. Users specified here cannot be marked "inactive" and they must have the "Read" permission on cases. <ul style="list-style-type: none">  Note: You can't revoke the "Read" permission on leads or cases for users assigned to a rule. Note that reassigning an escalated case is optional.
Notification Template	Specifies the template to use for the email that is automatically sent to the new owner specified in the <code>Assign To</code> field. If no template is specified, no email will be sent.
Notify this user	Specifies the user to notify when the case is escalated. Notifying another user is optional.
Notify Case Owner	Indicates that the owner of the case is notified when the case is escalated.
Notification Template	Specifies the template to use for the notification email that is automatically sent to the <code>Notify</code> user(s). If you choose a user in the <code>Notify</code> field, you must select a template.
Additional Emails	Specifies additional individuals that you want to notify upon escalation.

-  **Note:** Each time you save a case or change the case owner, your escalation rules re-evaluate that case. Once the case matches an escalation rule entry, calculates when the case should be escalated and stops checking other escalation rule entries. For example, if you have two escalation rule entries that specify:

- Escalate three hours after creation date if `Case Reason` equals Crash
- Escalate four hours after creation date if `Case Reason` equals Bug

A case created with `Case Reason` of Bug will be scheduled for escalation four hours after it was created. Later, a user changes the case, which causes the escalation rules to re-evaluate the case. If escalation rules find that the `Case Reason` is now Crash, it schedules the case to be escalated three hours after creation date. If the case was created more than three hours ago, the case is escalated as soon as possible.

Escalation rules are not evaluated when transferring multiple cases at one time from a case list view. Also note that if you use assignment rules to change case ownership, the escalation rules are evaluated before any assignment rules.

 **Tip:** Salesforce processes rules in the following order:

1. Validation rules
2. Assignment rules
3. Auto-response rules
4. Workflow rules (with immediate actions)
5. Escalation rules

[Monitoring the Case Escalation Rule Queue](#)

Creating Escalation Rules

Create case escalation rules to escalate cases automatically if they are not resolved within a certain period of time.

Typically, your organization will have one escalation rule that consists of multiple entries which specify exactly how the cases are escalated. For example, your standard case escalation rule could have two entries: cases with `Type` set to Gold are escalated within two hours, and cases with `Type` set to Silver are escalated within eight hours.

Create Quick Text Messages

Quick Text messages enable agents to include standardized notes with case updates and to send common responses to customers without having to type the responses each time. Create custom messages for your agents to use when they email and chat with customers.

1. Click the **Quick Text** tab.
2. Click **New**.
3. If you have more than one Quick Text record type, select a record type for the new message, and then click **Continue**.
4. Type a message name.
5. Type the message.
It can include line breaks, lists, and special characters and can be up to 4,096 characters.
6. Click **Available Merge Fields** to display the merge field selector.
7. Select the channels in which you want the message to be available.
Depending on which features are enabled in your organization, these channels might be available.
 - **Email**—the Case Feed Email action
 - **Live Agent**—Live Agent in the Salesforce console
 - **Portal**—a community or a customer portal
 - **Phone**—the Case Feed Log a Call action
 - **Internal**—the Case Feed Change Status action
8. Select a category.
9. Optionally, select a subcategory.
10. Click **Save**.

Tip: Click **Test and Verify Merge Fields** to view a sample of the quick text, populated with data from records that you choose.

Monitoring Support Processes

Monitoring Automated Process Actions

Salesforce Knowledge users can schedule articles to be published or archived on a specific date. Use the automated-process actions queue to view these pending actions and cancel them if necessary.

To view pending actions:

1. From Setup, enter *Automated Process Actions* in the **Quick Find** box, then select **Automated Process Actions**.
2. Click **Search** to view all pending actions for any article, or set the filter criteria and click **Search** to view only the pending actions that match the criteria. The filter options are:

Process Definition

The process that is triggering the action. This value is always "KBWorkflow."

Object

The object that triggered the pending action. This value is always "Knowledge Article."

Scheduled Date

The date the pending actions are scheduled to occur.

Create Date

The date the article that triggered the pending action was created.

Created By

The user who created the article that triggered the pending action.

Record Name

The name of the article that triggered the pending action.

The filter is not case-sensitive.

To cancel pending actions:

1. Select the box next to the pending actions you want to cancel.
2. Click **Delete**. Salesforce cancels the pending action.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To manage automated-process actions:

- "Modify All Data"

Monitoring the Case Escalation Rule Queue

When Salesforce triggers a case escalation rule that has time-dependent actions, use the escalation rule queue to view pending actions and cancel them if necessary.

To view pending actions:

1. From Setup, enter *Case Escalations* in the *Quick Find* box, then select **Case Escalations**.
2. Click **Search** to view all pending actions for any active case escalation rule, or set the filter criteria and click **Search** to view only the pending actions that match the criteria. The filter options are:

Case To Escalate

The *Case Number* of the escalated case. The *Case Number* is a unique, automatically generated number used for identifying the case.

Escalation Rule

The name of the rule used to escalate the case.

Rule Entry

The order in which the rule entry will be processed. A rule entry is a condition that determines how a case escalation rule is processed. Each escalation rule can have a maximum of 3000 rule entries.

Escalation Action

The time criteria specified for the case to escalate as defined in the rule entry.

Ignore Business Hours

Indicates if the *Ignore Business Hours* checkbox is selected on the rule entry, meaning that the rule entry is in effect at all times and ignores your organization's business hours.

Escalate At

The date and time at which the case will escalate as defined in the rule entry. Dates and times display in the time zone of the user viewing the escalation rule queue.

Added Date

The date and time at which the case was added to the queue. Dates and times display in the time zone of the user viewing the escalation rule queue.

The filter is not case-sensitive.

To cancel pending actions:

1. Select the box next to the pending actions you want to cancel.
2. Click **Delete**. Salesforce cancels the pending action.

Monitoring the Entitlement Process Queue

When Salesforce triggers an entitlement process that has time-dependent milestone actions, use the entitlement process queue to view pending actions and cancel them, if necessary.

To view pending actions:

1. From Setup, enter *Entitlement Processes* in the Quick Find box, then select **Entitlement Processes**.
2. Click **Search** to view all pending actions for any active workflow rules, or set the filter criteria and click **Search** to view only the pending actions that match the criteria. The filter options are:

Entitlement Process Name

The entitlement process.

Case Number

The case's automatically generated identifying number.

Milestone Name

The milestone that triggered the action.

Evaluation Date

The date the evaluated actions are scheduled to occur.

Created Date

The creation date of the case that triggered the entitlement process.

Username

The user who updated the case to trigger an entitlement process.

The filter is not case-sensitive.

To cancel pending actions:

1. Select the box next to the pending actions you want to cancel.
2. Click **Delete**.

Adding Entitlements and Service Agreements

Entitlement Management Overview

Entitlement management lets you and your support agents:

- Verify if your customers are eligible for support
- Create and maintain service contracts for your customers
- Specify unique service levels for each customer, such as first response and resolution times
- Enforce service levels with time-dependent, automated processes that instruct agents how to resolve cases

Entitlement Management Features

Entitlement management includes the following features to help you provide the correct service levels to your customers:

EDITIONS

Available in: Salesforce Classic

Available in:

- Enterprise
- Performance
- Unlimited
- Developer

USER PERMISSIONS

To manage the entitlement process queue:

- "Modify All Data"

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

Verifying Entitlements

Support agents can verify that customers are eligible for support before creating cases for them. Here's an example of how support agents use entitlements:

1. A customer calls support.
2. A support agent searches for the caller's account, contact, asset, or service contract.
3. The agent verifies there's an active entitlement on the Entitlements related list.
4. The agents creates a case from the entitlement.

Defining Service Levels

Users can create and maintain service contracts that represent different kinds of customer support, such as warranties, subscriptions, or maintenance agreements. Each service contract can include the specific products covered under the agreement.

Enforcing Service Levels

You can add [time-dependent processes](#) to entitlements that specify the actions, or [milestones](#), your support team must take when service levels on cases are near violation, violated, or successfully completed.

Providing Portal Access

You can add entitlement management to a Customer Portal or partner portal so that portal users can view their service contracts and entitlements, and create cases with the correct entitlements.

Reporting on Entitlements and Service Levels

Administrators can use custom report types to define report criteria from which users can run and create reports on entitlements and service contracts.

 **Important:** Only users in organizations with the Service Cloud can enable, create, and update entitlement management items.

SEE ALSO:

[Getting Started with Entitlement Management](#)

[Setting Up Entitlement Management](#)

Entitlements Overview

Entitlements help you determine if your customers are eligible for customer support so you can create cases for them. A customer may be eligible for support based on a particular asset, account, or service contract. You can use entitlements on their own or in conjunction with entitlement processes, which are timelines that contain all of the steps (or milestones) that your support team must complete in order to resolve cases.

Depending on how entitlements are set up, you can view and create them on the Entitlements tab or from the Entitlements related list on accounts, contacts, assets, or service contracts. Click **Create Case** on the Entitlements related list to create a case that automatically includes the correct entitlement, account, contact, and asset.

If set up, the Entitlements or Entitlement Template related lists let you add existing entitlements to contacts and products.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

 **Note:** Entitlements don't automatically apply to cases created with Web-to-Case or Email-to-Case. If needed, you can add entitlements to these features using Apex code.

[Entitlement Management Overview](#)

[Getting Started with Entitlement Management](#)

Getting Started with Entitlement Management

Answer these questions before setting up entitlement management.

Watch a Demo:  [Entitlements Management Setup](#)

Before you set up entitlement management, review these questions. Your answers will help determine the setup steps you need to take.

Where do you want agents to verify that a contact or service contract is eligible for support?

You can set up entitlements so that users can view and create them from the Entitlements tab or from the Entitlements related lists on these objects:

Add Entitlements to the Page Layouts of this Object	So Users Can View and Create Entitlements When...
Accounts	At least one contact on the account is eligible for support.
Contacts	Specific contacts are eligible for support.
Assets	Specific assets (purchased products) are eligible for support.
Service Contracts	Support agents can verify that a specific service contract includes support.

The Entitlements related list has a **Create Case** link so users can create a new case that automatically includes the correct entitlement. The case automatically includes any account, contact, or asset information from the entitlement.

How much detail do you want your entitlement management process to include?

Where you want support agents to verify entitlements helps determine the level of detail for your entitlement management process. There are three models for managing entitlements, each with different levels of detail:

Your Goal	Entitlement Model	Use If	To Set Up
Support agents verify that contacts or accounts are eligible for customer support before they create cases	Entitlements Only	<ul style="list-style-type: none"> There's no need to manage your customers' entitlements as part of a service contract Your entitlements don't have a renewal process 	See Setting Up Entitlements Only .

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To set up entitlements:

- "System Administrator"

Your Goal	Entitlement Model	Use If	To Set Up
		<ul style="list-style-type: none"> Entitlements aren't purchased by your customers; they're bundled with products (warranties) Your customers' entitlements are short term and managed independently of each other 	
Support agents verify that a contact is eligible for support based on a service contract	Service Contracts with Entitlements	<ul style="list-style-type: none"> Entitlements are purchased and managed separately from the products they cover and are part of a service contract Your customers' entitlements are renewed at a contract level You use Salesforce for customer support but not necessarily for service contract management 	See Setting Up Service Contracts with Entitlements .
Support agents verify that a contact is eligible for support based on line items in a service contract	Service Contract with Contract Line Items and Entitlements	<ul style="list-style-type: none"> You use Salesforce for customer support and to manage your customers' service contracts Your support team manages service contract transactions, such as transfers, mergers, and renewals Warranties, subscriptions, or other support products appear as line items on your sales orders and map to one or more entitlements Entitlements are created and updated through an integration with your order management system 	See Setting Up Service Contracts with Contract Line Items and Entitlements .

 **Note:** You can switch to a different entitlement model at any time.

Do you want to predefine terms of support on the products offered to your customers?

If your organization uses the products feature, you can [create entitlement templates](#) so that agents can add predefined terms of support to products. For example, you can create entitlement templates for Web or phone support so that agents can easily add entitlements to products offered to customers.

Do you want to enforce service levels on cases?

You can add [time-dependent processes](#) to entitlements that specify the actions your support team must take when service levels on cases are near violation, violated, or successfully completed. For example, you can set up entitlement management to instruct support agents to call certain people when a customer's case is unresolved after two hours.

Setting Up Entitlements

Getting Started

Enable [entitlements](#) before following the steps below.

Customizing Entitlements

These steps, which you can do in any order, let you customize entitlements based on your business needs and how your agents work.

- Customize entitlements fields.
This lets users add additional information to entitlements.
- Set field history tracking on entitlements.
This lets you see when field values were changed.
- Customize entitlement page layouts.

This lets you specify which entitlement fields display to users. To limit the number of cases entitlements support, add these fields to entitlement page layouts:

Field	Description
Per Incident	Lets you limit the number of cases the entitlement supports.
Cases Per Entitlement	The total number of cases the entitlement supports.
Remaining Cases	The number of cases the entitlement can support. This field decreases in value by one each time a case is created with the entitlement.

- Customize case page layouts to add the `Entitlement Name` lookup field.
This lets users add entitlements to cases.
- Customize account, contact, asset, and, if applicable, service contract page layouts to add the Entitlements related list.
This lets users verify entitlements and create cases that are automatically associated with the correct entitlement, account, contact, and asset.
- Customize related lists on entitlements to add Cases and Contacts.
This lets users:
 - View cases and contacts associated with entitlements
 - Create cases automatically associated with the correct entitlements
 - Add contacts to entitlements

Giving Users Access to Entitlement Management

- [Verify user permissions, set field-level security, and make the Entitlements tab visible.](#)

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To set up entitlements:

- "System Administrator"

Enhancing and Extending Entitlements

Follow these optional steps to add more functionality and flexibility to your entitlement management implementation.

- [Set up lookup filters on cases](#) to restrict the entitlements-related items returned on cases.
- [Set up entitlement templates](#) to predefine terms of customer support that users can add to products. For example, you can create entitlement templates for Web or phone support so that users can easily add entitlements to products offered to customers.

Setting Up Service Contracts

Service contracts are agreements between you and your customers for a type of customer support. Service contracts can represent different kinds of customer support, such as warranties, subscriptions, or service level agreements (SLAs).

To set up service contracts, from the object management settings for service contracts:

1. **Customize service contract fields.**
This lets users add additional information to service contracts.
2. **Customize service contract page layouts.**
This lets you specify which service contract fields display to users.
3. **Set field-level security on service contract fields.**
This lets you choose which service contract fields users can access.
4. **Set field history tracking on service contracts.**
This lets you see when field values were changed.
5. **Add the Service Contracts tab to an app.**
This lets users view the Service Contracts tab in a specific app.
6. **Customize account and contact page layouts to add the Service Contracts related list.**
This lets users create, update, and verify service contracts from accounts and contacts.
7. [Create service contracts.](#)

USER PERMISSIONS

To set up service contracts:

- "Manage Entitlements"
AND
"Customize Application"

Setting Up Contract Line Items

Contract line items are specific products covered by a service contract. They only display to users on the Contract Line Items related list on service contracts, not on contracts. You can only use contract line items if your organization uses products.

From the object management settings for contract line items:

1. Customize contract line item fields.
This lets users add additional information to contract line items.
2. Customize contract line item page layouts.
This lets you specify which contract line item fields display to users.
3. Customize service contract page layouts to add the Contract Line Items related list.
This lets users create, edit, and delete contract line items from service contracts.
4. Set field-level security on contract line items.
This lets you choose which contract line item fields users can access.
5. Set field history tracking on contract line items.
This lets you see when field values were changed.
6. [Add contract line items to service contracts](#).

Note:

- Schedules aren't available for contract line items.
- Customer Portal users can't access contract line items.

USER PERMISSIONS

To set up service contracts and contract line items with entitlements:

- "Manage Entitlements"
AND
"Customize Application"

Create Milestones

Milestones are required steps in your support process. They're metrics that represent service levels to provide to each of your customers. Examples of milestones include First Response and Resolution Times on cases.

To create milestones:

1. From Setup, enter *Milestones* in the **Quick Find** box, then select **Milestones**.
2. Click **New Milestone**.
3. Enter a name and description.

We recommend naming milestones after common support tasks such as *First Response Time* or *Resolution Time*. This helps users understand milestones when they view them on cases or entitlement processes.

4. Select a recurrence type.

Recurrence Type	Description
None	The milestone occurs only once for the case.
Independent	The milestone occurs whenever the milestone criteria match the case criteria.
Sequential	The milestone occurs whenever the case criteria match the milestone criteria and the previous occurrence's Target Date has passed.

5. Click **Save**.
6. Customize case page layouts to:
 - Add these milestone fields:

Field	Description
Milestone Status	Shows a milestone's status on a case.
Milestone Status Icon	Shows a milestone's status on the case by displaying one of the following icons: <ul style="list-style-type: none"> -  Compliant -  Open Violation -  Closed Violation

- Add the Case Milestones related list. This lists milestones associated with a case.

You can customize the Case Milestone related list to add these fields:

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To create milestones:

- "Manage Entitlements"
- AND
- "Customize Application"

Field	Description
Elapsed Time	Shows the time it took to complete a milestone. Automatically calculated to include any business hours on the case. Elapsed Time is calculated only after the Completion Date field is populated.
Start Date	The date and time that the milestone tracking started.
Time Remaining	Shows the time that remains before a milestone violation. Automatically calculated to include any business hours on the case.
Target Response	Shows the time to complete the milestone. Automatically calculated to include any business hours on the case.
Time Since Target	Shows the time that has elapsed since a milestone violation. Automatically calculated to include any business hours on the case.

7. Customize case milestone page layouts. The Case Milestone page appears when users click the name of a milestone from the Case Milestones related list.

You can customize the Case Milestone page to add these fields:

Field	Description
Completed	Icon (✔) that indicates a milestone completion.
Completion Date	The date and time the milestone was completed.
Elapsed Time	Shows the time it took to complete a milestone. Automatically calculated to include any business hours on the case. Elapsed Time is calculated only after the Completion Date field is populated.
Entitlement Process	The entitlement process that is being used for the case. Entitlement processes are optional.
Start Date	The date and time that the milestone tracking started.
Target Date	The date and time to complete the milestone.
Target Response	Shows the time to complete the milestone. Automatically calculated to include any business hours on the case.
Time Remaining	Shows the time that remains before a milestone violation. Automatically calculated to include any business hours on the case.
Time Since Target	Shows the time that has elapsed since a milestone violation. Automatically calculated to include any business hours on the case.

Field	Description
Violation	Icon (🚫) that indicates a milestone violation.

8. Optionally, create an entitlement process that includes the milestone.

 **Note:** You can add time-dependent workflow actions to milestones after they're added to entitlement processes. See [Adding Milestone Actions to Entitlement Processes](#).

 **Tip:** You can add validation rules to case milestones so that when users update a milestone on a case, it meets the standards you specify before they can save it. For example, you can create a validation rule that ensures users select milestone completion dates that occur after case creation dates.

To begin adding validation rules for case milestones, from the object management settings for case milestones, go to Validation Rules.

[Find Object Management Settings](#)

Milestones Overview

Milestones are required steps in your support process. They're metrics that represent service levels to provide to each of your customers. Examples of milestones include First Response and Resolution Times on cases.

Milestones can display one of the following statuses on cases:

Milestone Status	Description	Example
 Compliant	Milestones on the case are complete or not in violation. New cases display as compliant because they're not in violation.	The first response on a case is complete or not in violation.
 Open Violation	Milestones on the case are violated; steps in a support process are incomplete.	The first response on a case is incomplete.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions with the Service Cloud

Use milestones in conjunction with entitlement processes to ensure that agents interact with and resolve cases on time and completely. Milestones define the steps in your support process, and entitlement processes enforce those steps.

Milestones are measured in minutes and seconds. They are accurate up to the minute. For example, suppose that a milestone is triggered at 11:15:40 am and the time to complete the milestone is 10 minutes. In this case, the milestone target time is 11:25:00 am, not 11:25:40. As a result, the remaining time for the agent to complete the milestone is 9 minutes and 20 seconds, not the 10 full minutes.

You can set up a milestone to occur once in an entitlement process or to recur until the entitlement process exits. The following recurrence types are available for milestones:

Recurrence Type	Description
None	The milestone occurs only once for the case.
Independent	The milestone occurs whenever the milestone criteria match the case criteria.
Sequential	The milestone occurs whenever the case criteria match the milestone criteria and the previous occurrence's Target Date has passed.

You can create a custom report to view a list of cases with milestones by choosing the Cases with Milestones report type. You can also view cases with milestones by creating case list views that filter on milestone fields.

Milestone Actions

Milestone actions are time-dependent workflow actions that occur at every step (milestone) in an entitlement process. Examples of milestone actions include sending email alerts to specified users an hour before a first response is near violation or automatically updating certain fields on a case one minute after a first response successfully completes.

You can add three types of actions to milestones:

Action Type	Description
 Success Actions	The actions to take when a milestone successfully completes.
 Warning Actions	The actions to take when a milestone is near violation.
 Violation Actions	The actions to take when a milestone is violated.

You can automate the following actions for each action type:

Automation Type	Description	Example
Task	Assigns a task to a specific user. You can specify the task's <code>Subject</code> , <code>Status</code> , <code>Priority</code> , and <code>Due Date</code> .	Create a task for a support rep to call a customer when a first response is violated.
Email Alert	Emails a specific template to a designated recipient.	Notify case owners when their cases are near violation of a first response.
Field Update	Changes the value of a selected field. You can specify a value or create a formula for the new value.	Update the case <code>Priority</code> field to <code>High</code> when a first response is near violation.

Automation Type	Description	Example
Outbound Message	Sends a message to a designated endpoint. You can also specify a username and the data you want to include in the message.	Send data about parts or services to an external system after a first response is successful.

- [Enabling Milestone Feed Items](#)

Milestones with Independent Recurrence

Recurring milestones allow milestones to repeat within an entitlement process whenever the milestone criteria match the case criteria. Independent recurring milestones always use the current time as the Start Date.

Milestones are required steps in your support process. They're metrics that represent service levels to provide to each of your customers. Examples of milestones include First Response and Resolution Times on cases.

For milestones with independent recurrence, the milestone occurs whenever the milestone criteria match the case criteria until the entitlement process exits. Only one occurrence of a milestone can be active at a time. For all occurrences, the Start Date is the current time when the milestone criteria match the case criteria, regardless of when the previous occurrence was complete.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions with the Service Cloud

Example: For example, a milestone called Engineer Solution Proposed is set up to track case escalation to Engineering. When the Engineer Solution Proposed milestone occurs, the support agent expects a proposed solution from Engineering within four hours.

At 10 a.m., the support agent escalates a case to Engineering by changing a field that, due to workflow rules, causes the milestone criteria to match the case criteria. As a result, the Engineer Solution Proposed milestone is created with a Start Date of the current time, which is 10 a.m. The milestone's Target Date is 2 p.m., four hours from the Start Date. At 11 a.m., well before the target date, an engineer proposes a solution that's sent to the customer and the Engineer Solution Proposed milestone is complete.

However, the solution proposed doesn't solve the customer's issue. At 1 p.m., the support agent escalates the case to Engineering and the Engineer Solution Proposed milestone is created again—this time with a Target Date of 5 p.m.

After the second occurrence of the Engineer Solution Proposed milestone, the case has two milestones:

- One milestone that started at 10 a.m. and is now complete
- One milestone that started at 1 p.m. and is incomplete with a Target Date of 5 p.m.

The milestone can recur as many times as necessary until the entitlement process is completed.

Milestones with Sequential Recurrence

Recurring milestones allow milestones to repeat within an entitlement process whenever the milestone criteria match the case criteria. Sequential recurring milestones have a start time that's based on the Target Date of the preceding occurrence of the milestone.

Milestones are required steps in your support process. They're metrics that represent service levels to provide to each of your customers. Examples of milestones include First Response and Resolution Times on cases.

For milestones with sequential recurrence, the milestone occurs whenever the case criteria match the milestone criteria and the previous occurrence's Target Date has passed, until the entitlement process exits. Only one occurrence of a milestone can be active at a time. For the first occurrence, the Start Date is the current time when the milestone criteria match the case criteria. For subsequent occurrences, the Start Date must be after the Target Date of the previous occurrence. If an occurrence is completed before its Target Date and the milestone criteria match the case criteria again, then the next occurrence will start at the previous occurrence's Target Date. If an occurrence is completed after its Target Date, the next occurrence's Start Date will be the current time when the milestone criteria match the case criteria.

Example: For example, a milestone called Customer Contact Made is set up to track daily contact with a customer as part of an SLA. The milestone is complete when the support agent communicates with the customer. The Customer Contact Made milestone has a target time of 24 hours.

At 10 a.m. on Monday, a case is created with the Customer Contact Made milestone. The Target Date for the milestone is 24 hours from the start time, 10 a.m. on Tuesday. At 11 a.m. on Monday, the support agent communicates with the customer. The Customer Contact Made milestone is complete. In addition, the next occurrence of the Customer Contact Made milestone is created. However, because the previous occurrence's Target Time is still in the future, the Start Date of this occurrence is 10 a.m. on Tuesday.

After the second occurrence of the Customer Contact Made milestone, the case has two milestones:

- One milestone that started at 10 a.m. on Monday and is now complete
- One milestone scheduled to start at 10 a.m. on Tuesday. that's incomplete with a Target Date of 10 a.m. on Wednesday.

If the support agent communicates with the customer multiple times on Monday, it won't have any effect on the Tuesday milestone.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

Track Stopped Time and Actual Elapsed Time on Milestones

You can let support agents and supervisors monitor milestone completion times and view service level agreement (SLA) compliance.

The **Stopped Time** shows how long an agent is blocked and cannot move forward and complete the milestone. For example, an agent might wait for a customer to reply with more information.

The **Actual Elapsed Time** shows the amount of time that it took to complete the milestone. $(\text{Elapsed Time}) - (\text{Stopped Time}) = (\text{Actual Elapsed Time})$

1. From Setup, enter *Entitlement Settings* in the Quick Find box, then select **Entitlement Settings**.
2. In the Milestone Stopped Time and Actual Elapsed Time section, select **Enable stopped time and actual elapsed time**.
3. After you've enabled this option, add the fields to the case milestone page layout.
 - a. From the object management settings for case milestones, go to Page Layouts.
 - b. Open the case milestone page layout, and add the stopped Time and Actual Elapsed Time fields to the layout.

SEE ALSO:

[Case Feed Page Layouts Overview](#)

[Create and Edit Feed Layouts in Case Feed](#)

Add the Milestone Tracker to Case Feed

Add the milestone tracker component to the Case Feed page so your support agents can see the countdown time to an active milestone's Target Date or how long a milestone has been in violation for cases they're working on.

Agents working on cases need to be aware of how much time they have until their milestones are due because their performance is often measured based on how often they miss milestones. The milestone tracker lets agents see the time remaining on an active milestone or how overdue the milestone is if its Target Date has passed, along with a list of upcoming milestones and closed milestones, all on the Case Feed page.

When the milestone is in progress, the milestone is represented by a green circle. The circle winds down clockwise as time elapses. The remaining hours, minutes, and seconds are shown in the center of the circle. When the time to complete the milestone expires, the circle turns red. The amount of time that the milestone is overdue is shown in the center of the circle.

EDITIONS

Available in: **Enterprise, Performance, Unlimited,** and **Developer** with the Service Cloud

USER PERMISSIONS

To enable the stopped time and actual elapsed time fields:

- "Manage Entitlements"

To create and edit page layouts:

- "Customize Application"

To assign page layouts:

- "Manage Users"

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To create and edit page layouts:

- "Customize Application"

To assign page layouts:

- "Manage Users"

1. From the object management settings for cases, go to Page Layouts.
2. How you access the Case Feed Settings page depends on what kind of page layout you're working with.
 - For a layout in the Case Page Layouts section, click **Edit**, and then click **Feed View** in the page layout editor.
 - For a layout in the Page Layouts for Case Feed Users section, click  and choose `Edit feed view`. (This section appears only for organizations created before Spring '14.)
3. In the Other Tools and Components section, select the **Milestone Tracker**, and specify where on the page you want it to appear.
4. Click **Save**.

Add the milestone tracker to your custom pages by including the `<apex:milestoneTracker>` component in a Visualforce page, or [add it as a Salesforce console component](#) to make it available to agents without having to take up space on a Case Feed page.

SEE ALSO:

[Find Object Management Settings](#)

Creating Entitlement Templates

Entitlement templates are predefined terms of customer support that you can quickly add to products. For example, you can create entitlement templates for Web or phone support so that users can easily add entitlements to products offered to customers.

 **Note:** You can only use entitlement templates if your organization uses the products feature.

To create entitlement templates:

1. From Setup, enter *Templates* in the `Quick Find` box, then select **Templates**.
2. Click **New Template**.
3. Enter the details:

Field	Description
Entitlement Template Name	The name of the entitlement template. We recommend using a descriptive name, such as <i>Phone Support</i> . This helps users better understand entitlement templates when they see them on related lists for products.
Term (Days)	The number of days the entitlement is in effect.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To create entitlement templates:

- "Manage Entitlements"

Field	Description
Entitlement Process	The entitlement process associated with the entitlement. Entitlement processes are timelines that include all of the steps (milestones) that your support team must complete to resolve cases. Each process includes the logic necessary to determine how to enforce the correct service level for your customers.
Per Incident	Lets you limit the number of cases the entitlement supports.
Cases Per Entitlement	The total number of cases the entitlement supports. This field is only available if <code>Per Incident</code> is selected.
Business Hours	The entitlement's supported business hours .
Type	The type of entitlement, such as Web or phone support. Administrators can customize this field's values.

4. Click **Save**.
5. Customize product page layouts to add the Entitlement Templates related list.

Optionally, you can customize the Entitlement Templates related list to add the `Type` and `Business Hours` fields. This lets users view the type of entitlement, such as Web or phone support, and any business hours that apply to the entitlement.

6. Click **Save**.

SEE ALSO:

[Setting Up Entitlements](#)

[Entitlement Management Implementation Guide](#)

Setting Up Entitlements-Related Lookup Filters on Cases

You can set up lookup filters on cases to restrict the entitlements-related items returned. For example, when portal users create a case and select the `Entitlement Name` field, they can choose only entitlements registered to their account or contact.

To set up entitlement-related lookup filters on cases:

1. From Setup, enter *Entitlement Settings* in the `Quick Find` box, then select **Entitlement Settings**.
2. Choose the item(s) you'd like returned in the lookup fields.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To set up entitlement-related lookups on cases:

- "Manage Entitlements"

Lookup Field on Cases	Click	To Return
Asset	Same account on the case	Assets registered to the account on the case. Note: To ensure that the lookup fields return all assets that share an account with the case, choose only this option.
	Same contact on the case	Assets registered to the contact on the case.
	Entitlements on the case's account	Assets associated with entitlements that belong to the case's account.
	Entitlements on the case's contact	Assets associated with entitlements related to the case's contact.
Entitlement	Active status	Entitlements with an Active Status.
	Same account on the case	Entitlements associated with the account on the case.
	Same asset on the case	Entitlements associated with the asset on the case.
	Same contact on the case	Entitlements associated with the contact on the case.

Choosing multiple items acts as an AND function. For example, choosing `Same account on the case` and `Same contact on the case` restricts items returned in the `Asset` field to assets registered to the account *and* contact on the case.

 **Tip:** Choose items that match how your support reps verify support eligibility. For example, choose the account-related items if your support reps verify support based on accounts.

3. Click **Save**.

[Entitlement Management Implementation Guide](#)

Giving Users Access to Entitlement Management

After you set up entitlement management, you can let users access the feature. Users must have:

- [Specific user permissions](#)
- [Access to the appropriate fields](#)
- [Access to the appropriate tabs](#)

Verify User Permissions

The following user permissions control access to different features in entitlement management:

Users Who Will	Need These Permissions	Permissions Are Automatically Enabled on These Standard Profiles
Set up entitlement management, including milestones, entitlement processes, and entitlement templates	“Manage Entitlements” AND “Customize Application”	System Administrator
Provide entitlement management to a Customer Portal	“Customize Application” AND “Manage Users” and “Edit Self-Service Users”	System Administrator
Provide entitlement management to a partner portal	“Customize Application” AND “Manage Users”	System Administrator
Create or update custom report types that include entitlement management	“Manage Custom Report Types”	System Administrator
Create and run reports based on entitlement management custom report types	“Create and Customize Reports”	Read Only, Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator
Create cases with entitlements	“Create” on cases AND “Read” on entitlements	Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator
Change entitlements on cases	“Edit” on cases AND “Read” on entitlements	Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To create and edit users:

- “Manage Internal Users”

Users Who Will	Need These Permissions	Permissions Are Automatically Enabled on These Standard Profiles
Verify or view entitlements	"Read" on entitlements	Read Only, Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator
Create entitlements	"Create" on entitlements	None: enable the permission in a permission set or custom profile
Change entitlements	"Edit" on entitlements	None: enable the permission in a permission set or custom profile
View entitlement contacts	"Read" on entitlement contacts	Read Only, Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator
Change entitlement contacts	"Create" on entitlement contacts AND "Delete" on entitlement contacts	None: enable the permissions in a permission set or custom profile
Verify or view service contracts	"Read" on service contracts	Read Only, Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator
Create service contracts	"Create" on service contracts	None: enable the permission in a permission set or custom profile
Change service contracts	"Edit" on service contracts	None: enable the permission in a permission set or custom profile
Verify or view contract line items	"Read" on contract line items	Read Only, Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator
Add contract line items to service contracts:	"Edit" on service contracts AND "Create" on contract line items and "Read" on products and price books	None: enable the permissions in a permission set or custom profile
Change contract line items on service contracts	"Edit" on service contracts AND "Edit" on contract line items and "Read" on products and price books	None: enable the permissions in a permission set or custom profile

Tip: If a user permission isn't on a standard profile you need to use, create a permission set and enable the permission in it, or clone the standard profile and enable the permission in the custom profile.

Set Field-Level Security

Choose which entitlement management fields users can view and edit. Field-level security settings let you specify users' access to fields on detail and edit pages, related lists, list views, reports, search results, email and mail merge templates, and portals.

You can set field-level security from a permission set, profile, or a particular field.

Make the Entitlements and Service Contracts Tabs Visible

Entitlement management has two tabs: the Entitlements tab, where users can create and manage entitlements, and the Service Contracts tab, where users can create and edit service contracts and contract line items (if contract line items are set up). You can create a custom app with these tabs or instruct your users to add the tabs to an existing tab set. Only users with the "Read" permission on entitlements will see the Entitlements tab and only users with the "Read" permission on service contracts will see the Service Contracts tab. Contract line items display on the Service Contracts tab for users who have the "Read" permission on contract line items.

SEE ALSO:

[Setting Up Entitlements](#)

[Field-Level Security Overview](#)

Creating Entitlement Processes

You can create up to 1000 entitlement processes and include up to ten milestones in each entitlement process. Be sure to [create milestones](#) before creating entitlement processes.

To create an entitlement process:

1. From Setup, enter *Entitlement Processes* in the Quick Find box, then select **Entitlement Processes**.
2. Click **New Entitlement Process**.
3. Enter a name and description.
4. Select **Active** to enable the process.

Tip: You may want to activate an entitlement process after you've [added milestone actions](#) to it. This is because you can't update or delete milestone actions on a process after it's activated and applied to a case.

5. Optionally, if entitlement versioning is enabled, select **Default Version** to make this version of the entitlement process the default.
6. Choose the criteria for cases to enter and exit the entitlement process:

Field	Description	Additional Actions to Take?
Case enters the process	Based on case created date Select if cases should enter the process when they're created.	No.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To create and update entitlement processes:

- "Manage Entitlements"

Field	Description	Additional Actions to Take?
	<p>Based on a custom date/time field on the case</p> <p>Select if you want the value of a custom date/time field on the case to determine when the case enters the process.</p>	Yes, a drop-down list displays for selecting the custom date/time. You can only choose a custom date/time, not a custom date.
Case exits the process	<p>Based on when case is closed</p> <p>Select if cases should exit the process when they're closed.</p>	No.
	<p>Based on custom criteria</p> <p>Select if cases should exit the process based on criteria you define.</p>	<p>Yes, select one of the following:</p> <ul style="list-style-type: none"> Choose <code>criteria are met</code> and select the filter criteria that a case must meet for it to exit the process. For example, set a case filter to <code>Priority equals Low</code> if you want cases with the <code>Priority</code> field marked <code>Low</code> to exit the process. Choose <code>formula evaluates to true</code> and enter a formula that returns a value of "True" or "False." Salesforce triggers the rule if the formula returns "True." Choose <code>formula evaluates to true</code> and enter a formula that returns a value of "True" or "False." Cases exit the process if the formula returns "True." For example, the formula <code>(Case: Priority equals Low) AND (Case: Case Origin equals Email, Web)</code> moves cases out of the process if their <code>Priority</code> field is <code>Low</code> and the <code>Case Origin</code> field is marked <code>Email</code> or <code>Web</code>.

- Optionally, choose the business hours you'd like to apply to the entitlement process. The business hours you set here calculate the Target Date for all the milestones on this entitlement process. Business hours applied to a milestone override business hours applied to an entitlement process, which override business hours applied to a case. If no business hours are set on the milestone, then the Entitlement Process Business Hours are used. If neither the Milestone Business Hours nor the Entitlement Process Business Hours are set, then the business hours on the case are used.

- Click **Save**.

After you create an entitlement process, you can do the following optional tasks to further customize your entitlement processes:

- [Add milestones to the entitlement process.](#)
- Customize case page layouts to add [entitlement process fields](#).

 **Note:** Entitlement processes only apply to cases with assigned entitlements.

SEE ALSO:

[Monitoring the Entitlement Process Queue](#)

[Entitlement Processes Overview](#)

[Creating New Versions of Entitlement Processes](#)

Entitlement Processes Overview

Entitlement processes are timelines that include all of the steps (or milestones) that your support team must complete to resolve cases.

Entitlement processes are timelines that include all of the steps (milestones) that your support team must complete to resolve cases. Each process includes the logic necessary to determine how to enforce the correct service level for your customers.

Not all entitlements require entitlement processes. For example, an entitlement might just state that a customer is eligible for phone support and business hours define phone support to be 24/7. If you needed to add more to that definition—for example, if certain people need to be emailed after a customer's case goes unresolved for two hours—you would use an entitlement process.

You can create up to 1000 entitlement processes and include up to ten milestones in each entitlement process. Contact Salesforce for information on increasing the number of entitlement processes and milestones.

Entitlement versioning lets you make changes to existing entitlement processes, even if they're assigned to active entitlements and cases. This can be useful if the business rules behind your entitlement processes change, for example, or if you need to create multiple versions of the same entitlement process that have only minor differences. With entitlement versioning, you don't need to create entirely new processes; you can simply create new versions of existing ones.

To view or cancel active entitlement processes, from Setup, enter *Entitlement Processes* in the Quick Find box, then select **Entitlement Processes**.

How Cases Move Through Entitlement Processes

1. A support agent adds an entitlement with an entitlement process to a case.
2. The case enters the process based on its creation date or a custom date/time field. A custom date/time field lets users edit a date on the case to trigger when it enters the process.
3. Salesforce assigns milestones with matching criteria to the case. For example, if a milestone's criteria is *Priority equals High*, and a case has a *Priority* of High, Salesforce assigns it to the Priority equals High milestone.

A case associates with one milestone at a time; it can associate with many milestones as it moves through the process.

4. Milestone actions determine when and if warning, violation, or success workflow actions fire for the case.
5. A support agent updates the case to complete a milestone action.
6. After a case is updated, it cycles through the entitlement process and initiates any milestones that match its criteria.
7. The case exits the process based on custom criteria or when it's closed.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

-  **Note:** Entitlement processes only apply to cases with assigned entitlements. You can view cases with assigned entitlements by creating case list views that filter on entitlement process fields.

Adding Milestones to Entitlement Processes

Milestones are required steps in your support process. They're metrics that represent service levels to provide to each of your customers. Examples of milestones include First Response and Resolution Times on cases. Use milestones in entitlement processes to enforce the steps in your support process.

You can create up to 1000 entitlement processes and include up to ten milestones in each entitlement process.

To add milestones to entitlement processes:

1. From Setup, enter *Entitlement Processes* in the Quick Find box, then select **Entitlement Processes**.
2. Click the name of an entitlement process.
3. Click the name of the entitlement process again under Entitlement Process Versions.
4. Click **New** on the Milestones related list.
5. Choose the milestone.
6. In *Time Trigger (Minutes)*, enter the number of minutes in which users need to complete the milestone before it triggers an action.

Or, if you'd like the trigger time for the milestone to be calculated dynamically based on the milestone type and properties of the case, click **Enable Apex Class for the Time Trigger (Minutes)**.

-  **Note:** You must have a custom Apex class that implements the `Support.MilestoneTriggerTimeCalculator` Apex interface to use the **Enable Apex Class for the Time Trigger (Minutes)** option.

7. If you selected **Enable Apex Class for the Time Trigger (Minutes)**, use the lookup to specify an Apex class for the dynamically calculated milestone.
8. Choose when the milestone starts:

Select	To	Use If
Milestone Criteria	Calculate the milestone Target Date when the milestone is applied to a case (matches case criteria). This may or may not match the Entitlement Process start time, which is usually when a case is created.	A milestone's Target Date is based on when it's applied to a case—for example, reassigning a case to development when support believes the problem is a defect. This could occur at any time and it's <i>not</i> based on the start of

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To add milestones to entitlement processes:

- "Manage Entitlements"

Select	To	Use If
Entitlement Process	Calculate the milestone Target Date when the entitlement process starts (by default, when a case is created).	the entitlement process (timeline). Use if the milestone is recurring. A milestone's Target Date is based on the start of the entitlement process (timeline). For example, first response and resolution times on a case always calculate their Target Date when the entitlement process starts.

9. Optionally, select the business hours that you want to apply to the Target Date calculation for this milestone. If you don't specify Milestone Business Hours, then the Entitlement Process Business Hours are used. If neither are specified, then the business hours on the case are used.
10. Enter the order in which to process the milestone if a case matches the criteria of more than one milestone in an entitlement process. Use this if you have similar milestones, such as first response and first response with a case **Priority** of high. Cases can only match one milestone at a time in an entitlement process.
11. Enter the criteria a case must match for the milestone to apply to it:
 - Choose `criteria are met` and select the filter criteria that a case must meet for a milestone to apply to it. For example, set a case filter to `Priority equals High` if you want the milestone to apply to cases with the **Priority** field marked High. Choose `formula evaluates to true` and enter a formula that returns a value of "True" or "False." Salesforce triggers the rule if the formula returns "True."
 - Choose `formula evaluates to true` and enter a formula that returns a value of "True" or "False." The milestone applies to cases if the formula returns "True." For example, the formula `(Case: Priority equals High) AND (Case: Case Origin equals Email, Web)` applies the milestone to cases where the **Priority** field is High and the **Case Origin** field is marked Email or Web. Note that you can't use the **Case Owner** field in formulas.
12. Click **Save**.

After you add a milestone to an entitlement process, you can do the following optional tasks to further incorporate milestones into your entitlement processes:

- Customize entitlements page layouts to add the Milestones related list. This lets users view milestones on entitlements.
- [Add actions to milestones in the entitlement process.](#)

 **Note:** The **Timeline** field shows you any milestones added to the entitlement process:

-  The Milestone icon () represents milestones.
- Click or hover your mouse pointer over each milestone to view its details.

- Drag the Handle icon () along the Timeline Zoom tool to view past and future milestones.

[Creating Entitlement Processes](#)

Adding Milestone Actions to Entitlement Processes

Milestone actions are time-dependent workflow actions that occur at every step (milestone) in an entitlement process. Examples of milestone actions include sending email alerts to specified users an hour before a first response is near violation or automatically updating certain fields on a case one minute after a first response successfully completes.

Before adding milestone actions to entitlement processes, you need to [create milestones](#) and [create entitlement processes](#).

To add milestone actions to entitlement processes:

1. From Setup, enter *Entitlement Processes* in the Quick Find box, then select **Entitlement Processes**.
2. Click the name of an entitlement process.
3. Click the name of a milestone on the Milestone related list.
4. Add actions to the milestone:

Click Add Workflow Action and Select	To	Example
New Task	Create a workflow task	Create a task for a support rep to call a customer when a first response is violated.
New Email	Create an email alert	Notify case owners when their cases are near violation of a first response.
New Field Update	Define a field update	Update the case <i>Priority</i> field to <i>High</i> when a first response is near violation.
New Outbound Message	Define an outbound message	Send data about parts or services to an external system after a first response is successful.
Select Existing Action	Select an existing action	Use an existing email alert to notify a case owner when their case is near violation of a first response.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To add milestone actions to entitlement processes:

- “Manage Entitlements”
AND
“Customize Application”

 **Note:** To make warning and violation actions time-dependent, add a time trigger first. The time trigger for success actions is the time trigger on the milestone.

The **Add Workflow Action** button initially displays on the Success Actions section. It displays in the Warning Actions and Violation Actions sections after you add time triggers to them.

- Click **Add Time Trigger** to add a time trigger to the milestone.
Time-triggered actions only occur during your organization's [business hours](#).
- Click **Add Workflow Action** under a time trigger to add time-dependent actions.
You can add up to ten actions and ten time triggers to each type of milestone action.

Optionally:

- Click **Edit** next to any action or time trigger to modify it.
- Click **Remove** next to any action to remove it from the entitlement process. This removes the milestone action from the entitlement process but does not delete the milestone action.
- Click **Delete** next to any time trigger to remove it from the milestone. This deletes the time trigger and removes its actions from the entitlement process but does not delete the milestone actions. The actions are still available when you click **Add Workflow Action** and choose **Select Existing Action**.

[Getting Started with Entitlement Management](#)

Set How the Milestone Tracker Displays Time Remaining on Milestones

The milestone tracker shows a countdown of the time that remains before a milestone is due. If the milestone has been violated, the milestone tracker shows the amount of time that it is overdue. You can show remaining time in either business hours or actual hours.

Enable entitlement management and business hours before setting how the milestone tracker displays the remaining time.

The remaining time for a milestone is the difference between the present time and when the milestone is due. If business hours are set for milestones, the time remaining is shown in business hours by default.

1. From Setup, enter *Entitlement Settings* in the Quick Find box, then select **Entitlement Settings**.
2. Under the Milestone Tracker section, select the checkbox for *Show the time remaining in actual hours, not business hours*.
3. Click **Save**.

 **Example:** *If the remaining time is shown in business hours:* For example, suppose that business hours are from 9:00 AM to 5:00 PM. Right now, it's 4:30 PM and the support agent has a milestone due at 11:00 AM the next day. In this case, the milestone tracker shows the remaining time in business hours, so the remaining time is 2.5 hours. (4:30-5:00 PM today and 9:00-11:00 AM tomorrow.)

If the remaining time is shown in actual hours: However, if you set the milestone tracker to show time in actual hours, the milestone tracker ignores the business hours. Instead, the

EDITIONS

USER PERMISSIONS

To set how remaining time is shown:

- "Manage Entitlements"

milestone tracker shows the remaining time using the full amount of time between the present time and when the milestone is due. So, if it's 4:30 PM now and the milestone is due at 11:00 AM tomorrow, the remaining time would be 18.5 hours. (4:30 PM today through 11:00 AM tomorrow.)

Enabling Milestone Feed Items

Show feed items on cases for completed and violated milestones.

Milestone feed items provide an additional way for support agents to monitor case activity. When you enable milestone feed items, your support agents see notifications in the Case Feed when a milestone is completed or violated. Milestone feed items for cases a user owns or follows also appear on the user profile page.

This setting applies only if you have Chatter and entitlement management enabled.

1. From Setup, enter *Entitlement Settings* in the Quick Find box, then select **Entitlement Settings**.
2. Select **Enable milestone feed items**.

 **Note:** Enabling milestone feed items doesn't create feed items for milestones that have already been completed or violated.

[Adding Milestone Actions to Entitlement Processes](#)

Entitlement Versioning Overview

[Watch a Demo](#) (2:20 minutes)

Entitlement versioning lets you make changes to existing entitlement processes, even if they're assigned to active entitlements and cases. This can be useful if the business rules behind your entitlement processes change, for example, or if you need to create multiple versions of the same entitlement process that have only minor differences. With entitlement versioning, you don't need to create entirely new processes; you can simply create new versions of existing ones.

When you create a new version of an entitlement process, you can change any of the following:

- Name
- Description
- Whether the process is active
- Whether the version is the default
- Entry criteria
- Exit criteria

You can also add notes about the version. This makes it easy to differentiate between multiple versions of the same process, especially if they have the same name.

On new versions of entitlement processes that are currently in use, you can add new milestones, but can't edit existing ones. On new versions of processes that aren't currently in use, you can both add new milestones and edit existing ones.

Creating New Versions of Entitlement Processes

[Watch a Demo](#) (2:20 minutes)

Entitlement versioning lets you make changes to existing entitlement processes, even if they're assigned to active entitlements and cases. This can be useful if the business rules behind your entitlement processes change, for example, or if you need to create multiple versions of the same entitlement process that have only minor differences. With entitlement versioning, you don't need to create entirely new processes; you can simply create new versions of existing ones.

Before you can create new versions of entitlement processes, you need to [enable entitlement versioning](#).

To create a new version of an entitlement process:

1. From Setup, enter *Entitlement Processes* in the **Quick Find** box, then select **Entitlement Processes**.
2. Click the name of the entitlement process for which you want to create a new version.
3. In the Entitlement Process Versions list, click the version of the process from which you want to create a new version.
4. On the Entitlement Process Detail page, click **Create New Version**.
5. Specify the information for the new version.
We recommend using the Version Notes field to include details about what makes the version you're creating different from others. This makes it easier to differentiate between multiple versions of the same entitlement process.
6. Click **Save**.

On new versions of entitlement processes that are currently in use, you can add new milestones, but can't edit existing ones. On new versions of processes that aren't currently in use, you can both add new milestones and edit existing ones.

Once you've created a new version of an entitlement process, you can choose to apply it to all entitlements and cases assigned to the previously used version, or only to new entitlements and cases.

To create and update entitlement processes:

- "Manage Entitlements"

Using New Versions of Entitlement Processes

[Watch a Demo](#) (2:20 minutes)

Once you've created a new version of an entitlement process, you can choose to apply it to all entitlements and cases assigned to the previously used version, or only to new entitlements and cases.

To apply it to a new entitlement (and, by extension, cases with that entitlement), simply choose it from the Entitlement Process lookup field when you create the entitlement.

To apply a new entitlement process to cases and entitlements assigned to a previously used version of the process, follow these steps:

1. From Setup, enter *Entitlement Processes* in the **Quick Find** box, then select **Entitlement Processes**.
2. Click the name of the entitlement process you want to work with.
The list on the main Entitlement Processes page shows the default version of each process. Click the name of a process to see a list of all available versions of it.
3. On the detail page for the entitlement process, click the name of the version you want to update cases and entitlements to.
4. Click **New Update Rule**.
5. Choose the version of the entitlement process you want to update from.
You can update from any other version of the process, whether or not it's active.
6. To prevent milestone warning and violation actions from being triggered on cases to which warnings or violations will newly apply after the update, select **Don't Trigger New Milestone Warnings and Violations**.
7. Click **Save**.
The update rule detail page shows the estimated number of entitlements and cases that will be updated.
8. Click **Start** to begin the update process.

Throughout the update process, the update rule detail page will refresh to show the number of entitlements and cases processed. To stop the update at any time, click **Stop**.

USER PERMISSIONS

To create and update entitlement processes:

- "Manage Entitlements"

Entitlement Management Notes, Limitations, and Best Practices

Notes and Limitations

- You can only use contract line items if your organization uses products.
- You can't create list views for contract line items..
- You can't share entitlements. If an entitlement has an account, its sharing is inherited from account sharing.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

- You can't share contract line items. Sharing for contract line items is inherited from service contract sharing. For example, users with the "Read" permission on service contracts inherit the "Read" permission on contract line items.
- If you want your customers or partners to access their entitlements or service contracts, add entitlements or service contracts to your portals.

Don't add the following entitlement process fields to case page layouts for portal users because portal users shouldn't access information related to your internal support processes: `Entitlement Process Start Time`, `Entitlement Process End Time`, `Stopped`, and `Stopped Since`.

- If you use the `Per Incident` field to limit the number of cases entitlements support, we recommend setting field-level security on the `Cases Per Incident` and `Remaining Cases` fields to read-only for users who shouldn't modify per incident support.
- Entitlements don't automatically apply to cases created with Web-to-Case or Email-to-Case. If needed, you can add entitlements to these features using Apex code.
- You can't add milestones to cases without using entitlement processes. Entitlement processes apply milestones to cases.
- Merge fields for entitlements on cases aren't supported. For example, if you add the `Entitlement Name` `{!Case.Entitlement}` merge field to an email template, the field is not populated on the template.

Best Practices

- Set up lookup filters on cases to restrict the entitlements-related items returned. For example, when portal users create a case and select the `Entitlement Name` field, they can choose only entitlements registered to their account or contact.
- Use Apex code to automatically mark milestones as `Completed` on cases that match unique criteria. For example, you can create an Apex trigger on `EmailMessage` that marks a first response milestone as `Completed` on cases when support reps send email from cases.
- Use the Mass Transfer Tool to transfer multiple service contracts from one user to another.
- Customize the values for the `Type` field on entitlements to match the types of entitlements your team provides or sells, such as Web support or online training.
- Add the `Status Icon` field to entitlements, service contracts, and contract line items page layouts so that users can easily see one of these three statuses:
 -  Active
 -  Expired
 -  Inactive

Additionally, you can add fields to page layouts.

- Use sharing rules to give users access to service contracts they don't own; you can't extend the organization-wide default sharing model for service contracts.
- If you use products, set up entitlement templates to predefine terms of support that users can add to products.
- Set up entitlement processes to enforce all the steps that your support team must complete to resolve cases.
- If you're not using entitlement versioning, we recommend activating entitlement processes *after* you've added milestone actions to them. This is because you can't update or delete milestone actions on a process after it's activated and applied to a case. We recommend creating new entitlement processes to replace existing, active ones applied to cases.
- If you're using entitlement versioning, you can update existing entitlement processes, even when they're assigned to active entitlements and cases.
- You can create up to 1000 entitlement processes and include up to ten milestones in each entitlement process. Contact Salesforce for information on increasing the number of entitlement processes and milestones.

- Use custom report types to define report criteria from which users can run and create reports on entitlements and service contracts.
- You can view cases with milestones by creating case list views that filter on milestone fields.
- Use the entitlement process queue to view or cancel active entitlement process actions.
- You can add validation rules to case milestones so that when users update a milestone on a case, it must meet the standards you specify before they can save it. For example, you can create a validation rule that ensures users select milestone completion dates that occur after case creation dates.

Setting Up Salesforce Knowledge

As a knowledge base administrator, getting started involves choosing how your articles will be formatted and published, then making the knowledge base available to authors, reviewers, publishers, and others on your team. After initial setup you can enable numerous settings, such as making articles available to customers, partners, and public website visitors.

Before setting up Salesforce Knowledge, make sure that you are a Salesforce Knowledge user:

1. From your personal settings, enter *Advanced User Details* in the *Quick Find* box, then select **Advanced User Details**. No results? Enter *Personal Information* in the *Quick Find* box, then select **Personal Information**.
2. Ensure that the *Knowledge User* checkbox is selected.

Getting Started with Salesforce Knowledge

Complete the following steps to enable Salesforce Knowledge in your organization:

1. From Setup, enter *Knowledge Article Types* in the *Quick Find* box, then select **Knowledge Article Types** and [create one or more article types](#).

 **Note:** Before users can access article types, an administrator must set object permissions for article types.

2. From Setup, enter *Knowledge Settings* in the *Quick Find* box, then select **Knowledge Settings**. Confirm that you want to enable Salesforce Knowledge and click *Enable Knowledge*.
3. Select your [general settings](#).
 - Select *Allow users to create and edit articles from the Articles tab* to enable users to edit articles without going to the Article Management tab. Users can click **Edit** an article to open the article edit page. If a published version of the article already exists, they have the option to view the published version or edit the current version. If a draft version exists, they can continue with editing the existing draft, but should carefully review the draft so that they don't overwrite unpublished changes.
 - Select *Activate Validation Status field* to add a Validation Status field to all Salesforce Knowledge articles.
 - Select *Allow users to add external multimedia content to HTML in the standard editor* to allow `<iframe>` elements in the standard editor to embed multimedia content from the Dailymotion, Vimeo, and YouTube websites.
4. Select at least one option under *Article Summaries*.
 - Internal App
 - Customer
 - Partner
5. Select desired options for how search functions on the Knowledge tab.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To create or edit users:

- "Manage Internal Users"

To create article types and article actions:

- "Customize Application"

AND

"Manage Salesforce Knowledge"

To manage synonyms:

- "Manage Synonyms"

To create data categories:

- "Manage Data Categories"

- `Suggest articles for cases considering case content (Beta)` suggests articles based on their content similarity as well as their links between similar cases. If no articles are linked to similar cases, suggested articles have similar titles as the case. Suggested articles are available in the Salesforce Console for Service and your portals when viewing existing cases and creating new ones.
- `Highlight relevant article text within search results` generates a snippet of the relevant article text with the search terms bolded. See [Search Highlights and Snippets](#) on page 2620.
- `Auto-complete keyword search` suggests the three most popular keyword searches performed on the Knowledge tab. Suggestions are based on the channel (internal, customer, partner, or public) the user is searching.

 **Note:** Keyword search history is refreshed once a day.

- `Auto-complete title search`: suggests up to three articles with matching titles.

If your organization doesn't have the Knowledge tab enabled see [Enabling Knowledge One with Permission Sets](#) and [Enabling Knowledge One with Profiles](#).

6. Choose a **Default Knowledge Base Language**. This is the language your authors will use to write most of the articles. We recommend that your **Default Knowledge Base Language** and your organization's language be the same.
7. If your Knowledge base supports multiple languages, select `Multiple Languages`, add the languages supported, and adjust their settings.

 **Note:** You can't remove a language once it is added.

8. Optionally, select your `Case Settings`.
 - [Allow users to create an article from a case](#). Choose either the simple or standard editor and define the default article type, assignee, and any Apex customization.
 - [Use a profile to create article PDFs](#). If agents need to attach PDFs to cases make sure `Allow to attach an article as pdf` is checked in the [case feed page layout](#).
 - [Allow users to share articles via public URLs](#)
 - [Enable list of cases linked to an article](#)
9. Optionally, check `Allow users to create an article from a reply` to create articles from replies in Answers.
10. Click **Save**.

Complete the following steps to give internal users the ability to manage and view articles:

1. [Create the category groups](#) and individual categories that authors will assign to articles. Categories help agents, customers, partners, and visitors find articles in the knowledge base. See [Managing Data Categories](#) on page 2640 for more details.
2. After setting up your data categories, you can control article visibility based on category. By default, Salesforce Knowledge users have access to all articles associated with any category. To restrict article visibility, see [Edit Category Group Visibility](#) on page 2649.
3. Give internal users access to Salesforce Knowledge by assigning each user a Salesforce Knowledge feature license:
 - a. From Setup, enter `Users` in the `Quick Find` box, then select **Users**.
 - b. Click **Edit** next to the user's name or click **New** to create a new user.
 - c. Select the `Knowledge User` checkbox.

 **Note:** For instructions on giving portal users access to Salesforce Knowledge, see [Enabling Salesforce Knowledge in the Customer Portal](#) and [Enabling Salesforce Knowledge in the Partner Portal](#).

4. Verify that each user has the appropriate Salesforce Knowledge user permissions enabled. For more information see [Granting Permissions for Salesforce Knowledge Users](#) on page 2660.
5. Make the Article Management and Knowledge tabs visible by adding them to a custom app or instructing your users to add the Article Management or Knowledge tab to an existing tab set. Note the following:
 - All users with access to Salesforce Knowledge can see the Knowledge tab.
 - Users with the “Manage Articles” user permission can see the Article Management tab.

[Find Your Personal Settings](#)

Defining Article Types

The first step when setting up Salesforce Knowledge is to create one or more article types. You cannot enable Salesforce Knowledge until at least one article type is created.

When creating an article, the author must select an article type. *Article types*, such as FAQs and Tutorials, provide the format and structure to control how an article displays for each audience, known as a channel. For each article type you can create custom fields, customize the layout by adding or removing sections and fields, and choose a template for each channel. You can also create workflow rules and approval processes to help your organization track and manage article creation and publication.

 **Note:** Before users can access article types, an administrator must set object permissions for article types.

To create an article type:

1. From Setup, enter *Knowledge Article Types* in the Quick Find box, then select **Knowledge Article Types**.
2. Click **New Article Type** or edit an existing article type.
3. Enter the following:

Field	Description
Label	A name used to refer to the article type in any user interface pages.
Plural Label	The plural name of the object. If you create a tab for this object, this name is used for the tab.
Gender	If it is appropriate for your organization’s default language, specify the gender of the label. This field appears if the organization-wide default language expects gender. Your personal language preference setting does not affect whether the field

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To create, edit, or delete article types:

- “Customize Application”
- AND
- “Manage Salesforce Knowledge”

Field	Description
	appears. For example, if the organization's default language is English and your personal language is French, you are not prompted for gender when creating an article type.
Starts with a vowel sound	If it is appropriate for your organization's default language, check if your label should be preceded by "an" instead of "a".
Object Name	(Read only) A unique name used to refer to the article type when using the Force.com API. In managed packages, this unique name prevents naming conflicts on package installations. The Object Name field can contain only underscores and alphanumeric characters. It must be unique, begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.
Description	An optional description of the article type. A meaningful description will help you remember the differences between your article types when you are viewing them in a list.
Track Field History	Select this option to track the full history of an article and its versions. The system records and displays field updates, publishing workflow events, and language versions for the master article and any translations.
Deployment Status	Indicates whether the article type is visible outside Setup. In Development means article managers cannot choose this article type when creating articles. Only select Deployed after you are done creating the article type.

4. Click **Save**.
5. On the article type detail page, complete the following information:
 - In the Fields related list, [create or modify custom fields](#) as needed.
 - In the Fields related list, [edit the article-type layout](#) as needed to rearrange fields and create sections.
 - In the Channel Displays related list, [choose a template](#) for the Internal App, Partner, Customer, and Public Knowledge Base.

SEE ALSO:

[Setting Up Salesforce Knowledge](#)

Deleting Article Types

To delete an article type:

1. From Setup, enter *Knowledge Article Types* in the Quick Find box, then select **Knowledge Article Types**.
2. Next to the target article type, click **Del**.
3. Confirm that you want to delete the article type.

Notes on Deleting Article Types

Note the following about deleting article types:

- If your organization has only article type, you cannot delete it. Every Salesforce Knowledge org requires at least one deployed article type. Create a new article type and then delete the old one.
- Any articles associated with a deleted article type are automatically removed from all channels. This includes draft, published, and archived articles.
- Salesforce does not display deleted article types in the Recycle Bin with other deleted records. Instead, deleted article types appear in the Deleted Article Types list on the article list view page for 15 days. During this time you can restore the article type and its articles, or permanently erase the article type and its articles. After 15 days, the article type and its articles are permanently erased.
- If a user clicks a bookmark to a deleted article's URL, an Insufficient Privileges message displays.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To delete article types:

- "Customize Application"
- AND
- "Manage Salesforce Knowledge"

Modifying Article-Type Layouts

Article-type layouts determine which fields users can view and edit when entering data for an article. They also determine which sections appear when users view articles. The format of the article, for example whether layout sections display as subtabs or as a single page with links, is defined by the [article-type template](#). Each article type has only one layout, but you can choose a different template for each of the article type's four [channels](#).

 **Tip:** You can also use [field-level security](#) to hide fields on article types. For example, if you publish the same article in the internal app and the Customer Portal, you may want to use field-level security to hide a custom field such as `Internal Comments` from Customer Portal users.

To modify an article-type layout:

1. From Setup, enter `Knowledge Article Types` in the `Quick Find` box, then select **Knowledge Article Types**.

2. Select one of the article types in the list.

3. In the Fields related list, click **Edit Layout**.

4. When working on the layout:

- The layout editor consists of two parts: a palette on the upper portion of the screen and the layout on the lower portion of the screen. The palette contains the available fields and a section element. The layout contains an Information section and space for you to add sections. By default, all custom fields are included in the Information section.

 **Note:** The `Article Number`, `Summary`, `Title`, and `URL Name` standard fields do not display in the layout. `Article Number` and `Summary` appear in a read-only Properties section at the top of the published article. Also included in this header are the `First Published`, `Last Modified`, and `Last Published` fields.

- To add a new section, drag and drop the section element into the palette.
- To change the name of a section, click its title. You cannot rename the Information section.
- To remove a field from a section, drag it to the right side of the palette or click the  icon next to the field.
- To remove a section from the article-type layout, click the  icon next to the section name.
- Use the undo and redo buttons to step backwards and forwards, respectively.
- Use the following keyboard shortcuts:
 - Undo = CTRL+Z
 - Redo = CTRL+Y
 - Quick Save = CTRL+S
- To select multiple elements individually, use CTRL+click. To select multiple elements as a group, use SHIFT+click .
- To quickly locate any item in the palette, use the Quick Find box. The Quick Find box is especially useful for article-type layouts that have large numbers of items available in the palette.
- To save your changes and continue editing the article-type layout, click **Quick Save**.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To customize the article-type layout:

- “Customize Application”
AND
“Manage Salesforce Knowledge”

- To save your changes when you are done customizing the article-type layout, click **Save**. If you navigate away from your article-type layout before clicking save, your changes will be lost.

[Defining Article Types](#)

[Adding Custom Fields to Article Types](#)

Assigning Article-Type Templates

Article types in Salesforce Knowledge require a template for each channel.

The article-type template specifies how the sections defined in the article-type layout are rendered. Salesforce provides two standard article-type templates, Tab and Table of Contents, and you can use Visualforce to [create custom templates](#).

If you choose the Tab template, the sections you defined in the layout appear as tabs when users view an article.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

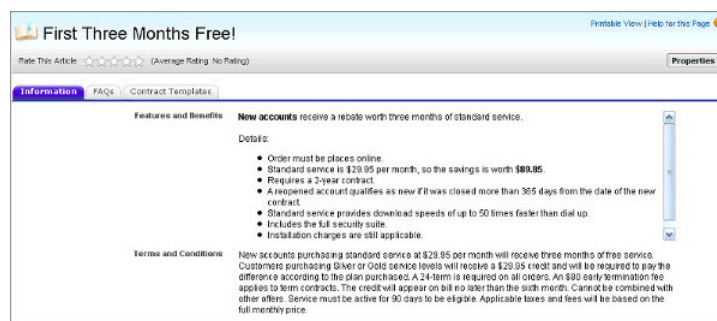

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To edit article-type template assignments:

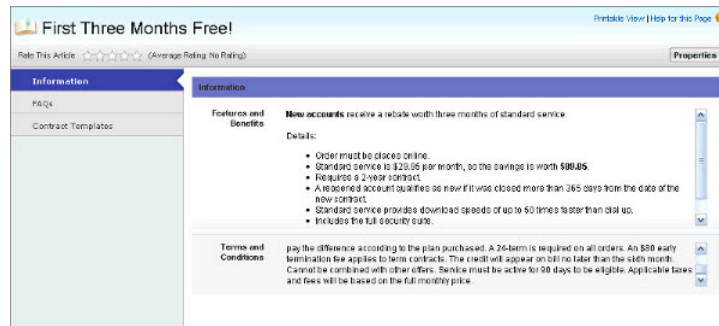

- “Manage Salesforce Knowledge”

Published Article Using the Tab Article-Type Template

If you choose the Table of Contents template, the sections you defined in the layout appear on one page with hyperlinks to each section title.

Published Article Using the Table of Contents Article-Type Template

To choose the template assignment for a channel:

1. From Setup, enter *Knowledge Article Types* in the Quick Find box, then select **Knowledge Article Types**.
2. Click a label to view the article-type detail page.
3. In the Channel Displays related list, click **Edit**.
4. For each channel, specify the template.

For Internal App, Customer and Partner, **Tab** is the default template. For Public Knowledge Base, **Table of Contents** is the default template. If your organization has a custom template for this article type, it also appears in the drop-down menu.

5. Click **Save**.

SEE ALSO:

[Modifying Article-Type Layouts](#)

[Defining Article Types](#)

Creating Custom Article-Type Templates

Article types in Salesforce Knowledge require a template for each channel.

The standard article-type templates—Tab and Table of Contents—specify how the sections in the article-type layout appear in the published article. For example, if you choose the Tab template, the sections defined in the layout appear as tabs when users view an article. With the Table of Contents template, sections appear on a single page with hyperlinks to each section. You can also create a custom template using Visualforce. Custom templates are not associated with the article-type layout.

To create a custom article-type template:

1. From Setup, enter *Knowledge Article Types* in the **Quick Find** box, then select **Knowledge Article Types**.
2. Find the article type you are creating the template for and click its title to open the detail page. Note the article type's **API Name**. You will need this value when you create the Visualforce page.
3. From Setup, enter *Visualforce Pages* in the **Quick Find** box, then select **Visualforce Pages**.
4. Click **New**.
5. In the **Name** text box, enter the text that should appear in the URL as the page name. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.
6. In the **Label** text box enter the text that users will see when choosing this template from the Channel Displays related list on the article type detail page.
7. Add your Visualforce markup. The only requirement for custom article-type templates is that the standard controller be equal to the **API Name** of the article type. For example, if the **API Name** of the article type is *Offer__kav*, your markup would be:

```
<apex:page standardController="Offer__kav">
    ... page content here ...
</apex:page>
```

 **Note:** Click **Component Reference** for a list of the Visualforce components, such as *knowledge:articleRendererToolbar* and *knowledge:articleCaseToolbar*, available for use in custom article-type templates.

8. If your article type has a **File field**, you can allow users to download the field's content. In the following example, the article type is *Offer*, the name of the File field is *my_file*, and the text that appears as a link is *Click me*:

```
<apex:outputLink value="{!URLFOR($Action.Offer__kav.FileFieldDownload,
Offer__kav.id, ['field'=$ObjectType.Offer__kav.fields.my_file__Body__s.name])}">Click
me</apex:outputLink>
```

 **Note:** If the File field is empty (meaning the author didn't upload a file), the link still appears on the published article but has no function. If you do not want the link to appear when the File field is empty, replace *Click me* in the example with the name of the file, for example, *{!Offer__kav.my_file__Name__s}*.

EDITIONS

Available in: **Salesforce Classic**

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To create, edit, or delete article-type templates:

- "Customize Application"
- AND
- "Manage Salesforce Knowledge"

- Click **Save**. Your custom template can now be assigned to any channel on the article type. See [Assigning Article-Type Templates](#) on page 2606 for details.

SEE ALSO:

[Developer's Guide: Visualforce Developer's Guide
Managing Article Types](#)

Managing Article Types

When creating an article, the author must select an article type. *Article types*, such as FAQs and Tutorials, provide the format and structure to control how an article displays for each audience, known as a channel. For each article type you can create custom fields, customize the layout by adding or removing sections and fields, and choose a template for each channel. You can also create workflow rules and approval processes to help your organization track and manage article creation and publication.

After creating your article types, you can customize, edit, and delete them. From Setup, enter *Knowledge Article Types* in the **Quick Find** box, then select **Knowledge Article Types** to display the Article Types list page, which provides a list of all the article types defined for your organization. From the Article Types list page you can:

- Click **New Article Type** to [define an article type](#).
- Click the article-type name to display the detail page. On the detail page you can edit existing fields, add new custom fields, add and edit sections on the article-type layout, assign and create [compact layouts](#), and select a template for each channel.
- Click **Del** to [delete an article type](#).

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To create, edit, or delete article types:

- “Customize Application”
AND
“Manage Salesforce Knowledge”

Adding Custom Fields to Article Types

Create custom fields to store information that is important to your articles. Before you begin, determine the [type of custom field](#) you want to create. The only standard fields provided on article types are `Article Number`, `Summary`, `Title`, and `URL Name`, so at minimum you'll want to create a field where authors can write the body of the article.

 **Note:** Authors can view the `URL Name` when they create or edit an article. The `URL Name` does not appear to end users viewing published articles.

To add a custom field:

1. From Setup, enter `Knowledge Article Types` in the `Quick Find` box, then select **Knowledge Article Types**.
2. Select an article type.
3. Click **New** in the Fields related list.
4. Choose the type of field to create, and click **Next**.
5. Enter a field label. The field name is automatically populated based on the field label you enter. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Ensure the custom field name is not identical to any standard field name for that object.
6. Enter any field attributes, such as `Description`, and click **Next** to continue.

 **Note:** You cannot enter a default value for any custom field.

7. Set the [field-level security](#) to determine whether the field should be visible and editable or read only for specific profiles, and click **Next**. Field-level security allows you to control which fields are visible in different channels.
8. If you do not want the field to be added automatically to the article-type layout, uncheck `Yes, add this custom field to the layout`.
9. Click **Save** to finish or **Save & New** to create more custom fields.
10. Optionally [rearrange your custom fields](#) on the article-type layout.

 **Note:** Creating fields may require changing a large number of records at once. To process these changes efficiently, Salesforce may queue your request and send an email notification when the process has completed.

 **Warning:** You will lose your data if you convert a custom field on an [article type](#) into any other field type. Do not convert a custom field on an article type unless no data exists for the field.

Customizing Salesforce Knowledge Settings

 **Note:** Before enabling Salesforce Knowledge, you must [create at least one article type](#).

Salesforce Knowledge is a knowledge base where users can easily create and manage content, known as articles, and quickly find and view the articles they need. For more information, see [Salesforce Knowledge Overview](#).

From Setup, enter *Knowledge Settings* in the `Quick Find` box, then select **Knowledge Settings**. If Salesforce Knowledge has not been enabled in your organization, an **Enable Knowledge** option is available. If Salesforce Knowledge is already enabled, you can configure the following optional settings.

Allow users to create and edit articles from the Articles tab

If this checkbox is selected, users can create and edit articles from the Articles tab.

Activate the Validation Status field for articles

When you activate the `Validation Status` field, users can select values to show whether the content of the article has been validated or not.

Allow users to add external multi-media content to the standard HTML editor

If this checkbox is selected, users can cut and paste `<iframe>` HTML to embed multi-media content from the following sites: Dailymotion, Vimeo, and YouTube.

Show article summaries in article list views

For each channel, decide whether an article's `Summary` details should display on the Articles tab.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To create or change custom fields:

- "Customize Application"

To modify article-type layouts:

- "Manage Salesforce Knowledge"

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To enable Salesforce Knowledge:

- "Customize Application"

Choose the language(s) for your knowledge base

The `Default Knowledge-Base Language` should be the primary language used for writing articles. It defaults to your organization's language.

If you will publish articles in more than one language, select `Multiple Languages` and choose the translation settings. For instructions, see [Setting up a Multilingual Knowledge Base](#) on page 2625.

Allow users to create an article from a case

If this checkbox is selected, users can create a draft article that is attached to the case when the article is published using one of the following options.

- Create articles using the simple editor only when closing cases.
- Create articles using the standard editor any time a user creates an article. Make sure that users have "Manage Articles," "Read," and "Create" permissions.

Select a default article type. For articles created when closing a case, assign the article to a user.

You can help agents create articles more quickly by [selecting an Apex class](#) that pre-populates any of the fields on the draft. By default the `Title` field in all draft articles contains the case subject.

If you enable this option, also click **Layout Properties** on each case-close page layout and select `Enable submissions during case close` and `Submit Articles`.

Use a profile to create customer-ready article PDFs on cases

By default, when a user [creates an article PDF directly from a case](#), the PDF includes all the article fields visible to that user. If you want PDFs to be generated according to a different profile, for example, a profile that hides certain fields from customers, select `Use a profile to create customer-ready article PDFs on cases` and choose the profile that should determine field visibility.

Enable list of cases linked to an article

Agents and Salesforce Knowledge managers can see a list of cases an article is attached to. This helps validate if the article is the right solution for a case and shows which articles are used most, without running a report. The Linked Cases related list:

- Is visible on the detail or preview page of any article that has been published at least once.
- Shows a maximum of 200 cases.
- Is sorted in descending order by the date the article was linked to the case. The sort order can't be changed.
- Doesn't appear on archived articles or a translation's edit and detail pages.
- Doesn't appear for external users such as portal or communities users or on Salesforce1.

Allow users to share articles via public URLs

You can share an article that is available on a public knowledge base with a URL. In the Available Sites list, select the sites you want to allow your agents to send URLs from and add them to the Selected Sites list. Agents can then email customer service clients with a URL to link directly to the article in your public knowledge base.

Allow users to create an article from a reply

If this checkbox is selected, members of an answers community or Chatter Answers community can convert helpful replies into articles. The article type you select determines which fields appear on the draft article, but on all articles the `Title` contains the question and the `Summary` contains the reply. After a reply is promoted to an article, the original reply has a status message indicating its association with the draft article. When the article is published, the message on the reply includes a link to the article.

SEE ALSO:

[Setting Up Salesforce Knowledge](#)

[Creating Search Synonyms](#)

[Example Apex Customization for Submitting Articles from Cases](#)

Example Apex Customization for Submitting Articles from Cases

 **Note:** You can add, edit, or delete Apex using the Salesforce user interface only in a Developer Edition organization, a Salesforce Enterprise Edition trial organization, or sandbox organization. In a Salesforce production organization, you can only make changes to Apex by using the Metadata API `deploy` call, the Force.com IDE, or the Force.com Migration Tool. The Force.com IDE and Force.com Migration Tool are free resources provided by Salesforce to support its users and partners, but are not considered part of our Services for purposes of the Salesforce Master Subscription Agreement.

If your organization [allows customer-support agents to create Salesforce Knowledge articles](#) while closing a case, you can use Apex to pre-populate fields on draft articles. To do so, create an Apex class and assign it to the case article type using the example below as a guide. For more information on the syntax and use of Apex, see the [Force.com Apex Code Developer's Guide](#).

Set up the example by creating the following article type, field, and data categories. Do not change the default `API Name` assigned to each new object.

1. Create an article type called `FAQ`.
2. Create a text custom field called `Details`.
3. Create a category group called `Geography` and assign it a category called `USA`.
4. Create a category group called `Topics` and assign it a category called `Maintenance`.

To finish the example, create and assign the Apex class:

1. From Setup, enter `Apex Classes` in the `Quick Find` box, then select **Apex Classes** and click **New**.
2. Click **Version Settings** to specify the version of Apex and the API used with this class. If your organization has installed managed packages from the AppExchange, you can also specify which version of each managed package to use with this class. Use the default values for all versions. This associates the class with the most recent version of Apex and the API, as well as each managed package. You can specify an older version of a managed package if you want to access components or functionality that differs from the most recent package version. You can specify an older version of Apex and the API to maintain specific behavior.
3. In the `Apex Class` text box enter the following script and click **Save**:

```
public class AgentContributionArticleController {
    // The constructor must take a ApexPages.KnowledgeArticleVersionStandardController
    as an argument
    public
AgentContributionArticleController (ApexPages.KnowledgeArticleVersionStandardController
ctl) {
    SObject article = ctl.getRecord(); //this is the SObject for the new article.

                                //It can optionally be cast to the proper
    article type, e.g. FAQ__kav article = (FAQ__kav) ctl.getRecord();

    String sourceId = ctl.getSourceId(); //this returns the id of the case that was
    closed.
    Case c = [select subject, description from Case where id=:sourceId];

    article.put('title', 'From Case: '+c.subject); //this overrides the default
    behavior of pre-filling the title of the article with the subject of the closed case.
    article.put('Details__c',c.description);
}
```

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

USER PERMISSIONS

To edit Salesforce Knowledge settings:

- "Customize Application"

To create an Apex class:

- "Author Apex"

```

        ctl.selectDataCategory('Geography','USA'); //Only one category per category
group can be specified.
        ctl.selectDataCategory('Topics','Maintenance');
    }

```

4. From Setup, enter *Knowledge Settings* in the Quick Find box, then select **Knowledge Settings** and click **Edit**.
5. Verify the [case settings](#); using our example, the **Default article type** should be FAQ.
6. From the Use Apex Customization menu, select **AgentContributionArticleController** and click **Save**.

As a result of this example, when agents create an article from the case-close screen:

- The data from the *Description* field on the case appears in the *Details* field of the article.
- The title of the article contains *From Case:* and the case subject.
- The article is automatically assigned to the *USA* data category and the *Maintenance* data category.

Sending Articles from Cases

USER PERMISSIONS

To set up Email-to-Case or On-Demand Email-to-Case:	"Customize Application"
To enable Email-to-Case or On-Demand Email-to-Case:	"Modify all Data" AND "Customize Application"
To customize page layouts:	"Customize Application"
To create or change HTML email templates:	"Edit HTML Templates"
To create or change public email template folders:	"Manage Public Templates"
To create or change Visualforce email templates:	"Customize Application"

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance** and **Developer** editions.

Salesforce Knowledge is available for an additional cost in **Enterprise** and **Unlimited** editions.

If articles are associated with a case, users working on the case can attach PDF versions of the articles to an email simply by choosing a template you create. This capability is available if [Email-to-Case or On-Demand-Email-to-Case](#) is set up and the Email related list is visible on case page layouts.

Creating an Email Template that Converts Articles to PDF Files

To allow users working on a case to automatically attach article PDFs to an email message:

1. From Setup, enter *Email Templates* in the Quick Find box, then select **Email Templates**.
2. Click **New Template** to create a template from scratch or click **Edit** next to an existing template. The new or edited template must include the *Articles as PDFs* case field.

3. For example, if you want to edit the *SUPPORT: Case Response with Solution (SAMPLE)* template to include articles instead of solutions, complete these steps:
 - a. Click **Edit** next to the *SUPPORT: Case Response with Solution (SAMPLE)* template.
 - b. Change the `Email Template Name` to *SUPPORT: Case Response with Article (SAMPLE)*.
 - c. Modify the `Template Unique Name` as needed.
 - d. Choose **Case Fields** from the `Select Field Type` drop-down menu.
 - e. Choose **Articles as PDFs** from the `Select Field` drop-down menu.
 - f. Copy the value from the `Copy Merge Field Value` field and paste it in the email body.
4. Click **Save**.

On the case detail page in the Emails related list, users can now click **Send an Email** and choose the new template. Articles associated with the case are automatically converted to PDF attachments, and the attachments can be previewed or deleted if needed before the email is sent.

 **Note:** Both the article and the knowledge base must be in the same language. For example, if your knowledge base language is English but you want a Japanese article converted into a PDF, change your knowledge base language to Japanese (in Setup, enter *Knowledge* in the `Quick Find` box, select **Knowledge Settings**, then click **Edit**) before converting the article.

Notes on Field Visibility in Article PDFs

Consider the following information when using email templates that include the **Articles as PDFs** function:

- The fields that appear in article PDFs are determined by your profile if the `Use a profile to create customer-ready article PDFs on cases` checkbox (from Setup, enter *Knowledge Settings* in the `Quick Find` box, then select **Knowledge Settings**) is not selected. If you can see all fields in the original article, all fields also appear in the automatically generated PDF. If field-level security restricts you from seeing a field on an article, that field and its data do not appear in the article's PDF.
- If the `Use a profile to create customer-ready article PDFs on cases` checkbox is selected and a profile is chosen from the **Profile** menu (from Setup, enter *Knowledge Settings* in the `Quick Find` box, then select **Knowledge Settings**), the chosen profile determines which fields appear in automatically generated PDFs. For example, if you are sending article PDFs to customers, you might choose the Customer Portal User profile to ensure that internal-only fields do not appear in article PDFs.
- Fields in the Properties section of an article, including `First Published`, `Last Modified`, `Last Published`, and `Summary`, are not included in any PDF version regardless of setting or profile.

SEE ALSO:

[Salesforce Knowledge Overview](#)
[Setting Up Salesforce Knowledge](#)

Enable Sending Article Content in Email (Beta)

When using Knowledge One, agents can send an email with an article's contents embedded in the body of the email.

 **Note:** Sending article content via email is available through a beta program for articles published on external channels (public knowledge bases, portals, or communities) and is not supported on Internet Explorer 7. For new organizations, the user permission off on all standard profiles but on for the System Administrator profile. For existing organizations, contact your Salesforce representative to enable the permission on the standard System Administrator profile.

Agents can send article content within an email rather than just sending a URL, letting your customers access the information without going to a website and letting your agents send articles that are not published publicly without rewriting or copy and pasting an internal article. Administrators can assign permission to only those agents with a good knowledge of what is acceptable for an external audience.

To enable and setup which article fields go into emails for each article type.

1. From the object management settings for cases, go to Page Layouts.
2. How you access the Case Feed Settings page depends on what kind of page layout you're working with.
 - For a layout in the Case Page Layouts section, click **Edit**, and then click **Feed View** in the page layout editor.
 - For a layout in the Page Layouts for Case Feed Users section, click  and choose `Edit feed view`. (This section appears only for organizations created before Spring '14.)
