Run Assignment Rules for a Territory

Run account assignment rules for any territory that has rules defined and belongs to a territory model in Planning or Active state. If your territory is in Planning state, running rules lets you preview account assignments. If your territory is in Active state when you run rules, accounts are assigned to territories according to your rules.

⚠️ Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Open the hierarchy for the territory model the territory model belongs to.
2. In the tree view or list view, find the territory you want to run rules for.
3. In list view, click Run Rules. In tree view, hover over the territory name and then click Run Rules. If you want to view the territory record’s details, including its assigned rules, before you run its rules, open the record and then click the Run Rules button in the Assignment Rules Assigned to This Territory related list.
Find Out Which Territories an Assignment Rule Applies To

If you use rules to assign accounts to territories, it can be helpful to find out which territories a single rule applies to.

Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From Setup, enter Territory Models in the Quick Find box, then select Territory Models to view a list of your organization’s territory models.
2. Find the model in which the rule operates and click View Rules to see a list of all the rules associated to the model and its territories.
3. Click the rule name and look for the territories it applies to in the Assigned Territories related list.

Create Custom Report Types for Enterprise Territory Management Reports

Organizations using Enterprise Territory Management can run reports that show account assignments, user assignments, and more. Set up custom report types so sales managers and other users can create the reports they need.

Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure you’re familiar with custom report types and the general steps for creating and maintaining them.
2. Create custom report types relating these objects and configuring them as necessary. Make all fields available for reporting. Add each report to the Territory Management report type category. Provide a clear name and description for each report type so users who create reports can understand which one to use for their needs.

<table>

3. Deploy the report types you want to make available to users.
4. Let users know that they can create reports using these custom report types.

SEE ALSO:

Create a Custom Report Type
Report on Accounts Assigned to Territories

Manage account assignments to sales territories by reporting on which accounts have been assigned to territories. See which accounts belong to which territories.

Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure your organization has a custom report type that links the Accounts and Territories objects. It should specify that the Accounts object must have related Territory records and it should make all fields on these objects available for reporting.

2. Create your report: click the Reports tab, then click New Report.

3. From the Territory Management category, select the custom report type created for this report.

4. Click Create.

5. Make sure that the Accounts field Account Name and the Territories field Label appear on the report. If they do not, add them.

6. (Optional) Filter the report results. To show data from territory models in Active state only, from the Filters drop-down list, select Field Filter. Configure the filter options to show Territory Model: Label equals <name of active territory model> and then click OK. From the Show field, to filter by account ownership, select My accounts, My team’s accounts, or My territory teams’ accounts. To filter by user territory assignment, select My territories’ accounts.

Important: If you later activate a different territory model, make sure you update the territory model name variable in this report.

7. Add any other fields you find useful for this report.

8. Save the report and run it.

9. (Optional) Summarize information by Accounts field Account Name to show each account along with the number of territories it’s assigned to.
Report on Territories Without Assigned Accounts

Manage account assignments to sales territories by reporting on which territory models’ territories do not have assigned accounts.

⚠️ **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure your organization has a custom report type that links the Territory Models, Territories, and Territory-Assigned Records objects. It should specify that the Territories object *may or may not* have related Territory-Assigned records and should make all fields on these objects available for reporting.

2. Create your report: click the Reports tab, then click **New Report**.

3. From the Territory Management category, select the custom report type created for this report.

4. Click **Create**.

5. Make sure that the Territory Models field *Label* and the Territories field *Label* appear on the report. If they do not, add them.

6. From the **Filters** drop-down list, select **Cross Filter**. Configure the filter options to show *Territories without Territory-Assigned Records* and then click **OK**. Configure the filter options to show *Object equals Account*.

7. If you want to show data from territory models in *Active state only*, from the **Filters** drop-down list, select **Field Filter**. Configure the filter options to show *State equals Active* and then click **OK**.

8. Add any other fields you find useful for this report.

9. Save the report and run it.
Report on Users Not Assigned to Territories

Manage user assignments to sales territories by reporting on which users have not been assigned to territories.

Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure your organization has a custom report type that links the Users and Territories objects. It should specify that the Users object *may* or *may not* have related Territories records and should make all fields on these objects available for reporting.

2. Create your report: click the Reports tab, then click New Report.

3. From the Territory Management category, select the custom report type created for this report.

4. Click Create.

5. Make sure that the Users field Full Name and the Territories field Label appear on the report. If they do not, add them.

6. From the Filters drop-down list, select Cross Filter. Configure the filter options to show Users without Territories and then click OK.

7. If you want to show data from territory models in Active state only, from the Filters drop-down list, select Field Filter. Configure the filter options to show Territory Model: Label equals <name of active territory model> and then click OK.

   Important: If you later activate a different territory model, make sure you update the territory model name variable in this report.

8. Add any other fields you find useful for this report.

9. Save the report and run it.
Report on Territories with Assigned Users

Manage user assignments to sales territories finding out which territory models’ territories have users assigned. See which assigned users belong to which territories.

ё Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure your organization has a custom report type that links the Territory Models, Territories, and Users objects. It should specify that the Territory object must have related Users records and make all fields on these objects available for reporting.

2. Create your report: click the Reports tab, then click New Report.

3. From the Territory Management category, select the custom report type created for this report.

4. Click Create.

5. Make sure that the Territory Models field Label, the Territories field Label, and the Users field Full Name appear on the report. If they do not, add them.

6. If you want to show data from territory models in Active state only, from the Filters drop-down list, select Field Filter. Configure the filter options to show State equals Active and then click OK.

7. Add any other fields you find useful for this report.

8. Save the report and run it.

9. (Optional) Summarize information by Territory object field Label to show each territory with the users assigned to it.
Report on Summarizable Account Fields by Territory

Gauge territory size by reporting on summarizable account data, such as annual revenue or number of employees.

Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure your organization has a custom report type that links the Accounts and Territories objects. It should specify that the Accounts object must have at least one Territory object record and should make all fields on these objects available for reporting.

2. Create your report: click the Reports tab, then click New Report.

3. From the Territory Management category, select the custom report type created for this report.

4. Click Create.

5. Select Matrix Format for the report.

6. From the Territories field list, select the Label field. Drag it to create a row grouping.

7. From the Accounts field list, select the Account Name field. Drag it to create a row grouping.

8. From the Accounts field list, select summarizable fields, such as Annual Revenue and Employees, to show those totals. Drag them into the summarizable fields area. When prompted, select the Sum checkbox.

9. (Optional) Filter the report results. From the Show field, to filter by account ownership, select My accounts, My team’s accounts, or My territory teams’ accounts. To filter by user territory assignment, select My territories’ accounts.

10. Add any other fields you find useful for this report.

11. Run the report and make sure it shows the data and the arrangement you want.

12. Summarize information by the Territories field Label to total all the summarizable field values by territory.

13. Save the report.

Archive a Territory Model

Archiving a territory model deactivates it in your organization, but the model remains in your territory model list, where you can reference its associated assignment rules and the resulting account-to-territory assignments generated by the rules. You can only archive a model that is in the Active state. After archiving a model, you cannot return it to the Active state or the Planning state.

Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From Setup, enter Territory Models in the Quick Find box, then select Territory Models.

2. Click Edit next to the territory model you want to archive.

3. Choose Archiving from the State drop-down. The model state changes to Archiving while Salesforce processes your request. When processing is complete, the model state changes to Archived, and you receive a confirmation via email. This may take some time, depending on the size and complexity of your organization.
Delete a Territory Model

Delete a territory model if your organization no longer actively uses the model for territory management or reference. You can’t delete an active territory: the model must be in Planning or Archived state.

⚠️ Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Deleting a territory model also deletes all its associated territories and account assignments. You can’t cancel the process or restore a deleted model. The process may take several hours, so we’ll send you an email when it’s complete.

1. From Setup, enter Territory Models in the Quick Find box, then select Territory Models.
2. Find the model in the list. Check the value in the State column to make sure the model is in the Planning or Archived state.
3. Click Del.
4. Later, check your email for confirmation that the deletion process is complete.

View and Manage Assignment Rules at the Territory Model Level

If you want to view and manage account assignment rules at a high level, you can. Start from the territory model record to create, edit, or view rules for the model’s territories. From the model-level list of rules, you can view rule criteria, or open a rule record to find out which territories it’s assigned to, if any.

⚠️ Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From Setup, enter Territory Models in the Quick Find box, then select Territory Models.
2. Click View Rules next to the territory model whose rules you want to manage.
3. On the Assignment Rules list view, you can create a new rule, open a rule record for complete details, or hover over the rule name to view its criteria.

Account Billing City equals Los Angeles
Activating Assignment Rules and Applying them to Descendant Territories

The ability to apply an assignment rule to descendant territories is available at the territory level only. You cannot apply assignment rules to descendants at the territory model level. Therefore, you only get the option to apply a rule to descendant territories if you access the rule’s record from an individual territory.

Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

With this restriction in mind, make sure you create or edit a rule record from the appropriate place. Starting from the territory record gives you the most options. Make sure you activate all assignment rules you want to use: inactive rules do not affect assignments for associated territories or any descendant territories they have been applied to.

Example: For example, you have a territory model called US, and its hierarchy has two territories: Eastern States and Western States. The Eastern States territory has an assigned rule called Eastern States Accounts. If you open the record for the territory model, US, then click View Rules and from there click Edit to edit the Eastern States Accounts rule record, the final step lets you activate the rule.

If you start from the Eastern States territory record, then click Edit next to the Eastern States Accounts rule record, in addition to the step where you activate or deactivate the rule, you’ll see an additional step that lets you apply the rule to the Eastern States territory’s descendants.

Disable Enterprise Territory Management

If you wish, you can disable Enterprise Territory Management for your organization and use another means of record sharing.

Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Important: If you disable Enterprise Territory Management, your users lose record access that’s based on territory assignments, and your organization no longer has access to territory management data. If you re-enable Enterprise Territory Management, you may lose data that had previously been available through the feature.

1. If you haven’t already, archive your active territory model before disabling Enterprise Territory Management.

2. From Setup, enter Territories in the Quick Find box, then select Settings.

3. Click Disable Territory Management 2.0.
Customizing Territories to Help Your Users Manage Accounts

Enable Territory Management

Before you enable Territory Management, contact Salesforce, and then check that your organization meets the prerequisites.

Note: This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

Territory management is not enabled by default in Salesforce. To request territory management for your organization, contact Salesforce.

Note: Original Territory Management is available only with Customizable Forecasts and is not supported with Collaborative Forecasts. If original Territory Management is enabled, you can no longer use Collaborative Forecasts. The newer Enterprise Territory Management can’t be used with Customizable Forecasts. Enterprise Territory Management and Collaborative Forecasts can both be enabled and used at the same time in your Salesforce organization, but the two features are not currently integrated to work together.

Ensure that you meet the following prerequisites before enabling territory management:

• To enable territory management, your organization must be using customizable forecasting. If you do not know whether you have customizable forecasting, see Do I Have Customizable Forecasting? on page 1502.

• To prepare your organization for territory management, follow the steps in the Deploying Territory Management Guide.

After you have completed the prerequisites, you will be ready to turn on territory management for your organization:

1. In Salesforce, from Setup, enter Territory in the Quick Find box, then select Territory Settings.

2. Optionally, change the organization-wide territory management settings that are configurable from the Territory Settings page. See Configure Territory Management Settings on page 1822.

3. There are two different options for enabling territory management, which depend on your preference to retain or purge pre-existing forecast data. Click either Enable Territory Management or Enable Territory Management from Scratch.

What the Enable Territory Management Button Does

When you click this button, your organization’s current forecast hierarchy and forecast data are automatically copied to the territory hierarchy as follows:

• The name of your organization is set as the top of the territory hierarchy.

• For each role in the forecast hierarchy, a corresponding territory is created in the new territory hierarchy.

• Manual forecast sharing settings on the roles are copied to the new territory. For more information on manual forecast sharing, see Manually Sharing a Forecast on page 1944.

• Active Salesforce users are added to territories based on their roles.

• Opportunities are assigned to the opportunity owner’s territory.

• Accounts are not assigned anywhere in the territory hierarchy.

• Until you add or edit territories, your forecasts work the same as they did before you enabled territory management.

What the Enable Territory Management from Scratch Button Does

When you click this button, the following occurs:

• All pre-existing forecast data is deleted.

• An empty territory hierarchy is created.
Using this button is only recommended when you are setting up a brand new organization in Salesforce that does not have an existing forecast hierarchy.

⚠️ **Warning:** *Irreversible data loss* can result from clicking *Enable Territory Management from Scratch.*

4. Configure territory-related fields, page layouts, and user permissions:
   - From the object management settings for accounts, go to Page Layouts and add the **Territories** and **Exclude from territory assignment rules** fields to account page layouts. For each account page layout, you can set whether users can choose to run account assignment rules when they save accounts. You can also set whether account assignment rules run by default whenever accounts are saved.
   - From the object management settings for opportunities, go to Page Layouts and add the **Territory** field to opportunity page layouts.
   - To allow a user to be an administrator of the territory hierarchy, grant them the “Manage Territories” permission using permission sets or profiles. Users that had the “Customize Application” permission before you enabled territory management are automatically given the “Manage Territories” permission.

5. To begin working with your new territory hierarchy, from Setup, enter **Hierarchy** in the Quick Find box, then select **Territory Hierarchy**. See Building Your Territory Hierarchy on page 1823.

**Configure Territory Management Settings**

**Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

You can set default account, contact, opportunity, and case access levels for new territories, as well as whether forecast managers can administer the territories located below them in the territory hierarchy.

1. From Setup, enter **Territory** in the Quick Find box, then select **Territory Settings**.

2. Choose default access levels for accounts, contacts (depending on your organization-wide default setting), opportunities, and cases. These are the access levels that will be selected by default when a new territory is created. For descriptions of these fields, see Territory Fields on page 1826.

   **Note:** These settings are not retroactive and do not affect territories that already exist. When creating or editing an individual territory, you can override these default access levels. See Create Territories on page 1825.

3. Optionally, check **Forecast managers can manage territories**. When this box is checked, forecast managers can administer subordinate territories: they can manage users, manually add accounts, and manage account assignment rules for
territories that are below their immediate territory. Also, they can add child territories to both their immediate territory and lower territories. To learn more about forecast managers, see Assigning Forecast Managers in Your Forecast Hierarchy on page 1942.

- Building Your Territory Hierarchy

Building Your Territory Hierarchy

Note: This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

Note: If you clicked the Enable Territory Management button to enable territory management, your existing forecast hierarchy was used as the basis of the territory hierarchy.

To work with your organization's territory hierarchy, from Setup, enter Hierarchy in the Quick Find box, then select Territory Hierarchy. The following terms are used when referring to territories in the hierarchy.

**Parent Territory**
A territory that is located immediately above another territory in the hierarchy. A territory has exactly one parent territory in the hierarchy, except for the top-level territory which does not have a parent.

**Child Territory**
A territory that is immediately below another territory in the hierarchy. A parent territory can have an unlimited number of child territories.

**Sibling Territory**
Child territories that share the same parent territory.

Choose an option from the drop-down list to change how the territory hierarchy is displayed:

**Show in tree view**
See a visual representation of the parent-child relationships between your territories. Click Expand All to see all territories, or Collapse All to see only top-level territories. To expand or collapse an individual node, click the plus (+) or minus (-) icon.

**Show in sorted list view**
See a territory list that you can sort alphabetically by territory name, parent territory (Reports to), or description.

To show a filtered list of items, select a predefined list from the View drop-down list, or click Create New View to define your own custom views. To edit or delete any view you created, select it from the View drop-down list and click Edit.

**Show in list view**
See a list of territories and their children, grouped alphabetically by the name of the top-level territory. The columns are not sortable. This view is not available for hierarchies with more than 1,000 territories.
Each view provides links for you to create, edit, and delete territories.

SEE ALSO:

Managing Territories
Display and Edit Territories

Display and Edit Territories

From the territory detail page, you can view and modify different aspects of the territory, including related territories, assigned users, and included accounts.

Note: This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

Displaying Territories

1. From Setup, enter Hierarchy in the Quick Find box, then select Territory Hierarchy.
2. Select the name of the territory you want to view.

Viewing Related Territories

The Hierarchy list at the top of the territory detail page shows how this territory is related to the top-level territory in the territory hierarchy. To see the names of other territories that share parent territory of this one, refer to the Siblings list. In either list, you can click a territory name to view that territory. The territory detail page also includes a Child Territories related list; see Working with Territory Related Lists on page 1825.

Editing Territories

To update an existing territory, click Edit, and then change the fields you want to modify. For more information, see Territory Fields on page 1826 and Create Custom Territory Fields on page 1827.

If an edit to a territory affects a large amount of data, you receive a confirmation email when the operation has completed.

Note: When you edit groups, roles, and territories, sharing rules are automatically recalculated to add or remove access as needed.

Cloning Territories

Click Clone to create a territory with the same standard and custom field values as the current territory. The cloned territory has the same parent territory as the original territory. However, assigned users, account assignment rules, and manually assigned accounts are not cloned.

Note: If you have read-only access to a field, the value of that field is not carried over to the cloned record.

Viewing Accounts Assigned to a Territory

Click View Accounts to see a list of the accounts that have been assigned to this territory and territories below it in the territory hierarchy. The list includes both manually assigned accounts and accounts that were assigned via rules.
Working with Territory Related Lists

Each territory detail page has the following related lists:

- **Assigned Users** - Lists the users in the territory. See Manage Users in Territories on page 1828.
- **Inherited Account Assignment Rules** - Lists the account assignment rules for this territory that are defined in a parent territory. See Managing Account Assignment Rules on page 1832.
- **Account Assignment Rules Defined in This Territory** - Lists the account assignment rules for this territory. See Managing Account Assignment Rules on page 1832.
- **Manually Assigned Accounts** - Lists the accounts that have been manually added to this territory. See Manually Assign Accounts to Territories on page 1839.
- **Child Territories** - Lists the territories located immediately below this territory in the territory hierarchy. To create a child territory for this territory, click Add Territory. To view a child territory's detail page, click the territory name.

**Note:** Hover over the links at the top of a detail page to display the corresponding related list and its records. If Chatter is enabled, hover links display below the feed. An interactive overlay allows you to quickly view and manage the related list items. Click a hover link to jump to the content of the related list. If hover links are not enabled, contact your Salesforce administrator.

- Create Territories

Create Territories

**Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

You can create up to 500 territories for your organization. To create a new territory:

1. From Setup, enter Hierarchy in the Quick Find box, then select Territory Hierarchy
2. Click Add Territory. You can also click Add Territory from the Child Territories related list of a territory detail page.
3. Define the new territory by entering or changing fields. For descriptions of territory fields, see Territory Fields on page 1826.

   The required standard fields for territories are Label, Territory Name, and Parent Territory. Territories can also have custom fields. For more information, see Create Custom Territory Fields on page 1827.

4. Click Save to finish or Save & New to create more territories.

## Territory Fields

**Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

A territory has the following fields, listed in alphabetical order.

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account Access</td>
<td>Sets how much access territory members have to the territory’s accounts: view only, view and edit, or view, edit, transfer and delete.</td>
</tr>
<tr>
<td>Case Access</td>
<td>Sets how much access territory members have to cases on the territory’s accounts, regardless of who owns the cases: no access, view only, or view and edit.</td>
</tr>
<tr>
<td>Confine Opportunity Assignment</td>
<td>Select this checkbox to prevent the opportunities in this territory from being moved out of this territory and its child territories when account assignment rules are run.</td>
</tr>
<tr>
<td>Contact Access</td>
<td>Sets the level of access territory members have to contacts on the territory’s accounts, regardless of who owns the contacts. The options are no access, view only, or view and edit.</td>
</tr>
<tr>
<td>Forecast Manager</td>
<td>The user to whom forecasts from child and lower-level territories roll up. Only modifiable by clicking Change on the territory detail page. If enabled via the Territory Settings page, a forecast manager can administer lower territories in the hierarchy.</td>
</tr>
<tr>
<td>Label</td>
<td>The name used to refer to the territory in any user interface pages.</td>
</tr>
<tr>
<td>Opportunity Access</td>
<td>Sets how much access territory members have to opportunities on the territory’s accounts, regardless of who owns the opportunities: no access, view only, or view and edit.</td>
</tr>
<tr>
<td>Parent Territory</td>
<td>Territory immediately above this territory in the territory hierarchy. The parent territory must be an existing territory. Use the lookup icon to select the parent territory.</td>
</tr>
<tr>
<td>Sharing Groups</td>
<td>Read-only and only displays on the territory detail page. For every territory, two sharing groups are created; one for the territory, and another for the territory and its children. Click Territory to see the users who are in the sharing groups.</td>
</tr>
</tbody>
</table>
## Create Custom Territory Fields

You can add up to 500 custom territory fields to tailor territories for your company’s unique requirements.

**Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

From the object management settings for territories, go to the fields area. From this area, you can view details of standard fields, create or edit custom fields, or define field dependencies.

**Note:** Territories don’t have customizable page layouts. New custom fields are added in alphabetical order at the bottom of the territory detail page.

### EDITIONS

**Available in:** Salesforce Classic

**Available in:** Developer and Performance Editions and in Enterprise and Unlimited Editions with the Sales Cloud

### USER PERMISSIONS

To create or edit custom territory fields:
- "Manage Territories"
- OR
- You are a forecast manager. Forecast managers can manage territories of those users working below them in territory hierarchy.
Delete Territories

**Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

You can only delete territories that do not have any child territories. When a territory is deleted, the following items are no longer associated with that territory:

- All users, whether or not Active in Territory is checked
- All accounts, whether assigned manually or by account assignment rules
- All opportunities

To delete a territory:

1. From Setup, enter **Hierarchy** in the Quick Find box, then select ** Territory Hierarchy**
2. Click Del next to a territory in the hierarchy. Alternatively, select the name of a territory and click **Delete**.

**Note:** Restoring an account or opportunity from the Recycle Bin restores the territory assignment, but it does not trigger the evaluation of account assignment rules. If account assignment rules changed while the record was in the Recycle Bin, the restored record may have territories that are inconsistent with the new rules.

SEE ALSO:
- Display and Edit Territories
- Building Your Territory Hierarchy

Manage Users in Territories

**Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

A territory can have an unlimited number of users, and a user can be assigned to an unlimited number of territories.

In the context of a specific territory, users have both an Active status and an Active in Territory status:

**Active**

An active user is able to log in to Salesforce.

Deactivated users, such as employees who are no longer with your company, are disabled from logging in to Salesforce. Deactivated users continue to own opportunities and appear in forecasts and territories. When users are deactivated, their opportunity forecast overrides, adjusted total overrides, and manager's choice overrides on subordinates' forecasts are frozen. However, the manager of a deactivated user can apply manager's choice overrides to that user's forecasts. Rollup amounts are kept current. If a deactivated user is later reactivated, the user can resume normal work as before. If “Allow Forecasting” is disabled for a user who is deactivated, the user is removed from any territories he or she is assigned to.

Users can set their active status by modifying their personal information page in their personal settings.
Active in Territory

Users with Active in Territory checked on the territory detail page have open opportunities, closed opportunities, or no opportunities at all in that territory. Users with Active in Territory deselected have been transferred out of or removed from the territory, but retain ownership of opportunities in the old territory.

To view the territories to which you belong, view the Territories related list on your personal information page. To view this related list for any user, from Setup, enter Users in the Quick Find box, then select Users.

Adding Users to Territories

To add users to a territory:

1. From a territory detail page, click Add Users.
2. To show a filtered list of items, select a predefined list from the View drop-down list, or click Create New View to define your own custom views.
3. Select and deselect checkboxes in the Action column to move users between the Available and Selected areas. Also, you can:
   - Click a letter to view users who correspond to that letter.
   - Click All to display all users who match the criteria of the current view.
   - Click select shown to move all users that are shown on the current list page to the Selected area below.
   - Click deselect shown or deselect all to move users from the Selected area to the Available area.
   
   **Note:** Users already assigned to the territory will not appear in the Available users list even if they meet the list view criteria.
4. When the Selected area includes all users that you want to assign to the territory, click Assign.

Removing Users from Territories

You can remove a user from a territory and choose who will receive his or her open opportunities:

1. In the Assigned Users related list on the territory detail page, click Remove next to the user’s name.
2. Click the New Owner lookup icon ( ) to select a recipient for any open opportunities the user may have.
3. Alternatively, leave the New Owner field blank. One of the following results will occur:
   - If the parent territory has a forecast manager, then that forecast manager takes ownership of the user’s open opportunities. Also, the forecast manager is assigned to the territory with Active in Territory unchecked.
   - If the parent territory does not have a forecast manager, then the user remains in the territory with Active in Territory unchecked.
4. Click Save.

   If very large amounts of data are affected, you will be sent a confirmation email when the operation has completed.

Transferring Users Between Territories

The user transfer wizard allows you to move a user from one territory to another, choose which open opportunities the user will continue to own, and designate a recipient for open opportunities the user leaves behind.

To transfer a user to another territory:

1. In the Assigned Users related list on the territory detail page, click Transfer next to the user’s name.
2. Click **Select** next to the territory to which you are transferring the user. If necessary, expand or collapse nodes in the territory hierarchy to display the desired destination territory.

3. Click the **New Owner** lookup icon ( ) to select the user who will take ownership of the open opportunities that the transferred user does not keep. Click **Next** to proceed.

   If you skip this step and choose not to select a recipient, the forecast manager of the parent territory of the user’s former territory automatically receives the open opportunities that the user does not keep. If there is no forecast manager in the parent territory of the user’s former territory, then the user being moved retains ownership of his or her opportunities.

4. Choose a list view of the user’s open opportunities.

5. Click **Select** and **Deselect** to move opportunities between the Available and Selected areas. Also, you can:
   - Click a letter to view opportunities that correspond to that letter.
   - Click **All** to display all opportunities that match the criteria of the current view.
   - Click **select shown** to move all opportunities that are shown on the current list page to the Selected area below.
   - Click **deselect shown** or **deselect all** to move opportunities from the Selected area to the Available area.

6. When the Selected area shows the opportunities that you want the user to retain after the transfer, click **Transfer**.

   If very large amounts of data are affected, you will be sent a confirmation email when the operation has completed.

   **Note:** If you transfer the forecast manager out of a territory, that territory will no longer have a forecast and any opportunity overrides for that territory that were created by forecast managers above it in the territory hierarchy will be deleted. See Overriding Customizable Forecasts on page 1507.

Add Forecast Managers to Territories

Note: This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

Consider the following before assigning the forecast manager for a territory:

- A territory can have only one forecast manager. See Assigning Forecast Managers in Your Forecast Hierarchy on page 1942.
- Forecasts from child and lower-level territories roll up to forecast managers.
- If a territory has no forecast manager, there is no forecast for that territory.
- Forecast managers can receive opportunities when users are transferred out of or removed from a territory.
- Forecast managers can receive opportunities when account assignment rules are run.
- On the territory settings page, you can enable forecast managers to act as delegated administrators for territories below them in the hierarchy.

To assign or change the forecast manager for a territory:

1. On the territory detail page, click Change next to the Forecast Manager field.
2. Select a name from the drop-down list to specify the territory’s forecast manager.

On the right, a tree view of the territory hierarchy allows you to see the child and lower-level territories whose forecasts will roll up to the forecast manager.
3. Click **Save** to finish.

### Managing Account Assignment Rules

**Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

You can create account assignment rules that automatically move accounts and their associated opportunities and cases into territories based on any standard or custom account field, such as zip code, state, industry, revenue, or number of employees. Each rule consists of multiple rows of criteria that specify exactly how the accounts are assigned.

Account assignment rules are governed by the following:

- A territory can have inherited account assignment rules, meaning that the rules were created somewhere higher in the territory hierarchy and consequently also impact the given territory.
- A territory can have locally defined account assignment rules, meaning that the rule was created at the given territory.
- If a territory doesn’t have any inherited or locally-defined account assignment rules, then it only contains accounts that were manually added.
- If an account matches all inherited and locally-defined account assignment rules for multiple territories on the same branch of the hierarchy, then the account is assigned to the lowest matching territory.
- If an account matches a territory’s inherited account assignment rules but not all of the territory’s locally-defined rules, then the account isn’t assigned to the territory, but is evaluated for child territories.

For example, you have three territories:

- Territory A has four rules marked "Apply to child territories", and is a parent of territory B.
  - Territory B has three rules not marked "Apply to child territories", and is a parent of territory C.
  - Territory C has two rules.

If you assign an account that matches all of territory A’s and territory C’s rules but only one of territory B’s rules, then the account is assigned to territory C. However, if territory B’s rules are marked “Apply to child territories,” then the account is assigned only to territory A.

### Working with Account Assignment Rules

Click **Run Rules** on the territory detail page to evaluate the active inherited, locally defined rules shown on the page against all existing accounts in your organization. The rules for all subordinate territories are also evaluated—that is, when you run rules on the top-level territory, all rules in the entire hierarchy are evaluated. When you click **Run Rules**, an icon ( ) displays next to the button for all affected territories to indicate that rules are being processed. An email confirmation is sent when processing is complete.

**Note:** To protect data quality, you can’t modify a territory while the processing icon displays.
Click **Manage Rules** on the territory detail page to access the Manage Account Assignment Rules page, where you can create, edit, preview, and run account assignment rules:

- Click **New** to create a new rule, or **Edit** to edit an existing rule. See Create and Edit Account Assignment Rules on page 1837.
- Use the **Active** checkbox to set a locally-defined rule as active or inactive.

Active account assignment rules automatically evaluate accounts and assign them to territories when:

- An account is created using the Salesforce user interface, the Force.com API, or a client such as Connect Offline.
- An account is imported using an import wizard.
- An account is created by the conversion of a lead.
- An account is edited and saved if the **Select by default** checkbox is selected for the “Evaluate this account against territory rules on save” checkbox option under **Layout Properties**. If the account assignment rule initiates an opportunity ownership change, you must have transfer access on the opportunity.
- An account is edited and saved via the Force.com API.
- **Run Rules** is clicked on a territory detail page, provided the **Exclude from territory assignment rules** checkbox on the account is deselected.
- **Save & Run Rules** is clicked on the manage account assignment rules page for a territory, provided the **Exclude from territory assignment rules** checkbox on the account is deselected.
- Duplicate accounts are merged.

- Click a rule name to see the details of that rule, including its active status and criteria. From a rule detail page you can edit, delete, or clone a rule.
- Click **Preview** to see the accounts that would be assigned to this territory and its child territories if the rules currently marked active were run. See Preview Account Assignments on page 1838.
- Click **Save** to save the current active status of locally-defined rules.
- Click **Save & Run Rules** to save the current active status of locally-defined rules and evaluate the inherited and locally-defined rules shown on the page against all existing accounts in your organization. Running account assignment rules affects accounts in the Recycle Bin.

Click **Edit** on the territory detail page to toggle the **Confine Opportunity Assignment** checkbox. When it is selected, the territory’s opportunities remain in the territory or its child territories when you run account assignment rules. The following exceptions apply:

- If an opportunity’s account moves to only one of the territory’s children, then the opportunity follows the account and is reassigned to the account’s new territory. This includes when an account moves to multiple territories and only one of the new territories is a child of the original territory.
- If an opportunity’s account moves to more than one of the territory’s children, then the opportunity’s territory field is set to blank.
- If an opportunity’s account moves completely out of the territory and its children, then the opportunity’s territory field is set to blank.

**Tip:** You can also manage account assignment rules using the Data Loader or the Web services API.

**Account Assignment Rules and Opportunities**

Several factors determine how account assignment rules assign opportunities to territories, including:

- Whether the account associated with the opportunity is assigned to one or more territories
- Whether the opportunity owner is a member of the same territory as the account
- The number of users assigned to the territory
- Whether a forecast manager is assigned to the territory
Note: If you’re updating an account which triggers an account assignment rule that is part of territory management, you must have transfer access on the opportunity if the account assignment rule initiates a change in the opportunity ownership.

Accounts with One Territory

If the account associated with the opportunity is assigned to only one territory, use the following table to determine how the opportunity’s territory is assigned:

<table>
<thead>
<tr>
<th>Opportunity Owner Belongs to Same Territory as Account</th>
<th>Number of Users Assigned to Territory</th>
<th>A Forecast Manager is Assigned to the Territory</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>1</td>
<td>N/A</td>
<td>The opportunity is assigned to the same territory as the account. The opportunity owner is unchanged.</td>
</tr>
<tr>
<td>No</td>
<td>1</td>
<td>N/A</td>
<td>The opportunity is assigned to the same territory as the account and the opportunity owner is the sole member of the territory.</td>
</tr>
<tr>
<td>No</td>
<td>0</td>
<td>N/A</td>
<td>The opportunity is assigned to the same territory as the account and the opportunity owner is added as an inactive member of the territory. The owner of the opportunity remains unchanged.</td>
</tr>
<tr>
<td>Yes</td>
<td>&gt;1</td>
<td>Yes</td>
<td>The opportunity is assigned to the same territory as the account and the forecast manager becomes the opportunity owner.</td>
</tr>
<tr>
<td>Yes</td>
<td>&gt;1</td>
<td>No</td>
<td>The opportunity is assigned to the same territory as the account. The owner of the opportunity remains unchanged if the opportunity owner has Active in Territory selected on the territory detail page.</td>
</tr>
<tr>
<td>No</td>
<td>&gt;1</td>
<td>Yes</td>
<td>The opportunity is assigned to the forecast manager of the territory.</td>
</tr>
<tr>
<td>No</td>
<td>&gt;1</td>
<td>No</td>
<td>The opportunity is assigned to the same territory as the account and the opportunity owner is added as an inactive member of the territory. The owner of the opportunity remains unchanged.</td>
</tr>
</tbody>
</table>

Accounts with Multiple Territories

If the account associated with the opportunity is assigned to more than one territory, use the following table to determine how the opportunity’s territory is assigned:

<table>
<thead>
<tr>
<th>Opportunity Owner’s Territory Membership</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opportunity owner has one territory in common with the account</td>
<td>The opportunity is not assigned to any territories. The opportunity owner can assign the opportunity to the territory that he or she has in common with the account.</td>
</tr>
</tbody>
</table>
Opportunity Owner’s Territory Membership

<table>
<thead>
<tr>
<th>Opportunity owner has more than one territory in common with the account</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The opportunity is not assigned to any territories. The opportunity owner can assign the opportunity to any territory that he or she has in common with the account.</td>
</tr>
<tr>
<td>Opportunity owner has no territories in common with the account</td>
<td>The opportunity is not assigned to any territories. The opportunity owner cannot assign the opportunity to any territories.</td>
</tr>
</tbody>
</table>

Territory Assignments for Standard Users

If the user creating the opportunity is a standard user, Salesforce automatically assigns a territory to a new opportunity only if the user and account have exactly one territory in common. For example, James, who is a standard user assigned to the Westlake territory only, creates an opportunity on the Filmore, Inc. account. Filmore, Inc. belongs to the Westlake territory and one other territory. Because James and Filmore, Inc., have exactly one territory in common, the new opportunity is assigned to the Westlake territory. If James belonged to the account’s other territory, the opportunity would not be assigned to a territory.

Use the following table to determine when a territory will be assigned to an opportunity created by a standard user.

<table>
<thead>
<tr>
<th>Number of Territories Assigned to User</th>
<th>Number of Territories Assigned to Account</th>
<th>Opportunity Owner Belongs to Same Territory as Account</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1</td>
<td>Yes</td>
<td>The opportunity is assigned to the territory in common.</td>
</tr>
<tr>
<td>&gt;1</td>
<td>1</td>
<td>Yes</td>
<td>The opportunity is assigned to the account’s territory if the user belongs to that same territory.</td>
</tr>
<tr>
<td>1</td>
<td>&gt;1</td>
<td>Yes</td>
<td>The opportunity is assigned to the user’s territory if the account is associated with that same territory.</td>
</tr>
<tr>
<td>&gt;1</td>
<td>&gt;1</td>
<td>Yes</td>
<td>The opportunity is not assigned to any territories. The opportunity owner can assign the opportunity to any territory that he or she has in common with the account.</td>
</tr>
<tr>
<td>N/A</td>
<td>N/A</td>
<td>No</td>
<td>The opportunity is not assigned to any territories.</td>
</tr>
</tbody>
</table>

Territory Assignments for Administrators

A user who is an administrator or has “Manage Territories” permission can view all territories.

If the user is an administrator, a territory-delegated administrator, or a user with the “Manage Territories” permission, Salesforce automatically assigns a territory to a new opportunity only if the administrator, the account, and the account’s parent accounts have exactly one territory in common. For example, Jennifer is an administrator who manages the Northlake and Westlake territories. She creates an opportunity on the Richmond Brothers account. Richmond Brothers is associated with the Northlake and Southlake territories. Richmond Brothers has one parent account, Zyman Products, which is assigned to the Northlake and Eastlake territories. Because Jennifer, Richmond Brothers, and Zyman Products have only the Northlake territory in common, the new opportunity is assigned to the Northwest territory. If Richmond Brothers or Zyman Products also belonged to the Westlake territory, the opportunity would not be assigned to a territory.
Use the following table to determine when a territory will be assigned to an opportunity created by an administrator.

<table>
<thead>
<tr>
<th>Number of Territories Administrator Manages</th>
<th>Number of Territories Assigned to Account</th>
<th>Number of Territories Assigned to Account's Parent Account(s)</th>
<th>Opportunity Owner Manages Same Territory as Account and Parent Account(s)</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1</td>
<td>1</td>
<td>Yes</td>
<td></td>
</tr>
<tr>
<td>&gt;1</td>
<td>1</td>
<td>1</td>
<td>Yes</td>
<td></td>
</tr>
<tr>
<td>1</td>
<td>&gt;1</td>
<td>1</td>
<td>Yes</td>
<td></td>
</tr>
<tr>
<td>1</td>
<td>1</td>
<td>&gt;1</td>
<td>Yes</td>
<td></td>
</tr>
<tr>
<td>&gt;1</td>
<td>&gt;1</td>
<td>1</td>
<td>Yes</td>
<td></td>
</tr>
<tr>
<td>1</td>
<td>&gt;1</td>
<td>&gt;1</td>
<td>Yes</td>
<td></td>
</tr>
<tr>
<td>&gt;1</td>
<td>1</td>
<td>&gt;1</td>
<td>Yes</td>
<td></td>
</tr>
<tr>
<td>&gt;1</td>
<td>&gt;1</td>
<td>&gt;1</td>
<td>Yes</td>
<td></td>
</tr>
</tbody>
</table>

The opportunity is assigned to the territory in common.

#### Create and Edit Account Assignment Rules

**Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

A territory can have a maximum of 15 account assignment rules, including both active and inactive rules. To create or edit an account assignment rule:

1. From Setup, enter **Hierarchy** in the Quick Find box, then select **Territory Hierarchy**.
2. Select the territory you want to modify.
3. Click **Manage Rules** in the Account Assignment Rules related list.
4. Click **New** to create a new account assignment rule. To edit an existing account assignment rule, click **Edit**.
5. Enter a name for the rule. Rule names must be unique and can have a maximum of 80 characters.
6. Define filter criteria that accounts must match to be included in the territory.
   - If your organization uses multiple languages, use your organization’s default language when specifying your criteria. When you use picklists to specify filter criteria, the selected values are stored in the organization’s default language. If you edit or clone existing filter criteria, first set the **Default Language** on the Company Information page to the same language that was used to set the original filter criteria. Otherwise, the filter criteria may not be evaluated as expected.
7. Optionally, check the **Apply to child territories** box that makes the rule applicable to child territories.
8. Optionally, check the **Active** box to activate the rule. Inactive rules never run.

Active account assignment rules automatically evaluate accounts and assign them to territories when:
- An account is created using the Salesforce user interface, the Force.com API, or a client such as Connect Offline.
- An account is imported using an import wizard.
- An account is created by the conversion of a lead.

---

**EDITIONS**

Available in: Salesforce Classic

Available in Developer and Performance Editions and in Enterprise and Unlimited Editions with the Sales Cloud

**USER PERMISSIONS**

To create or edit account assignment rules:
- “Manage Territories”
  - OR
  - You are a forecast manager.
• An account is edited and saved if the Select by default checkbox is selected for the “Evaluate this account against territory rules on save” checkbox option under Layout Properties. If the account assignment rule initiates an opportunity ownership change, you must have transfer access on the opportunity.

• An account is edited and saved via the Force.com API.

• Run Rules is clicked on a territory detail page, provided the Exclude from territory assignment rules checkbox on the account is deselected.

• Save & Run Rules is clicked on the manage account assignment rules page for a territory, provided the Exclude from territory assignment rules checkbox on the account is deselected.

• Duplicate accounts are merged.

9. Click Save to finish, or Save & New to save the rule and begin defining another rule.

Tip: By creating at least one account assignment rule at the top of your territory hierarchy that applies to child territories, you can build a hierarchy where all accounts match the top-level criteria and subordinate territories differentiate accounts by more specific criteria.

Similarly, if your organization uses divisions, create a rule at the top of your territory hierarchy that filters accounts by division and applies to child territories.

EDITIONS
Available in: Salesforce Classic

Available in: Developer and Performance Editions and in Enterprise and Unlimited Editions with the Sales Cloud

USER PERMISSIONS
To preview account assignments in territories:
• “Manage Territories” OR
  You are a forecast manager. Forecast managers can manage territories of those users working below them in territory hierarchy.
View Inherited Rules Lists

Note: This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

The inherited rules list page displays a list of account assignment rules inherited by the selected territory. From this page, you can view detailed rule information and access information on individual rules.

• To show a filtered list of items, select a predefined list from the View drop-down list, or click Create New View to define your own custom views.
• Click a rule name to view the rule detail.

SEE ALSO:
Territory Management
Manually Assign Accounts to Territories

Manually Assign Accounts to Territories

Note: This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

As an alternative to creating and running account assignment rules, you can add accounts to territories manually:

1. On the territory detail page, click Add Accounts on the Manually Assigned Accounts related list.
2. Choose a view from the drop-down list, or click Create New View to build a new custom view.
3. Click Select and Deselect to move accounts between the Available and Selected areas. Also, you can:
   • Click a letter to view accounts that correspond to that letter.
   • Click All to display all accounts that match the criteria of the current view.
   • Click select shown to move all accounts that are shown on the current list page to the Selected area below.
   • Click deselect shown or deselect all to move accounts from the Selected area to the Available area.
4. When the accounts in the Selected area includes all accounts that you want to manually add to the territory, click Assign.

Note: Manually adding accounts and running account assignment rules are completely independent. A manually added account remains in a territory until it is manually removed. There is nothing to prevent assignment rules also adding the account to the territory.

Display and Edit Territories
Customizing Options for Selling

Customize Opportunities and Products

Get the most out of opportunities and products by setting up these additional features.

**Enable and Configure Similar Opportunities**
Allow users to find Closed/Won opportunities that match the attributes of an opportunity they’re currently working on, so they can quickly access information that might help them close their open deals.

**Make It Easy to Add Products to Opportunities**
Set up Salesforce to prompt your users to add products when they create an opportunity. When you select **Prompt users to add products to opportunities** in Opportunity Settings, the label for the save button in a new opportunity record is “Save & Add Product.”

**Enable Opportunity Update Reminders**
Updated and accurate opportunities drive precise forecasts. Enabling update reminders lets managers send their direct reports automated emails with a report on the team’s open opportunities.

**Activate and Deactivate Product Prices with Their Products Simultaneously**
Set up Salesforce so that when you activate or deactivate a product, all related prices for that product are activated or deactivated at the same time.

**Restrict Price and Quantity Editing on Opportunity Products**
Control whether users can update the **Price** and **Quantity** fields on opportunities.

**Activate Big Deal Alerts**
Your organization can use alerts that automatically send an email notification for opportunities with large amounts. You can activate one opportunity alert for your organization. The alert message resembles the opportunity detail page including the page layout and language from a selected user.

**Customize Big Deal Alerts**
Your organization can use alerts that automatically send an email notification for opportunities with large amounts. Customize this alert to send an email when an opportunity reaches a threshold.

SEE ALSO:

- **Opportunities**
Enable and Configure Similar Opportunities

Allow users to find Closed/Won opportunities that match the attributes of an opportunity they're currently working on, so they can quickly access information that might help them close their open deals.

Note:
- Searches are constructed as OR statements. Therefore, Closed/Won opportunities need to match only one criteria to be considered similar. For best search results, include multiple search terms.
- When deciding which opportunity fields to display on the Similar Opportunities related list, be aware that users will see all fields that are displayed, regardless of sharing rules and user permissions.

1. From Setup, enter Similar Opportunities in the Quick Find box, then select Similar Opportunities.
2. Click Edit.
3. Select Enable Similar Opportunities.
4. Select the fields or related lists that you want Similar Opportunities searches to match against, and then click Add.
5. Select the fields to display in the Similar Opportunities related list.
6. Click Save.
7. Make sure the Similar Opportunities related list is added to the opportunity page layout.

SEE ALSO:
- Guidelines for Finding Similar Opportunities

Make It Easy to Add Products to Opportunities

Set up Salesforce to prompt your users to add products when they create an opportunity. When you select Prompt users to add products to opportunities in Opportunity Settings, the label for the save button in a new opportunity record is “Save & Add Product.”

SEE ALSO:
- Products Concepts
Enable Opportunity Update Reminders

Updated and accurate opportunities drive precise forecasts. Enabling update reminders lets managers send their direct reports automated emails with a report on the team’s open opportunities.

1. From Setup, enter Update Reminders in the Quick Find box, then select Update Reminders.
2. Click Edit.
3. Select Enable Update Reminders for My Organization.
4. Optionally, select Automatically Activate Reminders for Users with Direct Reports to schedule opportunity update reminders for all users who have direct reports.
5. Click Save.
6. If you didn’t automatically activate all users with direct reports, then select which users you want to be able to schedule opportunity update reminders. Any user that has direct reports can be added.
7. Click Activate.
8. Let those users know they can start scheduling update reminders for their direct reports.

Note: If an account owner is allowed to send opportunity update reminders, then all partner and customer portal users that are assigned as Executives to the account will receive the reminders, even if they don’t have access to the opportunity. To avoid reminders being sent to these users, remove them from the Executive role.

Guidelines for Finding Similar Opportunities

Activate and Deactivate Product Prices with Their Products Simultaneously

Set up Salesforce so that when you activate or deactivate a product, all related prices for that product are activated or deactivated at the same time.

1. From Setup, enter Product Settings in the Quick Find box, then select Product Settings.
2. Select When changing active flag on a product record.
3. Save your changes.

SEE ALSO:
Restrict Price and Quantity Editing on Opportunity Products
Products Concepts
Restrict Price and Quantity Editing on Opportunity Products

Control whether users can update the Price and Quantity fields on opportunities. Although Sales Price and Quantity fields are required, you can remove them from the page layout and they will be populated with a default value. Users will no longer see the fields or be able to add data to them.

To ensure that opportunity products use the price from the associated price book, remove the Sales Price field from the opportunity products page layout.

To use a quantity of one for all opportunity products, remove the Quantity field from the opportunity products page layout.

Note: If you cannot remove these fields from the page layout, contact Salesforce to enable this option.

SEE ALSO:
- Activate and Deactivate Product Prices with Their Products Simultaneously
- Products Concepts

Activate Big Deal Alerts

Your organization can use alerts that automatically send an email notification for opportunities with large amounts. You can activate one opportunity alert for your organization. The alert message resembles the opportunity detail page including the page layout and language from a selected user.

Before you begin, you may want to decide which user has the page layout and language settings that you would like included in all alerts. This user must also have the “View All Data” permission.

1. From Setup, enter Big Deal Alert in the Quick Find box, then select Big Deal Alert.
2. Enter a name for the alert.
3. Enter a Trigger Probability and Trigger Amount in the corporate currency. An opportunity alert is triggered for opportunities with this probability and amount or greater. The alert triggers only for those opportunities that meet both the trigger probability and trigger amount threshold settings.

Note: An opportunity can trigger a big deal alert even if it is in a currency that is different from the corporate currency. The Amount on an opportunity is converted to corporate currency and compared to the Trigger Amount. If you are using advanced currency management, dated exchange rates will be used.
4. Check the Active box if you would like to activate the new alert immediately after you save.
5. Enter the From Email Name.
6. Enter the From Email Address.

Note: The From address must be either one of your verified organization-wide email addresses or the email address listed in your Salesforce profile.

7. Select a user that provides the appropriate opportunity page layout, language, and currency settings for the content of the emails. This user must have the “View All Data” permission.

For organizations that use multiple currencies, all alerts include the amount in the currency of the opportunity. If the opportunity currency is different than the currency of the user selected in this step, both currencies are included in the email.
Enter a list of email recipients separated by commas. You can also include CC: and BCC: recipients but all must be valid email addresses.

The BCC: field is not available if your organization has enabled compliance BCC emails.

8. Check the Notify Opportunity Owner box if you would like to include the owner of the opportunity in the alert emails.
9. Click Save.

Note: An opportunity alert sends a notification the first time an opportunity reaches the threshold. So, an opportunity that reaches the threshold with 90% probability will not trigger additional alerts if the probability subsequently goes higher. However, an opportunity that already triggered an alert and then fell below the threshold can trigger a second alert if it crosses that threshold again.

When working remotely in Connect Offline, you can make changes to opportunities that trigger alerts. These alert messages will be sent when you update your data.

SEE ALSO:
Customize Big Deal Alerts

Customize Big Deal Alerts
Your organization can use alerts that automatically send an email notification for opportunities with large amounts. Customize this alert to send an email when an opportunity reaches a threshold. Your threshold consists of an opportunity amount and probability. For example, you can send an email to your team when an opportunity of $500,000 has reached a probability of 90%.

Activate Big Deal Alerts
Using Product Families

Use the Product Family picklist to categorize your products. For example, if your company sells both hardware and software, you can create two product families: Hardware and Software.

If your organization has customizable forecasting, your users can have a different quota for hardware sales and software sales. Users can also view forecasts for opportunities with hardware products separate from opportunities that include software products.

To begin using product families:

- Customize the Product Family picklist to include the different categories of products you sell.
- For each product in your price books, edit the product and select the appropriate Product Family value.
- If your organization has customizable forecasting, set a different quota for each product family for your users.
- If your organization has customizable forecasting, consider changing your forecast settings to display a particular forecast family value by default when your users click the Forecasts tab.

Enable Product Schedules

Create default revenue and quantity schedules for products that are delivered or paid for over a period of time. In addition, administrators can enable schedule settings that allow users to create schedules for individual products on opportunities.

1. From Setup, enter Product Schedules in the Quick Find box, then select Product Schedules Settings.
2. Select the appropriate checkboxes to enable quantity and revenue schedules for your organization. Note that disabling a schedule type automatically deletes all existing schedule information from products.
   For a definition of each schedule type, see Products, Price Books, and Schedules Overview on page 1375.
3. For each schedule type you enable, select whether to automatically enable that schedule type for every product in your price books. This option automatically selects the Quantity Scheduling Enabled or Revenue Scheduling Enabled checkboxes on every product in your price books.
4. Click Save.

For greater control of schedules on a product-by-product basis, administrators can also determine which schedule types users can establish for each product.
Note: Enabling or disabling schedules does not affect archived products.

If schedules are referenced in Apex, only one of the schedule types (quantity or revenue) can be disabled. For example, if Apex references the schedule object (represented as `OpportunityLineItemSchedule` in the code), one of the schedule types can be disabled, but not both.

Help Sales Reps Manage Their Meetings and Tasks

Help Your Sales Reps Manage Events and Tasks Together

Give sales reps a more accurate perspective on their leads, contacts, opportunities, and accounts. Use combined activities settings to help them manage and track meetings and tasks. Options differ for Lightning Experience and Salesforce Classic.

Considerations for the Activity Composer and Activity Timeline in Lightning Experience

In some Salesforce orgs, page layouts or record types need adjustments to prevent tabs from disappearing from the activity composer. Also, if you customize the display and order of fields in the activity timeline, be aware of the behavior of certain fields.

Considerations for Activity Reminder Setup in Salesforce Classic

Disabling individual preferences for displaying event and task reminders erases users' activity reminder settings. If you re-enable activity reminders later, users receive reminders only for activities they create or edit after you re-enable the setting.

Considerations for Shared Activities (Multiple Contacts on an Activity)

Use Shared Activities to let users relate multiple contacts to each event or task and to view information about open activities and activity history on contact detail pages. If you enable Shared Activities, or if it's enabled by default in your Salesforce org, you can't disable it. Whether you enable Shared Activities or leave it disabled, review these considerations.

Guidelines for Shared Activities (Multiple Contacts on an Activity)

To include related contacts alongside other event and task details, include the Name related list in the event and task detail page layouts.

SEE ALSO:
Customization Options for Managing Events and Tasks Together

Considerations for the Activity Composer and Activity Timeline in Lightning Experience

In some Salesforce orgs, page layouts or record types need adjustments to prevent tabs from disappearing from the activity composer. Also, if you customize the display and order of fields in the activity timeline, be aware of the behavior of certain fields.

Display Tabs in Activity Composer by Adjusting Page Layouts and Record Types

In some Salesforce orgs, displaying tabs in the activity composer in Lightning Experience requires you to adjust settings.
Considerations for the Timeline and Activity Related Lists
On the detail page for objects that support activities, Lightning Experience doesn’t display the Open Activities and Activity History related lists along with other related lists. It displays the activity timeline instead. Objects that support activities include opportunities, leads, accounts, contacts, and custom objects on which you enable activities.

Considerations for Customizing Activity Timeline Fields
You can use compact layouts to customize the display and order of fields for items in the activity timeline. Be aware that certain essential fields remain in the timeline even if you delete them from a layout. Icons in the timeline aren’t customizable.

SEE ALSO:
Guidelines for Customizing the Task List in Lightning Experience

Display Tabs in Activity Composer by Adjusting Page Layouts and Record Types
In some Salesforce orgs, displaying tabs in the activity composer in Lightning Experience requires you to adjust settings.

Configure the Call, Task, and Event Tabs in the Activity Composer in Lightning Experience
Is the call, task, or event tab missing from the activity composer on opportunities or other objects in your Salesforce org? Check your layout, record type, and permissions settings.

Configure the Email Action in the Activity Composer in Lightning Experience
Is the Email action missing from the activity composer on opportunities or other objects in your Salesforce org? Check your layout and permissions settings.

Configure the Call, Task, and Event Tabs in the Activity Composer in Lightning Experience
Is the call, task, or event tab missing from the activity composer on opportunities or other objects in your Salesforce org? Check your layout, record type, and permissions settings.

1. Look at the object’s page layout—opportunities, leads, accounts, contacts, or a custom object that supports activities. Check whether you’ve included the corresponding action in the Salesforce1 and Lightning Experience Actions section of the object’s page layout.

   Note: An object page inherits the actions of the global page layout unless you’ve customized the actions in the Salesforce1 and Lightning Experience Actions section of the object’s page layout.

2. Have you created a custom record type for calls, tasks, or events? (Record types determine a record’s layout and picklist values. You can define one or more record types for users to choose from when they create an event or a task.) Look at the page layout that you’ve associated with the custom record type. Ensure that you’ve assigned the custom record type to the corresponding action. For example, if you created a custom record type for calls, assign it to the Log a Call action.

3. Ensure that your users have permission to view that custom record type.

Actions in Lightning Experience
How Actions Are Ordered in Lightning Experience
Page Layouts
Permission Sets
Configure the Email Action in the Activity Composer in Lightning Experience

Is the Email action missing from the activity composer on opportunities or other objects in your Salesforce org? Check your layout and permissions settings.

1. If the Email action is missing from the activity composer, open the page layout assigned to the record type for the opportunity or other object.
2. Add the Send an Email action (not the Send Email action) to the Salesforce1 and Lightning Experience Actions section of the page layout.
3. Make sure that your users have the Send Email (not Send an Email) permission.

Considerations for the Timeline and Activity Related Lists

On the detail page for objects that support activities, Lightning Experience doesn’t display the Open Activities and Activity History related lists along with other related lists. It displays the activity timeline instead. Objects that support activities include opportunities, leads, accounts, contacts, and custom objects on which you enable activities.

Considerations for Customizing Activity Timeline Fields

You can use compact layouts to customize the display and order of fields for items in the activity timeline. Be aware that certain essential fields remain in the timeline even if you delete them from a layout. Icons in the timeline aren’t customizable.

Display and Order of Fields

Use compact layouts to customize the display and order of fields in the timeline. However, certain fields remain in the timeline even if you remove them from the layout, because they contain essential activity information. For example, suppose that you remove the due date, the date and time, or the task status fields from the compact layouts. The event start date and time, the task checkbox, the task due date, and the call logging date still appear on activities in the timeline. The description field on events and the comments field on tasks also always appear in the timeline, although they aren’t available in the compact layout. The remaining fields visible in the timeline reflect the fields you include in the compact layout.

Icons

The icons for activity types (events, tasks, calls, and email) in the timeline aren’t customizable.
Considerations for Activity Reminder Setup in Salesforce Classic

Disabling individual preferences for displaying event and task reminders erases users’ activity reminder settings. If you re-enable activity reminders later, users receive reminders only for activities they create or edit after you re-enable the setting.

Considerations for Shared Activities (Multiple Contacts on an Activity)

Use Shared Activities to let users relate multiple contacts to each event or task and to view information about open activities and activity history on contact detail pages. If you enable Shared Activities, or if it’s enabled by default in your Salesforce org, you can’t disable it. Whether you enable Shared Activities or leave it disabled, review these considerations.

Enabling Shared Activities

Limit on Number of Contacts
Your sales reps can relate up to 50 contacts to each event or task.

Time Needed to Enable Shared Activities
Enabling Shared Activities takes up to 48 hours, depending on the volume of activity in your Salesforce org. During this process, sales reps can continue working with events and tasks. The Activity Settings page in Setup displays messages about the status and what to do if the process doesn’t finish.

Display of Related Contacts Alongside Other Activity Details
To show related contacts on event and task detail pages, ensure that the Name related list is included on event and task page layouts. Be aware that the items in the Name related list aren’t fields, so they don’t adhere to field-level security settings.

Visualforce Display of Events
If a Visualforce page uses the standard controller to display Shared Activities events, use API version 26.0 or later.

Leaving Shared Activities Disabled

Limitations in Custom Reports Based on Activity Relationships
If you don’t enable Shared Activities, custom reports based on activity relationships work as follows.

- They show only invitees to an event but not the organizer.
- They don’t show events to which no one has been invited.

No Support for Activity Custom Lookups
If you don’t enable Shared Activities, custom report types that use activity custom lookup field relationships aren’t supported.

Duplicate Records Created for Email
If you don’t enable Shared Activities and a sales rep sends an email to multiple contacts, Salesforce creates a closed task for each contact. As a result, Salesforce creates duplicate records instead of just one task corresponding to the email.
Guidelines for Shared Activities (Multiple Contacts on an Activity)
To include related contacts alongside other event and task details, include the Name related list in the event and task detail page layouts.

- Page Layouts

Help Your Sales Reps Manage Events and Calendars
Optimize the way your sales reps manage their meetings and scheduling. Options differ for Lightning Experience, Salesforce Classic, and Salesforce1.

Create and Manage a Public Calendar or a Resource Calendar in Salesforce Classic
Use a public calendar to manage group activities. For example, track a group’s events, such as marketing events, product releases, or training classes, or schedule a common activity, such as a team vacation. Use a resource calendar to schedule the use of a shared resource, such as a conference room or an overhead projector.

Set Up Cloud Scheduler in Salesforce Classic
The New Meeting Request button is enabled by default on page layouts. It lets your users use Cloud Scheduler to request meetings with customers. The button appears on the Open Activities related list on the detail pages of contacts, leads, and person accounts.

Event Fields
Event records have standard fields for tracking and recording event details.

SEE ALSO:
- Customization Options for Events and Calendars
Create and Manage a Public Calendar or a Resource Calendar in Salesforce Classic

Use a public calendar to manage group activities. For example, track a group’s events, such as marketing events, product releases, or training classes, or schedule a common activity, such as a team vacation. Use a resource calendar to schedule the use of a shared resource, such as a conference room or an overhead projector.

You can create an unlimited number of calendars.

- View and edit your existing public calendars and resource calendars.
  From Setup, enter Public Calendars and Resources in the Quick Find box, then select Public Calendars and Resources.

- Create a public calendar or a resource calendar.
  1. Click New, name the calendar, select Active, and save the calendar.
  2. Click Sharing. Add the public groups, roles, or people you want to share the calendar with.
  3. In Calendar Access, specify the way you want to share the calendar.
    - **Hide Details**
      Other people can see whether given times are available, but they can’t see other information about events in the calendar.
    - **Hide Details and Add Events**
      Other people can see whether given times are available, but they can’t see details of events. Other people can insert events in the calendar.
    - **Show Details**
      Other people can see detailed information about events in the calendar.
    - **Show Details and Add Events**
      Other people can see detailed information about events in the calendar, and they can insert events in the calendar.
    - **Full Access**
      Other people can see detailed information about events in the calendar, insert events in the calendar, and edit existing events in the calendar.

- Delete a public calendar.
  1. From Setup, enter Public Calendars and Resources in the Quick Find box, then select Public Calendars and Resources.
  2. Click Del next to the name of a calendar.

Ensure that users have the appropriate permissions. For example, an event invitee who doesn’t have “Read” permission on opportunities can’t view the opportunity associated with the event.

SEE ALSO:
   Access to Activities
Set Up Cloud Scheduler in Salesforce Classic

The New Meeting Request button is enabled by default on page layouts. It lets your users use Cloud Scheduler to request meetings with customers. The button appears on the Open Activities related list on the detail pages of contacts, leads, and person accounts.

Use the following methods alone or in combination to control whether the New Meeting Request button is displayed on detail page layouts. The button is also available in the Calendar section on the Home tab when the Requested Meetings subtab is enabled. The following add and remove actions don’t affect the button in the Calendar section.

Cloud Scheduler Quick Setup for Multiple Page Layouts
1. From Setup, enter Cloud Scheduler in the Quick Find box, and then select Cloud Scheduler.
2. If you’re adding the button and the new UI theme isn’t already enabled, enable it on the User Interface page in Setup.
3. To add the New Meeting Request button to the Open Activities related list on all eligible page layouts, click Add Button. To remove the button from all current page layouts, click Remove Button.

Cloud Scheduler Manual Setup for Individual Page Layouts
1. If you’re adding the button and the new UI theme isn’t already enabled, enable it on the User Interface page in Setup. See Customize User Interface Settings.
2. Add or remove the New Meeting Request button to the Open Activities related list on the page layouts you want.
   - Contacts
   - Leads
   - Person Accounts (if enabled)
     To allow users to request a meeting with a person account, add the Email field to the page layout. From the object management settings for person accounts, go to Page Layouts.

Cloud Scheduler Optional Settings
You can optionally enable these settings to make Cloud Scheduler even more useful.

- Ask your users to install Salesforce for Outlook.
  We recommend that users sync their calendar events between Salesforce and Outlook to propose meeting times based on their availability displayed in their Salesforce calendar.

- Add your company logo to the meeting requests sent to invitees.

- Show requested meetings in the Calendar section on the Home tab.
  The Requested Meetings subtab is displayed by default. If you remove the New Meeting Request button from all page layouts, we recommend that you also remove the Requested Meetings subtab because your users can’t request meetings.

- Enable your Partner users to request meetings using Cloud Scheduler. The customPartner User profile must have the correct user permissions on page 1853, and it must be active and assigned to your Partner users.
User Permission Requirements

Users must have the “Send Email” and “Edit Events” permissions to request meetings. These permissions are enabled in most standard profiles.

If users don’t have the required permissions, they:

- Can’t see the New Meeting Request button on the Open Activities related list
- Can’t edit, reschedule, or cancel requested meetings

Field-Level Security Requirements

In most cases, you don’t need to change field-level security settings to allow users to request meetings. However, if you’ve changed the default field-level security settings for certain profiles in your Salesforce org, refer to the following table to check whether the changes prevent users from requesting meetings.

Note: In permission sets and the enhanced profile user interface, the setting labels differ from those in the original profile user interface and in field-level security pages for customizing fields.

<table>
<thead>
<tr>
<th>Object</th>
<th>Field</th>
<th>Required Field-Level Security Settings</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Event</td>
<td>Name</td>
<td>Read and Edit</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Visible (with Read-Only not selected)</td>
<td></td>
</tr>
</tbody>
</table>

- If this field isn’t readable, the New Meeting Request button isn’t displayed on the Open Activities related list, and an “Insufficient privileges” message is displayed when a user tries to change (confirm or reschedule) or view a requested meeting.

- If this field is readable but not editable, the New Meeting Request button isn’t displayed on the Open Activities related list, and requested meetings open as read only, preventing users from confirming or rescheduling the meeting.

- Description Read Visible

By default, when a requested meeting is confirmed, the last message sent from the meeting organizer is displayed in the Description field for the new event.

However, if field-level security for the Description field isn’t readable, the last message isn’t displayed in the Description field, even if field-level security is later set to readable.
Guidelines for Adding Custom Logos to Meeting Requests in Salesforce Classic

You can display a custom logo in communications, such as meeting requests. Use these guidelines for custom logo images.

SEE ALSO:
Activities

Guidelines for Adding Custom Logos to Meeting Requests in Salesforce Classic

You can display a custom logo in communications, such as meeting requests. Use these guidelines for custom logo images.

A custom logo appears in the following locations.

- Email requests sent to invitees when you request a meeting or schedule an event
- Meeting response pages where invitees select the times they can meet
- Event response pages where invitees accept or decline the event

When you use a custom logo, keep the following in mind.

- The image must be smaller than 20 KB and formatted as a .gif, .jpeg, or .png file.
- For best results, use an image smaller than 130 pixels wide, 100 pixels high, and 72 pixels per inch. Automatic resizing can prevent larger images from displaying correctly in some email clients.
- Upload your logo to the Documents tab to make it externally available.

Note:

- Other users can replace the logo if it’s in the Shared Documents folder. To prevent unwanted changes, create a folder accessible only to system administrators and upload the logo to this folder.
- You can’t use a logo that is stored in the My Personal Documents folder or marked Internal Use Only.

- You can’t delete a custom logo from the Documents tab when it’s being used in meeting requests. Either select another image to use as your logo, or uncheck the option to display a custom logo in meeting requests.

## Event Fields in Lightning Experience

These standard fields for tracking and recording event details are available in Lightning Experience.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Activity Currency</strong></td>
<td>Indicates the default currency for all currency amount fields in the activity. Amounts are displayed in the activity currency. They are also converted to the user’s personal currency. Available only in orgs in which multiple currencies are used.</td>
</tr>
<tr>
<td><strong>All-Day Event</strong></td>
<td>By selecting this checkbox, a user specifies that the event lasts all day.</td>
</tr>
<tr>
<td><strong>Assigned To</strong></td>
<td>Indicates the assigned owner of the event. By default, the event is assigned to the user who created it.</td>
</tr>
<tr>
<td></td>
<td>On an event detail page or list view, <strong>Assigned To</strong> denotes the event creator. However, if an event invitee views a report on Activities with Contacts, <strong>Assigned</strong> denotes the viewer as the invitee.</td>
</tr>
<tr>
<td></td>
<td>This field isn’t available in Personal Edition.</td>
</tr>
<tr>
<td><strong>Created By</strong></td>
<td>Indicates the user who created the event, including the creation date and time. Read only.</td>
</tr>
<tr>
<td><strong>Date</strong></td>
<td>Indicates the planned date of the event. This field is displayed only if multiday events are disabled.</td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>Description of the event. The limit is 32 KB of data.</td>
</tr>
<tr>
<td><strong>Division</strong></td>
<td>Indicates the division to which the activity belongs. This value is inherited from the related account, lead, case, or custom object, if any. Otherwise, the activity belongs to the global division. Available only in orgs in which divisions are used to segment data.</td>
</tr>
<tr>
<td><strong>Duration</strong></td>
<td>Represents the length of an event spanning less than a full day, in hours and minutes. This field appears only if multiday events are disabled.</td>
</tr>
<tr>
<td><strong>Email</strong></td>
<td>Contains the email address of the contact or lead related to the event. This field is filled in with the value from the related contact or lead record.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>End</td>
<td>Indicates the planned end date and time of the event. This field appears only if multiday events are enabled.</td>
</tr>
<tr>
<td>Event Record Type</td>
<td>Contains the name of the field that determines which picklist values are available for the record. Available in Professional, Enterprise, Unlimited, Performance, and Developer Editions.</td>
</tr>
<tr>
<td>Last Modified By</td>
<td>Contains the name of the user who last changed the event, including the modification date and time. Read only.</td>
</tr>
<tr>
<td>Name</td>
<td>Contains the name of the contact or lead related to the event. If Shared Activities is enabled in your org, a user can relate up to 50 contacts to a non-recurring event. This field is visible only to users with the “Read” permission for contacts and leads. Relating a contact to an event can affect the account to which Salesforce relates the event. See the Related To field.</td>
</tr>
<tr>
<td>Location</td>
<td>Indicates the location of the event.</td>
</tr>
<tr>
<td>Phone</td>
<td>Contains the phone number of the contact or lead related to the event. This field is filled in with the value from the related contact or lead record.</td>
</tr>
<tr>
<td>Private</td>
<td>Indicates whether users other than the event owner can see the event details when viewing the event owner’s calendar. However, users with the “View All Data” or “Modify All Data” permission see private event details in reports and searches or when viewing other users’ calendars. Exported data files always contain private events. Events with invitees and events being added or changed in another user’s calendar can’t be marked private. Private events can’t be related to other records.</td>
</tr>
<tr>
<td>Public</td>
<td><strong>Note</strong>: Before Summer ’13, this field was called Visible in Self-Service. This checkbox lets a user specify whether a past event is visible in the Self-Service portal.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong>: Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.</td>
</tr>
<tr>
<td></td>
<td>If Communities is enabled in your org, the value in this field specifies whether the event is visible to external users in communities. If an external user owns the event, that user sees the event in the community regardless of whether the event is marked public.</td>
</tr>
<tr>
<td></td>
<td>This field is not visible by default. A Salesforce admin can expose it.</td>
</tr>
</tbody>
</table>
### Field

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| Related To    | Represents the record that the event is related to, such as an account, an opportunity, or a custom object. This field is available only when a user relates the event to a contact, not to a lead. The record is visible only to users with the “Read” permission for the type of record the event is related to. If you relate the event to an object other than an account, Salesforce determines the account on the event as follows.  
• Suppose that a user relates the event to an opportunity, a contract, or a custom entity that belongs to an account. Salesforce uses that object’s account as the account for the event.  
• Suppose that a user relates the event to some other object and also to a contact. Salesforce uses the primary contact’s account as the account for the event.  
• If a user leaves the Related To field empty, then Salesforce doesn’t relate an account to the event. |
| Show Time As  | Determines how the event appears when other users view a user’s calendar: busy, out of office, or free.                                           |
| Start         | Planned start date and time of event. This field appears only if multiday events are enabled.                                               |
| Subject       | Contains the subject of the event.                                                                                                        |
| Time          | Indicates the start time of a planned event. This field appears only if multiday events are disabled.                                      |
| Type          | Indicates the event type; for example, email or meeting. Limit for values in the picklist is 40 characters.                                  |

### Event Fields in Salesforce Classic

These standard fields for tracking and recording event details are available in Salesforce Classic.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activity Currency</td>
<td>Indicates the default currency for all currency amount fields in the activity. Amounts are displayed in the activity currency. They are also converted to the user’s personal currency. Available only in orgs in which multiple currencies are used.</td>
</tr>
<tr>
<td>All-Day Event</td>
<td>By selecting this checkbox, a user specifies that the event lasts all day.</td>
</tr>
<tr>

<td>Description</td>
</tr>
<tr>
<td>--------------------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Assigned To</strong></td>
<td>Indicates the assigned owner of the event. By default, the event is assigned to the user who created it. On an event detail page or list view, Assigned To denotes the event creator. However, if an event invitee views a report on Activities with Contacts, Assigned denotes the viewer as the invitee. This field isn’t available in Personal Edition.</td>
</tr>
<tr>
<td><strong>Create Recurring Series of Events</strong></td>
<td>By selecting this checkbox, a user can set up a series of recurring events.</td>
</tr>
<tr>
<td><strong>Created By</strong></td>
<td>Indicates the user who created the event, including the creation date and time. Read only.</td>
</tr>
<tr>
<td><strong>Date</strong></td>
<td>Indicates the planned date of the event. This field is displayed only if multiday events are disabled.</td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>Contains a note describing the event. This field holds up to 32 KB of data.</td>
</tr>
<tr>
<td><strong>Division</strong></td>
<td>Indicates the division to which the activity belongs. This value is automatically inherited from the related account, lead, case, or custom object, if any. Otherwise, the activity belongs to the global division. Available only in orgs in which divisions are used to segment data.</td>
</tr>
<tr>
<td><strong>Duration</strong></td>
<td>Represents the length of an event spanning less than a full day, in hours and minutes. This field appears only if multiday events are disabled.</td>
</tr>
<tr>
<td><strong>Email</strong></td>
<td>Contains the email address of the contact or lead related to the event. This field is automatically filled in with the value from the related contact or lead record.</td>
</tr>
<tr>
<td><strong>End</strong></td>
<td>Indicates the planned end date and time of the event. This field appears only if multiday events are enabled.</td>
</tr>
<tr>
<td><strong>Event Record Type</strong></td>
<td>Contains the name of the field that determines what picklist values are available for the record. Available in Professional, Enterprise, Unlimited, Performance, and Developer Editions.</td>
</tr>
<tr>
<td><strong>Last Modified By</strong></td>
<td>Contains the name of the user who last changed the event, including the modification date and time. Read only.</td>
</tr>
<tr>
<td><strong>Name</strong></td>
<td>Contains the name of the contact or lead related to the event. If Shared Activities is enabled in your org, a user can relate up to 50 contacts to a non-recurring event. This field is visible only to users with the “Read” permission for contacts and leads. Relating a contact to an event can affect the account to which Salesforce relates the event. See the Related To field.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Location</td>
<td>Indicates the location of the event.</td>
</tr>
<tr>
<td>Phone</td>
<td>Contains the phone number of the contact or lead related to the event. This field is automatically filled in with the value from the related contact or lead record.</td>
</tr>
<tr>
<td>Private</td>
<td>Indicates whether users other than the event owner can see the event details when viewing the event owner’s calendar. However, users with the “View All Data” or “Modify All Data” permission can see private event details in reports and searches, or when viewing other users’ calendars. Exported data files always contain private events. Events with invitees and events being added or changed in another user’s calendar can’t be marked private. Private events can’t be related to other records.</td>
</tr>
<tr>
<td>Public</td>
<td><img src="image" alt="Note" /> Before Summer ’13, this field was called Visible in Self-Service. This checkbox specifies whether a past event is visible in the Self-Service portal.</td>
</tr>
<tr>
<td>Related To</td>
<td>Represents the record that the event is related to, such as an account, an opportunity, or a custom object. This field is available only when a user relates the event to a contact, not to a lead. The record is visible only to users with the “Read” permission for the type of record the event is related to. If you relate the event to an object other than an account, Salesforce determines the account on the event as follows.</td>
</tr>
<tr>
<td></td>
<td>• If you relate the event to an opportunity, contract, or custom entity that belongs to an account, Salesforce uses that object’s account as the account for the event.</td>
</tr>
<tr>
<td></td>
<td>• If you relate the event to any other kind of object also relate the event to a contact, Salesforce uses the primary contact’s account as the account for the event.</td>
</tr>
<tr>
<td></td>
<td>• If you leave the Related To field empty, then Salesforce doesn’t relate an account to the event.</td>

### Field Description

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Response</td>
<td>Optional field; allows users invited to an event to enter a note when they accept or decline the event. This field isn’t available in Personal Edition.</td>
</tr>
<tr>
<td>Select Invitees</td>
<td>Lets you relate up to 1,000 people (invitees) and resources to the event. When you search for people or resources to invite to an event, the Available list displays up to 300 results.</td>
</tr>
<tr>
<td>Show Time As</td>
<td>Picklist. Determines how the event appears when another user views your calendar: busy, out of office, or free.</td>
</tr>
<tr>
<td>Start</td>
<td>Planned start date and time of event. This field appears only if multiday events are enabled.</td>
</tr>
<tr>
<td>Subject</td>
<td>Contains the subject of the event; for example, “Meeting.” A user can enter a subject or select from a list of previously defined subjects.</td>
</tr>
<tr>
<td>Time</td>
<td>Indicates the start time of a planned event. This field appears only if multiday events are disabled.</td>
</tr>
<tr>
<td>Type</td>
<td>Indicates the event type; for example, email or meeting. Limit for values in the picklist is 40 characters.</td>
</tr>
</tbody>
</table>

### Help Your Sales Reps Manage Their Tasks

Optimize the way your sales reps manage their work. Options differ for Lightning Experience, Salesforce Classic, and Salesforce1.

**Considerations for Customizing the Task List in Lightning Experience**

Use compact layouts to customize the display and order of fields for items in the task list. However, certain fields remain in the task list even if you remove them from a layout, because they contain essential task information. For example, suppose that you remove the status and due date fields from a compact layout. The task checkbox and the due date still appear on tasks in the list. The remaining fields visible in the list reflect the fields you include in the compact layout.

**Guidelines for Customizing the Task List in Lightning Experience**

To customize the action bar next to the task list, use the Salesforce1 and Lightning Experience Actions section of the task page layout.

**Considerations for Closing and Reopening Tasks**

Salesforce Classic differs from Lightning Experience and Salesforce1 in the way it handles validation rules on tasks.

**Considerations for Email Notification of Task Assignments**

When the setting **Enable user control over task assignment notifications** is enabled in Activity Settings, users see the option **Email me when someone assigns me a task** in their personal settings. Both the setting and the option are enabled by default. Enabling and disabling the setting affects users in different ways. Before migrating a Salesforce org, avoid excessive email notifications by disabling the setting. You can re-enable it after migration.

**Task Fields**

Task records have standard fields for tracking and recording task details.
Email Tracking in Salesforce Classic

If you use HTML email templates in Salesforce Classic, enable Salesforce to track outbound HTML emails as a type of completed task. If you disable this option, Salesforce no longer stores email tracking information. However, email tracking reports remain on the Reports tab. To display email statistics to your users, add the HTML Email Status related list to the relevant page layouts.

Considerations for the Activity Composer and Activity Timeline in Lightning Experience

Considerations for Closing and Reopening Tasks

Salesforce Classic differs from Lightning Experience and Salesforce1 in the way it handles validation rules on tasks.

Considerations for Closing and Reopening Tasks in Lightning Experience

Suppose that you’ve created a validation rule for tasks; for example, you require users to enter a comment before closing a task. If you’ve set up more than one Closed status for tasks, users must choose a status when they reopen or close a task. If you’ve set up more than one Open status for tasks and a user reopens a task, Lightning Experience remembers the last Open status.

Considerations for Closing and Reopening Tasks in Salesforce Classic

Suppose that you’ve created a validation rule for closing a task; for example, you require users to enter a comment. Before users can close a task, they must first open the task detail page and edit the task. Likewise, if you’ve set up more than one Open status for tasks, users must edit the task to choose a status when they reopen a task.
Considerations for Closing and Reopening Tasks in Lightning Experience

Suppose that you’ve created a validation rule for tasks; for example, you require users to enter a comment before closing a task. If you’ve set up more than one Closed status for tasks, users must choose a status when they reopen or close a task. If you’ve set up more than one Open status for tasks and a user reopens a task, Lightning Experience remembers the last Open status.

Considerations for Closing and Reopening Tasks in Salesforce Classic

Suppose that you’ve created a validation rule for closing a task; for example, you require users to enter a comment. Before users can close a task, they must first open the task detail page and edit the task. Likewise, if you’ve set up more than one Open status for tasks, users must edit the task to choose a status when they reopen a task.

Considerations for Email Notification of Task Assignments

When the setting Enable user control over task assignment notifications is enabled in Activity Settings, users see the option Email me when someone assigns me a task in their personal settings. Both the setting and the option are enabled by default. Enabling and disabling the setting affects users in different ways. Before migrating a Salesforce org, avoid excessive email notifications by disabling the setting. You can re-enable it after migration.

### Table 12: Effects of Enabling and Disabling the Feature in Setup

<table>
<thead>
<tr>
<th>User Type</th>
<th>Effects of Enabling the Feature</th>
<th>Effects of Disabling the Feature</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salesforce Classic users, including Communities users</td>
<td><strong>In My Settings &gt; Notifications, the Assigns you a task checkbox is displayed.</strong></td>
<td><strong>In My Settings &gt; Notifications, the Assigns you a task checkbox isn’t displayed.</strong></td>
</tr>
<tr>
<td>Lightning Experience users</td>
<td><strong>In Lightning Experience, the Email me when someone assigns me a task checkbox isn’t displayed. However, users who have turned on that option in Salesforce Classic still receive email notifications.</strong></td>
<td><strong>No user receives an email notification when another user assigns a task.</strong></td>
</tr>
<tr>
<td>Salesforce Classic users, including Communities users</td>
<td>• On the Create Task page, the Send email notification and Make this the default setting checkboxes aren’t displayed.</td>
<td>• On the Create Task page, the Send email notification and Make this the default setting checkboxes are displayed, and email notifications are sent according to whether</td>
</tr>
<tr>
<td>User Type</td>
<td>Effects of Enabling the Feature</td>
<td>Effects of Disabling the Feature</td>
</tr>
<tr>
<td>-----------</td>
<td>-------------------------------</td>
<td>----------------------------------</td>
</tr>
</tbody>
</table>
| Partner portal users | • On the Create Task page, the Send email notification and Make this the default setting checkboxes aren’t displayed.  
  • Email notifications are sent whenever someone assigns a task to a user (partner portals have no settings page for admins or users). | On the Create Task page, the Send email notification and Make this the default setting checkboxes are displayed, and email notifications are sent according to whether the checkboxes are selected. |
| Users who are assigned tasks that are generated by workflow task rules | • On the New Task page for workflow tasks, the Notify Assignee checkbox isn’t displayed.  
  • If a Salesforce admin selected the Notify Assignee checkbox before Winter ’15, task assignees who deselect the option don’t receive notifications. | Email notifications are sent to task assignees according to workflow task rules. |
| Users who are assigned tasks through an API | Use an API to set the triggerUserEmail value. The default is false.  
  • If triggerUserEmail = true, email notifications are sent according to individual users’ settings.  
  • If triggerUserEmail = false, email notifications aren’t sent when a task is assigned. | • If triggerUserEmail is true, email notifications are sent to all users when tasks are assigned.  
  • If triggerUserEmail is false, email notifications aren’t sent when a task is assigned. |
| Users who are assigned tasks through Apex | Notifications that are sent through Apex are sent in the context of the request header. | If a value in the request header is set so that email notifications are sent, email notifications are sent to users when tasks are assigned. Apex processes the header sequentially from the first line to the last. If a statement in the request header indicates that a task notification is required, an email notification is sent. |
### Task Fields
Task records have standard fields for tracking and recording task details.

**Task Fields in Lightning Experience**
These standard fields for tracking and recording task details are available in Lightning Experience.

**Task Fields in Salesforce Classic**
These standard fields for tracking and recording task details are available in Salesforce Classic.

### Task Fields in Lightning Experience
These standard fields for tracking and recording task details are available in Lightning Experience.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activity Currency</td>
<td>Indicates the default currency for all currency amount fields in the task. Amounts are displayed in the task currency and are also converted to a user's personal currency. Available only in orgs in which multiple currencies are used.</td>
</tr>
<tr>
<td>Assigned To</td>
<td>Indicates the assigned owner of a task. By default, the task is assigned to the user who created it. This field isn't available in Personal Edition.</td>
</tr>
<tr>
<td>Call Duration</td>
<td>Indicates the duration of a call in seconds. This field is populated when a call is answered using Salesforce CRM Call Center.</td>
</tr>
<tr>
<td>Call Object Identifier</td>
<td>Indicates the ID of a call logged in Salesforce through Salesforce computer-telephony integration (CTI) with a third-party telephony system. This field is often populated with the ID stored in the telephony system. Limit is 255 characters.</td>
</tr>
<tr>
<td>Call Result</td>
<td>Represents the result of a given call; for example, &quot;we'll call back&quot; or &quot;call unsuccessful.&quot; Limit is</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>---------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Call Type</td>
<td>Indicates the call type: inbound, internal, or outbound. A Salesforce admin can customize the selections in the picklist.</td>
</tr>
<tr>
<td>Comments</td>
<td>Contains a description of the task. The limit is 32 KB of data. If Spell Checker is enabled in your org, a user can spell-check the contents.</td>
</tr>
<tr>
<td>Created By</td>
<td>Indicates the user who created the task, along with the task creation date and time. Read only.</td>
</tr>
<tr>
<td>Division</td>
<td>Indicates the division to which the task belongs. This value is inherited from the related account, lead, case, or custom object, if any. Otherwise, the task belongs to the global division. Available only in orgs in which divisions are used to segment data.</td>
</tr>
<tr>
<td>Due Date</td>
<td>Indicates the date when the task is due.</td>
</tr>
<tr>
<td>Email</td>
<td>Contains the email address of the contact or lead associated with the task. This field is filled in with the value from the related contact or lead record.</td>
</tr>
<tr>
<td>Last Modified By</td>
<td>Indicates the user who last changed the task, along with the task modification date and time. This field is read only.</td>
</tr>
<tr>
<td>Name</td>
<td>Contains the name of the contact or lead related to the task. If Shared Activities is enabled in your org, a user can relate up to 50 contacts to a non-recurring task. This field is visible only to users who have the “Read” permission for contacts and leads. Relating a contact to a task can affect the account to which Salesforce relates the task. See the Related To field.</td>
</tr>
<tr>
<td>Phone</td>
<td>Contains the phone number of the contact or lead related to the task. This field is filled in with the value from the related contact or lead record.</td>
</tr>
<tr>
<td>Priority</td>
<td>Indicates the urgency of the task; for example, low, medium, or high. A Salesforce admin can customize the selections in the picklist.</td>
</tr>
<tr>
<td>Public</td>
<td>By selecting this checkbox, a user can specify that the completed task is visible in the Self-Service portal.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Before Summer ’13, this field was called Visible in Self-Service.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.</td>
</tr>
<tr>
<td></td>
<td>If Communities is enabled in your org, this field specifies whether a task is visible to external users in communities. If an external user....</td>
</tr>
</tbody>
</table>
### Field | Description
--- | ---
**Description** | owns the task, that user sees the task in the community regardless of whether it’s marked Public. This field is not visible by default. A Salesforce admin can make it visible.

**Related To** | Indicates the record that the task is related to, such as an account or an opportunity. This field is available only when a user relates the task to a contact, not to a lead. The record is visible only to users with the "Read" permission for the type of record the task is related to.

If a user relates the task to an object other than an account, Salesforce determines the account on the task as follows:

- Suppose that a user relates the task to an opportunity, a contract, or a custom entity that belongs to an account. Salesforce uses that object’s account as the account for the task.
- Suppose that a user relates the task to some other object and also to a contact. Salesforce uses the primary contact’s account as the account for the task.
- If a user leaves the Related To field empty, Salesforce doesn’t relate an account to the task.

**Status** | Indicates the status of a task; for example, "not started" or "completed." A Salesforce admin can customize the selections in the picklist.

**Subject** | Contains the subject of the task.

**Task Record Type** | Contains the name of the field that determines which picklist values are available for the record. Available in Professional, Enterprise, Unlimited, Performance, and Developer Editions.

**Type** | Indicates the task type; for example, Email or Meeting. Limit for values in the picklist is 40 characters.

### Task Fields in Salesforce Classic

Set Up and Maintain Sales Tools

Help Sales Reps Manage Their Meetings and Tasks

**Email Tracking in Salesforce Classic**

If you use HTML email templates in Salesforce Classic, enable Salesforce to track outbound HTML emails as a type of completed task. If you disable this option, Salesforce no longer stores email tracking information. However, email tracking reports remain on the Reports tab. To display email statistics to your users, add the HTML Email Status related list to the relevant page layouts.

**Customize Activities for Your Sales Reps**

Optimize the way that your sales reps can manage events, calendars, and tasks. Customization options differ for Lightning Experience, Salesforce Classic, and Salesforce1.

**Customization Options for Managing Events and Tasks Together**

Give sales reps a more accurate perspective on their leads, contacts, opportunities, and accounts. Use combined activities settings to help them manage and track meetings and tasks. Options differ for Lightning Experience and Salesforce Classic.

**Customization Options for Events and Calendars**

Optimize the way your sales reps manage their meetings and scheduling. Options differ for Lightning Experience, Salesforce Classic, and Salesforce1.

**Customization Options for Tasks**

Optimize the way your sales reps manage their work. Options differ for Lightning Experience, Salesforce Classic, and Salesforce1.

Increase Productivity

Set Up Notes

To let your users take rich text notes, set up Notes, our enhanced note-taking tool.

Consider these items before setting up Notes.

- After Notes is enabled for your organization, new notes are created using Notes. Notes created with the old note-taking tool open in the old note-taking tool.
- If you disable Notes, users can’t access notes that were created with Notes.
- Users with a Partner Portal or Customer Portal license can’t use Notes, they must use the old note-taking tool instead.

Walk Through It

1. Make sure that the Notes related list is included on your page layouts.
2. Make sure that Notes is enabled. From Setup, enter Notes Settings in the Quick Find box, then select Notes Settings. Then, make sure Enable Notes is selected.
3. To let users take notes from the Chatter publisher, the Global Actions menu, and the Salesforce1 action bar, add the New Note quick action to Quick Actions in the Salesforce Classic Publisher and Salesforce1 and Lightning Experience Actions sections on the global publisher layout.
4. If you’ve overridden the global publisher layout on any of your object page layouts, add the New Note quick action to your custom layouts, too.
5. To let your users easily take notes in Salesforce1:
   a. Make sure that your users can create tasks from notes in Salesforce1. From Setup, enter Activity Settings in the Quick Find box, then select Activity Settings. Select Allow Creation of Tasks from Notes.
b. Make sure that Notes appears in your organization’s Salesforce1 navigation menu. From Setup, enter Navigation in the Quick Find box, select Salesforce1 Navigation, and then move Notes from the Available list to the Selected list. We recommend putting it above Smart Search Items.

SEE ALSO:
- What’s the Difference Between Notes and the Old Note-Taking Tool?
- Guidelines for Using Notes in the Salesforce1 Mobile App

Configure Page Layouts for Notes

If you’ve been using Salesforce prior to Winter ’16, you need to make a few adjustments to your page layouts so that users can view their notes.

1. Make sure you’re familiar with how to edit page layouts.
2. Select the object, and then the layout your users use.
3. From the list of page element categories, select Related Lists.
4. Drag the Notes related list on to the page where you want it to appear.
   If your users have been using the old note-taking tool, keep the Notes & Attachments related list so that they can access old notes. Notes taken with the enhanced version of Notes appear in the Notes related list.
5. Save the layout, and confirm that you want to overwrite users’ related list customizations.
6. Repeat these steps for other objects you use Notes with.

SEE ALSO:
- Edit Page Layouts for Standard Objects
- Edit Page Layouts for Custom Objects

Customizing Options for Leads

Set Up Lead Management

Help your sales teams track prospects and build a strong pipeline of opportunities. Your sales teams use Salesforce leads to work and qualify their prospects with the goal of creating opportunities.

Using leads can give your sales staff instant access to the latest prospects and ensures that no leads are ever dropped. Successful lead management helps sales and marketing manage the inbound lead process, track lead sources, and analyze return on their marketing investment.

From Setup, get started using lead management:

- Go to the object management settings for leads. From the fields section, create custom lead fields that track information specific to your company. Also, map your custom lead fields to
account, contact, and opportunity fields so that the data gets converted when users convert leads. Edit the Lead Status picklist to choose the default status for new and converted leads.

- Enter Lead Settings in the Quick Find box, then select Lead Settings to specify your default lead settings.
- Enter Assignment Rules in the Quick Find box, then select Lead Assignment Rules to set up lead assignment rules that automatically assign leads.
- Enter Web-to-Lead in the Quick Find box, then select Web-to-Lead to automatically capture leads from your website.
- To let your sales teams edit converted leads, enter User Interface in the Quick Find box, then select User Interface. Then, select Enable “Set Audit Fields upon Record Creation” and “Update Records with Inactive Owners” User Permissions.

Managing Leads

Before your organization begins using leads, you can perform the following setup:

- Customize the default Lead Settings.
- Create lead queues to help manage the distribution of leads.
- Set up lead assignment rules to automatically assign leads.
- Set up Web-to-Lead to automatically capture leads from your website.
- Import your organization’s existing leads.
- Create custom lead fields.
- Map custom lead fields to other custom fields for lead conversion.
- Edit the Lead Status picklist to choose the default status for new and converted leads.

SEE ALSO:
Leads
Leads Home

Define Default Settings for Lead Creation

Optimize lead management features for your sales teams so they can nurture leads efficiently and prevent duplicate records when it’s time to convert the leads to contacts, accounts, and opportunities.

1. From Setup, enter Lead Settings in the Quick Find box, then select Lead Settings, and then click Edit.
2. Define the default lead owner and lead conversion settings.
3. Save your settings.
Map Custom Lead Fields for Lead Conversion

Get the most out of records created from the leads your sales teams convert when you map custom lead fields to the fields of records they’re converted to.

When sales reps convert qualified leads, the information from the standard lead fields appears in standard fields for contact, account, and opportunity records. If you set up custom lead fields, you specify how that custom information converts to custom fields in accounts, contacts, and opportunities.

1. From the object management settings for leads, go to the fields section, then click Map Lead Fields.

2. For each custom lead field, choose a custom account, contact, or opportunity field into which you want the information inserted when you convert a lead.

3. Save your work.

SEE ALSO:
- Convert Qualified Leads

Guidelines for Mapping Custom Lead Fields for Lead Conversion

Learn the best practices for mapping custom lead fields to custom fields in contacts, accounts, and opportunities. Mapping custom fields helps your sales reps retain that important information when they convert qualified leads to track new potential deals.

<table>
<thead>
<tr>
<th>Make sure to</th>
<th>It's good to know that</th>
</tr>
</thead>
<tbody>
<tr>
<td>Map custom lead fields to other custom fields of the same data type.</td>
<td>Specifically, map numeric lead fields to other numeric fields, or map long text area fields to other long text area fields. Some exceptions include:</td>
</tr>
<tr>
<td></td>
<td>• You can map between text and picklist fields. But your data truncates if the mapped text field is not large enough to hold the entire lead picklist value.</td>
</tr>
<tr>
<td></td>
<td>• You can map field types Text or Text Area to long text area fields.</td>
</tr>
<tr>
<td></td>
<td>• You can map auto-number fields to field types Text, Text Area, or Picklist.</td>
</tr>
<tr>
<td></td>
<td>• Do not map custom formula fields to other formula fields or any other type of field.</td>
</tr>
</tbody>
</table>

Map custom lead field types Number, Currency, or Percent to other number, currency, or percent fields of the same length and decimal places. | For example, your lead currency field has a length of 3 and 2 decimal places. Map it to another custom currency field with a length of 3 and 2 decimal places. |
### Make sure to | It's good to know that
--- | ---
Not change data types for custom lead fields | If you change data types for custom fields, Salesforce deletes the lead mappings for those custom fields.

## Web Lead Concepts
Gather information from your company's website and automatically generate up to 500 new leads a day with Web-to-Lead.

If your company already has a form in which prospects enter their contact information, consider creating a jump page where prospects respond to a campaign. With a little extra HTML code, redirect that information to Salesforce to create leads.

**SEE ALSO:**
- [Define Default Settings for Lead Creation](#)
- [Guidelines for Setting Up Web-to-Lead](#)

## Guidelines for Setting Up Web-to-Lead
Get Salesforce ready to gather information from your company's website and automatically generate up to 500 new leads a day.

<table>
<thead>
<tr>
<th>If you want to</th>
<th>Make sure to</th>

- Web Lead Concepts
- Generate Leads from Your Website for Your Sales Teams

**Generate Leads from Your Website for Your Sales Teams**

Automatically generate up to 500 leads per day with the prospecting data from your company's website visitors. When you set up Web-to-Lead, Salesforce captures prospects who provide contact information. You can also redirect prospects to other Web pages that are critical to campaign success.

1. From Setup, enter *Web-to-Lead* in the Quick Find box, then select *Web-to-Lead*.
2. Click **Edit** to enable or change Web-to-Lead settings.
3. If you want automate email replies to prospects, select a default response template. If you set up response rules to use different email templates based on the information prospects provide, the default response template is used when no auto-response rules apply. Templates must be marked *Available for Use*.
4. Save your changes.
5. To create a form that captures prospect details on your website, click **Create Web-to-Lead Form**, and then select fields you want to include.
6. Select fields to include on your Web-to-Lead form. Use the Add and Remove arrows to move fields between the Available Fields list and the Selected Fields list, and use the Up and Down arrows to change the order of the fields on your form.
   - Select the **Campaign** field.
   - For organizations using multiple currencies, add the **Lead Currency** field if you add currency amount fields, otherwise all amounts will be captured in your corporate currency.
   - Use a custom multi-select picklist to allow potential customers to express interest in several products.
   - For organizations using lead record types, select the **Lead Record Type** field if you want users to select a record type for Web-generated leads.
7. If your organization uses the Translation Workbench or has renamed tabs, select the language for the form labels displayed on your Web-to-Lead form. The source of your Web-to-Lead form is always in your personal language.
8. Specify the complete URL to which users should be directed after they submit their information—for example, your company's home page for a thank you page—and click **Generate**.
9. Copy the generated HTML code and provide it to your company's webmaster to incorporate into your website.
10. Click **Finished**.

To test the Web-to-Lead form, add the line `<input type="hidden" name="debug" value="1">` to your code. This line redirects you to a debugging page when you submit the form. Remove this line before releasing the Web-to-Lead page to your website.
Leads generated from your website are initially marked with the “default status” specified by the Lead Status picklist. For Web leads generated as part of a campaign, the member status of the new leads is set to the Member Status value specified in the form, or to the “default” member status if the Member Status field is not included in the form.

In addition, new leads are marked as “Unread,” and are changed to “Read” when viewed or edited by the lead owner. Users can select the My Unread Leads list view to quickly locate their new leads.

Note: The format for date and currency fields captured online is taken from your organization’s default settings - Default Locale and Currency Locale.

The daily limit for Web-to-Lead requests is 500. If your organization exceeds its daily Web-to-Lead limit, the Default Lead Creator (specified in the Web-to-Lead setup page) receives an email containing the additional lead information. See How many leads can we capture from our website? on page 1322 for additional information on Web-to-Lead limits.

If a new lead cannot be generated due to errors in your Web-to-Lead setup, Customer Support is notified of the problem so that we can help you correct it.

Salesforce runs field validation rules before creating records submitted via Web-to-Lead and only creates records that have valid values.

All universally required fields must have a value before a record can be created via Web-to-Lead.

Salesforce doesn’t support rich text area (RTA) fields on Web-to-Lead forms. If you use RTA fields on your forms, any information entered in them is saved as plain text when the lead is created.

Customizing Sales Teams

Managing Opportunity Teams

Make it easy for your sales reps to collaborate on opportunities.

1. **Enable Team Selling**
   To make it easy for your sales reps to collaborate on selling opportunities, enable opportunity teams in Salesforce.

2. **Considerations for Customizing Opportunity Teams**
   Make opportunity teams work better for your business by customizing opportunity team roles, page layouts, and more. Before you do, consider these key points.

3. **Customize Opportunity Team Roles**
   Every opportunity team member has a role in that opportunity, such as Account Manager or Sales Rep. To track the roles that team members play in your company, customize your opportunity team roles in Salesforce.

4. **Considerations for Updating Team Members on Multiple Records**
   Before you use a mass team reassignment wizard, consider a few key points.
5. **Update Team Members on Multiple Records**
   If your Salesforce org uses account teams or opportunity teams, keep your records up-to-date the easy way. Use the mass team reassignment wizards to add, remove, and replace team members on multiple records at the same time.

6. **Considerations for Disabling Team Selling**
   Before you disable team selling, consider the following key points.

---

**Enable Team Selling**

To make it easy for your sales reps to collaborate on selling opportunities, enable opportunity teams in Salesforce.

1. From Setup, enter *Opportunity Team Settings* in the Quick Find box, then select *Opportunity Team Settings*.
2. Define the settings as needed.
3. Save your changes.

**Considerations for Customizing Opportunity Teams**

Make opportunity teams work better for your business by customizing opportunity team roles, page layouts, and more. Before you do, consider these key points.

- Opportunity teams are available in Lightning Experience, but you must switch to Salesforce Classic to use some related features, such as Opportunity Splits. For more information, review the Lightning Experience limitations for Sales features.
- You can create a maximum of 50 custom fields for an opportunity team.
- If you delete a custom field, filters that use the custom field are also deleted, and the result of assignment or escalation rules that rely on the custom field’s data can change.
- To display opportunity team member information on a parent page, you must link the team member and the parent. For example, to display team member information on the related account detail page, add a custom lookup field called Account to the Opportunity Team editor, and then set this field to the parent account for each opportunity team member.
- You can’t create a lookup from an object, such as an account, to an opportunity team member.
- Validation rules and Apex triggers aren’t supported when a user adds his or her default opportunity team on an opportunity.

**SEE ALSO:**

*Guidelines for Using Opportunity Teams*
Customize Opportunity Team Roles

Every opportunity team member has a role in that opportunity, such as Account Manager or Sales Rep. To track the roles that team members play in your company, customize your opportunity team roles in Salesforce.

⚠️ **Warning:**
- Leave the Opportunity Owner unchanged. It’s needed for Opportunity Splits.
- Opportunity teams share roles with account teams. If you remove an opportunity team role, that role is no longer listed as an account team role.

1. From Setup, enter Team Roles in the Quick Find box, then select **Team Roles** under Opportunity Teams.
2. Edit the picklist values for team roles as needed.
3. Save your changes.
4. To update a changed picklist value in all your files, enter Replace Team Roles in the Quick Find box, then select **Replace Team Role**.

Considerations for Updating Team Members on Multiple Records

Before you use a mass team reassignment wizard, consider a few key points.

- If you don’t see the **Mass Reassign Account Teams** or **Mass Reassign Opportunity Teams** option in Setup, go to the Accounts or Opportunities page, and then click the option in the Tools section.
- If Opportunity Splits is enabled, and you remove a team member assigned to a split that must total 100%, the removed member’s percentage transfers to the opportunity owner. You can’t remove the opportunity owner.
- When you’re selecting the team members to change in records:
  - For account teams, select the appropriate account, contact, case, and opportunity access.
  - For opportunity teams, select the appropriate opportunity access. Then complete any custom fields that have been defined and added to the opportunity team page layout.
Update Team Members on Multiple Records

If your Salesforce org uses account teams or opportunity teams, keep your records up-to-date the easy way. Use the mass team reassignment wizards to add, remove, and replace team members on multiple records at the same time.

1. From Setup, enter Mass Reassign in the Quick Find box, then select Mass Reassign Account Teams or Mass Reassign Opportunity Teams.

   The Step 1 page of the wizard appears.

2. Complete the wizard as instructed.

3. Review the number of changed records, and then click Done to exit the wizard.

Considerations for Customizing Opportunity Teams

Considerations for Disabling Team Selling

Before you disable team selling, consider the following key points.

- Disabling team selling permanently removes all opportunity teams from all opportunities and deletes default opportunity teams.
- If Opportunity Splits is enabled, you can’t disable team selling.
- If team members are referenced in Apex, you can’t disable team selling.
- Before you disable team selling, do the following.
  - Disable Opportunity Splits. This action permanently deletes all split data from your Salesforce org.
  - Delete all custom fields, custom buttons and links, page layouts, validation rules, workflow rules, and Apex triggers that you’ve added to opportunity teams.
  - Delete all custom reports that include opportunity team information.
  - Uninstall any Apex packages that use opportunity teams.

- To disable team selling:
  - You need the “Customize Application” permission.
  - Access Opportunity Team Settings. From Setup, enter Opportunity Team Settings in the Quick Find box, then select Opportunity Team Settings.

SEE ALSO:

Considerations for Customizing Opportunity Teams
Considerations for Disabling Opportunity Splits
Managing Opportunity Splits

Make it easy for your sales reps to share opportunity revenue.

1. Considerations for Enabling Opportunity Splits
   Before you enable Opportunity Splits, consider these key points.

2. Enable Opportunity Splits
   Make it easy for your sales reps to collaborate on opportunities and share opportunity revenue with team members.

3. Create Custom Opportunity Split Types
   To better reflect your business operations, create custom opportunity split types on opportunity currency fields. Create up to three types to use in addition to revenue and overlay splits. Then, specify whether each type always totals 100%.

4. Considerations for Removing Opportunity Split Types
   Typically, you deactivate an opportunity split type when you have five split types (the maximum) and you need another. Or you delete a seldom-used type to reduce storage. Before you deactivate or delete an opportunity split type, consider these key points.

5. Considerations for Editing Multi-Line Layouts for Opportunity Splits
   Before you customize the fields that Salesforce displays when sales reps edit opportunity splits, consider these key points.

6. Considerations for Disabling Opportunity Splits
   If your Salesforce org isn’t using Opportunity Splits, you can disable the feature. Before you do so, consider these key points.

Considerations for Enabling Opportunity Splits

Before you enable Opportunity Splits, consider these key points.

General considerations

- You must enable team selling before you can enable Opportunity Splits.
- Enabling Opportunity Splits changes the opportunity records in your Salesforce org. Here’s what happens.
  - A script temporarily disables triggers, workflows, and validation rules for opportunity team records, mass reassignment of opportunity team members, and mass transfer of accounts and opportunities.
  - The opportunity owner is included on each opportunity team. Because the Opportunity Owner role is essential for splits, you can’t remove it.
  - If you enable split types that total 100%, new opportunity split records include a default entry for the owner. This owner initially receives 100% of the split amount. (These additional records require more data storage. To see how this extra storage requirement affects your Salesforce org, search for “Monitoring Storage Resources” in the Salesforce Help.)
- You can have up to five split types, including inactive split types. To rename, temporarily deactivate, or permanently delete split types, return to the Opportunity Splits setup page, and then click Edit Split Types. Deleting split types deletes splits data. You can’t delete the default split types.
- If Let users add members to opportunity teams while editing splits isn’t selected, users must be added to an opportunity team before they can be added to an opportunity split.
Available time
Enabling Opportunity Splits starts a process that sets up splits on every opportunity in your Salesforce org. Depending on the number of opportunity records, this process can take hours. You can still work with Salesforce while the process is ongoing. Automated email notifications keep you up-to-date on the script’s status. Consider running the process overnight.

Inactive currencies
If your Salesforce org has inactive currencies that have been active in the past, you probably have opportunity records that use those currencies. Those records are part of the split enablement process, but the currency’s inactive status causes the process to fail. To help prevent a failure, or fix a failure that occurs:

- Make the inactive currency active during the splits enablement. (You can make it inactive again after the process is finished.)
- Delete the opportunities with the inactive currency. This solution works best when your Salesforce org has only a few opportunities with an inactive currency and you don’t need them for reporting or historical purposes.

Inactive users
Similar to inactive currencies, if your Salesforce org has inactive users that worked with opportunities, you probably have opportunity records still owned by those users. The split enablement process accesses those records, but the users’ inactive status causes the process to fail. To help prevent a failure, or fix a failure that occurs:

- Make the inactive users active during the splits enablement. (You can make them inactive again after the process is finished.)
- Delete all opportunities owned by inactive users. This solution works best when your Salesforce org has only a few opportunities owned by inactive users and you don’t need them for reporting or historical purposes.

Mass operations in progress
If you’re running a mass operation, such as Mass Transfer or Mass Reassign Team Member, enabling Opportunity Splits at the same time can cause the enablement to fail. Make sure that all mass operations are finished before you start to enable Opportunity Splits.

Enable Opportunity Splits
Make it easy for your sales reps to collaborate on opportunities and share opportunity revenue with team members.

1. From Setup, enter Opportunity Splits in the Quick Find box, then select Settings.
2. Click Set up Opportunity Splits.
3. To better reflect your business process, do any of the following.
   - Rename or deactivate the default revenue and overlay splits, which are based on the Opportunity - Amount field.
   - Click Add a new split type to split another currency field and specify whether splits on that field must total 100%.
4. Save your changes.
5. Select the page layouts to display the Opportunity Splits related list.
6. To ensure that users with customized page layouts see the related list, select Add to users’ customized related lists.
7. Save your changes.
8. Click Let users add members to opportunity teams while editing splits to enable quicker changes to those teams.
For information about letting sales reps include splits in forecasts, see Enable Forecast Types for Collaborative Forecasts.

SEE ALSO:
- Enable Team Selling
- Create Opportunity Splits
- Change a Record’s Owner

Create Custom Opportunity Split Types

To better reflect your business operations, create custom opportunity split types on opportunity currency fields. Create up to three types to use in addition to revenue and overlay splits. Then, specify whether each type always totals 100%.

Note: You can split most currency fields created on opportunities, including custom currency fields and roll-up summary fields, but not formula currency fields.

1. Contact Salesforce to have custom split types enabled for your Salesforce org.
   Changes to opportunity split types are completed by a background process. You’re notified by email when the process is finished. We recommend not editing splits on opportunities until changes are complete.

2. From Setup, enter Opportunity Splits in the Quick Find box, select Settings, and then click Edit Split Types.

3. Click + Add a new split type.

4. Define the settings as needed.

5. Save your changes.

Considerations for Removing Opportunity Split Types

 Typically, you deactivate an opportunity split type when you have five split types (the maximum) and you need another. Or you delete a seldom-used type to reduce storage. Before you deactivate or delete an opportunity split type, consider these key points.

- Deactivating a split type removes it from the Salesforce interface while saving the underlying data. That way, you can reactivate it later.
- Deleting a split type permanently removes all related data.
- To deactivate or delete a split type:
  - You need the “Customize Application” permission.
  - Access Opportunity Splits Settings.
- If your Salesforce org contains many opportunities, the script that deletes split types can take several hours.

SEE ALSO:
- Considerations for Disabling Opportunity Splits
- Enable Opportunity Splits
Considerations for Editing Multi-Line Layouts for Opportunity Splits

Before you customize the fields that Salesforce displays when sales reps edit opportunity splits, consider these key points.

• To edit layouts, you need the “Customize Application” permission.
• You can’t add rich text fields or multi-select picklists to the multi-line layout for opportunity splits.
• You edit rich text fields and multi-select picklists on the opportunity split detail page.

Considerations for Disabling Opportunity Splits

If your Salesforce org isn’t using Opportunity Splits, you can disable the feature. Before you do so, consider these key points.

• Disabling Opportunity Splits is irreversible. You can’t retrieve lost splits data.
• If you disable Opportunity Splits, here’s what happens.
  – Splits on all opportunities in your org are deleted.
  – Split reports are deleted.
  – Custom reports that were built using split report templates still appear on the Reports tab, but you can’t access them.
• To disable Opportunity Splits:
  – You need the “Customize Application” permission.
  – You access Opportunity Splits Settings.
• If your org contains many opportunities, the script that disables Opportunity Splits can take several hours to finish.

  Considerations for Disabling Team Selling
  Considerations for Removing Opportunity Split Types
Managing Currencies

Manage Multiple Currencies

Your organization can set up the ability to use multiple currencies in opportunities, forecasts, quotes, reports, and other data.

1. Enable multiple currencies for your organization.
2. To designate your corporate currency, from Setup, enter Manage Currencies in the Quick Find box, then select Manage Currencies, and then click Change Corporate.
3. To activate more currencies for your organization, click New in the Active Currencies related list.
4. To use dated exchange rates, enable advanced currency management.
5. Set conversion rates for new currencies. See Edit Conversion Rates. If you have enabled advanced currency management, see Editing Dated Exchange Rates on page 1896.

Using Multiple Currencies

International organizations can use multiple currencies in opportunities, forecasts, reports, quotes, and other currency fields. The administrator sets the “corporate currency,” which reflects the currency of the corporate headquarters. The administrator also maintains the list of active currencies and their conversion rates relative to the corporate currency. The active currencies represent the countries in which the organization does business. Only active currencies can be used in currency amount fields.

Each user has a personal currency, which is used as the default currency in quotas, forecasts depending on which forecasting version you use, opportunities, quotes, and reports. Users can also create opportunities and enter amounts using other active currencies.

All standard and custom object records with currency fields have a field that specifies the currency to use for all amount fields in that record. (Click Edit to display this editable Currency field on a record.) For example, you can set the Account Currency to “USD-U.S. Dollars” so that the Annual Revenue shows in dollars for one of your American accounts. All currency amounts are displayed in the default currency of the record. Administrators can choose whether to also display, in parentheses, the user’s personal currency if it is different from the currency of the record. When you change the default currency of a record, currency amounts are not converted. They just display the new currency code.

Note: If your organization uses advanced currency management, the opportunity close date determines which conversion rate to use when displaying currency amounts.

Depending on the forecasting version you have, forecast currency amounts are converted to the user’s personal currency. Additionally, for managers, their team’s opportunities, forecasts, quotes, and other data are converted and rolled up to the manager’s personal currency. The manager can also drill down to see the data in the native currency. All conversion and roll-ups happen automatically.

Amounts in reports are shown in their original currencies, but can be displayed in any active currency. You can change the currency used for report totals by selecting a currency from Show > Currencies. The default value is your personal currency. For any amount, you can choose to display the Converted column—for example, Annual Revenue Converted—which shows amounts in the currency you select.

Custom formula fields are not tied to any particular currency. If the result of a formula field is a currency amount, it displays in the currency of the associated record. This rule is also true for cross-object formulas that reference merge fields with different currencies, and formulas in workflow rules and approval processes. However, workflow rules and approval processes that use filters instead of formulas convert all currency values to the corporate currency.
If currency fields are referenced in Apex, you can’t disable multiple currencies for your organization. For example, if Apex code references the Account Currency field (represented as CurrencyIsoCode in the code), you can’t disable multiple currencies.

SEE ALSO:
Administrator setup guide: Using Multiple Currencies
Enable Multiple Currencies

Enable Multiple Currencies

To enable multiple currencies in your organization:

1. Familiarize yourself with the implications of enabling multiple currencies.
2. In Setup, enter Company Information in the Quick Find box, then select Company Information and click Edit. Ensure that your selected currency locale is the default currency that you want to use for current and future records. Enable Allow Support to Activate Multiple Currencies, and then save your changes.

   Note: This setting is used to verify the specific organization that’s approved for multi-currency activation. It doesn’t submit a request to Salesforce. Submit the request via your normal support process.

3. To enable multiple currencies, contact Salesforce. Be prepared to provide the following information.
   - The organization ID (production or sandbox)
   - Confirmation that you understand that your current currency locale will become the default currency stamp for current and future records (USD, EUR, GBP, and so on)
   - Confirmation that you understand that multiple currencies can’t be disabled once enabled
   - Confirmation that you’re a system administrator authorized on behalf of your organization to request multi-currency enablement
   - Confirmation that you consent to the lockout of this organization for a certain period, depending on your organization’s data usage volume

   Note: For large organizations, multiple currencies are sometimes enabled over the weekend to avoid performance issues during the work week.

About Advanced Currency Management
Implications of Enabling Multiple Currencies

Enabling multiple currencies introduces permanent changes in your organization. Before proceeding, be aware of these implications to ensure a smooth transition for your organization.

- After enabled, multiple currencies can’t be disabled for your organization.
- Work with your Salesforce representative to determine the best time for multi-currency enablement. The enablement process temporarily locks your organization, preventing all integration processing and user logins. The lockout duration depends on the data space used by your organization.

- Upon enablement, existing records are stamped with a default currency code that you provide in your enablement request. For example, if your organization contains records using USD and EUR, switch them all to the same default currency before enablement. Support for this type of conversion is also available as a Salesforce paid implementation service.

- Standard and custom objects, such as Account, Lead, Case, Opportunities, Opportunity Products, Opportunity Product Schedules, and Campaign Opportunities, have currency fields that support multiple currencies. Reports related to these objects and fields also support multiple currencies. By default, page layouts for these objects have multi-currency-compatible fields in which you can specify the currency for the record. Typically, these fields are available only when creating a record or editing an existing record. The selected currency is used for the primary amount field.

- After enablement, the primary currency displays as usual and, optionally, a secondary currency amount appears in parentheses. The primary currency is typically the default corporate currency, unless it’s overridden at the record level. The amount shown in parentheses is the user’s personal default currency, calculated based on the conversion rate settings defined in your organization. To control whether the converted currency amount appears, enable or disable parenthetical currency conversion from the Manage Currencies page.

- In reports, the primary currency reflects either the default corporate currency or the currency selected for the record. The secondary currency reflects the personal default currency of the user running the report, or the currency specified in the report criteria.

- Users can specify a personal default currency on their personal information page. If parenthetical currency conversion is enabled, the personal default currency displays as the secondary currency amount (converted amount). Changing the personal default currency updates the converted amount in real time.

- After a currency is added to an organization’s list of supported currencies, it can’t be deleted from the administrator’s list of currencies, even when it’s deactivated. The presence of inactive currencies in the administrator’s list is a cosmetic issue that doesn’t affect end users. A deactivated currency isn’t visible to end users, but remains visible to administrators. Salesforce recommends that you keep this issue in mind during testing and use only those currencies that you eventually plan to use in your organization.

- After enablement, all currency fields display the ISO code of the currency before the amount. For example, $100 displays as USD 100.

Note: If you have only one currency in your multi-currency organization, you can set a preference to display currency symbols instead of ISO codes. To display currency symbols, search Setup for User Interface, and then select Show currency symbols instead of ISO codes in the Currency Display Settings section of the User Interface settings page. If you later enable more currencies in your organization, ISO codes display and this preference is no longer available. This preference applies only in the standard Salesforce user interface.

- By default, all converted amounts in your organization rely on the current conversion rates defined for your organization. Conversion rates must be set and updated manually. Changing the exchange rate automatically updates converted amounts on all records, including on closed opportunities.

You can opt to use dated exchange rates by using advanced currency management to track historical exchange rates. Advanced currency management allows you to maintain a list of exchange rates by date range. Converted currency amounts on opportunities display based on the specified Close Date, regardless of the opportunity stage. If the Close Date changes to a different exchange rate period, changing the Close Date impacts converted amounts.
Dated exchange rates aren’t used in forecasting, currency fields in other objects, or currency fields in other types of reports.

- About Advanced Currency Management

### Activate and Deactivate Currencies

For orgs with multiple currencies, specify which currencies are supported by activating or deactivating currencies.

- **Active currencies** represent countries in which your org does business. Only active currencies can be entered in opportunities, forecasts, and other items. Once you activate a currency, you can never permanently delete it.
- **Inactive currencies** are currencies that your org no longer uses. You can have existing records that use inactive currencies, but you can’t enter new amounts that use inactive currencies.

To activate new currencies:

1. From Setup, enter *Manage Currencies* in the Quick Find box, then select *Manage Currencies*.
2. Click **New** in the Active Currencies related list.
3. Select a currency. Currencies are alphabetized using their ISO currency code.
4. Enter the conversion rate relative to your corporate currency.
5. Specify the number of decimal places to display for amounts in this currency.
6. Click **Save**.

To activate a currency from the list of inactive currencies, click **Activate** next to the currency.

To deactivate a currency, click **Deactivate** next to the currency. You can’t deactivate the corporate currency. Deactivating a currency does not alter amounts in items that use that currency. However, you can no longer enter new amounts using the inactive currency.

**Note:** Deactivating a currency that is set as a user’s personal currency automatically resets the user’s currency to the corporate currency.

About Advanced Currency Management

Advanced currency management allows you to manage dated exchange rates within opportunities using Salesforce. Dated exchange rates allow you to map a conversion rate to a specific date range. For example, the exchange rate on January 1 was 1 USD to 1.39 AUD, but on February 1, it changed to 1 USD to 1.42 AUD. Your opportunities that closed between January 1 and February 1 use the first exchange rate ($1 = 1.39), while opportunities that closed after February 1 used the second exchange rate ($1 = 1.42).

Dated exchange rates are defined using a start date and a conversion rate. Each rate is in effect until either the end of time or the day before the next start date for that currency. The time between one start date and the next start date is called the exchange rate date range. These ranges can be as small as a day and as large as all of time.

To enable or disable advanced currency management, see Enabling or Disabling Advanced Currency Management on page 1894.

When advanced currency management is first enabled, your existing exchange rates automatically become the first set of dated exchange rates. These rates will be valid for all time, until you define another set of exchange rates. For more information, see Editing Dated Exchange Rates on page 1896.

If you disable advanced currency management, all currency conversions will use the static conversion rate. See Edit Conversion Rates on page 1895.

**Note:** Although dated exchange rates aren’t supported in Lightning Experience or Salesforce1, some limited functionality is available. Opportunities display the correct amount if the CloseDate field is on the page layout for opportunities. Because page layouts control who sees what on object records, only users who have this page layout assigned to them see the correct amount. Otherwise, the amount shown reflects the original amount before a dated exchange rate was applied.

Advanced Currency Management Considerations

- Dated exchange rates are used for opportunities, opportunity products, opportunity product schedules, campaign opportunity fields, opportunity splits, and reports related to these objects and fields. Dated exchange rates are not used in forecasting, currency fields in other objects, or currency fields in other types of reports.
- Organizations with advanced currency management support roll-up summary fields between two advanced currency management objects. For example, roll-up summary fields are supported from an opportunity line object to its opportunity object, because both are advanced currency management enabled. However, if you enable advanced currency management, you can’t create roll-up summary fields that calculate currency on the opportunity object rolling up to the account object, and you can’t filter on the opportunity currency field on the account object. All existing currency-related roll-up summary fields on the opportunity object are disabled and their values are no longer calculated. If your organization enables advanced currency management, you should delete any currency roll-up summary fields using opportunities and accounts or opportunities and custom objects.
- Campaign opportunity fields use dated exchange rates when calculating the amount in the campaign currency, but are not used when converting those amounts to the user currency.
- Cross-object formulas always use the static conversion rate for currency conversion.
• If advanced currency management is enabled, you can’t bind Visualforce pages that use `<apex:inputField>` or `<apex:outputField>` components to currency fields that support advanced currency management.

Enabling or Disabling Advanced Currency Management

To enable advanced currency management:

1. Enable multiple currencies for your organization. For more information, see Manage Multiple Currencies on page 1889.
2. From Setup, enter Manage Currencies in the Quick Find box, then select Manage Currencies.
3. Click Enable.
4. When prompted, select Yes, I want to enable Advanced Currency Management and click Enable.

When advanced currency management is first enabled, your existing exchange rates automatically become the first set of dated exchange rates. These rates will be valid for all time, until you define another set of exchange rates.

To disable advanced currency management:

1. From Setup, enter Manage Currencies in the Quick Find box, then select Manage Currencies.
2. Click Disable.
3. When prompted, select Yes, I want to disable Advanced Currency Management and click Disable.

If you disable advanced currency management, all currency conversions will use the static conversion rate. See Edit Conversion Rates on page 1895.

When advanced currency management is enabled, Visualforce `<apex:inputField>` and `<apex:outputField>` components cannot display currency fields.

SEE ALSO:
- About Advanced Currency Management
Edit Conversion Rates

You can manage static exchange rates between your active and inactive currencies and the corporate currency by editing the conversion rates. These exchange rates apply to all currency fields used in your organization. In addition to these conversion rates, some organizations use dated exchange rates for opportunities and opportunity products.

1. Search Setup for Manage Currencies.
2. If you use advanced currency management, click Manage Currencies.
3. In the Active Currencies or Inactive Currencies list, click Edit Rates.
4. Enter the conversion rate between each currency and your corporate currency.
5. Click Save.

When you change the conversion rates, currency amounts are updated using the new rates. Previous conversion rates are not stored. All conversions within opportunities, forecasts, and other amounts use the current conversion rate.

If your organization uses advanced currency management, you can also manage dated exchange rates for currency fields on opportunities and opportunity products.

Note:
- You cannot track revenue gain or loss based on currency fluctuations.
- Changing conversion rates causes a mass recalculation of roll-up summary fields. This recalculation can take up to 30 minutes, depending on the number of records affected.
- You can also change a conversion rate via the API. However, if another roll-up summary recalculation for the same currency field is in progress, the age of that job affects the recalculation job that you triggered. Here’s what happens when you request a currency rate change via the API, and a related job is in progress.
  - If the other recalculation for the same currency field was kicked off less than 24 hours ago, your currency rate change isn’t saved. You can try again later or instead change the currency rate from Manage Currencies in Setup. Initiating the change from Setup stops the old job and triggers your recalculation to run.
  - If the other recalculation job was kicked off more than 24 hours ago, you can save your currency rate change and your job starts.

To check the status of your recalculation job, see the Background Jobs page in Setup.

Editing Dated Exchange Rates

To add new dated exchange rates:

1. From Setup, enter Manage Currencies in the Quick Find box, then select Manage Currencies.
2. Click Manage Dated Exchange Rates.
3. Click New Exchange Rates.
4. Enter the date that the exchange rates go into effect.
5. Enter the exchange rates.

   **Note:** The exchange rates will default to the current exchange rate. If you do not want to set a new exchange rate for a currency, delete the exchange rate (leave the field blank).

6. Click Save to save the new dated exchange rates.

To view existing dated exchange rates:

1. From Setup, enter Manage Currencies in the Quick Find box, then select Manage Currencies.
2. Click Manage Dated Exchange Rates.
3. Select the date range you want to view either by entering the date and clicking Go!, or by selecting Previous Range or Next Range.

To delete a dated exchange rate for a particular currency:

1. From Setup, enter Manage Currencies in the Quick Find box, then select Manage Currencies.
2. Click Manage Dated Exchange Rates.
3. Click the name of the currency you want to edit.
4. Click Del for the date range you want to delete.

   If the date range you want is not displayed, enter it in the Show all rates with start dates between fields and click Go!

To edit your dated exchange rates for a particular currency:

1. From Setup, enter Manage Currencies in the Quick Find box, then select Manage Currencies.
2. Click Manage Dated Exchange Rates.
3. Click the name of the currency you want to edit.
4. Click Edit for the date range you want to edit. If the date range you want is not displayed, enter it in the Show all rates with start dates between fields and click Go!

5. Edit the exchange rate, setting it to the new value for the date range, and click Save.

Enabling and Customizing Quotes

Enable Quotes

Make it easy for your sales reps to show your customers the prices of the products and services that your company offers.

1. From Setup, enter Quotes Settings in the Quick Find box, then select Quotes Settings.
2. Select Enable Quotes.
3. Save your changes.
4. To display the Quotes related list on the standard opportunity page layout, select Opportunity Layout.
5. To add the Quotes related list to all opportunity page layouts that users have customized, select Append to users' personal related list customization.
6. Save your changes.

Note: You can’t disable the Quotes feature if:
- Your records have any references to quotes, quote line items, or quote PDFs from any application customizations, including formula fields, triggers, workflow rules, and approval processes. Remove these references before you try to disable the feature.
- Any quote is synced with an opportunity. On each synced quote’s detail page, choose to stop syncing before you try to disable the feature.

- “Customize Application”
Considerations for Creating Quote Templates

Before you create a quote template, consider a few key points.

- Quote PDFs don’t support right-to-left languages. The text aligns to the left side of the page.
- Text formatting isn’t available in the Text/Image Field for Unicode languages such as Arabic and Japanese. To make these languages visible in plain text, contact Salesforce and ask to enable the feature for foreign character support for rich text area fields in Quote PDFs.
- Advanced Currency Management isn’t available with quotes.
- The maximum number of characters that you can use in the quotes template Text/Image Field is 32,000. This number includes the hidden HTML characters that are used to format text.
- Sometimes a field doesn’t appear on the quote templates palette or on a PDF that’s created from a template.
  - If the default value for the field exceeds 255 characters, quote templates can’t include text areas or text fields.
  - If a user can’t view or update a field because of field-level security settings, that field doesn’t appear on PDFs that are created from a template, even if the template includes that field. Read-only fields appear on PDFs.
  - Fields that appear on a quote page layout but don’t contain data for a given quote appear on the quote templates palette but not when a PDF is created.
  - Quote line item fields that don’t contain data don’t appear as columns in a list when a PDF is created, even if the template includes that field. For example, if no quote line items offer a discount, the Discount column doesn’t appear, even if the list includes the Discount field.
  - If a related list isn’t included on a quote page layout, it doesn’t appear on the template palette or any PDFs for quotes that use that page layout.
  - If the currency of a product on an opportunity differs from the user’s currency in a multicurrency org, currency fields for quotes and quote line items appear in both currencies. The product’s currency is converted to the user’s currency, and the converted amount appears in parentheses. Fields in quote custom reports appear in the report’s currency. Currency fields include Subtotal, Tax, and Grand Total.
  - If you create a Developer or Developer Pro sandbox for your Salesforce org, templates that contain Text/Image fields can’t be opened for editing within the sandbox.
- Fields within sections have different alignment than columns within lists, so if you place a totals section below a list, its field values won’t align directly below the right-hand list values. For example, say your template includes a list of quote line items, including a Total Price column at the far right that shows the total for each line item. If you add a totals section beneath the list, and you include Subtotal, Total Price, and Grand Total fields, their values will show the total of all line items, but the amounts won’t align directly below the list’s Total Price column.

SEE ALSO:
  Create, Preview, and Activate Quote Templates
Create, Preview, and Activate Quote Templates

Define the look of your company’s quote PDFs by creating templates that your sales reps can choose when they create quote PDFs.

Watch a Demo: Creating Quote Templates

1. From Setup, enter Templates in the Quick Find box, then select Templates under Quotes.
2. Click New, and then select a template, such as Standard Template, on which to base your new template.
3. Give your new template a name, and then click Save.
4. In the template editor, drag the elements that you want to the template, and then complete the details. To add:
   - One or more Quote fields or fields from related objects, use a section and add fields to it.
   - Text that you can edit and format, such as terms and conditions, use Text/Image Field.
   - An image, such as your company logo, use Text/Image Field.
   - A table of Quote fields or fields from a different object, such as Quote Line Item, use a list.
5. Click Quick Save to save your changes and continue working on the template.
6. Click Save and Preview to make sure that the quote PDFs that users create will look the way you want them to.

   Preview shows templates in system administrator profile view. The preview and the template show the rich text and images that you’ve added. Other data is simulated.

   Important: Save and Preview saves changes to your template, so after you preview, you can’t undo them.
7. Click Save when you’re finished.
8. Return to the Quote Templates page, and then click Activate.

Enhance Quote Templates

After you create a quote template, add features to enhance it.

Add Rich Text to a Quote Template
Include text that you can format, such as your company’s address or terms and conditions, in your quote template’s body, header, or footer.

Add a List to a Quote Template
Arrange and display fields from a quote line item or any other standard or custom object that has a lookup relationship to the quote object. The added list looks like a table, with field names appearing as columns.
Add an Image to a Quote Template
Show an image, such as your company logo, in your quote template’s body, header, or footer.

Add a Totals Section to a Quote Template
Include subtotal and grand total amounts for your quote.

Add a Signature Block to a Quote Template
Create signature and date lines so that customers can easily sign off on their quotes.

Guidelines for Using the Quote Templates Editor
While you’re creating and editing quote templates, refer to key guidelines for additional information.

Add Rich Text to a Quote Template
Include text that you can format, such as your company’s address or terms and conditions, in your quote template’s body, header, or footer.

1. Drag Text/Image Field into place in the header, the footer, or any section in the body.
2. Type or paste your text into the field.
3. Format the text as needed.
4. Click OK.

To view quote templates:
• “View Setup and Configuration”
Add a List to a Quote Template

Arrange and display fields from a quote line item or any other standard or custom object that has a lookup relationship to the quote object. The added list looks like a table, with field names appearing as columns.

A list can include up to 10 fields.

Note: You can’t add lists to the header or footer of your quote template.

1. Drag a list from the palette to the template.
2. Enter a title for the list. To suppress the title from appearing on the template or PDF, select Hide Title.
3. In the Object field, select the object whose fields you want to appear in the list.
4. Use the Add and Remove arrows to move columns from the Available Fields list to the Selected Fields list. Use the Up and Down arrows to change the order of the columns.
5. Click OK.

SEE ALSO:
- Guidelines for Using the Quote Templates Editor
- Enhance Quote Templates

Add an Image to a Quote Template

Show an image, such as your company logo, in your quote template’s body, header, or footer.

Before you begin, review key considerations.

Insert an Uploaded Image

1. To use an image that’s stored in Salesforce CRM Content, locate the image, and then download it to your local file directory.
2. Drag Text/Image Field into place in the header, the footer, or any section in the body.
3. Click the image icon, click Choose File, and then select the image in your file directory.
4. Click Open and then Insert.
   The image appears in the field. To resize it, drag the sizing handles, which show the image’s height and width in pixels.
5. Click OK.
6. Click Save and Preview to see how the image will look in PDFs that are created from the template.
7. To suppress the title from appearing on the template or PDF, select Hide Title in Section Properties.

Insert an Image from a Salesforce Web Address

1. If you need to, upload the image to the Documents tab, or define a static resource.
2. Drag Text/Image Field into place in the header, the footer, or any section in the body.
3. To suppress the title from appearing on the template or PDF, select Hide Title.
4. Click OK.

5. On the Documents tab or the Static Resources page, open the image’s detail page, click View File, and then copy its URL.

6. In the quote template editor, click in the title bar of Text/Image Field.

7. Click the image icon, and then click the Web Address tab.

8. Paste the URL into the URL field, and then click Insert.

   The image appears in the field. You can resize it by dragging the sizing handles, which show the image’s height and width in pixels.

9. Click OK.

10. Click Save and Preview to see how the image will look in PDFs that are created from the template.

   ! **Important:** If the image is removed from the Documents tab or Static Resources page where it’s stored, the template displays a message that the image isn’t available. Restore the image, open the template, delete the error message image, and then paste the URL again.

   Guidelines for Using the Quote Templates Editor
   Enhance Quote Templates

Add a Totals Section to a Quote Template

Include subtotal and grand total amounts for your quote.

1. Do either of the following.
   a. Select Standard Template when you create a template, and then modify the totals section as needed.
   b. Drag a section onto the layout of any template, and then drag total-related fields (such as Subtotal and Grand Total) to the right half of the section. If you're placing the section directly below a list, hide the title.

2. Click , and then select right field alignment.

3. Save your changes.

To create quote templates:
- "Customize Application"

To view quote templates:
- "View Setup and Configuration"
Add a Signature Block to a Quote Template

Create signature and date lines so that customers can easily sign off on their quotes.

1. Drag Text/Image Field into the footer of your template. To right-align your signature block, or to create two signature blocks, use two columns.
2. Enter a label for each line that you want to create. For example, enter Signature, Name, Title, or Date.
3. To create a line where the customer can sign or write other information, press and hold the underscore key.
4. Click OK.
5. Save your changes.

SEE ALSO:
Guidelines for Using the Quote Templates Editor
Enhance Quote Templates

Guidelines for Using the Quote Templates Editor

While you're creating and editing quote templates, refer to key guidelines for additional information.

General Guidelines

• Click beneath the palette at the top to expand or collapse it.
• In the left column, select an object to display its fields on the palette.
• Use Quick Find to easily locate items on the palette.
• To add an element to the template, drag it from the palette to the layout below.
• To remove an element from the layout, drag it back to the palette, or hover over its title bar and click .
• For any section (including a header or footer), double-click its title bar or click to:
  – Hide the section title.
  – Hide field labels. (Field names appear in gray in the quote template editor, but they don’t appear on quote PDFs.)
  – Change the number of columns (one or two).
  – Adjust field alignment.
• To rename the template, click Quote Template Properties.
• To show field content without labels in quote template sections, headers, and footers, click , and then select the Hide checkbox.
• Use the Blank Space field to add vertical space anywhere on the template.

Guidelines for Using Headers and Footers

A header or footer is essentially a section. You can add fields to it and show or hide its title. You can’t remove a header or footer or add more sections to it.

• In the quote template editor, select an object, and then drag the fields that you want to the header or footer.
To use an image, such as your company logo, or include extended information, such as terms and conditions, use Text/Image Field.

To change the number of columns in your header or footer, click , and then select the number (one or two) that you want.
- To display an image that spans the width of a page, use a one-column header or footer.
- For terms and conditions text, use a one-column footer.

To change field alignment within a column, click , and then select left or right alignment.

To hide field labels, click , and then select the Hide checkbox.

Considerations for Adding Images to Quote Templates

Before you add images to quote templates, consider a few key points.

- You can store images for uploading in your file system or in Salesforce CRM Content.
- If you store images on the Documents tab or the Static Resources page, you get a web address that you can use to insert the image.
- If you insert an image that’s too large, it will be cropped when users create quote PDFs from the template. To prevent cropping, click Save and Preview after you insert an image, and then resize the image as needed.
- To insert an image from a public web address outside the Salesforce application (such as your company’s website), contact Salesforce and ask to have the public URL whitelisted for your Salesforce org.

SEE ALSO:
Add an Image to a Quote Template

Quotes Fields

If you’re troubleshooting quotes or working with custom fields, review the details about quote fields.

These tables list the fields that make up a quote. Your page layout, field-level security settings, and Salesforce edition determine what fields are visible and editable. (Field-level security is available in Professional, Enterprise, Unlimited, Performance, and Developer Editions.)

Note: If the currency of a product on an opportunity differs from the user’s currency in a multicurrency org, currency fields for quotes and quote line items appear in both currencies. The product’s currency is converted to the user’s currency, and the converted amount appears in parentheses. Fields in quote custom reports appear in the report’s currency. Currency fields include Subtotal, Tax, and Grand Total.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account Name</td>
<td>The name of the account that the quote’s opportunity is linked to. (Read only.)</td>
</tr>
<tr>
<td>Additional To</td>
<td>Another address field. By default not displayed on the page layout.</td>
</tr>
<tr>
<td>Additional To Name</td>
<td>The name of the person or company that’s associated with the additional address.</td>
</tr>
<tr>
<td>Bill To</td>
<td>The billing address for the account that’s associated with the quote.</td>
</tr>
<tr>
<td>Bill To Name</td>
<td>The name of the person or company that the quote is billed to.</td>
</tr>
<tr>
<td>Contact Name</td>
<td>The name of the contact that’s associated with the quote. By default, this contact is the primary contact on the opportunity.</td>
</tr>
<tr>
<td><strong>Field</strong></td>
<td><strong>Description</strong></td>
</tr>
<tr>
<td>------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Contract</td>
<td>The contract that's associated with the quote.</td>
</tr>
<tr>
<td>Created By</td>
<td>The user who created the quote, including the creation date and time. (Read only.)</td>
</tr>
<tr>
<td>Description</td>
<td>The description of the quote, or notes to help you differentiate between quote versions.</td>
</tr>
<tr>
<td>Discount</td>
<td>The weighted average of all line item discounts on the quote. Can be any positive number up to 100. (Read only.)</td>
</tr>
<tr>
<td>Email</td>
<td>The email address of the contact who’s associated with the quote. If available, automatically completed when you add a contact.</td>
</tr>
<tr>
<td>Expiration Date</td>
<td>The date when this quote is no longer valid.</td>
</tr>
<tr>
<td>Fax</td>
<td>The fax number for the contact who’s associated with the quote. If available, automatically completed when you add a contact.</td>

### Quote Line Item Fields

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Created By</td>
<td>The user who created the line item, including creation date and time. (Read only.)</td>
</tr>
<tr>
<td>Date</td>
<td>The service date, effective date, or other date for the product.</td>
</tr>
<tr>
<td>Discount</td>
<td>The discount that you apply to the line item. You can enter a number with or without the percent symbol. You can use up to two decimal places.</td>
</tr>
<tr>
<td>Last Modified By</td>
<td>The user who most recently changed the line item, including the modify date and time. (Read only.)</td>
</tr>
<tr>
<td>Line Description</td>
<td>The description of the product in the line item.</td>
</tr>
<tr>
<td>Line Item Number</td>
<td>A system-generated number that identifies the line item. (Read only.)</td>
</tr>
<tr>
<td>List Price</td>
<td>The price of the product within the price book, including currency. (Read only.)</td>
</tr>
<tr>
<td>Product</td>
<td>The name of the line item product as listed in the price book. (Read only.)</td>
</tr>
<tr>
<td>Product Code</td>
<td>The internal code or product number that’s used to identify the product.</td>
</tr>
<tr>
<td>Quantity</td>
<td>The number of units of this line item’s product included in the quote. The value must be one or greater. If a quote is synced with an opportunity, this field is updated from the quote line item to the opportunity product. If you use forecasting for your opportunities, this field also appears in the Products list on the Opportunity Forecast Edit page, depending on which forecasting version you use.</td>
</tr>
<tr>
<td>Quote Name</td>
<td>The name of the quote that the line item is for.</td>
</tr>
</tbody>
</table>
The price that you want to use for the product. Initially, the sales price for a product on an opportunity or quote is the product’s list price from the price book, but you can change it here. If a quote is synced with an opportunity, this field is updated from the quote line item to the opportunity product. If a quote is synced with an opportunity, this field is updated from the quote line item to the opportunity product. If you use forecasting for your opportunities, this field also appears in the Products list on the Opportunity Forecast Edit page, depending on which forecasting version you use.

Whether the line item uses schedules in the opportunity. Default schedules aren’t carried over from the opportunity when opportunity products are copied to a quote.

The line item’s sales price multiplied by the quantity.

The line item’s sales price multiplied by the quantity and minus the discount.

Customizing Options for Contracts

Customize Contract Settings

Customize Salesforce to handle your internal contract management process. To access the contract settings page, from Setup, enter Contract Settings in the Quick Find box, then select Contract Settings. You can perform the following tasks in the Contract Settings page.

Enabling Contract Expiration Notices

Set an option to automatically send email notifications to account and contract owners when a contract expires. To activate these expiration notices:

1. Select the Send contract expiration notice emails... option.
2. Click Save.

Remove the check on this option and click Save to stop sending expiration notices.

Disabling Auto-Calculation of Contract End Dates

Your contracts may not have end dates or you may prefer to have users enter them manually. If so, disable auto-calculation of contract end dates:

1. Remove the check in the Auto-calculate Contract End Date option.
2. Click Save.
3. View your page layout and field-level security settings for Contract End Date, Contract Start Date, and Contract Term to ensure your users can read or edit them as needed.

To enable auto-calculation, check this option and click Save. If Salesforce auto-calculates Contract End Date, it does not display on the contracts edit page.
**Note:** If **Auto-calculate Contract End Date** is enabled but **Contract Start Date** or **Contract Term** is empty, **Contract End Date** will be blank.

**Tracking History for all Statuses**

The default is to track history for contracts with a status of either **In Approval Process** or **Activated**. To track history for contracts for all statuses:

1. Select the **Track history for all statuses** option.
2. Click **Save**.

**SEE ALSO:**
- Contracts
- Customize Order Settings

**Customizing Options for Orders**

**Customize Order Settings**

Customize Salesforce to handle your internal order management process.

Specify the following order settings from the Order Settings page in Setup.

- **Enable Orders**
  To let your users track and manage customer requests for products or services, enable orders for your Salesforce org.

- **Enable Reduction Orders**
  To let your users process returns or reductions on orders that have been activated, enable reduction orders for your Salesforce org.

- **Enable Negative Quantities for Order Products**
  To let your users add order products with quantities of less than zero, enable negative quantities for your Salesforce org.

**SEE ALSO:**
- Orders

---

**EDITIONS**

Available in: Salesforce Classic

Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions

**USER PERMISSIONS**

To modify order settings:
- “Customize Application”
Enable Orders

To let your users track and manage customer requests for products or services, enable orders for your Salesforce org.

1. From Setup, enter Order Settings in the Quick Find box, then select Order Settings.
2. Select Enable Orders if it isn’t already selected.
3. Click Save.
4. Select which page layouts should have an Orders related list, and save.
5. Use profiles or permission sets to assign user and object permissions to the appropriate users.

If you later disable orders, all of your existing order-related data will be hidden from view. If for some reason you need to access that data again, you can re-enable orders to view it.

SEE ALSO:
- Permission Sets
- Work in the Enhanced Profile User Interface Page
- Customize Order Settings
- Enable Reduction Orders
- Orders

Enable Reduction Orders

To let your users process returns or reductions on orders that have been activated, enable reduction orders for your Salesforce org.

Before you can enable this setting, orders must be enabled for your org.

1. From Setup, enter Order Settings in the Quick Find box, then select Order Settings.
2. Select Enable Orders if it isn’t already selected.
3. Select Enable Reduction Orders.
4. Click Save.
5. Using a profile or permission set, assign the necessary permissions to the appropriate users.

To create reduction orders, users need the “Create Reduction Orders” user permission. To add order products to reduction orders, users need field-level access to these order product fields: Start Date, End Date, and Original Order Product.

Consider adding the Reduction Order Products related list to your page layouts for order products.

If this setting is later disabled, the “Create Reduction Orders” permission is hidden from all profiles or permission sets but no data is hidden from view. Users won’t be able to create or activate reduction orders, but they will still be able to view and edit existing ones. If you disable reduction orders, also disable any record types or page layouts specific to reduction orders. If you weren’t using record types, remove fields specific to reduction orders from your page layouts. These include Original Order and Reduction Order.
on the Order object and Original Order Product and Available Quantity on the Order Product object, as well as any custom fields.

SEE ALSO:
- Permission Sets

Enable Negative Quantities for Order Products

To let your users add order products with quantities of less than zero, enable negative quantities for your Salesforce org.

Before you can enable this setting, orders must be enabled for your org.

1. From Setup, enter Order Settings in the Quick Find box, then select Order Settings.
2. Select Enable Orders if it isn’t already selected.
3. Select Enable Negative Quantity.
4. Click Save.

If this setting is later disabled, users won’t be able to add order products with negative quantities or activate orders that have order products with negative quantities. However, users will still be able to view and edit existing order products that have negative quantities.

When you set up Collaborative Forecasts, you choose one or more forecast types, enable forecast users, define your forecast hierarchy, and specify other forecast settings.

⚠️ **Important:**
- This information applies to Collaborative Forecasts and not to **Customizable Forecasts**.
- For Forecasts features to function correctly, don’t disable the new user interface theme in Salesforce Classic. In addition, original Territory Management must not be enabled. Enterprise Territory Management may be enabled, but forecast rollups are based on the role hierarchy and not the territory hierarchy.
- For best viewing results, keep the **Tab Bar Organizer** enabled when using Collaborative Forecasts.

If you’re migrating to Collaborative Forecasts, see *Considerations for Migrating from Customizable Forecasting to Collaborative Forecasts* on page 1468. To set up the forecasts feature, you need to:
- Enable one or more forecast types. You can have up to 4 forecast types.
- Select the fields that appear in the opportunity pane for each forecast type.
- Enable quotas if you want to make this functionality available.
- Enable forecasts adjustments for your company and for specific user profiles to make this functionality available.
- Choose whether to use individual forecast category rollups on page 1924 or enable cumulative forecast rollups.
- Define your forecast range. You can select the period and default range. Standard and custom fiscal years are supported.
- Customize your forecast categories if your company uses specific terminology.
- Set a forecast currency if your company uses multiple currencies. You can select either your company’s corporate currency or the forecast owner’s personal currency.
- Enable users who need to use forecasts.

1912
• Set up your forecasts hierarchy to determine how forecasts roll up within your company and who can view and adjust them. To do this, from Setup, enter Forecasts Hierarchy in the Quick Find box, then select Forecasts Hierarchy. The forecast hierarchy is based entirely on the role hierarchy, but also specifies which users are forecast managers.

• Make sure the Forecasts tab is visible to forecasting users.

<td>“Manage Quotas” AND “View All Forecasts”</td>
</tr>
</tbody>
</table>

Choose the types of forecasts you want and the details that appear on the Forecasts tab so that your sales reps can see the revenue and quantity projections from their sales pipeline.

⚠️ Important:
• This information applies to Collaborative Forecasts and not to Customizable Forecasts.
• For Forecasts features to function correctly, don’t disable the new user interface theme in Salesforce Classic. In addition, original Territory Management must not be enabled. Enterprise Territory Management may be enabled, but forecast rollups are based on the role hierarchy and not the territory hierarchy.
• For best viewing results, keep the Tab Bar Organizer enabled when using Collaborative Forecasts.

If your sales reps already use Customizable Forecasts, but want to use Collaborative Forecasts, contact your Salesforce representative. In addition, Salesforce recommends that you review the documentation prior to setting up Collaborative Forecasts. If you later change certain settings, you can lose some data.

For a more detailed step-by-step explanation of setting up Collaborative Forecasts and why you’d want to enable certain functionality, see the Collaborative Forecasts Implementation Guide.
1. From Setup, enter Forecasts Settings in the Quick Find box, then select Forecasts Settings. If forecasts is not already enabled, select Enable Forecasts.

2. If you do not yet have any forecast types enabled, click Add a Forecast Type. If you want to enable an additional forecast type, click Add another forecast type.

3. Select the forecast type that you want to add. Depending on your other configurations, you can choose Opportunities, Opportunity Splits, Overlay Splits, Product Families, or a custom opportunity currency field.

4. Select the forecast measurement you want to use—Revenue or Quantity. If you want forecasts for both, add separate forecast types for each.
   Not every forecast type supports both measurements. For example, Opportunity Splits forecasts only work with revenue.

5. Select the fields that appear in the opportunity pane of a forecast page.
   You can choose a different set of fields for each forecast type.

6. Click OK.

7. You can enable forecasts adjustments for your company and for specific users.*

8. Optionally, enable cumulative forecast rollups.

9. Under Configure the Default Forecast Display, select a Forecast Period, either monthly or quarterly.* Standard and custom fiscal years are supported.

10. Under Configure the Default Forecast Display, use the drop-down lists to select a beginning period and the number of periods you want to display. This setting becomes the default for all Collaborative Forecasts users until they change it for themselves on the Forecasts tab.

11. If you need to, customize your Forecast Categories.

12. If your company uses multiple currencies, select the currency in which your users will forecast.

13. You can enable quotas for your company.

14. Click Save.

Now you can enable users who need to use forecasts and set up your forecasts hierarchy to determine how forecasts roll up, and who can view and adjust them.

* You can return to the Forecasts Settings page to make changes. However, making changes can affect your data.
  • If you disable adjustments, adjustment data is purged.
  • If you change your forecast period, both quota and adjustment data is purged.
  • If you remove a forecast type, both quota and adjustment data is purged for that forecast type.
  • If you change the forecast measurement for a forecast type from revenue to quantity or from quantity to revenue, both quota and adjustment data is purged for that forecast type.

Enabling Users for Forecasts

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts.

1. From Setup, enter Users in the Quick Find box, then select Users.
2. For each user you want to enable, click Edit.
3. Under General Information, select Allow Forecasting.
4. Click Save.

Enabled users are available in the forecasts hierarchy.

You can also enable additional users or disable users you’ve already enabled when you configure your forecast hierarchy.

SEE ALSO:
- Collaborative Forecasts
- Enable Partner Portal Users to Add Collaborative Forecasts Opportunities
- Considerations for Collaborative Forecasts Setup

Enable Partner Portal Users to Add Collaborative Forecasts Opportunities

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts.

Before beginning, make sure that you’ve:
- Enabled partner portals for your organization and created a partner portal.
- Created a partner profile and assigned it to your partner portal.
- Enabled an account as a partner and enabled partner portal login for a contact of that account.

If your organization works with partners, you can include the figures from partner user opportunities in users’ forecasts. Follow these steps to add partner portal users to the forecast hierarchy.

1. From Setup, enter Users in the Quick Find box, then select Users and select the partner portal contact you created.
2. Make sure that the Active and Allow Forecasting checkboxes are selected.
3. Enable the partner portal user in the forecast hierarchy and make sure the person is assigned to an active forecast manager.

Opportunities that a partner portal user creates can roll up to the forecast of the account owner; note that the account owner must be the person’s forecast manager in the forecast hierarchy for the opportunities to roll up into the forecast. For example, say Gordon Johnson:
- Owns a partner account called Acme
- Has an Acme contact named Anne Smith

SEE ALSO:
- Collaborative Forecasts
- Enable Partner Portal Users to Add Collaborative Forecasts Opportunities
- Considerations for Collaborative Forecasts Setup
• Anne is a partner portal user
• Anne reports to Gordon in the forecasts hierarchy

If Anne adds opportunities in her portal, Gordon sees those opportunities in his forecast; because Gordon is Anne’s forecast manager, Gordon can adjust forecast amounts based on her opportunities and see how she’s tracking against her quota. However, it’s important to note that partner portal users don’t have access to the Collaborative Forecasts tab or any of its functionality.

SEE ALSO:
  Collaborative Forecasts
  Considerations for Collaborative Forecasts Setup

Set Up Your Forecast Hierarchy

Your forecast hierarchy lists all forecast users and determines how their forecasts roll up through your organization. Keep your forecast hierarchy up-to-date to ensure that forecast managers see all subordinates’ forecast amounts.

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts.

When you assign a user as a forecast manager, all forecasts and adjustments from the manager’s subordinates in the hierarchy roll up into his or her forecasts. It’s important to always assign a forecast manager to the top level of the forecast hierarchy.

1. From Setup, enter Forecasts Hierarchy in the Quick Find box, then select Forecasts Hierarchy. Click Expand All to see the roles available in your organization.

2. Click Enable Users and click Add and Remove to move users between the Available Users list and the Enabled Users list. If you previously enabled a user from Setup by entering Users in the Quick Find box, then selecting Users and editing a user page to allow forecasting, the name already appears in the Enabled Users list.

3. If you need to select a forecast manager for each manager role in the hierarchy, click Edit Manager next to the role, then select a name from the Forecast Manager drop-down list.

4. Click Save.

Note: Be sure each sales manager with subordinates is designated as a forecast manager in your forecast hierarchy. This ensures that the forecast visibility rolls up to every level of the hierarchy.

If you want users to be able to adjust forecasts, enable adjustments on page 1923 next.

Organizations with API access can upload quotas for Collaborative Forecasts users and display them alongside users’ forecast amounts. To simply enable quotas for your organization, API access is not needed.

⚠️ **Note:** This information applies to Collaborative Forecasts and not to Customizable Forecasts.

A quota is the sales goal assigned to a user on a monthly or quarterly basis. A manager’s quota equals the amount the manager and team are expected to generate together. The quota rollup is done manually by users and managers, and either revenue or quantity data can be used. If your organization has more than one type of forecast enabled, each forecast type maintains its own separate quota information. Follow these steps to enable quotas for Collaborative Forecasts in your organization.

1. From Setup, enter *Forecasts Settings* in the Quick Find box, then select *Forecasts Settings*.
2. Under Quotas, select *Show Quotas*.
3. Click *Save*.

⚠️ **Note:** If you disable Collaborative Forecasts, quotas are also disabled. Additionally, when you change your data source or disable revenue or quantity forecasts, related quotas are purged.

**EDITIONS**

Available in: Salesforce Classic

Available in: Enterprise, Performance, Unlimited, and Developer Editions

Available in: Professional Edition with the “API Enabled” permission

Load quota data for forecasts with the Data Loader or the API.

**Note:** This information applies to Collaborative Forecasts and not to Customizable Forecasts.

To upload quotas for users in your organization, you can use either the Data Loader application or the Salesforce APIs. The Data Loader provides a simple point-and-click method for adding, inspecting, and editing data in your organization. The APIs provide additional flexibility but require you to write code. To use either method, your organization must have API access enabled. See Data Loader on page 653 for more details about Data Loader.

**Add Quotas with the Data Loader**

Before you upload quotas, consider which version of the Data Loader you are using. For Data Loader v.30 and later, you’ll need to specify the forecast type of each quota you plan to upload.

**If you are using Data Loader v.30 or later:**

1. Query the User object to get the IDs of your users.
2. Make note of the names and IDs of the users for whom you want to upload quotas.
3. Query the ForecastingType object to get the IDs of your forecast types.
4. Make note of the IDs of the forecast types your organization is using.

**If you are using Data Loader v.29 or earlier:**

1. Query the User object for your users’ IDs.
2. Make note of the names and IDs of the users for whom you want to upload quotas.
3. Prepare a .csv file with user names, IDs, and quotas (either amount or quantity), and the start date of each quota’s forecast period. If you use both revenue and quantity forecasts, specify the quotas for each on separate rows of your .csv file.
4. Upload your quotas .csv file using the Data Loader.
### If you are using Data Loader v.30 or later:

5. Prepare a .csv file with user names, user IDs, forecasting type names, Forecasting Type IDs, quotas (either amount or quantity), and the start date of each quota's forecast period.

6. Upload your quotas .csv file using the Data Loader.

### If you are using Data Loader v.29 or earlier:

<table>

</tr>
<tr>
<td>k.</td>
<td>Click Finish and then click Yes.</td>
</tr>
<tr>
<td>l.</td>
<td>Click View Extraction.</td>
</tr>
</tbody>
</table>
m. Click **Open in external program**.

n. Save the file in the .csv format.

o. Note the **DeveloperName** and **Id** values for each of your active forecast types. Your organization may not be using all of the forecast types that appear in the results. See the list below if you’re not sure which forecast type a specific **DeveloperName** refers to.

- **OpportunityRevenue** : Opportunities - Revenue
- **OpportunityQuantity** : Opportunities - Quantity
- **OpportunitySplitRevenue** : Opportunity Revenue Splits - Revenue
- **OpportunityOverlayRevenue** : Opportunity Overlay Splits - Revenue
- **OpportunityLineItemRevenue** : Product Families - Revenue
- **OpportunityLineItemQuantity** : Product Families - Quantity
- The name of a custom opportunity split type that has been enabled as a forecast type. Custom split types are based on currency fields, which can only contain revenue amounts.

p. Add columns for **DeveloperName** and **Id** to your quota spreadsheet and add the name and ID of the forecast type of your quotas to each row. The name is not necessary for uploading quotas, but will help you know which forecast type you are working with in each row.

3. Prepare your quota spreadsheet for upload.

- If you are using Data Loader v.30 or later, create a .csv file with columns for User Name, User ID, Forecast Type Name, Forecast Type ID, Quota Amount, Quota Quantity, Currency Code, and forecast period Start Date [YYYY-MM-DD].
- If you are using Data Loader v.29 or earlier, create a .csv file with columns for User Name, User ID, Quota Amount, Quota Quantity, Currency Code, and forecast period Start Date [YYYY-MM-DD]. If you use both revenue and quantity forecasts, specify the quotas for them on separate rows of your .csv file.

You don’t actually need the User Name or Forecast Type Name columns, but including them makes it much easier for you to understand the contents of your .csv file.

<table>

</tbody>
</table>

If your forecast Data Source is product families, include a column for Product Family as well.
4. Use the Data Loader to upload your quota information to Salesforce.
   a. If you haven’t already, launch the Data Loader.
   b. Click Insert.
   c. Log in with your user name and password.
   d. Click Next.
   e. Click Show All Salesforce Objects.
   f. Select the Forecasting Quota object from the list.
   g. Click Browse and choose the .csv file you want to upload.
   h. Click Next.
   i. Click OK in the Data Selection dialog box that opens.
   j. Click Create or Edit a Map.
   k. Map these columns to fields in the ForecastingQuota object as shown in the table.

<table>
<thead>
<tr>
<th>Column headers in CSV file</th>

<td>StartDate</td>
</tr>
<tr>
<td>Product Family (needed only when the forecast data source is Product Families)</td>
<td>ProductFamily</td>
</tr>
<tr>
<td>Forecast Type ID (needed only for Data Loader v.30 or later)</td>
<td>ForecastingTypeID</td>
</tr>
</tbody>
</table>

l. Click OK.
m. Click Next.
Click **Browse** and choose the directory where you want to save the log file containing messages about the success or failure of the upload.

Click **Finish**.

Click **Yes** to proceed with the upload.

Click **OK**.

As a best practice, load quota data in the quota owner’s **personal currency**. Note that you can still upload quota data using the API even if **Show Quotas** is disabled. If your Data Loader time zone setting is ahead of quota owners’ time zones, the month can be off by one. To avoid this problem, use a date greater than or equal to the third day of each month when inserting quotas.

**Uploading Quotas with the API**

When uploading quota information with the API, be sure to use the correct API version, depending on the type of quota data you are working with. If your organization has more than one type of forecast enabled, each forecast type maintains its own separate quota information.

<table>
<thead>
<tr>

*Enable Quotas in Forecasts*
Enabling Forecasts Adjustments

Administrators can enable managers to adjust subordinates’ forecasts, all forecast users to adjust their own forecasts, or both.

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts.

Before enabling adjustments, make sure you’ve set up your forecast hierarchy.

1. From Setup, enter Forecasts Settings in the Quick Find box, then select Forecasts Settings.
2. If you want to allow forecast managers to adjust their subordinates’ forecast amounts, under Enable Forecast Adjustments, select Enable Manager Adjustments.
3. If you want to allow all forecast users to adjust their own forecast amounts, under Enable Forecast Adjustments, select Enable Owner Adjustments.
   
   Note: If your organization uses product family forecasts, you can’t adjust your own product family forecast amounts.

4. Click Save.
5. From Setup, enter Profiles in the Quick Find box, then select Profiles.
6. Find a profile for which you want adjustments enabled.
7. If you’re using the enhanced profile user interface, click App Permissions and click Edit.
8. Select Override Forecasts and click Save.

If you have more than one type of forecast enabled, each forecast type maintains its own separate adjustments.

Define Your Company’s Forecast Date Range
Disabling Forecasts Adjustments

Turn off forecast adjustments if you no longer want forecast managers to adjust subordinates’ forecast amounts or forecast owners to adjust their own forecasts.

**Note:** This information applies to Collaborative Forecasts and not to Customizable Forecasts.

**Warning:** Disabling forecasts adjustments purges existing adjustments for all forecast types. Before disabling adjustments, see Adjustments Purges. Since disabling certain functionality can result in purged quota and adjustment data, consider exporting your data before disabling anything. When you complete your setting changes, you can import the data back into Salesforce.

1. From Setup, enter *Forecasts Settings* in the Quick Find box, then select *Forecasts Settings*.
2. To prevent forecast managers from adjusting subordinates’ forecast amounts, under Enable Forecast Adjustments, deselect “Enable Manager Adjustments.”
3. To prevent all forecast users from adjusting their own forecast amounts, under Enable Forecast Adjustments, deselect “Enable Owner Adjustments.”
4. Click *Save*. You don’t need to update user permissions because adjustments are now disabled for your entire organization.

**Example:** Say you have forecast managers who adjusted forecast amounts for some direct reports. After you disable adjustments for your organization, the next time the managers view their respective forecast rollups, no adjustments will appear.

Cumulative Forecast Rollups Overview

As an administrator, you can choose between two methods of rolling up opportunities into forecasts for your sales teams.

- Individual forecast category rollups, which combine the opportunities from each individual forecast category into separate forecast amounts for each category.
- Cumulative forecast rollups, which combine opportunities from more than one forecast category into cumulative forecast amounts.

The default rollup setting for organizations is individual forecast category rollups. If you choose Cumulative Forecast Rollups in Setup, the way opportunities roll up to forecast amounts is different. The column names on the Forecasts tab are also different. See the differences for yourself.

<table>
<thead>
<tr>
<th>Category rollup method</th>

</tr>
<tr>
<td>Closed Only</td>
<td></td>
<td>Closed</td>
</tr>
</tbody>
</table>

### Advantages of Cumulative Forecast Rollups

With individual forecast category rollups, each total and subtotal represents opportunities from only one of the individual forecast categories. This type of rollup means that if forecast users want to know the total that they’re going to actually bring for the month or quarter, they need to add the Best Case, Commit, and Closed forecast amounts together themselves.

**Example: Individual forecast rollup**

<table>
<thead>
<tr>
<th>Forecast amounts</th>
<th>Closed</th>
<th>Commit</th>
<th>Best Case</th>
<th>Pipeline</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>$50</td>
<td>$100</td>
<td>$150</td>
<td>$200</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Opportunities</th>
<th>Closed</th>
<th>Commit</th>
<th>Best Case</th>
<th>Pipeline</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>$50</td>
<td>• $50</td>
<td>• $50</td>
<td>• $50</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• $50</td>
<td>• $50</td>
<td>• $50</td>
</tr>
</tbody>
</table>

With Cumulative Forecast Rollups, the forecast columns show cumulative amounts from the opportunities in the named forecast category, as well as subsequent categories in your sales funnel. This view makes it easier for sales teams to see the total numbers they’re likely to bring in, saving them from combining the category totals themselves.

For example, this table shows the cumulative forecast rollup amounts when there are four Pipeline, three Best Case, two Commit, and one Closed opportunity, each worth $50.

**Example: Cumulative forecast rollup**

<table>
<thead>
<tr>
<th>Forecast amounts</th>
<th>Closed Only</th>
<th>Commit Forecast</th>
<th>Best Case Forecast</th>
<th>Open Pipeline</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>$50</td>
<td>$150</td>
<td>$300</td>
<td>$450</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

Example: Cumulative forecast rollup

- $50

**Note:** Forecast Historical Trending can’t be used in organizations that use Cumulative Forecast Rollups.

### Enable Cumulative Forecast Rollups for Sales Reps and Managers

Your organization can use either Cumulative Forecast Rollup columns or individual forecast category columns.

Be aware that changing the forecast column display purges all adjustments to Commit and Best Case forecast amounts, but not quota data.

1. From Setup, enter *Forecasts Settings* in the Quick Find box, then select *Forecasts Settings*.
2. Enable Cumulative Forecast Rollups.

### Selecting a Forecast Currency

**Note:** This information applies to Collaborative Forecasts and not to Customizable Forecasts.

Before selecting a forecast currency, review information in *Working With Multiple Currencies in Forecasts*.

1. From Setup, enter *Forecasts Settings* in the Quick Find box, then select *Forecasts Settings*.
2. Under Forecast Currency, choose a forecast currency option.
3. Click *Save*.

Forecast Types Overview

Give users the flexibility of having up to four types of forecasts, so they can predict sales from multiple perspectives.

**Note:** This information applies to Collaborative Forecasts and not to Customizable Forecasts.

Here are the types of forecasts you can let your users choose from.

<table>
<thead>
<tr>
<th>Forecast Type</th>
<th>How is the rollup calculated?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opportunities - Revenue</td>
<td>The rollup is based on the opportunity Amount field.</td>
</tr>
<tr>
<td>Opportunities - Quantity</td>
<td>The rollup is based on the opportunity Quantity field.</td>
</tr>
<tr>
<td>Product Families - Revenue</td>
<td>The rollup is based on the opportunity Amount field, and forecast amounts are separated by product family. To use a Product Family forecast, your organization must also use Opportunity Products and Product Families.</td>
</tr>
<tr>
<td>Product Families - Quantity</td>
<td>The rollup is based on the opportunity Quantity field, and forecast amounts are separated by product family. To use a Product Family forecast, your organization must also use Opportunity Products and Product Families.</td>
</tr>
<tr>
<td>Opportunity Splits - Revenue</td>
<td>The rollup is based on the opportunity Amount field and each sales team member’s split percentage. For Opportunity Splits - Revenue forecasts, the split percentages for each opportunity must total 100%. To use opportunity splits forecasts, Opportunity Teams, Opportunity Splits, and the Revenue split type must be enabled.</td>
</tr>
<tr>
<td>Overlay Splits - Revenue</td>
<td>The rollup is based on the opportunity Amount field and each overlay sales team member’s split percentage. For Overlay Splits - Revenue forecasts, the split percentages do not need to total 100%. To use overlay splits forecasts, Opportunity Teams, Opportunity Splits, and the Overlay split type must be enabled.</td>
</tr>
<tr>
<td>Custom Opportunity Currency Field - Revenue</td>
<td>The rollup is based on the amount in the custom opportunity currency field that you specify. To use custom opportunity currency field forecasts, Opportunity Teams and Opportunity Splits must be enabled. A custom split type for the field must also be enabled, even if you don’t intent to split credit for the field amount.</td>
</tr>
</tbody>
</table>
**Forecast Type**

<table>
<thead>
<tr>
<th>Forecast Type</th>
<th>How is the rollup calculated?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Expected Revenue - Revenue</td>
<td>The rollup is based on the amount in the opportunity Expected Revenue field. To forecast on the Expected Revenue field, Opportunity Teams and Opportunity Splits must be enabled. A custom split type for the field must also be enabled, even if you don't intend to split credit for the field amount.</td>
</tr>
</tbody>
</table>

**Opportunities**

Use an opportunity revenue forecast if you want to forecast on the amount field of opportunities. Use an opportunity quantity forecast if you want to forecast on the quantity field of opportunities.

**Product Families**

Use a product family forecast if your organization groups its products and services into families and needs to forecast based on those families. With product families, keep in mind the following.

- The Amount column appears in the opportunity list on the Forecast page.
- You can forecast on revenue, or quantity, or both.
- Forecast users will be able to view individual product family forecasts for each sales rep below them in the forecast hierarchy.
- Your organization must use Opportunity Products and Product Families.
- Users should populate the Product Family field on each product record. Forecasts for products without a Product Family value appear in a forecast row titled Products Not Categorized. (If an opportunity lacks line items, the opportunity amount or quantity also appears in this row.)
- Adjustments can be made to the forecasts for a sales rep’s product family forecasts, but not directly to their total forecast for all product families.
- You can set separate product family quotas for each sales rep, but not a single quota for each sales rep.

**Opportunity Splits**

Use an opportunity splits revenue forecast if your sales organization uses team selling and opportunity splits. With opportunity splits, keep in mind the following.

- The Forecasted Amount and Split % columns appear in the opportunity list on the Forecast page.
- You can forecast on revenue, but not on quantity.
- Your organization must have Team Selling, Opportunity Splits, and the Revenue split type enabled.

**Overlay Splits**

Use overlay splits to track revenue from sales team members who help close opportunities, but are not directly responsible for them.

- The overlay splits on a specific opportunity do not have to total 100%.
- You can forecast on revenue, but not on quantity.
- Your organization must have Team Selling, Opportunity Splits, and the Overlay split type enabled.

**Custom Opportunity Currency Fields**

If your organization uses any custom currency fields on opportunities, you can forecast on the amounts in those fields.
Because the field must be a custom currency field, you can forecast on revenue, but not quantity.

You can forecast on the custom field whether or not it includes opportunity splits.

Regardless of whether the field uses splits, your organization must have Team Selling, Opportunity Splits, and a custom split type enabled for the field.

**Expected Revenue**

The Expected Revenue field on opportunities is useful if there is often a difference between the value of the Amount field and the actual revenue brought in by the opportunity. If your sales team can anticipate this difference, they may want to use the Expected Revenue field, and forecast on it.

- You can forecast on revenue, but not quantity.
- You can forecast on the Expected Revenue field whether or not you use opportunity splits with it.
- Regardless of whether you use splits with the Expected Revenue field, your organization must have Team Selling, Opportunity Splits, and a custom split type enabled for it.

When you enable more than one type of forecast, Custom Forecast Views lets you customize the opportunity information that’s displayed for each forecast.

Here's an example—your sales team forecasts revenue from both opportunities and product families. You’ll enable both opportunity and product family forecasts based on revenue.

Here you can see the Opportunities Revenue forecast page, which shows revenue totals for each sales rep in each forecast rollup.

Each user can change the forecast view from one forecast type to another using the forecast type menu, which we see here.
And when users change the forecast type to Product Family Revenue, they can see each sales rep's totals by product family.
Enable Forecast Types for Collaborative Forecasts

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts.

A forecast type is a forecast configured to use a specific type of data. The opportunity Amount field, opportunity splits, overlay splits, custom opportunity fields, or product families can be used. Each forecast type also specifies a measurement—either revenue or quantity. With opportunities and product families, you can set up forecast types for both quantity and revenue. With opportunity splits the only choice is revenue. Before you add forecast types, be sure you understand the details of each.

1. From Setup, enter Forecasts Settings in the Quick Find box, then select Forecasts Settings.

2. If your organization:
   - Doesn’t yet have any forecast types enabled, click Add a Forecast Type.
   - Already has at least one forecast type enabled, click Add another forecast type.

3. From the Forecast Type menu, choose the data source you want to use for the forecast.

4. Choose the Forecast Measurement you want to use: Revenue or Quantity. If you want both, add separate forecast types for each.

5. Choose the columns you want to display in the related opportunities list on the Forecast tab for the forecast type.
   - If your forecast data source is opportunities or product families, the Amount field appears by default. If your data source is opportunity splits, the Forecasted Amount and Split % fields appear by default. You can change the selected fields for each forecast type even after it has been enabled. Depending on whether your forecast type uses the revenue or quantity measurement, consider adding Amount or Quantity to the pane.

6. Click OK and then Save.

Repeat this procedure for each forecast type you want to add. When you enable a forecast type, the initial calculation of the new forecast can take some time, depending on the number of opportunities, users, and product families in your organization.

Warning: If you disable a forecast type, all related quota and adjustment information is purged.

- Selecting Fields that Appear in the Collaborative Forecasts Opportunity Pane
Enable Revenue Splits Forecasts for Sales Managers

Help your sales teams track revenue from opportunities with multiple sales reps when you add Revenue Splits Forecasts to your organization.

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts.

Before you enable Revenue Splits Forecasts, make sure you’ve enabled:

- Collaborative Forecasts
- Team Selling and Opportunity Splits
- The Revenue opportunity split type

With those features enabled, you’re ready to enable Overlay Splits Forecasts.

1. From Setup, enter Forecasts Settings in the Quick Find box, then select Forecasts Settings.
2. If your organization:
   - Doesn’t yet have any forecast types enabled, click Add a Forecast Type.
   - Already has at least 1 forecast type enabled, click Add another forecast type. You can enable up to 4 forecast types.
3. From the Forecast Type menu, choose Opportunity Revenue Splits. Revenue is the only forecast measurement available for overlay splits.
4. Choose the columns you want to display in the related opportunities list on the Forecast tab for the overlay forecast. To make it easy for forecast users to see the split amounts on each opportunity, include the Split column.
5. Click OK and then Save.

Enable Overlay Splits Forecasts for Sales Managers

Help your sales teams track revenue from overlay sales roles when you add Overlay Forecasts to your organization.

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts.

Before you enable Overlay Forecasts, make sure you’ve enabled:

- Collaborative Forecasts
- Team Selling and Opportunity Splits
- The Overlay opportunity split type

With those features enabled, you’re ready to enable Overlay Splits Forecasts.

1. From Setup, enter Forecasts Settings in the Quick Find box, then select Forecasts Settings.
2. If your organization:
   - Doesn’t yet have any forecast types enabled, click Add a Forecast Type.
   - Already has at least one forecast type enabled, click Add another forecast type. You can enable up to four forecast types.
3. From the Forecast Type menu, choose Opportunity Overlay Splits. Revenue is the only forecast measurement available for overlay splits.
4. Choose the columns you want to display in the related opportunities list on the Forecast tab for the overlay forecast. Include the Split column to make it easy for forecast users to see the split amounts on each opportunity.

5. Click OK and then Save.

Enable Custom Field Forecasts for Sales Managers

To enable a custom field forecast, first enable a custom split type for the field, and then add a forecast for it.

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts.

For each custom opportunity field your sales teams want to forecast on, first enable a custom split type—even if the field doesn’t include splits. When a sales rep creates an opportunity, the rep automatically receives a 100% split for any 100% validated custom split type you enable. So even if you don’t intend to split the custom field, the forecast rollup always includes 100% of the amount in the custom field.

Before you enable custom field forecasts, make sure you’ve enabled:

- Collaborative Forecasts
- At least one custom opportunity currency field
- Team Selling and Opportunity Splits
- A custom opportunity split type based on the custom field (For details on enabling split types, see Enable Opportunity Splits on page 1886.)

With those features enabled, you’re ready to enable a custom field forecast.

1. From Setup, enter Forecasts Settings in the Quick Find box, then select Forecasts Settings.

2. If your organization:
   - Doesn’t yet have any forecast types enabled, click Add a Forecast Type.
   - Already has at least one forecast type enabled, click Add Another Forecast Type. Enable up to four forecast types.

3. From the Forecast Type menu, choose the name of the custom opportunity split type you created based on your custom opportunity field. Revenue is the only forecast measurement available for custom field forecasts.

4. Choose the columns you want to display in the related opportunities list on the Forecast tab for the custom field forecast. Include the Split column to make it easy for forecast users to see the split amounts on each opportunity.

5. Click OK and then Save.
Define Your Company’s Forecast Date Range

The Collaborative Forecasts rollup table displays forecast amounts for individual months or quarters and a range of months or quarters, depending on your Collaborative Forecasts settings. Six months or four quarters is the default.

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts.

If you use custom fiscal years, your custom periods or quarters are displayed. Users can forecast up to 12 months or eight quarters in the future or past. If your forecast range includes the current month or quarter, the Forecasts page displays the current month or quarter by default. If not, then the first month or quarter of the range is selected by default.

The forecast date range becomes the default for all Collaborative Forecasts users. Users can use this default or they can set a different date range display for their own forecasts. Once users change their individual forecast date range displays, administrators can’t override them. However, when changing the period display from monthly to quarterly or quarterly to monthly, the change is reflected in all users’ forecasts.

Warning: If you change the period setting from monthly to quarterly or quarterly to monthly, or you change the standard fiscal year, all adjustments and quotas are purged. If you enable custom fiscal years, creating the first custom fiscal year deletes any quotas and adjustments in the corresponding and subsequent standard fiscal years. These changes trigger a forecast recalculation that can take significant time, depending on the quantity of your data.

1. From Setup, enter Forecasts Settings in the Quick Find box, then select Forecasts Settings.

2. Under Configure the Default Forecast Display, use the drop-down lists to select a beginning period and the number of periods you want to display.

3. Click Save.

1934
Selecting Fields that Appear in the Collaborative Forecasts Opportunity Pane

**Note:** This information applies to Collaborative Forecasts and not to Customizable Forecasts.

**Tip:** If you add an opportunity field to the opportunity pane and it’s not visible to Forecasts users, check the field-level security setting for the specific user profile and field. If the forecast is based on that field, the Forecasted Amount column shows the value of the field or the value of the field’s split that contributes to the forecast, regardless of field-level security.

When a user selects a forecast amount in the rollup table, the list of opportunities that roll up to that amount appears below the table. Administrators select up to 15 standard and custom fields that appear in the opportunity pane, for each enabled forecast type. Users see the fields selected based on their field level security settings. Opportunity Name is a required field. Additionally, we recommend adding Forecast Category to the pane.

When selecting fields, keep in mind the fields used in the forecast rollup. An opportunity-quantity forecast rolls up based on the opportunity’s Quantity field, while opportunity-revenue forecasts roll up based on the opportunity’s Amount field. For opportunity splits-revenue forecasts, the rollup is based on the opportunity’s Amount field and the split % assigned to the sales rep. For custom opportunity field forecasts, the rollup is based on the custom field amount. For product families-revenue forecasts, the rollup is based on the sum of the Total Price field for all opportunity line items in that product family, while product family-quantity forecasts roll up based on the Quantity field for all opportunity line items in that product family. For opportunities without opportunity line items or with line items that don’t have a product family specified, the totals roll up into the Products Not Categorized row on the Forecasts page. Depending on whether your forecast type uses the revenue or quantity measurement, consider adding Amount or Quantity to the pane.

If your forecast data source is opportunities or product families, the Amount field appears by default. If your data source is opportunity splits, the Forecasted Amount and Split % fields appear by default. You can change the selected fields for each forecast type even after it has been enabled.

1. From Setup, enter *Forecasts Settings* in the Quick Find box, then select *Forecasts Settings*.
2. Click the name of the forecast type whose opportunity fields you want to edit.
3. Under Select fields to display in the list of related opportunities, select fields and click Add and Remove to move them between the Available Columns list and the Selected Columns list. To determine field order in the layout, select fields and click Up, Down, Top, or Bottom.
4. Click OK.

Customize Forecasts Categories

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts.

A forecast category is the category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can customize forecast category names for your organization.

1. From the management settings for opportunities, go to Fields.
2. Click Forecast Category.
3. Click Edit for any value you want to edit in the Forecasts Category Picklist Values.
4. Enter a forecast category name.
5. Click Save.

New forecast category names appear on opportunity records and forecasts.

Disable Collaborative Forecasts Functionality

To disable Collaborative Forecasts, first contact Salesforce.

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts.

Before disabling Collaborative Forecasts or any of its functionality, be sure you understand how your forecast data will be affected.

Tip: Since disabling certain functionality can result in purged quota and adjustment data, consider exporting your data before disabling anything. When you complete your setting changes, you can import the data back into Salesforce. Note that if you change your period setting from monthly to quarterly or quarterly to monthly, you cannot import your quota or adjustments data back into Salesforce because the existing values will not align with your new periods.

If you disable... | These items are purged...
--- | ---
Collaborative Forecasts | Adjustments
A forecast type | Quotas and adjustments for that forecast type
Adjustments | Adjustments
These items are purged...

If you disable...
The monthly period setting to use quarterly periods
OR
The quarterly period setting to use monthly periods

Quotas and adjustments

When adjustments are purged from forecasts, the underlying data on which the forecasts are based remains untouched.

### Configuring Customizable Forecasts

#### Setting Up Customizable Forecasting

**Note:** This information applies to Customizable Forecasting and not Collaborative Forecasts.

Sales forecasts represent the best estimate of how much revenue you can generate. They give your managers and executives a view of your overall business no matter how dispersed your sales teams are.

Because forecasting is so universal, customizable forecasting is a flexible solution for even the most advanced requirements. Get started using customizable forecasting in Setup by entering *Forecasts (Customizable)* in the Quick Find box, then selecting *Forecasts (Customizable)*:

- Click **Edit Forecast settings for your company** to customize the default settings for your organization. See Define Customizable Forecast Settings.
- Click **Batch submit forecasts for your users** to set up batch submission. See Submit Customizable Forecasts in Batches.
- Click **Set up the forecasting hierarchy for your company** to set up your initial forecast hierarchy. Refer to Set Up Your Forecast Hierarchy.

  Administrator tip sheet: Setting Up Customizable Forecasting
Define Customizable Forecast Settings

Once you enable Customizable Forecasts for your organization, you need to specify the settings that are most appropriate to how you run your business.

**Note:** This information applies to Customizable Forecasting and not Collaborative Forecasts.

Define the following settings for your organization:

- **Forecast Data Aggregation** determines the type of data that is displayed on forecasts.
- **Forecast Summary Default View** determines the default product family, date start, date range, and forecast numbers for default forecasts.
- **Forecast Data Sharing** determines whether forecast data can be shared.

To set forecast options:

1. From Setup, enter *Forecasts* in the Quick Find box, then select *Forecasts Settings*.
2. Select *Forecast Revenue* if you want forecasts to include revenue amount. If you disable this setting, you lose all revenue overrides on your forecasts.
3. Select *Forecast Quantity* if you want forecasts to include quantity totals. If you disable this setting, you lose all quantity overrides on your forecasts.
4. Choose a *Forecast Period*. If you do not have custom fiscal years enabled, choose monthly or quarterly depending on your organization’s forecasting cycle. The month or quarter start date is based on Greenwich Mean Time (GMT). If you have enabled custom fiscal years, you can choose forecast by fiscal period or by fiscal quarter. The forecast period you choose determines the time increment your organization uses for quotas and forecasts. If you choose monthly, you can still see totals by quarters but, if you choose quarterly, monthly forecast totals are not available. If you change this setting, you lose all overrides and forecasts, including all forecast history.
5. Choose a *Forecast Date* that determines how opportunity amounts contribute to forecasts:
   - If you want the entire opportunity amount to contribute to the forecast period for that date, choose *Opportunity Close Date*. If your organization does not use products, this option is the only one available.
   - If you want the amount of the product on the opportunity to contribute to the forecast period that corresponds with the *Product Date*, choose *Product Date*. When no products exist on an opportunity or the product date is blank, Salesforce uses the *Opportunity Close Date* in the user’s forecast instead.
   - If you want the individual revenue schedule amounts to contribute to the forecast periods that correspond with the schedule dates, choose *Schedule Date*. If a product does not have a revenue schedule, Salesforce uses the *Product Date* in the user’s forecast instead.
6. Choose a *Forecast Type*:
   - Choose *Use Overall Forecast* if your organization does not use products. Your users have one forecast and one quota for each period. If your organization does not use products, this option is the only one available.
   - Choose *Use Product Families* if your users have one quota and one forecast for each product family. See *Using Product Families*.
7. Choose a default view for your users. This setting determines what forecast product family, date start, date range, and forecast totals to display for users when they first click the Forecasts tab. Users can change their view but the default remains the same for all users.
8. Enable or disable forecast sharing by selecting or deselecting *Enable Forecast Sharing*.
9. Click *Save*.

If you have enabled forecast sharing, you are prompted to choose who can share existing forecast views. The options are:
• Require Administrator assistance for forecast sharing - Only administrators can share existing forecast data.

• Forecast managers can share their own forecast data - Administrators can share existing forecast data, and existing forecast managers can also share their own views.

Note: This choice applies to existing forecasting views only; it is not a default setting for your organization. Each time you edit or assign a forecast manager in the role hierarchy, define who can share that view.

If you have chosen to disable forecast sharing, you are prompted to confirm your choice.

Customizable Forecasting includes five standard report types. You can’t create custom report types with Customizable Forecasting.

Set Your Fiscal Year for Customizable Forecasting

Set Your Fiscal Year for Customizable Forecasting

Your fiscal year determines your monthly or quarterly forecasting cycle, the month it starts, and whether the Fiscal Year is named for the starting or ending year. For example, if your fiscal year starts in April 2015 and ends in March 2016, your fiscal year setting can be either 2015 or 2016.

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts.

To set your fiscal year for customizable forecasting:

1. Archive your data. We recommend running your weekly or monthly data export before setting the fiscal year, because changing the setting affects your opportunity and forecast data.

2. From Setup, enter Fiscal Year in the Quick Find box, then select Fiscal Year.

3. Choose a Forecast Period of monthly or quarterly depending on your forecasting cycle. The month or quarter start date is based on Greenwich Mean Time (GMT).

   The forecast period you choose determines the time increment your company uses for quotas and forecasts. If you choose monthly, you can still see totals by quarters but, if you choose quarterly, monthly forecast totals are not available.

4. Choose a Fiscal Year Start Month that represents the beginning of your fiscal year.

5. Select a Fiscal year is based on option that represents how your company refers to a fiscal year. For example, if your fiscal year starts in April 2015 and ends in March 2016 and is called Fiscal Year 2016, choose The ending month. The last month determines how your company refers to that fiscal year.

6. If you want to change the fiscal year settings of forecasts created before you enabled customizable forecasts, select Apply to all forecasts and quotas. This option changes your historical forecast data.

7. Click Save.

Setting Up Customizable Forecasting
Set Up Your Forecast Hierarchy

Your forecast hierarchy lists all forecast users and determines how their forecasts roll up through your Salesforce org. Keep your forecast hierarchy up-to-date to ensure that forecast managers see all subordinates’ forecast amounts.

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts.

Your forecast is based on the role hierarchy by default, or the territory hierarchy if your org has territory management.

When customizable forecasting is enabled for your org, it automatically generates a forecast hierarchy based on your org’s role hierarchy. The forecast hierarchy becomes based on your territory hierarchy only when you enable territory management. To customize your forecast hierarchy:

- Make sure that all the appropriate users are in your forecast hierarchy. If any are not and should be, see Enable Users for Customizable Forecasting.
- Make sure that the appropriate users are the assigned forecast manager whenever there is more than one user in a role or territory in your forecast hierarchy. Each user at the bottom of your forecast hierarchy can be a forecast manager. However, above that, a single user must be chosen as the forecast manager for forecasts to roll up to that user. See Assigning Forecast Managers in Your Forecast Hierarchy.
- Share forecast manager views with other users. See Manually Sharing a Forecast.

Be sure each sales manager with subordinates is designated as a forecast manager in your forecast hierarchy. This ensures that the forecast visibility rolls up to every level of the hierarchy.

If Nonforecasting appears next to a role or territory in the forecast hierarchy, it means that a forecast manager has not been assigned to that role or territory.

Note: When you remove a user from the forecast hierarchy or the role hierarchy, all their quota and override data is permanently deleted.

- Setting Up Customizable Forecasting
- Set Up Your Forecast Hierarchy
- Manually Sharing a Forecast
Enable Users for Customizable Forecasting

To give users access to sales forecasts, add them to the forecast hierarchy and give them the Allow Forecasting permission.

**Note:** This information applies to Customizable Forecasting and not Collaborative Forecasts.

To enable users for customizable forecasting if your organization does not use territory management:

1. From Setup, enter Forecasts Hierarchy in the Quick Find box, then select Forecasts Hierarchy.
2. To view a list of users assigned to a level, click Enable Users next to a role at that level.
3. To enable the user for customizable forecasting, select a user and click Add. To disable a user, select the user and click Remove.
4. Click Save.

**Note:** When you remove a user from the forecast hierarchy or the role hierarchy, all their quota and override data is permanently deleted.

To enable a user for customizable forecasting if your organization uses territory management:

1. From Setup, enter Users in the Quick Find box, then select Users.
2. Click Edit next to the user’s name.
3. Select Allow Forecasting.
4. Click Save.
5. Add the user to a territory.

**Note:** To view a list of users for a territory, select the territory name in the territory hierarchy or run a territory report. For more information on territory reports, see Territory Reports.

Customizable Forecasting includes five standard report types. You can’t create custom report types with Customizable Forecasting.

**Note:** To view a list of users for a territory, select the territory name in the territory hierarchy or run a territory report. For more information on territory reports, see Territory Reports.

If you add multiple users to a role or territory, assign only one as the forecast manager for that role or territory. See Assigning Forecast Managers in Your Forecast Hierarchy

**SEE ALSO:**
- Setting Up Customizable Forecasting
- Setting Up Customizable Forecasting
- Enable Territory Management
- Manually Sharing a Forecast
Assigning Forecast Managers in Your Forecast Hierarchy

**Note:** This information applies to Customizable Forecasting and not Collaborative Forecasts.

After users are enabled for customizable forecasting, assign a user as a forecast manager for each role in your forecast hierarchy. Assigning someone as a forecast manager means that all forecasts from users below that user in the forecast hierarchy roll up to that person. For example, an executive and executive assistant may have the same role, but the executive is the assigned forecast manager in the forecast hierarchy because all subordinates' forecasts roll up to the executive. Both the executive and executive assistant can submit forecasts, but forecasts of other users do not roll up to the executive assistant.

If a role in the forecast hierarchy has no forecast manager, that role and all its subordinate roles are not included in your forecasts.

If Nonforecasting appears next to a role or territory in the forecast hierarchy, it means that a forecast manager has not been assigned to that role or territory.

1. From Setup, enter Forecasts (Customizable) in the Quick Find box, then select Forecasts Hierarchy.
2. Click Assign Manager or Edit Manager next to a role to assign a user as the forecast manager of that role.

Roles without roles below them cannot have forecast managers unless your organization has territory management, which supports forecast managers at all levels.

3. Choose a user to be assigned as the forecast manager of the selected role. If no users are available for the role, enable the appropriate user; see Enable Users for Customizable Forecasting.
4. If forecast sharing is enabled, choose the sharing settings:
   - Choose Require Administrator assistance for forecast sharing to limit forecast sharing for this view to administrators. This is the default option.
   - Choose Forecast managers can share their own forecast views to allow the administrator or the forecast manager to share this view.
5. Click Save.

SEE ALSO:
- Setting Up Customizable Forecasting
- Set Up Your Forecast Hierarchy
- Manually Sharing a Forecast
Enabling Customizable Forecasting

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts.

Enabling customizable forecasting for your organization allows your forecast users to view and submit their customizable forecasts from the Forecasts tab based on your customizable forecast settings. Customizable Forecasting includes five standard report types. You can’t create custom report types with Customizable Forecasting.

1. From Setup, enter Forecasts Hierarchy in the Quick Find box, then select Forecasts Hierarchy.

2. Click Enable Customizable Forecasting. If this option is not available, customizable forecasting is already enabled for your organization. After you enable customizable forecasting, three new user permissions are available:

<table>
<thead>
<tr>
<th>Permission</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Override Forecasts</td>
<td>Allows users to override their own forecasts and forecasts for users below them in the forecast hierarchy. All standard profiles except Read Only receive this permission.</td>
</tr>
</tbody>
</table>
| Edit Personal Quota    | Allows users to change their individual quotas. All standard profiles except Read Only receive this permission.

Users with the “Manage Users” permission can always edit any quota. Users can always edit the quotas of users that report directly to them.

<table>
<thead>
<tr>
<th>Permission</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>View All Forecasts</td>
<td>Allows users to view any forecast regardless of their place in the forecast hierarchy. The System Administrator profile includes this permission.</td>
</tr>
</tbody>
</table>

3. Choose the appropriate opportunity page layouts that you want to include the new Opportunity Forecasts related list. Optionally, choose the Append... option to add this related list to page layouts even if users have customized them.

4. Click Save.

5. Enable or disable these permissions where necessary.

Note: With customizable forecasts, your forecasts still depend on how your Opportunity Stage picklist values map to Forecast Categories.

SEE ALSO:
- Setting Up Customizable Forecasting
- Enable Territory Management
- Manually Sharing a Forecast
Manually Sharing a Forecast

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts.

Your administrator defines your organization's forecasting hierarchy, which determines which users can view the forecast data. However, your administrator can manually extend sharing privileges for forecast data, and you may be able to manually extend sharing privileges for your own forecast data as well. Manual forecast sharing can only increase access to forecast data; it cannot restrict access for users who already have access. To manually share a forecast, you must be an administrator or a forecast manager who has been given access to share your forecast data.

To see which users can view your forecast or to share your forecast data, do one of the following:

- From Setup, enter Forecasts Hierarchy in the Quick Find box, then select Forecasts Hierarchy, then click Share next to the view you want to share.
- Click Sharing on the forecast home page to share your own forecast data.

The User and Group Sharing list shows you all the users who currently have access to this forecast data. It also details the level of access they have, whether they can submit a forecast, and the reason they have that access. The reasons a user might have access to forecast data are:

<table>
<thead>
<tr>
<th>Reason</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Administrator</td>
<td>The user is an administrator, or has the &quot;Modify All Data&quot; permission.</td>
</tr>
<tr>
<td>Delegated Forecast Manager</td>
<td>A user has access to forecast data that was granted via the Sharing button on the forecast.</td>
</tr>
<tr>
<td>Forecast Manager</td>
<td>A user has access due to being a forecast manager in the forecast hierarchy.</td>
</tr>
<tr>
<td>Owner</td>
<td>The owner can always see his or her own forecast data.</td>
</tr>
<tr>
<td>View All Forecasts Permission</td>
<td>The user has the &quot;View All Forecasts&quot; permission.</td>
</tr>
</tbody>
</table>

On the Forecast Sharing Detail page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the View drop-down list, or click Create New View to define your own custom views. To edit or delete any view you created, select it from the View drop-down list and click Edit.
- Click Add to grant other users or groups access to the forecast data.
  
  Note: Manual sharing extends to the opportunity data that makes up the forecast. If a user has permission to override forecast data, then the user also has permission to override the opportunity forecast data.
- Click Expand List to view all users that have access to the forecast data.
- For manual sharing rules that you created, click Edit or Del next to an item in the list to edit or delete the access level.

Setting Up Customizable Forecasting
Submit Customizable Forecasts in Batches

Submitting forecasts takes a snapshot of forecast data and makes that data available in forecast history and reports. Save time by submitting multiple forecast at once.

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts.

To submit multiple forecasts at once:

1. From Setup, enter Batch Submit in the Quick Find box, then select Batch Submit Forecasts.
2. Choose the appropriate forecast period.
3. Select the users that have forecasts you want to submit and click Add to add them to the list of Selected Users for Batch Submit. Select more than one at a time using CTRL+click.
4. Click Submit.
5. Click OK.

Users can also submit their forecasts individually by clicking Submit from their forecast.

Enabling Business Networks for Collaboration Across Organizations

Enable Salesforce to Salesforce

Warning: Enabling Salesforce to Salesforce is not reversible, however, you control the information you share and the connections you share with. You can stop sharing or modify sharing settings at any time. By enabling Salesforce to Salesforce, you agree to allow salesforce.com to process updates to information in your organization that is shared with other organizations. Salesforce to Salesforce allows you to share your data with third-party recipients, and those recipients may in turn use Salesforce to Salesforce to share your data with further third-party recipients unknown to you. You are responsible for ensuring that appropriate contractual or other legal arrangements are in place between you and your recipients to limit those recipients’ use and disclosure of your shared data.

To enable Salesforce to Salesforce:

1. From Setup, enter Salesforce to Salesforce Settings in the Quick Find box, then select Salesforce to Salesforce Settings.
2. Click Edit.
3. Select Enable.
4. Click Save.

When you enable Salesforce to Salesforce, a new user named “Connection User” is created. This user does not count towards the number of used licenses for your organization, and is not included in any user management view.

When your business partner updates a shared record, the Last Modified By field on the record in your organization displays Connection User, allowing you to easily track all changes made by your business partners.
The Connection User is automatically assigned to the Partner Network profile. The Partner Network profile cannot be modified and is not included in any profile management view.

After Salesforce to Salesforce is enabled:

1. Create a permission set with the “Manage Connections” permission enabled and the Connection tab set to Visible, and assign the permission set to users who will be working with Salesforce to Salesforce connections.
   
   We also recommend giving the “Manage Queues” user permission to all users with the “Manage Connections” user permission. This lets users create and manage queues for connections without needing assistance from an administrator.

2. Configure Salesforce to Salesforce settings, such as communication templates for sending invitations to your business partners.

3. Add the External Sharing related list to page layouts for the appropriate profiles.

   Note: This related list can be made available to all users, not just users with the “Manage Connections” permission.

4. Optionally, create custom list views on the External Sharing related list and give access to the appropriate users, so that they can view and accept shared records.

5. Optionally add the Received Connection Name and Sent Connection Name columns to the related lists on the page layouts of the desired objects.

6. Create and manage connections with your business partners.

- Finding Out if Your Partners Use Salesforce

Configure Salesforce to Salesforce

You can configure Salesforce to Salesforce to use communication templates for interacting with your business partners. In addition, you can configure the email address and name used on the templates. To configure any of these settings:

1. From Setup, enter Salesforce to Salesforce Settings in the Quick Find box, then select Salesforce to Salesforce Settings.

2. Click Edit and modify the following settings:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>From Email Address</td>
<td>The email address from which all Salesforce to Salesforce communication templates are sent, for example, “<a href="mailto:partner@acme.com">partner@acme.com</a>.” Salesforce sends the emails automatically, but they appear to your contacts as if they were sent from this email address. If a contact responds to a communication template, the response is sent to this address.</td>
</tr>
<tr>
<td>From Email Name</td>
<td>The name that will be associated with the “From” Email Address, for example, “Acme Channel Manager”.</td>
</tr>
<tr>
<td>Invitation Template</td>
<td>Used to send invitations.</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

Configure the Email Action in the Activity Composer in Lightning Experience
Enable Enhanced Email

Enhanced email is enabled by default for many organizations. Enhanced Email lets users relate emails to contacts, leads, accounts, opportunities, cases, campaigns, and person accounts. Enhanced Email also lets administrators add custom fields to emails, use workflows and triggers, and modify email page layouts.

In Salesforce Lightning Experience, Enhanced Email lets users view their emails in a page that displays the email just like a traditional email program would.

Note: Enhanced Email is not automatically enabled for companies that use Email to Case. If you use Email to Case, you can use custom fields, workflows, and triggers with email without enabling Enhanced Email. Enable Enhanced Email to store emails as Email records instead of tasks, which lets users relate emails to objects other than the Case object. Test Enhanced Email thoroughly in a sandbox environment to ensure that your Email to Case customizations are working as expected.

If you currently use custom business logic that incorporates tasks and email, recreate any custom Task fields on the EmailMessage object. Migrate any Task triggers to the EmailMessage object. Test your workflows with Enhanced Email in a sandbox environment to ensure that they are working correctly.

1. From Setup, enter Enhanced Email in the Quick Find box, then select Enhanced Email.
2. Click Enable.

Let Users Send Email through Gmail or Office 365

Let your users send their Salesforce email through their Gmail or Office 365 accounts to streamline their email correspondence. Email sent in Lightning Experience looks like it was sent from your users’ Gmail or Office 365 accounts. Your users can also see the emails they’ve sent in their Gmail or Office 365 Sent Items folder.

Emails sent through workflows and triggers are still sent through Salesforce. Also, bounce management isn’t supported when you send through external email accounts.

If you send email through Gmail or Office 365, Transport Layer Security (TLS) is handled through the external email service and not through Salesforce settings.

1. From Setup, enter Send through External Email Services in the Quick Find box, then select Send through External Email Services.
2. Enable Send through Gmail or Send through Office 365. You can allow your org to send through either Gmail or Office 365; you can’t select both.
   - Your users can manage their external email configuration from My Email Settings in their personal settings.

The feature is enabled for all users with the standard user profile or with the “Send Email through External Email Services” user permission. Users can send through external email services in the Lightning Experience Email Composer using the OAuth industry standard. User credentials aren’t stored within Salesforce.
Setting Up Email Relaying

Email relaying is using an email server to send email that did not originate on the email server. Companies set up email relaying to:

- Route all email through their own email servers to avoid the appearance of email spoofing by Salesforce. Email spoofing is the forging of email headers to make messages appear as if they came from someone other than the original sender.
- Store copies of all email as required by government regulations in various industries.
- Apply existing content filters that scan messages for data and content that is not approved to be sent out through company email.
- Run outbound email through antivirus software before sending it to customers.
- Append data such as company-wide disclaimers at the bottom of email messages.

You can set up email relaying for Salesforce-generated email by configuring Salesforce to automatically route email through your company’s Simple Mail Transfer Protocol (SMTP) server. Contact Salesforce to enable email relaying for your organization.

**Warning:** If you plan to activate both bounce management and email relaying, check with your email administrator to ensure that your organization’s email server allows the relaying of email sent from Salesforce; otherwise, the email you send from Salesforce may not get delivered. For more information on bounce management, see Configure Deliverability Settings on page 1953.

To set up email relaying:

1. From Setup, enter *Email Relay Activation* in the Quick Find box, then select *Email Relay Activation*.
2. Configure the following settings:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Email Host</td>
<td>The host name or IP address of your company’s SMTP server. Obtain this information from your email administrator. <strong>Important:</strong> If you plan to use Transport Layer Security (TLS) with this connection, enter the host name instead of the IP address. TLS requires the host name for verifying certificates. For host names, use the following format: <code>&lt;mail server&gt;.&lt;domain&gt;.&lt;domain extension&gt;</code> For example: mail.acme.com</td>
</tr>
<tr>
<td>Port</td>
<td>The port number of your company’s SMTP server. Obtain this information from your email administrator. Email relaying is supported on port numbers 25, 587, 10025, and 11025.</td>
</tr>
<tr>
<td>Setting</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>TLS Setting</td>
<td>Specifies whether Salesforce uses TLS for SMTP sessions. Select one of the following options:</td>
</tr>
<tr>
<td></td>
<td>• <strong>Preferred</strong> (default): If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. If TLS is unavailable, Salesforce continues the session without TLS.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Required</strong>: Salesforce continues the session only if the remote server offers TLS. If TLS is unavailable, Salesforce terminates the session without delivering the email.</td>
</tr>
<tr>
<td></td>
<td>• ** Preferred Verify**: If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. Before the session initiates, Salesforce verifies the certificate is signed by a valid certificate authority, and that the common name presented in the certificate matches the domain or mail exchange of the current connection. If TLS is available but the certificate is not signed or the common name does not match, Salesforce disconnects the session and does not deliver the email. If TLS is unavailable, Salesforce continues the session without TLS.</td>
</tr>
<tr>
<td></td>
<td>• ** Required Verify**: Salesforce continues the session only if the remote server offers TLS, the certificate is signed by a valid certificate authority, and the common name presented in the certificate matches the domain or mail exchange to which Salesforce is connected. If any of these criteria are not met, Salesforce terminates the session without delivering the email.</td>
</tr>
<tr>
<td>Restrict Relay to Domains</td>
<td>Specifies whether to restrict the email relaying functionality to certain domains. If you select this option, enter the names of those domains separated by commas in the text field below. (The asterisk (*) wildcard is allowed; for example, *.subdomains.com matches <a href="mailto:john@aco.subdomains.com">john@aco.subdomains.com</a> and <a href="mailto:john@bco.subdomains.com">john@bco.subdomains.com</a> (but not <a href="mailto:john@subdomains.com">john@subdomains.com</a>)). This causes Salesforce to route email to your company’s SMTP server only if the email is addressed to one of the listed domains. If you select the checkbox but do not list any domains, Salesforce routes all email to your company’s SMTP server.</td>
</tr>
<tr>
<td>Active</td>
<td>Enables email relaying for your organization. If you deselect this checkbox, Salesforce keeps the email relay configuration but does not route email to your company’s email server.</td>
</tr>
</tbody>
</table>

3. Click **Save**.
Enable Email to Salesforce

Let your users add email to Salesforce records. Email to Salesforce lets users assign emails to leads, contacts, and opportunities, or to other specific records in Salesforce. That way, it’s easy to track sales-related communications.

1. From Setup, enter Email to Salesforce in the Quick Find box, then select Email to Salesforce.
2. Click Edit.
3. Select the Active checkbox.
4. Optionally, select the Advanced Email Security Settings checkbox to configure Email to Salesforce to verify the legitimacy of the sending server before processing a message. Email to Salesforce uses the following authentication protocols to verify the sender’s legitimacy:
   - SPF
   - SenderId
   - DomainKeys

If the sending server passes at least one of these protocols and does not fail any protocols, Email to Salesforce accepts the email. If the server fails a protocol or does not support any of the protocols, Email to Salesforce ignores the email.

Tip: Before you select Advanced Email Security Settings, ensure that the senders you expect to use Email to Salesforce support at least one of the listed authentication protocols.

5. Click Save.
6. Optionally, click Send Notification Email to notify users that Email to Salesforce is activated, or click Skip This Step.

After enabling Email to Salesforce, Salesforce creates a unique Email to Salesforce address for each user. To view their unique Email to Salesforce address and customize their settings, users can go to the My Email to Salesforce page in their personal settings. For more information, see How Does Email to Salesforce Work? on page 1620.
Enabling Compliance BCC Emails

If your organization evaluates all outbound email messages for compliance, you can enable compliance BCC emails to automatically send a hidden copy of each outbound email message to an email address you specify. Enabling compliance BCC emails prevents users from editing the BCC field on any email and disables their Automatic Bcc setting under My Email Settings.

To enable compliance BCC emails for your organization:

1. From Setup, enter Compliance BCC Email in the Quick Find box, then select Compliance BCC Email.
2. Select the Enable checkbox.
3. Enter your compliance email address.
4. Click Save.

**Note:** The BCC email is automatically sent to the address you specify for any emails your users send, excluding system emails such as password reset or import completion notifications.

Configure Deliverability Settings

To improve the deliverability of email you send from Salesforce, configure your organization’s email deliverability settings. Email deliverability is the likelihood of a company’s or individual’s email reaching its intended recipient. This likelihood is adversely affected by:

**Bounced email**

Email that is addressed to an invalid recipient and returned to the sender. If a sender sends several email messages that bounce, the email server might slow or block the delivery of all email from that sender.

**Noncompliant email**

Email that does not comply with a recipient’s email security framework, such as the Sender Policy Framework (SPF), which verifies that the From address in an email message is not forged.

**Warning:** If you plan to activate both bounce management and email relaying, check with your email administrator to ensure that your organization’s email server allows the relaying of email sent from Salesforce; otherwise, the email you send from Salesforce may not get delivered. For information on email relaying, see Setting Up Email Relaying on page 1950.

To configure the email deliverability settings for your organization:

1. From Setup, enter Deliverability in the Quick Find box, then select Deliverability.
2. To control the type of email your organization sends, change the Access level in the Access to Send Email section. You may not be able to edit the Access level if Salesforce has restricted your organization’s ability to change this setting.

   - **No access**: Prevents all outbound email to and from users.
   - **System email only**: Allows only automatically generated emails, such as new user and password reset emails.
   - **All email**: Allows all types of outbound email. Default for new, non-sandbox organizations.

   **Tip:** The System email only setting is especially useful for controlling email sent from sandboxes so that testing and development work doesn’t send test emails to your users.

   - Newly created sandboxes default to System email only.
3. Select the Activate bounce management checkbox to help ensure that the email addresses you have for your contacts, leads, and person accounts are correct, and that the email your users send to those addresses is not impeded due to excessive email bounces.

When bounce management is activated and a user sends an email to a contact, lead, or person account with an invalid email address, Salesforce displays an alert next to that email address and prevents users from sending email to the address until it is updated or confirmed. Also, the email bounces to Salesforce instead of the sender’s personal email account.

Tip: Use the Bounced Contacts and Bounced Leads standard reports to view a list of email all addresses that have bounced email. The report includes the reason the email was bounced, the date the bounce occurred, and the contact, lead, or person account that bounced the email.

4. Select the Show bounce alert next to all instances of the email address checkbox to configure Salesforce to search all lead, contact, and person account records for instances of any email address that bounces an email and to display a bounce alert next to each instance. If you do not select this option, Salesforce only displays the bounce alert on the record from which the email was originally sent.

5. Select the Return bounced email to sender checkbox to configure Salesforce to send a copy of the bounced email header to the sender. If you do not select this option, only Salesforce receives the bounced email header. In either case, for security purposes Salesforce does not return the body of the bounced email to the sender. This option applies to all users in your organization and cannot be enabled per user or per email.

6. Select the Enable compliance with standard email security mechanisms checkbox to automatically modify the envelope From address of every email you send from Salesforce to comply with email security frameworks that your recipients might implement, such as SPF.

Many recipient email systems enforce SPF to verify whether an email is legitimate. SPF checks the envelope From address of an inbound email to verify legitimacy. If this feature is enabled, Salesforce changes the envelope From address to a Salesforce email address to verify the sender's legitimacy. The header From address remains set to the sender’s email address.

7. Select the Enable Sender ID compliance checkbox to comply with the Sender ID framework. This will automatically populate the Sender field in the envelope of every email you send from Salesforce with no-reply@Salesforce. This enables receiving mail servers using the Sender ID email authentication protocol to verify the sender of an email by examining the Sender and From headers of an inbound email through a DNS lookup. All replies will still be delivered to the sender's email address. If you do not select this checkbox, the Sender field is set to null and email delivery fails when a recipient email system performs a Sender ID check.

Note:
- We recommend enabling Sender ID compliance only if you have recipients using the Sender ID email authentication protocol, which isn’t widely used.
- If you enable Sender ID compliance, the recipient’s email client (not Salesforce) may append the phrase “Sent on behalf of” to the From field of email received from Salesforce.

8. If you want Salesforce to send users a status email when their mass emails are complete, select Notify sender when mass email completes.

9. To specify how Salesforce uses the Transport Layer Security (TLS) protocol for secure email communication for SMTP sessions, choose one of the following:
- Preferred (default): If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. If TLS is unavailable, Salesforce continues the session without TLS.
• **Required**: Salesforce continues the session only if the remote server offers TLS. If TLS is unavailable, Salesforce terminates the session without delivering the email.

• **Preferred Verify**: If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. Before the session initiates, Salesforce verifies the certificate is signed by a valid certificate authority, and that the common name presented in the certificate matches the domain or mail exchange of the current connection. If TLS is available but the certificate is not signed or the common name does not match, Salesforce disconnects the session and does not deliver the email. If TLS is unavailable, Salesforce continues the session without TLS.

• **Required Verify**: Salesforce continues the session only if the remote server offers TLS, the certificate is signed by a valid certificate authority, and the common name presented in the certificate matches the domain or mail exchange to which Salesforce is connected. If any of these criteria are not met, Salesforce terminates the session without delivering the email.

[Note: If you select a setting other than Preferred (the default setting), select Restrict TLS to these domains and specify a comma-separated domain list. The asterisk (*) wildcard is allowed; for example, *.subdomains.com matches john@aco.subdomains.com and john@bco.subdomains.com (but not john@subdomains.com). If you don’t specify domains, Salesforce uses the TLS setting you specify for all outbound emails, which may result in emails not being delivered.]

10. Click **Save**.

### Organization-Wide Addresses

If your organization requires users to share a common email alias, you can define a list of organization-wide addresses for each user profile. Organization-wide addresses define a common email address that a user profile can use. When sending email from Salesforce, users with these profiles can choose a different From address than the email address they have defined. Replies are delivered to the organization-wide address.

For example, assume your organization has several users under a single Support Profile. A Support Profile can be associated with an email address called support@acme.com and a Display Name of Acme Support. When Support Profile users send an outbound email through Salesforce, they can choose to have their From address appear as support@acme.com instead of their own Salesforce email address.

The highlighted sections in the following image represents the changes to the From address and Display Name that the recipient of an email might see:
After an organization-wide address is verified, it is available as a From address when sending an email or an email alert.

To display the list of defined organization-wide addresses, from Setup, enter Organization-Wide Addresses in the Quick Find box, then select Organization-Wide Addresses. From this page you can:

- Click Add to create a new organization-wide address.
- Click Edit to change any of the fields associated with the alias:
  - Display Name is the word or phrase users who receive your email will see as the sender of the email.
  - Email Address is the email address that is used when sending an outbound email.
  - Allowed Profiles lists the profiles which use the email address as an alias.
  - Status shows the current stage of verification. When you add a new organization-wide address, it must be verified as a valid email address before becoming available for use. If you have not received your verification email, click Resend to have another one sent.
- Click Del to remove the alias.

Note: You cannot use an organization-wide address to send a mass email or a Stay-in-Touch request. You cannot delete or change an organization-wide email address if it is used by an email alert. Organization-wide addresses can’t be used in scheduled reports, scheduling dashboards for refresh, sending mail merge emails, and sending meeting requests to contacts and leads.

SEE ALSO:
- Managing Organization-Wide Email Footers

**Defining Organization-Wide Addresses**

To define an organization-wide address for a user profile:

1. From Setup, enter Organization-Wide Addresses in the Quick Find box, then select Organization-Wide Addresses.
2. Click Add.
3. Enter a **Display Name**. The display name identifies how your name appears on outbound emails. The maximum length is 300 characters.
4. Enter the **Email Address** you would like to use as an alias. This can be any standard email address. The maximum length is 270 characters.
5. Select **Allow All Profiles to Use this From Address** if you want every user profile in your organization to be able to use the new From address. Otherwise, select **Allow Only Selected Profiles to Use this From Address** to choose from existing user profiles.
6. Click **Save** to save your changes, or **Save and New** to define another organization-wide address. A verification email is sent to the new email address which includes a link that you click to
complete the verification process. The From address will not be available for use until you access the email and click this link. Click Cancel to return to the previous page without saving.

**Note:** Organization-wide addresses can't be used in scheduled reports, scheduling dashboards for refresh, sending mail merge emails, and sending meeting requests to contacts and leads.

To use an organization-wide address, send an email or set up an email alert, and choose your organization-wide address from the drop-down list.

**Managing Organization-Wide Email Footers**

You can create personalized footers or disclaimers that appear at the bottom of all outgoing email messages sent from Salesforce or the API. You can create a separate email footer for each encoding and choose default footers for single and mass email. The defaults are used when no footer matches an outgoing email’s encoding.

**Creating Email Footers**

1. From Setup, enter Email Footers in the Quick Find box, then select Email Footers.
2. Click New.
3. Enter a name.
4. Choose if you want the footer to be available for single emails, mass emails, or both.
5. Select the email encoding. The email encoding determines which emails the footer appears on. For each encoding you can have one active single email footer and one active mass email footer.
6. Enter the text of the footer.

   **Note:** Footers are text only; HTML tags aren't rendered. Maximum is 32 KB.

**Editing Email Footers**

1. From Setup, enter Email Footers in the Quick Find box, then select Email Footers.
2. To edit an email footer, either click Edit next to a footer or on the footer detail page.
3. Edit the footer information and click Save.

**Choosing Default Email Footers**

You can choose one default footer for single email and one for mass email. These defaults are used when no footer matches an outgoing email’s encoding.

1. From Setup, enter Email Footers in the Quick Find box, then select Email Footers.
2. Using Default for Single Mail and Default for Mass Mail, select default footers.
3. Click Save.

   **Note:** If you don’t click Save, your default footer choice is lost when you leave the page.
Deactivating Email Footers

You can deactivate an email footer without deleting it.

1. From Setup, enter Email Footers in the Quick Find box, then select Email Footers.
2. Uncheck the Single and Mass checkboxes next to the footer.
3. Click Save.

Testing Email Deliverability

Salesforce sends email from many different IP addresses. The number of addresses depends on your data center and appears on the Test Deliverability page. If your organization blocks any of these IP addresses, users might not receive all email sent from Salesforce. You can check whether your organization is receiving email from every Salesforce IP address.

1. From Setup, enter Test Deliverability in the Quick Find box, then select Test Deliverability.
2. Enter your business email address.
3. Click Send. Salesforce sends a test message from all IP addresses to your business email address. Each test message specifies the IP address from which it was sent.
4. To make sure that you received all test messages, check your business email account.

If you didn’t receive all the test messages, your organization’s email administrator must whitelist the Salesforce IP ranges on your organization’s email server. Whitelisting an IP address allows the email server to receive email from an IP address that is otherwise blocked. For a current list of Salesforce IP ranges, see What are the Salesforce IP Addresses to whitelist?.

Salesforce maintains separate IP addresses for inbound and outbound email. The IP addresses used for outbound email don’t accept inbound email connections.

SEE ALSO:
  - Configure Deliverability Settings
  - Enabling Compliance BCC Emails

Deleting Email Attachments Sent as Links

You can find and delete attachments sent as links. Recipients who subsequently click on the attachment link see a message asking them to contact the email sender to view the attachment.

You can search only within your organization’s email retention period (typically 30 days, but contact Salesforce Support for your organization’s details).

To find and delete email attachments sent as links:

1. From Setup, enter Attachments in the Quick Find box, then select Delete Attachments Sent as Links.
2. Enter either of these:
   - File name (optional), username, and date range:
- Optionally, attachment file name, including the file extension (for example, ThisYearResults.pdf). You can use wildcards (for example, ThisYearRes would find ThisYearResults.pdf).
- Sender’s username
- Date range during which the email was sent

- Attachment URL: Click the attachment link (.html) in the email to open it in a browser, and copy and paste the URL.

3. Click Search.

- Search results show up to 100 matching entries.
- If the attachment was sent using mass email, search results show one entry for every 100 emails sent—delete one of these entries to delete the attachment.

4. In Search Results, click Del next to the attachment you want to delete. Recipients who subsequently click on the attachment link see a message asking them to contact the email sender to view the attachment.

   Note: You cannot recover deleted attachments from the Recycle Bin.

---

Monitoring the Mass Email Queue

Use the mass email queue to view the status of scheduled mass emails and cancel mass emails if necessary.

You can view the mass emails that you’ve scheduled on the Mass Emails page in your personal settings. If you have permission to view all mass emails in your organization, from Setup, enter Mass Emails in the Quick Find box, then select Mass Emails.

From these pages, you can:

- Click Cancel to cancel a pending mass email.
- Click Stop to stop a mass email that Salesforce is in the process of sending.
- Click Del to delete the record of a sent or canceled mass email from the queue.
- Click the name of the mass email to view details about an individual mass email.

The mass email queue shows the number of recipients that the mass email was addressed to and sent to. These numbers may differ because:

- The mass email would cause your organization to exceed its daily mass email limit. Salesforce does not send the message to any of the intended recipients in this case.
- One or more selected recipients opted out of receiving mass email after the mass email was scheduled but before it was processed.
- One or more selected recipient email addresses were removed from the contact or lead after the mass email was scheduled but before it was processed.
- The user who sent the mass email was deactivated after the mass email was scheduled but before it was processed. Salesforce does not send mass emails scheduled by a user who is deactivated.

Send Mass Email in Salesforce Classic
Create a DKIM Key

Use the DKIM (DomainKeys Identified Mail) key feature to enable Salesforce to sign outbound emails sent on your organization’s behalf. A valid signature provides recipients confidence that the email was handled by a third party such as Salesforce in a way authorized by your organization.

When you create a DKIM key, Salesforce generates a public and private key pair. You must publish the public key in the DNS, which tells recipients that you, as the owner of the domain, have authorized the use of this key to sign your mail. Salesforce uses the private key to create DKIM signature headers on your outgoing email. Then, recipients of the mail, can compare the signature header with the public key in the DNS to determine that the mail was signed with an authorized key. If your domain also publishes a Domain-based Message Authentication, Reporting and Conformance (DMARC) policy, recipients can use the DKIM signature to verify that the mail conforms to DMARC.

To create a new key:

1. From Setup, enter DKIM Keys in the Quick Find box, then select DKIM Keys.
2. Click Create New Key.
3. For Selector, enter a unique name.
4. Enter your Domain name.
5. Select the type of Domain Match you’d like to use.
6. Click Save.

- The key defaults to Inactive state. Make sure you add the public key to the DNS record before activating the key. DKIM signing is active whenever you have an active DKIM key.
- You can’t have more than one active DKIM key per domain name. You might have multiple active DKIM keys if your organization sends mail from more than a single domain or if you use subdomains under your organizational domain and have specified domain matching at the subdomain level.
- When you insert or update a domain key, it’s possible that the change affects existing DKIM keys. For example, if you’ve set DomainMatch to DomainAndSubdomains for the example.com domain, and you then set DomainMatch to SubdomainsOnly for the mail.example.com domain, either key could be used. Here’s how we resolve conflicts in the case when domain keys overlap.

1. If two keys are equally specific about matching for the same domain, the new key replaces and deactivates the existing key.
2. If a new key is more specific about matching than an existing key, the new key is used and the existing key is modified to no longer apply to the case covered by the new key. For example, because DomainOnly and SubdomainsOnly are more specific than DomainAndSubdomains, a new DomainOnly key would change the DomainMatch for an existing DomainAndSubdomains key to become SubdomainsOnly.
3. If multiple keys have different domains that match the sending domain, the key with the longest domain name is used. In case of a tie, the most specific key is used.

For information about DKIM, see http://dkim.org
Import a DKIM Key

Use the DKIM (DomainKeys Identified Mail) key feature to enable Salesforce to sign outbound emails sent on your organization’s behalf.

Some companies have multiple Salesforce organizations, and users in those organizations share a domain name in their email address. Therefore, companies that want Salesforce to sign the email sent by those users sometimes want to share DKIM keys. You can do that using this page.

First, create the key and ensure it’s working for one organization. To import and use it in another organization, copy the selector name, domain name, and public and private key data from the working key. You can get this data from the detail page for the key you want to import. After you’ve copied the key data, log in to the target organization and follow these steps to import the key.

1. From Setup, enter DKIM Keys in the Quick Find box, then select DKIM Keys.
2. Click Import a Key.
3. Enter the same selector name you copied from the original organization.
4. Enter the same domain name you copied from the original organization.
5. Paste in the public and private key data you copied into their respective fields.
6. Select the type of Domain Match you’d like to use. Most likely you’ll use the same value that was selected for the key in the original organization.
7. Click Save.

Because the public and private key data worked for the original organization, you can typically activate the key in the target organization immediately.

Note: The private key data is an encrypted form of the private key data that’s used to sign emails. It’s decrypted internally when signing emails. Therefore, it can be used only within Salesforce. For example, you can’t take the public and private key data and plug it into an external mail system.
Working with Mail Merge Templates

Managing Mail Merge Templates

Mail merge templates define the content of a form letter or other mail merge document. They include variables called merge fields where data from your records—for example a contact’s name and address—displays in the generated document.

As an administrator, you’re responsible for building mail merge templates in Microsoft Word and uploading them to Salesforce to make them available for your users. See the following topics:

- **Create Mail Merge Templates** explains how to build a new mail merge template from a blank Word document.
- **Modify Existing Mail Merge Templates** explains how to download sample templates and modify them to meet your unique business needs.
- **Uploading Mail Merge Templates to Salesforce** explains how to upload completed mail merge templates to Salesforce.

Tip: Download sample mail merge templates to help you get started.

SEE ALSO:
- Mail Merge
- Considerations for Using Merge Fields in Mail Merge Templates
- Send a Single Mail Merge Document
Create Visualforce Email Templates

You can create email templates for use in Visualforce pages.

1. Do one of the following:
   - If you have permission to edit public templates, from Setup, enter Email Templates in the Quick Find box, then select Email Templates.
   - If you don’t have permission to edit public templates, go to your personal settings. Enter Templates in the Quick Find box, then select Email Templates or My Templates—whichever one appears.

2. Click New Template.

3. Choose Visualforce and click Next.
   You can’t send a mass email using a Visualforce email template.

4. Choose a folder in which to store the template.

5. To make the template available for use, select the Available For Use checkbox.

6. Enter a name in Email Template Name.

7. If necessary, change the Template Unique Name. This unique name refers to the component when you use the Force.com API. In managed packages, this unique name prevents naming conflicts in package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the Template Unique Name field, you can change certain components’ names in a managed package and the changes are reflected in a subscriber’s organization.

8. If desired, choose a different character set from the Encoding drop-down list.

9. Enter a description for the template. Both template name and description are for your internal use only.

10. Enter a subject line for your Visualforce email template.

11. In the Recipient Type drop-down list, select the type of recipient to receive email created from the template.

12. If desired, in the Related To Type drop-down list, select the object from which the template retrieves merge field data.

13. Click Save.

14. On the Viewing Email Templates page, click Edit Template.

15. Enter markup text for your Visualforce email template.

   ![](https://yourInstance.salesforce.com/servlet/servlet.ImageServer?id=015D0000000Dpwc&oid=00DD0000000FHaG&lastMod=127057656800" height="64" width="64"/>

   ![](https://yourInstance.salesforce.com/servlet/servlet.ImageServer?id=015D0000000Dpwc&oid=00DD0000000FHaG&lastMod=127057656800" height="64" width="64"/>

   ![](https://yourInstance.salesforce.com/servlet/servlet.ImageServer?id=015D0000000Dpwc&oid=00DD0000000FHaG&lastMod=127057656800" height="64" width="64"/>

16. To specify the version of Visualforce and the API used with this email template, click Version Settings. If you’ve installed managed packages from the AppExchange, you can also specify which version of each managed package to use with this email template. Generally, use the default value for all versions, to associate the email template with the most recent version of Visualforce, the API, and each managed package. To maintain specific behavior, you can specify an older version of Visualforce and the API. To access components or functionality that differ from the most recent package version, you can specify an older version of a managed package.
17. To view the details of the template, click **Save**. To continue editing your template, click **Quick Save**. Your Visualforce markup must be valid before you can save your template.

![Note: The maximum size of a Visualforce email template is 1 MB. You can’t send a mass email using a Visualforce email template. The `!Receiving_User.field_name` and `!Sending_User.field_name` merge fields work only for mass email and are unavailable in Visualforce email templates.](image)

![Tip:](image)

- View a sample of the template populated with data from records you choose and send a test email by clicking **Send Test and Verify Merge Fields**. If the email template includes encrypted data, remember that the data is displayed as encrypted within the generated email and in the Visualforce template page. For security reasons, it isn’t displayed in plain text.
- To translate Visualforce email templates based on recipients’ or related objects’ languages, use the `<messaging:emailTemplate>` tag’s **language** attribute (valid values: Salesforce supported language keys, for example, “en-US”). The language attribute accepts merge fields from the email template’s **recipientType** and **relatedToType** attributes. You create custom language fields for use in the merge fields. The Translation Workbench is required to translate email templates.

Create Custom HTML Email Templates

You can create custom HTML email templates without using letterhead. If you don’t know HTML, you can paste HTML code into your template.

1. Do one of the following:
   - If you have permission to edit public templates, from Setup, enter Email Templates in the Quick Find box, then select Email Templates.
   - If you don’t have permission to edit public templates, go to your personal settings. Enter Templates in the Quick Find box, then select Email Templates or My Templates—whichever one appears.

2. Click New Template.

3. Choose Custom (without using Letterhead) and click Next.

4. Choose a folder in which to store the template.

5. To make the template available for use, select the Available For Use checkbox.

6. Enter a name in Email Template Name.

7. If necessary, change the Template Unique Name. This unique name refers to the component when you use the Force.com API. In managed packages, this unique name prevents naming conflicts in package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the Template Unique Name field, you can change certain components’ names in a managed package and the changes are reflected in a subscriber’s organization.

8. If desired, choose a different character set from the Encoding drop-down list.

9. Enter a Description for the template. Both template name and the description are for your internal use only. The description is used as the title of any email activities you log when sending mass email.

10. Click Next.

11. Enter a Subject for the message.

12. Enter the HTML source text for the message. Include all the HTML tags.

   **Note:** If you are including an image, we recommend uploading it to the Documents tab. Then you can reference the copy of the image on our server. For example:

   ```html
   <img src="https://yourInstance.salesforce.com/servlet/servlet.ImageServer?id=015D0000000Dpwc&oid=00DD0000000FHaG&lastMod=1270576568000" alt="Company Logo" height="64" width="64"/>
   ```

13. If desired, enter merge fields in the template subject and body. When you send an email, these fields are replaced with information from your lead, contact, account, opportunity, case, or solution.

14. Click Next.

15. If desired, enter the text-only version of your email or click Copy text from HTML version to paste the text from your HTML version without the HTML tags automatically. The text-only version is available to recipients who can’t view HTML emails.

   **Warning:** We recommend that you leave the text-only version blank. If you leave it blank, Salesforce automatically creates the text-only content based on the current HTML version. If you enter content manually, subsequent edits to the HTML version aren’t reflected in the text-only version.
16. Click **Save**.

**Tip:** View a sample of the template populated with data from records you choose and send a test email by clicking **Send Test and Verify Merge Fields**.

**Note:** You can’t modify the content of a custom HTML template when you select it for use in an email.

Create HTML Email Templates

You can create HTML email templates using letterhead. You can’t change the letterhead or the layout in an existing template. To create an HTML email template, you must have at least one active letterhead.

To create an HTML email template:

1. Do one of the following:
   - If you have permission to edit public templates, from Setup, enter **Email Templates** in the Quick Find box, then select **Email Templates**.
   - If you don’t have permission to edit public templates, go to your personal settings. Enter **Templates** in the Quick Find box, then select **Email Templates** or **My Templates**—whichever one appears.

2. Click **New Template**.

3. Choose **HTML (using Letterhead)** and click **Next**.

4. Choose a folder in which to store the template.

5. To make the template available for use, select the **Available For Use** checkbox.

6. Enter an **Email Template Name**.

7. If necessary, change the **Template Unique Name**. This unique name refers to the component when you use the Force.com API. In managed packages, this unique name prevents naming conflicts in package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the **Template Unique Name** field, you can change certain components’ names in a managed package and the changes are reflected in a subscriber’s organization.

8. Select a **Letterhead**. The letterhead determines the logo, page color, and text settings of your email. In an existing template, you can’t change this field. To use a different letterhead after you’ve created a template, create another template.
9. Select the Email Layout. The email layout determines the columns and page layout of the message text. To see samples, click View Email Layout Options. In an existing template, you can’t change this field. To use a different email layout after you’ve created a template, create another template.

10. If desired, choose a different character set from the Encoding drop-down list.

11. Enter a Description of the template. Both template name and description are for your internal use only. The description is used as the title of any email activities you log when sending mass email.

12. Click Next.

13. Enter a subject for the email you send.

14. Enter the text of the message by clicking any section and entering text. To prevent anyone using the template from editing a section, click the padlock icon.

15. Change the style of your text by selecting the text and using the format toolbar. See Using the Format Toolbar on page 1637.

16. If desired, enter merge fields in the template subject and body. When you send an email, these fields are replaced with information from your lead, contact, account, opportunity, case, or solution.

17. Click Next.

18. If desired, enter the text-only version of your email or click Copy text from HTML version to paste the text from your HTML version without the HTML tags automatically. The text-only version is available to recipients who can’t view HTML emails.

   Warning: We recommend that you leave the text-only version blank. If you leave it blank, Salesforce automatically creates the text-only content based on the current HTML version. If you enter content manually, subsequent edits to the HTML version aren’t reflected in the text-only version.

19. Click Save.

   Tip: View a sample of the template populated with data from records you choose and send a test email by clicking Send Test and Verify Merge Fields.

Considerations for Using Merge Fields in Email Templates

A merge field is a field you can put in an email, an email template, a mail merge template, a custom link, or a formula to incorporate values from a record. You can use merge fields in the subject and body of custom HTML templates. When using merge fields, it’s a good idea to understand how they work and what to expect in your merged emails.

Guidelines for Syntax and Formatting

The syntax consists of an open curly brace and exclamation point, followed by the object name, a period, the field name, and a closing curly brace. For example, if you want to include the account number of your recipient, you could enter `ID: {!Account.AccountNumber}`, and your recipient’s email displays `ID: 001234567890123`.

A merge field’s syntax can vary depending on where you're using the field. To make sure you're using the correct syntax, select merge fields from the drop-down list in the editor where you're using the merge field. Most merge fields for email templates correspond directly with email template fields.

**Important:**

- If two or more custom objects have matching names or labels, only one of the objects appears when you select from available merge fields. Make sure that all custom objects have unique names and labels so that you can select merge fields from any of the objects.

Guidelines for Using Merge Fields

**General**

- Don’t use a hyperlink formula field in the subject of an email template or in the body of a text email template.
- In email templates, you can add substitute text to any merge field. Substitute text appears in a sent email if the merge record does not contain data for that field. To add substitute text, place a comma after the field name and enter the text before the closing bracket, for example: `Dear {!Contact.FirstName, Valued Customer}`. When you save the template, the merge field appears in the template as `Dear {!BLANKVALUE(Contact.FirstName, "Valued Customer")}`. In this example, if there is no information in the First Name field of the contact record, the email you create with your template begins with “Dear Valued Customer”.
- The `{!Receiving_User.field_name}` and `{!Sending_User.field_name}` merge fields work only for mass email and are unavailable in Visualforce email templates.
- User fields are also known as Sending User fields for administrators and users with the “Manage Users” permission. Use them in email templates when referencing the person sending the email.
- Administrators and users with the “Manage Users” permission can use Receiving User merge fields for email templates to reference the recipient of the email.
- The Created Date and Last Modified Date fields display only the date, not the date and time.
- If your template contains a merge field for which there is no data in a particular record, that field does not appear in the email you send. To find blank fields, modify your recipient list view to search for the merge fields you are using in your template, and enter the criterion “<field> equals,” leaving the third field blank. Edit those records that have blank fields before you send your emails.

**Accounts**

When account merge fields are included in an email template and this template is selected after a contact is added to the email To field, the account merge fields are populated from the contact’s account, not the case’s account.
Campaigns

- Campaign and campaign member merge fields can be used in email templates, but not mail merge templates.
- Campaign member merge fields cannot be used with other types of merge fields in the same email template. For example, if you create an email template using a campaign member merge field and you want to include the title of the recipient, use `{!CampaignMember.Title}` instead of `{!Lead.Title}` or `{!Contact.Title}`.

Cases

If you have enabled Email-to-Case or On-Demand Email-to-Case, you can create email templates that support agents can use to respond to case emails. These templates can include merge fields that display information from the original email in the response.

Connection Finder

Custom email templates must contain the survey URL. `{!Contact.PartnerSurveyURL}` is available as a contact merge field when creating templates.

Contacts

- In Salesforce Classic, templates with Contact merge fields can be used to generate mail merge documents for leads. Likewise, templates with Lead fields can be used to generate mail merge documents for contacts.
- You can use custom Contact or Lead fields for merging in Salesforce Classic and Lightning Experience, but only for documents for the object the custom fields come from. For example, a custom Lead field can only be used for templates for leads.

Opportunities

Merge fields for products on opportunities are only available to organizations that have enabled products and can only be used in mail merge templates, but not email templates.

Workflow

To use merge fields from user records in email templates, select from the following merge field types:

- User Fields—Use these merge fields to represent the sending user. Merge fields named `{!User.field_name}` return values from the user record of the person who created or updated the record that triggered the workflow rule.
- Workflow Target User Fields—Use these merge fields only in email templates for workflow rules on the User object. Merge fields named `{!Target_User.field_name}` return values from the user record that was created or updated to trigger the workflow rule.

This release contains a beta version of workflow on the User object that is production quality but has known limitations. To provide feedback and suggestions, go to IdeaExchange.

SEE ALSO:

- Merge Fields Overview
- Merge Fields for Approvals
Merge Fields for Visualforce Email Templates

A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

Syntax and Formatting

Merge fields for Visualforce email templates use the same expression language as formulas:

```
{!Object_Name.Field_Name}
```

For example, you can start your email template with Hello, {!Contact.FirstName}. When you send the template, each recipient will see their first name in place of the merge field. If your recipient's first name is John, he will see Hello, John! when he opens the email.

Tips

- You can't send a mass email using a Visualforce email template. {!Receiving_User.field_name} and {!Sending_User.field_name} are used for mass email and aren’t available for Visualforce email templates.
- To translate Visualforce email templates based on recipients’ or related objects’ languages, use the `<messaging:emailTemplate>` tag’s language attribute. Valid values are Salesforce-supported language keys, such as "en-us" for English (US). The language attribute accepts merge fields from the email template’s `recipientType` and `relatedToType` attributes. You create custom language fields for use in the merge fields. The Translation Workbench is required to translate email templates.

Considerations for Using Merge Fields in Mail Merge Templates

A merge field is a field you can put in an email, an email template, a mail merge template, a custom link, or a formula to incorporate values from a record. When using merge fields, it’s a good idea to understand how they work and what to expect in your merged documents.
Guidelines for Syntax and Formatting

Mail merge templates are created by uploading documents to Salesforce from your desktop. The syntax for these merge fields is `OBJECT_FIELD_NAME` or `FIELD_NAME`. Merge fields for mail merge templates must:

- Be unique
- Contain only letters, numbers, and the underscore (_) character
- Not exceed 40 characters

For example: `AccountNumber`. To make sure that you’re using the correct syntax, use Connect for Office to insert merge fields into your mail merge template.

Merge Field Compatibility

- In Salesforce Classic, templates with Contact merge fields can be used to generate mail merge documents for leads. Likewise, templates with Lead fields can be used to generate mail merge documents for contacts.
- You can use custom Contact or Lead fields for merging in Salesforce Classic and Lightning Experience, but only for documents for the object the custom fields come from. For example, a custom Lead field can only be used for templates for leads.
- In Salesforce Classic, for Opportunity mail merges, you can use Contact merge fields to merge additional information about a related contact.
- In Salesforce Classic, merge fields for products on opportunities are only available to organizations that have enabled products. Merge fields for products on opportunities are not available in Lightning Experience.
- In Salesforce Classic, Approval Process merge fields can be used in email templates, but not mail merge templates. Merge fields for Approval Process are not available in Lightning Experience.
- Campaign and campaign member merge fields cannot be used in mail merge templates.

Managing Version Settings for Visualforce Email Templates

To aid backwards-compatibility, each Visualforce email template is saved with version settings for the specified version of Visualforce and the API. If the Visualforce email template references installed managed packages, the version settings for each managed package referenced by the Visualforce component are saved too. This ensures that as Visualforce, the API and the components in managed packages evolve in subsequent versions, a Visualforce email template is still bound to versions with specific, known behavior.

A package version is a number that identifies the set of components uploaded in a package. The version number has the format `majorNumber.minorNumber.patchNumber` (for example, 2.1.3). The major and minor numbers increase to a chosen value during every major release. The `patchNumber` is generated and updated only for a patch release. Publishers can use package versions to evolve the components in their managed packages gracefully by releasing subsequent package versions without breaking existing customer integrations using the package.

To set the Salesforce API and Visualforce version for an existing Visualforce email template:

1. Do one of the following:
   - If you have permission to edit public templates, from Setup, enter Email Templates in the Quick Find box, then select Email Templates.
   - If you don’t have permission to edit public templates, go to your personal settings. Enter Templates in the Quick Find box, then select Email Templates or My Templates—whichever one appears.

2. Click the Email Template Name for the Visualforce email template.

3. Click Edit Template and then click Version Settings.

4. Select the Version of the Salesforce API. This is also the version of Visualforce used with this template.

5. Click Save.

To configure the package version settings for a Visualforce email template:

1. Do one of the following:
   - If you have permission to edit public templates, from Setup, enter Email Templates in the Quick Find box, then select Email Templates.
   - If you don’t have permission to edit public templates, go to your personal settings. Enter Templates in the Quick Find box, then select Email Templates or My Templates—whichever one appears.

2. Click the Email Template Name for the Visualforce email template.

3. Click Edit Template and then click Version Settings.

4. Select a Version for each managed package referenced by the Visualforce email template. This version of the managed package will continue to be used by the Visualforce email template if later versions of the managed package are installed, unless you manually update the version setting. To add an installed managed package to the settings list, select a package from the list of available packages. The list is only displayed if you have an installed managed package that is not already associated with the Visualforce email template.

5. Click Save.

Note the following when working with package version settings:

- If you save a Visualforce email template that references a managed package without specifying a version of the managed package, the Visualforce email template is associated with the latest installed version of the managed package by default.
• You cannot **Remove** a Visualforce email template’s version setting for a managed package if the package is referenced by the Visualforce email template.

**Managing Cloud-Based Email Integration**

**Administering Salesforce App for Outlook**

**Lightning for Outlook**

Get your sales teams to stay on top of important sales opportunities. Using Microsoft® Outlook® Web App (OWA), Outlook 2016, or Outlook 2013, along with Microsoft Office 365™, sales teams can manage their sales more efficiently. Your sales reps can add email and attachments to Salesforce records. Also, they can create Salesforce records using global actions—directly in their email applications.

First, you enable Lightning for Outlook, and then your sales team members complete their short setup procedures. After that, teammates select an email or an event in Outlook (1) and then select Salesforce (2). That’s when your reps see related contacts, leads, and users. Reps can also see related accounts, opportunities, and cases (3).

Sales reps can select the record to see more details about it in their Outlook. Or they can get complete details about the record or the email added to it directly in Salesforce (4).

As an attendee to events in Microsoft calendars, your reps see relevant Salesforce records. First, your reps open an event in Outlook. Then, they select Salesforce (1).
Relevant Salesforce records appear (2). And like when reps work with emails, your reps can select a record to see more details in their email application. Or, they can get complete details about the record directly in Salesforce (3).

Event organizers can see a different view of relevant Salesforce records. After organizers open an event, they select Add-ins > Salesforce. Relevant records appear in the right pane.

Set Up Sales Teams to Experience Salesforce in Microsoft® Outlook®

Help your sales teams see and create Salesforce records with global actions directly in Outlook Web App (OWA), Outlook 2016, and Outlook 2013.

1. From Salesforce Setup, enter Lightning for Outlook in the Quick Find box, then select Lightning for Outlook Settings.
2. Enable Lightning for Outlook. Save your changes.
   After the whitelist and mapping sections appear, there’s no need for you to change them.

3. Choose the environment in which you’re setting up Lightning for Outlook.
   Tip: Help your sales teams help themselves! From the Microsoft Office Store, make Lightning for Outlook available for your sales teams to install. That way, you spend less time installing Lightning for Outlook for fewer teammates.

4. If you’re using Exchange 2016 or 2013 on-premise, update Exchange Metadata URL. Then, update the whitelist domains in the next section.

Lightning Sync

Help users keep their contacts and events in sync between your Microsoft® Exchange server and Salesforce without asking them to install and maintain software.

When you set up users’ contacts and events to sync between your company’s Microsoft® Exchange server and Salesforce, you help your users increase their productivity. That’s because there’s no need for users to duplicate their work between the two systems. In addition, Lightning Sync offers users with compatible computing environments the flexibility to sync items whether working from their desks or from their mobile devices.

You define your users’ Lightning Sync experience by selecting sync settings for users in Salesforce. You can set up users to sync contacts between Exchange and Salesforce in both directions, or just one. You can also set up users to sync events in one direction, from Exchange to Salesforce.
You can also decide how users’ Exchange events sync to Salesforce. Set up users to sync all their events, or only the events they select. Users select which Exchange events sync to Salesforce using Lightning for Outlook, a Microsoft integration feature that lets users experience Salesforce directly from Microsoft Outlook.

You can select more settings to define your users’ sync experiences. For example, set up Lightning Sync to sync events your users mark as private. Or, to automatically remove events in Salesforce that your users delete from their calendars.

**Lightning Sync Limitations**

Currently, Lightning Sync doesn’t:

- Sync events from Salesforce to Exchange
- Sync recurring events
- Sync invitees included in events
- Delete syncing contacts in one action
- Support Platform Encryption
Lightning Sync System Requirements
Confirm that your Microsoft® Exchange-based server meets these system requirements before you set up your sales reps to sync contacts and events with Lightning Sync.

How Does Lightning Sync Sync My Sales Reps’ Stuff?
Learn how Lightning Sync handles your reps’ contacts and events when they’re set up to use Lightning Sync.

See the Big Picture for Setting Up Lightning Sync
Set up Lightning Sync so your users can sync contacts and events between your company’s Microsoft® Exchange server and Salesforce. You complete several steps to prepare the systems to communicate, both on your Exchange server and in Salesforce.

How Can I Avoid Syncing Data Between My Salesforce Organizations?
If your company uses Lightning Sync in multiple Salesforce organizations, make sure the data in those organizations remains separate by being mindful about how you set up your Lightning Sync configurations.

Manage Users
After you’ve set up Lightning Sync, manage how your users experience the feature and assist users in troubleshooting problems.

How Does Lightning Sync Sync My Sales Reps’ Stuff?
Learn how Lightning Sync handles your reps’ contacts and events when they’re set up to use Lightning Sync.

Considerations for Syncing Events
Before you roll out Lightning Sync to your sales reps, familiarize yourself with these considerations for syncing events. That way, your rollout generates no surprises.

Private Event Sync
Learn how private events sync from your sales reps’ calendar applications to Salesforce when you’ve set up reps to use Lightning Sync.
Event Delete

You can set up sales reps to delete events—from both their Exchange-based email and Salesforce—in one action.

Considerations for Syncing Events

Before you roll out Lightning Sync to your sales reps, familiarize yourself with these considerations for syncing events. That way, your rollout generates no surprises.

Lightning Sync can sync your sales reps' events from their Microsoft® Exchange-based calendars to Salesforce. You decided whether reps sync events by setting up the feature from Lightning Sync configurations in Setup.

Keep in mind that there's potential for Lightning Sync to overwrite event data unless you're considerate about how you roll out the feature to your reps.

First, does one of these scenarios describe your rollout?

• You're migrating reps from Salesforce for Outlook
• Your reps edit their events records in Salesforce
• Your reps already have access to Lightning for Outlook (previously known as Salesforce App for Outlook)

For example, say that your rep maintains meeting notes in Salesforce event records. But the matching event in that rep's Exchange-based calendar doesn't include those notes. During the first sync, Lightning Sync overwrites the event in Salesforce with the one from the calendar.

If one of these scenarios describes your rollout scenario, you can avoid overwriting event data by following our Guidelines for Syncing Events.

Guidelines for Syncing Events

Before you roll out Lightning Sync, address these guidelines to avoid overwriting event data during certain sync scenarios.

Guidelines for Syncing Events

Before you roll out Lightning Sync, address these guidelines to avoid overwriting event data during certain sync scenarios.

If you fall into one of the sync scenarios outlined in Considerations for Syncing Events, follow these guidelines when you set up your reps for Lightning Sync.

• In Lightning Sync configurations, don't change the default setting, TODAY, for the event sync filter. That way, edits that your reps made to past events in Salesforce are excluded from the initial sync.
• Tell reps that events sync from Microsoft® Exchange-based calendars to Salesforce.
• Tell reps to edit event fields that sync (like date, time, subject, or description) in their calendars, and not in Salesforce. That way, Lightning Sync doesn't overwrite those edits in Salesforce. (Reps can continue to use features in Salesforce that don’t sync with their calendars, however, like relating events to Salesforce records.)
Private Event Sync

Learn how private events sync from your sales reps’ calendar applications to Salesforce when you’ve set up reps to use Lightning Sync.

Reps can prevent colleagues from viewing their events in Salesforce and in their calendar applications by marking events as private.

Lightning Sync doesn’t sync your reps’ private events between systems unless you select to sync events and select to enable Sync Private Events in a rep’s Lightning Sync configuration. After enabling, new and updated private events sync during the next sync cycle (usually sync cycles occur every few minutes). Private events sync according to the filters you’ve determined in the rep’s configuration.

When private events start syncing, private event details are visible to reps’ colleagues depending on two factors: Which system events are viewed in, and how reps have set their calendar sharing settings in Salesforce.

In Salesforce, private event start and end times are visible to colleagues, but event details are hidden. All private event details are visible to Salesforce administrators who can view, edit, and report on events. Reps can choose to share more private event details with their colleagues by changing their calendar sharing level in their Personal Settings.

In your calendar application, private event details are shared with colleagues and supervisors as they always have been. Refer to that calendar application documentation for more information.

If you decide to disable Private Event Sync, your reps’ private events don’t sync during the next sync cycle, and do not sync again. A version of each private event that was previously syncing remains in both Salesforce and the rep’s calendar until the rep deletes one or both.

⚠️ Important: Salesforce doesn’t communicate to reps how their private events are set up to sync, nor does it communicate that you’ve changed the setting. It’s important that you communicate which experience reps can expect so they can prepare their calendars accordingly. This practice can help keep reps comfortable with syncing their private events. It also guarantees that you keep Great Aunt Alberta’s 95th birthday party out of your Salesforce org.

Event Delete

You can set up sales reps to delete events—from both their Exchange-based email and Salesforce—in one action.

You can set up reps to delete syncing events in one action by selecting **Automatically remove deleted Exchange events from Salesforce** on reps’ sync configurations.

Then, reps can delete an event from their Exchange-based calendar, and Lightning Sync removes the event’s counterpart in Salesforce automatically.

Because Lightning Sync is designed to sync only from Exchange to Salesforce, Lightning Sync delete only works when sales reps delete events from their Exchange-based calendar. If reps delete syncing events from Salesforce, that event’s counterpart remains in Exchange.

Events that reps move out of their default Exchange calendar and into a secondary calendar are also deleted from Salesforce automatically.
See the Big Picture for Setting Up Lightning Sync

Set up Lightning Sync so your users can sync contacts and events between your company’s Microsoft® Exchange server and Salesforce. You complete several steps to prepare the systems to communicate, both on your Exchange server and in Salesforce.

Complete these steps to set up Lightning Sync.

1. **Prepare Your Microsoft® Exchange Server for Lightning Sync**
   The first step in setting up Lightning Sync is to enable several settings on your Exchange server, including Exchange Web Services, Exchange Autodiscover Service, and Basic authentication.

2. **Set Up a Microsoft® Exchange Service Account to Communicate with Lightning Sync**
   After you’ve enabled Exchange Web Services and Exchange Autodiscover Service on your Exchange server, create an Exchange service account with impersonation rights for the mailbox of each Lightning Sync user.

3. **Run the Microsoft® Remote Connectivity Analyzer with Lightning Sync Parameters**
   Run the Remote Connectivity Analyzer—the free web-based tool provided by Microsoft—to confirm whether you and your Exchange administrator have set up Lightning Sync successfully. Or, run the Remote Connectivity Analyzer if Lightning Sync was syncing your reps’ items successfully, but suddenly stops. Use the parameters provided to run the test for Lightning Sync.

4. **Set Up Salesforce to Communicate with Microsoft® Exchange**
   After running the Remote Connectivity Analyzer, log in to Salesforce to enable Lightning Sync and provide your service account credentials.

5. **Run the Lightning Sync Connection Test**
   After providing your service account credentials in Salesforce, run the Lightning Sync connection test to confirm whether you and your Exchange administrator have set up Lightning Sync successfully. Or, run the connection test if Lightning Sync was syncing your reps’ items successfully, but suddenly stops.

6. **Tell Users How to Prevent Calendar Events from Syncing to Salesforce**
   Tell your Lightning Sync users how to manage which of their Exchange calendar events sync with Salesforce. We recommend users prepare their calendars before you add users to Lightning Sync configurations and begin the sync process, but users can manage which events sync at anytime.

7. **Define Sync Settings for Sales Reps Using Lightning Sync**
   After sales reps prepare their Exchange events to sync with Salesforce, you can define sync settings for groups of reps in Lightning Sync configurations. This step kicks off the sync process for your reps.

8. **Tell Users How to Sync Email Contacts with Salesforce**
   Tell your Lightning Sync users that it’s time to manage the Exchange email contacts that they want to sync with Salesforce.

SEE ALSO:
- Lightning Sync
- Lightning for Outlook and Lightning Sync Success Community
Prepare Your Microsoft® Exchange Server for Lightning Sync

The first step in setting up Lightning Sync is to enable several settings on your Exchange server, including Exchange Web Services, Exchange Autodiscover Service, and Basic authentication. These instructions vary depending on the version of Microsoft® Exchange your company uses. For more support, visit Microsoft’s support website, search for the keywords mentioned here, and follow the instructions intended for your Exchange version.

Complete the following steps on your Exchange server.

1. Enable Exchange Web Services (EWS) on an SSL connection.
   - Make sure your Exchange server has a signed certificate from one of the Salesforce-approved Certificate Authorities.
   - If your organization has configured a firewall, allow an inbound connection to your Exchange client access server on ports 80 and 443.

2. Enable Exchange Autodiscover Service.

3. Enable Basic authentication on both your Exchange server and your Autodiscover service. If you need to run additional authentication methods (such as Microsoft NTLM), there is no need to disable those methods; you can run Lightning Sync without conflict.

Set Up a Microsoft® Exchange Service Account to Communicate with Lightning Sync

After you’ve enabled Exchange Web Services and Exchange Autodiscover Service on your Exchange server, create an Exchange service account with impersonation rights for the mailbox of each Lightning Sync user.

Before setting up an Exchange Service account, make sure you’ve enabled the appropriate Exchange server settings to set up Lightning Sync.

To set up an Exchange service account, you’ll complete these steps on your Exchange server.

Watch a Demo:

- Salesforce Lightning Sync Setup in Office 365 via Point and Click
- Salesforce Lightning Sync Setup in Exchange via the Command Line

Note: For more support, visit Microsoft’s support website, search for the keywords mentioned here, and follow the instructions intended for your Exchange version.

1. Create an Exchange user with a mailbox that will act as the service account. You’ll use this email address for this mailbox to configure Exchange impersonation for the service account.

2. Using Exchange Management Shell, enter the commands that enable service account impersonation for your version of Exchange. If you receive a pipeline error message, wait a few minutes and re-enter the command to let your server process the requests.

   a. Enable the Active Directory extended permission for ms-Exch-EPI-Impersonation on all Client Access servers.

      Get-ExchangeServer | where {$_IsClientAccessServer -eq $TRUE} | ForEach-Object {Add-ADPermission -Identity $_.distinguishedname -User (Get-User -Identity <EnterExchangeSyncServiceAccountEmailAddress>).Identity -extendedRight ms-Exch-EPI-Impersonation}
b. Enable the Active Directory extended rights for `ms-Exch-EPI-May-Impersonate` to let your service account impersonate all accounts on your Exchange server. You'll set a filter later that lets you limit the users the service account syncs with Salesforce.

```powershell
Get-MailboxDatabase | ForEach-Object {Add-ADPermission -Identity $_.distinguishedname -User <EnterExchangeSyncServiceAccountAddress> -ExtendedRights ms-Exch-EPI-May-Impersonate}
```

- If you're using Exchange Online offered by Microsoft Office 365™:
  a. Enable customization on your Exchange server.

```powershell
Enable-OrganizationCustomization
```

3. Using Exchange Management Shell, enter these commands to configure your service account to impersonate the group of users who'll sync with Lightning Sync.

a. Create a management scope to define a filter that groups together the Exchange users who'll sync with Lightning Sync. For example, if you want only your sales representatives to sync, and their Exchange mailboxes all have the same value `Sales` for the filterable property `Department`, you'd enter `Department -eq 'Sales'` in place of `<ChooseRecipientFilter>`.

```powershell
New-ManagementScope -Name:<ChooseExchangeSyncScopeName> -RecipientRestrictionFilter:{<ChooseRecipientFilter>}
```

b. Create a management role assignment that restricts the service account to impersonate only the users you defined in the management scope.

```powershell
New-ManagementRoleAssignment -Name:<ChooseExchangeSyncRoleAssignmentName> -Role:ApplicationImpersonation -User:<EnterExchangeSyncServiceAccountAddress> -CustomRecipientWriteScope:<EnterExchangeSyncScopeName>
```

Run the Microsoft® Remote Connectivity Analyzer with Lightning Sync Parameters

Run the Remote Connectivity Analyzer—the free web-based tool provided by Microsoft—to confirm whether you and your Exchange administrator have set up Lightning Sync successfully. Or, run the Remote Connectivity Analyzer if Lightning Sync was syncing your reps’ items successfully, but suddenly stops. Use the parameters provided to run the test for Lightning Sync.

Before you run the Remote Connectivity Analyzer, make sure that you’ve enabled the appropriate Exchange server settings and then set up an Exchange service account. Wait a few minutes after completing those tasks to let your Exchange server process the changes you’ve made. Otherwise, the Remote Connectivity Analyzer can show a failed test summary, even though you’ve configured setup correctly.

The Remote Connectivity Analyzer checks several points of connectivity between your Salesforce organization and your Exchange server. When the test is complete, Microsoft provides a summary describing your connection status.

**Note:** The Microsoft Remote Connectivity Test and the Lightning Sync Connection Test check general connectivity between Exchange and your Salesforce organization. If you want to test connectivity for only one (or a few) of your reps, check their sync statuses from Lightning Sync Status in Setup.

1. Visit Microsoft’s website and search for the Remote Connectivity Analyzer.
2. On the Exchange Server tab, select **Service Account Access (Developers)**.

3. Click **Next**.

4. Complete the test fields:

<table>
<thead>
<tr>
<th>For this test field</th>
<th>Type this parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target mailbox email address</td>
<td>The email address of a sales rep you’ve set up to be impersonated by your Lightning Sync service account</td>
</tr>
<tr>
<td>Service Account User Name (Domain\User Name or UPN)</td>
<td>The service account domain\user name or UPN you’ve set up for Lightning Sync</td>
</tr>
<tr>
<td>Service Account Password</td>
<td>The service account password you’ve set up for Lightning Sync</td>
</tr>
</tbody>
</table>

5. Select **Use Autodiscover to detect server settings**.

6. Select **Test predefined folder**.

7. Choose **Contacts** if you’d like to test sync connectivity for this user’s contacts, or **Calendar** for this user’s events.

8. Check **Use Exchange Impersonation**.

9. In the Impersonated User field, type the same Exchange email address you specified for Target mailbox email address.

10. For Impersonated user identifier, select **SMTP Address**.

11. Check the **I understand that I must use the credentials of a working account…** acknowledgment.

12. Type the analyzer verification code and click **verify**.

13. At the top of the page, click **Perform Test**.

   Running the test usually takes less than 30 seconds. When the test is complete, the analyzer displays a summary evaluating the sync connectivity for the Exchange user you’ve specified.

14. Take action based on the test results.

   - If the test summary displays “Connectivity Test Successful” or “Connectivity Test Successful with Warnings,” it’s likely that you’ve set up your service account correctly. You’re ready to provide your service account credentials to Salesforce.
   - If the test summary displays “Connectivity Test Failed,” review the test details to troubleshoot setup issues. If the test continues to fail, verify that you’ve completed the previous setup steps correctly and then contact Salesforce Customer Support for help.

SEE ALSO:

- Check Lightning Sync Users’ Sync Statuses
- Run the Lightning Sync Connection Test
Set Up Salesforce to Communicate with Microsoft Exchange

After running the Remote Connectivity Analyzer, log in to Salesforce to enable Lightning Sync and provide your service account credentials.

1. From Salesforce Setup, enter Lightning Sync Setup in the Quick Find box, then select Lightning Sync Setup.
2. Under Enable Lightning Sync, click Edit.
3. Check Enable Lightning Sync and click Save.
4. Enter the service account user name you created in Exchange, including your company’s domain and top-level domain. For example, if you work for AW Computing, and the service account mailbox you’ve created is svcacct@awcomputing.com, enter your user name in either of these formats:
   - svcacct@awcomputing.com
   - awcomputing.com\svcacct

Some network configurations require one format rather than the other. If your first attempt to get Salesforce and Exchange to communicate is unsuccessful, try the other format.

5. Enter your service account password.
6. If your sales reps’ email domains are different than your service account domain, enter the additional domains in a comma-separated list. For example, if your service account is svcacct@awcomputing.com, but your reps’ email addresses are in the domain awcomputing.net, enter awcomputing.net as an additional domain so Lightning Sync can recognize it.
7. Click Save.

Run the Lightning Sync Connection Test

After providing your service account credentials in Salesforce, run the Lightning Sync connection test to confirm whether you and your Exchange administrator have set up Lightning Sync successfully. Or, run the connection test if Lightning Sync was syncing your reps’ items successfully, but suddenly stops.

The Lightning Sync connection test checks several points of connectivity between your Salesforce organization and your Exchange server. When the test is complete, it provides a summary describing your connection status.

Run both the Lightning Sync connection test and the Microsoft Remote Connectivity Analyzer when you’re testing connectivity. The tests differ slightly, so running both gives you more information about your connection status.

Test your connection status to confirm whether you and your Exchange administrator have set up Lightning Sync successfully. Or, run the connection tests if Lightning Sync was syncing successfully, but syncing suddenly stops for all reps in your Salesforce organization.

The Microsoft Remote Connectivity Test and the Lightning Sync Connection Test check general connectivity between Exchange and your Salesforce organization. If you want to test connectivity for only one (or a few) of your reps, check their sync statuses from Lightning Sync Status in Setup.

1. From Setup, enter Lightning Sync Setup in the Quick Find box, then select Lightning Sync Setup.
2. From the Connection Test section, provide the email address for one of the reps you’ve set up your Exchange service account to impersonate.
3. Click Test.
Salesforce checks your connection between Salesforce and your Exchange server and summarizes your connection status.

Tell Users How to Prevent Calendar Events from Syncing to Salesforce

Tell your Lightning Sync users how to manage which of their Exchange calendar events sync with Salesforce. We recommend users prepare their calendars before you add users to Lightning Sync configurations and begin the sync process, but users can manage which events sync at anytime.

Users might not want to sync some calendar events—like personal events—to Salesforce.

In the next setup step, you define user sync settings in Lightning Sync configurations, which starts syncing your users’ items. At that time, if you set up users to sync events, all of users’ events start to sync to Salesforce right away—unless you tell users to manage their events now.

Users can prevent personal events from syncing from Exchange to Salesforce in different ways.

- Users can create a separate calendar in their calendar application to keep track of their personal events. (Lightning Sync is designed to sync only a reps’ main Exchange account calendar to Salesforce.)

- In the next setup step, you choose whether you want to sync users’ private events. If you opt not to sync users’ private events, you can tell users to assign the private option to events in their calendar applications that they’d rather not sync.

If users don’t manage their personal events before syncing begins, users can still remove those events from Salesforce by deleting personal events Salesforce manually.

Define Sync Settings for Sales Reps Using Lightning Sync

After sales reps prepare their Exchange events to sync with Salesforce, you can define sync settings for groups of reps in Lightning Sync configurations. This step kicks off the sync process for your reps.

Defining sync settings lets you control which of your users can sync contacts and events. You can also control which direction your users sync, and create filters to limit certain records from syncing.

Before you begin, make sure that you understand how to define your sync settings to avoid syncing data between organizations. Syncing data between organizations is possible if you test Lightning Sync before rolling it out to your sales reps, or your company uses multiple Salesforce orgs.

1. From Salesforce Setup, enter Sync Configurations in the Quick Find box, then select Sync Configurations.
2. Click New Lightning Sync Configuration.
3. Enter the name of the configuration. For example, if you’re creating a configuration for users in a particular region, enter a unique name for it, and then select Active.

![Basic Information](image)

4. Assign users and profiles to this configuration.

![Assign Users and Profiles](image)

5. Indicate the sync direction for your users’ contacts.

![Data Settings](image)

6. To change field mappings between Salesforce and Exchange contacts, click **Edit Field Mappings**.

7. Indicate whether you’d like to sync your users’ events from Exchange to Salesforce.

![Events](image)

8. Indicate whether you want all Exchange events to sync to Salesforce, or only the events your users select. If you set up users to select events, events users relate to Salesforce from Lightning for Outlook begin to sync between the two systems. To finish setting up that option, you’re required to enable Lightning for Outlook, and your users are required to complete Lightning for Outlook setup.
9. To change field mappings between Salesforce and Exchange events, click **Edit Field Mappings**.

10. Click **Save**.

11. Set filters to specify the contacts users can sync from Salesforce to Exchange. You are required to set filters based on your users’ record ownership. Choose whether you want to:
   - Limit contacts that users sync to only what users own, choose **Selected Contacts**, and then select **User’s Records**. Make sure that you select both of these settings together, or no contacts sync for users in this configuration.
   - Let users sync all contacts they can see in Salesforce, choose **All Contacts**.

12. Select **Sync private events** to sync events your users have marked private either in Salesforce or their calendars.

13. Select **Automatically remove deleted Exchange events from Salesforce** to let reps delete Exchange events and Salesforce events in one action.

14. Specify the specific events users can sync from Exchange to Salesforce. Enter a filter in the **Greater or equal to** field. Doing so limits the events users can sync to these time frames.
   - **TODAY**—Syncs events that end on or after today. The start time is 12:00 a.m. Learn more on page 1978 about why this selection is recommended in certain scenarios.
   - **LAST MONTH**—Syncs events that ended on or after the first day of last month.
   - **LAST N DAYS**—Syncs events that ended on or after a specified number of days ago, such as **LAST 30 DAYS**. You can sync events that ended up to 180 days ago.
15. Click Save.
   Contact and event syncing has begun for users in this Lightning Sync configuration.

   How Can I Avoid Syncing Data Between My Salesforce Organizations?

Tell Users How to Sync Email Contacts with Salesforce

Tell your Lightning Sync users that it’s time to manage the Exchange email contacts that they want to sync with Salesforce.

If you’ve set up your users to sync contacts from only Salesforce to Exchange, you can skip this step—your users’ contacts and events are already syncing.

After you define users’ sync settings by adding them to Lightning Sync configurations and make the configurations active, Lightning Sync creates a folder that’s called Salesforce_Sync as a subdirectory under the Contacts directory in each user’s email account.

Users who are syncing contacts from Exchange to Salesforce or syncing both ways can choose which email contacts sync to Salesforce by moving those contacts into the Salesforce_Sync folder.

Tell users to move their contacts to the Salesforce_Sync folder now.

How Can I Avoid Syncing Data Between My Salesforce Organizations?

If your company uses Lightning Sync in multiple Salesforce organizations, make sure the data in those organizations remains separate by being mindful about how you set up your Lightning Sync configurations.

You’re using multiple organizations if you either:

- Test new features in a sandbox organization before setting up the feature in your live organization.
- Maintain separate Salesforce organizations for different divisions of your company.

To prevent Lightning Sync from syncing contacts and events between your Salesforce organizations, don’t add the same user to Lightning Sync configurations in more than one organization.

We don’t recommend marking a Lightning Sync configuration as inactive to prevent data from syncing between your Salesforce organizations. While marking a configuration as inactive prevents it from syncing a user’s data, you risk forgetting that user is included in multiple Lightning Sync configurations, and marking the configuration as active later.

**Example:** You’re testing Lightning Sync features in your sandbox organization, so you add user Marianne Schumacher to a Lightning Sync configuration in the sandbox organization. After you’re satisfied with how you’ve set up Lightning Sync features for Marianne, you’re ready to add her to a Lightning Sync configuration in your live organization.

Before you add Marianne to a Lightning Sync configuration in your live organization, remove her from the configuration in your sandbox organization. Otherwise, Lightning Sync can sync contacts and events between Marianne’s email application, the sandbox organization, and the live organization, saving test and live data to all three data sources.
Manage Users

After you've set up Lightning Sync, manage how your users experience the feature and assist users in troubleshooting problems.

Assign Users to Lightning Sync Configurations

To get your Lightning Sync users’ contacts and events to sync, you add users to a Lightning Sync configuration. You can do this in Salesforce by adding individual users, or multiple users with user profiles.

Fix Sync Issues for Lightning Sync Users

If an Lightning Sync user has trouble syncing between Microsoft® Exchange and Salesforce, you can troubleshoot sync issues by checking your users’ sync statuses or running a Lightning Sync error report. If you find a sync issue that a user can’t overcome, then you can reset that user's sync process for them.

Assign Users to Lightning Sync Configurations

To get your Lightning Sync users’ contacts and events to sync, you add users to a Lightning Sync configuration. You can do this in Salesforce by adding individual users, or multiple users with user profiles.

Before you assign a user to a Lightning Sync configuration, consider how that user’s records sync if they're already mentioned in another configuration:

- If you assign an individual user to two Lightning Sync configurations, the user is removed from the first configuration automatically and assigned to the new one.
- If you assign a user to two Lightning Sync configurations as both an individual user and as part of a profile, the user is not removed from either configuration, but the user's records will sync according to the configuration that lists the user individually.
- If you assign a user to one Lightning Sync configuration and one configuration, the user is not removed from either configuration, but the user’s records will sync according to the Lightning Sync configuration.

Users observe the assignments you’ve created, added, or removed the next time Lightning Sync runs a sync cycle.

To assign a user to a Lightning Sync configuration,

1. From Setup, enter Lightning Sync Configurations in the Quick Find box, then select Lightning Sync Configurations.

2. If you’re modifying a Lightning Sync configuration, click Edit next to the one that you want to modify. Otherwise, click New Lightning Sync Configuration, and then complete the required fields.

3. In the Assign Users and Profiles section, select either Profiles or Users in the Search drop-down list.

4. If you don’t see the member you want to add, enter keywords in the search box and click Find.

5. Select members from the Available Members box, and click Add to add them to the group. If all available users are assigned to this configuration, the Users list is empty and you can only assign profiles.

6. To remove members, select those members and click Remove.

7. Click Save.

How Lightning Sync Manages Sync Conflicts with Salesforce for Outlook
How Can I Avoid Syncing Data Between My Salesforce Organizations?
Fix Sync Issues for Lightning Sync Users

If an Lightning Sync user has trouble syncing between Microsoft® Exchange and Salesforce, you can troubleshoot sync issues by checking your users' sync statuses or running a Lightning Sync error report. If you find a sync issue that a user can't overcome, then you can reset that user's sync process for them.

Check Lightning Sync Users' Sync Statuses

If your users can't sync, you can check their sync statuses—and the sync status of your Lightning Sync setup—to learn where sync is failing.

Build and Run a Lightning Sync Error Report

If your Lightning Sync users can't sync, you can run an error report to discover what's causing sync to fail in your organization, and for which users. The report details provide suggestions to help you troubleshoot sync issues.

Reset Sync for Lightning Sync Users

If a user has trouble syncing between Microsoft Exchange and Salesforce, you can reset that user’s sync process. This process clears out and then restores the connections between a user’s Exchange and Salesforce records. Resetting the sync process won't affect information stored in those records.

Test Your Connection Between Salesforce and Microsoft® Exchange

Run both the Lightning Sync connection test and the Microsoft Remote Connectivity Analyzer when you’re testing connectivity. The tests differ slightly, so running both gives you more information about your connection status.

Lightning Sync Statuses

Understanding Lightning Sync statuses helps you assess and address Lightning Sync errors that appear on the Lightning Sync status page in Salesforce.

Check Lightning Sync Users' Sync Statuses

If your users can't sync, you can check their sync statuses—and the sync status of your Lightning Sync setup—to learn where sync is failing.

1. From Setup, enter Lightning Sync Status in the Quick Find box, then select Lightning Sync Status.
2. Type the name of the user whose sync status you’d like to check, and click Check Status.

In some cases, you may need to reset sync for a user.

If you need help interpreting sync statuses, or need recommendations on correcting sync issues, check out Lightning Sync Statuses.

USER PERMISSIONS

To access Lightning Sync statuses:
• “View Setup and Configuration”
**Build and Run a Lightning Sync Error Report**

If your Lightning Sync users can’t sync, you can build and run an error report to discover what’s causing sync to fail in your organization, and for which users. The report details provide suggestions to help you troubleshoot sync issues.

First, you’ll create a custom report type using a Lightning Sync Error Report custom object we’ve set up for you in Salesforce. Then, you’ll create a Lightning Sync error report. Finally, you’ll run your report to help your users fix those pesky sync errors they’re experiencing.

1. **Create a custom report type.** Set the Primary Object to *Lightning SyncError*.
2. **Create your Lightning Sync error report.** From the Reports tab, click *New Report*. Set the Report Type to the Lightning Sync report type you created in step 1, and click *Create*.
3. **Save and run your Lightning Sync error report.** From the unsaved report, click *Save*, complete the required fields, and click *Save and Run Report*.
   
Salesforce generates a list of errors sync errors found in your organization, or displays “Grand Totals (0 records)” if the report couldn’t identify any sync errors.

If the report couldn’t identify any errors, but users still can’t sync, contact Salesforce.

**SEE ALSO:**
- Lightning Sync Statuses

**Reset Sync for Lightning Sync Users**

If a user has trouble syncing between Microsoft Exchange and Salesforce, you can reset that user’s sync process. This process clears out and then restores the connections between a user’s Exchange and Salesforce records. Resetting the sync process won’t affect information stored in those records.

1. **Make sure that your user’s Salesforce_Sync folder contains only the contacts the user wants to sync with Salesforce, and the events the user doesn’t want to sync are marked as Private in the user’s calendar application.**
2. **From Salesforce Setup, enter Lightning Sync Status in the Quick Find box, then select Lightning Sync Status.**
3. Type a user’s name, and click **Reset Sync**.

During the next sync cycle, Lightning Sync will sync:

- All contacts from the user’s *Salesforce_Sync* folder in Exchange to Salesforce, excluding contacts that fall outside of the filters you set in the user’s Exchange configuration.
- All events from the user’s calendar in Exchange to Salesforce, excluding events that fall outside of the filters you set in the user’s Exchange configuration, or events the user marked as **Private** in Exchange.
Test Your Connection Between Salesforce and Microsoft® Exchange

Run both the Lightning Sync connection test and the Microsoft Remote Connectivity Analyzer when you’re testing connectivity. The tests differ slightly, so running both gives you more information about your connection status.

Test your connection status to confirm whether you and your Exchange administrator have set up Lightning Sync successfully. Or, run the connection tests if Lightning Sync was syncing successfully, but syncing suddenly stops for all reps in your Salesforce organization.

Note: The Microsoft Remote Connectivity Test and the Lightning Sync Connection Test check general connectivity between Exchange and your Salesforce organization. If you want to test connectivity for only one (or a few) of your reps, check their sync statuses from Lightning Sync Status in Setup.

Run the Microsoft® Remote Connectivity Analyzer with Lightning Sync Parameters

Run the Remote Connectivity Analyzer—the free web-based tool provided by Microsoft—to confirm whether you and your Exchange administrator have set up Lightning Sync successfully. Or, run the Remote Connectivity Analyzer if Lightning Sync was syncing your reps’ items successfully, but suddenly stops. Use the parameters provided to run the test for Lightning Sync.

Run the Lightning Sync Connection Test

After providing your service account credentials in Salesforce, run the Lightning Sync connection test to confirm whether you and your Exchange administrator have set up Lightning Sync successfully. Or, run the connection test if Lightning Sync was syncing your reps’ items successfully, but suddenly stops.

Run the Microsoft® Remote Connectivity Analyzer with Lightning Sync Parameters

Run the Remote Connectivity Analyzer—the free web-based tool provided by Microsoft—to confirm whether you and your Exchange administrator have set up Lightning Sync successfully. Or, run the Remote Connectivity Analyzer if Lightning Sync was syncing your reps’ items successfully, but suddenly stops. Use the parameters provided to run the test for Lightning Sync.

Before you run the Remote Connectivity Analyzer, make sure that you’ve enabled the appropriate Exchange server settings and then set up an Exchange service account. Wait a few minutes after completing those tasks to let your Exchange server process the changes you’ve made. Otherwise, the Remote Connectivity Analyzer can show a failed test summary, even though you’ve configured setup correctly.

The Remote Connectivity Analyzer checks several points of connectivity between your Salesforce organization and your Exchange server. When the test is complete, Microsoft provides a summary describing your connection status.

Note: The Microsoft Remote Connectivity Test and the Lightning Sync Connection Test check general connectivity between Exchange and your Salesforce organization. If you want to test connectivity for only one (or a few) of your reps, check their sync statuses from Lightning Sync Status in Setup.

1. Visit Microsoft’s website and search for the Remote Connectivity Analyzer.
2. On the Exchange Server tab, select Service Account Access (Developers).
3. Click Next.
4. Complete the test fields.
For this test field
Target mailbox email address
Service Account User Name (Domain\User Name or UPN)
Service Account Password

Type this parameter
The email address of a sales rep you’ve set up to be impersonated by your Lightning Sync service account
The service account domain\user name or UPN you’ve set up for Lightning Sync
The service account password you’ve set up for Lightning Sync

5. Select Use Autodiscover to detect server settings.
6. Select Test predefined folder.
7. Choose Contacts if you’d like to test sync connectivity for this user’s contacts, or Calendar for this user’s events.
8. Check Use Exchange Impersonation.
9. In the Impersonated User field, type the same Exchange email address you specified for Target mailbox email address.
10. For Impersonated user identifier, select SMTP Address.
11. Check the I understand that I must use the credentials of a working account... acknowledgment.
12. Type the analyzer verification code and click verify.
13. At the top of the page, click Perform Test.
   Running the test usually takes less than 30 seconds. When the test is complete, the analyzer displays a summary evaluating the sync connectivity for the Exchange user you’ve specified.
14. Take action based on the test results.
   • If the test summary displays “Connectivity Test Successful” or “Connectivity Test Successful with Warnings,” it’s likely that you’ve set up your service account correctly, and you’re ready to provide your service account credentials to Salesforce.
   • If the test summary displays “Connectivity Test Failed,” review the test details to troubleshoot setup issues. If the test continues to fail, verify that you’ve completed the previous setup steps correctly and then contact Salesforce Customer Support for help.

### Choosing an Email Integration Product

**Which Microsoft® Email Integration Product is Right for My Company?**

Compare Lightning for Outlook with our legacy products, Salesforce for Outlook and Email to Salesforce. Reviewing each product’s system requirements can help you determine which product—or combination of products—is the best fit for your company.

Whether you’re preparing to migrate from a retired product like Connect for Outlook, or considering Salesforce email integration for the first time, you’ll help your sales professionals streamline the work they do between their Microsoft-based email and Salesforce when you set up Lightning for Outlook, Salesforce for Outlook, or Email to Salesforce.

Each email integration feature is unique, and compatible with different Microsoft products. You can introduce just one of these features to your users—or a combination—depending on which best fits your company’s needs.

#### Sync Between Email Applications and Salesforce

Give your users the confidence that their records are up-to-date—whether users are working in their email application or in Salesforce. Depending on the combination of email integration products you choose, you can help users keep contacts, events, and tasks in sync between their Microsoft email and Salesforce. To set up your users to sync items, consider either Lightning Sync—the sync component for Lightning for Outlook—or Salesforce for Outlook sync.

</tbody>
</table>

Records in sync: The number of events that are syncing for this user. This user has this number of events syncing from Exchange to Salesforce. If this user reports difficulty syncing only some events, verify that the user is set up to sync events as expected in the user’s Lightning Sync configuration and that the user didn’t assign the private option to the event. Also remember that at this time, Lightning Sync doesn’t sync recurring events or invitees on events.
Experience Salesforce Directly from Email Applications

Set up your users to view and create Salesforce records, or add emails to Salesforce, without ever leaving their email applications. To set up your users to work with Salesforce records directly from their email, consider the Lightning for Outlook, the Salesforce for Outlook side panel, or Email to Salesforce.

Compare Microsoft Email Integration Products

Determine which features are best for you and your teams. First, compare the system requirements to learn which features are compatible with your company’s computing environment. Then, take a look at our feature overviews to learn what each feature does.

**Running Multiple Email Integration Features Simultaneously**

**Considerations for Running Lightning for Outlook and Salesforce for Outlook Simultaneously**

Depending on your company’s computing environment and the email integration solutions your users are looking for, you can set up features from both Lightning for Outlook and Salesforce for Outlook to meet those needs. Before you begin set up, get up to speed on the feature limitations you face and learn how Salesforce manages sync conflicts between the two systems.

Limitations for Running Lightning for Outlook and Salesforce for Outlook Simultaneously

While you can enable both Lightning for Outlook and the Salesforce for Outlook Side Panel in the same organization, users can’t run both Outlook integration features at the same time.

To prevent your users from juggling multiple email integration features at one time, Salesforce automatically disconnects the Salesforce for Outlook side panel when users connect to Lightning for Outlook. Folks who use Lightning for Outlook can still download, install, and sync with Salesforce for Outlook, but only Lightning for Outlook can run in Outlook.

How Lightning Sync Manages Sync Conflicts with Salesforce for Outlook

Learn how Salesforce manages sync conflicts when users are assigned to sync the same records for both features.

If you’re migrating your users from Salesforce for Outlook to Lightning Sync, or have set up your Lightning Sync users to use the Salesforce side panel, you’ll have assigned users to configurations for both products.

If you’ve assigned a user to sync the same records with conflicting settings in both an Outlook configuration and an Lightning Sync configuration, Salesforce automatically gives preference to the settings you’ve set for that kind of record in the Lightning Sync configuration.

Because Salesforce gives preference by record, not by configuration, there’s a chance that a user set up to sync through both features might end up syncing some kinds of records with Salesforce for Outlook, and some with Lightning Sync.

For example, if a user is assigned to sync contacts, events, and tasks in an Outlook configuration and contacts and events in an Lightning Sync configuration, then the users’ tasks would sync with Salesforce for Outlook, and the users’ contacts and events would sync with Lightning Sync.

Though Salesforce manages these conflicts for you, we recommend disabling Salesforce for Outlook sync settings for your Lightning Sync users.

This best practice prevents you from losing track of which users are syncing from each feature, in case your configuration settings become more complicated over time.

Note: You can set up your Lightning Sync users to work with their records from the Salesforce Side Panel, even though it’s a Salesforce for Outlook feature. You can set this up by adding those Lightning Sync users to an Outlook configuration with disabled sync, and enabling the Side Panel option on page 1578.

Other Features | Requirement
---|---
We don’t support using:
- IMAP and POP3 email servers
- Terminal servers, such as Citrix® servers
- Proxy Automatic Configuration files (.pac)

Installers | If you’re an administrator and plan to use the `.msi` installer, you may need to install the following tools:
---|---
- Microsoft .NET Framework 4.5.2, 4.6, or 4.6.1
- Microsoft Visual Studio® 2010 Tools for Office Runtime
- Primary Interop Assemblies (PIA) Redistributable for your version of Microsoft Outlook

Windows 7 `.msi` users must run the command prompt as an administrator and then launch the installer from the command line. For example: `msiexec /i SalesforceForOutlook.msi`.

Single Sign-On | We support using either:
---|---
- Delegated authentication
- Security Assertion Markup Language (SAML) with My Domain

We don’t support using a separate online identity provider for single sign-on.

### Outlook Configurations and Outlook Publisher Layouts

Help Salesforce for Outlook users easily maintain their records between Microsoft® Outlook® and Salesforce by creating separate settings for groups of users with different needs. To do so, from Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.

### Salesforce for Outlook Configurations

Salesforce for Outlook configurations include settings for the data that Salesforce for Outlook users can sync between Microsoft® Outlook® and Salesforce. Administrators can create separate configurations for different types of users, and give users permission to edit some of their own settings. For example, an opportunity team might want to sync everything, while a manager might want to sync only events.

In addition, you can set up your users to create, view, and work with Salesforce records directly in Outlook from the Salesforce Side Panel. The side panel allows users to easily add Outlook emails, events, and tasks to related Salesforce records. Here's how:

> **Using the Salesforce Side Panel to Work with Records in Microsoft® Outlook®**

### Outlook Publisher Layouts

Users can create accounts, cases, leads, opportunities, and even custom objects directly from the side panel using the side panel publisher. To set up your users to work with the side panel publisher, create the quick actions that you want to appear in your users’ publisher menus, add those quick actions to the appropriate publisher layouts, and assign the publisher layouts to the right users.

To create, edit, or delete configurations:
- “Manage Email Client Configurations”
Create Salesforce for Outlook Configurations

Before reps can start using Salesforce for Outlook, you define their experience by creating Outlook configurations. Outlook configurations define Salesforce for Outlook settings for reps, like which features reps have access to, and how reps’ records sync between Outlook and Salesforce. If you’d like to define unique settings for a subset of your sales team, create multiple Outlook configurations, and assign reps accordingly.

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.
2. Click New Outlook Configuration.
3. Enter a name and description of the configuration.
4. Select Active to activate the configuration.
5. Select Notify of product updates so that sales reps can see when upgrades for Salesforce for Outlook are available to download.
6. Depending on the experience you want your reps to have, define some or all these settings.
   - Assign users and profiles
   - Email-related options for the Salesforce Side Panel, as well as add email and create cases
   - Sync direction
   - Conflict behavior
   - Field mappings
   - Matching criteria
   - Modification permissions
   - Advanced settings
7. Click Save.
8. Define data sets.

When first time Salesforce for Outlook users log in to Salesforce from the Salesforce for Outlook setup wizard, these settings take effect immediately. Any changes you make to active Outlook configurations take effect the next time sales reps open Outlook.

SEE ALSO:
- Desktop-Based Salesforce for Outlook
- Salesforce for Outlook Configurations for Contact Manager and Group Editions
Assign Users to Salesforce for Outlook Configurations

After you define basic information for a Salesforce for Outlook configuration, you select the Salesforce for Outlook users that the configuration’s settings will apply to.

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.

2. If you’re modifying an existing Outlook configuration, click Edit next to the one that you want to modify. Otherwise, click New Outlook Configuration, and then complete the required fields.

3. In the Assign Users and Profiles section, select either Profiles or Users in the Search drop-down list.

4. If you don’t see the member you want to add, enter keywords in the search box and click Find.

5. Select members from the Available Members box, and click Add to add them to the group. If all available users are assigned to this configuration, the Users list is empty and you can only assign profiles.

6. To remove members, select those members and click Remove. If removed users are assigned to another active configuration through a profile, that other configuration is used the next time they open Outlook. Otherwise, removed users are unable to use Salesforce for Outlook.

7. Click Save. All changes take effect the next time data syncs for the users in this configuration. If you assign a user who is already assigned to a different configuration, that user is removed from the other configuration and assigned to this one. If an assigned user is also part of a profile assigned to another active configuration, the configuration that lists the user directly is used.

Create Salesforce for Outlook Configurations
Outlook Configurations and Outlook Publisher Layouts
Set Up Email Options for Salesforce for Outlook
Define Data Settings for Salesforce for Outlook

Data settings control the sync behavior and email functionality of Salesforce for Outlook. You can define the following settings using the Data Settings fields in a Salesforce for Outlook configuration.

- Email-related options for the Salesforce Side Panel, as well as add email and create cases
- Sync direction
- Conflict behavior
- Field mappings
- Matching criteria
- Modification permissions

Set Up Email Options for Salesforce for Outlook

Help your sales teams track important Microsoft® Outlook® emails related to Salesforce contacts and leads. And get those contacts and leads to appear directly in Outlook.

Enable the Salesforce Side Panel

Let your sales reps see Salesforce contacts and leads that are relevant to your reps' emails and events.

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.
2. If you're modifying an existing Outlook configuration, click Edit next to the one that you want to modify. Otherwise, click New Outlook Configuration, and then complete the required fields.
3. Select Side Panel.
4. Save your changes.

Let Side Panel Sales Reps Add Emails, Attachments, Events, and Tasks to Records

The Add Email setting lets them add Outlook emails and their attachments, events, and tasks to their Salesforce records directly from the side panel. You can also let your reps allow users to select attachments, which lets sales reps choose specific attachments to add to Salesforce, instead of automatically including them all.

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.
2. If you're modifying an existing Outlook configuration, click Edit next to the one that you want to modify. Otherwise, click New Outlook Configuration, and then complete the required fields.
3. Select Side Panel.
4. Select Add Email.
5. Save your changes.
6. To let reps choose specific attachments to add to Salesforce, select Allow users to select attachments.

**Let Users Who Aren’t Working in the Side Panel Add Emails and Attachments to Records**

For sales reps who don’t have the side panel enabled, the Add Email setting adds the Add Emails and Send and Add buttons to the Outlook ribbon. The setting also lets your reps add up to 10 emails simultaneously to Salesforce.

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.
2. If you’re modifying an existing Outlook configuration, click Edit next to the one that you want to modify. Otherwise, click New Outlook Configuration, and then complete the required fields.
3. Deselect Side Panel.
4. Select Add Email.
5. Save your changes.
6. If you don’t have My Email to Salesforce enabled, click Enable in the popup message to enable it.

**Let Users Who Aren’t Working in the Side Panel Create Cases from Outlook**

For sales reps who don’t have the side panel enabled, the Create Cases setting adds the drop-down list button to Outlook. The setting also lets your reps create Salesforce cases from Outlook emails. If you’ve enabled the side panel for your reps, you can give them access to the Side Panel Publisher. The publisher lets your reps create various kinds of Salesforce records directly from the side panel.

*Note:* Before you can enable the Create Case feature, review and complete the procedures in Set Up Create Case for Salesforce for Outlook Users on page 2014. Then, return to this topic to complete the following procedure.

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.
2. If you’re modifying an existing Outlook configuration, click Edit next to the one that you want to modify. Otherwise, click New Outlook Configuration, and then complete the required fields.
3. Clear the Side Panel option.
4. Select Create Case. Then, choose one of these links.
   - **Recommended:** Choose an Existing Create Case Destination, which lets you choose existing destinations. You can choose up to 10 destinations for each Outlook configuration.
   - **Create a New Create Case Destination.** To create one, save your work first, then create the destination. After that, return to the Outlook Configuration page to complete the Create Case setup requirements.
5. Save your changes.

Learn How Enabling Recurring Events Affects Users

Your Salesforce and API users can expect the following changes after you enable the Salesforce for Outlook Recurring Events feature.

<table>
<thead>
<tr>
<th>For</th>
<th>You should know that</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salesforce users</td>
<td>Changes made to a series don’t affect past events.</td>
</tr>
<tr>
<td></td>
<td>Changes made to the following fields in an event series override changes previously made to single events.</td>
</tr>
<tr>
<td></td>
<td>• Event start or end time</td>
</tr>
<tr>
<td></td>
<td>• All-day event</td>
</tr>
<tr>
<td></td>
<td>• Frequency</td>
</tr>
<tr>
<td></td>
<td>• Recurrence start date, if a user sends updates to invitees</td>
</tr>
<tr>
<td>API users</td>
<td>After users start syncing recurring events, the following read-only API objects appear in the API.</td>
</tr>
<tr>
<td></td>
<td>• EventRecurrenceException</td>
</tr>
<tr>
<td></td>
<td>• TaskRecurrenceException</td>
</tr>
</tbody>
</table>

In addition, if users change any of those fields, all events in the series are deleted and re-created. As a result, the status of all invitees is reset to Not Responded.

SEE ALSO:
- Set Up Email Options for Salesforce for Outlook
- Outlook Configurations and Outlook Publisher Layouts

Set Up Create Case for Salesforce for Outlook Users

The Create Case feature in Salesforce for Outlook lets users create cases in Salesforce from emails in Microsoft® Outlook®. As an administrator, you can create Email-to-Case destinations that appear in the drop-down list button Create Cases in Outlook. For each destination, you choose the assignee, which can be either individual users or queues. You can add up to 10 destinations for each Outlook configuration. When users create cases, they can add up to 10 emails simultaneously for each destination.

Before Salesforce for Outlook users can create cases from Outlook emails, you’ll need to perform the following procedures.

1. If you haven’t already done so, enable and configure On-Demand Email-to-Case.
2. Define Email-to-Case destinations (also known as email routing addresses).
3. Enable the Create Case feature in your configurations, which adds the Create Cases drop-down list button in Outlook.
Salesforce for Outlook assigns a category to the emails that Salesforce for Outlook users add as cases to Salesforce. This category, *Added to Salesforce as a case*, makes it easy for users to search for emails they added as cases to Salesforce.

### Define Sync Directions for Your Salesforce for Outlook Users

Set sync directions for sales reps who sync contacts, events, and tasks between Microsoft® Outlook® and Salesforce.

1. From Setup, enter *Outlook Configurations* in the Quick Find box, then select *Outlook Configurations*.
2. Create or edit a configuration, and select one of these sync directions under Data Settings for each object being synced.
   - *Don’t sync*—Outlook and Salesforce records aren’t synced, and you can’t select an Outlook folder to sync within the setup wizard.
   - *Salesforce to Outlook*—When data first syncs, a record in Salesforce creates or updates a record in Outlook. During future syncs, changes made to Salesforce records appear in Outlook, regardless of whether the Outlook version of the record has changed. In addition, deleting a synced record in Salesforce deletes its Outlook counterpart. Outlook changes are never sent to Salesforce. The required conflict behavior setting for this option is *Salesforce always wins*.
   - *Outlook to Salesforce*—During its first sync, a record in Outlook creates or updates a record in Salesforce. During future syncs, changes made to Outlook records appear in Salesforce, regardless of whether the Salesforce version has changed. In addition, deleting a synced record in Outlook deletes its Salesforce counterpart. Salesforce changes are never sent to Outlook. The required conflict behavior setting for this option is *Outlook always wins*. This option isn’t available for contacts.
   - *Sync both ways*—When records sync, changes to Outlook and Salesforce sync between the two systems. If records conflict, the conflict behavior setting determines which record wins.
3. Click *Save*. All changes take effect the next time data syncs for the users in this configuration.
4. Define a data set for each object that has a sync direction.

SEE ALSO:
- Outlook Configurations and Outlook Publisher Layouts
- Set Up Email Options for Salesforce for Outlook
- Create Salesforce for Outlook Configurations

Define Conflict Behavior for Salesforce for Outlook

Conflict behavior settings determine what happens when Salesforce for Outlook encounters a conflict when syncing data both ways. A conflict occurs when the same record is updated in both Salesforce and Outlook or when a record is updated on one side and deleted on the other.

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.
2. Edit a configuration, and select one of the following conflict behaviors under Data Settings for Contacts, Events, and Tasks.
   - Salesforce always wins
   - Outlook always wins
3. Click Save. All changes take effect the next time data synchronizes for the users in this configuration.

Customize the Fields That Sync Between Salesforce and Microsoft® Outlook®

Customize fields in the records that your sales reps sync using Salesforce for Outlook. Also add custom Outlook or Salesforce fields you want your reps to sync.

Field mappings define which Salesforce and Outlook fields correspond when items sync between the two systems. Salesforce comes with a set of default mappings. Decide whether to let your sales reps edit their own field mappings in their personal settings.

Map these custom field types.
- Outlook text fields
- Salesforce text fields
- Some Salesforce picklist fields

Edit default field mappings or set up custom field mappings for your reps.

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.
2. Select an Outlook Configuration you’d like to edit, or create a new one.
3. Under Data Settings, click Edit Field Mappings under Contacts, Events, or Tasks to display all the fields for records on that object.
4. Review which Salesforce fields are mapping to each Outlook field.
5. Edit the Salesforce or Outlook field mappings you’d like to change, or create mappings for custom fields. Salesforce for Outlook lets you edit any field mapping with a picklist. You can add more mappings at the bottom of the list. You can remove mappings by clicking the X next to the mapping.
**Warning:** If you map a custom field that is universally required, make sure that it has a default value to avoid errors. Also, mapping custom fields that require validation by Salesforce can cause sync errors. For example, you map a custom Salesforce field that requires a unique value. If you enter a non-unique value in the Outlook field, you receive a sync error.

6. Click **Save**. Field mappings begin syncing on items the next time those items are updated in either Salesforce or Outlook.

### Define Matching Criteria for Salesforce for Outlook

Define how Salesforce for Outlook handles multiple matching Salesforce contacts when a contact first syncs from Outlook.

1. From Setup, enter **Outlook Configurations** in the Quick Find box, then select **Outlook Configurations**.

2. Edit a configuration, and select one of these matching criteria options under Data Settings for contacts.
   - **Most recent activity**—Choose the Salesforce contact that shows the most recent activity (such as a phone call or email), as shown in the contact’s Activity History related list. This option is the default matching criteria.
   - **Last updated**—Choose the Salesforce contact that was most recently modified.
   - **Oldest**—Choose the Salesforce contact that has the earliest creation date.

3. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

If we don’t find a matching contact in Salesforce, we create one that syncs with the Outlook contact. We then either assign the synced contact to a Salesforce account, leave it unassigned, or place it in your sales rep’s My Unresolved Items page.

### EDITIONS

This feature available to manage from: both Salesforce Classic and Lightning Experience

Available in all editions

### USER PERMISSIONS

To view configurations:
- “View Setup and Configuration”

To create, edit, or delete configurations:
- “Manage Email Client Configurations”
Let Users Modify Salesforce for Outlook Settings

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.
2. Edit a configuration, and select any of the following options under Data Settings for each object being synced. You can allow users to modify:
   - Whether object is synced
   - Sync direction
   - Conflict behavior
   - Field mappings
3. Click Save. All changes take effect the next time data syncs for the users in this configuration.

You can overwrite users’ modifications any time by selecting Overwrite configuration changes made by users in a configuration. After you save the updated configuration, the new settings replace the existing settings for users of the configuration the next time their data syncs.

Assign Users’ Sync Folders in Microsoft® Outlook®

You can assign your Salesforce for Outlook users’ contact, event, and task sync folders in Outlook to simplify their setup process and keep sync folders consistent across your company. You can specify Outlook sync folders from Salesforce Outlook configurations.

By default, users can change the Outlook folders where their Salesforce contacts, events, and tasks sync from the Settings menu in their Salesforce for Outlook system tray. You can prevent users from changing their Outlook sync folders when you clear this default setting for contacts, events, and tasks, and assign specific Outlook sync folders from users’ Outlook configurations.

**Note:** Assigning Outlook sync folders might create Outlook directory folders for all of the users in your Outlook configuration. Salesforce for Outlook can’t remove Outlook sync folders from your users’ Outlook directories after they’ve been created. If you reassign a different folder later, the original folder remains in users’ local Outlook directories until users delete the folder.

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.
2. Open an Outlook configuration.
3. To assign a folder where users sync contacts, in Data Settings, deselect Outlook folder for syncing contacts on the Allow users to modify: setting.
4. In the text box that appears, type the name of the Outlook folder where you want your users’ contacts to sync with Salesforce. Type the name of a common folder that exists in the Outlook directory for each of your users, at the same directory level as the Outlook default contacts folder. Folder names are case sensitive. If you type the name of a folder that doesn’t exist at that level for each user, Salesforce creates the folder in Outlook for those users. To have Salesforce for Outlook sync with a nested Outlook folder, type a filepath, including backslashes (\). For example, to assign the Outlook folder “sfdc_sync_contacts” as a nested directory under your users’ default Outlook contacts folder, type Contacts\sfdc_sync_contacts in the Outlook folder for syncing contacts text box.

**EDITIONS**

This feature available to manage from: both Salesforce Classic and Lightning Experience

Available in all editions

**USER PERMISSIONS**

To view configurations:
- “View Setup and Configuration”

To create, edit, or delete configurations:
- “Manage Email Client Configurations”

**EDITIONS**

Available for set up in: both Salesforce Classic and Lightning Experience

Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions

**USER PERMISSIONS**

To create and edit Outlook configurations:
- “Configure Application”
where $Contacts$ is your users’ default contacts folder, and $sfdc_sync_contacts$ is the folder where you want your users’ Salesforce contacts to sync.

If the folder exists in your users’ Outlook directories, Salesforce for Outlook syncs your contacts with it. If the folder doesn’t exist, Salesforce for Outlook creates a folder at “Contacts\sfdc_sync_contacts.”

5. Click **Save**.

6. Instruct your users to save their Salesforce for Outlook settings again to confirm the changes that you’ve made to their systems. To do so, instruct your users to:
   a. In the settings wizard, right-click the Salesforce for Outlook icon () in their system tray, and then click **Settings**.
   b. Click **Next** from Review Your Sync Direction.
   c. Click **Next** from Control Which Outlook Items Sync.
   d. Click **Save** from Syncing Private Items.

   Salesforce for Outlook locates Outlook folders that exist in your users’ Outlook directories or creates them for your users.

7. Instruct your users to move the Outlook contacts that they want to sync to the folder that you specified.

To change the Outlook folder locations where users sync events and tasks with Salesforce, repeat steps 3 through 7 in the events and tasks sections.
Define Advanced Settings for Salesforce for Outlook

Use advanced settings in a Salesforce for Outlook configuration to customize the default behavior of Salesforce for Outlook, such as setting the maximum size of the sync log. Click **Edit** to change the value of an advanced setting or **Remove** to remove it from the configuration.

1. From Setup, enter **Outlook Configurations** in the Quick Find box, then select **Outlook Configurations**.
2. If you’re modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.
3. Click **Add Advanced Setting** in the Advanced Settings section of an Outlook configuration.
4. Choose one of these settings and enter a value.

<table>
<thead>
<tr>
<th>Advanced Setting</th>
<th>This setting indicates</th>
</tr>
</thead>
<tbody>
<tr>
<td>HTTPTimeout</td>
<td>The number of seconds Salesforce for Outlook waits while trying to establish an HTTP connection with Salesforce. The value must be between 15 and 360 seconds, and the default is 30.</td>
</tr>
<tr>
<td>MaxLogFileSize</td>
<td>The maximum file size of the sync log you’ll maintain. Value must be between 1 and 128 MB, and the default is 1.</td>
</tr>
<tr>
<td>MaxRetries</td>
<td>The number of times Salesforce for Outlook tries to connect to Salesforce. The value must be between 0 and 10, and the default is 3.</td>
</tr>
</tbody>
</table>

5. Click **OK**.
6. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

Set Up Reps to Create Records Directly from the Salesforce Side Panel

If your sales team generates prospects while they’re working in Microsoft® Outlook®, set up reps to use the Salesforce Side Panel Publisher so they can create accounts, cases, leads, opportunities, and even custom objects directly from the side panel.

Here’s how it looks.

Your Salesforce edition determines which side panel features your reps can access and how you set up reps to use the side panel publisher.

1. Verify that you’ve set up Create a Record global quick actions for each action you want to be available in your reps’ side panel publisher menus.

2. Add the actions to the appropriate publisher layout.
   - For Contact Manager or Group Editions, add global quick actions to your reps’ side panel publisher menus with the global publisher layout editor. Any global quick actions you add to the side panel are displayed for all features you’ve configured that leverage global quick actions. The side panel publisher, however, displays only actions with the action type Create a Record.
   - For Professional, Enterprise, Performance, Unlimited, or Developer Editions, add global quick actions to your reps’ side panel publisher menus with the side panel publisher layout editor. You can create multiple side panel publisher layouts to give different reps access to different side panel publisher menus.

3. Assign side panel publisher layouts to your reps.
   - For Contact Manager or Group Editions, assign your global publisher layout to user profiles to give reps access.
   - For Professional, Enterprise, Performance, Unlimited, or Developer Editions, assign your side panel publisher layout to user profiles to give reps access.

SEE ALSO:
- Create Quick Actions for the Salesforce Side Panel Publisher
- Customize Side Panel Publisher Menu Layouts for Different Salesforce for Outlook Users
- Assign Global Publisher Layouts to User Profiles
- Assign Salesforce Side Panel Publisher Layouts to User Profiles
- View Salesforce Records in Microsoft® Outlook®
Create Quick Actions for the Salesforce Side Panel Publisher

Take the first step in preparing your Salesforce for Outlook users to create records directly from the Salesforce Side Panel. You’ll set up Create a Record global quick actions for each kind of record you want to appear in users’ Side Panel Publisher menus.

The Salesforce Side Panel Publisher is a menu that lets users create accounts, cases, contacts, leads, opportunities or custom objects records directly from the side panel. You’ll choose which quick actions appear in users’ side panel publisher menus by creating global Create a Record actions for each kind of record.

**Note:** You can use global actions for several types of publisher menus found in Salesforce, like the ones for the Home page or the Chatter tab. If you’ve already set up global Create a Record actions for the kinds of records you want available to your users, there’s no need to set up the actions again—you’ll find these actions already available to add to all publisher layouts.

If you haven’t created global Create a Record actions for the kinds of records you want available to your users, you’ll have to do so now.

1. From Setup, enter Global Actions in the Quick Find box, then select Global Actions.
2. Click New Action.
3. Select Action Type Create a Record.
   Only Create a Record actions appear in the side panel publisher menu.
4. Select a Target Object for the type of record you want available to users with this action.
   If the Target Object requires a Record Type, make sure that the users you’ll assign to this action also have access to that record type.
5. Enter a Label for the new action that tells your users what it does.
6. Click Save.
7. From the Action Layout Editor, drag the fields you want to appear on the side panel publisher record detail page.
   If any of these fields are marked as required for this type of record elsewhere in your organization, make sure to include the fields in this action, too. This is because Salesforce won’t let your users save records from the side panel publisher if the required fields aren’t included in the record detail. The action layout editor displays red asterisks next to required fields.

After creating your Create a Record actions, the next step to setting up the side panel publisher for your users is to add your global actions to the appropriate side panel publisher layout. For Contact Manager or Group Editions, add global quick actions to your reps’ side panel publisher menus with the global publisher layout editor. For Professional, Enterprise, Performance, Unlimited, or Developer Editions, add global quick actions to your reps’ side panel publisher menus with the side panel publisher layout editor.

SEE ALSO:
- Set Up Reps to Create Records Directly from the Salesforce Side Panel
- Customize Side Panel Publisher Menu Layouts for Different Salesforce for Outlook Users
Customize Side Panel Publisher Menu Layouts for Different Salesforce for Outlook Users

Take the second step in preparing your Salesforce for Outlook users to create records directly from the Salesforce Side Panel. Set up different side panel publisher menus for specific users by customizing multiple publisher layouts with different sets of global quick actions.

Before you can customize side panel publisher layouts for your users, make sure you set up Create a Record global quick actions for each kind of record you want to appear in users’ side panel publisher menus.

Some Salesforce editions let you create multiple publisher layouts so that users with different job responsibilities can have access to publisher menus with different sets of quick actions. This lets different types of users create only the records that apply to their job responsibilities. For example, sales representatives may need to create only contacts and opportunities, but sales managers may need to create contacts, opportunities, cases, and leads.

You can set up different side panel publisher menus for sales representatives and sales managers by customizing publisher layouts with specific sets of global actions for the different groups of users.

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.
2. From the Outlook Publisher Layouts related list, click New. Give your new layout a name, and then click Save.
3. From the Outlook Configurations page, click Edit to add the global actions to your new layout.
4. From the Outlook Side Panel Publisher Layout Editor, drag the global actions you want to use into the Quick Actions in the Salesforce Classic Publisher section. For help using the publisher layout editor feature, see Add Actions to Global Publisher Layouts.

After you add actions to a publisher layout, the final step to setting up the side panel publisher for users is to give them access by assigning publisher layouts to the appropriate user profiles. For Contact Manager or Group Editions, assign your global publisher layout to user profiles to give reps access. For Professional, Enterprise, Performance, Unlimited, or Developer Editions, assign your side panel publisher layout to user profiles to give reps access.

SEE ALSO:
- Set Up Reps to Create Records Directly from the Salesforce Side Panel
- Assign Global Publisher Layouts to User Profiles
- Assign Salesforce Side Panel Publisher Layouts to User Profiles
Assign Salesforce Side Panel Publisher Layouts to User Profiles

Some Salesforce editions let you customize multiple side panel publisher menu layouts so that users with different job responsibilities can create different kinds of records directly from the Salesforce Side Panel. After you’ve created your layout, give your users access to the layout by assigning it to their user profiles.

For Contact Manager or Group Editions, assign your global publisher layout to user profiles to give reps access. For all other editions, you can assign Salesforce Side Panel Publisher Layouts by following these steps.

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.
2. From the Outlook Publisher Layouts related list, click Publisher Layout Assignment > Edit Assignment.
3. Select a user profile by clicking anywhere on its row in the table.
4. From the Publisher Layout to Use drop-down, select the layout that you want to assign to the highlighted profile.
5. Click Save.

Define Data Sets for Salesforce for Outlook

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records sync. Each configuration must have a data set in order for users to sync with Outlook.

The Outlook Configuration detail page shows a summary of the configuration’s current filters.

Note: If your company uses Platform Encryption, you can’t set filters on fields you’ve encrypted. Otherwise, Salesforce for Outlook can’t sync contacts, events, or tasks for users assigned to that configuration.

1. From Setup, enter Outlook Configurations in the Quick Find box, then select Outlook Configurations.
2. Click the name of an Outlook configuration.
3. In the Data Sets related list, click Edit.
4. Specify filters.
5. To see how many items sync with the filters you’ve specified, you can check the data set size.
6. Click Save.

Learning about Data Sets for Salesforce for Outlook

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records sync.

Knowing What Syncs

Salesforce for Outlook syncs records based on definitions in data sets, along with records related to them.

Understanding Limits to Data Sets

When using data sets, users can sync up to 5,000 records per filter between Microsoft Outlook and Salesforce at a time. This means that if users have more than 5,000 records to sync based on the configuration of their data sets, Salesforce for Outlook won’t sync some of them. In addition, users may find that syncing these large quantities of records may slow down the sync process. You can, however, increase the limits for the number of records users can sync. Just keep in mind that you can’t reduce the likelihood of the sync process slowing down.

Increasing Limits to Data Sets

If your users are working with more than 5,000 records, you can configure their data sets so that they can sync larger quantities of records. To do this, you’ll first edit data sets to include additional filters. For example, under Filter By Record Ownership in the Contact Filters section, choose Selected Contacts. Then, choose User’s Records under Contacts, Contacts on Opportunities, and Contacts on Accounts. Because the data set now has three filters, your users can now sync up to 15,000 contact records.

Keep in mind that these various filters you set up won’t necessarily select records that are mutually exclusive. Therefore, the sync process might not sync exactly 15,000 records. To avoid this situation, you can further refine the group of contacts you want to sync. Just define additional parameters under Filter By Additional Objects and Fields.

After defining the filters, you can get a record count for your users in the Data Set Size section. To do so, enter a user, and then click Get Record Count. If your users still exceed sync limits for the filters you set up, you may find that the sync process selects records in a random fashion.

About Person Accounts

If your organization enabled person accounts and your users have more than 5,000 records in Salesforce, data sets work in a different way. Specifically, Salesforce runs a query first on person accounts that match filter criteria, and then on contacts assigned to these accounts. So it’s possible for the sync process to reach the 5,000 record limit (including person accounts and contacts) and not include some of the contacts your users would expect to sync.

- To filter contacts by opportunity teams: **“Opportunity Team Selling”**
- To filter contacts by account teams: **“Account Teams”**
- To create, edit, or delete data sets: **Sync Direction can’t be Don’t sync**

**EDITIONS**

This feature available to manage from: both Salesforce Classic and Lightning Experience

Available in all editions

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records sync. For example, you may want to let certain users sync all contacts, but let other users sync only contacts related to their opportunity teams. In addition, you can filter by the fields in the records, such as letting users sync only contacts related to specific accounts and opportunities.

The Outlook Configuration detail page shows a summary of the configuration’s current filters.

**Note:** If your company uses Platform Encryption, you can’t set filters on fields you’ve encrypted. Otherwise, Salesforce for Outlook can’t sync contacts, events, or tasks for users assigned to that configuration.

1. Define a data set for a configuration.
2. Under Filter By Record Ownership, specify the contacts users can sync.
3. If you choose Selected Contacts, you can further limit which contacts users sync.

<table>
<thead>
<tr>
<th>For</th>
<th>To allow users to sync</th>
<th>Select</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contacts</td>
<td>All contacts that they own</td>
<td>User's Records</td>
</tr>
<tr>
<td></td>
<td>All contacts they and their subordinates in the role hierarchy own</td>
<td>User's Team's Records</td>
</tr>
<tr>
<td>Contacts on Opportunities</td>
<td>Contacts related to their opportunities</td>
<td>User's Records</td>
</tr>
<tr>
<td></td>
<td>Contacts related to opportunities that they and their subordinates in the role hierarchy own</td>
<td>User's Team's Records</td>
</tr>
<tr>
<td></td>

Sample Lightning Sync and Salesforce for Outlook Data Sets

Salesforce for Outlook Contact Filters

Contact filters control the number of records that Salesforce for Outlook users can sync between Outlook and Salesforce. Note the following when using contact filters.

• The criteria you specify are AND based. That is, if you specify more than one criterion, the result includes only records that match all of the criteria.

• If entering a date, use the format allowed by your Locale setting. You can also use special date values like TODAY, NEXT WEEK, NEXT YEAR, LAST <number> DAYS, and so on.

• Place quotation marks around numbers or other data that includes commas. For example, Amount equals "10,000" returns records that have an amount of $10,000 but Amount equals 10,000 returns $10,000 as well as $10 and $0.

• When you use the “less than,” “greater than,” “less or equal,” or “greater or equal” operators on fields that have numeric values, records with blank or “null” values are returned as if their value is zero (0).

• To limit results to records that are blank or contain “null” values for a particular field, choose the field and the “equals” or “not equal to” operators, leaving the third field blank. For example, Amount equals returns records with blank amount fields. You can search for blank values or other specified values at the same time. For example, Amount equals 1,,2 returns records where the Amount is blank or contains the value “1” or “2”. For example, if you create a workflow a filter for accounts with the criteria Annual Revenue less than 100000, account records match if their Annual Revenue is blank.

• To search for phone numbers, include the exact phone number formatting or example, Phone starts with (561).

• Separate search terms by commas to filter by more than one value. You can enter up to 80 characters, including commas and spaces. For example, to search for accounts in California, New York, or Washington, use State contains CA,NY,WA.

• When you filter on standard long text area fields, such as Description, only the first 1000 characters of the field are searched.

• You can use the Get Record Count button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration’s filters.

• If you need to reference user information in your contact filters, you can add the following merge fields to them.

<table>
<thead>
<tr>
<th>Merge Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>$User.ID</td>
<td>References the ID of the current user. This merge field can be applied to fields that contain a user lookup. The valid operators for this merge field are Equals and Not Equal To. When creating</td>
</tr>
</tbody>
</table>
### Merge Field

<table>
<thead>
<tr>
<th>Merge Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>$User.ID</td>
<td>mobile view filters that reference an owner field, you can only use the $User.ID merge field.</td>
</tr>
<tr>
<td>$User.Username</td>
<td>References the username of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.</td>
</tr>
<tr>
<td>$User.Firstname</td>
<td>References the first name of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.</td>
</tr>
<tr>
<td>$User.Lastname</td>
<td>References the last name of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.</td>
</tr>
<tr>
<td>$User.Fullname</td>
<td>References the first and last name of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.</td>
</tr>
</tbody>
</table>

SEE ALSO:

- Define Data Sets for Salesforce for Outlook
- Check the Size of Salesforce for Outlook Data Sets
Enter Event Filters for Lightning Sync and Salesforce for Outlook

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records sync. For example, most users may sync only current and future events, while some users may need to also sync past events. Salesforce for Outlook syncs events based on their end dates rather than their start dates. For example, if you’re syncing current and future events only, a two-day event that started yesterday still syncs.

The Data Sets section of the Outlook Configuration detail page shows a summary of the configuration’s current event filters.

1. Define a data set for a configuration.

2. Under Events, enter one of these filters in the Greater or equal to field.
   - **TODAY**—Syncs events that end on or after today. The start time is 12:00 a.m.
   - **LAST MONTH**—Syncs events that ended on or after the first day of last month.
   - **LAST N DAYS**—Syncs events that ended on or after a specified number of days ago, such as **LAST 30 DAYS**.

3. You can use the Get Record Count button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration’s filters.

4. Save the data set.

**Note:** The following items don’t sync: all-day events beginning on the first day you’re configured to sync, and event attendees. Multiday events sync as single events in either direction. Multi-day events do sync.

SEE ALSO:
- Sample Lightning Sync and Salesforce for Outlook Data Sets

Create Task Filters for Salesforce for Outlook

Specify which tasks sync between Microsoft® Outlook® and Salesforce for your sales teams. Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records sync. For example, most users may sync past-due tasks, while other users sync only current and future tasks. Salesforce for Outlook syncs tasks based on their due dates rather than their start dates. For example, if you're syncing current and future tasks only, a task that started yesterday still syncs.

The Data Sets section of the Outlook Configuration detail page shows a summary of the configuration's current task filters.

1. **Define a data set** for a configuration.

2. **Under Tasks**, enter one of these filters in the *Greater or equal to* field.
   - **TODAY**—Syncs tasks that are due on or after today. The start time is 12:00 a.m.
   - **LAST MONTH**—Syncs tasks that were due on or after the first day of last month.
   - **LAST N DAYS**—Syncs tasks that were due on or after a specified number of days ago, such as **LAST 30 DAYS**.

3. **Choose** whether recurring Salesforce tasks sync to Outlook.

![Image of Task Filters]

4. You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration’s filters.

5. **Save** the data set.

**Note:** Salesforce for Outlook doesn’t sync every kind of task. These kinds of tasks never sync:

- Recurring Outlook tasks to Salesforce
- Completed tasks, if marked as completed before Salesforce for Outlook syncs
- Tasks created automatically when you flag an email or contact for follow-up

**SEE ALSO:**

**EDITIONS**

This feature available to manage from: both Salesforce Classic and Lightning Experience

**Available in all editions**

**USER PERMISSIONS**

To view configurations:
- “View Setup and Configuration”

To create, edit, or delete configurations:
- “Manage Email Client Configurations”

To create, edit, or delete data sets:
- **Sync Direction can't be Don’t sync**
Sample Lightning Sync and Salesforce for Outlook Data Sets

Because users with the same role usually have similar data sync requirements, many administrators create sync configurations based on the positions in their organization. Below are sample data sets for common Salesforce groups. Your Salesforce for Outlook and Lightning Sync users have unique needs, but you can use these examples as a reference to help you get started creating Outlook configurations (for Salesforce for Outlook users) and Lightning Sync configurations (for Lightning Sync users).

Sales Manager

Sales managers usually need to see records they own and the records of the users who report to them. In addition, they need to see the latest contact information for anyone associated with large deals in the pipeline and any upcoming meetings that might be related to these deals. They may also like to have their Chatter contacts in Outlook.

Sample Outlook Configuration for Sales Managers:

<table>
<thead>
<tr>
<th>Contacts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contacts: User's Records, User's Team's Records</td>
</tr>
<tr>
<td>Contacts on Opportunities: User's Team's Records</td>
</tr>
<tr>
<td>Contacts on Accounts: User's Team's Records</td>
</tr>
<tr>
<td>Contacts in Chatter: Records User is Following</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Events</th>
</tr>
</thead>
<tbody>
<tr>
<td>Events: User's Records</td>
</tr>
<tr>
<td>Date greater or equal TODAY</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Tasks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tasks: User's Records</td>
</tr>
<tr>
<td>Date greater or equal TODAY</td>
</tr>
</tbody>
</table>

Sales Engineer

Sales Engineers often only need the contacts owned by them and the other members of their opportunity teams. They may also want their Chatter contacts, a record of the past month’s meetings, and a schedule of all future meetings.

Sample Outlook Configuration for Sales Engineers:

<table>
<thead>
<tr>
<th>Contacts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contacts: User's Records</td>
</tr>
<tr>
<td>Contacts on Opportunities: User's Opportunity Teams' Records</td>
</tr>
<tr>
<td>Contacts in Chatter: Records User is Following</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Events</th>
</tr>
</thead>
<tbody>
<tr>
<td>Events: User's Records</td>
</tr>
<tr>
<td>Date greater or equal LAST MONTH</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Tasks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tasks: User's Records</td>
</tr>
<tr>
<td>Date greater or equal LAST MONTH</td>
</tr>
</tbody>
</table>

Account Executive

Account executives need to see contacts related to their accounts and opportunities. The opportunities are filtered so only contacts related to open opportunities with a probability over 40% sync. They’d also like to sync their Chatter contacts, all future meetings, and all meetings from the last two months.
Sample Outlook Configuration for Account Executives:

Contacts
- Contacts on Opportunities: User's Records
  - (Probability (%) greater than 40) AND (Stage not equal to Closed Won, Closed Lost
- Contacts on Accounts: User's Records
- Contacts in Chatter: Records User is Following

Events
- Events: User's Records
  - Date greater or equal LAST 60 DAYS

Tasks
- Tasks: User's Records
  - Date greater or equal LAST 60 DAYS

Check the Size of Salesforce for Outlook Data Sets

You can use the Get Record Count button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration’s filters. If the numbers are too high or low, you can adjust the filters and check the size again. The maximum record count is 5000 per object.

1. Define a data set for a configuration.
2. Under Data Set Size, click the lookup icon next to the User field.
3. Select a user. To test maximum size, choose a user who owns a lot of records, even one who may not be currently assigned to the configuration.
4. Click Get Record Count. The number of records that would sync between Outlook and Salesforce for that user appear.
5. Adjust the filters or selected user and retest the data set as needed. Nothing is saved until you click Save.

Uninstalling Connect for Outlook

Connect for Outlook (Retired)

Before you get interested in our retired, legacy Connect for Outlook product, we urge you to explore either our cloud- or desktop-based Microsoft integration products: Lightning for Outlook or Salesforce for Outlook.

⚠️ Important: Effective Winter ’16, we retired Connect for Outlook. This means the product no longer saves your emails or syncs your contacts, events, and tasks between Microsoft® Outlook® and Salesforce.

But don’t worry! Become even more productive when you migrate to either Lightning for Outlook or Salesforce for Outlook. Team up with your Salesforce administrator to determine which product is best for you and your colleagues.

Connect Offline

Desktop Client Access

Connect Offline and Connect for Office are desktop clients that integrate Salesforce with your PC. As an administrator, you can control which desktop clients your users can access as well as whether users are automatically notified when updates are available.

To set permissions for Salesforce for Outlook, use the “Manage Email Client Configurations” permission.

You can set users’ access to desktop client by editing their profiles.

The desktop client access options are:

<table>
<thead>
<tr>
<th>Option</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off (access denied)</td>
<td>The respective client download page in users’ personal settings is hidden. Also, users can’t log in from the client.</td>
</tr>
<tr>
<td>On, no updates</td>
<td>The respective client download page in users’ personal settings is hidden. Users can log in from the client but can’t upgrade it from their current version.</td>
</tr>
<tr>
<td>On, updates w/o alerts</td>
<td>Users can download, log in from, and upgrade the client, but don’t see alerts when a new version is made available.</td>
</tr>
<tr>
<td>On, updates w/alerts</td>
<td>Users can download, log in from, and upgrade the client. They can see update alerts, and can follow or ignore them.</td>
</tr>
<tr>
<td>On, must update w/alerts</td>
<td>Users can download, log in from, and upgrade the client. When a new version is available, they can see an update alert. They can’t log in from the client until they have upgraded it.</td>
</tr>
</tbody>
</table>

Connect Offline is the only client available with Developer Edition. In Personal, Group, and Professional Editions, all users have the system default “On, updates w/o alerts” for all clients.

Note:
- Desktop client access is available only for users whose profiles have the “API Enabled” permission.

If users can see alerts and they have logged in to Salesforce from the client in the past, an alert banner automatically appears in the Home tab when a new version is available. Clicking the banner opens the Check for Updates page, where users can download and run installer files. From their personal settings, users can also access the Check for Updates page, regardless of whether an alert has occurred.

SEE ALSO:
- Personalize Your Salesforce Experience
Install Connect Offline

Allocating Connect Offline Licenses
For Salesforce orgs using Professional, Performance, Unlimited, Enterprise, and Developer Editions, Salesforce provides one Connect Offline license for each Salesforce license. Users without a Connect Offline license can use for a 30-day trial period.

To allocate a Connect Offline license to a user within your organization, edit the user’s record and select the Offline User checkbox. Users must have this checkbox selected to use Force.com Connect Offline.

Verifying System Requirements
The system requirements for Connect Offline are:

- Microsoft® Internet Explorer® 6, 7, or 8 (We don’t support other browsers, including Mozilla® Firefox®, Apple® Safari®, and Google Chrome™.)
- Microsoft Windows® 2000, Windows XP, Windows Vista®, or Windows 7
  
  Note: The 32-bit version of Internet Explorer 8 with its Compatibility View option is required for the 64-bit version of these operating systems.

- 256 MB of RAM (512 MB recommended)
- 20 MB of disk space minimum (250 MB recommended depending on the size of the briefcase)
- Intel® Pentium® II processor, 500 MHz or above

Installing an Individual Client
To download and install the Connect Offline client:

1. From your personal settings, enter Connect Offline in the Quick Find box, then select Connect Offline.
2. Click Install Now.
   
   Note: You must have administrator privileges on the computer on which you install Connect Offline.

3. Click Yes when prompted to install and run the client.
4. Follow the prompts in the setup wizard to complete the installation.
5. Log in to Connect Offline to verify the installation.

Deploying Connect Offline System-Wide
If your organization uses Windows, network administrators can install Connect Offline on several machines at once. For mass deployments, go to the Connect Offline page in your personal settings and click the link to download the zipped MSI package.

Tip: The login history lists the version of Connect Offline that each user is using.
Updating Connect Offline
Salesforce periodically releases Connect Offline updates and notifies users according to settings in their user profiles.

Sample Offline Data Sets
Many administrators create briefcase configurations based on the functional groups in their organization because users in the same group usually have similar offline requirements for data. Below are sample data sets for common Salesforce groups. Your Connect Offline users have unique needs, but you can use the examples as a reference to help you get started with data sets in briefcase configurations.

Sales Manager
Sales managers usually need to see records they own and also the records of their subordinates. They also tend to closely monitor large deals in the pipeline.

This briefcase configuration allows sales managers to see:
- The opportunities they own
- The opportunities owned by users who report to them in the role hierarchy
- All opportunities scheduled to close in the current quarter with an amount greater than $100,000
- All accounts related to the opportunities
- A subset of their contact and activity records

**Sample Briefcase Configuration for Sales Managers**

<table>
<thead>
<tr>
<th>Object</th>
<th>Ownership Filter</th>
<th>Field Filter</th>
<th>Max Records</th>
<th>Order By</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opportunity</td>
<td>Users Team's Records</td>
<td>(Close Date equals THIS QUARTER) AND (Amount greater than &quot;$100,000&quot;)</td>
<td>No Limit</td>
<td></td>
</tr>
<tr>
<td>Account</td>
<td>All Records</td>
<td></td>
<td>No Limit</td>
<td></td>
</tr>
<tr>
<td>Contact</td>
<td>Users' Records</td>
<td></td>
<td>No Limit</td>
<td></td>
</tr>
<tr>
<td>Task</td>
<td>Users' Records</td>
<td>Closed equals False</td>
<td>500</td>
<td>Last Activity (Descending)</td>
</tr>
<tr>
<td>Event</td>
<td>All Records</td>
<td>Date equals TODAY OR Date equals NEXT 30 DAYS</td>
<td>No Limit</td>
<td></td>
</tr>
</tbody>
</table>

Sales Engineer
The sales engineer briefcase configuration retrieves opportunities owned by the other members of the user’s opportunity team, but does not include the user’s records. The sales engineer briefcase configuration is opportunity-based because all accounts and contacts included in the briefcase are related to the opportunities. The sales engineers would see:
- Up to 5000 opportunities they own and up to 5000 opportunities that list them on the opportunity team. These opportunities must be either open or have a close date in the current month, the past two months, or up to 24 months in the future. If more than 5000 opportunities exist, the 5000 most recently modified records are synchronized.
- All accounts, contacts, and opportunity products related to those opportunities
• A subset of tasks and events related to those opportunities

Sample Briefcase Configuration for Sales Engineers

<table>
<thead>
<tr>
<th>Object</th>
<th>Ownership Filter</th>
<th>Field Filter</th>
<th>Max Records</th>
<th>Order By</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opportunity</td>
<td>User’s Sales Team’s Records</td>
<td>Closed equals False</td>
<td>No Limit</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Account</td>
<td>All Records</td>
<td>No Limit</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Contact</td>
<td>All Records</td>
<td>No Limit</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Task</td>
<td>All Records</td>
<td>No Limit</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Event</td>
<td>All Records</td>
<td>No Limit</td>
<td></td>
</tr>
<tr>
<td>Task</td>
<td>User’s Records</td>
<td>Closed equals False</td>
<td>No Limit</td>
<td></td>
</tr>
<tr>
<td>Event</td>
<td>User’s Records</td>
<td>Date equals TODAY OR Date equals NEXT 30 DAYS</td>
<td>No Limit</td>
<td></td>
</tr>
</tbody>
</table>

Account Executive

The account executive briefcase configuration is account-based, which means the briefcase includes the user’s accounts and opportunities related to those accounts. The opportunities are filtered so that only open opportunities scheduled to close in the current quarter are synchronized. The Task and Event child data sets retrieve all activities related to those opportunities, not just the user’s activities. Only open tasks and events from a two-month window are sent to the briefcase. The Task and Event parent data sets pull down just the user’s activities and restrict the activities to open tasks and events scheduled for the next 30 days. The Contact data set delivers the user’s contact records, but limits the record count to the 500 most recently active contacts.

Monitoring Email

What Are Email Logs?

Email logs are CSV files that contain information about all email sent through Salesforce over the last 30 days. Logs contain data such as:

- The email address of each email sender and recipient
- The date and time each email was sent
- The delivery status of each email
- Any error code associated with each email

You can use email logs to troubleshoot encountered errors.

To manage email logs, from Setup, enter Email Log Files in the Quick Find box, then select Email Log Files.

- To request a new email log, click Request an Email Log. Due to the volume of email processed through Salesforce, requests are queued in the order that they are received. Email logs should be available within 30 minutes of your request.
- The pending email log requests list provides the status on email log requests that have not yet completed. You can have a maximum of three pending log requests at any time.
- The email log errors list provides descriptions for requests that failed.
  - To resubmit a request that failed, click Resubmit.
  - To delete a request that failed, click Del.

⚠️ Warning: You cannot resubmit a failed request if it requires data that has exceeded the 30 day limit, or if you already have three pending requests.

- To download an email log, click Download (.zip). Email logs are CSV files contained within a compressed file that contains a maximum of 100,000 records. Since email log requests return up to 500,000 records, there may be up to five .zip files to download. Logs contribute to your overall file storage limits.
- To delete an email log, click Del.

For a summary of the information returned from an email log, see Viewing Email Logs on page 2041.

Requesting an Email Log

To request a new email log for your organization:

1. From Setup, enter Email Log Files in the Quick Find box, then select Email Log Files.
2. Click Request an Email Log.
   
   You can have a maximum of three pending log requests at one time. If you already have three pending requests, you cannot request another log until at least one of those requests completes.
3. Enter a Start Time and End Time range for the email log you want to retrieve. Email logs are available for messages sent within the past 30 days prior to your request.

⚠️ Note: Each email log can span a maximum of seven days. To see email log data from a period of time greater than seven days, create multiple requests.
4. Optionally, you can filter an email log to only include rows where a specific domain name or email address appears in a field, such as Recipient or Message ID Header. To enter more than one filter term, separate each value with a comma. If you leave this field blank, the log is not filtered and all email addresses are returned within the specified time range.

5. Enter the email addresses that you want to receive notification when the email log request is complete. Separate each email address with a comma.

To clear a request and return to the email log overview page, click Cancel.

</table>

In addition, there are responses that may appear at any point during the delivery sequence:

- **while not connected**: The client is trying to establish a connection
- **while idle**: The client has connected, but is not sending or receiving any commands
- **reading confirmation**: A command was sent and the client is waiting for a response
- **handshaking TLS**: An error occurred while trying to establish a secure connection
- **out of band bounce**: The receiving server accepted a command, but then for an unknown reason rejected it
- **in unknown state**: An unknown error has occurred

<td>Delivery Status Notification</td>
<td>After every delivery stage, a three-digit response code is sent from the mail server. The first number indicates whether the command was successful or unsuccessful; the second digit indicates the type of error; and the third provides additional information to resolve the potential problem. The five possible values of the first digit are: 1xx - Positive Preliminary reply: The command was accepted, but no response has been sent. 2xx - Positive Completion reply: The requested action has successfully completed. 3xx - Positive Intermediate reply: The command was accepted, but the requested action needs more information. 4xx - Transient Negative Completion reply: The command was not accepted and the requested action did not occur. However, the error condition is temporary and the action may be requested again. 5xx - Permanent Negative Completion reply: The command was not accepted and the requested action did not occur. Every email service provider implements the codes differently, so there is no comprehensive list for what the second or third digits indicate.</td>
<td>421 no adequate servers</td>
</tr>
</tbody>
</table>
Troubleshoot with Inbound Email Snapshots

Take a snapshot of inbound email messages so you can more easily troubleshoot inbound email errors.

Inbound email snapshots capture a copy of inbound email messages, helping you diagnose issues with email services such as Email to Salesforce, Email-to-Case, and Apex email services. Request a snapshot by specifying criteria for the email’s To and From addresses, and when an inbound message meets that criteria, the snapshot records a single copy that you can view and download. The email itself is processed normally without alteration. Snapshots contain the:

• Sender’s address
• Inbound email service address
• Date and time of the snapshot
• Full message contents, including headers and attachments

To enable inbound email snapshots, contact Salesforce.

• To access inbound email, from Setup, enter Email Snapshots in the Quick Find box, then select Email Snapshots.
• To request an inbound email snapshot, enter criteria for the To address (required) and From address (optional). Then click Request Snapshot.

The requested snapshot is added to the list of Pending and Completed Snapshots. When an inbound message meets your specified criteria, we take a snapshot and complete the request.

• To view a completed snapshot:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>View snapshot details</td>
<td>Click Show Details to see when the snapshot was taken, the sender’s address, and the inbound email service address. Click Hide Details to collapse the details section.</td>
</tr>
<tr>
<td>Download the snapshot</td>
<td>Click Download then either open the email as a .txt file or save it to your computer.</td>
</tr>
</tbody>
</table>

Consider these tips when using inbound email snapshots:
You can have a maximum combined total of 25 pending and completed snapshots. Delete some to free up space for new snapshots. You can delete any pending or completed snapshot, even if someone else originally requested it.

Deleted snapshots are permanently deleted. They’re not moved to the Recycle Bin.

When specifying criteria for the To address, keep these tips in mind.

- The criteria apply to any of the addresses specified in an email’s To, CC, or BCC fields (not only the To field).
- Inbound email service addresses always end in salesforce.com.
- You may want to look up the addresses your organization uses. This table summarizes where to find them.

<table>
<thead>
<tr>
<th>Type of inbound email address</th>
<th>Where to find addresses</th>
</tr>
</thead>
<tbody>
<tr>
<td>The user’s unique Email to Salesforce address</td>
<td>From the user’s personal settings, enter Email to Salesforce in the Quick Find box, then select Email to Salesforce to view the unique address assigned to them by Email to Salesforce.</td>
</tr>
<tr>
<td>Email routing addresses for Email-to-Case or On-Demand Email-to-Case</td>
<td>From Setup, enter Email-to-Case in the Quick Find box, then select Email-to-Case to open the Email-to-Case settings page. View the Routing Addresses section.</td>
</tr>
<tr>
<td>Your organization’s email service addresses</td>
<td>From Setup, enter Email Services in the Quick Find box, then select Email Services, then the name of an email service.</td>
</tr>
</tbody>
</table>

- You can use an asterisk (*) wildcard in both the local-part of the email address (the part before the @ symbol) and in the domain-part (the part after the @ symbol). Spaces, commas, and semicolons aren’t valid characters. Each address field can contain a maximum of 255 characters.
- If you want to request more than one snapshot with identical criteria, click Request Snapshot multiple times.
- If you believe that a snapshot should have completed but it still shows Pending status, try refreshing the page.
- Snapshots don’t expire. If no inbound emails match the specified criteria, a requested snapshot remains in Pending status indefinitely. Completed snapshots persist until you delete them.

Personalize Your Salesforce Experience
Set Up Voice

Voice allows users to access telephony features directly in Salesforce.

To use Voice in your org:

Prerequisites
Plan out your implementation before enabling Voice in your organization.

Enable Voice
Turn on Voice from the Voice Settings page in Lightning Experience.

Create a Permission Set with Voice Features
Assign the Voice app permissions with a custom permission set.

Assign the Voice Permission Set to Users
Assign the Voice licenses to users from Setup.

How Do I Manage Voice Usage?
See your org’s Voice usage from Setup.

Prerequisites
Plan out your implementation before enabling Voice in your organization.

Having a dedicated network for your Voice calls is best. We recommend having at least 10 kbps per Voice session available, but having 500 kbps+ per Voice session is optimal.

The supported browsers for Voice include the most recent versions of Chrome and Firefox. You also need open ports on your computer and network firewalls for Voice to work. Make sure that the following ports aren’t blocked:

- TCP: port 80 and 443
- UDP: all ports between 10,000 and 60,000

The Voice product currently includes the following limitations:

- Voice features are available in Lightning Experience on the desktop only.
- Outgoing calls are supported to the U.S. and Canada only.
- Every license is allowed one dedicated number. To change it, an admin can release the number, and the Voice user can then reassign themselves another number. Admins can release and replace, at most, a single number for each user each month.
- Voice doesn’t currently support record types. If someone has multiple, we pick the first one by default.

Before beginning the implementation process, Salesforce must enable Voice permissions and provision Voice licenses for your organization. Your Salesforce contact coordinates it with you, but you can check if your organization has available Voice licenses. In Setup, enter Company Information in the Quick Find box, then select Company Information, and check for Voice Outbound User, Voice Minutes, and Voice Inbound User under Permission Set Licenses.
Enable Voice

Turn on Voice from the Voice Settings page in Lightning Experience.

1. From Setup, enter Voice Settings in the Quick Find box, then select Voice Settings.
2. Enable Voice.

Create a Permission Set with Voice Features

Assign the Voice app permissions with a custom permission set.

1. From Setup, enter Permission Sets in the Quick Find box, then select Permission Sets.
2. Click New.
3. Enter a name for the permission set. Naming it Voice makes it easy to identify.
4. Click Save.
5. Click App Permissions.
6. Click Edit.
8. Click Save.
Assign the Voice Permission Set to Users

Assign the Voice licenses to users from Setup.

1. From Setup, enter Users in the Quick Find box, then select Users.
2. Select a user.
3. In the Permission Set License Assignments related list, click Edit Assignments.
4. Assign the Voice Minutes, Voice Outbound User, and (if available) Voice Inbound User licenses and click Save.
5. In the Permission Set Assignments related list, click Edit Assignments.
6. Add the Voice permission set under Enabled Permission Sets and click Save.
7. Repeat the process for other users you want to grant Voice access to.

The number of permission sets you can assign is limited by the number of feature licenses you’ve purchased.

How Do I Manage Voice Usage?

See your org’s Voice usage from Setup.

From Setup, enter Usage Report in the Quick Find box, then select Usage Report.

The page displays your org’s total minutes used this month and last month. You can view usage by date, and also sort and filter the usage data.

**Release a Voice Number**

Release a number from the Number Management page in Setup.
Release a Voice Number

Release a number from the Number Management page in Setup.

Once you release a number, it can’t be recovered. You can still access calling data, but you can’t make calls with the number. Admins can release, at most, a single number for each user each month.

1. From Setup, enter Number Management in the Quick Find box, then select Number Management.
2. Click next to a number.
3. Click Release.

Set Up Work.com

Work.com Implementation Overview

Work.com is a suite of sales-management and service-management tools that help managers and teams learn faster and perform better.

Work.com has various features to help your sales and service teams. This includes recognition tied to real rewards, detailed goals and real-time coaching, and full-featured performance reviews.

After you receive your Work.com licenses, you’ll need to set up Work.com by performing the following activities.

- Assign a Work.com administrator to complete the setup process.
- Enable preferences for Work.com features.
- Set up permissions to Work.com features with profiles or permission sets.
- Assign Work.com licenses to users.
- Configure Work.com features for your organization.

**EDITIONS**

Available in: Salesforce Classic

---

Plan out your implementation before enabling Work.com in your organization.

Administrators should make the decisions outlined in the Business Decision Checklist before enabling Work.com.

Before beginning the implementation process, Salesforce must enable Work.com permissions and provision Work.com licenses for your organization. Your Salesforce contact will coordinate this with you, but you can check if your organization has available Work.com licenses. In Setup, enter **Company Information** in the Quick Find box, then select **Company Information**, and check for Work.com User under **Feature Licenses**.

**Note:** It is recommended that you enable Chatter regardless of the edition your organization is using. Many Work.com features use the Chatter feed to notify and interact with users. To confirm Chatter is enabled, from Setup, enter **Chatter Settings** in the Quick Find box, then select **Chatter Settings**, and verify that Chatter Settings is enabled.

SEE ALSO:

Assign a Work.com Administrator
Enable Work.com

Assign a Work.com Administrator

Before enabling Work.com in your organization, you must assign a Work.com user feature license to the person who will be the system administrator and responsible for setting up Work.com for your organization.

If you’re the administrator setting up Work.com, assign the license to yourself.

1. From Setup, enter Users in the Quick Find box, then select Users.
2. Find the name of the person who will be the system administrator and click Edit next to their name.
3. In the right-hand column, select the Work.com User checkbox.
4. Click Save.

We strongly recommend that you create a separate Work.com Administrator profile with limited access because the standard Salesforce System Administrator profile is so powerful. For more information, see the Create Your Work.com Administrator Profile.

SEE ALSO:
Enable Work.com Features

Enable Work.com Features

Administrators can enable preferences for Work.com features on the Work.com Settings page.

All the settings except for Thanks Settings and Skills Settings require a Work.com license.

1. From Setup, enter Work.com Settings in the Quick Find box, then select Work.com Settings.
2. Select the Work.com features you want to enable:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Section</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable Thanks</td>
<td>Thanks Settings</td>
<td>Enable Thanks to allow users to recognize others with thanks badges on the Chatter feed. If you disable this setting, users no longer see the Thanks action in the Chatter publisher. However, they can still see previously created Thanks posts.</td>
</tr>
<tr>
<td>Restrict Custom Badge Creators</td>
<td>Thanks Settings</td>
<td>By default, all users can create custom badges. This setting restricts badge creation to users that have the “Create” permission on the Reward object.</td>
</tr>
</tbody>
</table>
### Feature | Section | Description
--- | --- | ---
Enable Rewards | Recognition Settings | Enable Rewards to tie tangible rewards to badges. Reward creators can upload gift codes to create Reward funds. See the "Reward Funds" topic for more information about creating rewards.
Enable Manager Groups for Coaching | Coaching Settings | Enable manager groups to give managers access to the coaching spaces of the users that report to them. To enable this setting, the Manager Groups setting must first be enabled in Setup, under Sharing Settings.
Enable Manager Groups for Goals | Goal Settings | Enable manager groups to give managers access to the goals of the users that report to them. To enable this setting, the Manager Groups setting must first be enabled in Setup, under Sharing Settings.
Enable Calibration | Perform Settings | Enable Calibration to see and update performance across teams and individuals.
  **Note:** For Performance Edition organizations, Calibration is not available for the following profiles: Contract Manager, Marketing User, Read Only, and Solution Manager.
Enable Skills | Skills Settings | Enable Skills to allow users to add skills to their profiles and endorse the skills of other users. Enabling this setting replaces the Knowledgeable About widget on Chatter profiles.
Restrict Skill and Endorsement Editing to Record Detail Pages | Skills Settings | Disables inline editing of skills and endorsements on Chatter profiles, and restricts editing to record detail pages. Recommended if you have customized these objects with custom required fields.
  **Note:** Don't enable this setting if you want to use skills in Chatter profiles.
Enable Automatic Skill Feed Posts | Skills Settings | Enable to automatically create Chatter feed posts when a user adds a new skill.
Enable Suggested Skills | Skills Settings | Enable Suggested Skills to have the skills widget suggest skills for users to add based on their Chatter Topics activity.

3. Click **Save**.

SEE ALSO:  
*Work.com Feature Access*
Work.com Feature Access

Once Work.com is enabled for your organization, grant users access to Work.com features using either profiles or permission sets.

Administrators can grant users access to Work.com features with either profiles or permission sets.

Note: Professional Edition organizations will need to grant access through existing profiles.

• A profile contains user permissions and access settings that control what users can do within their organization. Each user can only have one profile. Refer to Recommended Work.com Profiles for more information about creating profiles.

• A permission set is a collection of settings and permissions that gives users access to various tools and functions. Permission sets extend users’ functional access without changing their profiles. Refer to Recommended Work.com Permission Sets for more information about creating the proper permission sets.

If your organization has provisioned Work.com Only user licenses, they come with a standard Work.com Only profile. Keep in mind that you can’t modify the standard profile, but you can clone it and modify the cloned profile.

SEE ALSO:
- Recommended Work.com Permission Sets
- Assign Work.com Permission Sets
- Recommended Work.com Profiles
- Assign Work.com Profiles
- Work.com License Types

Assign Work.com Permission Sets

Assign permission sets with Work.com access to your users from Setup.

Before you can assign permission sets to your users, you must create permission sets with Work.com access. Refer to Recommended Work.com Permission Sets for more information.

1. From Setup, enter Users in the Quick Find box, then select Users.

2. Select a user.

3. In the Permission Set Assignments related list, click Edit Assignments.

4. To assign a permission set, select it from the Available Permission Sets box and click Add. To remove a permission set assignment, select it from the Enabled Permission Sets box and click Remove.

You can also assign permission sets to many users at the same time. For more information, see “Assign a Permission Set to Multiple Users” in the Salesforce Help.

Note:
- The Permission Set Assignments page shows permission sets with no associated license and permission sets that match the user’s license. For example, if a user’s license is Chatter Only, you can assign permission sets with the Chatter Only license and permission sets with no associated license to that user.

If you assign a permission set with no associated user license, all of its enabled settings and permissions must be allowed by the user’s license, or the assignment will fail.
• Some permissions require users to have permission set licenses before the user can have those permissions. For example, if you add the “Use Identity Connect” permission to the “Identity” permission set, only users with the Identity Connect permission set license can be assigned the “Identity” permission set.

5. Click Save.

Assign Work.com Profiles

Assign profiles with Work.com access to your users from Setup.

Before you can assign profiles to your users, you must create profiles with Work.com access. Refer to Recommended Work.com Profiles for more information.

1. From Setup, enter Users in the Quick Find box, then select Users.
2. Click Edit next to a user.
3. From the Profile drop-down, select the profile you would like to assign.
4. Click Save.

Work.com License Types

After granting access to Work.com features with permission sets or profiles, assign users a Work.com license.

Work.com has two types of licenses.

• Work.com Only user licenses are for users who don’t have a Salesforce license and will only use the Work.com features in your organization.

  Note: Work.com Only user licenses have limited administrator functionality. Assign Work.com User Feature licenses instead for users who will be administering performance summary cycles or other Work.com features.

• Work.com User Feature licenses are for users who also have a Salesforce license.

You may want to configure Work.com features before assigning licenses to all users. For example, you may want to initially limit licenses to Work.com administrators to avoid exposing certain features prior to your launch date.

</tbody>
</table>

Note: It is recommended that you enable Chatter regardless of the edition your organization is using. Many Work.com features use the Chatter feed to notify and interact with users. To confirm Chatter is enabled, from Setup, enter Chatter Settings in the Quick Find box, then select Chatter Settings, and verify that Chatter Settings is enabled.

You can customize where different tabs, such as Goals and Feedback, appear within the Work.com app and on user profiles. From Setup, enter Apps in the Quick Find box, then select Apps and make changes to the desired apps and subtab apps. For more information, see Editing App Properties or Managing Subtab Apps in the Salesforce Help.

Thanks and Skills Features

Set up Thanks and Skills features by configuring thanks in the Chatter publisher and assigning a publisher layout to profiles.

Make sure you’ve enabled the desired Thanks and Recognition features prior to configuring them. From Setup, enter “Work.com Settings” in the Quick Find box, then select Work.com Settings and enable the relevant settings.

For detailed information about creating rewards, refer to Reward Funds in the Salesforce Help. Additionally, information about customizing skills can be found in the Skills Customization topic.

- Configure Thanks in the Chatter Publisher and Salesforce1 Action Bar
- Assign Publisher Layout to Profiles

EDITIONS

Available in: Salesforce Classic

Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions
Configure Thanks in the Chatter Publisher and Salesforce1 Action Bar

You can change the position of the Thanks action in the Chatter publisher and the Salesforce1 action bar, or even hide Thanks for specific profiles.

To modify the Chatter publisher, actions in the publisher must be enabled.

1. From Setup, enter Chatter Settings in the Quick Find box, then select Chatter Settings.
2. Confirm that Enable Actions in the Publisher is selected in the Actions in the Publisher section. If it isn’t enabled, click Edit, select Enable Actions in the Publisher, and click Save.
3. From Setup, enter Publisher Layouts in the Quick Find box, then select Publisher Layouts.
4. Click Edit next to the Global Publisher Layout.
5. Drag the Thanks action to where you want it to appear in the Chatter publisher or the Salesforce1 action bar.
6. Click Save.

You can hide Thanks for specific users by changing profile visibility settings.

SEE ALSO:
Thanks and Skills Features
Assign Publisher Layout to Profiles

Assign Publisher Layout to Profiles

Assign the publisher layout with Thanks to user profiles. People with these profiles can thank their coworkers directly from the publisher.

If not everyone in your organization should have this feature, create another layout without Thanks and assign it to a profile. People with that profile won’t see Thanks in their publisher.

1. From Setup, enter Publisher Layouts in the Quick Find box, then select Publisher Layouts.
2. Click Publisher Layout Assignment.
3. Click Edit Assignment.
4. Select a user profile by clicking anywhere on its row in the table.
5. From the Publisher Layout to Use drop-down, select the global publisher layout that you want to assign to the highlighted profile.
6. Save the layout.

SEE ALSO:
Thanks and Skills Features
Configure Thanks in the Chatter Publisher and Salesforce1 Action Bar
Goals and Coaching Features

Enable feed and history tracking to further track goals and coaching.

Note: Enable Chatter in your organization before configuring Goals and Coaching features.

Feed tracking lets users see Chatter feed updates for any relevant changes. History tracking lets you track changes to critical fields. We recommend that you track changes for Goal, Metric, and Coaching objects.

Surface key company goals to give all employees visibility into company-wide goals.

For additional information about creating an overall Goals strategy for your organization, see the Goals Strategy Guide.

Configure Key Company Goals

Key company goals give everyone in your organization visibility into a company-wide goal after you grant sharing access from the goal’s detail page. Work.com administrators and people who have been granted access have the ability to create key company goals.

Alternatively, you can also set field-level security using permission sets.

1. From the object management settings for goals, go to the fields area.
2. Click on the Key Company Goal field label.
3. Click Set Field-Level Security.
4. Ensure the Visible checkbox is selected for all profiles with goals access.
5. Ensure the Read-Only checkbox is not selected for profiles that should be able to create key company goals.
6. Click Save.

Performance Summary and Calibration Features

Set up Calibration reports to compare and update performance ratings in your organization. Work.com performance summaries gather feedback about people in your organization with a custom questionnaire. You can create, deploy, and share different performance summaries across your organizations by managing performance summary cycles. Once users have submitted performance summary details, you can see and update performance ratings across the organization with the Calibration feature.

You can create and deploy performance summary cycles from the Performance Cycles tab. Users with the Performance Cycle Manager permission set or profile will be able to access the Performance Cycles tab.

For detailed information about creating and deploying performance summary cycles, refer to Performance Summary Cycles Overview in the Salesforce Help. For more information about the Calibration feature, refer to the Calibration Overview topic.

SEE ALSO:
- Work.com Feature Overview
- Set Up Calibration Reports

Set Up Calibration Reports

Calibration reports are populated with data from performance summary cycles. They are designed for managers and executives to review overall performance of their teams or organizations. Before using the Calibration feature, you must create a report that loads the performance summary data.

Define your own calibration report or download the calibration reports package from the Package Installation page.

- Production Calibration Report Package
- Sandbox Calibration Report Package

1. On the Calibration tab, select a calibration report from the drop-down list.
2. Click View/Edit Report.
3. Click Save As.
4. Type a name, an optional description, unique name, and specify the report folder.
   If the report is saved to a public folder, anyone with permission to view the folder sees this report, but each user will only see performance summaries they have access to. If the report is saved to “My Personal Custom Reports,” only you will see the Calibration report.
5. Click Save & Return to Report.

Tip: You can also create a new report. Once a report meets specific criteria, it automatically appears in the Calibration drop down.
- The report must be a Work.com Calibration report type.
- The report must be in a Summary Format, grouped by Feedback Question Name and then by Feedback.
- These columns should be listed in the report:
  - Performance Cycle ID
  - Feedback Request ID
The report must be filtered to only view one performance summary cycle.

Once you’ve downloaded the package or created a report that meets the criteria, it automatically appears in the Calibration drop-down.

Configure Work.com Reports

Work.com Report and Dashboard Overview

Use reports and dashboards to see how Work.com features are being used in your organization.

Salesforce reports and dashboards are available for all Work.com users. Administrators should install the reporting package that applies to their Work.com edition. The Work.com reporting package contains:

- Custom report types for Work.com objects
- Custom fields for Work.com objects
- Example dashboards

Install one of the following packages based on the Work.com edition you purchased. For example, if your organization has Work.com Align, only install the Align package. Refer to your product contract to confirm which Work.com edition you have.

Note:

- Make sure you’ve enabled the features related to your Work.com edition prior to installing the package. The package will only install correctly if you’ve enabled the features beforehand.
- If you purchased Work.com after the Spring ’15 release, install the Work.com Perform package.
- It is not possible or necessary to install all the packages.

Production Packages:

- Work.com Motivate
- Work.com Align
- Work.com Perform
- Thanks and Skills Reports and Dashboards

Sandbox Packages:

- Work.com Motivate
- Work.com Align
- Work.com Perform
Thanks and Skills Reports and Dashboards

### Work.com Perform Package Dashboards

These dashboards are available after installing the [Work.com Perform](#) package:

- Work.com Coaching Dashboards
- Work.com Performance Summary Dashboards
- Work.com Recognition Dashboards
- Work.com Skills Dashboards

### Table 25: Work.com Coaching Dashboards

<table>
<thead>
<tr>
<th>Report Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Company Coaching Dashboard</td>
<td>Displays coaching coverage and activity across your company</td>
</tr>
<tr>
<td>Company Goals Dashboard</td>
<td>Displays Key Company Goals and the number of goals created</td>
</tr>
<tr>
<td>Manager Coaching Dashboard</td>
<td>Displays coaching and goals related to your team</td>
</tr>
</tbody>
</table>

### Table 26: Work.com Performance Summary Dashboards

<table>
<thead>
<tr>
<th>Report Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Performance Cycle Dashboard</td>
<td>Displays statistics about the participants, questions, and progress of a specific performance cycle</td>
</tr>
</tbody>
</table>

### Table 27: Work.com Recognition Dashboards

<table>
<thead>
<tr>
<th>Report Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recognition Dashboard</td>
<td>Displays badge statistics and users giving and receiving badges</td>
</tr>
<tr>
<td>Recognition with Rewards Dashboard</td>
<td>Displays badge and rewards statistics and users giving and receiving badges</td>
</tr>
</tbody>
</table>
Table 28: Work.com Skills Dashboards

<table>
<thead>
<tr>
<th>Report Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Skills Dashboard</td>
<td>Displays skills statistics for your organization</td>
</tr>
</tbody>
</table>

Work.com Report and Dashboard Overview

Recommended Work.com Permission Sets

Create different permission sets for different types of Work.com users.
Create new permission sets for each type of Work.com user.

Walk Through It: create, edit, and assign a permission set

Use the tables below to assign the appropriate object settings and system permissions for each permission set.

Standard User

The Standard User permission set gives a user all the basic Work.com functionality.

Table 29: Standard User Object Settings

Custom Badge Creator

The Custom Badge Creator permission set gives users the ability to create custom badges.

Note:
- If the Restrict Custom Badge Creators preference is enabled, users must also have Create enabled on the Reward object.
- This permission set should be assigned in addition to the Standard User permission set.
### Table 33: Custom Badge Creator System Permissions

<table>
<thead>
<tr>
<th>System Permissions</th>
<th>Enabled</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create custom Badge Definitions</td>
<td>✔️</td>
</tr>
<tr>
<td>Moderate Chatter</td>

</tr>
</tbody>
</table>

### Reward Creator

The Reward Creator permission set is for users who should have the ability to link badges to tangible rewards.

**Note:** This permission set should be assigned in addition to the Standard User permission set.

### Table 34: Reward Creator Object Settings

Recommended Work.com Profiles

Create different profiles for different types of Work.com users.

Create a new profile for each type of Work.com user. For more information about creating profiles, see either Work in the Original Profile Interface or Work in the Enhanced Profile User Interface Page depending on whether you have the Enable Enhanced Profile User Interface preference turned on.

**Note:** Professional Edition organizations will need to grant access through existing profiles. The Work.com Only User, Chatter Only User, and Standard User profiles grant basic access to Work.com objects. The System Administrator profile grants users full administrative access to all Work.com features.

Use the tables below to assign the appropriate object settings and system permissions for each profile.
## Standard User

The Standard User profile gives a user all the basic Work.com functionality.

### Table 38: Standard User Object Settings

Create a Support Case

Log a new case with support if you need certain permissions enabled or are experiencing technical difficulties.

1. Log in to Salesforce, then go to the Help and Training page.
2. In the Contact Support section, click Create a Case.

3. Select your support topic and category.
   For example, if your issue is related to Work.com, click Sales Cloud > Work.com.
4. Select a question that relates to your issue.
5. If you don’t find the solution to your problem, click Log a New Case.

6. Enter case details and click Submit.
Performance Summary Cycles Overview

Use Work.com performance summary cycles to create, deploy, and share performance summaries across your company.

In a typical performance summary cycle, you perform the following activities:

1. Plan—Create a performance summary cycle and add the people you want reviewed.
2. Deploy—Make the performance summaries available for users to complete.
3. Evaluate—Write performance summaries and submit them.
5. Share—Share the submitted performance summaries with summary subjects.
6. Finish—End the performance summary cycle.

Click the Performance Cycles tab to see a list of recently viewed performance cycles.

Click New to create a performance cycle, or click the name of a cycle to see more details.
From this page you can:

- See details about the performance summary cycle.
- Take actions on the cycle. Available actions are determined by your cycle’s state and may include **Clone**, **Edit**, **Deploy**, **Delete**, **Share All**, and **Finish**.
- Access the questions related to a performance cycle.
- View a list of performance summary feedback requests. You can also add subjects individually or upload a CSV file to add subjects in bulk.
• View a list of jobs performed by the performance cycle, including cycle deployment and sharing performance summaries.

  Deploy a Performance Summary Cycle
  Performance Summary Cycle Actions

Create a Performance Summary Cycle

Create a Work.com performance summary cycle from the Performance Cycles page to gather feedback about people in your organization.

1. Click the Performance Cycles tab.
   If the Performance Cycles tab isn’t displayed, select Work.com from the Force.com app drop-down menu at the top-right or click to the right of your current tabs and select it from the All Tabs page.

2. Click New.
   [Note:] You can also create performance cycles by clicking Clone on another performance cycle’s detail page, but cloning a cycle copies only the cycle name, activity start date, and activity end date. Question sets, due dates, and other details are not copied.

3. Enter a cycle name, an activity start date, and an activity end date.

4. Click Save.

5. Click New Feedback Question Set.

6. Enter a question set name, feedback type, and due date.
   Question sets group questions according to their intended audience. For example, a performance summary about Bill Jones could have up to four different audiences:
   • Manager Summary—Questions for Bill’s manager. By default, every cycle must include a manager summary.
   • Self Summary—Questions for Bill.
   • Peer Summary—Questions for Bill’s peers.
   • Skip Level Summary—Questions for Bill’s direct reports.

7. Click Save.

8. Click New Feedback Question.

   You can specify rules for each question:
   • Optional—The person writing the summary isn’t required to answer this question.
   • Confidential—The subject of the summary won’t see the submitted answer. This rule isn’t available for self summaries.
10. Click **Save**.

11. Add additional question sets and questions, as needed.

Once you're done adding questions, add people to the performance summary cycle.

SEE ALSO:
- Performance Summary Cycles Overview
- Performance Summary Overview
- Add People to a Performance Summary Cycle
- Deploy a Performance Summary Cycle
Add People to a Performance Summary Cycle

Add people to a performance summary cycle manually or through a CSV file.

You can only add people to summary cycles with a state of Setup or In Progress.

1. Click the Performance Cycles tab.
   
   If the Performance Cycles tab isn’t displayed, select Work.com from the Force.com app drop-down menu at the top-right or click to the right of your current tabs and select it from the All Tabs page.

2. Click a performance summary cycle.

3. In the Feedback Requests section, add users to the performance cycle.
   
   • To manually enter subjects, click Add Subject. Enter the user’s name and click Save.
   
   • To upload subjects through a CSV file, click Upload Subject CSV, then select Choose File. Select a CSV file, click Upload, and save your changes.

   The CSV file should contain a list of either user IDs (example: 005R0000000DjZW) or usernames (example: john@acme.com) in the first column. The data should begin on the second row, because the first row is seen as the header row and is not uploaded.

   Tip: Many organizations have specific requirements about participation in a performance summary cycle. Use the Users report to narrow down the list of users you want to add to performance summaries and obtain the usernames there.

The Job Tracker displays the status of the CSV upload. Additionally, you can confirm the users included in a performance summary cycle in the Feedback Requests section.

SEE ALSO:

Performance Summary Cycles Overview
Deploy a Performance Summary Cycle
Delete People from a Performance Summary Cycle
Delete People from a Performance Summary Cycle

If you added someone you don’t need to evaluate, delete them from the performance summary cycle.

You can only delete people from summary cycles with a state value of Setup.

1. Click the Performance Cycles tab.
   If the Performance Cycles tab isn’t displayed, select Work.com from the Force.com app drop-down menu at the top-right or click ➔ to the right of your current tabs and select it from the All Tabs page.

2. Click a performance summary cycle.

3. In the Feedback Requests section, click Del in the Action column of the subject you want to delete.

SEE ALSO:
Performance Summary Cycles Overview
Deploy a Performance Summary Cycle
Add People to a Performance Summary Cycle
Deploy a Performance Summary Cycle

Deploy a performance summary cycle to make the summaries available for people to complete.

Note: You can’t edit questions or cycle details after a performance summary cycle is deployed, but you can add more people.

1. Click the Performance Cycles tab.
   If the Performance Cycles tab isn’t displayed, select Work.com from the Force.com app drop-down menu at the top-right or click to the right of your current tabs and select it from the All Tabs page.

2. Click a performance summary cycle.

3. Click Deploy.

   Any inactive users are automatically removed prior to cycle deployment. When deployment is complete, you’ll receive a detailed email that describes the cycle deployment and any users that were removed. You can add them back again later, if necessary.

Once deployed, a manager summary is assigned to the manager of each person added to the cycle. If the cycle contains self summaries, the self summary is assigned to the associated person. Each person assigned a summary receives an email notification and can start working on their summaries.

Calibration Overview

Use Work.com calibration reports to visualize, compare, and update performance ratings across your entire company.

Note: For **Performance Edition** organizations, Calibration is not available for the following profiles: Contract Manager, Marketing User, Read Only, and Solution Manager.

Calibration reports are populated with data from performance summary cycles. They are designed for managers and executives to review overall performance of their teams or organizations. You can quickly identify high and low performers, and depending on user permissions, make changes to a person’s individual performance ratings directly in the calibration report.

Create your own calibration report or download the calibration reports package from the Package Installation page.

- Production Calibration Report Package
- Sandbox Calibration Report Package

Access calibration reports from the Calibration tab. Note that you can only view the results for a single performance summary cycle at a time.

The Distribution Graph shows the distribution of ratings for each multiple choice question. Select different questions in the drop-down list to view the associated rating distribution.

The Employees in Graph section shows the performance summary details for users included in the performance review. You can filter and sort each column. Filtering the columns also updates the distribution graph. You can also add custom columns to filter performance summary details by location, department, or other measures. View individual performance summaries by clicking on the View column.

SEE ALSO:

Create a Calibration Report

Create a calibration report by copying an existing report or creating a new report that meets the proper criteria.

Alternatively, you can download the calibration report package from the Package Installation page.

- Production Calibration Report Package
- Sandbox Calibration Report Package

1. On the Calibration tab, select a calibration report from the drop-down list.
2. Click View/Edit Report.
3. Click Save As.
4. Type a name, an optional description, unique name, and specify the report folder.
   If the report is saved to a public folder, anyone with permission to view the folder sees this report, but each user will only see performance summaries they have access to. If the report is saved to "My Personal Custom Reports," only you will see the Calibration report.
5. Click Save & Return to Report.

Tip: You can also create a new report. Once a report meets specific criteria, it automatically appears in the Calibration drop down.

- The report must be a Work.com Calibration report type.
- The report must be in a Summary Format, grouped by Feedback Question Name and then by Feedback.
- These columns should be listed in the report:
  - Performance Cycle ID
  - Feedback Request ID
  - Feedback ID
  - Subject: User ID
  - Subject: Full Name (or Subject: First Name and Subject: Last Name)
- The report must be filtered to only view one performance summary cycle.

SEE ALSO:
- Calibration Overview
- Build a New Report
- Customize a Calibration Report
Customize a Calibration Report

Enhance your calibration report with additional columns and filters.

Calibration reports use Salesforce reporting. You can filter and specify additional custom columns for your calibration report. The columns display in the order you specify. However, the sort order in reports doesn’t apply in calibration reports.

1. On the Calibration tab, select a calibration report from the drop-down list.
2. Click View/Edit Report.
3. Click Customize.
4. Add filters and columns to your report, as necessary.
   - The following columns are required and can’t be removed from calibration reports:
     - Performance Cycle ID
     - Feedback Request ID
     - Feedback ID
     - Subject: User ID
     - Subject: Full Name (or Subject: First Name and Subject: Last Name)
5. Click Save.

Example: Some common uses include:
- Filter by Performance Summary Cycle for the required performance summary cycle
- Filter by Department to create a report for the department
- Filter by Location to create a report for that location

SEE ALSO:
- Reports Give You Access to Your Data

- Create a Calibration Report
Update Performance Summary Details

Easily update performance summary details directly in the calibration report.

You can only update performance summaries you have access to. If you have “Modify All Data” or “View All Data” permissions for performance summaries, then you can see the ratings of performance summaries before they are submitted. The only editable fields are the multiple choice questions answered by a user’s manager, and do not include peer, self, or skip level summaries. Once the performance summary is finalized and shared with the user, answers can’t be edited.

1. On the Calibration tab, select a calibration report from the drop-down list.
2. On the Employees in Graph section, double-click the rating to you want to change.
   You can only change ratings on a submitted performance summary.
3. Select the new value.
4. Click Save.

USER PERMISSIONS

To view the Calibration tab:
- “Enable Work.com Calibration”

To edit performance ratings:
- “Create,” “Read,” and “Edit” on Feedback, Feedback Question, Feedback Question Sets, and Feedback Requests
  AND
- “Read” on Performance Cycles
Export Calibration Report Details

Performance summary data can be exported with the underlying calibration report.

1. On the Calibration tab, select a calibration report.
2. Click View/Edit Report.
3. Click Export Details.
4. Select the file encoding and file format.
5. Click Export.

SEE ALSO:
  - Calibration Overview
  - Create a Calibration Report

Skills Customization

You can change object permissions for the skill and endorsement objects to suit the needs of your organization.

Customize the skill and endorsement objects in the same way you edit other objects. This includes adding custom fields, modifying page layouts, and adding triggers, workflow, and validation rules. You can also customize the hovers that appear on skills, so that you expose specific standard and custom fields.
Administrators can change object permissions for the skill and endorsement objects to suit the needs of their organization. For example, you can configure object settings so users can’t create skills, and only skills created by an administrator can be assigned to others. By default, supported user profiles have the ability to see, create, edit, and remove skills, and administrators have “Modify All Data” and “View All Data” permissions.

Additionally, administrators can change some skills settings on the Work.com Settings page. From Setup, enter Work.com Settings in the Quick Find box, then select Work.com Settings.

**Edit Skills and Endorsements via record detail pages**
Disables inline editing of skills and endorsements on Chatter profiles. Recommended if you have customized these objects with custom required fields.

**Generate feed posts when users add a new skill**
Automatically creates a Chatter feed post when a user adds a new skill to a profile.

**Enable Suggested Skills**
Automatically suggests skills based on users’ Chatter topics.

You can also install a package with additional reports and dashboards for thanks and skills features:

- Thanks and Skills Reports and Dashboards (Production Package)
- Thanks and Skills Reports and Dashboards (Sandbox Package)

Work.com Report and Dashboard Overview
Skills Limitations

Skills and endorsements have special behaviors and limitations.

Note the following restrictions:

- The Skills feature is not supported in Communities.
- All skill records are visible to users with the "Read" permission on Skills.
- Skill User and Endorsement records can only be deleted by the owner and users with the "Modify All Data" permission.
- To restore the users and endorsements associated with a deleted skill, retrieve the skill from the recycle bin. Creating a skill with the same name will not restore the prior associations.
- Users can only endorse others, not themselves. Users can’t be endorsed more than once by the same person on the same skill.
  
  Administrators can endorse users on behalf of other users through the API.

- Users can’t see the skills widget on a Chatter profile page unless Chatter is enabled and users have the “Read” permission on Skills and Skill Users.

- Entitlement Management Setup

Tracking Customer Inquiries

Cases

A case is a customer’s question or feedback. Support agents can review cases to see how they can deliver better service. Sales reps can use cases to see how they affect the sales process. Responding to cases keeps your customers happy and enhances your brand.

Your administrator can set up communication channels to gather cases from customers’ preferred forms of contact. Channels include Communities for online forums, Email-to-Case for emails, Web-to-Case for websites, Salesforce Call Center for phone calls, and more. Some channels aren’t available for Lightning Experience.

From the Cases home page, you can create, locate, and edit cases and also sort and filter cases and queues using standard and custom list views.

EDITIONS

Available in both: Salesforce Classic and Lightning Experience

Available in: Group, Professional, Enterprise, Performance, Unlimited, and Developer Editions
Tip: If a Salesforce console is set up, you can use its dashboard-like interface to respond to multiple cases faster. If entitlements are set up, you can check whether customers are eligible for support or if cases are close to violating a milestone. If Salesforce to Salesforce is set up and cases are shared with external contacts, choose one of the list views to see cases that your business partners have shared with you. These features are available only in Salesforce Classic.

USER PERMISSIONS
To view cases:
- “Read” on cases
To create cases:
- “Create” on cases
Viewing Case Lists

The cases list page displays a list of cases in your current view. To show a filtered list of items, select a predefined list from the View drop-down list, or click Create New View to define your own custom views. To edit or delete any view you created, select it from the View drop-down list and click Edit.

If the Salesforce console is set up, view case lists by selecting Cases from the navigator tab (if Cases is available).

- Click Edit or Del to edit or delete a case.
- If Chatter is enabled, click + or - to follow or stop following a case in your Chatter feed.
- Click New Case or select Case from the Create New drop-down list in the sidebar to create a case.
- Select the box next to one or more cases and then use the buttons at the top of the view to close the cases, take ownership of them, or change the case status or owner.

**Note:** Cases with a red arrow have been automatically escalated via your organization’s escalation rules.

Taking Ownership of Cases

To take ownership of cases in a queue, view the queue list view, check the box next to one or more cases, and then click Accept. Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations can grant additional access to cases beyond what the sharing model allows.

**Note:** The organization-wide sharing model for an object determines the access users have to that object’s records in queues:

- **Public Read/Write/Transfer**
  Users can view and take ownership of records from any queue.

- **Public Read/Write or Public Read Only**
  Users can view any queue but only take ownership of records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

- **Private**
  Users can only view and accept records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

Regardless of the sharing model, users must have the “Edit” permission to take ownership of records in queues of which they are a member. Administrators, users with the “Modify All” object-level permission for Cases, and users with the “Modify All Data” permission, can view and take records from any queue regardless of the sharing model or their membership in the queue.

**SEE ALSO:**
- Cases
- Guidelines for Working with Cases
Changing Multiple Cases

From any case list page, administrators can “mass update” multiple cases at once. From any queue list view, users can take ownership of one or more cases if they are a member of that queue, if they are higher in the role or territory hierarchy than a queue member, or if the organization’s default sharing for cases is Public Read/Write/Transfer. Simply check the boxes next to the desired cases and click the appropriate button. The following actions are possible:

- **Accept** — Assigns you as the owner of the selected cases in a queue list view. Any attached open activities are transferred to you as well. In organizations that do not have the Public Read/Write/Transfer sharing model for cases, you can take cases only from queues of which you are a member or if you are higher in the role hierarchy than a queue member.

- **Change Owner** — Assigns the cases to the one user or queue you specify. Any attached open activities are transferred to the new owner as well. When putting cases in a queue, the open activities are not transferred.

In addition to the required user permissions for this feature, you must have read sharing access to the cases you are updating.

**Note:** When you change case ownership, any associated open activities that are owned by the current case owner are transferred to the new owner.

- **Close** — Closes the selected cases using the values you specify. You can set a common Status and Reason and add any comments.

  You must have the “Manage Cases” permission and read/write sharing access to the cases to use this feature.

- **Change Status** — Changes the Status of the cases to the value you set.

  You must have the “Manage Cases” permission and read/write sharing access to the cases to use this feature.

**SEE ALSO:**

*Guidelines for Working with Cases*
Create Cases

You can create cases in various ways:

- Your admin can set up Web-to-Case and either Email-to-Case or On-Demand Email-to-Case to automatically capture cases from your website and customer emails.
- Your customers can log their own cases from a community, Customer Portal, Self-Service portal, or Chatter Answers.

**Note:** Starting with Spring '12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

- You can create cases manually from the Cases tab, the Cases related list, or, depending on your org’s settings, in the feed on record detail pages.
- If you have an answers community, you can escalate an unanswered or problematic question into a new case.

You can create or update cases only for contacts that are eligible to receive customer support. For how to find out if a contact is eligible, or if a service contract includes an entitlement, see Verify Entitlements on page 2199.

To create a case for a support email or phone call:

1. Use Search to find the individual’s account and then locate the contact in the Contacts related list.
   
   If the contact doesn’t exist, create a contact for that account.

2. Click **New** in the Cases related list of the contact.
   
   If your org uses record types, you might be prompted to choose a Record Type when creating a case. Different record types can have different fields and different picklist values.

3. Enter information for the case.
   
   When you enter or select a contact for the Contact Name field, the Account Name field defaults to the account associated with the contact when you save the case. However, you can change the account in the Account Name field during subsequent updates.

4. To associate the case with an asset:
   
   a. Click the **Asset** lookup icon. Initially, the asset lookup lists all assets for the selected contact. Enter search criteria and click **Go!** to refine this list.

   b. Select an asset from the assets listed to associate it with the case.

   c. If you do not find a matching asset, click **New** to create an asset from the lookup dialog and associate it with the new case. The **New** button displays if your org has enabled Quick Create and you have the “Create” permission on assets.

   d. To associate the new asset with a product, enter your product search criteria and click **Go!** or select a product from the list of matches. Click **Skip** if you do not want to associate the asset with a product.

   e. Enter the asset details and click **Save**.

5. If your org settings allow it, you can associate the case with another case. Simply type the case number of the parent in the Parent Case field. Alternatively, you can click the lookup icon to search for a case’s case number.

   When a case is associated with a parent case it signifies a relationship between cases. The relationship can be a grouping of similar cases for easy tracking, or a division of one case into multiple cases for various users to resolve.
6. Optionally set who sees the case and how, depending on how your org is set up.
   • To prevent the case from appearing in the Self-Service portal, deselect Visible in Self-Service Portal.
   • To automatically assign the case using your org’s active assignment rule, select Assign using active assignment rules. If Assign using active assignment rules is selected and no assignment rule criterion is met, the case is assigned to the Default Case Owner. If this setting isn’t active, you are assigned as the owner.
   If Assign using active assignment rules is selected by default and you deselect it, you override your org’s default assignment rules and you’re assigned as the owner.
   • To automatically send an email to the contact indicating that the case was create, select Send notification email to contact.

7. Click Save, or click Save & New to save the case and create another. Alternatively, click Save & Close to save and close the case immediately. This action sets the Closed When Created field on the case, which indicates that the case was closed during creation.

   Note: When you save a newly-created case with an active assignment rule, the record type of the case can change, depending on how your admin configured assignment rules.

If your org uses divisions, the division of a new case is automatically set to the division of the related contact.

Guidelines for Working with Cases

A case is a customer question or feedback. The fields and related lists you see on a case are determined by your customizations or features set up by your administrator. Learn how you can get the most out of working with cases.

Updating Cases

When you change a contact, the account doesn’t update to the contact’s account, but you can edit the account yourself.

Contacts who are portal users can only view cases associated with the account on their contact record.

When you change an account, manual shares on a case are deleted for users who don’t have read access on the new account.

If set up, select Send notification email to contact to let the contact know that you’ve updated the case. An email is sent only if you have access to the contact.

If set up, select Assign using active assignment rules to reassign a case using an assignment rule. If the case doesn’t match rule criteria, it’s reassigned to your organization’s default case owner.

If set up, click Sharing to share a case with other users, groups, or roles.

If set up, close a case by selecting Closed under Status. Otherwise, click Close Case and change any fields as needed. If knowledge article submissions are set up, click Save and Create.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Case assignment rules, case escalation rules, web-to-case, and customer portals are available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions.

USER PERMISSIONS

To view cases:
• “Read” on cases
To update cases:
• “Edit” on cases
**Article** to store information that would help others close similar cases. When the draft article you submit is published, it’s attached to the case and available in the knowledge base for easy reference.

If set up, a Web-to-Case Information section lists information entered by the customer who created the case from a website form.

**Using Case Related Lists**

To reply and work with cases created from Email-to-Case, use the Emails related list.

To view the required steps in a support process or to add the date of a completed milestone, use the Case Milestones related list.

To find articles from your organization’s knowledge base to help solve a case, use the Articles related list. To initiate a search, type keywords. Attach relevant articles to the case to track solutions and help others solve similar cases. Attached articles appear on the related list. If you create a draft article while closing a case, the article appears on the related list after the draft article is published.

To find solutions (version 1.0 of articles) to help solve a case, use the Solutions related list. If solution categories are set up, choose them to refine your search, along with keywords. If suggested solutions are set up, click View Suggested Solutions to see relevant solutions. The solutions are suggested based on relevancy and case similarity.

**Replying to Cases from Chatter Answers (Not Available in Lightning Experience)**

To reply to a case converted from a question on a web community, type your response in the Chatter-like feed, and click Answer Customer. Your response is tracked on the Case Comments related list.

Case comments marked Public display as private messages from customer support in Chatter Answers. They don’t display to the entire community. For example, if a support agent adds a public case comment, it displays only to the case’s contact private messages in Chatter Answers. Support agents can read all private and public case comments.

**Case Comments**

Case comments let you and your support agents add, edit, and delete public and private comments on a case. All comments appear in the Case Comments related list.

Comments can remain private or be made publicly available to a case’s contact on the Customer Portal, Self-Service portal, or Chatter Answers. You can also set up your portal or Web community to let customers comment on their cases. When a portal user adds a comment, the case owner receives an email. A comment icon remains on the case heading until the case owner views it.

**Note:** Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

User Permissions

To view case comments:
- “Read” on cases

To add case comments and make case comments public:
- “Edit” or “Create” on cases

To edit or delete case comments added by other users:
- “Modify All” on cases

To edit, delete, or make public your existing case comments:
- “Edit Case Comments”
Creating and Editing Case Comments on Case Detail Pages

1. Click New or Edit on the Case Comments related list.
2. Optionally, select Public to enable comment notifications to the contact on the case, and to let the contact view the comment on the Customer Portal or Self-Service.
3. Type comments in Comment.
4. Click Save.

**Note:** Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

**Note:** If you publish cases and case comments to external contacts via Salesforce to Salesforce, all public case comments are automatically shared with a connection when you share a case. To stop sharing a comment, select Make Private.

**Tip:** On the Case Comments related list:
- Click Del to delete an existing comment.
- Click Make Public or Make Private to change the public status of a comment on the Customer Portal or Self-Service portal. Case comments marked Public display as private messages from customer support in Chatter Answers. They don’t display to the entire community. For example, if a support agent adds a public case comment, it displays only to the case’s contact private messages in Chatter Answers. Support agents can read all private and public case comments.

Creating and Editing Case Comments on Case Edit Pages

1. Click New on the Cases tab to create a case, or select an existing case and click Edit.
2. Type your comments in Internal Comments.
3. Optionally, select Send Customer Notification to email the contact on the case of your new public comment.
4. Click Save.

An email is sent to the case owner whenever a case comment is created or updated.

Note: Send Customer Notification displays on case edit pages when:
- An administrator has enabled case comment notification to contacts on Support Settings or Self-Service Portal settings pages.
- The comment is marked Public.
- There’s a contact on the case.
- The contact on the case has a valid email address.

Creating and Editing Case Comments

Case History

The Case History related list of a case detail page tracks the changes to the case. Any time a user modifies any of the standard or custom fields whose history is set to be tracked on the case, a new entry is added to the Case History related list. All entries include the date, time, nature of the change, and who made the change. Modifications to the related lists on the case are not tracked in the case history.

Note: Changes to the Closed When Created field are only tracked when the field is updated via the Force.com API.

In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, for automated case changes that result from Web-to-Case or case assignment or escalation rules, the user listed in the history is the Automated Case User chosen in the Support Settings.

## Case Fields

Depending on your page layout and field-level security settings, some fields may not be visible or editable.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>🔼</td>
<td>Indicates that an escalation rule escalated a case. The escalation icon disappears when a case is closed or no longer meets escalation rule criteria.</td>
</tr>
<tr>
<td>📣</td>
<td>Indicates that a customer added a comment to a case from a web portal. The icon appears until the case owner views the case.</td>
</tr>
<tr>
<td>Account Name</td>
<td>Name of the account associated with a case’s contact. The name is added when you link the case to a contact and save the case. When updating a case, you can add a different account.</td>
</tr>
<tr>
<td>Asset</td>
<td>The customer’s product model. On edit pages, this field shows only assets associated with a case’s contact, but you can use inline editing to see a list of all assets on a case.</td>
</tr>
<tr>
<td>Business Hours</td>
<td>Indicates the hours at which escalation actions or entitlement processes run on a case.</td>
</tr>
<tr>
<td>Case Currency</td>
<td>The currency for all currency amounts on a case. Amounts display in the case currency and are also converted to your personal currency. Only available for organizations that use multiple currencies.</td>
</tr>
<tr>
<td>Case Division</td>
<td>The division to which a case belongs. Division is inherited from a case’s contact. If it has no contact, it’s set to the default global division. Only available in organizations that use divisions to segment data.</td>
</tr>
<tr>
<td>Case Number</td>
<td>Unique number assigned to the case. Numbers start at 1000 and are read only, but administrators can change the format. Case numbers often increase sequentially, but sometimes they skip numbers in a sequence.</td>
</tr>
<tr>
<td>Case Owner</td>
<td>User assigned to own a case.</td>
</tr>
<tr>
<td>Case Record Type</td>
<td>Field name that determines the picklist values available on a case. Record types are often related to a support process.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Closed by Self-Service User</td>
<td>Indicates if a case’s contact closed the case from a web portal. This field is read only.</td>
</tr>
<tr>
<td>Closed When Created</td>
<td>Indicates if a case was closed during creation using the Save and Close button. This field is read only.</td>
</tr>
<tr>
<td>Contact Email</td>
<td>Email address of a case’s contact. The address is added when you add a contact to a case. This field is read only.</td>
</tr>
<tr>
<td>Contact Mobile</td>
<td>Mobile phone number of a case’s contact. The number is added when you add a contact to a case. This field is read only.</td>
</tr>
<tr>
<td>Contact Name</td>
<td>Name of a case’s contact.</td>
</tr>
<tr>
<td>Contact Phone</td>
<td>Phone number of a case’s contact. The number is added when you add a contact to a case. This field is read only.</td>
</tr>
<tr>
<td>Created By</td>
<td>User who created a case, including creation date and time. This field is read only.</td>
</tr>
<tr>
<td>Custom Links</td>
<td>Lists of custom links for cases created by an administrator.</td>
</tr>
<tr>
<td>Date/Time Closed</td>
<td>Date and time that a case was closed. This field is read only.</td>
</tr>
<tr>
<td>Date/Time Opened</td>
<td>Date and time that a case was opened. This field is read only.</td>
</tr>
<tr>
<td>Description</td>
<td>Description of a case,- usually a customer question or feedback. This field can store up to 32 KB of data, but only the first 255 characters display in reports.</td>
</tr>
<tr>
<td>Entitlement Name</td>
<td>Name of an entitlement added to a case. Only available if entitlements are set up.</td>
</tr>
<tr>
<td>Entitlement Process Start Time</td>
<td>The time the case entered an entitlement process. If you have “Edit” permission on cases, you can update or reset the time. When you reset the time:</td>
</tr>
<tr>
<td></td>
<td>• Closed or completed milestones aren’t affected</td>
</tr>
<tr>
<td></td>
<td>• Incomplete milestones are recalculated based on the new start time</td>
</tr>
<tr>
<td>Entitlement Process End Time</td>
<td>The time a case exited an entitlement process. If an entitlement process applies to a case, this field appears.</td>
</tr>
<tr>
<td>Internal Comments</td>
<td>Internal notes related to a case. Each comment can store up to 4 KB of data and appears on the Case Comments related list. Comments marked “public” can appear on web portals.</td>
</tr>
<tr>
<td>Milestone Status</td>
<td>A milestone is a step in an entitlement process. If an entitlement process applies to a case, this field appears.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Milestone Status Icon</td>
<td>Indicates a milestone’s status on a case by displaying one of the following icons:</td>
</tr>
<tr>
<td></td>
<td>- <img src="image" alt="Compliant" /> Compliant</td>
</tr>
<tr>
<td></td>
<td>- <img src="image" alt="Open Violation" /> Open Violation</td>
</tr>
<tr>
<td></td>
<td>- <img src="image" alt="Closed Violation" /> Closed Violation</td>
</tr>
<tr>
<td></td>
<td>If an entitlement process applies to a case, this field appears.</td>
</tr>
<tr>
<td>Modified By</td>
<td>User who last changed a case, excluding any changes made to a case’s related list items. This field also includes the date and time of the change. This field is read only.</td>
</tr>
<tr>
<td>Origin</td>
<td>Source of a case, for example, phone, email, or web. Administrators set field values, and each value can have up to 40 characters. When editing a case created from a community with quick actions, add an origin because it isn’t set by default.</td>
</tr>
<tr>
<td>Parent Case</td>
<td>A case above one or more related cases in a case hierarchy. A case number identifies a parent case, and a parent case must exist before you can add it to another case.</td>
</tr>
<tr>
<td>Priority</td>
<td>Urgency of a case. Administrators set field values, and each value can have up to 20 characters.</td>
</tr>
<tr>
<td>Product</td>
<td>Name of a case’s product. This field is only available if entitlements are set up to include products.</td>
</tr>
<tr>
<td>Question</td>
<td>A question on the Q&amp;A tab that is related to a case. This field is populated when you create a case from a question or a question is escalated to a case.</td>
</tr>
<tr>
<td>Reason</td>
<td>The reason a case was created. Administrators set field values.</td>
</tr>
<tr>
<td>Status</td>
<td>Status of a case, for example, open or closed. Administrators set field values.</td>
</tr>
<tr>
<td>Stopped</td>
<td>Lets you stop an entitlement process on a case, which might be necessary if you’re waiting for a customer’s response. You can stop an entitlement process up to 300 times. If an entitlement process applies to a case, this field appears.</td>
</tr>
<tr>
<td>Stopped Since</td>
<td>Shows the date and time an entitlement process was stopped on a case. If an entitlement process applies to a case, this field appears.</td>
</tr>
<tr>
<td>Subject</td>
<td>Brief description of the customer’s question or feedback, for example, <em>Printing Gives Error on Internet Explorer.</em></td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Timeline</td>
<td>How far along a case is to reaching an entitlement process’s milestones. You can click or hover your mouse pointer over each milestone to view its details. These icons represent milestones:</td>
</tr>
<tr>
<td></td>
<td>• Completed milestone</td>
</tr>
<tr>
<td></td>
<td>• Violated milestone</td>
</tr>
<tr>
<td></td>
<td>You can drag the Handle icon ( ) along the Timeline Zoom tool to view past and future milestones. If an entitlement process applies to the case, this field appears.</td>
</tr>
<tr>
<td>Type</td>
<td>Type of case, for example, question or problem. Administrators set field values.</td>
</tr>
<tr>
<td>Visible in Self-Service Portal</td>
<td>Indicates if a case is visible to users in a web portal. If you want web-generated cases visible in a portal, include this field in Web-to-Case setup.</td>
</tr>
<tr>
<td>Web Company</td>
<td>Company name provided by a customer who created a case from Web-to-Case or Email-to-Case.</td>
</tr>
<tr>
<td>Web Email</td>
<td>Email address provided by a customer who created a case from Web-to-Case or Email-to-Case.</td>
</tr>
<tr>
<td>Web Name</td>
<td>Customer’s name as provided by a customer who created a case from Web-to-Case or Email-to-Case.</td>
</tr>
<tr>
<td>Web Phone</td>
<td>Phone number provided by the customer who created a case from Web-to-Case or Email-to-Case.</td>
</tr>
</tbody>
</table>

- Guidelines for Working with Cases

**How is the “Age” calculated in case reports?**

The Age of an open case is the time that has elapsed from its creation to the present. The Age of a closed case is the elapsed time from its creation to the time it was closed. Case reports display a drop-down list labeled “Units” that lets you choose to view the Age in days, hours, or minutes.

**SEE ALSO:**
- Case Fields
- Web-to-Case FAQ
Using the Case Milestones Related List

The Case Milestones related list on a case detail page displays a list of milestones that automatically apply to the case due to an entitlement process. Milestones are required steps in your support process. They're metrics that represent service levels to provide to each of your customers. Examples of milestones include First Response and Resolution Times on cases.

**Note:**
- No records to display appears in the related list if no milestones apply to the case.
- The related list contains fields that your company has chosen to display, based on its business processes. Depending on your company's requirements, you may see some or all of the following fields.

**Action**

Lists the actions you can perform on the milestone. For example, if you have the “Edit” permission on cases, you can click Edit to select the milestone completion date.

**Note:** Customer Portal users can’t edit case milestones.

**Milestone**

The name of a set of steps in an entitlement process that applies to the case. Users with the “Manage Entitlements” permission can click a milestone’s name to view the entitlement process, case criteria, time triggers, and actions associated with it.

The following table lists the types of actions associated with milestones:

<table>
<thead>
<tr>
<th>Action Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Tick] Success Actions</td>
<td>The actions to take when a milestone successfully completes. Success actions still fire on milestones that are closed late.</td>
</tr>
<tr>
<td>![Warning] Warning Actions</td>
<td>The actions to take when a milestone is near violation.</td>
</tr>
<tr>
<td>![Exclamation] Violation Actions</td>
<td>The actions to take when a milestone is violated.</td>
</tr>
</tbody>
</table>

Administrators can set up milestones to automate the following for each action type:

<table>
<thead>
<tr>
<th>Workflow Action</th>
<th>What It Does</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Task</td>
<td>Create a workflow task</td>
<td>Create a task for a support agent to call a customer when a First Response milestone is violated.</td>
</tr>
<tr>
<td>New Email</td>
<td>Create an email alert</td>
<td>Notify case owners when a First Response milestone on their case is near violation.</td>
</tr>
<tr>
<td>New Field Update</td>
<td>Define a field update</td>
<td>Update the case Priority field to High when a First Response milestone is near violation.</td>
</tr>
</tbody>
</table>

**Editions**

Available in: Salesforce Classic

Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions with the Service Cloud

**User Permissions**

To view case milestones:
- “Read” on cases

To edit case milestones:
- “Edit” on cases
<table>
<thead>
<tr>
<th>Workflow Action</th>
<th>What It Does</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Outbound Message</td>
<td>Define an outbound message</td>
<td>Send data about parts or services to an external system after a First Response milestone is completed.</td>
</tr>
<tr>
<td>Select Existing Action</td>
<td>Select an existing action</td>
<td>Use an existing email alert to notify a case owner when their case is near violation of a first response.</td>
</tr>
</tbody>
</table>

**Start Date**

The date and time that the milestone tracking started.

**Target Date**

The date and time to complete the milestone.

**Completion Date**

The date and time the milestone was completed.

**Target Response**

Shows the time to complete the milestone. Automatically calculated to include any business hours on the case. Depending on your company’s business requirements, the time can appear in minutes, hours, or days.

**Time Remaining**

Shows the time that remains before a milestone violation. Automatically calculated to include any business hours on the case. Depending on your company’s business requirements, the time can appear in minutes, hours, or days.

**Elapsed Time**

Shows the time it took to complete a milestone. Automatically calculated to include any business hours on the case. Elapsed Time is calculated only after the Completion Date field is populated. Depending on your company’s business requirements, the time can appear in minutes, hours, or days.

**Violation**

Icon (⚠️) that indicates a milestone violation.

**Time Since Target**

Shows the time that has elapsed since a milestone violation. Automatically calculated to include any business hours on the case. You can choose to display the time in days, hours and minutes, or minutes and seconds.

**Completed**

Icon (✅) that indicates a milestone completion.

Because they’re part of a case’s history, completed milestones remain on a case even if they’re no longer applicable.

Searching for Cases

1. Enter your search terms in the sidebar or header search box.
2. Click Search.
3. From the search results, click an item to open it or click Edit, if available.

You can also create a case list view to find cases that match specific criteria.

SEE ALSO:
   - Cases

Cloning Cases

The Clone button on a case quickly creates a new case using information from the existing case, for example, when you need to log multiple issues for a customer on a support call.

1. Click Clone on an existing case.
2. Enter or change any information for the new case.
3. Check the box to assign the case automatically using your active assignment rule.
4. Click Save.

Note: If you have read-only access to a field, the value of that field is not carried over to the cloned record.

SEE ALSO:
   - Case Fields

Deleting Cases

To delete a case, click Del next to the case on the cases list page, or click Delete on the case detail page. The Del link and Delete button do not display for users who do not have the “Delete” permission on cases.

When you delete a case, all related events and tasks, case comments, and attachments are also deleted. Associated contacts, accounts, and solutions are not deleted with the case. The deleted case is moved to the Recycle Bin. If you undelete the case, any related items are also restored.

Note: If you delete an event, task, case comment, or attachment from a case—and then delete the case—the event, task, case comment, or attachment cannot be restored via undelete.

SEE ALSO:
   - Cases
Assigning Cases

You can assign cases to users or queues in a variety of ways.

- **Using an Assignment Rule for Web-to-Case, Email-to-Case, or On-Demand Email-to-Case**
  In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, web- and email-generated cases are automatically assigned to users or queues based on criteria in your active case assignment rule.
  Cases that do not match the assignment rule criteria are automatically assigned to the Default Case Owner specified in the Support Settings.

- **Using an Assignment Rule when Creating or Editing a Case**
  In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, when creating or editing a case, you can check a box to assign the case automatically using your active case assignment rule. An email is automatically sent to the new owner if your administrator specified an email template in the matching rule entry. If you want this checkbox to be selected by default, your administrator can modify the appropriate page layout. If required, your administrator can edit the page layout to hide the assignment checkbox but still force case assignment rules.

- **Changing Ownership of Multiple Cases (administrators only)**
  From any case list page, an administrator, or a user with the “Manage Cases” permission, can manually assign one or more cases to a single user or queue.

- **Taking Cases from a Queue**
  To take ownership of cases in a queue, go to the queue list view, check the box next to one or more cases, and click Accept.

  **Note:** The organization-wide sharing model for an object determines the access users have to that object’s records in queues:

  - **Public Read/Write/Transfer**
    Users can view and take ownership of records from any queue.
  
  - **Public Read/Write or Public Read Only**
    Users can view any queue but only take ownership of records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

  - **Private**
    Users can only view and accept records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

  Regardless of the sharing model, users must have the “Edit” permission to take ownership of records in queues of which they are a member. Administrators, users with the “Modify All” object-level permission for Cases, and users with the “Modify All Data” permission, can view and take records from any queue regardless of the sharing model or their membership in the queue.

- **Changing Ownership of One Case**
  To transfer a single case you own or have read/write privileges to, click Change next to the Case Owner field on the case detail page, and specify a user, partner user, or queue. Make sure that the new owner has the “Read” permission on cases. The Change link displays only on the detail page, not the edit page.

  In Group, Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, check the Send Notification Email box to automatically send an email to the new case owner.

- **Creating a Case Manually (default assignment)**
When you create a case from the Cases tab, you are automatically listed as the case owner, unless the assignment rule checkbox is displayed and you select it to enable the assignment rule. If it’s selected by default, you can override the assignment rule and assign yourself as the owner by deselecting the checkbox.

Changing Multiple Cases

Sharing Cases

Your administrator defines the default sharing model for your entire organization. You can change this model to extend sharing to more users than the default set by your administrator. However, you cannot change the sharing model to make it more restrictive than the default.

To view and manage sharing details, click Sharing on the case detail page. The Sharing Detail page lists the users, groups, roles, and territories that have sharing access to the case. On this page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the View drop-down list, or click Create New View to define your own custom views. To edit or delete any view you created, select it from the View drop-down list and click Edit.
- Click Add to grant access to the record for other users, groups, roles, or territories.
  
  Note: To share a case with another user, that user must have access to the account associated with the case and the “Read” permission on cases.
- Click Expand List to view all users that have access to the record.
- For manual sharing rules that you created, click Edit or Del next to an item in the list to edit or delete the access level.

Case Feed

Case Feed Overview

Case Feed gives support agents a more streamlined way of creating, managing, and viewing cases. It includes actions and a Chatter feed. The actions let agents create case notes, log calls, change the status of cases, and communicate with customers. The feed displays important case events in chronological order, so it’s easy to see the progress of each case.

Agents assigned to a Case Feed page layout see a page that looks like this each time they view a case:
Case Feed

- **Highlights Panel (1)**—Provides an overview of the most important information about a case, such as the contact information, case name, case description, status, priority, and case owner. Agents can use the column dividers to resize sections of the highlights panel so they can see more of the info that’s most relevant.

- **Feed and Detail Views (2)**—From the feed view, which includes the publisher and feed, agents can easily switch to the case detail view to see more in-depth information and work with related lists.

- **Publisher (3)**—Contains the actions agents use to work with cases, such as the Email, Case Note, and Change Status actions.

- **Articles Tool (4)**—Lets agents find Knowledge articles that can help them resolve cases, and then attach them to a case or email them to customers.

- **Feed Filters (5)**—Help agents quickly find specific information in the feed by limiting the feed items that appear.

- **Feed (6)**—Offers a chronological view of the case’s history. Feed items are created for:
  - Incoming and outgoing email related to the case
  - Comments related to the case on a customer portal or Chatter Answers
  - Calls logged about the case
  - Changes to the case status
  - Comments made on the case
  - Links or files added to the case
  - Milestone activity related to the case
  - Case actions that result from workflow events
  - New tasks and events related to the cases

- **Follow Button and Followers List (7)**—Let agents follow the case so they’re notified in Chatter of updates to it, and let them see other followers.

- **Custom Buttons and Links (8)**—Give agents access to more tools and functionality.

Administrators can customize most aspects of Case Feed, including:

- The fields in the highlight panel
- The actions that appear and the fields they include
- The feed filters that are available and where on the page the list appears
- The width of the feed
The tools, custom buttons, and custom links that are available, and where on the page they appear.

Case Feed and Related Lists
View and Edit Cases from the Case Detail Page in Case Feed

Using Feed Filters in Case Feed

Feed filters make it easy for support agents to see all updates of one type, such as all call logs or all email messages, when working with cases in Case Feed. By using filters, agents can find the information they need more quickly, without having to browse through each case event.

When creating or editing feed layouts, administrators can specify which filters are available:

- Choosing only All Updates automatically shows all events on a case and hides the list of individual feed filters. Use this option if you want support agents to see the complete history of a case.
- Choosing only one type of feed filter automatically shows only case events of that type and hides the list of individual feed filters. For example, if you select only All Emails, the feed for each case shows the email messages related to the case but not case notes, portal replies, or other activities. This option is useful for agents who provide support primarily by one channel—phone, email, or portal—and who need to see case events only for that channel.
- Choosing more than one type of feed filter shows a list of available filters in the left sidebar of the Case Feed page or above the feed in the center of the page, with the first filter selected by default. For example, if you make the All Emails, Status Changes, and Portal Answers filters available, the feed for each case shows, by default, the email messages related to the case; users can click the other filters to see other types of case events. Use this option if your agents tend to provide support in one channel but also need to be able to see other types of case updates.

In addition, administrators can specify how and where the list of feed filters appears:

- As a fixed list in the left column.
- As a floating list in the left column. With this option, the feed filters list remains visible as users scroll down the page. This can be useful with long feeds, as it lets agents quickly filter case activities from anywhere on the page, without having to scroll to the top.
- As a drop-down list in the center column.
- As in-line links in the compact feed view. This option is available only for compact feed view.

Case Feed Overview

Case Feed and Related Lists

In the traditional case interface, support agents complete tasks such as logging calls and sending emails primarily by working with related lists. In Case Feed, agents can do several of these tasks directly in the feed.

Here's an overview of the most common related lists included in the traditional case interface, the tasks agents do from them, and where agents can complete those tasks in Case Feed.

Activity History
## Case Feed Feature Agents Use for this Task

- View and Edit Cases from the Case Detail Page in Case Feed
- Printable View in Case Feed
Printable View in Case Feed

Use the printable view option to view and print a comprehensive list of the information related to a case.

Printable view, which you access by clicking [Print] on any Case Feed page, displays information in the following order:

1. Case details
2. Contents of related lists that are included on the Case Detail page
3. Internal notes

Notes and Tips

- Depending on the related lists that are included on the Case Detail page, certain case events, such as email messages and logged calls, may not appear in the printable view. To ensure that emails and call logs are included, customize your Case Detail page layouts for Case Feed users to add the Activity History related list. To include public portal posts, add the Case Comments related list.
- Internal notes are listed under the heading Chatter on the printable view page.
- Related lists that don’t have data in them aren’t displayed in the printable view, even if they’re included in the Case Detail page layout.
- If your Case Detail page layout includes custom links and buttons, they appear in the case details section in the printable view.
- Printable view shows 500 each of the most recent internal note posts, links, and documents, and 100 of the most recent comments on each of these posts.

View and Edit Cases from the Case Detail Page in Case Feed

View and Edit Cases from the Case Detail Page in Case Feed

Use the Case Detail page to see and update detailed information about a case and work with related lists.

On the Case Detail page, you can:

- View and edit case information, including changing contact and account information, status, origin, priority, type, and case reason.
- Change or update the case subject and description.
- View related lists and use them to complete additional tasks (for example, viewing the approval history on a case or adding members to a case team).
- Close a case.
- Delete a case.
- Clone a case.

Note: If your organization has inline editing enabled, you can use it on the Case Detail page.
To switch between the feed view and the case details page when viewing a case, use the buttons or, if you’re working in the Salesforce console, the buttons.

To open a printable display of the case details, click **Printable View** on any page in Case Feed.

- Case Feed Overview

## Case Hierarchies

### Viewing Case Hierarchies

A case hierarchy shows you cases that are associated with one another via the **Parent Case** field. When a case is associated with a parent case it signifies a relationship between cases. The relationship can be a grouping of similar cases for easy tracking, or a division of one case into multiple cases for various users to resolve. In the case hierarchy, cases are indented to show that they are related to the parent case above them.

- To view the hierarchy for a case, click **View Hierarchy** next to the **Case Number** field on the case detail page.
- To specify that a case is associated with another case, edit the case and type the case number of the parent in the **Parent Case** field. Alternatively, you can click the lookup icon to search for a case’s case number.

**Note:** A parent case must exist before it can be entered and saved in the **Parent Case** field.

- To create a new case that is automatically associated with a case whose detail page you are viewing, click the **New** button on the Related Cases related list. From the **New** drop-down button, you can choose to create either a blank case or a case with information from the parent case.

**SEE ALSO:**
- Guidelines for Working with Cases
- Create Cases

---

**EDITIONS**

Available in both: Salesforce Classic and Lightning Experience

Available in: **Group**, **Professional**, **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

**USER PERMISSIONS**

To view cases:
- “Read” on cases

To view parent cases:
- “Read” on cases
Related Cases

If set up by your administrator, case detail pages include a Related Cases related list, which displays all of the cases directly below a parent case in a case hierarchy. Cases can be associated with each other via the Parent Case lookup field on a case edit page. When a case is associated with a parent case it signifies a relationship between cases. The relationship can be a grouping of similar cases for easy tracking, or a division of one case into multiple cases for various users to resolve.

From the Related Cases related list, click:

- **New** and choose from the drop-down button to create either a blank case or a case with information from the parent case.
- **Edit** to modify an existing case.
- **Cls** to close an existing case.

To perform mass actions from the Related Cases related list, select the checkboxes next to the cases you wish to update, and click:

- **Close** to close the selected cases using the values you specify.
- **Change Owner** to assign the cases to the one user or queue you specify.
- **Change Status** to change the Status of the cases to the value you specify.

Resolving Customer Inquiries

Solving Customer Inquiries

Solving Cases

To solve a case:

1. **View the case.**
2. **Find an article** or **find a solution** that answers the case’s question.
3. Attach the article or solution to the case by clicking **Select** next to a reviewed solution in the list of solutions. Or, click the title of an unreviewed solution and choose **Select** on the solution detail page.
4. Email the solution or article to the contact by clicking **Send Email** in the Activity History related list.
   a. Click **Select Template** and choose a template.
      
      You or your administrator can create email templates that automatically include the case description, solution detail, solution attachments, and other fields.
   b. Fill in the email fields.
   c. Click **Send**.
      
      The emailed solution or article is logged as an activity in the Activity History related list.
5. Close the case.

SEE ALSO:

- Multilingual Solutions Overview

Using Suggested Articles to Solve Cases

Suggested articles help knowledge base users solve cases quickly. When a new case is saved, the search engine automatically looks for articles that have keywords in common with the admin-selected case fields. The user working the case can scan the articles and attach them to the case if needed, or initiate another search with different keywords. Articles attached to the case appear on the Articles related list, which also provides a Find Articles button to search the knowledge base at any time.

To enable suggested articles:

1. From Setup, enter Support Settings in the Quick Find box, then select Support Settings.
2. Click Edit and choose Enable suggested articles. Suggested articles and suggested solutions cannot be enabled at the same time.
3. Choose each audience (channel) that receives suggested articles when submitting a case. Suggested articles are available for the internal app and the portals.
4. When you’re done with the Support Settings page click Save.

- Welcome to Salesforce Knowledge

Use Actions to Work with Cases in Case Feed

Case Feed actions make it easy for support agents to do tasks like send email, post to portals and communities, log calls, change case status, and write case notes, all on the same page.

Actions appear in the publisher at the top of the feed.

Here are some common Case Feed actions. Depending on how your administrator has set up your organization, you might not see all of these actions.
Support Your Customers

Solving Customer Inquiries

- Use the Email action to respond to customers by email. In some organizations, the Email and Portal actions are combined in an Answer Customer action.
- The Log a Call action lets you create a record of the details of a phone call. Call logs are visible only to other users in your organization, not to customers.
  
  Note: If you’re using a SoftPhone, completed calls and call notes are logged automatically in the case’s feed, as are interaction log entries whose Status is Completed.
- With the Portal action, you can post replies to a customer portal or a Chatter Answers community.
- Use the Change Status action to escalate, close, or make other changes to the status of a case.
- The Question action lets you search for and create questions.
- The Post, File, and Link actions are the same ones you’re used to seeing in Chatter.
  - Use the Post action to create case notes to share information about the case or get help from others in your organization. (Notes created with the Post action aren’t included in the Case Comments related list on the case detail page.)
  - Add a PDF, photo, or other document to the case with the File action. (Documents you add with File aren’t included in the Attachments related list on the case detail page.)
  - Use the Link action to share a link that’s relevant to the case.

  Case Feed Overview

Find, Attach, and Email Articles with the Case Feed Articles Tool

Knowledge articles can help you solve cases more quickly by providing in-depth troubleshooting steps and other detailed information. Use the articles tool in Case Feed to search for articles relevant to the case you’re working with, attach articles to the case, and email them to customers.

Note: Before you can use the articles tool, your administrator needs to set up and configure Salesforce Knowledge.

EDITIONS

Available in: Salesforce Classic

Available in: Enterprise, Performance, Unlimited, and Developer Editions

USER PERMISSIONS

To use articles in Case Feed:
- "Manage Cases"
AND
- “Read” on at least one article type
Click to open the articles tool.

- By default, the tool shows articles with keywords or phrases similar to the subject and description of the case you’re working with. If you don’t see the article you want, type new terms in the search box and click Search Again, or click Advanced Article Search for more options.
- Click the title of an article to open it in a new window if you want to see more information about it than just the title and the summary.
- When you find the article you want, choose what you want to do with it:
  - Select Email to customer to attach the article to a message as a PDF.
  - Select Attach to case to include the article as a case attachment.

### Close Cases

After you solve a customer’s case, you can close it from a few locations and create a solution or article to help solve similar cases.

1. **Click Close Case** on a case’s detail page, **Clis** on the Cases related list, or **Save & Close** while editing a case. If enabled by your administrator, you can select Closed from Status on a case’s edit page and click Save without completing any more steps.
2. Update Status, Case Reason, or any other fields as necessary.
3. If solutions are enabled, you can fill in the Solution Details for the case. If you don’t want to save the solution or submit it for review to a solution manager, uncheck Submit to public solutions. When this field is checked, the new solution is automatically linked to the case.
4. If there’s a contact on the case, select Notify contact on case close to send an email to the contact based on a predefined case close template.
5. **Click Save or Save and Create Article.** The article option is available if both Salesforce Knowledge and article submission during case close is enabled.

⚠️ **Tip:** If you have the “Manage Cases” permission, you can close multiple cases at once using the Close button on case lists.

**EDITIONS**

- Available in: Salesforce Classic
- Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.
- Salesforce Knowledge is available for an additional cost in: **Enterprise** and **Unlimited** Editions.

If articles are associated with a case, users working on the case can attach PDF versions of the articles to an email simply by choosing a template you create. This capability is available if Email-to-Case or On-Demand-Email-to-Case is set up and the Email related list is visible on case page layouts.

**Creating an Email Template that Converts Articles to PDF Files**

To allow users working on a case to automatically attach article PDFs to an email message:

1. From Setup, enter Email Templates in the Quick Find box, then select Email Templates.
2. Click New Template to create a template from scratch or click Edit next to an existing template. The new or edited template must include the Articles as PDFs case field.
3. For example, If you want to edit the **SUPPORT: Case Response with Solution (SAMPLE)** template to include articles instead of solutions, complete these steps:
   a. Click Edit next to the **SUPPORT: Case Response with Solution (SAMPLE)** template.
   b. Change the Email Template Name to **SUPPORT: Case Response with Article (SAMPLE)**.
   c. Modify the Template Unique Name as needed.
   d. Choose Case Fields from the Select Field Type drop-down menu.
   e. Choose Articles as PDFs from the Select Field drop-down menu.
   f. Copy the value from the Copy Merge Field Value field and paste it in the email body.
4. Click Save.

On the case detail page in the Emails related list, users can now click Send an Email and choose the new template. Articles associated with the case are automatically converted to PDF attachments, and the attachments can be previewed or deleted if needed before the email is sent.
Support Your Customers

Note: Both the article and the knowledge base must be in the same language. For example, if your knowledge base language is English but you want a Japanese article converted into a PDF, change your knowledge base language to Japanese (in Setup, enter Knowledge in the Quick Find box, select Knowledge Settings, then click Edit) before converting the article.

Notes on Field Visibility in Article PDFs

Consider the following information when using email templates that include the Articles as PDFs function:

• The fields that appear in article PDFs are determined by your profile if the **Use a profile to create customer-ready article PDFs on cases** checkbox (from Setup, enter Knowledge Settings in the Quick Find box, then select Knowledge Settings) is not selected. If you can see all fields in the original article, all fields also appear in the automatically generated PDF. If field-level security restricts you from seeing a field on an article, that field and its data do not appear in the article’s PDF.

• If the **Use a profile to create customer-ready article PDFs on cases** checkbox is selected and a profile is chosen from the Profile menu (from Setup, enter Knowledge Settings in the Quick Find box, then select Knowledge Settings), the chosen profile determines which fields appear in automatically generated PDFs. For example, if you are sending article PDFs to customers, you might choose the Customer Portal User profile to ensure that internal-only fields do not appear in article PDFs.

• Fields in the Properties section of an article, including First Published, Last Modified, Last Published, and Summary, are not included in any PDF version regardless of setting or profile.

Working with Case Emails

Cases generated via Email-to-Case or On-Demand Email-to-Case display in an Emails related list. The Emails related list includes all emails sent by your customer regarding a particular case, as well as the email threads you and your customer. The first 77 characters of an email message appear in the related list so that you can see what the message is about without having to click on it.

To work with Email-to-Case or On-Demand Email-to-Case emails:

• Click **Send An Email** to send an email to a contact, another user, or any other email address.

• Click **Reply** to respond to an email. The email response automatically includes the email body as received from the customer. Enter your response and click **Send**.

  When you reply to email messages in the Email related list on cases, the **From:** field on your email may display to recipients as no-reply@salesforce.com or support@company.com. This is due to how the recipients’ email applications receive Sender and From headers on inbound email. By default, an Enable Sender ID compliance setting is selected for your organization, which enables email messages sent from Salesforce to comply with email applications that require Sender headers for delivery.

• Click **To All** to respond to all participants on an email thread.

EDITIONS

Available in: Salesforce Classic

Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions

USER PERMISSIONS

To view cases:

• “Read” on cases

To work with case emails:

• “Edit” on cases
• Click the subject of the email to view the email. From the email, you can reply to the sender, reply to everyone, forward the email, or delete it.

• While viewing an email, you can display a list of all the emails associated with the case by clicking Email Message List, and you can navigate to the case's other emails by clicking Next or Previous.

  Note: The Email Message List, Next, and Previous links are not available in the Customer Portal and partner portal.

• While viewing an email, click Forward to forward it. The email automatically includes the email body as received from the customer. Optionally, enter text and click Send.

• If the original email was an HTML email, you can click the Click here to view HTML version link to see the HTML version. If you want to see the entire email header, click the Click here to view original email headers link.

• To view any attachments contained in incoming emails, go to the Attachments related list of the email. To view attachments sent with outbound emails, view the Attachments related list of outbound emails.

  The size limit for an attachment is 5 MB. The user who configured the email agent can view its log file to see if any attachments exceeded the size limit.

• Click Del to delete an email. Note that a deleted email can be retrieved from the Recycle Bin. However, if you delete an email from a case, then delete the case, you will not be able to retrieve the deleted email from the Recycle Bin.

In the Email related list, emails are listed in the order received according to the most recent. Emails in the related list display one of the following statuses:

<table>
<thead>
<tr>
<th>Email Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>New 📥️</td>
<td>An inbound email that has not been read. The contents of the Subject field display in bold for emails with a New Status.</td>
</tr>
<tr>
<td>Read 📥️</td>
<td>An inbound email that has been read but not replied to.</td>
</tr>
<tr>
<td>Sent 📥️</td>
<td>An outbound email.</td>
</tr>
<tr>
<td>Replied 📥️</td>
<td>An inbound email that has been replied to. Replying to a sent email gives it a replied status.</td>
</tr>
</tbody>
</table>

When a case contains a new (unread) email, an “Email” task associated with that case is automatically created in the case owner’s task list with the email subject displayed. The owner can easily see the new task on the Home tab or from the Open Activities related list of the case. From the task, the owner can click a link to view the email associated with the case. When the user responds to the email, the task is removed from the owner’s task list and added to the case’s Activity History related list. The user can also move an email task to which they have not responded to the Activity History related list by changing its status to “Completed.”

  Note: When inbound emails create a new case and your assignment rules route that case to a queue, the “Email” task is assigned to the user configured in the email agent.

  If an inbound email does not contain the email address of an existing contact, then the Web Name field on the case is automatically updated with the name in the From field of the email, and the Web Email field on the case is automatically updated with the address provided in the inbound email.
Tip: When running the Cases with Emails report, add the Is Incoming field to the report to see the cases received via Email-to-Case.

Sending Articles from Cases

Send and Reply to Email from Case Feed

Use the features of the Case Feed email action to save time when writing messages and customize the emails you send to customers.

Note:

- The email action in Case Feed is available only if your organization uses Email-to-Case.
- Depending on how your administrator has set up Case Feed, some of the options described below might not be available to you or might look different.

Here's how to use the email action:

1. Depending on which action appears, click Answer Customer and select Email, or just click Email. To write a reply to a message, click Reply or Reply All below an email message in the feed.

2. If your department uses email templates, choose one for your message.
3. Select a From address. If this field doesn’t appear as a picklist, your administrator has already defined a From address.

4. The email address of the contact who created the case automatically appears in the To field, as long as the creator is an existing contact. To add more recipients, click 📞 to look up an address, or type or paste email addresses or names in the To field.
   • When you enter an email address or name that matches one contact or user, the address appears as a button with the person’s name.
   • To add several addresses at once, copy and paste them separated by spaces or commas. These email addresses appear as buttons, and, if they’re associated with a contact or user, show the contact’s name.
   • When you enter an email address that matches multiple contacts or users, the address appears as a button. Clicking the button brings up a list of people associated with the email address so you can choose the one you want to associate with the message.

5. If you need to copy other people on the message, click Add Cc or Add Bcc.

6. By default, the email subject is the name of the case it’s related to. You can edit the subject if you need to.

7. Use the rich text editor to add formatting to your message.

8. Create your message. If your department uses Quick Text messages, you can add them in the body of your email.

9. If your administrator has enabled email drafts, you can click Save to save a copy of your message without sending it. When you save a message as a draft, any agent with access to the case can edit it.

10. Click Attach File or drag and drop files in the attachments pane to add files to the message.

11. Optionally, attach an article to the message.

12. Click Send Email.
   Note: Depending on how your administrator has set up Case Feed, this button may have a different name.

Tip: Click and drag 📊 in the bottom right corner to change the height of the message pane. Make it larger so you can see more of what you’re writing, or make it smaller so you can see more of the case history in the feed without scrolling. Once you resize the message pane, it appears in the new size each time you write an email, until you resize it again.

Case Feed Overview
Use Quick Text in Case Feed
Add Images and Files to Email Messages in Case Feed

Give customers comprehensive information to help resolve their issues more quickly by attaching files to email messages, and add inline images to include pictures that enhance your text.

For example, if you’re working on a case that requires a customer to try a few different solutions to resolve an issue, you might attach a how-to video or a document with multiple sets of detailed troubleshooting steps. If the customer has to follow a particular set of troubleshooting steps very carefully, you could use inline images after each step in the body of a message.

• To add an inline image, click in the toolbar of the Case Feed email publisher and upload or link to the image you want. Each image you embed must be no larger than 1 MB, and in .png, .jpg, .jpeg, .jpe, .jfif, .pjpeg, .bmp, or .gif format. The total size of your email message, including images and text, can be no more than 12 MB.

  Note: You need to use the rich text editor in the email publisher to embed images. You can’t embed images in plain text messages.

• To attach files to an email, click Upload files to choose a file from your computer or Salesforce, or to use a file that’s already attached to the case, or drag and drop files to the attachments area at the bottom of the email publisher. You can attach up to a total of 10 MB to each email message. Salesforce supports all file types.

  Note: Drag-and-drop functionality is available only on browsers that support HTML5.

• Click Files: to see a list of the attachments you’ve added.

• Click next to an attachment to remove it.

When the recipient of your email views the message, any images you’ve embedded appear in the body of the email. If the total size of everything you’ve attached to the message is greater than 3 MB, all of the attachments appear as links, which the recipient can use to download the files. If the total attachment size is less than 3 MB, each file appears as an attachment.

Example: For example, let’s say you’re a support agent for an appliance company, and you’re working on a case for a customer who’s having trouble with the ice maker on her fridge. You could email the customer step-by-step instructions for troubleshooting the ice maker and include an image after each step, and could attach two documents: a PDF of the user manual for the fridge (a 2 MB file) and a list of maintenance tips to keep the fridge working well (a 10 KB file). When the customer receives the email, she’ll see:

• The images embedded in the body of the email message so she can refer to them one at a time as she works through the troubleshooting steps

• The user manual and list of maintenance tips as attachments to the message, as their total size is less than 3 MB

If you also attached a troubleshooting video (a 2.5 MB file), all three of the attachments would appear to the customer as links, as the total size of all attachments would be greater than 3 MB.

SEE ALSO:
- Send and Reply to Email from Case Feed
- Find, Attach, and Email Articles with the Case Feed Articles Tool
- Customize Emails with the Rich Text Editor in Case Feed
Use Email Templates in Case Feed

Templates help you ensure consistency, save time, and include basic information, such as a customer’s name and their case number, all with one click. If your administrator has created text, HTML, or Visualforce email templates, or if you’ve created your own templates, you can use them when emailing customers in Case Feed.

For best results, we recommend using the rich text editor when working with email templates.

Note: Depending on how your administrator has set up Case Feed, you may see a pre-loaded template when you use the Email action. Use the steps below to choose a different template if needed.

To use a template:

1. Depending on which action appears, click Answer Customer and select Email, or just click Email.
2. Click Select a Template.
3. Choose the folder that has the template you want.
4. Click the name of the template to add it to the email.

Tip:
- If you choose more than one text or HTML template, each template is added in the order you choose it. If you choose a Visualforce template after choosing another template, it replaces the earlier template.
- If the template you choose has attachments, they’re included with the message.
- If the template you choose has merge fields, only the case-related fields are merged.
- To remove a template, click 🗑. This also deletes any text you’ve entered and removes all template attachments.

5. Finish writing and sending your message.

Work with Draft Emails in Case Feed

With draft emails, support agents can save messages they write to customers without having to send them immediately, and administrators can create approval processes for email messages.

Drafts are only supported if your administrator has enabled them.

As a support agent, you might want to save a message as a draft while you gather additional information about the issue you’re solving, confirm troubleshooting steps with a colleague, or take a break and log out of Salesforce. To save an email as a draft, click Save under the text box when you’re writing an email.

Note: Drafts aren’t auto-saved.

Each case can have only one draft email associated with it, so if you’re working on a case with a draft you or someone else has saved, you won’t be able to write another email until that draft is sent or discarded. When you view a case with a draft associated with it, you see a notification with the name of the user who wrote the draft and a link to view it. Any agent or supervisor with access to a case can edit the draft email, unless it’s awaiting approval.

If your company uses approval processes for email messages, when you submit a message, it’s sent to a supervisor for review. (Depending on how your administrator has set up approval processes, you may have the option of submitting the message for review or sending it without review.) When a supervisor approves the message, it’s sent to the customer. If your email isn’t approved, a message with an
explanation appears at the top of the publisher when you click Email while viewing the case. You can edit the message and resubmit it.

SEE ALSO:
Review and Approve Email Drafts

**Review and Approve Email Drafts**

Depending on how your administrator has set up draft emails and approval processes for your organization, you may need to review and approve messages written by the agents you oversee before those messages are sent to customers.

When an agent submits a message for approval, you receive an email notification with a link to the case that includes the message. A notice appears at the top of the publisher when you click Email. Click View email to go to the message detail page. On that page:

- Click Unlock Record to make the message editable.
- Click Delete if you want to discard the draft.
- Click Approve/Reject in the Approval History related list to approve or reject the message.
- Click Reassign to assign the approval to another supervisor.

If you approve the message, it’s sent to the customer. If you reject it, you have the option of writing a note explaining why. This note appears above the publisher on the case page when the agent clicks Email, along with a notice that the draft has been rejected.

Work with Draft Emails in Case Feed
Enable Default Email Templates in Case Feed
Create Approval Processes for Email Drafts

**Customize Emails with the Rich Text Editor in Case Feed**

The rich text editor lets you customize the emails you send to customers. Use it to format text, add bulleted or numbered lists, and add images and links.

**Accessing the Editor**

The rich text editor appears when you click Email, or Answer Customer and then Email, in the publisher on the Case Feed. You won’t see the editor if:

- Your administrator hasn’t enabled it.
- You used the plain text editor the last time you wrote an email in Case Feed. Just click the toggle icon to switch to rich text.

**Tips on Using the Rich Text Editor**

- The rich text editor is available only for the Email action.
- If you enter HTML and other kinds of markup in the editor, it won’t render when you send a message.
To delete a message, click \[ \text{X} \].

**Use Quick Text in Case Feed**

Quick Text helps you respond to customers and update cases more quickly. Insert pre-written messages, such as greetings and common troubleshooting steps, into customer communications like emails and portal posts. You can also insert pre-written notes into case status changes and call logs. In Case Feed, you can use Quick Text with the Email, Portal, Change Status, and Log a Call actions.

**Note:** Only Quick Text messages assigned to the channel for the action you’re working with are available in that action. For example, only messages assigned to the Email channel are available in the Email action.

1. Choose the Email, Portal, Change Status, or Log a Call action.
2. In the body of the action, type ```;```.
   If you’ve used Quick Text before, then a list of Quick Text messages appears, with the messages you’ve used most recently at the top. If this time is the first time you’ve used Quick Text, then no messages appear.
3. To see more messages, type a word or phrase.
   A list of messages that include those words appears.
4. To see the title and full text of a message, click it once or highlight it using the arrow keys on your keyboard.
   The full message appears at the bottom of the Quick Text list.
5. To select a message, double-click it or highlight it and press ENTER.
   If the message you select contains merge fields, they are resolved when you add the message.

**Phoning Customers**

**Salesforce CRM Call Center System Requirements**

Salesforce CRM Call Center requires the installation of a light-weight computer-telephony integration (CTI) adapter on every Salesforce user’s machine. The minimum system requirements for an adapter are:

- For adapters built with CTI version 4.0 or higher:
  - Microsoft® Internet Explorer® 8; Mozilla® Firefox® 3.5; Apple® Safari® 4; Google Chrome™ 10.0 (Internet Explorer 11 isn’t supported)
  - Microsoft Windows® XP (with Microsoft .NET framework)
- For adapters built with previous versions of CTI:
  - Internet Explorer 7 or 8; Firefox 3.5 or 3.6 (Safari, Chrome, and Internet Explorer 11 aren’t supported)
  - For Windows 7 32-bit, 32-bit Internet Explorer 8; Firefox 3.5 or 3.6
  - For Windows 7 64-bit, 64-bit Internet Explorer 8; Firefox 3.5 or 3.6
  - 256 MB of RAM (512 MB recommended)
  - 20 MB of disk space minimum
  - Intel® Pentium® II processor, 500 MHz or above
Windows XP

Note: If you’re using a CTI adapter built with version 4.03 of the CTI Toolkit, a popup window displays when using Firefox or Chrome browsers. This popup window must display on your machine to stay connected to Salesforce CRM Call Center.

SoftPhone Overview

A SoftPhone is a customizable call-control tool that appears to users assigned to a call center with machines on which CTI adapters have been installed. A SoftPhone’s functionality, user interface, and location are determined by the version of the CTI Toolkit with which it was built. See:

- About CTI 1.0 and 2.0 SoftPhones on page 2141
- CTI 3.0 and 4.0 SoftPhones on page 2143

About CTI 1.0 and 2.0 SoftPhones

A SoftPhone is a customizable call-control tool that appears to users assigned to a call center with machines on which CTI adapters have been installed. SoftPhones built with versions 1.0 or 2.0 of the CTI Toolkit display in the sidebar of every Salesforce page. Although administrators and developers can customize CTI 1.0 or 2.0 SoftPhones, they usually include the following components:
Call center state area
Includes a drop-down list that lets you specify whether you’re ready to receive calls. See Changing Your Call Center State on page 2151.

Phone line header
Shows the status of the phone line. A status icon changes colors and blinks ( ), and provides a text description. You can click the name of the line (Line 1) to show or hide the line’s dial pad and call information area.

Call information area
Shows data related to the call, such as the phone number the customer used to dial, the duration of the call, and links to any records associated with the call.

Call button area
Shows buttons that let you make call commands, such as dialing, hanging up, putting a caller on hold, transferring, conferencing, and opening a second line while on a call. See Using the SoftPhone on page 2150.

Current call log area
Displays log information for the call. By default, the Subject field includes the date and time of the call, but users can edit this field. The Name field lets users specify a related contact, lead, or person account, while the Related To field lets them attach an additional record to the call log once the call ends. Users can enter additional information about the call in the Comments text.
Call logs are saved in an activity record that can be retrieved from the recent calls area of the SoftPhone, or the Activity History related list of the associated records. See Creating Call Logs in the SoftPhone on page 2146.

**Recent calls area**
Displays saved logs for calls that have recently completed. Click a log’s **Subject** to open its detail page, or click a log’s **Name** or **Related To** link to open its associated record. Click **Edit** to reopen a call log for editing in the SoftPhone.

**My Calls Today report**
Opens a report of all the calls you’ve made or received in the last day.

**SoftPhone logo**
Displays a customizable logo for each CTI adapter.

**Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

SEE ALSO:

**CTI 3.0 and 4.0 SoftPhones**
A SoftPhone is a customizable call-control tool that appears to users assigned to a call center with machines on which CTI adapters have been installed. SoftPhones built with versions 3.0 and 4.0 of the CTI Toolkit display in the footer of the Salesforce console or in the sidebar of every Salesforce page. Although administrators and developers can customize CTI 3.0 and 4.0 SoftPhones, they usually include the following components:

**Call center state area**
Includes a drop-down list that lets you specify whether you’re ready to receive calls. See Changing Your Call Center State on page 2151.
Phone line header
Shows the status of the phone line. A status icon changes colors and blinks ( ), and provides a text description. You can click the name of the line (Line 1) to show or hide the line's dial pad and call information area.

Call information area
Shows data related to the call, such as the phone number the customer used to dial, the duration of the call, and links to any records associated with the call.

Call button area
Shows buttons that let you make call commands, such as dialing, hanging up, putting a caller on hold, transferring, conferencing, and opening a second line while on a call. See Using the SoftPhone on page 2150.

My Calls Today report
Opens a report of all the calls you’ve made or received in the last day.

SoftPhone logo
Displays a customizable logo for each CTI adapter.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

### Answering a Call Using the SoftPhone

When logged in to a SoftPhone, you can receive a call when:

- The call originates from a queue and your call center state is set to Ready for Calls
- The call is dialed directly to your extension and you are not already on a call

You can tell that you have an incoming call if you see a flashing red button and the words “Incoming Call,” “Incoming Transfer,” or “Incoming Conference” next to the name of a telephone line in your SoftPhone.

Details about the call, if any, are displayed just above the Answer button, and typically include the phone number of the caller and the number that the caller dialed to reach you. When the caller’s phone number can be matched with a number in an existing Salesforce record, a link to that record is also displayed. Likewise, if your call center prompts callers to enter an account number or other data before being connected with a representative, your SoftPhone searches for records that contain that information and automatically displays links to matching results.

To answer an incoming call, you can:

- Click Answer in the SoftPhone.
- Use your physical telephone set to pick up the call.

When you answer a call, the Call Duration clock starts ticking, and your call center state is automatically set to Busy. If you do not answer the call, the system forwards it to another user and your call center state is automatically set to Not Ready for Calls.

Once you have answered a call, you can:

- Log comments and associate Salesforce records with the call
- Put the caller on hold
- Transfer the call to another call center user
- Conference another call center user into the call
- End the call

If your SoftPhone supports multiple lines and you answer Line 2 while speaking on Line 1, Line 1 is automatically put on hold.

**Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.
Tip: **Screen pops** are pages that display when incoming calls match the phone number of an existing Salesforce record. The following table describes when screen pops display (they can only display when your call center state is set to Ready for Calls):

<table>
<thead>
<tr>
<th>Screen Pops On</th>
<th>Display</th>
<th>Don’t Display</th>
</tr>
</thead>
<tbody>

<td></td>
</tr>
<tr>
<td>Detail pages when inline editing is in use</td>
<td>✔️</td>
<td></td>
</tr>
<tr>
<td>Edit pages and detail pages in the <strong>Salesforce Console</strong></td>
<td>✔️</td>
<td></td>
</tr>
<tr>
<td>Outbound calls</td>
<td>✔️</td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
- Using the **SoftPhone**
- Changing Your Call Center State
- Tip sheet: Getting Started with your **SoftPhone**

### Creating Call Logs in the **SoftPhone**

Every external call that you make or receive with a **SoftPhone** automatically generates a call log activity record. You can view these call logs in the Activity History related list of any Salesforce record that is associated with the call or by running a report. Automatically generated call log records include values for:

- The call center user who received or initiated the call
- The phone number of the contact who called or who was called by the call center user
- The date on which the call took place
- The duration of the call, in seconds
- Whether the call was inbound or outbound
- The call center system’s unique identifier for the call

You can associate up to two records, edit the subject, and add comments to a call log while the call is underway. To do so:

1. **Associate up to two the records with the call log:**
   - When you view or create a contact, lead, or person account, a **Name** drop-down list appears in the call log. Use this list to select a single contact, lead, or person account record to associate with the call.
   - When you view or create any other type of Salesforce record, a **Related to** drop-down list appears in the call log. Use this list to select a single record of any other type to associate with the call.

   **Note:** Custom object records can only be associated with a call log if the custom object tracks activities.

By default, the most recently viewed records are selected in the **Name** and **Related to** lists unless you manually choose a different record. The records that you choose in these lists will include the call log in their Activity History related lists once the call ends. These records are also displayed with the call if it is transferred to or conferenced with another Salesforce CRM Call Center user.

---

**EDITIONS**

Available in: Salesforce Classic

Available in: **Professional**, **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

**USER PERMISSIONS**

To create a call log:
- Member of a call center
2. Edit the **Subject** and **Comments** fields with information about what happened during the call.

After the call ends, the call log is automatically saved as a completed task. You can quickly access the saved call logs for calls that were just completed by expanding the Last \( N \) Calls section of the SoftPhone. Up to three of your last calls are displayed in this list with your most recent call displayed first:

- To modify a recent call log, click **Edit** next to the call log's **Subject** field.
- To view a saved call log, click the call log's **Subject**.
- To view a record that is associated with a call log, click the name of the record.

To view a list of all calls that you've made or received in the past day, click **My Calls Today**. This link opens the My Calls Today report in the Reports tab.

**Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

SEE ALSO:
- Using the SoftPhone
- Wrapping Up a Call Using the SoftPhone
- Tip sheet: Getting Started with your SoftPhone

### Putting a Caller on Hold Using the SoftPhone

**Salesforce CRM Call Center** allows you to put any caller on hold so that the caller can't hear you speaking. To put a caller on hold, click **Hold** in the SoftPhone line that is currently active. The **Hold Time** clock that shows how long the caller has been waiting automatically starts, and the line light icon (뇌) begins to blink yellow.

- Callers are automatically put on hold whenever you initiate a call transfer, dial a number on a second line, or initiate a conference call.
- If you click **Hold** while on a conference, your line becomes mute but other conference participants can still speak to one another.

To resume the call, click **Retrieve from Hold**. If you want to end the call without retrieving the caller from hold, click **End Call**.

**Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

SEE ALSO:
- Using the SoftPhone
- Tip sheet: Getting Started with your SoftPhone
Transferring a Call Using the SoftPhone

To transfer a call to another call center user or to an external phone number:

1. Attach any relevant Salesforce records to the call that you want to transfer. For example, if you created a case for the call, save it, and make sure that it is selected in one of the Related To fields of the current call log. By doing this, the user to whom you are transferring the call will have access to the case in his or her SoftPhone.

2. Click Transfer in the SoftPhone line that you want to transfer. You remain on the line with your first caller and a new dial pad becomes active.

3. Use the dial pad, your keyboard, or the call center directory to enter the phone number of the person to whom the call should be transferred.

4. Click Initiate Transfer. Your first caller is automatically put on hold while you are on the call with the destination number. If a number you dial is busy, a message appears and you have the option to dial again or cancel the call.

5. When you are ready to transfer your first caller to the destination number, click Complete Transfer. If you no longer want to transfer the call, click Cancel Transfer.

Once you complete a transfer, your line is immediately freed and you return to the Ready for Calls state.

Making a Conference Call Using the SoftPhone

To initiate a conference call with another call center user or an outside phone number:

1. While on a call, click Conference in the SoftPhone line that is currently active. Your caller is automatically put on hold and a new dial pad becomes active.

2. Use the dial pad, your keyboard, or the phone directory to enter the phone number of the person you want to include in the conference.

3. Click Initiate Conference. Your first caller remains on hold while you are on the call with the destination number. If a number you dial is busy, a message appears and you have the option to dial again or cancel the call.

4. Once you have connected with the second caller and are ready to start the conference, click Complete Conference. The second caller joins the first on your original telephone line and all three of you can speak freely to one another. If you no longer want to conference the call after dialing the second number, click Cancel Conference to hang up on the second caller and return to your original caller.

Note:

- If you click Hold while on a conference, your line becomes mute but other conference participants can still speak to one another.
Some phone systems limit the number of callers who can be conferenced on a single line. See your administrator for details.

- Tip sheet: Getting Started with your SoftPhone

Wrapping Up a Call Using the SoftPhone

When you are ready to end a call:

1. **Update the associated call log.** For example, if you created a case or viewed a contact while you were on the call, verify that they are selected in one of the Related To fields of the log, and use the Comments text box to enter any notes about the call.

   Call logs are not created for internal calls.

2. Click **End Call** in the active SoftPhone line or use your physical phone set to hang up. This terminates the call and frees the line.

3. If wrap up codes are not enabled, your call center state is set back to Ready for Calls and the log for your call is automatically saved.

4. If wrap up codes are enabled, your call center state is set to Wrap Up and a set of reason codes are displayed in the SoftPhone. While in this state you cannot receive any incoming calls.
   
   a. Select the reason code that best represents the outcome of the call.
   
   b. Optionally make any additional modifications to your call log.
   
   c. Click **Done**. Your call center state returns to Ready for Calls, and the log for your call is automatically saved.

All saved call logs are placed in the Last N Calls section of the SoftPhone for quick reference. You can review details of these call logs by clicking any of the associated links:

- The **Subject** link (for example, “Call 6/01/2006 12:34 PM”) opens the call log details page.
- Either of the **Related To** links opens the detail page for the specified record.

**Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

SEE ALSO:
- Call Center Overview
- Using the SoftPhone
- Tip sheet: Getting Started with your SoftPhone
Using the SoftPhone

The Salesforce CRM Call Center SoftPhone appears in the left sidebar of your Salesforce window or in the footer of the Salesforce console. You can use the SoftPhone to:

- Log in to your call center
- Modify your call center state to show whether you are ready to receive a new call
- Dial a phone number by using the built-in SoftPhone, or by clicking the icon next to any phone number associated with a contact, lead, activity, or account
- Look up a phone number in your custom call-center directory
- Answer a phone call from another call center user or an external number
- Put a caller on hold
- Initiate a conference call with another call center user or an external number
- Transfer a phone call to another call center user or an external number
- Add comments to or associate Salesforce records with an automatic call log to quickly record information related to a call
- Edit personal Salesforce CRM Call Center settings to customize the behavior of your SoftPhone

You can’t collapse the sidebar if you’re a Salesforce CRM Call Center user and working within the Console tab.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

SEE ALSO:
- Call Center Overview
- Salesforce CRM Call Center System Requirements
- Use a SoftPhone with a Salesforce Console
- Wrapping Up a Call Using the SoftPhone
- Tip sheet: Getting Started with your SoftPhone

Logging In to the SoftPhone

Salesforce CRM Call Center requires you to first log in to Salesforce and then to log in separately to your organization’s phone system. The phone system login is located in the sidebar and only appears if you are:

- Assigned to a call center in Salesforce
- Using a machine on which an appropriate CTI adapter is installed. (You can quickly verify that an adapter is installed by looking for the icon in the system tray of your computer. The system tray is located next to the clock in the lower-right corner of your monitor.)

If a phone system login does not appear, contact your administrator.

Depending on the phone system that your organization uses, the login prompts you to enter your user ID, password, and other credentials. Once you have entered these values, click Log In to complete the connection to your phone system.

To automatically log in to your phone system without having to click the Log In button:
1. From your personal settings, enter SoftPhone in the Quick Find box, then select My SoftPhone Settings.

2. Select Automatically log in to your call center when logging into Salesforce. Once you have logged in to your phone system, Salesforce remembers your login information and automatically makes a connection to your phone system whenever you log in to Salesforce.

   Note: If you explicitly log out of the phone system at any time while you are logged in to Salesforce, automatic log in is turned off for the remainder of your Salesforce session. To reenable automatic log in, log out of Salesforce and then log back in.

After logging in to a phone system, your call center state is automatically set to Not Ready for Calls. If you want to receive calls, you must change your call center state to Ready for Calls.

   Tip: If you’re using a CTI adapter built with version 4.0 of the CTI Toolkit, you’ll be automatically logged out of the SoftPhone after 8 hours if you have one browser tab open and go to an external Web page, or to a Salesforce page without a sidebar (such as a dashboard). Automatic-logout times can vary because they’re based on how your administrator has configured your SoftPhone. To stay logged in, make sure you have at least one browser tab open to a Salesforce page with a sidebar, such as Home or Cases. Automatic logout doesn’t occur in the Salesforce console.

Changing Your Call Center State

While logged in to Salesforce CRM Call Center, there may be times when you do not want to receive calls on your SoftPhone, or when you need to step away from your desk. To avoid receiving calls when you do not want them, you can set your call center state next to the icon in the SoftPhone. Possible values for call center state include:

<table>
<thead>
<tr>
<th>Call Center State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ready for Calls</td>
<td>You are not currently on a call, and you are prepared to receive the next direct or queued call.</td>
</tr>
<tr>
<td>Not Ready for Calls</td>
<td>You are not currently on a call, and you are not prepared to receive the next queued call. In this state you can still receive calls that are dialed directly to your extension.</td>
</tr>
<tr>
<td>On a Call</td>
<td>You are currently connected to a caller and cannot receive either a direct or a queued call.</td>
</tr>
<tr>
<td>Wrap-Up</td>
<td>You are currently on a call, and you wish to go directly to the Not Ready for Calls state when the call is complete.</td>
</tr>
<tr>
<td>Log Out</td>
<td>You want to log out from your call center phone system and remain logged in to Salesforce. After</td>
</tr>
</tbody>
</table>

2151
When you first log in to Salesforce CRM Call Center, your call center state is automatically set to Not Ready for Calls. You must choose Ready for Calls from the drop-down list before you can receive any calls.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Using the Call Center Directory

Every call center has an associated call center directory that includes the name and number of every user that belongs to that call center, as well as other phone numbers that are related to records in your system.

To use your call center directory:

1. In the SoftPhone, click the name of the open line that you want to use. This action opens the dial pad for that line. Click next to the dial pad to open your call center directory.
2. Search the call center directory for a phone number:
   a. In the Pick an object drop-down, choose the type of record that you want to search. Any object with a phone number field is included in this list.
   b. In the Search text box, type all or part of the name for which you are searching.
   c. Click Go to view a list of only those records that include your search text.
3. When you find the phone number that you want, click its associated record name to automatically enter the number into the SoftPhone.
4. Click **Dial** to make the call.

- Tip sheet: Getting Started with your SoftPhone

Making a Call Using the SoftPhone

In Salesforce CRM Call Center there are three ways to make a call:

- Dialing a number manually
- Using the call center directory
- Using click-to-dial

While on a call, you can also make a call on a second phone line by clicking **New Line**. The new line allows you to enter a new phone number while remaining connected to your original caller. Once you click **Dial**, your original call is placed on hold, and your new call begins.

If you make a call while your call center state is set to Ready for Calls, your state moves directly to Not Ready, and you must enter Not Ready reason codes.

To end a call that you just dialed, click **End Call**. Some phone systems don’t allow you to end a call from a SoftPhone before it is answered. In these cases, an **End Call** button isn’t displayed, and you must use your physical phone set to terminate the call.

If a number you dial is busy, a message appears and you have the option to dial again or cancel the call.

**Note:** Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Making a Call by Dialing a Number Manually

To make a call in Salesforce CRM Call Center by manually dialing a number:

1. In the SoftPhone, click the name of the open line that you want to use. This action opens the dial pad for that line.
2. Enter the phone number that you want to dial by clicking the number buttons on the dial pad, or by typing numbers on your keyboard.
3. Click Dial or press the Enter key on your keyboard.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Making a Call Using the Call Center Directory

To make a call in Salesforce CRM Call Center using the call center directory:

1. In the SoftPhone, click the name of the open line that you want to use. This action opens the dial pad for that line.
2. Click next to the dial pad to open your call center directory.
3. Use the directory to locate the number that you want to dial.
4. When you have found the number, click the name associated with the number to automatically enter the number into the dial pad.
5. Click Dial or press the Enter key on your keyboard.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

SEE ALSO:
- Using the SoftPhone

Making a Call Using Click-to-Dial

To make a call directly from the phone field of a contact, lead, activity, or account using Salesforce CRM Call Center:

1. Locate the number that you want to dial in a contact, lead, activity, or account.
2. Click the button to the right of the number. The number is automatically dialed in the first open SoftPhone line.
   - A number that has already been clicked cannot be clicked again for five seconds.
   - The button does not appear next to fax numbers.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Checking the Version of Your CTI Adapter

To check which version of the CTI adapter you’ve installed on your machine:

1. Run the CTI adapter from where it’s installed. For example, from the Start menu, select All Programs > salesforce.com > CTI Adapter 2.0 > Salesforce Adapter 2.0.
2. Right-click the icon in the system tray of your computer. The system tray is located next to the clock in the lower-right corner of your screen.
3. Click About...
   - The version of your CTI adapter displays under CTI Connector.

Note: If you’re using a CTI adapter built with version 4.03 of the CTI Toolkit, a popup window displays when using Firefox or Chrome browsers. This popup window must display on your machine to stay connected to Salesforce CRM Call Center.

Viewing Community Activity for Ideas and Questions

Activity statistics, such as how many posts you’ve made and how many likes you’ve received in Ideas and Questions appear on your profile page so that others can learn about your participation in the community.

Click your name anywhere around the application to view your profile. If available, you can also click the Profile tab or Your Name > My Profile at the top of the page. View other people’s profiles by clicking their name.

Community Activity appears on the Overview tab of your profile and shows how your activity stacks up to other people’s. You can also evaluate the activity of other members of the community when you look at their profile.

When Chatter Answers is enabled for your organization, the total numbers for the following activities appear on your profile page:

- Questions you’ve asked
- Questions you’ve answered
- Questions you’ve solved with a best answer

Click Questions to navigate back to the Q&A tab.
When Reputation in Ideas is enabled by your administrator, the total numbers for the following activities appear on your profile page:

- Ideas you’ve created
- Comments you’ve received
- Comments and ideas you’ve voted on

Click Ideas to navigate back to the Ideas tab.

**Working with Customer Portal Users**

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

**Note:** High-volume portal users are available for customer portals or communities intended for many thousands to millions of users. See About High-Volume Portal Users on page 2344.

Some common tasks when managing Customer Portal users include:

- Setting up the Customer Portal for users
- Enabling Customer Portal users individually from the Contacts tab
- Disabling and deactivating Customer Portal users
- Changing Customer Portal users’ information and roles
- Changing Customer Portal users’ accounts
- Merging Customer Portal users
- Resetting Customer Portal users’ passwords
- Viewing Customer Portal users’ user licenses
- Granting high-volume portal users access to object's records
- Sharing high-volume portal users’ records with Salesforce users
- Managing Customer Portal users’ permissions and access settings
- Assigning profiles to a Customer Portal
- Delegating Customer Portal user management and case and contact management to portal users
- Reporting on Customer Portal users

**Tip:** To troubleshoot issues for Customer Portal users, click Manage External User and choose Log in to Portal as User on the portal user’s contact detail page. This selection opens a new browser window and automatically logs you into the portal as the portal user. This option also ensures that the portal is configured appropriately.

The Log in to Portal as User button is only available if you have the “Edit Self-Service Users” permission and “Edit” access on the account. The Log in to Portal as User button does not display for inactive portal users.
Post on Cases and Community Questions with the Community Action in the Case Feed

The Community action in the case feed is your default option for responding to customers on cases that originated from a community or customer portal.

To post on cases in a customer portal or community:

1. Click Answer Customer on the Case Feed page.
2. Click and select Community. Depending on how your administrator has set up Case Feed, you may be able to click Community without first having to click Answer Customer.
3. Enter the message to the customer.

4. If you’re working on a case that was escalated from a question in Chatter Questions or Chatter Answers, choose who you want your post to be visible to:
   - Select Customer Only to post your answer as a private reply, or Everyone to post it as a public reply.
   - Select Customer Case to make a post visible to all internal and external users with access to the case, or Community Question to post a public answer on the community user’s question. If you select Customer Case and your Salesforce administrator has enabled the community case feed, you’ll be creating a Chatter post instead of a case comment.

5. Optionally, select Send Email to send a message to the customer letting them know that a reply to their question has been posted to the case.

   Note: This option is only available if your administrator has enabled it, and if the customer you’re replying to is associated with the case and has a valid email address. If your organization uses the community case feed and email notifications for Chatter case posts are enabled, users are automatically notified by email about public posts on their cases and this option doesn’t appear.
6. Optionally, attach a Knowledge article to the post.
7. Click the button to publish your post.

Note: If the community case feed is enabled in your organization, you can change the visibility of case posts after they are published. For details, see Expose or Hide a Published Post or Email in the Community Case Feed.

Answers Overview

Note: Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

Answers Terminology

The following terms are used when describing answers features and functionality:

Answers
Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

Best Answer
When a member of an answers community asks a question and other community members post a reply, the asker can mark one of the replies as the best answer. The best answer then appears directly under the question (above the other replies). Identifying the best answer helps other community members with the same question quickly find the most relevant, useful information.

Community
Communities are customizable public or private spaces for employees, end-customers, and partners to collaborate on best practices and business processes.

Data Category for Answers
On the Answers tab, data categories allow users to classify questions in an answers zone. For example, if you have a zone for hardware products, your data categories may include laptops, desktops, and printers. Zone members can quickly browse within a specific category to find answers to their questions. Administrators can use data categories to control access to questions.

Idea
Ideas are suggestions posted by the members of an ideas community and are organized by zones. For example, if the focus of a particular zone is “Ideas for car features,” an appropriate idea for that zone might have the title “Insulated cup holders that keep your beverage hot or cold.” Or, if the focus of a particular zone is “Ideas for our company’s employee benefits,” an appropriate idea for that zone might have the title “On-site day care.”
Question
An issue posted to an answers community. When a community member asks a question, other community members post replies to help resolve the question.

Reply
The response to a question in an answers community. When community members reply to a question, the person who asked the question can mark one of the replies as the best answer to resolve and close the question.

Vote, Reply
In an answers community, a vote means you either like or dislike a reply to a question.

Zone
Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions.

Icon Descriptions

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1.png" alt="Image" /></td>
<td>A question that has been resolved. To resolve a question, the person who asked the question chooses a reply as the best answer.</td>
</tr>
<tr>
<td><img src="image2.png" alt="Image" /></td>
<td>A question that community members have replied to. For example, this icon represents a question with four replies. If a question has no replies, a “0” appears in this icon.</td>
</tr>
<tr>
<td><img src="image3.png" alt="Image" /></td>
<td>A reply to a question.</td>
</tr>
<tr>
<td><img src="image4.png" alt="Image" /></td>
<td>A reply that has been marked as the best answer to a question.</td>
</tr>
</tbody>
</table>

Using Answers

Note: Starting with Summer ‘13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

On the Answers tab you can:
- Ask a question
- Find an answer to a question
- Reply to a question
- Vote for a reply
- Identify a reply as the best answer to your question
- View all of your questions and replies
- Convert a reply into an article in the knowledge base
- Escalate a question to a case

EDITIONS
Available in: Salesforce Classic
Answers is available in: Enterprise, Performance, Unlimited, and Developer Editions.

USER PERMISSIONS
To view the Answers tab:
- “Read” on questions
To ask and reply to questions:
- “Create” on questions
To vote for replies:
- “Read” on questions
The right side of the answers home page provides a snapshot of recent activity by showing the most recently asked and the most recently replied questions, as well as questions that have been open for more than a week.

Only administrators have full read, create, edit, and delete permissions for answers. Standard and portal users can delete their own questions and replies if no one has replied or voted.

SEE ALSO:
- Answers Overview

Asking a Question

Note: Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

To ask a question:

1. From the Answers tab, enter your question and click Ask.

   Salesforce searches the titles and descriptions of the other questions in the zone and lists ones that are similar to yours. If your question has already been asked, click the question title to view the replies that other zone members have posted to that question.

   Alternatively, click Start Over to clear the similar questions results and ask another question.

2. If your question has not already been asked, click Continue.

3. Enter a description of your question. Use the HTML editor to format your text or upload an image.

4. Select a category for your question. If you do not assign a category, community members may have difficulty finding your question, as they must use search or view all questions in the community.

5. Click Post Question.

After asking your question, wait for community members to post replies. Then you can choose a reply as the best answer to resolve your question.

Creating Questions from the Questions Tab

**Note:** Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

**Note:** Since your administrator determines the fields on questions, some fields might not be included in the following steps.

You can use the Questions tab in both the application and the console to ask questions of the zones that you moderate and manage. Asking community members for input or opinions is an easy way to assess interest in topics or create engagement in the community.

To post a question to the community from the Questions tab:

1. Click **New Question** from the Questions list view page or click **New** from the Recent Questions list on the Questions overview page.
2. Select a zone for your question.
3. Add a title for your question.
4. Optionally, enter a description of your question.
   Use the rich text editor to format your text or upload an image. To ensure that your images appear correctly in the feed, Salesforce recommends that they be less than 450 pixels wide.
5. Select a category for your question.
   Questions must be assigned to a category to appear in the community. Questions that don’t have a category are still visible to the owner of the question, but not to other members of the community.
6. Click **Save**.

Editing and Deleting a Question

**Note:** Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

Standard users can delete their own questions if the questions have not received replies. Once a question receives a reply, the owner of the question can no longer delete it. As the Salesforce administrator, you can edit or delete any question posted to a community. For example, you may want to monitor your answers community and edit or delete questions that contain inappropriate content or offensive language.

To edit or delete a question:

1. Click the question title to view the question detail page.
2. Click **Edit** or **Delete** at the top of the page. When editing a question, you can change the title or description and select a different category for the question. When deleting a question, the question (and all associated replies) goes to the Recycle Bin.

Another way to prevent offensive language is to create a validation rule that prevents users from entering specific words when asking a question.
Finding and Viewing Questions

**Note:** Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

There are a couple ways to find a question:

- **Browse all questions within a community or category.**
- **Search for a question using the search field on the Answers tab.** This field searches the title and description fields for both questions and replies and displays matching results.

Once you’ve found your question, click the question title to view the question detail page, which lists all the replies for the question. The question detail page lists the number of community members who liked and disliked each reply, and also shows the best answer to the question (if one has been chosen).

From the question detail page, you can:

- **Reply to the question.**
- **Vote for a reply.**
- **Choose a reply as the best answer.** You can only choose a best answer if you asked the question or are a Salesforce administrator.

If a question has already been resolved, you can click **Mark as Not Answered** above the question to re-open it.

- **Sort replies by**
  - **Newest**—Shows the most recently posted replies at the top of the list.
  - **Oldest**—Shows the oldest replies at the top of the list.
  - **Most Votes**—Shows the replies with the greatest number of “likes” and “dislikes” (added together) at the top of the list.

**SEE ALSO:**
- Answers Overview
- Using Answers
Browsing Questions within a Zone or Category

Note: Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

To view all questions within a zone or category, go to the Answers tab and click the zone name or category that appears below the Get an Answer heading.

Browsing Questions within a Zone

After clicking the zone name to view all questions within that zone, you can:

- Ask a question.
- Filter questions so you only see the open or resolved questions. A question is considered resolved when the person who asked the question selects one of the replies as the best answer. Community members can continue to post replies and vote for replies even when the question has been resolved.
- Sort questions by:
  - Recent Activity—Shows the questions that have the most recent replies at the top of the list
  - Newest—Shows the questions that have been most recently asked at the top of the list
  - Oldest—Shows the oldest questions at the top of the list
- Click Reply below a question to post a reply.
- Click a category to view all the questions associated with that category. All the categories within your zone appear under the zone name at the top of the page.

The question icons identify whether the question has been resolved or is still open.

Browsing Questions within a Category

When community members ask a question, they associate a single category with their question to make it easier to find within the community. To browse all questions associated with a category, click the category name to display the category detail page.

You can click on a category from the following locations:

- When viewing a question, the categories associated with that question appear below the question description.
- When browsing questions within a zone, all the categories in the zone appear below the zone name.
- On the answers home page, all the categories in the zone appear below the zone name.

From the category detail page, you can:

- Ask a question that is automatically associated with the category you are viewing.
- View all questions associated with that category, or filter the questions so you only see the open or resolved questions. A question is considered resolved when the person who asked the question selects one of the replies as the best answer. Community members can continue to post replies and vote for replies even when the question has been resolved.
- Sort questions by:
  - Recent Activity—Shows the questions that have the most recent replies at the top of the list
Support Your Customers

- Newest—Shows the questions that have been most recently asked at the top of the list
- Oldest—Shows the oldest questions at the top of the list

- Click **Reply** below a question to post a reply.

The question icons identify whether the question has been resolved or is still open.

**SEE ALSO:**

**Rephrasing to a Question**

**Note:** Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

To reply to a question:

- If you’re viewing a list of questions within a community or category, click **Reply** next to question you want to respond to. Enter your reply in the editor and click **Reply**.
- If you’re viewing the details of a question, enter your reply in the space provided at the bottom of the page, and click **Reply**.

After you reply to a question:

- Community members can vote on whether they like dislike your reply.
- The person who asked the question can choose your reply as the best answer.

**SEE ALSO:**
- Answers Overview
- Voting for a Reply
- Choosing the Best Answer to a Question
- Escalating a Question to a Case
Editing and Deleting a Reply

Note: Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

Standard users without the “edit” and “delete” permissions on the answers object cannot edit or delete their replies. However, as the Salesforce administrator, you can edit or delete any reply posted to a community. For example, you may want to monitor your answers community and edit or delete replies that contain inappropriate content or offensive language.

To edit or delete a reply:

1. Click the question title to view a list of all replies for the question.
2. Click Edit or Delete next to the reply you want to change or remove. When deleting a reply, the reply goes to the Recycle Bin.

Another way to prevent offensive language is to create a validation rule that prevents users from entering specific words when posting a reply.

To create validation rules, from the object management settings for Chatter Answers question and Chatter Answers reply, go to Validation Rules.

Voting for a Reply

Note: Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

When you vote on a reply, you contribute to the answers community by identifying the replies that contain the most helpful (and unhelpful) information. When other community members look for an answer to a question, they can quickly look at the number of “likes” and “dislikes” a reply has received and make a more informed decision about which reply to read.

In addition, the more votes a reply receives the easier it is for the person who asked the question to choose a reply as the best answer.

When viewing a question, review the replies and click Like to voice your approval of a reply or Dislike if a reply contains incorrect or unhelpful information. Your vote (either a +1 or –1) is included in the Like or Dislike total for that reply. You can’t vote for your own reply and you can only vote once for each reply.

Choosing the Best Answer to a Question

Note: Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

After you ask a question, you should monitor the replies posted by other community members and eventually choose one of the replies as the best answer. The best answer is highlighted directly below the question so it’s easy to find, which helps community members quickly identify the most useful resolution to the question.

Only Salesforce administrators and the person who asked the question can mark a reply as the best answer.

To choose the best answer:

1. From the Answers tab, find your question and click its title.
2. Decide which reply is the best answer, and click Choose as Best Answer.

To identify the best answer, look at the votes (“likes” and “dislikes”) for each reply. The reply with the most “likes” probably contains the most useful information. If a question has many replies, try sorting the replies by Most Votes so the replies with the most likes and dislikes appear at the top of the list.

After you choose a best answer:

- The question is marked as “resolved”. Community members can continue to post and vote on replies for resolved questions.
- If another reply that you like better is posted in the future, simply choose that reply as the best answer to replace the old best answer.
- You can remove the best answer status of the reply at any time. Removing the best answer status from a reply makes it a regular reply.

Viewing Your Questions and Replies

Note: Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

Once you become an active community member, you can view a list of all the questions you asked and replies you posted by clicking My Questions & Replies at the top of any page in the Answers tab.

When viewing a list of your questions, you can quickly identify which questions you resolved and which questions are still open. (Resolved questions have a best answer.) You can sort your questions by:

- Newest—Shows your most recently asked questions at the top of the list
- Recent Activity—Shows your most recently asked questions and your questions that have the most recent replies at the top of the list
- Oldest—Shows your oldest questions at the top of the list

When viewing a list of your replies, the question title appears as a link followed by your reply. You can sort your replies by:

- Newest—Shows your most recently posted replies at the top of the list.
- Oldest—Shows your oldest replies at the top of the list.
- Most Votes—Shows your replies that have received the greatest number of “likes” and “dislikes” (added together) at the top of the list.

The following table describes the icons displayed on the page:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>

Creating an Article from a Reply

**Note:** Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

In an answers community, you may want to turn a particularly helpful answer into an article in your knowledge base. To create an article:

1. Click the question title to view a detail page showing the question and its replies.
2. On the reply you want to add to the knowledge base, click **Promote to Article**.
3. Edit your article. The fields that appear depend on the default article type assigned to replies, but the following is true for all article types:
   - The **Title** field contains the title of the question.
   - The **Summary** field contains the reply.
   - You can make new data category selections for the article. Unlike answers, articles support multiple category groups.

**Note:** An administrator can change the article type and assignee.

4. Click **Save**. The original reply now has a status message indicating its association with an article. When the article is published, the message on the reply includes a link to the article.

Escalating a Question to a Case

Note: Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

If a question remains unresolved or its reply isn’t satisfactory, administrators and trusted community members can escalate the question to a case. After a case is created, the question detail page provides a link to the case for the life of the question. This link also shows the status of the case.

Note: Closing the case does not mark the question as resolved, and resolving the question does not close the case. The case and the question must be updated separately.

To escalate a question to a case:

1. Click the question title.
2. On the question detail page, click Escalate to Case. This button only appears if an administrator has configured the appropriate case settings.
3. Update the case fields if you want to change any default values. The question title automatically becomes the case Subject.
4. Click Save. You are returned to the question detail page and the case is now available for the Case Owner to resolve.

Ideas Overview

Ideas is a community of users who post, vote for, and comment on ideas. An Ideas community provides an online, transparent way for you to attract, manage, and showcase innovation.

Tip: Salesforce offers its own Ideas community for Salesforce users to submit product feedback and suggest new features. To visit, go to http://ideas.salesforce.com.

Ideas Terminology

The following terminology is used for Ideas:

Category, Ideas
Categories are administrator-defined values that help organize ideas into logical sub-groups within a zone. The View Category drop-down list on the Ideas tab allows users to filter ideas by category, and the Categories picklist on the Post Ideas page lets users add categories to their ideas. For example, if your ideas zone has the focus “Improvements to our clothing line,” then you might set up categories such as “Shirts,” “Jackets,” and “Slacks.” Each organization has one common set of categories that can be added or removed from each zone. An administrator defines separate categories for their ideas and answers zones.

Comment
Comments are plain text responses to posted ideas that enable discussions about the ideas. On the Ideas tab, the Comments subtab lists the comments that have most recently been submitted. On the detail page of an idea, comments are sorted in chronological order from oldest to newest.

Community
Communities are customizable public or private spaces for employees, end-customers, and partners to collaborate on best practices and business processes.

Community Expert
A community expert is a member of the community who speaks credibly and authoritatively on behalf of your organization. When community experts post comments or ideas, a unique icon (☆) displays next to their name. The Salesforce administrator can designate as many community experts as necessary.

Demote
If you dislike an idea, you can click demote to subtract 10 points from its overall score and decrease the idea’s overall popularity ranking. You cannot demote the same idea more than once, and after you demote an idea you cannot promote it. An idea can have negative overall points if more users demote the idea than promote it.

Half-life
The half-life setting determines how quickly old ideas drop in ranking on the Popular Ideas subtab, to make room for ideas with more recent votes. A shorter half-life moves older ideas down the page faster than a longer half-life. This setting affects all zones in your organization.

Idea
Ideas are suggestions posted by the members of an ideas community and are organized by zones. For example, if the focus of a particular zone is “Ideas for car features,” an appropriate idea for that zone might have the title “Insulated cup holders that keep your beverage hot or cold.” Or, if the focus of a particular zone is “Ideas for our company’s employee benefits,” an appropriate idea for that zone might have the title “On-site day care.”

Idea Themes
Idea Themes provide a forum in which you invite community members to post ideas about specific topics so that community members can solve problems or propose innovations for your company.
Point
A point is a unit of measurement that represents the popularity of an idea. Each vote for an idea is worth ten points (promote adds 10 points and demote removes 10 points). An idea’s total number of points displays to the left of the idea.

Popular Ideas
On the Popular Ideas subtab, ideas are sorted by an internal calculation that reflects the age of an idea’s positive votes. Regardless of an idea’s static total number of points, ideas with newer positive votes display higher on the page than ideas with older positive votes. This allows you to browse ideas that have most recently gained popularity, with less precedence given to long-established ideas that were positively voted on in the past.

Portal
If your organization has a Customer Portal or partner portal, you can add the Ideas tab to either or both portals so that portal users can participate in their own Ideas communities. The Zone list at the top of the Ideas tab lists all the available zones, and each zone contains its own unique group of ideas.

Promote
If you agree with or like an idea, click promote to add 10 points to the idea. You cannot promote the same idea more than once and you cannot promote an idea that you have already demoted. Salesforce automatically adds your promote vote to any idea you post.

Recent Activity
Your Recent Activity page contains a summary of all the recent activity that relates to your participation within a zone. For example, this page lists all the ideas and comments you have posted to a zone as well as the ideas you have voted on. You can view your Recent Activity page by clicking your nickname located on the right side of the Ideas tab.

Status
An idea’s status helps zone members track the progress of the idea. For example, “Under Review”, “Reviewed”, “Coming Soon”, and “Now Available” are common status values an administrator can define and assign to ideas. An idea’s status appears next to the idea’s title for all zone members to see.

Top All Time Ideas
On the Top All-Time subtab, ideas are sorted from most number of points to fewest. This allows you to see the most popular ideas in the history of your Ideas zone.

Vote, Idea
In an ideas community, a vote means you have either promoted or demoted an idea. After you vote on an idea, your nickname displays at the bottom of the idea’s detail page to track that your vote was made. You can use your Recent Activity page to see a list of all the ideas you have voted on.

Zone
Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions.
Using Ideas

Ideas is a community of users who post, vote for, and comment on ideas. An Ideas community provides an online, transparent way for you to attract, manage, and showcase innovation. You can:

- Post ideas
- View ideas or Idea Themes
- Search for ideas
- Vote for ideas
- Comment on ideas
- View recent activity and replies
- Subscribe to syndication feeds

Each time you click the Ideas tab, the Popular Ideas subtab displays ideas in all categories. To change your current view, click one of the other subtabs like Recent Ideas or Top All-Time. Click List to toggle back to the list view.

Viewing Ideas

The following sections describe how to view ideas:

- Accessing the Ideas Tab in Salesforce
- Accessing the Ideas Tab in a Portal
- Browsing Popular Ideas
- Browsing Recent Ideas
- Browsing Top Ideas of All Time
- Viewing Ideas by Category
- Viewing Ideas by Status
- Browsing Ideas in Other Zones
- Viewing the Details of an Idea

Accessing the Ideas Tab in Salesforce

In Salesforce, the Ideas tab is available by default in the Community app. You can select this app from the Force.com app menu in the top right corner of any Salesforce page.

Note that your administrator may have customized your profile to also display the Ideas tab in other apps. Also, your administrator may have renamed the Ideas tab to an alternate tab name.

Click Tab to display the Ideas tab. Click List to toggle back to the list view.
Tip: The Zone list at the top of the Ideas tab lists all the available zones, and each zone contains its own unique group of ideas.

Accessing the Ideas Tab in a Salesforce.com Community
If your organization has created a Salesforce.com Community, your administrator can display the Ideas tab to the community by adding it to the list of selected tabs during setup of the community.

Accessing the Ideas Tab in a Portal
If your organization has portal users who have access to a Customer Portal or partner portal, your portal's administrator can display the Ideas tab on either type of portal. The ideas that display in a portal are either created through a portal or are created internally in Salesforce and published for display in a portal.

Browsing Popular Ideas
On the Popular Ideas subtab, ideas are sorted by an internal calculation that reflects the age of an idea’s positive votes. Regardless of an idea’s static total number of points, ideas with newer positive votes display higher on the page than ideas with older positive votes. This allows you to browse ideas that have most recently gained popularity, with less precedence given to long-established ideas that were positively voted on in the past.

Browsing Recent Ideas
The Recent Ideas subtab lists the ideas that have most recently been submitted. Newer ideas display above older ideas.

Browsing Top Ideas of All Time
The Top All-Time subtab lists the ideas with the most points. The difference between the Top All-Time subtab and the Popular Ideas subtab is that the Top All-Time subtab displays the top ideas of all time by number of points, whereas the Popular Ideas subtab uses an algorithm to display the ideas that have received the most recent positive votes.

Viewing Ideas by Category
Categories are administrator-defined values that help organize ideas into logical sub-groups within a zone. The View Category drop-down list on the Ideas tab allows users to filter ideas by category, and the Categories picklist on the Post Ideas page lets users add categories to their ideas.

To browse ideas by category, select a category from the View Category drop-down list. Alternatively, click the category link at the bottom of the idea description, next to the user who posted the idea.

Viewing Ideas by Idea Themes
You can view all of the ideas that are posted to an idea theme. From the Idea Themes detail page, you can manage an idea theme and its related ideas.

Viewing Ideas by Status
An idea’s status helps zone members track the progress of the idea. For example, “Under Review”, “Reviewed”, “Coming Soon”, and “Now Available” are common status values an administrator can define and assign to ideas. An idea’s status appears next to the idea’s title for all zone members to see.
To view all ideas of a particular status, go to the Ideas tab and select a value from the Status drop-down list. Alternatively, click the status link next to an idea to view all ideas in the zone with that status.

**Browsing Ideas in Other Zones**

Administrators can create multiple zones with each zone having its own unique list of ideas. For this reason, it is important to verify you are viewing the correct zone when browsing ideas. To browse ideas in a specific zone, select a zone from the list of zones the top of the page.

**Viewing the Details of an Idea**

Click the title of an idea to open the detail page of that idea. The detail page of an idea includes the following sections:

- The details of the idea, including its full text and number of points
- The related idea theme and the zone to which it belongs.
- All comments that have been submitted for the idea
- An area for adding a new comment
- A list of the last 100 users who have voted (promoted or demoted) for the idea, sorted left to right from most recent vote to oldest vote
- If you are an administrator, the detail page lets you edit, delete, and merge ideas.

**SEE ALSO:**

- Ideas Overview

Voting on Ideas

In an ideas community, a vote means you have either promoted or demoted an idea. If you agree with or like an idea, click **promote** to add 10 points to the idea. You cannot promote the same idea more than once and you cannot promote an idea that you have already demoted. Salesforce automatically adds your promote vote to any idea you post.

If you dislike an idea, you can click **demote** to subtract 10 points from its overall score and decrease the idea's overall popularity ranking. You cannot demote the same idea more than once, and after you demote an idea you cannot promote it. An idea can have negative overall points if more users demote the idea than promote it.

To vote on an idea:

1. On the Ideas tab, locate an idea you want to promote or demote.
2. To add 10 points to the idea, click **promote** next to the idea. To subtract 10 points from the idea, click **demote**. After you have voted, your Nickname displays at the bottom of the idea’s detail page to track that your vote was made.

**Note:** When you post a new idea, you automatically cast a vote for that idea and 10 points are added to the idea’s score.

SEE ALSO:

- Ideas Overview

Commenting on Ideas

Comments are plain text responses to posted ideas that enable discussions about the ideas. On the Ideas tab, the Comments subtab lists the comments that have most recently been submitted. On the detail page of an idea, comments are sorted in chronological order from oldest to newest.

Adding Comments to Ideas

Add comments to ideas to share your thoughts and opinions with other community members:

1. On the Ideas tab, locate an idea on which you want to add a comment.
2. Click either the title of the idea or the Comments link below the idea description.
3. On the detail page for the idea, type your comments into the text entry area in the Add Your Comment section. You can enter up to 4,000 characters.
   If your organization has enabled the HTML editor for Ideas, the description can include HTML and reference online images. If the HTML editor is not enabled, use plain text only.
4. Click Post to submit your comment.

Your newly added comment displays in the Comments related list on the idea detail page.

Editing Comments on Ideas

To edit a comment that you have submitted on an idea:

1. On the detail page of the idea, click Edit next to your comment.
2. Modify your comment as desired.
3. Click Apply to save your work.

Deleting Comments on Ideas

Deleting comments on ideas requires the “Delete” permission on ideas.

1. On the detail page of the idea, click Del next to your comment.
2. Click OK.

Viewing Recently Posted Comments

To view the comments that have most recently been posted in your Ideas community, click the Comments subtab and select a zone in which to view comments. Click the text of a comment to view the detail page of the appropriate idea.

On the Comments subtab:

- Comments are listed in chronological order from newest to oldest.
- The title of the idea on which the comment was posted displays above the comment.
- The alias of the user who posted the comment displays next to the comment text.
The total number of comments on the idea displays in brackets below the comment text. For example, Comments [20] indicates that the idea has twenty comments.

SEE ALSO:
- Ideas Overview
- Viewing Ideas
- Using Ideas
- Liking Comments on Ideas

Liking Comments on Ideas
Like a comment to show that you endorse it. Below a comment that is associated with an idea, click Like. To stop liking a comment, click Unlike. Ideas counts the number of likes a comment gets. When a comment receives a like, a point is added to the comment’s total score and to the reputation of the user who posted the comments.

SEE ALSO:
- Commenting on Ideas

Deleting Ideas
To delete an idea:
1. Click the name of an idea to open the detail page.
2. Click the Delete button.
3. Click OK.
The idea, its comments, and any child ideas are moved to the Recycle Bin. Note that undeleting an idea from the Recycle Bin also restores the idea’s comments, votes, and child ideas.

SEE ALSO:
- Merging Ideas
- Posting and Editing Ideas
Viewing Your Recent Activity Page

Your Recent Activity page contains a summary of all the recent activity that relates to your participation within a zone. To view your Recent Activity page, go to the Ideas tab and click your Nickname link on the right side of the page. To view the Recent Activity page of another member of the zone, click the community member’s name that appears below any idea or comment they have posted. You can view activity for the different zones you have access to by selecting a zone from the Zone list.

The Recent Activity page uses the following icons to identify the various types of activity:

-💡 identifies the ideas you have submitted.
- ![Checkmark] identifies the ideas you have voted on.
-💬 identifies the comments you have posted to ideas as well as the comments other users have posted to your ideas.

For additional detail, click the following links located on the left side of the Recent Activity page:

- **Ideas Submitted** lists the ideas you have posted to this zone. The most recent idea appears first.
- **Ideas Voted On** lists the ideas in this zone that you have either promoted or demoted.
- **Recent Replies** displays the most recent comment posted to each of your ideas, as well as the most recent comment posted to each idea you have previously commented on. This section is not displayed when viewing another community member’s recent activity.

To quickly determine the number of recent replies you have received, look next to the recent replies icon (💬) in the upper right corner of the Ideas tab. This icon only appears when you have received a new reply.

**Note:** You can’t upload your own picture to replace the default image.

- Viewing Ideas
- Using Ideas
Subscribing to Syndication Feeds for Ideas

Syndication feeds enable users to subscribe to changes within Ideas and receive updates in external news readers. For users to be able to subscribe to Ideas syndication feeds, the following prerequisites are necessary:

- Ideas must be exposed publicly using Force.com sites.
- The Categories field must be enabled in Ideas. This field is enabled by default for some organizations.

To subscribe to a syndication feed, click the feeds icon on the following Ideas pages:

- Popular Ideas subtab
- Recent Ideas subtab
- Top All-Time subtab
- Comments subtab

This feed lists comments separately even when they belong to the same idea, whereas the Comments subtab groups comments for a single idea together and only shows the number of recent comments for that idea.

- Recent Activity page

To subscribe to a feed that includes all the comments posted by a specific community member, click the community member’s name that appears below any idea or comment he or she has posted. Then click the feeds icon on the community member’s Recent Activity page. When you subscribe to another community member’s Recent Activity feed, the feed only includes recent comments from that community member and no other user.

Note: Child ideas (ideas that have been merged with a master idea) are not included in any feeds. Only master ideas are included.

SEE ALSO:
- Ideas Overview
Posting and Editing Ideas

Posting Ideas

1. Use the search box in the sidebar to search for existing ideas that match your idea. This helps reduce the number of duplicate ideas in the community. If no existing ideas match your idea, proceed to the next step.

2. Create a new idea using one of the following options:
   - On the Ideas tab, select the appropriate community from the Community list at the top of the page and click Post Idea.
   - From the Ideas list view, click New Idea, then select a community, and click Continue.
   - From the sidebar, select Idea from the Create New drop-down list, select a community, and click Continue.

3. If you’re posting the idea to an idea theme, select one from the list. You can only post ideas to idea themes that exist within your community.

4. Enter a title for your idea no longer than 255 characters.
   After you enter the title, Salesforce searches the community for ideas with the same words in their title or description and then displays the top five matching ideas. If one of these ideas looks similar to your own, click that idea’s title to open its detail page in a new window. From the detail page, you can read a description of the idea and vote for it instead of posting your duplicate idea to the community. If none of the ideas in the list are similar to your idea, proceed with the following steps to post your unique idea.

5. In the description area, enter the details of your idea.
   If your organization has enabled the HTML editor for Ideas, the description can include HTML and reference online images. If the HTML editor is not enabled, use plain text only.

6. Choose one or more categories for your idea.

7. If you are an administrator, optionally choose a status for your idea. The Status drop-down list is only visible to administrators.

8. If enabled by your administrator, you can add an attachment to your idea:
   - Click Browse to locate and attach a file from your computer.
     You can attach any supported file types, including Microsoft® PowerPoint® presentations and Excel® spreadsheets, Adobe® PDF files, image files, audio files, and video files. The maximum attachment size is determined by your organization.
   - Optionally, type a title for the file. If you don’t enter a title, the filename appears as the attachment’s title.

9. Click Post
   Your new idea displays at the top of the Recent Ideas subtab, and your vote (promote) is automatically applied to the idea. Each vote is always worth 10 points.

Tip: Use the following writing tips to make your idea easier for others to read and understand:
   - Use complete sentences.
   - Be as concise and direct as possible.
   - Check your spelling and punctuation.
Editing Ideas

If you have the “edit” permission on ideas, you can edit the details of an existing idea:

1. On the Ideas tab, click the title of an idea.
2. Click Edit.
3. Modify the title, description, category, and status (administrators only) of the idea as appropriate.
4. Click Apply to save your work.

Editing an idea’s details does not allow you to edit the comments on an idea.

Merging Ideas

Overview

As more users contribute to a zone, the number of duplicate ideas often increases. Duplicate ideas make it difficult to measure feedback because votes and comments are spread out over many similar ideas. The best way to resolve this issue is to merge duplicate ideas together so one idea becomes the master to one or more child ideas.

Note the following about merging ideas.

• Once you merge ideas they cannot be separated.
• All votes belonging to child ideas are transferred to the master idea. If the same community member votes for two ideas that are eventually merged, only the vote for the master idea is kept; the vote for the child idea is discarded.
• Users can only vote for and add comments to a master idea.
• You cannot merge ideas in separate zones.
• Deleting a parent idea automatically deletes all child ideas. Child ideas cannot be deleted individually.
• The master idea does not inherit the status and category values of its child ideas.
• When an idea is merged and becomes a child idea, the child idea still appears on the Ideas Submitted page but not on any other pages in a zone member’s Recent Activity.
• Merged ideas don’t appear in the list of submitted ideas on the Idea Themes detail page and aren’t counted in the Submitted Ideas field.
• When you merge a child idea, you can no longer edit the Idea Theme field.
• A child idea that has been merged is still visible to the user who submitted the idea from the Ideas Submitted list on the user’s Recent Activity page.

Merging Ideas

To locate duplicate ideas and merge them together:

1. On the Ideas tab, click the title of an idea that you want to merge.
2. On the idea’s detail page, click Find Duplicates. Salesforce searches all the ideas within the zone and displays the five ideas with titles that most closely match the current idea’s title.

3. If the Possible Duplicates list does not contain any ideas that you want to merge, enter keywords in the Search for Duplicates field and click Search. Salesforce displays a new list of possible duplicate ideas.

4. From the Possible Duplicates list, select the ideas that you want to merge.
   To view the details of a possible duplicate idea, click the idea’s title. Use your browser’s back button to return to the search results.

5. Click Merge with Current Idea.

6. Select the idea that you want to be the master idea, and click Merge.

7. Click OK to complete the merge.

Tips on Using Ideas

Available in: Salesforce Classic
Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions

Consider the following information when setting up and using Ideas:

- To monitor the activity of ideas, you can:
  - Create a workflow rule or trigger based on the number of comments an idea receives. You cannot create a workflow rule or trigger based on an idea’s vote total or vote count. You also cannot create a trigger that inserts or deletes a comment when the Idea object is updated.
  - Create a custom report based on an idea’s vote score or number of comments.

- When posting an idea or comment, you can include a URL in the idea’s description or comment field, but you cannot attach a file or add a note to an idea.

- Master detail relationships are not supported.
- Ideas does not support workflow tasks, outbound messages, and approvals.
- Ideas does not support custom links.
- The Ideas detail page does not contain related lists.
- The data export feature archives all your Ideas data with the exception of deleted ideas and deleted comments.
- You cannot create activities and events for Ideas.

- When using standard or custom Idea fields, note the following:
  - History tracking is not supported.
  - Field dependencies and roll-up summary fields are not supported.
  - Formula fields are not available for the Community object.
Tips for Using the HTML Editor

The HTML editor gives users WYSIWYG HTML editing capabilities, allowing them to:

- Insert an image
- Insert hyperlinks
- Change paragraph alignment
- Create bulleted and numbered lists

Implementation Tips

- HTML tags you enter into the HTML editor will display to users as text.
- In related lists, search results, and hover details, Salesforce does not display text with HTML formatting or images.
- Hyperlinks open in a new browser window when users click on them. The HTML editor supports HTTP, HTTPS, and mailto hyperlinks.
- To insert an image, click and either browse to an image file or specify the image’s web address. Enter a description that appears when a user hovers over the image and when the image is not available. The image must have a URL that Salesforce can access.
- Images do not show up in list views and reports.
- You cannot disable individual features of the HTML editor. For example, you cannot disable its hyperlink and image capabilities.
- The HTML editor supports all languages that Salesforce supports.
- For security purposes, the HTML editor only allows the tags and attributes listed in Supported HTML Tags and Attributes on page 2184. Salesforce automatically removes unsupported tags and attributes when you save an idea description or comment. Salesforce also removes potentially malicious HTML. Note that Salesforce does not notify users when unsupported or potentially malicious HTML is removed.
- The HTML editor does not support JavaScript or Cascading Style Sheets (CSS).

Supported HTML Tags and Attributes

The HTML editor supports the following tags:

<table>
<thead>
<tr>
<th>Tag</th>
<th>Tag</th>
<th>Tag</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;a&gt;</code></td>
<td><code>&lt;dt&gt;</code></td>
<td><code>&lt;q&gt;</code></td>
</tr>
<tr>
<td><code>&lt;abbr&gt;</code></td>
<td><code>&lt;em&gt;</code></td>
<td><code>&lt;samp&gt;</code></td>
</tr>
<tr>
<td><code>&lt;acronym&gt;</code></td>
<td><code>&lt;font&gt;</code></td>
<td><code>&lt;small&gt;</code></td>
</tr>
<tr>
<td><code>&lt;address&gt;</code></td>
<td><code>&lt;h1&gt;</code></td>
<td><code>&lt;span&gt;</code></td>
</tr>
<tr>
<td><code>&lt;b&gt;</code></td>
<td><code>&lt;h2&gt;</code></td>
<td><code>&lt;strike&gt;</code></td>
</tr>
<tr>
<td><code>&lt;bdo&gt;</code></td>
<td><code>&lt;h3&gt;</code></td>
<td><code>&lt;strong&gt;</code></td>
</tr>
<tr>
<td><code>&lt;big&gt;</code></td>
<td><code>&lt;h4&gt;</code></td>
<td><code>&lt;sub&gt;</code></td>
</tr>
<tr>
<td><code>&lt;blockquote&gt;</code></td>
<td><code>&lt;h5&gt;</code></td>
<td><code>&lt;sup&gt;</code></td>
</tr>
<tr>
<td><code>&lt;br&gt;</code></td>
<td><code>&lt;h6&gt;</code></td>
<td><code>&lt;table&gt;</code></td>
</tr>
<tr>
<td><code>&lt;caption&gt;</code></td>
<td><code>&lt;hr&gt;</code></td>
<td><code>&lt;tbody&gt;</code></td>
</tr>
<tr>
<td><code>&lt;cite&gt;</code></td>
<td><code>&lt;i&gt;</code></td>
<td><code>&lt;td&gt;</code></td>
</tr>
<tr>
<td><code>&lt;code&gt;</code></td>
<td><code>&lt;img&gt;</code></td>
<td><code>&lt;tfoot&gt;</code></td>
</tr>
</tbody>
</table>
The above tags can include the following attributes:

<table>
<thead>
<tr>
<th>alt</th>
<th>face</th>
<th>size</th>
</tr>
</thead>
<tbody>
<tr>
<td>background</td>
<td>height</td>
<td>src</td>
</tr>
<tr>
<td>border</td>
<td>href</td>
<td>style</td>
</tr>
<tr>
<td>class</td>
<td>name</td>
<td>target</td>
</tr>
<tr>
<td>colspan</td>
<td>rowspan</td>
<td>width</td>
</tr>
</tbody>
</table>

The above attributes can include URLs that begin with the following:

- http:
- https:
- file:
- ftp:
- mailto:
- #
- / for relative links

Enabling the HTML Editor in Ideas

The HTML editor is enabled by default for most organizations. If your organization does not have the HTML editor already enabled, an administrator can enable it as described in Customizing Ideas Settings on page 2399.

⚠️ Warning: Once you enable the HTML editor, you cannot disable it.

Before enabling the HTML editor, note the following:

- Each HTML idea description has a maximum size of the 32 KB. Each comment has a maximum size of 4 KB.
- If you use the HTML editor to edit and save an idea description or comment that was in text format, Salesforce saves the description or comment in HTML format.
• In list views and search results, Salesforce displays only the first 255 characters of an idea's description or comment. This number includes HTML tags.

Idea Themes

Watch a Demo: Encourage Collaboration with Idea Themes

Idea Themes lets you invite community members to post ideas about specific topics so that members can solve problems or propose innovations for your company. For example, to engage with your community and create excitement around the launch of a new product, you can ask members to work together to create the product’s name. Community members collaborate and add ideas to the idea theme, while you monitor their activities as they vote and comment on each other’s ideas until they find a winner.

When you create an idea theme, you can add pictures, videos, and other multimedia content to showcase or explain the idea that you’re presenting to the community. You can also view and manage the list of ideas that have been posted to the idea theme.

Using Idea Themes

Click the Idea Themes tab to view, filter, moderate, and create themes from lists.

- **Click Create New View** to define your own custom list views. To edit or delete any view you created, select it from the View drop-down list and click **Edit**. If your organization has multiple communities, we recommend you add **Community** to your views so that you can see the name of the community associated with each idea theme. Adding the **Zone** field to the view also helps with managing multiple zones.

- **Click New Idea Theme** from the Idea Themes list view page or click **New** from the Recent Idea Themes list on the Idea Themes overview page to **create a new idea theme**.

- Click **Refresh** to refresh a list that’s been updated.

- Click **Edit or Del** to edit or delete an idea theme.

**Note:** Deleting an idea theme also deletes the ideas that are associated with it. Conversely, undeleting an idea theme also undeletes the ideas that are associated with it.

SEE ALSO:
- Creating and Editing Idea Themes

- Managing Idea Themes

Creating and Editing Idea Themes

You can use the Idea Themes tab in both the application and the console to create and edit Idea Themes for the communities that you manage.

1. **Click New Idea Theme** from the Idea Themes list view page or click **New** from the Recent Idea Themes list on the Idea Themes overview page.

2. Select a zone for the idea theme and click **Continue**.

3. Select the idea theme’s **Status**.

4. Select a category for the theme.

5. Add a title for the theme.

6. Optionally, enter a description of the theme.
   
   Use the HTML editor to format your text or add an image or video.

7. **Click Save**.

SEE ALSO:
- Idea Themes
- Using Idea Themes
- Managing Idea Themes
Managing Idea Themes

From the Idea Themes detail page, you can manage an idea theme and its related ideas. As an administrator, you can perform the following tasks:

- **Edit**, **Delete**, or **Clone** an idea theme.
- **Edit** or **Delete** ideas that have been submitted to the idea theme.
- Move an idea from one idea theme to another in your zones.

You can do this by editing the name of the idea, which removes the idea from the current idea theme and gives you the opportunity to select a different idea theme.

- View the number of ideas that have been submitted for the idea theme. Merged ideas don’t appear in the list of submitted ideas on the Idea Themes detail page and aren’t counted in the **Submitted Ideas** field.
- **Create an idea** and post it to the idea theme in which you’re working.

Using the Chatter Answers Q&A Tab

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Chatter Answers is a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Chatter Answers lets your customers:

- Post, browse, and reply to questions using the Q&A tab.
- Delete their own questions and replies.
- Flag questions and replies as spam, hateful, or inappropriate.
- Receive emails when their questions are answered or when best answers are chosen for questions they’re following.
- Collaborate publicly or privately with support agents to resolve issues related to open cases.
- Search and review articles from Salesforce Knowledge.
- Like a post or Salesforce Knowledge article to help determine its popularity.
- Upload photos of themselves to their user profiles.
- View other users’ total number of posts and number of replies marked as best answers by others.

Note: Chatter Answers is available in: Salesforce Classic, Professional, Enterprise, Performance, Unlimited, and Developer Editions.

Available in: Salesforce Classic, Professional, Enterprise, Performance, Unlimited, and Developer Editions.

**USER PERMISSIONS**

To view questions:
- “Read” on questions
To ask and reply to questions:
- “Create” on questions
To view cases:
- “Read” on case
To change cases:
- “Edit” on case
1. **Search**: Customers can search for existing questions before they post their own.

2. **Filter and Sort**: Community members and support agents can select different viewing options for questions in the feed.

   Searches in the Chatter Answers Q&A tab can be filtered to show questions based on:
   - **All Questions** shows all questions in the zone, as well as Salesforce Knowledge articles, when enabled.
   - **Unanswered Questions** shows all questions that don’t have replies.
   - **Unsolved Questions** shows all questions that don’t have a best answer.
   - **Solved Questions** shows all questions that have a best answer, as well as Salesforce Knowledge articles, when enabled.
   - **My Questions** shows all questions you’ve asked and are following.

   You can then sort the results based on the following options:
   - **Date Posted** sorts questions with the most recently asked questions appearing first.
   - **Recent Activity** sorts questions with the most recent replies and comments appearing first.
   - **Most Popular** sorts questions that have received the most likes, upvotes, and followers appearing first.

3. **Question**: Customers can post a question to the community for help. Other members of the community can post answers or follow the question to receive email notifications on subsequent posts.

4. **Browse by Category**: If categories are enabled in the community, members can click the category name to show questions related to that category.

5. **Reputation**: Community members can earn points and ratings that display on hover over their photos in the feed.

6. **Comment**: Community members and support agents can comment on the question, and the customer or agent can select a comment as the best answer.

Chatter Answers lets service organizations:
- Create multiple communities and organize them into different zones, with each zone having its own focus and questions.
- Brand and customize communities.
- Give agents the opportunity to respond to customers publicly or privately.
- Automate the creation of cases from questions using an Apex trigger and workflow rules.
- Deflect customer inquiries through participation.
- Encourage participation by publicly displaying user statistics.
- Moderate questions and answers from the Q&A tab in the internal Salesforce application or from the community.

A customer’s question is typically answered on the Q&A tab using one of these processes:

<table>
<thead>
<tr>
<th>Question Answered by a Similar Question with a Best Answer</th>
<th>Question Answered by the Members within the Community</th>
<th>Question Answered by a Support Agent</th>
<th>Question Answered by a Salesforce Knowledge Article</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. A customer types a question or keyword into the Chatter Answers Q&amp;A tab and clicks Post Your Question.</td>
<td>1. A customer types a question or keyword into the Chatter Answers Q&amp;A tab and clicks Post Your Question.</td>
<td>1. A customer types a question or keyword into the Chatter Answers Q&amp;A tab and clicks Post Your Question.</td>
<td>1. A customer types a question or keyword into the Chatter Answers Q&amp;A tab and clicks Post Your Question.</td>
</tr>
<tr>
<td>2. A similar question with a best answer appears in search results.</td>
<td>2. No similar questions display in search results.</td>
<td>2. No similar questions display in search results.</td>
<td>2. A similar Salesforce Knowledge article with an answer displays in search results.</td>
</tr>
<tr>
<td>3. The customer continues to enter a description of the question and clicks Post to Community to post a public question.</td>
<td>3. The customer continues to enter a description of the question and selects Post Privately to Representative to post a private question.</td>
<td>3. The customer continues to enter a description of the question and selects Post Privately to Representative to post a private question.</td>
<td>3. The customer selects the article, and views the answer.</td>
</tr>
<tr>
<td>4. A community member or support agent reads the question and adds a comment, which answers the customer’s question.</td>
<td>4. The private question is converted to a case.</td>
<td>4. The private question is converted to a case.</td>
<td></td>
</tr>
</tbody>
</table>

Chatter Answers Terminology
Chatter Answers Terminology

Note: Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

The following terms are used when describing Chatter Answers features and functionality.

Answers

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

Article

Articles capture information about your company’s products and services that you want to make available in your knowledge base.

Best Answer

When a member of an answers community asks a question and other community members post a reply, the asker can mark one of the replies as the best answer. The best answer then appears directly under the question (above the other replies). Identifying the best answer helps other community members with the same question quickly find the most relevant, useful information.

Flag

An icon that users can click on a question or reply to report it as spam, hateful, or inappropriate.

Follow

A subscription to a question that lets you receive emails when someone answers or comments on a specific question.

Like

To show support or indicate quality or usefulness for a question, answer, or knowledge article.

Popular

Each question’s popularity is based on the number of users who Like it within a certain amount of time.

Question

An issue posted to an answers community. When a community member asks a question, other community members post replies to help resolve the question.

Question, Private

An issue posted to an answers community, but marked Private so that only support agents can view and respond to it.

Reply

The response to a question in an answers community. When community members reply to a question, the person who asked the question can mark one of the replies as the best answer to resolve and close the question.

Topics

The sidebar that lists data categories from which your customers can browse questions and replies. For example, if you have a zone for hardware products, your topics may include laptops, desktops, and printers.

Vote, Reply

In an answers community, a vote means you either like or dislike a reply to a question.

Zones

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions.

</tbody>
</table>

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: Enterprise, Developer, Performance, and Unlimited Editions.

Note: Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Chatter Answers lets you work with questions and cases that originate from customers in a zone. Once a customer posts a question to the zone, you or other customers can reply. Questions are converted to cases when they’re marked Private, or after a time specified by your administrator.

With Chatter Answers, you can:

- Reply to questions converted to cases.
- Create custom views for cases converted from questions by filtering on Case Origin.
- Upload a photo to your profile so that customers can see who you are.
- Work with Chatter Answers users, who are essentially Customer Portal users.
- Assign the Chatter Answers User feature license to portal users who don’t self-register so that they can access your community.
- Use the Q&A tab to moderate questions and to:
  - Review lists of questions.
  - Answer questions or add replies to questions.
  - Escalate a question to a case.
  - Delete questions or replies.
  - Select best answers for questions.
  - Promote helpful replies to Salesforce Knowledge articles.

Note: We recommend that you assign a support agent to review public questions from the Q&A tab. Agents can’t click Flag next to questions or replies that are spam, hateful, or inappropriate, but they can edit and delete questions or replies from a zones via the Q&A tab if they have the “Delete” permission on questions.

Tip: To moderate many questions quickly, we recommend that support agents review questions from pinned lists on the Salesforce console (this requires adding the Q&A tab to the console’s Navigation tab).

EDITIONS

Available in: Salesforce Classic
Answers is available in: Enterprise, Performance, Unlimited, and Developer Editions.

Note: Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

The Questions tab lets you view, search, filter, moderate, and create questions from lists.

- Search for questions by typing two or more letters of a question in the Search All Questions box. As you type, questions that match your search terms appear.
- Select predefined list views from the View drop-down list. Some predefined lists from which you can filter questions include:
  - Questions with Best Replies
  - Questions without Best Replies
- Click Create New View to define your own custom list views. To edit or delete any view you created, select it from the View drop-down list and click Edit.
- Click New Question from the Questions list view page or click New from the Recent Questions list on the Questions overview page to create a new question.
- Click to refresh a list that’s been updated.
- After you select a question from the list:
  - Type an answer or comment and click Answer Customer & Zone to reply to customers.
  - Click and choose:
    - Delete to delete the question from the community.
    - Escalate to Case to create a case from the question.
    - Edit to edit the fields in an existing question.
  - Click on one of the question’s replies and choose:
    - Delete to delete the reply from the community.
    - Promote to Article to add the reply as a draft article to the knowledge base (available if it’s set up by your administrator).
    - Edit to edit the fields in an existing reply.
  - If the question is private, meaning only support agents can view and answer it, you can click the case link to view the case automatically associated with the question.
Note: The Questions tab is intended for Chatter Answers, but you can also use it to view questions from the answers feature.

Questions Home

Searching for Questions and Answers in the Chatter Answers Q&A Tab

Search the Chatter Answers Q&A tab to find questions and replies, best answers, and Salesforce Knowledge articles that can help find answers quickly. Searching in the Q&A tab might help you avoid posting redundant questions.

Note: Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

1. In the Q&A tab, enter your question in the search box.
2. Click the magnifying glass to view matching questions and articles from within the zone.
   If enabled, Salesforce Knowledge articles appear in the results, as well.

Searches in the Chatter Answers Q&A tab can be filtered to show questions based on:

- **All Questions** shows all questions in the zone, as well as Salesforce Knowledge articles, when enabled.
- **Unanswered Questions** shows all questions that don’t have replies.
- **Unsolved Questions** shows all questions that don’t have a best answer.
- **Solved Questions** shows all questions that have a best answer, as well as Salesforce Knowledge articles, when enabled.
- **My Questions** shows all questions you’ve asked and are following.

You can then sort the results based on the following options:

- **Date Posted** sorts questions with the most recently asked questions appearing first.
- **Recent Activity** sorts questions with the most recent replies and comments appearing first.
- **Most Popular** sorts questions that have received the most likes, upvotes, and followers appearing first.

Note: From the header search box at the top of the page you can search more objects than from within the Q&A tab. Global searches by internal users return results from all questions that are available within the organization. Searches performed by all other users in Salesforce Communities return results from the questions that are available within the community.
Choose the Best Answer to a Question

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

After you ask a question, you should monitor the replies posted by other community members and eventually choose one of the replies as the best answer. The best answer is highlighted directly below the question so it’s easy to find, which helps community members quickly identify the most useful resolution to the question.

Only Salesforce administrators and the person who asked the question can mark a reply as the best answer.

To choose the best answer:

1. From the Q&A tab, find your question and click its title.
2. Decide which reply is the best answer, and click **Choose as Best Answer**.

   To identify the best answer, look at the votes ("likes" and "dislikes") for each reply. The reply with the most "likes" probably contains the most useful information. If a question has many replies, try sorting the replies by **Most Votes** so the replies with the most likes and dislikes appear at the top of the list.

   After you choose a best answer:
   - The question is marked as “resolved”. Community members can continue to post and vote on replies for resolved questions.
   - If another reply that you like better is posted in the future, simply choose that reply as the best answer to replace the old best answer.
   - You can remove the best answer status of the reply at any time. Removing the best answer status from a reply makes it a regular reply.

Replying to Chatter Answers Email Notifications

When you receive an email notification, you can post a response back to the community by replying to the email.

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

When you receive email notifications related to a question, you can conveniently reply directly from your email and the reply appears as an answer on the Q&A tab. You’ll receive an email notification for the following events:

- Someone answers a question you’ve asked or are following.
- Customer support or a moderator selects a best answer for a question you’ve asked or are following.

**Note:** To reply to email notifications, your administrator must enable email replies on the Chatter Answers Settings page.

Consider these tips when sending email replies:

- Replies must be sent from the email address specified on your profile. If you use email aliases or email forwarding services that send replies from a different email address, your replies won’t be processed.
- If replies contain your personal email signature, the signature text is treated as part of your comment. Default signatures inserted by mobile devices, such as Sent from my iPhone, are automatically removed from replies. Before replying, delete custom signatures and any extra text you don’t want posted to the community.
Attachments in replies are ignored.

Posts that include rich text or other types of markup appear as plain text in the body of the email notification.

Automated messages such as “out of office” responses are ignored by the system.

Before replying, check the email address that displays in the To field of your email. Valid addresses contain tokens, or long character strings, both before and after the @ symbol, such as w8t27apy1@j321imd9gbs.d8rx.d.chatter.salesforce.com. Some email applications may automatically use the From address from the original email, such as ReplyToQ&A@<your.company>.com, which is not a valid address for receiving replies. If you see this shortened address in the To field of your reply email, replace it with the valid reply-to address in the email header information. For example, in an application such as IBM® Lotus Notes®:

1. Open the original email.
2. Click View > Show > Page Source.
3. In the ReplyToQ&A section, copy the email address that looks like:
   w8t27apy1@j321imd9gbs.d8rx.d.chatter.salesforce.com.
4. Paste the reply-to address in the To field of your reply email.

## Resolving Customer Inquiries with Others

### Case Team Fields

Case teams have the following fields, listed in alphabetical order. Availability of fields depends on how your admin set up Salesforce.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Case Access</td>
<td>The level of access a team member has to a case, such as Read/Write, Read Only, or Private. Case access can’t be less than your org’s default case sharing access.</td>
</tr>
<tr>
<td>Member Name</td>
<td>The name of a user on a case team.</td>
</tr>
<tr>
<td>Member Role</td>
<td>The team member’s role on the case, such as support agent or case manager.</td>
</tr>
<tr>
<td>Visible in Customer Portal</td>
<td>Indicates whether the case team member appears in the customer portal.</td>
</tr>
</tbody>
</table>

### Editions

Creating and Verifying Service Agreements

Entitlements

Entitlements are units of customer support in Salesforce, such as “phone support” or “web support.” They’re typically used to represent terms in service agreements. Entitlements help you determine if your customers are eligible for support so you can create support records like cases or work orders for them.

You can associate entitlements with accounts, assets, contacts, and service contracts. For example, a phone support entitlement can be added to an account. When a contact from that account calls your service department, support agents can quickly verify that they’re entitled to phone support.

You can use entitlements on their own or as part of entitlement processes. Entitlement processes are timelines that contain all the steps that agents must complete to resolve a support record. To represent more complex service-level agreements in Salesforce—with features like renewal processes and multiple service levels—you can use service contracts and contract line items.
View and manage entitlements in Salesforce from the Entitlements tab. Depending on how entitlements are set up, you can also use the Entitlements related list on accounts, contacts, assets, or service contracts.

SEE ALSO:
- Guidelines for Working with Entitlements
- Entitlements: Terms to Know

Guidelines for Working with Entitlements
Entitlements in Salesforce specify whether a customer is entitled to customer support. Learn how to perform common actions on entitlements.

Viewing Entitlements
You can view entitlements on the Entitlements tab or the Entitlements related list on:
- Accounts
- Assets
- Contacts
- Service contracts
To view entitlements that are associated with a particular account, contact, asset, or service contract, go to the Entitlements related list on the record.

Tip: Has the console in your org been set up to include entitlements? If so, click the Console tab to view and edit entitlements and their associated records in one place.

Creating Entitlements
You can create and edit entitlements from the Entitlements tab or the Entitlements related list on accounts, assets, or service contracts.

Your business may have its own processes for how to link entitlements to customers in Salesforce. The simplest approach is to create an entitlement on the customer’s account via the Entitlements related list. Then, use the entitlement for every contact on the account. Keep in mind that when you create a contact on an account, the contact doesn’t automatically inherit an entitlement from the account. Your admin may set up automation that creates an entitlement for new contacts on an account.

Note:
- You can add existing entitlements to contacts or products, but you can’t create entitlements from a contact or product record.
- Click Clone on an entitlement to quickly create an entitlement from an existing one.

Deleting Entitlements
You can delete entitlements on the entitlement’s detail page, the Entitlements related list, or the Entitlements tab. Deleting an entitlement moves it to the Recycle Bin. Any notes, attachments, or activities associated with the entitlement are also deleted. If you undelete the entitlement, the associated items are undeleted.

Note: You can’t delete an entitlement with an open case or work order.

Sharing Entitlements
You can’t share entitlements. Entitlements use the same sharing model as the account they’re associated with.
Associating a customer with an entitlement doesn’t share the entitlement with them. For customers to be able to see their entitlements, entitlements must be set up in your external community.

## Verify Entitlements

Each entitlement in Salesforce is associated with a specific account. Verify that a customer is entitled to customer support before you create or update a case or work order.

<table>
<thead>
<tr>
<th>What to Verify</th>
<th>Where to Verify It</th>
<th>Steps To Verify</th>
</tr>
</thead>
</table>
| Whether at least one contact on a specific account is entitled to support | Account detail page                | 1. View the account.  
2. Confirm that the entitlement is on the Entitlements related list. |
| Whether a specific contact is entitled to support | Contact detail page                | 1. View the contact.  
2. Confirm that the entitlement is on the Entitlements related list. |
| Whether specific assets (purchased products) are entitled to support | Asset detail page                  | 1. Locate the asset from a related list or an assets list view on the Products tab.  
2. Click the asset name.  
3. Confirm that the entitlement is on the Entitlements related list. |
| Whether a service contract includes a specific entitlement | Service Contract detail page       | 1. Click the Service Contracts tab.  
2. Click the service contract name.  
3. Confirm that the entitlement in question is on the Entitlements related list. |
After you verify an entitlement, click **New Case** on the entitlement’s detail page to create a case associated with the entitlement. The case automatically includes the correct entitlement, account, contact, and asset information. Alternatively, you can add an entitlement to an existing case using the **Entitlement Name** lookup field on the case.

**SEE ALSO:**
- Guidelines for Working with Entitlements

**Entitlements: Terms to Know**

Learn useful terms related to entitlement features in Salesforce.

**Entitlement**

A unit of customer support in Salesforce, such as “phone support” or “web support.” It’s typically used to represent terms in warranties. You can associate entitlement with accounts, assets, contacts, and service contracts. View entitlements from the Entitlements tab or the Entitlements related list on accounts, assets, contacts, and service contracts.

**Entitlement Contact**

Contacts who are entitled to customer support—for example, a named caller. The Contacts related list on an entitlement shows which contacts are eligible for that entitlement. You can remove or add contacts directly from the related list, or by updating the contact record itself. Your business may not allow you to provide support to customers unless they are a contact on the entitlement.

**Note:**

- Contacts on an account don’t automatically inherit the account’s entitlements. Depending on your business processes, you may need to create a separate entitlement for each contact on an account. You can also set up an Apex trigger that automatically assigns an entitlement to a contact when you create the contact.
- Entitlement contacts don’t have page layouts, search layouts, buttons, links, or record types.
- The same visibility and sharing settings that apply to the parent account apply to contacts. Associating a contact with an entitlement doesn’t share the entitlement record with the contact or the related community user.

**Entitlement Template**

Predefined terms of customer support that can be quickly added to products in Salesforce. For example, you can create entitlement templates for phone or web support so users can easily add entitlements to products purchased by customers.

**Entitlement Management**

A collection of Salesforce features that help you provide the correct service levels to your customers. It includes:

- **Entitlements**, which let support agents determine whether a customer is eligible for support.
- **Entitlement processes**, which are timelines that include all the steps that your support team must complete to resolve support records like cases or work orders.
- **Service contracts**, which let you represent different kinds of customer support agreements like warranties, subscriptions, or maintenance agreements. You can restrict service contracts to cover specific products.
- **Community access to entitlements**, which lets community users view entitlements and service contracts and create support records from them.
- **Reporting on entitlement management**, which lets you track the way entitlements are used in your Salesforce org and whether service contract terms are being met.

Depending on your business needs, you may decide to use all of these features or just a few of them.
**Service Contract**
A customer support agreement between you and your customers. Service contracts in Salesforce can represent warranties, subscriptions, service level agreements (SLAs), and other types of customer support. View service contracts in the Service Contracts tab or on the Service Contracts related list on accounts and contacts.

**Contract Line Item**
Specific products covered by a service contract. View contract line items in the Contract Line Items related list on service contracts (not contracts!). You can only use contract line items if your org uses products.

*Note:* Schedules aren’t available for contract line items, and community users can’t access them.

**Entitlement Process**
A timeline that includes all the steps (milestones) that support agents must complete to resolve a support record. Each process includes the logic needed to determine how to enforce the correct service level for your customers. Entitlement processes come in two types: Case and Work Order.

Not all entitlements need processes. For example, a simple entitlement might just state that a customer is eligible for phone support 24/7. If you need to add time-dependent steps or service levels to that definition—for example, if you want a supervisor to be notified by email when a customer’s case goes unresolved for two hours—you need an entitlement process.

**Milestone**
A required step in your entitlement process. Milestones are metrics that represent service levels to provide to each of your customers. Examples of milestones include First Response and Resolution Time on cases.

**Milestone Action**
A time-dependent workflow action that occurs on a milestone in an entitlement process. For example, you might add the following actions to a milestone:

- Send an email alert to certain users one hour before a first response milestone is scheduled to expire
- Update certain fields on a case one minute after a first response is completed

There are three types of milestone actions:

- *Success actions* are triggered when a milestone is completed
- *Warning actions* are triggered when a milestone is about to be violated
- *Violation actions* are triggered when a milestone is violated

You can automate tasks, email alerts, field updates, and outbound messages for each action type.

### Entitlement Fields
Entitlements have the following fields. Some fields may not be visible or editable depending on your page layout and field-level security settings.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account Name</td>
<td>The account associated with the entitlement. Every entitlement must be linked to an account.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Asset Name</td>
<td>The asset associated with the entitlement. Products represent the items your company sells (for example, a laptop case), whereas assets represent the specific products your customers have purchased (the laptop case purchased by John).</td>
</tr>
<tr>
<td>Business Hours</td>
<td>The entitlement's supported business hours. To learn more about business hours on entitlements, see How Business Hours Work in Entitlement Management.</td>
</tr>
<tr>
<td>Per Incident</td>
<td>Lets you limit the number of cases the entitlement supports. Use this field if your service agreements with your customers are based on number of cases (as opposed to number of days or other criteria). Otherwise, you probably don’t need it.</td>
</tr>
<tr>
<td>Note: This option is not available for work orders.</td>
<td></td>
</tr>
<tr>
<td>Cases Per Entitlement</td>
<td>The total number of cases the entitlement supports. This field is only available if Per Incident is selected.</td>
</tr>
<tr>
<td>Contract Line Item</td>
<td>The contract line item (product) associated with the entitlement.</td>
</tr>
<tr>
<td>End Date</td>
<td>The last day the entitlement is in effect. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the End Date to 365 days after the Start Date.</td>
</tr>
<tr>
<td>Entitlement Name</td>
<td>The entitlement's name. We recommend using a descriptive name, such as Phone Support. This helps users better understand entitlements when they see them on related lists for accounts, contacts, and assets.</td>
</tr>
<tr>
<td>Service Contract</td>
<td>The service contract associated with the entitlement. To quickly find a service contract in the lookup dialog box, select criteria from the Filter by fields. Admins can set lookup filters to restrict filter values and results.</td>
</tr>
<tr>
<td>Start Date</td>
<td>The first day the entitlement is in effect. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the Start Date to the date when the Status changes to Active.</td>
</tr>
<tr>
<td>Entitlement Process</td>
<td>The entitlement process associated with the entitlement. Entitlement processes are timelines that include all the steps (milestones) that your support team must complete to resolve...</td>
</tr>
</tbody>
</table>
### Field | Description
--- | ---
Cases | Each process includes logic to determine how to enforce the correct service level for your customers.
Remaining Cases | The number of cases the entitlement can support. This field decreases in value by one each time a case is created with the entitlement.
This field is only available if Per Incident is selected.
Status | The entitlement’s status.
Status is determined by your Salesforce org’s current system date and the entitlement’s Start Date and End Date. The status is:
- Active if the system date is equal to or later than the Start Date and equal to or earlier than the End Date.
- Expired if the system date is later than the End Date.
- Inactive if the system date is earlier than the Start Date.
Status Icon | Represents the entitlement’s status with one of the following icons:
- Active
- Expired
- Inactive
Type | The type of entitlement, such as Web or phone support. Admins can customize this field’s values.

## Service Contracts

### Service Contracts

Service contracts in Salesforce represent a customer support agreement between you and your customers. You can use them to represent warranties, subscriptions, service level agreements (SLAs), and other types of customer support.

Service contracts are an advanced entitlement feature. You may need to use them if:
- You want to define specific service levels for your customers, such as warranties, subscriptions, and service level agreements.
- Your customers’ entitlements are renewed at the contract level. In other words, your business processes allow you to create an entitlement for a customer only if they have an active service contract.
View and manage service contracts in Salesforce from the Service Contracts tab. Depending on how service contracts are set up, you can also use the Service Contracts related list on accounts and contacts.

SEE ALSO:
Guidelines for Working with Service Contracts
Service Contract Fields
Set Up Service Contracts

Guidelines for Working with Service Contracts

Service contracts are agreements between you and your customers for a type of customer support. Learn how to perform basic actions on service contracts.

Viewing Service Contracts
View service contracts from the Service Contracts tab or on the Service Contracts related list on accounts and contacts. To view a service contract’s details, click the service contract name. You can see associated entitlements, contract line items, field update history, and more.

The Service Contracts related list on an account or contact shows all the service contracts associated with that item.

Tip: If service contracts have been set up in the console, click the Console tab to find, view, and edit service contracts and their associated records in one place.

Creating Service Contracts
You can create and edit service contracts from:
• The Service Contracts tab
• The Service Contracts related list on accounts and contacts

We recommend linking each service contract to an account in Salesforce. Then, you can create entitlements on the service contract and assign the entitlements to contacts associated with the account.

Tip:
• Click Clone on a service contract to quickly create a new service contract from an existing one.
• Use the Parent Service Contract field and Child Service Contracts related list to make one service contract the parent of another. This helps you represent complex contracts.
• Entitlements reflect terms in a service contract, and a service contract may be associated with multiple entitlements. Link an entitlement to a service contract via the Entitlements related list on the service contract or the Service Contract lookup field on the entitlement.

Deleting Service Contracts
You can delete service contracts from the service contract’s detail page or the Service Contracts related list.

Deleting a service contract moves it to the Recycle Bin. Any notes, attachments, activities, or contract line items associated with the service contract are also deleted. If you undelete the service contract, the associated items are undeleted.
Note:
- You can’t delete service contracts with active or expired entitlements. If you want to delete a service contract with entitlements—for instance, because there’s a problem with the service contract—add its entitlements to another service contract first, then delete it.
- If you delete a service contract with both a parent service contract and child service contract(s), keep in mind that its parent and children will no longer be linked in a service contract hierarchy.

Sharing Service Contracts
You can use sharing rules to grant extra access to service contracts beyond what your organization’s default sharing model allows. However, you can’t make the sharing model more restrictive than the default model.

To see who has access to a service contract, click Sharing on the service contract’s detail page. This takes you to the sharing detail page. There, you can:
- View a list of who has access to the service contract.
- Click Add to grant access to the record for other users, groups, roles, or territories. You can only share service contracts with users who have the “Read” permission on service contracts.
- Create, edit, and delete manual sharing rules.
- Define a custom view to filter the list of users with access to the service contract.

Transferring Service Contracts Between Users
You may need to transfer multiple service contracts to a user. To do this, click the Service Contracts tab and click Transfer Service Contracts in the Tools section.

Service Contract Fields
Service contracts have the following fields. Some fields may not be visible or editable depending on your page layout and field-level security settings.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account Name</td>
<td>The account that purchased or owns the service contract.</td>
</tr>
<tr>
<td>Activation Date</td>
<td>The day the service contract first went into effect.*</td>
</tr>
<tr>
<td>Approval Status</td>
<td>An approval process status field. If your business has an approval process for service contracts, this field indicates the current stage of the approval process.</td>
</tr>
<tr>
<td>Billing City</td>
<td>City portion of billing address. Up to 40 characters are allowed in this field.</td>
</tr>
<tr>
<td>Billing Country</td>
<td>Country portion of billing address. Entry is selected from a picklist of standard values, or</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Billing State</td>
<td>State or province portion of billing address. Entry is selected from a picklist of standard values, or entered as text. Up to 80 characters are allowed if the field is a text field.</td>
</tr>
<tr>
<td>Billing Zip</td>
<td>Zip or postal code portion of billing address. Up to 20 characters are allowed in this field.</td>
</tr>
<tr>
<td>Contact Name</td>
<td>The contact associated with the service contract. Select from the drop-down list.</td>
</tr>
<tr>
<td>Contract Name</td>
<td>Name of the service contract. Depending on your business needs, you may want to include the name of the customer, the contract end date, the type of product covered by the contract, or other information.</td>
</tr>
<tr>
<td>Contract Number</td>
<td>Auto-generated number identifying the service contract. (Read only)</td>
</tr>
<tr>
<td>Created By</td>
<td>User who created the service contract. (Read only)</td>
</tr>
<tr>
<td>Created Date</td>
<td>The date the service contract was created.*</td>
</tr>
<tr>
<td>Currency</td>
<td>The currency for all amount fields in the service contract. Available only for organizations that use multiple currencies. You can’t change the currency on a service contract that has contract line items.</td>
</tr>
<tr>
<td>Description</td>
<td>Description of the service contract. Up to 32 KB of data are allowed in this field. Try to include information that helps agents understand the coverage provided by the service contract. For example, “This contract entitles the customer to a first response within 2 hours and a case resolution within 24 hours.”</td>
</tr>
<tr>
<td>Discount</td>
<td>Weighted average of all contract line item discounts on the service contract. Can be any positive number up to 100. (Read only)</td>
</tr>
<tr>
<td>End Date</td>
<td>The last day the service contract is in effect.* This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the End Date to 365 days after the Start Date.</td>
</tr>
<tr>
<td>Grand Total</td>
<td>Total price of the service contract plus shipping and taxes. (Read only)</td>
</tr>
<tr>
<td>Last Modified By</td>
<td>User who most recently changed the service contract. (Read only)</td>
</tr>
<tr>
<td>Line Items</td>
<td>Number of contract line items (products) on the service contract.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Parent Service Contract</td>
<td>The service contract’s parent service contract, if it has one. Tip: View, create, and delete a service contract’s child service contracts in the Child Service Contracts related list.</td>
</tr>
<tr>
<td>Root Service Contract</td>
<td>The top-level service contract in a service contract hierarchy. Depending on where a service contract lies in the hierarchy, its root may be the same as its parent. (Read only)</td>
</tr>
<tr>
<td>Service Contract Owner</td>
<td>The assigned owner of the service contact.</td>
</tr>
<tr>
<td>Shipping and Handling</td>
<td>Total shipping and handling costs for the service contract.</td>
</tr>
<tr>
<td>Shipping City</td>
<td>City portion of primary mailing or shipping address. Up to 40 characters are allowed in this field.</td>
</tr>
<tr>
<td>Shipping Country</td>
<td>Country portion of primary mailing or shipping address. Entry is selected from a picklist of standard values, or entered as text. Up to 80 characters are allowed if the field is a text field.</td>
</tr>
<tr>
<td>Shipping State</td>
<td>State or province portion of primary mailing or shipping address. Entry is selected from a picklist of standard values, or entered as text. Up to 80 characters are allowed if the field is a text field.</td>
</tr>
<tr>
<td>Shipping Street</td>
<td>Primary mailing or shipping street address of account. Up to 255 characters are allowed in this field.</td>
</tr>
<tr>
<td>Shipping Zip</td>
<td>Zip or postal code portion of primary mailing or shipping address. Up to 20 characters are allowed in this field.</td>
</tr>
<tr>
<td>Special Terms</td>
<td>Any terms that you have agreed to and want to track in the service contract.</td>
</tr>
<tr>
<td>Start Date</td>
<td>The first day the service contract is in effect.* This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the Start Date to the date when the Status changes to Active.</td>
</tr>
</tbody>
</table>
### Field | Description
--- | ---
**Status Icon** | Represents the service contract’s status with one of the following icons:
- ✅ Active
- ❌ Expired
- ⏳ Inactive

**Subtotal** | Total of the service contract line items (products) before discounts, taxes, and shipping are applied. (Read only)

**Tax** | Total taxes for the service contract. This is a currency field, so enter the amount, not percentage. For example, enter $10.50.

**Term (months)** | Number of months that the service contract is in effect. This field is independent of the Start Date and End Date values. Depending on how your business uses service contracts, you may choose to hide the Term field or set up data validation that populates the End Date when a Term is specified, for example.

**Total Price** | Total of the contract line items (products) after discounts and before taxes and shipping. (Read only)

*Service contracts have four date fields. Created Date is the date the service contract was created in Salesforce, so it’s the earliest of the dates. Activation Date is the date it was first activated for an account or customer. Finally, Start Date represents the date the service contract was put into effect or last renewed, while End Date is the last date the service contract is in effect. Start Date and End Date are blank by default, but you can create Apex triggers that populate these fields based on other service contract fields like Status.*

**SEE ALSO:**
- Guidelines for Working with Service Contracts
- Contract Line Item Fields
Contract Line Items

Contract line items are specific products covered by a service contract, not by a general contract. You can only use contract line items if your Salesforce org uses products.

A service contract’s line items are listed in the Contract Line Items related list.

**Note:** Schedules aren’t available for contract line items, and community users can’t access them.

**Example:** You can create a service contract that covers products X, Y, and Z, and then create entitlements on the service contract that are assigned to contacts on a particular account. When one of the contacts calls support, the agent checks whether the entitlement associated with the service contract is active. If it’s active, the agent can provide support for any of the products (represented by the contract line items) covered by the service contract.

SEE ALSO:
- Guidelines for Working with Contract Line Items
- Contract Line Item Fields
Guidelines for Working with Contract Line Items

Contract line items are specific products covered by a service contract. Learn how to perform basic actions on contract line items.

Viewing Contract Line Items
To view a contract line item, navigate to the service contract that covers it. The Contract Line Items related list shows all the line items associated with a service contract. Click the contract line item to view its associated entitlements, history, and more.

>Note: You can't create custom list views for contract line items.

Adding Contract Line Items to a Service Contract
You can add line items to a service contract from the Contract Line Items related list on the service contract's detail page.

1. Click Add Line Item in the Contract Line Items related list.
2. Select a price book if prompted. If only the standard price book is activated, it's automatically assigned to the service contract.
3. Select one or more products from the list, or search for a product and then click the product name.
4. Enter the attributes for each product. Your admin may have customized this page to include fields specific to your business.
5. Enter the Sales Price for the product. The Sales Price defaults to the List Price specified in the price book assigned to the opportunity. If your user permissions allow it, you can override this value. You might want to give a discount, for example.
6. Enter the number of products at this price in the Quantity box.
7. Click Save.

>Tip: Use the Parent Contract Line Item field and Child Contract Line Items related list to make one line item the parent of another. This helps you represent complex products with multiple components.

Deleting Contract Line Items
You can delete contract line items from the contract line item's detail page or the Contract Line Items related list on a service contract.

Deleting a contract line item moves it to the Recycle Bin. Any notes, attachments, or activities associated with the contract line item are also deleted. If you undelete the contract line item, the associated items are undeleted.

Sharing Contract Line Items
You can't share contract line items. Sharing for contract line items is inherited from service contract sharing. For example, users with the "Read" permission on service contracts inherit the "Read" permission on contract line items.

Accessing Knowledge

Salesforce Knowledge

Work with Articles and Translations

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: Enterprise and Unlimited Editions.
The Article Management tab is your home page for working with articles throughout the publishing cycle as they are created, assigned to collaborators, translated, published, archived, and deleted.

Agent’s need the correct permissions on an article’s article type and article actions to complete some tasks. For more information see, Assign Article Actions to Public Groups.

To specify which articles appear in the list view, use the following options in the sidebar:

- In the View area, select Draft Articles, Published Articles, or Archived Articles. You can filter draft articles by those assigned to you or those assigned to anyone (all draft articles for your organization).
- If applicable, click the Translations tab in the View area, and select Draft Translations or Published Translations. You can filter draft translations by those assigned to you, those assigned to a translation queue, or those assigned to anyone (all draft translations in your organization).
- To refine the current view, first select an article language filter and then enter a keyword or phrase in the Find in View field. The Find in View field is inactivated for archived articles.
- In the Filter area, choose a category from a drop-down menu to filter the current view.

To modify which columns display, click Columns. The following columns are available depending on what is selected in the view area:

<table>
<thead>
<tr>
<th>Column</th>
<th>Description</th>
<th>View</th>
</tr>
</thead>
<tbody>
<tr>
<td>Action</td>
<td>Displays the actions available for the article or translation.</td>
<td>All articles and translations</td>
</tr>
<tr>
<td>All User Ratings</td>
<td>Average ratings from users of your internal Salesforce organization, Customer Portal, partner portal, and your public knowledge base.</td>
<td>Published and archived articles and published translations</td>
</tr>
<tr>
<td>Archived Date</td>
<td>Date the article was archived.</td>
<td>Archived articles</td>
</tr>
<tr>
<td>Article Number</td>
<td>Unique number automatically assigned to the article.</td>
<td>All articles and translations</td>

</table>

On the Article Management tab, you can:

- Find an article or translation by entering a search term or using the category drop-down menu.
- Create an article by clicking **New**.
• Publish an article or translation by selecting it and clicking **Publish...** If you have the “Publish Articles” article action and an approval process is set up for an article, you see both **Publish...** and **Submit for Approval** buttons.

• Modify an article or translation by clicking **Edit** next to it.

• See how an article or translation appears for end users by clicking **Preview** next to it. From the Channel drop-down menu you can choose any channel where an article is visible except the public knowledge base.

  **Note:** Voting and Chatter information is not available when previewing a Knowledge article.

• See a list of an article’s or translation’s other versions by clicking its version number.

• Change the owner of an article or translation by selecting it and clicking **Assign...**

  **Note:** All draft articles must have an assignee.

• Send an article or translation to the Recycle Bin by selecting it and clicking **Delete**.

• Archive a published article or translation by selecting it and clicking **Archive...**

• Submit articles for translation by selecting them and clicking **Submit for Translation**. You can set dues dates for each language and assign it to another agent or a queue for export to a translation vendor.

• Go directly to the Setup pages for exporting and importing articles for translation with **Export Articles for Translation** and **Import Article Translations** in the Related Links area.

**Search Articles and External Sources on the Knowledge Tab**
Use federated search to search all your resources at once.

**Create and Edit Articles**
You can create or edit an article from the Knowledge tab or Article Management tab. If you’re creating an article, you may need to select the article type and language. If you’re editing a published article or translation, choose whether to leave it published while you work on a draft copy, or whether to remove the original article from publication and work on it directly. If you work on a copy, publishing the copy replaces the last published version of the article. If you work on the original article, it is unavailable in the channels until you republish it.

**Publish Articles and Translations**
Publishing articles and translations makes them visible in all channels selected. If you publish an article that has translations, all translations of the article are published as well.

**Translate Articles Within Salesforce Knowledge**
If your organization translates Salesforce Knowledge articles internally, you can enter the translation from the translation detail page.

**Archive Articles and Translations**
Archiving removes published articles and translations that are obsolete so they no longer display to agents and customers on your organization’s Salesforce Knowledge channels.

**Salesforce Knowledge Article Versions**
Article versions allow you to save an older version of a published article and then see which version of the article is associated with a case. To save the previous version, select the Flag as new version checkbox when publishing a new version. The previously published version is saved and the new version is published with the next sequential version number as an identifier.

**Delete Articles and Translations**
You can delete articles and translations on the Article Management tab or the detail page of the article or translation. Deleting permanently removes articles from the knowledge base. You can delete draft articles, draft translations of articles, or archived articles, but not published articles or translations.

Use federated search to search all your resources at once.

1. Enter your search terms in the Search box.
   You can use search wildcards and operators in your search terms. If your organization has any auto-complete options enabled, you can select from the suggestions.
   
   **Note:** In the auto-complete drop-down, article titles have a paper icon while the keywords have a magnifying glass icon.

2. Click the search icon or press *Enter* on your keyboard.

3. Optionally, select filters to refine your search results.
   Depending on the source you are searching, filter by language, data category, article status, article type, and article validation. Click *Reset* to return all filters to their default setting.
   
   - When *All* is selected, you can filter by language and data category, depending on what your organization supports.
   - When *Articles or My Draft* is selected you can filter by:
     - Article status: Published, Draft, and Draft Translations
     - Language: Values depend on those supported in your organization
     - Data categories: Values depend on those created in your organization
     - Article type: Values depend on those created in your organization
Validation Status: No Filter (all articles), Not Validated (articles that are not validated), Validated (validated articles), and any other values supported in your organization such as in review.

- When an external source is selected, there are no filters and the general article information displayed is controlled by your external object search layout.

4. For articles, you can sort by:
   - Published Date
   - Best Rating
   - Most Viewed
   - Title: A to Z
   - Title: Z to A

5. View information by clicking the article or external source title. Below the title you can find general article information such as: new article indication, article number, article type, validation status, last published date, article view comparison, and article rating comparison.

6. Use the drop-down by each article to follow or unfollow, edit, publish, and delete an article, depending on your permissions.

Promote Articles in Search Results
Associate keywords with articles to optimize search results in Salesforce Knowledge. Users who search for these keywords see the article first in their search results. Promoted search terms are useful for promoting an article that you know is commonly used to resolve a support issue when a user’s search contains certain keywords.

Article Search Results
How search works for articles depends on your use of search options, search terms, wildcards, and operators. Salesforce Knowledge search uses the same custom search algorithms that are available throughout Salesforce, which include mechanisms such as tokenization, lemmatization, and stopword lists, to return relevant search results.
Promote Articles in Search Results

Associate keywords with articles to optimize search results in Salesforce Knowledge. Users who search for these keywords see the article first in their search results. Promoted search terms are useful for promoting an article that you know is commonly used to resolve a support issue when a user’s search contains certain keywords.

Articles must be in published status for you to manage their promoted terms.

1. In the Article Management tab, select Published Articles in the View section, and then click the title of the published article that you want to promote for a search term.

2. In the Promoted Search Terms related list, click New Promoted Term.

3. Enter the keywords that you want to associate with the article.
   - You can associate the same term with multiple articles. If the user’s search matches the promoted term, all associated articles are promoted in search results, ordered by relevancy.
   - The maximum number of characters per promoted term is 100. For best results matching users’ search terms, limit each promoted term to a few keywords.

4. Click Save.

   **Example:** For example, if an article addresses a common support issue such as login problems, you can associate the terms password and password change. Article search matches a promoted term whenever all keywords within the term occur within the user’s search terms, in any sequence. Each keyword must match exactly. For example:
   - The promoted term password matches a search for change password.
   - The promoted term password change matches a search for how do I change my password but doesn’t match forgot password.
   - The promoted term password doesn’t match a search for change passwords.

Consider these limitations and general limits when you use promoted search terms.

- Your organization can create a maximum of 2,000 promoted terms. For best results, use them selectively, which means create a limited number of promoted terms and a limited number of promoted articles per term.
- If your organization translates articles into multiple languages, each promoted term is associated with one article version and the article version’s language. If you need equivalent promoted terms to be associated with each translation, you must specify promoted terms for each translation. For example, associate change password with an English language article version and changer mot de passe with a French language article version.
- The end user’s language setting determines the scope of the article search. Search results exclude article versions and any associated promoted terms that are not in the user’s language.
Article Search Results

How search works for articles depends on your use of search options, search terms, wildcards, and operators. Salesforce Knowledge search uses the same custom search algorithms that are available throughout Salesforce, which include mechanisms such as tokenization, lemmatization, and stopword lists, to return relevant search results.

Many factors influence the order in which articles appear in the results list. Salesforce evaluates your search terms and your data to move more relevant matches higher in your list of results. Some of these factors include:

Operators
When you don’t specify an operator in your article search, the search engine determines the best operator to use.

Many searches use “AND” as the default operator. This means that when you search for multiple terms, all the terms must match to generate a result. Matching on all terms tends to produce search results that are more relevant than searches using the “OR” operator, where matches on any of the search query terms appear in the results.

If the search engine doesn’t return any results that match all the terms, it looks for matches using the “OR” operator. With the “OR” operator, the search engine boosts documents that contain more terms from the search query, so that they appear higher in the results list.

Frequency
This algorithm calculates the frequency with which a term appears within each article. The algorithm then weighs them against each other to produce the initial set of search results.

Relevancy
Articles that are frequently viewed or that are frequently attached to cases appear higher in the results. Article ownership and recent activity also boost an article in the results list.

Proximity of Terms
Articles that contain all the keywords in a search are ranked highest, followed by those with fewer keywords, followed by those with single keyword matches. Terms that are closer together in the matched document, with few or no intervening words, are ranked higher in the list.

Exact Matches
Matches on exact keywords are ranked higher than matches on synonyms or lemmatized terms.

Title Field
If any search terms match words in an article title, the article is boosted in the search results.

Token Sequence
If the search term is broken up into multiple tokens because it contains both letters and numbers, the system boosts results based on the same sequence of tokens. That way, exact matches are ranked higher than matches on the tokens with other tokens in between.
Create and Edit Articles

You can create or edit an article from the Knowledge tab or Article Management tab. If you’re creating an article, you may need to select the article type and language. If you’re editing a published article or translation, choose whether to leave it published while you work on a draft copy, or whether to remove the original article from publication and work on it directly. If you work on a copy, publishing the copy replaces the last published version of the article. If you work on the original article, it is unavailable in the channels until you republish it.

Note: When applying categories, choose the categories that a user would naturally look for as they navigate. Users only find an article if they select its explicitly applied category, the parent of that category, or a child of that category.

Once your article is complete, you can assign it to another agent to edit or review the article, publish the article directly, or submit the article for approval. If you have the “Publish Articles” article action and an approval process is set up for an article, you’ll see both Publish... and Submit for Approval buttons..

Smart Links to Salesforce Knowledge Articles
Smart linking from one article to another.

Smart Links to Salesforce Knowledge Articles
Smart linking from one article to another.

Smart links automatically adjust when the name or URL of an article is changed. For example, when the URL Name of an article is changed, Salesforce Knowledge automatically updates the article’s URL based on the channel, adds the site prefix for a public knowledge base, and adds the community name for the community portal. There are two ways to create a smart link in the rich text editor to a Salesforce Knowledge article within another article:

- Search for the article.
- Enter the article URL.

Important: Smart links are based on the channels they are in. Therefore, you can’t add a smart link to an article in another channel. For example, an article on your public knowledge base can’t link to an article only published in your internal channel.

Smart Links to Salesforce Knowledge Articles Through Search
Smart linking from one article to another using the Link Article dialog in the rich text editor.

Smart Links to Salesforce Knowledge Articles with URLs
Smart linking from one Salesforce Knowledge article to another by manually entering the article URL in the rich text editor.
Smart Links to Salesforce Knowledge Articles Through Search

Smart linking from one article to another using the Link Article dialog in the rich text editor. When creating or editing an article, you can use a keyword search to create a smart link in a rich text area field.

1. Place your cursor where you’d like to place the link.
2. Click the link icon, ![Link Icon]. The Link Article dialog appears.
3. Optionally, select which language to search. If no language is selected, Salesforce Knowledge returns those articles in your knowledge base’s default language that are related to your keyword search.
4. Optionally, select the publish status type to search.
   - Online (default if no publish status is selected)
   - Draft
   - Draft translations (if your knowledge base supports multiple languages)
5. Enter article keywords into the search bar.
6. Click the search icon at the end of the search bar. The top 20 related articles display.
7. Select the article to reference in a smart link from the article list.
   - **Important:** Smart links are based on the channels they are in. Therefore, you can't add a smart link to an article in another channel. For example, an article on your public knowledge base can't link to an article only published in your internal channel.
8. Optionally, click **Go to Article** to view the article in another window and ensure that it is the correct reference.
9. Optionally, click the Target tab and select where the referenced article displays.
   - **Not Set**: Opens the linked article in the same frame as it was clicked.
   - **Frame**: Opens the linked article in a designated frame.
   - **New Window (_blank)**: Opens the linked article in a new window or tab.
   - **Topmost Window (_top)**: Opens the linked article in the full body of the window.
   - **Same Window (_self)**: Opens the linked article in the same frame as it was clicked.
   - **Parent Window (_parent)**: Opens the linked article in the parent frame.
10. Click **OK**.
    - **Note:** Smart links add more characters than what is displayed. If you see an error that you have surpassed the character limit, have your administrator increase the limit.
Smart Links to Salesforce Knowledge Articles with URLs

Smart linking from one Salesforce Knowledge article to another by manually entering the article URL in the rich text editor.

When creating or editing an article, you can manually create a smart link in a rich text area field.

1. Highlight the content or place your cursor where you'd like to place the link.
2. Click the link icon, 
3. Select Link Type URL.
4. Select Protocol <other>.
5. Enter the article URL as: /articles/[language]/[articleType]/[URLName].
For example, for an English article in a multiple language knowledge base, of article type FAQ, with a URL Name of About-Passwords the article URL is: /articles/en_US/FAQ/About-Passwords. Add a language only if your Salesforce Knowledge base supports multiple languages.

Important: Smart links are based on the channels they are in. Therefore, you can't add a smart link to an article in another channel. For example, an article on your public knowledge base can't link to an article only published in your internal channel.

6. Optionally, click the Target tab and select where the referenced article displays.
   - Not Set: Opens the linked article in the same frame as it was clicked.
   - Frame: Opens the linked article in a designated frame.
   - New Window (_blank): Opens the linked article in a new window or tab.
   - Topmost Window (_top): Opens the linked article in the full body of the window.
   - Same Window (_self): Opens the linked article in the same frame as it was clicked.
   - Parent Window (_parent): Opens the linked article in the parent frame.

7. Click OK.

Note: Smart links add more characters than what is displayed. If you see an error that you have surpassed the character limit, have your administrator increase the limit.
Publish Articles and Translations

Publishing articles and translations makes them visible in all channels selected. If you publish an article that has translations, all translations of the article are published as well.

You can publish an article or translation from the Article Management tab or the article’s or translation’s detail page. To publish, you need the publish permission on an article’s article type and the “Publish Articles” or “Publish Translated Articles” article action to publish an article or translation.

When publishing articles keep the following in mind.

- You can choose to publish directly or schedule publishing for a future date. Articles you scheduled for publication later continue to appear in the Draft Articles filter, now with the pending icon (Pago) next to the article title. To see the publication date, hover over the icon.
  
  Tip: To cancel a scheduled publication, click Cancel Publication on the article or translation detail or edit page.

- If your organization has implemented approval processes, you need the same permissions and actions to publish an article after it has been approved. Approval processes aren’t available for translations.

- An article in an approval process might be sent to a queue to be published even if it is scheduled to publish immediately. This happens when the article is very large, there are many active languages, or there are many other articles to publish at that time. To mitigate performance issues, the article is sent to a queue until it can be published successfully, usually within minutes. Also, note that the Last Modified By or Last Approval By fields show Automated Process as the last user to modify the article.

- If the draft being published is a working copy of a currently published article, it is published as a new version of the original.

- For articles and translations that have already been published, select the Flag as new version checkbox to make the new article icon (Pago) display next to your article in the selected channels. Readers from these channels can see that this article has been modified since the last time they’ve read it. This checkbox is not available when you publish an article for the first time, as the icon displays by default for new articles.

- If you assign an article that is scheduled for publication, you also cancel the scheduled publication.

- Scheduling a publication removes any assignment information. The user who scheduled the publication is assigned to the article.

- Conflicts might occur when different agents perform actions on the same articles simultaneously. Depending on who performs the action first, the articles will not be available for subsequent users though the articles still display momentarily in the articles list. Performing an action on these articles results in a conflict error.

- If you have the “Publish Articles” article action and an approval process is set up for an article, you see both Publish... and Submit for Approval buttons.
Translate Articles Within Salesforce Knowledge

If your organization translates Salesforce Knowledge articles internally, you can enter the translation from the translation detail page.

Depending on the status of your translation and the article actions assigned to you, you can do the following from the translation detail page.

<table>
<thead>
<tr>
<th>Action</th>
<th>Description</th>
<th>Article Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Archive</td>
<td>Archiving removes published translations that are obsolete so they no longer display to agents and customers on your organization's Salesforce Knowledge channels.</td>
<td>To archive a translation, archive its master article.</td>
</tr>
<tr>
<td>Assign...</td>
<td>Assigning changes the owner of the translation.</td>
<td>Draft translations</td>
</tr>
<tr>
<td>Delete</td>
<td>Deleting a translation permanently removes it from the knowledge base.</td>
<td>Draft translations</td>
</tr>
<tr>
<td>Edit</td>
<td>Editing modifies the translation's content or properties.</td>
<td>Draft and published translations</td>
</tr>
<tr>
<td>Preview</td>
<td>Previewing shows how the translation appears to end users.</td>
<td>Draft and published translations</td>
</tr>
<tr>
<td>Publish...</td>
<td>Publishing translations makes them visible in all channels selected.</td>
<td>Draft translations</td>
</tr>
</tbody>
</table>

1. Click the Article Management tab and select Translations in the View area.
2. Select Draft Translations.

   Note: You can also edit a published translation. It reverts to draft status until you republish it, although you can choose to keep the existing version published while you update it.
3. Optionally, change the Assigned To filter to view articles that are not assigned to you for translation.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in Enterprise and Unlimited Editions.

USER PERMISSIONS

To work with translated articles:
- “Manage Articles” AND
- “Create,” “Read,” “Edit,” or “Delete” on the article type (depending on the action)
For example, you might want to view articles assigned to a translation queue.

4. Click **Edit** next to the article and language you want to translate.
5. Enter your translation.
6. Click **Save**.

**Archive Articles and Translations**

Archiving removes published articles and translations that are obsolete so they no longer display to agents and customers on your organization’s Salesforce Knowledge channels.

You can archive published articles and translations on the Article Management tab. You can choose to archive either real time (now) or schedule the archival.

Articles you’re archiving now move directly to the Archived Articles view. Articles you scheduled for archiving later continue to display on the Published Articles view, now with the pending icon (👇). Hover over the icon to see the archive date. On the archive date, the article automatically moves to the Archived Articles view.

**Note:**
- Conflicts might occur when different agents perform actions on the same articles simultaneously. Depending on who performs the action first, the articles will not be available for subsequent users though the articles still display momentarily in the articles list. Performing an action on these articles results in a conflict error.
- If you edit a published article that is scheduled for archiving, you also cancel the archiving.
- If an article has a published translation with a draft version, on archive, the draft version is deleted. Published translations are archived along with the article.

**Tip:** To cancel a scheduled archive, click **Cancel Archive** on the article detail page.

**Salesforce Knowledge Article Versions**

Article versions allow you to save an older version of a published article and then see which version of the article is associated with a case. To save the previous version, select the **Flag as new version** checkbox when publishing a new version. The previously published version is saved and the new version is published with the next sequential version number as an identifier.

When an article is attached to a case and a new version of the article is published, the version attached to the case as being outdated. For example, if Version 2 is attached to a case and a third version is published, the article attached to the case becomes Version 2 (outdated). This notation ensures that there is a permanent record of which content was associated with the case.

When you click the version number in the Article View, and the Article or Translation Detail pages, you see the Version History list. In this list you can:
- View the list of archived versions.
- To view a version, click its title.
- Expand the version to view its field change history (if you have history tracking enabled for the article type and for fields).

By default, the system stores up to ten versions of an article, plus any versions that are attached to cases.
When several versions of an article exist, you can restore an older version and republish it. Click Revert to Draft Version to copy the archived version’s content into a draft article, then republish it as a new version. You can also restore the older version of any associated translations at the same time.

† Note: When there is an existing draft for the article, the option to revert isn’t available.

You can delete an older, outdated version of a published article by selecting Delete This Version from the article detail page. If you delete an article version associated to a case, it is no longer be attached to the case. Translated article versions depend on the master language article. If the master language version is deleted, the translated versions are also deleted.

Versions also appear in custom reports, allowing you to find and read the article version attached to a case.

Delete Articles and Translations

You can delete articles and translations on the Article Management tab or the detail page of the article or translation. Deleting permanently removes articles from the knowledge base. You can delete draft articles, draft translations of articles, or archived articles, but not published articles or translations.

† Note:

• To delete published article and translations, first remove them from publication by choosing edit or archive.
• When a user without delete access cancels the editing on published article, the newly created article draft is not deleted automatically.

Deleting articles moves them to the Recycle Bin, where you can undelete them if you change your mind. If you delete an article with translations, the translations are also moved to the Recycle Bin. However, if you delete a single translation, you can’t undelete it. Deleting an article or translation may fail if another user or the system simultaneously modifies it while the deletion is being processed. You receive an error message when this occurs.

† Note:

• Conflicts might occur when different agents perform actions on the same articles simultaneously. Depending on who performs the action first, the articles will not be available for subsequent users though the articles still display momentarily in the articles list. Performing an action on these articles results in a conflict error.
• If you delete a draft article that is a working copy of a currently published article, the original published version is not affected but the draft version is permanently removed. It does not go to the Recycle Bin. You can edit the published version to work again on a draft copy.
• When a user without delete access cancels editing a published article, the newly created article draft is not deleted automatically.
Articles or Knowledge Tab

Find out which Salesforce Knowledge tab you are using and what you can do on each.

There are two tabs for searching Salesforce Knowledge articles: the Knowledge tab or the Articles tab. The one you use depends on when your organization started using Salesforce Knowledge or if it adopted the Knowledge tab.

The Knowledge tab

If the search bar is at the top of the main frame of the page you are using the Knowledge One on the Knowledge tab.

The Knowledge tab merges functionality of the old Articles tab and the Article Management tab and uses federated search to search all your resources at once. On the Knowledge tab, you can:

- **Search** all your Salesforce Knowledge articles and any of your external data sources, such as Microsoft® SharePoint®.
- **Filter** articles by language and data categories.
- Sort articles by published date, rating, most viewed, and title.
- Use the **Create Article** drop-down to select an article type and create an article.
- Use the drop-down by each article to follow or unfollow, edit, publish, and delete an article, depending on your permissions.

Also, when you use case feed, the Knowledge tab layout is applied to the article sidebar.

**Note:** Community members without the Knowledge One permission cannot access Knowledge through Communities. They also can’t access Knowledge in communities via the Salesforce1 mobile browser and downloadable apps.

To switch to the Knowledge One and the Knowledge tab, have your administrator add the Knowledge One permission to your profile or permission set.
The Articles tab

If the search bar is in the left-side panel of the page you are using the Articles tab.

The Articles tab presents a list of your Salesforce Knowledge published articles. On the Articles tab, you can:

- Search for published articles
- View published articles
- Create an article
- Customize how the article information is displayed

Solutions

Solutions Overview

A solution is a detailed description of a customer issue and the resolution of that issue. Solution managers, administrators, and users with the appropriate permissions can create, review, and categorize solutions. They can also publish solutions to the Self-Service portal and make solutions public.

The Solutions tab displays a home page that lets you quickly locate and manage solutions. If your organization uses solution categories, you can browse for and find solutions by category. You can also sort and filter solutions using standard and custom list views.

Administrators, and users with the “Import Solutions” permission, can import solutions.

Note: By default, solutions are created and displayed in text format. Administrators can enable HTML solutions so that all solutions are displayed in HTML format and created using an HTML editor.

Searching for Solutions

You can find solutions by:

- Searching from the Cases Tab
- Searching from the Solutions Tab
- Browsing for Solutions
- Searching Using Global Search
- Create a List View in Salesforce Classic

When you search for solutions, all standard text fields on solutions are searched, as well as the following custom field types:

- Auto-number
- Text
- Text area
- Long text area
- Email
- Phone
- Any field set as an external ID

Be aware of these behaviors in solution searches:

- Solution Search returns solutions that include all or any of your keywords. For example, searching for `data loader` may return results with just `data`, just `loader`, or both keywords in any order. Items that include more of your keywords are listed higher in results, and items that contain your keywords as a phrase or near each other are also listed higher.

- Solution Search can stem—or find variants of your search terms. For example, searching for `creating` finds solutions containing `create`, `created`, and `creating`.

- You can use search wildcards and operators to improve your Solution Search results.

- If any search terms match words in a solution title, the solution is boosted in the search results.

- The numbers displayed in parentheses and brackets alongside search results indicate the number of matching solutions found. For example, if you search for `Truck` and `Truck (35)` displays, then your organization has 35 solutions with the term `Truck`.

Searching from the Cases Tab

1. On a case detail page in the Solutions related list, enter keywords related to a possible solution in the search box. You can use search wildcards and operators in your query.

2. If your organization uses categories, select a category in which to search.

3. Click **Find Solution.** The search returns a list of relevant solutions.
   - Click column headings to sort the results in ascending or descending order.
     - Sorting applies across all search results for a particular object, including those on subsequent pages.
     - You can’t click on column headings for multi-select picklist fields because you can’t sort the multi-select picklist field type.
If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently.

If solution summaries and inline category breadcrumbs are enabled for your organization, search results display up to 150 characters of the solution details and up to 150 characters of the category trail to which the solution belongs.

Note that if HTML Solutions is enabled, all tags and images are removed from solution details.

If suggested solutions is enabled, click **View Suggested Solutions** to view relevant solutions using a formula that automatically scores the relevancy of each solution to the particular case via word frequency, word proximity, case similarity, and related solutions.

4. If search results filters are enabled for your organization, you can filter the search results. Click the **Show Filters** link in the appropriate results related list, enter the filter criteria, and click **Apply Filters**.

### Searching from the Solutions Tab

1. On the Solutions tab, enter keywords related to a possible solution in the search box at the top of the page. You can use search wildcards and operators in your query.

2. If your organization uses categories, select a category in which to search.

3. Click **Find Solution**. The search returns a list of matching records.

   Click column headings to sort the results in ascending or descending order.

   **Note:** Sorting applies across all search results for a particular object, including those on subsequent pages. You can’t click on column headings for multi-select picklist fields because you can’t sort the multi-select picklist field type.

   If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently. If solution summaries and inline category breadcrumbs are enabled for your organization, search results display up to 150 characters of the solution details and up to 150 characters of the category trail to which the solution belongs. Note that if HTML Solutions is enabled, all tags and images are removed from solution details.

4. If search results filters are enabled for your organization, you can filter the search results. Click the **Show Filters** link in the appropriate results related list, enter the filter criteria, and click **Apply Filters**.

5. From the list, select a record to jump directly to that record. If you do not find a matching record, browse for a relevant solution using categories.

   The fields you see in search results are determined by the search layout defined by your administrator and by your field-level security settings (available in Professional, Enterprise, Unlimited, Performance, and Developer Editions only).

### Browsing for Solutions

1. In the Browse Solutions section of the Solutions tab, click a solution category to view a list of solutions in that category and its subcategories.

2. Optionally, use the drop-down list to sort the solutions by category, most commonly used, or recently updated.

3. Select a record from the results to jump directly to that record.

### Searching Using Global Search

1. Enter your search terms in the header search box.
You can use search wildcards and operators in your query.

2. Select Search Options... from the drop-down and select Solutions to narrow your search results.
3. Click Search.

Displaying and Selecting Solutions

<table>
<thead>
<tr>
<th>USER PERMISSIONS</th>
<th>EDITIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>To view solutions:</td>
<td>“Read” on solutions</td>
</tr>
<tr>
<td>To attach a solution to a case:</td>
<td>“Read” on solutions and cases AND “Edit” on cases</td>
</tr>
<tr>
<td>To change unpublished solutions:</td>
<td>“Edit” on solutions</td>
</tr>
<tr>
<td>To delete unpublished solutions:</td>
<td>“Delete” on solutions</td>
</tr>
<tr>
<td>To change published solutions:</td>
<td>“Manage Published Solutions”</td>
</tr>
<tr>
<td>To delete published solutions:</td>
<td>“Manage Published Solutions”</td>
</tr>
</tbody>
</table>

Displaying Solutions

When you have located a solution, either by searching from a case or from the solutions home or list pages, click the solution title to display detailed information. If hover details are enabled, hover over any lookup field on the detail page to view key information about a record before clicking into that record’s detail page.

Viewing Solution Updates and Comments (Chatter)

Display a Chatter feed of updates, comments, and posts about the solution.

Selecting Solutions

To attach the solution to your case, click Select from the solution detail page or the search results list. The solution is automatically added to the case. The Select option is available only if you searched for a solution from within a case, or you searched for solutions to add to your Self-Service portal Home page.

Editing and Deleting Unpublished Solutions

Users with the “Edit” permission on solutions can update unpublished solutions by clicking Edit, changing the necessary fields, and then clicking Save. To delete an unpublished solution, a user with the “Delete” permission on solutions can click the Delete button.

Note: If HTML Solutions is enabled for your organization, and you open a text solution with the HTML editor and save it, the solution will become an HTML solution.

Editing and Deleting Published Solutions

The ability to edit and delete published solutions is restricted to users who have the “Managed Published Solutions” permission, such as solution managers and administrators.
Note: Translated solutions inherit the record type of the master solution from which they are translated. You cannot change the record type of translated solutions.

Solution Related Lists
Below the solution details is information related to the solution, including a history of changes to the solution, open and closed activities, attachments, related cases, translated solutions, and the categories to which the solution belongs. The related lists you see are determined by your personal customization, and by any customization your administrator has made to page layouts or your permissions to view related data.

Note: The size limit for a file attached to a solution is 5 MB. You cannot upload solution attachments with the following file extensions: htm, html, htt, htx, mhtml, mhtm, shtm, shtml, acgi.

Hover over the links at the top of a detail page to display the corresponding related list and its records. If Chatter is enabled, hover links display below the feed. An interactive overlay allows you to quickly view and manage the related list items. Click a hover link to jump to the content of the related list. If hover links are not enabled, contact your Salesforce administrator.

Printing Solutions
To open a printable display of the record details, in the top-right corner of the page, click Printable View.

Note: If HTML solutions is enabled for your organization, any HTML formatting applied in your solution details will appear in the Printable View.

To return to the last list page you viewed, click Back to list at the top of the solution detail page. If your organization has enabled collapsible page sections, use the arrow icons next to the section headings to expand or collapse each section on the detail page.

Solution History
Solution Fields
Creating Solutions
Categorizing Solutions
Viewing Solution Lists

The Solutions list page displays a list of solutions in your current view. To show a filtered list of items, select a predefined list from the View drop-down list, or click Create New View to define your own custom views. To edit or delete any view you created, select it from the View drop-down list and click Edit.

- Click a solution title to view the detail. Click Edit or Del to change the solution or move it to the Recycle Bin.
- If Chatter is enabled, click to follow or stop following a solution in your Chatter feed.
- Click New Solution or select Solution from the Create New drop-down list in the sidebar to create a solution.

SEE ALSO:

Solutions Overview

Creating Solutions

You can create a solution in the following ways:

- Create a solution from the sidebar or Solutions tab:
  1. Select Solution from the Create New drop-down list in the sidebar, or click New next to Recent Solutions on the solutions home page.

    If multilingual solutions is enabled for your org, you can create a translated solution by clicking New on the Translated Solutions related list of the master solution. Translated solutions inherit the record type of the master solution from which they are translated. You cannot change the record type of translated solutions.

    2. If multilingual solutions is enabled for your org, select the language for the solution from the Language picklist.

    The languages available are the languages supported by Salesforce. The Language picklist excludes languages already used in the master solution or in other translated solutions associated with the master solution.

    3. Enter the solution title, details, and any other information.

      Tip: In solution searches, if any search terms match words in a solution title, the solution is boosted in the search results. Thus, it’s a good idea to write a solution title with relevant words that users are likely to use in searches.

      If HTML Solutions is enabled for your org, you can enter solution details in an HTML editor. The HTML editor allows you to use a toolbar to insert images and format the text and paragraphs in your solution.

    4. Click Save.
Note: Images in HTML solution details don’t show up in list views and reports.

• Create a new solution while closing a case:

  1. Choose Close Case on a case detail page, or click Save & Close while editing a case.
  2. Enter the title and details under Solution Information, and check Submit to knowledge base to submit the solution for review by your solution managers.
  3. Click Save.

Tips on Writing Solutions

Categorizing Solutions

Tips on Writing Solutions
To assist users in solving their cases, it is important to write good solutions. Review the guidelines below, and also see the Tips & Hints for Solutions document.

Reusable
• Include all facts and symptoms of the problem.
• Include any necessary analysis or troubleshooting ideas.
• Include a concise, accurate description of the cause and resolution of the problem.
• Include only one cause and one resolution per solution. If there are a number of steps to the resolution, number each step and put it on a separate line.
• Make sure the text is clear and in the language of the intended audience—both customer support users and your customers.
• Make sure the title properly describes the problem or question.
• Associate as many relevant solutions to a particular case as possible to increase the usefulness of the suggested solutions feature. Suggested solutions are found using a formula that automatically scores the relevancy of each solution to a particular case via the number of times the solution is related to similar cases.

Note: Use a consistent format to ensure that all solutions are reusable. You can determine the best format for your organization, but make sure each solution contains a title, the symptoms of the problem, the cause of the problem, and the resolution to the problem.

Findable
• Make sure the solution can be found by multiple troubleshooting paths and by different people who will describe problems in different ways.
• Make sure the solution is unique and can exist as a discrete piece of knowledge.
• Make sure the solution is meaningful to your organization and is worth sharing with your customers.
• Make sure the solution includes words that customers use so that when they log their own cases via the Self-Service Portal or the Customer Portal, the suggested solutions feature can return useful results based on word frequency. For example, if customers use
the word “hub” for “router,” include “hub” in the solution to increase the likelihood of it being returned in the results of suggested solutions.

Note: Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Technically Accurate

• Make sure the solution is accurate and up-to-date.
• Make sure the level of technical detail is appropriate for the intended audience.

Sample Solution

This example provides a clear solution to a specific problem.

How do I change an account’s billing information?

Problem—Users aren’t sure how to change an account’s billing information, such as the credit card number or payment type.
Solution—Change billing information in the active contract on the account.
1. Open an account by clicking its name on the Accounts home page or an Accounts related list.
2. Scroll to the Contracts related list and click Edit next to the active contract on the account.
3. Enter the correct billing information.
4. Click Save.

SEE ALSO:

Creating Solutions

Reviewing Solutions

Solution managers, administrators, and users with the “Edit” permission on solutions can review existing solutions. Solution managers, administrators, and users with the “Manage Published Solutions” can publish solutions.

1. Click Edit on the solution detail page.
2. Edit the necessary information, and change the Status to Reviewed.

Note: The Status picklist field on a solution does not need to be set to Reviewed for a solution to be visible in the Customer Portal; a solution is visible in the Customer Portal if the Visible in Self-Service Portal checkbox is selected on a solution.
4. Optionally, check Visible in Public Knowledge Base to also make the solution available to users accessing public solutions.
   This field only applies to solutions, not articles in the public knowledge base.
5. Click Save.
For organizations with multilingual solutions, if you modify a master solution that has translated solutions, the Translated Solutions Status page displays. From there, you can adjust the statuses of translated solutions and notify users to update those translations.

SEE ALSO:
- Solution Fields
- Creating Solutions
- Categorizing Solutions

Deleting Solutions

To delete a solution, click Del next to the solution on the solutions list page, or click Delete on the solutions detail page. The Del link is displayed only for solution managers, administrators, and users with the “Manage Published Solutions” or “Delete” permission on solutions.

When you delete a solution, all related history and attachments are also deleted. The solution is moved to the Recycle Bin. Associated cases are not deleted with the solution, but the case associations are removed and are not restored if you later undelete the solution.

For organizations with multilingual solutions enabled:
- Deleting a master solution does not delete the translated solutions associated with it. Instead, each translated solution becomes a master solution.
- Deleting a translated solution removes the association with its master solution.
- Undeleting a master or translated solution from the Recycle Bin does not restore its associations with other master or translated solutions. You can manually restore the associations by modifying the Master Solution lookup field on the edit page of translated solutions.
- After deleting a translated solution, you can create a new translated solution in the same language. However, you will not be able to undelete the original translated solution from the Recycle Bin until you delete the second translated solution.

SEE ALSO:
- Solutions Overview
Categorizing Solutions

Use solution categories to group similar solutions together. Each solution can belong to more than one category. Once your solutions are categorized, you can browse for and find solutions by category from the Solutions tab or when solving a case. Customers can also browse published solutions by category in public solutions, the Self-Service portal, and the Customer Portal.

Administrators, and users with the “Manage Categories” permission, can categorize solutions prior to enabling solution categories for the entire organization. Once solution category browsing is enabled, all users with the appropriate permissions can categorize solutions.

If multilingual solutions is enabled for your organization, translated solutions inherit solution categories from their master solutions. The categories on a translated solution are synchronized with the categories on the master solution. To modify a translated solution’s categories, you have to modify the categories of its master solution.

1. View the solution you want to categorize.

2. Click Select Categories in the Solution Categories related list.
   This related list is not visible unless your administrator has defined and enabled categories.

3. In the solution category hierarchy, click Select to add a category to the solution. Repeat until you have added all applicable categories.
   We recommend that you limit the number of categories to which a solution belongs. If you put solutions into only the most relevant categories, they will be easier for users and customers to find.
   If necessary, click Deselect to remove a category from the solution.

4. Click Save.

To later remove a category from a solution, click Del in the Solution Categories related list on the solution detail page.

Note: You can create a custom report on solution categories. However, solution category information is not available in list views.

SEE ALSO:
   Searching for Solutions
   Solving Cases
Setting Multilingual Solution Statuses

After you modify a master solution, you can adjust the statuses of each translated solution associated with it and notify users to update those translations, if necessary:

1. Choose a status for the translated solution from the Status picklist. For example, Draft, Reviewed, or Duplicate. The picklist values available for you to choose from are set by your administrator.

2. Select the Out of Date checkbox to indicate that the master solution has been updated and that the translated solution may need translating. The translated solution will be marked Out of Date on the Translated Solution related list of the master solution.

3. Select the Send Notification checkbox if you want the last active user who created or modified the solution to receive an email notifying them that the master solution has been updated and that the translated solution may need translating.

   The user displayed in the Notification Recipient column will receive the email. Email notices are system-generated and cannot be modified. The email notification is in the language of the notification recipient.

   4. Click Save.

SEE ALSO:
   Multilingual Solutions Overview
   Solution Fields

Solutions Home

Clicking on the Solutions tab displays the solutions home page.

- Under Find Solutions, enter keywords to search for a solution. If your organization uses categories, optionally select a category in which to search. If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently.

- In the Browse Solutions section, click a category name to view a list of solutions in that category and its subcategories.

- To show a filtered list of items, select a predefined list from the View drop-down list, or click Create New View to define your own custom views. To edit or delete any view you created, select it from the View drop-down list and click Edit.

- In the Recent Solutions section, select an item from the drop-down list to display a brief list of the top solutions matching that criteria. From the list, you can click any solution name to go directly to the solution detail. Toggle the Show 25 items and Show 10 items links to change the number of items that display. The fields you see are determined by the “Solutions Tab” search layout defined by your administrator and by your field-level security settings (available in Professional, Enterprise, Unlimited, Performance, and Developer Editions only). The Recent Solutions choices are:
Recent Solutions Choice

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recently Viewed</td>
</tr>
</tbody>
</table>

The last ten or twenty-five solutions you viewed, with the most recently viewed solution listed first. This list is derived from your recent items and includes records owned by you and other users.

- In the **Recent Solutions** section, click **New** to create a solution.
- Under **Reports**, click any report name to display that report. The Solution List report allows you to report on any solution field.

SEE ALSO:
- Solutions Overview
- Creating Solutions
- Searching for Solutions

**Solution History**

The Solution History related list of a solution detail page tracks changes to the solution. Any time a user modifies any of the standard or custom fields whose history is set to be tracked on the solution, a new entry is added to the Solution History related list. All entries include the date, time, nature of the change, and who made the change. Modifications to the related lists on the solution are not tracked in the solution history.

- Solutions Overview
- Solution Fields

**Solution Fields**

A solution has the following fields, listed in alphabetical order.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Created By</td>
<td>User who created the solution including creation date and time. (Read only)</td>
</tr>
<tr>
<td>Language</td>
<td>The language in which a solution is written. Available for organizations with multilingual solutions enabled.</td>
</tr>
<tr>
<td>Master Solution</td>
<td>The solution with which a translated solution is associated and from which its title and details are derived. Available for organizations with multilingual solutions enabled.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Master Solution Details</td>
<td>Detailed description of the master solution from which a translated solution's details are derived. (Read only)</td>
</tr>
<tr>
<td></td>
<td>Available for organizations with multilingual solutions enabled.</td>
</tr>
<tr>
<td>Master Solution Title</td>
<td>Title of the master solution from which a translated solution's title is derived. (Read only)</td>
</tr>
<tr>
<td></td>
<td>Available for organizations with multilingual solutions enabled.</td>
</tr>
<tr>
<td>Modified By</td>
<td>User who last changed the solution fields, including modification date and time. This does not track changes made to any of the related list items on the solution. (Read only)</td>
</tr>
<tr>
<td>Open Case Detail</td>
<td>Link to printable view of the case that was used to create the solution. Displays only if the solution was created when the case was closed. Displays only when editing a solution. (Read only)</td>
</tr>
<tr>
<td>Out of Date</td>
<td>Checkbox that indicates that a translated solution's title and details may need translating to match the title and details of the master solution with which it is associated.</td>
</tr>
<tr>
<td></td>
<td>Available for organizations with multilingual solutions enabled.</td>
</tr>
<tr>
<td>Public</td>
<td>Note: Before Spring ’14, this field was called Visible in Self-Service Portal.</td>
</tr>
<tr>
<td></td>
<td>Indicates the solution is available in the Self-Service Portal and Customer Portal.</td>
</tr>
<tr>
<td></td>
<td>If Communities is enabled in your organization, this field specifies whether a solution is visible to external users in communities.</td>
</tr>
<tr>
<td>Solution Details</td>
<td>Detailed description of the solution. Up to 32 KB of data are allowed. Solution details are either displayed in text or HTML, depending on how your organization is set up.</td>
</tr>
<tr>
<td></td>
<td>When the HTML solution detail is displayed in list views and search results, only the first 255 characters are displayed. This number includes HTML tags and images that are removed.</td>
</tr>
<tr>
<td>Solution Number</td>
<td>Automatically generated identifying number. (Read only)</td>
</tr>
<tr>
<td></td>
<td>Administrators can modify the format and numbering for this field.</td>
</tr>
<tr>
<td>Solution Title</td>
<td>Title of the solution describing the customer's problem or question.</td>
</tr>
<tr>
<td>Status</td>
<td>Status of the solution, for example, Draft, Reviewed. Entry is selected from a picklist of available values, which are set by an administrator. Each picklist value can have up to 40 characters.</td>
</tr>
<tr>
<td>Visible in Public Knowledge Base</td>
<td>Indicates the solution is a public solution. This field only applies to solutions, not articles in the public knowledge base.</td>
</tr>
</tbody>
</table>
What is a solution manager?
A solution manager can edit, delete, and make solutions visible in the Self-Service Portal and Customer Portal and visible in public solutions. Typically, these individuals are product experts with excellent written communication skills and advanced knowledge in a particular area of your product. To designate one or more users as solution managers, your administrator can assign those users to the Solution Manager profile when creating or editing the users’ personal information.

SEE ALSO:
Solutions FAQ

Why are solutions used?
Solutions provide a quick means to identify and resolve a customer issue. By capturing customer issues and structuring findable, reusable solutions, your customer support team can leverage existing knowledge to provide answers to issues that have been solved previously, increasing customer satisfaction and your team’s productivity.

SEE ALSO:
Solutions FAQ
What is the difference between a solution and a FAQ?

A FAQ serves mostly as a useful tip for how the product or service is supposed to work. Solutions answer customer questions when the product or service is not working as expected. Because customers’ expectations may not always be accurate, a solution may describe how the product or service is supposed to work (very similar to a FAQ), help troubleshoot a problem, or provide a work-around to a bug or product limitation.

SEE ALSO:
- Solutions FAQ

How can I write good solutions?

A good solution is reusable, easy to find, and technically accurate. For more information, download Tips & Hints for Solutions.

SEE ALSO:
- Solutions FAQ

What should I look for when I review solutions?

Solution managers can use these guidelines when reviewing solutions:

1. **Structure**: The solution should include a clear title, the symptom(s), cause, and resolution.
2. **Language**: The solution should be clear and easy to read in the language of the customer.
3. **No Customer-Specific Information**: Solutions should never contain customer-specific information.
4. **Technically Accurate**: The solution should accurately and effectively solve the problem posed by the customer.
5. **Professional**: Check for spelling and correct sentence structure.
6. **Sensitivity**: The solution should not contain any confidential or proprietary information that you wouldn’t want a competitor to read.

SEE ALSO:
- Solutions FAQ

What are the Visible in Self-Service Portal and Visible in Public Knowledge Base checkboxes on a solution?

The **Visible in Self-Service Portal** and **Visible in Public Knowledge Base** checkboxes, when selected, indicate that a solution is available for external use on your organization’s Self-Service Portal and Customer Portal and public solutions. Solutions available for external use are regarded as published.

**Visible in Public Knowledge Base** only applies to solutions, not articles in the public knowledge base.

**Note**: Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Using Unified Help Desks

Use a Salesforce Console

Get more done faster using a console’s enhanced interface to work with records.

Unlike standard Salesforce pages, all items you click in a console display as tabs. Along with the efficiency of tab-based navigation, a console helps you:

- Work with many records simultaneously
- View most recently used tabs and bookmarks
- Resize pinned lists to see more information
- Navigate more quickly using keyboard shortcuts
- Work across multiple monitors

A console’s dashboard-like interface organizes related data all on one screen so that you can:

- Search for records
- Jot notes on records using the interaction log
- See when records you’re viewing have been edited by others
- Use a SoftPhone to make and receive calls

Additionally, with a Salesforce console for service, you can:

- Find Salesforce Knowledge articles to solve cases
- Chat with customers using Live Agent

Note: If your Salesforce admin adds custom console components, additional functionality might be available for you in the sidebars and footers of a console.

Salesforce Console Tabs

Any items you click on in a console display as tabs. Tabs let you see all the information you need on one screen without losing context.
Console Tabs

(1) The navigation tab lets you select objects and records to work with. (2) Primary tabs display the main work items in a console, such as an account. (3) Subtabs display related items on a primary tab, such as an account’s contact. Use tabs to navigate within the console as you do your work.

⚠️ **Warning:** Browsers’ back buttons aren’t supported for a console and might not work as expected. Console tabs are saved in browser tabs until you close them.

When you close browser tabs, you lose any open console tabs. If your administrator sets up saved user sessions for a console, when you log back into Salesforce, any of your previously open console tabs and console components automatically appear again. Also, if you resize any sidebar components, interaction logs, or close the global search header, those customizations appear again too.

If you log out of Salesforce and log in again using the same window, your previously open tabs reopen in the new session, even when **Save User Sessions** is disabled.

SEE ALSO:

- Use a Salesforce Console
- View Bookmarks or Recently Used Tabs in a Salesforce Console

Salesforce Console Navigation Tab

Use the navigation tab to select an object and view its home page.

**EDITIONS**

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions
Each console displays one navigation tab. Your administrator determines the list of objects you can choose from a navigation tab, but if it’s turned on for you, you can click Customize My Tabs to hide, display, and organize the objects.

Most object home pages selected from a navigation tab display list views, which automatically appear as enhanced lists. A navigation tab doesn’t display forecasts, ideas, answers, connections, portals, console, or buttons for customizing your Salesforce org.

SEE ALSO:
- Salesforce Console Tabs
- Use a Salesforce Console

Guidelines for Working with Salesforce Console Tabs

Learn how you can get the most out of working with a console’s primary tabs and subtabs.

A Console’s Primary Tabs and Subtabs

(1) A primary tab is the main item to work on, such as an account. (2) A subtab is a related item on a primary tab, such as an account’s contact. Salesforce doesn’t limit the number of tabs you can display.
When viewing tabs, ✉️ appears on tabs where you haven’t saved changes, except for reports, Visualforce pages, or your Salesforce org’s setup pages. ⚠️ appears on tabs where you need to fix errors. If your administrator has added external domains to a console’s whitelist, tabs can display pages outside of Salesforce. New tabs don’t appear when you click a custom button or change a record’s type, owner, or territory; instead, the current tab goes to the item you selected.

You can do a variety of things with tabs from the tab bar by clicking ☑️ and selecting an option, such as closing tabs, refreshing tabs, showing keyboard shortcuts, and more. To rearrange a tab, drag it to a new position along the tab bar. Tabs maintain their status as primary tabs or subtabs, meaning that you can’t move primary tabs to the subtabs bar or vice versa. Rearranging tabs isn’t available for Internet Explorer® 7.

If your administrator has turned on multi-monitor components, you can pop out primary tabs from your browser and drag them to any location on your screen to personalize the way you work. Just click ☑️ and select Pop out primary tabs. To return primary tabs to their original browser, click ☑️ and select Pop tabs back into console.

To copy the URL of a console tab and send it to another user, click ☑️ and select 🎯 next to the tab’s name. If you’re sending the URL to a non-console user, choose to create a standard Salesforce URL from the Link to Share dialog box. Then, press CTRL+C to copy the URL. To add a new tab to your console in which to paste a URL you’ve copied, click ☑️. In the text box, press CTRL+V to paste the URL, then click Go!. You can paste a console URL or a standard Salesforce URL into a new tab.

To pin a frequently visited primary tab to the tab bar for quick access, click ☑️ and select ✏️. When a tab is pinned, it’s moved to the front of the tab bar and its text is removed to provide more screen space. To unpin a tab, click ☑️ and select ✏️.

To bookmark a favorite or occasionally visited tab for quick access, click ☑️ and select ☝️. When a tab is bookmarked, it’s moved to the History component in the footer (formerly named Most Recent Tabs). To remove a bookmarked tab, click ☑️ and select ☝️, or click Remove next to the tab in the History component. See View Bookmarks or Recently Used Tabs in a Salesforce Console on page 3835.

⚠️ Warning: If you click Cancel on a newly created item that you haven’t saved, the item and its tab are deleted and aren’t sent to the Recycle Bin.

聞いた: If your Salesforce admin adds custom console components, additional functionality might be available for you to work with in the sidebars next to tabs.

Tip: To reopen the last tab you closed, press SHIFT+C or click ☑️ and select Reopen last-closed tab. You can reopen up to ten closed tabs.

SEE ALSO:
- Salesforce Console Navigation Tab
- Salesforce Console Tabs
- Use a Salesforce Console
**View Bookmarks or Recently Used Tabs in a Salesforce Console**

If set up by your Salesforce admin, you can quickly access any primary tabs that you’ve bookmarked or recently used in a console without having to search Salesforce.

*Note:* With Summer '15, Most Recent Tabs was renamed History and bookmarks were added to it to give you a more streamlined experience for finding and retrieving tabs. These features aren’t available in Internet Explorer® 7 and 8.

To view any bookmarked or recently used primary tabs, click History in the console’s footer. Then click the Bookmarks or Recent Tabs column and select a tab. You can get each tab’s URL to send it to another user, or remove bookmarks and clear recently used tabs to start from scratch. Next to each recent tab, you can access up to ten subtabs when they’re available. Items that don’t display as tabs, such as meeting request overlays, don’t display in the History footer.

SEE ALSO:
- Guidelines for Working with Salesforce Console Tabs
- Use a Salesforce Console

**Resize and Minimize Pinned Lists in a Salesforce Console**

If an administrator has turned on pinned lists and chosen where they display on screen, you can resize and minimize the lists.

To resize a pinned list, click the right or bottom margin of the list and drag it to the size you want. To minimize a pinned list, click the arrow on the right or bottom margin. To display the list again, click the arrow once more. If you haven’t yet selected a record from a list, the list automatically displays full screen.

SEE ALSO:
- Use a Salesforce Console

**Work with Keyboard Shortcuts in a Salesforce Console**

Keyboard shortcuts let you quickly perform actions by pressing keys instead of having to use a mouse.

Keyboard shortcuts can make working with a console more efficient. For example, instead of typing case details and then using a mouse to click Save, an administrator can create a shortcut so that you can type case details and press CTRL+S to save cases without switching to your mouse. Only administrators can create or customize shortcuts.

To view an overlay that lists shortcuts for a console, press SHIFT+K or click Show Keyboard Shortcuts. If a shortcut appears dimmed on the overlay, it hasn’t been enabled or it’s been customized.
Keyboard shortcuts aren't case sensitive, even when you press SHIFT before a letter key. For example, SHIFT+b is the same as SHIFT+B. If CTRL, ALT, or SHIFT is in a keyboard shortcut, the sequence of those keys doesn't matter. For example, CTRL+ALT+A is the same as ALT+CTRL+A.

Guidelines for Working with Salesforce Console Multi-Monitor Components

Move portions of a console to different areas of your computer screens so that you can view data in ways that help you work best.

After a Salesforce admin turns on multi-monitor components, you can pop out and drag primary tabs and Open CTI SoftPhones to other locations on your screens. You can also move the History component, Live Agent chats (but not the footer component), and any custom console components or Force.com Canvas components in a console’s footer. To use multi-monitor components, you might need to update your browser’s settings to: (1) allow popup windows; (2) open links in windows, not tabs.

To pop out and drag primary tabs, click and select Pop out primary tabs. To return primary tabs to their original browser, click and select Pop tabs back into console.

To pop out and drag components in a console’s footer, click the items and select . To return items to their original browser, click . To refresh a popped out footer component, right-click on it and choose Reload or Refresh. When you refresh a popped out footer component, it’s returned to the console’s footer.

If pinned lists are set up, a playground appears as a blank area next to lists and it says Drag Footer Components Here. Use this area to keep track of Salesforce windows among several applications on your screens.

⚠️ Important: Popped out items close and lose their positions on your screens when you: (1) log out of Salesforce; (2) click Setup; (3) click a link to leave a console; (4) refresh or close your browsers.

🔍 Note: You can’t pop out SoftPhones built with versions 3.0 or 4.0 of the CTI Toolkit.

💡 Tip: Any items popped out of the console have blue headings to help you locate them among other windows on your screens.

To use keyboard shortcuts from popped out components, focus on the correct window. For example, if you’re focused on a window with the navigation tab, the default shortcut to go to primary tabs, key command P, won’t work.

Use a Salesforce Console
Add Notes to Records in a Salesforce Console

The interaction log helps you quickly add notes to records on a console’s primary tabs.

If you’re assigned to an interaction log layout, you can access the log from a console’s footer. Logs appear on items that have an Activity History related list, such as accounts and contacts, but not solutions. Logs aren’t available for reports, dashboards, Salesforce CRM Content, the Article Management tab, or Visualforce pages.

To show or hide the interaction log, hover over the log’s border and click 🔄 or 🔧. To resize the interaction log and a detail page, drag the bar in between them. To help you quickly save notes on customers, when a contact appears on a subtab, the contact’s name is added to the log’s Name. However, you can change the Name before you save a log. When you click Clear Log to remove notes or a Subject, any saved notes aren’t removed—they’re stored on the record’s Activity History related list. For easy review and retrieval, all logs are saved as tasks on records’ Activity History related list.

Note: Administrators can customize the fields that appear on logs.

Tip: If you use a SoftPhone, click Add Call Data to add a call’s date and time to the log. When screen popup windows appear from inbound calls, click End Call to end the call and save any updates that you’ve made to the log.

Use a Salesforce Console

View Push Notifications in a Salesforce Console

Push notifications are visual indicators that appear when a record or field you’re viewing was changed by others.

After a Salesforce admin configures push notifications, visual indicators for record or field changes appear on lists and detail pages. When changes happen, detail pages automatically refresh and show updates, or notifications appear as dialog boxes. Lists display notifications as:

SEE ALSO:
Use a Salesforce Console
Push Notifications for Lists

(1) Yellow when a record changes. (2) Blue if it’s the last item you viewed. (3) Bold and italic when a field specified by an admin changes.

Note:

- These objects and their fields are available for push notifications: accounts, contacts, cases, leads, opportunities, campaigns, tasks, and custom objects.
- Push notifications aren’t available in the console in Professional Edition.
- If you set up push notifications for the lead object and use Data.com Clean rules, push notifications are triggered in the console. Keep in mind that extra notifications can affect your push notification limit.

SEE ALSO:

Use a Salesforce Console

Use a SoftPhone with a Salesforce Console

A SoftPhone in a console lets you view records related to phone calls, as well as receive, place, and transfer calls.

You can access a SoftPhone if you’re assigned to a call center using a CTI adapter built with version 3.0 or 4.0 of the CTI Toolkit, or if you’re using a call center built with Open CTI.

Click 📞 to display a SoftPhone from the footer of a console. Use the interaction log to write notes in call logs. A call log is an activity record that automatically generates when you use a SoftPhone, and it tracks the phone number, caller, date, time, and duration of the call. You can view call logs in the Activity History related list of any record associated with the call.

**Important:** Data might not save properly when you: (1) Refresh your browser during a call; (2) use a SoftPhone in multiple browsers simultaneously; (3) switch to a SoftPhone in a browser without a console.

**Note:** If you’re using a CTI adapter built with version 4.0 of the CTI Toolkit, displays in the footer even when you’re not connected to the adapter.

EDITIONS

Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions

USER PERMISSIONS

To view and use the SoftPhone:

- Member of a call center
Tip: You can hide the SoftPhone by clicking , but you can’t move it away from the footer of a console. You can also resize the height of a SoftPhone by dragging the bar on top of it. When you click End Call, any updates you’ve made to the interaction log are saved before the call ends.

SEE ALSO:
- Using the SoftPhone

Find Knowledge Articles in a Salesforce Console

If Salesforce Knowledge and the Knowledge sidebar is set up by an administrator, articles automatically appear when you select a case in a console.

To help you solve cases faster, suggested articles appear in the sidebar as you type details into a case’s Subject. Only articles updated within the last 30 days appear, but you can view older articles by specifying a search term or filtering search results. To filter articles by a specific category, language, or validation status, click and choose filter options. To access these filters, validation status and multilingual articles must be enabled. An administrator determines which languages are available for articles. The columns available in the sidebar are New, Article Title, and Most Viewed. You can drag the bar in between the columns to resize them, but you can’t add, remove, or rearrange columns.

To find articles to help you solve a case, click , type keywords into Search, and click Go. To attach an article to a case, click the checkbox next to the article and click Attach to Case. You can only attach an article to a saved case. displays next to an article already attached to a case.

To change the number of articles displayed, click the article count indicator in the lower left corner of the sidebar and choose a setting. You can view 10, 25, 50, 100, or 200 articles at a time. When you change this setting, you return to the first page of the list.

To show or hide the sidebar, hover over the scrollbar and click or . You can drag the bar in between the articles sidebar and a detail page to resize the width of either one.

Live Agent for Support Agents

Welcome to Live Agent for support agents! Live Agent is a comprehensive chat solution that makes it easy for you to support customers.

As a support agent, you assist dozens of customers with their support issues every day. Live Agent is a chat solution that's fully integrated with the rest of Salesforce, making it easy for you to access all the information you need about your customers in a single workspace. In addition, Salesforce leverages the power of the Service Cloud, giving you access to important tools like a knowledge base and pre-defined support messages, that let you assist your customers and close cases more quickly.

Whether you're a seasoned veteran or new to Live Agent, there are several tools at your disposal that make it easy to assist multiple customers at the same time with chat. Let's get started.

Live Agent is available in: Unlimited Edition with the Service Cloud

Live Agent is available for an additional cost in: Enterprise and Unlimited Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:
- Live Agent is enabled, set up, and included in a Salesforce console app
Assist Customers with Chat

Use Live Agent to quickly help your customers solve issues.

Using Live Agent in the Salesforce console gives you access to several other Service Cloud products that let you assist customers in a comprehensive way.

Change Your Live Agent Status
Change your Live Agent status to control when you’re available to receive new and transferred chats.

Chat with Customers
Accept incoming chat requests to begin chatting with customers.

Access Customer Details During a Chat
When you accept a chat request, a details tab for that chat opens automatically. The details tab includes information about the visitor and lets you look up records related to the chat, such as contacts and cases.

Send Quick Text Messages in Chats
Send pre-written messages to chat customers to send common messages more quickly.

Transfer Files During a Chat
Give customers the ability to upload and transfer files during a chat so they can easily share more information about their issues.

Block Unwanted Chat Customers
You can block chats from troublesome customers right from the Salesforce console. For example, if a customer is using abusive language or sending spam messages, you can block that user from starting a new chat.

End a Chat Session
End a chat session after you’ve finished chatting with a customer and updating the records related to their chat.

User Permissions

To chat with visitors in Live Agent in the Salesforce console:

• Live Agent is enabled, set up, and included in a Salesforce console app
**Change Your Live Agent Status**

Change your Live Agent status to control when you’re available to receive new and transferred chats.

In Live Agent, you can set your online status to online, away, or offline. When you exit Live Agent, your status automatically changes to offline and any active chat sessions end.

1. Click the Live Agent footer widget to open the chat monitor.
2. Click the drop-down arrow in the upper right corner of the chat monitor to view your status options.
3. Select your status.

**Live Agent Statuses**

Live Agent statuses define how you can interact with customers while you’re online, away, or offline.

<table>
<thead>
<tr>
<th>Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Online</td>
<td>You can receive and accept incoming chats and transfers.</td>
</tr>
<tr>
<td>Away</td>
<td>You can continue any chat sessions you’ve already started, but you can’t accept incoming chats or transfers.</td>
</tr>
<tr>
<td>Offline</td>
<td>You can’t accept incoming chats or transfers, and no chats can be routed to you.</td>
</tr>
</tbody>
</table>

Chat with Customers

Accept incoming chat requests to begin chatting with customers.

When you receive a new chat or transfer request, the pending request appears in your chat monitor. You can see the deployment or website the chat came from, the customer’s name (if it’s available), and the number of minutes the request has been waiting to be answered.

You can chat with several customers at the same time. Each chat session opens in a separate primary tab.

1. In the chat monitor, click Accept on the chat request.
   The chat log opens in a new primary tab.
2. Type your message to the customer in the message field.
3. Click Send or hit ENTER on your keyboard to send your message to the customer.
4. Click End Chat when you’re done assisting the customer.
   If the customer ends the chat first, a notice appears in the chat log.

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:
- Live Agent is enabled, set up, and included in a Salesforce console app
Access Customer Details During a Chat

When you accept a chat request, a details tab for that chat opens automatically. The details tab includes information about the visitor and lets you look up records related to the chat, such as contacts and cases.

- To search for a record, type a name in the relevant box in the Related Entities section of the page, then click \( \text{Search} \). To associate a record you find to the chat, select it from the search results list and click \( \text{Save} \).

In older organizations, you could access records and visitor details from the Related Entities panel during chats. However, starting with Summer ’14, the Related Entities panel in the details tab isn’t available for new Live Agent customers. Existing customers will continue to have access to the Related Entities panel.

- Once you associate an existing record to the chat, click the name of the record to open it in a new tab.
- To create a new record, click \( \text{New Case}, \text{New Lead}, \text{New Contact} \), or \( \text{New Account} \).
Send Quick Text Messages in Chats

Send pre-written messages to chat customers to send common messages more quickly.

Quick Text lets you respond to customers more efficiently by letting you insert predefined messages, such as greetings or common troubleshooting steps, into your chat messages.

**Note:** If you don’t have access to Quick Text, contact your Salesforce admin.

1. While chatting with a customer, type `;;` in the message field.
   - A list of Quick Text messages appears. The messages you’ve used most recently appear at the top of the list.
2. To see additional Quick Text messages that are available, type a word or phrase.
   - A list of messages that include those words appears.
3. To see the title and full text of a message, click once or highlight it using the arrow keys on your keyboard.
   - The full message appears at the bottom of the Quick Text list.
4. To select a message and add it to your chat, double-click it or highlight it and hit ENTER on your keyboard.
5. To send the message, click **Send** or hit ENTER on your keyboard.

**USER PERMISSIONS**

To access Quick Text while chatting with visitors in Live Agent:
- “Read” on Quick Text
Transfer Files During a Chat

Give customers the ability to upload and transfer files during a chat so they can easily share more information about their issues.

For example, if a customer is receiving an error when they try to complete a process, they can upload and transfer a screenshot of the error message to the agent.

Before a customer can upload a file, you must associate the chat with a record, such as a case or a contact. Since the chat transcript isn’t created until you end the chat, you can’t attach a customer’s file directly to the transcript during the chat.

1. Click to search for or create a record to attach to the chat.
2. Click the file transfer icon ()
   
   **Note:** A customer can’t upload a file until you initiate the file transfer by clicking the file transfer icon. This helps prevent customers from uploading unsolicited or potentially dangerous files into the chat.
3. Select the record you chose in the first step to attach the transferred file to.
   
   The customer receives a prompt to upload their file to the chat window. The file can’t exceed 25 MB.
4. When the customer has sent the file through the chat, click the link in the chat log to view the file.
Add Attachments to a Chat

Attach Articles to Live Agent Chats

Use the Knowledge One widget to find articles that help solve customer issues during chats.

The Knowledge One widget is only available if your Salesforce org uses Knowledge and your Salesforce admin has included the tool in your Salesforce console app.

1. When chatting with a visitor, click an article from the list in the Knowledge One widget. A tab with the full text of the article opens.

2. To search for a specific article in the list, type a word or phrase in the text box in the widget and click or press ENTER.
   - Alternatively, click at the top of the widget to search all articles, including those not in the list. The main widget search gives you the option of limiting your results to specific types of articles.
   - To filter your search results, click Filters and choose how you want to restrict your search.

3. When you find the article you want, click , then click Share.
   The text of the article appears in the chat text box.

4. Click Send or press ENTER on your keyboard to send the article to the visitor.

   Note: You can send articles to visitors only if your admin has set up a Chat Answer field on articles. If this field isn't set up, you can view articles but can't include them in chats.

SEE ALSO:

Set Up Chat Answers from Knowledge Articles
Attach Records to Chat Transcripts

Search for or create records to attach to a chat transcript as you chat with customers.

Find existing records or create new ones to associate with a transcript as you chat with customers. For example, you can create a new case based on the customer’s issue, or search for the customer’s existing contact record and attach these records to the transcript for later reference. You can attach standard or custom records to your chat transcripts.

1. While chatting with a customer, click 📂 to attach a record to the transcript.

   **Note:** You can only attach one of each type of record to a chat transcript. For example, you can’t attach more than one case to a single transcript.

2. To search for an existing record:
   a. Click the search icon (🔎) in the records window next to the type of record you want to search for.
   b. Type the name of the record and hit ENTER. The record opens in a new tab.
   c. Click the attach icon (🗂️) again.
   d. Select the check box next to the record you searched for to link it to the chat transcript.

3. To create a new record:
   a. Click the create icon (+) next to the type of record you want to create.
   b. Complete the information in the new record and save it. The record will automatically link to the transcript once the record is created.

4. After you complete the chat with the customer, exit the chat.

5. If prompted, click Save. The records you linked are now attached to the transcript. You can access them from the transcript’s detail view.

SEE ALSO:

Live Agent Transcripts
Block Unwanted Chat Customers

You can block chats from troublesome customers right from the Salesforce console. For example, if a customer is using abusive language or sending spam messages, you can block that user from starting a new chat.

Blocking a chat ends the chat and blocks any new chat requests coming from that user’s IP (Internet Protocol) address.

If your Salesforce org is receiving many spam chats from a particular region, your administrator can block entire ranges of IP addresses.

1. In the interaction pane, click the icon.

2. (Optional) Enter a comment explaining why you’re blocking this visitor.

3. Click Block.

When you click Block, you immediately end the chat, and the visitor sees a notification that an agent ended the chat. If multiple agents are engaged in a conference, Block immediately ends the conference, and the other agents are also notified.

If you don’t see the icon in your console, contact your Salesforce admin to enable it. Only a Salesforce admin can unblock an IP address.

EDITIONS

Live Agent is available in: Performance Editions and in Developer Edition orgs that were created after June 14, 2012

Live Agent is available in: Unlimited Edition with the Service Cloud

Live Agent is available for an additional cost in: Enterprise and Unlimited Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app
End a Chat Session

End a chat session after you've finished chatting with a customer and updating the records related to their chat.

After you end a chat with a customer, the primary and secondary tabs related to that chat remain open in your console. Close them to save your work and free up space to take on more chats.

1. Close the primary tab for the chat.
2. If prompted, click Save.

Collaborate and Request Help

Transfer Chats to an Agent, Skill, or Button

Live Agent chats can be transferred to another agent, skill, or button so your customers always receive the highest-quality help from the most relevant sources.

Just as you forward an email or pass a case to another agent, you can transfer a Live Agent chat. Transferring is useful when a customer has an issue that another agent can solve, or requires an agent with a particular skill. How the chat gets to the next agent depends on the kind of transfer you use.

There are three types of transfers: Transfer to Agent, Transfer to Skill, and Transfer to Button. To ensure that your customers get help as quickly as possible, certain chat transfer types can exceed agents’ configured capacity. You can set agent capacity through the Live Agent Configuration, or the Presence Configuration if your organization uses Omni-Channel.
### Type of Transfer

<table>
<thead>
<tr>
<th>Transfer to Agent</th>
<th>Scenario</th>
<th>Method of Transfer</th>
<th>Can Exceed Configured Agent Capacity?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>You want to transfer the chat to Agent Jane, because she’s the perfect fit for the case.</td>
<td>A chat request is sent to Agent Jane. If she accepts the request, the chat is transferred to her, and your chat workspace closes.</td>
<td>Yes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Transfer to Skill</th>
<th>Scenario</th>
<th>Method of Transfer</th>
<th>Can Exceed Configured Agent Capacity?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>You want to forward the chat to an agent who has the skill “billing specialist.”</td>
<td>A chat request is sent to all agents assigned to the skill, and the chat is transferred to the first agent to accept it.</td>
<td>Yes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Transfer to Button</th>
<th>Scenario</th>
<th>Method of Transfer</th>
<th>Can Exceed Configured Agent Capacity?</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>You want to transfer a chat from the sales queue to the service queue.</td>
<td>The chat is transferred to an available agent assigned to the selected button or queue.</td>
<td>No</td>
</tr>
</tbody>
</table>

When chats are transferred directly to an agent or skill group, the transferred chats are allowed to exceed the accepting agent’s capacity. This means that agents always receive a chat request, even if they’re handling the maximum allowed number of chats. If the transfer request is rejected or times out, the original agent can try another recipient or transfer method.

Chats routed from buttons or queues always respect the configured agent capacity. So, agents assigned to that button or queue don’t receive the transfer request—or any other chat requests—until they have open capacity. But don’t worry: customers still won’t get stuck waiting for another agent. When a chat is sent to the next queue, it’s added into the list of incoming chats by its age, so it will appear higher up than brand-new chat requests.

When an agent accepts a transferred chat, the records attached to the chat transcript, like a case or contact, open alongside the chat in the workspace. The accepting agent has the information to start assisting the customer right away, without having to search for related records. These records are also completely up-to-date, as the previous agent is prompted to save any changes when the transfer is initiated.

**Note:** If the accepting agent doesn’t have permissions to view one or more of the attached objects, those items won’t open in the transferred workspace.

**Transfer Chats**

You can transfer chat sessions to other agents when a customer needs extra help with an issue, or to make room for new requests.

---

*2266*
Transfer Chats

You can transfer chat sessions to other agents when a customer needs extra help with an issue, or to make room for new requests.

1. While chatting with a customer, click Transfer.

2. Select a transfer option from one of the menus.
Note: There are options for each type of transfer that’s enabled for your Salesforce org. If you don’t see the option you need, ask your administrator to add it for you.

3. (Optional) Write a message for the agent receiving the chat. This message is part of the chat request to provide context for the next agent.
4. If the transfer is accepted, your chat and any associated records automatically close (don’t worry, you’ll be prompted to save your changes if you haven’t already). If it’s rejected, you can try again with another recipient or transfer method.
Send a Chat Conferencing Request

As wise as support agents are, sometimes a single support agent doesn't have all the information that's required to solve a customer's problem. Chat conferencing lets you invite one or more agents into your customer chats. That way, your agents can turn boring chats into veritable support parties for your customers—all without disrupting the flow of conversation! Send a chat conferencing request to ask another agent to join you in a customer chat.

Note: You can conference in a single agent, or send a request to all agents and the first to accept will join the conference. You can conference multiple agents into a chat, but you need to send each request individually.

1. While you’re chatting with a customer, click 🌿.
2. Select the skill group of the agents that you want to transfer into the chat.
3. Select whether to send the conference request to all agents with that skill or to a specific agent.
4. Click Conference to send the conference request.
   If the agent accepts the conference request, you see a notification in the chat log, and that agent can start chatting with you and the customer. If the agent declines the request, you see a notification above the chat log. The customer receives a notification when an agent joins or leaves a conference.
5. If you decide to exit the conference, click Leave, and then click Leave again.
   If the other agent leaves the conference, you’ll see a notification in the chat log.

Any saved and attached records will open for other agents who join the conference. But only the originating or longest-attending agent will be able to attach other records. If the longest-attending agent attaches or removes records during the conference, other agents won’t see these changes in their workspaces.

For more about transferring chats and workspaces, see Transfer Chats.

Request Help with a Chat

When you need help with a chat, you can raise a virtual flag to alert a supervisor. Supervisors are alerted that you need help, and they can respond directly via the console.

1. In the interaction pane, click the 🏛️ icon.
2. Enter a message briefly explaining what help you need.
3. Click Raise Flag.

Either you or a supervisor can lower the flag when your issue is resolved.

If you don’t see the 🏛️ icon in your console, contact your Salesforce admin to enable it.
View Customer Records

Salesforce automatically creates some records when a chat ends. These records store information about chat customers and their interactions with agents.

These records are mostly used internally to provide an audit trail about your customers and their chats with agents. However, you can access these records yourself if you ever need them.

1. To access customer records in the Salesforce console, select the type of record you want to view from the Salesforce console navigation list.
   A list of those records will appear in the main window.

Live Agent Session Records
Every time your agents log in to Live Agent, a Live Agent session record is automatically created. These session records store information about your agents’ and customers’ interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers.

Live Agent Visitor Records
Every time an agent chats with a customer, Salesforce automatically creates a visitor record that identifies the customer’s computer.

Live Agent Transcripts
A Live Agent transcript is a record of a chat between a customer and an agent. Salesforce automatically creates a transcript for each chat session.

Live Agent Session Records
Every time your agents log in to Live Agent, a Live Agent session record is automatically created. These session records store information about your agents’ and customers’ interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers.

Live Agent Visitor Records
Every time an agent chats with a customer, Salesforce automatically creates a visitor record that identifies the customer’s computer.

Live Agent Transcripts
A Live Agent transcript is a record of a chat between a customer and an agent. Salesforce automatically creates a transcript for each chat session.

EDITIONS
Available in: Salesforce Classic

Live Agent is available in: Performance Editions and in Developer Edition orgs that were created after June 14, 2012

Live Agent is available in: Unlimited Edition with the Service Cloud

Live Agent is available for an additional cost in: Enterprise and Unlimited Editions

USER PERMISSIONS
To view customer records:
- “Read” on the record type
For agents to use Live Agent:
- “API Enabled” administrative permission
**Live Agent Session Records**

Every time your agents log in to Live Agent, a Live Agent session record is automatically created. These session records store information about your agents’ and customers’ interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers.

Use Live Agent sessions to find and edit information about your support agents’ chats with customers. For example, you can create a list called “Today’s Sessions” to view chat activity that occurred in one day.

You can associate session records with cases, accounts, contacts, and leads or link them with other objects through custom lookup fields.

**Note:** If you have the correct permissions, you can create, view, edit, or delete session records, just like other record types in Salesforce. However, session records are meant to provide a paper trail for the chats between your agents and customers, so we don’t recommend tampering with these records in most cases.

**Live Agent Visitor Records**

Every time an agent chats with a customer, Salesforce automatically creates a visitor record that identifies the customer’s computer.

Each new visitor is associated with a session key, which Salesforce creates automatically. A session key is a unique ID that is stored in the visitor record and on the visitor’s PC as a cookie. If a customer participates in multiple chats, Salesforce uses the session key to link the customer to their visitor record, associating that record to all related chat transcripts.

**Note:** If you have the correct permissions, you can create, view, edit, or delete visitor records, just like other record types in Salesforce. However, visitor records are meant to provide a paper trail that associates your customers with their chat transcripts, so we don’t recommend tampering with these records in most cases.

SEE ALSO:

- [Create Records](#)
- [Delete Records](#)
- [Edit Records](#)
Live Agent Transcripts

A Live Agent transcript is a record of a chat between a customer and an agent. Salesforce automatically creates a transcript for each chat session.

When a chat ends successfully—that is, when the chat is ended by a customer or an agent—the chat transcript is created as soon as the agent closes the chat window and any related tabs.

If a chat is disconnected or experiences another error, Salesforce still creates a chat transcript for it, though it takes up to 30 minutes to create the transcript after the chat is disconnected.

You can associate a transcript with cases, accounts, contacts, and leads, or you can link it to other objects.

Note: If you have the correct permissions, you can create, view, edit, or delete chat transcripts, just like other record types in Salesforce. However, chat transcripts are meant to provide a paper trail for the chats between your agents and customers, so we don’t recommend tampering with these records in most cases.

Live Agent Transcript Fields
Live Agent transcript fields help you track information about your agents’ chats with customers.

Live Agent Transcript Events
Live chat transcript events automatically track events that occur between your agents and customers during chats.

**Live Agent Transcript Fields**

Live Agent transcript fields help you track information about your agents’ chats with customers. A Live Agent transcript has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields might not be visible or editable.

<table>
<thead>
<tr>
<th>Field</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abandoned After</td>
<td>The amount of time in seconds an incoming chat request went unanswered by an agent before the chat was disconnected by the customer.</td>
</tr>
<tr>
<td>Account Name</td>
<td>The name of the account associated with the transcript.</td>
</tr>
<tr>
<td>Agent Average Response Time</td>
<td>The average time that it took an agent to respond to a chat visitor’s message.</td>
</tr>
<tr>
<td>Agent Maximum Response Time</td>
<td>The maximum time it took an agent to respond to a chat visitor’s message.</td>
</tr>
<tr>
<td>Agent Message Count</td>
<td>The number of messages an agent sent during the chat.</td>
</tr>
<tr>
<td>Agent Skill</td>
<td>The skill associated with the live chat button used to initiate the chat.</td>
</tr>
<tr>
<td>Body</td>
<td>The transcribed chat between an agent and a visitor.</td>
</tr>
<tr>
<td>Browser</td>
<td>The type and version of the browser used by the visitor.</td>
</tr>
<tr>
<td>Browser Language</td>
<td>The visitor’s browser language selection.</td>
</tr>
<tr>
<td>Case</td>
<td>The case associated with the chat.</td>
</tr>
<tr>
<td>Chat Button</td>
<td>The chat button that the visitor clicked to initiate the chat.</td>
</tr>
<tr>
<td>Chat Duration</td>
<td>The total duration of the chat in seconds.</td>
</tr>
<tr>
<td>Contact Name</td>
<td>The name of the contact that participated in the chat.</td>
</tr>
<tr>
<td>Created By</td>
<td>The user who created the transcript, including creation date and time (Read only).</td>
</tr>
<tr>
<td>Created Date</td>
<td>The date and time the transcript was created (Read only).</td>
</tr>
<tr>
<td>Deployment</td>
<td>The deployment from which the visitor initiated the chat.</td>
</tr>
</tbody>
</table>

**EDITIONS**

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012.

Live Agent is available in: **Unlimited** Edition with the Service Cloud.

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions.
<table>
<thead>
<tr>
<th>Field</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>End Time</td>
<td>The time the chat ended</td>
</tr>
<tr>
<td>Ended By</td>
<td>Indicates whether the visitor or the agent ended the chat</td>
</tr>
<tr>
<td>Last Modified By</td>
<td>The user who last modified the transcript, including date and time (Read only)</td>
</tr>
<tr>
<td>Last Modified Date</td>
<td>The date and time the transcript was last modified (Read only)</td>
</tr>
<tr>
<td>Lead</td>
<td>The name of the lead that was generated by the chat or discussed during the chat</td>
</tr>
<tr>
<td>Live Chat Transcript</td>
<td>Unique, numerical identifier automatically assigned to the transcript. Administrators can modify the format and numbering for this field. Transcript numbers usually increase sequentially, but sometimes they can skip numbers in a sequence.</td>
</tr>
<tr>
<td>Live Chat Visitor</td>
<td>Unique, numerical identifier automatically assigned to the visitor. Administrators can modify the format and numbering for this field. Visitor numbers usually increase sequentially, but sometimes they can skip numbers in a sequence. Note that visitors and contacts are different: a visitor might be a contact, but this is not a requirement, and there is no relationship between contacts and visitors.</td>
</tr>
<tr>
<td>Location</td>
<td>The visitor’s geographic location. Either the city and state, or city and country (if the visitor is located outside of the United States).</td>
</tr>
<tr>
<td>Network</td>
<td>The visitor’s network or Internet Service Provider.</td>
</tr>
<tr>
<td>Owner</td>
<td>The name of the transcript owner. By default, the owner is the user who originally created the transcript (for example, the agent who answered the chat). You can select a different user as the owner, or assign the transcript to a queue. When assigning transcripts to other users, make sure those users have the “Read” permission on live chat transcripts.</td>
</tr>
<tr>
<td>Platform</td>
<td>The user’s operating system</td>
</tr>
<tr>
<td>Referring Site</td>
<td>Site the visitor was on before they came to your website. For example, if the visitor used Google to search for your support organization’s website, the referring site is Google.</td>
</tr>
<tr>
<td>Request Time</td>
<td>The time that the visitor initially requested the chat</td>
</tr>
<tr>
<td>Screen Resolution</td>
<td>The screen resolution used by the visitor</td>
</tr>
<tr>
<td>Start Time</td>
<td>The time that the agent answered the chat request</td>
</tr>
</tbody>
</table>
### Field Definitions

<table>
<thead>
<tr>
<th>Field</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Status</td>
<td>Completed or Missed. A missed chat was requested but not answered</td>
</tr>
<tr>
<td>User Agent</td>
<td>A string that identifies the type of browser and operating system the visitor used</td>
</tr>
<tr>
<td>Visitor Average Response Time</td>
<td>The average time that it took a visitor to respond to an agent comment</td>
</tr>
<tr>
<td>Visitor Maximum Response Time</td>
<td>The maximum time it took a customer to respond to an agent’s message</td>
</tr>
<tr>
<td>Visitor IP Address</td>
<td>The IP address of the computer that the visitor used during the chat</td>
</tr>
<tr>
<td>Visitor Message Count</td>
<td>The number of messages a visitor sent during the chat</td>
</tr>
<tr>
<td>Wait Time</td>
<td>The total amount of time a chat request was waiting to be accepted by an agent</td>
</tr>
</tbody>
</table>

### Live Agent Transcript Events

Live chat transcript events automatically track events that occur between your agents and customers during chats.

You can edit live chat transcripts to track events that occur between your agents and customers during live chats. You can add the following events to a live chat transcript:

<table>
<thead>
<tr>
<th>Event</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chat Requested</td>
<td>Visitor requested a chat</td>
</tr>
<tr>
<td>Queued</td>
<td>Chat request was placed in queue</td>
</tr>
<tr>
<td>Routed (Push)</td>
<td>Chat request was routed to agent</td>
</tr>
<tr>
<td>Routed (Choice)</td>
<td>Chat request was routed to all available, qualified agents</td>
</tr>
<tr>
<td>Accepted</td>
<td>Chat request was accepted by agent</td>
</tr>
<tr>
<td>Critical Wait Alert Time</td>
<td>Agent failed to respond to the customer’s message before reaching the critical wait alert time</td>
</tr>
<tr>
<td>Critical Wait Alert Cleared</td>
<td>Agent responded to the customer’s message after the critical wait alert was received</td>
</tr>
<tr>
<td>Transfer Requested</td>
<td>Agent requested chat transfer</td>
</tr>
<tr>
<td>Transfer Accepted</td>
<td>Chat transfer was accepted by agent</td>
</tr>
<tr>
<td>Transfer Request Canceled</td>
<td>Chat transfer request was canceled by the agent who sent the request</td>
</tr>
<tr>
<td>Transfer Request Declined</td>
<td>Chat transfer request was declined by the agent who received the request</td>
</tr>
</tbody>
</table>

Live Agent for Support Supervisors

Welcome to Live Agent for support supervisors! Live Agent is a comprehensive chat solution that makes it easy for your agents to support customers. With Live Agent’s supervisor tools, you can easily monitor your agents’ activities, assist your agents in chats, and view data on your agents’ chat sessions.

As a support supervisor, you oversee your employees to ensure that they provide the best customer support possible. Live Agent is a chat solution that’s fully integrated with the rest of Salesforce, making it easy for you to access the information you need about your agents and their chat activity in a single workspace.

Whether you’re a seasoned veteran or new to Live Agent, there are several tools at your disposal that make it easy to support and monitor your chat agents as they work with customers. Let’s get started.

SEE ALSO:
- Live Agent for Support Agents
- Live Agent for Administrators
- Permissions for Live Agent Support Supervisors

The Live Agent Supervisor Panel

The Live Agent supervisor panel is your one-stop shop to find information about your department’s chat buttons and chat agents. From the supervisor panel, you can monitor agents’ chat activities as they chat with customers and view customer traffic on specific chat buttons, all in real time. The supervisor panel is conveniently located in the Salesforce console, so it’s easy to access it without switching out of the app.

Access the Supervisor Panel
Access the supervisor panel conveniently from the Salesforce console to easily monitor your agents’ chat activity.

Agent Status List
The agent status list in the supervisor panel gives you access to real-time information about your agents’ chat activity.

Queue Status List
The queue status list in the supervisor panel gives you access to real-time information about your organization’s chat buttons and queues.

EDITIONS
Available in: Salesforce Classic

Live Agent is available in:
- Performance Editions
- Developer Edition orgs that were created after June 14, 2012
- Unlimited Edition with the Service Cloud
- Additional cost in Enterprise and Unlimited Editions

USER PERMISSIONS
To chat with visitors in Live Agent in the Salesforce console:
- Live Agent is enabled, set up, and included in a Salesforce console app

Monitor Your Agents’ Chats

View your agents’ chats from the supervisor panel as they help customers. You can monitor agents’ performance and give them real-time feedback and help as they serve customers.

Access the Supervisor Panel

Access the supervisor panel conveniently from the Salesforce console to easily monitor your agents’ chat activity.

1. To access the supervisor panel in the Salesforce console, select Live Agent Supervisor in the console’s navigation list.

   The supervisor panel appears in the main console window, giving you access to real-time information about your Salesforce org’s chat buttons and agents.
Agent Status List

The agent status list in the supervisor panel gives you access to real-time information about your agents’ chat activity.

<table>
<thead>
<tr>
<th>Agent Detail</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Agent Name</td>
<td>The name of the agent.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> If a red flag appears next to the name, the agent has requested help. Respond via the chat detail module (far right).</td>
</tr>
<tr>
<td>Status</td>
<td>The agent’s Live Agent status.</td>
</tr>
<tr>
<td>Action</td>
<td>The actions you can take to change the agent’s status.</td>
</tr>
<tr>
<td>No. Chats in Progress</td>
<td>The number of chats that an agent is engaged in.</td>
</tr>
<tr>
<td>No. Requests Assigned</td>
<td>The number of pending chat requests that are currently assigned to the agent.</td>
</tr>
<tr>
<td>Time Elapsed Since Login</td>
<td>The amount of time the agent has been logged in to Live Agent.</td>
</tr>
<tr>
<td>Time Elapsed Since Last Accept</td>
<td>The amount of time since the agent last accepted a chat request.</td>
</tr>
<tr>
<td>Message to Supervisor (optional)</td>
<td>The private message that the agent sent with a help flag.</td>
</tr>
</tbody>
</table>

Expand each agent’s name to see details about the customers they’re chatting with.

<table>
<thead>
<tr>
<th>Customer Detail</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visitor Name</td>
<td>The name of the customer, if available.</td>

</table>

The queue status list in the supervisor panel gives you access to real-time information about your organization’s chat buttons and queues.

**Available in:** Salesforce Classic

Live Agent is available in: Performance Editions and in Developer Edition orgs that were created after June 14, 2012

Live Agent is available in: Unlimited Edition with the Service Cloud

Live Agent is available for an additional cost in: Enterprise and Unlimited Editions
Monitor Your Agents’ Chats

View your agents’ chats from the supervisor panel as they help customers. You can monitor agents’ performance and give them real-time feedback and help as they serve customers.

1. In the Agent Status list, click 📈 to expand the information about the agent whose chat you want to view. If an agent has requested help, you see a red flag next to the name and a private message (far right) if the agent entered one.

2. To view a chat, click View in the Action column of the chat you want to monitor.
   The chat monitor opens in the Agent Status list.

3. To send a private message to an agent as the agent is chatting with a customer, type your message in the message field and press Enter.
   The agent can see your message in the chat log, but the message is invisible to the customer.

When you finish monitoring your agent’s chat, click again to collapse the chat monitor.
To remove a flag after you’ve provided help, click Lower Flag.

SEE ALSO:
Agent Status List
Assign Skills to Agents

Assign skills to your agents as the expertise of your team evolves.

1. In Setup, enter Skills in the Quick Find box, then select Skills.
2. Click the name of the skill you want to assign.
3. Click Edit.
4. Select either the profiles (recommended) or individual users who have this skill.
5. Click Save.

If you don’t have access to the Skills page, ask your Salesforce administrator about enabling this permission. Only your administrator can create skills.
Report on Live Agent Sessions

Gain insight into your agents’ chat activities by building reports about Live Agent chat sessions. You can create a custom report type for Live Agent chat sessions and use it to run reports on your agents’ sessions using the Report Builder. These Live Agent session reports can provide insight about your agents’ chat activities—for example, whether or not your agent team is able to handle all chat requests from your customers.

1. Create a custom report type using Live Agent Sessions as the primary object.
3. Customize your report to include the columns of information you want to feature.
4. Save or run the report.

SEE ALSO:
- Create a Report
- Build a New Report
- Live Agent Session Records

Console Tab

Agent Console

The Agent console in the console tab makes it easier to find related information with less switching between pages.

Note: As of the Spring ’15 release, Agent console is not available to new organizations. The newer Salesforce console improves the Agent console by providing you with more options and more advanced technologies. See Salesforce Console.
You can set up the Agent console to display the information most important to your work according to your business needs. Before setting up or using the Agent console, review Agent console terminology.

SEE ALSO:
- Agent Console FAQ
- Displaying the Agent Console
- Navigating within the Agent Console
- Tip sheet: Using the Console

Agent Console Concepts

Review the following terminology used to describe the components of the Agent console:

**Frames**
- Separate sections of the console, each displaying a different record, list view, or other page.

**List View**
- The console’s top frame, which is a list view of records based on specific criteria. The list views you can select to display in the Console tab are the same list views defined on the tabs of other objects. You cannot create a list view within the console.

**Detail View**
- The Agent console’s center frame, which is the detail page view of any record selected from any of the console’s other frames. The detail view displays the same page layouts defined for the object’s detail pages. When a record is displayed in the detail view, it is highlighted in the list view.

**Mini View**
- The Agent console’s right frame which displays the records associated with the record displayed in the detail view. The fields displayed in the mini view are defined in the mini page layouts by an administrator. The mini view does not display if the record in the detail view does not have any records associated with it.

**Sidebar**
- The Agent console’s left frame, which displays recent items, the Recycle Bin, and other components, just like the sidebar displayed on every Salesforce page. To show or hide the sidebar in the console, click the border of the left frame.

**Related Objects**
- Objects chosen by an administrator to display in the Agent console’s mini view when records of a particular type are shown in the console’s detail view. For example, when a case is in the detail view, an administrator can choose to display an associated account, contact, or asset in the mini view.

**Mini Page Layouts**
- A subset of the items in a record’s existing page layout that administrators choose to display in the Agent console’s Mini View and in Hover Details. Mini page layouts inherit record type and profile associations, related lists, fields, and field access settings from the page layout.
Console Layout

Objects chosen by an administrator to display in the list view frame of the Agent console. For example, if an administrator adds cases to a console layout, then users whose profiles are assigned to that console layout can see list views of cases in the console's list view frame.

SEE ALSO:
Agent Console
Displaying the Agent Console
Navigating within the Agent Console
Tip sheet: Using the Console

Navigating within the Agent Console

What you click in the Agent console determines which frame a record displays in.

In the detail view, clicking:

- Buttons or links on the record displays the record in the detail view.
- Email this page displays a link to the record in an email.
- Link to this page displays the record and the URL of the record in a new browser window.
- Printable View displays a printable view of the record in a popup window.
- Customize Page allows you to customize the display of related lists in the detail view of the record.
- Help for this page displays an online help page for the record.

In the mini view, clicking:

- Links displays the record in the detail view. Associated records display in the mini view.
- View displays the entire record in the detail view.
- Edit displays a mini edit page in the mini view.
  - To edit a field not displayed on the mini edit page, click View to display the entire record in the detail view, and then click Edit from the detail view.
- Show more below a related list displays more of the records included in the related list in the mini view. Show more displays an additional five records every time you click it, up to a maximum of 100.

  Note: The mini view does not display if the record in the detail view does not have any records associated with it.

In the list view, clicking:

- A link displays the record in the detail view.
- Refresh reloads the list view with any updates that have occurred to the records since you began viewing the list.
- A column heading sorts that column in ascending order. Click the heading a second time to sort in descending order.
- A letter at the bottom of the list view filters your list view records by the letter.
- fewer or more at the bottom of the list view displays a shorter or longer list.
- Previous Page or Next Page at the bottom of the list view displays the previous or next page of items on the list.
For more information, see Using the Agent Console List View.

In the sidebar, clicking:

- The border of the left frame opens the sidebar in the console. Click the border of the left frame a second time to hide the sidebar.
- A record under Recent Items displays the record in the detail view.
- Calendar displays the calendar in the detail view.
- Recycle Bin displays the Recycle Bin in the detail view.

**Tip:** Clicking the back or forward buttons on your browser cycles you through pages in the console. You will not immediately exit the console by clicking them.

**Note:** Not all pages open within the console. For example, clicking Printable View, Check Spelling, Help for this Page, lookup icons, email addresses, and custom links set to open in a new browser window all open outside of the console in a new browser window or popup.

Drag-and-drop editing is not available for calendar views in the Agent console.

Displaying the Agent Console

You can start using the Agent console after your administrator has set it up as described in Agent Console.

To display the Agent console, click the Console tab. To exit the console, select any tab.

No data displays in the console if the selected list view does not contain any records.

**Note:** You can only access the Agent console if your administrator has assigned your user profile to a console layout and granted you access to the Console tab. You can customize your display to make the Console tab visible in your tab sets.

SEE ALSO:
- Agent Console FAQ
- Agent Console
- Navigating within the Agent Console

Using the Agent Console List View

The Agent console’s list view allows you to quickly perform actions within Salesforce without leaving the console.

Display list views
From the drop-down list in the top left of the list view frame, select an object, and then a list view of the object to display in the console’s list view frame. You cannot create a list view within the console.

Click Refresh to reload the list view with any updates that have occurred to the records since you began viewing the list. The refresh button automatically changes colors when record updates have occurred.

Records italicize in the list view when you edit them in the detail view. This shows you the records you have edited.

Search
Enter keywords in the search box above the list view and click Go! to use advanced search across all the searchable records you can access in your organization. Terms in an advanced search are treated as separate words rather than a phrase and can be found in different indexed fields within a record. So, searching for Pat Powers in advanced search will find a contact named “Pat P Powers,” as well as a contact named “Pat Smith” with an email address of “smith@powers.com.” Search results display in the detail view.

Create records
From the New drop-down list, select any object to create a new record. New record pages display in the detail view.

View recent items
From the Recent Items drop-down list, you can choose to display any of the 10 records you most recently viewed. Recent items display in the detail view.

Perform mass actions
Select the checkbox next to items in the list view, and from the Mass Action drop-down list, choose the action you want to perform on all the selected records.

If you perform a mass action on more than 200 records while using Internet Explorer, you might be automatically logged out of Salesforce.

Note: No data displays in the console if the selected list view does not contain any records.

Agent Console FAQ

- How is the Console tab different from other tabs in Salesforce?
- How do I view the Agent console?
- Why do I only see the list views of certain objects in the Agent Console?
- Can I view more than one Agent console?
- Is the Agent console the same thing as the Salesforce console?

How is the Console tab different from other tabs in Salesforce?

The Console tab is just like other tabs in Salesforce except that the console can display records from several different Salesforce tabs all on one Console tab. This specialized display is called the Agent console, and it allows you to have all the information you need on one tab when interacting with Salesforce. By using the Agent console in the Console tab, you can quickly find, view, and edit records, such as cases, accounts, and contacts, with fewer clicks and without switching back and forth between screens.

SEE ALSO: Agent Console FAQ

How do I view the Agent console?

You can view the Agent console by clicking the Console tab. You can only access the Agent console if your administrator has assigned your user profile to a console layout and granted you access to the Console tab. You can customize your display to make the Console tab visible in your tab sets.

SEE ALSO: Agent Console FAQ

Why do I only see the list views of certain objects in the Agent Console?

The list views of objects you can display in the Agent console are defined by your administrator in the console layout assigned to your user profile.

SEE ALSO: Agent Console FAQ

Can I view more than one Agent console?

No. You can only view one Agent console. However, your administrator can customize many different Agent console layouts to display a variety of objects in the Agent console’s list view, and then assign those console layouts to different user profiles to satisfy business needs for different users.

SEE ALSO: Agent Console FAQ
Is the Agent console the same thing as the Salesforce console?

No. The Salesforce console improves on the Agent console by providing you with more advanced options and technologies.

Agent Console FAQ

Using Social Customer Service

Social Action Tips

Use the social action on the case or lead feed to respond to social posts. Choose an appropriate message type when composing a response. For example, you may choose to reply with a direct message on Twitter rather than a public tweet.

We recommend that the layout of the social action include the following fields, at minimum.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>In Reply To</td>
<td>The social post you are replying to and its content. Use the Reply, Retweet, and Comment links in the feed to add content to a specific item in the feed.</td>
</tr>
<tr>
<td>Managed Social Account</td>
<td>You must have access to the managed social account by a profile or permission set. Use the drop-down to change to another account you have access to.</td>
</tr>
<tr>
<td>Message Type</td>
<td>By default the message type is set to Reply for inbound posts. Use the drop-down to change to another valid message type.</td>
</tr>
<tr>
<td>Content</td>
<td>All outbound content must be unique for the interaction, you can’t send the same content in the same conversation. All Twitter replies must start with a handle: @[social handle].</td>
</tr>
</tbody>
</table>

If your posts require approval before they are sent, you can click Submit for Approval to start the review process. You can Recall it before it is approved or rejected. If a post is rejected, you can Retry a rewritten post. When your post is approved, it is automatically published.

Here are some tips for working with social networks.

- URLs in a social post are turned into clickable links.
- When deleting posts, consider that Twitter Direct Messages behave like emails. For example, the sender can delete their direct message from a conversation view. However, receiver has that direct message in their conversation view until they choose to delete it.
- Speaking of Twitter Direct Messages, Twitter has a preference to “Receive Direct Messages from Anyone”. Therefore, depending on if this permission is set on your or the recipient’s account, you may not have to follow each other to direct message.
• If your Twitter settings allow you to receive direct messages from anyone, you can send deep links to invite users to direct message conversations. To send a deep link direct message invitation, paste this link into your outbound message:
https://twitter.com/messages/compose?recipient_id={your Twitter account’s numeric user ID}
You can find your twitter account’s numeric ID on twitter.com by going to Your Twitter User > Settings > Your Twitter Data. Twitter handles the URLs and the rendering in their native clients.

• Agents can use the View Source link to go to the original post within its social network.

• In Salesforce1, agents can see and reply to social content from mobile devices.

• Only change the Status picklist field on social posts if you are working with outbound posts. If an agent manually sets the status on the inbound social post detail page, the social posts in the case feed may not match. We recommend removing the Status field on the inbound social post detail page layout. For example, if you change the Status of an inbound post to Sending, the Reply link in the case feed item disappears until you change the status back to None.

For Twitter accounts, agents can use case and lead feeds to see the content they are responding to, retweet, mark as favorite and follow tweets, send replies to tweets and direct messages, and delete tweets managed by your social accounts.

For Facebook accounts, cases and leads are created from your managed Facebook page and agents can use the feeds to see the content they are replying to, like posts and comments, send posts, comments, replies, and private messages, and delete posts managed by your social accounts.

Here are tips for dealing with some possible error messages.

<table>
<thead>
<tr>
<th>Message</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>You can’t send a direct message to this Twitter user because he or she is not following you.</td>
<td>Use a reply to ask the Twitter user to follow your managed social account. Once they are following you, send them a direct message.</td>
</tr>
<tr>
<td>Whoops! You already said that... Change your message and try again.</td>
<td>You can’t post the same text twice. Change your content and send again.</td>
</tr>
<tr>
<td>Your content is too long.</td>
<td>Reduce your content to 140 characters or less. For Twitter replies, the handle is included in the character count.</td>
</tr>
</tbody>
</table>
| Twitter replies must begin with a handle. | The content field for a Twitter reply must be in the form: @[sender’s handle] message text.
Ensure that there is a space between the sender’s handle and your message. |
| Your response message type must be compatible with the original post’s message type. | Change the message type to match the original message. |
| Your login to Social Studio has failed. The username or password may be incorrect. Update your credentials or reset your password. | An administrator must edit the Social Studio credentials on the Social Media settings page. |

Note: When an administrator makes a copy of or refreshes a Sandbox organization, a new organization is created, with a new ID, making the Social Studio login invalid.
ActionMessage
We recommend creating a workflow to notify the case owner that an attempt to send a response via Twitter has failed.

Welcome to Social Customer Service
Implementing Social Customer Service

How to Reconnect a Social Account

Reconnect your social account for Social Customer Service.

Your social account can be disconnected from Social Customer Service if your social media network provider’s connect, or token, has expired. Many providers have expiration policies of 60 to 90 days.

1. From Setup, enter Social Media in the Quick Find box, then select Settings.
2. On the Social Accounts tab, click Reauthorize in the Action column.

The social network opens and asks you to authenticate the account. Once your account is reauthenticated, you are returned to the Social Accounts tab.
Managing Social Posts

A social post is a Salesforce object that represents a post on a social network such as Facebook or Twitter. The Social Posts tab or object is a collection of information about a post from a person or company on a social network, such as Twitter or Facebook. The available information for a post varies depending on the social network. You can view and manage social posts.

Note: For inbound posts, setting a Status picklist value on the social post detail page does not stay with the post, as this field is for outbound posts only.

1. Click the Social Posts tab.

2. Optionally, select a view. The list defaults to those recently viewed. Select a View or create a new one to filter the list of posts. If your organization has moderation enabled, select Social posts without case to view and either create a case for or ignore posts. You can also create a new view to fit your needs.

3. Click on the social post name you’d like to manage or click New Social Post to create a post. If you selected a view you can click Edit or Del (delete) as appropriate.

Note: On the Social Post tab, you can only create, edit, and delete posts in your Salesforce organization, not on the social networks.

4. To manage posts without cases, select the posts you’d like to either create a case for or ignore and click Create Case and Ignore as appropriate.

For example, an agent can ignore a Facebook post of "I love you guys!" as it does not warrant a case.

5. If you have Approvals enabled, Social Posts tab has a Social posts pending approval list view that allows you to review multiple pending posts and approve or reject them as desired.

Note: Once approvals are enabled, the Approve Posts and Reject Posts buttons remain on the Social Posts tab. However they don’t work for inbound and posts not needing approval.

Tip: If you approve a post from the Social posts pending approval list view and a system interruption, session timeout, or other unexpected issue prevents the post from being published on the intended social network, an error message displays on the individual case only, not on the list view. To help honor any commitments your company may have regarding response times on social networks, after approving posts from the list view, we recommend checking the posts’ statuses to ensure they were sent successfully and don't need to be resent.

On the social post detail page you can:

- View, edit, and create the post’s content and information.
  
  Note: The information varies depending on the social network the persona is from.

  Don’t forget to click Save to save changes or create a new post.

- If your organization has moderation enabled, you can create a case for a post or ignore it if it does not warrant a case.

- Delete the post in your Salesforce organization.
**Note:** Social posts are not deleted when their parent record, usually a case, is deleted. Similarly, if a social post is associated with an account, contact, or lead through the polymorphic Who field, deleting any of those related records does not affect the social post.

You can reply to a social post from the case or lead feeds only, not the Social Posts tab.

### Managing Social Personas

A social persona is a Salesforce object that represents a contact's profile on a social network such as Facebook, or Twitter.

The Social Personas tab or object is a collection of publicly available information about a person or company from Twitter or Facebook. A Persona is relative to the social network and there can be multiple personas attached to a single contact. You can edit or delete a persona but you can’t manually create a social persona from Salesforce. The personas are created from public information on social networking sites. You can view and manage your social persona records like other records in Salesforce.

**Note:** Social persona fields may have maximum character lengths set by standard or custom Salesforce limits. For example, the first name field is limited to 40 characters. If a social persona with a first name longer than 40 characters is created from an inbound social post the first name is truncated at the 40th character.

1. Click the **Social Personas** tab.

2. Optionally, select a view.

   The list defaults to those recently viewed. Select **All** in the **View** drop-down to show all social personas in your organization. You can also create a new view to fit your needs.

3. Click on the social handle you’d like to manage.

   If you selected a view, click **Edit** or **Del** (delete) as appropriate.

   **Warning:** If you delete a social persona through the Social Accounts and Contacts feature, all related social posts are also deleted.

On the social persona detail page you can:

- View and edit the contact's available information for that social network.

  **Note:** The information varies depending on the social network the persona is from.

- Delete the social persona from your organization.

- Create, edit, and delete social posts.

- View which social network created the persona, in the **Source App** field. This field is set on creation and is not updateable. Social Personas created prior to the Summer ‘15 release do not have this field.

  **Warning:** There is no field level security and you can’t control who can create, read, edit, or delete Social Personas. Anyone in your organization can see all the data on a Social Persona object.

---

**EDITIONS**

Available in: Salesforce Classic

Social personas and posts are available in: **Enterprise**, **Performance**, **Unlimited**, and **Professional** Editions.

**USER PERMISSIONS**

To install and deploy Social Studio for Salesforce:

- “Customize Application”
Welcome, Support Administrators

This documentation is for administrators who want to set up Salesforce customer service and support features, also known as the Service Cloud. It’s organized by tasks so that you can quickly find information about setting up features that solve support issues for your company. For example, information about setting up self-service websites is located in a section named Creating Web and Social Channels, rather than a section that includes the feature names, Customer Portal or Chatter Answers. However, you can search this documentation by keywords to find a feature name or support solution. Note that this documentation doesn’t include many feature-specific concepts or overviews. For those, please refer to the documentation, Support Your Customers.

Together, Set Up and Maintain Customer Support Tools and Support Your Customers contain the information you need to set up and deliver customer service with Salesforce.

Setting Up Customer Channels

Creating Email Channels

Email-to-Case

Automatically turn emails from your customers into cases in Salesforce to track and resolve customer cases quickly.

You can set up either Email-to-Case or On-Demand Email-to-Case; each supports different business cases.

<table>
<thead>
<tr>
<th>Details</th>
<th>Email-to-Case</th>
<th>On-Demand Email-to-Case</th>
</tr>
</thead>
<tbody>
<tr>
<td>Business case:</td>
<td>Keep email traffic inside your network’s firewall and accept emails larger than 25 MB</td>
<td>Keep email traffic outside your network’s firewall and refuses emails larger than 25 MB</td>
</tr>
<tr>
<td>Set up:</td>
<td>Requires you to download and install the Email-to-Case agent on your local machine to turn emails to cases</td>
<td>Requires you to set up Salesforce Apex email services to turn emails to cases</td>
</tr>
<tr>
<td>Maximum number of emails converted to cases each day:</td>
<td>2,500</td>
<td>Number of user licenses multiplied by 1,000, up to a daily maximum of 1,000,000</td>
</tr>
</tbody>
</table>
Email-to-Case helps your company efficiently resolve and correspond with customer inquiries via email. Salesforce automatically creates cases and auto-populates case fields when customers send messages to email addresses you specify.

1. Email-to-Case requires downloading the Email-to-Case agent. This allows you to keep all email traffic within your network’s firewall and accept emails larger than 25 MB from customers.

2. Install the agent behind your network’s firewall.

3. Enable Email-to-Case and configure your Email-to-Case settings.

4. Configure your routing address settings to customize the way Salesforce handles your customer emails.

5. Test your email routing addresses by manually sending emails to them and verify that these emails convert to cases based on their routing address settings.

6. Add the email address that you configured to your company’s support website. This is the email address customers can use to submit cases to your support team.

7. Add the Emails related list to the Cases page layout.

8. Optionally, create templates agents can use when replying to email. These templates can include merge fields that display information from the original email in the reply.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Email-to-Case is available in: Professional, Enterprise, Performance, Unlimited, and Developer editions.

USER PERMISSIONS

To set up Email-to-Case:
- “Customize Application”

To enable Email-to-Case:
- “Modify All Data”
  AND
- “Customize Application”
Enable and Configure Email-to-Case

Get your company ready to automatically turn incoming email messages into cases by enabling Email-to-Case and choosing the settings that fit your needs.

Note: Before you can enable and configure Email-to-Case, you need to download and install the Email-to-Case agent onto your local machine.

1. From Setup, enter Email-to-Case in the Quick Find box, then select Email-to-Case.
2. Click Edit.
3. Select Enable Email-to-Case.
4. Configure your Email-to-Case settings.
5. Click Save.

SEE ALSO:
   - Email-to-Case
   - Email-to-Case Settings
   - Configure Routing Addresses for Email-to-Case and On-Demand Email-to-Case

Email-to-Case Settings

Configure your Email-to-Case settings to customize the way Salesforce handles and creates cases from incoming emails.

To access these settings, from Setup, enter Email-to-Case in the Quick Find box, then select Email-to-Case.

<table>
<thead>
<tr>
<th>Email-to-Case Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable Email-to-Case</td>
<td>Enables Salesforce to create cases from inbound emails.</td>
</tr>
<tr>
<td>Notify Case Owners on New Email</td>
<td>Allows case owners to automatically receive notifications of new emails for their existing cases. Email notifications assign a task to the case owner to respond to the new email. Responding to the email closes the task. To disable email notifications at any time, simply deselect the checkbox.</td>
</tr>
<tr>
<td>Enable HTML Email</td>
<td>Warns users before they view incoming HTML email content so that they can avoid opening potentially malicious HTML that could harm their computers. If this setting isn’t selected, support agents see text instead of HTML in the email message detail pages. When agents reply to an email, the text version of the message is</td>
</tr>
</tbody>
</table>
### Email-to-Case Setting

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insert Thread ID in the Email Subject</td>
<td>Adds the thread ID to the subject of email. The thread ID is a unique number that identifies the organization and case associated with the outgoing email. It helps ensure that replies to the original email are associated with the correct case.</td>
</tr>
<tr>
<td>Insert Thread ID in the Email Body</td>
<td>Adds the thread ID to the body of email.</td>
</tr>
<tr>
<td>Place User Signatures before Email Threads</td>
<td>Adds the user signature after the reply, but before the email thread. If this setting isn’t selected, the user signature is placed at the bottom of the email thread.</td>
</tr>
</tbody>
</table>

### Use Unique Email Subject and Email Body IDs

Make sure the subject line and body of your outgoing emails are unique.

*Warning:* If the **Email Subject ID** and **Email Body Text ID** are the same, Email-to-Case creates an infinite loop of emails related to each case. If these settings are not selected, Email-to-Case eventually could stop accepting new emails.

To exclude the thread ID from email, deselect both the **Insert Thread ID in the Email Subject** and **Insert Thread ID in the Email Body** checkboxes. A new case is created when a support agent responds to an outbound case email.

SEE ALSO:
- Email-to-Case

### Set up On-Demand Email-to-Case

On-Demand Email-to-Case helps your company efficiently resolve customer inquiries via email. Salesforce automatically creates cases and auto-populates case fields when customers send messages to email addresses you specify. On-Demand Email-to-Case lets you process customer emails up to 25 MB.

1. Set the **Default Case Owner** and **Automated Case Owner** for your organization.
2. Enable and configure Email-to-Case.
3. Enable and configure On-Demand Email-to-Case.
4. Configure your routing address settings to customize the way Salesforce handles your customer emails.
5. Test your email routing addresses by manually sending emails to them and verify that these emails convert to cases based on their routing address settings.
6. Add the email address that you configured to your company’s support website. This is the email address customers can use to submit cases to your support team.
7. Add the Emails related list to the Cases page layout.
8. Optionally, create templates agents can use when replying to email. These templates can include merge fields that display information from the original email in the reply.
**Note:** On-Demand Email-to-Case automatically shortens email text to 32,000 characters. Contact Salesforce if you’d like this limit raised to 128,000 characters for your organization.

SEE ALSO:
- Email-to-Case
- Create Text Email Templates
- Create HTML Email Templates
- Create Visualforce Email Templates

**Enable and Configure On-Demand Email-to-Case**

Turn incoming emails into cases automatically without having to download and install software with On-Demand Email-to-Case.

**Note:** Before you enable On-Demand Email-to-Case, set the Default Case Owner and Automated Case User and enable and configure Email-to-Case.

1. From Setup, enter Email-to-Case in the Quick Find box, then select Email-to-Case.
2. Click Edit.
3. Select Enable On-Demand Service.
4. Select your Over Email Rate Limit Action and Unauthorized Sender Action settings based on how your company plans to use On-Demand Email-to-Case.
5. Click Save.

SEE ALSO:
- Email-to-Case
- Set up On-Demand Email-to-Case
- Routing Address Settings for Email-to-Case and On-Demand Email-to-Case

**On-Demand Email-to-Case Settings**

Use the On-Demand Email-to-Case settings to specify how Salesforce handles incoming email messages that are beyond your organization’s daily processing limits or that come from unauthorized senders.

These settings are specific to On-Demand Email-to-Case. For more information about general Email-to-Case settings, see Email-to-Case Settings.
On-Demand Email-to-Case Setting

<table>
<thead>
<tr>
<th>Description</th>
<th>Over Email Rate Limit Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Choose what On-Demand Email-to-Case does with email that surpasses your organization’s daily email processing limit:</td>
<td></td>
</tr>
<tr>
<td>• Bounce message—The email service returns the message to the sender or to the Automated Case User for On-Demand Email-to-Case, with a notification that explains why the message was rejected.</td>
<td></td>
</tr>
<tr>
<td>• Discard message—The email service deletes the message without notifying the sender.</td>
<td></td>
</tr>
<tr>
<td>• Requeue message—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected.</td>
<td></td>
</tr>
</tbody>
</table>

Unauthorized Sender Action

<table>
<thead>
<tr>
<th>Description</th>
<th>If you limited the email addresses and domains available for On-Demand Email-to-Case in the Accept Email From field, choose what happens to messages received from senders who are blocked:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Bounce message—The email service returns the message to the sender or to the Automated Case User for On-Demand Email-to-Case, with a notification that explains why the message was rejected.</td>
<td></td>
</tr>
<tr>
<td>• Discard message—The email service deletes the message without notifying the sender.</td>
<td></td>
</tr>
</tbody>
</table>

Make sure the subject line and body of your outgoing emails are unique.

⚠️ Warning: If the Email Subject ID and Email Body Text ID are the same, Email-to-Case creates an infinite loop of emails related to each case. If these settings are not selected, Email-to-Case eventually could stop accepting new emails.

Email-to-Case

Routing Address Settings for Email-to-Case and On-Demand Email-to-Case

You can define your email routing address settings after you add and verify your email routing addresses for Email-to-Case and On-Demand Email-to-Case.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Routing Name</td>
<td>The name for the routing address—for example, Gold Support or Standard Support.</td>
</tr>
<tr>
<td>Email Address</td>
<td>Email-to-Case source only: The inbound email address for this On-Demand Email-to-Case routing address. Email sent to this address creates new cases using the specified settings. The email address must be unique. Note that this is the email address to which you will provide a link on your company's support website.</td>
</tr>
<tr>
<td>Save Email Headers</td>
<td>Email-to-Case source only: Select this checkbox to save the email routing information associated with each email submitted as a case. Saving email routing information counts towards your organization’s overall storage limit. To view email headers from an email converted to a case, see Working with Case Emails on page 2133.</td>
</tr>
<tr>
<td>Setting</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Accept Email From</td>
<td>To limit the email addresses and domains available for On-Demand Email-to-Case, entering them in this field. Leave it blank to allow On-Demand Email-to-Case to receive email from any email address or domain.</td>
</tr>
<tr>
<td>Create Task from Email</td>
<td><em>Email-to-Case source only:</em> Select this checkbox to automatically assign a task to the case owner when an email is submitted as a case. Assignment rules automatically assign owners to a case; however, if a case does not match assignment rule criteria, then the user in the Default Case Owner field on the Support Settings page is assigned to the case.</td>
</tr>
<tr>
<td>Task Status</td>
<td><em>Email-to-Case source only:</em> Choose a status from this drop-down list with which to predefine the Status field on tasks automatically assigned to case owners when email is submitted as cases. This setting is only available if you selected the Create Task from Email checkbox.</td>
</tr>
<tr>
<td>Case Owner</td>
<td><em>Outlook source only:</em> The owner of the case, which can be either an individual user or a queue.</td>
</tr>
<tr>
<td>Case Priority</td>
<td>The priority assigned to cases created from emails sent to this email routing address.</td>
</tr>
<tr>
<td>Case Origin</td>
<td>The value assigned to the Case Origin field for email sent to this email routing address.</td>
</tr>
</tbody>
</table>

**Note:** The Priority and Case Origin fields auto-populate the case via the routing address settings when the routing address is included in either the To, CC, or BCC fields of an inbound email.

**Email-to-Case FAQ**

- How can I prevent spam from becoming cases?
- Is there a size limit for attachments using Email-to-Case?
Is there a size limit for attachments using Email-to-Case?

Email attachments using On-Demand may be up to 25 MB. There is no attachment size limit when using the Email-to-Case agent.

SEE ALSO:
Email-to-Case FAQ

How can I prevent spam from becoming cases?

You can limit spam through the following options:

- Create a black list rule to reject emails from specified IP addresses.
- Download spam filter apps from AppExchange.

Email-to-Case FAQ

Creating Web and Social Channels

Web Cases

Get Ready to Capture Cases with Web-to-Case

Gather customer support requests directly from your company’s website and automatically generate up to 5,000 new cases a day with Web-to-Case. This can help your organization respond to customers faster, improving your support team’s productivity.

Before you set up Web-to-Case:

- Create custom case fields, if needed.
- Create a default email template for the automated notification that will be sent to your customers when they submit a case.
- Create case queues if you wish to assign incoming cases to queues as well as to individual users.
- Customize Support settings on page 2551 to select the default owner of cases that don’t meet the criteria in your assignment rule.
- Create an active case assignment rule to determine how web-generated cases are assigned to users or put into queues. If you do not set an active assignment rule, all web-generated cases are assigned to the default owner you specify in the Support Settings.

Next, you’re ready to set up Web-to-Case on page 2304.

Web-to-Case FAQ
Set Up Web-to-Case

Gather customer support requests directly from your company’s website and automatically generate up to 5,000 new cases a day with Web-to-Case. Setting up Web-to-Case involves enabling the feature, choosing settings, and adding the Web-to-Case form to your website.

Note: Before you start, review Get Ready to Capture Cases with Web-to-Case and Web-to-Case Notes and Limitations for information on prerequisites and things to consider as you set up Web-to-Case.

1. From Setup, enter Web-to-Case in the Quick Find box, then select Web-to-Case.
2. Select Enable Web-to-Case.
3. Choose a default case origin.
4. Select a default response template for automatically notifying customers that their case was created.
   If you set up response rules to use different email templates based on the information submitted, the default email template is used when no response rules apply. Leave this option blank if you do not wish to send emails when no response rules apply. This template must be marked as “Available for Use.”
5. Select Hide Record Information to hide the record information in the email sent to customers if the case creation fails.
6. Enter an email signature if you’d like to use a different signature than the default.
7. Click Save.

To generate HTML code that your webmaster can use on your website to handle Web-to-Case support requests from your customers, see Generate Web-to-Case HTML Code.

To generate HTML code that your webmaster can use on your company’s website to capture cases in a Web form. Whenever someone submits information on any of those Web pages, a case will be created.

You must have Web-to-Case enabled. For instructions on setting up Web-to-Case, see Set Up Web-to-Case on page 2304.

1. From Setup, enter Web-to-Case HTML Generator in the Quick Find box, then select Web-to-Case HTML Generator.
2. Use the Add and Remove arrows to move fields between the Available Fields list and the Selected Fields list to select the fields to include on your Web-to-Case form. Use the Up and Down arrows to change the order of the fields on your form.
   For organizations using multiple currencies, add the Case Currency field to the HTML if you add any other currency amount fields, otherwise all amounts will be captured in your corporate currency. For organizations using record types on cases, select the Case Record Type field if you want users submitting Web-generated cases to select specific record types.
3. If your organization uses the Self-Service portal or the Customer Portal and you want Web-generated cases to be visible to users in these portals, select Visible in Self-Service Portal.

4. Specify the complete URL to which customers should be directed after they submit their information. For example, the URL can be for a “thank you” page or your company’s home page.

5. If your organization uses the Translation Workbench or has renamed tabs, select the language for the form labels displayed on your Web-to-Case form. The source of your Web-to-Case form is always in your personal language.

6. Click Generate.

7. Copy the generated HTML code and provide it to your company’s webmaster so he or she can incorporate it into your website.

8. Click Finished.

   Tip: Use a custom multi-select picklist to allow customers to report cases on several products at a time.

If you want to test the Web-to-Case form, add the line `<input type="hidden" name="debug" value="1">` to the code. This line redirects you to a debugging page when you submit the form. Don't forget to remove it before releasing the Web-to-Case page to your website.

### Web-to-Case Notes and Limitations

Learn more about how Web-to-Case works to be sure you set it up in the most effective way for your company.

Keep these considerations in mind as you decide how to set up Web-to-Case.

- Whenever possible, Web-generated cases are automatically linked to the relevant contact and account based on the customer’s email address.
- Salesforce runs field validation rules before creating records submitted via Web-to-Case and only creates records that have valid values. All universally required fields must have a value before a record can be created via Web-to-Case.
- The format for date and currency fields captured online is taken from your organization’s default settings - Default Locale and Currency Locale.
- Salesforce doesn’t support rich text area (RTA) fields on Web-to-Case forms. If you use RTA fields on your forms, any information entered in them is saved as plain text when the case is created.
- If your organization exceeds its daily Web-to-Case limit, the default case owner (specified in your Support Settings page) will receive an email containing the additional case information.

- Web-to-Case FAQ
Web-to-Case FAQ

- What is the maximum number of web cases we can capture?
- Who owns new web-generated cases?
- How do I specify which information to capture?
- Can I capture cases from multiple web pages?
- How can our webmaster test the Web-to-Case page?
- What status and origin are assigned to Web-generated cases?
- How can I be sure that cases won’t be lost?
- How do I avoid Web-to-Case spam?

What is the maximum number of web cases we can capture?

In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, you can capture up to 5,000 cases in a 24-hour period. If your company generates more case requests than that, click Help & Training at the top of any page and select the My Cases tab to submit a request for a higher limit directly to Salesforce Customer Support.

When your organization reaches the 24-hour limit, Salesforce stores additional requests in a pending request queue that contains both Web-to-Case and Web-to-Lead requests. The requests are submitted when the limit refreshes. The pending request queue has a limit of 50,000 combined requests. If your organization reaches the pending request limit, additional requests are rejected and not queued. Your administrator receives email notifications for the first five rejected submissions. Contact Salesforce Customer Support to change your organization’s pending request limit.

SEE ALSO:
Web-to-Case FAQ

Who owns new web-generated cases?

Your administrator can set an active case assignment rule to automatically assign web-generated cases to users or queues based on specific criteria in those cases. Cases that do not match any of the assignment rule criteria are assigned to the Default Case Owner specified in the Support Settings.

SEE ALSO:
Web-to-Case FAQ

How do I specify which information to capture?

When you generate the HTML for your company’s website, you can choose which standard or custom case fields for which you want to gather information. You must create the custom case fields prior to generating the HTML code. From Setup, enter Web-to-Case in the Quick Find box, then select Web-to-Case to set up the feature and generate the HTML.

SEE ALSO:
Web-to-Case FAQ
Can I capture cases from multiple web pages?
Yes. Insert the generated HTML code into the web pages from which you want to capture cases. Whenever someone submits information on any of those web pages, a case will be created.

SEE ALSO:
Web-to-Case FAQ

How can our webmaster test the Web-to-Case page?
Add the following line to your Web-to-Case code if you want to see a debugging page when you submit the form. Don’t forget to remove this line before releasing the Web-to-Case page on your website.
<input type="hidden" name="debug" value="1">

SEE ALSO:
Web-to-Case FAQ

What status and origin are assigned to Web-generated cases?
New Web cases are marked with the default status that your administrator selected from the Case Status picklist values. The default value for the Origin field is determined by your administrator when setting up Web-to-Case.

SEE ALSO:
Web-to-Case FAQ

How can I be sure that cases won’t be lost?
If your organization exceeds its daily Web-to-Case limit, the Default Case Owner (specified in the Support Settings) will receive an email containing the additional case information. If a new case cannot be generated due to errors in your Web-to-Case setup, Customer Support is notified so that we can assist you in correcting it.
If your organization is using On-Demand Email-to-Case, Salesforce ensures that your cases won’t be lost if users submit them during a scheduled Salesforce downtime.

SEE ALSO:
Web-to-Case FAQ

How is the “Age” calculated in case reports?
The Age of an open case is the time that has elapsed from its creation to the present. The Age of a closed case is the elapsed time from its creation to the time it was closed. Case reports display a drop-down list labeled “Units” that lets you choose to view the Age in days, hours, or minutes.

Customer Portals

Setting Up Your Customer Portal

Note: Starting with Summer ’13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

A Salesforce Customer Portal provides an online support channel for your customers—allowing them to resolve their inquiries without contacting a customer service representative. With a Customer Portal, you can customize and deliver a visually stunning user interface to your customers, and use the following Salesforce features to help you and your customers succeed:

- Determine which pages and fields customers see with page layouts and field-level security
- Manage customers with profiles, permission sets, roles, and sharing rules
- Provide and organize documents via Salesforce CRM Content or the Documents tab
- Create a knowledge base for your customers using Salesforce Knowledge
- Allow customers to participate in Ideas communities.
- Display and collect data that is unique to your organization with custom objects
- Display custom s-controls and content from other websites via Web tabs
- Provide customized reports via the Reports tab

Note: High-volume portal users are available for customer portals or communities intended for many thousands to millions of users. See About High-Volume Portal Users on page 2344.

Setting up your Customer Portal consists of the following steps:

1. Enable the Customer Portal.
2. Create one or more portals.

   For each portal:
   a. Configure the settings and communication templates.

   You can standardize the communication templates sent to the users of all your Customer Portals by clicking the Set Default Email Templates for All Customer Portals link on the Tools section of the Customer Portal Setup page. For more information, see Creating Multiple Customer Portals on page 2314.
The Convert Portal User Access wizard automatically displays after the first time you save settings for your first portal, whether it is the Customer Portal or partner portal. You can use this wizard to help ensure that records and folders owned by Salesforce users are not shared with portal users.

b. Customize the fonts and colors.

c. Customize the available tabs and tab order.

d. Configure portal languages.

3. Optionally, if available to your portal user licenses, you can enable Salesforce CRM Content, Ideas, Answers, Entitlement Management or Salesforce Knowledge as needed.

   For each profile:

   b. Customize list views.

      Customer Portal users can automatically see any list view with visibility settings marked Visible to all users. We recommend that you create specific list views on all objects accessible to portal users, and then assign portal users to only the list views you want them to view.

   c. Customize search layouts.

      The search layouts in your Salesforce organization are the same search layouts used in your Customer Portal. Verify that search layouts on objects accessible to portal users only include fields you want them to view in search results.

5. Set up workflow:

   a. Set up workflow rules or case assignment rules to automatically assign cases created by portal users to Salesforce users or queues by using the criteria Current User: User Type contains Customer Portal.

      For case assignment rules to work on the Customer Portal, select the Select Case Assignment checkbox by default checkbox on case page layouts assigned to portal profiles. Portal users cannot view these checkboxes on the Customer Portal. Note that assignment rules trigger when a case is created and when it is edited. To prevent cases from being automatically reassigned when edited by portal users, add a rule entry using the criteria Current User: User Type contains Customer Portal and select the Do Not Reassign User checkbox.

   b. Create workflow alerts or case auto-response rules to automatically respond to portal users when they create a case on your portal.

6. Configure portal user access.

7. Grant high-volume portal users access to objects.

8. Optionally, enable single sign-on.

10. Add a link on your organization’s website to the portal.

    Users can navigate to your Customer Portal after you copy the Login URL from your portal’s settings and paste it into the HTML of your website. For more information, see Enable Customer Portal Login and Settings on page 2315.

11. Enable contacts to use your portal.
To learn more about implementing a Customer Portal, see Preparation for Setting Up Your Portal on page 2374.

**Note:** Contact Salesforce about activating a Customer Portal for your organization.

**User Controls**

Users can click **Edit My Settings** after they sign in to change their:

- Community username
- Community password
- Locale
- Language
- Time zone
- Notification settings
- Contact information

Users can use the Customer Portal Welcome component to change their:

- Portal username
- Portal password
- Locale
- Language
- Time zone
- Contact information

None

**Note:** Contact Salesforce to activate a specific portal for your organization.

### Enabling Your Customer Portal

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

To enable the Salesforce Customer Portal:

1. From Setup, enter *Customer Portal Settings* in the Quick Find box, then select **Customer Portal Settings**.
2. Click **Edit**.
3. Select **Enable Customer Portal**.
4. Click **Save**.
5. Continue setting up the portal.

**Tips on Enabling the Customer Portal**

Consider the following when enabling the Customer Portal:

- After you enable the Customer Portal, you can [create multiple Customer Portals](#) to satisfy the various business needs of your customers.
- These items become available after you enable the Customer Portal:
The High Volume Customer Portal, Authenticated Website, Customer Portal Manager, and Customer Portal User profiles, if you purchased user licenses for them.

- The **Enable Customer Portal User** and **View Customer Portal User** buttons on contact and person account records.
- The All Customer Portal Users and All Internal Users groups along with the Roles and Internal Subordinates sharing rule category.

- After you enable a Customer Portal, you cannot disable it. However, you can prevent users from logging into it. See **Enable Customer Portal Login and Settings** on page 2315.

**SEE ALSO:**

- **Setting Up Your Customer Portal**

**Considerations for the Convert Portal User Access Wizard**

Your Customer Portal and partner portal users appear in the role hierarchy, however, they’re external contacts who don’t need access to your organization’s internal data. When setting up a Customer Portal or partner portal, you can use the Convert Portal User Access wizard to help ensure that no records or folders are shared with a portal user.

**Note:** Starting with Summer '13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

The wizard affects the following areas of your Salesforce org:

**Sharing Rules**

The Convert Portal User Access wizard converts any sharing rules that include the Roles, Internal and Portal Subordinates data set category to include the Roles and Internal Subordinates data set category instead.

The Roles and Internal Subordinates data set category allows you to create sharing rules that include all users in a specified role plus all of the users in roles below that role, excluding any Customer Portal and partner portal roles.

Only organization-wide sharing rules are updated when you convert Roles, Internal and Portal Subordinates to Roles and Internal Subordinates. The Roles, Internal and Portal Subordinates category for queues, public groups, list views, documents, and manual sharing created on specific records by clicking the **Sharing** button is not converted to Roles and Internal Subordinates.

**Note:** The Roles, Internal and Portal Subordinates data set category is only available in your organization after you create at least one role in the role hierarchy.

- The Roles and Internal Subordinates data set category is only available in your organization after you create at least one role in the role hierarchy and enable a portal.

**Folder Sharing**

The Convert Portal User Access wizard also enables you to automatically convert the access levels of any report, dashboard, or document folders that are accessible to Roles, Internal and Portal Subordinates to a more restrictive access level: Roles and Internal Subordinates. This helps prevent Customer Portal and partner portal users from accessing folders. Using the wizard is more efficient than locating various folders in Salesforce and setting their access levels individually.

The wizard does not convert folders that are accessible to all users or accessible to public groups. You must manually update the access levels on those folders.
When you first save a Customer Portal or partner portal, Salesforce automatically displays the Convert Portal User Access wizard.

Using the Convert Portal User Access Wizard
Configuring User Access to the Customer Portal

Using the Convert Portal User Access Wizard

Note: Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

When setting up a Customer Portal or partner portal, you can use the Convert Portal User Access wizard to help ensure that no records or folders are shared with a portal user.

To use the wizard:

1. For the Customer Portal, from Setup, enter Customer Portal Settings in the Quick Find box, then select Customer Portal Settings. For the partner portal, from Setup, enter Partners in the Quick Find box, then select Settings.

2. Click the Convert Portal User Access link.

3. Select the checkboxes next to the sharing rules you want to convert to Roles and Internal Subordinates.

4. Click Next.

5. Select the checkboxes next to the folders whose access levels you want to change to Roles and Internal Subordinates.

6. Click Next.

7. Click Save to apply your selected changes.

SEE ALSO:
Considerations for the Convert Portal User Access Wizard
Creating Multiple Customer Portals

Note: Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

After you have enabled the Salesforce Customer Portal, you can create multiple Customer Portals to satisfy the various business needs of your customers.

To create more than one Customer Portal:

1. From Setup, enter Customer Portal Settings in the Quick Find box, then select Customer Portal Settings.
2. Click New.
3. Follow the same steps used to set up your organization’s first Customer Portal. See Setting Up Your Customer Portal on page 2308.

Note: Contact Salesforce for information about the number of Customer Portals you can activate for your organization.

Before you begin creating multiple Customer Portals for your organization, review the following implementation tips and best practices.

Implementation Tips

• Portal users can only log into Customer Portals assigned to their profile. To assign a profile to a Customer Portal, select the name of a portal from the Customer Portal Setup page, click Edit Profiles in the Assigned Profiles section, and select the Active checkbox next to the profile you want to assign to the portal.

A portal user can access all the Customer Portals assigned to his or her profile with one username and password.

You can view the number of active users associated with each profile assigned to a Customer Portal by creating a custom summary report and adding Profile to your report columns.

• The login URL of each Customer Portal you create contains a unique identifier, such as portalId=060D00000000Q1F. The unique identifier determines the specific portal a user can access. If a user accesses a login URL that does not contain a unique identifier, they are automatically directed to the login URL of the first Customer Portal you created. Note that portal users can only log into a Customer Portal via the portal’s login page and not through the Salesforce login page.

• The settings on the following items apply to both your organization and your Customer Portals:
  – List views
  – Search layouts
  – Case assignment rules
  – Workflow alerts

Best Practices

• Because you can uniquely customize the fonts, colors, email templates, and login message of each Customer Portal you create, you can build a Customer Portal for each product and customer service level supported by your organization. For example, if your organization provides gold, silver, and bronze levels of customer support, then you could create a unique Customer Portal for each.

  Note: JavaScript and CSS code are automatically removed from HTML files used as the portal login message.
You can standardize the communication templates sent to the users of all your Customer Portals by clicking the **Set Default Email Templates for All Customer Portals** link on the Tools section of the Customer Portal Setup page. These settings determine the email templates to use when sending email notifications, such as a new case comment or a reset password, to portal users whose profiles are associated with more than one Customer Portal.

By default, sample templates are automatically selected for you in the **New User Template**, **New Password Template**, and **Lost Password Template** lookup fields. However, sample templates are not selected for you in the **New Comment Template** and **Change Owner to Portal User Template** lookup fields. Unless you select templates for these fields, users whose profiles are associated with more than one Customer Portal will not receive email notifications when new comments are added to their cases or when they become the new owner of a record in the Customer Portal. Email templates must be marked as **Available for Use** to be sent to portal users.

**Tip:** Because the default email templates are sent to users of multiple Customer Portals, we recommend that you create default email templates that do not contain portal-specific branding.

You cannot delete a Customer Portal, but you can prevent users from logging into a portal by deselecting the **Login Enabled** checkbox. For more information, see **Enable Customer Portal Login and Settings** on page 2315.

You can create multiple Customer Portals that display different tabs for users with the same profile, as long as the profile has access to each object displayed on a tab. For more information, see **Customizing Your Customer Portal Tabs** on page 2325.

**SEE ALSO:**
- Setting Up Your Customer Portal
- About Customer Portal User Management
- Administrator setup guide: Salesforce Customer Portal Implementation Guide

**Enable Customer Portal Login and Settings**

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

1. From Setup, enter **Customer Portal Settings** in the Quick Find box, then select **Customer Portal Settings**.
2. Click **Edit** next to the name of the Salesforce Customer Portal you want to customize.
3. Set the following options:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>Name of the Customer Portal as displayed on the portal’s detail and edit pages, as well as the Customer Portal Setup page. The name of the Customer Portal is not displayed on portal pages, but it does display in the browser title bar. The name of your portal must be unique for your organization and not already in use by a Customer Portal or partner portal.</td>
</tr>
</tbody>
</table>
Furthermore, an error may occur if you name a Customer Portal "partner portal" Customer Portal.

**Description**

A description of the Customer Portal as displayed on the portal’s detail and edit pages. The description of the Customer Portal is not displayed in the portal.

**Login Enabled**

Allows users to log in to the Customer Portal.

We recommend that you do not select this checkbox until you have completed the steps described in Setting Up Your Customer Portal.

**Note:** Users must be able to log in to the Customer Portal, be within their user profile’s restricted IP range, and be within designated Login Hours in order to be able to reset their passwords.

**Administrator**

Click the lookup icon (🔍) to choose a default administrator for your Customer Portal. All email notifications regarding users who self-register for your Customer Portal will be sent to this Salesforce user.

Notifications include information about registration errors and any other issues self-registering customers may experience, such as inadvertently entering duplicate email addresses, creating duplicate contact records, and exceeding your organization’s user license limit.

When choosing an administrator for your Customer Portal, you can only select users that have the “Edit Self-Service Users” permission. Furthermore, you cannot deactivate a user selected as a portal administrator.

<table>

</thead>
<tbody>
<tr>
<td>From Email Address</td>
<td>The email address from which all Customer Portal communication templates are sent—for example, “<a href="mailto:support@acme.com">support@acme.com</a>.” Salesforce sends the emails automatically, but they appear to portal users as if they were sent from this email address. If a portal user responds to a communication template, the response is sent to this address.</td>
</tr>
</tbody>
</table>
### Email Notification Settings

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>From Email Name</td>
<td>The name associated with the “From” Email Address—for example, “Acme Customer Support.”</td>
</tr>
<tr>
<td>New User Template</td>
<td>The email template used to send a username and initial password to all newly enabled and self-registering Customer Portal users. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as Available for Use.</td>
</tr>
<tr>
<td>New Password Template</td>
<td>The email template used to send a new password to existing Customer Portal users when you reset their passwords. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as Available for Use.</td>
</tr>
<tr>
<td>Lost Password Template</td>
<td>The email template used to send a new password to existing Customer Portal users when they reset their own passwords by clicking Forgot your password? on the login page of the Customer Portal. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as Available for Use.</td>
</tr>
<tr>
<td>New Comment Template</td>
<td>The email template used to send a notification to Customer Portal users when a public comment is added to one of their cases. This template must be marked as Available for Use.</td>
</tr>
<tr>
<td>Change Owner to Portal User Template</td>
<td>The email template used to send a notification to Customer Portal users when they become the new owner of a record in the portal. This template must be marked as Available for Use.</td>
</tr>
</tbody>
</table>

**Note:** You can standardize the communication templates sent to the users of all your Customer Portals by clicking the Set Default Email Templates for All Customer Portals link on the Tools section of the Customer Portal Setup page. For more information, see Creating Multiple Customer Portals on page 2314.

**Tip:** If you plan to use the same communication template for different objects, such as the Change Owner to Portal User Template, we recommend that you include text and merge fields on the template that are appropriate for both objects. For example, if your organization has a Warranty custom object and a Training custom object, and you want to use the Change Owner to Portal User Template for both, the text and merge fields on the template should read: “A new record has been assigned to you. Id: {!Training.ID}{!Warranty.Id}.” When the template is sent, only the relevant merge fields will display.

### Look and Feel

</tr>
<tr>
<td>Login Message</td>
<td>A text or HTML file that allows you to incorporate your organization’s branding into the header of the login page, forgot password page, and change password page of your Customer Portal. Click the lookup icon (ți) to choose a file that has been uploaded to a publicly accessible folder on the Documents tab. The file you include in the Login Message lookup field can be up to 2 KB. <strong>Note:</strong> JavaScript and CSS code are automatically removed from HTML files used as the portal login message.</td>
</tr>
</tbody>
</table>
## Self-Registration Settings

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
</table>
| Self-Registration Enabled       | Allows existing contacts to register themselves for access to your Customer Portal. When you select this checkbox and add the Allow Customer Portal Self-Registration checkbox to contact page layouts, contacts whose records are marked Allow Customer Portal Self-Registration can view a self-registration area on the Login page of your Customer Portal. From the self-registration area, users can enter their email address and click Submit to receive an automatically assigned username and password for logging in to your Customer Portal. Other email notifications sent to users regarding their registration status include:  
  • Existing user, from which the user can enter another email address or click a Forgot Password? link to retrieve his or her password.  
  • New user, which informs the user that the email address he or she submitted does not match an existing contact in your organization. If an administrator has implemented Web-to-Case or Web-to-Lead to capture new user information, then the user can click a link to enter his or her information on the appropriate form.  
  • Internal error, which informs the user that an error occurred during the self-registration process and that your portal's administrator has been notified about the error.  
  • Ineligible user, which informs the user that he or she is not eligible for self-registration to your Customer Portal. This notification is sent when a submitted email address matches a contact that does not have the Allow Customer Portal Self-Registration checkbox selected. It is also sent when a submitted email address does not match any contacts, and your administrator has not set up Web-to-Lead or Web-to-Case to capture new user information.  

Ensure that all required custom fields on users have default values. Otherwise, users who self-register for your Customer Portal will receive an error message.  

Note that person account users cannot self-register for your Customer Portal. When person account users self-register for your Customer Portal, they receive an email notification that instructs them to contact the portal administrator. |
### Self-Registration Settings

</tbody>
</table>

4. Click **Save** to save your Customer Portal settings.

**SEE ALSO:**
- Setting Up Your Customer Portal
Customize Your Customer Portal Fonts and Colors

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can customize the fonts and colors of the Salesforce Customer Portal to reflect your company's branding. Your portal's fonts and colors are specified in a portal "color theme." Select a predefined color theme and, optionally, customize it to better match your branding. You can click the See examples link to see all of the theme attributes you can customize.

1. From Setup, enter Customer Portal Settings in the Quick Find box, then select Customer Portal Settings.
2. Select the name of your Customer Portal.
3. Click Change Portal Fonts and Colors.
4. Select a color theme from the Color Theme drop-down list. Select Custom from the Color Theme drop-down list to create your own theme from scratch. A preview of the color theme you select is automatically displayed in the Preview sections.
5. Optionally, customize the color of any theme you select by either:
   • Entering a hexadecimal value into any theme attribute, or
   • Clicking the hexadecimal value of any theme attribute and selecting a color from the point-and-click editor

When you customize a theme, it is automatically renamed Custom when saved. You can customize the following options, which, when customized, automatically display in the Preview sections:

### Customizing Your Customer Portal Tabs

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

The Salesforce Customer Portal can display the following tabs:

- Answers
- Articles
- Ideas
- Home
- Cases
- Reports
- Solutions
- Web tabs
- Entitlements
- Custom objects
- Service contracts
- Chatter Answers
- Documents from the Documents tab
- Salesforce CRM Content tabs: Libraries, Content, and Subscriptions

Additionally, the Customer Portal can display the following tabs to delegated external user administrators:

- Accounts
- Contacts

To choose which tabs display to users logged in to a Customer Portal, and to customize the order in which tabs display to portal users:

1. From Setup, enter Customer Portal Settings in the Quick Find box, then select Customer Portal Settings.
2. Select the name of the Customer Portal whose tabs you want to customize.
3. Click Customize Portal Tabs.
4. To add or remove tabs, select a tab title, and click the Add or Remove arrow to add or remove the tab to or from the Selected Tabs box. To change the order of the tabs, select a tab title in the Selected Tabs box, and click the Up or Down arrow.
5. Optionally, from the Default Landing Tab drop-down, you can select which tab to display to users when they log into your portal.

**Editions**

Available in: Salesforce Classic

Available in: Enterprise, Performance, Unlimited, and Developer Editions

**User Permissions**

To customize Customer Portal tabs:
- “Customize Application"
6. Click **Save**.

You can further specify which tabs users can access by editing tab settings in users’ associated profiles and permission sets.

**Tip:** You can create multiple Customer Portals that display different tabs for users with the same profile, as long as they have access to each object displayed on a tab.

To make the following tabs visible in the Customer Portal, use the steps above and change the tab visibility setting to Default On in all Customer Portal profiles.

**Allowing Portal Users to View Web Tabs**
To allow portal users to view Web tabs, simply create Web tabs and assign them to Customer Portal profiles.

**Granting Portal Users Access to the Documents Tab**
To allow portal users to view a Documents tab, grant Customer Portal users access to the folders on your Salesforce Documents tab that contain the files you want them to view.

**Allowing Portal Users to View the Reports Tab**
To allow portal users to view a Reports tab:

1. Grant portal users access to the folders on your Salesforce Reports tab that contain the reports you want them to run.
2. Set the organization-wide default sharing model to Private on objects you want portal users to report on.
3. Assign portal users to permission sets or profiles that include the “Run Reports” permission.

When you add the Reports tab to your Customer Portal, portal users:

- Cannot customize reports or filter report results; they can only run reports.
- Can export reports to Excel if they have the “Export Reports” permission.
- Do not have access to the Unfiled Public Reports and My Personal Custom Reports folders.
- Will receive an insufficient privileges error if they run a report that contains objects they do not have permission to view.

**Providing Portal Users with Access to the Ideas Tab**
To allow portal users to access the Ideas tab, configure Ideas to display in the portal. For more information, see **Creating and Editing Zones** on page 2392 and **Enabling Ideas in the Customer Portal** on page 2329.

If your organization has the Ideas and Answers Portal license, hide the Reports tab in the Customer Portal. Otherwise, your Customer Portal users receive an Insufficient Privileges message when they click the Reports tab. For information on hiding tabs, see **Customizing Your Customer Portal Tabs** on page 2325.

**Allowing Portal Users to Access Salesforce CRM Content Tabs**
To allow portal users to access Salesforce CRM Content, see **Enabling Salesforce CRM Content in the Customer Portal** on page 2327.

**EDITIONS**

Available in: Salesforce Classic

Available in: Enterprise, Performance, Unlimited, and Developer Editions

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Salesforce CRM Content is available in the Customer Portal. Two levels of access to Salesforce CRM Content can be granted to Customer Portal users:

- Portal users without a Salesforce CRM Content feature license can download, rate, comment on, and subscribe to content if they have the “View Content on Portals” user permission. They cannot view potentially sensitive data such as usernames, download history, and version history. The content delivery feature is not available to portal users.
- Portal users with a Salesforce CRM Content feature license can access all Salesforce CRM Content features granted by their library permission(s), including contributing content, moving and sharing content among libraries, and deleting content. They can also view Salesforce CRM Content reports. The content delivery feature is not available to portal users.

### Enabling Salesforce CRM Content for Non-Licensed Users

After you have enabled your Customer Portal, complete the following steps to enable Salesforce CRM Content in your portals. Use these steps if you have not purchased Salesforce CRM Content feature licenses for your portal users.

1. Update Customer Portal profiles:
   a. Clone the Customer Portal User or Customer Portal Manager profile.
   b. In the cloned profiles, add the “View Content in Portals” user permission.
   c. Change the tab visibility for the Libraries, Content, and Subscriptions tabs from Tab Hidden to Default On.
   d. Assign the cloned profiles to your Customer Portal users.

2. Determine what privileges your portal users will have in each Salesforce CRM Content library by creating one or more library permissions.
Enabling Salesforce CRM Content for Licensed Users

After you have enabled your Customer Portal, complete the following steps to enable Salesforce CRM Content in your portals. Use these steps if you have purchased Salesforce CRM Content feature licenses for your portal users.

1. Update Customer Portal profiles:
   a. Optionally, clone the Customer Portal User and Customer Portal Manager profile to include the “Create Libraries” user permission if you want to allow portal users to create and administer new libraries.
   b. In your standard or cloned Customer Portal profiles, change the tab visibility for the Libraries, Content, and Subscriptions tabs from Tab Hidden to Default On.
   c. Assign the cloned profiles to your Customer Portal users as needed.

2. Select the Salesforce CRM Content User checkbox on the user detail page for each Customer Portal user.

3. Determine what privileges your portal users will have in each Salesforce CRM Content library by creating one or more library permissions.

4. Determine which libraries you want your portal users to have access to. Ensure that confidential content is not available in these libraries.

5. Add portal users to libraries. Portal users with the Customer Portal User profile or a clone of that profile can only be added to a library as part of a public group. Portal users with the Customer Portal Manager profile or a clone of that profile can be added to a library individually.

6. Add the Salesforce CRM Content tabs to each Customer Portal.

   Note: The Documents tab is not part of Salesforce CRM Content.

Setting Up Your Customer Portal
Enabling Ideas in the Customer Portal

Note: Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Ideas is available in the Customer Portal.

After you have set up your Customer Portal, follow the steps below to enable Ideas in your portal.

1. Create zones in the Ideas context that are active and configured to display in the portal. For more information, see Creating and Editing Zones on page 2392.

2. Add the Ideas tab to your Customer Portal. For more information, see Customizing Your Customer Portal Tabs on page 2325.

3. If your organization has the Ideas and Answers Portal license, hide the Reports tab in the Customer Portal. Otherwise, your Customer Portal users receive an Insufficient Privileges message when they click the Reports tab. For information on hiding tabs, see Customizing Your Customer Portal Tabs on page 2325.

Setting Up Your Customer Portal

Enabling Entitlement Management in the Customer Portal

Note: Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the Customer Portal to provide your customers with access to their entitlements and service contracts. Contract line items don’t display in the Customer Portal.

Note: High-volume customer portal users do not have access to service contracts and entitlements.

After you have set up entitlement management and enabled a Customer Portal, complete the following steps to add entitlement management to your portals.

1. Update Customer Portal profiles:
   a. Clone Customer Portal profiles and enable the “Read” permission on entitlements or service contracts.
   b. Optionally, on the profiles of delegated external user administrators, enable the “Create” and “Delete” permissions on entitlement contacts. This lets delegated external user administrators update entitlement contacts.
   c. In the cloned profiles, verify that the tab visibility for the Entitlements or Service Contracts tabs are Default On.
2. At the bottom of the customer portal detail page, click **Edit Profiles** and activate the new profiles.

3. Customize case page layouts to add the **Entitlement Name** lookup field. This lets portal users add entitlements to cases.
   
   **Tip:** Don’t add the following entitlement process fields to case page layouts for portal users because portal users shouldn’t access information related to your internal support processes: Entitlement Process Start Time, Entitlement Process End Time, Stopped, and Stopped Since.

4. Optionally, customize related lists on accounts and contacts to add Entitlements. This lets delegated external user administrators create cases automatically associated with the right entitlements.

5. **Add the Entitlements or Service Contract tabs** to each Customer Portal.

6. Assign the cloned profiles to your Customer Portal users:
   
   a. To create a new Customer Portal user, click **Manage External User** and choose **Enable Customer User** on the contact detail page. To update an existing user, click **Manage External User** and choose **View Customer User**.

   b. For a new user, select the cloned profile from the **Profile** drop-down menu. For an existing user, click **Edit** and then select the profile.

   c. Click **Save**.

[Setting Up Your Customer Portal](#)
Enabling Salesforce Knowledge in the Customer Portal

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the Customer Portal to provide your customers with access to Salesforce Knowledge articles. Portal users can view and rate articles but cannot create or edit articles.

After you have set up Salesforce Knowledge in your organization and enabled your Customer Portal, complete the following steps to enable Salesforce Knowledge in your portals.

1. Update Customer Portal profiles:
   a. Clone the Customer Portal User or Customer Portal Manager profiles and enable the “Read” permission for article types you want to share with customers.
   b. In the cloned profiles, verify that the tab visibility for the Articles tab is Default On.

2. At the bottom of the customer portal detail page, click Edit Profiles and activate the new profile.

3. Assign the cloned profiles to your Customer Portal users:
   a. To create a new Customer Portal user, click Manage External User and choose Enable Customer User on the contact detail page. To update an existing user, click Manage External User and choose View Customer User on the contact detail page.
   b. For a new user, select the cloned profile from the Profile drop-down menu. For an existing user, click Edit and then select the profile.
   c. Click Save.

4. Add the Articles tab to each Customer Portal.

5. If you want your Customer Portal users to have different category group visibility settings than the account owner, change the visibility settings for the Customer Portal user.

   By default, Customer Portal users inherit their data category access from the account owner. For example, if the account owner has a role of CEO and the CEO role has full access to all the data categories in a category group, then Customer Portal users can also access all categories in that group. In some cases, you may want to limit which categories a Customer Portal user can access.

6. If you have high-volume portal users, make the categories these users need to access visible by default. Because high-volume portal users don’t have roles, they can only access categorized articles if the associated data categories have been made visible to all users regardless of role.

7. Notify users who create articles that they must select Customer Portal as a channel option when creating or modifying an article. If the Customer Portal channel is not selected, the article will not be published in the portal.

8. To allow users to search for articles from the Home tab, add the Article Search component to the home page layout. Ensure that you assign the layout to the Customer Portal profiles.

Setting Up Your Customer Portal
Enabling Answers in the Customer Portal

Note: Starting with Summer ‘13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the Customer Portal to provide your customers with access to an answers community.

To enable answers in your portal:

1. **Set up your Customer Portal.**
   
   When customizing your portal fonts and colors, note that answers only supports the following changes:
   - All tab styles
   - The following page styles:
     - Page Background
     - Text
     - Link
     - Link Hover

2. **Set up answers**, making sure that your answers community is configured to display in the Customer Portal.

3. **Add the Answers tab** to your Customer Portal.

4. **Create Customer Portal users:**
   - On the contact detail page, click **Manage External User** and then choose **Enable Customer User**.
   - Enter the required information, making sure to select the correct Customer Portal profile from the **Profile** drop-down menu.
   - Click **Save**.

5. **If you want your Customer Portal users to have different category group visibility settings than the account owner**, change the visibility settings for the Customer Portal user.
   
   By default, Customer Portal users inherit their category access from the account owner. For example, if the account owner has a role of CEO and the CEO role has full access to all the data categories in the category group assigned to answers, then Customer Portal users can also access all categories in the answers community. In some cases, you may want to limit which categories a Customer Portal user can access.

6. **If you have high-volume portal users**, make the data categories these users need to access visible through permission sets or profiles.

7. **If your organization has the Ideas and Answers Portal license**, hide the Reports tab in the Customer Portal. Otherwise, your Customer Portal users receive an Insufficient Privileges message when they click the Reports tab. For information on hiding tabs, see **Customizing Your Customer Portal Tabs** on page 2325.

Setting Up Your Customer Portal
Customize Your Customer Portal Pages

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can customize your Salesforce Customer Portal pages just as you customize pages in Salesforce: with page layouts.

Page layouts control the layout and organization of buttons, fields, s-controls, Visualforce, custom links, and related lists on object record pages. They also help determine which fields are visible, read only, and required. Page layouts can include s-controls and Visualforce pages that are rendered within a field section when the page displays. You can control the size of the s-controls and Visualforce pages, and determine whether or not a label and scroll bars display.

Customer Portal users view the layouts assigned to their profile when they log in to your Customer Portal. You can customize the following objects’ page layouts for your portal:

- Home
- Tasks
- Events
- Cases
- Assets
- Accounts
- Solutions
- Contacts
- Entitlements
- Custom Objects
- Service Contracts

Customizing Portal Page Layouts

From the object management settings for the object whose page layout you want to edit, go to Page Layouts.

By default, Customer Portal users have “Read” permissions on accounts, contacts, assets, products and price books, so that they can view their account name and choose a contact and asset for the cases they create on your portal. They may also have “Update” or “Create” permissions for assets and accounts, depending on the type of customer portal.

**Note:** Customer Portal users can’t view the tags section of a page, even if it is included in a page layout.

To display a custom object in your Customer Portal, you must:

- Select the Available for Customer Portal checkbox on the custom object. You cannot assign a portal profile to a custom-object page layout unless this checkbox is selected.
- Grant user permissions to the custom object on permission sets or profiles assigned to portal users.
• Add the tab of the custom object to your Customer Portal so that the tab is accessible to your Customer Portal users. For more information, see Customizing Your Customer Portal Tabs on page 2325.

Configuring Multilingual HTML Messages for Customer Portals

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

If your organization has multiple languages enabled, you can upload HTML messages in any of the languages supported by Salesforce and configure the messages to display in the portal based on portal user language settings. For example, you can upload an HTML message in French to display on the Home tab for portal users with French language settings, and an HTML message in English to display on the Home tab for portal users with English language settings.

Note the following before configuring multilingual HTML messages:

• Before you can add a multilingual HTML message to a portal, you must upload the HTML-formatted file in the Documents tab.

• Even if configured, portal HTML messages will not display on the Ideas, Reports, Content, or Solutions tabs.

To configure multilingual HTML messages:

1. To configure a display language for the Customer Portal, from Setup, enter Customer Portal Settings in the Quick Find box, then select Customer Portal Settings.

2. Click the name of the portal to edit.

3. Click Add New Language in the Assigned Languages related list.

4. Select a language from the Language drop-down list.

5. Click the lookup icon ( propel ) next to a tab name, then select the HTML message to display on that tab. Optionally repeat this step for each tab that you want to display an HTML message.

6. Click Save.
Setup Tips and Considerations for Customer Portal Pages

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Consider the following set up tips and general information about Salesforce Customer Portal pages.

**Setting Up Cases**

- When setting up your Customer Portal, clone the page layout for cases (Case Layout), and rename it **Portal Case Layout**. This allows you to easily differentiate between case page layouts for internal users and case page layouts for portal users.
- By default, new cases are accessible in the Customer Portal, but you can include the **Visible in Self-Service** checkbox on case page layouts so that you can deselect the checkbox to prevent a case from being displayed.
- Do not select the **Show Case Email Notification** and **Show Case Email Notification by default** checkboxes on case page layouts. These features only apply to Salesforce users.
- Do not add the **Internal Comments** field to case page layouts assigned to portal profiles because portal users may view comments intended only for Salesforce users.
- Include the **Asset** field on case page layouts if you want portal users to be able to associate cases with an asset related to their account.
- Include the **Contact Name** lookup field on case page layouts so that users with “Edit” permissions on that field can change a case’s contact to another portal user in the same account.
- If a portal user is the owner of a case, the **Contact Name** field on the case must be the contact associated with the same portal user who owns the case. You can’t specify a different contact, even if they’re associated with the same portal account.
- Do not select the **Show solution information section**, **Show Contact Notification** checkbox, and **Select Contact Notification** checkbox by default checkboxes on close-case page layouts because their functions only apply to Salesforce users.
- Create case record types to set the default value of the **Case Origin** picklist field for cases logged on your Customer Portal.
- For case assignment rules to work on the Customer Portal, select the **Select Case Assignment** checkbox by default checkbox on case page layouts assigned to portal profiles. Portal users cannot view these checkboxes on the Customer Portal. Note that assignment rules trigger when a case is created and when it is edited. To prevent cases from being automatically reassigned when edited by portal users, add a rule entry using the criteria **Current User: User Type contains Customer Portal** and select the **Do Not Reassign User** checkbox.
- Portal users can view all the values in the **Type**, **Status**, **Priority**, and **Case Reason** picklist fields unless you create record types for cases that contain separate picklist values for them.
- You can prevent portal users from submitting cases with attachments by removing the **Submit & Add Attachment** button from case page layouts:
  1. Edit a case page layout with the enhanced page layout editor.
  2. Click **Layout Properties**.
  3. Deselect **Show Submit & Add Attachment Button**.
  4. Click **OK**.
  5. Click **Save**.
**Cases**

- Portal users need the “Read” permission on contacts to create cases.
- Portal users cannot edit the value of the **Status** picklist field on cases.
- Portal users can edit and delete attachments they have added to their cases, but portal users cannot edit and delete attachments added to cases by Salesforce users.
- The **Delete** and **Sharing** buttons on case detail pages are not available to portal users.
- The **Email Message List**, **Next**, and **Previous** links are not available to Customer Portal users when they view emails from the **Email related list** on case detail pages. The Email related list is only available in organizations where Email-to-Case or On-Demand Email-to-Case is enabled.
- Optionally, you can create case auto-response rules to automatically respond to portal users when they create a case on your portal.
- Portal users can view, search, and create notes and attachments on cases.
- When creating a case, a portal user bypasses the Suggested Solutions page and is directed to their case if:
  - No relevant suggested solutions match the case.
  - He or she creates the case by clicking **Submit & Add Attachment**.

Note that suggested solutions are only available in organizations where they are enabled. For more information on suggested solutions, see [Suggested Solutions Overview](#) on page 2714. For more information about how Customer Portal users can self-close their own cases from suggested solutions, see [Enable Customer Portal Login and Settings](#).

- If **Salesforce Knowledge** is enabled, you can add the Articles related list to case page layouts assigned to portal users so that they can find articles that help them solve their cases.
- If Chatter is enabled for your organization, feed attachments are included in the **Notes and Attachments related list**. Portal users can download feed attachments, but can’t preview, edit, or delete them.

**Solutions**

- The **Status** picklist field on solutions is not available to portal users.
- The **Status** picklist field on a solution does not need to be set to Reviewed for a solution to be visible in the Customer Portal; a solution is visible in the Customer Portal if the **Visible in Self-Service Portal** checkbox is selected on a solution.
- If you enable **solution categories** for your organization, solution categories are also available in your Customer Portal. Uncategorized solutions do not display in the solution categories of your Customer Portal, but they do display in your portal’s search and list views.
- The **top solutions feature** is not available for your Customer Portal, but you can create links on your Customer Portal home page to your organization’s most relevant solutions.

**Home Page**

- Include the Customer Portal Welcome component on home page layouts assigned to Customer Portal users. Each Customer Portal user who logs in to your portal receives a welcome message with his or her name. The users can also change their own portal username, password, locale, language, time zone, and contact information. When portal users change information about themselves their user records are updated but their contact records aren’t automatically updated with those changes.

  Note that Customer Portal users who have the “Is Single Sign-On Enabled” permission cannot change their usernames from the Customer Portal Welcome component.

- When designing home page layouts for your Customer Portal, we recommend adding the following components: Search, Solution Search, Recent Items, Customer Portal Welcome, and a custom HTML Area component that includes your corporate branding in the wide column.
Create custom components to put on the home page layouts of your Customer Portal, such as links to custom list views, specific documents, and top solutions.

Custom component names do not display in the wide section of the home page in the Customer Portal.

You can position the logout link anywhere on the header by using the HTML tag: `<a href="/secur/logout.jsp">Logout</a>". For more information on the header, see Enable Customer Portal Login and Settings on page 2315.

We recommend not adding the following components to your Customer Portal home page layouts because they are for Salesforce users: Tasks, Calendar, Product Search, Recent Items, Dashboard Snapshot, Messages & Alerts, and Items To Approve.

Activities

Portal users can't be assigned to activities.

Portal users can view completed tasks and past events marked Visible in Self-Service that are associated with objects they have permission to view.

Documents

Verify that none of your organization's internal documents on the Documents tab are available in folders accessible to portal users.

Reports

Portal users can run reports if they have the “Run Reports” permission.

Portal users can export reports if they have the “Export Reports” permission.

The Report Options section does not display on report results for portal users because portal users cannot customize report results. Also, the Generated Chart section, which includes the Edit, Large, Medium, and Small links, does not display on report results.

Report results for portal users only include links to objects the portal users have permission to access.

Portal users can only report on objects set to Private in the organization-wide default sharing model. Some objects, such as solutions and articles, are not included in the sharing model and cannot be reported on by Customer Portal users.

Portal users will receive an insufficient privileges error if they run a report that contains objects they do not have permission to view.

By default all users, including portal users, can view report folders. To prevent portal users from viewing report folders, update the sharing settings on report folders to the All Internal Users group.

Custom Objects

When you deselect the Available for Customer Portal checkbox on a custom object, the custom object is no longer available on the Customer Portal, and all of the permissions for the custom object are automatically removed from portal profiles. If you select the Available for Customer Portal checkbox on a custom object again, you must update the permissions for the custom object on portal profiles.

Note: If you configure custom object access at a later time, permission sets retain their configuration.

Portal users can view, search, and create notes and attachments on custom objects.

If Chatter is enabled for your organization, feed attachments are included in the Notes and Attachments related list. Portal users can download feed attachments, but can't preview, edit, or delete them.

Articles

For setup information, see Enabling Salesforce Knowledge in the Customer Portal on page 2331.

Assets

Portal users can create, view, and update assets associated with their accounts.
• Assets are only visible to portal users if you include the Asset lookup field on case page layouts. From case detail pages, portal users can view an asset by clicking it in the Asset field.
• Portal users can view and search attachments on assets.
• If Chatter is enabled for your organization, feed attachments are included in the Notes and Attachments related list. Portal users can download feed attachments, but can’t preview, edit, or delete them.

Salesforce CRM Content

• Portal users with a Salesforce CRM Content feature license can perform any tasks granted by their library permission.
• Portal users with the “View Content on Portals” user permission have view-only access to Salesforce CRM Content.
• Portal users with the “Create Libraries” user permission can create and administer libraries.
For more information, see Enabling Salesforce CRM Content in the Customer Portal on page 2327.

Answers
For setup information, see Enabling Answers in the Customer Portal on page 2332. When customizing your portal fonts and colors, note that answers only supports the following changes:

• All tab styles
• The following page styles:
  – Page Background
  – Text
  – Link
  – Link Hover

Ideas
For setup information, see Enabling Ideas in the Customer Portal on page 2329.

Accounts
Only users with delegated external user administrator rights can view the Accounts tab and their account’s detail page in your Customer Portal. See Delegating Customer Portal User Administration and Portal Super User on page 2360.

Note: Customer portal users don’t see the Notes & Attachments related list on accounts.

Contacts
Only users with delegated external user administration rights can view their account’s contacts. See Delegating Customer Portal User Administration and Portal Super User on page 2360.

Only users with the “Portal Super User” permission can view the Contacts tab and edit and detail pages for contacts in your Customer Portal. See Delegating Customer Portal User Administration and Portal Super User on page 2360.

Note: Customer portal users don’t see the Notes & Attachments related list on contacts.

Entitlements

• For setup information, see Enabling Entitlement Management in the Customer Portal on page 2329.
• Add the “Read” permission on entitlements to custom portal profiles; assign the profiles to portal users who need access to entitlements. See Configuring User Access to the Customer Portal on page 2352.
• Add the Entitlement Name lookup field to case page layouts so that portal users can add entitlements to cases.
• Don’t add the following entitlement process fields to case page layouts for portal users because portal users shouldn’t access information related to your internal support processes: Entitlement Process Start Time, Entitlement Process End Time, Stopped, and Stopped Since. See Case Fields on page 2112.
• Optionally, add the Entitlements tab to your Customer Portal so that portal users can view entitlements associated with their accounts and create cases from entitlements.

• Add the Entitlements related list to account and contact page layouts so that delegated external user administrators can create cases automatically associated with the right entitlements. See Delegating Customer Portal User Administration and Portal Super User on page 2360.

Service Contracts

• For setup information, see Enabling Entitlement Management in the Customer Portal on page 2329.

• Grant the "Read" permission on service contracts to the portal users who need access to service contracts. See Configuring User Access to the Customer Portal on page 2352.

• Add the Service Contracts tab to your Customer Portal so that portal users can view the details of their service contracts. See Customizing Your Customer Portal Tabs on page 2325.

• Contract line items don’t display in the Customer Portal.

Flows

• You can include Force.com flows in your Customer Portal by embedding them in a Visualforce page.

• Users can run only flows that have an active version. If the flow you embed doesn’t have an active version, users see an error message. If the flow you embed includes a subflow element, the flow that is referenced and called by the subflow element must have an active version.

• When you make a flow available to site or portal users, point them to the Visualforce page that contains the embedded flow, not the flow itself. Site and portal users aren’t allowed to run flows directly.

Customize Your Customer Portal Pages

Customer Portal Setup Limits

Note: Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Contact Salesforce for information about the number of Customer Portals and Customer Portal user licenses you can activate.

The maximum number of custom objects you can include in a Customer Portal is determined by the total number of custom objects your Edition allows.

Also, user licenses control the number of custom objects a portal user can see in a Customer Portal. For information, contact Salesforce.

SEE ALSO:
Setting Up Your Customer Portal
Enable Single Sign-On for Portals

Single sign-on allows users to access all authorized network resources without having to log in separately to each resource. You validate usernames and passwords against your corporate user database or other client application rather than having separate user passwords managed by Salesforce.

You can set up Customer Portals and partner portals to use SAML single sign-on, so that a customer only has to login once.

Note: Single sign-on with portals is only supported for SAML 2.0.

To enable single sign-on for portals:

1. In addition to the SAML sign-on information that must be gathered and shared with your identity provider, you must supply your information provider with the Organization ID and the Portal ID. In the SAML assertion that is sent from your identity provider, the portal_id and organization_id must be added as attributes.

   Note: You can leave these attributes blank to differentiate between portal and platform users. For example, when blank, the user is a regular platform user and when populated, the user is a portal user.

   a. From Setup, enter Company Information in the Quick Find box, then select Company Information and copy the ID located in the Salesforce Organization ID.

   b. For Customer Portals, from Setup, enter Customer Portal Settings in the Quick Find box, select Customer Portal Settings, click the name of the Customer Portal, and then copy the ID located in the Portal ID.

   c. For partner portals, from Setup, enter Partners in the Quick Find box, then select Settings. Next, click the name of the partner portal, and copy the ID located in the Salesforce Portal ID.

Available in: Salesforce Classic

Customer Portal is available in: Enterprise, Performance, Unlimited, and Developer Editions

Partner Portal is available in: Enterprise, Performance, Unlimited, and Developer Editions
To set sharing rules: "Manage Sharing"

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Managing Customer Portal users is similar to managing regular Salesforce users. General user administration concepts like profiles and page layouts still apply. Review the following advice for managing Customer Portal users:

- Customer Portal Profiles
- Customer Portal Sharing Rules
- Customer Portal Role Hierarchy
- Customer Portal User Licenses

**Note:** High-volume portal users include both the High Volume Customer Portal and Authenticated Website license types.

### Customer Portal Profiles

The profiles you assign to Customer Portal users define permissions for them to perform different functions within a Customer Portal, such as whether they can view, create, edit, or delete cases and custom object records.

When you enable a Customer Portal, the following profiles are automatically created if you purchased user licenses for them:

- High Volume Customer Portal
- Authenticated Website
- Customer Portal User
- Customer Portal Manager

The settings on Customer Portal profiles are similar. However, you can grant users with the Customer Portal Manager profile greater access to data via the Customer Portal role hierarchy and sharing rules (neither of which apply to high-volume portal users). You can also clone and customize each profile to suit the various support requirements of specific customers. You can also use permission sets to grant additional permissions and access settings to Customer Portal users.

Depending on the user licenses you purchased, you can configure Customer Portal profiles for custom objects, Salesforce CRM Content, reporting, and customer support functionality, such as cases and solutions.

**Important:** For portal users to be able to view their new cases, the New Cases Visible in Portal support setting must be selected. From Setup, enter Support Settings in the Quick Find box, select Support Settings, then select New Cases Visible in Portal.

### Customer Portal Sharing Rules

After you enable a Customer Portal, the following groups and sharing rule category are created:

<table>
<thead>
<tr>
<th>Groups and Sharing Rule Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>All Customer Portal Users group</td>
<td>Contains all Customer Portal users, except for high-volume portal users.</td>
</tr>
</tbody>
</table>
Groups and Sharing Rule Category | Description
---|---
All Internal Users group | Contains all Salesforce users in your organization.
Roles and Internal Subordinates sharing rule category | Lets you create sharing rules with specific Salesforce users in your organization by role plus all of the users in roles below that role, excluding any Customer Portal and partner portal roles. Because high-volume portal users don’t have roles, they aren’t included in this or any other sharing rule category.

You can use these groups and the sharing rule category to create sharing rules that:
- Grant Customer Portal or Salesforce users access to specific data (except for high-volume portal users, because you can’t include them in any groups or sharing rules)
- Link Customer Portal users and Salesforce users
- Link Customer Portal users from different accounts as long as they have the Customer Portal Manager user license

Customer Portal Role Hierarchy

When you enable a Customer Portal on an account, the system creates a role hierarchy for the account’s portal users. The portal roles are unique for each account and include the account’s name—for example, “Account A Customer User.” In your organization’s overall role hierarchy, this account-specific hierarchy is directly below the account owner.

The roles in a portal role hierarchy are fixed. You cannot customize them or add new ones. They are:
- Executive—for contacts
- Manager—for contacts
- User—for contacts
- Person Account—for person accounts

**Note:** All users in a customer portal role (Executive, Manager, and User roles) have read access to all portal-enabled contacts under their portal account even when the contact sharing model is private.

As you enable customers as Customer Portal users, the system automatically assigns roles based on the user license. Person accounts always have the Person Account role. Contacts with the High Volume Customer Portal or Authenticated Website license do not have a role.

If access to contacts are set to private, high-volume portal users only have access to their own contact and those they are granted access to.

Role hierarchies ensure that portal users from different accounts never see each other’s data. Even though high-volume portal users aren’t included in role hierarchies, they’re restricted from seeing records that aren’t associated with their account or contact, and they can only see objects to which they’ve been granted access. You can, however, create sharing rules so that users with the Customer Portal Manager license from different accounts can see each other’s data.

Accounts with different portal types—Customer Portal and partner portal—have a separate role hierarchy for each portal. Role names include the portal type with which they are associated. For example, if Account A has both a Customer Portal and a partner portal, then roles for the Customer Portal are named “Account A Customer User” and roles for the partner portal are named “Account A Partner User.”

To view the roles assigned to your Customer Portal users, create a custom report, choose Administrative Reports, select Users as the data type, and add Role to your report columns. Note that you can’t report on roles for high-volume portal users because they don’t have roles.
Note: You cannot create a Customer Portal user associated with an account owned by a partner user.

**Customer Portal User Licenses**

A user license determines the baseline of features that the user can access. Every user must have exactly one user license.

You can assign the following user licenses to Customer Portal users:

- High Volume Customer Portal
- Authenticated Website
- Customer Portal Manager Custom
- Customer Portal Manager Standard (not available for new customers)

These user licenses determine the available Customer Portal profiles. They also determine users' positions in the Customer Portal role hierarchy.

The following table shows the Customer Portal user licenses with their associated profiles and positions in the Customer Portal role hierarchy.

<table>
<thead>
<tr>
<th>User License</th>
<th>Profiles</th>
<th>Roles and Sharing</th>
</tr>
</thead>
</table>
| High Volume Customer Portal and Authenticated Website | High Volume Customer Portal or Authenticated Website profile, or a profile cloned and customized from one of these. | High-volume portal users don’t have roles. See About High-Volume Portal Users on page 2344. Can't share but can transfer records they own. Can’t transfer cases from non-high-volume portal users to them. Can’t include in:  
  - Personal groups or public groups.  
  - Sharing rules.  
  - Account teams, opportunity teams, or case teams.  
  - Salesforce CRM Content libraries.  
  - High-volume portal users can’t access standard Account and Contact detail pages. However, you can create a custom solution, using tools like Visualforce or the API, where they can access those records. Can access custom objects depending on profile settings. |

</tbody>
</table>

**Note:** Person accounts enabled as Customer Portal users are automatically assigned the Person Account role, which you cannot change. Person accounts are automatically assigned to this role because they include a single user, so multiple roles are not necessary for their account. Furthermore, all person accounts owned by the same user are assigned the same role.

- Setting Up Your Customer Portal

### About High-Volume Portal Users

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

High-volume portal users are limited-access portal users intended for organizations with many thousands to millions of portal users. Unlike other portal users, high-volume portal users don’t have roles, which eliminates performance issues associated with role hierarchy calculations. High-volume portal users include both the High Volume Customer Portal and Authenticated Website license types.

**EDITIONS**

<table>
<thead>
<tr>
<th>Available in:</th>
<th>Salesforce Classic</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Enterprise, Performance, Unlimited, and Developer Editions</td>
</tr>
</tbody>
</table>

2344
Characteristics
High-volume portal users:
• Are contacts enabled to access a Customer Portal.
• Are assigned to the High Volume Customer Portal or Authenticated Website license.
• Only share the records they own with Salesforce users in the high-volume portal users sharing group.

Access to Records
High-volume portal users can access records if any of the following conditions are met:
• They have "Update" access on the account they belong to.
• They own the record.
• They can access a record’s parent, and the organization-wide sharing setting for that record is Controlled by Parent.
• The organization-wide sharing setting for the object is Public Read Only or Public Read/Write.
• They access the account or contact that they’re enabled under via the API (not via the standard account or contact detail page).

Administrators can create sharing sets to grant high-volume portal users additional access to records; see Granting High-Volume Portal Users Access to Records on page 2347.

Limitations
• High-volume portal users can’t manually share records they own or have access to.
• You can’t transfer cases from non-high-volume portal users to high-volume portal users.
• High-volume portal users can’t own accounts.
• You can’t add case teams to cases owned by high-volume portal users.
• You can’t include high-volume portal users in:
  – Personal groups or public groups.
  – Sharing rules.
  – Account teams, opportunity teams, or case teams.
  – Salesforce CRM Content libraries.
  – High-volume portal users can’t access standard Account and Contact detail pages. However, you can create a custom solution, using tools like Visualforce or the API, where they can access those records.

These limitations also apply to records owned by high-volume portal users.
• You can’t assign high-volume portal users to territories.

Sharing Records Owned by High-Volume Portal Users to Salesforce Users
Granting High-Volume Portal Users Access to Records
Sharing Set Overview
Sharing Set Overview

Grant portal or community users access to records that are associated with their accounts or contacts using sharing sets, based on their user profiles.

Previously, a sharing set granted access to any record that has a lookup field to an account or contact that matches the user’s account or contact. With Spring ’14, you can also determine how access is granted using an access mapping in the sharing set, which supports indirect lookups from the user and target record to the account or contact. You can determine the objects to use in the access mapping, and they must both either point to an account or contact.

For example, you might want to use a sharing set if you would like to:

- Grant users access to all cases related to their account or contact record.
- Grant users access to all cases related to a parent account or contact that is identified on the user’s account or contact record.

You can use sharing sets to grant access to accounts, contacts, cases, service contracts, users, and custom objects. Sharing sets can be used with these user profiles:

- Authenticated Website
- Customer Community User
- Customer Community Login User
- High Volume Customer Portal
- High Volume Portal
- Overage Authenticated Website User
- Overage High Volume Customer Portal User

The following example shows an access mapping on a sharing set, which grants portal or community users access to all cases associated with the entitlements on their account, even if they are not directly associated with the case.
Example:
1. Account lookup on portal or community user
2. Related account on entitlement
3. Entitlement lookup on case

Note: Portal or community users gain access to all order entitlements and order items under an account to which they have access. To share records owned by high-volume portal users, use a share group instead.

Granting High-Volume Portal Users Access to Records

Grant users access to records based on their profiles using sharing sets.

Note: Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

A sharing set grants high-volume portal users access to any record that has a lookup field to an account or contact that matches the user’s account or contact.

You can also grant access to records via access mapping in a sharing set, which supports indirect lookups from the user and target record to the account or contact. For example, grant users access to all cases related to an account that’s identified on the users’ contact records.

1. From Setup, enter Customer Portal Settings in the Quick Find box, then select Customer Portal Settings.

2. In the Sharing Sets related list, click New to create a sharing set, or click Edit next to an existing sharing set.

3. In the Sharing Set Edit page, fill in the Label and Sharing Set Name fields. Label is the sharing set label as it appears on the user interface. Sharing Set Name is the unique name used by the API.
4. Enter a description.

5. Select the profiles of the users to whom you want to provide access.

6. Select the objects you want to grant access to.

   The Available Objects list excludes:
   - Objects with an organization-wide sharing setting of Public Read/Write
   - Custom objects that don't have an account or contact lookup field

7. In the Configure Access section, click Set Up or Edit next to an object name to configure access for the selected profiles, or click Del to remove access settings for an object.

   Note: Objects with Set Up in the Action column aren't configured for high-volume portal user access. Until you configure an object, high-volume portal users have limited or no access to its records. For more information on access, see About High-Volume Portal Users on page 2344.

8. Grant access based on an account or contact lookup:
   - Select a value in the User drop-down list to determine the account or contact lookup on the user.
   - Select a value in the Target Object field to determine the account or contact lookup on the target object.

   For example, to grant access to all cases associated with an account identified on the user's contact record, select Contact.Account and Account respectively.

   Note: Both selected fields must point to either an account or contact. For example, Contact.Account and Entitlement.Account both point to an account.

9. Choose an access level of Read Only or Read/Write. (If the object’s organization-wide sharing setting is Public Read Only, then only Read/Write is available.)

10. Click Update, then click Save.

    Your settings apply to all of your organization’s Customer Portals or sites.

   About High-Volume Portal Users
   Sharing Set Overview
Granting High-Volume Portal or Community Users Access to User Records

Grant users access to other users using sharing sets.

Note: Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can create a sharing set to grant high-volume portal users access to internal users or other users in the same portal, enabling them to see or edit the target user records.

With Spring ’14, you can also grant access to users in other portals through an indirect lookup to an account or contact.

To grant access to selected users in the same portal, you would typically create a sharing set if you deselected the Portal User Visibility checkbox on the Sharing Settings page.

To create a sharing set to grant access to other users:

1. From Setup, enter Customer Portal Settings in the Quick Find box, then select Customer Portal Settings.
2. In the Sharing Settings for High-Volume Portal Users related list, click New to create a sharing set, or click Edit next to an existing sharing set.
3. In the Sharing Set Edit page, fill in the Label and Sharing Set Name fields. Label is the sharing set label as it appears on the user interface. Sharing Set Name is the unique name used by the API.
4. Select the profiles of the users you want to have access.
5. Select the User object.
Target users can be other high-volume portal or community users or internal users.
6. In the Configure Access section, click Set Up or Edit next to the User object to configure access for the selected profiles, or click Del to remove access settings for an object.
7. Grant access based on an account or contact lookup:
   - Select a value in the User drop-down list to determine the account or contact that’s related to the user, either by a direct lookup or indirect lookup via an intermediate object.
   - Select a value in the Target User drop-down list to determine the account or contact that’s related to the target user, either by a direct lookup or indirect lookup via an intermediate object.
For example, to grant access to target users associated with another account identified on the user’s account record, select Account.Parent and Account respectively.

Note: Both selected fields must point to either an account or contact. For example, Account.Parent and Contact.Account both point to an account.

8. Choose an access level of Read Only or Read/Write. (If the User object’s organization-wide sharing setting is Public Read Only, then only Read/Write is available.)
9. Click Update, then click Save.
Your settings apply to all of your organization’s Customer Portals or sites.

Example: The following example grants your portal users access to users whose contacts are related to the accounts identified on the portal users’ managers records. In other words, the account field on the portal user’s manager record must match the
account field identified on the target user’s contact

1. Manager lookup on portal user
2. Account lookup on manager
3. Account lookup on contact
4. Contact lookup on target user

In this example, to grant access to the target users, you would select $Manager.Account$ and $Contact.Account$ in the User and Target User drop-down list respectively.

Sharing Records Owned by High-Volume Portal Users to Salesforce Users

Note: Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

High-volume portal users are limited-access portal users intended for organizations with many thousands to millions of portal users. Unlike other portal users, high-volume portal users don’t have roles, which eliminates performance issues associated with role hierarchy calculations. Because high-volume portal users are not in the role hierarchy while Salesforce users are, a share group allows you to specify the Salesforce users who can access records owned by high-volume portal users. Each Customer Portal has its own share group.

To specify the Salesforce users who can access records owned by high-volume portal users:

1. From Setup, enter Customer Portal Settings in the Quick Find box, then select Customer Portal Settings.
2. Click the name of a Customer Portal.
3. Click the Share Group Settings subtab.
4. Click **Activate** to turn on the share group.

   Activating the share group can take a while. An email is sent to you when the process finishes.

   **Note:** Deactivating a share group removes all Salesforce users’ access to records owned by high-volume portal users. An email isn’t sent to you when the deactivation process finishes.

5. Click **Edit** to add Salesforce users to the share group:
   a. From the **Search** drop-down list, select the type of member to add.
   b. If you don’t see the member you want to add, enter keywords in the search box and click **Find**.
   c. Select members from the Available Members box, and click **Add** to add them to the group.
   d. Click **Save**.

*About High-Volume Portal Users*

**Viewing Sharing Sets for High-Volume Portal Users**

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Administrators can create sharing sets to grant high-volume portal users access to objects based on their profiles. To view detailed information about a sharing set:

1. From Setup, enter **Customer Portal Settings** in the Quick Find box, then select **Customer Portal Settings**.

2. In the Sharing Settings for High-Volume Portal Users related list, click the name of a sharing set.

   The Sharing Set detail page shows the profiles included and the access granted to objects in the set. On this page, you can do any of the following:
   
   - To edit the sharing set, click **Edit**.
   - To remove the sharing set, click **Delete**.
   - To view the details of an included profile, click its name.
   - To change or remove access settings for an object, click the **Edit** or **Del** link next to the object name.

Customer Portal Access

Configuring User Access to the Customer Portal

**USER PERMISSIONS**

| To set up the Customer Portal: | “Customize Application” |
| To manage Customer Portal users: | “Edit Self-Service Users” |
| To create, edit, and delete profiles: | “Manage Profiles and Permission Sets” |
| To set default sharing access and sharing rules: | “Manage Sharing” |
| To enable Customer Portal users: | “Edit Self-Service Users” |

**EDITIONS**

| Editions Available in: Salesforce Classic |
| Available in: Enterprise, Performance, Unlimited, and Developer Editions |

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

When setting up a Salesforce Customer Portal for the first time, configure the following before enabling users to access your portal:

1. Set up your portal as described in Setting Up Your Customer Portal.
2. Assign Customer Portal profiles to a portal:
   a. Select the name of a portal from the Customer Portal Setup page.
   b. Click Edit Profiles in the Assigned Profiles section.
   c. Select the Active checkbox next to the profile you want to assign to the portal.

   Portal users can only log into Customer Portals assigned to their profile. If you are creating multiple portals, you must assign profiles to each portal you want users to access.

3. Set the organization-wide defaults in your organization’s sharing model to Private on accounts, contacts, contracts, assets, and cases. This ensures that portal users can only view and edit data related to their accounts.

   **Tip:** To maintain Public organization-wide default behavior for Salesforce users, while ensuring that portal users can only view and edit data related to their accounts, you can create self-referencing sharing rules of “All Internal Users” to “All Internal Users”.

4. Optionally, set sharing rules for portal users (except for high-volume portal users). This lets you share records between portal users and Salesforce users or vice versa.

   **Note:** If your organization uses sharing rules that share to Roles, Internal and Portal Subordinates, then update those sharing rules to share to Roles and Internal Subordinates instead. This is to help ensure that no records owned by a Salesforce user are accidentally shared with a portal user.

   The Roles and Internal Subordinates data set category allows you to create sharing rules that include all users in a specified role plus all of the users in roles below that role, excluding any Customer Portal and partner portal roles.
You can easily convert sharing rules that include Roles, Internal and Portal Subordinates to include Roles and Internal Subordinates instead by using the Convert Portal User Access wizard. Furthermore, you can use this wizard to convert any publicly accessible report, dashboard, and document folders to folders that are accessible by all users except for portal users.

5. Verify that portal users are not added to any queues and are not included in any public groups added to queues. This is because portal users added to queues may be able to access records from accounts to which they are not related.

6. Optionally, add the Welcome component to home page layouts assigned to portal users.

The Welcome component allows portal users to receive a welcome message with their name, plus the ability to change their own portal username, password, locale, language, time zone, and contact information. For details, see Setup Tips and Considerations for Customer Portal Pages on page 2335.

7. Optionally, allow contacts to register themselves for access to your portal. See Enable Customer Portal Login and Settings on page 2315.

- About Customer Portal User Management
- Administrator setup guide: Salesforce Customer Portal Implementation Guide

Enable the Customer Portal for Contacts and Person Accounts

To allow a customer to access your Salesforce customer portal, enable the customer’s contact or person account record as a customer user.

1. From a contact or person account detail page, click Manage External User, and then select Enable Customer User.

2. Verify the general information and locale settings, and enter any missing information. The customer’s Username defaults to the customer’s Email.

3. Select a portal user license. The user license that you choose determines the permission sets, user profile, and role hierarchy options that you can select for the customer user. See Customer Portal User Licenses on page 2343.

4. Select Generate new password and notify user immediately to email a customer portal username and password to the customer.

   If your Salesforce org uses multiple customer portals, customer users can access all customer portals that are assigned to their profiles with a single username and password. See Creating Multiple Customer Portals on page 2314.

5. Click Save.

6. To troubleshoot or confirm the portal configuration, on the contact detail page, click Manage External User, and then choose Log in to Portal as User. A new browser window opens and logs you in to the portal as the partner user.
You can deactivate customer users as needed.

Roles Per Customer Portal Account

Note: Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can set the default number of roles for Customer Portal accounts. This benefits your customer portal by reducing the number of unused roles for Customer Portal accounts. You must have a Customer Portal enabled to use this functionality.

For example, if you currently have three roles created when an account is enabled for your Customer Portal, but only need one role for new accounts, you can reduce the number of roles to one. You can set up to three roles for Customer Portal accounts. The default number of roles for Customer Portal accounts is three.

To set the number of roles per Customer Portal account:

1. From Setup, enter Customer Portal Settings in the Quick Find box, then select Customer Portal Settings.
2. Click Set number of roles per Portal Account.
3. Click Edit.
4. In the Number of Roles drop-down list, set your default number of roles per Customer Portal account.
5. Click Save.

The number of roles for existing portal accounts doesn’t change with this setting.

SEE ALSO:
- Enable the Customer Portal for Contacts and Person Accounts
Disabling and Deactivating Portal Users

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

There are two ways in which you can remove a customer’s access to your Salesforce Customer Portal or partner portal. As described in detail below, *disabling* a portal user is permanent, while *deactivating* a portal user is not:

**Disabling a portal user**

Disabling a portal user includes the following actions:

- Termination of the user’s access to your portal
- Removal from all groups, teams, and sharing rules with which the user is associated.
- Permanent loss of the portal user’s association with the contact

If you later re-enable a contact for portal access, a new portal user is created that is not related to the previous portal user record in any way.

- The role on the portal user record is removed.
- For partner users, the partner user role becomes obsolete. As a result:
  - The user’s data no longer rolls up to the partner account owner role
  - Opportunities owned by that user are removed from your organization’s forecast hierarchy

**Note:** Before disabling a partner user, we recommend transferring opportunities owned by that user to an active user.

We recommend disabling a portal user if:

- A contact was accidentally enabled as a portal user
- The portal user is associated with a duplicate contact
- You do not want a contact to access the portal in the future

**Note:** Salesforce doesn’t delete user records, including portal user records. While you can’t re-enable a disabled portal user, you can view and update the record for a disabled user in Setup by entering Users in the Quick Find box, then selecting Users.

**Deactivating a portal user**

Deactivating a portal user prevents that user from logging into your portal and gives you the option to remove the user from any teams in which he or she is a member (for example, case teams and account teams). When you deactivate a portal user, the portal user record does not permanently lose its association with the contact. You can reactivate the portal user at any time.

**Note:** When a delegated external user administrator deactivates a portal user, the administrator doesn’t have the option to remove the portal user from any teams that user is a member of.

We recommend deactivating a portal user if you may reactivate the portal user in the future.

If a user on an account team has Read/Write access (Account Access, Contact Access, Opportunity Access, and Case Access) and is deactivated, the access will default to Read Only if the user is reactivated.
Disabling a Portal User

To disable a portal user:

1. On the contact detail page, click Manage External User and choose either Disable Customer User or Disable Partner User. On the account detail page of a person account, click Manage External Account and choose Disable Customer Account.
   
   Person accounts are not available for the partner portal.

2. Click OK.

Deactivating a Portal User

To deactivate a portal user:

1. For the Customer Portal, click Manage External User and choose View Customer User on the contact or person account detail page. For the partner portal, click Manage External User and choose View Partner User on the contact detail page.
   
   Person accounts are not available for the partner portal.

2. Click Edit, and deselect the Active checkbox.
   
   To reactivate a portal user at any time, select the Active checkbox.

3. Click Save.

   Note: You can’t mass deactivate portal users.

Tips on Disabling and Deactivating Portal Users

Consider the following when disabling or deactivating portal users (disabling is permanent; deactivating is not):

- You can’t delete an active portal user; you can only disable or deactivate his or her access to the portal.
- The following table describes whether you can delete contacts that are associated with portal users:

<table>
<thead>
<tr>
<th>State of Portal User Associated to Contact</th>
<th>Can You Delete the Contact?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Active portal user</td>
<td>No. This is to ensure that the contact is available if you choose to reactivate the portal user.</td>
</tr>
<tr>
<td>Inactive portal user</td>
<td>No. This is to ensure that the contact is available if you choose to reactivate the portal user.</td>
</tr>
<tr>
<td>Disabled portal user</td>
<td>Yes. Deleted contacts are sent to the Recycle Bin.</td>
</tr>
</tbody>
</table>

- To delete a portal-enabled contact, first disable the portal user, then delete the contact.
- Cases associated with a portal user are not updated in any way when you disable or deactivate the portal user. For example, if a portal user owns a case, and the portal user is disabled, he or she remains the owner of the case until the case is updated with a new owner.
- Before you disable a partner user, we recommend that you transfer any opportunities owned by the user to another user who will remain active. This is because when you disable a partner user, any opportunities he or she owns are removed from your organization’s forecast hierarchy (the partner user’s role becomes obsolete).
- After you disable a portal user, it may take Salesforce up to ten seconds to disable the user. During that time, a portal user may still perform actions on a portal.
• You can remove the Disable Customer User and Disable Partner User buttons from contact page layouts at any time. Doing so would prevent users with the "Edit Self-Service Users" or "Manage External Users" permissions from disabling portal users.

• A disabled or deactivated portal user does not count against your organization’s available user licenses. However, disabling or deactivating a portal user does not reduce the number of licenses for which your organization is billed; you must change your organization’s license count to change your billing.

• To disable all portal users associated with an account and permanently delete all of the account’s portal roles and groups:
  – Click Manage External Account and choose Disable Partner Account on a partner portal account.
  – Click Manage External Account and choose Disable Customer Account on a Customer Portal account or Customer Portal person account.

You can remove the Disable Customer Account and Disable Partner Account buttons from account page layouts at any time. Doing so would prevent users with the “Edit Self-Service Users” or “Manage External Users” permissions from disabling portal accounts.

• When you disable a portal user or portal account, the change is tracked in the setup audit trail.

• Portal roles are not removed from disabled portal users associated with person accounts. However, you can remove the portal roles manually:
  1. From Setup, enter Users in the Quick Find box, then select Users.
  2. Select the name of a disabled portal user.
  3. Click Edit.
  4. Select None from the Role drop-down list.
  5. Click Save.

SEE ALSO:
  Enable the Customer Portal for Contacts and Person Accounts

Disabling Customer Accounts

Disabling a customer account disables external users associated with the account. We recommend disabling a customer account only if the account was accidentally enabled.

You can’t delete customer accounts, but you can disable them. Disabling the account permanently disables up to 100 external users associated with the account and removes them from all communities, groups, teams, permission sets, and sharing rules that they’re associated with. This includes both active and inactive external users. Additionally, roles and groups associated with the account are permanently deleted and you won’t have the option to restore them from the Recycle Bin.

Note: You can’t disable an account if there are more than 100 active or inactive external users associated with it. You must disable the users before disabling the account.

1. Go to the Account detail page for the account you want to disable.
2. Click Manage External Account, then click Disable Customer Account.
3. Click OK to confirm.

If you decide to re-enable the account in the future, you can re-enable individual contacts as Customer Portal users. Re-enabling a contact for a Customer Portal creates a new customer portal user record and role that is not associated with the previous customer portal user record and role. You can’t restore deleted roles and groups.
Editing Customer Portal User Information

**USER PERMISSIONS**

To manage Customer Portal users: "Edit Self-Service Users"

To manage profiles and permission sets: "Manage Profiles and Permission Sets"

To create, edit, and delete page layouts: "Customize Application"

To set field-level security: "Manage Profiles and Permission Sets" AND "Customize Application"

To set sharing rules: "Manage Sharing"

**EDITIONS**

Available in: Salesforce Classic

Available in: Enterprise, Performance, Unlimited, and Developer Editions

**Note:** Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can edit Salesforce Customer Portal user information for contacts associated with accounts you have permission to access. To edit information for a Customer Portal user:

1. From Setup, enter *Users* in the Quick Find box, then select *Users*.

2. Click *Edit* next to a user’s name.

3. Change the necessary information and click *Save*.

**Tips for Editing Customer Portal User Information**

Consider the following when editing Customer Portal user information:

- Create a custom list view to display only Customer Portal users by filtering on the Customer Portal Manager and Customer Portal User license types. For example, use the criteria “License Type equals Customer Portal User, Customer Portal Manager.”

- When generating a new password for a user, the new password is automatically sent to the user’s email address and email verification is not enforced.

- When changing a user’s email address to a new email address, email confirmation isn’t enforced.

- Include the Customer Portal Welcome component on home page layouts assigned to Customer Portal users so that, upon logging in to the portal, they receive a welcome message with their name. From the component, a user can change their own portal username, password, locale, language, time zone, and contact information. When portal users change information about themselves, their user record is updated but their contact record is not automatically updated with those changes.

**SEE ALSO:**

- About Customer Portal User Management
- Disabling and Deactivating Portal Users
Resetting Customer Portal User Passwords

Note: Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

If a Salesforce Customer Portal user loses his or her password, the user can click the Forgot your password? link on the Customer Portal login page to have a new password emailed to him or her.

To reset a Customer Portal user’s password:

1. From Setup, enter Users in the Quick Find box, then select Users.
2. Select the checkbox next to the user’s name. Optionally, to change the passwords for all currently displayed users, check the box in the column header to select all rows.
3. Click Reset Password. The user receives an email that contains a link and instructions to reset the password.

Tip: You can include the Customer Portal Welcome component on home page layouts assigned to Customer Portal users. Each Customer Portal user who logs in to your portal receives a welcome message with his or her name. The users can also change their own portal username, password, locale, language, time zone, and contact information. When portal users change information about themselves their user records are updated but their contact records aren’t automatically updated with those changes.

About Customer Portal User Management
Delegating Customer Portal User Administration and Portal Super User

Note: Starting with Summer '13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can delegate some administrative rights to Customer Portal users with the Customer Portal Manager Custom user license. Delegated external user administrators can do the following for external users, including both customer users and partner users, associated with their own account:

- Create new external users
- Edit existing external users
- Reset passwords for external users
- Deactivate existing external users

Note: When a delegated external user administrator deactivates a portal user, the administrator doesn’t have the option to remove the portal user from any teams that user is a member of.

Delegated external user administrators can also view their account’s detail page, along with contacts and cases related to their account via the Accounts tab. In addition, delegated external user administrators receive the “Portal Super User” permission. This permission lets delegated external user administrators do the following for their own account:

- View, edit, and transfer all cases
- Create cases for contacts
- View and edit all contacts, whether portal enabled or not
- View account details when they’re the contact on a case
- Report on all contacts, whether portal enabled or not, if the Reports tab is added to your Customer Portal and the user has the “Run Reports” permission

You can add just the “Portal Super User” permission to the profiles of external users (except for high-volume portal users) so that they have access to their account and can view and edit all of its cases and contacts without having the ability to manage other external users. However, super users can’t view the Contacts tab on the Customer Portal without the Delegated External User Administrator permission. To edit contacts, super users must select a contact from a case record. For more information, see:

- Delegating External User Administration Rights
- Providing Users with the “Portal Super User” Permission
- Tips on Setting Up Delegated Customer Portal User Administration

Delegating External User Administration Rights

Note: You must use the original profile user interface to delegate administration rights for external users. If you’re using the enhanced profile user interface, disable it temporarily in the User Interface settings to complete this procedure.

To delegate External User Administration Rights:

1. From Setup, enter Profiles in the Quick Find box, then select Profiles and click a custom Customer Portal profile.

   You can’t add delegation rights or the “Portal Super User” permission to the standard Customer Portal Manager, Customer Portal User, or High Volume Customer Portal profiles.
2. Click **Edit**.
3. Select **Delegated External User Administrator**. When you select Delegated External User Administrator, the Portal Super User is automatically selected after you click **Save**.
4. Click **Save**.
5. In the Delegated External Users Profiles related list, click **Edit**.
6. Select the external user profiles you want users with this profile to be able to administer. An external user delegated administrator can manage external users with Customer Portal, partner portal, or Communities profiles, as long as the users with the profile are under the same account.
7. Click **Save**.

To change which profiles a delegated Customer Portal user administrator can edit:

1. From Setup, enter *Profiles* in the Quick Find box, then select *Profiles* and click a custom Customer Portal profile.
2. Click **Edit** in the Delegated External User Profiles related list.
3. Select the external user profiles you want this profile to be able to administer.
4. Click **Save**.

Delegated Customer Portal administrators can perform the following tasks from a contact’s detail page:

- Click **Enable Customer Portal User** to allow a contact to use a Customer Portal.
- Click **View Customer Portal User** to view the Customer Portal user’s details. From a Customer Portal user’s detail page, delegated Customer Portal users can:
  - Click **Edit** to edit a Customer Portal user’s details.
  - Click **Reset Password** to reset the Customer Portal user’s password.
  - Click **Edit** and deselect the Active checkbox to deactivate the user.

**Providing Users with the “Portal Super User” Permission**

To provide users with the “Portal Super User” permission:

1. From Setup, enter *Profiles* in the Quick Find box, then select *Profiles* and click a custom Customer Portal profile.

   You can’t add the “Portal Super User” permission to the standard Customer Portal Manager, Customer Portal User, or High Volume Customer Portal profiles.

2. Click **Edit**.
3. Select **Portal Super User**.
4. Click **Save**.

**Tip:** To report on profiles with the “Portal Super User” permission:

1. Note the names of profiles with the “Portal Super User” permission.
2. Select the Reports tab.
3. From the Administrative Reports folder, select the All Active Users report.

**Tips on Setting Up Delegated Customer Portal User Administration**

Consider the following when setting up delegated Customer Portal User Administration:
On the profile of users you are granting delegated portal administration:

- Add the "Create" and "Edit" permissions on contacts so that delegated portal administrators and users with the "Portal Super User" permission can create and update contacts related to their account.
- Set the Accounts and Contacts tab settings to Default On so that delegated portal administrators can view the Accounts and Contacts tabs and easily manage contacts related to their accounts.

Add the Accounts and Contacts tabs to your Customer Portal.

Set field-level security and page layouts so that delegated Customer Portal user administrators and portal super users can only access the account, contact, and case fields you specify.

**Note:** To allow portal super users to create cases for contacts other than themselves, set the field-level security on the Contact Name field on cases to Editable.

Customer Portal users are prevented from viewing related lists to objects they don’t have access to. For example, if a Customer Portal user views a contact, and the contact page layout includes the Opportunities related list, the portal user can’t view the Opportunities related list because portal users don’t have access to opportunities.

Delegated Customer Portal user administrators can update portal users on any account to which they are transferred.

Customer Portal Health

Portal Health Check

Your customers and partners can access your information via portals in many ways. With portal health check reports, you can easily monitor this access. Portal health check reports show your security-related portal settings and provide information you can use to improve portal security.

Customer Portals and partner portals let you collaborate with and provide services to your customers and partners. With portals, you share and capture information from third-party users. To ensure that you don’t expose more information than intended, it’s important to follow best practices for portal implementation.

**Note:** Portal health check reports show sensitive user permissions, object permissions, and field permissions granted through profiles, as well as organization-wide sharing settings and sharing rules. Your portal users can also access records via the following means, which aren’t included in portal health check reports.

- Permission sets
- Manual sharing
- Apex managed sharing
- Territories
- List views
- Groups
- Queues
- Teams
- Content libraries

**EDITIONS**
Available in: both Salesforce Classic and Lightning Experience

Available in: Enterprise, Performance, Unlimited, and Developer Editions

**USER PERMISSIONS**
To view portal health check reports:
- “Customize Application” AND “Manage Users” AND “Modify All Data”
To view portal health check reports, from Setup enter *Portal Health Check* in the Quick Find box, then select *Portal Health Check*. Lastly, click the report you want.

The following reports are included:

- Administrative and User Permissions
- Object Access and Field-Level Security
- Sharing Organization-Wide Defaults
- Sharing Rules

⚠️ **Note:** The portal health check reports don't include information for criteria-based sharing, high-volume portal users, or Self-Service portal users.

**SEE ALSO:**
- View the Administrative and User Permissions Report for Portal Users
- View the Object Access and Field-Level Security Report for Portal Users
- View the Sharing Organization-Wide Defaults Report for Portal Users
- View the Sharing Rules Report for Portal Users

---

**View the Administrative and User Permissions Report for Portal Users**

User permissions are powerful, as they expand users' access to data. It's important to use caution when setting permissions for a profile. Use the Administrative and User Permissions report—one of the portal health check reports—to see portal profiles and their critical permission settings.

⚠️ **Note:** This report doesn't show permissions granted through permission sets.

For each profile, the report lists the number of portal users assigned to it and the following permission settings:

- Delegated External User Administrator
- Send Email
- Convert Leads
- Edit Events
- Edit Opportunity Product Sales Price
- Edit Tasks
- Transfer Cases
- Portal Super User
- API Enabled
- Password Never Expires
- Create Libraries
- View Content in Portals
- Export Reports
- Run Reports

⚠️ **Note:** Depending on your organization's settings, some permissions won't appear in the report.
To view this report:

1. From Setup, enter Portal Health Check in the Quick Find box, then select Portal Health Check.
2. Click Administrative and User Permissions.

From the report page, you can:

- View a profile detail page by clicking the profile name.
- Show a filtered list of items by selecting a predefined view from the drop-down list.
- Return to the list of reports by clicking Back to list: Portal Health Check Reports.

Portal Health Check

View the Object Access and Field-Level Security Report for Portal Users

Object permissions specify the access that users have to standard and custom objects. It is important to monitor this information for portal user profiles to ensure that portal users have access to only the appropriate objects and fields. The Object Access and Field-Level Security report—one of the portal health check reports—allows you to do just that.

The Object Access and Field-Level Security report shows how many portal profiles can access each standard and custom object in your organization. For each object, it also lists the number of portal users with access, the object access level, and the fields that are visible to those users.

Note: The Object Access and Field-Level Security report doesn’t show permissions granted through permission sets.

To view this report:

1. From Setup, enter Portal Health Check in the Quick Find box, then select Portal Health Check.
2. Click Object Access and Field-Level Security.
3. From the report page, click an object name.

On the object detail page, you can:

- View a profile detail page by clicking the profile name.
- View a profile’s field-level security detail page by clicking visible fields.
- Return to the high-level object access and field-level security report by clicking Object Access and Field-Level Security.

From both report pages, you can:

- Show a filtered list of items by selecting a predefined view from the drop-down list.
- Return to the list of reports by clicking Back to list: Portal Health Check Reports.

View the Sharing Organization-Wide Defaults Report for Portal Users

The Sharing Organization-Wide Defaults report—one of the portal health check reports—lists standard and custom objects and the default access setting for each object. You can use this report to review and edit the organization-wide default settings that expose records to portal users.

Organization-wide default settings specify each object’s default access level for users in your organization. If an object’s default access level is Public, users with enabled object permissions ("Read," “Create," “Edit," or “Delete") may be able to access records that they don’t own. For example, if the default access setting for the account object is Public Read/Write, then any user with the “Read” permission on the account object can view any account record. When setting organization-wide defaults, you want to make sure you don’t let portal users see objects they shouldn’t access.

To view this report:

1. From Setup, enter Portal Health Check in the Quick Find box, then select Portal Health Check.
2. Click Sharing Organization-Wide Defaults.

The report lists the default access setting for each object. If an object’s default access is Public, Show Details (for calendar), or Use (for price book), portal users with object permissions can access other users’ records. In this case, the Security column indicates a weak organization-wide default setting. You can view the specific object permissions granted to portal profiles in the Object Access and Field-Level Security report.

If the object’s default access is Private, Hide Details (for calendar), or No Access (for price book), the Security column indicates a strong organization-wide default setting.

Note: Even with a strong organization-wide default setting, portal users may have access to other users’ records through exceptions such as sharing rules.

If Grant Access Using Hierarchies is checked, any user above a record owner in a territory or role hierarchy can access the owner’s records for that object.

From the report page, you can:

• Change the organization-wide sharing settings for any object by clicking Edit, then changing the settings on the Organization-Wide Sharing Defaults Edit page.
• Show a filtered list of items by selecting a predefined view from the drop-down list.
• Return to the list of reports by clicking Back to list: Portal Health Check Reports.

SEE ALSO:

Portal Health Check
View the Sharing Rules Report for Portal Users

The Sharing Rules report—one of the portal health check reports—lists all sharing rules that give portal users access to records they don’t own. It shows how many portal users can access records as a result of each sharing rule, and lets you edit access levels for each rule. For some user sets (like groups, roles, and territories), you can drill down to detail pages, and edit, delete, or manage the users in the set.

To view this report:

1. From Setup, enter Portal Health Check in the Quick Find box, then select Portal Health Check.

2. Click Sharing Rules.

The Number of Portal Users Affected column shows the number of portal users who can get access as a result of the sharing rule. This number includes users specified in the rule and, if Grant Access Using Hierarchies is enabled for the object, any portal users above them in the role or territory hierarchy. If any users in this set have enabled object permissions (“Read,” “Create,” “Edit,” or “Delete”), they can access records exposed by the rule.

Note:
- The Sharing Rules report doesn’t include criteria-based sharing rules.
- The Sharing Rules report doesn’t check portal users’ object permissions. You can view the specific object permissions granted to portal profiles in the Object Access and Field-Level Security report.

From the report page, you can:
- Change the access level in a sharing rule by clicking Edit, then changing the settings on the sharing rule edit page.
- View the details of a user set in a sharing rule by clicking the link in the Owned By or Shared With column.
- Show a filtered list of items by selecting a predefined view from the drop-down list.
- Return to the list of reports by clicking Back to list: Portal Health Check Reports.

Note: Account and account territory sharing rules can grant access to contacts, opportunities, and cases associated with the shared accounts. The Sharing Rules report shows access levels only for top-level objects, not associated objects.

Self-Service Portal

Self-Service Jump Start

Note: Starting with Spring '12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Get your Self-Service portal running quickly using the Jump Start button. It automates the setup process by choosing some default settings for you.

Note: You can’t save any JavaScript as part of your custom code, and can only use certain HTML elements and attributes.

1. From Setup, enter Self-Service Portal in the Quick Find box, select Settings, then click Jump Start.

2. Review the process and click Continue.

3. Choose a color theme.

4. Edit the default settings as needed and click Save.

5. Test your Self-Service portal by:
   a. Clicking Generate to retrieve a test username and password.
   b. Clicking Access Self-Service Portal to preview your pages.
   c. Optionally, click Invite to notify other users how to log in and preview your pages.

6. Enable your Self-Service portal by copying the link provided in the Enable Self-Service... section to an appropriate place on your website.

7. Click Done when finished.

8. Enable your customers to use your Self-Service portal. See Managing Self-Service Users on page 2389.

Tip: To make changes to your settings, see Enable Self-Service Features and Settings on page 2369. The Self-Service Jump Start automatically enables the Enable Self-Service button on contact detail pages.

Setting Up Self-Service

Note: Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Self-Service provides an online support channel for your customers - allowing them to resolve their inquiries without contacting a customer service representative.

Setting up your Self-Service portal is simple. Choose from two setup options:

- **Jump Start** - Gets you up and running quickly; see Self-Service Jump Start on page 2367.
- **Self-Service Setup** - Complete setup which allows you more customization. The setup consists of:
  - Enable Self-Service Features and Settings on page 2369
  - Customizing Your Self-Service Look and Feel on page 2372
  - Customizing Your Self-Service Fonts and Colors on page 2373
  - Customizing Your Self-Service Pages on page 2374
  - Generating Login HTML on page 2388
  - Managing Self-Service Users on page 2389

See Preparation for Setting Up Your Portal to learn more about implementing Self-Service.

Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions

User Permissions

To use Self-Service Jump Start:
- “Manage Self-Service Portal”

To set up the Self-Service portal:
- “Manage Self-Service Portal” AND “Customize Application”
Enable Self-Service Features and Settings

**Note:** Starting with Spring '12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

1. From Setup, enter Self Service Portal in the Quick Find box, then select Settings.
2. Click Self-Service Setup on the Self-Service Settings page.
3. Set the following options:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Login Enabled</td>
<td>Allows users to log into the Self-Service portal.</td>
</tr>
<tr>
<td>Edit Self-Service Users</td>
<td>Displays the <strong>Enable Self-Service</strong> button on contact detail pages. Or, for contacts in which Self-Service is already enabled, the <strong>View Self-Service</strong> button displays.</td>
</tr>
<tr>
<td>Logout URL</td>
<td>The URL of the web page that will be displayed when users log out of the Self-Service portal, for example, <a href="http://www.acme.com">http://www.acme.com</a>. If a logout URL is not specified, the <strong>Logout</strong> button does not display to users.</td>
</tr>
<tr>
<td>Default Case Origin</td>
<td>The default origin assigned to all cases submitted via the Self-Service portal. Available values are taken from your organization’s Case Origin picklist. You can assign different default origins for cases submitted via Self-Service and Web-to-Case.</td>
</tr>
<tr>
<td>New Cases Visible in Portal</td>
<td>Automatically selects the <strong>Visible in Self-Service Portal</strong> checkbox for all new cases, including cases created via Web-to-Case, Email-to-Case, and On-Demand Email-to-Case. Regardless of this default, users creating new cases can manually set the <strong>Visible in Self-Service Portal</strong> checkbox.</td>
</tr>
<tr>
<td>Enable Solution Browsing</td>
<td>Enables solution categories in the Self-Service portal so that customers can browse solutions by category. If multilingual solutions is enabled, you can translate solution categories.</td>
</tr>
<tr>
<td>Top-Level Category for Self-Service Portal</td>
<td>The top-level category accessible by customers in the Self-Service portal. Customers can view all solutions marked</td>
</tr>
<tr>
<td>Setting</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Visible in Self-Service Portal</td>
<td>Visible in Self-Service Portal in this category and its subcategories. Leave this blank to let customers view all solutions marked Visible in Self-Service Portal in all categories.</td>
</tr>
<tr>
<td>Case Record Type</td>
<td>The record type to assign to any case submitted via the Self-Service portal.</td>
</tr>
</tbody>
</table>
| "From" Email Address              | The email address from which all new user and password emails will be sent, for example, support@acme.com. When this field is blank, Salesforce uses:  
  • The Automated Case User's email address for users who receive an email with a temporary password by clicking **Forgot your password?** on the Login Page of the Self-Service portal. The Automated Case User is specified on the Support Settings page in Setup.  
  • The email address of the user who last posted a comment for users who receive a case comment notification email. |
| "From" Email Name                 | The name that will be associated with the "From" Email Address, for example, "Acme Customer Support." When this field is blank, Salesforce uses:  
  • Your organization’s name for users who receive an email with a temporary password by clicking **Forgot your password?** on the Login Page of the Self-Service portal.  
  • The name of the user who last posted a comment for users who receive a case comment notification email. |
<p>| New User Template                 | The email template used to send a username and initial password to all newly-enabled Self-Service users. Self-Service automatically selects a sample template for you, but you can modify the sample or create your own email template. This template must be marked as “Available for Use.” |
| New Password Template             | The email template used to send a new password to existing Self-Service users when you reset their passwords or when they reset their own passwords by clicking <strong>Forgot your password?</strong> on the Login Page of the Self-Service portal. Self-Service automatically selects a sample template for you, but you can modify the sample or create your own email template. This template must be marked as “Available for Use.” |
| Enable Notification Email on New Case Comment | When selected, indicates that the Send Customer Notification option on a case comment is displayed. Even if this checkbox is not selected, the Send Customer Notification option still displays on cases if you have enabled email notifications to contacts who are not members. |</p>
<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Comment Template</td>
<td>The email template used to send a notification to Self-Service users when a public comment is added to one of their cases. Self-Service automatically selects a sample template for you, but you can modify the sample or create your own email template. This template must be marked as “Available for Use.” Note that case owners are sent a separate notification that you can’t customize.</td>
</tr>
<tr>
<td>Enable Case Auto-Response Rules for Self-Service Cases</td>
<td>Indicates if cases submitted through your Self-Service portal will trigger your auto-response rules.</td>
</tr>
<tr>
<td>Case Creation Template</td>
<td>The email template to use when cases submitted through your Self-Service portal do not match any auto-response rules.</td>
</tr>
<tr>
<td>Maximum Page Width</td>
<td>The maximum pixel width of the Self-Service pages from Salesforce. If hosting the portal yourself, this is the width of the inner HTML frame on your Self-Service login page.</td>
</tr>
<tr>
<td>Minimum Page Height</td>
<td>The minimum pixel height of the Self-Service pages from Salesforce.</td>
</tr>
<tr>
<td>Style Sheet URL</td>
<td>The complete, publicly accessible URL of your organization’s Self-Service style sheet, for example, “<a href="http://www.acme.com/styles/selfservice.css.%E2%80%9D">http://www.acme.com/styles/selfservice.css.”</a> See Customizing Your Self-Service Look and Feel on page 2372. If you use a predefined color theme, leave this field blank.</td>
</tr>
<tr>
<td>Color Theme</td>
<td>Use one of Salesforce’s color themes if you do not have your own style sheet to use. Click the View link to see template settings. To change the fonts and colors of one of Salesforce’s color themes, see Customizing Your Self-Service Fonts and Colors on page 2373.</td>
</tr>
<tr>

**Customizing Your Self-Service Look and Feel**

**Note:** Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

To develop a meaningful look and feel for your Self-Service portal:

1. Customize the headers and footers of the Self-Service pages; see Create Your Custom Page Header and Footer Sections on page 2381.
2. Customize the Self-Service portal fonts and colors via one of these options:
   - Choose a predefined color theme or upload your own style sheet on page 2375.
   - Customize fonts and colors using a point-and-click editor on page 2373.

**SEE ALSO:**
- Setting Up Self-Service

**EDITIONS**

Available in: Salesforce Classic

Available in: **Professional**, **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

**USER PERMISSIONS**

To set up the Self-Service portal:
- “Manage Self-Service Portal”

To modify Self-Service pages:
- “Manage Self-Service Portal”
  AND
  “Customize Application”
Customizing Your Self-Service Fonts and Colors

### Note:
Starting with Spring '12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

You can customize the fonts and colors of the Self-Service portal to reflect your company’s branding. Your portal’s fonts and colors are specified in a portal “color theme.” Select a predefined color theme and customize it using a point-and-click editor.

1. From Setup, enter Fonts and Colors in the Quick Find box, then select Fonts and Colors. Salesforce offers predefined themes that you can customize. Click Preview to view any theme.

2. Select the color theme you want to customize.

   From the color theme page, you can:
   - Click the Reset to Default link to remove all customizations from a theme.
   - Click the Back to All Themes link to return to the list of color themes.
   - Click Preview Theme Name to view the theme you are customizing.

3. Choose a portal page to customize. Color themes are customized page-by-page with some page elements being shared by multiple pages.

   From the portal page, you can:
   - Click See Examples to see all of the elements that you can customize.
   - Click Clear next to an element to remove customizations.
   - Click Preview Theme Name to view the theme you are customizing.
   - Click the Back to All Pages link to return to the list of all portal pages.

4. Click Edit next to the visual element you want to customize. Some elements are visible only on the selected portal page, and some are shared across multiple portal pages. Changes you make to shared elements affect all pages.

   **Note:** Depending on the visual element, you can customize attributes using a point-and-click editor or a custom style sheet editor which lets you modify the cascading style sheets (CSS) directly. Choose the click here link to switch between the two.

   If you are using the point-and-click editor, select the Show advanced attributes box to access the click here link. We recommend that only users familiar with cascading style sheets (CSS) define them.

5. Edit the visual element as desired.

   If you are using the point-and-click editor:
   - Click Edit next to a basic or advanced attribute. If you do not see the advanced attributes, select the Show advanced attributes box.
   - In the popup window, change the attribute as needed.
   - Click OK to confirm your changes in the popup window.

   If you are using the custom style sheet editor, enter valid CSS code.

   For a list of all the page attributes you can edit, see Self-Service Page Attributes on page 2386.

6. Click Save to save all changes to the visual element and its attributes. Customizations are not visible to your Self-Service users until you set the color theme as active.

7. Repeat these steps to customize all visual elements and their attributes as necessary.

8. Return to the list of color themes by clicking the Back to All Pages link and then the Back to All Themes link.
9. Click **Set Active Theme**.

10. Select the theme to activate for your portal, live and in real-time. Your organization can only have one active theme.

11. Click **Save**.

   **Note:** Since changes to an active theme take effect immediately, we recommend that you fully customize a theme before activating it so as not to disturb your customers.

### Preparation for Setting Up Your Portal

**Note:** Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Before setting up your Self-Service portal or your Salesforce Customer Portal:
• **Build your public solutions** - Review and mark your solutions as *Visible in Self-Service Portal*. Only solutions marked *Visible in Self-Service Portal* can appear in the Self-Service portal or the Customer Portal. For your Self-Service portal only, identify the top five solutions you want to feature on the Home Page.

• **Determine the information to show and collect** - Decide which case fields will be available when users view their cases. You should also decide which fields should be required when users submit cases online and which picklist values users can select when they solve their own cases with suggested solutions. (See Case Fields on page 2112.)

• **Designate the portal’s location** - Choose where to add your portal’s login URL on your corporate website. To locate the login URL for your Self-Service portal, see Generating Login HTML; to locate the login URL for your Customer Portal, see Enable Customer Portal Login and Settings on page 2315.

• **Customize your portal communication templates** - Decide which email templates to send to users to communicate a variety of information, such as reset passwords, notifications when public comments are added to cases, and case auto-responses with suggested solutions.

• **Customize and distribute the portal tip sheet** - Download the Using the Self-Service Portal and Customer Portal tip sheet and edit it to match your portal’s branding and features, such as suggested solutions and the ability to attach files to submitted cases. Then distribute the document to your customers who want to learn how to answer their own inquiries using your portal.

**SEE ALSO:**
- Setting Up Self-Service
- Customize the Self-Service Style Sheet

**Customize the Self-Service Style Sheet**

- **Note:** Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Select a predefined color theme, or download a sample Self-Service color theme so you can customize it. This color theme allows you to incorporate your organization’s branding into your Self-Service portal.

- **Note:** To customize the Self-Service color theme using a point-and-click editor, see Customizing Your Self-Service Fonts and Colors on page 2373.

1. From Setup, enter *Self-Service Portal* in the Quick Find box, then select Settings.
2. Click Self-Service Setup.
3. Click the View Color Theme Options link in the page settings section.
4. Find a set of fonts and colors you like and click Download This Color Theme.
   To use a predefined color theme without customizing it, simply click Select This Color Theme.
5. Save the color theme you downloaded and give it to your webmaster if it needs more customization. The downloaded color theme is a CSS style sheet that your webmaster can edit.
6. Store the downloaded style sheet in a publicly accessible location and enter the URL for your style sheet in the Style Sheet URL field.
7. Click Save.

</tr>
<tr>
<td>Show Message</td>
<td>The message that will be displayed at the top of the home page. You can enter a message of up to 32,000 characters including any HTML tags.</td>
</tr>
</tbody>
</table>
4. If you chose to show a message on the page, enter your message in the text box, using the formatting toolbar to change the size, color, or font. Select Show HTML to view your page message in HTML. You can’t save any JavaScript as part of your custom code, and can only use certain HTML elements and attributes.

5. Optionally, insert merge fields for data that you want to replace dynamically.

6. Click Save.

7. To see how your Home Page will look, click Preview next to Home Page in the Portal Pages list. If you have customized the Self-Service style sheet, the preview shows your custom styles.

Set the Top Solutions

If you checked Show Top Solutions List from the Home page, click Add in the Solutions related list of the Self-Service Settings page to search for and select solutions to display on the Home page. You can only select solutions that have been marked Visible in Self-Service Portal.

Customizing Your Self-Service Pages

Enable the Solutions Page

**Note:** Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

You can enable the Self-Service Solutions Page from the Self-Service Portal Pages related list. The Solutions Page allows users to see solutions that have been marked Visible in Self-Service Portal and any files attached to those solutions.

1. To enable this page, click Edit on the Solutions Page line.
2. Select the Show Solution Page checkbox.
3. Check Show Message to display a message at the top of the Solutions Page.
4. If you enabled the message, enter your message in the text box, using the formatting toolbar to format the size, color, or font.
   Optionally, check Show HTML to view your page message in HTML code. You can’t save any JavaScript as part of your custom code, and can only use certain HTML elements and attributes.
5. Optionally, insert any merge fields for data that you want to replace dynamically.
6. Click Save.
7. To see how your Solutions Page will look, click Preview on the Solutions Page line. If you have customized the Self-Service style sheet, the preview shows your custom styles.

Customizing Your Self-Service Pages

**EDITIONS**
Available in: Salesforce Classic
Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions

**USER PERMISSIONS**
To modify Self-Service pages:
• “Manage Self-Service Portal”
   AND
• “Customize Application”
Customize the Self-Service Portal Log a Case Page

The Log a Case Page on the Self-Service portal lets users submit new cases to your customer support team. Customize the page by creating a page message, adding merge fields, and choosing the case fields you want to include.

Note: Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

New cases submitted from this page are automatically created in Self-Service and assigned to the support representative or queue defined by your case assignment rules.

1. From Setup, enter Self-Service Portal in the Quick Find box, then select Settings.
2. In the Portal Pages list, click Edit next to Log a Case Page.
3. Select the Show Log a Case Page checkbox.
4. Select Show Message to display a message on this page.
5. If you enabled a page message, enter it in the text box, using the formatting toolbar to change the size, color, or font.
   Select Show HTML to view and edit your page message in HTML. You can’t save any JavaScript as part of your custom code, and can only use certain HTML elements and attributes.
6. Optionally, insert merge fields for data that you want to replace dynamically.
7. Click Save.
8. To change the fields that display on the page, click the Page Layout link.
   Note: If a case field is tied to a validation rule, the rule can prevent Self-Service portal users from logging a case if they do not have access to fill in that field. Consider making those fields visible on the Log A Case page.
9. Click Save at any time to finish.
10. To see how your Log a Case Page will look, click Preview next to Log a Case Page in the Portal Pages list. If you have customized the Self-Service style sheet, the preview shows your custom styles.

Customize the View Cases Page

Note: Starting with Spring '12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

You can enable and customize the View Cases Page from the Self-Service Portal Pages related list. The View Cases Page allows users to view their open and closed cases, related solutions, completed activities, comments, and optionally to add comments to their cases.

1. Click Edit on the View Cases Page line.
2. Select the Show View Cases Page box to allow users to view their open and closed cases.
3. Select Add Comments to Cases to allow users to add comments to their cases. When a user adds a comment, an email is automatically sent to the case owner.
4. Select Add Attachments to Cases to allow users to upload files to their cases. When a user adds an attachment, an email is automatically sent to the case owner.

   When editing the page layout for the View Cases Page, add the Case Attachments related list to allow Self-Service users to view the files they’ve added to their cases. Be aware that this related list also shows any files that support reps have added to the case.

5. Check Show Message to display a message on this page.
6. If you enabled the message, enter your message in the text box, using the formatting toolbar to format the size, color, or font.

   Optionally, check Show HTML to view your page message in HTML code. You can’t save any JavaScript as part of your custom code, and can only use certain HTML elements and attributes.

7. Optionally, insert any merge fields for data that you want to replace dynamically.
8. Click Save.
9. To change the fields and related lists that display on the page, click the Page Layout link.

   Add the Case Activities related list to allow Self-Service users to view public, completed activities related to their cases. You also need to set field-level security to visible for the Visible in Self-Service Portal checkbox on activity page layouts so support reps will be able to display or hide completed activities in the Self-Service portal by clicking Make Public or Make Private in the case’s Activity History related list.

10. Click Save at any time to finish.
11. To see how your View Cases Page will look, click Preview on the View Cases Page line. If you have customized the Self-Service style sheet, the preview shows your custom styles.

Tip: To hide specific cases from users in the portal, you can deselect the Visible in Self-Service Portal checkbox on the case.

Note: View Cases pages list cases in descending order via the Case Number field. Portal users cannot change this order; nor can they sort case columns in the Self-Service portal.

Setting Up Self-Service
Customizing Your Self-Service Pages
Customize the Suggested Solutions Page

Note: Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

You can enable and customize the Suggested Solutions Page from the Self-Service Portal Pages related list. The Suggested Solutions Page displays up to ten relevant solutions that may help users solve a particular case. When submitting a case or viewing cases in the Self-Service portal, users can view suggested solutions and close their cases themselves.

To customize the Suggested Solutions Page:

1. Click Edit on the Suggested Solutions Page line.
2. Select Show Suggested Solutions Page to enable the page in the Self-Service portal.
3. Select a Self-Closed Case Status to show in the Status field for cases closed by Self-Service users. You must select at least one “Closed” value for this field.
4. Choose the maximum number of suggested solutions to display to users at one time. You can show a maximum of ten.
5. Select the Self-Closed Case Reasons that Self-Service users can choose from when they self-close their cases.
6. Check Show Message to display a message on this page.
7. If you enabled the message, enter your message in the text box, using the formatting toolbar to format the size, color, or font. Optionally, check Show HTML to view your page message in HTML code.
   You can’t save any JavaScript as part of your custom code, and can only use certain HTML elements and attributes.
8. Optionally, insert any merge fields for data that you want to replace dynamically.
9. Click Save.
10. To see how your Suggested Solutions Page will look, click Preview on the Suggested Solutions Page line. If you have customized the Self-Service style sheet, the preview shows your custom styles.

Self-Service Page Attributes

Note: Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

The following is a list of Self-Service page attributes which can be modified with the point-and-click editor:

<table>
<thead>
<tr>
<th>Page Attribute</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Color</td>
<td>The color of the text.</td>
</tr>
<tr>
<td>Bold</td>
<td>The bolded value of the text. For example, whether the text is bolded or not.</td>
</tr>
<tr>
<td>Font size</td>
<td>The size of the text.</td>
</tr>
<tr>
<td>Font</td>
<td>A specific style of type in which letters are displayed.</td>
</tr>
<tr>
<td>Font Family</td>
<td>A prioritized list of font family names for an element. Web browsers use the first font value recognized.</td>
</tr>
<tr>
<td>Underline</td>
<td>The underline value of the text. For example, whether the text is underlined or not.</td>
</tr>
<tr>
<td>Border Color</td>
<td>The color of a border.</td>
</tr>
<tr>
<td>Border Style</td>
<td>The style of a border, such as dotted, dashed, or solid.</td>
</tr>
<tr>
<td>Border Width</td>
<td>The width of a border.</td>
</tr>
<tr>
<td>Bottom Border Width</td>
<td>The width of a bottom border.</td>
</tr>
<tr>
<td><strong>Page Attribute</strong></td>
<td><strong>Description</strong></td>
</tr>
<tr>
<td>------------------------</td>
<td>---------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Padding</td>
<td>The amount of space between the border and the element.</td>
</tr>
<tr>
<td>Padding Top</td>
<td>The amount of space to put between the top border and the element.</td>
</tr>
<tr>
<td>Padding Right</td>
<td>The amount of space to put between the right border and the element.</td>
</tr>
<tr>
<td>Padding Left</td>
<td>The amount of space to put between the left border and the element.</td>
</tr>
<tr>
<td>Padding Bottom</td>
<td>The amount of space to put between the bottom border and the element.</td>
</tr>
<tr>
<td>Height</td>
<td>The height of the element.</td>
</tr>
<tr>
<td>Line Height</td>
<td>The height of a line.</td>
</tr>
<tr>
<td>Background Color</td>
<td>The background color of the element.</td>
</tr>
<tr>
<td>Background Repeat</td>
<td>The format in which the background image displays. For example, whether the image displays repeatedly in a horizontal or vertical format.</td>
</tr>
<tr>
<td>Background Image</td>
<td>The background image of the element. The relative or absolute URL which hosts the image must be inside the surrounding URL() syntax. For example, url(/sserv/img/tabBg_gray.gif).</td>
</tr>
</tbody>
</table>

Generating Login HTML

1. From Setup, enter Self-Service Portal in the Quick Find box, then select Settings.
2. Click Generate Login HTML.
3. Insert the URL or HTML code provided into your portal's Web page.
4. Click Finished to return to the Self-Service Settings page.

Note: You can't be logged into Salesforce and the Self-Service portal at the same time, with the same browser. For example, if you log into Salesforce and then the Self-Service portal using the same browser, your Salesforce session becomes invalid. Conversely, if you log into the Self-Service portal and then Salesforce using the same browser, your Self-Service portal session becomes invalid.

SEE ALSO:
Setting Up Self-Service

Using the Portals Tab

Note: Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

The Portals Tab is where you set up an online support channel for your Self-Service customers - allowing them to resolve their inquiries without contacting a customer service representative.

Clicking on the Portals tab displays the portals home page. From there, you can:

- View your customer Self-Service portal home page.
- Click on your Self-Service portal pages to see how your customers will interact with them.
- Under Reports, click any report name to jump to that report.
- Select any of the links under Tools to access utilities for managing your Self-Service portal and Self-Service users.

Note: The Portals tab does not include the Customer Portal.
Managing Self-Service Users

Note: Starting with Spring '12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Manage your Self-Service user information from a single place and make changes to more than one user at a time. Before your customers can take advantage of the Self-Service portal, you must enable Self-Service access for each contact. You can enable access for one contact at a time from the Contacts tab or for multiple contacts via the Self-Service setup pages.

- To enable Self-Service users individually from the Contacts tab, select a contact and click Enable Self-Service on the contact's detail page.
- To enable multiple Self-Service users at once, see Enabling Multiple Self-Service Users on page 2389.
- To change Self-Service user information, see Editing Self-Service User Information on page 2390.
- To reset Self-Service user passwords, see Resetting Self-Service User Passwords on page 2390.

SEE ALSO:
Setting Up Self-Service

Enabling Multiple Self-Service Users

Note: Starting with Spring '12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

You can perform mass actions for Self-Service user management such as enabling Self-Service access for many contacts at once. Each contact must have an email address and must be associated with an account to be a Self-Service user.

To enable new users for your Self-Service portal:
1. From Setup, enter Users in the Quick Find box, then select Users.
2. Click Enable New User(s).
3. Enter search criteria to compile a list of the contacts you want to enable and click Search.
4. Select the contacts you want to enable and click Next.
5. Modify Self-Service user information as necessary.
6. Select the Super User checkbox to enable the contact as a Self-Service super user who can view case information, add comments, and upload attachments for all cases submitted by anyone in his or her company.
7. Click Save.

SEE ALSO:
Managing Self-Service Users
Editing Self-Service User Information

Note: Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Edit Self-Service user information to keep user information updated.

1. From Setup, enter Users in the Quick Find box, then select Users.
2. Select the users you want to change.
3. Click Edit User(s).
4. Make any necessary changes to these records.
5. Click Save.

SEE ALSO:
Managing Self-Service Users

Resetting Self-Service User Passwords

Note: Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

If a Self-Service user loses his or her password, you can email a new password to him or her. To reset one or more Self-Service users’ passwords:

1. From Setup, enter Users in the Quick Find box, then select Users.
2. Select the users whose passwords you want to reset.
3. Click Reset Password(s).
4. Click OK.

SEE ALSO:
Managing Self-Service Users
Zones for Salesforce Communities and Customer Portals

Using Zones to Organize Communities

Note: Starting with the Summer '13 release, Chatter Answers and Ideas "communities" have been renamed to “zones.”

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions. Zones are shared by the Ideas, Answers, and Chatter Answers applications, allowing you to view and create zones from those locations. Professional Edition organizations can have only one internal zone. All other editions can have up to 50 zones shared between Ideas, Answers, and Chatter Answers.

Note: If you need more than 50 zones, contact Salesforce.

You can display a zone to the following types of users:

- Salesforce Communities users.
- Public users (requires setting up a Force.com site).
- Internal Salesforce users. Salesforce users can access all zones regardless of whether the community is internal-only or displayed in a portal.
- Customer Portal or partner portal users.
- Salesforce console users.

Note: You cannot use Salesforce sharing rules to restrict access to zones. When you create a zone, you can restrict access by selecting the portal where the zone should appear. Only the users assigned to that portal (and internal Salesforce users) will be able to access that unless you expose it publicly using Force.com sites.

Users will see zones, search results, and content that are associated with the context defined by their user profile:

- Community users see the zones associated with the community they’re signed in to.
- Internal users with permission to see Ideas can see all internal-only zones in the organization. If internal users sign in to a community, they see only those zones associated with that community.
- Internal users with permission to see Chatter Answers can see all internal-only zones for the organization in the Q&A tab. If internal users sign in to a community, they see only those zones associated with that community.
- Portal users can see the zones associated with their portal.
- Portal users with access to both a portal and a community can see the zones associated with the portal or community that they are currently signed in to.
- Users who are accessing the portal or community through an API can access all zones that they have access to in all contexts.
- Global searches in the internal application performed by internal users return results from all ideas that are available within the organization. Searches performed by all other users in Salesforce Communities return results from the ideas that are available within the community.

SEE ALSO:
- Creating and Editing Zones
Creating and Editing Zones

Zones are shared by the Ideas, Answers, and Chatter Answers applications, allowing you to view and create zones from those locations. Answers can only have one zone displayed at a time. Supported editions allow up to 50 zones per organization.

To create a new zone or edit the details of an existing zone:

1. From Setup, enter Zones in the Quick Find box, then select Zones under Answers, Ideas Zones, or Chatter Answers Zones.

2. Click Edit next to the zone you want to change or New to create a new zone.

3. Enter a unique name for your zone that clearly identifies the zone’s purpose.

4. Optionally, enter a description in plain text. HTML and other markup languages are not supported.

5. Select the Active checkbox to display the zone to your community.

You can’t delete zones, so if you need to hide a zone, make sure Active isn’t selected. All active zones are automatically available from the Ideas tab, but you can only assign one active zone to Answers.

6. Select the Username Format to specify how usernames appear in posted questions and answers throughout the zone. Chatter Answers uses the Username Format for questions and answers only. Ideas uses the Nickname for usernames within a community rather than the Username Format within in a zone.

Note: For Chatter Answers, first names are used for users in the Customer Support Agents Group even if Nickname is selected as the Username Format for the zone.

7. Specify where you want this zone displayed.

   - Community lets you select a community in which to display the zone. For Chatter Answers only, you can also select Visible Without Authentication to allow guest users to view activity within the zone through the community without signing in.
   - Internal Only displays the zone to internal users only. Portal and Salesforce Communities members can’t see internal zones.
   - Portal lets you select from a list of existing portals.

   To make a zone publicly available, you must select the Customer Portal that you plan to expose publicly using Force.com sites. Chatter Answers is supported on Force.com sites. Answers isn’t supported on Force.com sites.

Note: If you re-assign a zone to another community, the items associated with that zone move to the new community, as well. Users who are logged in to the original community can’t view the items that have been moved to the new community, including from the Recent Items section of the sidebar column. If the zone is moved back to the original community, the ability to view those items is restored.

8. To set up zones for Chatter Answers, follow these steps:

   a. Select Enable for Chatter Answers to associate the zone with Chatter Answers.

   b. Select Enable Private Questions to let customers post their questions privately to customer support (create cases). If you don’t select this setting, support agents can still initiate private communications with customers.

   c. In Visualforce Page That Hosts Your Zone’s Feeds, click [ ] and choose the Visualforce page on which questions, replies, and knowledge articles display.
The page you choose must include either the `chatteranswers:allfeeds` component or a combination of the following components: `chatteranswers:aboutme`, `chatteranswers:guestsignin`, `chatteranswers:feedfilter`, `chatteranswers:feeds`, `chatteranswers:searchask`, `chatteranswers:datacategoryfilter` so that the zone is linked to your Force.com site correctly. If you don’t choose a Visualforce page, one is automatically generated when you save your zone. The generated page includes your zone’s ID so that topics, questions, and replies are associated with your specific zone and can display on it. The page is named after your zone with a suffix of “_main,” for example, `ZoneName_main`. The page also includes a language attribute that matches your organization’s default language.

You can use the `NoSignIn` Boolean attribute in the `chatteranswers:allfeeds`, `chatteranswers:aboutme`, `chatteranswers:feeds` or `chatteranswers:searchask` components to remove all sign-in links from your zone. Use this option when you have an external sign-in path and want to ensure that your users follow it instead of the standard Chatter Answers sign-in. When the `NoSignIn` Boolean attribute is true, users can still search and view publicly accessible content for the zone. If they already have a valid session, they can still post questions, replies, vote, and flag content.

d. In Site That Hosts Your Zone, click and choose the Force.com site on which you want to host the zone.
   - If you associated the zone with a portal, you can enter a Force.com site domain.
   - If you associated the zone with a Salesforce Community that does not require authentication for users to view zone activity, we populate the Force.com site domain for you.

e. Optionally, in Email Notification URL, customize the URL that’s included in email notifications sent from the zone. The email notification URL is generated automatically to be adapted to the visibility settings of the zone, but it can be modified to fit specific needs or use cases. If you have a customized login page, enter its URL. For example, if you’ve created a login page from which users can access multiple zones, you can customize Email Notification URL to redirect users to that page from email notifications.

   **Note:** If you have an existing URL for email notifications for an internal zone and subsequently set up a custom domain using My Domain, you must manually update the Email Notification URL. To update the URL, clear the existing URL so that the field is blank. Save the page, and the system populates the field with the new My Domain URL.

f. In Customer Support Agents Group, select the public group of users who will act as support agents for the zone. These users will have a headset icon next to their username in the zone.

g. Optionally, in Header or Footer, click and choose a text or HTML file that incorporates your organization’s branding into the headers or footers of email notifications sent from the zone.

   You can only choose a file that has been uploaded to a publicly accessible folder on the Documents tab and marked Externally Available Image. The files you include in the fields can have a combined size of up to 10 KB.

h. Select the data categories that you want exposed to the zone from the list of pre-defined data categories.

9. To set up Ideas for the zone, use the Experts group field to select the public group of experts who will monitor the zone for Ideas.

10. Click Save.

Answers Communities

Setting Up Answers

Note: Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

To set up answers:

1. Enable answers and set the default zone.
2. Create a category group for answers and add data categories to the category group.
   
   Note: Even though you can create up to five hierarchy levels of categories in a category group, only the first level of categories is supported in your answers community. Child categories below the first level are not displayed in the community, and community members can’t assign these child categories to questions.

3. Assign the data categories to your answers community.
4. Review the category group visibility settings to decide how you want to restrict access to categories and categorized questions in the answers community.
5. Using roles, permission sets, or profiles:
   a. Customize data category group visibility.
   b. (Optional) Designate default category group visibility for users without visibility through roles, permission sets, or profiles.

6. (Optional) To allow community members who work with cases to escalate an unanswered or problematic question to a new case:
   a. From the object management settings for cases, go to Page Layouts. Then edit the case page layouts to include the Question field.
   b. From the object management settings for cases, go to Fields. Then ensure that field-level security for the Question field makes the field visible in the necessary profiles.

Only community members who have permission to create cases will see an Escalate to Case option on questions.

7. (Optional) If your organization uses Salesforce Knowledge, users can convert particularly helpful replies into articles in the knowledge base. From Setup, enter Knowledge Settings in the Quick Find box, then select Knowledge Settings and ensure that Allow users to create an article from a reply is checked.

8. (Optional) Create validation rules for questions and replies to prevent offensive language from being posted to the answers community.

To create validation rules, from the object management settings for Chatter Answers question and Chatter Answers reply, go to Validation Rules.

9. (Optional) Create workflow rules for questions. For example, you may want to create a workflow rule that sends the community administrator an email whenever a question has ten or more replies but no best answer. Questions do not support approval processes or workflow tasks.

10. (Optional) Create reports for your answers community.

11. (Optional) Enable answers in your Customer Portal or enable answers in your partner portal.
Tip: Any custom fields you create for questions or replies can’t display in the Salesforce user interface. However, you can add custom fields to questions or replies for API integration purposes. For example, add a custom text field to questions and use the API to populate that text field with the name of the country from which each question is posted.

Enabling Answers and Assigning the Default Zone

Note: Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

To enable the answers feature:

1. From Setup, enter Answers Settings in the Quick Find box, then select Answers Settings.
2. Click Edit.
3. Use the Enable Answers checkbox to enable answers.
   Enabling answers adds the Answers tab to the Community application and creates a zone named Internal Zone.
4. Select the default zone for the Answers tab. You can only display one answers zone at a time. You can either use Internal Zone as the default or create a new zone and use it as the default.
5. Click Save.

Assigning Data Categories to Answers

Note: Starting with Summer ’13, Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer ’13 release.

In an answers zone, a category group provides one or more categories that help organize questions for easy browsing. If the category group contains a hierarchy, only the first-level categories display on the Answers tab. For example, if you’re a computer manufacturer you might create a Products category group for your Products zone that has four categories: Performance Laptops, Portable Laptops, Gaming Desktops, and Enterprise Desktops. Zone members can choose one of the categories to assign to a question.

The following example shows how the categories within a category group appear on the Answers tab.

1. The zone assigned to answers.
2. When you assign a category group to answers, the data categories within the group appear beneath the zone name on the Answers tab. Zone members can assign these categories to their questions and browse within categories to see related questions. The name of the category group isn’t displayed within the answers community.

The name of the category group is not displayed in the answers community; however, all the categories within the group appear below the zone name on the Answers tab.

To assign a category group to answers:

1. Create a category group for answers and add data categories to the category group.

We recommend naming the category group the same as the answers community so other administrators understand where the category group is being used.
Note: Even though you can create up to five hierarchy levels of categories in a category group, only the first level of categories is supported in your answers community. Child categories below the first level are not displayed in the community, and community members can’t assign these child categories to questions.

2. From Setup, enter **Data Category Assignments** in the **Quick Find** box, then select **Data Category Assignments** under Answers. The category group assignments page only displays after you enable answers.

3. Click **Edit**.

4. Select the category group you want to assign to your answers zone.

   Note: If you change the category group for answers later, all the existing categories associated with your questions are removed. The questions in your answers community become uncategorized until community members assign the new categories to them.

5. Click **Save**.

You receive an email after the save process completes.

**Ideas Communities**

**Encourage Idea Creation and Sharing in Salesforce Communities**

Add your Ideas users to Salesforce Communities to take advantage of new ways to collaborate. Create more engagement and collaboration around Ideas as you enable your customers to post and comment on Ideas right from their Salesforce Communities home page. Adding Ideas to Salesforce Communities lets your users reap the benefits of a vibrant, creative partnership between community members. Communities are customizable, public or private spaces for employees, customers, and partners to collaborate on best practices and business processes. When you enable Ideas in Salesforce Communities, you give your community members the ability to create ideas and idea themes and have a dialog around them. You can create public communities that let your customers or partners exchange ideas, as well as private internal communities that are specific to your employees.

Moderating and managing ideation communities can be assigned to internal community members, depending on their privileges. Internal users can moderate both internal and external communities because they have access to internal communities as well as any public communities that they have permission to access.

To organize your community into smaller groups, you can create zones within a community that reflect special interests, product groupings, or types of customers. Zones are shared by the Ideas, Answers, and Chatter Answers applications, allowing you to view and create zones from those locations. For example, if you’re a computer manufacturer you can create a community named Laptop Products and another named Desktop Products. Within each of those communities, you can create zones that are specific to different aspects of the products.

Community members have visibility into different zones based on their user profiles:

- Community users see the zones associated with the community they’re signed in to.
- Internal users with permission to see Ideas can see all internal-only zones in the organization. If internal users sign in to a community, they see only those zones associated with that community.
• Internal users with permission to see Chatter Answers can see all internal-only zones for the organization in the Q&A tab. If internal users sign in to a community, they see only those zones associated with that community.
• Portal users can see the zones associated with their portal.
• Portal users with access to both a portal and a community can see the zones associated with the portal or community that they are currently signed in to.
• Users who are accessing the portal or community through an API can access all zones that they have access to in all contexts.
• Global searches in the internal application performed by internal users return results from all ideas that are available within the organization. Searches performed by all other users in Salesforce Communities return results from the ideas that are available within the community.

Managing Ideas

Ideas is a community of users who post, vote for, and comment on ideas. Consider it an online suggestion box that includes discussions and popularity rankings for any subject. To further organize your community into smaller groups, you can create zones within a community that reflect special interests, product groupings, or types of customers.

You can display Ideas to internal Salesforce users, a Salesforce.com Community, Customer Portal or partner portal users, or to public users (requires setting up a Force.com site). You can also manage Ideas from the console.

Professional Edition organizations can have only one internal zone. All other editions can have up to 50 zones shared between Ideas, Answers, and Chatter Answers.

As an administrator, you can:
• Control whether ideas are enabled for your organization and customize the half-life of ideas. See Customizing Ideas Settings.
• Create zones to organize ideas. See Creating and Editing Zones.
• Create Idea Themes that let you invite community members to post ideas about specific topics so that members can solve problems or propose innovations for your company.
• Define picklist values for the Categories and Status fields. See Define Picklist Values for the Categories and Status Fields.
• Specify the layout of custom fields. See Set Page Layouts for Ideas.
• Make idea reports available to your users.
• Customize idea search layouts.
• Merge ideas to reduce the number of duplicate ideas.
• Assign a status to an idea.
• Delete a vote through the API to erase all history that the vote ever occurred.

Specifically, deleting a vote does the following:
- Removes 10 points from the idea’s overall score
- Removes the user’s name from the Last 100 Votes section on the idea’s detail page

Enabling Ideas in the Customer Portal
Administrator setup guide: Salesforce Ideas Implementation Guide
Customizing Ideas Settings

To manage organization-wide settings for Ideas:

1. From Setup, enter Ideas Settings in the Quick Find box, then select Ideas Settings.
2. Click Edit.
3. Use the Enable Ideas checkbox to enable or disable Ideas for your organization.
   Disabling Ideas removes the Ideas tab and users will no longer be able to access active zones, but these zones will reappear on the Ideas tab the next time you enable Ideas.
4. Optionally, select Enable Text-Formatting, Images and Links to enable the Ideas HTML editor, which gives users WYSIWYG HTML editing and image referencing capabilities when they post or comment on ideas.
   **Warning:** Once you enable the Ideas HTML editor, you cannot disable it. If you do not see the Enable Text-Formatting, Images and Links checkbox, the Ideas HTML editor is enabled for your organization by default.
5. If your organization does not already have the multi-select Categories field enabled, click the Enable button located below the Categories message at the top of the page. This button is not displayed if your organization already has the Categories field enabled.
   If the Categories field is already enabled, the Enable Categories checkbox is selected. Once the field is enabled, you cannot disable it.
6. Select Enable Reputation to let users earn points and ratings based on their activity in each zone.
7. Select an Ideas User Profile type for all user profiles in the zone.

<table>
<thead>
<tr>
<th>User Profile Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chatter profile</td>
<td>The user’s Chatter profile is the default user profile type. If you select this option and a user doesn’t have a Chatter profile, then the Ideas zone profile is used.</td>
</tr>
<tr>
<td>Ideas zone profile</td>
<td>The profile that the user sets up for the Ideas zone. This profile type is used for Ideas zones in portals.</td>
</tr>
<tr>
<td>Custom profile with a Visualforce page</td>
<td>You can specify a Visualforce page for a custom profile for all Ideas users in the zone. If you select this profile type, you must specify a Visualforce page in Custom Profile Page.</td>
</tr>
</tbody>
</table>

8. In the Half-Life (in Days) field, enter a number of days.
   The half-life setting determines how quickly old ideas drop in ranking on the Popular Ideas subtab, to make room for ideas with more recent votes. A shorter half-life moves older ideas down the page faster than a longer half-life.
   **Note:** This field does not appear if Ideas is disabled. To modify the Half-Life (in Days) field, save your changes after enabling ideas, and then click Edit on the Ideas Settings page.
9. Click **Save**.

SEE ALSO:
- Enable Idea Themes
- Managing Ideas
- Administrator setup guide: Salesforce Ideas Implementation Guide
- Encouraging Innovation with Idea Reputation

**Encouraging Innovation with Idea Reputation**

Reward the most influential and innovative members of your Ideas community by acknowledging their participation and contribution to the community. By enabling Reputation in Ideas, and then choosing level names and thresholds, you let users earn points and ratings that reward and encourage frequent, meaningful activity in the community. As community members engage more frequently, they improve the overall quality of ideas, which means that everyone reaps the benefits of a vibrant, creative partnership with your customers.

Users are awarded points for many activities including:

- Creating an idea
- Receiving a comment on their idea
- Receiving an upvote on their idea or comment
- Commenting on someone else’s idea

Reputation points are calculated separately for each zone, and for the cumulative activity within the entire organization. Users who participate in different zones will have different reputation values for each zone based on their activity in that zone. When users are logged into the internal application, their reputation score is based on their participation in all zones to which they belong.

Ideas comes with the following pre-defined reputation levels that apply to all zones and to the internal application. Using the API, reputation levels and points for each level can be added or edited to reflect the levels of participation in your community.

<table>
<thead>
<tr>
<th>Name</th>
<th>Points per Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Observer</td>
<td>0 – 99</td>
</tr>
<tr>
<td>Contributor</td>
<td>100 – 399</td>
</tr>
<tr>
<td>Influencer</td>
<td>400 – 1499</td>
</tr>
<tr>
<td>Thought Leader</td>
<td>1500+</td>
</tr>
</tbody>
</table>

Reputation levels are available through the API and can be displayed in custom Ideas implementations. To add or edit reputation level names, points per level, or other attributes of a reputation in any of your zones, use the IdeaReputation and IdeaReputationLevel objects in the API. You can create up to 25 different reputation levels for each zone.

- Customizing Ideas Settings
**Designating Community Experts**

Designate your star users as experts in their communities.

A community expert is a member of the community who speaks credibly and authoritatively on behalf of your organization. When community experts post comments or ideas, a unique icon displays next to their name. The Salesforce administrator can designate as many community experts as necessary.

If you want to have experts within your community, set up Zones and create a public group that includes the expert users. Then, during the setup process you can designate this public group as your community experts.

Before you select a public group to be community experts, note the following:

- A community expert can be an employee of your organization who is responsible for providing official responses to the community. A community expert can also be someone outside your organization who is active within the community and knowledgeable about the subject matter.
- The only difference between a community expert and other community members is the unique icon that displays next to the community expert’s name. Community experts do not have any extra permissions beyond what is specified in their user profile and permission sets.
- Community experts must be part of a public group and that public group must be specified in the Experts Group drop-down list. You might need to create a public group for each community if the experts within those communities are different.
- If a community is displayed in a Customer Portal or partner portal, you can use a cascading style sheet (CSS) to change the icon associated with the community expert. When creating a portal, specify your CSS in the Header of your portal and use the expertUserBadge class to reference the new background image for the community expert. We recommend the icon be no larger than 16 by 16 pixels.

**SEE ALSO:**
- Creating and Editing Zones

**Set Page Layouts for Ideas**

When you create a custom field for Ideas, you can add it to the Additional Information section that appears on the Post Idea and Idea Detail pages.

You can specify the order in which a custom field appears in the Additional Information section as well as remove a custom field from these pages without permanently deleting the field from the system. Although it’s possible to move standard fields onto the page layout, by default they already appear in the Idea Detail section at the top of the page and their order is not customizable. However, you can drag the Status field to the Additional Information section to have the status of an idea appear in the page layout.

**Note:** The label and layout of the Additional Information section can’t be customized.

1. From the object management settings for ideas, go to Page Layouts.
2. Click Edit.
3. Select a custom field from the box on the right and drag it to the Additional Information section. Custom fields appear in the order they are placed in the Additional Information section.
4. To display an idea’s status to zone members, select the Status field and drag it to the Additional Information section.
5. To let users add files to ideas, select the **Attachments** field and drag it to the Additional Information section. Make sure you've set field-level security for your users.

6. Click **Save**.

SEE ALSO:
- **Define Picklist Values for the Categories and Status Fields**
- **Find Object Management Settings**

### Adding Apex Triggers to Idea Comments

Adding Apex triggers to Idea Comments lets you perform actions related to comments that users post to an idea.

A trigger is a set of Apex code that fires at a particular time in the life cycle of a record. You can add Apex triggers to comments in Ideas to better manage ideas in your community.

Use triggers on comments to perform actions such as:

- Send an email notification to the moderator or other user when a comment is left on an idea.
- Send an email notification to the user with the contents of their comment.
- Notify the moderator when a specified number of comments is reached for an idea.
- Prevent posting of comments with specific words.

### Migrating to the Community Application

If your organization enabled Ideas prior to the Winter '10 release, we recommend that you migrate to the new Community application. The Community application:

- Replaces the Ideas application in the Force.com app menu.
- Includes the Ideas and Answers tabs.

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

⚠️ **Warning:** Once you migrate to the Community application, you cannot return to the old Ideas application. The Ideas tab with all your existing data will still be available in the new Community application.

To migrate to the Community application:

1. From Setup, enter **Ideas Settings** in the Quick Find box, then select **Ideas Settings**.

The Community message appears at the top of the Ideas Settings page. If the Community message does not appear, the Community application is already enabled for your organization.
2. Click **Enable** below the Community message. Salesforce checks your organization for any custom objects named Community. If such an object exists, you must delete or rename the object before enabling the Community app.

3. Click **Enable** when Salesforce confirms it's okay to migrate to the Community application.

### Customizing Ideas Standard and Custom Fields

<table>
<thead>
<tr>
<th>USER PERMISSIONS</th>
<th>EDITIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>To define picklist values:</td>
<td><em>Customize Application</em></td>
</tr>
<tr>
<td>To set field level security:</td>
<td><em>Customize Application</em></td>
</tr>
<tr>
<td>To define or change field validation rules:</td>
<td><em>Customize Application</em></td>
</tr>
<tr>
<td>To create Ideas custom fields:</td>
<td><em>Customize Application</em></td>
</tr>
<tr>
<td>To enable attachments for ideas:</td>
<td><em>Customize Application</em></td>
</tr>
</tbody>
</table>

Administrators can customize Ideas standard and custom fields to meet the needs of an organization’s unique requirements:

- Define picklist values for the Categories and Status fields.
- Click the name of a standard or custom field to set field-level security.
- Click the name of a custom field to set validation rules.
- Create a custom field for Ideas. Custom fields appear in the Additional Information section on the Post Idea and Idea Detail pages.
- Add the Attachment field to the layout and set field-level security. Users can attach all supported file types, including Microsoft® PowerPoint® presentations and Excel® spreadsheets, Adobe® PDF files, image files, audio files, and video files. The maximum attachment size is determined by your organization.

**Note:** In custom implementations of Ideas, you can use the `URL.getFileFieldURL` Apex method to retrieve the download URL for file attachments.

**SEE ALSO:**

- Customizing Ideas Settings
Select Picklist Values and Defaults for a Zone

After you define picklist values for the Categories and Status fields, you can add and remove picklist values from these fields on a per-zone basis and specify a default value. This allows you to customize the Categories and Status fields based on the unique purpose of a zone. For information, see Define Picklist Values for the Categories and Status Fields on page 2404.

To add or remove picklist values from a specific zone:

1. From Setup, enter Zones in the Quick Find box, then select Zones.
2. Click the name of the zone.
3. In the Idea Picklists Available for Editing section, click Edit next to the Categories or Status field.
4. To remove a picklist value, select the value from the Selected Values list and click Remove.
5. To add a picklist value to the zone, select the value from the Available Values list and click Add.
6. To specify a default value for the field, use the Default drop-down list.
7. Click Save.

SEE ALSO:
Creating and Editing Zones

Define Picklist Values for the Categories and Status Fields

Overview

For members of a zone to assign categories to an idea or be able to view an idea’s status, the Ideas administrator needs to define picklist values for the Categories and Status fields. These fields are only available in an ideas community and not in an answers community.

Categories are administrator-defined values that help organize ideas into logical sub-groups within a zone. The View Category drop-down list on the Ideas tab allows users to filter ideas by category, and the Categories picklist on the Post Ideas page lets users add categories to their ideas.

An idea’s status helps zone members track the progress of the idea. For example, “Under Review”, “Reviewed”, “Coming Soon”, and “Now Available” are common status values an administrator can define and assign to ideas. An idea’s status appears next to the idea’s title for all zone members to see.

Note: If the Category field is displayed (instead of Categories), then your zone members can only assign a single category to an idea. To allow them to assign multiple categories to an idea, from Setup, enter Ideas Settings in the Quick Find box, then select Ideas Settings and enable Categories.

Defining Picklist Values

To define picklist values for the Categories and Status standard fields:

1. From Setup, enter Ideas in the Quick Find box, then select Fields.
2. Click Edit next to the Categories or Status standard field.
3. On the picklist edit page, click **New** to add new picklist values to the standard field. You can also edit, delete, reorder, and replace picklist values.

   **Note:** Once you add picklist values to the **Categories** or **Status** field, the field will always require at least one picklist value. This means you can delete picklist values until there is one remaining for the field.

4. Add one or more picklist values (one per line) in the provided text area.

5. Select the zones that you want to include the new picklist values.

6. Save your changes.

7. To specify a default value for the **Categories** or **Status** fields, see **Select Picklist Values and Defaults for a Zone**.

   **Note:** Do not use the **Edit** link on the Fields page to specify a default value for **Categories** or **Status**. You can only specify a default value from the Zone Detail page.

8. To display an idea's status to zone members, select the **Status** field and drag it to the Additional Information section. You can find this field from Setup by entering **Ideas** in the **Quick Find** box, then selecting **Fields**.

   Once you select this checkbox, you can assign a status to any idea when you post a new idea or edit an existing idea.

**SEE ALSO:**

- Managing Ideas
- Select Picklist Values and Defaults for a Zone
- Find Object Management Settings

### Enabling the Categories Field

Organizations using the **Category** field can switch to the multi-select **Categories** field that allows zone members to associate more than one category with an idea. The **Category** field only allows one category to be associated with an idea.

**Warning:** Once you enable the **Categories** field, you cannot disable it. Also, enabling the **Categories** field automatically disables the old **Category** field in Salesforce and the API.

When you enable the **Categories** field, Salesforce automatically does the following:

- Checks your organization’s workflow rules, triggers, validation rules, custom fields, and Apex code and lists any area that references the **Category** field. You must manually fix or remove these references before Salesforce allows you to enable the **Categories** field.
- Automatically moves all picklist values and search layouts from the old **Category** field to the new **Categories** field.
- Ensures each idea is associated with the appropriate picklist value in the new **Categories** field.
- Makes the new **Categories** field available in Salesforce and the API.

To enable the **Categories** field:

1. From Setup, enter **Ideas Settings** in the **Quick Find** box, then select **Ideas Settings**.

2. Click **Enable** located below the **Categories** message at the top of the page. This button is not displayed if your organization already has the **Categories** field enabled.
Salesforce checks your organization’s workflow rules, triggers, validation rules, custom fields, and Apex code for references to the Category field and lists any areas where this reference needs to be removed.

3. If you need to remove references to the Category field, click Cancel. Once you have removed the references, try enabling the Categories field again.

   **Note:** For validation and workflow rules you must delete the rule or fix the Category reference within the rule. It is not sufficient to deactivate the rule. If you need to delete a custom field that references the Category field, make sure to erase the field after it has been deleted.

4. Read the information in the pop-up window, and click Enable. It may take several minutes for Salesforce to enable the new field.

5. Fix any custom reports that reference the old Category field.

Chatter Answers Communities

Chatter Answers Implementation Overview

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

**Note:** We recommend that advanced Salesforce administrators and developers set up and maintain Chatter Answers, as it involves several Salesforce features.

Chatter Answers is a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings
together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Before administrators can set up Chatter Answers, their organizations must have implemented Data Categories. If you want Salesforce Knowledge articles to display in your zones, then administrators need to implement Salesforce Knowledge.

Unlike other Salesforce features, Chatter Answers spans across several areas of setup. There isn’t one location in Salesforce where you can update and configure all the settings related to Chatter Answers. For example, configuring Chatter Answers might require you to update Customer Portal settings from Setup by entering Customer Portal Settings in the Quick Find box, then selecting Customer Portal Settings, and Force.com Site settings by entering Sites in the Quick Find box, then selecting Sites.

Setting up Chatter Answers also includes customizing or maintaining:

- Cases
- Case assignment rules
- Workflow rules on cases or questions
- Apex triggers on questions
- Visualforce pages
- Customer Portal users
- Organization-wide sharing defaults
- Feature licenses

Customizing the appearance of your Chatter Answers zone to match your company’s branding involves creating or updating Visualforce pages and adding them to the Force.com Site used to host your zone.

SEE ALSO:

Setting Up Chatter Answers

Setting Up Chatter Answers

Note: Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Note: The steps below are general guidelines for setting up Chatter Answers. Chatter Answers integrates several Salesforce features, including features administrators may have implemented already, so each Chatter Answers implementation may be different. Contact Salesforce for specifics on your implementation.

Before administrators can set up Chatter Answers, their organizations must have implemented Data Categories. If you want Salesforce Knowledge articles to display in your zones, then administrators need to implement Salesforce Knowledge.

1. Enable Chatter Answers.
2. Configure email notification settings.
3. Implement a Customer Portal (if one doesn’t already exist for your organization).
5. Configure high-volume portal users for self-registration.
6. Implement a Force.com site (if one doesn’t already exist for your organization and you want to use a site).
7. Configure your organization’s Force.com site for Chatter Answers.
8. Configure cases for Chatter Answers.

9. Set Questions tab visibility.

10. Optionally:
   - Assign data categories to Chatter Answers.
   - Configure Salesforce Knowledge for Chatter Answers.
   - Add Chatter Answers to your Customer Portals or Partner Portals.

11. Configure one or more zones.

12. Troubleshoot any setup issues.

**Important:** After you set up Chatter Answers, it may not work properly if you change any of the configurations in the features mentioned above. If certain configuration issues are detected, Salesforce sends email notifications to the Site Contact user.

**Tip:**
- You can add custom fields to questions or replies for API integration purposes only. For example, add a custom text field to questions and use the API to populate that text field with the name of the country from which each question is posted. Any custom fields you create for questions or replies can't display in the Salesforce user interface.
- You can customize fields, page layouts, buttons and links, Apex triggers, and validation rules for questions and replies for Chatter Answers from Setup by entering “Chatter Answers” in the Quick Find box, then selecting Chatter Answers and choosing the appropriate setting.
- You can rename Customer Support on your zones’ user interface. For example, you can change “Customer Support” to “Acme Support.” Just edit the Customer Support label on the Question object.
- You can rename the Chatter Answers tab in your portal, as well.

---

**Enable Chatter Answers**

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Enable Chatter Answers to set up Chatter Answers zones.

1. From Setup, enter Chatter Answers Settings in the Quick Find box, then select Chatter Answers Settings.
2. Click Edit.
3. Select Enable Chatter Answers.
4. Optionally, select:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Show Chatter Answers in Portals</td>
<td>Lets you add Chatter Answers as a tab to your Customer Portal or Partner Portal. If you choose this option, you must add the Chatter...</td>
</tr>
</tbody>
</table>

---

**EDITIONS**

Available in: Salesforce Classic

Chatter Answers is available in: Enterprise, Developer, Performance, and Unlimited Editions.

**USER PERMISSIONS**

To enable Chatter Answers:
- “Customize Application”
<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Answers tab to each portal and assign the Chatter Answers User license to portal users. If you only want to display Chatter Answers in your portals, then you don’t need to set up a Force.com site to host Chatter Answers. However, a site lets guest users access some Chatter Answers data without a login, whereas portals do not.</td>
<td></td>
</tr>
<tr>
<td>Optimize Question Flow</td>
<td>Lets users filter search results by articles or questions before they post a question to any of your Chatter Answers zones. Also, adds Title and Body fields to questions for easier text input and scanning. This setting is turned on automatically when you enable Chatter Answers.</td>
</tr>
<tr>
<td>Enable Rich Text Editor</td>
<td>Lets zone members use the rich text editor to format text and upload images when posting questions and replies. This setting is turned on automatically when you enable Chatter Answers.</td>
</tr>
<tr>
<td>Note: Optimize Question Flow must be enabled to select this option.</td>
<td></td>
</tr>
<tr>
<td>Show Search/Ask Publisher Inline</td>
<td>Embeds the Search/Ask Publisher inline instead of using a pop-up window.</td>
</tr>
<tr>
<td>Note: Optimize Question Flow must be enabled to select this option.</td>
<td></td>
</tr>
<tr>
<td>Enable Reputation</td>
<td>Lets users earn points and ratings that display as hover text on their profile pictures. Reputation is enabled across all zones. This setting is turned on automatically when you enable Chatter Answers.</td>
</tr>
<tr>
<td>Allow Posting Answers via Email</td>
<td>Lets users post answers by replying to email notifications.</td>
</tr>
<tr>
<td>Enable Facebook Single Sign On</td>
<td>Lets users sign in to your Chatter Answers zones with their Facebook logins. If you choose this setting, your zones display an option to Sign in with Facebook next to your zones’ Sign In. When a user signs in to Chatter Answers with a Facebook login, the first name, last name, and the photo associated with the Facebook account is used in posts to your zones. When you enable this feature, you must define and enable a Facebook authentication provider in your organization’s security controls.</td>
</tr>
<tr>
<td>Facebook Authentication Provider</td>
<td>Lets you choose an existing Facebook authentication provider after you select Enable Facebook Single Sign On. You must choose a Facebook authentication provider to implement Facebook Single Sign On for your Chatter Answers zones. This setting is ignored if you have associated the Chatter</td>
</tr>
</tbody>
</table>
### Option | Description
--- | ---
Answers zone to a Chatter community with a different Facebook authentication provider. | **Custom Profile Page**

Lets you select a custom Visualforce page for users' profiles for Chatter Answers on a public Chatter community site. You must have **Visible without authentication** set for the zone in order for the user profile pages to be used. The following attributes are passed to the custom Visualforce page that you select:

- **communityId**. This attribute indicates which zone the currently selected feed item, such as a question or a reply, belongs to.
- **userId**. This attribute indicates the owner of the currently selected feed item, such as a question or a reply.
- **showHeader**. This attribute is a Boolean value that specifies whether the Salesforce tab header is included in the page. If this attribute is set to true, the Salesforce tab header is displayed.

5. **Click Save**.

After you enable Chatter Answers, several items are automatically added to your organization for use with setting up zones:

- A Q&A tab where internal users and administrators can view and use Chatter Answers. Administrators can rename this tab.
- Standard permission settings for Questions on user profiles so that you can grant users permissions to questions and replies.
- Visualforce pages that you can add to a Force.com site, a tab in a Community, or a Customer Portal so that users can register, sign in, and view feed items on a zone.
- An Apex class named `ChatterAnswersRegistration` with a method for customizing Account creation for portal users.
- An Apex trigger for questions named `chatter_answers_question_escalation_to_case_trigger` so that questions with specified attributes are automatically escalated to cases.
- A workflow field update named `chatter_answers_num_subscriptions_above_limit_wf` so that when a question is escalated to a case, Priority on questions is updated.
- Two workflow rules, `chatter_answers_no_best_reply_within_time_limit_wf` and `chatter_answers_num_subscriptions_above_limit_wf`, which you can customize and activate so that questions without best replies or questions with a specified number of followers are automatically escalated to cases.

Visualforce Pages for Chatter Answers

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

After you enable Chatter Answers, the Visualforce pages below are automatically added to your organization. You can use these pages to set up and configure Chatter Answers.

<table>
<thead>
<tr>
<th>Visualforce page</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ChatterAnswersAgentView</td>
<td>The Visualforce component that displays questions on case detail pages when questions are converted to cases. This component is optional and offers an alternative to the case detail page.</td>
</tr>
<tr>
<td>ChatterAnswersChangePassword</td>
<td>The page where users can change their passwords to your zone.</td>
</tr>
<tr>
<td>ChatterAnswersForgotPassword</td>
<td>The forgot password page for your zone.</td>
</tr>
<tr>
<td>ChatterAnswersForgotPasswordConfirm</td>
<td>The forgot password confirmation page for your zone.</td>
</tr>
<tr>
<td>ChatterAnswersHelp</td>
<td>The online help page displayed to users when they click Need Help?.</td>
</tr>
<tr>
<td>ChatterAnswersLogin</td>
<td>The login page for your zone.</td>
</tr>
<tr>
<td>ChatterAnswersRegistration</td>
<td>The page where users can self-register for access to your zone.</td>
</tr>
</tbody>
</table>
| When you create a zone, the following page is added to your organization: _Community Name_main_ (Home Page) | The page that includes the question, reply, and Salesforce Knowledge article feeds for your zone. This page is also used to determine the community from which email notifications are sent to users. This page is automatically generated when you save a new zone without choosing Visualforce Page That Hosts Your Community’s Feeds. The generated page includes your zone’s ID so that topics, questions, and replies are associated with your specific zone and can display on it. The page is named after your zone with a suffix of _main_, for example, ZoneName_main. The edition options available are Classic, Enterprise, Developer, Performance, and Unlimited. Chatter Answers is available in: Salesforce Classic, Enterprise, Developer, Performance, and Unlimited Editions.
Customizing Chatter Answers using Visualforce Pages

You can create a Visualforce page that displays a Chatter Answers zone customized for your users.

Note: Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

By using a Visualforce page, you can add custom widgets to Chatter Answers, such as announcements or ads, which let you extend your branding and change the experience for users. You can also control the arrangement of elements on the page. Your customers can access your custom Chatter Answers zone through a Force.com site, a tab in a Community, or a Customer Portal to which you’ve added the Visualforce page. When internal users access a Chatter Answers zone that uses a Visualforce page, they see only the zone that is related to the page; they can’t switch zones as they can when using the standard Q&A tab.

Note: You can’t customize the Chatter Answers Q&A tab with a Visualforce page, but you can add a Visualforce tab in your organization and create an internal Chatter Answers experience with your custom Visualforce page.

In order to display the zone, the Visualforce page you create must include either the chatteranswers:allfeeds component or a combination of the following components: chatteranswers:aboutme, chatteranswers:guestsignin, chatteranswers:feedfilter, chatteranswers:feeds, chatteranswers:searchask, chatteranswers:datacategoryfilter.

Example: Custom Visualforce Page using the chatteranswers:allfeeds Component

The chatteranswers:allfeeds component provides an out-of-the-box Chatter Answers Visualforce page. A page that uses the chatteranswers:allfeeds component includes the following Chatter Answers elements:

- Chatter Answers sign in
- Chatter Answers profile
- Data category filters
- The Search/Ask bar
- Feed filters
- The questions feed
For example, the following Visualforce page including the `chatteranswers:allfeeds` component has all of the Chatter Answers elements in the standard arrangement for a zone without any other custom widgets.

```xml
<apex:page>
    <body>
        <chatteranswers:allfeeds communityId="09aD00000000K7c"/>
    </body>
</apex:page>
```

**Example: Custom Visualforce Page using All of the Chatter Answers Page Components**

Using the Chatter Answers page components allows you to pick and choose which elements of your Chatter Answers zone appear to your customers. You can use as few as one component or you can customize your page to use all of them. You can include the following components:

- `chatteranswers:aboutme`
- `chatteranswers:guestsignin`
- `chatteranswers:feedfilter`
- `chatteranswers:feeds`
- `chatteranswers:searchask`
- `chatteranswers:datacategoryfilter`

Using the Chatter Answers page components instead of the `chatteranswers:allfeeds` component allows you more flexibility over the arrangement of the elements on the page. For example, the following Visualforce page includes all of the standard Chatter Answers elements, but they appear in a different order on the resulting page than they do when you use the `chatteranswers:allfeeds` component. In this example, the Search/Ask component and the feed filter appear below the feed instead of above it.

```xml
<apex:page language="en_US" showHeader="false" cache="true">
    <body>
        <div class="csMini">
            <div class="threecolumn">
                <div class="leftContent">
                    <chatteranswers:guestsignin />
                    <chatteranswers:aboutme communityId="09aD00000000cfE"/>
                    <chatteranswers:datacategoryfilter communityId="09aD00000000cfE"/>
                </div>
                <div class="mainContent">
                    <div id="lowerMainContent" class="lowerMainContent">
                        <div id="rightContent" class="rightContent"></div>
                    </div>
                    <div class="centerContent">
                        <chatteranswers:feeds communityId="09aD00000000cfE"/>
                        <chatteranswers:searchask communityId="09aD00000000cfE"/>
                        <chatteranswers:feedfilter />
                    </div>
                </div>
                <div class="clearingBox"></div>
            </div>
        </div>
    </body>
</apex:page>
```

Configuring Email Notifications for Chatter Answers Users

Note: Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Determine when emails are sent to users by configuring the notification settings that apply to all of your zones. Each email includes a link to a specific zone so that users can easily return to it.

1. From Setup, enter Email Notification Settings in the Quick Find box, then select Email Notification Settings.
2. Click Edit.
3. Choose from the following settings:
   
<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Replies to a question they own</td>
<td>Notify customers when other users reply to their questions.</td>
</tr>
<tr>
<td>Replies to a question they follow</td>
<td>Notify customers when other users reply to questions they’re following.</td>
</tr>
<tr>
<td>Selects a best answer on a question they follow</td>
<td>Notify customers when a best answer is selected for a question they’re following.</td>
</tr>
<tr>
<td>Sends a private reply to their question (Customer Support)</td>
<td>Notify customers when customer support responds to their questions privately.</td>
</tr>
</tbody>
</table>

4. Click Save.

USER PERMISIONS

To configure email notifications for your Chatter Answers users:
• “Customize Application”
Configuring a Customer Portal for Chatter Answers

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

**Note:** Even if you don’t plan on using a Customer Portal, you must configure one for Chatter Answers to authenticate users who sign in to your Chatter Answers zone.

1. From Setup, enter Customer Portal Settings in the Quick Find box, then select Customer Portal Settings.

2. Click Edit next to the Customer Portal you want to configure for Chatter Answers.

3. Click Login Enabled to let customers sign in to Chatter Answers.

4. In From Email Address, type the address from which all email communications from your Chatter Answers zone are sent. For example, support@acme.com.

5. In From Email Address Name, type the name associated with the From Email Address. For example, Acme Customer Support.

6. Click Self-Registration Enabled to let customers register themselves for access to Chatter Answers.

7. In Default New User License, choose the portal user license that’s automatically assigned to customers who self-register. We recommend you choose the High Volume Customer Portal license.

8. In Default New User Profile, choose the profile that’s automatically assigned to customers who self-register. We recommend you choose the profile you cloned and customized for self-registration.

9. Click Save.

10. Assign the profile you selected as the Default New User Profile to your Customer Portal so that users can sign in to your zone:
   a. From Setup, enter Customer Portal Settings in the Quick Find box, then select Customer Portal Settings.
   b. Select your portal’s name.
   c. In the Assigned Profiles section, click Edit Profiles.
   d. Click Active next to the profile you selected as the Default New User Profile.
   e. Click Save.

Configuring Portal Users for Self-Registration to Chatter Answers

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Configure Customer Portal users for self-registration to your Chatter Answers community.

1. Clone the High Volume Customer Portal profile so that you can customize it:
   a. From Setup, enter Profiles in the Quick Find box, then select Profiles.
   b. Click Clone next to High Volume Customer Portal.
   c. Type a name for the new profile.
   d. Click Save.

2. Customize the cloned profile to include permissions to the standard objects on your community:
   a. From Setup, enter Profiles in the Quick Find box, then select Profiles.
   b. Click the name of the cloned profile.
   c. Click Edit.
   d. In Standard Object Permissions, click on the following permissions to these objects:

<table>
<thead>
<tr>
<th>Object</th>
<th>Permissions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cases</td>
<td>Read, Create</td>
</tr>
<tr>
<td>Contacts</td>
<td>Read</td>
</tr>
<tr>
<td>Questions</td>
<td>Read, Create</td>
</tr>
<tr>
<td>Account</td>
<td>Read</td>
</tr>
</tbody>
</table>

   e. Click Save.

Configuring a Force.com Site for Chatter Answers

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

**Note:** Configuring a Force.com site is recommended for self-service communities.

Configure a Force.com site for Chatter Answers to host a domain and publicly display some of your Salesforce data, such as questions, replies, and Salesforce Knowledge articles.

1. From Setup, enter Sites in the Quick Find box, then select Sites.
2. Click Edit next to the name of the site you want to configure for Chatter Answers.
3. Click Active to activate the site. You can activate the site after you’ve finished setting up Chatter Answers.
4. In Active Site Home Page, choose a Visualforce page as the home page for your site.
5. Click Save.
6. Click Edit on the Site Visualforce Pages related list.
   a. Use the Add and Remove buttons to enable the following Visualforce pages for your site:
      - ChatterAnswersAgentView
      - ChatterAnswersChangePassword
      - ChatterAnswersForgotPassword
      - ChatterAnswersForgotPasswordConfirm
      - ChatterAnswersHelp
      - ChatterAnswersLogin
      - ChatterAnswersRegistration
   b. Click Save.
7. Click Public Access Settings to grant guest users (unauthenticated, non-Customer Portal users) access to cases, questions, and Salesforce Knowledge articles.
   a. Click Edit on the profile for Chatter Answers users.
   b. In Standard Object Permissions, click Read on Cases and Questions.
   c. Optionally, if you want articles to display in Chatter Answers, click Read on articles types in Article Type Permissions.
   d. Click Save.
8. Click Edit next to a category group in the Category Group Visibility Settings related list to grant users access to the categories so that they can browse questions, replies, and Salesforce Knowledge articles.
   a. Next to Visibility, click All Categories.
   b. Click Save.
9. Return to the site and select its name from Setup by entering Sites in the Quick Find box, then selecting Sites.
10. Click Login Settings to enable user authentication for the site.
    a. Click Edit.
    b. In Enable Login For, choose the Customer Portal you created for Chatter Answers.
c. Click Save.

After you configure your Force.com site for Chatter Answers, you can replace the default Visualforce pages that make up your community with customized ones. The Visualforce pages are automatically set to your site’s URL so that portal users can navigate to them.

**Note:** To make your site’s page URLs short and easy to remember, you can use the Chatter Answers URL rewriter. The following pages use the URL rewriter:

- ChatterAnswersHelp
- ChatterAnswersLogin
- ChatterAnswersRegistration
- ChatterAnswersForgotPassword

Chatter Answers is also compatible with custom URL rewriters for sites.

1. From Setup, enter Sites Settings in the Quick Find box, then select Sites Settings.
2. Click Edit next to a site.
3. Choose the pages to replace. If you replace the Change Password Page, the Change Password Page for your site is automatically updated too.
4. Click Save.

**Note:** Internet Explorer 8 users receive a security warning if you customize with URLs that don’t include https://.

Configuring Cases for Chatter Answers

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Configure case features for Chatter Answers so that cases are created, escalated, and accessed by the appropriate users of your Chatter Answers zones.

1. Set your organization-wide sharing defaults to **Private on Account**, **Controlled by Parent on Contact**, and **Private on Case** to prevent users from accessing each other’s information.
2. Set field-level security on **Question** on cases to **Visible** for profiles assigned to your Customer Portal so that users can access their private questions.
3. Update **Origin** on cases with the value in the Question trigger so that support agents can see which cases originated from Chatter Answers.
4. Create a case assignment rule where Case Origin equals the value of Chatter Answers so that cases created from private questions are assigned to support agents.
5. Grant high-volume portal users access to cases so that they can access their private questions on Chatter Answers.

SEE ALSO:
- Setting Up Chatter Answers

Setting Q&A Tab Visibility

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Set the visibility of the Q&A tab to **Default On** so that support agents can view, search, filter, and moderate questions posted to your Chatter Answers zones.

1. From Setup, enter **Profiles** in the Quick Find box, then select **Profiles**.
2. Select a support agent profile.
3. Depending on which user interface you’re using, do one of the following:
   - Enhanced profile user interface—in the **Find Settings...** box, enter the name of the tab you want and select it from the list, then click **Edit**.
   - Original profile user interface—Click **Edit**, then scroll to the Tab Settings section.
4. Specify the visibility of the Q&A tab to **Default On**.
5. (Original profile user interface only) To reset users’ tab customizations to the tab visibility settings that you specify, select **Overwrite users’ personal tab customizations**.
6. Click **Save**.

**SEE ALSO:**
- Setting Up Chatter Answers

### Assigning Data Categories to Chatter Answers

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Assign a data category group to Chatter Answers so that it’s available to all of your Chatter Answers zones. You configure each zone with a top-level data category (topic) in which customers and support agents can categorize and filter questions and knowledge articles.

1. From Setup, enter **Data Category Assignments** in the Quick Find box, then select **Data Category Assignments** under Chatter Answers.
2. Click **Edit**.
3. Select a category group.
4. Click **Save**.

**Note:** Each zone in Chatter Answers can be associated with a top-level category. For a zone to be visible to a customer, the customer’s user profile must have visibility to that zone’s top-level data category. In addition, if a customer has visibility to child data categories but not to the top-level data category associated with a zone, the zone won’t be visible to them.

**SEE ALSO:**
- Setting Up Chatter Answers
- Data Categories in Salesforce.com

### Editions

**Available in:** Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

### User Permissions

To assign data categories to Chatter Answers:
- “Customize Application”
Configure Salesforce Knowledge for Chatter Answers

- **Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

To display Salesforce Knowledge articles in your Chatter Answers zones, you must:

1. **Implement Data Categories** (if you haven’t done so already).
2. **Implement Salesforce Knowledge** (if you haven’t done so already).
3. Configure both for Chatter Answers.

You configure each zone with a top-level data category (topic) in which customers and support agents can categorize and filter questions and knowledge articles.

1. If you use role-based data category visibility, set the Default Data Category Visibility to **All Categories** so that customers not included in your organization’s role hierarchy, such as high-volume portal users, can access categories that include questions and Salesforce Knowledge articles.
   Alternatively, use permission sets or profiles to set data category visibility.
2. **Create one category group for all of your communities** so that you’re less likely to reach the limit of three active data categories. Then add a child category for each community; and add child categories to those categories to provide topics.
3. **Activate the category group you want available to Chatter Answers** so that users can access it.
4. **Grant “Read” permissions to specific article types** on the profiles of Chatter Answers users so that they can access articles from your zones.
5. **Optionally, allow support agents to promote replies to draft articles in the knowledge base** so that your support team can capture useful information quickly.

Adding Chatter Answers to a Portal

- **Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

You can add Chatter Answers to an existing Customer Portal or Partner Portal so that portal users can access Chatter Answers zones from one of your established channels. After users log in to one of your portals, they can access Chatter Answers from a tab and choose which zone to view from a drop-down list. If you only want to display Chatter Answers in your portals, then you don’t need to set up a Force.com site to host Chatter Answers. However, a site lets guest users access some Chatter Answers data without a login, whereas portals do not.

The following occurs to Chatter Answers when it appears in a portal:
Chatter Answers displays as a tab, which you can rename.

A drop-down list lets portal users switch between all of your Chatter Answers zones.

The **My Settings** link for users is replaced by **Enable Emails** and **Disable Emails**.

**Sign In** and **Sign Up** are removed because portal users can only view Chatter Answers after they’ve logged in to your portal.

Chatter Answers displays a look and feel, which you can’t customize.

The **Need help?** link is removed.

If you display Chatter Answers with a Visualforce page on a portal, the option for users to switch zones in a portal isn’t available.

Add Chatter Answers to a Customer Portal

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

You can add Chatter Answers to an existing Customer Portal so that portal users can access Chatter Answers zones from one of your established support channels.

1. Enable Chatter Answers for portals:
   a. From Setup, enter **Chatter Answers Settings** in the Quick Find box, then select **Chatter Answers Settings**.
   b. Click **Edit**.
   c. Select **Show Chatter Answers in Portals**.
   d. Click **Save**.

2. Edit Customer Portal user profiles to support Chatter Answers.
   Using the enhanced profile user interface, follow these steps:
   a. From Setup, enter **Profiles** in the Quick Find box, then select **Profiles**.
   b. Click **Edit** next to a portal user profile.
   c. In the Apps section of the page, select **Object Settings**.
   d. On the Object Settings page, select **Q&A**.
   e. In Tab Settings, select **Default On**.
   f. Click **Save** and navigate back to the Objects Settings page.
   g. Select **Questions and Answers**, and in the Object Permissions section select **Read** and **Create**.
   h. Click **Save**.

   Using the original profile interface, follow these steps:
   a. From Setup, enter **Profiles** in the Quick Find box, then select **Profiles**.
   b. Click **Edit** next to a portal user profile.
   c. In Tab Settings, select **Default On** for **Q&A**.
d. In Standard Object Permissions, select Read and Create on Questions.
e. Click Save.

3. Add the Chatter Answers User feature license to Customer Portal users:
a. From Setup, enter Users in the Quick Find box, then select Users.
b. Click Edit next to a portal user.
c. In the General Information area, select Chatter Answers User.
d. Click Save.

4. Add Chatter Answers as a tab to your Customer Portal:
a. From Setup, enter Customer Portal Settings in the Quick Find box, then select Customer Portal Settings.
b. Click the name of a Customer Portal.
c. Click Customize Portal Tabs.
d. Select Q&A and click the Add arrow to move it into the Selected Tabs box.
e. Click Save.

5. Optionally, rename the Q&A tab for your Customer Portal:
a. From Setup, enter Rename Tabs and Labels in the Quick Find box, then select Rename Tabs and Labels.
b. Click Edit next to Questions.
c. Click Next.
d. In Other Labels, rename Q&A. You can only rename it as Singular, not Plural.
e. Click Save.

SEE ALSO:
Adding Chatter Answers to a Portal

Adding Chatter Answers to a Partner Portal

Note: Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

You can add Chatter Answers to an existing Partner Portal so that portal users can access Chatter Answers zones from one of your established partner channels.

1. Enable Chatter Answers for portals:
a. From Setup, enter Chatter Answers Settings in the Quick Find box, then select Chatter Answers Settings.
b. Click Edit.
c. Select Show Chatter Answers in Portals.
d. Click Save.

2. Edit Partner Portal user profiles to support Chatter Answers:
a. From Setup, enter Profiles in the Quick Find box, then select Profiles.
b. Click **Edit** next to a portal user profile.

c. In the Apps section of the page, select **Object Settings**.

d. On the Object Settings page, select **Q&A**.

e. In Tab Settings, select **Default On**.

f. Click **Save** and navigate back to the Objects Settings page.

g. Select **Questions and Answers**, and in the Object Permissions section select **Read** and **Create**.

h. Click **Save**.

3. Add the Chatter Answers User feature license to Partner Portal users:

   a. From Setup, enter **Users** in the Quick Find box, then select **Users**.

   b. Click **Edit** next to a portal user.

   c. In the General Information area, select **Chatter Answers User**.

   d. Click **Save**.

4. Add Chatter Answers as a tab to your Partner Portal:

   a. From Setup, enter **Partners** in the Quick Find box, then select **Settings**.

   b. Click the name of a Partner Portal.

   c. Click **Customize Portal Tabs**.

   d. Select Chatter Answers and click the **Add** arrow to move the Chatter Answers tab into the Selected Tabs box.

   e. Click **Save**.

5. Optionally, rename the Chatter Answers tab for your Partner Portal:

   a. From Setup, enter **Rename Tabs and Labels** in the Quick Find box, then select **Rename Tabs and Labels**.

   b. Click **Edit** next to Questions.

   c. Click **Next**.

   d. In Other Labels, rename Q&A. You can only rename it as **Singular**, not **Plural**.

   e. Click **Save**.

Adding Chatter Answers to a Portal
Adding a Custom Visualforce Page to Display Chatter Answers

Use a Visualforce page to provide a custom Chatter Answers experience for your customers.

Note: Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

You must have a Visualforce page created that includes either the chatteranswers:allfeeds component or a combination of the following components: chatteranswers:aboutme, chatteranswers:guestsignin, chatteranswers:feedfilter, chatteranswers:feeds, chatteranswers:searchask, chatteranswers:datacategoryfilter.

To add a custom Visualforce page for displaying Chatter Answers:

1. From Setup, enter Tabs in the Quick Find box, then select Tabs to display a list of your organization’s Visualforce tabs.
2. In the Visualforce section, click New to create a new Visualforce tab.
3. Select the Visualforce page you want to use and add details for the other fields on the page.
4. Click Next.
5. Select which user profiles can see the tab.
6. Select the custom apps from which the tab will be available.
7. Click Save.

To add the Visualforce tab as a Community tab, make sure the page is available in the community’s tabs.

To add the Visualforce tab to a Customer Portal, make sure the Visualforce tab is configured to show in the portal.

You don’t need to add the Visualforce tab to a Force.com site. Just make sure that you have created the Visualforce page with Chatter Answers components before you set up the site.

SEE ALSO:

Customizing Chatter Answers using Visualforce Pages
Troubleshooting Chatter Answers Setup

Note: Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

After you set up a Chatter Answers community, you can view a snapshot of all of its configurations on one page so that you don’t have to visit several pages in setup to diagnose issues.

1. From Setup, enter Sites Settings in the Quick Find box, then select Sites Settings.
2. In the Site Snapshot column, click View next to the Force.com site associated with your community.
3. Click ▶ to show or ▼ to hide various settings.
4. Click Go! to go to a specific page in setup where you can change settings.

Example: For example, you can use a site snapshot to see if the Force.com site hosting your community is marked Active or to verify the names of the user profiles assigned to your Customer Portal.

Chatter Answers Users Overview

Note: Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Because Chatter Answers integrates several features with the Customer Portal, managing Chatter Answers users is similar to managing Customer Portal users. Use the following to manage the data and functions that are accessible to Chatter Answers users:

- Profiles, permissions, and access settings determine a user’s permission to perform different functions, such as adding comments to a case.
- User licenses define which profiles and permission sets are available to a user, such as the High Volume Customer Portal (Service Cloud Portal User) or Customer Portal Manager Custom license.
- Feature licenses entitle a user to additional Salesforce features, such as Chatter Answers.
- Field-level security defines which fields users can access, such as fields on Salesforce Knowledge articles.
- Sharing sets let you selectively grant record access to defined groups of high-volume portal users.

Chatter Answers excludes some features typically available to Customer Portal users, such as:

- Ideas
- Groups
- Teams
- Reports
- Content
Set Up and Maintain Customer Support Tools

- Page layouts
- Custom objects
- Delegated external user administration
- Customer Portal role hierarchy (available, but not used)
- Customer Portal sharing rules, except for high-volume portal users

Chatter Answers users can only access the following records from your zone:

- Cases
- Questions
- Replies (answers)
- Salesforce Knowledge articles

Chatter Answers is designed to support one user language for each zone that you create. When you enable Chatter Answers, the Visualforce pages automatically added to your organization inherit your organization’s default language. However, you can change the language attribute on each Visualforce page. Users who self-register for your zone inherit your organization’s default language. Guest users view your zone in the language specified in the Visualforce pages, no matter the language chosen for their browsers.

**Note:**
- Chatter Answers users can’t change their language, timezone, or locale settings.
- Portal users must have the Chatter Answers User feature license to use Chatter Answers. This feature license is automatically assigned to high-volume portal users who self-register for Chatter Answers. You can manually assign the license to users who don’t self-register by editing a user and clicking Chatter Answers User.
- Authenticated Website User profiles don’t have access to Chatter Answers.

Internal users with permission to see Chatter Answers can see all zones in the Q&A tab in their organization. If internal users sign in to a community, they see only those zones associated with that community.

**SEE ALSO:**
- Setting Up Chatter Answers

**Encouraging Participation with Chatter Answers Reputation**

**Note:** Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Tap into the expertise and knowledge of your most active community members by rewarding their activity. By enabling reputations, you let users earn points and ratings that display in hover details over a user’s photo in the feed. As your star posters engage more frequently, they improve the overall content in your community and provide better answers for users who are searching for help with an issue. This means that users who are searching for a solution can be confident that an answer from an expert can be trusted, which means fewer support calls for your organization.

<table>
<thead>
<tr>
<th>EDITIONS</th>
<th>Available in: Salesforce Classic</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chatter Answers is available in: Enterprise, Developer, Performance, and Unlimited Editions.</td>
<td></td>
</tr>
</tbody>
</table>
Users earn points when their posts receive votes or are selected as having resolved the question in any of the zones to which they belong. When they earn enough points, the hover details show their reputation as well as the number of posts and questions they’ve resolved in that zone. Reputation points are calculated separately for each zone, and for the cumulative activity within the entire organization. Users who participate in different zones will have different reputation values for each zone based on their activity in that zone. When users are logged into the internal application, their reputation score is based on their participation in all zones to which they belong.

Chatter Answers comes with the following pre-defined reputation levels that apply to all zones:

<table>
<thead>
<tr>
<th>Name</th>
<th>Points per Level</th>
<th>Color</th>
</tr>
</thead>
<tbody>
<tr>
<td>Newbie</td>
<td>0 – 499</td>
<td>Green</td>
</tr>
<tr>
<td>Smartie</td>
<td>500 – 1999</td>
<td>Blue</td>
</tr>
<tr>
<td>Pro</td>
<td>2000 – 4999</td>
<td>Purple</td>
</tr>
<tr>
<td>All Star</td>
<td>5000+</td>
<td>Orange</td>
</tr>
</tbody>
</table>

To add or edit reputation level names or points per level in any of your zones, use the ChatterAnswersReputationLevel object in the API. You can create up to 25 different reputation levels for each zone. Colors for the different reputation levels can be changed at the style sheet (CSS) level.

Chatter Answers Implementation Tips

Note: Starting in Summer '16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Consider the following information when planning and implementing Chatter Answers.

• We recommend that advanced Salesforce administrators and developers set up and maintain Chatter Answers, as it involves several Salesforce features.
• Before administrators can set up Chatter Answers, their organizations must have implemented Data Categories. If you want Salesforce Knowledge articles to display in your zones, then administrators need to implement Salesforce Knowledge.
• You can customize fields, page layouts, buttons and links, Apex triggers, and validation rules for questions and replies for Chatter Answers from Setup by entering “Chatter Answers” in the Quick Find box, then selecting Chatter Answers and choosing the appropriate setting.
• After you enable Chatter Answers, several items are automatically added to your organization for use with setting up zones:
  – A Q&A tab where internal users and administrators can view and use Chatter Answers. Administrators can rename this tab.
  – Standard permission settings for Questions on user profiles so that you can grant users permissions to questions and replies.
  – Visualforce pages that you can add to a Force.com site, a tab in a Community, or a Customer Portal so that users can register, sign in, and view feed items on a zone.
  – An Apex class named ChatterAnswersRegistration with a method for customizing Account creation for portal users.
  – An Apex trigger for questions named chatter_answers_question_escalation_to_case_trigger so that questions with specified attributes are automatically escalated to cases.
  – A workflow field update named chatter_answers_num_subscriptions_above_ so that when a question is escalated to a case, Priority on questions is updated.
  – Two workflow rules, chatter_answers_no_best_reply_within_time_limit_wf and chatter_answers_num_subscriptions_above_limit_wf, which you can customize and activate so that questions without best replies or questions with a specified number of followers are automatically escalated to cases.
• You can add Chatter Answers to an existing Customer Portal or Partner Portal so that portal users can access Chatter Answers zones from one of your established channels.
• Chatter Answers is designed to support one user language for each zone that you create. When you enable Chatter Answers, the Visualforce pages automatically added to your organization inherit your organization’s default language. However, you can change the language attribute on each Visualforce page. Users who self-register for your zone inherit your organization’s default language. Guest users view your zone in the language specified in the Visualforce pages, no matter the language chosen for their browsers.
• You can rename Customer Support on your zones’ user interface. For example, you can change “Customer Support” to “Acme Support.” Just edit the Customer Support label on the Question object.
• Questions escalated to cases display a Chatter-like feed on case detail pages. The case detail page also includes a Customer View section that lets support agents reply publicly or privately to the thread posted to the zone.
• Case comments marked Public display as private messages from customer support in Chatter Answers. They don’t display to the entire community. For example, if a support agent adds a public case comment, it displays only to the case’s contact private messages in Chatter Answers. Support agents can read all private and public case comments.
• Chatter Answers sends email to users when they:
  – Sign up for an account.
  – Follow a question (answers or comments).
  – Receive an answer or comment to their question.
− Receive a private reply to their question from customer support.

• Internet Explorer 8 users receive a security warning if you customize with URLs that don’t include https://.

• Before you make a zone public, add at least 20 frequently asked questions, answers, or articles. This content will generate conversations.

• Create Salesforce Knowledge articles that contain:
  – Your support organization’s phone number so that customers can contact your support agents directly.
  – Terms and conditions for zone members, such as when support agents might delete customers’ questions and comments.

• Chatter Answers uses the following API objects:
  – Case
  – ChatterAnswersActivity
  – ChatterAnswersReputationLevel
  – Community (Zone)
  – Question
  – QuestionReportAbuse
  – QuestionSubscription
  – Reply
  – ReplyReportAbuse

  Setting Up Chatter Answers

Escalating a Question to a Case in Chatter Answers

If a question in Chatter Answers isn’t resolved or its replies aren’t satisfactory, administrators and trusted community members such as moderators can escalate the question to a case.

Note: Starting in Summer ’16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

After a case is created, the question detail page provides a link to the case for the life of the question. This link also shows the status of the case.

To escalate a question to a case:

1. Click the question title.

2. Click the triangle next to the question to display the drop-down menu, and click Escalate to Case.

Note: This option only appears if the user has permission to create cases. Users created from contacts cannot escalate questions to cases.

3. Update the case fields if you want to change any default values. The question title automatically becomes the case subject.

4. Click Save. You are returned to the question detail page, and the case is now available for the Case Owner to resolve.
Note: Closing the case does not mark the question as resolved, and resolving the question does not close the case. The case and the question must be updated separately.

Chatter Answers Best Practices

Note: Starting in Summer ‘16, Chatter Answers isn’t available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that’s seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter.

Consider the following tips when planning and using Chatter Answers.

• We recommend that you tell support agents that:
  – The Case Origin field lists Chatter Answers on any case converted from a question.
  – If they answer a question privately, they can’t convert it to a public answer.

• We recommend that you assign a support agent to review public questions from the Q&A tab. Agents can’t click Flag next to questions or replies that are spam, hateful, or inappropriate, but they can edit and delete questions or replies from a zones via the Q&A tab if they have the “Delete” permission on questions.

• To moderate many questions quickly, we recommend that support agents review questions from pinned lists on the Salesforce console (this requires adding the Q&A tab to the console’s Navigation tab).

• To see a list of cases converted from questions, we recommend that administrators or support agents create a case view where Case Origin equals Chatter Answers.

• Because photos added to profiles display externally on Chatter Answers, we recommend that support agents choose photos that match their company’s policies and branding.

Salesforce Open CTI Overview

Salesforce CRM Call Center seamlessly integrates Salesforce with third-party computer-telephony integration (CTI) systems. Before the introduction of Open CTI, Salesforce users could only use the features of a CTI system after they installed a CTI adapter program on their machines. Yet such programs often included desktop software that required maintenance and didn’t offer the benefits of cloud architecture. Open CTI lets developers:

• Build CTI systems that integrate with Salesforce without the use of CTI adapters.
• Create customizable SoftPhones (call-control tools) that function as fully integrated parts of Salesforce and the Salesforce console.
• Provide users with CTI systems that are browser and platform agnostic, for example, CTI for Microsoft® Internet Explorer®, Mozilla® Firefox®, Apple® Safari®, or Google Chrome™ on Mac, Linux, or Windows machines.

Developers use Open CTI in JavaScript to embed API calls and processes; Open CTI is only available for use with JavaScript pages. To use Open CTI, developers should have a basic familiarity with:
CTI
JavaScript
Visualforce
Web services
Software development
The Salesforce console
Salesforce CRM Call Center

For information (English only) on customizing and building CTI systems with Open CTI, see the Open CTI Developer’s Guide.

Salesforce CTI Toolkit Overview
Developers use a CTI (computer-telephony integration) toolkit provided by Salesforce to build CTI adapters that integrate Salesforce with third-party CTI systems. The CTI Toolkit helps developers build CTI adapters that Salesforce CRM Call Center users install on their machines so they can use the features of a CTI system through the Salesforce SoftPhone.

There are three versions of the CTI Toolkit. Each version provides users with different Salesforce CRM Call Center functionality. However, Salesforce only distributes CTI Toolkit version 4.0 or higher. The following table lists the functionality available in CTI adapters built with each CTI Toolkit:

<table>
<thead>

- Call Center Overview
- Designing a Custom SoftPhone Layout

### Call Center Overview

Salesforce CRM Call Center seamlessly integrates Salesforce with third-party computer-telephony integration (CTI) systems. After a lightweight CTI adapter program has been installed on a Salesforce user's machine, the user can use the features of a CTI system through the Salesforce SoftPhone, a customizable call-control tool that appears in the footer of the Salesforce console or in sidebar of every Salesforce page.

The SoftPhone allows Salesforce users to:

- Make calls by dialing a number in the SoftPhone, choosing a number in an online directory, or clicking a phone number in any contact, lead, activity, or account
- Receive calls
- Quickly view all Salesforce records that are related to the call, such as contacts, cases, or accounts
- Transfer calls
- Initiate conference calls
- Put callers on hold
- Attach records to calls
- Generate automatic call logs

Administrators can configure Salesforce CRM Call Center by:

- Modifying SoftPhone layouts and assigning them to selected user profiles
- Adding phone numbers to call center directories

Developers can use Salesforce CRM Call Center code libraries to:

- Customize the functionality of existing CTI adapters
- Build new CTI adapters for phone systems that are not yet supported

For information on:

- Working with Salesforce CRM Call Center as a call center user, see [Using the SoftPhone on page 2150](https://developer.salesforce.com) and [Use a SoftPhone with a Salesforce Console on page 3840](https://developer.salesforce.com)

---

**EDITIONS**

Available in: Salesforce Classic

  - Deploying Adapters to Call Center Machines
  - Salesforce CTI Toolkit Overview
  - Tip sheet: Getting Started with your SoftPhone
  - Administrator tip sheet: Getting Started with Setting Up Call Centers
  - Developer guide: CTI Toolkit Developer’s Guide

Setting Up Salesforce CRM Call Center

Before Salesforce users can access Salesforce CRM Call Center features, an administrator must perform the following tasks:

1. Install a computer-telephony integration (CTI) adapter on every call center user machine. Salesforce CRM Call Center features are not available on machines that do not have an adapter installed.

2. Define a new call center record for every CTI system in use at your organization.

3. Assign Salesforce users to the appropriate call center. A Salesforce CRM Call Center user must be associated with a call center to view the SoftPhone user interface.

4. Optionally:
   - Configure call center phone directories with additional directory numbers and updated phone number search layouts.
   - Customize SoftPhone layouts for different user profiles, so that the SoftPhone of a salesperson might show related leads, accounts, and opportunities, while the SoftPhone of a support rep might show related cases and solutions.
   - If you’re using CTI adapters built with version 4.0 of the CTI Toolkit, enable HTTPS for your call center.

Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions

USER PERMISSIONS

To manage call centers, call center users, call center directories, and SoftPhone layouts:
- “Manage Call Centers”
Deploying Adapters to Call Center Machines

Except for call centers built with Open CTI, any machine that uses Salesforce CRM Call Center must have a CTI adapter installed. A CTI adapter is a light-weight software program that controls the appearance and behavior of a Salesforce SoftPhone. The CTI Developer's Toolkit version determines a SoftPhone's functionality.

Because a CTI adapter communicates directly with an individual CTI system, an organization must use a different CTI adapter for each type of CTI system that is in use. For example, if an organization wants to integrate one call center that runs Cisco IPCC Enterprise™ and one call center that runs Cisco IPCC Express™, the organization must have two CTI adapters available. A call center user’s machine only requires the SoftPhone CTI adapter for the call center to which it connects.

To download a SoftPhone CTI adapter, visit AppExchange. Adapter installation packages include both the adapter setup files and a call center definition file that can be used in conjunction with the adapter.

To install a CTI adapter on a single machine, run the CTI adapter’s Setup.exe application as a Windows administrator user.

To deploy a CTI adapter to all the machines in a call center at once, use the .msi file that is packaged with the installer and your preferred Software Management System.

Once a CTI adapter is installed, you can perform the following operations:

- Start the CTI adapter application by clicking Start > Programs > salesforce.com > <Your CTI System Name> Adapter. You can verify that the CTI adapter is running by looking for the icon in the system tray of the computer.
- Stop the CTI adapter application by right-clicking the CTI adapter system tray icon ( ) and choosing Exit.
- Modify CTI adapter log settings by right-clicking the CTI adapter system tray icon ( ) and choosing Logging... In the CTI Log Settings dialog:
  - Select the types of messages that you want to log. Keep log levels at Low - Errors unless you are troubleshooting an issue with your adapter.
  - Specify the location for the two log files that the CTI adapter generates. For more information on these files, see the CTI Toolkit Developer's Guide.

SEE ALSO:

- Setting Up Salesforce CRM Call Center
- Managing Call Center Users
- Administrator tip sheet: Getting Started with Setting Up Call Centers

Call Center Definition Files

A call center definition file specifies a set of fields and values that are used to define a call center in Salesforce for a particular CTI adapter. Salesforce uses call center definition files in order to support the integration of Salesforce CRM Call Center with multiple CTI system vendors.

By default, any CTI adapter installation package includes a default call center definition file that works specifically with that adapter. This XML file is located in the adapter installation directory and is named after the CTI system that it supports. For example, the Cisco IPCC Enterprise™ adapter’s default call center definition file is named CiscoIPCCEnterprise7x.xml.

The first instance of a call center for a particular CTI adapter must be defined by importing the adapter’s call center definition file into Salesforce. Subsequent call centers can be created by cloning the original call center that was created with the import.
If your organization modifies an adapter or builds a new one, you must customize the adapter’s call center definition file so that it includes any additional call center information that is required. For example, if you are building a CTI adapter for a system that supports a backup server, your call center definition file should include fields for the backup server’s IP address and port number. CTI adapters for systems that do not make use of a backup server do not need those fields in their associated call center definition files.

**Note:** Once a call center definition file has been imported into Salesforce, the set of fields that were specified in the file cannot be modified. The values assigned to those fields, however, can be changed within Salesforce.

See the following topics for information about creating and importing a call center definition file:

- To create a call center definition file for a custom CTI adapter, see **Creating a Call Center Definition File** on page 2437.
- To view a sample call center definition file, see **Sample Call Center Definition File** on page 2438.
- To import a call center definition file into Salesforce, see **Importing a Call Center Definition File** on page 2439.

**SEE ALSO:**
- Creating a Call Center
- Cloning a Call Center
- Call Center Definition XML Format
- Required Call Center Elements and Attributes
- Specifying Values for `<item>` Elements
- Administrator tip sheet: Getting Started with Setting Up Call Centers

### Creating a Call Center Definition File

If you have built a custom CTI adapter you must write a call center definition file to support it. Use a text or XML editor to define an XML file according to the guidelines outlined in the following topics:

- Call Center Definition XML Format
- Required Call Center Elements and Attributes
- Specifying Values for `<item>` Elements
- Sample Call Center Definition File

**SEE ALSO:**
- Creating a Call Center
- Sample Call Center Definition File
- Importing a Call Center Definition File
- Cloning a Call Center
- Administrator tip sheet: Getting Started with Setting Up Call Centers
Sample Call Center Definition File

The following XML code makes up a sample call center definition file. For more information on the XML format of a call center definition file, see Creating a Call Center Definition File on page 2437.

```xml
<!--
All sections and items whose name value begins with "req" are required in a valid call center definition file. The sortOrder and label attributes can be changed for all required sections and items except reqGeneralInfo, reqInternalName, and reqDisplayName, in which only the label attribute can be altered.

Note that the value for the reqInternalName item is limited to 40 alphanumeric characters and must start with an alphabetic character. reqInternalName must be unique for all call centers that you define.
-->
<callCenter>
 <section sortOrder="0" name="reqGeneralInfo" label="General Info">
  <item sortOrder="0" name="reqInternalName" label="Internal Name">callCenter001</item>
  <item sortOrder="1" name="reqDisplayName" label="Display Name">My Call Center</item>
  <item sortOrder="2" name="reqDescription" label="Description">Located in San Francisco, CA</item>
  <item sortOrder="3" name="reqProgId" label="CTI Connector ProgId">MyAdapter.MyAdapter.1</item>
  <item sortOrder="4" name="reqVersion" label="Version">4.0</item>
  <item sortOrder="5" name="reqAdapterUrl" label="CTI Adapter URL">http://localhost:11000</item>
 </section>
 <section sortOrder="1" name="ServerInfo" label="CTI Server Info">
  <item sortOrder="0" name="HostA" label="Host A">Host A</item>
  <item sortOrder="1" name="PortA" label="Port A">Port A</item>
  <item sortOrder="2" name="HostB" label="Host B">Host B</item>
  <item sortOrder="3" name="PortB" label="Port B">Port B</item>
  <item sortOrder="4" name="PeripheralID" label="Peripheral ID">1000</item>
 </section>
</callCenter>
```

Importing a Call Center Definition File

To create your first call center for a CTI adapter that was just installed, you can import the adapter's default call center definition file into Salesforce:

1. From Setup, enter Call Centers in the Quick Find box, then select Call Centers.
2. Click Import.
3. Next to the Call Center Definition File field, click Browse to navigate to the default call center definition file in your CTI adapter installation directory. This XML file is named after the type of CTI system that the adapter supports. For example, the Cisco™ IPCC Enterprise adapter's default call center definition file is named CiscoIPCCEnterprise7x.xml. Click Open to enter the path in the Call Center Definition File field.
4. Click Import to import the file and return to the All Call Centers page. The new call center record is listed with the other call centers in your organization.

   **Note:** If you receive the error A call center with this internal name already exists, a call center definition file for this CTI adapter has already been imported into Salesforce. To create additional call center records for this CTI adapter, clone the adapter’s existing call center, or modify the call center definition file to include a different value for reqInternalName.

5. Click Edit next to the name of the new call center to modify the call center’s settings.

To create additional call centers for a particular CTI adapter, see Cloning a Call Center on page 2444.
To define a new call center definition file for a CTI adapter that was customized specifically for your organization, see Creating a Call Center Definition File on page 2437.

SEE ALSO:
- Creating a Call Center
- Managing Call Centers
- Administrator tip sheet: Getting Started with Setting Up Call Centers

Call Center Definition XML Format

A call center definition file consists of three XML elements: callCenter, section, and item. The following list provides details about the properties and attributes of each element:

**callCenter**
This element represents a definition for a single call center phone system. At least one <callCenter> element must be included in every call center definition file. A <callCenter> element consists of one or more <section> elements.

**section**
This element represents a grouping of related data fields, such as server information or dialing prefixes. When a call center is edited in Salesforce, fields are organized by the section to which they are assigned. A <section> element belongs to a single <callCenter> element, and consists of one or more <item> elements.

**Attributes**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Required?</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>sortOrder</td>
<td>Positive Integer</td>
<td>Required</td>
<td>The order in which the section should appear when the call center is edited in Salesforce. For example, a section with sortOrder=&quot;1&quot; comes just before a section with sortOrder=&quot;2&quot;. The values for sortOrder must be non-negative integers, and no numbers can be skipped within a single call center definition. For example, if there are three section elements in a call center definition file, one &lt;section&gt; element must have sortOrder=&quot;0&quot;, one &lt;section&gt; element must have sortOrder=&quot;1&quot;, and one &lt;section&gt; element must have sortOrder=&quot;2&quot;.</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Required</td>
<td>The internal name of the section as defined in the Salesforce database. You can use this value to refer to the section when writing custom adapter or SoftPhone code. Names must be composed of only alphanumeric characters with no white space or other punctuation. They are limited to 40 characters each. Names beginning with req are reserved for required Salesforce sections only (see Required Call Center Elements and Attributes on page 2442). Other reserved words that cannot be used for the name</td>
</tr>
</tbody>
</table>
The name of the section when viewed in Salesforce. Labels can be composed of any string of UTF-8 characters. They are limited to 1000 characters each.

**item**

This element represents a single field in a call center definition, such as the IP address of a primary server or the dialing prefix for international calls. When call centers are edited in Salesforce, each `<item>` element is listed under the section to which it belongs. You can have multiple `<item>` elements in a `<section>` element.

**Attributes:**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Required?</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>sortOrder</td>
<td>Positive Integer</td>
<td>Required</td>
<td>The order in which the item should appear when the call center is edited in Salesforce. For example, an item with <code>sortOrder=&quot;1&quot;</code> comes just before an item with <code>sortOrder=&quot;2&quot;</code>. The values for <code>sortOrder</code> must be non-negative integers, and no numbers can be skipped within a single call center definition. For example, if there are three item elements in a call center definition file, one <code>&lt;item&gt;</code> element must have <code>sortOrder=&quot;0&quot;</code>, one <code>&lt;item&gt;</code> element must have <code>sortOrder=&quot;1&quot;</code>, and one <code>&lt;item&gt;</code> element must have <code>sortOrder=&quot;2&quot;</code>.</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Required</td>
<td>The internal name of the item as defined in the Salesforce database. You can use this value to refer to the item when writing custom adapter or SoftPhone code. Names must be composed of only alphanumeric characters with no white space or other punctuation. They are limited to 40 characters each. Names beginning with <code>req</code> are reserved for required Salesforce sections only (see Required Call Center Elements and Attributes on page 2442). Other reserved words that cannot be used for the <code>name</code> attribute include <code>label</code>, <code>sortOrder</code>, <code>internalNameLabel</code>, and <code>displayNameLabel</code>.</td>
</tr>
</tbody>
</table>
### Description

**label**

**Type:** String  
**Required:** Optional  
**Description:** The name of the item when viewed in Salesforce. Labels can be composed of any string of UTF-8 characters. They are limited to 1,000 characters each.

### Required Call Center Elements and Attributes

There must be one `<section>` that includes `<item>` elements with the following names in every call center definition file:

#### <item> Name  
**Description**  

- **reqInternalName**
  
  Represents the unique identifier for the call center in the database. It must have a `sortOrder` value of 0, and its value must be specified in the call center definition (see Specifying Values for `<item>` Elements on page 2443). A value for `reqInternalName` must be composed of no more than 40 alphanumeric characters with no white space or other punctuation. It must start with an alphabetic character and must be unique from the `reqInternalName` of all other call centers defined in your organization.

- **reqDisplayName**
  
  Represents the name of the call center as displayed in Salesforce. It must have a `sortOrder` value of 1. A value for `reqDisplayName` has a maximum length of 1,000 UTF-8 characters.

- **reqDescription**
  
  Represents a description of the call center. A value for `reqDescription` has a maximum length of 1,000 UTF-8 characters.

- **reqProgId**
  
  Represents the Program ID (progId) of the CTI adapter that should be used for this call center. This value is specified in the default call center definition file that comes bundled with every CTI adapter installer, or in the base COM class of a custom CTI adapter.

- **reqVersion**
  
  Represents the version of the CTI Toolkit with which the adapter was built. This element is available for call centers built with CTI Toolkit versions 3.0 or higher.
### Description

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>reqAdapterUrl</td>
<td>Represents the location of where the CTI adapter is hosted. For example, <a href="http://localhost:11000">http://localhost:11000</a>. This element is available for call centers built with CTI Toolkit versions 4.0 or higher.</td>
</tr>
</tbody>
</table>

You can add additional `<item>` elements to this section if needed.

**SEE ALSO:**
- Creating a Call Center
- Creating a Call Center Definition File
- Call Center Definition XML Format
- Required Call Center Elements and Attributes
- Specifying Values for `<item>` Elements
- Sample Call Center Definition File

### Specifying Values for `<item>` Elements

With the exception of the `reqInternalName` `<item>`, whose value must always be specified in a call center definition file, you can specify `<item>` values either in the call center definition file or in Salesforce once the definition file has been imported.

To specify a value for an `<item>` element in a call center definition file, place the value between the opening and closing tags of the `<item>`. For example:

```xml
<item sortOrder="0" name="reqInternalName" label="Call Center Internal Label">MyCallCenter</item>
```

sets the value of the `reqInternalName` `<item>` to `MyCallCenter`. Note that any `<item>` value other than the value for `reqInternalName` can be edited in Salesforce after the call center definition is imported.

- Sample Call Center Definition File
Creating a Call Center

A call center in Salesforce CRM Call Center corresponds to a single computer-telephony integration (CTI) system already in place at your organization. Salesforce users must be assigned to a call center record before they can use any Salesforce CRM Call Center features.

There are two ways to create a call center record in Salesforce:

- Import a call center definition file into Salesforce. Use this method to create your first call center for a CTI adapter that was just installed.
- Clone an existing call center definition. Use this method to create additional call centers for a particular CTI adapter. For example, if you already have a call center record for a Cisco IPCC Enterprise™ call center based in one location, you can clone that record for a Cisco IPCC Enterprise call center based in another location.

To view a list of call centers that have already been created, from Setup, enter Call Centers in the Quick Find box, then select Call Centers.

SEE ALSO:
- Setting Up Salesforce CRM Call Center
- Call Center Definition Files
- Managing Call Centers
- Displaying and Editing a Call Center
- Managing Call Center Users
- Administrator tip sheet: Getting Started with Setting Up Call Centers

Cloning a Call Center

To create more than one call center for a particular CTI adapter, you can clone an existing one. For example, if you already have a call center record for a Cisco IPCC Enterprise™ call center based in one location, you can clone that record for a Cisco IPCC Enterprise call center based in another location.

To clone a call center:

1. From Setup, enter Call Centers in the Quick Find box, then select Call Centers.
2. Click the name of the call center that you want to clone.
3. Click Clone. This action opens a new call center for editing with the same fields and values as the original call center. Only the Internal Name field is left intentionally blank to allow you to provide a new name. The Internal Name field is limited to 40 alphanumeric characters and must start with an alphabetic character. Internal Name must be unique for every call center defined in your organization. For more information, see Call Center Fields on page 2446.
4. Make any additional changes to the new call center as necessary.
5. Click Save to save the new call center, or click Cancel to return to the All Call Centers page without saving the cloned call center.
Note: If you have read-only access to a field, the value of that field is not carried over to the cloned record.

Displaying and Editing a Call Center

A call center in Salesforce CRM Call Center corresponds to a single computer-telephony integration (CTI) system already in place at your organization. Salesforce users must be assigned to a call center record before they can use any Salesforce CRM Call Center features.

To view call center details:
1. From Setup, enter Call Centers in the Quick Find box, then select Call Centers.
2. Click the name of the call center that you want to view.

From the Call Center Detail page you can:
- Click Edit to modify the properties of the call center.
- Click Delete to erase the call center record from Salesforce. When you delete a call center, all associated directory numbers are also deleted. Any users associated with the call center must be reassigned to another call center to continue using Salesforce CRM Call Center features.
- Click Clone to create a duplicate copy of the call center with the same fields and values as the current call center.
- Click Manage Call Center Users to designate Salesforce users as members of this call center.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Managing Call Centers

A call center in Salesforce CRM Call Center corresponds to a single computer-telephony integration (CTI) system already in place at your organization. Salesforce users must be assigned to a call center record before they can use any Salesforce CRM Call Center features.

To view a list of call centers that have already been created, from Setup, enter Call Centers in the Quick Find box, then select Call Centers. From this page, you can:

- Click the name of a call center to view call center details.
- Click Import to import a call center definition file that you have already created.
- Click Edit next to any call center to modify call center details.
- Click Del next to any call center to erase the call center record from Salesforce. When you delete a call center, all associated directory numbers are also deleted. Any users associated with the call center must be reassigned to another call center to continue using Salesforce CRM Call Center features.

SEE ALSO:
- Setting Up Salesforce CRM Call Center

Call Center Fields

All call centers include the following required fields, though additional fields may be available depending on the content of the call center definition file that was used to create the call center:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Internal Name</td>
<td>Represents the unique identifier for the call center in the database. Internal Name must be composed of no more than 40 alphanumeric characters with no white space or other punctuation. It must start with an alphabetic character and must be unique from the Internal Name of all other call centers defined in your organization. Once a value for Internal Name has been saved for a call center, it cannot be changed.</td>
</tr>
<tr>
<td>Display Name</td>
<td>Represents the name of the call center as displayed in Salesforce. It must have a sortOrder value of 1. Display Name has a maximum length of 1,000 UTF-8 characters.</td>
</tr>
<tr>
<td>Description</td>
<td>Represents a description of the call center. Description has a maximum length of 1,000 UTF-8 characters.</td>
</tr>
<tr>
<td>CTI Connector ProgId</td>
<td>Represents the Program ID (progId) of the CTI adapter that should be used for this call center. This value is specified in the default call center</td>
</tr>
</tbody>
</table>
Every call center in Salesforce CRM Call Center includes a call center directory that allows users to search for phone numbers throughout your organization. You can customize call center directories by:

- Adding additional directory numbers, either to a single call center or to all defined call centers in your organization
- Updating phone number search layouts

SEE ALSO:

- Setting Up Salesforce CRM Call Center
- Managing Call Centers
- Managing Call Center Users
- Administrator tip sheet: Getting Started with Setting Up Call Centers

Adding a Number to a Call Center Directory

To customize call center directories by adding additional directory numbers, either to a single call center or to all defined call centers in your organization:

1. From Setup, enter Directory Numbers in the Quick Find box, then select Directory Numbers. From this page, you can:
   - Click Edit to edit an existing additional directory number.
   - Click Del to delete an existing additional directory number.
   - Click the name of an existing additional directory number to view its details in the Additional Directory Number Detail page. From this page you can click Edit to edit the number, click Delete to delete it, or click Clone to quickly create a new additional directory number with the same information as the existing number.

2. Click New to define a new additional directory number.

3. In the Name field, enter a label that identifies the additional directory number.

4. In the Phone field, enter the phone number, including any international country codes. Dialing prefixes, such as 9 or 1, do not need to be included.
5. In the Call Center field, select the call center directory to which you want to add the new directory number. To add the number to every call center directory in your organization, choose -- Global --.

6. In the Description field, optionally enter text that provides further information about the additional directory number.

7. Click Save to save the number and return to the All Additional Directory Numbers page. Alternatively, click Save & New to save the number and create another.

Tip: If you have a large number of directory numbers to define, use the Data Loader to create them in one step.

SEE ALSO:
- Setting Up Salesforce CRM Call Center
- Customizing a Call Center Directory
- Administrator tip sheet: Getting Started with Setting Up Call Centers

Customizing SoftPhone Layouts

A SoftPhone is a customizable call-control tool that appears to users assigned to a call center with machines on which CTI adapters have been installed. Similar to page layouts, you can design custom SoftPhone layouts and assign them to Salesforce CRM Call Center users based on their user profile. See:

- Designing a Custom SoftPhone Layout
- Assigning a SoftPhone Layout to a User Profile

SEE ALSO:
- Setting Up Salesforce CRM Call Center
- Managing Call Centers
- Administrator tip sheet: Getting Started with Setting Up Call Centers

Designing a Custom SoftPhone Layout

In a SoftPhone layout you can control the call-related fields that are displayed and the Salesforce objects that are searched for an incoming call. To design a custom SoftPhone layout:

1. From Setup, enter SoftPhone Layouts in the Quick Find box, then select SoftPhone Layouts.
2. Click New to create a new SoftPhone layout definition, or click Edit next to the name of an existing layout definition to view or modify it.
3. In the Name field, enter a label that uniquely identifies your SoftPhone layout definition.
4. In the Select Call Type picklist, choose the type of call for which the currently displayed SoftPhone layout should be used. Every SoftPhone layout definition allows you to specify different layouts for inbound, outbound, and internal calls. These three layouts are grouped together in a single SoftPhone layout definition.
5. In the Display these call-related fields section, click Edit to add, remove, or change the order of fields in the currently-displayed SoftPhone layout.
• To add a field to the SoftPhone layout, select it in the Available list and click **Add**.
• To remove a field from the SoftPhone layout, select it in the Selections list and click **Remove**.
• To change the order of a field in the SoftPhone layout, select it in the Selections list and click **Up** or **Down**.

Any changes that you make are automatically updated in the SoftPhone layout preview image on the right side of the page. To hide the Available and Selections lists, click **Collapse**.

Phone-related fields only appear in a user's SoftPhone if a valid value for that field is available. For example, if you add a Caller ID field to the layout of an outbound call, Caller ID will not appear.

6. In the **Display these Salesforce Objects** section, click **Add/Remove Objects** to add, remove, or change the order of links to call-related objects.

7. Below the list of selected objects, click **Edit** next to each **If single `<Object>` found, display** row to specify the fields that should be displayed in the SoftPhone layout if a single record for that object is the only record found. You can add, remove, or change the order of fields.

8. In the **Screen Pop Settings** section (for inbound call types), click **Edit** next to each type of record-matching row to specify which screens should display when the details of an inbound call match or don’t match existing record(s) in Salesforce. The following table describes each record-matching row and its screen pop options:

<table>
<thead>
<tr>
<th>Record-Matching Row</th>
<th>Description</th>
<th>Screen Pop Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Screen pops open within</td>

</tr>
<tr>
<td>-----------------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| Single-matching record      | Use to set the screen pop options for when the details of an inbound call match one existing Salesforce record. | **Don't pop any screen**  
Select if you don't want any screen to display.  

**Pop detail page**  
Select to display the matching record's detail page.  

**Pop to Visualforce page**  
Select to display a specific Visualforce page.  
The CTI adapter passes data from the call to the Visualforce page via a URL.  
This includes at least **ANI** (the caller ID) and **DNIS** (the number that the caller dialed). The URL can pass additional data to the Visualforce page if necessary. |
| Multiple-matching records   | Use to set the screen pop options for when the details of an inbound call match more than one existing Salesforce record. | **Don't pop any screen**  
Select if you don't want any screen to display.  

**Pop to search page**  
Select to display a search page.  

**Pop to Visualforce page**  
Select to display a specific Visualforce page.  
The CTI adapter passes data from the call to the Visualforce page via a URL.  
This includes at least **ANI** (the caller ID) and **DNIS** (the number that the caller dialed). The URL can pass additional data to the Visualforce page if necessary. |

To hide expanded record-matching rows, click **Collapse**.

This section only displays if your CTI adapter was built using the **CTI Developer's Toolkit 2.0 or higher**.
9. Configure SoftPhone layouts for any remaining call types in the Select Call Type picklist.

10. Click Save.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

SEE ALSO:
- Setting Up Salesforce CRM Call Center
- Assigning a SoftPhone Layout to a User Profile
- Administrator tip sheet: Getting Started with Setting Up Call Centers

Assigning a SoftPhone Layout to a User Profile

Once you have defined one or more custom SoftPhone layouts, you can assign them to user profiles:

1. From Setup, enter SoftPhone Layouts in the Quick Find box, then select SoftPhone Layouts.

2. Click Layout Assignment.

3. For each user profile that appears in the page, select the SoftPhone layout that the profile should use. Profiles are only listed in this page if they include users that are currently assigned to a call center, or if they have already been assigned a custom SoftPhone layout.

4. Click Save.

Note: Call center users will see their newly assigned SoftPhone layout the next time they log into Salesforce.

SEE ALSO:
- Setting Up Salesforce CRM Call Center
- Customizing SoftPhone Layouts
- Administrator tip sheet: Getting Started with Setting Up Call Centers
Enabling HTTPS in a Call Center

With CTI adapters built with version 4.0 of the CTI Toolkit, you can specify a secure URL, or one that uses the secure hypertext transfer protocol (HTTPS), for your call center. Using HTTPS provides added security for your call center, and also helps prevent the Mixed Content warnings that can appear in your browser if your Salesforce organization uses the HTTPS protocol but your call center does not.

To enable HTTPS:

1. From Setup, enter Call Centers in the Quick Find box, then select Call Centers.
2. Click the name of a call center.
3. Click Edit.
4. Type the secure URL for your adapter in CTI Adapter URL. For example, https://localhost:11000.
5. Click Save.

**Important:** In addition to specifying a secure URL on the Call Center Settings page, you also need to make changes to the CTI adapter’s configuration file, and create and install a new certificate for the CTI adapter. For more information, see the CTI Toolkit Developer’s Guide.

**Note:** Previous versions of CTI are secure but use Windows® technologies that are different than those in CTI 4.0.

Managing Call Center Users

A Salesforce user cannot view Salesforce CRM Call Center features unless an administrator has assigned the user to a call center. See the following for instructions:

- Adding a User to a Call Center
- Removing a User from a Call Center

Every call center user has access to a set of personal SoftPhone settings that specify:

- Whether the user should be automatically logged into his or her SoftPhone when he or she logs into Salesforce
- How a record should be displayed when it is the only one that matches an incoming call

To change the default personal SoftPhone settings for all new call center users, use the Force.com API.

SEE ALSO:
- Setting Up Salesforce CRM Call Center
- Creating a Call Center
- Managing Call Centers
- Administrator tip sheet: Getting Started with Setting Up Call Centers
Adding a User to a Call Center

To add a user to a call center in Salesforce CRM Call Center:

1. From Setup, enter Call Centers in the Quick Find box, then select Call Centers.
2. Click the name of the call center to which you want to assign the Salesforce user.
3. In the Call Center Users related list, click Manage Call Center Users.
4. Click Add More Users.
5. Specify search criteria to find the Salesforce users who should be assigned to the call center.
6. Click Find to display the list of Salesforce users that meet your search criteria. All users who already belong to a call center are excluded from search results because a user can only be assigned to one call center at a time.
7. Select the checkbox next to each user who should be assigned to the call center and click Add to Call Center.

Alternatively, you can change a particular user's call center in the User Edit page:

1. From Setup, enter Users in the Quick Find box, then select Users.
2. Click Edit next to the name of the user.
3. Modify the Call Center field as appropriate. You can change the user's call center by clicking the lookup icon (🔍) and choosing a new call center, or you can remove the user from his or her current call center by deleting the call center name from the field.

SEE ALSO:
- Setting Up Salesforce CRM Call Center
- Managing Call Center Users
- Creating a Call Center
- Administrator tip sheet: Getting Started with Setting Up Call Centers

Removing a User from a Call Center

To remove a user from a call center in Salesforce CRM Call Center:

1. From Setup, enter Call Centers in the Quick Find box, then select Call Centers.
2. Click the name of the call center from which you want to remove the Salesforce user.
3. In the Call Center Users related list, click Manage Call Center Users.
4. Click Remove next to the name of the user that you want to remove from the call center.

To remove multiple users at once, select the Action checkbox next to each user you want to remove and click Remove Users.

Alternatively, you can change a particular user's call center in the User Edit page:

1. From Setup, enter Users in the Quick Find box, then select Users.
2. Click Edit next to the name of the user.
3. Modify the Call Center field as appropriate. You can change the user’s call center by clicking the lookup icon (🔍) and choosing a new call center, or you can remove the user from his or her current call center by deleting the call center name from the field.

Creating Web-Chat Channels

Live Agent for Administrators

Welcome to Live Agent for administrators! Live Agent is a comprehensive chat solution that makes it easy for your support organization’s agents and support supervisors to assist customers. With Live Agent, your support organization can leverage the comprehensive customer service tools that are available in the Salesforce console while providing real-time chat support.

As an administrator, you can set up and customize Live Agent for your users, including agents and support supervisors. Live Agent is easy to set up and highly customizable. You can enable a suite of features that your agents and supervisors can use to assist customers.

Watch a Demo: Live Agent Configuration
A few major steps are involved in enabling, setting up, and deploying Live Agent in your Salesforce org. Let’s get started.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: Performance Editions and in Developer Edition orgs that were created after June 14, 2012

Live Agent is available in: Unlimited Edition with the Service Cloud
Live Agent is available for an additional cost in: Enterprise and Unlimited Editions

USER PERMISSIONS

To set up Live Agent:
- “Customize Application”

To create user profiles or permission sets:
- “Manage Profiles and Permission Sets”
Create a Basic Live Agent Implementation

Before you customize Live Agent, you need to create the basic Live Agent implementation for your Salesforce org. After you complete the basic setup steps, you’ll have a functioning Live Agent implementation that your agents can use to chat with customers.

Watch a Demo: Live Agent Configuration

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: Performance Editions and in Developer Edition orgs that were created after June 14, 2012

Live Agent is available in: Unlimited Edition with the Service Cloud

Live Agent is available for an additional cost in: Enterprise and Unlimited Editions

USER PERMISSIONS

To set up Live Agent:
- “Customize Application”

To create user profiles or permission sets:
- “Manage Profiles and Permission Sets”
Enable Live Agent

Get started with Live Agent by enabling it for your Salesforce org. After you enable Live Agent, you can customize it.

1. From Setup, enter Live Agent Settings in the Quick Find box, then select Live Agent Settings.
2. Select Enable Live Agent.
3. Click Save.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in:
- Performance Editions and in Developer Edition orgs that were created after June 14, 2012
- Unlimited Edition with the Service Cloud
- Live Agent is available for an additional cost in Enterprise and Unlimited Editions

USER PERMISSIONS

To enable Live Agent:
- "Customize Application"
Create Live Agent Users

Before your users can assist customers with chat, you need to assign the users as Live Agent users. Live Agent users are support agents and supervisors who have the Salesforce permissions to assist customers with chat.

All Live Agent users need the API Enabled administrative permission enabled on their associated profile before they can use Live Agent.

1. From Setup, enter Users in the Quick Find box, then select Users.
2. Click Edit next to a user’s name.
3. Select Live Agent User. If you don’t see this checkbox, verify that your support organization has purchased enough Live Agent feature licenses.
4. Click Save.

After creating users, make sure that you assign them a Live Agent configuration and associate them with the appropriate skills.

Permissions for Live Agent Support Agents

You need to enable a few specific permissions for Live Agent support agents so that they have access to all the tools that they’ll need to provide help to customers.

## Create and Assign Live Agent Skills

Skills identify your agents’ areas of expertise. When you assign an agent to a skill, that agent receives chat requests that are related to the agent’s skill areas. You can also empower your supervisors to assign skills to agents.

1. From Setup, enter *Skills* in the Quick Find box, then select *Skills*.
2. Click **New**.
3. Enter a name for the skill.
   
   For example, you can create a skill that’s called “Accounts” for agents who specialize in questions about customer accounts.

4. In the Assign Users area, select the users whom you want to associate with the skill.
5. In the Assign Profiles area, select the profiles that you want to associate with the skill.
6. Click **Save**.

To enable supervisors to assign skills, enable the “Assign Live Agent Skills to Users” permission on their profiles, or assign it to individual users via a permission set. When supervisors have this permission, they can go to **Setup > Customize > Live Agent Skills** and update the assigned profiles or users under each skill.

### EDITIONS

Available in: Salesforce Classic

Live Agent is available in: Performance Editions and in Developer Edition orgs that were created after June 14, 2012

Live Agent is available in: Unlimited Edition with the Service Cloud

Live Agent is available for an additional cost in: Enterprise and Unlimited Editions

### USER PERMISSIONS

To create skills:
- “Customize Application”

To assign skills (supervisors):
- “Assign Live Agent Skills to Users”
Create Live Agent Configurations

Live Agent configurations define the Live Agent functionality that's available to your agents and support supervisors when agents chat with customers. Create Live Agent configurations to control the functionality of Live Agent in the Salesforce console.

For efficiency, create profiles and users before you create configurations. That way, you can create a configuration and assign it to users and profiles at the same time.

Live Agent configurations enable you to control your users' access to certain Live Agent features. You can create multiple configurations that define Live Agent's functionality for multiple types of users. For example, you might create a configuration specifically for experienced agents that gives them more permissions than new agents have, or you might create a configuration for support supervisors that gives them the permissions that they need to monitor their employees.

1. To get started with creating a configuration, in Setup, enter Live Agent Configurations in the Quick Find box, then select Live Agent Configurations.

2. Click New.

3. Choose the settings for your Live Agent configuration.

4. Click Save.

Live Agent Configuration Settings

Live Agent configuration settings control the functionality that's available to agents and their supervisors while agents chat with customers.

Apply settings when you create or edit a Live Agent configuration.

Basic Information

Configure the basic functionality that's available to agents when they chat with customers.

<table>

</tr>
<tr>
<td>Visitor Blocking Enabled</td>
<td>Indicates whether an agent can block visitors from an active chat within the Salesforce console. See Let Your Agents Block Visitors by IP Address.</td>
</tr>
</tbody>
</table>
Chatlets
Chatlets are tools that are available only to organizations that use Live Agent in the Live Agent console. The Live Agent console is no longer supported, so we don’t recommend setting up chatlets. But don’t worry—if you use Live Agent in the Salesforce console, you don’t need chatlets.

Assign Users
Assign eligible users to the configuration to give them access to Live Agent functionality. Later, you’ll see that you can also assign profiles to a configuration. If a user is assigned a configuration at the profile and user levels, the user-level configuration overrides the configuration that’s assigned to the profile.

⚠️ Warning: Users can be assigned to only one Live Agent configuration at a time. If you assign the same user to a second Live Agent configuration, the system removes that user from the first Live Agent configuration without warning you. So make sure that you know exactly which Live Agent configuration each user should be assigned to!

For example, let’s say that User A is assigned to Live Agent Configuration A. Then, you create Live Agent Configuration B and accidentally assign User A to it. Salesforce automatically removes User A from Live Agent Configuration A and reassigns the user to Live Agent Configuration B without notifying you.

Assign Profiles
Assign eligible profiles to the configuration to give users who are associated with the profiles access to Live Agent functionality. If a user is assigned a configuration at the profile and user levels, the user-level configuration overrides the configuration that’s assigned to the profile.

Supervisor Settings
Supervisor settings determine the Live Agent functionality that’s available to support supervisors. In addition, these settings determine the default filters that apply to the Agent Status list in the supervisor panel.
### Setting | What It Does
--- | ---
Chat Monitoring Enabled | Indicates whether supervisors can monitor their agents’ chats in real time while their agents interact with customers.
Whisper Messages Enabled | Indicates whether supervisors can send private messages to agents while agents chat with customers.
Agent Sneak Peek Enabled | Indicates whether supervisors can preview an agent’s chat messages before the agent sends them to the customer.
Default Agent Status Filter | Determines the default agent status, such as Online, Offline, or Away, by which to filter agents in the supervisor panel. When supervisors view the Agent Status list in the supervisor panel, they see a list of agents who have that status.
Default Skill Filter | Determines the default skill by which to filter agents in the supervisor panel. When supervisors view the Agent Status list in the supervisor panel, they see a list of agents who are assigned to that skill.
Default Button Filter | Determines the default button by which to filter agents in the supervisor panel. When supervisors view the Agent Status list in the supervisor panel, they see a list of agents who are assigned to that button.
Assigned Skills | Determines the skills that are visible to supervisors in the supervisor panel. When supervisors view the Agent Status list in the supervisor panel, they see a list of agents who are assigned to these skills. If you don’t select any skills, the Agent Status list displays agents who are assigned to any skill.

### Chat Conference Settings
Determine whether agents can invite other agents to join them in a customer chat. Chat conferencing lets your agents include multiple agents in a single chat. That way, your agents can help your customers get the solutions that they need without making your customers wait for their chats to be transferred.

**Note:** Chat conferencing does not support the Related Entities panel. If you attempt to use it with chat conferencing, important details might not be saved on your record.

### Setting | What It Does
--- | ---
Chat Conferencing Enabled | Indicates whether agents can invite other agents to join them in customer chats.
Chat Transfer Settings
Determine how agents can transfer chats to other agents.

<table>

<td>Determines the buttons to which agents can transfer chats.</td>
</tr>
<tr>
<td></td>
<td>Agents can transfer chats to available agents who are assigned to those buttons.</td>
</tr>
</tbody>
</table>

Supported Browsers for Live Agent Notifications
Live Agent notifications help agents respond to chats efficiently by alerting agents when certain events occur. The types of chat notifications that are supported are determined by the web browsers your agents use.

Two types of chat notifications are available in Live Agent.

**Chat request notifications**
- Notifies an agent when the agent receives a chat request; available as audio notifications and desktop notifications

**Disconnect notifications**
- Notifies an agent when the agent is disconnected from Live Agent; available as audio notifications only

<table>

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions
Create Live Agent Deployments

A deployment is a place on your company’s website that’s enabled for Live Agent. Create deployments to implement Live Agent and control its functionality on your website.

To customize the chat window that your customers see, you first need to create a Force.com site to host your custom images.

A deployment consists of a few lines of JavaScript that you add to a Web page. Your organization can have a single Live Agent deployment or multiple deployments. For example, if you have a single service center that supports multiple websites, creating a separate deployment for each site enables you to present multiple chat windows to your visitors.

1. From Setup, enter Deployments in the Quick Find box, then select Deployments.
2. Click New.
3. Choose the settings for your deployment.
4. Click Save.
   Salesforce generates the deployment code.
5. Copy the deployment code, and then paste it on each Web page where you want to deploy Live Agent. For best performance, paste the code immediately before the closing body tag (that is, </body>).

   **Note:** If you’re using security zones in Internet Explorer 8 or 9, verify that your deployment and any website that hosts that deployment are in the same security zone. Due to an issue with Internet Explorer, it’s not possible to launch a chat window from a website that’s in a different security zone. For more information on security zones, refer to Internet Explorer help.

Live Agent Deployment Settings

Live Agent deployment settings control the functionality that’s available to agents and their supervisors while agents chat with customers.

Apply settings when you create or edit a Live Agent deployment.

Basic Information

Configure the basic functionality that’s available on a particular Live Agent deployment.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Live Chat Deployment Name</td>
<td>Names the deployment. This deployment name, or a version of it, automatically becomes the Developer Name.</td>
</tr>
<tr>
<td>Developer Name</td>
<td>Sets the API name for the Live Agent deployment.</td>
</tr>
<tr>
<td>Chat Window Title</td>
<td>Sets the name of the chat window as it appears to customers.</td>
</tr>
</tbody>
</table>
### What It Does

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Allow Visitors to Save Transcripts</td>
<td>Indicates whether customers can save copies of their chat transcripts after they finish chatting with an agent.</td>
</tr>
<tr>
<td>Allow Access to Pre-Chat API</td>
<td>Indicates whether developers can access and implement the pre-chat API.</td>
</tr>
<tr>
<td></td>
<td><strong>Warning:</strong> The pre-chat API gives developers access to potentially personal information that customers provide in pre-chat forms, such as the customer's name and email address.</td>
</tr>
<tr>
<td>Permitted Domains</td>
<td>Determines the domains that can host the deployment.</td>
</tr>
<tr>
<td></td>
<td>When using permitted domains:</td>
</tr>
<tr>
<td></td>
<td>• List as many domains as you need to, but only one per line.</td>
</tr>
<tr>
<td></td>
<td>• Use only the domain and subdomain. For example, use xyz.domain.com, domain.com, or <a href="http://www.domain.com">www.domain.com</a>. Don't include http:// or mappings to specific pages within a domain, such as domain.com/page.</td>
</tr>
<tr>
<td></td>
<td>• Make sure that you specify all the domains that you want to allow to host the deployment.</td>
</tr>
<tr>
<td></td>
<td>• To make the deployment usable on any domain, leave the Permitted Domains field empty.</td>
</tr>
</tbody>
</table>

### Chat Window Branding

You can optionally customize your chat windows with custom images by associating your deployment with a Force.com site and its static resources.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Branding Image Site</td>
<td>Determines the Force.com site that's associated with the deployment.</td>
</tr>
<tr>
<td></td>
<td>By associating your deployment with a Force.com site, you can customize your deployment with branding images. Store your branding images as static resources with your Force.com site.</td>
</tr>
<tr>
<td>Chat Window Branding Image</td>
<td>Sets the custom graphic that appears in the customer's chat window.</td>
</tr>
<tr>
<td>Mobile Chat Window Branding Image</td>
<td>Sets the custom graphic that appears in the customer's chat window when the customer accesses chat from a mobile site.</td>
</tr>
</tbody>
</table>

### Permitted Domains and Live Agent Deployments

To enhance security and minimize the number of illegitimate chat requests that you receive, use the permitted domains option when you create Live Agent deployments. There are a few considerations to keep in mind when you use permitted domains.
• List as many domains as you need to, but only one per line.
• Use only the domain and subdomain—for example, xyz.domain.com, domain.com, or www.domain.com. Don’t include http:// or mappings to specific pages within a domain, such as domain.com/page.
• Specify all the domains that you want to allow to host the deployment.
• To make the deployment usable on any domain, leave the Permitted Domains field empty.

Create Chat Buttons

Create chat buttons to enable customers to request a chat with an agent directly from your website. Before you create chat buttons, you need to:

• Create skills. Each chat button is associated with a particular skill or set of skills so that chats that are initiated from the button are routed to the appropriate agents.
• Create a Force.com site and static resources to use custom images for the online and offline versions of your button. If you don’t have a Force.com site, you can specify online and offline button images or text by modifying the code that’s generated when you create a button.

You need to create the buttons that visitors click to start chats. Like a deployment, a button consists of several lines of JavaScript that you copy and paste into Web pages. A single deployment can have multiple buttons; each button enables you to refine the chat experience for visitors. For example, your service deployment might have buttons for personal computer, laptop, or tablet issues. Each button is mapped to a skill or set of skills to ensure that visitors’ inquiries go to only those agents who can solve the visitors’ problems.

1. From Setup, enter Chat Buttons in the Quick Find box, then select Chat Buttons & Invitations.
2. Click New.
3. Select Chat Button from the Type field.
4. Choose the remaining settings for your chat button.
5. Click Save.
6. Copy the button code, and then paste it on each Web page where you’ve deployed Live Agent. Make sure that you paste the code in the area on the page where you want the button to appear.

Tip: Because the code changes with each modification, remember to copy and paste the code each time that you update the button.
Chat Button Settings

Chat button settings control the behavior of the chat buttons that customers use to interact with agents.

Apply settings when you create or edit a Live Agent chat button.

Basic Information

Configure the basic functionality that’s available on a particular Live Agent chat button.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type</td>
<td>Determines the type of button that you want to create.  <strong>Warning:</strong> When you create a chat button to host on your website, you must set this option to Chat Button.</td>
</tr>
<tr>
<td>Name</td>
<td>Names the chat button. This button name, or a version of it, automatically becomes the Developer Name.</td>
</tr>
<tr>
<td>Developer Name</td>
<td>Sets the API name for the chat button.</td>
</tr>
<tr>
<td>Routing Type</td>
<td>Determines how incoming chat requests are routed to agents with the appropriate skills.</td>
</tr>
<tr>
<td>Skills</td>
<td>Associates skills with the button. Incoming chat requests that originate from the button are routed to agents with the skills that you specify.</td>
</tr>
<tr>
<td>Language</td>
<td>Sets the default language for text in the chat window.</td>
</tr>
<tr>
<td>Push Time-Out</td>
<td>Sets the amount of time that an agent has to respond to a chat request before the request times out and is routed to another agent.</td>
</tr>
<tr>
<td>Enable Customer Time-Out</td>
<td>Indicates whether chats are ended if the customer doesn’t respond within a specified period.</td>
</tr>
<tr>
<td>Customer Time-Out (seconds)</td>
<td>Sets the amount of time that a customer has to respond to an agent message before the session ends. The timer stops when the customer sends a message. The timer resets to 0 each time the agent sends a message.</td>
</tr>
<tr>
<td>Customer Time-Out Warning (seconds)</td>
<td>Sets the amount of time that a customer has to respond to an agent message before a warning appears and a timer begins a countdown. The</td>
</tr>
</tbody>
</table>
## What It Does

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>warning disappears (and the timer stops) each time the customer sends a message. The warning disappears (and the timer resets to 0) each time the agent sends message. The warning value must be shorter than the time-out value (we recommend at least 30 seconds).</td>
</tr>
<tr>
<td>Enable Queue</td>
<td>Indicates that queuing is enabled. Queueing allows incoming chat requests to wait in a queue until an agent with the appropriate skills is available to accept the chat.</td>
</tr>
<tr>
<td>Queue Length Per Agent</td>
<td>Determines the number of chat requests per agent that can be placed in the agent’s queue.</td>
</tr>
<tr>
<td>Overall Queue Length</td>
<td>Determines the maximum number of chat requests that can be placed in the queue.</td>
</tr>
<tr>
<td>Custom Agent Name</td>
<td>Sets the agent’s name as it appears to customers in the chat window.</td>
</tr>
<tr>
<td>Auto Greeting</td>
<td>Sets a customized greeting message that the customer receives automatically when an agent accepts the customer’s chat request.  Optionally, use merge fields to customize the information in your greeting by using the Available Merge Fields tool. For example, you can personalize the chat experience by using merge fields to include the customer’s name in the greeting.</td>
</tr>
</tbody>
</table>

### Chat Button Customization

You can optionally customize your chat button with custom images by associating your deployment with a Force.com site and its static resources.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Site for Resources</td>
<td>Determines the Force.com site that’s associated with the chat button. By associating your button with a Force.com site, you can customize the button with branding images. Store your branding images as static resources with your Force.com site.</td>
</tr>
<tr>
<td>Online Image</td>
<td>Sets the custom button graphic that appears when the chat button is unavailable.</td>
</tr>
<tr>
<td>Offline Image</td>
<td>Sets the custom button graphic that appears when the chat button is available for customers to request new chats.</td>
</tr>
</tbody>
</table>

---

**Note:** If you specify an automatic greeting message in both your Live Agent configuration and in an individual chat button, the message that’s associated with your chat button overrides the message that’s associated with your configuration.
### Setting | What It Does
---|---
Custom Chat Page | Replaces the standard Live Agent chat window with a custom chat window page that you’ve developed. Use this option only to use a chat window other than the default chat window that Live Agent provides.
Pre-Chat Form Page | Directs Live Agent to the Force.com page that hosts your customized pre-chat form that customers see before they begin a chat with an agent.
Pre-Chat Form URL | Directs Live Agent to the URL of the Web page that hosts your pre-chat form.
Post-Chat Page | Directs Live Agent to your customized post-chat page that customers see after they complete a chat.
Post-Chat Page URL | Directs Live Agent to the URL of the Web page that hosts your post-chat page.

### Chat Routing Options
Routing options in Live Agent enable you to specify how incoming chat requests are directed to agents.

| Routing Option | Description |
---|---
Choice | Incoming chat requests are added to the queue in Live Agent in the Salesforce console and are available to any agent with the required skill. |
Least Active | Incoming chats are routed to the agent with the required skill who has the fewest active chats. This option is a push option, which means that incoming chats are routed, or “pushed,” to agents. You can specify the amount of time that an agent has to answer a chat request before it’s routed to the next available, qualified agent. |
Most Available | Incoming chats are routed to the agent with the required skill and the greatest difference between chat capacity and active chat sessions. For example, if Agent A and Agent B each have a chat capacity of five, and Agent A has three active chat sessions while Agent B has one, incoming chats will be routed to Agent B. This option is a push option, which means that incoming chats are routed, or “pushed,” to agents. You can specify the amount of time that an agent has to answer a chat request before it’s routed to the next available, qualified agent. |
Chat Queuing Options

Queuing options in Live Agent let you control how incoming chat requests are handled when no agents are available.

For each Live Agent chat button or invitation that you create, you can enable queuing to put incoming chat requests on hold if no agents with the required skills are available to accept the requests. You can also specify the maximum number of requests in a queue. By enabling queues and setting limits for them, you can control how incoming chat requests are handled, which helps agents manage chat backlogs.

With queuing enabled, your company can accept incoming chat requests even when agents are at capacity, and you can specify the maximum number of requests to accept. This helps agents work effectively and limits the amount of time that customers spend waiting to chat.

The way that chat queuing works is determined by chat routing options. Routing options are set through your chat button or automated invitation. See Chat Routing Options to learn more about how you can route chats to the right agents.

Let’s look at how queuing and routing options work together:

<table>
<thead>
<tr>
<th>Queuing Option</th>
<th>With This Routing Option</th>

### Customize Your Live Agent Branding with Force.com Sites

To customize your Live Agent implementation with branding images, use a Force.com site to upload the images for your chat window and chat buttons.

To customize your chat window and chat buttons, you need to create one or more Force.com sites and then upload the images that you want to use as static resources. Static resources enable you to upload content that you can reference in a Visualforce page. Each static resource has its own URL that Salesforce uses to access the images when the chat window loads.

1. Create a Force.com site to host your images.
   
   When you create a Force.com site for your Live Agent deployment, you need to provide only the following information:
   
   • A site label and site name
   • A site contact
   • The active site’s home page
   • A site template

2. Upload your branding images as static resources.
Customize Your Live Agent Implementation

After you set up your basic Live Agent implementation, customize it with solutions that are appropriate for your agents, supervisors, and customers. Live Agent offers several options for customizing your implementation declaratively, which means that no coding is required.

Create Live Agent Objects
The first step towards getting your Live Agent implementation up and running is to create the necessary objects in Salesforce.

Set Visibility for Live Agent Users
Choose how your Live Agent users can view the Supervisor Tab and Live Agent Sessions using Profiles and Permission Sets.

Set Privacy Options for Live Agent Users
Protect your agents and the customers they assist by blocking sensitive data and unwanted visitors.

Create Live Agent Objects

The first step towards getting your Live Agent implementation up and running is to create the necessary objects in Salesforce.

Create Automated Chat Invitations
Set up automated chat invitations that appear as animated pop-ups on your website to invite customers to chat with an agent.

Pre-Chat Forms and Post-Chat Pages
Pre-chat forms and post-chat pages in Live Agent enable you to exchange information with customers who contact your company through chat.

Create Quick Text Messages
Quick Text messages enable agents to include standardized notes with case updates and to send common responses to customers without having to type the responses each time. Create custom messages for your agents to use when they email and chat with customers.
Create Automated Chat Invitations

Set up automated chat invitations that appear as animated pop-ups on your website to invite customers to chat with an agent.

Before you create automated invitations, you need to:

- Create skills. Each chat button is associated with a particular skill or set of skills so that chats that are initiated from the button are routed to the appropriate agents.
- Create a Force.com site and static resources to use custom images for the online and offline versions of your button. If you don’t have a Force.com site, you can specify online and offline button images or text by modifying the code that’s generated when you create a button.

Automated invitations can be set to trigger based on certain criteria, such as whether a customer remains on a Web page for more than a specified amount of time. Invitations can be associated with specific skills, which ensures that customers will be routed to the appropriate agent when they accept an invitation to chat.

1. From Setup, enter Chat Buttons & Invitations in the Quick Find box, then select Chat Buttons & Invitations.
2. Click New.
3. Under Type, select Automated Invitation.
4. Click Save.
5. Copy the invitation code, and then paste it on each Web page where you’ve deployed Live Agent. Make sure that you paste the code in the area on the page where you want the invitation to appear.

Tip: Because the code changes with each modification, remember to copy and paste the code each time that you update the invitation.

Automated Invitation Settings

Automated invitation settings control the behavior of the invitations that are sent to your customers to prompt them to chat with agents while they visit your website.
Automated Invitation Settings

Automated invitation settings control the behavior of the invitations that are sent to your customers to prompt them to chat with agents while they visit your website.

Apply settings when you create or edit a Live Agent automated invitation.

**Basic Information**

Configure the basic functionality that’s available on a particular Live Agent chat button.

<td>Allow invitation to be triggered again after rejecting</td>
<td>Indicates whether the invitation can be sent to the customer again after the customer has rejected a previous invitation.</td>
</tr>
<tr>
<td>Animation</td>
<td>Determines the type of animation for your invitation. Depending on which animation you choose, you’ll be prompted to select the positions where the invitation will appear on-screen to customers.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Animations won’t render for agents using Internet Explorer versions 9 and below.</td>
</tr>
</tbody>
</table>

### Invitation Customization

You can optionally customize your invitation with custom images by associating your deployment with a Force.com site and its static resources.
## Setting

### Site for Resources
Determines the Force.com site that's associated with the invitation. By associating your invitation with a Force.com site, you can customize the invitation with branding images. Store your branding images as static resources with your Force.com site.

### Online Image
Sets the custom button graphic that appears when the invitation is unavailable.

### Offline Image
Sets the custom button graphic that appears when the invitation is available for customers to request new chats.

### Custom Chat Page
Replaces the standard Live Agent chat window with a custom chat window page that you’ve developed. Use this option only to use a chat window other than the default chat window that Live Agent provides.

### Pre-Chat Form Page
Directs Live Agent to the Force.com page that hosts your customized pre-chat form that customers see before they begin a chat with an agent.

### Pre-Chat Form URL
Directs Live Agent to the URL of the Web page that hosts your pre-chat form.

### Post-Chat Page
Directs Live Agent to your customized post-chat page that customers see after they complete a chat.

### Post-Chat Page URL
Directs Live Agent to the URL of the Web page that hosts your post-chat page.

## Sending Rule
Create sending rules for your invitation to determine when to trigger and send the invitation to customers. You can include multiple criteria in your sending rule. Additionally, if your sending rule requires more complicated logic, you can apply Boolean operators to your sending rule.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Criteria</td>
<td>Sets the criteria to be evaluated by the sending rule. For example, you can create a rule that sends the invitation based on how many seconds a customer has been viewing a Web page.</td>
</tr>
<tr>
<td>Operator</td>
<td>Sets the operator to evaluate your criteria. For example, you can create a rule that sends the invitation when a customer has been on a page for more than a specified number of seconds.</td>
</tr>
<tr>
<td>Value</td>
<td>Sets the value to evaluate the formula against. For example, you can create a rule that sends the invitation when a customer has been on a page for more than 30 seconds.</td>
</tr>
</tbody>
</table>
Pre-Chat Forms and Post-Chat Pages

Pre-chat forms and post-chat pages in Live Agent enable you to exchange information with customers who contact your company through chat.

Pre-chat forms and post-chat pages offer a standardized way of collecting information from customers who contact your company through chat. These forms and pages also offer a standardized way of sharing information with customers after their chat sessions are finished. In addition, by using these forms and pages, you can customize the chat experience for your users.

By using pre-chat forms, you can collect information from a customer, such as a name or a description of a problem, after the customer requests to chat with an agent. This information can help direct chat requests efficiently and can reduce the amount of time that agents need to spend collecting information before beginning a chat session. You can also use this information to customize a customer’s experience while the customer chats with an agent, such as including the customer’s first name in the chat window.

By using post-chat pages, you can share information with customers at the end of a chat session. For example, you can direct your customers to another Web page after they complete a chat with an agent, and you can forward them to a survey about their chat experience.

You have to create pre-chat forms and post-chat pages programmatically, using Live Agent’s APIs. For information on creating customized pre-chat forms and post-chat pages, see the Live Agent Developer’s Guide (English only).

Create Quick Text Messages

Quick Text messages enable agents to include standardized notes with case updates and to send common responses to customers without having to type the responses each time. Create custom messages for your agents to use when they email and chat with customers.

1. Click the Quick Text tab.
2. Click New.
3. If you have more than one Quick Text record type, select a record type for the new message, and then click Continue.
4. Type a message name.
5. Type the message. It can include line breaks, lists, and special characters and can be up to 4,096 characters.
6. Click Available Merge Fields to display the merge field selector.
7. Select the channels in which you want the message to be available.
   Depending on which features are enabled in your organization, these channels might be available.
   - Email—the Case Feed Email action
   - Live Agent—Live Agent in the Salesforce console
   - Portal—a community or a customer portal
   - Phone—the Case Feed Log a Call action
   - Internal—the Case Feed Change Status action
8. Select a category.
9. Optionally, select a subcategory.

10. Click Save.

Tip: Click Test and Verify Merge Fields to view a sample of the quick text, populated with data from records that you choose.

Set Up Quick Text

Set Visibility for Live Agent Users
Choose how your Live Agent users can view the Supervisor Tab and Live Agent Sessions using Profiles and Permission Sets.

Set Visibility for the Supervisor Tab through Profiles
The Live Agent supervisor panel is your supervisors’ one-stop shop for finding information about their organizations’ chat buttons and chat agents. Make the Live Agent supervisor tab visible to users who are assigned to specified profiles.

Set Visibility for the Live Agent Sessions Tab through Permission Sets
Session records store information about your agents’ and customers’ interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers. Make the Live Agent sessions tab visible to users who are assigned to specified permission sets.

Set Visibility for the Live Agent Sessions Tab through Profiles
Session records store information about your agents’ and customers’ interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers. Make the Live Agent sessions tab visible to users who are assigned to specified profiles.
Set Visibility for the Supervisor Tab through Profiles

The Live Agent supervisor panel is your supervisors’ one-stop shop for finding information about their organizations’ chat buttons and chat agents. Make the Live Agent supervisor tab visible to users who are assigned to specified profiles.

1. From Setup, enter Profiles in the Quick Find box, then select Profiles.
2. Click Edit next to the profile that you want to give access to the supervisor tab.
3. Set the visibility of the Live Agent supervisor tab to Default On.
4. Click Save.

After you give your users permission to access the Live Agent supervisor tab, set up access to the Live Agent supervisor panel in the Salesforce console.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: Performance Editions and in Developer Edition orgs that were created after June 14, 2012

Live Agent is available in: Unlimited Edition with the Service Cloud

Live Agent is available for an additional cost in: Enterprise and Unlimited Editions

USER PERMISSIONS

To set tab visibility for Live Agent features:
- “Manage Profiles and Permission Sets”
Set Visibility for the Live Agent Sessions Tab through Permission Sets

Session records store information about your agents’ and customers’ interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers. Make the Live Agent sessions tab visible to users who are assigned to specified permission sets.

Alternatively, you can give users access to the Live Agent sessions tab through profiles.

1. From Setup, enter Permission Sets in the Quick Find box, then select Permission Sets.
2. Click the name of a permission set, or create a permission set.
3. Click Object Settings.
4. Click Live Agent Sessions.
5. Click Edit.
6. In Tab Settings, select Available and Visible.
7. Click Save.

EDITIONS
Available in: Salesforce Classic

Live Agent is available in: Unlimited Edition with the Service Cloud
Live Agent is available for an additional cost in: Enterprise and Unlimited Editions

USER PERMISSIONS
To set tab visibility for Live Agent features:
- “Manage Profiles and Permission Sets”
Set Visibility for the Live Agent Sessions Tab through Profiles

Session records store information about your agents’ and customers’ interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers. Make the Live Agent sessions tab visible to users who are assigned to specified profiles.

Alternatively, you can give users access to the Live Agent sessions tab through permission sets.

1. From Setup, enter Profiles in the Quick Find box, then select Profiles.
2. Select a support agent profile.
3. Click Edit.
4. Set the visibility of the Live Agent sessions tab to Default On.
5. Click Save.

Set Privacy Options for Live Agent Users

Protect your agents and the customers they assist by blocking sensitive data and unwanted visitors.

Block Sensitive Data in Chats
Sensitive data rules let you block specific patterns, such as credit card, Social Security, phone and account numbers, or even profanity. You can choose to remove the text or replace it with your preferred characters.

Let Your Agents Block Visitors by IP Address
Help your agents avoid troublesome customers by blocking chats from specified IP addresses.

Create an IP Blocking Rule to Block Chat Visitors
Help your agents avoid troublesome customers by blocking chats from specified IP addresses.
Block Sensitive Data in Chats

Sensitive data rules let you block specific patterns, such as credit card, Social Security, phone and account numbers, or even profanity. You can choose to remove the text or replace it with your preferred characters.

1. In Setup, enter Sensitive Data in the Quick Find box, then select Sensitive Data Rules.
2. Click New.
3. Write each pattern as a JavaScript regular expression (regex), and choose your preferred settings. The regex is case-sensitive.
4. Click Test Your Pattern.
5. Enter some text in the format of the data you want to block, such as 123-45-6789 for a Social Security number.
6. Preview your results to ensure that the rule is working correctly.
7. Select the roles for which you want to enforce this rule.
8. Click Save.

You can block the text from agents, supervisors, customers, or all of these. When a rule is triggered, it logs one or more of these chat transcript events:

- Sensitive data blocked (Agent)
- Sensitive data blocked (Supervisor)
- Sensitive data blocked (Visitor)

Note: Sensitive data is visible while someone’s typing, but it is masked when the person sends it. So if you want to mask customer information from agents, we recommend disabling Agent Sneak Peek (under Setup > Customize > Live Agent > Live Agent Configurations).

Sensitive data rules apply to the auto-greeting and any quick text that you have enabled. They don’t apply to the agent name or other standard text in the chat window.
Let Your Agents Block Visitors by IP Address

Help your agents avoid troublesome customers by blocking chats from specified IP addresses.

You can enable your agents to block chat requests from specified IP addresses while they work in the console. For example, if a customer is using abusive language or sending spam messages, the agent can block that user from starting a new chat.

An agent action blocks chats from an individual IP address.

Blocked visitors will see a message indicating that chat isn’t available.

If a customer attempts to request a chat from a blocked IP address, the chat won’t enter a queue, nor will it be routed to agents. In addition, you can modify or delete blocking rules.

1. In Setup, enter Live Agent Configurations in the Quick Find box, then select Live Agent Configurations.
2. Click Edit next to the configuration that you want to modify.
3. Under Basic Information, select Visitor Blocking Enabled.
4. Click Save.

As a Salesforce admin, you can also block individual IP addresses. Or, if your Salesforce org is receiving spam chats from a particular region, you can block entire IP ranges. See Create an IP Blocking Rule for more information.
Create an IP Blocking Rule to Block Chat Visitors

Help your agents avoid troublesome customers by blocking chats from specified IP addresses. You can block chat requests from specified IP addresses. For example, if a customer is using abusive language or sending spam messages, you can block that user from starting a new chat. If your Salesforce org is receiving spam chats from a particular region, you can block entire ranges of IP addresses.

Blocked visitors will see a message indicating that chat isn’t available.

If a customer attempts to request a chat from a blocked IP address, the chat won’t enter a queue, nor will it be routed to agents. In addition, you can modify or delete blocking rules.

1. In Setup, enter Block Visitors in the Quick Find box, then select Block Visitors. For guidelines on entering valid IP ranges, see Set Trusted IP Ranges for Your Organization.

2. Click New and fill in the parameters of your Blocking Rule.

3. Click Save.

You can also enable your agents to block chat requests from specified IP addresses while they work in the console. See Let Your Agents Block Visitors by IP Address for more information.

For guidelines on entering valid IP ranges, see Set Trusted IP Ranges for Your Organization.
Set Up Live Agent in the Salesforce Console

After you set up and customize your basic Live Agent implementation, add it to the Salesforce console so that your agents and supervisors can start using chat to assist customers. Additionally, you can set up some other features in the Salesforce console to create an even more robust chat experience for your agents and your customers.

Add Live Agent to the Salesforce Console
Adding Live Agent to the Salesforce console enables agents and supervisors to chat with customers and access other customer service tools in one place.

Set Up Chat Answers from Knowledge Articles
If your organization uses Salesforce Knowledge, you can enable your agents to answer customer questions by using information from your knowledge base. Set up chat answers on articles so that agents can search for articles from Live Agent in the Salesforce console and include the information in chats.

Add the Supervisor Panel to the Salesforce Console
Add the supervisor panel to the Salesforce to make your support supervisors’ work easier. That way, supervisors can access information about their agents without having to switch between workspaces.
Add Live Agent to the Salesforce Console

Adding Live Agent to the Salesforce console enables agents and supervisors to chat with customers and access other customer service tools in one place.

Before you add Live Agent to a Salesforce console app, you need to create a Salesforce console app if you don't have one set up.

After you set up Live Agent, add it to a Salesforce console app. After Live Agent is set up in the console, your agents can interact with chat customers. With the Salesforce console, your agents and supervisors can access Live Agent and other Service Cloud products in one place to provide customers fast and efficient customer service.

1. From Setup, enter Apps in the Quick Find box, then select Apps.
2. Click Edit next to the name of the Salesforce console app in which you want to set up Live Agent.
3. Select Include Live Agent in this App.
4. Choose the records or pages that you want to open as subtabs of chat sessions in the chat workspace.
5. Optionally, if your Salesforce org has Knowledge enabled, select Include Suggested Articles from Knowledge in Live Agent to display the Knowledge One widget in the chat workspace.
6. Click Save.

You can run multiple Salesforce apps at the same time. However, if you log in to another Salesforce app while you’re logged in to a Salesforce console app, you can’t accept new chat requests.

SEE ALSO:
Salesforce Console
Set Up Chat Answers from Knowledge Articles

If your organization uses Salesforce Knowledge, you can enable your agents to answer customer questions by using information from your knowledge base. Set up chat answers on articles so that agents can search for articles from Live Agent in the Salesforce console and include the information in chats.

To give support agents the ability to include information from Knowledge articles in chat sessions by using the Knowledge One widget, you need to add a custom field that’s called “Chat Answer” to article types. This field stores information from the article that’s appropriate to share with customers during a live chat. Using this field can be helpful for articles that are too long for an agent to include easily in a response.

Create the custom field as a Text, Text Area, or Text Area (Long). The Rich Text Field option is not supported. You need to add this custom field to each article type that contains information that you want operators to access from the Knowledge One widget.

1. From Setup, enter Knowledge Article Types in the Quick Find box, then select Knowledge Article Types.
2. Create or edit an article type.
3. Click New in the Fields related list.
4. Select Text, Text Area, or Text Area (Long).
   Don’t select Text Area (Rich).
5. Click Next.
6. Enter Chat Answer in Field Label.
   Make sure that Field Name is populated automatically with Chat_Answer. (You can use a different name for the Field Label.)
7. Click Next.
8. Specify security settings, and then click Next.
   Make the Chat Answer field visible to authors, editors, and live chat agents. Hide it from portal users or other users who don’t need access to it.
9. Select Yes, add this custom field to the layout, and then click Save.
Add the Supervisor Panel to the Salesforce Console

Add the supervisor panel to the Salesforce to make your support supervisors’ work easier. That way, supervisors can access information about their agents without having to switch between workspaces.

1. In Setup, enter Apps in the Quick Find box, then select Apps.
2. Click Edit next to the Salesforce console app that you want to add the supervisor panel to.
3. In the Choose Navigation Tab Items section, add Live Agent Supervisor to the Selected Items list.
4. Click Save.

Live Agent Console

The Live Agent console is a legacy feature that agents could use to chat with customers before Spring ’13. Salesforce no longer supports the Live Agent console. If your support organization still uses it, we recommend migrating to Live Agent in the Salesforce console as soon as possible, because the Live Agent console will eventually be discontinued.

To upgrade to Live Agent in the Salesforce console, see Live Agent for Administrators. The Salesforce Help walks you through the end-to-end process of setting up Live Agent in the Salesforce console, including implementing and customizing it for your Salesforce org.
Live Agent Console Limitations

The Live Agent console provides only limited access to some features and doesn’t include Live Agent features that were released after Spring ’13.

To upgrade to Live Agent in the Salesforce console, see Live Agent for Administrators. The Salesforce Help walks you through the end-to-end process of setting up Live Agent in the Salesforce console, including implementing and customizing it for your Salesforce org.

Agent Features

The Live Agent console doesn’t provide support for some of the agent features that agents use during chats in the Salesforce console.

Supervisor Features

The Live Agent console was originally designed only for agents’ interactions with customers. As a result, the Live Agent console doesn’t support any supervisor features that are supported in the Salesforce console.

Omni-Channel for Administrators

Omni-Channel is a comprehensive customer service solution that lets your call center route any type of incoming work item—including cases, chats, or leads—to the most qualified, available agents in your organization. Omni-Channel integrates seamlessly into the Salesforce console.

Omni-Channel is a flexible, customizable feature, and you can configure it declaratively—that is, without writing code. Use Omni-Channel to manage the priority of work items, which makes it a cinch to route important work items to agents quickly. Manage your agents’ capacity to take on work items so that they’re given only the number of assignments that they can handle. You can also define which agents can work on different types of assignments. For example, you can create one group of agents to respond to leads and sales inquiries, and another group that helps customers with support questions.

Best of all, Omni-Channel routes all these assignments to the correct agents automatically. Agents no longer have to pick and choose work assignments manually from a queue, which saves everyone in your call center time, effort, and brainpower. Because it’s easier for agents to work on their assignments, they can assist your customers faster and more effectively and close assignments more quickly.

Let’s get started!

Get to Know Omni-Channel: Walkthrough

Set up Omni-Channel to push work to the most skilled and available agents in real-time.

Get to Know Omni-Channel: Walkthrough

Set up Omni-Channel to push work to the most skilled and available agents in real-time.

Welcome to Omni-Channel!

Omni-Channel enables your contact center to push work to the most qualified, available support agent in your organization in real time. Let’s take a high-level tour of how to set up Omni-Channel for your contact center.

Walk through it: Get to Know Omni-Channel

Here’s what the walkthrough covers: Enable Omni-Channel and create Service Channels, Routing Configurations, Queues, Presence Statuses, and Presence Configurations.
Create Omni-Channel Objects

The first step towards getting your Omni-Channel implementation up and running is to create the necessary objects in Salesforce.

Enable Omni-Channel
Enable Omni-Channel to gain access to the objects that you’ll need to set up the feature in your organization.

Create Service Channels
Service channels let you turn nearly any Salesforce object such as a case, lead, SOS session, or even a custom object into a work record. Omni-Channel then plucks these work items from their queues like flowers from the garden of agent productivity and routes them to your agents in real time.

Create Routing Configurations
Routing configurations determine how work items are routed to agents. Use them to prioritize the relative importance and size of work items from your queues. That way, the most important work items are handled accordingly, and work is evenly distributed to your agents. To start routing work items to agents, create routing configurations and assign them to queues.

Associate Routing Configurations and Agents with Queues
Queues are a classic element of Salesforce that help your teams manage leads, cases, and custom objects. Omni-Channel supercharges your queues to be able to route work items to your agents in real time. Agents don’t have to select work items manually from queues because Omni-Channel routes work items to agents automatically and in real time!

Create Presence Configurations
Let’s focus on agents for a minute. Presence configurations determine how much work agents can take on and what Omni-Channel behaviors they can access while they assist customers. Your organization can have multiple configurations for different groups of agents who support different channels.

Create Presence Statuses
Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline.

Enable Omni-Channel
Enable Omni-Channel to gain access to the objects that you’ll need to set up the feature in your organization.

1. From Setup, enter Omni-Channel Settings in the Quick Find box, then select Omni-Channel Settings.
2. Select Enable Omni-Channel.
3. Click Save.
Create Service Channels

Service channels let you turn nearly any Salesforce object such as a case, lead, SOS session, or even a custom object into a work record. Omni-Channel then plucks these work items from their queues like flowers from the garden of agent productivity and routes them to your agents in real time.

Service channels let you manage sources of work and their priority compared to other work items. After you create service channels, you’ll associate them with queues, which determine how work items are routed to your agents. You can create service channels for support channels, such as cases or SOS calls, or for sales channels, such as leads.

1. In Setup, enter Service Channels in the Quick Find box, select Service Channels, then click New.
2. Specify the settings for your service channel.
3. Click Save.

**Service Channel Settings**

Customize your service channel settings to define how your organization receives work from various sources, such as chat, email, SOS calls, or social channels.

**Supported Objects for Omni-Channel**

Omni-Channel turbocharges your agents’ productivity by assigning records to them in real time. But which objects and records does Omni-Channel support?

---

**Setting** | **What It Does**
--- | ---
Service Channel Name | Names the service channel. This service channel name, or a version of it, automatically becomes the API Name.
API Name | Sets the API name for the service channel.
Salesforce Object | The type of Salesforce standard or custom object that’s associated with this service channel. For example, if you have a service channel for Web cases set the Related Object Type to Case. For a complete list of objects that service channels support, see Supported Objects for Omni-Channel.
Custom Console Footer Component | (Optional) Opens the specified custom console footer component when an agent accepts a work item request. For example, open a marketing campaign widget when an agent accepts a lead.
Supported Objects for Omni-Channel
Omni-Channel turbocharges your agents’ productivity by assigning records to them in real time. But which objects and records does Omni-Channel support?
Omni-Channel currently supports routing for the following objects and records.
- Cases
- Chats
- SOS video calls
- Social posts
- Orders
- Leads
- Custom objects

Create Routing Configurations
Routing configurations determine how work items are routed to agents. Use them to prioritize the relative importance and size of work items from your queues. That way, the most important work items are handled accordingly, and work is evenly distributed to your agents. To start routing work items to agents, create routing configurations and assign them to queues.
Create a routing configuration for each service channel in your organization. After you create routing configurations, associate them with queues so your agents can receive work after we get Omni-Channel set up.

1. In Setup, enter Routing in the Quick Find box, select Routing Configurations, then click New.
2. Specify the settings for your routing configuration.
3. Click Save.

Routing Configuration Settings
Customize your routing configuration settings to define how work items are pushed to agents.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Routing Configuration Name</td>
<td>Names the service routing configuration. This routing configuration name, or a version of it, automatically becomes the Developer Name.</td>
</tr>
</tbody>
</table>
### Setting

| Developer Name | Sets the API name for the service channel. |

### Routing Settings

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Routing Priority</td>
<td>The order in which work items from the queue that are associated with this routing configuration are routed to agents. Objects in queues with a lower number are routed to agents first. For example, if you set the priority for highly qualified leads to 1 and the priority for less qualified leads to 2, highly qualified leads are routed and assigned to agents before less qualified leads. On the backend, we identify agents with available capacity; then we assign work to them based on this priority order: 1. The priority of the queue from which the work item came 2. The amount of time that the work item has been waiting in the queue 3. Members of the queue who are available to receive new work items from the queue When the work item is assigned to an agent, the owner of the object changes from the queue to the agent. If an agent declines the work item, we reassign it back to the queue with its original age so that it can be properly rerouted.</td>
</tr>
<tr>
<td>Routing Model</td>
<td>Determines how incoming work items are routed to agents who are assigned to the configuration’s service channel.</td>
</tr>
<tr>
<td>Push Time-Out (seconds)</td>
<td>Sets a time limit for an agent to respond to an item before it’s pushed to another agent.</td>
</tr>
</tbody>
</table>

### Work Item Size

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Units of Capacity</td>
<td>Indicates the amount of an agent’s overall capacity that’s consumed when the agent is assigned a work item from queues that are associated with this configuration. The Capacity setting in the presence configuration the agent is assigned to determines the agent’s overall capacity. When the agent is assigned a work item from the queue that’s associated with this configuration, the Capacity Weight is subtracted from the agent’s overall capacity. Agents can be assigned work items until their overall capacity reaches 0.</td>
</tr>
</tbody>
</table>
**Setting** | **What It Does**
--- | ---
You can select a Capacity Weight or a Capacity Percentage, but not both.

**Percentage of Capacity**

The percentage of an agent’s overall capacity that’s consumed when the agent is assigned a work item from queues that are associated with this configuration.

The agent’s overall capacity is determined by the Capacity setting in the presence configuration that the agent is assigned to. When the agent is assigned a work item from the queue that’s associated with this configuration, the Capacity Percentage is deducted from the agent’s overall capacity until the agent has 0% capacity remaining.

You can select a Capacity Weight or a Capacity Percentage, but not both.

---

**Omni-Channel Routing Model Options**

Specify how incoming work items are directed to agents using Omni-Channel.

In Omni-Channel, work items are automatically routed or “pushed” to agents who are assigned to the appropriate queue.

<table>
<thead>
<tr>
<th>Routing Option</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Least Active</strong></td>
<td>Incoming work items are routed to the agent with the least amount of open work. When work items consume 1 capacity, the agent with the lowest number of work items receives incoming work. The example presents a scenario in which agents have work with varying capacity impacts.</td>
<td>• Agent A and Agent B each have an overall capacity of 5.&lt;br&gt;• Agent A has 3 active work items with capacity impact of 1. Agent B has 1 active work item with capacity impact of 4.&lt;br&gt;• Because Agent A has a lower capacity impact than Agent B, incoming work items are routed to Agent A.</td>
</tr>
<tr>
<td><strong>Most Available</strong></td>
<td>Incoming work items are routed to the agent with the greatest difference between work item capacity and open work items. Capacity is determined by the presence configuration that the agent is assigned to.</td>
<td>• Agent A and Agent B each have an overall capacity of 5.&lt;br&gt;• Agent A has 3 active work items while Agent B has 1.&lt;br&gt;• Because Agent B has the most open capacity,</td>
</tr>
</tbody>
</table>
**Associate Routing Configurations and Agents with Queues**

Queues are a classic element of Salesforce that help your teams manage leads, cases, and custom objects. Omni-Channel supercharges your queues to be able to route work items to your agents in real time. Agents don’t have to select work items manually from queues because Omni-Channel routes work items to agents automatically and in real time!

The work items in the queue are assigned the priority that you specified in the routing configuration that you created earlier. If your organization already uses them, you can reuse queues that are available in your organization. That way, you can route work items in real time to the agents who are assigned to those queues.

If your organization doesn’t use queues, create at least one to integrate with Omni-Channel. You can also create multiple queues to handle the different types of work items. For example, you might create one queue for incoming cases and another queue for incoming leads.

For routing to work correctly, assign each of your agents to the queue from which they are receiving work items.

For more information about queues, see “Queues Overview” in the Salesforce Help.

1. In Setup, enter Queues in the Quick Find box, then select Queues.
2. Create a queue or edit an existing one.
3. In the Routing Configuration field, look up the routing configuration that you want to associate with the queue.
4. In the Queue Members section, add agents to the Selected Users field.
   
   These agents will receive work items from this queue.
5. Click Save.

**Create Presence Configurations**

Let’s focus on agents for a minute. Presence configurations determine how much work agents can take on and what Omni-Channel behaviors they can access while they assist customers. Your organization can have multiple configurations for different groups of agents who support different channels.

When you enable Omni-Channel in your organization, Salesforce creates a presence configuration for you, called the Default Presence Configuration. All your agents are assigned to that configuration automatically. However, you can create a presence configuration and assign individual agents to it to customize Omni-Channel settings for a subset of your agents. If you reassign agents to a custom presence configuration, they’re excluded from the Default Presence Configuration.

1. In Setup, enter Presence in the Quick Find box, select Presence Configurations, then click New.
2. Choose the settings for your presence configuration.
3. Click Save.
Presence Configuration Settings

Customize your presence configuration settings to define the Omni-Channel settings that are assigned to agents.

Basic Information

These settings configure the basic functionality that’s available to agents when they’re signed in to Omni-Channel.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Presence Configuration Name</td>
<td>Names the presence configuration. This configuration name, or a version of it, automatically becomes the Developer Name.</td>
</tr>
<tr>
<td>Developer Name</td>
<td>Sets the API name for the configuration.</td>
</tr>
<tr>
<td>Capacity</td>
<td>Determines the agent’s maximum capacity for work. The size of the work item that you specified in the routing configuration consumes the agent’s capacity.</td>
</tr>
<tr>
<td>Automatically Accept Requests</td>
<td>Automatically accepts work assignments that are pushed to an agent. These work items open automatically in the agent’s workspace, so the agent doesn’t have to accept these work items manually from the Omni-Channel footer widget. If Allow Agents to Decline Requests is enabled, you can’t use this setting.</td>
</tr>
<tr>
<td>Allow Agents to Decline Requests</td>
<td>Allows agents to decline incoming work items. If Automatically Accept Requests is enabled, agents can’t decline requests.</td>
</tr>
<tr>
<td>Update Status on Decline</td>
<td>Automatically changes the agent’s status to the status that you specify when the agent declines a work item. This setting is available only if Allow Agents to Decline Requests is enabled.</td>
</tr>
</tbody>
</table>

EDITIONS

Available in: Salesforce Classic

Omni-Channel is available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions
### What It Does

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Allow Agents to Choose a Decline Reason</td>
<td>Allows agents to choose a reason when declining work assignments.</td>
</tr>
<tr>
<td></td>
<td>This setting is available only if Allow Agents to Decline Requests is enabled.</td>
</tr>
<tr>
<td>Update Status on Push Time-Out</td>
<td>Automatically changes the agent’s status when a work assignment that’s been pushed to them times out.</td>
</tr>
<tr>
<td></td>
<td>This setting is available only if Push Time-Out is enabled.</td>
</tr>
<tr>
<td>Request Sound Enabled</td>
<td>Plays a sound in the agent’s widget when a work request is received.</td>
</tr>
<tr>
<td>Disconnect Sound Enabled</td>
<td>Plays a sound in the agent’s widget when the agent loses connection with Omni-Channel.</td>
</tr>
</tbody>
</table>

### Assign Users

Assign eligible users to the configuration to give them access to Omni-Channel functionality. Later, you’ll see that you can also assign profiles to a configuration. If a user is assigned a configuration at the profile and user levels, the user-level configuration overrides the configuration that’s assigned to the user’s profile.

⚠️ **Warning:** Users can be assigned to only one presence configuration at a time. If you assign the same user to a second presence configuration, the system removes that user from the first presence configuration without warning you. So make sure that you know which presence configuration assignment is required for each user!

For example, let’s say that User A is assigned to Presence Configuration A. Then, you create Presence Configuration B and assign User A to it without realizing that the user was assigned to another presence configuration. Salesforce removes User A from Presence Configuration A and reassigns the user to Presence Configuration B without notifying you.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Available Users</td>
<td>Indicates the users who are eligible to be assigned to the configuration.</td>
</tr>
<tr>
<td>Selected Users</td>
<td>Indicates the users who are assigned to the configuration.</td>
</tr>
</tbody>
</table>

### Assign Profiles

Assign eligible profiles to the configuration to give users who are associated with the profiles access to Omni-Channel functionality. If a user is assigned a configuration at the profile and user levels, the user-level configuration overrides the configuration that’s assigned to the user’s profile.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Available Profiles</td>
<td>Indicates the user profiles that are eligible to be assigned to the configuration.</td>
</tr>
<tr>
<td>Selected Profiles</td>
<td>Indicates the user profiles that are assigned to the configuration.</td>
</tr>
</tbody>
</table>
Create Presence Statuses

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline.

A presence status can encompass one or more channels of work items. For example, you might create a presence status called “Available for Web Support” that includes service channels for chats and emails. When agents are signed in to that presence status, they can receive incoming chats and emails. Genius!

1. In Setup, enter Presence in the Quick Find box, select Presence Statuses, then click New.

2. Choose the settings for your presence status.

3. Click Save.

Presence Status Settings

Customize your presence status settings to define which service channels are assigned to difference statuses. Agents can sign in to Omni-Channel with different statuses depending on the types of work that they’re available to receive.

Basic Information

Use these settings to name your presence status.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Status Name</td>
<td>Names the presence status.</td>
</tr>
<tr>
<td></td>
<td>This presence status name, or a version of it, automatically becomes the API Name.</td>
</tr>
<tr>
<td>API Name</td>
<td>Sets the API name for the presence status.</td>
</tr>
</tbody>
</table>

Status Options

These settings indicate whether agents are online or busy when they use this status.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Online</td>
<td>Lets agents who use this status receive new work items.</td>
</tr>
<tr>
<td>Busy</td>
<td>Lets agents who use this status appear away and indicates that they’re unable to receive new work items.</td>
</tr>
</tbody>
</table>
Service Channels

Assign service channels to your presence status. Agents who sign in with this presence status can receive work items from the channels that you select.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What It Does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Available Channels</td>
<td>Indicates the service channels that are eligible to be assigned to the presence status.</td>
</tr>
<tr>
<td>Selected Channels</td>
<td>Indicates the service channels that are assigned to the presence status.</td>
</tr>
</tbody>
</table>

Set Access to Presence Statuses

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Once you’ve created your Presence Statuses for Omni-Channel, you need to set up how your users will access them. You can set access through permission sets or profiles.

Give Users Access to Presence Statuses with Permission Sets

Make presence statuses available to agents who are assigned to certain permission sets.

Give Users Access to Presence Statuses with Profiles

Make presence statuses available to agents who are assigned to certain profiles.

Give Users Access to Presence Statuses with Permission Sets

Make presence statuses available to agents who are assigned to certain permission sets. Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. You can give users access to presence statuses through permission sets, or alternatively, through profiles.

1. In Setup, enter Permission Sets in the Quick Find box, then select Permission Sets.
2. Click the name of the permission set to which you want to give access to statuses.
3. Click Service Presence Statuses Access.
4. Click Edit.
5. Select the presence statuses that you want to associate with the permission set.
   Agents who are assigned to this permission set can sign in to Omni-Channel with any of the presence statuses that you make available to them.
6. Click Save.

Editions

Available in: Salesforce Classic
Omni-Channel is available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions

Editions

Available in: Salesforce Classic
Omni-Channel is available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions

User Permissions

To set up Omni-Channel:
- “Customize Application”
To modify permission sets:
- “Manage Profiles and Permission Sets”
Give Users Access to Presence Statuses with Profiles

Make presence statuses available to agents who are assigned to certain profiles.

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. You can give users access to presence statuses through profiles, or alternatively, through permission sets.

1. In Setup, enter Profiles in the Quick Find box, then select Profiles.
2. Click the name of the profile to which you want to give access to statuses.
   Don’t click Edit next to the profile name. If you do, you won’t see the correct page section where you can enable statuses.
3. In the Enabled Service Presence Status Access section, click Edit.
4. Select the presence statuses that you want to associate with the profile.
   Agents who are assigned to this profile can sign in to Omni-Channel with any of the presence statuses that you make available to them.
5. Click Save.

Add the Omni-Channel Widget to the Salesforce Console

After you get Omni-Channel all set up for your organization, it’s time to add the Omni-Channel widget to the Salesforce console so that your agents can start receiving work.

The Omni-Channel widget appears in the bottom right corner of the Salesforce console. From there, agents can change their presence status and triage their incoming work assignments.

Note: If your organization uses Live Agent to manage chats, you can either use the Live Agent widget or the Omni-Channel widget to manage chats, but not both. To learn more about managing Live Agent, see Enable Omni-Channel with Your Existing Live Agent Implementation.

1. From Setup, enter Apps in the Quick Find box, then select Apps.
2. Click Edit next to the Salesforce console app that you want to add the Omni-Channel widget to.
3. In the Choose Console Components section, add Omni-Channel to your list of selected items.
4. Click Save.

Control Visible Work Item Details in the Omni-Channel Widget with Compact Layouts

Ever wanted to customize the information that your agents see when they get a new work item in the Omni-Channel widget? You can! Just customize primary compact layout for that work item’s object.
Control Visible Work Item Details in the Omni-Channel Widget with Compact Layouts

Ever wanted to customize the information that your agents see when they get a new work item in the Omni-Channel widget? You can! Just customize primary compact layout for that work item’s object.

If you look closely, you’ll notice that a few fields are visible by default on new work item requests. For example, if your agent receives a request to manage a case, the request features the case’s priority, status, and case number by default. An object’s primary compact layout controls all of the visible fields in the Omni-Channel widget. But what if you want to see more information, such as the case’s owner or its subject? Just edit the primary compact layout so that it includes the fields that you want to appear in the widget.

Tip: The Omni-Channel widget is, well, compact, so there’s only so much room to display fields on work item requests. While you can technically put up to 10 fields on a compact layout, the Omni-Channel widget will only display 4 fields. As a best practice, select up to 4 of the most important fields that you want to expose on work item requests, then add those to your compact layout.

1. Decide which object’s compact layout you want to edit.
2. From the management settings for the object whose work item you want to edit, select Compact Layouts, and then select New. For example, to edit the compact layout for cases, go to the object management settings for cases, select Compact Layouts, then select New.
3. Select the settings for your compact layout, including the fields that you want it to include. The fields that you pick appear in the Omni-Channel widget when an agent receives a request.
4. Click Save.
5. Change the primary compact layout to your new layout by clicking Compact Layout Assignment > Edit Assignment.
6. Select your new compact layout from the Primary Compact Layout drop-down list.
7. Click Save.

Test Your Omni-Channel Implementation

Now that you’ve got Omni-Channel set up and enabled, test your implementation to make sure it’s working correctly.

To test your implementation, route a work item to yourself through the Salesforce console.

1. Log in to the Salesforce console.
   Make sure that you log in as a user who’s enabled to use Omni-Channel. For the sake of testing the feature, make sure that you’re the only agent who’s signed in to Omni-Channel.
2. In the Omni-Channel widget, change your status so that you can receive incoming work items.
3. In the console, navigate to the record that corresponds to your current presence status’s channels. For example, if you’re logged in with a status that’s called “Available for Cases,” navigate to a list of your open cases in the console. We’ll assume that your “Available for Cases” status is associated with a cases service channel. After all, it wouldn’t make much sense if your “Available for Cases” status made you available for, say, leads, would it?
4. Select the checkbox next to the record that you want to route to yourself.
5. Click Change Owner. You’ll be redirected to the Change Case Owner page.

6. Select Queue from the Owner list.

7. Enter the name of the queue that you associated with your routing configuration.

Sit back and relax. You’ll see an incoming request notification in the Omni-Channel widget within a few seconds.

Enable Omni-Channel with Your Existing Live Agent Implementation

Are you loving Live Agent and want to add Omni-Channel to the mix? Here’s what changes for you and your organization (and not for your agents!).

So, you’ve decided to take your customer service to the next level by using Live Agent and Omni-Channel in tandem. That’s great! Once everything’s set up, you’ll find that the two work together in perfect harmony. In the meantime, there are a few things you need to know before you start managing chat traffic with Live Agent in Omni-Channel.

Live Agent is powered by Live Agent Configurations, which control the behaviors and settings that are available to Live Agent users. Similarly, Omni-Channel uses Presence Configurations to control the behaviors and settings that are available to Omni-Channel users. You can integrate Live Agent with Omni-Channel so chats are routed just like other work items. Your agents are then able to accept or reject chat requests right from the Omni-Channel widget.

**Note:** When you enable both Live Agent and Omni-Channel, chat capacity is managed through Presence Configurations along with other work items. Chats routed through Omni-Channel are always assigned 1 unit of capacity. Keep this in mind when you configure your chat agents’ capacity in your Presence Configurations.

When you integrate Live Agent and Omni-Channel, your Live Agent users also become Omni-Channel users, so your chat agents need to be associated with both a Live Agent Configuration and a Presence Configuration. Luckily, Salesforce does some of the heavy lifting for you when you enable Omni-Channel with your current Live Agent implementation. For each Live Agent Configuration that you already have in your organization, Salesforce creates a corresponding Presence Configuration for you. If you have multiple Live Agent Configurations in place, Salesforce creates a different Presence Configuration for each Live Agent Configuration.

Let’s say you already have Live Agent enabled, and you have 20 agents who handle chats. These agents are assigned to a Live Agent Configuration.
When you enable Omni-Channel, Salesforce creates a new Presence Configuration for you that corresponds to your Live Agent Configuration. Salesforce automatically assigns all 20 of your chat agents to the new Presence Configuration. That way, there’s no disruption to your agents’ workflow when you enable Omni-Channel, and they can start accepting chats through the Omni-Channel widget in the console right away.

Reference

How Does Omni-Channel Routing Work?

Do data models make your heart skip a beat? Want to understand the ins and outs of how Omni-Channel routes work items to your agents? Then we have a treat for you. Omni-Channel pushes work items to the right agent at the right time so that your support team can efficiently help customers with their problems. But how does routing work under the hood? Let’s dive in.

Omni-Channel routes work through two separate processes.

- First, when a new work item is assigned to an Omni-Channel queue, Omni-Channel attempts to route it to an agent. Omni-Channel routes work items by the priority of the queue that they’re assigned to, so the most important work items are pushed to agents first. Next, items are routed based on how long they’ve been sitting in the queue. The oldest work items are pushed to agents before more recent ones. (We’ll get into the details of how that happens in a minute.)

- Second, when an agent’s ability to receive work changes (perhaps they come back from “away” status, or they finish another work item), Omni-Channel tries to find a work item that can be routed to that agent.

Routing New Work Items

When a work item is created, it gets assigned to a queue. If that queue is associated with a Routing Configuration, it’s added to a list of items that are still waiting to be routed to agents.

Then Omni-Channel determines which agents are available and how much work each agent is currently working on. This information comes from the UserServicePresence API object, which tracks an agent’s current capacity for work items.

Routing Pending Work Items

When a new work item is added to the list of pending items, Omni-Channel determines whether it can immediately route the work item to an agent.
First, we identify if any agents are online with a Presence Status that’s linked to the correct Service Channel. Let’s say your organization receives a new case that’s assigned to an Omni-Channel queue. Omni-Channel determines if there’s a Service Channel for cases. Then we check which agents are online with a status that lets them receive new cases.

<table>
<thead>
<tr>
<th>Scenario</th>
<th>What Happens</th>
</tr>
</thead>
<tbody>
<tr>
<td>No agents are available.</td>
<td>If there isn’t an agent online who has the right status, we keep our work item in the list of items that need to be assigned to an agent.</td>
</tr>
<tr>
<td>Agents are available, but don’t have capacity for new work.</td>
<td>If there are one or more agents who are available, we check to see if any of those agents have the capacity to take on a new work item. If there are no agents with enough capacity for more work, we leave the work item in the list.</td>
</tr>
<tr>
<td>Agents are available and have capacity for more work.</td>
<td>If there are agents that 1) are available and 2) have capacity to work on the item, we check which agent is going to be the proud parent of the work item based on your organization’s routing settings. If your routing configuration uses the Least Active routing model, we look for the agent who currently has the least amount of work compared to other agents who could take on the work item. We then route the work item to that agent. If your routing configuration uses the Most Available routing model, we look for the agent who has the largest gap between the maximum amount of work that they can handle and the amount of work that they are working on. We then route the work item to that agent. But what if there’s a tie between two or more agents? In that case, to the agent who has been waiting the longest amount of time for a new work item. After all, we wouldn’t want anyone on our support staff getting lazy.</td>
</tr>
</tbody>
</table>

When an Agent’s Ability to Receive Work Changes

When an agent logs in to Omni-Channel, finishes a work item, or changes status, Omni-Channel checks to see if there is any work that those agents can take on.

<table>
<thead>
<tr>
<th>Scenario</th>
<th>What Happens</th>
</tr>
</thead>
<tbody>
<tr>
<td>The agent is away.</td>
<td>We move on with our lives without performing any more checks.</td>
</tr>
<tr>
<td>The agent is available, but doesn’t have capacity for work.</td>
<td>We quit while we’re ahead.</td>
</tr>
<tr>
<td>The agent is available and has capacity for more work</td>
<td>We look at the list of work items that are waiting to be routed to an agent. We check to see if the agent is qualified to work on any of the objects, based on how much of the agent’s capacity the objects will take up, and the service channel that’s associated with the agent’s status. For example, if the agent is online with a status that makes them available for cases, we check to see if there are any cases in our list.</td>
</tr>
</tbody>
</table>
**What Happens**

If the list has work items that the agent is qualified to work on, the item with the highest priority is routed to the agent. If two or more items have the same priority, the oldest one is routed.

---

**Rerouting a Work Item**

Sometimes an agent declines a work item or becomes unavailable before the agent can start working on it. In that case, the work item is rerouted until it finds a safe and loving home in the arms of a capable, qualified agent.

First, Salesforce automatically changes the owner of the work item to the queue from which the object was originally routed. We then try to route the work item to a different agent (Agent B) than the agent who declined it (Agent A). However, the work item can be routed to Agent A again if Agent A changes his or her status, or if we attempted to route the work item to Agent B at least once. We do this until our work item finds a safe and loving home in the arms of a capable, qualified agent.

And our agents, their work items, and your customers, live happily ever after.

---

**Supported Objects for Omni-Channel**

Omni-Channel turbocharges your agents’ productivity by assigning records to them in real time. But which objects and records does Omni-Channel support?

Omni-Channel currently supports routing for the following objects and records.

- Cases
- Chats
- SOS video calls
- Social posts
- Orders
- Leads
- Custom objects

---

**Fields for Agent Work Records**

Every time an object is routed to an agent through Omni-Channel, Salesforce creates an Agent Work record that logs information about the work assignment and how it’s routed. Agent Work records contain fields that help you track information about the assignments your agents are working on. If the same work item is routed multiple times, that work item is associated with multiple Agent Work records.

An Agent Work record has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields might not be visible or editable.

<table>
<thead>
<tr>
<th>Field</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accept Date</td>
<td>The date and time that the work item was accepted by an agent.</td>
</tr>
<tr>
<td>Agent Capacity when Declined</td>
<td>The amount of an agent’s capacity that was available when the agent declined the work item.</td>
</tr>
<tr>
<td>Agent Work ID</td>
<td>The Salesforce ID of the Agent Work record.</td>
</tr>
<tr>
<td><strong>Field</strong></td>
<td><strong>Definition</strong></td>
</tr>
<tr>
<td>----------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Assign Date</td>
<td>The date and time that the work item was assigned to an agent and pushed to the agent’s Omni-Channel widget.</td>
</tr>
<tr>
<td>Close Date</td>
<td>The date and time that the agent closed the console tab associated with the work item, setting the Agent Work record’s status to “Closed.”</td>
</tr>
<tr>
<td>Created By</td>
<td>The name of the agent who accepted the work item.</td>
</tr>
<tr>
<td>Created Date</td>
<td>The date that the work item was created.</td>
</tr>
<tr>
<td>Decline Date</td>
<td>The date that an agent declined the work item.</td>
</tr>
<tr>
<td>Last Modified Date</td>
<td>The date the work item was last modified.</td>
</tr>
<tr>
<td>Name</td>
<td>The unique, Salesforce-generated number of the Agent Work record.</td>
</tr>
<tr>
<td>Percentage of Capacity</td>
<td>The percentage of capacity that the work item consumes of the agent’s total, possible capacity.</td>
</tr>
<tr>
<td>Queue</td>
<td>The Salesforce queue from which the work item was routed.</td>
</tr>
<tr>
<td>Request Date</td>
<td>The date and time that the Salesforce object was assigned to the queue, creating the associated work item.</td>
</tr>
<tr>
<td>Service Channel</td>
<td>The Service Channel that’s associated with the work item.</td>
</tr>
<tr>
<td>Speed to Answer</td>
<td>The amount of time in seconds between the time the work item was created (the Request Date) and the time the work item was accepted by an agent (the Accept Date).</td>
</tr>
<tr>
<td>Status</td>
<td>The status of the Agent Work record—including, “Assigned,” “Opened,” “Closed,” or “Declined.”</td>
</tr>
<tr>
<td>Units of Capacity</td>
<td>The number of units of an agent’s capacity that the work item consumes of the agent’s total, possible capacity.</td>
</tr>
<tr>
<td>User</td>
<td>The name of the agent to whom the work item was routed.</td>
</tr>
<tr>
<td>Work Item</td>
<td>The name of the work item that’s associated with the Agent Work record—for example, “Case 123456.”</td>
</tr>
</tbody>
</table>
Fields for User Presence Records

Every time agents change their Presence Statuses in Omni-Channel, Salesforce creates a User Presence record to log all of the agents’ activities while they’re signed logged in with that status. User Presence records contain fields that help you track information about your agents’ availability. A User Service Presence record has the following fields, listed in alphabetical order. Depending on your field-level security settings, some fields might not be visible or editable.

<table>
<thead>
<tr>
<th>Field</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>At Capacity Duration</td>
<td>The amount of time in seconds that the agent was working at 100% of the agent’s capacity, as indicated in the agent’s Presence Configuration.</td>
</tr>
<tr>
<td>Configured Capacity</td>
<td>The agent’s overall capacity, as indicated in the agent’s Presence Configuration.</td>
</tr>
<tr>
<td>Created By</td>
<td>The name of the agent who set the Presence Status in Omni-Channel.</td>
</tr>
<tr>
<td>Created Date</td>
<td>The date when the User Presence record was created.</td>
</tr>
<tr>
<td>Idle Duration</td>
<td>The amount of time in seconds that the agent was assigned no work items.</td>
</tr>
<tr>
<td>Is Away</td>
<td>Indicates whether the agent’s status is a “busy” status.</td>
</tr>
<tr>
<td>Is Current Status</td>
<td>Indicates whether the agent’s Presence Status in the Service Presence Status field is the agent’s current Presence Status.</td>
</tr>
<tr>
<td>Last Modified Date</td>
<td>The date the User Presence record was last modified.</td>
</tr>
<tr>
<td>Service Presence Status</td>
<td>The API name of the Presence Status the agent used to log in to Omni-Channel.</td>
</tr>
<tr>
<td>Status Duration</td>
<td>The amount of time in seconds that the agent’s status was set to the Presence Status indicated by the Status Name field.</td>
</tr>
<tr>
<td>Status End Date</td>
<td>The date and time that the agent logged out of Omni-Channel or changed to another Presence Status.</td>
</tr>
<tr>
<td>Status Start Date</td>
<td>The date and time that the agent set the Presence Status.</td>
</tr>
<tr>
<td>User</td>
<td>The name of the agent who is signed in to Omni-Channel.</td>
</tr>
<tr>
<td>User Presence ID</td>
<td>The autogenerated Salesforce ID of the User Presence record.</td>
</tr>
</tbody>
</table>

**Set Up SOS Video Chat and Screen-Sharing**

Want to connect with your customers in a whole new way? SOS is the Service Cloud’s mobile support solution. With SOS, you can add a help button to your native iOS or Android mobile application so your customers can connect with agents over a one-way video and two-way audio chat.

Gone are the days when your customers had to connect with a nameless, faceless agent over the phone. With one click, your customers can video chat with agents who provide personalized, in-app guidance with screen-sharing and annotations.

**Editions**

Available in: Salesforce Classic

SOS is available for an additional cost in: Enterprise, Performance, Unlimited, and Developer Editions
SOS is integrated into the Salesforce console for the Service Cloud. Your agents can access cases, account records, and customer information quickly and easily during their video calls. Agents can also draw on customers’ screens during an SOS session, giving your customers in-app guidance to solve their problems. Your customers get a comprehensive, personal support experience, and your agents have the information they need in the console to solve customer issues.

Even better, SOS is fully integrated into Omni-Channel, the Service Cloud’s routing engine. Use Omni-Channel to customize how work items—including SOS video calls—are routed to your agents. Route SOS calls to the most available, capable agents in your organization in real time.—no third-party routing engine required!

For more information on integrating SOS into your mobile applications, see the SOS iOS SDK.

Before you set up SOS, enable Omni-Channel in your organization.

1. Assign SOS Licenses to Agents
   Each agent who uses SOS must have an SOS license and be part of a permission set that enables the SOS license.

2. Enable the SOS License
   Use a permission set to enable the SOS license for your users.
3. **Create an SOS Presence Status**
   Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Create a presence status that lets your agents indicate that they're online and available to receive SOS calls.

4. **Give Users Access to SOS Presence Statuses with Permission Sets**
   Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Give SOS agents access to the SOS presence status so they can start receiving SOS calls.

5. **Give Users Access to Your SOS Presence Statuses with Profiles**
   Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Give SOS agents access to the SOS presence status so they can start receiving SOS calls.

6. **Create an SOS Routing Configuration**
   Routing configurations determine how work items are routed to agents. They let you prioritize the relative importance and size of work items from your queues. That way, the most important work items are handled accordingly, and work is evenly distributed to your agents. Create an SOS routing configuration to determine how SOS calls are dispersed to your agents.

7. **Create an SOS Queue**
   Queues are a classic element of Salesforce that help your teams manage leads, cases, service contracts, and custom objects. Omni-Channel supercharges queues to route work items to agents in real time. Create an SOS queue to funnel SOS calls to SOS agents. We'll associate the SOS queue with the SOS routing configuration we created earlier.

8. **Update Your Salesforce Console Settings**
   After you get SOS all set up for your organization, it's time to a few settings in your Salesforce console so that your agents can start receiving work.

9. **Create an SOS Deployment**
   Create an SOS deployment to integrate your SOS settings from Salesforce into your mobile application.

### Assign SOS Licenses to Agents

Each agent who uses SOS must have an SOS license and be part of a permission set that enables the SOS license.

1. From Setup, enter *Users* in the Quick Find box, then select *Users*.
2. Select the user that you want to assign an SOS license to.
3. Click *Permission Set License Assignments*.
4. Click *Edit Assignments*.
5. Check the *Enabled* checkbox for *SOS User*.
6. Click *Save*.

---

**EDITIONS**

Available in: Salesforce Classic

SOS is available for an additional cost in: 
*Enterprise, Performance, Unlimited, and Developer Editions*

**USER PERMISSIONS**

To set up SOS:
- “Customize Application”
Enable the SOS License

Use a permission set to enable the SOS license for your users.

You can add only users who have been assigned the SOS license to the permission set.

1. From Setup, enter Permission Sets in the Quick Find box, then select Permission Sets.
2. Select the SOS permission set.
   If you don’t have an SOS permission set, create one. For User License, select None.
3. Click App Permissions.
4. Click Edit.
5. Select Enable SOS Licenses.
6. Click Save.

Create an SOS Presence Status

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Create a presence status that lets your agents indicate that they’re online and available to receive SOS calls.

A presence status can be associated with one or more channels of work items. Associate the SOS presence status with the SOS service channel. That way, your agents can receive SOS calls when they’re signed in with the SOS presence status.

1. From Setup, enter Presence in the Quick Find box, select Presence Statuses, then click New.
2. Name your status.
   Let’s call our status “Available for SOS.” A version of that name becomes the Developer Name automatically.
3. In the Status Options section, select Online.
4. In the Service Channels section, add SOS to the Selected Channel list.
5. Click Save.
Give Users Access to SOS Presence Statuses with Permission Sets

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Give SOS agents access to the SOS presence status so they can start receiving SOS calls.

Alternatively, you can give users access to presence statuses through profiles.

1. From Setup, enter Permission Sets in the Quick Find box, then select Permission Sets.
2. Click the name of the permission set that contains your SOS agents.
3. Click Service Presence Statuses Access.
4. Click Edit.
5. Select the SOS presence status that we created earlier, “Available for SOS.”
6. Click Save.

Give Users Access to Your SOS Presence Statuses with Profiles

Presence statuses indicate whether an agent is online and available to receive incoming work items, or whether the agent is away or offline. Give SOS agents access to the SOS presence status so they can start receiving SOS calls.

Alternatively, you can give users access to presence statuses through permission sets.

1. From Setup, enter Profiles in the Quick Find box, then select Profiles.
2. Click the name of the profile that contains your SOS agents.
   Don’t click Edit next to the profile name. If you do, you won’t see the correct page section where you can enable statuses.
3. In the Enabled Service Presence Status Access section, click Edit.
4. Select your SOS presence status, “Available for SOS,” to associate it with the profile.
5. Click Save.
Create an SOS Routing Configurations

Routing configurations determine how work items are routed to agents. They let you prioritize the relative importance and size of work items from your queues. That way, the most important work items are handled accordingly, and work is evenly distributed to your agents. Create an SOS routing configuration to determine how SOS calls are dispersed to your agents.

After you create this configuration, we’ll create an SOS queue for your SOS calls. Then, we’ll associate our routing configuration with our SOS queue so that your agents can receive calls after we get SOS set up.

1. From Setup, enter Routing in the Quick Find box, select Routing Configurations, then click New.

2. Name your routing configuration.
   Let’s call our routing configuration “SOS Routing Configuration.” A version of that name becomes the Developer Name automatically.

3. Set your routing priority.
   If SOS calls are the most important or the only work items your agents handle, set your routing priority to 1. That priority ensures that SOS calls are routed to your agents before other types of work items.

4. Select your routing model.

5. Set the value of the Percentage of Capacity field to 100.
   Agents can accept only one SOS call at a time, so SOS calls take 100% of an agent’s capacity.

6. Click Save.

Create an SOS Queue

Queues are a classic element of Salesforce that help your teams manage leads, cases, service contracts, and custom objects. Omni-Channel supercharges queues to route work items to agents in real time. Create an SOS queue to funnel SOS calls to SOS agents. We’ll associate the SOS queue with the SOS routing configuration we created earlier.

The work items in the SOS queue are assigned the priority that you specified in the SOS routing configuration that you created earlier.

For routing to work correctly, assign each of your agents to a queue from which they’ll be receiving work items.

For more information about queues, see “Queues Overview” in the Salesforce Help.

1. From Setup, enter Queues in the Quick Find box, then select Queues.

2. Click New.

3. In the Label field, name your queue.
   Let’s call our queue “SOS Queue.” A version of this name becomes the Queue Name automatically.

4. In the Routing Configuration field, look up and select the routing configuration that you created earlier, “SOS Routing Configuration.”

5. In the Supported Objects section, add SOS Session to the list of selected objects.
6. In the Queue Members section, add each of the agents to whom you want to route SOS calls to the Selected Users field.
7. Click Save.

**Update Your Salesforce Console Settings**

After you get SOS all set up for your organization, it's time to set a few settings in your Salesforce console so that your agents can start receiving work.

You need to add the Omni-Channel and SOS widgets to your console, as well as whitelist the URL `salesforceliveagent.com`.

The SOS and Omni-Channel widgets appear in the footer of the Salesforce console. From the Omni-Channel widget, agents can change their presence status and triage their incoming work assignments, including SOS calls. When an agent accepts an SOS call, the call opens in the SOS widget, where agents can view the customer’s screen.

You also need to whitelist the URL `salesforceliveagent.com` to make sure your calls aren't blocked by your company's firewalls. This ensures that all of your customers’ SOS calls make it safely to your agents.

1. From Setup, enter Apps in the Quick Find box, then select Apps.
2. Click Edit next to the Salesforce console app that you want to add the Omni-Channel and SOS widgets to.
3. In the Choose Console Components section, add Omni-Channel and SOS to your list of selected items.
4. In the Whitelist Domain field, add `salesforceliveagent.com` to the list of whitelisted domains.
5. Click Save.

**Create an SOS Deployment**

Create an SOS deployment to integrate your SOS settings from Salesforce into your mobile application.

When you create an SOS deployment, your deployment is assigned a unique ID number. Your mobile developers use this deployment ID to integrate your SOS settings in Salesforce into SOS in your mobile application.

1. From Setup, enter SOS Deployments in the Quick Find box, then select SOS Deployments.
2. Click New.
3. Choose the settings for your deployment.
4. Click Save.
5. Copy the SOS Deployment ID from the detail page and send it to your mobile developers.

To integrate the SOS deployment with a mobile application, mobile developers use the SOS iOS SDK.

**SOS Deployment Settings**

SOS deployment settings control how your Salesforce SOS settings integrate into your mobile application.
SOS Deployment Settings

SOS deployment settings control how your Salesforce SOS settings integrate into your mobile application.

Apply settings when you create or edit an SOS deployment.

Setting Up the Support Agent Experience

Setting Up a Unified Help Desk

Agent Console in the Console Tab

Setting up the Agent Console

Get started with the Agent console quickly.

Note: As of the Spring ’15 release, Agent console is not available to new organizations.

The newer Salesforce console improves the Agent console by providing you with more options and more advanced technologies. See Salesforce Console.

You can quickly set up the Agent console so that users have all the information they need on one screen when working with Salesforce. To set up the Agent console:

1. Create console layouts to define what objects are available to users in the console’s list view frame.
2. Choose the related objects to show in the mini view.
3. Define mini page layouts to customize the fields and related lists of the objects that display in the console’s mini view.
4. Assign profiles to a console layout to provide users access to specific objects in the console’s list view.
5. Add the Agent console to custom apps so that users can access the console from specific apps.

Note: You can’t add the Agent console to partner portals or customer portals.

Visualforce pages might not display properly in the Agent console, as there is no cross-domain communication between Salesforce and Visualforce domains.

SEE ALSO:

Tip sheet: Using the Console
Create Agent Console Layouts

Note: As of the Spring ’15 release, Agent console is not available to new organizations.

The newer Salesforce console improves the Agent console by providing you with more options and more advanced technologies. See Salesforce Console.

To create a layout for the Agent console:

1. From Setup, enter Console Layouts in the Quick Find box, then select Console Layouts.
2. Click New and optionally choose an existing layout to clone.
3. Enter a name for the new layout.
4. Click Save.
5. Click Edit in the Selected List Views section.
6. To add or remove objects to the layout, select an object, and click the Add or Remove arrow.

To change the order of the objects as they appear in the console's list view frame, select an object in the Selected List box, and click the Up or Down arrow.

A user can only view objects in the console's list view frame if those objects are added to the console layout to which their profile is assigned.

7. Click Save.
8. Next, choose the related objects to show in the mini view of the console.

SEE ALSO:

Managing Console Layouts for the Agent Console

Customizing Agent Console Layouts

To customize layouts for the Agent console:

1. From Setup, enter Console Layouts in the Quick Find box, then select Console Layouts.
2. Select a layout name.
3. To modify the Name or Description of the layout, click Edit in the Console Layout Detail section.
4. To add or remove objects to the layout, click Edit in the Selected List Views section, select an object, and click the Add or Remove arrow.

To change the order of the objects as they will appear in the console's list view frame, select an object in the Selected List box, and click the Up or Down arrow.

A user can only view objects in the console's list view frame if those objects are added to the console layout to which their profile is assigned.

5. Click Save to finish.

SEE ALSO:

Managing Console Layouts for the Agent Console
Deleting Agent Console Layouts

To delete a layout for the Agent console:

1. From Setup, enter Console Layouts in the Quick Find box, then select Console Layouts.
2. Click Del next to the console layout name.

Note: You cannot delete a console layout that is assigned to a profile. You must first reassign the profile to another console layout or no console layout.

SEE ALSO:
Managing Console Layouts for the Agent Console

Managing Console Layouts for the Agent Console

Console layouts define what objects are available to users in the Agent console’s list view frame. For example, if you want users to see list views of cases and contacts in the console, then you would add both cases and contacts to a console layout, and then assign that console layout to the appropriate user profiles. A user can only view objects in the console’s list view frame if those objects are added to the console layout to which their profile is assigned.

From the console layouts list page, accessed in Setup by entering Console Layouts in the Quick Find box, then selecting Console Layouts, you can:

• Click New to create layouts.
• Click Edit to modify a layout.
• Click Del to delete a layout.
• Click Console Layout Assignment to assign console layouts to profiles.

SEE ALSO:
Setting up the Agent Console
Choose Related Objects for the Agent Console’s Mini View

While you can choose which related objects appear in the Agent console’s mini view, you can only choose objects with a lookup or master-detail relationship on the primary object. For example, from the cases object, you can choose account and contact because cases have account and contact lookup fields.

1. From the object management settings for the object whose page layout you want to edit, go to Page Layouts.
   The standard or custom object you choose in this step represents the record in the detail view of the console, and the related objects in the mini view will be records associated with it.

2. Next to a page layout name, click Edit.

3. In the page layout header, click Mini Console View.

4. To select which related objects will be displayed in the mini view, select a field name, and click Add or Remove. You can select objects only if they are defined as lookup relationships and those lookup fields are included on the page layout. To change the order of the related objects in the mini view, select a field name in Selected Relationship Fields, and click Up or Down. Click Save when finished.

5. Click Save.

6. Next, define mini page layouts to specify the fields and related lists to show for the related objects in the mini view.

Tip: The fewer related objects you add to the Agent console’s mini view, the easier it is for users to read the information displayed. The console can also process data faster when fewer related objects are added to the mini view.

Note: You cannot choose related objects for the Close Case Layout or the Log a Case Page and View Cases Page layouts on the Self-Service Portal.

SEE ALSO:

Setting up the Agent Console
Find Object Management Settings
Define Mini Page Layouts for the Agent Console

You can define mini page layouts for the records that appear in the mini view of the Agent console, hover details, and event overlays. A mini page layout contains a subset of the items in an existing page layout. Mini page layouts inherit record type and profile associations, related lists, fields, and field access settings from their associated page layout. The visible fields and related lists of the mini page layout can be further customized, but the other items inherited from the associated page layout can’t be changed on the mini page layout itself.

The event mini page layout is used for the event detail and edit overlays, not the Console tab. Related lists on mini page layouts only display in the Console tab, not hover details.

1. From the object management settings for the object whose page layout you want to edit, go to Page Layouts.

2. Next to a page layout name, click Edit.

3. In the page layout header, click Mini Page Layout.

4. Select which fields and related lists will be displayed for this type of record in the mini view. For each related list you select, choose which fields to display in that related list.
   - You can select all of the available fields and up to five related lists to display in the console; however, it is recommended that you only select a few so that users do not have to scroll to find information.
   - Selected fields and related lists display in the console even when they do not contain content.
   - Fields marked Always Displayed or Always on Layout on page layouts are automatically included on the mini page layout and cannot be removed unless they are removed from the page layout.
   - Field properties on the page layout determine field properties on the mini page layout. For example, if a field is read-only on the page layout, that same field will be read-only on the mini page layout. To change the field properties of fields on the mini page layout, you must change the field properties of fields on the page layout. Note that the console respects field-level security in organizations where it is available.
   - To add or remove fields, select a field name, and click Add or Remove. To change the order of the fields, select a field name in Selected, and click Up or Down. Click Save when finished.
   - The order of related lists on the page layout determines the order of related lists on the mini page layout. To change the order of related lists on the mini page layout, you must change the order of related lists on the page layout, then select the mini page layout and click Save.

5. Click Save.

Note: You can’t define mini page layouts for the Close Case Layout or the Log a Case Page and View Cases Page layouts on the Self-Service Portal.

You can define mini page layouts for the user object; however, you cannot add standard fields or related lists. Also, a customized mini page layout won’t display in the Agent console.

SEE ALSO:
- Setting up the Agent Console
- Find Object Management Settings
Assign Layouts for the Agent Console

After you create console layouts, assign which layouts users see in the Agent console on the console tab. A user’s profile determines which console layout is seen.

To assign console layouts:

1. From Setup, enter Console Layouts in the Quick Find box, then select Console Layouts.
2. Click Console Layout Assignment.
3. Select a console layout to assign to a profile via the drop-down list.
4. Select the Console tab visibility settings for a profile via the drop-down list. You can only select Console tab visibility settings for profiles assigned to a console layout.
5. Click Save.

Note: Enterprise, Unlimited, Performance, and Developer Edition users with the “Customize Application” permission can assign a console layout to a profile via the profile detail page. From Setup, enter Profiles in the Quick Find box, then select Profiles, select a profile name, then click Edit in the Console Settings section.

Managing Console Layouts for the Agent Console

Case Feed

Set Up Case Feed

Prerequisites and Basic Setup

Before you enable and customize Case Feed:

- Decide which actions and tools you need:
  - To use the Email action, set up Email-to-Case.
  - To use the Portal action, set up a customer portal, a partner portal, or Chatter Answers.
  - To use the articles tool, set up Salesforce Knowledge.
- Review how cases are upgraded and know what to expect when you enable Case Feed actions and feed items.

When you’re ready, enable Case Feed actions and feed items.

Note: In organizations created prior to Winter ’14, you also need to:

- Enable Chatter and actions in the publisher.
- Enable feed tracking on cases. On the feed tracking page, turn off tracking for the Status field. This prevents duplicate feed items when agents update a case’s status using the Change Status action.
**Customizing Page Layouts**

Choose what you want to appear on Case Feed page layouts based on your company’s needs and how your support agents work.

- Create layouts for case detail and close case pages and highlights panels.
- Create layouts for feed view pages to specify which actions, fields, and tools agents see when they’re working with cases.

**Giving Users Access**

The easiest way to give users access to Case Feed is to assign them to profiles that use the feed-based case page layouts you create. In organizations created prior to Spring ’14, you may also be able to give users access in two other ways:

- By creating permission sets and assigning them to users
- Through custom profiles

**Setting up Case Feed: Adding More Functionality**

Follow these optional steps to add more functionality to Case Feed.

- To let agents include short, pre-written messages in their emails, set up Quick Text and create Quick Text messages.
- To give agents the option of emailing customers to let them know when questions they’ve posted to a portal have been answered, enable portal email notifications.
- To let agents save email messages as drafts before sending them, and to make it possible to create approval actions for email, enable email drafts.
- Create text, HTML, or Visualforce email templates to help agents save time and increase consistency.
- Create and add custom actions to give agents access to additional functionality.

SEE ALSO:
- Chatter Settings
- Enable Actions in the Chatter Publisher
- Assign Page Layouts from a Customize Page Layout or Record Type Page

**Enable Case Feed Actions and Feed Items**

Enabling Case Feed actions and feed items gives your users access to some standard actions they’ll need when working with cases, such as Email and Change Status, and to feed items related to those actions.

**Note:** In Salesforce orgs created before the Winter ’14 release, you must enable feed tracking on Cases before you can enable the Case Feed actions and feed items. If feed tracking isn’t enabled, then the Enable Case Feed Actions and Feed Items isn’t visible.

In Salesforce organizations created after the Winter ’14 release, feed tracking on cases and Case Feed actions and feed items are automatically enabled.

1. From Setup, enter Support Settings in the Quick Find box, then select Support Settings.
2. Click Edit.
3. Select Enable Case Feed Actions and Feed Items.
4. Click Save.
Once you enable Case Feed actions and feed items, your cases are upgraded to the new user interface automatically. We recommend that you wait until this upgrade process is finished before giving users access to Case Feed.

SEE ALSO:
- Set Up Case Feed
- Case Feed Upgrade Results
- Assign Case Feed to Users
- Enable Feed Updates for Related Records

Create Permission Sets for Case Feed
After you enable Case Feed for your organization, create a permission set to give users access to it.

1. Create a permission set for Case Feed.

   Walk Through It

2. On the Permission Set page, click App Permissions.
3. Select Use Case Feed. Optionally, select any other permissions you want to include in the set.
4. Click Save.
   Tip: If you have an existing permission set, you can edit it to include the Use Case Feed permission.

SEE ALSO:
- Set Up Case Feed
- Assign Case Feed to Users

Assign Case Feed to Users
After you've enabled Case Feed in your organization and created a permission set that includes it, assign that permission set to users.

1. From Setup, enter Users in the Quick Find box, then select Users.
2. Select a user's name.
3. In the Permission Set Assignments list, click Edit Assignments.
4. Select the permission set you want in the Available Permission Sets list, and then click Add.
5. Click Save.

SEE ALSO:
- Set Up Case Feed
- Create Permission Sets for Case Feed

EDITIONS
Available in: Salesforce Classic
Available in: Enterprise, Performance, Unlimited, and Developer Editions

USER PERMISSIONS
To create permission sets:
- "Manage Profiles and Permission Sets"

EDITIONS
Available in: Salesforce Classic
Available in: Enterprise, Performance, Unlimited, and Developer Editions

To change support settings:
- “Manage Cases” AND
  "Customize Application"
Give Users Access to Case Feed through Custom Profiles

Instead of giving users access to Case Feed through permission sets, you can create a custom profile that includes the "Use Case Feed" user permission.

1. Create a new profile.
2. On the Profile page, click Edit.
3. In General User Permissions, select Use Case Feed.
4. Click Save.
5. Assign users to the profile.

Example:

Note: Case Feed is automatically enabled and assigned to all standard profiles in Salesforce organizations created after the Winter ’14 release. To disable Case Feed on a profile, deselect Use Case Feed.

SEE ALSO:
Set Up Case Feed

Case Feed Upgrade Results

When you enable Case Feed for your organization, an upgrade process converts active cases to the new interface and creates feed items for activity on those cases.

During the upgrade process, users won’t notice anything different. After the process is complete, users for whom you’ve enabled Case Feed see existing and new cases in the new interface, while users without Case Feed continue to see traditional cases.

Here’s what happens when cases are upgraded to the new interface:

- The 5000 most recent, active cases in your organization are converted to the Case Feed interface. How long this takes varies depending on the number of cases being converted and the complexity of the data they contain. For example, cases with multiple email messages or other attachments may take longer to convert than other cases.
- Older cases are also upgraded if they have comments, emails, or logged calls that were added to the case within the date range that applies to the original 5000 converted cases. You can have up to 500 cases with current comments, up to 500 with current emails, and up to 500 with current logged calls for a total of 1500 additional converted cases.
- The following items are added to the feed for each case:
  - Up to 60 email messages.
  - Up to 60 private and public comments. These are converted from comments to Chatter posts during the upgrade.
  - Up to 60 logged calls. Some logged calls that were created before you upgraded to Case Feed may appear in the feed as tasks.
- The Case Feed interface is enabled for all new cases, giving users access to the publisher and feed.
- The Case Detail view becomes available, and contains additional information about the case, including items that remain in their current related lists.

You’ll receive an email message once the upgrade process has finished.
Best Practices

• For the smoothest upgrade experience, we recommend enabling Case Feed in a full-copy sandbox organization before you enable it in your production organization. This helps you determine how long the case conversion process takes and lets you review some sample cases in the new user interface.

• After you enable Case Feed in your production organization, wait until the upgrade process has finished to give users access. We recommend first assigning Case Feed to a single user, who can review some of the converted cases to be sure the upgrade process was successful, and then making it available to other users.

Set Up Case Feed
Enable Case Feed Actions and Feed Items

Enable Portal Reply Email Notifications in Case Feed

If your organization uses a portal or community, support agents can use the Community action in Case Feed to respond to customers. Enabling portal reply email notifications gives agents access to the Send Email option in the Community action.

1. From Setup, enter Support Settings in the Quick Find box, then select Support Settings.
2. Click Edit.
3. Select Enable Case Comment Notification to Contacts.
4. Select a template for email notifications.
5. Click Save.

Emails sent to external users include a link to the community. If the user receiving the email is a member of multiple active communities, the link goes to the oldest active community. If the user is already logged in to a community and clicks the link in the email, the link goes to that community. If the user is not a member of any community, the link goes to the internal organization. If the user is a member of a portal and a community, the link goes to the community.

SEE ALSO:
Set Up Case Feed

Highlight Externally Visible Feed Items in Case Feed

You can highlight feed items in Case Feed that are visible to external users. Now support agents can easily distinguish between feed items that are visible only to internal users and items that are visible to external users.

By default, Case Feed doesn’t distinguish feed items according to who can see them.

You must enable both the Enable Community Case Feed and Highlight Externally Visible Feed Items settings for the highlighting to work properly.

When the Enable Community Case Feed and Highlight Externally Visible Feed Items settings are enabled, the following feed items are highlighted in the case feed:

• Public emails sent to or received from the email address for contact person on a case
• Public case comments
Set Up and Maintain Customer Support Tools

Case Feed

- All social posts (such as Facebook posts)
- Questions escalated from Communities
- Tasks that have the All with Access or Public settings
- Events that have the All with Access or Public settings
- Chatter posts that have the All with Access or Public settings

When only Highlight Externally Visible Feed Items is enabled, then the following feed items are highlighted in the case feed:
- Incoming and outgoing email feed items that are sent to, or received from, the email address for the contact person on a case

When only Enable Community Case Feed is enabled, then no feed items are highlighted.

This setting is only available for compact feed.

1. Feed items that are highlighted in orange are visible to external users, such as customers.
2. Feed items that are not highlighted are visible only to internal users, such as support agents.

1. Enable the Highlight Externally Visible Feed Items setting.
   a. From your object management settings for cases, go to Page Layouts.
   b. Select the feed-based page layout that you want to edit, and click Edit.
   c. Scroll to the Feed View settings and select Highlight Externally Visible Feed Items.

2. Enable the Enable Community Case Feed setting.
   a. From your object management settings for cases, go to Support Settings.
   b. Select Enable Community Case Feed.
Enable Email Drafts in Case Feed

Draft emails let support agents who use Case Feed write and save messages without having to send them immediately. This option also makes it possible to implement approval processes so messages can be reviewed by supervisors or senior agents before they’re sent to customers.

Before enabling draft emails, set up Email-to-Case and Case Feed.

1. From Setup, enter Support Settings in the Quick Find box, then select Support Settings.
2. Click Edit.
3. Select Enable Email Drafts.
4. Click Save.

Note: Changes to fields other than To, From, CC, BCC, and Subject in the Email action aren’t saved when a message is saved as a draft. We recommend removing any additional fields from the Email action if you plan to use draft emails.

SEE ALSO:
- Set Up Case Feed
- Create Approval Processes for Email Drafts

Add Custom Components to Case Feed

Use Visualforce pages as custom components in Case Feed to give support agents easy access to special tools or functionality while they’re working with cases.

For example, you might create a map component that lets agents see where a customer is located, or a tool agents can use to look up the products related to cases they’re working on. You can use any Visualforce page that includes the standard case controller as a custom component.

Once you’ve created a Visualforce page to use as a custom component, add it to the Case Feed layout.

1. How you access the Case Feed Settings page depends on what kind of page layout you’re working with.
   - For a layout in the Case Page Layouts section, click Edit, and then click Feed View in the page layout editor.
   - For a layout in the Page Layouts for Case Feed Users section, click and choose Edit feed view. (This section appears only for organizations created before Spring ’14.)
2. In the Other Tools and Components section, click + Add a Visualforce page and choose the page you want.
   The width of the component is determined by the width of the column it’s in. To make the component look best, we recommend setting the width of the Visualforce page to 100%.
3. Set the height of the component.
4. Choose where you want the component to appear on the page.
Tip: Components in the right column are hidden when agents view the Case Detail page, so use the left column for any components you want to be accessible all the time.

SEE ALSO:
Set Up Case Feed

Add Custom Actions in Case Feed

Include custom actions in the Case Feed publisher to give support agents easy access to the additional tools and functionality they need when working with cases.

Actions in Case Feed let support agents perform tasks like emailing customers, writing case notes, and changing the status of a case. Using Visualforce pages, you can create custom actions that offer agents more functionality. For example, you might create a Map and Local Search action that lets agents look up the customer’s location and find nearby service centers.

You can use any Visualforce page that uses the standard case controller as a custom action.

Note: If you’ve opted to use the advanced page layout editor to configure the publisher for a Case Feed layout, see Configure the Case Feed Publisher with the Enhanced Page Layout Editor for instructions on adding actions.

1. From the object management settings for cases, go to Page Layouts.
2. How you access the Case Feed Settings page depends on what kind of page layout you’re working with.
   - For a layout in the Case Page Layouts section, click Edit, and then click Feed View in the page layout editor.
   - For a layout in the Page Layouts for Case Feed Users section, click and choose Edit feed view. (This section appears only for organizations created before Spring ’14.)
3. Click + Add a Visualforce Page in the list of custom actions.
4. Select the page you want to add as an action.
5. Specify the height of the action in pixels.
6. Click Save.

Developer’s Guide: Customizing Case Feed with Visualforce
Find Object Management Settings
Create Custom Feed Filters for Case Feed

Custom feed filters help support agents focus on the items that are most relevant for them.

1. From Setup, enter Cases in the Quick Find box, then select Feed Filters.
2. Click New.
3. In the Feed Filter Information section, enter the filter label, name, and description.
4. In the Feed Filter Criteria section, define how to populate this filter. You can create more refined filters using the OR function.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Feed Item Type</td>
<td>Specifies the feed type to include in the filter. For example, the Created Record feed item type shows feed items about new records.</td>
</tr>
<tr>
<td>Related Object</td>
<td>Specifies the object associated with the selected feed item. The list includes all objects related to the Case object. The objects in the list vary depending on how your organization is set up. For example, if you selected Created Record as the feed item type, you might select Case as the related object. This filter then shows new Cases.</td>
</tr>
<tr>
<td>Visibility</td>
<td>Specifies whether to include a feed item in the filter based on the feed item’s visibility. The visibility depends on the security and sharing settings for the related object. Visibility can include either All Users or Internal Users. For example, suppose that you selected Case Comment Feed as the feed item type and Internal Users as the visibility. This feed filter then shows case comments made by internal users.</td>
</tr>
</tbody>
</table>

5. Click Save.
6. After you define your custom feed filters, add the filters to the list of selected filters in the Feed Filter Options section of the page layout’s Feed View settings.

Example: To create a filter that shows interactions with a customer, you could define a filter named Customer Interaction that uses the following criteria.

- Criterion 1: Case Comment feed item type with visibility set to All Users
- Criterion 2: Email Message feed item type with visibility set to All Users
- Criterion 3: Chatter post feed item type with visibility set to All Users

When an agent applies this filter, the case feed shows only Case Comment, Email Message, and Chatter feed items that are visible to both external and internal users. Everything else is filtered out.

- Settings for Feed Views in Case Feed
Case Feed Page Layouts Overview

Customize the feed view, detail view, highlights panel, and close case page to specify the fields, tools, and functionality support agents see when they’re working with cases.

There are four types of page layouts you can customize in Case Feed:

- Feed views, which users see when managing and interacting with cases.
- Detail views, which users see when they click View Case Details.
- Highlights panels, which appear at the top of both feeds and case detail pages.
- Close case views, which appear when users close cases from the case detail page.

From the object management settings for cases, you can create, edit, and assign all four types of layouts by going to Page Layouts.

SEE ALSO:
- Create and Edit Feed Layouts in Case Feed
- Configure the Case Feed Publisher with the Enhanced Page Layout Editor
- Customize the Highlights Panel in Case Feed
- Find Object Management Settings

Customize the Highlights Panel in Case Feed

The highlights panel appears at the top of the feed detail views and shows the most important information about a case. Edit the highlights panel to include the fields that are most important for your support agents.

1. From the object management settings for cases, go to Page Layouts.
2. In Page Layouts for Case Feed users, click next to a layout and choose Edit detail view.
3. Hover your mouse pointer over the Highlights Panel until the icon appears, then click it.
4. On the Highlights Panel Properties page, click a box to edit the fields in it.
5. Use the drop-down list to choose the type of information to include in each field. To leave a field blank, choose None. You can’t move or delete Case Number or Created Date.
6. Click OK.

SEE ALSO:
- Set Up Case Feed
- Find Object Management Settings
Create and Edit Feed Layouts in Case Feed

Feed view page layouts determine which actions, fields, and tools users see when they’re working with cases in Case Feed. You can create different layouts and assign them to different user profiles. For example, you might have one layout for agents and another for supervisors.

Note: Before creating a new feed view page layout, you need to create a new case detail page layout.

1. From the object management settings for cases, go to Page Layouts.
2. How you access the Case Feed Settings page depends on what kind of page layout you’re working with.
   • For a layout in the Case Page Layouts section, click Edit, and then click Feed View in the page layout editor.
   • For a layout in the Page Layouts for Case Feed Users section, click and choose Edit feed view. (This section appears only for organizations created before Spring ‘14.)
   
     If you’ve already opted to use the advanced page layout editor to configure the publisher for a layout, choose Edit detail view to add, change, or remove actions.

3. Choose the tools, components, and options for your feed view page.
4. Click Save.

Once you’ve created or edited feed view page layouts, assign them to profiles.

Settings for Feed Views in Case Feed

Use Case Feed settings to customize the feature according to your support department’s processes and business needs.

Apply these settings when you create or update feed views for Case Feed.

Feed View Options

<table>
<thead>
<tr>
<th>Option</th>
<th>Use It to…</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable Full-Width Feed View in the Console</td>
<td>Expand the width of the feed to take up all available space when agents view cases in Salesforce console tabs or subtabs.</td>
<td>The portion of the page the feed takes up with this setting enabled depends on whether you have tools or components in the right column of the Case Feed layout, and whether you have console sidebar components. This setting is automatically enabled in organizations created after Summer ‘14.</td>
</tr>
<tr>
<td>Option</td>
<td>Use It to…</td>
<td>Notes</td>
</tr>
<tr>
<td>---------------------------------------------</td>
<td>---------------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Enable Compact Feed View in the Console</td>
<td>Update the overall look and feel of the feed view and compress feed items when agents view cases in Salesforce console tabs or subtabs.</td>
<td>Compact feed lets agents see more information about a case with much less scrolling than they need to do when working with cases in the standard feed view. This option is only available if you have Actions in the Publisher and Use Page Layout Editor to Configure Actions enabled.</td>
</tr>
</tbody>
</table>
| Highlight Externally Visible Feed Items     | Indicate which feed items are visible to external users by changing the background color of the feed item to orange. | This option is only available for compact feed. When this setting and the Enable Community Case Feed setting are both enabled, the following feed items are highlighted in the case feed:  
- Public emails sent to or received from the email address for contact person on a case  
- Public case comments  
- All social posts  
- Questions escalated from Communities  
- Tasks that have the All with Access/Public setting  
- Events that have the All with Access/Public setting  
- Chatter posts that have the All with Access/Public setting

<tr>
<th>Select Case Feed Tools</th>
<th>Use It to...</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Choose which tools to make available to agents when they use Case Feed.</td>
<td></td>
<td>The Articles tool is included by default, but it won’t appear on the Case Feed page unless your organization uses Salesforce Knowledge.</td>
</tr>
</tbody>
</table>
## Articles Tool

<table>
<thead>
<tr>
<th>Option</th>
<th>Use It to...</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable Email PDF Attachments</td>
<td>Give agents the ability to attach Knowledge articles to email messages as PDFs.</td>
<td>This setting appears only if your organization uses Salesforce Knowledge. If you use Knowledge and don’t enable this setting, agents will be able to attach articles only to cases, not to email messages.</td>
</tr>
<tr>
<td>Use Case Feed Articles Tool in the Console</td>
<td>Replace the Knowledge sidebar in the Salesforce console with the Case Feed articles tool.</td>
<td>This setting appears only if your organization uses Salesforce Knowledge. If you use Knowledge and don’t enable this setting, we recommend hiding either the Case Feed articles tool or the Knowledge sidebar in the Salesforce console so agents see only one of those tools when they’re working with cases in the console.</td>
</tr>
</tbody>
</table>

## Other Tools and Components

<table>
<thead>
<tr>
<th>Option</th>
<th>Use It to...</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Custom Components</td>
<td>Select up to 10 custom Visualforce pages to add as components. You can use as a custom component any Visualforce page that uses the standard case controller.</td>
<td>Once you add a Visualforce page, you can specify its height and choose where on the page you want it to appear.</td>
</tr>
<tr>
<td>Choose Placement</td>
<td>Specify where on the page you want tools and components like custom buttons, custom links, and the followers list to appear. You can also choose to hide anything your agents don’t need access to.</td>
<td>Custom links and buttons are only available as right sidebar components on the feed view page layout if you’ve added them to the related case detail page layout.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The Milestone Tracker is available only if you’ve enabled entitlement management in your organization.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The Topics list is available only if you’ve enabled topics on cases.</td>
</tr>
</tbody>
</table>

## Filter Options

<table>
<thead>
<tr>
<th>Option</th>
<th>Use It to...</th>
<th>Notes</th>
</tr>
</thead>
</table>
| Filters Appear| Specify where and how feed filters appears:  
• As a fixed list in the left column  
• As a floating list in the left column  
• As a drop-down list in the center column | Choose “As a floating list in the left column” if you want the feed filters list to remain visible as users scroll down the page. This can be useful with long feeds, as it lets agents quickly filter case activities from anywhere on the page, without having to scroll to the top. |
<table>
<thead>
<tr>
<th>Option</th>
<th>Use It to…</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select Filters</td>
<td>Choose the filters to include in the feed filters list, and specify the order of the list.</td>
<td>We recommend putting the filters agents are likely to use most often at the top of the list.</td>
</tr>
</tbody>
</table>

SEE ALSO:
Configure the Case Feed Publisher with the Enhanced Page Layout Editor

Add the Attachment Component to Case Feed

Add the attachment component to the Case Feed page so your support agents can quickly view and manage all of the files associated with a case.

Access to all of the files associated with a case is critical to support agents when they’re helping your customers. The attachment component lets agents view and manage all of the Chatter files, attachments from emails, and case attachment related list files for a case, all on the Case Feed page. Using the attachment component, agents can quickly attach a file to an email and download a file. Agents can toggle between a view of the most recent attachments for a case across all sources and a view of all of the files associated with a case sorted by their creation date.

1. From the object management settings for cases, go to Page Layouts.
2. How you access the Case Feed Settings page depends on what kind of page layout you’re working with.
   - For a layout in the Case Page Layouts section, click Edit, and then click Feed View in the page layout editor.
   - For a layout in the Page Layouts for Case Feed Users section, click and choose Edit feed view. (This section appears only for organizations created before Spring ’14.)
3. In the Other Tools and Components section, select Files, and specify where on the page you want it to appear.
4. Click Save.

Add the attachment component to your custom pages by including the <support:caseUnifiedFiles> component in a Visualforce page, or add it as a Salesforce console component to make it available to agents without having to take up space on a Case Feed page.

SEE ALSO:
Find Object Management Settings
Add the Case Experts Component (Pilot) to Case Feed

Easily identify the experts on case topics so agents can collaborate to solve customer issues quickly.

Note: Case Experts is currently available through a pilot program. For information on enabling Case Experts for your organization, contact salesforce.com.

Using the power of topics on cases, support agents can be endorsed as experts on specific topics. Agents endorsed as experts can help other agents who might be less knowledgeable on the topic.

To establish case experts in your organization, you must have Chatter and topics for cases enabled.

To enable Case Experts, display the Experts component on Case Feed.

1. From the object management settings for cases, go to Page Layouts.

2. How you access the Case Feed Settings page depends on what kind of page layout you’re working with.
   - For a layout in the Case Page Layouts section, click Edit, and then click Feed View in the page layout editor.
   - For a layout in the Page Layouts for Case Feed Users section, click and choose Edit feed view. (This section appears only for organizations created before Spring ’14.)

3. In the Other Tools and Components section, select Case Experts, and specify where on the page you want it to appear.

4. Click Save.

Add the experts component to your custom pages by including the <apex:support:caseExperts> component in a Visualforce page.

Configure the Case Feed Publisher with the Enhanced Page Layout Editor

If your organization uses the actions in the publisher feature, you can use the enhanced page layout editor to choose the actions that appear in the Case Feed publisher.

Note: This option is selected by default for new Salesforce organizations that use Case Feed, and for organizations that enable Case Feed after the Summer ’13 release.

1. From the object management settings for cases, go to Page Layouts.

2. How you access the Case Feed Settings page depends on what kind of page layout you’re working with.
   - For a layout in the Case Page Layouts section, click Edit, and then click Feed View in the page layout editor.
   - For a layout in the Page Layouts for Case Feed Users section, click and choose Edit feed view. (This section appears only for organizations created before Spring ’14.)

3. Select Use Page Layout Editor to Configure Actions.

4. Click Save.

5. To access the page layout editor:
   - For a layout in the Case Page Layouts section, click Edit.
   - For a layout in the Page Layouts for Case Feed Users section, click and choose Edit detail view. (This section appears only for organizations created before Spring ’14.)
6. In the page layout editor, click \(\text{in the Quick Actions in the Salesforce Classic Publisher section.}

7. In the palette, click Quick Actions.

8. Drag the actions you want to the Quick Actions in the Salesforce Classic Publisher section. You can also drag actions to change the order in which they appear and drag off actions you don’t want.

On the Case Feed page, up to approximately five or six actions are displayed in the publisher; the rest are included in the More drop-down list.

9. Click Save.

If you’ve previously used the Case Feed Settings page to configure the publisher, you see these differences when you switch to the enhanced page layout editor:

- The actions list appears at the top of the publisher. You can no longer position the actions list to the left of the publisher.
- The Answer Customer action has been divided into its two component actions: Email and Portal.
- The actions list looks more like the Chatter publisher on other pages.
- The standard Chatter actions—Post, File, Link, Poll, Question, and Thanks—automatically appear in the publisher layout, and they replace the Write Case Note action. You can change the sequence of these actions and remove any you don’t need.
- The Feed View/Details drop-down list replaces the View Case Detail action.
- Custom actions you previously added to the Case Feed publisher aren’t available. Create new custom actions and add them to the publisher. These new actions must use publisher.js rather than interaction.js.
- The Case Detail page expands to full width, making it easier to see all of your related lists and other information.

- Find Object Management Settings

Convert Page Layouts for Case Feed Users to Case Page Layouts

As of Spring ’14, we’ve made creating and customizing case layouts easier by replacing page layouts for Case Feed users with feed-based layouts for case pages. By converting your older page layouts, you can use the advanced page layout editor to manage them and can assign Case Feed to users more easily.

Note: Page layouts for Case Feed users are available only in organizations created prior to Spring ’14.

Feed-based case layouts include the same features as page layouts for Case Feed users: a feed, which includes a publisher with actions, feed filters, tools such as an articles tool, and sidebar components such as custom buttons and links; a highlights panel; and a detail page, with related lists and other in-depth information about the case. You can use the standard page layout assignment tool to assign feed-based case page layouts to users, which means you no longer have to use permission sets or custom profiles to give users access to Case Feed.

To convert page layouts for Case Feed users to feed-based case layouts:

1. From the object management settings for cases, go to Page Layouts.

2. Click \(\text{next to a layout in the Page Layouts for Case Feed Users list and choose Convert to case page layout.}
We recommend using this option so you can review the converted layout before you delete the original, but to save time, you can choose Convert to page layout and delete.

3. The converted layout appears in the Case Page Layouts list with the prefix Converted. Click Edit next to it.

4. In the page layout editor, confirm that the layout includes the elements you want. To see and edit what’s included in the feed view, including feed filters and sidebar components, click Feed View.

5. Once you’re happy with the case page layout, click Page Layout Assignment in the Case Page Layouts list to assign it to the appropriate user profiles.

   Note: For custom profiles with the Use Case Feed permission, or profiles with permission sets that include Use Case Feed, these page assignments won’t take effect until you remove the permission or permission set. If your organization was created between Winter ’14 and Spring ’14, you can’t remove Use Case Feed from standard profiles, so these assignments won’t take effect until you delete all of your page layouts for Case Feed users.

6. Click next to the older version of the layout in the Page Layouts for Case Feed Users list and choose Delete. In the confirmation that appears, click OK.

7. If there are users assigned to the layout you delete, you’re prompted to choose another layout as a replacement. This is only a formality: Once you assign users to a case page layout, that’s what they’ll see.

   If you have multiple layouts for Case Feed users, we recommend converting and deleting them all at the same time. Once you delete the last of your older layouts, the Page Layouts for Case Feed Users list will disappear.

Add Global Actions and Custom Quick Actions as Components to the Console Sidebar

You can add global actions and custom quick actions as components to the Service Console sidebar, so agents can create records, update case info, search for related info, and link to parent records—all without ever leaving the current tab. You can use quick actions to replace the Case Detail Page, so agents can see case-related information, such as contacts and assets, in their main workflow.

1. Create the global action (for the Create action) and the custom quick action (for the Update action).

   Create actions must be global quick actions. Update actions must be object-specific quick actions that are based on the lookup field object type. For example, to update a contact lookup field, you must have a contact-specific update action.

2. Add the actions as components to the case page layouts so that the quick actions are available for your agents to use.
   a. From Setup, enter “Case” in the Quick Find box, then select Page Layouts.
   b. Select the page to which you want to add the quick actions and click Edit.
   c. In the Case Layout page, select Custom Console Components.
   d. Go to the Sidebar section where you want to add the component (for example, go to the Left Sidebar section).
   e. For Type, select Lookup.
f. For Field, select the related field that the quick action acts on.

g. Select Enable Linking to allow support agents search for a record and link it to a related record. For example, a support agent can link a contact name to a case.

h. For Create Action, select the global action that creates a record. For example, a global action can create a contact.

i. For Update Action, select the quick action the updates a record. For example, a quick action can update a field on the contact.

j. Click Save.

Add Console Components to Page Layouts

Set Up Cases for Lightning Experience

Before you can use case feed in Lightning Experience, recreate standard publishers with quick actions.

Quick actions appear on mobile devices, whereas standard case feed publishers do not. To use the feed-first design on cases, recreate these publishers as quick actions.

• Create a Log a Call Quick Action
• Create a Change Status Quick Action

Create a Log a Call Quick Action

Before you can use case feed in Lightning Experience, you must recreate the Log a Call publisher as a quick action.

1. From the object management settings for cases, go to Buttons, Links, and Actions.

2. Click New Action.

3. Under Action Type, select Log a Call.

4. Under Standard Label Type, select Log a Call.

5. Click Save.

6. To choose the fields users see, customize the action’s layout, then click Save.
7. On case page layouts, drag the new quick action to the Salesforce1 and Lightning Experience Actions section, then click **Save**.

SEE ALSO:
- Set Up Cases for Lightning Experience
- Create Object-Specific Quick Actions

**Create a Change Status Quick Action**

Before you can use case feed in Lightning Experience, you must recreate the Change Status publisher as a quick action.

1. From the object management settings for cases, go to Buttons, Links, and Actions.
2. Click **New Action**.
3. Under **Action Type**, select **Update a Record**.
4. Under **Standard Label Type**, select **Change Status**.
5. Click **Save**.
6. To choose the fields users see, customize the action’s layout, then click **Save**.
7. On case page layouts, drag the new quick action to the Salesforce1 and Lightning Experience Actions section, then click **Save**.

SEE ALSO:
- Set Up Cases for Lightning Experience
- Create Object-Specific Quick Actions

**Enable Default Email Templates in Case Feed**

Use default email templates in Case Feed to give support agents easy access to the templates they need based on the types of cases they’re working on.

Before you can enable default email templates, you need to create text, HTML, or Visualforce templates, and create an Apex class that contains template selection logic.

Default email templates make it easy for support agents to respond to customers more quickly, more accurately, and with greater consistency. The email templates are preloaded, so agents don’t need to browse for the templates they need before writing email. You can create as many templates as needed and assign them based on your company’s needs. For example, if your support center handles issues related to multiple products, you can create a specific template for each product and preload the appropriate template based on a case’s origin, subject, or other criteria.

To enable default email templates:

1. From Setup, enter **Support Settings** in the Quick Find box, then select **Support Settings**.
2. Click **Edit**.
3. Select **Enable default email templates**.
4. Choose the Apex class that contains your template selection logic.
5. Click **Save**.

**SEE ALSO:**

- Create Send Actions for Email Approval Processes
- Create Approval Processes for Email Drafts
- Review and Approve Email Drafts

### Create Send Actions for Email Approval Processes

Use send actions to save your support agents time by ensuring that email messages are sent automatically at the end of an approval process.

**Note:** Send actions are available only in organizations that have email drafts enabled.

1. From Setup, enter **Send Actions** in the Quick Find box, then select **Send Actions**.
2. Click **New Send Action**.
3. Select Email Message from the object drop-down list.
4. Enter a unique name for the action.
5. Optionally, enter a description for the action.
6. Click **Save**.

After you create a send action, create an approval process that includes it.

**SEE ALSO:**

- Enable Default Email Templates in Case Feed
- Create an Approval Process with the Standard Wizard

### Create Approval Processes for Email Drafts

Approval processes determine how your organization handles draft email messages—specifying, for example, which messages require approval and whether approvers are automatically assigned. Create customized approval processes based on your company’s needs.

1. **Enable draft emails.**
   
   Though you can create approval processes for email messages without this step, those processes won’t be triggered until your organization has email drafts available.

2. **Create a send action.**
   
   Send actions ensure that email messages are sent once they’ve been approved.

3. **Create approval processes.**
   
   Be sure to choose Email Message from the Manage Approval Processes For: drop-down list.
4. To give certain users, such as senior support agents, the ability to choose whether to submit an email message for approval or simply send the message, assign them to a profile that has the Bypass Email Approval permission selected.

SEE ALSO:
Create an Approval Process with the Standard Wizard
Enable Default Email Templates in Case Feed

Rename Actions and Feed Filters in Case Feed

Rename Case Feed actions and feed filters so they match the terms your company uses.

For example, if your company refers to your portal as a customer community, you might rename the Portal action “Customer Community.”

1. From Setup, enter Rename Tabs and Labels in the Quick Find box, then select Rename Tabs and Labels.
2. Click Edit next to Cases in the list of standard tabs.
3. Click Next.
4. Find the label you want to change in the Other Labels list.
5. Type the new name for the label in the text box next to it.
6. If the new label begins with a vowel sound, check Starts with vowel sound.
7. Click Save.

Automating Contact Centers

Set Up Customer Support

If your organization uses cases and solutions, set up automated support features to make your support processes more efficient.

From Setup:

• Enter Business Hours in the Quick Find box, then select Business Hours to set your organization’s support hours.
• Enter Assignment Rules in the Quick Find box, then select Case Assignment Rules to create rules for automatically routing cases.
• Enter Escalation Rules in the Quick Find box, then select Escalation Rules to create rules for automatically escalating cases.
• Enter Support Settings in the Quick Find box, then select Support Settings to customize email templates and defaults for automated support features.
• Enter Auto-Response Rules in the Quick Find box, then select Case Auto-Response Rules to set up rules that send email to customers when they submit cases from one of the following.
  – A Web-to-Case form
  – An Email-to-Case message
  – An On-Demand Email-to-Case message
  – A Customer Portal
  – A Self-Service portal

• Enter Email-to-Case in the Quick Find box, then select Email-to-Case to set up the ability to capture customer emails as cases. The setup specifies how the content of each customer email automatically populates case fields.

For support features related to solutions, from Setup, enter Solution in the Quick Find box, then:

• Select Solution Categories to set up categories so your users can categorize the solutions they create.
• Select Solution Settings to enable specific options for solutions.

For additional support features, from Setup, enter Self-Service in the Quick Find box, then:

• Select Public Solutions to set up public solutions for your customers to use when searching for solutions.
• Select Web-to-Case to set up the ability to capture cases from your website.
• Select Settings under Self-Service Portal to set up your organization’s web portal for your customers to log cases and search for solutions.

Note: Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

For support features related to a Salesforce Customer Portal, from Setup, enter Customer Portal in the Quick Find box, then:

• Select Customer Portal Settings to set up your organization’s Customer Portal so that your customers can log cases, search for solutions, and access any custom objects you may have created for them.

For support features related to Salesforce CRM Call Center, from Setup, enter Call Center in the Quick Find box, then:

• Select Call Centers to set up new call centers and manage the users who are assigned to them.
• Select Directory Numbers to set up additional phone numbers that can be searched in a call center user’s phone directory.
• Select SoftPhone Layouts to set up the layouts that are used to display call information in a call center user’s SoftPhone.

To create support queues for cases or custom objects, from Setup, enter Queues in the Quick Find box, then select Queues.

The support features include the ability to notify customers when their case is created manually or via the web, or when their case is resolved. You can also automatically notify users when a case is escalated, created, or reassigned. To use notification emails, you must create email templates for each type of notification.

Customize Support Settings

Turn on or set various support processes to automate case management. Choose email templates, default case owner, case notifications, and more.

To work with these settings, from Setup, enter Support Settings in the Quick Find box, then select Support Settings and click Edit.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Default Case Owner</td>
<td>The user or queue automatically assigned to all cases that don’t match any case assignment rule entries. This user must be Active.</td>
</tr>
<tr>
<td>Notify Default Case Owner</td>
<td>Select this checkbox to notify the default case owner when a case is assigned to him or her. If the new owner is a queue, the notification is sent to the queue email address. Notifications are system-generated and can’t be modified.</td>
</tr>
<tr>
<td>Record Type Setting</td>
<td>Indicates which record type to assign to cases created by users applying assignment rules. Select either:</td>
</tr>
<tr>
<td></td>
<td>• Keep the existing record type if you want new cases to keep the creator’s record type</td>
</tr>
<tr>
<td></td>
<td>• Override the existing record type with the assignee’s default record type if you want to overwrite the creator’s record type on new cases</td>
</tr>
<tr>
<td>Automated Case User</td>
<td>The user listed in the Case Feed feed items and Case History related list for automated case changes. Automated case changes can occur from assignment rules, escalation rules, On-Demand Email-to-Case, or cases logged in the Self-Service portal. You can:</td>
</tr>
<tr>
<td></td>
<td>• Select System to indicate that an automated process performed an action, such as creating a case or changing a case’s status. When you select System, the lookup field is grayed out.</td>
</tr>
<tr>
<td></td>
<td>• Select User to use the lookup field to specify a user, such as an administrator, to be the Automated Case User. This user must have the System Administrator profile or the “Modify All Data” and “Send Email” permissions.</td>
</tr>
</tbody>
</table>

Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions

USER PERMISSIONS

To change support settings:
• “Manage Cases” AND “Customize Application”
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Case Creation Template</td>
<td>The template used to notify contacts that their case was created manually by a support agent. The notification is optional; it’s triggered by a checkbox on the case edit page. This template must be Available for Use.</td>
</tr>
<tr>
<td>Case Assigned Template</td>
<td>The template used to notify users that a case was manually assigned to them by an administrator or another user. The notification is optional; it’s triggered by a checkbox on the Change Case Owner page. This template must be Available for Use.</td>
</tr>
<tr>
<td>Case Close Template</td>
<td>The template used to notify contacts that a case has been closed. The notification is optional; it’s triggered by a checkbox on the Close Case page. This template must be Available for Use.</td>
</tr>
<tr>
<td>New Cases Visible in Portal</td>
<td>Automatically selects the Visible in Self-Service Portal checkbox for all new cases, including cases created via Web-to-Case, Email-to-Case, and On-Demand Email-to-Case. Regardless of this default, users creating new cases can manually set the Visible in Self-Service Portal checkbox. If you're using Salesforce Communities, this setting does not apply for partner or customer users viewing cases in communities. New case visibility in communities is controlled by sharing rules.</td>
</tr>
<tr>
<td>Enable Case Comment Notification to Contacts</td>
<td>Select this checkbox to notify contacts who aren’t Self-Service portal users when a case comment has been modified or added to a case. If you select this setting, click Case Comment Template and choose the email template to use for these notifications. This template must be Available for Use.</td>
</tr>
<tr>
<td>Notify Case Owner of New Case Comments</td>
<td>Select this checkbox to notify the case owner when a user adds a public or private comment to a case. If you select this setting, case owners can’t opt out of receiving these notices. (Notices aren’t sent to inactive case owners.)</td>
</tr>
<tr>
<td>Early Triggers Enabled</td>
<td>Select this checkbox to enable early triggers for escalation rules and their actions. You can set up an escalation rule to perform an action when a case has been unresolved for a specific number of hours. The Age Over hour you specify determines when Salesforce performs the escalation action. Enable early triggers to ensure that your escalation actions are triggered before the Age Over hour you specify.</td>
</tr>
<tr>
<td>Enable Suggested Solutions</td>
<td>Select this checkbox to enable the Suggested Solutions button on case detail pages so agents can propose specific solutions to help resolve cases.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>-------</td>
<td>-------------</td>
</tr>
<tr>
<td>Enable Suggested Articles</td>
<td>Select this option to provide suggested articles on the Articles related list. You can make suggested articles available in all Salesforce Knowledge channels except the public knowledge base.</td>
</tr>
<tr>
<td>Send Case Notifications from System Address</td>
<td>Select this checkbox to specify that case comment, attachment, and assignment notifications sent to case owners are sent from a system address, rather than the address of the user who updated the case. System notifications display a “From” email address of “<a href="mailto:noreply@salesforce.com">noreply@salesforce.com</a>”, and an email “Name” related to the message, such as “Case Comment Notification”. You can select this checkbox to prevent Self-Service or Customer Portal users who update their cases from receiving “out-of-office” emails from case owners.</td>
</tr>
<tr>
<td>Notify Case Owners when Case Ownership Changes</td>
<td>Select this checkbox to automatically select <strong>Send Notification Email</strong> on cases when users change a case owner to another user. This helps prevent users from forgetting to notify other users that they’re the new owner of a case. Selecting this setting doesn’t automatically select <strong>Send Notification Email</strong> when users change a case owner to a queue.</td>
</tr>
<tr>
<td>Show Closed Statuses in Case Status Field</td>
<td>Select this checkbox to add closed statuses to the <strong>Status</strong> field on cases so agents can close cases without having to click the <strong>Close Case</strong> button and update information on close case page layouts. Selecting <strong>Show Closed Statuses in Case Status Field</strong> doesn’t remove the <strong>Close</strong> button from case list views. Instead, it adds Closed to the list of statuses available for users to choose from when they select multiple cases and click <strong>Change Status</strong> on case list views.</td>
</tr>
<tr>
<td>Hide Save &amp; Close Button and Cls Links</td>
<td>After selecting <strong>Show Closed Statuses in Case Status Field</strong> as described above, you can select this checkbox so that the <strong>Save &amp; Close</strong> button on case edit pages and <strong>Cls</strong> links on Cases related lists don’t display unnecessarily. Instead, users close cases via the <strong>Status</strong> field and <strong>Save</strong> button.</td>
</tr>
<tr>
<td>Enable Case Feed Actions and Feed Items</td>
<td>Use this setting to turn on Case Feed-specific actions and feed items. When you select this option, existing cases are upgraded to the Case Feed user interface.</td>
</tr>
<tr>
<td>Size of Email Feed Item Body</td>
<td>Control the size of email feed items by setting a character limit on the email feed item body. You can set the character limit to:</td>
</tr>
<tr>
<td></td>
<td>• Small = 400 characters (default)</td>
</tr>
<tr>
<td></td>
<td>• Medium = 1200 characters</td>
</tr>
</tbody>
</table>

</tr>
</tbody>
</table>

**Note:** Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

**SEE ALSO:**
- Set Up Customer Support
Set Business Hours

Specify the hours when your support team is available to serve customers. This helps make your department’s processes, such as escalations and milestones, more accurate.

Setting business hours lets you apply specific time zones and locations to:

- Milestones in entitlement processes
- Entitlement processes
- Cases
- Case escalation rules

You can also make the Business Hours field available on the Case Layout page so that your support agents can set the times a support team is available to work on the case. By default, business hours are set 24 hours, seven days a week in the default time zone specified in your organization’s profile.

Additionally, users with the “Customize Application” permission can add business hours to escalation rules so that when the details of a case match the criteria of an escalation rule, the case is automatically updated and escalated with the times and location on the rule. For example, a case updated with Los Angeles business hours escalates only when a support team in Los Angeles is available.

To set business hours:

1. From Setup, enter Business Hours in the Quick Find box, then select Business Hours.
2. Click New Business Hours.
3. Type a name for the business hours.
   We recommend using a name that will remind users of a location or time zone when they view business hours on a case, entitlement process, or milestone. For example, if your business hours are for a support center in San Francisco, you could use the name San Francisco Business Hours.
4. Click Active to allow users to associate the business hours with cases, escalation rules, milestones, and entitlement processes.
5. Optionally, click Use these business hours as the default to set the business hours as the default business hours on all new cases.
   Default business hours on cases can be updated with business hours on escalation rules if the cases match escalation rule criteria and the rule is set to override business hours.
6. Choose a time zone to associate with the business hours in the Time Zone drop-down list.
7. Set your business hours for each day of the week.
   - If your support team is available during the entire day every day of the week, select the 24 hours checkbox.
   - Choose the start and end times for the business hours. If the time you want isn’t available, click the field and type it in.
   - Leave the business hours start and end times blank and the 24 hours checkbox deselected to indicate that the support team is not available at all that day.
8. Click Save.

After you have set business hours, you can associate them with:

- Escalation rules, so that when the details of a case match the criteria of an escalation rule, the case is updated and escalated with the business hours on the rule.
• Holidays, so that business hours and any escalation rules associated with business hours are suspended during the dates and times specified in holidays.

• Milestones, in entitlement processes so that business hours can change with the severity of a case.

• Entitlement processes, so that you can use the same entitlement process for cases with different business hours.

SEE ALSO:
- Guidelines for Setting Business Hours
- Set Up Support Holidays
- Set Up Customer Support

Guidelines for Setting Business Hours

To make your support processes more accurate, define when your support team is available to help customers. There are a few guidelines to keep in mind as you set business hours.

• After you set business hours, add the Business Hours lookup field to case layouts and set field-level security on the Business Hours field. This lets users view and update the business hours on a case.

• Business hours on a case are automatically set to your organization’s default business hours, unless the case matches the criteria on an escalation rule associated with different business hours.

• Salesforce automatically calculates daylight savings times for the time zones available for business hours, so you don’t have to configure rules to account for time zones.

• Business hours on a case include hours, minutes, and seconds. However, if business hours are less than 24 hours, the system ignores the seconds for the last minute before business hours end. For example, suppose it is 4:30 PM now, and business hours end at 5:00 PM. If you have a milestone with a 30-minute target, it’s more common to say that the target is 5:00 PM, not 4:59 PM. To accommodate this, the system stops counting seconds after 5:00. If seconds were counted from 5:00:00-5:00:59, the 30-minute target would occur after the 5:00:00 PM target cut-off and would roll over to the next day.

• Escalation rules only run during the business hours they’re associated with.

• You can update cases associated with business hours that are no longer active, without having to reactivate business hours.

• You can’t include the Business Hours field in list views or reports.

• You can create multiple business hours for support teams that operate in the same time zone but at different hours.

• For simplicity, we recommend that you create one set of business hours per support center.

• You can’t deactivate business hours that are included in escalation rules. You must first remove them from the escalation rules.

• You can associate up to 1000 holidays with each set of business hours.

• On cases that include entitlements, business hours are applied according to a hierarchy. For details, see How Business Hours Work in Entitlement Management.

SEE ALSO:
- Set Business Hours
- Set Up Support Holidays
Set Up Support Holidays

Holidays let you specify the dates and times your customer support team is unavailable. After you create a holiday, you can associate it with business hours to suspend business hours and escalation rules during holiday dates and times.

For example, you could create a holiday called New Year’s Day that begins at 8 p.m. on December 31 and ends at 9 a.m. on January 2. Escalation rules and entitlement milestones wouldn’t apply during the holiday.

1. From Setup, enter Holidays in the Quick Find box, then select Holidays.
2. Click New, or click Clone next to the name of an elapsed holiday.
   You can only clone elapsed holidays.
3. Type a name for the holiday.
4. Type a date for the holiday.
   If you want the holiday to span more than one day:
   a. Select the Recurring Holiday checkbox.
   b. Enter the first day of the holiday in the Start Date field.
   c. Deselect the No End Date checkbox in the End Date field.
   d. Enter the last day of the holiday in the End Date field.
5. Optionally, you can:
   • Specify the exact times at which the holiday takes place by deselecting the All Day checkbox next to the Time field and entering the exact times.
   • Select the Recurring Holiday checkbox to schedule the holiday to recur during specific dates and times:
     – In the Frequency field, select the frequency at which the holiday recurs. When you click the Daily, Weekly, or Monthly fields, more options display that allow you to refine frequency criteria.
     – In the Start Date and End Date fields, specify the dates during which you wish the holiday to recur.
     The following error message displays if you select a start date and end date that does not correspond with the frequency you selected: The recurring holiday has no occurrence.
6. Click Save.
7. Click Add/Remove on the Business Hours related list.
8. Use the Add and Remove to choose the business hours you want to associate with the holiday. You can associate the holiday with multiple business hours.

SEE ALSO:
Guidelines for Creating Support Holidays
Set Business Hours
Set Up Customer Support
Guidelines for Creating Support Holidays

Holidays let you specify the dates and times your customer support team is unavailable. There are a few guidelines to keep in mind as you set up and work with holidays.

- You can associate up to 1000 holidays with each set of business hours.
- Holidays automatically acquire the time zone of the business hours with which they are associated. For example, if you associate a holiday to business hours that are in Pacific Standard Time, the holiday will take effect for those business hours in Pacific Standard Time.
- You can only add business hours marked as Active to holidays.
- Holiday names don’t need to be unique. For example, you could create multiple holidays named ‘New Year’s Day’.
- Currently, report results do not take holidays into account.
- If you schedule a holiday to recur on a specific day of every month, the holiday will only recur on months that have that specific day. For example, if you schedule a holiday on the 31st day of every month, then the holiday will only recur on months that have 31 days.
  
If you want a holiday to recur on the last day of every month, choose Last from the ‘On day of every month’ drop-down list.

SEE ALSO:
- Set Up Support Holidays
- Set Business Hours

Set Up Assignment Rules

Define conditions that determine how leads or cases are processed.

1. From Setup, enter Assignment Rules in the Quick Find box, then select either Lead Assignment Rules or Case Assignment Rules.
2. Choose New, and then give the rule a name. Specify whether you want this to be the active rule for leads or cases created manually and via the web and email. Then click Save.
3. To create the rule entries, click New. For each entry, you can specify:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Order</td>
<td>Sets the order in which the entry will be processed in the rule, for example, 1, 2, 3. Salesforce evaluates each entry in order and tries to match the criteria of the entry. As soon as a match is found, Salesforce processes the item and stops evaluating the rule entries for that item. If no match is found, the item is reassigned to either the default Web-to-Lead owner, the administrator doing a lead import, or the default case owner.</td>
</tr>
<tr>
<td>Criteria</td>
<td>Specifies conditions that the lead or case must match for it to be assigned. Enter your rule criteria.</td>
</tr>
<tr>
<td></td>
<td>- Choose criteria are met and select the filter criteria that a record must meet to trigger the rule. For example, set a case filter to Priority</td>
</tr>
</tbody>
</table>

SEE ALSO:
- Set Up and Maintain Customer Support Tools
equals High if you want case records with the Priority field marked High to trigger the rule.

If your organization uses multiple languages, enter filter values in your organization’s default language.

You can add up to 25 filter criteria, of up to 255 characters each.

When you use picklists to specify filter criteria, the selected values are stored in the organization’s default language. If you edit or clone existing filter criteria, first set the Default Language on the Company Information page to the same language that was used to set the original filter criteria. Otherwise, the filter criteria may not be evaluated as expected.

- Choose formula evaluates to true and enter a formula that returns a value of “True” or “False.” Salesforce triggers the rule if the formula returns “True.” For example, the formula `AND(ISCHANGED(Priority), ISPICKVAL(Priority, "High") )` triggers a rule that changes the owner of a case when the Priority field is changed to High.

If your condition uses a custom field, the rule entry will be deleted automatically if the custom field is deleted.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>User</td>
<td>Specifies the user or queue to which the lead or case will be assigned if it matches the condition. Users specified here cannot be marked “inactive” and they must have “Read” permission on leads or cases.</td>
</tr>
<tr>
<td></td>
<td>Note: You can’t revoke the “Read” permission on leads or cases for users assigned to a rule.</td>
</tr>
<tr>
<td></td>
<td>If your organization uses divisions, leads are assigned to the default division of the user or queue specified in this field. Cases inherit the division of the contact to which they are related, or are assigned to the default global division if no contact is specified.</td>
</tr>
<tr>
<td>Do Not Reassign Owner</td>
<td>Specifies that the current owner on a lead or case will not be reassigned to the lead or case when it is updated.</td>
</tr>
<tr>
<td>Email Template</td>
<td>Specifies the template to use for the email that is automatically sent to the new owner. If no template is specified, no email will be sent. When assigning a lead or case to a queue, the notification goes to the Queue Email address specified for the queue and all queue members.</td>
</tr>
<tr>
<td>Predefined Case Teams</td>
<td>Specifies the predefined case team(s) to add to a case when it matches the condition. Case teams help groups of people work together to solve a case, such as a support agent, support manager, and a product manager.</td>
</tr>
<tr>
<td></td>
<td>Click the Lookup icon ( ) to select a predefined case team to add to the assignment rule. To add more predefined case teams, click Add Row to add a new row with which you can add a predefined case team.</td>
</tr>
<tr>
<td>Replace any existing predefined case teams on the case</td>
<td>Specifies that any existing predefined case teams on the case are replaced with the predefined case teams on the condition, when a case matches the condition.</td>
</tr>
</tbody>
</table>

After creating the entry, click Save, or Save & New to save the entry and create more entries.
Tip: Create an error-proof rule by always creating the last rule entry with no criteria. This rule entry catches any leads or cases that the previous rule entries didn’t assign.

Managing Assignment Rules

Create assignment rules to automate your organization’s lead generation and support processes.

- **Lead Assignment Rules**—Specify how leads are assigned to users or queues as they are created manually, captured from the web, or imported via the Data Import Wizard.
- **Case Assignment Rules**—Determine how cases are assigned to users or put into queues as they are created manually, using Web-to-Case, Email-to-Case, On-Demand Email-to-Case, the Self-Service portal, the Customer Portal, Outlook, or Lotus Notes.

Typically, your organization will have one rule for each overall purpose—for example, one lead assignment rule for importing and a different lead assignment rule for web-generated leads; or one case assignment rule for standard use and one case assignment rule for holiday use. For each rule type, only one rule can be in effect at any time.

Each rule consists of multiple rule entries that specify exactly how the leads or cases are assigned. For example, your standard case assignment rule may have two entries: cases with “Type equals Gold” are assigned to “Gold Service” queue, and cases with “Type equals Silver” are assigned to “Silver Service” queue.

To create an assignment rule, from Setup, enter **Assignment Rules** in the Quick Find box, then select **Lead Assignment Rules** or **Case Assignment Rules**.

Sample Assignment Rule

The following case assignment rule assigns a case to a specific queue based on the account rating:

**Rule Name** — **Hot Account Assignment**

**Rule Entries:**

<table>
<thead>
<tr>
<th>Order</th>
<th>Criteria</th>
<th>Assign To</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>ISPICKVAL(Account.Rating, &quot;Hot&quot;)</td>
<td>Tier 1 Support Queue</td>
</tr>
<tr>
<td>2</td>
<td>OR( ISPICKVAL(Account.Rating, &quot;Warm&quot;), ISPICKVAL(Account.Rating, &quot;Cold&quot;))</td>
<td>Tier 2 Support Queue</td>
</tr>
</tbody>
</table>

- [Viewing and Editing Assignment Rules](#)
Set Up Auto-Response Rules

Send automatic email responses to lead or case submissions based on the record’s attributes. Set up auto-response rules to send quick replies to customers to let them know someone at your company received their inquiry or details about their issue.

Create auto-response rules for leads captured through a Web-to-Lead form and for cases submitted through a:

- Self-Service portal
- Customer Portal
- Web-to-Case form
- Email-to-Case message
- On-Demand Email-to-Case message

Create as many response rules as you like based on any attribute of the incoming lead or case. Keep in mind that you can activate only one rule for leads and one for cases at a time. Sales and service reps can find the email responses in the Activity History related list of the lead or contact and in the Email related list on cases.

Creating Auto-Response Rules

To create a Web-to-Lead response rule, from Setup, enter Auto-Response Rules in the Quick Find box, then select Lead Auto-Response Rules. To create a response rule for cases, from Setup, enter Auto-Response Rules in the Quick Find box, then select Case Auto-Response Rules. On the Auto-Response Rules page:

1. Click New.
2. Enter the rule name.
3. Check the active box to make this rule the only one activated.
4. Click Save.
5. Create rule entries.

Creating Response Rule Entries

1. Click New from the rule detail page.
2. Enter a number to specify the order this entry should be processed.

   The rule processes entries in this order and stops processing at the first matching entry and then sends the email using the specified email template. If no response rules apply, the rule uses the default template you specify on the Web-to-Case or Web-to-Lead Settings page.

   **Note:** To create an error-proof rule, always create the last rule entry with no criteria. This rule entry will catch any leads or cases that the previous rule entries did not. This is especially important for Email-to-Case and On-Demand Email-to-Case which don’t have default templates.

3. Enter your rule criteria:
   - Choose criteria are met and select the filter criteria that a record must meet to trigger the rule. For example, set a case filter to Priority equals High if you want case records with the Priority field marked High to trigger the rule.

   If your organization uses multiple languages, enter filter values in your organization’s default language. You can add up to 25 filter criteria, of up to 255 characters each.
When you use picklists to specify filter criteria, the selected values are stored in the organization’s default language. If you edit or clone existing filter criteria, first set the Default Language on the Company Information page to the same language that was used to set the original filter criteria. Otherwise, the filter criteria may not be evaluated as expected.

- Choose formula evaluates to true and enter a formula that returns a value of “True” or “False.” Salesforce triggers the rule if the formula returns “True.” For example, the formula `AND(ISPICKVAL(Priority,"High"),Version<4.0)` triggers a rule that automatically responds with the selected template if the Priority field on a case is set to High and the value of a custom field named Version on the case is less than four.

4. Enter the name to include on the From line of the auto-response message.

5. Enter the email address to include on the From line of the auto-response message. This must be either one of your verified organization-wide email addresses or the email address in your Salesforce user profile, and must be different from the routing addresses you use for Email-to-Case.

6. If you want, enter a reply-to address.

7. Select an email template.

8. If you’re creating a response rule entry for Email-to-Case, select Send response to all recipients to send auto-response messages to anyone included in the To and Cc fields in the original message.

9. Save your work.

SEE ALSO:
- Differences Between Auto-Response Rules and Workflow Alerts

### Differences Between Auto-Response Rules and Workflow Alerts

Auto-response rules and workflow email alerts provide similar functionality. The following table lists some of the differences between workflow alerts and auto-response rules to help you determine which process to use:

<table>
<thead>
<tr>
<th>Type of Process</th>
<th>Designed For</th>
<th>Runs When</th>
<th>Sends Email To</th>
<th>Number of Emails Sent</th>
</tr>
</thead>
</table>
| Workflow email alerts | Notifications to interested parties. | A case or lead is created or edited. | Anyone you choose. | Sends one email per email alert. Each workflow rule can have up to:  
  - 10 email alerts as immediate actions  
  - 10 email alerts per time trigger as time-dependent actions  
  - 10 time triggers |
### Setting Up Escalation Rules

Each rule defines a condition that determines how cases are processed.

To create an escalation rule:

1. From Setup, enter *Escalation Rules* in the Quick Find box, then select *Escalation Rules*.
2. Choose **New**, and give the rule a name. Specify whether you want this to be the active escalation rule. Click **Save**.
3. To create the rule entries, click **New**. For each entry, you can specify the following:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Order</td>
<td>Sets the order in which the entry will be processed in the rule, for example, 1, 2, 3. Salesforce evaluates each entry in order and tries to match the criteria of the entry. As soon as a match is found, Salesforce processes the item and stops evaluating the rule entries for that item. If no match is found, the case is simply not escalated.</td>
</tr>
<tr>
<td>Criteria</td>
<td>Specifies conditions that the case must match for it to be escalated.</td>
</tr>
</tbody>
</table>

You can enter your rule criteria:

- Choose criteria are met and select the filter criteria that a record must meet to trigger the rule. For example, set a case filter to *Priority equals High* if you want case records with the *Priority* field marked High to trigger the rule.

  If your organization uses multiple languages, enter filter values in your organization’s default language. You can
add up to 25 filter criteria, of up to 255 characters each.

When you use picklists to specify filter criteria, the selected values are stored in the organization's default language. If you edit or clone existing filter criteria, first set the Default Language on the Company Information page to the same language that was used to set the original filter criteria. Otherwise, the filter criteria may not be evaluated as expected.

- Choose formula evaluates to true and enter a formula that returns a value of “True” or “False.” Salesforce triggers the rule if the formula returns “True.” For example, the formula `AND(ISCHANGED(Priority), ISPICKVAL(Priority, "High"))` triggers a rule that changes the owner of a case when the Priority field is changed to High.

Note that if your condition uses a custom field, the rule entry will automatically be deleted if the custom field is deleted.

### Specify business hours criteria

Specifies how business hours apply to an escalated case:

- Ignore business hours - Select this field to ignore business hours when escalating a case.
- Use business hours specified on case - Select this field to use the existing business hours on a case when escalating it.
- Set business hours - Select this field and click the lookup icon (…) to select predefined business hours to apply to a case when escalating it.

Escalation actions only run during the business hours with which they are associated.

### Specify how escalation times are set

Determines what field applies to your Age Over number of hours. Your Age Over setting can be based on the number of hours since:

- A case was created
- The case was created unless it has been modified; once modified, the case will never get escalated
- The most recent time a case was modified

For example, if you choose Based on last modification time of the case and your Age Over setting is 5, cases will get escalated 5 hours after the most recent last modified time and date as long as the case is open.
4. After creating the entry, click **Save**, or **Save & New** to save the entry and create more entries.

5. After you create the last entry, click **Save**. The escalation rule and a list of one or more rule entries are displayed.

   **Note:** To create an error-proof rule, always create the last rule entry with no criteria. This rule entry will catch any cases that the previous rule entries did not assign.

6. Specify what action you want to be taken when one of the escalation rule entries is true. Click **Edit** next to the name of one of the rule entries.

7. Click **New** to add an escalation action. You can specify up to five actions for each rule entry, to escalate the case over increasing periods of time. For each escalation action, you can specify the following:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Age Over</td>
<td>Specifies the number of hours after which a case should be escalated if it has not been closed. This time is calculated from the date field set in the Specify how escalation times are set field. No two escalation actions can have the same number in this field.</td>
</tr>
<tr>
<td>Assign To</td>
<td>Specifies the user, partner user, or queue to which the case will be assigned if it matches the condition. Users specified here cannot be marked “inactive” and they must have the “Read” permission on cases.</td>
</tr>
<tr>
<td>Note:</td>
<td>You can’t revoke the “Read” permission on leads or cases for users assigned to a rule. Note that reassigning an escalated case is optional.</td>
</tr>
<tr>
<td>Notification Template</td>
<td>Specifies the template to use for the email that is automatically sent to the new owner specified in the Assign To field. If no template is specified, no email will be sent.</td>
</tr>
<tr>
<td>Notify this user</td>
<td>Specifies the user to notify when the case is escalated. notchifying another user is optional.</td>
</tr>
<tr>
<td>Notify Case Owner</td>
<td>Indicates that the owner of the case is notified when the case is escalated.</td>
</tr>
<tr>
<td>Notification Template</td>
<td>Specifies the template to use for the notification email that is automatically sent to the Notify user(s). If you choose a user in the Notify field, you must select a template.</td>
</tr>
<tr>
<td>Additional Emails</td>
<td>Specifies additional individuals that you want to notify upon escalation.</td>
</tr>
</tbody>
</table>

**Note:** Each time you save a case or change the case owner, your escalation rules re-evaluate that case. Once the case matches an escalation rule entry, calculates when the case should be escalated and stops checking other escalation rule entries. For example, if you have two escalation rule entries that specify:

- Escalate three hours after creation date if Case Reason equals Crash
- Escalate four hours after creation date if Case Reason equals Bug
A case created with Case Reason of Bug will be scheduled for escalation four hours after it was created. Later, a user changes the case, which causes the escalation rules to re-evaluate the case. If escalation rules find that the Case Reason is now Crash, it schedules the case to be escalated three hours after creation date. If the case was created more than three hours ago, the case is escalated as soon as possible.

Escalation rules are not evaluated when transferring multiple cases at one time from a case list view. Also note that if you use assignment rules to change case ownership, the escalation rules are evaluated before any assignment rules.

Tip: Salesforce processes rules in the following order:
1. Validation rules
2. Assignment rules
3. Auto-response rules
4. Workflow rules (with immediate actions)
5. Escalation rules

SEE ALSO:
- Creating Escalation Rules
- Viewing and Editing Escalation Rules
- Monitoring the Case Escalation Rule Queue

Creating Escalation Rules

Create case escalation rules to escalate cases automatically if they are not resolved within a certain period of time.

Typically, your organization will have one escalation rule that consists of multiple entries which specify exactly how the cases are escalated. For example, your standard case escalation rule could have two entries: cases with Type set to Gold are escalated within two hours, and cases with Type set to Silver are escalated within eight hours.

Set Up Quick Text

Quick Text lets users create messages, such as greetings, answers to common questions, and short notes, which support agents can easily insert into case updates and communications with customers to save time and increase standardization. When you set up Quick Text, you enable it, set the user permissions so agents can use it, and create standardized messages.

1. **Enable Quick Text.**
   
   Quick Text is automatically enabled for organizations that have enabled Live Agent.

2. Optionally, customize Quick Text settings.

3. **Grant permissions to users so that they can create Quick Text messages.**

4. **Create Quick Text messages.**

5. If your organization uses Live Agent, give agents access to the Quick Text sidebar in the Live Agent console.
Enable Quick Text

Enable Quick Text for your organization so your agents can use pre-defined messages to respond to your customers and update cases quickly and easily.

Note: Once you enable Quick Text, you can’t disable it.

1. From Setup, enter Quick Text Settings in the Quick Find box, then select Quick Text Settings.
2. Click Enable Quick Text.
3. Click Save.

After enabling Quick Text, give support agents access to Quick Text by updating the user permissions.

SEE ALSO:
- Set Up Quick Text
- Create Quick Text Messages

Give Support Agents Access to Quick Text

Giving agents access to Quick Text lets them choose standard messages to include in their chats and emails with customers, and in their case notes and updates.

To allow agents to use Quick Text in the Live Agent console, in Live Agent in the Salesforce console, or in the Email, Portal, Log a Call, and Change Status actions in Case Feed:

• Give them "Read" permission on Quick Text, and
• Do one of the following:

<table>
<thead>
<tr>
<th>Option</th>
<th>Steps</th>
</tr>
</thead>
</table>
| Give agents ownership of at least one Quick Text message | - Transfer ownership of existing Quick Text messages to the agents (click Change next to Owner on the record), or  
- Have agents create new messages |

<table>
<thead>
<tr>
<th>Option</th>
<th>Steps</th>
</tr>
</thead>
</table>
| Change your organization-wide default sharing setting for Quick Text | 1. From Setup, enter Sharing Settings in the Quick Find box, then select Sharing Settings.  
2. In Organization-Wide Defaults, click Edit.  
3. Select Public Read Only or Public Read-Write in the Default Access dropdown list for Quick Text.  
4. Click Save. |

Use sharing rules

If you don’t want to change your organization-wide default sharing settings, create sharing rules to specify which groups
After giving support agents access to Quick Text, you optionally can create standardized messages that they can use.

SEE ALSO:
Set Up Quick Text

Create Quick Text Messages

Quick Text messages enable agents to include standardized notes with case updates and to send common responses to customers without having to type the responses each time. Create custom messages for your agents to use when they email and chat with customers.

1. Click the **Quick Text** tab.
2. Click **New**.
3. If you have more than one Quick Text record type, select a record type for the new message, and then click **Continue**.
4. Type a message name.
5. Type the message. It can include line breaks, lists, and special characters and can be up to 4,096 characters.
6. Click **Available Merge Fields** to display the merge field selector.
7. Select the channels in which you want the message to be available.
   - Depending on which features are enabled in your organization, these channels might be available.
   - Email—the Case Feed Email action
   - Live Agent—Live Agent in the Salesforce console
   - Portal—a community or a customer portal
   - Phone—the Case Feed Log a Call action
   - Internal—the Case Feed Change Status action
8. Select a category.
9. Optionally, select a subcategory.
10. Click **Save**.

   **Tip:** Click **Test and Verify Merge Fields** to view a sample of the quick text, populated with data from records that you choose.

Set Up Quick Text
Monitoring Support Processes

Monitor Automated Article Process Actions

Salesforce Knowledge users can schedule articles to be published or archived on a specific date. Use the automated-process actions queue to view these pending actions and cancel them if necessary.

1. From Setup, enter Automated Process Actions in the Quick Find box, then select Automated Process Actions.

2. Click Search to view all pending actions for any article, or set the filter criteria and click Search to view only the pending actions that match the criteria.

   The filter options are:
   - **Process Definition**
     - The process that is triggering the action. This value is always “KBWorkflow.”
   - **Object**
     - The object that triggered the pending action. This value is always “Knowledge Article.”
   - **Scheduled Date**
     - The date the pending actions are scheduled to occur.
   - **Create Date**
     - The date the article that triggered the pending action was created.
   - **Created By**
     - The user who created the article that triggered the pending action.
   - **Record Name**
     - The name of the article that triggered the pending action.

   The filter is not case-sensitive.

To cancel pending actions, select the box next to the pending actions you want to cancel and click Delete.

Monitoring the Case Escalation Rule Queue

When Salesforce triggers a case escalation rule that has time-dependent actions, use the escalation rule queue to view pending actions and cancel them if necessary.

To view pending actions:

1. From Setup, enter Case Escalations in the Quick Find box, then select Case Escalations.

2. Click Search to view all pending actions for any active case escalation rule, or set the filter criteria and click Search to view only the pending actions that match the criteria. The filter options are:

   - **Case To Escalate**
     - The Case Number of the escalated case. The Case Number is a unique, automatically generated number used for identifying the case.

   - **Escalation Rule**
     - The name of the rule used to escalate the case.
Rule Entry
The order in which the rule entry will be processed. A rule entry is a condition that determines how a case escalation rule is processed. Each escalation rule can have a maximum of 3000 rule entries.

Escalation Action
The time criteria specified for the case to escalate as defined in the rule entry.

Ignore Business Hours
Indicates if the Ignore Business Hours checkbox is selected on the rule entry, meaning that the rule entry is in effect at all times and ignores your organization’s business hours.

Escalate At
The date and time at which the case will escalate as defined in the rule entry. Dates and times display in the time zone of the user viewing the escalation rule queue.

Added Date
The date and time at which the case was added to the queue. Dates and times display in the time zone of the user viewing the escalation rule queue.

The filter is not case-sensitive.

To cancel pending actions:
1. Select the box next to the pending actions you want to cancel.
2. Click Delete. Salesforce cancels the pending action.

SEE ALSO:
Creating Escalation Rules
Viewing and Editing Escalation Rules

Monitor the Entitlement Process Queue
When Salesforce triggers an entitlement process that has time-dependent milestone actions, use the entitlement process queue to view pending actions and cancel them, if necessary.

To view pending actions:
1. From Setup, enter Entitlement Processes in the Quick Find box, then select Entitlement Processes.
2. Click Search to view all pending actions for any active workflow rules, or set the filter criteria and click Search to view only the pending actions that match the criteria. The filter options are:

   Entitlement Process Name
   The entitlement process.

   Case Number
   The case’s automatically generated identifying number.

   Milestone Name
   The milestone that triggered the action.

   Evaluation Date
   The date the evaluated actions are scheduled to occur.

   Created Date
   The creation date of the case that triggered the entitlement process.
Adding Entitlements, Service Agreements, and Work Orders

What Is Entitlement Management?

Entitlement management helps you provide the correct support to your customers. It includes a variety of features that let you define, enforce, and track service levels as part of your support management process.

Entitlement management features include:

- **Entitlements**, which let support agents determine whether a customer is eligible for support.
- **Entitlement processes**, which let you design timelines that include all the steps that your support team must complete to resolve support records like cases or work orders.
- **Service contracts**, which let you represent different kinds of customer support agreements like warranties, subscriptions, or maintenance agreements. You can restrict service contracts to cover specific products.
- **Community access to entitlements**, which lets community users view entitlements and service contracts and create support records from them.
- **Reporting on entitlement management**, which lets you track the way entitlements are used in your Salesforce org and whether service contract terms are being met.

Because entitlement management is highly customizable, you have full control of which features you use and how you set them up to reflect your customer support model. We'll walk you through important planning decisions and setup steps to help you make the most of entitlement management.

⚠️ **Important**: Only users in orgs with the Service Cloud can enable, create, and update entitlement management items.

SEE ALSO:
- Planning for Entitlement Management
- Entitlement Management Setup Checklist
Planning for Entitlement Management

Entitlement management is highly customizable, which means you have many choices during setup. Before you begin the setup process, it’s essential to choose an entitlement management model.

Choose What Determines Support Eligibility

You can set up entitlement management so customers are eligible for support based on one or several of the following types of records:

- **Accounts**: Any contact on the account is eligible for support.
- **Contacts**: Specific contacts are eligible for support.
- **Assets**: Specific assets (purchased products) are eligible for support.
- **Service contracts**: Customers are eligible for support based on a specific service contract.
- **Contract line items**: Specific products covered by a service contract are eligible for support.

Your approach depends on how detailed you want your support process to be. If you prefer to keep it simple, just have your support agents determine support eligibility based on accounts. Here’s what this approach looks like:

Choose a Setup Model

There are three general ways to set up entitlement management. Once you’ve decided what should determine support eligibility, review the three models and select the one that best meets your business needs. You can always change which model you’re using.
### Entitlement model

<table>
<thead>
<tr>
<th>Entitlement model</th>
<th>What determines support eligibility</th>
<th>Use this model if</th>
</tr>
</thead>
</table>
| Entitlements only (simplest option) | Support agents determine whether a customer is eligible for support at the account, contact, or asset level. | • There’s no need to manage your customers’ entitlements as part of a service contract  
• Your entitlements don’t have a renewal process  
• Entitlements aren’t purchased by your customers; they’re bundled with products (warranties)  
• Your customers’ entitlements are short term and managed independently of each other |
| Entitlements + service contracts | Support agents determine whether a customer is eligible for support based on their service contract. | • Entitlements are purchased and managed separately from the products they cover and are part of a service contract  
• Your customers’ entitlements are renewed at a contract level  
• You use Salesforce for customer support but not necessarily for service contract management |
| Entitlements + service contracts + contract line items (most complex option) | Support agents determine whether a customer is eligible for support based on the products covered in their service contract. | • You use Salesforce for customer support and to manage your customers’ service contracts  
• Your support team manages service contract transactions, such as transfers, mergers, and renewals  
• Warranties, subscriptions, or other support products appear as line items on your sales orders and map to one or more entitlements  
• Entitlements are created and updated through an integration with your order management system |

Regardless of the setup model you choose, you can enhance your support process with other entitlement management features. For example, you can:

• Create entitlement processes to enforce required, time-dependent steps in your support process
• Use entitlement versioning to create and maintain multiple versions of entitlement processes
• Add entitlements to communities
• Report on entitlements
After you select a setup model, head to the invaluable **Entitlement Management Setup Checklist**.

## Entitlement Management Setup Checklist

When you set up entitlement management, you decide which features to use. Use this checklist to confirm that you’ve set up entitlement management in a way that fits your support processes.

<table>
<thead>
<tr>
<th>Step</th>
<th>Complete if...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Read Planning for Entitlement Management</td>
<td>You’re thinking about using entitlements in your org.</td>
</tr>
<tr>
<td>Set Up Entitlements</td>
<td>You want customer support eligibility to be determined at the account or contact level.</td>
</tr>
<tr>
<td>Enable Entitlements</td>
<td>You want to use entitlements in your org.</td>
</tr>
<tr>
<td>Customize Entitlements</td>
<td>You want to control which fields users see on entitlements, and how and where users associate entitlements with other records.</td>
</tr>
<tr>
<td>Set Up Entitlement and Asset Lookup Filters on Cases</td>
<td>You want to control which entitlements and assets users can link to a case.</td>
</tr>
<tr>
<td>Give Users Access to Entitlement Management</td>
<td>You want to give users the appropriate user permissions, field access, and tab access.</td>
</tr>
<tr>
<td>Set Up an Entitlement Template</td>
<td>You want to predefine the terms of support for specific products.</td>
</tr>
<tr>
<td>Automatically Add Entitlements to Cases from Web, Email, and Communities</td>
<td>You want the correct entitlement to be added automatically to cases created using Web-to-Case, Email-to-Case, or communities.</td>
</tr>
<tr>
<td>Set Up Milestones</td>
<td>You want to define required steps that support agents must complete to close a support record.</td>
</tr>
<tr>
<td>Customize Milestone Page Layouts</td>
<td>You want to control which milestone-related fields users see.</td>
</tr>
<tr>
<td>Enable Milestone Feed Items</td>
<td>You want automatic notifications to be added to the feed and the record owner’s profile page when a milestone is completed or violated.</td>
</tr>
<tr>
<td>Set Up the Milestone Tracker</td>
<td>You want your support team to be able to see a list of upcoming and closed milestones and countdowns for active and overdue milestones.</td>

- How entitlement processes affect the way they resolve cases or work orders

SEE ALSO:
Planning for Entitlement Management

Entitlement Management Limitations

The following limitations apply to entitlements and their related features.

**Entitlement Limitations**

- Every entitlement must be associated with an account.
- You can’t share entitlements. Entitlements inherit their parent account’s sharing settings.
- If you’re using entitlement processes, manage customers’ work orders and cases on separate entitlements. This is because an entitlement process only runs on records that match its type. For example, when a Case entitlement process is applied to an entitlement, the process only runs on cases associated with the entitlement. If a work order is also associated with the entitlement, the process won’t run on the work order.
- Merge fields for entitlements on cases aren’t supported. For example, if you add the `!Case.Entitlement` merge field to an email template, the field is not populated on the template.
- Entitlement contacts don’t have page layouts, search layouts, buttons, links, or record types.
- Entitlements don’t automatically apply to cases created with Web-to-Case or Email-to-Case. If needed, you can add entitlements to these features using Apex code. For a sample trigger, see * Automatically Add Entitlements to Cases from Web, Email, and Communities*.

**Milestone Limitations**

- You can’t add milestones to support records without using entitlement processes. Entitlement processes apply milestones to support records.
- An org can have up to 1,000 entitlement processes, with up to 10 milestones per process. If your org was created before Summer ’13, its maximum number of entitlement processes may be lower, but you can ask Salesforce to increase it.
- Milestones aren’t marked completed automatically. If you’d like, you can set up automation to auto-complete milestones on support records that match unique criteria. To learn more, see *Auto-Complete Case Milestones*.
- After an entitlement process is activated, you can’t delete its milestones or create milestone actions. However, you can create versions of entitlement processes with different milestone settings and apply the new version to existing entitlements.
- Only one instance of a milestone can count down on a record at a time. For example, if a Response Time milestone begins counting down on a case, a second Response Time milestone can’t be created until the first is completed.
- Business hours on entitlement processes aren’t supported in change sets. To transfer an entitlement process with business hours from one Salesforce org to another, use one of these approaches:
  - Create the entitlement process from scratch in the new org
  - Use an alternative method to transfer the entitlement process, such as the Force.com Migration Tool
  - Remove the business hours from the entitlement process before adding it to a change set

**EDITIONS**

Available in: Salesforce Classic

Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions with the Service Cloud
Contract Line Item Limitations

- You can only use contract line items if your org uses the Product object.
- You can’t create list views for contract line items.
- You can’t share contract line items. Contract line items inherit their parent service contract’s sharing settings. For example, users with the “Read” permission on service contracts inherit the “Read” permission on contract line items.

Entitlement Management Setup Checklist
Set Up an Entitlement Process

Set Up Entitlements

Entitlements are units of customer support in Salesforce, such as “phone support” or “web support”. Set up entitlements in your Salesforce org to help support agents determine whether a customer is eligible for support.

1. Enable Entitlements
   Enable entitlements in your Salesforce org to help support agents deliver the correct service level to your customers.

2. Customize Entitlements
   Customize entitlement fields and page layouts based on your business needs and how your agents work.

3. Set Up Entitlement and Asset Lookup Filters on Cases
   Set up lookup filters on entitlement-related case fields to restrict the entitlements that users can select on a case.

4. Give Users Access to Entitlement Management
   After you set up entitlement management, make sure that users have the appropriate user permissions, field access, and tab access.

5. Set Up an Entitlement Template
   Entitlement templates let you predefine terms of support that users can add to products.

6. Automatically Add Entitlements to Cases from Web, Email, and Communities
   Entitlements don’t automatically apply to cases created using Web-to-Case, Email-to-Case, or communities. However, you can add entitlements to these features using Apex code.
Enable Entitlements

Enable entitlements in your Salesforce org to help support agents deliver the correct service level to your customers.

1. From Setup, enter Entitlement Settings in the Quick Find box, then select Entitlement Settings.
2. Select Enable Entitlement Management.
3. Click Save. This takes you to a page where you can customize entitlement management settings. You’ll come back to those settings later on in the entitlement management setup process.

Customize Entitlements

Customize entitlement fields and page layouts based on your business needs and how your agents work.

1. Customize entitlement fields.
   This lets you control what information users add to entitlements.

   Tip: Create custom entitlement fields that are specific to your industry or your support processes. For example:
   - Customize the values for the Type field to match the types of entitlements your team provides or sells, like online support or online training.
   - If your business charges for entitlement renewals, create a currency field on entitlements named Cost to Renew.

2. Customize entitlement page layouts.
   This lets you specify which fields and related lists users see on entitlements. Consider making the following customizations:
   - Add the Status Icon field so users can easily see whether the entitlement is active, expired, or inactive.
   - Add the Cases, Contacts, and Work Orders related lists so users can:
     - View cases, contacts, and work orders associated with entitlements
     - Create cases or work orders automatically associated with the correct entitlements
     - Add contacts to entitlements

3. Set field history tracking on entitlements.
   This lets you see when field values were changed. Changes are listed in the Entitlement History related list on entitlements. From the object management settings for entitlements, go to the fields section and click Set History Tracking.

4. Customize other objects’ page layouts.
• Add the **Entitlement Name** lookup field to case and work order page layouts. This lets users add entitlements to cases or work orders.

**Important:** To let a user create cases from entitlements or change a case’s assigned entitlement, make the **Entitlement Name** field on cases editable for their profile.

• Add the Entitlements related list to other objects’ page layouts:

<table>
<thead>
<tr>
<th>Add the Entitlements related list to this object’s page layouts...</th>
<th>So users can view and create entitlements when...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accounts</td>
<td>Any contact on the account is eligible for support</td>
</tr>
<tr>
<td>Contacts</td>
<td>Specific contacts are eligible for support</td>
</tr>
<tr>
<td>Assets</td>
<td>Specific assets (purchased products) are eligible for support</td>
</tr>
</tbody>
</table>

5. **Make the Entitlements tab visible in Salesforce and any custom apps.**

The Entitlements tab is where users create and edit entitlements. Add the tab to an app or instruct your users to add it to an existing tab set in Salesforce. Users need the “Read” permission on entitlements to see the Entitlements tab.

### Set Up Entitlement and Asset Lookup Filters on Cases

Set up lookup filters on entitlement-related case fields to restrict the entitlements that users can select on a case.

For example, when community users create a case and use the lookup on the **Entitlement Name** field, you can set up lookup filters so they can choose only entitlements registered to their account or contact.

1. From Setup, enter **Entitlement Settings** in the Quick Find box, then select **Entitlement Settings**.

2. Choose the item(s) you’d like returned in the lookup fields.

<table>
<thead>
<tr>
<th>Lookup Field on Cases</th>
<th>Click...</th>
<th>To Return...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Asset</td>
<td>Same account on the case</td>
<td>Assets registered to the account on the case.</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Tip:</strong> If you want the lookup field to return all assets that share an account with the case, select only this option.</td>
</tr>
<tr>
<td></td>
<td>Same contact on the case</td>
<td>Assets registered to the contact on the case.</td>
</tr>
<tr>
<td></td>
<td>Entitlements on the case’s account</td>
<td>Assets associated with entitlements that belong to the case’s account.</td>
</tr>
</tbody>
</table>
### Lookup Field on Cases

<table>
<thead>
<tr>
<th>Click...</th>
<th>To Return...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Entitlements on the case's contact</td>
<td>Assets associated with entitlements related to the case's contact.</td>
</tr>
<tr>
<td>Entitlement</td>
<td>Active status</td>
</tr>
<tr>
<td>Same account on the case</td>
<td>Entitlements associated with the account on the case.</td>
</tr>
<tr>
<td>Same asset on the case</td>
<td>Entitlements associated with the asset on the case.</td>
</tr>
<tr>
<td>Same contact on the case</td>
<td>Entitlements associated with the contact on the case.</td>
</tr>
</tbody>
</table>

Choosing multiple items acts as an AND function, so the more items you select, the more it restricts the options returned. For example, choosing Same account on the case and Same contact on the case means the Asset lookup field only returns assets registered to both the account and the contact on the case.

**Tip:** Choose items that match the way your support agents verify support eligibility. For example, choose the account-related items if your support agents verify support eligibility based on accounts.

3. Click **Save**.

**Note:** Equivalent lookup filters aren’t available for work orders.

### Give Users Access to Entitlement Management

After you set up entitlement management, make sure that users have the appropriate user permissions, field access, and tab access.

1. **Assign entitlement management permissions to users.**

<table>
<thead>
<tr>
<th>Users Who Will</th>
<th>Need These Permissions</th>
<th>Permissions Are Auto-Enabled on These Standard Profiles</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set up entitlement management, including milestones, entitlement processes, and entitlement templates</td>
<td>“Manage Entitlements” AND “Customize Application”</td>
<td>System Administrator</td>
</tr>
<tr>
<td>Provide entitlement management to a community</td>
<td>“Customize Application” AND “Create and Set Up Communities”</td>
<td>System Administrator</td>
</tr>
<tr>
<td>Users Who Will</td>
<td>Need These Permissions</td>
<td>Permissions Are Auto-Enabled on These Standard Profiles</td>
</tr>
<tr>
<td>----------------</td>
<td>------------------------</td>
<td>-----------------------------------------------------</td>
</tr>
<tr>
<td>Create or update custom report types that include entitlement management</td>
<td>“Manage Custom Report Types”</td>
<td>System Administrator</td>
</tr>
<tr>
<td>Create and run reports based on entitlement management custom report types</td>
<td>“Create and Customize Reports”</td>
<td>Read Only, Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
<tr>
<td>Create cases with entitlements</td>
<td>“Create” on cases AND “Read” on entitlements</td>
<td>Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
<tr>
<td>Change a case’s entitlement</td>
<td>“Edit” on cases AND “Read” on entitlements</td>
<td>Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
<tr>
<td>Create work orders with entitlements</td>
<td>“Create” on work orders AND “Read” on entitlements</td>
<td>Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
<tr>
<td>Change a work order’s entitlement</td>
<td>“Edit” on work orders AND “Read” on entitlements</td>
<td>Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
<tr>
<td>Verify or view entitlements</td>
<td>“Read” on entitlements</td>
<td>Read Only, Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
<tr>
<td>Create entitlements</td>
<td>“Create” on entitlements</td>
<td>None: enable the permission in a permission set or custom profile</td>
</tr>
<tr>
<td>Change entitlements</td>
<td>“Edit” on entitlements</td>
<td>None: enable the permission in a permission set or custom profile</td>
</tr>
<tr>
<td>View entitlement contacts</td>
<td>“Read” on entitlement contacts</td>
<td>Read Only, Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
<tr>
<td>Change entitlement contacts</td>
<td>“Create” on entitlement contacts AND “Delete” on entitlement contacts</td>
<td>None: enable the permission in a permission set or custom profile</td>
</tr>
<tr>
<td>Verify or view service contracts</td>
<td>“Read” on service contracts</td>
<td>Read Only, Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
<tr>
<td>Users Who Will</td>
<td>Need These Permissions</td>
<td>Permissions Are Auto-Enabled on These Standard Profiles</td>
</tr>
<tr>
<td>--------------------------------</td>
<td>----------------------------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Create service contracts</td>
<td>“Create” on service contracts</td>
<td>None: enable the permission in a permission set or custom profile</td>
</tr>
<tr>
<td>Change service contracts</td>
<td>“Edit” on service contracts</td>
<td>None: enable the permission in a permission set or custom profile</td>
</tr>
<tr>
<td>Verify or view contract line items</td>
<td>“Read” on contract line items</td>
<td>Read Only, Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
<tr>
<td>Add contract line items to service contracts</td>
<td>“Edit” on service contracts AND “Create” on contract line items and “Read” on products and price books</td>
<td>None: enable the permissions in a permission set or custom profile</td>
</tr>
<tr>
<td>Change contract line items on service contracts</td>
<td>“Edit” on service contracts AND “Edit” on contract line items and “Read” on products and price books</td>
<td>None: enable the permissions in a permission set or custom profile</td>
</tr>
</tbody>
</table>

Tip: If a standard profile doesn’t include a certain user permission, you can create a permission set and enable the permission in it. Or, clone the standard profile and enable the permission in the custom profile.

2. Set field-level security.
Choose which entitlement management fields users can view and edit. Field-level security settings let you specify users’ access to fields in several areas of the user interface:

- Detail and edit pages
- Related lists
- List views
- Reports
- Search results
- Email and mail merge templates
- Communities

You can set field-level security from a permission set, profile, or a particular field.

Important: To let a user create cases from entitlements or change a case’s assigned entitlement, make the Entitlement Name field on cases editable for their profile.
Set Up an Entitlement Template

Entitlement templates let you predefine terms of support that users can add to products. You can create entitlement templates for specific products so support agents can quickly add the right entitlement whenever a customer purchases the product. For example, you can create entitlement templates for web or phone support so agents can easily add entitlements to products offered to customers.

Purchased or installed products are represented in Salesforce as assets. That means:

- A product (for example, “Laser Scanner”) is linked to an entitlement template
- A corresponding asset (for example, the laser scanner purchased by ABC Labs) is linked to an entitlement that was created from the entitlement template

**Note:** Entitlement templates are only available if entitlements and products are enabled in your org.

**Tip:** The Entitlement Management Trailhead module introduces you to common terms and walks you through the process of creating an entitlement template. And, it’s fun! To get started, see Entitlement Management.

1. Add the Entitlement Templates related list to product page layouts.

2. Optionally, add the **Type** and **Business Hours** fields to the Entitlement Templates related list. This lets users view the type of entitlement, such as Web or phone support, and any business hours that apply to the entitlement.

3. Create an entitlement template.
   a. From Setup, enter **Templates** in the Quick Find box, then select **Entitlement Templates**.
   b. Click **New Template**.
   c. Enter any details:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Entitlement Template Name</td>
<td>The name of the entitlement template.</td>
</tr>
<tr>
<td>Term (Days)</td>
<td>The number of days the entitlement is in effect. For example, if you want the entitlement template to entitle all customers who purchase this product to 90 days of phone support, enter 90.</td>
</tr>
<tr>
<td>Entitlement Process</td>
<td>The entitlement process associated with the entitlement.</td>
</tr>
<tr>
<td>Per Incident</td>
<td>Lets you limit the number of cases the entitlement supports. The admin determines whether this field is visible.</td>
</tr>
<tr>
<td>Cases Per Entitlement</td>
<td>The total number of cases the entitlement supports. This field is only available if Per Incident is selected.</td>
</tr>
<tr>
<td>Business Hours</td>
<td>The entitlement’s supported business hours.</td>
</tr>
</tbody>
</table>
The type of entitlement, such as Web or phone support. Admins can customize this field’s values.

4. Click **Save**.

5. Add the entitlement template to a product.
   a. Go to the product detail page.
   b. Click **Add Entitlement Template** on the Entitlement Templates related list.
   c. Select the entitlement template.
   d. Click **Insert Selected**.
   e. Click **Done**.

Now when a user creates an asset and links it to that product, the Entitlements related list on the asset includes an entitlement created from the entitlement template. That way, support agents responding to a call about the asset can quickly see what kind of support the customer is entitled to receive.

### Automatically Add Entitlements to Cases from Web, Email, and Communities

Entitlements don’t automatically apply to cases created using Web-to-Case, Email-to-Case, or communities. However, you can add entitlements to these features using Apex code.

When a case is created via Web-to-Case, Email-to-Case, or a community, it isn’t automatically associated with an entitlement. When a case’s Entitlement field is empty, this sample trigger checks whether the case contact has an active entitlement. If the contact has an active entitlement, the entitlement is added to the case. If the contact doesn’t have an active entitlement, the trigger then checks whether the case account has an active entitlement. If the case account has an active entitlement, the entitlement is added to the case. The trigger helps ensure that cases are resolved according to your customer support agreements.

To define this case trigger in your Salesforce org:

1. From Setup, enter **Case Triggers** in the Quick Find box, then select **Case Triggers**.
2. Click **New**.
3. Copy the text below and paste it in the text field.
4. Click **Save**.

```apex
trigger DefaultEntitlement on Case (Before Insert, Before Update) {
    List <EntitlementContact> entlContacts =
        [Select e.EntitlementId, e.ContactId, e.Entitlement.AssetId
            From EntitlementContact e
            Where e.ContactId in :contactIds
            And e.Entitlement.EndDate >= Today
            And e.Entitlement.StartDate <= Today];
    if(entlContacts.isEmpty()==false){
        for(Case c : Trigger.new){
            if(c.EntitlementId == null && c.ContactId != null){
```
for(EntitlementContact ec:entlContacts){
    if(ec.ContactId==c.ContactId){
        c.EntitlementId = ec.EntitlementId;
        if(c.AssetId==null && ec.Entitlement.AssetId!=null)
            c.AssetId=ec.Entitlement.AssetId;
        break;
    }
}
}
}
else{
    List <Entitlement> entls = [Select e.StartDate, e.Id, e.EndDate, e.AccountId, e.AssetId
        From Entitlement e
        Where e.AccountId in :acctIds And e.EndDate >= Today
        And e.StartDate <= Today];
    if(entls.isEmpty()==false){
        for(Case c : Trigger.new){
            if(c.EntitlementId == null && c.AccountId != null){
                for(Entitlement e:entls){
                    if(e.AccountId==c.AccountId){
                        c.EntitlementId = e.Id;
                        if(c.AssetId==null && e.AssetId!=null)
                            c.AssetId=e.AssetId;
                        break;
                    }
                }
            }
        }
    }
}

Set Up an Entitlement Process

Milestones

Milestones represent required, time-dependent steps in your support process, like first response or case resolution times. Milestones are added to entitlement processes to ensure that agents resolve support records correctly and on time.

An entitlement process can have up to 10 milestones. You can set up a milestone to occur once in an entitlement process, or to recur until the entitlement process exits.

Here’s how milestones fit into your support process:

EDITIONS
Available in: Salesforce Classic
Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions with the Service Cloud
View existing milestones in your org on the Milestones page under Entitlement Management in Setup. The Milestones related list on entitlements and entitlement processes also lists associated milestones.

Tip: There are several ways that you can view a list of records with milestones in your org:

• To view work orders with milestones, create a work order report using the Object Milestones custom report type
• To view cases with milestones, create a case report using the Cases with Milestones custom report type
• Create list views that filter on milestone fields

Before using milestones in your support process, review Milestone Limitations on page 2578.

Tip: The Entitlement Management Trailhead module introduces you to common terms and walks you through the process of creating milestones. And, it’s fun! To get started, see Entitlement Management.

SEE ALSO:
Set Up Milestones
Milestone Statuses
Milestone Recurrence Types
Milestone Actions

### Milestone Statuses

Milestones on support records display one of three statuses.

<table>
<thead>
<tr>
<th>Status</th>
<th>What It Means</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Checkmark]</td>
<td>Milestones on the record are either complete or not in violation.</td>
<td>The first response on a case is complete or not in violation.</td>
</tr>
<tr>
<td>![Warning]</td>
<td>Important: New records display as compliant because they’re not in violation.</td>
<td></td>
</tr>
</tbody>
</table>
Milestone Actions

Milestone actions are time-dependent workflow actions that occur on milestones in an entitlement process. Actions can be added to milestones after the milestone is added to an entitlement process. For example, you can create a milestone action that:

- Sends an email alert to certain users an hour before a First Response milestone is near violation
- Updates certain fields on a case one minute after a First Response milestone successfully completes

You can add three types of actions to milestones:

<table>
<thead>
<tr>
<th>Action Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>✔️ Success Actions</td>
<td>The actions to take when a milestone successfully completes. Success actions still fire on milestones that are closed late.</td>
</tr>
<tr>
<td>🚨 Warning Actions</td>
<td>The actions to take when a milestone is near violation.</td>
</tr>
<tr>
<td>🔴 Violation Actions</td>
<td>The actions to take when a milestone is violated.</td>
</tr>
</tbody>
</table>

You can automate the following actions for each action type:

<table>
<thead>
<tr>
<th>Workflow Action</th>
<th>What It Does</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Task</td>
<td>Create a workflow task</td>
<td>Create a task for a support agent to call a customer when a First Response milestone is violated.</td>
</tr>
<tr>
<td>New Email</td>
<td>Create an email alert</td>
<td>Notify case owners when a First Response milestone on their case is near violation.</td>
</tr>
<tr>
<td>New Field Update</td>
<td>Define a field update</td>
<td>Update the case Priority field to High when a First Response milestone is near violation.</td>
</tr>
</tbody>
</table>
### Workflow Action

<table>
<thead>
<tr>
<th>Workflow Action</th>
<th>What It Does</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Outbound Message</td>
<td>Define an outbound message</td>
<td>Send data about parts or services to an external system after a First Response milestone is completed.</td>
</tr>
<tr>
<td>Select Existing Action</td>
<td>Select an existing action</td>
<td>Use an existing email alert to notify a case owner when their case is near violation of a first response.</td>
</tr>
</tbody>
</table>

SEE ALSO:
- Add a Milestone Action to an Entitlement Process
- Entitlement Processes
- How a Record Moves Through an Entitlement Process

### Milestone Recurrence Types

When you create a milestone, you must choose its recurrence type. Learn what each recurrence type means and when to use it.

There are three milestone recurrence types in Salesforce:

<table>
<thead>
<tr>
<th>Recurrence Type</th>
<th>What It Means</th>
<th>How the Start Date is Determined</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>No Recurrence</td>
<td>The milestone only occurs once on the support record*.</td>
<td>The Start Date is the time when the milestone criteria are met on the record.</td>
<td>“First Response” “Resolution Time”</td>
</tr>
<tr>
<td>Independent</td>
<td>The milestone occurs whenever the milestone criteria match the record criteria.</td>
<td>The Start Date is the time when the milestone criteria are met on the record, regardless of when the previous occurrence was completed.</td>
<td>“Response Time”</td>
</tr>
<tr>
<td>Sequential</td>
<td>The milestone occurs on repeat whenever the milestone criteria are met.</td>
<td>For the first occurrence, the Start Date is the time when the milestone criteria are met on the case.</td>
<td>“Customer Contact Made”</td>
</tr>
</tbody>
</table>

**EDITIONS**

Available in: Salesforce Classic, Professional, Enterprise, Performance, Unlimited, and Developer Editions with the Service Cloud.
### Example:

**No Recurrence Type**

A milestone named “Resolution Time” is set up to ensure that cases are resolved within 4 hours. The milestone has one criterion: 

*Case: Status EQUALS New, Working, Escalated.*

Here’s how this milestone can be used:

1. At 10 a.m., a case is created whose Status is New, causing the milestone criteria to match the case criteria.
2. The “Resolution Time” milestone is automatically created with these settings:
   - Start Date = 10 a.m. (the current time)
   - Target Date = 2 p.m. (4 hours from the Start Date)
3. At 1 p.m., the support agent resolves the customer’s issue and closes the case, and the milestone is marked complete.

**Independent**

A milestone named “Engineer Solution Proposed” is set up to track case escalation to Engineering. When this milestone occurs, the support agent expects a proposed solution from Engineering within 4 hours. The milestone has one criterion: “*Case: Status EQUALS Waiting on Engineer*” (a custom status).

Here’s how this milestone can be used:

1. At 10 a.m., the support agent escalates a case to Engineering, causing the milestone criteria to match the case criteria.
2. An occurrence of the “Engineer Solution Proposed” milestone is automatically created with these settings:
• Start Date = 10 a.m. (the current time)
• Target Date = 2 p.m. (4 hours after the Start Date)

3. At 11 a.m., well before the Target Date, an engineer proposes a solution that’s sent to the customer. The milestone is marked complete manually or via a workflow.

If the proposed solution works, there may be no other occurrences of the “Engineer Solution Proposed” milestone on the case. However, if the solution doesn’t solve the customer’s issue, another occurrence would be created:

1. At 1 p.m., the support agent re-escalates the case to Engineering, causing the milestone criteria to match the case criteria.
2. A second occurrence of the “Engineer Solution Proposed” milestone is created with these settings:
   • Start Date = 1 p.m. (the current time)
   • Target Date = 5 p.m. (4 hours after the Start Date)

The case now has two “Engineer Solution Proposed” milestones:
• One completed milestone that started at 10 a.m.
• One incomplete milestone that started at 1 p.m. and has a Target Date of 5 p.m.

The milestone can recur as many times as necessary until the entitlement process is completed.

**Sequential**

A milestone named “Customer Contact Made” is set up to track daily contact with a customer as part of an SLA. When this milestone occurs, the support agent has 24 hours to communicate with the customer.

Here’s how this milestone can be used:

1. At 10 a.m. on Monday, a case is created whose entitlement process includes the “Customer Contact Made” milestone. The milestone has these settings:
   • Start Date = 10 a.m. Monday (the current time)
   • Target Date = 10 a.m. Tuesday (24 hours after the Start Date)

2. At 11 a.m. on Monday, the support agent communicates with the customer. This means that the milestone can be marked complete, and milestone’s second occurrence is created. However, because the previous occurrence’s Target Date is still in the future, the Start Date of the second occurrence is 10 a.m. Tuesday.

The case now has two “Customer Contact Made” milestones:
• One completed milestone that started at 10 a.m. Monday
• One incomplete milestone that is scheduled to start at 10 a.m. Tuesday with a Target Date of 10 a.m. Wednesday

If the support agent communicates with the customer multiple times on Monday, it doesn’t affect the Tuesday milestone.

Entitlement Processes
Add a Milestone to an Entitlement Process
Milestones: Supported Objects

Milestones represent required support steps that your team must complete to resolve a customer issue. Find out where you can use milestones in Salesforce.

What types of records can I add milestones to?

- Cases
- Work orders

How do I add milestones to a record?

Here are the general steps you’ll follow:

1. Create “master” milestones in Setup that represent required steps in your support process.
2. Add the milestones to an entitlement process, which is a customizable timeline of milestones.
3. Apply the entitlement process to a customer entitlement.

When you link a support record, such as a work order, to an entitlement that includes an entitlement process, the process—with its milestones—is automatically applied to the record. To learn more, see Set Up Milestones.

Can I use the same entitlement for work orders and cases?

If the entitlement has an entitlement process associated with it, don’t use the entitlement for multiple types of support records. Every entitlement process has a type—Case or Work Order—and a process only works on records that match its type. For example, when a Case entitlement process is applied to an entitlement, the process runs only on cases associated with the entitlement. If a work order is also associated with the entitlement, the process doesn’t run on the work order.

When I create a milestone, can I add it to both types of entitlement processes?

Yes. For example, if you create a First Response milestone in Setup, you can add it to both Case and Work Order entitlement processes.

How do I set the type of an entitlement process?

You select the type when you create the entitlement process. Entitlement processes created before Summer ’16 use the Case type. You can see an entitlement process’s type on its detail page.

Can I change the type of an entitlement process?

No. Once an entitlement process is created, all its versions must use the same type. Want to make the most of a particularly awesome entitlement process? Remember that you can easily create a similar process of a different type using the same milestones.

Are milestones supported in Lightning Experience?

Case milestones aren’t supported in Lightning Experience. Milestones on work orders are available in Lightning Experience with some limitations:

- The Object Milestones related list and milestone tracker are not available on work orders in Lightning Experience
- Updates to entitlement processes and milestones must be made in Salesforce Classic
- Clicking a milestone-related feed item on a work order in Lightning Experience redirects you to Salesforce Classic

Where do I manage milestones in my org?

- View and create milestones from the Milestones node in Setup under Entitlement Management
- Manage case milestone page layouts and validations rules from the Case Milestones node in Setup
- Manage work order milestone page layouts and validation rules from the Object Milestones node in Setup
Set Up Milestones

Milestones represent required steps in your support management process, like first response times. Set up and customize milestones in your org so they can be added to entitlement processes and applied to support records like cases and work orders.

1. **Customize Milestone Page Layouts**
   Milestones appear in the Case Milestones related list on cases, and the Object Milestones related list on work orders. Customize your page layouts to help support agents and supervisors track support progress.

2. **Enable Milestone Feed Items**
   Help support agents monitor support activity by enabling milestone feed items. This option posts a notification to the feed and the record owner’s profile page when a milestone is completed or violated.

3. **Set Up the Milestone Tracker**
   The milestone tracker gives support agents a complete view of upcoming and closed milestones, and displays countdowns for active and overdue milestones. Add it to the case feed, work order feed, a custom page, or the service console.

4. **Limit User Updates to Milestones**
   Add validation rules to milestones to prevent users from updating milestones unless certain criteria are met.

5. **Create a Milestone**
   Milestones represent required steps in your support process, such as case resolution time and first response time. You’ll create “master” milestones in your org, then add them to entitlement processes to enforce different service levels on support records like cases and work orders.

6. **Auto-Complete Case Milestones**
   Create an Apex trigger that automatically marks milestones Completed on cases that match unique criteria. In your trigger, define which events and related case criteria must be satisfied for a milestone to be marked Completed. You can implement a similar trigger to auto-complete work order milestones.

SEE ALSO:
- Milestones
- Entitlement Management Setup Checklist
- Milestones: Supported Objects
Customize Milestone Page Layouts

Milestones appear in the Case Milestones related list on cases, and the Object Milestones related list on work orders. Customize your page layouts to help support agents and supervisors track support progress.

1. Add any of the following fields to case and object milestone detail pages.
   - To edit case milestone detail page layouts, from Setup, enter Case Milestones in the Quick Find box, then click Page Layouts under Case Milestones.
   - To edit object milestone detail page layouts (which apply to work order milestones), from Setup, enter Object Milestones in the Quick Find box, then click Page Layouts under Object Milestones.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Actual Elapsed Time</td>
<td>The amount of time that it took to complete a milestone.</td>
</tr>
<tr>
<td></td>
<td>((\text{Elapsed Time}) - (\text{Stopped Time}) = (\text{Actual Elapsed Time}))</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> If you want to be able to display this field, Enable stopped time and actual elapsed time must be selected on the Entitlement Settings page.</td>
</tr>
<tr>
<td>Completed</td>
<td>Icon (✔) that indicates a milestone completion.</td>
</tr>
<tr>
<td>Completion Date</td>
<td>The date and time the milestone was completed.</td>
</tr>
<tr>
<td>Elapsed Time</td>
<td>The time it took to complete a milestone.</td>
</tr>
<tr>
<td></td>
<td>Automatically calculated to include any business hours on the support record.</td>
</tr>
<tr>
<td></td>
<td>Elapsed time is calculated only after the Completion Date field is populated.</td>
</tr>
<tr>
<td>Entitlement Process</td>
<td>The entitlement process that is being used for the record. Entitlement processes are optional.</td>
</tr>
<tr>
<td>Start Date</td>
<td>The date and time that the milestone tracking started.</td>
</tr>
<tr>
<td>Stopped Time</td>
<td>How long an agent has been blocked from completing a milestone. For example, an agent might wait for a customer to reply with more information.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Enable stopped time and actual elapsed time must be selected on the Entitlement Settings page.</td>
</tr>
<tr>
<td>Target Date</td>
<td>The date and time to complete the milestone.</td>
</tr>
</tbody>
</table>

To set up milestones, you need to have the following permission:

- **Manage Entitlements**
2. Add milestone elements to case and work order page layouts:
   a. Add milestone fields:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target Response</td>
<td>The time to complete the milestone. Automatically calculated to include</td>
</tr>
<tr>
<td>Time Remaining</td>
<td>any business hours on the support record.</td>
</tr>
<tr>
<td>Time Since Target</td>
<td>The time that has elapsed since a milestone violation. Automatically</td>
</tr>
<tr>
<td>Violation</td>
<td>calculated to include any business hours on the support record.</td>
</tr>
</tbody>
</table>

   b. Add the Case Milestones or Object Milestones related list to display the record's milestones.
Enable Milestone Feed Items

Help support agents monitor support activity by enabling milestone feed items. This option posts a notification to the feed and the record owner’s profile page when a milestone is completed or violated.

⚠️ Important:
- Chatter and entitlements must be enabled in your org.
- Enabling milestone feed items doesn’t create feed items for milestones that have already been completed or violated.
- If you add entitlement management to a community, enabling milestone feed items also makes feed items visible to community users.

1. From Setup, enter Entitlement Settings in the Quick Find box, then select Entitlement Settings.
2. Select Enable milestone feed items. This enables feed items for both cases and work orders.

Set Up the Milestone Tracker

The milestone tracker gives support agents a complete view of upcoming and closed milestones, and displays countdowns for active and overdue milestones. Add it to the case feed, work order feed, a custom page, or the service console.

Often, support agents’ performance is measured by how often they meet milestones. The milestone tracker helps agents be prepared for support deadlines by showing them:
- The time remaining until an active milestone reaches its Target Date
- The time passed since an overdue milestone’s Target Date
- A list of upcoming milestones
- A list of closed milestones

When a milestone is in progress, the milestone is represented by a green circle. The circle winds down clockwise as time elapses. The remaining time is shown in the center of the circle. When the time to complete the milestone expires, the circle turns red. The amount of time that the milestone is overdue is shown in the center of the circle.
If more than 24 hours remain on a milestone, the countdown displays in days (for example, 1d). When fewer than 24 hours remain, the countdown format switches to hours/minutes/seconds.

1. **Expose the milestone tracker to support agents.**
   You can expose the tracker in one of three ways:
   
   - Add it to the case feed. If you plan to use milestones on work orders, follow the same steps to add the tracker to the work order feed.
     
     a. From the object management settings for cases, go to Page Layouts.
     
     b. In the Case Page Layouts section, click **Edit**, and then click **Feed View** in the page layout editor.
     
     c. In the Other Tools and Components section, select the Milestone Tracker and specify where on the page you want it to appear.
     
     d. Click **Save**.
   
   - Add it to a custom Visualforce page using the `<apex:milestoneTracker>` component.
   
   - Add it as a component to the service console.

2. **Set how the milestone tracker displays time remaining or time overdue on milestones.**
   By default, the tracker uses actual hours. To make it display time remaining or time overdue in business hours, follow these steps.
   
   a. From Setup, enter **Entitlement Settings** in the Quick Find box, then select **Entitlement Settings**.
   
   b. In the Milestone Tracker section, deselect **Show the time remaining in actual hours, not business hours**.
   
   c. Click **Save**.

   **Example:** Suppose an active milestone’s business hours are 9 a.m. to 5 p.m. Right now, it’s 4:30 p.m. and the milestone’s Target Date is 11:00 a.m. tomorrow.
   
   - If the milestone tracker shows the remaining time in **business hours** (the default setting), it displays a countdown of 2 hours and 30 minutes (4:30 to 5 p.m. today and 9 to 11 a.m. tomorrow).
   
   - If the milestone tracker shows the remaining time in **actual hours**, it displays a countdown of 18 hours and 30 minutes (4:30 p.m. today to 11:00 a.m. tomorrow).
Limit User Updates to Milestones

Add validation rules to milestones to prevent users from updating milestones unless certain criteria are met.

1. From the object management settings for case milestones, go to Validation Rules.
2. Click New.
3. Enter the rule details.
4. Save your changes.

Example: This validation rule prevents users from selecting milestone completion dates that are earlier than the case creation date. You can create a similar validation rule for work orders from the object management settings for Object Milestones in Setup.

<table>
<thead>
<tr>
<th>Field</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rule Name</td>
<td>milestone_completion_date</td>
</tr>
<tr>
<td>Description</td>
<td>A milestone’s completion date must be later than the case creation date.</td>
</tr>
<tr>
<td>Error Condition Formula</td>
<td>CompletionDate &lt; Case.CreatedDate</td>
</tr>
<tr>
<td>Error Message</td>
<td>Error: The milestone completion date must be later than the case creation date.</td>
</tr>
<tr>
<td>Error Location</td>
<td>Top of Page</td>
</tr>
</tbody>
</table>

Example: This validation rule prevents users from selecting milestone completion dates that are earlier than the case creation date. You can create a similar validation rule for work orders from the object management settings for Object Milestones in Setup.

Editions

Available in: Salesforce Classic

Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions with the Service Cloud

User Permissions

To define or change field validation rules:
- “Customize Application”
To create or edit milestones:
- “Manage Entitlements”
Create a Milestone

Milestones represent required steps in your support process, such as case resolution time and first response time. You'll create “master” milestones in your org, then add them to entitlement processes to enforce different service levels on support records like cases and work orders.

1. From Setup, enter Milestones in the Quick Find box, then select Milestones under Entitlement Management.

2. Click New Milestone.

3. Enter a name and description. Try to name milestones after common support tasks, like “First Response Time” or “Resolution Time”. Descriptive names help users understand milestones when they see them on cases, work orders, or entitlement processes.

4. Select a recurrence type.

<table>
<thead>
<tr>
<th>Recurrence Type</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>No Recurrence</td>
<td>The milestone occurs only once on the record.</td>
<td>“First Response”</td>
</tr>
<tr>
<td></td>
<td></td>
<td>“Resolution Time”</td>
</tr>
<tr>
<td>Independent</td>
<td>The milestone occurs whenever the milestone criteria are met on the record.</td>
<td>“Response Time”</td>
</tr>
<tr>
<td>Sequential</td>
<td>The milestone occurs on repeat whenever the milestone criteria are met on the record.</td>
<td>“Customer Contact Made”</td>
</tr>
</tbody>
</table>

5. Click Save.

You can’t apply milestones to a record by themselves; they must be part of an entitlement process. So after you create your milestone, add it to an entitlement process.

Tip: You can add validation rules to milestones so users can only update a milestone if it meets specific standards. For details, see Limit User Updates to Milestones.

SEE ALSO:

Milestone Recurrence Types
Auto-Complete Case Milestones

Create an Apex trigger that automatically marks milestones Completed on cases that match unique criteria. In your trigger, define which events and related case criteria must be satisfied for a milestone to be marked Completed. You can implement a similar trigger to auto-complete work order milestones.

The following triggers mark specific types of milestones Completed when the case they are on meets unique criteria. We've also provided a milestone utility Apex class and accompanying unit tests. Define the milestone utility class before you use any of the triggers.

Milestone Utility Apex Class

Apex classes reduce the size of your triggers and make it easier to reuse and maintain Apex code. To define this Apex class in your org:

1. From Setup, enter Apex Classes in the Quick Find box, then click Apex Classes.
2. Click New.
3. Copy the class text and paste it into the text field.
4. Click Save.

```java
public class MilestoneUtils {
    public static void completeMilestone(List<Id> caseIds, String milestoneName, DateTime complDate) {
        List<CaseMilestone> cmsToUpdate = [select Id, completionDate from CaseMilestone cm
            where caseId in :caseIds and cm.MilestoneType.Name=:milestoneName
            and completionDate = null limit 1];
        if (cmsToUpdate.isEmpty() == false){
            for (CaseMilestone cm : cmsToUpdate){
                cm.completionDate = complDate;
            }
            update cmsToUpdate;
        }
    }
}
```

Apex Class Unit Test

You can set up Apex unit tests in the developer console to scan your code for any issues. To keep things running smoothly, Salesforce requires at least three-quarters of your Apex code lines to be covered by tests.

```java
static testMethod void TestCompleteMilestoneCase(){
    Contact oContact = [select id from Contact limit 1];
    String contactId;
    if (oContact != null)
        contactId = oContact.Id;

    Entitlement entl = [select id from Entitlement limit 1];
    String entlId;
    if (entl != null)
        entlId = entl.Id;

    List<Case> cases = new List<Case>{};
    if (entlId != null){
```
Case c = new Case(Subject = 'Test Case with Entitlement ',
    EntitlementId = entlId, ContactId = contactId);
cases.add(c);
}
if (!cases.isEmpty()){
    insert cases;
    List<Id> caseIds = new List<Id>();
    for (Case c : cases){
        caseIds.add(c.Id);
    }
milestoneUtils.completeMilestone(caseIds, 'First Response', System.now());
}
}

static testMethod void testCompleteMilestoneViaCase(){
    Entitlement entl = [select id from Entitlement limit 1];
    String entlId;
    if (entl != null)
        entlId = entl.Id;
    List<Case> cases = new List<Case>();
    for (Integer i = 0; i < 1; i++){
        Case c = new Case(Subject = 'Test Case ' + i);
cases.add(c);
        if (entlId != null){
            c = new Case(Subject = 'Test Case with Entitlement ' + i,
                EntitlementId = entlId);
cases.add(c);
        }
    }
    insert cases;
    List<CaseComment> ccs = new List<CaseComment>();
    for (Case c : cases){
        CaseComment cc = new CaseComment(CommentBody = 'TestPublic',
            IsPublished = true, ParentId = c.Id);
        ccs.add(cc);
        cc = new CaseComment(CommentBody = 'TestPrivate',
            IsPublished = false, ParentId = c.Id);
        ccs.add(cc);
    }
    if (!ccs.isEmpty())
        insert ccs;
    List<EmailMessage> emails = new List<EmailMessage>();
    for (Case c : cases){
        emails.add(new EmailMessage(parentId = c.Id));
    }
    if (!emails.isEmpty())
database.insert(emails);
    for (Case c : cases){
        Messaging.SingleEmailMessage mail = new Messaging.SingleEmailMessage();
        String[] toAddr = new String[] {'user@company.com'};
        }
mail.setToAddresses(toAddr);
mail.setSaveAsActivity(false);
mail.setTargetObjectId(c.ContactId);
mail.setWhatId(c.Id);
mail.setHtmlBody('TestHTMLBody');
mail.setPlainTextBody('TestTextBody');
Messaging.sendEmail(new Messaging.SingleEmailMessage[] { mail });

for(Case c : cases){
    c.Status = 'Closed';
}
update cases;
List<Case> insertedCases = [SELECT Subject, Description, (SELECT IsPublished, CommentBody From CaseComments), (SELECT TextBody, Subject, Incoming From EmailMessages) FROM Case WHERE Id IN :cases];

Sample Trigger 1
You can create a milestone named Resolution Time that requires cases to be closed within a certain length of time. It’s a great way to enforce case resolution terms in SLAs. This sample case trigger marks each Resolution Time milestone Completed when its case is closed. This way, the support agent doesn’t have to manually mark the milestone completed after closing the case.

Note: This trigger references the milestone utility test class, so be sure to define the test class first.

To define this trigger in your org:
1. From Setup, enter Case Triggers in the Quick Find box, then click Case Triggers.
2. Click New.
3. Copy the trigger text and paste it into the text field.
4. Click Save.

trigger CompleteResolutionTimeMilestone on Case (after update) {
    if (UserInfo.getUserType() == 'Standard'){
        DateTime completionDate = System.now();
        List<Id> updateCases = new List<Id>();
        for (Case c : Trigger.new){
            if (((c.isClosed == true)||(c.Status == 'Closed'))&&((c.SlaStartDate <= completionDate)&&(c.SlaExitDate == null)))
                updateCases.add(c.Id);
        }
        if (updateCases.isEmpty() == false)
            milestoneUtils.completeMilestone(updateCases, 'Resolution Time', completionDate);
    }
}

Sample Trigger 2
You can create a milestone named First Response that requires agents to get in touch with a case contact within X minutes or hours of the case’s creation. It’s a nice way to ensure that your support team is communicating with case contacts as soon as possible. This
sample email trigger marks a First Response milestone Completed when an email is sent to the case contact. That way, the support agent doesn’t have to manually mark the First Response milestone Completed after they email the case contact.

Note: This trigger references the milestone utility test class, so be sure to define the test class first.

To define this trigger in your org:

1. From Setup, enter **Email Triggers** in the Quick Find box, then click **Email Triggers**.
2. Click **New**.
3. Copy the trigger text and paste it into the text field.
4. Click **Save**.

```java
trigger CompleteFirstResponseEmail on EmailMessage (after insert) {
    if (UserInfo.getUserType() == 'Standard') {
        DateTime completionDate = System.now();
        Map<Id, String> emIds = new Map<Id, String>();
        for (EmailMessage em : Trigger.new) {
            if (em.Incoming == false)
                emIds.put(em.ParentId, em.ToAddress);
        }
        if (emIds.isEmpty() == false) {
            Set <Id> emCaseIds = new Set<Id>();
            emCaseIds = emIds.keySet();
            List<Case> caseList = [Select c.Id, c.ContactId, c.Contact.Email,
                                c.OwnerId, c.Status,
                                c.EntitlementId,
                                c.SlaStartDate, c.SlaExitDate
                            From Case c where c.Id IN :emCaseIds];
            if (caseList.isEmpty() == false) {
                List<Id> updateCases = new List<Id>();
                for (Case caseObj : caseList) {
                    if ((emIds.get(caseObj.Id) == caseObj.Contact.Email) &&
                            (caseObj.Status == 'In Progress') &&
                            (caseObj.EntitlementId != null) &&
                            (caseObj.SlaStartDate <= completionDate) &&
                            (caseObj.SlaExitDate != null) &&
                            (caseObj.SlaExitDate == null))
                        updateCases.add(caseObj.Id);
                }
                if (updateCases.isEmpty() == false)
                    milestoneUtils.completeMilestone(updateCases,
                                                     'First Response', completionDate);
            }
        }
    }
}
```

**Sample Trigger 3**

While the previous trigger dealt with email messages, this sample case comment trigger marks a First Response milestone Completed when a public comment is made on the case. You can use it if a public case comment is a valid first response in your support terms.

Note: This trigger references the milestone utility test class, so be sure to define the test class first.

To define this trigger in your org:
1. From Setup, enter Case Comment Triggers in the Quick Find box, then click Case Comment Triggers.

2. Click New.

3. Copy the trigger text and paste it into the text field.

4. Click Save.

```java
trigger CompleteFirstResponseCaseComment on CaseComment (after insert) {
    if (UserInfo.getUserType() == 'Standard') {
        DateTime completionDate = System.now();
        List<Id> caseIds = new List<Id>();
        for (CaseComment cc : Trigger.new) {
            if (cc.IsPublished == true) {
                caseIds.add(cc.ParentId);
            }
        }
        if (!caseIds.isEmpty()) {
            List<Case> caseList = [Select c.Id, c.ContactId, c.Contact.Email, c.OwnerId, c.Status, c.EntitlementId, c.SlaStartDate, c.SlaExitDate
                From Case c
                Where c.Id IN :caseIds];
            if (!caseList.isEmpty()) {
                List<Id> updateCases = new List<Id>();
                for (Case caseObj: caseList) {
                    if ((caseObj.Status == 'In Progress') && (caseObj.EntitlementId != null) && (caseObj.SlaStartDate <= completionDate) && (caseObj.SlaStartDate != null) && (caseObj.SlaExitDate == null)) {
                        updateCases.add(caseObj.Id);
                    }
                }
                if (!updateCases.isEmpty()) {
                    milestoneUtils.completeMilestone(updateCases,
                        'First Response', completionDate);
                }
            }
        }
    }
}
```

**Entitlement Processes**

Entitlement processes are timelines that include all the steps (or milestones) that your support team must complete to resolve support records like cases or work orders. Each process includes the logic necessary to determine how to enforce the correct service level for your customers.

Not all entitlements require entitlement processes. For example, an entitlement might just state that a customer is eligible for phone support and business hours define phone support to be 24/7. If you need to add more to that definition—for example, if certain people must be emailed after a customer’s case goes unresolved for two hours—use an entitlement process.
You can create up to 1,000 entitlement processes total, with up to 10 milestones per process. If your org was created before Summer '13, its maximum entitlement processes can be lower. Contact Salesforce to increase it.

**Note:** If you’re using entitlement processes, manage customers’ work orders and cases on separate entitlements. This is because an entitlement process only runs on records that match its type. For example, when a Case entitlement process is applied to an entitlement, the process only runs on cases associated with the entitlement. If a work order is also associated with the entitlement, the process won’t run on the work order.

To view or cancel active entitlement processes, from Setup, enter *Entitlement Processes* in the Quick Find box, then select *Entitlement Processes*. You can also use the entitlement process queue to view or cancel active entitlement process actions. (Entitlement process monitoring isn’t available in Professional Edition orgs.)

**Tip:** Entitlement process versioning lets you update existing entitlement processes, even if they’re assigned to active entitlements and cases. This can be useful if the business rules behind your entitlement processes change, for example, or if you need to create multiple versions of the same entitlement process that have only minor differences.

### Set Up an Entitlement Process

Entitlement processes are timelines that include all of the steps (milestones) that your support team must complete to resolve cases or work orders. Set up an entitlement process to apply to entitlements in your Salesforce org.

1. **Create an Entitlement Process**
   Create an entitlement process to give support agents a timeline of required steps to follow when solving support records. Each process includes the logic necessary to determine how to enforce the correct service level for your customers.
2. **Customize Entitlement Process Fields**
   If you intend to use entitlement processes in your Salesforce org, customize page layouts to ensure that support agents can see and interact with entitlement processes.

3. **Add a Milestone to an Entitlement Process**
   Add milestones to entitlement processes to define required steps in your support process.

4. **Add a Milestone Action to an Entitlement Process**
   Milestone actions are time-dependent workflow actions that occur at every step (milestone) in an entitlement process. After you create an entitlement process and add milestones to it, add milestone actions to the milestones.

5. **Apply an Entitlement Process to an Entitlement**
   You’ve created an entitlement process; now it’s time to use it! Apply an entitlement process to a customer’s entitlement so all support records linked to the entitlement use that process.

**SEE ALSO:**
Entitlement Management Setup Checklist

---

**Create an Entitlement Process**

Create an entitlement process to give support agents a timeline of required steps to follow when solving support records. Each process includes the logic necessary to determine how to enforce the correct service level for your customers.

> **Note:** You must create milestones before you create an entitlement process.

> **Tip:** The Entitlement Management Trailhead module introduces you to common terms and walks you through creating an entitlement process. And, it’s fun! To get started, see Entitlement Management.

1. From Setup, enter *Entitlement Processes* in the Quick Find box, then select *Entitlement Processes* under Entitlement Management.

2. Click *New Entitlement Process*.

3. Select an entitlement process type. If you intend to use the process to enforce milestones on cases, select Case. If you intend to use the process to enforce milestones on work orders, select Work Order. (If work orders aren’t enabled in your org, you only see the Case option.)

   > **Note:** If you’re using entitlement processes, manage customers’ work orders and cases on separate entitlements. This is because an entitlement process only runs on records that match its type. For example, when a Case entitlement process is applied to an entitlement, the process only runs on cases associated with the entitlement. If a work order is also associated with the entitlement, the process won’t run on the work order.

4. Enter a name—for example, *Standard Support Process*—and a description.

5. If you want to enable the process, select *Active*.

   > **Tip:** We recommend waiting to activate an entitlement process until you add milestone actions to it. You can’t update or delete milestone actions on a process after it’s activated and applied to a record.

6. Optionally, if entitlement versioning is enabled, select *Default Version* to make this version of the entitlement process the default.

7. Choose the criteria for records to enter and exit the entitlement process.

---

**EDITIONS**

*Available in: Salesforce Classic*

*Available in: Professional, Enterprise, Performance, Unlimited, and Developer Editions with the Service Cloud*

**USER PERMISSIONS**

To view entitlements:
- “Read” on entitlements

To change entitlements:
- “Edit” on entitlements

To create and update entitlement processes:
- “Manage Entitlements”
### Field | Description | More Actions to Take?
--- | --- | ---
Record* enters the process | **Based on record created date**
Select if records should enter the process when they’re created. | No

| Based on a custom date/time field on the record | Select if you want the value of a custom date/time field on the record to determine when the record enters the process. | Yes, a drop-down list displays for selecting the custom date/time. You can only choose a custom date/time, not a custom date.

Record exits the process | **Based on when record is closed**
Select if records should exit the process when they’re closed. | No

| Based on custom criteria | Select if records should exit the process based on criteria you define. | Yes, select one of the following:

- Choose criteria are met and select the filter criteria that a record must meet for it to exit the process. For example, set a case filter to *Priority equals Low* if you want cases with the *Priority* field marked Low to exit the process.

  Choose formula evaluates to true and enter a formula that returns a value of “True” or “False.” Salesforce triggers the rule if the formula returns “True.”

- Choose formula evaluates to true and enter a formula that returns a value of “True” or “False.” Records exit the process if the formula returns “True.” For example, the formula *(Case: Priority equals Low) AND(Case: Case Origin equals Email, Web)* moves cases out of the process if their *Priority* field is Low and the *Case Origin* field is marked Email or Web.

*The field names you see will reflect the entitlement process type you selected.

8. Optionally, choose the business hours you’d like to apply to the entitlement process. The business hours you set here calculate the Target Date for all the milestones on this entitlement process. To learn more, see [How Business Hours Work in Entitlement Management](#).
9. Save your changes.

Customize Entitlement Process Fields

If you intend to use entitlement processes in your Salesforce org, customize page layouts to ensure that support agents can see and interact with entitlement processes.

1. Add these fields to case and work order page layouts:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Timeline (available only on case page layouts)</td>
<td>How far along a case is to reaching an entitlement process's milestones. You can click or hover your mouse pointer over each milestone to view its details. These icons represent milestones:</td>
</tr>
<tr>
<td></td>
<td>• Completed milestone</td>
</tr>
<tr>
<td></td>
<td>• Violated milestone</td>
</tr>
<tr>
<td></td>
<td>You can drag the Handle icon ( ) along the Timeline Zoom tool to view past and future milestones. If an entitlement process applies to the case, this field appears.</td>
</tr>
<tr>
<td>Stopped</td>
<td>Lets you stop an entitlement process on a record, which might be necessary if you’re waiting for a customer’s response.</td>
</tr>
<tr>
<td>Stopped Since</td>
<td>The date and time the entitlement process was stopped on the record.</td>
</tr>
</tbody>
</table>

2. Save your changes.
Add a Milestone to an Entitlement Process

Add milestones to entitlement processes to define required steps in your support process.

1. From Setup, enter *Entitlement Processes* in the Quick Find box, then select *Entitlement Processes*.
2. Click the name of an entitlement process.
3. If you’re using versioning, click the name of the entitlement process again under Entitlement Process Versions.
4. Click **New** on the Milestones related list.
5. Choose the milestone.
6. In Time Trigger (Minutes), enter the number of minutes in which users must complete the milestone before it triggers an action.
   Or, if you’d like the trigger time for the milestone to be calculated dynamically based on the milestone type and properties of the case or work order, click **Enable Apex Class for the Time Trigger (Minutes)**.
   
   **Note:** You must have a custom Apex class that implements the `Support.MilestoneTriggerTimeCalculator` Apex interface to use this option.

7. If you selected **Enable Apex Class for the Time Trigger (Minutes)**, use the lookup to specify an Apex class for the dynamically calculated milestone.
8. Choose when the milestone starts:

<table>
<thead>
<tr>
<th>Select</th>
<th>To</th>
<th>Use If</th>
</tr>
</thead>
<tbody>
<tr>
<td>Milestone Criteria</td>
<td>Calculate the milestone <em>Target Date</em> when the milestone is applied to a support record (matches the record criteria).</td>
<td>A milestone’s <em>Target Date</em> is based on when it’s applied to a record. Use if the milestone is recurring.</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Note:</strong> An entitlement process usually starts when the record is created, but its milestones aren’t always applied right away.</td>
</tr>
<tr>
<td>Entitlement Process</td>
<td>Calculate the milestone <em>Target Date</em> when the entitlement process starts (by default, when a support record is created).</td>
<td>A milestone’s <em>Target Date</em> is based on the start of the entitlement process. For example, first response and resolution times on a case always calculate their <em>Target Date</em> when the entitlement process starts.</td>
</tr>
</tbody>
</table>

9. Optionally, select the business hours that you want to apply to the Target Date calculation for this milestone. If you don’t specify business hours for the milestone, then the Entitlement Process business hours are used. If neither are specified, then the business hours on the case or work order are used.

10. Specify the order in which Salesforce should process the milestones. This applies to situations where a support record matches the criteria of multiple milestones at the same time.
11. Enter the criteria a record must match for the milestone to apply to it:

- Choose criteria are met and select the filter criteria that a record must meet for a milestone to apply to it. For example, set a case filter to *Priority equals High* if you want the milestone to apply to cases with the *Priority* field marked High.

    Choose formula evaluates to true and enter a formula that returns a value of "True" or "False." Salesforce triggers the rule if the formula returns "True."

- Choose formula evaluates to true and enter a formula that returns a value of "True" or "False." The milestone applies to records if the formula returns "True." For example, the formula `(Case: Priority equals High) AND (Case: Case Origin equals Email, Web)` applies the milestone to cases where the *Priority* field is High and the *Case Origin* field is marked Email or Web. You can’t use the *Case Owner* field in formulas.

12. Click **Save**.

**Note:** Milestones are measured in minutes and seconds, but their start and end times are only accurate to the minute. For example, suppose a milestone is triggered at 11:10:40 a.m. and the time to complete the milestone is 10 minutes. In this case, the milestone target time is 11:20:00 a.m., not 11:20:40. As a result, the remaining time for the agent to complete the milestone is 9 minutes and 20 seconds, not the full 10 minutes.

- Milestone Statuses
- Milestone Actions

### Add a Milestone Action to an Entitlement Process

Milestone actions are time-dependent workflow actions that occur at every step (milestone) in an entitlement process. After you create an entitlement process and add milestones to it, add milestone actions to the milestones.

1. From Setup, enter *Entitlement Processes* in the Quick Find box, then select *Entitlement Processes*.
2. Click the name of an entitlement process.
3. Click the name of a milestone on the Milestones related list.
4. If you want to add a warning or violation action, add a time trigger first. After you add a trigger, the option to add a workflow action appears. Success actions use the milestone’s time trigger.

**Tip:** If you want a violation action to fire immediately after the milestone is violated, set the time trigger to 0 minutes.

5. Click **Add Workflow Action** and select an option.

<table>
<thead>
<tr>
<th>Workflow Action</th>
<th>What It Does</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Task</td>
<td>Create a workflow task</td>
<td>Create a task for a support agent to call a customer when a First Response milestone is violated.</td>
</tr>
</tbody>
</table>
### Workflow Action

<table>
<thead>
<tr>
<th>Workflow Action</th>
<th>What It Does</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Email</td>
<td>Create an email alert</td>
<td>Notify case owners when a First Response milestone on their case is near violation.</td>
</tr>
<tr>
<td>New Field Update</td>
<td>Define a field update</td>
<td>Update the case Priority field to High when a First Response milestone is near violation.</td>
</tr>
<tr>
<td>New Outbound Message</td>
<td>Define an outbound message</td>
<td>Send data about parts or services to an external system after a First Response milestone is completed.</td>
</tr>
<tr>
<td>Select Existing Action</td>
<td>Select an existing action</td>
<td>Use an existing email alert to notify a case owner when their case is near violation of a first response.</td>
</tr>
</tbody>
</table>

**Note:** Time-triggered actions only occur during your Salesforce org’s business hours. You can add up to 10 actions and 10 time triggers to each type of milestone action.

SEE ALSO: Milestone Actions

## Apply an Entitlement Process to an Entitlement

You’ve created an entitlement process; now it’s time to use it! Apply an entitlement process to a customer’s entitlement so all support records linked to the entitlement use that process.

1. Go to the entitlement.
2. In the Entitlement Process lookup field, select the process you want to apply.
   - **Important:** If you’re using entitlement processes, manage customers’ work orders and cases on separate entitlements. This is because an entitlement process only runs on records that match its type. For example, when a Case entitlement process is applied to an entitlement, the process only runs on cases associated with the entitlement. If a work order is also associated with the entitlement, the process won’t run on the work order.
3. Click **Save**.

**Tip:** If you’ve set up entitlement templates, you can associate an entitlement process with a template so all entitlements created using that template automatically use the selected entitlement process.

SEE ALSO: How a Record Moves Through an Entitlement Process
How a Record Moves Through an Entitlement Process

When an entitlement process is applied to an entitlement, the entitlement process runs on all support records linked to the entitlement. Learn how support records like cases and work orders move through an entitlement process.

1. A support agent linked a record to an entitlement that has an entitlement process. This can be done in several ways:
   - The support agent creates the record from the Cases or Work Orders related list on the entitlement.
   - The support agent creates the record, then uses the Entitlement lookup field on the record to select the proper entitlement.

2. The record enters the process based on its creation date or a custom date/time field. A custom date/time field lets users edit a date on the record to trigger when it enters the process.

3. Salesforce assigns milestones with matching criteria to the record. For example, if a milestone’s criteria is *Priority equals High*, and a case has a Priority of *High*, Salesforce assigns it to the *Priority equals High* milestone. A record associates with one milestone at a time. It can associate with many milestones as it moves through the process.

4. Milestone actions determine when and if warning, violation, or success workflow actions fire for the record.

5. A support agent updates the record to complete a milestone action.

6. After a record is updated, it cycles through the entitlement process and initiates any milestones that match its criteria.

7. The record exits the process based on custom criteria or when it’s closed.

You can view records with assigned entitlements by creating case or work order list views that filter on entitlement process fields.

**Important:** Milestones are not automatically marked Completed when a record exits an entitlement process. To write an Apex trigger that auto-completes milestones that meet unique criteria, see Auto-Complete Case Milestones.

- Set Up Entitlements
- Entitlement Management Setup Checklist
Report on Entitlements

Use custom report types to define report criteria that users can use to run and create reports on entitlements, service contracts, and contract line items.

After you set up entitlement management, your Salesforce org automatically includes the following custom report types:

<table>
<thead>
<tr>
<th>Custom Report Type</th>
<th>Description</th>
<th>Report Type Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accounts with entitlements with contacts</td>
<td>Lists accounts with entitlements that include contacts (named callers).</td>
<td>Accounts &amp; Contacts</td>
</tr>
<tr>
<td>Service contracts with contract line items</td>
<td>Lists service contracts with contract line items (products).</td>
<td>Customer Support Reports</td>
</tr>
<tr>
<td>Service contracts with entitlements</td>
<td>Lists service contracts with entitlements.</td>
<td>Customer Support Reports</td>
</tr>
<tr>
<td>Cases with milestones</td>
<td>Lists cases with milestones.</td>
<td>Customer Support Reports</td>
</tr>
</tbody>
</table>

**Note:** This report type can’t be customized.

To customize entitlement management custom report types:

1. From Setup, enter **Report Types** in the Quick Find box, then select **Report Types**.
2. From the All Custom Report Types page, you can:
   - Define a new custom report type. You can’t select entitlements as a primary object.
   - Update a custom report type’s name, description, report type category, and deployment status.
   - Delete a custom report type.

**Important:** When you delete a custom report type, all the data stored in the custom report type is deleted and cannot be restored from the Recycle Bin.

**Tip:** If you want to view a list of work orders with milestones in your org, use the Object Milestones custom report type to create a work order report.

How Business Hours Work in Entitlement Management

When a support record is linked to an entitlement, the record, its milestones, its entitlement process, and the entitlement itself can each use different business hours. Learn how Salesforce approaches business hours in these situations.

On records that include entitlement processes, business hours are applied according to a hierarchy. Salesforce uses the business hours specified at the highest level.

So a milestone’s business hours override the entitlement process’ business hours, which override the case or work order’s business hours. If no business hours are set on the milestone, then the entitlement process business hours are used. And if business hours aren’t specified on the milestone or the entitlement process, the case or work order business hours are used.

You can also set business hours on entitlements. If you create a record from an entitlement, it inherits the entitlement’s business hours. However, if the entitlement is part of an entitlement process, we recommend leaving the entitlement’s business hours field blank. Related records automatically use the entitlement process’ business hours.

When setting business hours, follow these best practices:

- If you want to use the same entitlement process for records that have different business hours, set business hours at the entitlement process level. For example, suppose that you set the business hours on an entitlement process to weekdays from 9 to 5. If a customer requests evening and weekend updates to their case, you can create an “Update Customer” milestone with its own 24/7 business hours.

- If you want to use different business hours for different severity levels, set business hours at the milestone level. For example, if the severity level of a case increases, the customer may need to be contacted more frequently. You can create a “Last Touch” milestone that changes business hours according to severity level while the other milestones in the entitlement process remain unchanged.

SEE ALSO:

Set Up an Entitlement Process
Updating an Entitlement Process

Entitlement versioning lets you create multiple versions of an entitlement process, even if it’s assigned to active entitlements and support records.

Watch a Demo (2:20 minutes)

Use entitlement versioning if:

- You want to make several versions of an entitlement process that have minor differences
- You want to update an entitlement process to reflect changes in your business processes

You might find that an entitlement process needs to be updated seasonally, or that you need to roll back to a previous version.

Note: To create multiple versions of entitlement processes, entitlement versioning must be enabled in your org. Select Enable Entitlement Versioning on the Entitlement Settings page in Setup.

When you create versions of entitlement processes with the same name, the version number and notes help you differentiate between versions. Salesforce prevents you from disabling entitlement versioning so you always know which version you’re working with.

When you create a new version of an entitlement process, you can change any of the following:

- Name
- Description
- Whether the process is active
- Whether the version is the default
- Entry criteria
- Exit criteria

You can also add notes about the version. This makes it easy to differentiate between multiple versions of the same process, especially if they have the same name.

On new versions of entitlement processes that are currently in use, you can add new milestones, but you can’t edit existing ones. On new versions of processes that aren’t currently in use, you can both add new milestones and edit existing ones.

Once you create a new version of an entitlement process, you can choose to apply it to all entitlements and support records assigned to the previously used version, or only to new entitlements and support records. All versions of an entitlement process must be the same type: Case or Work Order.

SEE ALSO:

Create a New Version of an Entitlement Process
Use a New Version of an Entitlement Process
Create a New Version of an Entitlement Process

Entitlement versioning lets you create multiple versions of an entitlement process, even if it’s assigned to active entitlements and support records. You can use multiple versions of an entitlement process at the same time in your Salesforce org.

Watch a Demo (2:20 minutes)

Note: To create multiple versions of entitlement processes, entitlement versioning must be enabled in your org. Select Enable Entitlement Versioning on the Entitlement Settings page in Setup.

When you create versions of entitlement processes with the same name, the version number and notes help you differentiate between versions. Salesforce prevents you from disabling entitlement versioning so you always know which version you’re working with.

1. From Setup, enter Entitlement Processes in the Quick Find box, then select Entitlement Processes.
2. Click the name of the entitlement process for which you want to create a new version.
3. In the Entitlement Process Versions list, click the version of the process from which you want to create a new version.
5. Add details about the new version. Follow these best practices:
   • Use the Version Notes field to explain what makes the version you’re creating different from others. This makes it easier to differentiate between multiple versions of the same entitlement process.
   • Leave the name as is.
   • Click Active to be able to use the new version.
   • Click Default if you want to make the new version the default version of the process. This makes it easier to find in lookup field searches.
6. Click Save.

After saving, you can modify the entitlement process’ milestones if needed.

Important:
   • On new versions of entitlement processes that are currently in use, you can add new milestones, but you can’t edit existing ones. On new versions of processes that aren’t currently in use, you can both add new milestones and edit existing ones.
   • All versions of an entitlement process must be the same type.

When you create a new version of an entitlement process, it isn’t automatically applied to entitlements that were using the previous version. To learn how to apply a new version of an entitlement process to existing and new entitlements, see Use a New Version of an Entitlement Process.

SEE ALSO:
   Updating an Entitlement Process
Use a New Version of an Entitlement Process

After you create a new version of an entitlement process, you can choose to apply it to all entitlements assigned to the previous version, or only to new entitlements. When you apply an entitlement process to an entitlement, it also applies the process to that entitlement’s active support records.

Watch a Demo (2:20 minutes)

Note: To create multiple versions of entitlement processes, entitlement versioning must be enabled in your org. Select Enable Entitlement Versioning on the Entitlement Settings page in Setup.

When you create versions of entitlement processes with the same name, the version number and notes help you differentiate between versions. Salesforce prevents you from disabling entitlement versioning so you always know which version you’re working with.

Applying an Entitlement Process to a New Entitlement

Scenario: You’re creating a new entitlement and want to apply a particular version of an entitlement process to it.

1. Choose the entitlement process you want in the Entitlement Process lookup field on the entitlement.

Tip: After you click the lookup icon on the Entitlement Process field, select “All Versions” in the lookup dialog box. Otherwise, you can only choose from the default versions of existing entitlement processes.

Applying an Entitlement Process to an Existing Entitlement

Scenario: You made a new version of an entitlement process, and you want to switch all the entitlements that were using the previous version over to your new version.

1. From Setup, enter Entitlement Processes in the Quick Find box, then select Entitlement Processes.

2. Click the name of the entitlement process you want to work with.
   The list on the main Entitlement Processes page shows the default version of each process. Click the name of a process to see a list of all available versions of it.

3. On the detail page for the entitlement process, click the name of the new version that you want to apply to existing entitlements (and by default, to cases or work orders linked to those entitlements).

4. Click New Update Rule.

5. Choose the version of the entitlement process you want to update from.
   You can update from any other version of the process, whether or not it’s active.

6. Depending on the differences between the old and new versions of the entitlement process, updating an entitlement to the new version can trigger milestone warning and violation actions on that entitlement’s support records (such as cases or work orders). To avoid such warnings and violation actions, select Don’t Trigger New Milestone Warnings and Violations. We recommend selecting this so you don’t trigger violation warnings on old entitlements and support records.

7. Click Save.
   The update rule detail page shows the estimated number of entitlements and support records that will be updated to use the new process.

8. Click Start to begin the update process.
Usually the update process completes within an hour, but it depends on the number of entitlements and records being updated. Throughout the update process, the update rule detail page refreshes periodically to show the number of entitlements and records processed. To stop the update at any time, click **Stop**.

Set Up Service Contracts

Service contracts are agreements between you and your customers for a type of customer support. Service contracts can represent different kinds of customer support, such as warranties, subscriptions, or service level agreements (SLAs).

**Note:** Entitlements must be enabled in your org for you to set up service contracts.

From the object management settings for service contracts:

1. **Customize service contract fields.**
   - This lets you control what information users add to service contracts. You can create custom service contract fields that are specific to your industry or support process.

2. **Customize service contract page layouts.**
   - This lets you specify which fields and related lists users see on service contracts. Consider making the following customizations:
     - Add the **Status Icon** field so users can easily see whether the service contract is active, expired, or inactive.
     - To let users make one service contract the parent of another, add the **Parent Service Contract** field and **Child Service Contracts** related list. You can also add the read-only **Root Service Contract** field so users can see the top-level service contract in a service contract hierarchy.

3. **Set field-level security on service contract fields.**
   - This lets you choose which service contract fields users can access.

4. **Set field history tracking on service contracts.**
   - This lets you see when field values were changed. Changes are listed in the **Service Contract History** related list on service contracts. From the object management settings for service contracts, go to the fields section, and then click **Set History Tracking**.

5. **Make the Service Contracts tab visible in Salesforce and any custom apps.**
   - The Service Contracts tab is where users create and edit service contracts and contract line items. Add the tab to an app or instruct your users to add it to an existing tab set in Salesforce. Users need the “Read” permission on service contracts to see the Service Contracts tab.

6. **Add the Service Contracts related list to account and contact page layouts.**
This lets users create, update, and verify service contracts from accounts and contacts.

SEE ALSO:
- Entitlement Management Setup Checklist
- Set Up Contract Line Items

### Set Up Contract Line Items

Set up contract line items to be able to specify which products a service contract covers. Contract line items only display to users on the Contract Line Items related list on service contracts (not on contracts!). You can only use contract line items if your Salesforce org uses products.

**Note:** Entitlements must be enabled in your org for you to set up contract line items.

From the object management settings for contract line items:

1. **Customize contract line item fields.**
   - This lets you control what information users add to contract line items. You can create custom contract line item fields that are specific to your industry or support process.

2. **Customize contract line item page layouts.**
   - This lets you specify which fields and related lists users see on contract line items. Consider making the following customizations:
     - Add the Status Icon field so users can easily see whether the line item is active, expired, or inactive.
     - To let users make one line item the parent of another, add the Parent Contract Line Item field and Child Contract Line Items related list. You can also add the read-only Root Contract Line Item field, which lists the top-level line item in a contract line item hierarchy.

3. **Customize other objects’ page layouts.**
   - This lets you choose how users can associate contract line items with other records. Consider making the following customizations:
     - (Required) Add the Contract Line Items related list to service contract page layouts. This lets users create, edit, and delete contract line items from service contracts.
     - Add the Contract Line Items related list to asset layouts. This lets users view and change associations between assets and contract line items.
     - Add the Contract Line Item lookup field to entitlement page layouts. This lets users associate a line item with a particular entitlement.

4. **Set field-level security on contract line items.**
   - This lets you choose which contract line item fields users can access.

5. **Set field history tracking on contract line items.**
   - This lets you see when field values were changed. Changes are listed in the Contract Line Item History related list on contract line items. From the object management settings for contract line items, go to the fields section, and then click **Set History Tracking.**
Add entitlement management to your communities to let customers or partners view their entitlements and service contracts. Contract line items don’t display in communities.

Follow these steps to expose entitlements and/or service contracts in a community.

1. Update user profiles.
   a. Clone the Customer Community User, Customer Community Plus User, or Partner Community User profiles and enable the “Read” permission on entitlements and/or service contracts.
      
      ![Note: Remember to click Edit Profiles at the bottom of the detail page to activate the new profiles.]
   b. Optionally, on the profiles of delegated community moderators, enable the “Create” and “Delete” permissions on entitlement contacts. This lets moderators update entitlement contacts.
   c. Verify that the tab visibility for the Entitlements and/or Service Contracts tabs is Default On.
2. Add the Entitlements and/or Service Contracts tabs to the community.
3. Add the Entitlement Name field to case and work order page layouts assigned to community users. This lets users add entitlements to cases and work orders. Work orders are not available in communities built using the self-service community templates.
   
   ![Note: To avoid exposing your internal support processes, we recommend not adding the following fields to case and work order page layouts for community users:]
   - Entitlement Process Start Time
   - Entitlement Process End Time
   - Stopped
   - Stopped Since
4. Optionally, add the Entitlements related list to account and contact page layouts assigned to community moderators. This lets moderators create cases automatically associated with the right entitlements.

Set Up Entitlement Management in Communities

EDITIONS
Available in: Salesforce Classic

Communities are available in Enterprise, Performance, Unlimited, and Developer Editions with the Service Cloud

Entitlement Management is available in Professional, Enterprise, Performance, Unlimited, and Developer Editions with the Service Cloud

USER PERMISSIONS
To create, customize, or activate a community:
- “Create and Set Up Communities” AND is a member of the community they’re updating

To set up entitlement management:
- “Manage Entitlements”

To assign user licenses:
- “Manage Internal Users”
Work Orders

Work orders in Salesforce represent a task or series of tasks to be performed on a product, typically in field service. You can use work orders to efficiently track repairs, standard maintenance, and other types of service.

Work orders can be associated with accounts, assets, cases, contacts, entitlements, service contracts, and other work orders. You can also create custom relationships between work orders and other standard or custom objects. And, you can attach Knowledge articles to work orders and work order line items so field technicians can quickly access product specs, instructions, and more.

You can view work orders on the Work Orders tab or the Work Orders related list on supported objects. You can also access work orders in the service console and in the Salesforce1 mobile browser app.

We recommend adding work order line items to work orders to provide details about the work to be performed. Work order line items represent specific tasks that must be performed to complete the work order. They can be marked as completed one by one, and make it easier for you to track and improve field service processes. A work order’s line items appear in its Work Order Line Items related list.

Example:

- If a customer purchases an asset from you and experiences a problem with it, you can create a work order to repair the asset.
- If a customer purchases an asset from you and covers it with a preventive service contract, you can create a work order that represents a periodic checkup.

Milestones: Supported Objects

Set Up Work Orders

Set up work orders in your org to track work performed on products.

1. Enable work orders.
   a. From Setup, enter Work Order Settings in the Quick Find box and click Work Order Settings.
   b. Click Enable.

2. Customize page layouts.
   a. To let users link work orders to other types of records, add the Work Orders related list to other objects’ page layouts. These objects’ page layouts can include the related list:
      - Account
      - Asset
      - Case
      - Contact
      - Entitlement
      - Service Contract

USER PERMISSIONS

To enable work orders:
- “Customize Application”
To edit page layouts:
- “Customize Application”
• Custom objects

b. To let users view work order line items that are associated with a particular asset, add the Work Order Line Items related list to Asset page layouts.

c. To let users make one work order the parent of another, add the Parent Work Order field and Child Work Orders related list to work order page layouts. To let users see the top-level work order in a work order hierarchy, you can also add the read-only Root Work Order field.

d. To let users make one work order line item the parent of another line item, add the Parent Work Order Line Item field and Child Work Order Line Items related list to work order line item page layouts. To let users see the top-level line item in a work order line item hierarchy, you can also add the read-only Root Work Order Line Item field.

3. Assign user permissions.

<table>
<thead>
<tr>
<th>Users Who Will...</th>
<th>Need These Permissions</th>
<th>Permissions Are Auto-Enabled on These Standard Profiles</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable work orders</td>
<td>“Customize Application”</td>
<td>System Administrator</td>
</tr>
<tr>
<td>View the Work Orders tab, work orders, and work order line items</td>
<td>“Read” on work orders</td>
<td>Read Only, Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
<tr>
<td>Create or clone work orders</td>
<td>“Create” on work orders</td>
<td>Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
<tr>
<td>Edit work orders</td>
<td>“Edit” on work orders</td>
<td>Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
<tr>
<td>Delete work orders</td>
<td>“Delete” on work orders</td>
<td>System Administrator</td>
</tr>
<tr>
<td>Create, clone, edit, or delete work order line items</td>
<td>“Edit” on work orders</td>
<td>Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator</td>
</tr>
</tbody>
</table>

4. Make the Work Orders tab visible to your users.

Users create and manage work orders from the Work Orders tab. You can add the tab to a custom app or instruct users to add the tab in Salesforce.

*Note:* The Work Orders tab is default ON for the following user profiles: Read Only, Standard User, Solution Manager, Contract Manager, Marketing User, and System Administrator.

5. Optionally, add work orders as a navigation tab item in the service console.

6. If your org was created before Summer ’16 and you want to use milestones on work orders, set field-level security on the following work order fields to expose them to specific user profiles:

• Business Hours
• Entitlement Process End Time
• Entitlement Process Start Time
• Is Closed

2623
• Milestone Status
• Milestone Status Icon
• Stopped
• Stopped Since

Tip: To set field-level security, from Setup, enter Field Accessibility in the Quick Find box, then click Field Accessibility. Click Work Order, then click View by Fields and select a field. Click Hidden next to a profile to view and update the field visibility settings.

7. If you want your team to be able to attach Knowledge articles to work orders or work order line items, add the Articles related list and the Knowledge One console component to your layouts.
   a. To let users view and change linked articles from the console, navigate to work order page layouts in Setup. In the layout editor, select Custom Console Components and add the Knowledge One widget to the console sidebar (recommended).
   b. To let users view and change linked articles from a work order’s detail page, add the Articles related list to the work order detail page layout (recommended).
   c. To let users attach Knowledge articles to work order line items, follow the previous two steps for work order line items layouts.

   Note: Knowledge must already be set up in your org.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: Enterprise, Performance, Unlimited, and Developer Editions with the Service Cloud

Work orders in Salesforce help you track tasks to be performed on a product. Learn how to perform common actions on work orders.

Viewing Work Orders

You can view work orders on the Work Orders tab or the Work Orders related list on:

• Accounts
• Assets
• Cases
Contacts
Entitlements
Service contracts

For a list of the work orders that are associated with a particular record, go to the Work Orders related list on the record.

Tip: If your Salesforce admin has set up the console to include work orders, click the Console tab to view and edit work orders and their associated records in one place.

Creating Work Orders
You can create and edit work orders from the Work Orders tab or the Work Orders related list on supported objects. Depending on how work orders are set up in your organization, this related list may not be available on some records.

Tip: When you create a work order, add line items to the work order. Work order line items represent specific tasks that a technician must perform to complete the work order. They can be marked as completed one by one, and make it easier to track and improve field service processes. In addition, pricing details like discounts and unit price are set at the line item level on work orders.

Deleting Work Orders
You can delete work orders on the work order’s detail page or the Work Orders related list. Deleting a work order moves it to the Recycle Bin. Any notes, attachments, activities, and line items associated with the work order are also deleted. If you undelete the work order, the associated items are undeleted.

Sharing Work Orders
You may be able to grant extra access to work orders beyond what your org’s default sharing model allows. However, you can’t make the sharing model more restrictive than the default.

To see who has access to a work order, click Sharing on the work order’s detail page. The Sharing button takes you to the sharing detail page. There, you can:

- View a list of who has access to the work order
- Click Add to grant access to the work order for other users, groups, roles, or territories. You can only share work orders with users who have the “Read” permission on work orders.
- Create, edit, and delete manual sharing rules

Work order line items inherit their parent work order’s sharing settings.

Reporting on Work Orders
Use the Object Milestones custom report type to view work orders with milestones in your org.

Note: The Milestone Status and Milestone Status Icon fields are not available in work order reports.

Attaching Knowledge Articles to Work Orders
You can attach Knowledge articles to work orders and work order line items to ensure that technicians in the fields can access the information they need. To learn more, see Knowledge Articles and Work Orders.

How to Associate a Work Order with Another Record
Work orders can be associated with accounts, assets, cases, contacts, entitlements, service contracts, and other work orders. You can also create custom relationships between work orders and other standard or custom objects.

Incorporating Work Orders Into Your Support Process
Work orders are a handy support tool, particularly if you offer field service. You can incorporate work orders into your support process in several ways.

How Pricing Works on Work Orders
Work orders and work order line items have several price-related fields. Find out how they interact and how to use them.
How to Associate a Work Order with Another Record

Work orders can be associated with accounts, assets, cases, contacts, entitlements, service contracts, and other work orders. You can also create custom relationships between work orders and other standard or custom objects.

When a work order is associated with another record in Salesforce, it appears in the Work Orders related list on the record. That association makes it easier for agents to track the progress of work related to open cases, service contracts, and more.

You can associate a work order with another record in two ways:

- Create the work order from the Work Orders related list on the record's detail page. For example, you can create a work order on an asset's detail page to link the work order to the asset.
- Create the work order from the Work Orders tab or list view, and add the other record to the work order record using a lookup field. For example, Asset, Case, Entitlement, and Service Contract are all standard lookup fields on work orders.

Not sure how—or whether—to associate a work order with another record? Follow these guidelines.

- If a work order is related to a particular asset, link the work order to the asset in Salesforce so you can easily track the work.
- If a case is opened because a customer experiences a problem with an asset, you may need to create a work order to inspect or repair the asset. Link the work order to the case so the case owner can track its progress.
- If you need to track periodic standard maintenance on assets, link the related work order to the entitlement or service contract that includes the maintenance.

- Guidelines for Using Work Orders

Incorporating Work Orders Into Your Support Process

Work orders are a handy support tool, particularly if you offer field service. You can incorporate work orders into your support process in several ways.

Here are some recommended approaches:

<table>
<thead>
<tr>
<th>Situation</th>
<th>How to Use Work Orders to Address the Situation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fixing a broken asset:</td>
<td>1. The agent creates a “Repair Asset” work order for the asset.</td>
</tr>
<tr>
<td></td>
<td>2. The work order includes a description of the problem.</td>
</tr>
<tr>
<td></td>
<td>3. The agent assigns the work order to a technician.</td>
</tr>
<tr>
<td></td>
<td>4. The technician is dispatched to repair the asset.</td>
</tr>
<tr>
<td></td>
<td>5. The technician diagnoses the problem and adds line items to the work order which</td>
</tr>
</tbody>
</table>
### Situation

Performing preventive maintenance: A customer purchases an asset from you and covers it with a five-year preventive maintenance contract. The contract entitles the customer to one preventive maintenance checkup each year. The annual maintenance checkup is represented in Salesforce by an entitlement that’s linked to the asset record.

<table>
<thead>
<tr>
<th>How to Use Work Orders to Address the Situation</th>
</tr>
</thead>
<tbody>
<tr>
<td>represent the specific tasks that must be completed to fix it.</td>
</tr>
<tr>
<td>6. As each line item on the work order is completed, the technician changes the line item status to <em>Completed</em>. When all line items are completed, the technician changes the work order status to <em>Completed</em>.</td>
</tr>
<tr>
<td>7. The agent closes the case.</td>
</tr>
</tbody>
</table>

While these approaches reflect typical uses of work orders, there are many ways to customize the way you use work orders. Here are some examples.

- Create a "New Work Order" quick action on assets, cases, and accounts.
  
  ![Note: Entitlements and service contracts don’t support quick actions.](image)

- Set up a quick action on work orders that automatically updates new work orders’ account, asset, and contact fields to match their parent record.

- Account for delays and scope changes by making one work order the child of another work order via the Parent Work Order field. For example, if a technician doesn’t complete all the line items on a work order, the technician can mark that work order as *Completed* and create a child work order that contains the remaining line items. A work order can have up to 2,000 child work orders, and a hierarchy of work orders can have up to 50 levels.

  Similarly, make one work order line item the child of another line item via the Parent Work Order Line Item field. A work order line item can have up to 2,000 child line items, and a hierarchy of line items can have up to 50 levels.

- If your org uses hierarchical assets, track specific subtasks more accurately by associating work order line items with different assets. For example, a work order linked to the “automobile” asset can have a line item linked to the child “headlight” asset. You can add the Work Order Line Items related list to asset page layouts to let users view all line items associated with an asset.
For Apex code samples that you can use to customize work orders in your org, see Apex Code Samples for Work Orders.

- Guidelines for Using Work Orders
- Apex Code Samples for Work Orders

How Pricing Works on Work Orders

Work orders and work order line items have several price-related fields. Find out how they interact and how to use them.

Work orders contain the following price-related fields. If you intend to use these fields, add them to work order page layouts.

<table>
<thead>
<tr>
<th>Work Order Field</th>
<th>What It Represents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Discount</td>
<td>(Read only) The weighted average of the discounts on all line items on the work order. It can be any positive number up to 100.</td>
</tr>
<tr>
<td>Subtotal</td>
<td>(Read only) The total of the work order line items before discounts and taxes are applied.</td>
</tr>
<tr>
<td>Total Price</td>
<td>(Read only) The total of the work order line items’ price after discounts but before tax is added.</td>
</tr>
<tr>
<td>Grand Total</td>
<td>(Read only) The total price of the work order with tax added.</td>
</tr>
<tr>
<td>Price Book</td>
<td>The price book associated with the work order. Adding a price book to the work order lets you link each work order line item to a product included in the price book.</td>
</tr>
<tr>
<td>Tax</td>
<td>The total tax on the work order in a currency format. (Do not enter a percentage.) For example, in a work order whose total price is $100, enter $10 to apply a 10 percent tax. You can enter a number with or without the currency symbol and you can use up to two decimal places.</td>
</tr>
</tbody>
</table>

And work order line items contain these price-related fields. If you intend to use these fields, add them to work order line item page layouts.

<table>
<thead>
<tr>
<th>Work Order Line Item Field</th>
<th>What It Represents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Discount</td>
<td>The percent discount to be applied to the line item’s subtotal. You can enter a number with or without the percent symbol and you can use up to two decimal places.</td>
</tr>
<tr>
<td>Work Order Line Item Field</td>
<td>What It Represents</td>
</tr>
<tr>
<td>----------------------------</td>
<td>--------------------</td>
</tr>
<tr>
<td>Subtotal</td>
<td>(Read only) The line item’s unit price multiplied by the quantity.</td>
</tr>
<tr>
<td>Total Price</td>
<td>(Read only) The line item’s subtotal with discounts applied. This field is blank until you add a unit price and save the line item.</td>
</tr>
<tr>
<td>List Price</td>
<td>(Read only) The price of the line item (product) as listed in its corresponding price book entry. If a product isn’t selected, the list price defaults to zero. <strong>Note:</strong> When you select a product to link to the line item, you can see the product’s list price next to its name and ID in the lookup window. The list price field populates when you save the line item.</td>
</tr>
<tr>
<td>Product</td>
<td>The name of the product that corresponds to the line item. The lookup only lists products that are included in the parent work order’s price book. When you select a product and save the line item, the following fields are populated on the line item: • List Price • Unit Price • Subtotal • Total Price <strong>Note:</strong> Inline editing isn’t supported on the Product field. To change the product on a line item, click Edit. Adding a product updates the list price, unit price, subtotal, and total price based on the new product’s corresponding price book entry.</td>
</tr>
<tr>
<td>Unit Price</td>
<td>By default, the unit price for a work order line item is the line item’s list price from the price book, but you can change it.</td>
</tr>
</tbody>
</table>

When filling out price fields on work orders and their line items, keep these guidelines in mind:

- To apply a discount to a work order, apply the discount at the line item level. If your work order doesn’t have line items, its discount is zero.
- When filling out price fields on a work order, just fill out the Price Book and Tax fields. The Discount, Subtotal, Total Price, and Grand Total fields are all automatically calculated based on line item fields.
- When filling out price fields on a work order line item, just fill out the Product and Discount fields. The Subtotal, Total Price, List Price, and Unit Price fields are all automatically calculated based on other line item fields.
- Work order line items don’t have to be linked to a product. For example, you might prefer to use work order line items to track tasks. Just keep in mind that if the Product field is blank, you can’t use the List Price, Unit Price, Discount, Quantity, Subtotal, or Total Price fields.

**Note:**

- You can’t delete a price book that’s linked to a work order.
- You can’t delete a product that’s linked to a work order line item.
You can’t delete a price book entry that’s linked to a work order line item. Price book entries are linked to work order line items via the Product lookup field.

You can’t remove a price book from a work order if its line items are linked to products from that price book.

## Work Order Fields

Work orders contain the following fields. Depending on how work orders are set up in your organization, some fields may not be visible to you.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account</td>
<td>The account associated with the work order.</td>
</tr>
<tr>
<td>Address</td>
<td>The compound form of the address where the work order is completed.</td>
</tr>
<tr>
<td>Asset</td>
<td>The asset associated with the work order.</td>
</tr>
<tr>
<td>Business Hours</td>
<td>The business hours associated with the work order.</td>
</tr>
<tr>
<td>Case</td>
<td>The case associated with the work order.</td>
</tr>
<tr>
<td>City</td>
<td>The city where the work order is completed. Maximum length is 40 characters.</td>
</tr>
<tr>
<td>Contact</td>
<td>The contact associated with the work order.</td>
</tr>
<tr>
<td>Country</td>
<td>The country where the work order is completed. Maximum length is 80 characters.</td>
</tr>
<tr>
<td>Currency ISO Code</td>
<td>The ISO code for any currency allowed by the organization. Available only for orgs with the multicurrency feature enabled.</td>
</tr>
<tr>
<td>Description</td>
<td>The description of the work order. We recommend describing the steps a user must complete to mark the work order Completed.</td>
</tr>
<tr>
<td>Discount</td>
<td>(Read Only) The weighted average of the discounts on all line items on the work order. It can be any positive number up to 100.</td>
</tr>
<tr>
<td>End Date</td>
<td>The date when the work order is completed. This field is blank unless you set up automation to configure it. For a sample workflow rule that configures the Start Date field (a similar field), see below.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Entitlement</td>
<td>The entitlement associated with the work order.</td>
</tr>
<tr>
<td>Entitlement Process End Time</td>
<td>The time the work order exits an entitlement process. If an entitlement process applies to a work order, this field appears.</td>
</tr>
<tr>
<td>Entitlement Process Start Time</td>
<td>The time the work order entered an entitlement process. If an entitlement process applies to a work order, this field appears.</td>
</tr>
<tr>
<td>Geocode Accuracy</td>
<td>(Read Only) The level of accuracy of a location’s geographical coordinates compared with its physical address. A geocoding service typically provides this value based on the address’s latitude and longitude coordinates.</td>
</tr>
<tr>
<td>Grand Total</td>
<td>(Read Only) The total price of the work order with tax added.</td>
</tr>
<tr>
<td>Last Modified Date</td>
<td>The date when the work order was last modified.</td>
</tr>
<tr>
<td>Last Viewed Date</td>
<td>The date when the work order was last viewed.</td>
</tr>
<tr>
<td>Latitude</td>
<td>Used with Longitude to specify the precise geolocation of the address where the work order is completed. Acceptable values are numbers between −90 and 90 with up to 15 decimal places.</td>
</tr>
<tr>
<td>Line Items</td>
<td>(Read Only) The number of work order line items on the work order.</td>
</tr>
<tr>
<td>Longitude</td>
<td>Used with Latitude to specify the precise geolocation of the address where the work order is completed. Acceptable values are numbers between −180 and 180 with up to 15 decimal places.</td>
</tr>
<tr>
<td>Milestone Status</td>
<td>A milestone is a step in an entitlement process. It can have one of three statuses: Compliant, Open Violation, and Closed Violation. If an entitlement process applies to a work order, this field appears. To learn more, see Milestone Statuses.</td>
</tr>
<tr>
<td>Milestone Status Icon</td>
<td>An icon that corresponds to the milestone status.</td>
</tr>
<tr>
<td></td>
<td>• 🔄 Compliant</td>
</tr>
<tr>
<td></td>
<td>• ⚠️ Open Violation</td>
</tr>
<tr>
<td></td>
<td>• ⚠️ Closed Violation</td>
</tr>
<tr>
<td>Owner</td>
<td>The work order’s assigned owner.</td>
</tr>
<tr>
<td>Parent Work Order</td>
<td>The work order’s parent work order, if it has one.</td>
</tr>
<tr>
<td></td>
<td>Tip: View, create, and delete a work order’s child work orders in the Child Work Orders related list.</td>
</tr>
<tr>
<td>Postal Code</td>
<td>The postal code where the work order is completed. Maximum length is 20 characters.</td>
</tr>
<tr>
<td>Price Book</td>
<td>The price book associated with the work order. Adding a price book to the work order lets you assign different price book entries</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Priority</td>
<td>The priority of the work order. The picklist includes the following values, which can be customized:</td>
</tr>
<tr>
<td></td>
<td>• Low</td>
</tr>
<tr>
<td></td>
<td>• Medium</td>
</tr>
<tr>
<td></td>
<td>• High</td>
</tr>
<tr>
<td></td>
<td>• Critical</td>
</tr>
<tr>
<td>Root Work Order</td>
<td>(Read Only) The top-level work order in a work order hierarchy. Depending on where a work order lies in the hierarchy, its root might be the same as its parent.</td>
</tr>
<tr>
<td>Service Contract</td>
<td>The service contract associated with the work order.</td>
</tr>
<tr>
<td>Start Date</td>
<td>The date when the work order goes into effect. This field is blank unless you set up automation to populate it. For a sample workflow rule that configures this field, see below.</td>
</tr>
<tr>
<td>State</td>
<td>The state where the work order is completed. Maximum length is 80 characters.</td>
</tr>
<tr>
<td>Status</td>
<td>The status of the work order. The picklist includes the following values, which can be customized:</td>
</tr>
<tr>
<td></td>
<td>• New</td>
</tr>
<tr>
<td></td>
<td>• Scheduled</td>
</tr>
<tr>
<td></td>
<td>• Assigned</td>
</tr>
<tr>
<td></td>
<td>• In Progress</td>
</tr>
<tr>
<td></td>
<td>• Completed</td>
</tr>
<tr>
<td></td>
<td>• Closed</td>
</tr>
<tr>
<td>Street</td>
<td>The street number and name where the work order is completed.</td>
</tr>
<tr>
<td>Subject</td>
<td>The subject of the work order. Try to describe the nature and purpose of the job to be completed. For example, “Annual on-site well maintenance.” The maximum length is 255 characters.</td>
</tr>
<tr>
<td>Subtotal</td>
<td>(Read Only) The total of the work order line items’ subtotals before discounts and taxes are applied.</td>
</tr>
<tr>
<td>Tax</td>
<td>The total tax on the work order. For example, in a work order whose total price is $100, enter $10 to apply a 10 percent tax. You can enter a number with or without the currency symbol and you can use up to two decimal places.</td>
</tr>
<tr>
<td>Total Price</td>
<td>(Read Only) The total of the work order line items’ price after discounts but before tax is added.</td>
</tr>
</tbody>
</table>
An auto-generated number that identifies the work order.

Example: The Start Date and End Date fields are blank by default, but you can set up workflow rules to configure them. The following rule populates the Start Date field with the current date and time when the Status field changes to In Progress:

1. Create a workflow rule on the Work Order object:
   - Under Evaluation criteria, select Created.
   - Under Rule Criteria, enter Work Order: Status EQUALS In Progress.

2. Add a New Field Update workflow action:
   - Under Field to Update, select Start Date.
   - Under Date Options, select the option to use a formula and enter the formula NOW().

3. Save and activate your rule.

Work Order Line Item Fields

Work order line items contain the following fields. Depending on how work orders are set up in your organization, some fields may not be visible to you.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Asset</td>
<td>The asset associated with the line item. If your org uses hierarchical assets (available after Spring '16), you may want to link a work order's line items with different assets. For this reason, line items do not automatically inherit their parent work order's asset value.</td>
</tr>
<tr>
<td>Currency ISO Code</td>
<td>The ISO code for any currency allowed by the organization. Available only for orgs with the multicurrency feature enabled.</td>
</tr>
<tr>
<td>Description</td>
<td>The description of the line item. We recommend describing the steps a user must follow to mark the line item Completed.</td>
</tr>
<tr>
<td>Discount</td>
<td>The percent discount to be applied to the line item. You can enter a number with or without the percent symbol and you can use up to two decimal places.</td>
</tr>
</tbody>
</table>
## Work Order Line Item Fields

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>End Date</td>
<td>The date when the line item is completed.</td>
</tr>
<tr>
<td>Line Item Number</td>
<td>An auto-generated number that identifies the line item.</td>
</tr>
<tr>
<td>List Price</td>
<td>The price of the line item (product) as listed in its corresponding price book entry. If a product isn’t specified, the list price defaults to zero. (Read only)</td>
</tr>
<tr>
<td>Order</td>
<td>The order associated with the work order line item. For example, you may need to order replacement parts before you can complete the line item.</td>
</tr>
<tr>
<td>Parent Work Order Line Item</td>
<td>The line item’s parent line item, if it has one.</td>
</tr>
<tr>
<td><strong>Tip:</strong> View, create, and delete a line item’s child line items in the Child Work Order Line Items related list.</td>
<td></td>
</tr>
<tr>
<td>Price Book Entry</td>
<td>The price book entry that corresponds with the line item. A price book must be specified on the parent work order.</td>
</tr>
<tr>
<td>Product</td>
<td>The product associated with the price book entry.</td>
</tr>
<tr>
<td>Quantity</td>
<td>The line item’s quantity.</td>
</tr>
<tr>
<td>Root Work Order Line Item</td>
<td>The top-level work order line item in a line item hierarchy. Depending on where a line item lies in the hierarchy, its root might be the same as its parent. (Read only)</td>
</tr>
<tr>
<td>Start Date</td>
<td>The date when the work order line item goes into effect.</td>
</tr>
<tr>
<td>Status</td>
<td>The status of the work order line item. The picklist includes the following values, which can be customized:</td>
</tr>
<tr>
<td></td>
<td>• New</td>
</tr>
<tr>
<td></td>
<td>• In Progress</td>
</tr>
<tr>
<td></td>
<td>• Completed</td>
</tr>
<tr>
<td></td>
<td>• Closed</td>
</tr>
<tr>
<td>Subtotal</td>
<td>The line item’s unit price multiplied by the quantity. (Read only)</td>
</tr>
<tr>
<td>Total Price</td>
<td>The line item’s subtotal with discounts applied. (Read only)</td>
</tr>
<tr>
<td>Unit Price</td>
<td>By default, the unit price for a work order line item is the line item’s list price from the price book, but you can change it.</td>
</tr>
<tr>
<td>Work Order</td>
<td>The parent work order of the work order line item. Because work order line items must be associated with a work order, this field is required.</td>
</tr>
</tbody>
</table>

SEE ALSO:

- Work Order Fields
- Incorporating Work Orders Into Your Support Process
Apex Code Samples for Work Orders

Use these Apex samples to customize and automate the role of work orders in your support process.

Sample Trigger 1

This trigger prevents users from closing a work order unless all its line items have been closed. It’s a good way to ensure that all scheduled tasks are completed.

To define a work order trigger in your org:

1. From Setup, enter Work Orders in the Quick Find box, then click Triggers under Work Orders.
2. Click New.
3. Copy the trigger text and paste it into the text field.
4. Click Save.

```apex
trigger ValidateWorkOrderLineItem on WorkOrder (before update) {
    for (WorkOrder w : Trigger.New) {
        if (w.Status == 'Closed') {
            List<WorkOrderLineItem> woLineItemList = [Select wo.Status
                From WorkOrderLineItem wo where wo.WorkOrderId=:w.Id];
            if (woLineItemList.isEmpty() == false) {
                for (WorkOrderLineItem woLineItem : woLineItemList) {
                    if (woLineItem.Status != 'Closed') {
                        w.addError('You cannot close a work order until all of its line items are closed.' );
                    }
                }
            }
        }
    }
}
```

Sample Trigger 2

This trigger automatically closes a case when a work order on the case is marked Closed. If a case has multiple work orders, the trigger fires when the first work order is marked Closed. That way, the support agent doesn’t have to manually close the case after the related work is complete.

```apex
trigger CloseCaseWhenWoId on WorkOrder (after update) {
    for (WorkOrder wo : Trigger.new) {
        try {
            if (wo.Status == 'closed') {
                Case ca = [SELECT Status from case where id = :wo.CaseId];
                ca.Status = 'closed';
                update ca;
            }
        } catch (Exception e) {
        }
    }
}
```
**Trigger 2 Unit Test**

You can set up Apex unit tests in the developer console to scan your code for any issues. To keep things running smoothly, Salesforce requires at least three-quarters of your Apex code lines to be covered by tests. This unit test applies to Sample Trigger 2.

```java
@isTest
class WOTriggerTest {
    void validateWO() {
        Case ca = new Case();
        ca.Origin = 'Phone';
        ca.Status = 'new';
        insert(ca);
        WorkOrder wo = new WorkOrder();
        wo.Subject = 'test';
        wo.Status = 'closed';
        wo.CaseId = ca.Id;
        insert(wo);
        update(wo);
        Case ca1 = [SELECT Status from Case where id = :ca.Id];
        System.assertEquals('Closed', ca1.Status);
    }
}
```

**Work Order Apex Class**

Apex classes reduce the size of your triggers and make it easier to reuse and maintain Apex code. This class, which you can reference in triggers, creates a work order with one line item.

```java
public class CreateWorkOrderLineItem {
    WorkOrderLineItem createWorkOrderLineItem() {
        WorkOrder wo = new WorkOrder();
        wo.Subject = 'title';
        insert wo;
        WorkOrderLineItem woli = new WorkOrderLineItem();
        woli.workOrderId = wo.Id;
        woli.description = 'abcd';
        return woli;
    }
}
```

**Work Order Apex Class Unit Test**

This unit test applies to the Work Order Apex Class.

```java
@isTest
class TestWorkOrderLineItem {
    void testCreateWorkOrderLineItem() {
        CreateWorkOrderLineItem cwoLi = new CreateWorkOrderLineItem();
        cwoLi.createWorkOrderLineItem();
    }
}
```
Knowledge Articles and Work Orders

You can attach Knowledge articles to work orders and work order line items to help field technicians access important procedural info, guidelines, specs, and more. Learn how to make the most of this feature.

Attaching an article

You can attach an article to a work order or work order line item in two ways:

- Navigate to the record to which you want to attach the article. In the Knowledge One widget in the console, search for an article. In the article’s action menu, click Attach to Work Order or Attach to Work Order Line Item.
- Navigate to the record to which you want to attach the article. In the Articles related list, click Find Articles. Use the search to locate your article, then click Attach to Work Order or Attach to Work Order Line Item in the article’s action menu.

Viewing an attached article

Articles attached to a work order or work order line item appear in the Knowledge One widget and the Articles related list on the record. View an article by clicking its title. You can also navigate to attached articles from the feed of a work order or work order line item if feed tracking for related lists is enabled.

On article detail pages, the Linked Work Orders and Linked Work Order Line Items related lists show which records an article is attached to.

Detaching an article

You can detach an article from a work order or work order line item in two ways:

- Navigate to the record that the article is attached to. In the Knowledge One widget in the console, click Detach from Work Order or Detach from Work Order Line Item in the article’s action menu.
- Navigate to the record that the article is attached to. In the Articles related list, click Detach next to the article.

Updating an attached article

If an article is out of date, you can publish a new version by navigating to the article and clicking Edit.

When you attach an article to a record, that version of the article stays associated with the record even if later versions are published. If needed, you can detach and reattach an article to a record to ensure that the record is linked to the latest version of the article. The Linked Article Version field on the linked article detail page leads to the attached version.

Managing linked articles

Customize linked articles’ page layouts, fields, validation rules, and more from the Linked Articles node in Setup under Knowledge. To learn how to configure your console and page layouts so articles can be attached to work orders and work order line items, see Set Up Work Orders.
(1) View and change the articles attached to a record from the Articles related list.

(2) View an article’s properties by clicking View, or view the article itself by clicking its title. Click Detach to remove the article from the record.

(3) The Knowledge One widget in the console sidebar lets you manage attached articles and search the Knowledge base.

(4) Each article’s action menu contains the option to attach or detach it.

**Warning:**
- The Article widget and Feed Articles Tool aren’t available in the feed view.
- Quick actions and global actions aren’t supported for linked articles.
- The Knowledge One widget on work orders and work order line items lets you search for articles, but doesn’t offer article suggestions.
- In the Article Toolbar on the Knowledge home page, you can’t attach an article to a work order or work order line item.
- The Linked Work Orders and Linked Work Order Line Items related lists on articles aren’t available in Lightning Experience or Salesforce1.
- Linked articles are view-only in Lightning Experience and Salesforce1.
- In Lightning Experience, clicking an article link in a feed item redirects you to the article page in Salesforce Classic. In Salesforce1, linked articles can’t be accessed from feed items.

Adding a Knowledge Base

Adding Salesforce Knowledge

Welcome to Salesforce Knowledge

Build your knowledge base and give your website visitors, clients, partners, and service agents the ultimate in support. Salesforce Knowledge lets you create and manage your company information and securely share it when and where it is needed.

Your Salesforce Knowledge base is built from knowledge articles, which are documents of information. Articles can include information on process, like how to reset your product to its defaults, or frequently asked questions like, how much storage your product supports.

Experienced service agents and internal writers write the articles. The articles are then published to a range of channels: internal database, customer and partner communities, or public websites. Where and what information is published is based on the article layout profile and the field level security.

Salesforce Knowledge Documentation Overview

Use these lists to find Salesforce Knowledge information in the Salesforce documentation set.

Overview of Salesforce Knowledge

- Welcome to Salesforce Knowledge
- Plan Your Knowledge Base
- Salesforce Knowledge Limits
- Work with Articles and Translations
- Salesforce Knowledge Guide

Set up Salesforce Knowledge

- Build Your Knowledge Base
- Knowledge Article Types
- Import Existing Information into Salesforce Knowledge
- Knowledge Article Access
- Workflow and Approvals for Articles

Use Your Salesforce Knowledge Base

- Search Articles and External Sources on the Knowledge Tab
  - Find Knowledge Articles in a Salesforce Console
Set Up and Maintain Customer Support Tools

- How Does Search Work?
- Articles or Knowledge Tab
- For searching and viewing Salesforce Knowledge Articles on your Android device, see Access Salesforce Knowledge Articles with Salesforce1 for Android (Beta) and Salesforce1 Differences from the Full Salesforce Site

- Create and Edit Articles
- Publish Articles and Translations
- Report on Salesforce Knowledge Articles

Define Data Categories for Your Salesforce Knowledge Articles

- Data Categories in Salesforce.com
- Create and Modify Category Groups
- Add Data Categories to Category Groups

Translate Salesforce Knowledge Articles

- Support a Multilingual Knowledge Base
- Translate Articles Within Salesforce Knowledge
- Export Articles for Translation
- Import Translated Articles

Share Your Salesforce Knowledge Base

- Salesforce Console and Salesforce Knowledge
- If you want visitors to your public website to view Salesforce Knowledge articles, install the Public Knowledge Base app from the AppExchange. To install, configure, and customize your public knowledge base with this package, see the Public Knowledge Base AppExchange App Guide available on the AppExchange.

Develop with Salesforce Knowledge

- The Salesforce Knowledge Developers Guide has Salesforce Knowledge specific development information along with tutorials and examples.
- The SOAP API Developer Guide has information on the Salesforce Knowledge API:
  - Guidelines
  - Objects
  - Calls
- The Metadata API Developers Guide has information on Salesforce Knowledge Metadata API objects.
- The Visualforce Developers Guide has information on Salesforce Knowledge Visualforce components.
- The Force.com Apex Code Developers Guide has information on the Apex KnowledgeArticleVersionStandardController Class.
Plan Your Knowledge Base

It’s important that you consider your individual company’s needs while you develop a strategy for capturing and publishing your support team’s expertise. With a robust knowledge base, customers receive service faster or even solve their own problems themselves.

Setting up Salesforce Knowledge is a “choose your own adventure” procedure. There are many features and options and it’s up to you to decide which ones are right for your enterprise.

</tbody>
</table>

Consider the following tips when planning and using Salesforce Knowledge:

Editions

Available in: Salesforce Classic

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: Enterprise and Unlimited Editions.
• Create synonym groups in Salesforce Knowledge. Synonyms are words or phrases that are treated as equivalent in article searches, letting you optimize search results.

• Before setting up data categories, carefully plan your category groups and their hierarchies. Also, consider how your category hierarchy maps to your role hierarchy. For more information, see Data Category Visibility.

• Create custom reports on your Salesforce Knowledge data. You can also install the Knowledge Base Dashboards and Reports app from the AppExchange to receive over two dozen helpful reports.

• Multiple agents can edit the same article at the same time. If that occurs, your changes can be overwritten by a colleague without warning, even if you save your work frequently. To avoid accidental data loss, instruct all users who edit articles to edit only the articles they’re assigned.

• Know the maximum limits for articles, article types, and data categories.

• Review your usage regularly to avoid storage shortages: from Setup, enter Storage Usage in the Quick Find box, then select Storage Usage.

• Public knowledge base users cannot rate articles.

• The File custom field type allows agents to attach documents to articles.

• You will lose your data if you convert a custom field on an article type into any other field type. Do not convert custom fields unless no data exists for the field.

• When renaming Salesforce Knowledge labels note that standard field names, like title and type, are fixed. These fields do not change the labels on the article create and edit pages. If the organization is set to another language, these fields remain in the fixed label for that language.

• The Salesforce Knowledge search engine supports lemmatization, which is the process of reducing a word to its root form. With lemmatization, a search can match expanded forms of a search term. For example, a search for running matches items that contain run, running, and ran.

• Make sure that you have a clear understanding of the type of articles your organization needs, and how agents interact with these article types. This determines the article type permissions and article actions that you need to assign to Salesforce Knowledge users, which you can then use to create the set of profiles or permission sets required by your organization. For more information, see Knowledge Article Access on page 2681.

• Determine if you need to create workflow rules for some of your article types. For example, you can create a rule that sends an email to an article manager when an agent creates an article upon closing a case.

• Determine if you need to create approval processes for some of your article types. For example, if you have a type of article that must have legal and management approval before it can be published externally, create an approval process for the article type.

Salesforce Knowledge Limits

Limits for Salesforce Knowledge per edition.

Salesforce Knowledge is a knowledge base for creating and managing content. If Salesforce Knowledge is enabled in the Customer Portal or partner portal, customers and partners can access articles.

<table>

**Build Your Knowledge Base**

If your organization has Knowledge User licenses and one is assigned to you, you are ready to build your knowledge base.

To ensure that your organization has Knowledge User licenses, from Setup, enter Company in the Quick Find box, then select Company Information. Knowledge User licenses are listed near the bottom of the page, in the Feature Licenses related list.

To ensure that you are a Salesforce Knowledge user, from your personal settings, enter Personal in the Quick Find box, then select Personal Information. The Knowledge User checkbox is in the second column of the User Detail section.

To enable Salesforce Knowledge, from Setup, enter Knowledge in the Quick Find box, then select Knowledge Settings. Confirm that you want to enable Salesforce Knowledge and click Enable Knowledge. If your org doesn’t have an article type, a default article type is created.

**Note:** If you enabled Knowledge before Spring ’16 you must create an article type first. After the Spring ‘16 release, you no longer need to create an article type first.

**Enable Salesforce Knowledge**

From the Knowledge Settings page, you can create a Knowledge Base experience for your support agents, partners, and customers.

To set up or edit your knowledge Base, from Setup, enter Knowledge Settings in the Quick Find box, select Knowledge Settings, then click Edit.

<table>
<thead>
<tr>

**Article Summaries**

| Show article summaries in article list views | For each channel, decide whether an article’s summary details display beneath the article’s title in search results. |

**Knowledge One**

| Switch from the Articles tab to the Knowledge Tab | Enable Knowledge One with Profiles  
Enable Knowledge One with Permission Sets |
| Suggest related articles on cases | Search on the Knowledge tab suggests articles based on their content similarity and their links to similar cases. If no articles are linked to similar cases, suggested articles have similar titles as the case or have keywords in common with admin-selected case fields. Suggested articles are available in the Salesforce Console for Service and your portals when viewing existing cases and creating ones.  
*Note:* By default, the Subject field is selected. Choose up to five of the available short text fields that include a description of the issue, the affected product, or the case topic. We recommend choosing short text fields to return more relevant results. Only the first 100 characters of the content from all admin-selected fields are searched. The Description field is always taken into account when suggesting articles for cases and does not count toward the character limit. |
| Highlight relevant article text within search results | Search on the Knowledge tab generates a snippet of the relevant article text with the search terms bolded. See Search Highlights and Snippets. |
| Auto-complete keyword search | Search on the Knowledge tab suggests the three most popular keyword searches performed on the Knowledge tab. Suggestions are based on the channel (internal, customer, partner, or public) the reader is searching.  
*Note:* Keyword search history is refreshed once a day. |
| Auto-complete title search | Search on the Knowledge tab suggests up to 3 articles with matching titles. |

**Language Settings**

<p>| Default Knowledge Base Language | The primary language used for writing articles. It defaults to your organization's language. We recommend that your Default Knowledge Base Language and your organization’s language are the same. |</p>
<table>
<thead>
<tr>
<th>Feature or Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single or Multiple Language</td>
<td>If you support more than one language, select Multiple Languages and choose the translation settings. For instructions, see <a href="#">Support a Multilingual Knowledge Base</a>. <strong>Important:</strong> Setting up a Multilingual Knowledge Base. Important: If you enable Multiple Languages, you can’t revert to a single language knowledge base.</td>
</tr>
</tbody>
</table>

**Case Settings**

| Allow agents to create an article from a case | If this checkbox is selected, agents can create a draft article that is attached to the case when the article is published using one of the following options.  
- Create articles using the simple editor only when closing cases.  
- Create articles using the standard editor any time an agent creates an article. Make sure that users have “Manage Articles,” “Read,” and “Create” permissions. Designate the following:  
  - The default article type, from the drop-down list  
  - For articles created when closing a case, assign the article to a user.  
  - Help agents create articles fast by selecting an Apex class that pre-populates any of the fields on the draft. By default, the Title field in all draft articles contains the case subject.  
  
  **Note:** If you enable this option, also click Layout Properties on each case-close page layout and select “Enable submissions during case close and Submit Articles.” |

| Use a profile to create article PDFs | By default, when a user creates an article PDF directly from a case, the PDF includes all the article fields visible to that user. If you want PDFs generated according to a different profile, for example, a profile that hides certain fields from customers, select Use a profile to create customer-ready article PDFs on cases and choose the profile that determines field visibility. |

| Enable list of cases linked to an article | Agents and Salesforce Knowledge managers can see a list of cases an article is attached to. This helps validate if the article is the right solution for a case and shows which articles are used most, without running a report. The Linked Cases related list:  
- Is visible on the detail or preview page of any article that has been published at least once.  
- Shows a maximum of 200 cases  
- Is sorted in descending order by the date the article was linked to the case. The sort order can’t be changed. |
<table>
<thead>
<tr>
<th>Feature or Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| • Doesn’t appear on archived articles or a translation’s edit and detail pages.  
• Doesn’t appear for external users such as portal or communities users or on Salesforce1. | |

| Share Article via URL Settings | You can share an article that is available on a public knowledge base with a URL. In the Available Sites list, select the sites you want to allow your agents to send URLs from and add them to the Selected Sites list. Agents can then email customer service clients with a URL to link directly to the article in your public knowledge base. |

| Answers Settings | If this checkbox is selected, members of an answers community or Chatter Answers community can convert helpful replies into articles. The article type you select determines which fields appear on the draft article. However, on all articles the Title contains the question and the Summary contains the reply. After a reply is promoted to an article, the original reply has a status message indicating its association with the draft article. When the article is published, the message on the reply includes a link to the article. |

| Chatter Questions Settings | Shows similar questions and relevant Salesforce Knowledge articles when a user enters a question in the Search field. |

| Knowledge Statistics Settings | With this option, the article VoteStat report (which by default only contains totals for star ratings) includes totals for the thumbs up or down ratings. |
Enable Knowledge One with Permission Sets

To switch users from the Articles tab to the Knowledge tab, add the Knowledge One permission to their permission sets.

To add the Knowledge One permission to a permission set:

1. From Setup, enter Permission Sets in the Quick Find box, then select Permission Sets.
2. Click the permission set you want to add the Knowledge One permission to.
3. In the Find Settings... box, enter Knowledge.
4. Select Knowledge One from the list of suggestions.
5. Click Edit.
6. Under Knowledge Management, check the Enabled check box for Knowledge One.
7. Click Save.
8. Ensure each user has at least a Read permission on at least one article type.

Once Knowledge One is available for your users, define your external data sources. Your external data sources appear under your articles both in the search results and the left-side panel.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: Enterprise and Unlimited Editions.

USER PERMISSIONS

To create or edit permission sets:
- “Manage Profiles and Permission Sets”

To create and edit external data sources:
- “Customize Application”
Enable Knowledge One with Profiles

To switch users from the Articles tab to the Knowledge tab, add the Knowledge One permission to their profiles.

To add the Knowledge One permission to a profile:

1. From Setup, enter Profiles in the Quick Find box, then select Profiles.
2. Click the profile you want to add the Knowledge One permission to.
3. In the Find Settings... box, enter Knowledge.
4. Select Knowledge One from the list of suggestions.
5. Click Edit
6. Under Knowledge Management, check Knowledge One.
7. Click Save.
8. Ensure each user has at least a Read permission on at least one article type.

Once Knowledge One is available for your users, define your external data sources. Your external data sources appear under your articles both in the search results and the left-side panel.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: Enterprise and Unlimited Editions.

USER PERMISSIONS

To create or edit profiles:
• “Manage Profiles and Permission Sets”

To create and edit external data sources:
• “Customize Application”
Example Apex for Submitting Articles from Cases

If your organization allows customer-support agents to create Salesforce Knowledge articles while closing a case, you can use Apex to pre-populate fields on draft articles. To do so, create an Apex class and assign it to the case article type using the example below as a guide.

For more information on the syntax and use of Apex, see the Force.com Apex Code Developer’s Guide.

Set up the example by creating the following article type, field, and data categories. Do not change the default API Name assigned to each new object.

1. Create an article type called FAQ.
2. Create a text custom field called Details.
3. Create a category group called Geography and assign it a category called USA.
4. Create a category group called Topics and assign it a category called Maintenance.

Now, create and assign the Apex class.

5. From Setup, enter Apex Classes in the Quick Find box, then select Apex Classes and click New.

6. To specify the version of Apex and the API used with this class, click Version Settings.

If your organization has installed managed packages from the AppExchange, you can also specify which version of each managed package to use with this class. Use the default values for all versions. This associates the class with the most recent version of Apex and the API, as well as each managed package. You can specify an older version of a managed package if you want to access components or functionality that differs from the most recent package version. You can specify an older version of Apex and the API to maintain specific behavior.

7. In the Apex Class text box enter the following script and click Save:

```java
public class AgentContributionArticleController {
    // The constructor must take a ApexPages.KnowledgeArticleVersionStandardController as an argument
    public AgentContributionArticleController(ApexPages.KnowledgeArticleVersionStandardController ctl) {
        SObject article = ctl.getRecord(); //this is the SObject for the new article.
        //It can optionally be cast to the proper article type, e.g. FAQ__kav article = (FAQ__kav) ctl.getRecord();

        String sourceId = ctl.getSourceId(); //this returns the id of the case that was closed.
        Case c = [select subject, description from Case where id=:sourceId];

        article.put('title', 'From Case: ' + c.subject); //this overrides the default behavior of pre-filling the title of the article with the subject of the closed case.
        article.put('Details__c', c.description);

        ctl.selectDataCategory('Geography','USA'); //Only one category per category group can be specified.
        ctl.selectDataCategory('Topics','Maintenance');
    }
}
```

8. From Setup, enter Knowledge Settings in the Quick Find box, then select Knowledge Settings and click Edit.
9. Verify the case settings; using our example, the **Default article type** should be FAQ.

10. From the Use Apex Customization menu, select **AgentContributionArticleController** and click **Save**.

As a result of this example, when agents create an article from the case-close screen:

- The data from the **Description** field on the case appears in the **Details** field of the article.
- The title of the article contains **From Case:** and the case subject.
- The article is automatically assigned to the **USA** data category and the **Maintenance** data category.

**Knowledge Article Types**

Article types, such as FAQs and Tutorials, provide the format and structure to control how an article displays for each audience, known as a channel. For each article type you can create custom fields, customize the layout by adding or removing sections and fields, and choose a template for each channel. You can also create workflow rules and approval processes to help your organization track and manage article creation and publication.
Create Article Types

An article type controls how an article displays and what type of information of fields are included.

Note: Before agents can access article types, you must set object permissions for article types.

1. From Setup, enter Knowledge Article Types in the Quick Find box, then select Knowledge Article Types.
2. Click New Article Type or edit an existing article type.
3. Enter the article types details

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Label</td>
<td>A name used to refer to the article type in any user interface pages.</td>
</tr>
<tr>
<td>Plural Label</td>
<td>The plural name of the object. If you create a tab for this object, this name is used for the tab.</td>
</tr>
<tr>
<td>Gender</td>
<td>If it is appropriate for your organization’s default language, specify the gender of the label. This field appears if the organization-wide default language expects gender. Your personal language preference setting does not affect whether the field appears. For example, if the organization’s default language is English and your personal language is French, you are not prompted for gender when creating an article type.</td>
</tr>
<tr>
<td>Starts with a vowel sound</td>
<td>If it is appropriate for your organization’s default language, check if your label should be preceded by “an” instead of “a”.</td>
</tr>
<tr>
<td>Object Name</td>
<td>(Read only) A unique name used to refer to the article type when using the Force.com API. In managed packages, this unique name prevents naming conflicts on package installations. The Object Name field can contain only underscores and alphanumeric characters. It must be unique, begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.</td>
</tr>
<tr>
<td>Description</td>
<td>An optional description of the article type. A meaningful description helps you remember the differences between your article types when you are viewing them in a list.</td>
</tr>
</tbody>
</table>
4. Click Save.

On the article type detail page,

- In the Fields related list, create or modify custom fields as needed.
- In the Fields related list, edit the article-type layout as needed to rearrange fields and create sections.
- In the Channel Displays related list, choose a template for the Internal App, Partner, Customer, and Public Knowledge Base.

Add Custom Fields to Article Types

Create custom fields to store information that is important to your articles. The only standard fields provided on article types are: Article Number, Summary, Title, and URL Name. At minimum, you want to create a field where authors can write the body of the article.

Before you begin, determine the type of custom field you want to create.

**Note:** Authors can view the URL Name when they create or edit an article. The URL Name does not appear to end users viewing published articles.

1. From Setup, enter Knowledge Article Types in the Quick Find box, then select Knowledge Article Types.
2. Select an article type.
3. Click New in the Fields related list.
4. Choose the type of field to create, and click Next.
5. Enter a field label. The field name is automatically populated based on the field label you enter. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not end with an underscore, and not contain two consecutive underscores.
6. Enter any field attributes, such as Description, and click Next to continue.
   **Note:** You cannot enter a default value for any custom field.
7. Set the field-level security to determine whether the field is visible and editable or read only for specific profiles, and click Next. Field-level security allows you to control which fields are visible in different channels.
8. If you do not want the field to be added automatically to the article-type layout, uncheck Yes, add this custom field to the layout.
9. Click **Save** to finish or **Save & New** to create more custom fields.

10. Optionally **rearrange your custom fields** on the article-type layout.

**Note:** Creating fields can require changing many records at once. To process these changes efficiently, Salesforce might queue your request and send an email notification when the process has completed.

**Warning:** You lose your data if you convert a custom field on an article type into any other field type. Do not convert a custom field on an article type unless no data exists for the field.

### Custom Fields on Articles

The first step in creating a custom field for articles is choosing the field type. This table describes all available custom field types.

<table>
<thead>
<tr>
<th>Field Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Article Currency</strong></td>
<td>In a multiple currency organization, an article can have an article currency field to set the article's currency ISO code.</td>
</tr>
<tr>
<td><strong>Currency</strong></td>
<td>Allows agents to enter a currency amount. The system automatically formats the field as a currency amount. This can be useful if you export data to a spreadsheet application. You can make this field required so an agent must enter a value before saving an article.</td>
</tr>
<tr>
<td><strong>Note:</strong> Salesforce uses the round-half-to-even tie-breaking rule for currency fields. For example, 23.5 becomes 24, 22.5 becomes 22, −22.5 becomes −22, and −23.5 becomes −24. Values lose precision after 15 decimal places.</td>
<td></td>
</tr>
<tr>
<td><strong>Date</strong></td>
<td>Allows agents to enter a date or pick a date from a popup calendar. In reports, you can limit the data by specific dates using any custom date field. You can make this field required so an agent must enter a value before saving an article.</td>
</tr>
<tr>
<td><strong>Date/Time</strong></td>
<td>Allows agents to enter a date or pick a date from a popup calendar, and enter a time of day. They can also add the current date and time by clicking the date and time link next to the field. The time of day includes AM or PM notation. In reports, you can limit the data by specific dates and times using any custom date field. You can make this field required so an agent must enter a value before saving an article.</td>
</tr>
</tbody>
</table>

**EDITIONS**

Salesforce Knowledge is available in **Performance and Developer Editions** and in **Unlimited Edition** with the Service Cloud.

Salesforce Knowledge is available for an additional cost in **Enterprise and Unlimited Editions**.
<table>
<thead>
<tr>
<th>Field Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Email</td>
<td>Allows agents to enter an email address, which is validated to ensure proper format. Character limit is 80. If this field is specified for contacts or leads, agents can choose the address when clicking <em>Send an Email</em>. You can’t use custom email addresses for mass emails. You can make this field required so an agent must enter a value before saving an article.</td>
</tr>
</tbody>
</table>
| File                     | Allows agents to upload and attach a file to an article. You can make this field required so an agent must enter a value before saving an article. Note the following caveats about File fields:  
  • The maximum attachment size is 25 MB.  
  • You can add up to 5 File fields to each article type; contact Salesforce to increase these limits.  
  • If the *Disallow HTML documents and attachments* security setting is enabled, File fields do not support HTML files.  
  • Text content in a File field attachment is searchable. You can search up to 25 MB of attached files on an article. For example, if an article has six 5-MB file attachments, the first 4.16 MB of each file is searchable.  
  • You cannot attach Salesforce CRM Content files using the File field.  
  • The File field type is not supported in Developer edition.  
  • The filename cannot exceed 40 characters.  
  • You cannot convert a File field type into any other data type. |
| Formula                  | Allows agents to automatically calculate values based on other values or fields such as merge fields.                                            |
|                          | **Note:** Salesforce uses the round half up tie-breaking rule for numbers in formula fields. For example, 12.345 becomes 12.35 and \(-12.345\) becomes \(-12.34\).  
  In Database.com, the Formula editor does not provide a *Check Syntax* button. Syntax checking occurs when the agent attempts to save the formula. |
<p>| Lookup Relationship      | Creates a relationship between two records so you can associate them with each other. For example, opportunities have a lookup relationship with cases that lets you associate a particular case with an opportunity. A lookup relationship creates a field that allows agents to click a lookup icon and select another record from a popup window. On the associated record, you can then display a related list to show all the records that are linked to it. You can create lookup relationship fields that link to users, standard objects, or custom objects. If a lookup field references a record that has been deleted, Salesforce clears the value of the lookup field by |</p>
<table>
<thead>
<tr>
<th>Field Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number</td>
<td>Allows agents to enter any number. This entry is treated as a real number and any leading zeros are removed. You can make this field required so an agent must enter a value before saving an article.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Salesforce uses the round half up tie-breaking rule for number fields. For example, 12.345 becomes 12.35 and (-12.345) becomes (-12.34). Salesforce rounds numbers referenced in merge fields according to the user’s locale, not the number of decimal spaces specified in the number field configuration.</td>
</tr>
<tr>
<td>Percent</td>
<td>Allows agents to enter a percentage number, for example, ‘10’. The system automatically adds the percent sign to the number. You can make this field required so an agent must enter a value before saving an article.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> If the decimal value is greater than 15, and you add a percent sign to the number, a runtime error occurs. Values lose precision after 15 decimal places.</td>
</tr>
<tr>
<td>Phone</td>
<td>Allows agents to enter any phone number. Character limit is 40. You can make this field required so an agent must enter a value before saving an article. Salesforce automatically formats it as a phone number.</td>
</tr>
<tr>
<td>Picklist</td>
<td>Allows agents to select a value from a list you define.</td>
</tr>
<tr>
<td>Picklist (Dependent)</td>
<td>Allows agents to select a value from a list dependent on the value of another field.</td>
</tr>
<tr>
<td>Picklist (Multi-select)</td>
<td>Allows agents to select more than one picklist value from a list you define. These fields display each value separated by a semicolon.</td>
</tr>
<tr>
<td>Text</td>
<td>Allows agents to enter any combination of letters, numbers, or symbols. You can set a maximum length, up to 255 characters. You can make this field required so an agent must enter a value before saving an article.</td>
</tr>
<tr>
<td>Field Type</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Text Area</td>
<td>Allows agents to enter up to 255 characters that display on separate lines similar to a Description field. You can make this field required so an agent must enter a value before saving an article.</td>
</tr>
<tr>
<td>Text Area (Long)</td>
<td>Allows agents to enter up to 131,072 characters that display on separate lines similar to a Description field. You can set the length of this field type to a lower limit, if desired. Any length from 256 to 131,072 characters is allowed. The default is 32,768 characters. Every time an agent presses Enter within a long text area field, a line break and a return character are added, both count toward the character limit. Also, smart links add more characters than what is displayed.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> If you lower the character limit and you have articles that surpass the new limit. Those articles can’t be edited until the limit is reset higher than their character counts.</td>
</tr>
</tbody>
</table>
| Text Area (Rich)    | Allows agents to enter up to 131,072 characters of HTML-supported text including code samples (`) and smart links between Salesforce Knowledge articles. There are two ways to create smart links:  
  - Search for the article.  
  - Enter the article URL.  

  **Note:**  
  - You can have up to 100 links to different Salesforce Knowledge articles in one rich text field.  
  - When you convert a text area (rich) field to a text area (long) field, links are displayed as link reference numbers, not URLs.  
  - The upgraded editor doesn’t support Internet Explorer version 7 or version 8 in compatibility mode. If you are using these browsers, you use the older editor.                                                                                                                                                      |
| URL                 | Allows agents to enter up to 255 characters of any valid website address. When agents click the field, the URL opens in a separate browser window. Only the first 50 characters are displayed on the record detail pages. You can make this field required so an agent must enter a value before saving an article.                                                                                                                                                                                                 |

2658
Field-Level Security on Articles

Field-level security lets administrators restrict readers’ access to specific fields on detail and edit pages. For example, you can make a “Comment” field in an article visible for Internal App profiles but not for public Community profiles.

If using both article-type layout and field-level security to define field visibility, the most restrictive field access setting always applies. For example, if a field is hidden in the article-type layout, but visible in the field-level security settings, the layout overrides security settings and the field aren’t visible. Some user permissions override both page layouts and field-level security settings. For example, users with the “Edit Read Only Fields” permission can always edit read-only fields regardless of any other settings.

**Important:** Field-level security doesn’t prevent searching on the values in a field. When search terms match on field values protected by field-level security, the associated records are returned in the search results without the protected fields and their values.

You can define security via a permission set, profile, or field.

### Define field-level security via permission sets or profiles

1. For permission sets or profiles, from Setup, either:
   - Enter **Permission Sets** in the Quick Find box, then select **Permission Sets**, or
   - Enter **Profiles** in the Quick Find box, then select **Profiles**

2. Select a permission set or profile.

3. Depending on which interface you’re using, do one of the following:
   - Permission sets or enhanced profile user interface—In the **Find Settings**... box, enter the name of the object you want and select it from the list. Click **Edit**, then scroll to the Field Permissions section.
   - Original profile user interface—In the Field-Level Security section, click **View** next to the object you want to modify, and then click **Edit**.

4. Specify the field’s access level.
   - **Note:** These field access settings override any less-restrictive field access settings on the article-type layouts.

5. Click **Save**.

### Define field-level security via fields

1. For fields, from Setup, enter **Knowledge Article Types** in the Quick Find box, then select **Knowledge Article Types**.

2. Select the article type that contains the field to modify.

3. Select the field and click **Set Field-Level Security**.

4. Specify the field’s access level.
   - **Note:** These field access settings override any less-restrictive field access settings on the article-type layouts.

5. Click **Save**.

After setting field-level security, you can modify the article-type layouts to organize the fields on detail and edit pages.
Use Videos from Any Provider with a Custom Visualforce Page

Using a custom Visualforce page and the HTML editor, you can insert videos from any provider into your Salesforce Knowledge articles.

For example, create a Visualforce page:

```apex
<apex:page showHeader="false" showChat="false" sidebar="false">
  <iframe width="560" height="315"
    frameborder="0" allowfullscreen="true">
  </iframe>
</apex:page>
```
Then, with the HTML editor, authors can reference videos using this code:

```html
<iframe frameborder="0" height="315"
    src="https://salesforce_instance/apex/Video?videoID=12345"
    width="560">
</iframe>
```

**Article Type Page Layouts**

Article-type layouts determine which fields agents can view and edit when entering data for an article. They also determine which sections appear when users view articles. The article-type template defines the format of the article, for example whether layout sections display as subtabs or as a single page with links. You can apply a layout per profile per article type. Therefore, you can display more sensitive fields of the same article to only those agents with the correct profile.

**Tip:** You can also use field-level security to hide fields on article types. For example, if you publish the same article in the internal app and in a community, you can use field-level security to hide a custom field such as Internal Comments from external community users.

1. From Setup, enter *Knowledge Article Types* in the Quick Find box, then select *Knowledge Article Types*.

2. Click the article type.

3. Scroll down to the Page Layouts related list or click the Page Layouts link at the top of the page.

4. To create a page layout, click *New* and follow the prompts. To edit an existing layout, click *Edit* and make your changes.

Make your changes. The layout editor consists of two parts: a palette on the upper portion of the screen and the layout on the lower portion of the screen. The palette contains the available fields and a section element. The layout contains an Information section and space for you to add sections. By default, all custom fields are included in the Information section.

**Important:** If you navigate away from your article-type layout before clicking save, your changes are lost.

**Note:** The Article Number, Summary, Title, and URL Name standard fields do not display in the layout. Article Number and Summary appear in a read-only Properties section at the top of the published article. Also included in this header are the First Published, Last Modified, and Last Published fields.

<table>
<thead>
<tr>
<th>Task</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add a section</td>
<td>Drag and drop the section element into the palette.</td>
</tr>
<tr>
<td>Change the name of a section</td>
<td>Click its title. You cannot rename the Information section.</td>
</tr>
<tr>
<td>Remove a field from a section</td>
<td>Drag it to the right side of the palette or click the icon next to the field.</td>
</tr>
<tr>
<td>Remove a section from the article-type layout</td>
<td>Click the icon next to the section name.</td>
</tr>
<tr>
<td>Save your changes and continue editing the article type layout</td>
<td>Click <em>Quick Save</em>.</td>
</tr>
</tbody>
</table>

**EDITIONS**

Available in: Salesforce Classic

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in Enterprise and Unlimited Editions.

**USER PERMISSIONS**

To customize the article-type layout:
- “Customize Application”
- AND
- “Manage Salesforce Knowledge”

2661
Tip:

- Use the undo and redo buttons to step backwards and forwards, respectively.
- Use the following keyboard shortcuts:
  - Undo = CTRL+Z
  - Redo = CTRL+Y
  - Quick Save = CTRL+S
- To select multiple elements individually, use CTRL+click. To select multiple elements as a group, use SHIFT+click.
- To quickly locate any item in the palette, use the Quick Find box. The Quick Find box is especially useful for article-type layouts that have large numbers of items available in the palette.

5. To assign various layouts to the article type based on a user profile, click **Page Layout Assignments**.

6. Click **Edit Assignment**.

7. Select the profile, or profiles (using SHIFT), you want to change and select the layout from the **Page Layout To Use** drop-down.

When creating multiple article type page layouts, consider the following limitations and functionality changes:

- When creating page layouts, some fields are hidden based on the agent’s license. Out of Date, Translation Completed Date, and Translation Exported Date are hidden from users who do not have a Knowledge User license or who are customer portal or partner portal users. In addition, Archived By and Is Latest Version are hidden from customer portal and partner portal users.
- Before Spring ’16, preview pages showed the Summary field in the API that contained text values, even if they were not in the page layout. To continue displaying summary fields on preview pages, manually update your page layouts to include them.
- If you want to attach articles as PDFs to emails when solving cases, add **File Attachments** to the **Selected Email Tools** in the Feed View for the article type layout.
- The article edit page only shows the standard fields (Article Number, Title, URL Name, and Summary) and all the custom fields added to the layout, including the side bar fields. Other standard fields added on the page layout are ignored because they are not editable, and the custom fields are displayed in the order specified in the page layout.
- If an article type page layout doesn’t include a field with a validation rule, you can’t create or edit an article of that article type. Make sure all page layouts assigned to the article type by profile include all fields with validation rules.
- The Communication channel layout doesn’t use the page layout to determine which Article fields are inserted into a case email. The fields that are inserted include the fields selected in the Communication Channel mapping.
- You can set up a specific profile to generate a PDF file. When sending articles as PDFs, the pdf is generated based on the sender’s profile. Therefore, the receiver might get fields they are not meant to see. Use the **Use a profile to create customer-ready article PDFs on cases** setting on the Knowledge settings page so the fields in PDFs come from the page layout assigned to the configured profile. Also, Field Level Security of both the sender profile and the configured profile are applied.
- Salesforce Classic Mobile actions and related lists are not available on article page layouts in the desktop Salesforce user interface, with the exception of actions on the article feed.
Send Article Content in Email (Beta)

When using Knowledge One, agents can send an email with an article’s contents embedded in the body of the email.

**Note:** Sending article content via email is available through a beta program for articles published on external channels (public knowledge bases, portals, or communities) and is not supported on Internet Explorer 7. For new organizations, the user permission off on all standard profiles but on for the System Administrator profile. For existing organizations, contact your Salesforce representative to enable the permission on the standard System Administrator profile.

Agents can send article content within an email rather than just sending a URL. Your customers can access the information without going to a website. Your agents send articles that are not published publicly without rewriting or copy and pasting an internal article. Administrators can assign permission to only those agents with a good knowledge of what is acceptable for an external audience.

To enable and setup which article fields go into emails for each article type.

1. From the object management settings for cases, go to Page Layouts.
2. How you access the Case Feed Settings page depends on what kind of page layout you’re working with.
   - For a layout in the Case Page Layouts section, click **Edit**, and then click **Feed View** in the page layout editor.
   - For a layout in the Page Layouts for Case Feed Users section, click and choose **Edit feed view**. (This section appears only for organizations created before Spring ‘14.)

If you’ve already opted to use the advanced page layout editor to configure the publisher for a layout, choose **Edit detail view** to add, change, or remove actions.

3. Under Articles Tool Settings, check **Enable attaching articles inline**.
4. Click **Save**.
5. From Setup, enter **Knowledge Article Types** in the Quick Find box, then select **Knowledge Article Types**.
6. Click the label or name of the article type you’d like to share via email.
7. Under Communication Channel Mappings, click **New** or **Edit**.
8. Enter a Label and Name.
9. Select and add **Email** to the Selected Channels list.
10. Select and add the fields you’d like included in the body of an email.

**Note:** Smart links can’t be included in the email and the following fields are not supported:
   - ArticleType
   - isDeleted
   - Language
   - MultiPicklist
   - Picklist
   - Publish Status
   - Source
11. Click **Save**.

**Example:** While solving customer cases, agents with the permission can insert article content into the body of an email. Anywhere agents can attach articles to cases, such as the Knowledge One sidebar in the Salesforce Console, the Articles list in the case feed, the Article widget, or the suggested articles in a Knowledge One search, they can email any article of that type within the body of an email by selecting **Email article with HTML** in the action drop-down. The article content is inserted at top of email thread or wherever the agent left their cursor. Once an article has been emailed, an envelope icon appears to the left of the title. When the article has files that exceed the 10-mb attachment limit, agents are asked to select which files to attach and retry sending the email.

**Note:** If rich text is not enabled on your case feed layout for the article type, only article text is embedded into the email and the action changes to **Email article text only**.

---

**Post Site and Community Article URLs**

In the Service Console, agents can insert Site or Community URLs for articles into the case feed via the email, community, or social publishers.

To post Site or Community URLs for articles into the case feed, you must have the Knowledge sidebar enabled in the Service Console and either a Force.com Site or Community setup.

1. From Setup, enter **Knowledge** in the Quick Find box, then select **Knowledge Settings**.

2. Click **Edit**.

3. In the **Share Article via URL Settings** section, enable **Allow users to share articles via public URLs**.

4. In the **Available Sites** list, select from which sites or communities you want agents to share article URLs and add them to the **Selected Sites** list.

5. Click **Save**.

Your agents can now select **Attach and share article** link from selected sites in the Knowledge sidebar of the console. Email is the default action but agents can change to the Social or Community action in the case feed before they insert the URL.

**Important:**

- Articles must be published. Draft articles don’t show the insert URL option.
- Articles must be shared publicly, meaning their Channel must be Public Knowledge Base, Customer, or Partner.
- All enabled URLs show **Attach and share article** link, even if the article is not visible in that site or community. The agent must confirm that the article is available in the site or community before sharing it with the customer.

---

**EDITIONS**

Available in: Salesforce Classic

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: Enterprise and Unlimited Editions.

---

**USER PERMISSIONS**

To administer Salesforce Knowledge:

- “Customize Application” AND
- “Manage Salesforce Knowledge”
Control Data Integrity with Validation Rules

Ensure that your article content is compliant with your company standards. Create validation rules for each article type to check whether required fields have the appropriate values based on the article’s status.

1. From Setup, enter Article Types in the Quick Find box, then select Knowledge Article Types.
2. Click the article type.
3. Scroll down to the Validation Rules related list or click the Validation Rules link at the top of the page.
4. To create a validation rule, click New. To edit an existing rule, click Edit.
5. Name the rule.
6. Make the rule active.
7. Optionally, describe what you want to control on articles of this type.
8. Specify an error condition formula and a corresponding error message.
   The error condition is written as a Boolean formula expression that returns true or false. When true, the article is not saved, and an error message displays. The author can correct the error and try again. For information on validation rules, see Define Validation Rules on page 4043.
   
   **Note:** Knowledge article errors always display at the top of the page, not next to the field. Write your errors descriptively so that authors know how to satisfy the validation rule. For example, identify which field is causing the error.
9. Click Save.

When creating validation rules on article types, consider the following limitations and functionality changes.

- If an article type page layout doesn’t include a field with a validation rule, you can’t create or edit an article of that article type. Make sure all page layouts assigned to the article type by profile include all fields with validation rules.
- The Article Currency field and the VLOOKUP function don’t support validation rules.
- When importing articles, if the import data file has a valid article with an invalid translation, the translation is created, but its translated content isn’t imported.
- Only the first validation rule error displays at the top of the page and in the import article log. If multiple errors exist but are not fixed, they are displayed on subsequent saves or imports.
- In the API, KA fields, such as Case Association Count and Archived Date, don’t support validation rules. Only KAV (article version) fields are supported in validation rules.
Article History Tracking

You can track the history of certain fields in articles. If you have history tracking enabled, open an article of that type and click Version to see a version history list. You can also set tracking for the article type and track the full history of an article and its versions. Article events are tracked for up to 18 months.

The system records and displays field updates, publishing workflow events, and language versions for the master article and any translations. When you track old and new values, the system records both values as well as the date, time, nature of the change, and the user who made the change. When you track only the changed values, the system marks the changed field as having been edited; it doesn’t record the old and new field values. This information is available in the Version History list and the fields are available in the Article Version History report.

Article history respects field, entity, and record-level security. You must have at least “Read” permission on the article type or the field to access its history. For data category security, Salesforce determines access based on the categorization of the online version of an article. If there is no online version, then security is applied based on the archived version, followed by the security of the draft version.

1. From Setup, enter Knowledge in the Quick Find box, then select Knowledge Article Types.
2. Create an article type or edit one from the Article Types list.
3. Click Set History Tracking.
4. Choose the fields you want to track.
   Salesforce begins tracking history from that date and time. Changes made before that date and time are not tracked.
5. Click Save.
Article Type Templates

Article types in Salesforce Knowledge require a template for each channel. The standard article-type templates—Tab and Table of Contents—specify how the sections in the article-type layout appear in the published article. For example, if you choose the Tab template, the sections defined in the layout appear as tabs when users view an article. With the Table of Contents template, sections appear on a single page with hyperlinks to each section. You can also create a custom template using Visualforce. Custom templates are not associated with the article-type layout.

1. From Setup, enter Knowledge Article Types in the Quick Find box, then select Knowledge Article Types.
2. Click an article type name.
   • If you are using a default template, continue with Step 12.
   • If you are creating a custom template, make note of the article type's API Name. You need this value when you create the Visualforce page.

3. From Setup, enter Visualforce Pages in the Quick Find box, then select Visualforce Pages.
4. Click New.
5. In the Name text box, enter the text that appears in the URL as the page name.
   This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.
6. In the Label text box, enter the text that users see when choosing this template from the Channel Displays related list on the article type detail page.
7. Add your Visualforce markup.
   The only requirement for custom article-type templates is that the standard controller is equal to the API Name of the article type. For example, if the API Name of the article type is Offer__kav, your markup would be:

   ```<apex:page standardController="Offer__kav">
   ... page content here ...
   </apex:page>```

   Note: Click Component Reference for a list of the Visualforce components, such as knowledge:articleRendererToolbar and knowledge:articleCaseToolbar, available for use in custom article-type templates.

8. If your article type has a File field, you can allow users to download the field's content.
   In the following example, the article type is Offer, the name of the File field is my_file, and the text that appears as a link is Click me:

   ```<apex:outputLink value="{!URLFOR($Action.Offer__kav.FileFieldDownload, Offer__kav.id, ['field'=$ObjectType.Offer__kav.fields.my_file__Body__s.name])}">Click me</apex:outputLink>```

   Note: If the File field is empty (meaning the author didn't upload a file), the link still appears on the published article but has no function. If you do not want the link to appear when the File field is empty, replace Click me in the example with the name of the file. For example, {!Offer__kav.my_file__Name__s}. 

---

Editions

Available in: Salesforce Classic

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: Enterprise and Unlimited Editions.

User Permissions

To create, edit, or delete article-type templates:
• "Customize Application"
  AND
  "Manage Salesforce Knowledge"
9. Click **Save**.
   Your custom template can now be assigned to any channel on the article type.

10. From Setup, enter **Knowledge Article Types** in the Quick Find box, then select **Knowledge Article Types**.

11. Click an article type name.

12. For each channel, specify the template.
   - For Internal App, Customer and Partner, **Tab** is the default template.
   - For Public Knowledge Base, **Table of Contents** is the default template.
   - If you created a custom template for this article type, it also appears in the drop-down menu.

13. Click **Save**.

**Example:** If you choose the Tab template, the sections you defined in the layout appear as tabs when users view an article.

*Published Article Using the Tab Article-Type Template*

If you choose the Table of Contents template, the sections you defined in the layout appear on one page with hyperlinks to each section title.

*Published Article Using the Table of Contents Article-Type Template*
Example Apex for Submitting Articles from Cases

If your organization allows customer-support agents to create Salesforce Knowledge articles while closing a case, you can use Apex to pre-populate fields on draft articles. To do so, create an Apex class and assign it to the case article type using the example below as a guide.

For more information on the syntax and use of Apex, see the Force.com Apex Code Developer’s Guide.

Set up the example by creating the following article type, field, and data categories. Do not change the default API Name assigned to each new object.

1. Create an article type called FAQ.
2. Create a text custom field called Details.
3. Create a category group called Geography and assign it a category called USA.
4. Create a category group called Topics and assign it a category called Maintenance.

Now, create and assign the Apex class.

5. From Setup, enter Apex Classes in the Quick Find box, then select Apex Classes and click New.

6. To specify the version of Apex and the API used with this class, click Version Settings.

If your organization has installed managed packages from the AppExchange, you can also specify which version of each managed package to use with this class. Use the default values for all versions. This associates the class with the most recent version of Apex and the API, as well as each managed package. You can specify an older version of a managed package if you want to access components or functionality that differs from the most recent package version. You can specify an older version of Apex and the API to maintain specific behavior.

7. In the Apex Class text box enter the following script and click Save:

```java
public class AgentContributionArticleController {
    // The constructor must take a ApexPages.KnowledgeArticleVersionStandardController as an argument
    public AgentContributionArticleController(ApexPages.KnowledgeArticleVersionStandardController ctl) {
        SObject article = ctl.getRecord(); //this is the SObject for the new article.
        //It can optionally be cast to the proper article type, e.g. FAQ__kav article = (FAQ__kav) ctl.getRecord();

        String sourceId = ctl.getSourceId(); //this returns the id of the case that was closed.
        Case c = [select subject, description from Case where id=:sourceId];

        article.put('title', 'From Case: '+c.subject); //this overrides the default behavior of pre-filling the title of the article with the subject of the closed case.
        article.put('Details__c',c.description);

        ctl.selectDataCategory('Geography','USA'); //Only one category per category group can be specified.
        ctl.selectDataCategory('Topics','Maintenance');
    }
}
```

8. From Setup, enter Knowledge Settings in the Quick Find box, then select Knowledge Settings and click Edit.
9. Verify the case settings; using our example, the Default article type should be FAQ.

10. From the Use Apex Customization menu, select AgentContributionArticleController and click Save.

As a result of this example, when agents create an article from the case-close screen:

- The data from the Description field on the case appears in the Details field of the article.
- The title of the article contains From Case: and the case subject.
- The article is automatically assigned to the USA data category and the Maintenance data category.

Delete an Article Type

Deleting article types can result in errors and lost data. Read this entire topic carefully before deleting article types.

1. From Setup, enter Knowledge Article Types in the Quick Find box, then select Knowledge Article Types.

2. Next to the article type, click Del.

3. Confirm that you want to delete the article type.

Notes on Deleting Article Types

- If your organization has only article type, you cannot delete it. Every Salesforce Knowledge org requires at least one deployed article type. Create an article type and then delete the old one.

- Any articles associated with a deleted article type are automatically removed from all channels, including draft, published, and archived articles.

- Salesforce does not display deleted article types in the Recycle Bin with other deleted records. Instead, deleted article types appear in the Deleted Article Types list on the article list view page for 15 days. During this time, you can restore the article type and its articles, or permanently erase the article type and its articles. After 15 days, the article type and its articles are permanently erased.

- If a reader clicks a bookmark to a deleted article’s URL, an Insufficient Privileges message displays.
Import Existing Information into Salesforce Knowledge

You can import your existing articles or information database into Salesforce Knowledge. This importer is for articles and translations you currently have outside Salesforce Knowledge.

**Note:** If you are looking for instructions on importing translated articles that you’ve sent to a localization vendor, see Import Translated Articles on page 2700.

1. **Prepare Articles for Import to Salesforce Knowledge**
   Each import file must have articles of the same type and columns corresponding to the fields in the article.

2. **Create a .csv File for Article Import**
   Each .csv file imports articles into one article type and maps the imported articles’ content with the article type’s fields. For example, a .csv file might map articles’ titles with the standard field `Title` in an article type, meaning that each article’s title is imported into the `Title` field.

3. **Set Article Import Parameters**
   Specify import parameters in a property file using key names and corresponding values. For example, use the key `DateFormat` to specify that a date custom field appears in the `DateFormat=dd/MM/YYYY` format or specify the character encoding to be used for the import.

4. **Create an Article .zip File for Import**
   To complete your article import, create a .zip file with your `.parameters`, `.csv`, and `.html` files, and upload them into Salesforce Knowledge.

5. **Article and Translation Import and Export Status**
   Find the status of your article imports and exports on the Article Imports page in Setup.
Prepare Articles for Import to Salesforce Knowledge

Each import file must have articles of the same type and columns corresponding to the fields in the article.

⚠️ Tip: Test your import using a small set of articles.

1. Sort your existing articles by information type.
   For example: FAQ, product information, or offer.

2. Ensure that each information type has a corresponding Salesforce Knowledge article type that matches its structure and content.
   For example, if you are importing FAQs, ensure that Salesforce Knowledge has an FAQ article type with enough question and answer fields to accommodate the largest FAQ article.
   If your articles contain .html files, use an article type that contains a rich text area field and ensure that the HTML is compliant with the tags and attributes supported in the rich text area field.

⚠️ Note: The article importer does not support subfields. If you have fields within fields, adjust your structure and content before importing into Salesforce Knowledge.

3. Verify that the article’s field-level security settings allow you to edit the fields.
   For each article type, create a csv file to import.

---

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: Enterprise and Unlimited Editions.

USER PERMISSIONS

To import articles:
- “Manage Salesforce Knowledge”
  AND
- “Manage Articles”
  AND
- “Manage Knowledge Article Import/Export”
  AND
- “Read,” “Create,” “Edit,” and “Delete” on the article type
Create a .csv File for Article Import

Each .csv file imports articles into one article type and maps the imported articles’ content with the article type’s fields. For example, a .csv file might map articles’ titles with the standard field Title in an article type, meaning that each article’s title is imported into the Title field.

1. Create one .csv file per article type.
   - There can only be one .csv file and one .properties file.
   - The .csv file and the .properties file must be in the root directory.
   - The compression process must preserve the folder and subfolder structure.
   - The .zip file name can’t contain special characters.
   - The .zip file can’t exceed 20 MB and the individual, uncompressed, files within the zip file can’t exceed 10 MB.
   - .csv files can’t have more than 10,000 rows, including the header row. Therefore, you can have a maximum of 9,999 articles and translations.
   - .csv file rows can’t exceed 400,000 characters.
   - .csv file cells can’t exceed 32 KB.
   - Each article in the .csv file can’t have more than 49 translations.

2. In the first row, specify the article type’s fields and metadata, such as language data categories or channels.

Enter one item in each column. You can use the following fields and metadata to import content.

<table>
<thead>
<tr>
<th>Field or data</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>isMasterLanguage</td>
<td>Identifies the article as a master (1) or translation (0). Required to import articles with translations, however, it can’t be in a .csv file to import articles without translations. Translations must follow their master articles so that they are associated with the master article preceding it</td>
</tr>
<tr>
<td>Title</td>
<td>The article or translation’s title. Required for all imports.</td>
</tr>
<tr>
<td>Standard and custom fields</td>
<td>Refer to an article type’s standard fields using field names and refer to custom fields using API names. Leaving a row cell empty may cause your articles to be skipped if the related article type field is mandatory.</td>
</tr>
<tr>
<td>Rich text area field</td>
<td>Use the rich text area custom fields to import .html files or images. Refer to an article type’s rich text area field using its API name.</td>
</tr>
<tr>
<td>File field</td>
<td>Use the file custom fields to import any file type (.doc, .pdf, .txt, etc.). Refer to an article type’s file field using its API name.</td>
</tr>
</tbody>
</table>

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: Enterprise and Unlimited Editions.

USER PERMISSIONS

To import articles:
- “Manage Salesforce Knowledge”
- “Manage Articles”
- “Manage Knowledge Article Import/Export”
- “Read,” “Create,” “Edit,” and “Delete” on the article type
To categorize the imported articles, use category groups; refer to a category group using its unique name prefixed with `datacategorygroup`. For example, use `datacategorygroup.Products` to specify the category group `Products`.

To specify where the imported articles are available, use the keyword `Channels`.

Specify the articles' language. Required to import articles with translations. Optional to import articles without translations. If you don’t include this column, the articles automatically belong to the `default knowledge base language` and you can’t import translations along with the master articles.

3. In subsequent rows, specify the articles you want to import.

Use one row per article and enter the appropriate information in each field or metadata column.

### Field or data

<table>
<thead>
<tr>
<th>Field or data</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data category groups</td>
<td>To categorize the imported articles, use category groups; refer to a category group using its unique name prefixed with <code>datacategorygroup</code>. For example, use <code>datacategorygroup.Products</code> to specify the category group <code>Products</code>.</td>
</tr>
<tr>
<td>Channel</td>
<td>To specify where the imported articles are available, use the keyword <code>Channels</code>.</td>
</tr>
<tr>
<td>Language</td>
<td>Specify the articles’ language. Required to import articles with translations. Optional to import articles without translations. If you don’t include this column, the articles automatically belong to the <code>default knowledge base language</code> and you can’t import translations along with the master articles.</td>
</tr>
</tbody>
</table>

### Consideration

<table>
<thead>
<tr>
<th>Consideration</th>
<th>Notes</th>
</tr>
</thead>
</table>
| Standard or custom fields | Enter the articles’ data for each field, except for rich text area fields where you must enter the relative path to the corresponding `.html` file in your `.zip` file.  
  
  **Note:** The article importer does not support subfields. If you have fields within fields, adjust your structure and content before importing into Salesforce Knowledge. |
| Rich text area field    | Always enter the `.html` file path relative to the location of the `.csv` file. Never enter raw text. If the specified path doesn’t exist, the related article isn’t imported.  
  
  Note the following information about importing HTML and images.
  
  - We recommend that you create separate folders for the `.html` files (for example, `/data`) and the images (for example, `data/images`).
  
  - To import images, include the images in an `.html` file using the `<img>` tag and `src` attribute. Ensure that the `src` value is a relative path from the `.html` file to the image folder.
  
  - Images must be `.png`, `.gif`, or `.jpeg` files.
  
  - Each image file can’t exceed 1 MB.
  
  - `.html` files can’t exceed the maximum size for their field.
  
  - If a date doesn’t match the date format specified in the property file, the related article isn’t imported.
  
  - If an `.html` file references a file that isn’t allowed, the related article isn’t imported. |
### Notes

- If an .html file references an image that’s missing, the related article is imported without the image.

### File field

Enter the path relative to the file’s location. If the specified path doesn’t exist, the related article isn’t imported. Note the following information about importing files.

- We recommend that you create a folder for your files (for example, `/files`).
- Each file must not exceed 5 MB.

### Category groups

Use category unique names to categorize articles. Use the plus symbol (+) to specify more than one category. For example, `Laptop+Desktop`. Note the following information about data category groups.

- Leaving the cell row empty causes your article to be set to No Categories.
- If you specify a category and its parent (for example, `Europe+France`) the import process skips the child category `France` and keeps the parent category `Europe`, because application of a parent category implicitly includes the category’s children.
- When importing articles with translations and associated data categories, only the master article retains the data categories. The article translations have no associated data category upon import.

### Channels

Specify articles’ channels using the keywords.

- `application` for Internal App. If you don’t specify a channel, `application` is the default.
- `sites` for Public Knowledge Base.
- `csp` for Customer.
- `prm` for Partner.

Use the plus (+) symbol to specify more than one channel (for example, `application+sites+csp` to make an article available in all channels).

**Note:** When importing articles with translations and associated channels, only the master article retains the channels. The article translations have no associated channels upon import.

---

**Example:** The following example .csv files import articles in a Product Offer article type. The first example is for imports of articles without translations. The second is for imports with translations. The .csv files contain titles, summaries, and descriptions. They
also classify the articles in the category group Products and make them available for specific channels. The `description__c` field is a rich text area and only supports paths to .html files. The `summary__c` field is a text field and only supports raw text. The “Best Desktop Computer Deals” article has no summary; the cell is left blank because the `summary__c` field is not mandatory.

<table>
<thead>
<tr>
<th>Title</th>
<th>summary__c</th>
<th>description__c</th>
<th>datacategorygroup.Products</th>
<th>Channels</th>
</tr>
</thead>
<tbody>
<tr>
<td>Free Digital Camera Offer</td>
<td>Get the new Digital Camera.</td>
<td>data/freecam.html</td>
<td>Consumer_Electronics</td>
<td>application+csp</td>
</tr>
<tr>
<td>Best Desktop Computer Deals</td>
<td></td>
<td>data/bestdeals.html</td>
<td>Desktop</td>
<td>application+csp</td>
</tr>
<tr>
<td>Free Shipping on Laptop and Desktops</td>
<td></td>
<td>data/freeship.html</td>
<td>Laptop+Desktops</td>
<td>application+csp</td>
</tr>
</tbody>
</table>

Example articlesimport.csv file:

```
Title,summary__c,description__c,datacategorygroup.Products,Channels
Free Digital Camera Offer, Get the new Digital Camera.,data/freecam.html,Consumer_Electronics,application+csp
Best Desktop Computer Deals,,data/bestdeals.html,Desktop,application+csp
Free Shipping on Laptop and Desktops,,data/freeship.html,Laptop+Desktops,application+csp
```

<table>
<thead>
<tr>
<th>isMaster</th>
<th>Language</th>
<th>Title</th>
<th>summary__c</th>
<th>description__c</th>
<th>datacategorygroup.Products</th>
<th>Channels</th>
<th>Language</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>0</td>
<td>es</td>
<td>Liberte Franqueo en Laptops y Ordenadores</td>
<td></td>
<td>data/freeship/es.html</td>
<td></td>
<td></td>
<td>es</td>
</tr>
</tbody>
</table>
Example articlestranslationsimport.csv file:

<table>
<thead>
<tr>
<th>isMasterLanguage,Title,summary__c,description__c,datacategorygroup.Products,Channels,Language</th>
</tr>
</thead>
<tbody>
<tr>
<td>1,Free Digital Camera Offer,Get the new Digital Camera,data/freecam.html,Consumer_Electronics,application+csp,en</td>
</tr>
<tr>
<td>0,Libérer l'Offre d'Appareil photo digital,Obtenir le nouvel Appareil photo digital.,data/freecam/fr.html,,,fr</td>
</tr>
<tr>
<td>0,Liberte Oferta Digital de Cámara,Consiga la nueva Cámara Digital.,data/freecam/es.html,,,es</td>
</tr>
<tr>
<td>1,Best Desktop Computer Deals,,data/bestdeals.html,Desktops,application+csp,en</td>
</tr>
<tr>
<td>0,Meilleures Affaires d'ordinateurs de bureau,,data/bestdeals/fr.html,,,fr</td>
</tr>
<tr>
<td>0,Mejores Tratos de ordenadores,,data/bestdeals/es.html,,,es</td>
</tr>
<tr>
<td>1,Free Shipping on Laptop and Desktops,,data/freeship.html,Laptops+Desktops,application+csp,en</td>
</tr>
<tr>
<td>0,Libérer Affranchissement sur Portables et Ordinateurs,,data/freeship/fr.html,,,fr</td>
</tr>
<tr>
<td>0,Liberte Franqueo en Laptops y Ordenadores,,data/freeship/es.html,,,es</td>
</tr>
</tbody>
</table>

Specify your import parameters in a property file using key names and corresponding values.
Set Article Import Parameters

Specify import parameters in a property file using key names and corresponding values. For example, use the key `DateFormat` to specify that a date custom field appears in the `DateFormat=dd/MM/YYYY` format or specify the character encoding to be used for the import.

1. Create a file with required parameters, as described in this table.

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
<th>Default Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>DateFormat</td>
<td>Format of the date to read in the .csv file</td>
<td>yyyy-MM-dd</td>
</tr>
<tr>
<td>DateTimeFormat</td>
<td>Format of the date and time to read in the .csv file</td>
<td>yyyy-MM-dd HH:mm:ss</td>
</tr>
<tr>
<td>CSVEncoding</td>
<td>Character encoding used to read the .csv file</td>
<td>ISO8859_15_FDIS</td>
</tr>
<tr>
<td>CSVSeparator</td>
<td>.csv file separator</td>
<td></td>
</tr>
<tr>
<td>RTAEncoding</td>
<td>Default encoding used for the HTML files (if not specified in the charset attribute from the HTML meta tag).</td>
<td>ISO8859_15_FDIS</td>
</tr>
</tbody>
</table>

Note: Salesforce does not support UTF-32 character encoding. We recommend using UTF-8. If you use specify UTF-16 character encoding, ensure that your HTML files specify the right byte-order mark.

Note: Specify only Java date formats. Make sure the date format is not misleading. For example, if you choose the format `yyyy-M-d`, a date entered as 2011111 can be interpreted as 2011-01-11 or 2011-11-01. Specify at least:

- Two digits for month and day format (MM, dd)
- Four digits for year format (yyyy)

If a date in the .csv file does not match the date format specified in the property file, the related article is not imported.

2. Save the file with the .properties.

Example: Example offerarticlesimport.properties property file:

```
DateFormat=yyyy-MM-dd
DateTimeFormat=yyyy-MM-dd HH:mm:ss
CSVEncoding=ISO8859_15_FDIS
```
Create a .zip file and import into Salesforce Knowledge.

Create an Article .zip File for Import

To complete your article import, create a .zip file with your .parameters, .csv, and .html files, and upload them into Salesforce Knowledge.

1. Create a .zip file containing:
   - The .csv file.
   - The folder containing the .html files to import.
   - The folder containing the image files referenced in the .html files.
   - The .properties file.

   **Important:** The import .zip file must meet the following requirements:
   - There can only be one .csv file and one .properties file.
   - The .csv file and the .properties file must be in the root directory.
   - The compression process must preserve the folder and subfolder structure.
   - The .zip file name can't contain special characters.
   - The .zip file can't exceed 20 MB and the individual, uncompressed, files within the zip file can't exceed 10 MB.
   - .csv files can't have more than 10,000 rows, including the header row. Therefore, you can have a maximum of 9,999 articles and translations.
   - .csv file rows can't exceed 400,000 characters.
   - .csv file cells can't exceed 32 KB.
   - Each article in the .csv file can't have more than 49 translations.

2. From Setup, enter Import Articles in the Quick Find box, then select Import Articles.

3. Select the appropriate Article Type for the imported articles.

4. To select the .zip file, click Browse, and then click OK.

5. If your import contains translations, select the Contains translations? checkbox.

   **Note:** If this checkbox is selected, your .csv file must contain the isMasterLanguage, Title, and Language columns. If this checkbox is not selected, your csv file can't contain the isMasterLanguage column but must contain the Title column. The Language column is optional for imports of articles without translations.

6. Click Import Now.

   When the import is complete, you receive an email with an attached log that provides details about the import.

Check on the status of your import, on the Article Imports page.
**Article and Translation Import and Export Status**

Find the status of your article imports and exports on the Article Imports page in Setup.

To check the status of your imports and exports, from Setup, enter *Article Imports* in the Quick Find box, then select *Article Imports*. If you’ve enabled multiple languages for Salesforce Knowledge, you see two tables: one for article and translation imports and another for exports for translation.

Import information includes:

- Possible actions
- Zip file names
- Who submitted it and when
- Status
- Started and completed dates
- Article types

Export information includes:

- Possible actions
- Zip file names
- Who submitted it and when
- Status
- Started and completed dates

Status descriptions are as follows:

<table>
<thead>
<tr>
<th>Status</th>
<th>Description</th>
<th>Possible Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pending</td>
<td>The import or export will start as soon as the previous pending import or export completes.</td>
<td>You can click <strong>Cancel</strong> to cancel the import or export.</td>
</tr>
<tr>
<td>Processing</td>
<td>The import or export is processing.</td>
<td>If you want to stop the process, or if the process has been stopped, call Salesforce Support. Salesforce may stop an import or export if a maintenance task has to be performed or if the import or export exceeds one hour.</td>
</tr>
<tr>
<td>Stopping/Stopped</td>
<td>Salesforce Support is stopping or has already stopped the import or export.</td>
<td>Contact Salesforce Support to restart the import or export, or click <strong>Cancel</strong> to cancel an entry.</td>
</tr>
<tr>
<td>Aborted</td>
<td>The import or export has been canceled. The articles that already imported or exported successfully are available in Salesforce.</td>
<td>You can restart an import or export, click <strong>Del</strong> to delete an entry, or click <strong>Email Log</strong> to receive the completion email and check the details of your import or export.</td>
</tr>
<tr>
<td>Completed</td>
<td>The import or export is complete. Successfully imported articles are visible on the Article Management tab on the</td>
<td>This status doesn’t mean the import or export is successful. Click <strong>Email Log</strong> to see the log file attached to the completion email.</td>
</tr>
</tbody>
</table>
**Knowledge Article Access**

Give your knowledge agents access to articles. Specify which agents in your company are Salesforce Knowledge users, those who can create, edit, archive, and delete articles. Create user profiles with the appropriate user permissions, and then assign users to these profiles.

By default all internal users can read articles except with the Salesforce Platform, Force.com - One App, Force.com App Subscription, and Knowledge Only User licenses. With those licenses, to view articles, a user must have the "AllowViewKnowledge" permission on their profile. However, this permission is off for default profiles. To give a user the "AllowViewKnowledge" permission on their profile, activate the permission on a cloned profile and assign the cloned profile to the user.

**Note:** To do more than read articles, agents need the Knowledge User license.

1. From Setup, enter *Users* in the Quick Find box, then select *Users*.
2. Click *Edit* next to the user's name or click *New* to create a user.
3. If you are creating a user, complete all the required fields.
4. Select the *Knowledge User* checkbox.
5. Click *Save*.

User permissions control access to different tasks Salesforce Knowledge. We recommend using permission sets or custom profiles to grant users the permissions they need. For example, you can create a permission set called "Article Manager" that includes the permissions to create, edit, publish, and assign articles.

Refer to this table for details on permissions associated with Salesforce Knowledge tasks.

<table>
<thead>

<td>&quot;Manage Data Categories&quot; permission. This permission is on by default in the System Administrator profile.</td>
</tr>
</tbody>
</table>

To enable agents to perform their specific tasks, create public groups for each role and assign only the necessary article actions to those groups.

**Example:** Your Salesforce Knowledge agents are a mixture of different levels of job experience and expertise in the products and services your company offers. These examples outline four basic types of users and some of the permissions they need to perform their jobs.

**Scott: The Reader**

Scott Jackson is relatively new to the company, so he’s a basic agent of the knowledge base. Currently, he has read-only access to articles, so he can search and view articles. Readers don’t author or publish, so he won’t belong to a public group or need to submit articles for approval. He needs the following permissions to perform his job.

<table>
<thead>
<tr>
<th>Scott</th>
<th>Permission</th>
<th>Article Type-Specific Permissions</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Salesforce Knowledge Functionality</strong></td>
<td>Manage Articles</td>
<td>Read</td>
</tr>
<tr>
<td>Search articles from and attach articles to cases</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Amber: The Candidate

Amber Delaney is a candidate-level agent and can create and publish articles with statuses of either **Work in Progress** or **Not Validated**. If Amber works on an article with a different validation status, she must send it to a queue for approval before it’s published.

Amber is part of the KCS Candidate public group and submits the articles she can’t publish to the Publishing External queue. She needs the following permissions to perform her job duties.

<table>
<thead>
<tr>
<th>Salesforce Knowledge Functionality</th>
<th>Manage Articles</th>
<th>Read</th>
<th>Create</th>
<th>Edit</th>
<th>Delete</th>
</tr>
</thead>
<tbody>
<tr>

<td>✔️</td>
<td>✔️</td>
<td>✔️</td>
<td></td>
<td>✔️</td>
</tr>
<tr>
<td>Edit published or archived articles</td>
<td>✔️</td>
<td>✔️</td>
<td>✔️</td>
<td>✔️</td>
<td>✔️</td>
</tr>
</tbody>
</table>

### Anne: The Contributor

As a contributor, Anne Murphy is a more advanced Knowledge user. She understands the standards for articles in the organization and can create articles and publish articles with **Validated Internal** status. She can also work on articles authored by other users if they have either **Work in Progress** or **Not Validated** statuses, and can change them to **Validated Internal**. Since she doesn’t have permission to publish articles to an external audience, she must submit those customer-facing articles to the Publishing External queue.

**Note:** Article approvers require the “Manage Articles” permission and at least the “Read” permission on the article type associated with articles they review. These permissions let them access the article in a draft state. Without these permissions, approvers can reassign but not approve articles.

Anne is a member of the Contributor public group and she needs the following permissions to perform her job duties.
### Salesforce Knowledge Functionality

### Pat: The Publisher

Pat Brown is Knowledge domain expert and is responsible for reviewing and publishing articles to an external audience. He is a member of the Publisher public group. Pat also belongs to the Publishing External queue. He needs the following permissions to perform his job duties.
### How they all work together

Each user profile defines an agent’s permission to perform different job duties and functions. To enable agents to perform these functions, you create public groups for each role and assign only the necessary article actions to that group. The criteria you create in the approval process defines which validation status can be automatically approved and published and which article must be approved and published by a domain expert.

For example, Anne, the Contributor, can create a Validated External article, but based on the article actions assigned to her public group, the approval process sends her article to Pat, the Publisher, to be published. Pat, as a Publisher, can publish his own articles without submitting them to a queue.

The following table lists the job functions that each role needs to perform on articles in the organization.

<table>
<thead>
<tr>
<th>Job Function</th>
<th>Reader</th>
<th>Candidate</th>
<th>Contributor</th>
<th>Publisher</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create and publish Work in Progress</td>
<td>No</td>
<td>Automatically approved and published</td>
<td>Automatically approved and published</td>
<td>Yes</td>
</tr>
<tr>
<td>Create and publish Not Validated</td>
<td>No</td>
<td>Automatically approved and published</td>
<td>Automatically approved and published</td>
<td>Yes</td>
</tr>
<tr>
<td>Create and publish Validated Internal</td>
<td>No</td>
<td>Needs approval</td>
<td>Automatically approved and published</td>
<td>Yes</td>
</tr>
</tbody>
</table>
## Create Public Groups for Knowledge

Salesforce Knowledge uses public groups as a way to assign users to specific tasks related to articles. When you assign article actions to a public group, you can grant users in that group the ability to do things like publish articles with a specified validation status. Public groups are also used in approval processes to manage the publishing workflow.

For example, when a member of the Candidate public group submits an article with the status Work in Progress for approval, it is automatically approved and published. If the same agent submits an article with Validated Internal status, it moves to the Publishing External queue to be reviewed before being published.

1. From Setup, enter Public Groups in the Quick Find box, then select Public Groups.
2. Click New, or click Edit next to the group you want to edit.
3. Enter the following information:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Label</td>
<td>The name used to refer to the group in any user interface pages.</td>
</tr>
<tr>
<td>Group Name (public groups only)</td>
<td>The unique name used by the API and managed packages.</td>
</tr>
</tbody>
</table>

---

**EDITIONS**

Available in: Salesforce Classic

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: Enterprise and Unlimited Editions.

**USER PERMISSIONS**

To create or edit a public group:
- "Manage Users"

To create or edit another user’s personal group:
- "Manage Users"
Select **Grant Access Using Hierarchies** to allow automatic access to records using your role hierarchies. When selected, any records shared with users in this group are also shared with users higher in the hierarchy.

Deselect **Grant Access Using Hierarchies** if you’re creating a public group with All Internal Users as members, which optimizes performance for sharing records with groups.

**Note:** If **Grant Access Using Hierarchies** is deselected, users that are higher in the role hierarchy don’t receive automatic access. However, some users—such as those with the “View All” and “Modify All” object permissions and the “View All Data” and “Modify All Data” system permissions—can still access records they don’t own.

<table>
<thead>
<tr>
<th>Search</th>
<th>From the <strong>Search</strong> drop-down list, select the type of member to add. If you don’t see the member you want to add, enter keywords in the search box and click <strong>Find</strong>.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Note:</strong> For account owners to see child records owned by high-volume portal users, they must be members of any portal share groups with access to the portal users’ data.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Selected Members</th>
<th>Select members from the <strong>Available Members</strong> box, and click <strong>Add</strong> to add them to the group.</th>
</tr>
</thead>
</table>

| Selected Delegated Groups | In this list, specify any delegated administration groups whose members can add or remove members from this public group. Select groups from the **Available Delegated Groups** box, and then click **Add**. This list appears only in public groups. |

**4.** Click **Save**.

**Note:** When you edit groups, sharing rules are automatically reevaluated to add or remove access as needed. If these changes affect too many records at once, a message appears warning that the sharing rules aren’t automatically reevaluated, and you must manually recalculate them.

Now assign only the necessary actions to your groups so the selected members can perform their tasks while keeping the integrity of your knowledge base.
Assign Article Actions to Public Groups

Article actions allow agents to participate in the article publishing process. By default, all article actions are assigned to users with the “Manage Articles” user permission. Agents can complete an action as long as they have the correct article type permission. You can control article action access by assigning public groups to article actions and adding agents the relevant public groups. To further restrict actions like publishing, you can create approval processes that allow agents to publish only those articles that have specific validation statuses. For example, many contributors can write many articles but you can create an approval process so no articles are published until they are reviewed and validated by a qualified author.

Note: Although you can add any user to a public group, only agents with the “Manage Articles” user permission and the appropriate object permissions can perform article actions.

This table summarizes the article type permissions that are required for each article action.

<table>
<thead>
<tr>
<th>Article Action</th>
<th>Create</th>
<th>Read</th>
<th>Edit</th>
<th>Delete</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publish Articles</td>
<td>☑</td>
<td>☑</td>
<td>☑</td>
<td>☑</td>
</tr>
<tr>
<td>Archive Articles</td>
<td>☑</td>
<td>☑</td>
<td></td>
<td>☑</td>
</tr>
<tr>
<td>Delete Articles</td>
<td></td>
<td>☑</td>
<td>☑</td>
<td></td>
</tr>
<tr>
<td>Edit Published and Archived Articles</td>
<td>☑</td>
<td></td>
<td>☑</td>
<td></td>
</tr>
<tr>
<td>Submit Articles for Translation</td>
<td>☑</td>
<td>☑</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Publish Translation</td>
<td>☑</td>
<td>☑</td>
<td>☑</td>
<td></td>
</tr>
<tr>
<td>Edit Translation</td>
<td>☑</td>
<td>☑</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

1. From Setup, enter Knowledge Article Actions in the Quick Find box, then select Knowledge Article Actions.
2. Click Edit.
3. For the action you want to assign, select the appropriate radio button and choose a public group. If you don’t modify an article action, all agents with the “Manage Articles” permission can perform that action.
4. Click OK and then click Save.
Define Validation Status Picklist Values

When the Validation Status field is enabled on the Knowledge Settings page, you can create picklist values that show the state of the article. For example, values could be Validated, Not Validated, or Needs Review.

Note: Validation status picklist values aren’t retained when you export articles for translation. Articles with picklist values can be imported, however, and their values are retained as long as the values exist in your organization.

1. From Setup, enter Validation Statuses in the Quick Find box, then select Validation Statuses.

2. On the picklist edit page, click New to add new values to the validation status field. You can also edit, delete, reorder, and replace picklist values.
   When you replace a picklist value, the system replaces it in all versions of the article, including any archived versions.

3. Add one or more picklist values (one per line) in the text area.

4. To set the value as the default for the picklist, be sure to select the Default checkbox.

5. Click Save.
Workflow and Approvals for Articles

Ensuring that the content in your articles is accurate and helpful is foundational to getting accurate information to those who need it most. Creating processes where Knowledge experts review, validate, and approve articles for publication is critical to creating a trustworthy knowledge base. Implementing approval processes with Salesforce Knowledge gives you additional control over the content and publication of your articles.

Creating workflow rules and approval processes lets your organization automate many of the tasks involved with managing its knowledge base. When implementing Salesforce Knowledge, you can create workflow rules and approval processes for some or all the article types used by your organization.

Workflow rules let you create email alerts, update fields, or send outbound API messages when an article meets certain criteria. For example, you could create a workflow rule that sends an email alert to the article owner when a new article is created from a case. Tasks are not supported by article type workflow.

Approval processes automate the approval of articles. When implemented with Salesforce Knowledge, approval processes give you additional control over the content of your articles and the process used to approve them. For example, you can create a process that requires legal and management teams to approve articles containing sensitive information.

Note: Tasks aren’t available for article type workflow rules. For more information about creating workflow rules, see Set the Criteria for Your Workflow Rule on page 4254. For more information about creating an approval process, see Create an Approval Process with the Standard Wizard on page 4282.

1. From Setup, enter Workflow Rules in the Quick Find box, then select Workflow Rules to access the workflow rules list page.

2. On the workflow rules list page, click New Rule.

3. Select the article type from the Select object drop-down list.

4. Click Next.

5. Enter a rule name. Optionally, enter a description for the rule.

6. Select the evaluation criteria and choose how criteria are met.

7. Enter criteria for the rule.

8. Click Save & Next.

9. Click Add Workflow Action, select the type of action for the rule, and enter the information required by the action.

10. Click Save.

11. Optionally, add a time-dependent workflow action by clicking Add Time Trigger. Provide time trigger information and then click Save.

12. Click Done.

13. From Setup, enter Approval Processes in the Quick Find box, then select Approval Processes.

Two wizards are available to help you through the approval setup process. Choose the one that better meets your requirements. See Choose the Right Wizard to Create an Approval Process on page 4281.

15. Provide a name, unique name, and description for the process.
16. Specify criteria for entering the process.
For example, you could specify that if the article is published on a public site it requires approval: Visible on public site equals True.

17. Specify approvers for the process.

Let the submitter choose the approver manually. (default)
Prompts the user to select the next approver.

Automatically assign an approver using a standard or custom hierarchy field.
Assigns the approval request to the user in the field displayed next to this option. You select this field when you configure the approval process.

Automatically assign to a queue.
Available only for objects that support queues. Assigns approval requests to a queue.

Automatically assign to approver(s).
Assigns the approval request to one or more specific users, specific queues, or users related to the submitted record. You can add up to 25 approvers per step per step.

18. Select the email template that the process uses to notify approvers.
When an approval process assigns an approval request to a user, Salesforce automatically sends the user an approval request email. The email contains a link to the approval page in Salesforce, where the agent can approve or reject the request and add comments.

19. Configure the approval request page layout.
The approver approves or rejects the article from this page. You can add as many fields to this page as you think your agents need to reasonably assess an article’s content. For example, you might choose to include information such as a summary of the article’s content, the product discussed, and the author’s name.

20. Specify which users are allowed to submit articles for approval.
For example, for articles that require editing before approval, you could create a public group containing editors, and then specify that only members of that group can submit articles for approval.

21. Activate the approval process.

**Example:** When an approval process is associated with an article type, agents with the “Manage Articles” permission might see both the Publish... and Submit for Approval buttons from an article’s detail page. Which buttons they see is determined by both permissions and article actions. These agents can publish an article without submitting it for approval. To limit this ability to certain users, assign the “Publish Articles” article action to a select group of users instead of giving it to all users with the “Manage Articles” permission. The ability to publish articles without prior approval is governed by an approval process that is specific to each user’s public group.

Keep the following in mind when creating approval processes for article types:

- Adding an approval process to an article type lets your organization ensure that the required reviewers approve the article before it’s published. When an approval process is enabled for an article’s article type, the Approval History related list displays on the article details page.
- When creating an approval process, change the final approval action to “Unlock the record for editing” to allow agents to publish the article.
- Articles aren’t published automatically at the end of an approval process. Agents must click Publish... to make the article available in the publishing channels.
- When an approval process is associated with an article type, agents with the “Manage Articles” permission might see both the Publish... and the Submit for Approval buttons on an article’s detail page. (Which buttons they see is determined by both permissions and article actions). These agents can publish an article without submitting it for approval. To prevent this from affecting
many users, assign the “Publish Articles” article action to a limited group of users instead of giving it to all users with the “Manage Articles” permission. For more information, see Assign Article Actions to Public Groups on page 2690. You still need to make sure that the users with direct publishing capability know which articles need approval before publication.

- Article approvers require the “Manage Articles” permission and at least the “Read” permission on the article type associated with articles they review. These permissions let them access the article in a draft state. Without these permissions, approvers can reassign but not approve articles.

- Workflow rules and approval processes apply to the “Draft to Publication” portion of the article publishing cycle. Workflow rules aren’t available for archiving. Approval processes aren’t available for translation or archiving.

  **Note:** When an article is published from the edit page, the article is first saved and then published. Workflow rules apply to the saved draft article but not the published article.

- A user who only has read access to an article type can publish a draft article of that type if there is an approval process associated to the article type and the approval process is complete (all the approvers have approved) but the article has not been published.

### Create Knowledge Actions

Knowledge actions are templates that link a workflow action to an article type. When knowledge actions are enabled, you can use them to link article types to specific workflow article actions, such as publishing. For example, if you want to have each FAQ published as a new version each time it completes the approval process, you can create a knowledge action that links the FAQ article type to the Publish as New action. Then, when you create an approval process for FAQs, select the new Knowledge Action.

**Important:** When you create the approval process, make sure to change the final approval action to Unlock the record for editing to let users publish the article.

1. From Setup, enter Knowledge Action in the Quick Find box, then select Knowledge Action.
2. Click New Knowledge Action.
3. Select the article type for the action. The workflow rules and approval process that you associate with the action must belong to the same article type.
4. Enter a unique name for the knowledge action.
5. Select the type of action you want to apply to the article type. For example, Publish as New publishes the article as a new version.
6. Enter a description.
7. Click Save.
   - The Knowledge Action detail page appears showing you the rules and approval processes that use the knowledge action.
8. When you’re ready to use the knowledge action in an approval or workflow process, click Activate on the Knowledge Action detail page.

---

**EDITIONS**

Available in: Salesforce Classic

Salesforce Knowledge is available in **Performance and Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Enterprise** and **Unlimited** Editions.

**USER PERMISSIONS**

To enable Salesforce Knowledge Actions:

- “Customize Application”
Modify Default Category Group Assignments for Articles

Salesforce Knowledge uses data categories to classify articles. Data categories are organized in category group. After creating category groups, admins decide which groups to use for Salesforce Knowledge articles. For example, if your org uses both the Answers and Salesforce Knowledge, you might want one category group to be used by the answers community and two other category groups for articles. Answers and articles can use the same category group. Authors can assign up to eight data categories from one category group to an article so that users searching for articles can find and filter by category. By default, all the category groups you create are assigned to Salesforce Knowledge.

1. From Setup, enter Data Category Assignments in the Quick Find box, then select Data Category Assignments under Knowledge. A list of all category groups appears.

2. Click Edit and move any category groups that you don’t want available for articles from the Selected Category Groups list to the Available Category Groups list. Later, you can choose to make a hidden category group visible.

   Note: The order of category groups is not preserved from the edit page to the data category assignment page.

3. Click Save.

   You receive an email after the save process completes. Authors can now assign categories in the selected groups to articles on the Article Management tab. Authors can only access categories if the category group is active and the author’s data category visibility settings provide access to the category.

EDITIONS

Available in: Salesforce Classic

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud. Salesforce Knowledge is available for an additional cost in Enterprise and Unlimited Editions.

USER PERMISSIONS

To modify category groups assignments in Salesforce Knowledge:
- “Customize Application” AND
- “Manage Salesforce Knowledge”
Filter Articles with Data Category Mapping

Make suggested articles more relevant when solving cases. Map case fields to data categories to filter for articles assigned to those data categories. For example, cases with a field for which product they are about can be mapped to the data category of that product. Articles assigned that category or product, are filtered to the top of the suggested article list.

⚠️ Important: Filtering articles based on case information is only supported in text and picklist fields.

To implement data category mapping, select which case fields map to which data categories and set a default data category for cases that have no value for the mapped fields. For information on data categories, see Data Categories in Salesforce.com on page 2722.

1. From Setup, enter Data Category Mappings in the Quick Find box, then select Data Category Mappings.
2. In the Case Field column, use the drop-down list to add a field.
3. In the Data Category Group column, use the drop-down list to map the information from the lookup field to a data category.
4. In the Default Data Category column, use the drop-down list to assign a data category when the field value does not match any categories from the category group.
5. Click Add.

Support Articles in Multiple Languages

With multiple languages for Salesforce Knowledge, you can lower support costs by translating articles into the languages your audience prefers. After selecting your language settings, two translation methods are available: translating articles in-house using the editing tool in the knowledge base, or sending articles to a localization vendor. Different languages can use different methods. For example, you may want to export articles to a vendor for French translations, but assign articles to an internal Knowledge user for Spanish translations.

- Before you add languages to your knowledge base, decide for each language whether you want to translate articles directly in Salesforce or export articles to a translation vendor. Communicate your decision to the people involved in the translation process (authors, reviewers, translation managers, publishers).
- When adding a language to your knowledge base, keep in mind that it can’t be deleted; however, you can hide a language by making it inactive. Deactivating a language means it no longer appears as a choice in the New Article dialog or the Submit for Translation dialog. Also, if articles are already published in the language, those articles are no longer visible to readers when the language is deactivated.
- You can only add languages supported by Salesforce to your knowledge base.
- To hide translated articles for a specific language, deactivate the language by unchecking Active on the Settings page.
Reach a global audience by offering your knowledge base in multiple languages.

**Tip:** For review queues, you can create queues made up of reviewers with different languages of expertise. For translation queues, you can create one queue for each language or combine languages within queues.

1. If you send articles to a vendor for translation, create a translation queue. From Setup, enter `Queues` in the Quick Find box, then select `Queues`.
2. Click **New**.
3. Enter the **Label** and **Queue Name**.
   For our example, use “Translating External” for the **Label** and “TranslatingExternal” for the **Queue Name**.
4. Choose email notification settings for the queue:
   - **To notify**
   - **One email address when new records are added to the queue.**
     - **You must**
     - Add an email address to Queue Email. You can add an email address for an individual or an email distribution list.
   - **All queue members individually when new records are added to the queue.**
     - **You must**
     - Leave Queue Email blank.
   - **All queue members and the Queue Email individually when new records are added to the queue.**
     - **You must**
     - Add an email address to Queue Email and select Send Email to Members.
5. Add **Knowledge Article Version** as the object available to the queue.
6. Choose the queue members (users, roles, or public groups) or objects.
   For users, roles, or public groups, only queue members and users above them in the role hierarchy can take ownership of records in the queue, depending on your organization’s sharing settings.
7. Click **Save**.
8. In Setup, enter **Knowledge Settings** in the Quick Find box, then select **Knowledge Settings** and click **Edit**.
9. Select **Multiple Languages** and add the languages you want to include in your knowledge base. You can only add languages supported by your Salesforce org.
   **Important:** You can’t remove a language once you’ve added it to your knowledge base.
10. Optionally, choose the following settings for each language:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Active</td>
<td>Only active languages appear in the New Article dialog and the Submit for Translation dialog. Also, active/inactive status determines whether a published article is visible. For example, if articles are published in Spanish to your partner portal and...</td>
</tr>
</tbody>
</table>
then you make Spanish an inactive language, the articles are no longer visible to partners.

This value appears in the Assign To field of the Submit for Translation dialog. Choose a person or a queue: the individual responsible for translating articles into this language, or the queue used for exporting articles to a localization vendor.

Select the person who to review or publish translations imported in this language.

11. Click Save.

Export Articles for Translation

If your organization sends Salesforce Knowledge articles to a vendor for translation, use the Export Articles for Translation feature in Setup.

Place the articles to be translated in a translation queue. To enable the article export feature, create one or more queues; authors and reviewers select the queue when they submit an article for translation. Make sure that they know which queue to choose for which language.

Note: You can have up to 50 exports in 24 hours and a maximum of 15 pending exports (exports that have not entered a final state such as Completed, Failed, or Canceled).

1. Create a translation queue with articles for translation.
2. On the Article Management tab, select the articles you want to translate, and click Submit for Translation.
3. In the dialog box, indicate which languages to translate the articles into and assign the translations to their corresponding language translation queue.
4. From Setup, enter Export Articles for Translation in the Quick Find box, then select Export Articles for Translation.
5. Select the queue that contains the articles you’re exporting.
6. Select either:
   - All articles to export every article in the queue.
   - Updated articles to only export articles that have been modified or added.
7. Click Continue.
8. Select the source and target language pairs you want to export.

   Important: Salesforce creates a separate .zip file for every article type in each language pair. You must retain the .zip file structure for a successful import. For more information, see Import Translated Articles on page 2700.

9. To have the files reviewed or published after being translated, select a user or a queue.
10. Select the file character encoding.
11. Select the delimiter for the .csv files. The delimiter is the separator for columns when the file is converted to table form. Your options are tab (default) or comma.

12. Click Export Now. You're notified by email when your export is complete. You can also check the status of your export by viewing the Article Import and Export Queue. From Setup, enter Article Imports and Exports in the Quick Find box, then select Article Imports and Exports.

Unzip the exported files, but retain the file structure for a successful import.
Import Translated Articles

If your organization sends Salesforce Knowledge articles to a vendor for translation, use the Import Article Translations feature in Setup. You can only import articles that have been exported from the same Salesforce organization. For example, you can’t export articles from your test or sandbox organization and import them into your production organization.

1. From Setup, enter Import Article Translations in the Quick Find box, then select Import Article Translations.

2. Choose how Salesforce handles translations after they're imported.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Review imported translations on the Article Management tab before publishing</td>
<td>Add imported translations to a queue from which agents can review them.</td>
</tr>
<tr>
<td>Publish translations immediately on import</td>
<td>Publish imported translations without reviews.</td>
</tr>
</tbody>
</table>

3. Select the language of the articles you’re importing.

4. If you chose to have articles reviewed before publishing, select to send the files to a user or a queue.

5. Click Browse, choose the translation .zip file to upload, and click Open.

You must place all the translation files (meaning, those exported from Salesforce and translated by your vendor) in a folder whose name is the same as the language code. For example, put French articles in an fr folder. Zip up this folder to create your import file.

**Important:** To import translated articles successfully, verify that the file structure and their extensions match the file structure and extensions of files exported from Salesforce Knowledge for translation. For example, if the target language is French, the file structure begins as follows:

```
import.properties
-fr
  --articletypearticlename_kav
  ---articlename.csv
  ---[Article collateral, html, images, etc.]
```

6. Click Import Now.

If you have more translated articles to upload, repeat steps four through six.

7. Click Finish.

An email notification is sent to you when your import finishes. You can view the status of your import from Setup by entering Article Imports and Exports in the Quick Find box, then selecting Article Imports and Exports.
Improve the Article Search Experience

Enable search highlights and snippets, synonyms, promoted terms, topics, and keywords from cases to improve your article search.

Search Highlights and Snippets
Quickly identify the best article and see how articles match your search terms with relevant text and highlighted search terms in the search results.

Search Synonyms for Articles
Create synonyms so words or phrases are treated as equivalents in searches. When searching Salesforce Knowledge articles, users can enter search terms that don’t match any terms in those items but are synonymous with the terms.

Manage Promoted Search Terms
View, edit, and delete—from a single page—all the promoted search terms that are associated with Salesforce Knowledge articles.

Enable Topics for Articles
With topics on articles, you can classify and search articles by assigning topics. Topics can be added from the article view and detail pages. Suggested topics, which are only supported in English, are terms extracted from the article, so that they are more concrete and precise than a data category assignment. When searching, topics can be used to index the article, so the matched articles are more relevant to keyword searches.

Use More Case Keywords to Find Articles
When searching articles from a case, by default, only the case title is used in the search. Often, you want to use information from the case for more accurate search results, or create a custom search button.

Search Highlights and Snippets

Quickly identify the best article and see how articles match your search terms with relevant text and highlighted search terms in the search results.

Search highlights and snippets give your agents and users context as to why the particular result matched their search query. The relevant text appears below the title with the search terms in bold. You can enable search highlights and snippets on the Salesforce Knowledge Settings page on page 2646.

Note: Search highlights and snippets are not generated for searches with wildcards.

Search highlights and snippets are generated from the following fields:
- Email
- Long text area
- Rich text area
- Text area

Search highlights and snippets aren’t generated from the following fields:
- Checkbox
- Currency
- Date
- Date Time
Search Synonyms for Articles

Create synonyms so words or phrases are treated as equivalents in searches. When searching Salesforce Knowledge articles, users can enter search terms that don't match any terms in those items but are synonymous with the terms.

To create synonyms and synonym groups, from Setup, enter Synonyms in the Quick Find box, then select Synonyms under Customize > Search. An org can create up to 10,000 synonym groups.

A search for one term in synonym group returns results for all terms in the group. For example, if you define a synonym group with these synonyms:

CRM, customer relationship management, Salesforce

then a search for customer relationship management matches articles that contain customer relationship management and articles that contain CRM or Salesforce.

Synonyms affect search behavior in the following ways:

Priority

If a search term is part of a synonym group, the search results list items that contain the search term, followed by items that contain other terms in the synonym group.

For example, if this synonym group is defined:

fruit, oranges

Then a search for oranges matches a list of items containing oranges, followed by items containing fruit.

Note: In the Article Management tab, if you sort the list by clicking a column header, the sort order, not priority, persists in the current and additional searches.

Wildcards

If a wildcard is used in a search, the wildcard expands the search term, but the search doesn't match any synonyms, even if the search phrase contains a defined synonym.

For example, if these synonym groups are defined:

fruit, oranges, apples
cabbage, lettuce

Then a search for orang* lettuce matches items that contain orange and oranges, but doesn't match items that contain fruit, apples, and cabbage.
Operators
If a search phrase contains an operator (AND/OR/AND NOT), synonym matches are returned only if the entire search phrase is a defined synonym.

For example, if these synonym groups are defined:

fruit, oranges and apples
vegetables, carrots

Then a search for oranges and apples returns matches for all items that contain the literal string oranges and apples and items that contain the term fruit.

However, if the search phrase is fruit and vegetables, which is not a defined synonym, the search matches only those items that contain both the terms, fruit and vegetables.

In this case, AND functions as an operator and synonym matches are not returned in the search results. In terms of this example, items that contain a synonym of either fruit or vegetables (items that contain the term carrots or the phrase oranges and apples) are not returned.

Exact phrase matches
If a defined synonym is only a part of a longer exact phrase search, the search doesn't treat it as a synonym.

For example, if this synonym group is defined:

oranges apples, fruit

Then an exact phrase search for “raspberries oranges apples” doesn’t match items that contain the word fruit.

Lemmatization
Synonyms do not undergo lemmatization in search results; rather, they are matched as an exact phrase. However, the search term does undergo lemmatization.

For example, if this synonym group is defined:

quench, drink orange juice

Then a search for quench matches items that contain quench, quenched, quenching, and drink orange juice, but doesn’t match items that contain drinking orange juice.

Ignored words
Words that are normally ignored in searches, such as the, to, and for, are matched if the word is part of a defined synonym.

For example, if this synonym group is defined:

peel the orange, cut the apple

Then a search for peel the orange matches items that contain the exact string peel the orange.

Overlapping synonyms
If a search term consists of overlapping synonyms from different groups, the search matches synonyms in all the overlapping synonym groups.

For example, if these synonym groups are defined:

• orange marmalade, citrus
• marmalade recipe, sugar

Then a search for orange marmalade recipe matches items that contain orange marmalade, citrus, marmalade recipe, and sugar.

Subsets
If one synonym group includes a synonym that is a subset of a synonym in another group, a search for the subset term doesn’t match items that contain synonyms from the subset synonym group.
For example, if these synonym groups are defined:

- orange, apple
- orange marmalade, citrus
- marmalade, jam

Then a search for orange marmalade matches items that contain orange marmalade and citrus, but doesn’t match items that contain apple or jam.

Manage Promoted Search Terms

View, edit, and delete—from a single page—all the promoted search terms that are associated with Salesforce Knowledge articles.

You can add promoted search terms to articles on the article’s detail page in the Promoted Search Terms related list.

1. From Setup, enter Promoted Search Terms in the Quick Find box, then select Promoted Search Terms under CustomizeSearch.

2. To view which terms are assigned to an article, sort by the Article column.

3. To edit a term, click Edit in its row.
   You can only change the term from this page, not the article it is assigned to.

4. To delete a term, click Delete in its row.
   The term is only deleted from the article associated with this row, not from other articles.

5. Remember to save your changes.
Enable Topics for Articles

With topics on articles, you can classify and search articles by assigning topics. Topics can be added from the article view and detail pages. Suggested topics, which are only supported in English, are terms extracted from the article, so that they are more concrete and precise than a data category assignment. When searching, topics can be used to index the article, so the matched articles are more relevant to keyword searches.

Note: Contrary to data categories, topics added to an article are not transferred to the same article in another language.

Topics for articles are enabled for each article type.

1. From Setup, enter Topics for Objects in the Quick Find box, then select Topics for Objects.
2. Click the article type name where you want to enable topics.
3. Check Enable topics.
4. Select which fields you want to use for suggestions.
5. Click Save.
6. Via profile or permission set, under System Permissions, define which agents can assign, create, delete, and edit topics.

Use More Case Keywords to Find Articles

When searching articles from a case, by default, only the case title is used in the search. Often, you want to use information from the case for more accurate search results, or create a custom search button.

Luckily, Salesforce Knowledge search pages accept other parameters:

- `id=<case id>`: The ID of the current case.
- `search=<keywords>`: The keywords to be searched.
- `articleType_<article type dev name>=on`: multiple parameters possible, article types to select (if no article type is selected, then all article types are selected)
- `ct_<data category group internal name>=<data category internal name>`: multiple parameters possible, filter pre-selection

To take advantage of those parameters, add a custom button to the case detail page containing a few lines of javascript that extract keywords from the case and hide the default article search button.

Note: You can also create a custom article widget with `support:caseArticle`.

1. From the object management settings for cases, go to Buttons, Links, and Actions.
2. Click New Button or Link.
3. Enter a unique Label, Name, and Description.
4. Select Detail Page Button for Display Type.
5. Select Execute JavaScript in the Behavior drop-down.
6. Select OnClick JaveScript in the Content Source drop-down.
7. Enter code for extracting case data and setting up parameters for the article search page.
For example:

```javascript
// article search page URL
var url = '/knowledge/knowledgeHome.apexp';

// ID of the current case
url += '?id={!Case.Id}';

// use the case subject as the search keywords
url += '&search={!Case.Subject}';

// read case attributes
var caseType = '{!Case.Type}';
var caseProduct = '{!Case.Product__c}';

// if the case is of a certain type, select only 2 of the article types available
// in other cases, we keep the default behavior (all article types selected)
if (caseType=='Problem' || caseType=='Question') {
    url += '&articleType_FAQ_kav=on';
    url += '&articleType_How_To_kav=on';
}

// preselect a data category for search results based on the category
var product = '';
if (caseProduct=='Home')
    product = 'Home';
if (caseProduct=='SMB')
    product = 'Small_and_Medium_Business';
if (caseProduct=='Large Enterprise')
    product = 'Large_Enterprise';

if (product.length>0)
    url += '&ct_Products2=' + product;

// once the logic is executed, we go to the article search page
window.location = url;
```

8. Click Save.

9. From the object management settings for cases, go to Page Layouts.

10. Click Edit next to Case Layout.

11. Drag your custom button for article search into the case layout.

12. Click Save.

13. Create a Visualforce page named CaseDetailsWithoutStandardKBSearchButton with the following code:

```html
<apex:page standardController="Case">
    <style type="text/css">
        div.knowledgeBlock input {display: none}
    </style>
    <apex:detail/>
</apex:page>
```
14. Back in the Buttons, Links, and Actions area for cases, click **Edit** next to **View**.

15. Select **Visualforce Page** in **Override with**.

16. Select **CaseDetailsWithoutStandardKBSearchButton** from the drop-down.

17. Click **Save**.

**Set Up the Knowledge One Widget**

Knowledge One is available as a widget you can plug in to the Salesforce Console for Service or Salesforce Console for Sales. If you are using the Knowledge tab, you get the same easy-to-use interface for articles and external sources on cases and within the Salesforce Console for Service. You can search, send, and create articles, all without leaving the case.

Of all the Salesforce Knowledge article widgets, the Knowledge One widget lets you:

- Attach a published Salesforce Knowledge article to the case in one click.
- Share an article as a URL, if it is shared on a public channel.
- Email an article as a PDF, if it is shared on a public channel.
- Create and manage articles.
- Make adjustments based on your window width. In the console, in windows smaller than 600 pixels, the searchable objects are displayed in a drop-down menu.

**Note:** The article widget in a case feed search doesn’t necessarily use the agent’s language. If the agent’s language isn’t a Salesforce Knowledge supported language but their locale language is, the locale language is the search language. If neither the agent’s language nor local language are supported, the search language is the default Salesforce Knowledge language, which you can find and set on the Knowledge Settings page.

1. From the object management settings for cases, go to Page Layouts and open your case page layout for edit.

2. Ensure the Email quick action is in the case page layout.

   Without the Email quick action, you can’t send articles via email.

   a. Select **Quick Actions** in the left-hand menu.

   b. Drag **Email** to the Quick Actions in the Salesforce Classic Publisher line.

3. Disable previous article sidebar components.

   - To disable the Knowledge sidebar, click **Layout Properties** and ensure **Knowledge Sidebar** is unchecked.
   - To disable the case feed article tool, click **Feed View** and ensure **Use Case Feed Article Tool in the Console** is unchecked.

4. In the page layout editor, click **Custom Console Components**.

5. In the sidebar where you want the Knowledge One widget, select **Knowledge One** in the Type drop down and set the sidebar parameters.

   Email quick action to be added to the Case page layout in order to show up

**Tip:** If you can’t see the Knowledge One sidebar, increase its width to 250 (height to 150) in the page layout. These are the minimum measurements for the Knowledge One sidebar to display properly.

Adding Solutions

HTML Solutions Overview

HTML solutions provide a more flexible way to create solutions, by allowing you to easily format paragraphs, and insert images and links. Using HTML solutions, you create solutions with an HTML editor and display those solutions to users in Salesforce, the Self-Service portal, the Customer Portal, and as public solutions.

Using the HTML editor, you can:

- Change fonts
- Increase or decrease font sizes
- Insert images from the Documents tab
- Set text color
- Set the background color of text
- Insert hyperlinks
- Change paragraph alignment
- Create bulleted and numbered lists

Note: By default, solutions are created and displayed in text format. Your administrator must enable HTML solutions.

Before you begin creating HTML solutions for your organization, review the following implementation tips and best practices.

Implementation Tips

- Once you enable HTML solutions, you cannot disable it.
- If you open a text solution with the HTML editor and save it, the solution becomes an HTML solution.
- HTML solutions are presented as such to Self-Service portal, public solutions, Customer Portal, and Salesforce users.
- Any HTML tags entered into the HTML editor will display to users as text when the solution is saved.
- When the HTML solution detail is displayed in list views and search results, only the first 255 characters are displayed. This number includes HTML tags and images that are removed.
- Each HTML solution can contain up to 32000 characters, including HTML tags.
- HTML formatting is preserved in the printable view of a solution.
- Hyperlinks in HTML solutions open in a new browser window when users click on them.
- All images that you want to include in your HTML solutions must be uploaded to the Documents tab. Images in HTML solution details don’t show up in list views and reports.
- HTML solutions can be created in any of the languages supported by Salesforce.

Best Practices

The following HTML tags are allowed in HTML solutions imported into Salesforce:

<table>
<thead>
<tr>
<th>Tag</th>
<th>Tag</th>
<th>Tag</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;a&gt;</code></td>
<td><code>&lt;dt&gt;</code></td>
<td><code>&lt;q&gt;</code></td>
</tr>
<tr>
<td><code>&lt;abbr&gt;</code></td>
<td><code>&lt;em&gt;</code></td>
<td><code>&lt;samp&gt;</code></td>
</tr>
<tr>
<td><code>&lt;acronym&gt;</code></td>
<td><code>&lt;font&gt;</code></td>
<td><code>&lt;small&gt;</code></td>
</tr>
</tbody>
</table>
Within the above tags, you can include the following attributes:

<table>
<thead>
<tr>
<th>alt</th>
<th>face</th>
<th>size</th>
</tr>
</thead>
<tbody>
<tr>
<td>background</td>
<td>height</td>
<td>src</td>
</tr>
<tr>
<td>border</td>
<td>href</td>
<td>style</td>
</tr>
<tr>
<td>class</td>
<td>name</td>
<td>target</td>
</tr>
<tr>
<td>colspan</td>
<td>rowspan</td>
<td>width</td>
</tr>
</tbody>
</table>

The above attributes that can include a URL are limited to URLs that begin with the following:

- http:
- https:
- file:
- ftp:
- mailto:
- #
Multilingual Solutions Overview

The multilingual solutions feature helps you translate solutions and solution categories into the languages supported by Salesforce so that customers and support reps can find answers to inquiries in the language with which they are most comfortable.

Multilingual solutions can lower support costs by:

- Improving customer satisfaction by answering inquiries in the languages preferred by customers
- Deflecting unnecessary incoming calls by providing solutions in languages that are the most useful for customers
- Managing inquiries in multiple languages from one location, anytime and anywhere

Review the following key terms for multilingual solutions:

**Master Solution**
A solution created in any language supported by Salesforce. A master solution can have zero or more translations associated with it; it cannot be linked to another master solution.

**Translated Solution**
A solution translated into another language supported by Salesforce and associated with exactly one master solution. A translated solution cannot have the same language as its master solution or any other translated solutions associated with that master solution. A translated solution cannot have other translated solutions associated with it. Translated solutions are represented by the 🌐 icon on solution detail pages, solution edit pages, solution list views, and solution search results.

You can work with multilingual solutions from the following:

**Solutions Tab**
When creating a new solution, users can choose a language in which to write the solution from the Language picklist field. Once the solution is saved, it becomes a master solution. Users can then create a translated solution by clicking New on the Translated Solutions related list of the master solution detail page. When a master solution is modified, users can adjust the statuses of its translated solutions to indicate that they may need translating.

**Cases Tab**
When users search for relevant solutions on a case by entering keywords in the Solutions related list and clicking Find Solution, search results include solutions in all languages that have matching keywords. Alternatively, if suggested solutions is enabled for cases, users can click View Suggested Solutions to find relevant solutions in multiple languages if they share common words with the case.

**Self-Service Portal**
If multilingual solution search is enabled for your Self-Service portal, customers automatically view solution search results in their preferred language as specified in their Self-Service user information settings. Customers can also choose to view solution search results in a specific language or all supported languages via a language drop-down list. By default, the Login Page of your Self-Service portal displays in your organization's language.
Public Solutions
If multilingual solution search is enabled for your public solutions, customers can choose to view solution search results in a specific language or all supported languages via a language drop-down list. By default, public solutions display in your organization’s language.

Solution Categories
Users with the “Manage Translation” permission can use the translation workbench to translate solution categories so that they display in the language of each user on the Solutions tab and in the preferred language of each customer on the Self-Service portal as specified in the customer’s user settings. Solution categories are not translated for public solutions.

Reports
You can track translated solutions marked Out of Date by choosing the Translated Solutions report. Running this report also lists the title and details of translated solutions. You can also create a custom report for multilingual solutions using the Master and Translated Solutions report type.

List Views
You can see which translated solutions are marked Out of Date and may need translating by creating a custom list view on the Solutions tab and entering the following search criteria: “Out of Date equals True”.

Import
The Data Import Wizard includes options to import master and translated solutions and associate them with each other.

To learn more about enabling multilingual solutions, see Enable Multilingual Solutions on page 2719.

  Categorizing Solutions
  Creating Solutions

Suggested Solutions Overview
The suggested solutions feature displays up to ten relevant solutions that may help users and customers solve a particular case from the case detail page, Salesforce Customer Portal, or the Self-Service portal.

Suggested solutions can lower support costs by:
• Reducing the time it takes for customer support reps to solve cases
• Improving customer support reps’ productivity by offering them proactive access to all solutions for any case
• Enabling customers to solve and close their own cases

The solutions displayed are not simply found via a keyword search. Rather, the following variables are entered into a formula that automatically scores the relevancy of each solution to the particular case:
• Word frequency in all solutions
• Word frequency in similar cases with related solutions
• Proximity of the keywords within the solutions
• Word similarities to self-closed cases and solutions rated useful by Self-Service users
• The number of additional cases associated with a solution

You can enable suggested solutions for the following:
Cases tab

Users can click View Suggested Solutions from the case detail page to view a list of solutions relevant to their case. If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently.

Customer Portal and Self-Service portal

Customers can view solutions relevant to their case when they submit a case or view cases online.

Customers can self-close their cases using suggested solutions.

When customers log new cases or click the View Suggested Solutions button on an existing case in the Customer Portal or Self-Service portal, a list of suggested solutions is displayed, including solutions in multiple languages for organizations with multilingual solutions enabled. When customers select a solution from the list, they can click Yes after Does this Solution help you answer your question? and then select a reason as to why they closed their case. The case will close with an indication on the Closed by Self-Service User case field. If the customer clicks No, they will be returned to the list of suggested solutions. If no suggested solutions are found, the Suggested Solutions Page is bypassed, and the customer is directed to their case.

Case auto-response rules and emails

Your support team can help customers solve their own cases without the assistance of customer support reps. Simply create email auto-responses for cases submitted via email, Web-to-Case, or the Self-Service portal. Within the auto-response email template, include the suggested solutions merge field, {!Case_Suggested_Solutions}, which provides outbound emails with direct links to the subject and description of each solution that may help customers answer their inquiries.

Note: Sending mass emails using templates with the suggested solutions merge field can take several minutes and isn’t recommended.

The Closed by Self-Service User field, along with a Closed When Created field, can be added to case page layouts. These fields are automatically set by Salesforce and can’t be modified. You can run reports on the Closed by Self-Service User and Closed When Created fields to see how cases have been closed.

• Report on the Closed by Self-Service User field to see how many cases have been closed by users via suggested solutions on the Self-Service portal
• Report on the Closed When Created field to see how many cases have been immediately saved and closed upon creation by support reps.

Note:

• Suggested solutions don’t display Salesforce Knowledge articles.
• Suggested solutions isn’t available for the public solutions because public solutions users don’t have an authenticated login that allows them to create or access cases.

Customize Support Settings
Multilingual Solutions Overview
Customizing Solution Settings

To customize solution settings:

1. From Setup, enter Solution Settings in the Quick Find box, then select Solution Settings.
2. Click Edit.
3. Select Enable Solution Browsing to turn on the ability to browse for and find solutions by category.
   This setting enables solution browsing on the Solutions tab, Customer Portal, and when solving a case.
4. Select Enable Multilingual Solutions to turn on the ability for users to translate solutions into multiple languages.
   You can deselect the Enable Multilingual Solutions checkbox at any time, but deselecting it removes all associations between master and translated solutions and automatically disables the Enable Multilingual Solution Search in Self Service Portal and Enable Multilingual Solution Search for Public Solutions settings. If you select the Enable Multilingual Solutions checkbox again, the associations between master and translated solutions are restored.
5. Select Enable Multilingual Solution Search in Self-Service Portal to add a language drop-down list to the Self-Service portal that automatically restricts search results to solutions that match the Self-Service portal user’s language. From the language drop-down list, Self-Service portal users can choose whether to search for solutions in a specific language or any language supported by Salesforce.
   Deselecting this checkbox removes the language drop-down list from the Self-Service portal, and search results include solutions in all languages, regardless of the Self-Service portal user’s language.
6. Select Enable Multilingual Solution Search for Public Solutions to add a language drop-down list to public solutions so that public solutions users can choose which language to search for solutions. From the language drop-down list, public solutions users can choose whether to search for solutions in a specific language or any language supported by Salesforce.
   Deselecting this checkbox removes the language drop-down list from public solutions, and search results include solutions in all languages.
   Warning: Once you select Enable HTML Solutions, you cannot disable it.
8. Select Solution Summary to display up to 150 characters of the solution details in the solution search results. Deselecting this checkbox removes the solution summary from the results.
9. Select Inline Category Breadcrumbs to display up to 150 characters of the breadcrumb trail of categories to which the solution belongs in the search results. Deselecting this checkbox removes the breadcrumbs from the results.
10. Click Save.
11. To enable solution browsing by customers in public solutions or your Self-Service portal, see Enabling Public Solutions on page 2721 and Enable Self-Service Features and Settings on page 2369.
In addition, you can customize the top-level category accessible by public solutions and Self-Service users. You do not need to modify this setting if you want customers to view all categories and all solutions that are visible in the Self-Service portal or visible in public solutions.

**Note**: Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

SEE ALSO:
- Categorizing Solutions
- Managing Solution Categories
- Enable Multilingual Solutions

**Getting Started with Categories**

Follow these steps to ensure a successful rollout of solutions:

1. Plan which categories your support team needs.
   
   Keep in mind that you can also allow customers to find solutions by category in public solutions and your Self-Service portal. You can specify that customers can view only solutions in a particular category and all of its subcategories.

   **Note**: Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

2. Define your categories; see Defining Solution Categories on page 2718.

3. Categorize your solutions; see Categorizing Solutions on page 2238. Administrators, and users with the "Manage Categories" permission, can categorize solutions prior to enabling solution categories for the entire organization.

4. Create a custom report of type Solution Categories to verify that all solutions are categorized appropriately. To find any uncategorized solutions, use the advanced report filters; choose the Category Name field and the "equals" operator, and leave the third field blank. Administrators, and users with the "Manage Categories" permission, can create solution category reports prior to enabling solution categories for the entire organization.

5. Enable solution category browsing for the Solutions tab; see Customizing Solution Settings on page 2716.

7. Specify the top-level category accessible by customers using public solutions and your Self-Service portal. This is useful if you want to have certain categories available only to internal staff.
   
   Leave this blank if you want customers to view all categories and all solutions that are visible in Self-Service portal or visible in public solutions.

SEE ALSO:
- Managing Solution Categories
Defining Solution Categories

Begin by creating your solution categories. The All Solutions category is automatically created for you as the top of your solution hierarchy. Users cannot add solutions to this category or translate it.

1. From Setup, enter Solution Categories in the Quick Find box, then select Solution Categories.
2. Click Add Category to create a subcategory below a specific category.
3. Enter the category name. Category names cannot include the backslash “\” character.
4. Select a different parent category, if desired. The parent category is the category directly above this category in the hierarchy.
5. Select a sort order for any subcategories you create under this category.
   - Choose Alphabetical Order to sort subcategories alphabetically.
   - Choose Custom Order to sort subcategories in the order you specify; see Adding and Sorting Subcategories on page 2718.
6. Click Save.
7. After creating categories, categorize your solutions. See Categorizing Solutions on page 2238. Administrators, and users with the “Manage Categories” permission, can categorize solutions prior to enabling solution categories for the entire organization.
8. Then, after categorizing solutions, turn on solution category browsing on the Solutions tab. See Customizing Solution Settings on page 2716.
9. To enable solution category browsing for the public knowledge base or your Self-Service portal, see Enabling Public Solutions on page 2721.

Editing and Deleting Categories

From the list of solution categories, you can:

- Click Edit to modify the category name, parent category, or sort order.
- Click Del to delete the category. The solutions associated with the category are not deleted.

  Note: You cannot delete a category in use by a Salesforce Customer Portal. For more information, see Enable Customer Portal Login and Settings on page 2315.

- Click the category name to view the category details.

Adding and Sorting Subcategories

From a category detail page, you can:

- Click New to add a subcategory below the category.
- Enter a custom sort order for the subcategories.
  1. Edit the category to set the Subcategory Sort Order to Custom Order.
  2. Enter numbers in the Order column to specify the order of the subcategories.
  3. Click Reorder.

SEE ALSO:

Categorizing Solutions
Managing Solution Categories

Create solution categories so that users can group similar solutions together. Once your solutions are categorized, users can browse for and find solutions by category from the Solutions tab or when solving a case. Customers can also browse solutions by category in public solutions, the Self-Service portal, and the Customer Portal.

Note: Starting with Spring ’12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Enable Multilingual Solutions

You can turn on multilingual solutions so users have the ability to translate solutions into multiple languages.

Preparing for Multilingual Solutions

Before you enable multilingual solutions:

- Run solution reports to locate any existing solutions that are already translated and will need to be converted to translated solutions after you enable multilingual solutions.

  When multilingual solutions is enabled for the first time, all existing solutions automatically become master solutions. You can create translated solutions from master solutions by associating a master solution without any translated solutions with a master solution of a different language via the Master Solution lookup field.

- Translate any existing solution categories.

  Translated solutions inherit the solution categories of their master solution. We recommend that you translate your solution categories before enabling multilingual solutions and then associate solutions with each other. This will help you associate solutions with the correct categories.

Enabling Multilingual Solutions

To enable multilingual solutions:

1. From Setup, enter Solution Settings in the Quick Find box, then select Solution Settings.
2. Click Edit.
3. Select Enable Multilingual Solutions.

   Optionally, select Enable Multilingual Solution Search in Self-Service Portal and Enable Multilingual Solution Search for Public Knowledge Base to allow customers to view solution search results in a specific language or all supported languages via a language drop-down list.
4. Click **Save**.

5. Customize solution page layouts to include the **Master Solution Title** field, **Master Solution Details** field, **Out-of-Date** field, and the Translated Solutions related list. The Language picklist and **Master Solution lookup** fields are automatically added to solution page layouts when you enable multilingual solutions.

   **Tip:** You can make solution edit pages easier for users to translate multilingual solutions by setting the Detail Information section to two columns and placing the **Master Solution Title** and **Master Solution Details** fields alongside each other. Underneath those fields, place the **Solution Title** and **Solution Details** fields alongside each other so that users can effortlessly compare the master and translated solutions. Note that the **Master Solution Title** and **Master Solution Details** fields display only on the translated solution edit page.

6. Set the field-level security settings of the **Master Solution lookup** field to editable for profiles or permission sets with the “Create” and “Edit” permissions on solutions.

   When the **Master Solution lookup** field is editable, users can associate translated solutions with master solutions.

   Field-level security is available in Professional, Enterprise, Unlimited, Performance, and Developer Editions.

7. Set the field-level security settings of the **Out of Date** checkbox field to visible for all profiles or permission sets with the “Read” permission on solutions.

   Field-level security is available in Professional, Enterprise, Unlimited, Performance, and Developer Editions.

8. As a best practice, add a long text area custom field to solutions called **Translation Comments** and include it on solution page layouts so that users can add any comments regarding the translation of the solution. Users should include a date with their comments so that other users can see when each comment was added.

   **Note:** You can deselect the **Enable Multilingual Solutions** checkbox at any time, but deselecting it removes all associations between master and translated solutions and automatically disables the **Enable Multilingual Solution Search in Self Service Portal** and **Enable Multilingual Solution Search for Public Solutions** settings. If you select the **Enable Multilingual Solutions** checkbox again, the associations between master and translated solutions are restored.

### Rolling Out Multilingual Solutions

After enabling multilingual solutions:

- Associate any existing translated solutions with the appropriate master solutions.

  You can do this manually using the **Master Solution lookup** field, or you can export a report of existing translated solutions and then import those solutions to associate them with a master solution. For each translated solution you import, include the 15 to 18 character **Solution ID** field of its master solution in a master solution column on your import file. To view the **Solution ID** field for master solutions, run the Translated Solution report. If you import solutions by mistake, you can use mass delete to remove them from your organization.

SEE ALSO:

- [Multilingual Solutions Overview](#)
- [Categorizing Solutions](#)
Enabling Public Solutions

Note: Starting with Spring '12, the Self-Service portal isn’t available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Using the Solutions tab, your customer support team can create solutions that people outside of your organization may find helpful. Using HTML code supplied by Salesforce, and with the help of your website administrator, you can add a search box and button to your website that allows your customers to search for solutions. This functionality is known as Public Solutions.

With public solutions, your customers can find answers to frequently asked questions without having to call your customer support center. All solutions with a Status of Reviewed and the Visible in Public Knowledge Base field checked will be available as public solutions, including any solution attachments.

Public solutions are different from the Self-Service portal and Salesforce Customer Portal because users are not required to log in, and they can only search for solutions, not submit cases. For more information about the Self-Service and Customer Portal, see Setting Up Self-Service on page 2368 and Setting Up Your Customer Portal on page 2308.

Note:

- The search box and button are displayed in a frame; your website must support frames in order for the solution search feature to work.
- Suggested solutions don’t display Salesforce Knowledge articles.

To enable Web access to solutions:

1. From Setup, enter Public Solutions in the Quick Find box, then select Public Solutions.
2. Click Edit.
3. Check Public Solutions Enabled.
4. If your organization uses solution categories, check Enable Solution Browsing to allow customers to browse solutions by category. Solution categories cannot be translated into other languages for public solutions.
   If multilingual solutions is enabled for your organization, you can add a language drop-down list to public solutions so that customers can choose which language to search for solutions. For more information, see Customizing Solution Settings on page 2716.
5. If solution category browsing is enabled, select the Top-Level Category accessible by customers in public solutions. Customers can view all solutions in this category and its subcategories if they are marked Visible in Public Knowledge Base. Leave Top-Level Category blank if you want customers to view all solutions in all categories when they are visible as public solutions.
6. If desired, you can change the appearance of the frame on your website by specifying the Maximum Page Width and Minimum Page Height.
7. Provide the URL of your CSS page in Style Sheet URL. The CSS file does not have to exist yet; you can download a sample file as a starting point later, or use your own file.
8. You can change the word or phrase that is used to describe solutions in the frame in Alternative Term. Provide singular and plural versions of the term.
9. Click Save.
10. If desired, click Download Sample CSS File to get the Salesforce style sheet.
11. Click Generate HTML.
12. Copy the resulting HTML code and click Finished.

13. Send the HTML (and the CSS file, if you downloaded it) to your website administrator to be added to your site as follows:
   - Add the HTML to your Web page.
   - Customize the downloaded style sheet.
   - Host the style sheet in a publicly accessible location on your Web server.

Organizing Articles, Answers, and Ideas into Categories

Data Categories in Salesforce.com

Data categories are used in Salesforce Knowledge (articles and article translations), Ideas, Answers, and Chatter Answers to help classify and find articles, questions, or ideas. You can use data categories to control access to a particular set of articles, questions, or ideas. Salesforce Knowledge supports a five-level hierarchy of data categories within each category group. You can classify articles in the knowledge base according to multiple categories that make it easy for users to find the articles they need. For example, to classify articles by sales regions and business units, create two category groups, Sales Regions and Business Units. The Sales Regions category group could consist of a geographical hierarchy, such as All Sales Regions as the top level, North America, Europe, and Asia at the second level.

In an answers zone, data categories help organize questions for easy browsing. Each answers zone supports one category group. For example, if you’re a computer manufacturer you might create a Products category group that has four sibling categories: Performance Laptops, Portable Laptops, Gaming Desktops, and Enterprise Desktops. On the Answers tab, zone members can assign one of the four categories to each question and then browse these categories for answers to specific questions.

Example:

Logical Classification of Articles
   As a knowledge base administrator, you can organize your knowledge base articles into a logical hierarchy and tag articles with the attributes that are significant to your business.

Easy Access to Questions
   As an answers administrator, you can choose which data categories are visible on the Answers tab. Zone members can tag a question with a category, which makes finding questions and answers easier for other members.

Control of Article and Question Visibility
   As a knowledge base or answers community administrator, you can centrally control the visibility articles or questions by mapping roles, permission sets, or profiles to categories in the category groups. When an article or question is categorized, users with visibility can automatically see it.

Article Filtering
   As a support agent, when articles are classified into logical categories, you can quickly and easily locate the article you need by filtering your organization’s knowledge base. To ensure you see all relevant articles, filtering by category has expansive results that include a category’s upward and downward relatives in the category hierarchy. For example, if your category hierarchy for products has the levels All Products > Computers > Laptops...
Gaming Laptops and you are helping a customer with a laptop problem, filtering by Laptops returns articles classified with Laptops as well as articles classified with Computers, All Products, or Gaming Laptops. Effectively, you are made aware of useful related articles like a free shipping offer for all products or an upgrade offer for gaming laptops. (To prevent irrelevant results, category filtering doesn't return nonlineal relatives like siblings and cousins. Articles about Desktops, a sibling of Laptops, would not display.)

**Article and Question Navigation**

As an end user, you can navigate the categories on the Articles tab or Answers tab to find the information you need to solve your problem.

**Managing Category Groups for Articles and Questions**

If your organization has Salesforce Knowledge and an answers community, you can create separate category groups or use the same category group for articles and questions.

**Data Categories in Articles**

A category group is the container for a set of categories. In Salesforce Knowledge it corresponds to the name of the category drop-down menus. For example, if you use the Data Categories page in Setup, enter *Data Category* in the Quick Find box, then select *Data Category Setup* to create and activate a category group called Products, a Products menu displays on the Article Management tab, the article edit page, the Articles tab in all channels, and the public knowledge base.

As an illustration, the figure below shows a knowledge base administrator’s view of an article about laptop deals; using the article edit page, the administrator has classified the article with Laptops in the Products category group, and USA in the Geography category group.

**An Article About Laptop Deals on the Article Management Tab**

The next figure now illustrates an agent finding that same article published on the Articles tab; the agent has selected Laptops and USA respectively in the Products and Geography drop-down menus to retrieve an article that is classified with both Laptops and USA.

**An Article About Laptop Deals on the Articles Tab**

When you add categories to a category group, you build a hierarchy that can contain up to five levels of depth and up to 100 categories total. Each category can have one parent, many siblings, and many children. A robust and well-organized category hierarchy helps users find the articles that are relevant to them quickly and easily.
By default, all Salesforce Knowledge users have access to all categories; however, you can restrict category visibility by role, permission set, or profile.

**Data Categories in Answers Zones**

An answers zone supports one category group, and members can assign one category to each question. Even though you can create up to five hierarchy levels of categories in a category group, only the first level of categories is supported in your answers community. Child categories below the first level are not displayed in the community, and community members can't assign these child categories to questions. The categories within the group display on the Answers tab below the zone name.

**Answers tab displaying categories**

By default, all zone members have access to all categories; however, you can specify category visibility.

**Data Category Implementation Tips**

Consider the following information when planning and implementing data categories for your organization:

- You can create up to three category groups with a maximum of five hierarchy levels in each group. Each category group can contain a total of 100 categories.
- If you want to use data categories with Answers, after creating your category group you must assign it from Setup by entering *Data Category Assignments* in the Quick Find box, then selecting *Data Category Assignments* under Answers. You can only assign one category group to an answers community. Salesforce Knowledge supports multiple category groups.
- Even though you can create up to five hierarchy levels of categories in a category group, only the first level of categories is supported in your answers community. Child categories below the first level are not displayed in the community, and community members can't assign these child categories to questions. Salesforce Knowledge supports a hierarchy of data categories.
- Category groups are hidden from users until they are activated. Do not activate a category group until you have finished defining its categories and their access settings, including their visibility.
- When assigning categories to articles, you can choose up to eight categories in a category group.
- If an article has no categories, it displays only when you choose the *No Filter* option in the category drop-down menu.
When searching for articles or article translations, selecting a category automatically includes the parent and children of that category and any grandparents, up to and including the top level. Sibling categories are not included. For example, if a category hierarchy has the levels All Products, Switches, Optical Networks, and Metro Core, selecting “Optical Networks” from the category drop-down menu returns articles assigned to any of the four categories. However, if the Switches category has a sibling category called Routers, selecting “Optical Networks” does not return articles classified within Routers. Category visibility settings may limit the specific articles you can find.

Once visibility settings have been chosen for the categories:

- Users who are not assigned visibility can only see uncategorized articles and questions unless default category visibility has been set up.
- For role-based visibility, Customer Portal users and partner portal users inherit the category group visibility settings assigned to their account managers by default. You can change the category group visibility settings for each portal role.
- If you only have access to one category in a category group, the category drop-down menu for that category group does not display on the Articles tab.

Deleting a category:

- Permanently removes it. It cannot be restored. It never appears in the Recycle Bin.
- Permanently deletes its child categories.
- As applicable, removes the category and its children from the Answers, Article Management, and Knowledge tabs in all channels, and your company’s public knowledge base.
- Removes associations between the category and articles or questions. You can reassign articles and questions to another category.
- Removes its mapping to visibility. Readers lose their visibility to articles and answers associated with the deleted category.

Deleting a category group:

- Moves it to the Deleted Category Groups section, which is a recycle bin. You can view items in this section but not edit them. It holds category groups for 15 days before they are permanently erased and cannot be recovered. During the 15-day holding period, you can either restore a category group, or permanently erase it immediately.
- Deletes all categories within that group.
- Removes all associations between the group’s categories and articles or questions.
- Removes all associations between the group’s categories and visibility.
- As applicable, removes the category drop-down menu from the Articles tab in all channels, the Article Management tab, and your company’s public knowledge base.

You can translate the labels of categories and category groups using the Translation Workbench.

Best Practices for Data Categories

Consider the following tips when using data categories:

- To quickly manage data categories, use keyboard shortcuts.
- After creating or updating categories, set up category group visibility rules.
- Save your changes frequently. The more actions you perform before clicking Save, the longer it takes to save.
# Data Category Shortcuts

Use keyboard shortcuts to work quickly with data categories.

---

**Editions**

Available in: Salesforce Classic

Data categories and answers are available in **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions.

Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Enterprise** and **Unlimited** Editions.
Create and Modify Category Groups

Category groups are used by Salesforce Knowledge (articles), answers (questions), or ideas. In all cases, category groups are containers for individual data categories. For example, a Contracts category group might contain Fixed Price, Cost Reimbursement, and Indefinite Delivery categories.

1. From Setup, enter Data Category in the Quick Find box, then select Data Category Setup.

2. To create a category group, click New in the Category Groups section. By default, you can create a maximum of five category groups and three active category groups. To edit an existing category group, hover your cursor over the category group name and then click the Edit Category Group icon ( ).

3. Specify the Group Name. This name appears as the title of the category drop-down menu on the Article Management and Articles tabs, and, if applicable, in the public knowledge base. The Group Name does not appear on the Answers tab.

4. Optionally, modify the Group Unique Name (the unique name used to identify the category group in the SOAP API).

5. Optionally, enter a description of the category group.

6. Click Save. You receive an email after the save process completes.

Activating Category Groups

When you add a category group, it’s deactivated by default and only displays on the administrative setup pages for Data Categories, Roles, Permission Sets, and Profiles. Keep your category groups deactivated to set up your category hierarchy and assign visibility. Until you manually activate a category group, it does not display in Salesforce Knowledge or your answers community. In addition to activating the category group, for answers communities you must assign the category group to a zone before the categories are visible on the Answers tab.

To activate a category group so it is available to users, move the mouse pointer over the name of the category group and click the Activate Category Group icon ( ).

You can now add categories to your category group. When you create a category group, Salesforce automatically creates a top-level category in the group named All. Optionally, double-click All to rename it.
Delete and Undelete Category Groups

Deleting a category group deletes all of its categories and removes all associations between the categories and articles or questions. Read this entire topic carefully to understand the consequences of deleting category groups.

1. From Setup, enter Data Category in the Quick Find box, then select Data Category Setup.
2. Hover your cursor over the category group name.
3. Click the Delete Category Group icon (X).
4. Select the checkbox in the confirmation dialog, then click OK.
   The data category group is deleted. Continue to step 5 if you wish to restore the data category group.
5. In the Removed Category Groups section, hover your cursor over the category group name.
6. Click the Undelete Category Group icon (X).
   The category group moves to the Category Groups section as an inactive category group, and associations with articles, questions, and visibility are restored.

Example: Deleting a category group:

- Moves it to the Deleted Category Groups section, which is a recycle bin. You can view items in this section but not edit them. It holds category groups for 15 days before they are permanently erased and cannot be recovered. During the 15–day holding period, you can either restore a category group, or permanently erase it immediately.
- Deletes all categories within that group.
- Removes all associations between the group’s categories and articles or questions.
- Removes all associations between the group’s categories and visibility.
- As applicable, removes the category drop-down menu from the Articles tab in all channels, the Article Management tab, and your company’s public knowledge base.

EDITIONS

Available in: Salesforce Classic

Data categories and answers are available in Enterprise, Performance, Unlimited, and Developer Editions.

Salesforce Knowledge is available in Performance and Developer Editions and in Unlimited Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: Enterprise and Unlimited Editions.

USER PERMISSIONS

To view the Data Categories page:
- “View Data Categories”

To create, edit, or delete data categories:
- “Manage Data Categories”
Add Data Categories to Category Groups

Once you have category groups, you can add data categories to help agents classify and find articles, questions, or ideas.

Administrators can create data categories for Salesforce Knowledge articles, questions in a zone, or ideas to classify and find articles, questions, or ideas. You can also use data categories to control access to articles, questions, and ideas.

By default, you can create up to 100 categories in a data category group and have up to 5 levels in a data category group hierarchy. To request more categories or hierarchy levels, contact Salesforce.

Note: On the Answers tab, only first-level data categories display. Therefore, when creating data categories for a portal or community, ensure that the categories you want visible have a sibling relationship and not a parent-child relationship.

1. From Setup, enter Data Category in the Quick Find box, then select Data Category Setup.
2. Click the category group name.
3. Click a category that is directly above where you want to add a category (a parent), or at the same level (a sibling).
4. Click Actions, then select an action: Add Child Category or Add Sibling Category.
5. Enter a category name.

If possible, Salesforce automatically reuses the name you entered as the Category Unique Name, a system field which the SOAP API requires.

7. Click Save.

Save your changes frequently. The more actions you perform before clicking Save, the longer it takes to save.

Tip: By default, all Salesforce Knowledge users and zone members can see all categories within an active category group. You can restrict category visibility after you have set up your data categories to ensure that users only access articles and questions that you want them to see.
Modify and Arrange Data Categories

Modifying and arranging categories can result in long processing times, changes to the visibility and categorization of articles, and other significant consequences. Read this entire topic carefully before modifying categories.

**Important:** Modify the category hierarchy when user activity is low. Because the save process involves potentially large and complex recalculations, it might take a long time to complete. During processing, agents might experience performance issues when searching for articles or questions or using category drop-down lists.

1. From Setup, enter Data Category in the Quick Find box, then select Data Category Setup.
2. Click a category group name.
3. Optionally, click Expand All to display the full category hierarchy, or Collapse All to display only the top-level categories.
4. To edit a category’s name or its unique API name, double-click it.
5. Use drag-and-drop editing to reposition a category in the hierarchy. As you drag, a red icon indicates an invalid destination, while a green icon indicates a valid destination.
   - Drag a category on top of another category to reposition it as a child of the destination category. For example, drag USA on top of North America to make USA one level below North America. After dragging, the category displays below the other child categories at that level.
   - Drag a category to a line that borders another category to reposition it as a sibling of that category. For example, to position USA between Canada and Mexico, drag it to the line between Canada and Mexico.
6. To reorder a category's children in alphabetical order, hover your cursor over its name, then choose Order Child Categories Alphabetically from the Actions drop-down list. This reorder only affects the first-level children, not grandchildren or deeper levels.
7. As you modify the category hierarchy, click Undo to cancel your last actions. Similarly, click Redo to step forward through your flow of performed actions.
8. Click Save. You receive an email when the save process completes.

   The save process recalculates the following:
   - The contents of the category drop-down menu.
   - The articles and questions visible to each user.
   - The articles and questions associated with categories.

**Note:** Save your changes frequently. The more actions you perform before clicking Save, the longer it takes to save.
Example:

**How Changing the Hierarchy Affects Article Visibility**

Changing the category hierarchy potentially changes which articles readers can see. In the example shown in the following graphic, the category PDAs moves from the original parent category Computers to the new parent category Consumer Electronics.

**Note:** When a category moves to a new parent category, users that have no visibility on the new parent category lose their visibility to the repositioned category.

**Move the Category “PDAs”**

![Diagram of category hierarchy]

To understand how this change affects which readers can see articles classified with the PDAs category, see the following table.

<table>
<thead>
<tr>
<th>When my role, permission set, or profile is mapped to:</th>
<th>Could I see PDA articles in their old location under Computers?</th>
<th>Can I see PDA articles in their new location under Consumer Electronics?</th>
<th>Why?</th>
</tr>
</thead>
<tbody>
<tr>
<td>All products</td>
<td>Yes</td>
<td>Yes</td>
<td>When your role, permission set, or profile is mapped to the top-level “All products” category, you can see everything in the category hierarchy.</td>
</tr>
<tr>
<td>Computers</td>
<td>Yes</td>
<td>No</td>
<td>You don’t have access to the branch of the category hierarchy where PDAs is now located.</td>
</tr>
</tbody>
</table>
When my role, permission set, or profile is mapped to:

<table>
<thead>
<tr>
<th>Could I see PDA articles in their old location under Computers?</th>
<th>Can I see PDA articles in their new location under Consumer Electronics?</th>
<th>Why?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consumer Electronics</td>
<td>No</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**How Changing the Hierarchy Affects Article Classification**

Classifying an article with a parent category implicitly grants access to that category’s children. You cannot explicitly apply both a parent category and one of its children to an article. From the article edit page, selecting a parent category grays out its child categories—you cannot select them in addition to the parent category. Salesforce respects this fact when you move a category to a new parent. It prevents explicitly adding a child category to an article when the new parent category is already present.

In the example depicted above, the category PDAs moves from the original parent category Computers to the new parent category Consumer Electronics. As a result, articles’ classifications might or might not change:

- Articles formerly classified with both Consumer Electronics and PDAs lose PDAs, because having Consumer Electronics now implies having PDAs.
- Articles formerly classified with only Consumer Electronics but not PDAs do not change. Access to PDAs is now implied.
- Articles formerly classified with only PDAs, but not Consumer Electronics, retain PDAs.
Delete a Data Category

Deleting data categories can result in long processing times, changes to the visibility and categorization of articles and questions, and other significant consequences. Read this entire topic carefully before deleting categories.

⚠️ Important: Modify the category hierarchy when user activity is low. Because the save process involves potentially large and complex recalculations, it might take a long time to complete. During processing, agents might experience performance issues when searching for articles or questions or using category drop-down lists.

1. From Setup, enter Data Category in the Quick Find box, then select Data Category Setup.
2. Click a category group name.
3. Click a category name. If necessary, click Expand All to display all categories in the category group.
4. Press DELETE, or choose Delete Category from the Actions drop-down list.
5. Click OK in the confirmation dialog box.
6. Choose how you want to reclassify articles associated with the deleted category or the deleted category’s children. In all cases, the articles retain their categories from other category groups.
   - Assign the deleted category’s parent category.
   - Assign a different category. You can select any other category in this category group.
     ✓ Note: The category you select cannot be deleted itself before you save your work.
   - Do not assign the articles a new category in this category group.

Deleting a category:
- Permanently removes it. It cannot be restored. It never appears in the Recycle Bin.
- Permanently deletes its child categories.
- As applicable, removes the category and its children from the Answers, Article Management, and Knowledge tabs in all channels, and your company’s public knowledge base.
- Removes associations between the category and articles or questions. You can reassign articles and questions to another category.
- Removes its mapping to visibility. Readers lose their visibility to articles and answers associated with the deleted category.
Data Category Visibility

Data category visibility can be set with roles, permission sets, or profiles. Data category visibility determines the individual data categories, categorized articles, and categorized questions that you can see.

There are three types of visibility:

- All Categories: All categories are visible
- None: No categories are visible
- Custom: Selected categories are visible

With custom data category visibility, you can only see the data categories permitted by their role, permission sets, or profile.

Visibility Setting Enforcement

To ensure a wide range of relevant information, category group visibility is broadly interpreted. Setting a category as visible makes that category and its entire directly related family line—ancestors, immediate parent, primary children, other descendants—visible to users. For example, consider a Geography category group with continents such as Asia and Europe at the top level, various countries at the second level, and cities at the third level. If France is the only visible category selected, then you can see articles classified with Europe, France, and all French cities. In other words, you can see categories that have a direct vertical relationship to France but you cannot see articles classified at or below Asia and the other continents.

Note: Only the first-level categories in the category group are visible on the Answers tab. In the Geography example, only the continent categories appear on the Answers tab; therefore, if France is the category selected as visible in category group visibility settings, zone members can see questions classified with Europe.

Category group visibility settings are enforced on the Answers tab, the Article Management tab, the Articles tab in all channels (internal app, partner portal, Salesforce.com Community, and Customer Portal), and the public knowledge base. In the following areas, users only see the categories that their visibility settings allow:

- On the Article Management tab, when creating or editing articles
- On the Article Management tab and the Articles tab, the category drop-down menu for finding articles
- On the Answers tab, the categories listed below the zone name

Initial Visibility Settings

If role, permission set, or profile data category visibility has not been set up, all users can see all data categories. However, if data category visibility is set up, users who are not assigned data category visibility by a role, permission set, or profile, only see uncategorized articles and questions unless you make the associated categories visible by default. Role, permission set, and profile visibility settings restrict default visibility settings. For example, if a data category is visible by default, it is not seen by a user whose role restricts access to that data category.

Note: If data category visibility is defined with roles, permission sets, and profiles, Salesforce uses a logical OR between the definitions to create a visibility rule for each user.

Role-Based Visibility Setting Inheritance

Child roles inherit their parent role’s settings and are kept in sync with changes to the parent role. You can customize and reduce the child role’s visibility, but you cannot increase it to be greater than that of the parent role. By default, Customer Portal users and partner portal users inherit the category group visibility settings assigned to their account managers. You can change the category visibility settings assigned to each user or role.
group visibility settings for each portal role. Because high-volume portal users don’t have roles, you must designate visibility settings by permission set or profile before these users can view categorized articles and questions.

### Categorized Article Visibility

User’s can see an article if they can see at least one category per category group on the article. For example, consider an article that is classified with California and Ohio in the Geography category group and Desktop in the Products category group:

- If you have visibility on Ohio and Desktop (but not California), you can see the article.
- If you don’t have visibility on either California or Ohio but do have visibility on Desktop, you do not see the article.
- If you have visibility on California but not Desktop, you do not see the article.

### Revoked Visibility

Data category visibility can be revoked (set to None) for a particular category group. Users in the target role, permission set, or profile can only see articles and questions that aren’t classified with a category in that category group. For example, if a user’s role has revoked visibility in the Geography category group but visibility to the Products category group, he or she can only see articles that have no categories in Geography and are classified with a category in Products. Because an answers zone can only be assigned to one category group, if the Geography category group was assigned to the zone and a member’s role visibility was revoked for that group, the member could only see uncategorized questions.

#### Example

These examples are based on two sample category groups, Products and Geography:

#### Note

Although category group visibility settings are available with answers communities (questions) and Salesforce Knowledge (articles), the examples below apply to articles only. Answers communities support one category group and one data category per question.

### Products Category Group

- All Products
  - Consumer Electronics
    - Cameras
    - Audio
    - Printers
  - Enterprise Electronics
    - Routers
    - Switches
    - PEX
  - Computers
    - Laptops
    - Desktops
    - PDAs

### Geography Category Group

- All Countries
  - Americas
    - USA
    - Canada
    - Brazil
Role Hierarchy Example

In this example, the Acme Electronics organization manufactures hardware and provides customer support for both consumers and enterprises. The Engineering department is organized by products. The Support department is organized geographically. Europe and the Americas are managed by corporate teams, but Asia is outsourced. Within the corporate and outsourced teams, there are subteams dedicated either to consumer or enterprise support.

The table below shows the categories visible to each role in the Acme Electronics organization, and states whether the visibility settings are inherited from the parent role or custom.

<table>
<thead>
<tr>
<th>Acme Electronics Role Hierarchy</th>
<th>Visible Geographic Categories</th>
<th>Visible Product Categories</th>
</tr>
</thead>
<tbody>
<tr>
<td>CEO</td>
<td>All Countries</td>
<td>All Products</td>
</tr>
<tr>
<td>VP of Engineering</td>
<td>All Countries, Inherit from CEO</td>
<td>All Products, Inherit from CEO</td>
</tr>
<tr>
<td>Consumer Engineering Team</td>
<td>All Countries, Inherit from VP of Engineering</td>
<td>Consumer Electronics, Custom</td>
</tr>
<tr>
<td>Enterprise Engineering Team</td>
<td>All Countries, Inherit from VP of Engineering</td>
<td>Enterprise Electronics, Custom</td>
</tr>
<tr>
<td>Computers Engineering Team</td>
<td>All Countries, Inherit from VP of Engineering</td>
<td>Computers, Custom</td>
</tr>
<tr>
<td>VP of Support</td>
<td>All Countries, Inherit from CEO</td>
<td>All Products, Inherit from CEO</td>
</tr>
<tr>
<td>VP of Corporate Support</td>
<td>Europe, America, Custom</td>
<td>All Products, Inherit from VP of Support</td>
</tr>
<tr>
<td>Director of Corporate Consumer Support</td>
<td>Europe, America, Inherit from VP of Corporate Support</td>
<td>Consumer Electronics, Computers, Custom</td>
</tr>
<tr>
<td>Director of Corporate Enterprise Support</td>
<td>Europe, America, Inherit from VP of Corporate Support</td>
<td>Enterprise Electronics, Computers, Custom</td>
</tr>
</tbody>
</table>
Article Visibility Example

The table below is an in-depth example of how category visibility settings restrict what users see. This example has three sample users whose category settings are noted in parentheses.

**Table 44: Example: How Category Visibility Settings Restrict What Users See**

<table>
<thead>
<tr>
<th>Categories</th>
<th>When User 1's visibility is All countries/Computers, the category is:</th>
<th>When User 2's visibility is America/All products, the category is:</th>
<th>When User 3's visibility is France/None, the category is:</th>
</tr>
</thead>
<tbody>
<tr>
<td>All countries/Laptop</td>
<td>VISIBLE</td>
<td>VISIBLE</td>
<td>NOT VISIBLE</td>
</tr>
<tr>
<td>Canada/Computers</td>
<td>VISIBLE</td>
<td>VISIBLE</td>
<td>NOT VISIBLE</td>
</tr>
<tr>
<td>USA/All products</td>
<td>VISIBLE</td>
<td>VISIBLE</td>
<td>NOT VISIBLE</td>
</tr>
<tr>
<td>Europe/Switches</td>
<td>NOT VISIBLE</td>
<td>NOT VISIBLE</td>
<td>NOT VISIBLE</td>
</tr>
<tr>
<td>Europe/No Categories</td>
<td>VISIBLE</td>
<td>NOT VISIBLE</td>
<td>VISIBLE</td>
</tr>
</tbody>
</table>

User 1: The user must be granted visibility in each category that classifies the article, or each category that classifies the article must be visible by default. In this example, User 1 can see Europe, because Europe is the child of All Countries, but he cannot see Switches, because Switches does not belong to Computers. That's why User 1 cannot see articles classified with Europe/Switches.

User 2: When a category is made visible to a user through custom settings or is made visible by default, its child and parent categories are implicitly included; therefore, User 2 can see articles categorized with All Countries because it is the parent category of America. He can also see Articles classified with USA because it is the child of America.

User 3: If a user has no access to the whole category group, he can only see articles that are not categorized in that group. User 3 cannot see the articles categorized with All countries/Laptop because he has no visibility in the category group that includes Laptop, but he can see articles categorized with Europe/No categories.
How Category Visibility Differs from Other Salesforce Models

These settings are unique to articles and questions and differ from other Salesforce models.

**Exclusive to articles and questions**

Category group visibility settings determine who can access articles and questions. Although they are standard objects, articles and questions do not have organization-wide defaults, sharing rules, or manual record sharing.

**Access**

Category group visibility settings are based on the user’s role, permission set, or profile. Child roles cannot see more categories than their parent role. To change a user’s visibility to categories and therefore categorized articles and questions, you must change the visibility settings for the user’s role, permission set, or profile, or, if custom data category visibility is not assigned, make certain categories visible to all users.

**Broad interpretation of visibility settings**

To ensure a wide range of relevant information, category group visibility is broadly interpreted. Setting a category as visible makes that category and its entire directly related family line—ancestors, immediate parent, primary children, other descendants—visible to users. For example, consider a Geography category group with continents such as Asia and Europe at the top level, various countries at the second level, and cities at the third level. If France is the only visible category selected, then you can see articles classified with Europe, France, and all French cities. In other words, you can see categories that have a direct vertical relationship to France but you cannot see articles classified at or below Asia and the other continents.

**Note:** Only the first-level categories in the category group are visible on the Answers tab. In the Geography example, only the continent categories appear on the Answers tab; therefore, if France is the category selected as visible in category group visibility settings, zone members can see questions classified with Europe.
## Category Group Visibility on Roles

### USER PERMISSIONS

<table>
<thead>
<tr>
<th>Permission</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>To view role details:</td>
<td>“View Setup and Configuration”</td>
</tr>
<tr>
<td>To edit and delete roles:</td>
<td>“Manage Roles”</td>
</tr>
<tr>
<td>To edit and delete permission sets and profiles:</td>
<td>“Manage Profiles and Permission Sets”</td>
</tr>
<tr>
<td>To view users:</td>
<td>“View Setup and Configuration”</td>
</tr>
<tr>
<td>To edit users:</td>
<td>“Manage Internal Users”</td>
</tr>
<tr>
<td>To view categories:</td>
<td>“View Data Categories”</td>
</tr>
<tr>
<td>To manage data categories:</td>
<td>“Manage Data Categories” AND &quot;View Data Categories&quot;</td>
</tr>
</tbody>
</table>

The Category Group Visibility Settings related list summarizes which categories users in the role can see, according to category group.

To view a role’s category visibility setting, from Setup, enter Roles in the Quick Find box, then select Roles, and select a role. To view the category visibility settings for a Customer Portal or partner portal role, from Setup, enter Users in the Quick Find box, then select Users and click the name of the role.

The following table explains the possible values in the Visibility column of the related list:

<table>
<thead>
<tr>
<th>Visibility</th>
<th>Description</th>
</tr>
