LIVE AGENT FOR SUPPORT AGENTS

Welcome to Live Agent for support agents! Live Agent is a comprehensive chat solution that makes it easy for you to support customers.

As a support agent, you assist dozens of customers with their support issues every day. Live Agent is a chat solution that's fully integrated with the rest of Salesforce, making it easy for you to access all the information you need about your customers in a single workspace. In addition, Salesforce leverages the power of the Service Cloud, giving you access to important tools like a knowledge base and pre-defined support messages, that let you assist your customers and close cases more quickly.

Whether you're a seasoned veteran or new to Live Agent, there are several tools at your disposal that make it easy to assist multiple customers at the same time with chat. Let's get started.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

ASSIST CUSTOMERS WITH CHAT

Use Live Agent to quickly help your customers solve issues.

Using Live Agent in the Salesforce console gives you access to several other Service Cloud products that let you assist customers in a comprehensive way.

[Change Your Live Agent Status](#)

Change your Live Agent status to control when you're available to receive new and transferred chats.

[Chat with Customers](#)

Accept incoming chat requests to begin chatting with customers.

[Access Customer Details During a Chat](#)

When you accept a chat request, a details tab for that chat opens automatically. The details tab includes information about the visitor and lets you look up records related to the chat, such as contacts and cases.

[Send Quick Text Messages in Chats](#)

Send pre-written messages to chat customers to send common messages more quickly.

[Transfer Files During a Chat](#)

Give customers the ability to upload and transfer files during a chat so they can easily share more information about their issues.

[Block Unwanted Chat Customers](#)

You can block chats from troublesome customers right from the Salesforce console. For example, if a customer is using abusive language or sending spam messages, you can block that user from starting a new chat.

[End a Chat Session](#)

End a chat session after you've finished chatting with a customer and updating the records related to their chat.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

Change Your Live Agent Status

Change your Live Agent status to control when you're available to receive new and transferred chats.

In Live Agent, you can set your online status to online, away, or offline. When you exit Live Agent, your status automatically changes to offline and any active chat sessions end.

1. Click the Live Agent footer widget to open the chat monitor.
2. Click the drop-down arrow in the upper right corner of the chat monitor to view your status options.
3. Select your status.

[Live Agent Statuses](#)

Live Agent statuses define how you can interact with customers while you're online, away, or offline.

Live Agent Statuses

Live Agent statuses define how you can interact with customers while you're online, away, or offline.

Status	Description
Online	You can receive and accept incoming chats and transfers.
Away	You can continue any chat sessions you've already started, but you can't accept incoming chats or transfers.
Offline	You can't accept incoming chats or transfers, and no chats can be routed to you.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Chat with Customers

Accept incoming chat requests to begin chatting with customers.

When you receive a new chat or transfer request, the pending request appears in your chat monitor. You can see the deployment or website the chat came from, the customer's name (if it's available), and the number of minutes the request has been waiting to be answered.

You can chat with several customers at the same time. Each chat sessions opens in a separate primary tab.

1. In the chat monitor, click **Accept** on the chat request.
The chat log opens in a new primary tab.
2. Type your message to the customer in the message field.
3. Click **Send** or hit ENTER on your keyboard to send your message to the customer.
4. Click **End Chat** when you're done assisting the customer.
If the customer ends the chat first, a notice appears in the chat log.

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

Access Customer Details During a Chat

When you accept a chat request, a details tab for that chat opens automatically. The details tab includes information about the visitor and lets you look up records related to the chat, such as contacts and cases.

- To search for a record, type a name in the relevant box in the Related Entities section of the page, then click . To associate a record you find to the chat, select it from the search results list and click **Save**.
In older organizations, you could access records and visitor details from the Related Entities panel during chats. However, starting with Summer '14, the Related Entities panel in the details tab isn't available for new Live Agent customers. Existing customers will continue to have access to the Related Entities panel.
- Once you associate an existing record to the chat, click the name of the record to open it in a new tab.
- To create a new record, click **New Case**, **New Lead**, **New Contact**, or **New Account**.

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To search for and view a record:

- "Read" on the object
- AND
- "Create" on Live Chat Transcripts

To create a new record:

- "Create" on the object
- AND
- "Create" on Live Chat Transcripts

To edit a record:

- "Edit" on the object
- AND
- "Create" on Live Chat Transcripts

To delete a record:

- "Delete" on the object
- AND
- "Create" on Live Chat Transcripts

Send Quick Text Messages in Chats

Send pre-written messages to chat customers to send common messages more quickly.

Quick Text lets you respond to customers more efficiently by letting you insert predefined messages, such as greetings or common troubleshooting steps, into your chat messages.

Note: If you don't have access to Quick Text, contact your Salesforce admin.

1. While chatting with a customer, type ;; in the message field.
A list of Quick Text messages appears. The messages you've used most recently appear at the top of the list.
2. To see additional Quick Text messages that are available, type a word or phrase.
A list of messages that include those words appears.
3. To see the title and full text of a message, click it once or highlight it using the arrow keys on your keyboard.
The full message appears at the bottom of the Quick Text list.
4. To select a message and add it to your chat, double-click it or highlight it and hit ENTER on your keyboard.
5. To send the message, click **Send** or hit ENTER on your keyboard.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To access Quick Text while chatting with visitors in Live Agent:

- "Read" on Quick Text

Transfer Files During a Chat

Give customers the ability to upload and transfer files during a chat so they can easily share more information about their issues.

For example, if a customer is receiving an error when they try to complete a process, they can upload and transfer a screenshot of the error message to the agent.

Before a customer can upload a file, you must associate the chat with a record, such as a case or a contact. Since the chat transcript isn't created until you end the chat, you can't attach a customer's file directly to the transcript during the chat.

1. Click  to search for or create a record to attach to the chat.
2. Click the file transfer icon ().
 **Note:** A customer can't upload a file until you initiate the file transfer by clicking the file transfer icon. This helps prevent customers from uploading unsolicited or potentially dangerous files into the chat.
3. Select the record you chose in the first step to attach the transferred file to.
The customer receives a prompt to upload their file to the chat window. The file can't exceed 25 MB.
4. When the customer has sent the file through the chat, click the link in the chat log to view the file.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To use the Salesforce console:

- "Live Agent" is enabled and set up
- AND
- Live Agent is set up in a Salesforce console app

Add Attachments to a Chat

Attach Articles to Live Agent Chats

Use the Knowledge One widget to find articles that help solve customer issues during chats.

The Knowledge One widget is only available if your Salesforce org uses Knowledge and your Salesforce admin has included the tool in your Salesforce console app.

1. When chatting with a visitor, click an article from the list in the Knowledge One widget. A tab with the full text of the article opens.
2. To search for a specific article in the list, type a word or phrase in the text box in the widget and click  or press ENTER.
 - Alternatively, click  at the top of the widget to search all articles, including those not in the list. The main widget search gives you the option of limiting your results to specific types of articles.
 - To filter your search results, click **Filters** and choose how you want to restrict your search.
3. When you find the article you want, click , then click **Share**.
The text of the article appears in the chat text box.
4. Click **Send** or press ENTER on your keyboard to send the article to the visitor.

Note: You can send articles to visitors only if your admin has set up a Chat Answer field on articles. If this field isn't set up, you can view articles but can't include them in chats.

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To search for and view an article:

- "Read" on the article type

Attach Records to Chat Transcripts

Search for or create records to attach to a chat transcript as you chat with customers.

Find existing records or create new ones to associate with a transcript as you chat with customers. For example, you can create a new case based on the customer's issue, or search for the customer's existing contact record and attach these records to the transcript for later reference. You can attach standard or custom records to your chat transcripts.

1. While chatting with a customer, click  to attach a record to the transcript.

 **Note:** You can only attach one of each type of record to a chat transcript. For example, you can't attach more than one case to a single transcript.
2. To search for an existing record:
 - a. Click the search icon () in the records window next to the type of record you want to search for.
 - b. Type the name of the record and hit ENTER.
The record opens in a new tab.
 - c. Click the attach icon () again.
 - d. Select the check box next to the record you searched for to link it to the chat transcript.
3. To create a new record:
 - a. Click the create icon () next to the type of record you want to create.
 - b. Complete the information in the new record and save it.
The record will automatically link to the transcript once the record is created.
4. After you complete the chat with the customer, exit the chat.
5. If prompted, click **Save**.
The records you linked are now attached to the transcript. You can access them from the transcript's detail view.

Block Unwanted Chat Customers

You can block chats from troublesome customers right from the Salesforce console. For example, if a customer is using abusive language or sending spam messages, you can block that user from starting a new chat.

Blocking a chat ends the chat and blocks any new chat requests coming from that user's IP (Internet Protocol) address.

If your Salesforce org is receiving many spam chats from a particular region, your administrator can block entire ranges of IP addresses.

1. In the interaction pane, click the  icon.
2. (Optional) Enter a comment explaining why you're blocking this visitor.
3. Click **Block**.

When you click **Block**, you immediately end the chat, and the visitor sees a notification that an agent ended the chat. If multiple agents are engaged in a conference, **Block** immediately ends the conference, and the other agents are also notified.

If you don't see the  icon in your console, contact your Salesforce admin to enable it. Only a Salesforce admin can unblock an IP address.

COLLABORATE AND REQUEST HELP

Transfer Chats to an Agent, Skill, or Button

Live Agent chats can be transferred to another agent, skill, or button so your customers always receive the highest-quality help from the most relevant sources.

Just as you forward an email or pass a case to another agent, you can transfer a Live Agent chat. Transferring is useful when a customer has an issue that another agent can solve, or requires an agent with a particular skill. How the chat gets to the next agent depends on the kind of transfer you use.

There are three types of transfers: Transfer to Agent, Transfer to Skill, and Transfer to Button. To ensure that your customers get help as quickly as possible, certain chat transfer types can exceed agents' configured capacity. You can set agent capacity through the Live Agent Configuration, or the Presence Configuration if your organization uses Omni-Channel.

Type of Transfer	Scenario	Method of Transfer	Can Exceed Configured Agent Capacity?
Transfer to Agent	You want to transfer the chat to Agent Jane, because she's the perfect fit for the case.	A chat request is sent to Agent Jane. If she accepts the request, the chat is transferred to her, and your chat workspace closes.	Yes
Transfer to Skill	You want to forward the chat to an agent who has the skill "billing specialist."	A chat request is sent to all agents assigned to the skill, and the chat is transferred to the first agent to accept it.	Yes
Transfer to Button	You want to transfer a chat from the sales queue to the service queue.	The chat is transferred to an available agent assigned to the selected button or queue.	No

When chats are transferred directly to an agent or skill group, the transferred chats are allowed to exceed the accepting agent's capacity. This means that agents always receive a chat request, even if they're handling the maximum allowed number of chats. If the transfer request is rejected or times out, the original agent can try another recipient or transfer method.

Chats routed from buttons or queues always respect the configured agent capacity. So, agents assigned to that button or queue don't receive the transfer request—or any other chat requests—until they have open capacity. But don't worry: customers still won't get stuck

EDITIONS

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

waiting for another agent. When a chat is sent to the next queue, it's added into the list of incoming chats by its age, so it will appear higher up than brand-new chat requests.

When an agent accepts a transferred chat, the records attached to the chat transcript, like a case or contact, open alongside the chat in the workspace. The accepting agent has the information to start assisting the customer right away, without having to search for related records. These records are also completely up-to-date, as the previous agent is prompted to save any changes when the transfer is initiated.

 **Note:** If the accepting agent doesn't have permissions to view one or more of the attached objects, those items won't open in the transferred workspace.

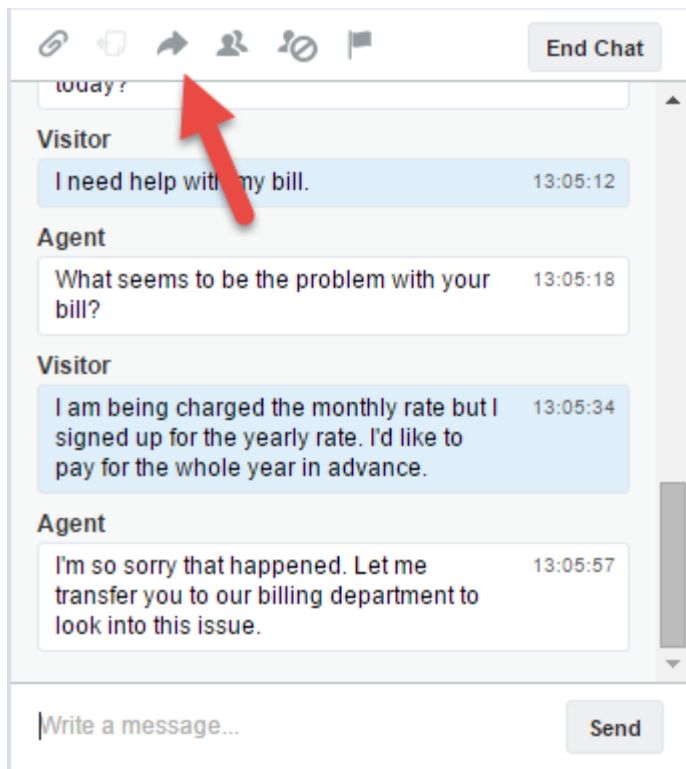

Transfer Chats

You can transfer chat sessions to other agents when a customer needs extra help with an issue, or to make room for new requests.

Transfer Chats

You can transfer chat sessions to other agents when a customer needs extra help with an issue, or to make room for new requests.

1. While chatting with a customer, click **Transfer**.

2. Select a transfer option from one of the menus.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

The screenshot shows a Salesforce chat window with a transfer modal open. The modal has the following fields:

- Skill**: A dropdown menu.
- Transfer to**: A dropdown menu.
- Queue**: A dropdown menu.
- Message (optional)**: A text area with the placeholder text "Summarize the issue to help other agents...".

At the bottom of the modal are two buttons: **Cancel** and **Transfer**.

The chat history in the background shows the following messages:

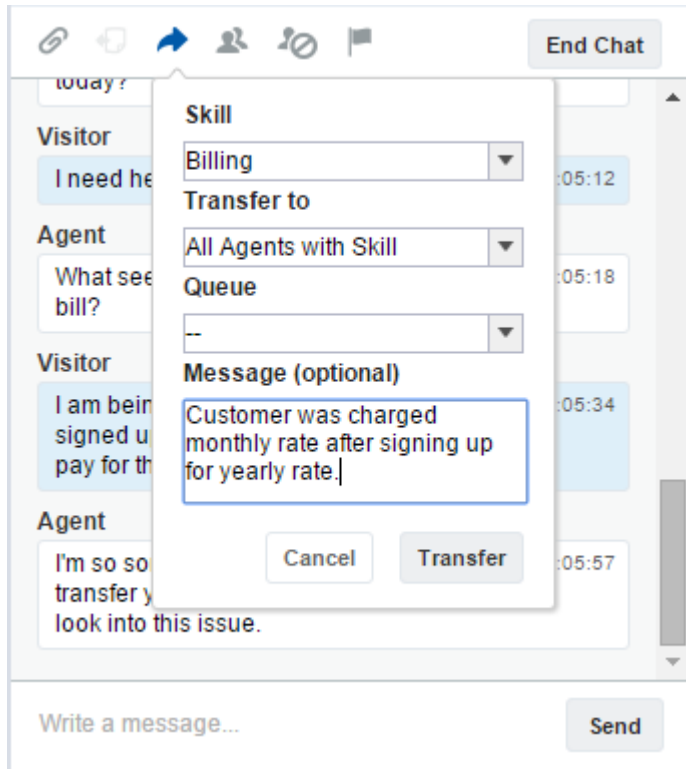

- Visitor**: "I need help..." (05:12)
- Agent**: "What see... bill?" (05:18)
- Visitor**: "I am being signed up... pay for the..." (05:34)
- Agent**: "I'm so sorry... transfer your... look into this issue." (05:57)

At the bottom of the chat window is a text input field labeled "Write a message..." and a **Send** button.

Note: There are options for each type of transfer that's enabled for your Salesforce org. If you don't see the option you need, ask your administrator to add it for you.

3. (Optional) Write a message for the agent receiving the chat. This message is part of the chat request to provide context for the next agent.

4. If the transfer is accepted, your chat and any associated records automatically close (don't worry, you'll be prompted to save your changes if you haven't already). If it's rejected, you can try again with another recipient or transfer method.

Send a Chat Conferencing Request

As wise as support agents are, sometimes a single support agent doesn't have all the information that's required to solve a customer's problem. Chat conferencing lets you invite one or more agents into your customer chats. That way, your agents can turn boring chats into veritable support parties for your customers—all without disrupting the flow of conversation! Send a chat conferencing request to ask another agent to join you in a customer chat.

 **Note:** You can conference in a single agent, or send a request to all agents and the first to accept will join the conference. You can conference multiple agents into a chat, but you need to send each request individually.

1. While you're chatting with a customer, click .
2. Select the skill group of the agents that you want to transfer into the chat.
3. Select whether to send the conference request to all agents with that skill or to a specific agent.
4. Click **Conference** to send the conference request.
If the agent accepts the conference request, you see a notification in the chat log, and that agent can start chatting with you and the customer. If the agent declines the request, you see a notification above the chat log. The customer receives a notification when an agent joins or leaves a conference.
5. If you decide to exit the conference, click **Leave**, and then click **Leave** again.
If the other agent leaves the conference, you'll see a notification in the chat log.

Any saved and attached records will open for other agents who join the conference. But only the originating or longest-attending agent will be able to attach other records. If the longest-attending agent attaches or removes records during the conference, other agents won't see these changes in their workspaces.

For more about transferring chats and workspaces, see [Transfer Chats](#).

USER PERMISSIONS

To create and edit configurations:

- "Customize Application"

To enable chat conferencing:

- "Enable Live Agent Chat Conference"

Request Help with a Chat

When you need help with a chat, you can raise a virtual flag to alert a supervisor. Supervisors are alerted that you need help, and they can respond directly via the console.

1. In the interaction pane, click the  icon.
2. Enter a message briefly explaining what help you need.
3. Click **Raise Flag**.

Either you or a supervisor can lower the flag when your issue is resolved.

If you don't see the  icon in your console, contact your Salesforce admin to enable it.

VIEW CUSTOMER RECORDS

Salesforce automatically creates some records when a chat ends. These records store information about chat customers and their interactions with agents.

These records are mostly used internally to provide an audit trail about your customers and their chats with agents. However, you can access these records yourself if you ever need them.

1. To access customer records in the Salesforce console, select the type of record you want to view from the Salesforce console navigation list.

A list of those records will appear in the main window.

Live Agent Session Records

Every time your agents log in to Live Agent, a Live Agent session record is automatically created. These session records store information about your agents' and customers' interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers.

Live Agent Visitor Records

Every time an agent chats with a customer, Salesforce automatically creates a visitor record that identifies the customer's computer.

Live Agent Transcripts

A Live Agent transcript is a record of a chat between a customer and an agent. Salesforce automatically creates a transcript for each chat session.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To view customer records:

- "Read" on the record type

For agents to use Live Agent:

- "API Enabled" administrative permission

Live Agent Session Records

Every time your agents log in to Live Agent, a Live Agent session record is automatically created. These session records store information about your agents' and customers' interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers.

Use Live Agent sessions to find and edit information about your support agents' chats with customers. For example, you can create a list called "Today's Sessions" to view chat activity that occurred in one day.

You can associate session records with cases, accounts, contacts, and leads or link them with other objects through custom lookup fields.

 **Note:** If you have the correct permissions, you can create, view, edit, or delete session records, just like other record types in Salesforce. However, session records are meant to provide a paper trail for the chats between your agents and customers, so we don't recommend tampering with these records in most cases.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Live Agent Visitor Records

Every time an agent chats with a customer, Salesforce automatically creates a visitor record that identifies the customer's computer.

Each new visitor is associated with a session key, which Salesforce creates automatically. A session key is a unique ID that is stored in the visitor record and on the visitor's PC as a cookie. If a customer participates in multiple chats, Salesforce uses the session key to link the customer to their visitor record, associating that record to all related chat transcripts.

 **Note:** If you have the correct permissions, you can create, view, edit, or delete visitor records, just like other record types in Salesforce. However, visitor records are meant to provide a paper trail that associates your customers with their chat transcripts, so we don't recommend tampering with these records in most cases.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Live Agent Transcripts

A Live Agent transcript is a record of a chat between a customer and an agent. Salesforce automatically creates a transcript for each chat session.

When a chat ends successfully—that is, when the chat is ended by a customer or an agent—the chat transcript is created as soon as the agent closes the chat window and any related tabs.

If a chat is disconnected or experiences another error, Salesforce still creates a chat transcript for it, though it takes up to 30 minutes to create the transcript after the chat is disconnected.

You can associate a transcript with cases, accounts, contacts, and leads, or you can link it to other objects.

Note: If you have the correct permissions, you can create, view, edit, or delete chat transcripts, just like other record types in Salesforce. However, chat transcripts are meant to provide a paper trail for the chats between your agents and customers, so we don't recommend tampering with these records in most cases.

[Live Agent Transcript Fields](#)

Live Agent transcript fields help you track information about your agents' chats with customers.

[Live Agent Transcript Events](#)

Live chat transcript events automatically track events that occur between your agents and customers during chats.

EDITIONS

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Live Agent Transcript Fields

Live Agent transcript fields help you track information about your agents' chats with customers.

A Live Agent transcript has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields might not be visible or editable.

Field	Definition
Abandoned After	The amount of time in seconds an incoming chat request went unanswered by an agent before the chat was disconnected by the customer
Account Name	The name of the account associated with the transcript
Agent Average Response Time	The average time that it took an agent to respond to a chat visitor's message
Agent Maximum Response Time	The maximum time it took an agent to respond to a chat visitor's message
Agent Message Count	The number of messages an agent sent during the chat
Agent Skill	The skill associated with the live chat button used to initiate the chat

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Field	Definition
Body	The transcribed chat between an agent and a visitor
Browser	The type and version of the browser used by the visitor
Browser Language	The visitor's browser language selection
Case	The case associated with the chat
Chat Button	The chat button that the visitor clicked to initiate the chat
Chat Duration	The total duration of the chat in seconds
Contact Name	The name of the contact that participated in the chat Note that contacts and visitors are not the same. See Live Chat Visitor for more information.
Created By	The user who created the transcript, including creation date and time (Read only)
Created Date	The date and time the transcript was created (Read only)
Deployment	The deployment from which the visitor initiated the chat
End Time	The time the chat ended
Ended By	Indicates whether the visitor or the agent ended the chat
Last Modified By	The user who last modified the transcript, including date and time (Read only)
Last Modified Date	The date and time the transcript was last modified (Read only)
Lead	The name of the lead that was generated by the chat or discussed during the chat
Live Chat Transcript	Unique, numerical identifier automatically assigned to the transcript. Administrators can modify the format and numbering for this field. Transcript numbers usually increase sequentially, but sometimes they can skip numbers in a sequence.
Live Chat Visitor	Unique, numerical identifier automatically assigned to the visitor. Administrators can modify the format and numbering for this field. Visitor numbers usually increase sequentially, but sometimes they can skip numbers in a sequence. Note that visitors and contacts are different: a visitor might be a contact, but this is not a requirement, and there is no relationship between contacts and visitors.
Location	The visitor's geographic location. Either the city and state, or city and country (if the visitor is located outside of the United States).

Field	Definition
Network	The visitor's network or Internet Service Provider.
Owner	<p>The name of the transcript owner. By default, the owner is the user who originally created the transcript (for example, the agent who answered the chat).</p> <p>You can select a different user as the owner, or assign the transcript to a queue. When assigning transcripts to other users, make sure those users have the "Read" permission on live chat transcripts.</p>
Platform	The user's operating system
Referring Site	<p>Site the visitor was on before they came to your website.</p> <p>For example, if the visitor used Google to search for your support organization's website, the referring site is Google.</p>
Request Time	The time that the visitor initially requested the chat
Screen Resolution	The screen resolution used by the visitor
Start Time	The time that the agent answered the chat request
Status	Completed or Missed. A missed chat was requested but not answered
Supervisor Transcript Body	Contains the whisper messages from supervisors
User Agent	A string that identifies the type of browser and operating system the visitor used
Visitor Average Response Time	The average time that it took a visitor to respond to an agent comment
Visitor Maximum Response Time	The maximum time it took a customer to respond to an agent's message
Visitor IP Address	The IP address of the computer that the visitor used during the chat
Visitor Message Count	The number of messages a visitor sent during the chat
Wait Time	The total amount of time a chat request was waiting to be accepted by an agent

Live Agent Transcript Events

Live chat transcript events automatically track events that occur between your agents and customers during chats.

You can edit live chat transcripts to track events that occur between your agents and customers during live chats. You can add the following events to a live chat transcript:

Event	Description
Chat Requested	Visitor requested a chat
Queued	Chat request was placed in queue
Routed (Push)	Chat request was routed to agent
Routed (Choice)	Chat request was routed to all available, qualified agents
Accepted	Chat request was accepted by agent
Critical Wait Alert Time Reached	Agent failed to respond to the customer's message before reaching the critical wait alert time
Critical Wait Alert Cleared	Agent responded to the customer's message after the critical wait alert was received
Transfer Requested	Agent requested chat transfer
Transfer Accepted	Chat transfer was accepted by agent
Transfer Request Canceled	Chat transfer request was canceled by the agent who sent the request
Transfer Request Declined	Chat transfer request was declined by the agent who received the request
Transferred to Button	Chat was transferred to a button
Transfer to Button Failed	Chat transfer to button was unsuccessful
Chat Conference Requested	Agent sent a request to start a conference
Chat Conference Canceled	Conference request was canceled
Chat Conference Declined	Conference request was declined by an agent
Agent Joined Conference	An agent joined the conference
Agent Left Conference	An agent left the conference
File Transfer Requested	A file transfer was requested
File Transfer Canceled by Agent	File transfer was canceled by an agent

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Event	Description
File Transfer Canceled by Visitor	File transfer was canceled by the visitor
File Transfer Succeeded	File transfer was successful
File Transfer Failed	File transfer failed
Canceled (Blocked)	An attempted chat was blocked via an IP blocking rule
Blocked by Agent	An agent blocked an active chat (creating an IP blocking rule)
Declined (Manual)	Chat request was declined by agent
Declined (Time-Out)	Chat request timed out while assigned to agent
Canceled (No Agent)	Chat request was canceled because no qualified agents were available
Canceled (No Queue)	Chat request was canceled because there was no room in queue
Canceled by Visitor	Visitor clicked Cancel Chat
Agent Left	Agent left chat
Visitor Left	Visitor left chat
Ended by Agent	Agent clicked End Chat
Ended by Visitor	Visitor clicked End Chat
Other	Another event occurred
