Optionally, you can also receive calls with Voice. Incoming calls show a list of related activities, so you have access to relevant information before you've even answered the call.

If you don't answer within 30 seconds or dismiss the call, the call ends. If you're not on Lightning Experience when someone calls, the person calling hears a message that you're not available. If voicemail is enabled in your org, you can also receive and store up to 20 voicemail messages.

For information about setting up Voice, see "Set Up Voice" in the Salesforce Help.

[Assign a Voice Number](#)

Assign a Voice number from your personal settings so the calls you make and receive don't appear to be coming from an unknown number.

[Assign a Forwarding Number for Voice](#)

Get your Voice calls forwarded to your mobile phone or main business line so you never miss a call. You can easily assign a forwarding number from your personal settings.

[Voice Best Practices](#)

For the best calling experience, use a hardwired connection to your network with adequate bandwidth, use a wired headset, and set up the proper environment on your machine.

Assign a Voice Number

Assign a Voice number from your personal settings so the calls you make and receive don't appear to be coming from an unknown number.

1. From your personal settings, enter *My Voice Settings* in the *Quick Find* box, then select **My Voice Settings**.
2. Click **Find Now**.
If you can't assign yourself a Voice number, you may need to ask your admin to grant you the **View Setup and Configuration** permission if you're using a custom profile.
3. Select your country and enter an area code to display a list of available numbers.
Phone numbers are subject to availability, and numbers from all area codes may not be available.
4. Select a number.
Once you assign yourself a number, you can't choose a new one or view available numbers.
5. Click **Save**.

Available in: **Professional**, **Enterprise**, **Performance**, and **Unlimited** Editions

Voice is available for an additional cost as an add-on license.

USER PERMISSIONS

To add the minutes related to Voice calls:

- Access Voice Minutes

To make outbound Voice calls:

- Access Voice Outbound Calls

To receive inbound Voice calls:

- Access Voice Inbound Calls

Assign a Forwarding Number for Voice

Get your Voice calls forwarded to your mobile phone or main business line so you never miss a call. You can easily assign a forwarding number from your personal settings.

When enabled, you receive calls simultaneously in your browser and on your forwarding number.

1. From your personal settings, enter *My Voice Settings* in the **Quick Find** box, then select **My Voice Settings**.
2. Select **Enable calls to my forwarding number**.
3. Enter your forwarding phone number.
4. Click **Save**.

Voice Best Practices

For the best calling experience, use a hardwired connection to your network with adequate bandwidth, use a wired headset, and set up the proper environment on your machine.

Use a Good Connection

A wireless connection can work, but a hardwired connection is strongly recommended.

Having a dedicated network for your Voice calls is best. We recommend having at least 10 kbps per Voice session available, but having 500 kbps+ per Voice session is optimal. Limiting the number of applications you have running (especially screen-sharing applications) and your open browser tabs also improves performance.

 **Note:** Using a network that masks your location may cause charges to be different from those displayed for your location.

Also make sure you're using the most up-to-date Chrome, Firefox, or Edge browser.

Make Calls with a Quality Headset

A wired USB headset works best. Wireless or mobile phone earbuds will work, but you may experience issues with call quality.

Connect Your Email and Calendar to Salesforce with Automated Activity Capture

After Automated Activity Capture is enabled, Salesforce asks you to connect your Google™ or Microsoft® Office 365® account to Salesforce.

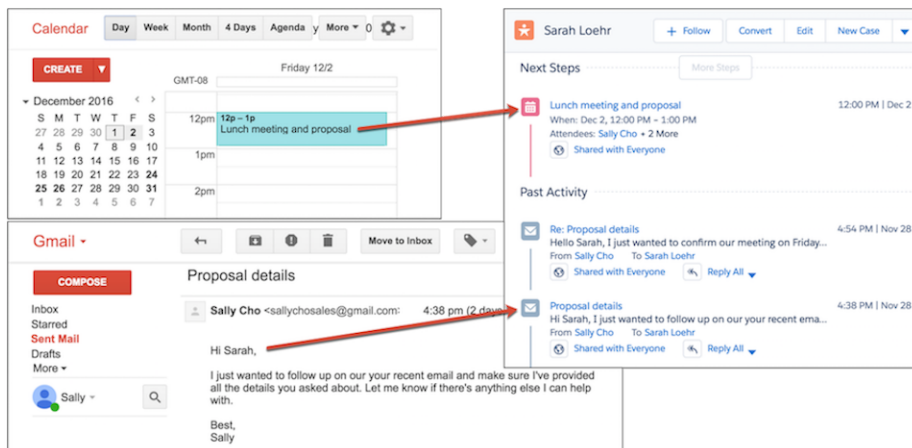

If Salesforce does not ask you to connect your account or you want to connect a new account, follow these steps. You can connect up to five Google™ and Microsoft® Office 365® email and calendar accounts.

1. From your personal settings, enter *Automated Activity Capture* in the **Quick Find** box, then select **Settings** under Automated Activity Capture.
2. Under Connected Accounts, click **New Account**.

3. Follow the steps to connect an account.

After you connect an account, it takes up to 24 hours for Automated Activity Capture to add your emails and events to related Salesforce records. For Gmail accounts, emails and events from the past 6 months are added to Salesforce. For Office 365 accounts, emails and events from the past 2 years are added.

[Let Users Share Activities with Groups](#)

[Control How Activities Are Shared](#)

[Automated Activity Capture](#)

Guidelines for Using Automated Activity Capture

Review how long it takes for emails and events to be added to Salesforce, platform encryption details, and more.

- Emails sent from Salesforce go through your connected email account, so they come from you and not from Salesforce.
- After you connect your account to Salesforce, it takes up to 24 hours for all your activities to be added to Salesforce.
- Only sales reps who have connected their email and calendar with Automated Activity Capture can see emails and events in Salesforce that were added with Automated Activity Capture.
- It takes up to 24 hours for all your emails and events to be added.
- If two (or more) contacts or leads have the same email address, Salesforce adds related emails or events to both records. If one of those records is related to an account or opportunity, only emails and events from the most recently updated record show up on the account or opportunity.
- When you share an individual email or event with a group and then delete that group, the setting for the individual email or event is removed.
- If you connect a Google account, Google events are added to your Salesforce calendar.

EDITIONS

Available in: Lightning Experience

Available for an extra cost with Sales Cloud Einstein and Inbox in: **Enterprise**, **Performance**, and **Unlimited** Editions

- For Google accounts, Salesforce adds emails and events from the last six months. For Office 365 accounts, Salesforce adds emails and events from the last two years. Email attachments aren't added to Salesforce.
- All senders and recipients own an email. All guests own an event. Only the owner of an email or event can control how its full contents are shared in Salesforce. If multiple people own an email or event, the most permissive settings win. For example, you share an email with three groups. Your colleague shares the email with two other groups. Then, the email is shared with all five groups.
- If Platform Encryption is enabled for your org, emails and events added to Salesforce don't show the names of encrypted contacts and leads.
- To disable Automated Activity Capture from Setup, Salesforce administrators can enter *Settings* in the *Quick Find* box, then select **Settings** under Automated Activity Capture.

Automated Activity Capture Limitations

To better understand how Automated Activity Capture works and get the most out of it, review some email, calendar, and reporting limitations.

General Limitations

- Automated Activity Capture is only available to customers with Sales Cloud Einstein or Inbox.
- Alerts in the Assistant don't reflect emails and events that were added to Salesforce with Automated Activity Capture.
- The `Last Activity Date` field on accounts, contacts, leads, opportunities, and person accounts doesn't reflect emails and events that were added to Salesforce with Automated Activity Capture.

Email Limitations

- If multiple contacts or leads have the same email address, Salesforce adds related emails or events to both records. If one of those records is related to an account or opportunity, only emails and events from the most recently updated record show up on the account or opportunity.
- After connecting your email and calendar to Salesforce with Automated Activity Capture, you can't send emails from Salesforce using an organization-wide email address. Emails sent from Salesforce go through your connected email account.

Calendar Limitations

- If you update a Google™ or Microsoft® Office 365® calendar event that started two or more days ago, the update isn't reflected in Salesforce.
- Changes to events in Salesforce are not reflected on Google or Office 365 calendars.
- Salesforce adds Google events to your Salesforce calendar but not Office 365 events.
- Your Salesforce calendar doesn't show Google events starting more than a month before and ending more than a month after the period that you're viewing.

Reporting Limitations

- Activities added to Salesforce with Automated Activity Capture don't show up in standard Salesforce reports. However, Automated Activity Capture includes activity reports that provide a summary of sales activities, including those added with Automated Activity Capture.
- Activity reports only include activities from the previous 90 days, and they don't include any future events.

See Which Leads Are Most Likely to Convert with Predictive Lead Scoring

Use artificial intelligence to score your leads by how well they fit your company's successful conversion patterns. Let your sales team prioritize their leads by lead score. See which fields influence each lead score most.

Einstein Predictive Lead Scoring uses a combination of data science and machine learning to discover the patterns of lead conversion in your business, and to predict which current leads to prioritize. By using machine learning, Predictive Lead Scoring provides a simpler, faster, and more accurate solution than traditional rules-based lead scoring approaches.

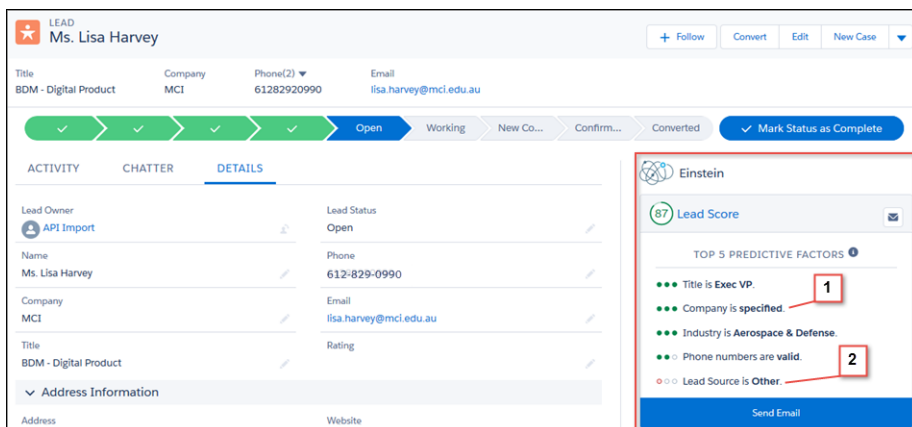

Predictive Lead Scoring analyzes your past leads, including any custom fields, to determine which of your current leads have the most in common with leads that have been successfully converted with opportunities in the past. Predictive Lead Scoring adds a Lead Score field to leads. The Lead Score lets sales reps prioritize their work by ranking leads according to their similarities to prior converted leads. Leads with higher scores have more in common with leads that have converted in the past.

The lead score appears in the Einstein component on lead detail pages. The component also shows sales reps which of the lead's fields had the greatest positive (1) or negative (2) influence on its score. Fields that aren't listed in the Einstein component still influence the score, but less than the fields listed.

EDITIONS

Available in: Lightning Experience

Available for an extra cost with Sales Cloud Einstein in: **Enterprise, Performance, and Unlimited Editions**

When you or your users add the Score field to list views, hovering over a score (1) displays the insights (2) behind the score. When sales reps focus on leads with higher scores, they're likely to convert more of them to opportunities. The lock (3) indicates that the score is read-only.

Predictive Lead Scoring periodically reanalyzes your historical leads and updates the scores for your current leads accordingly.

Predictive Lead Scoring includes a dashboard with reports that show key lead score metrics for your org.

- Average Lead Score by Lead Source
- Conversion Rate by Lead Score
- Lead Score Distribution: Converted and Lost Opportunities

Opportunity Insights

Provide your sales reps relevant updates about their opportunities to help them win more deals. They get predictions about which deals are likely to be won, reminders to follow up, and notifications when key moments in a deal take place.

 **Note:** For now, account- and opportunity-related insights are available in English only.

EDITIONS

Available in: Lightning Experience

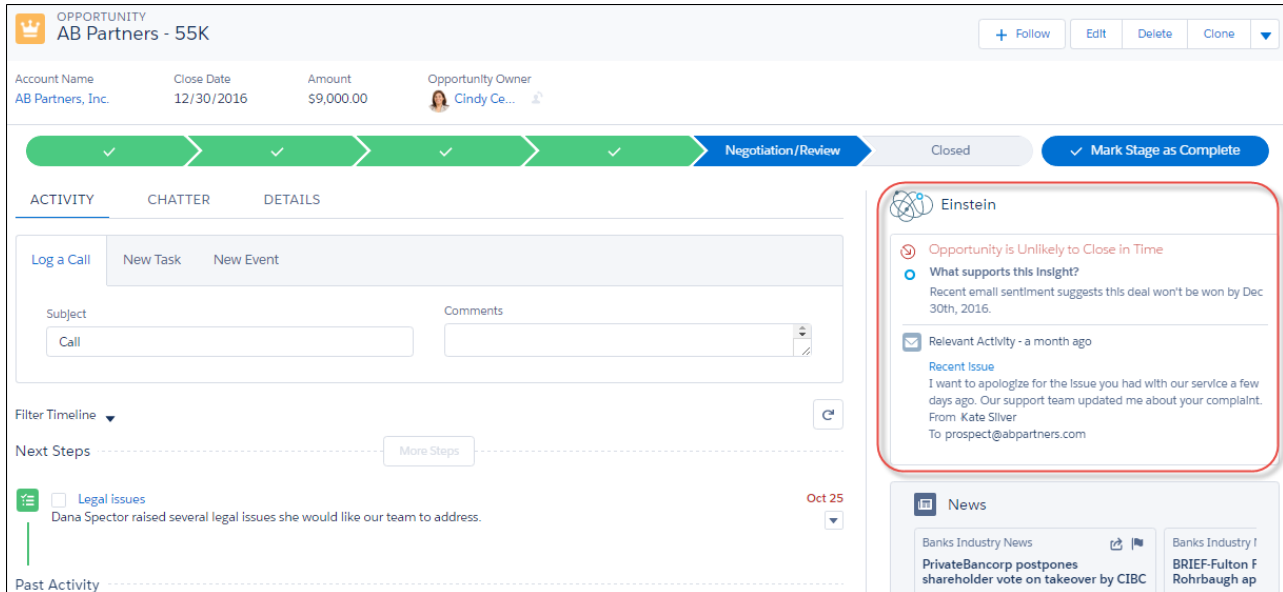

Available for an extra cost with Sales Cloud Einstein in: **Enterprise, Performance,** and **Unlimited** Editions

Opportunity Insights offers notifications about different opportunities precisely when they're needed on the Home page, opportunity records, and in list views.

Sales reps can see all the insights related to their deals on the Home page. The Home page also features relevant actions related to different opportunities, such as the ability to edit an opportunity's close date or email a contact who hasn't responded to a request. Reps can also dismiss insights or leave feedback about the relevance of individual insights.

 **Note:** To see the email action on insights, you must create an email global quick action. For more information, see “Create Global Quick Actions” in the Salesforce Help.

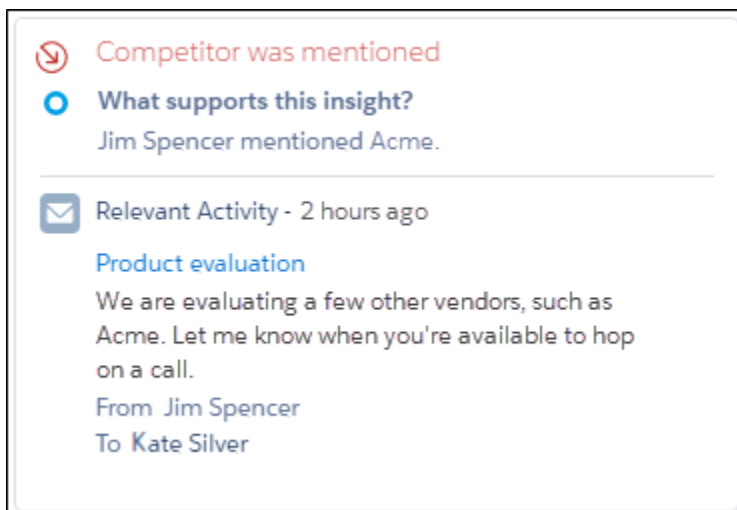

On an opportunity record, reps can see all insights related to an opportunity.

You can also customize list views to show insights.

Opportunity Insights is available with Lightning for Outlook and Lightning for Gmail.

Each insight offers details about why it's shown, tying it to relevant metrics.

Three different types of insights are available.

- Deal Predictions—See predictions based on recent activity and existing opportunity data, such as whether a deal is more or less likely to close, or if a deal seems unlikely to close in time.

- Follow-Up Reminders—Get reminders to follow up when a contact hasn't responded in a while, or if there hasn't been any communication related to an important opportunity for a significant period of time.
- Key Moments—Get notified when key moments related to a deal take place, such as if a contact mentions a competitor or is leaving their company.

Insights are visible to Einstein users with the proper record and activity access, which might include:

- Opportunity owners
- Opportunity team members
- Direct managers of opportunity owners and team members

If the opportunity owners or team members are changed, prior owners and team members can still access related insights. Additionally, all Einstein users that have permission to view an opportunity can see the related insights on the record's detail page.

 **Tip:** Many opportunity-related insights are derived from your reps' activities, such as emails and events. If an insight comes from a private email, then the insight is public, but the email content is not displayed. Privacy settings are determined by the activity owner, so to get the most out of Opportunity Insights, encourage your reps to set their **Sharing Setting for All Emails and Events** to Everyone.

Account Insights

Let artificial intelligence help your sales team maintain their relationships with customers. With Account Insights, your team stays informed about key business developments that affect their customers.

 **Note:** For now, account- and opportunity-related insights are available in English only.

Knowing what's impacting your customers' companies gives your sales team an edge when deciding whether customers are open to sales. Is the company expanding? Changing executive leadership? Acquiring competitors? Account Insights provides news articles from reputable sources that give your sales team the complete picture.

Insights appear in the Einstein component, which is on account records and the Home page.

EDITIONS

Available in: Lightning Experience

Available for an extra cost with Sales Cloud Einstein in: **Enterprise, Performance, and Unlimited** Editions

The screenshot displays the Salesforce Einstein interface for an account record. The main view shows a list of insights under the 'Einstein' header. The first insight is 'Company is expanding', followed by 'M&A activity detected'. A detailed view of the 'Company is expanding' insight is shown in a pop-up window, listing three supporting articles: 'Salesforce will likely end its \$5 billion buying spree this year, but its rivals won't (CRM) Business Insider - 16 days ago', 'Salesforce's Quip acquires startup Unity&Variety zdnet.com - 13 days ago', and 'Salesforce-Owned Quip Acquires Startup to Make Cloud Docs More Exciting talkincloud.com - 10 days ago'. Below the insights is a 'News' section with three article cards. To the right, a 'Past Activity' section shows 'No past activity. Past meetings and tasks marked as done show up here.'

On account records, the account's key fields (including `Account Name` and `Website`) determine what insights are returned. Each record shows up to three insights, and each insight shows up to three of the most relevant articles. All Einstein users with access to the record can see the insights.

On the Home page, Einstein users see insights based on the accounts they own and the accounts that they're an account team member. Each insight shows up to three of the most relevant articles. A user's manager also has access to these insights. Users can email insights to others or share them with other users and groups through Chatter. Users can also dismiss insights or leave feedback about the relevance of individual insights.

If the Einstein component isn't on page layouts, the admin needs to add it.

Account Insights is available with Lightning for Outlook and Lightning for Gmail.

[Set Up Sales Cloud Einstein](#)

[Sales Cloud Einstein](#)

Considerations for Setting Up Sales Cloud Einstein

Before setting up Sales Cloud Einstein, review considerations about your org's default sharing settings and installed packages added to your org.

- Sales Cloud Einstein is only available to users with standard Salesforce licenses.
- When you purchase Sales Cloud Einstein, Salesforce installs two packages in your org, SalesforceIQ Cloud and Sales Insights. Each package adds an associated integration user and profile. Salesforce uses these entities to provide insights to your org. If you update these entities, it can affect your org's ability to get insights.
- If you enable Automated Activity Capture, the Assistant may not work as expected. Alerts in the Assistant don't reflect emails and events that were added to Salesforce with Automated Activity Capture. Also, emails that your users send from the Assistant don't go through their Automated Activity Capture email account.
- To use Predictive Lead Scoring:
 - There must be at least 1,000 leads created over the last six months in your Salesforce organization. Lead scores are not generated until you have enough data to make the scores reliable.
 - Your sales reps must be creating opportunities during lead conversion. Predictive Lead Scoring analyzes converted leads with associated opportunities.
 - Your sales reps must have converted at least 120 leads with opportunities over the last six months.
 - Your sales reps must be converting a total of at least 20 leads to opportunities each month, based on leads created in the last six months.
 - Your sales reps should be filling in their lead records thoroughly. If leads have more data, Predictive Lead Scoring generates better insights.
 - Try to eliminate duplicate leads from your org.
- Don't install APEX classes that reference the ScoreIntelligence field provided by Predictive Lead Scoring until after you have enabled Predictive Lead Scoring and received the email confirming that enablement is complete.

The screenshot shows the 'Create Permission Set' interface. Under the 'Enter permission set information' section, the 'Label' and 'API Name' are both set to 'Einstein'. The 'License' dropdown menu is highlighted with a red box, and 'Sales Cloud Einstein' is selected. Below this, there is a section titled 'Select the type of users who will use this permission set' with instructions and a 'License' dropdown menu also highlighted with a red box.

3. Click **Save**.
4. Click **App Permissions**.
5. Enable app permissions for Einstein features.

The screenshot shows the 'Einstein' permission set configuration page. The 'App Permissions' section is expanded, and the 'Enabled' checkbox for 'Use Account Insights' is highlighted with a red box. The table below shows the following permissions:

Permission Name	Enabled	Description
Use Account Insights	<input checked="" type="checkbox"/>	Stay informed about key business developments that affect your customers.
Use Automated Activity Capture	<input type="checkbox"/>	Connect Google and Microsoft accounts to Salesforce and capture activities from those accounts.
Use Lead Insights	<input type="checkbox"/>	Use lead scores showing how well your leads match your company's conversion patterns and which lead attributes affect each score most.
Use Opportunity Insights	<input type="checkbox"/>	Use predictions about your deals, reminders to follow up, and updates when key moments occur.

Enable Automated Activity Capture for Sales Cloud Einstein

Access Automated Activity Capture Settings from the Sales Cloud Einstein Setup Assistant. From the Settings page, enable and configure Automated Activity Capture. Automated Activity Capture is required for Opportunity Insights and Account Insights.

- From Setup, enter *Sales Cloud Einstein* in the *Quick Find* box, then select **Setup Assistant** under Sales Cloud Einstein.

- If it's your first time visiting the Sales Cloud Einstein Setup Assistant, click **Get Started**. The Sales Cloud Einstein Setup Assistant shows all the steps you need for Sales Cloud Einstein deployment, including how to select Einstein users. Only Einstein users can use Einstein features, including Automated Activity Capture.
- Click **Set Up** next to Automated Activity Capture.
- On the Settings page, click **Enable**.
- Configure additional Automated Activity Capture settings.

After you enable Automated Activity Capture, Salesforce asks assigned Sales Cloud Einstein users to connect their Google™ or Microsoft® Office 365® account to Salesforce. It takes up to 24 hours for their emails and events to be initially added to Salesforce.

EDITIONS

Available in: Lightning Experience

Available for an extra cost with Sales Cloud Einstein and Inbox in: **Enterprise**, **Performance**, and **Unlimited** Editions

USER PERMISSIONS

To enable Automated Activity Capture:

- Customize Application and Modify All Data

Remove the `Last Activity Date` field from page layouts for accounts, contacts, leads, opportunities, and person accounts. This field doesn't reflect emails and events added to Salesforce with Automated Activity Capture.

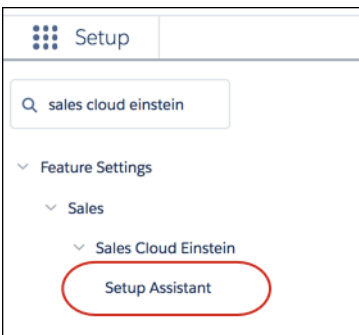

SEE ALSO:

Enable Predictive Lead Scoring

Access Predictive Lead Scoring Settings from the Sales Cloud Einstein Setup Assistant. From the Settings page, enable and configure Predictive Lead Scoring.

1. From Setup, enter *Sales Cloud Einstein* in the `Quick Find` box, then select **Setup Assistant** under Sales Cloud Einstein.

2. If it's your first time visiting the Sales Cloud Einstein Setup Assistant, click **Get Started**. The Sales Cloud Einstein Setup Assistant shows all the steps you need for Sales Cloud Einstein deployment, including how to select Einstein users. Only Einstein users can use Einstein features, including Predictive Lead Scoring.
3. Click **Set Up** next to Predictive Leading Scoring.
4. On the Settings page, click **Enable**.
5. Using the Lightning App Builder, make sure that the Einstein component was added to the Home page and to Lightning pages for leads.
6. After insights are available, add the `SCORE` field to public lead list views. Salesforce automatically adds this field to default list views. Sales Cloud Einstein users see insights on the Einstein component. It takes up to 24 hours for insights to be available.

EDITIONS

Available in: **Lightning Experience**

Available for an extra cost with Sales Cloud Einstein in: **Enterprise, Performance, and Unlimited** Editions

USER PERMISSIONS

To enable Predictive Lead Scoring:

- **Customize Application and Modify All Data**

 **Tip:** To get the most out of Lead Insights, tell sales reps to add the `Score` field to their lead list views.

Get a Quick Overview with Contact Cards

At a glance, you can see all the information about a contact. A contact card is a quick summary of contact information for email participants.

If a contact record doesn't exist in Salesforce, information for the Contact card doesn't generate. Instead, create a contact.

From the Add-in for Outlook

View contact cards on the **Profile** tab.

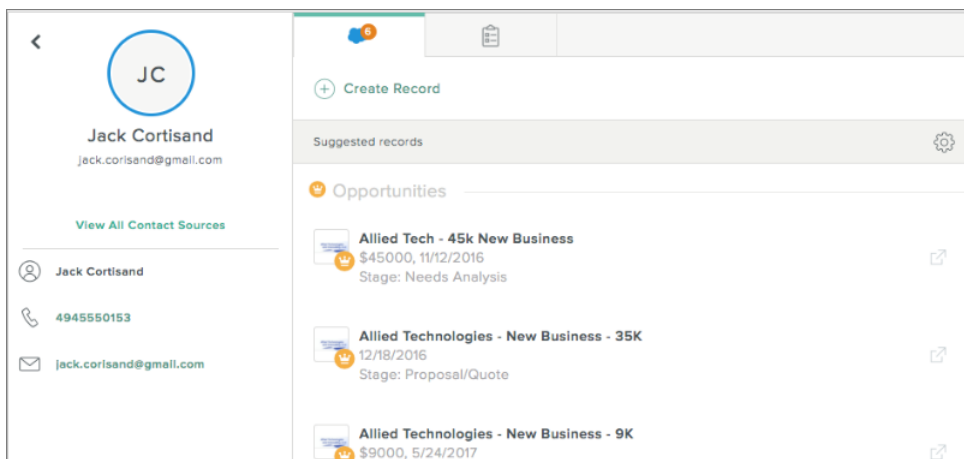

- Select **View All Contact Sources** to expand the view to see all the data sources.
- Open and view a contact's card from your Inbox or Calendar.
 1. Hover over an email address.

This opens the sidebar, which defaults to the **Record** tab.
 2. Click to open the **Profile** tab.

EDITIONS

Available in: Lightning Experience and Salesforce Classic

Available for an extra cost with Inbox in: **Contact Manager, Group, Professional, Enterprise, Performance, and Unlimited** Editions

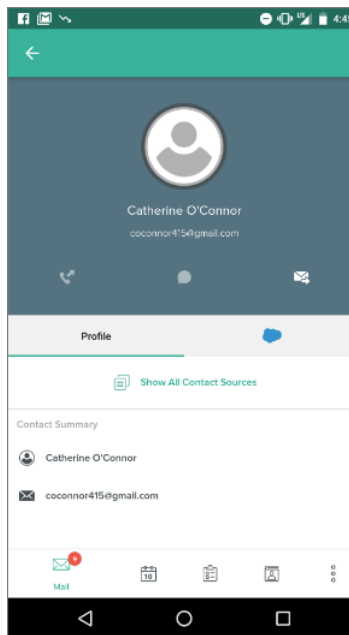

From the Standalone Mobile Email Apps

You can open and view a Contact card from any of the following places:

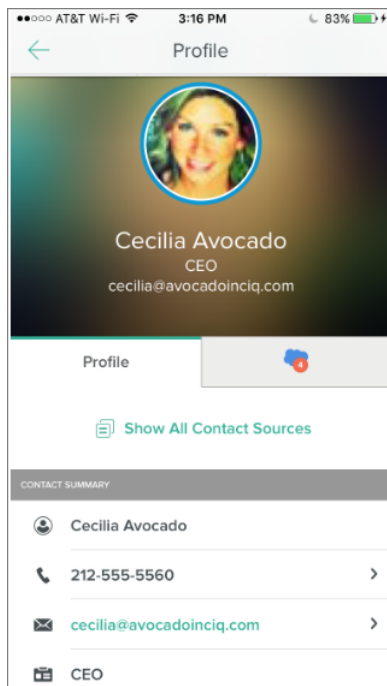

- Inbox—Open an email and click any of the names or addresses in the From, To, or cc lines.
- Calendar—Open an event and click any of the attendees.
- Contact Gallery—On the **Contact** tab, select any attendees that are visible in the agenda view.
Alternatively, search for a specific contact and select the contact.

Select **Show All Contact Sources** to expand the view to see all the data sources.

In Android

In iOS

From the Gmail Extension for Chrome

View contact cards on the **Profile** tab.

You can:

- Select **View All Contact Sources** to expand the view to see all the data sources.
- Open and view a Contacts card from any of the following places:
 - Inbox or Calendar—Hover over an email address. This opens the sidebar, which defaults to the **Record** tab. Click to open the **Profile** tab.
 - Google Contacts—From the list of contacts, hover over an email address. This opens the sidebar, which defaults to the **Record** tab. Click to open the **Profile** tab.

 **Note:** Contact card data comes from various sources.

- Images are obtained from Gravatar. To change the image, update it in Gravatar. SalesforceIQ caches data, so it could take some time before the image is refreshed.
- Structured data is obtained from Salesforce, Google or Exchange contacts, parsed signatures, or third-party data. To turn off third-party data, use the Salesforce Inbox Admin Setup screen in Lightning Experience.

Your prospect can click one of your options to immediately book a slot. If your calendar fills up in the meantime, your prospect only sees the times still available.

SEE ALSO:

[Boost Productivity on Every Email](#)

Prioritize Your Inbox with Intelligent Notifications

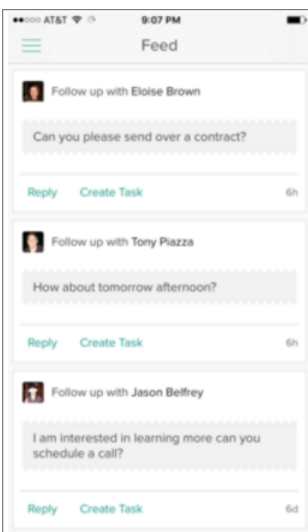

Inbox analyzes your email correspondence to help you stay on top of every deal. Receive an intelligent reminder if you need to follow up on an important email, or get notified when someone opens your email.

Inbox scans your unread messages and proactively suggests Salesforce tasks for engaged customers. Using natural language processing, Inbox identifies messages from customers that require a response but have not been replied to yet.

 **Note:** Inbox only suggests tasks for customer emails that you have not responded to in a couple of days. If you don't see any suggested tasks, you're up to speed on your email.

From the Standalone Mobile Email Apps

1. Open the Feed.
2. Scroll down to find a suggested task. The text snippet in the card shows the body of the email that Salesforce Inbox clued in on.

3. Do one of the following:
 - Click **Reply** to respond to the email immediately.
 - Click **Create Task** to save the suggestion as a Salesforce task.

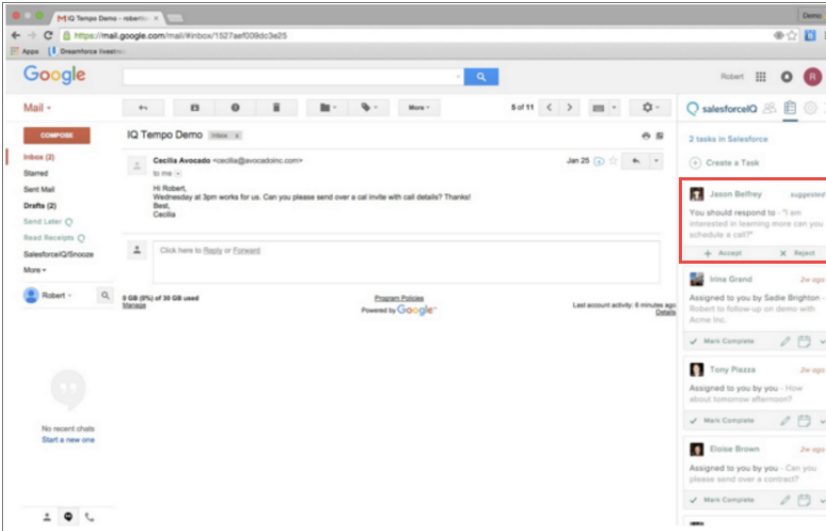

From the Gmail Extension for Chrome

1. Click the **task list** icon in the upper-right corner.
2. Scroll down to find a suggested task. The text snippet in the card shows the body of the email that Salesforce Inbox clued in on.

EDITIONS

Available in: Lightning Experience and Salesforce Classic

Available for an extra cost with Inbox in: **Contact Manager, Group, Professional, Enterprise, Performance,** and **Unlimited** Editions

3. Do one of the following:
 - Click **Accept** to save the suggestion as a Salesforce task.
 - Click **Reject** to dismiss the suggestion.

Take a Shortcut to Typing Faster Emails

Using the Chrome extension, you can use text shortcuts in any email message you compose in Gmail. Shortcuts save time while improving accuracy, because they give you an easy way to insert text you commonly use into a message.

A few default Shortcuts have been created for you, but you can also create your own.

 **Example:** If your email messages frequently include wording that you will follow up with a prospect by phone, you can use a shortcut to quickly enter that wording in any message. A sales rep might frequently end emails with the phrase "I look forward to our phone call." With a shortcut, it's easy to add the phrase every time.

1. In Gmail, click **Compose**.
2. Click the **semicolon** icon to the left of the compose screen.
3. Click **Manage your shortcuts**.
4. On the left side of the screen that appears, click **Create New** if it isn't already highlighted.

Considerations for Setting Up Inbox

Before setting up Inbox, review how it affects the Assistant, triggers, and validation rules.

- When creating Salesforce records with the Inbox clients, the validation rules, triggers, and required fields from Salesforce are applied.
- It can take up to 24 hours for changes in Salesforce to show up in the Inbox clients.
- If you enable Automated Activity Capture, the Assistant may not work as expected. Alerts in the Assistant don't reflect emails and events that were added to Salesforce with Automated Activity Capture. Also, emails that your users send from the Assistant don't go through their Automated Activity Capture email account.

SEE ALSO:

Enable Automated Activity Capture for Inbox

Use the Inbox Setup Assistant as your guide for setting up Automated Activity Capture.

1. From Setup, enter *Inbox* in the **Quick Find** box, then select **Setup Assistant** under Inbox.

2. If it's your first time visiting the Inbox Setup Assistant, click **Get Started**.
The Inbox Setup Assistant shows all the steps you need for Inbox deployment, including how to select Inbox users. Only Inbox users can use Inbox features, including Automated Activity Capture.
3. Click **Set Up** next to Automated Activity Capture.
4. On the Settings page, click **Enable**.
5. Configure additional Automated Activity Capture settings.

After you enable Automated Activity Capture, Salesforce asks assigned Inbox users to connect their Google™ or Microsoft® Office 365® account to Salesforce. It takes up to 24 hours for their emails and events to be initially added to Salesforce.

EDITIONS

Available in: Lightning Experience

Available for an extra cost with Sales Cloud Einstein and Inbox in: **Enterprise**, **Performance**, and **Unlimited** Editions

USER PERMISSIONS

To enable Automated Activity Capture:

- "Customize Application" and "Modify All Data"

Remove the `Last Activity Date` field from page layouts for accounts, contacts, leads, opportunities, and person accounts. This field doesn't reflect emails and events added to Salesforce with Automated Activity Capture.

Administering People and Organizations That Users Sell To

Administering Accounts

Enable Person Accounts

Important: Once person accounts have been enabled, they can't be turned off. Therefore, we recommend existing customers [create a sandbox](#) to preview how person accounts will affect their organization.

Before you begin, make sure to:

- Create at least one record type for accounts.
- Grant read permission on contacts for profiles that have read permission on accounts.
- Ensure that the contact sharing organization-wide default is set to "Controlled by Parent."

Once you complete the preliminary steps, contact Salesforce to enable person accounts and then:

1. From the object management settings for person accounts, go to Record Types.
2. Assign person account record types to profiles that require person accounts.

Note: Person accounts count against both account and contact storage because each person account consists of one account as well as one contact. Additional storage might be necessary when you implement person accounts, so you should review your storage usage.

[Person Accounts Implementation Guide](#)

Account Settings

Enhance account records with company hierarchy information, news, logos, autofill, and more.

To find all these settings, from Setup, go to the Accounts Settings page.

Setting	Description
Show Link to Hierarchy	Provide a link to the account hierarchy on account details. Let sales reps view relationships among parent and child accounts. Account hierarchies are available in Lightning Experience and Salesforce Classic. In Lightning Experience, add the View Account Hierarchy action to the account page layout. In Salesforce Classic, account detail pages include a View Hierarchy link whenever an account is related to a parent or child account via the <code>Parent Account</code> field.
Customize Hierarchy Columns	Customize the columns in account hierarchies to show the information that's most useful to your sales teams. Available in Lightning Experience only.

EDITIONS

Business accounts available in: Both Salesforce Classic and Lightning Experience

Business accounts available in: **All** Editions

Person accounts available in: Both Salesforce Classic and Lightning Experience

Person accounts available in **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

- "Customize Application"

USER PERMISSIONS

To change account settings:

- "Customize Application"

Setting	Description
Enable News	Provide sales reps with a customized list of timely, relevant news from US sources. News appears on accounts, contacts, leads, opportunities, and the Home page in Lightning Experience and Salesforce1. Confirm that the News component appears on your page layouts.
Enable Automated Account Fields	Display US-based companies in the Account Name field as sales reps enter information. Reps can select a suggested company from the list, making it easier to create business accounts. Automated Account Fields is available in Lightning Experience.
Enable Account Logos	Display company logos, when available, on US-based accounts. Some new logos replace logos from social profiles. Logos also appear with account suggestions. Account Logos is available in Lightning Experience and Salesforce1.
Contacts to Multiple Accounts	Let users relate a contact to multiple accounts. After enabling this feature, complete the additional setup steps . Contacts to Multiple Accounts is available in Lightning Experience, Salesforce Classic, and Salesforce1

SEE ALSO:

[Account Hierarchy](#)[Set Up Account Hierarchy in Lightning Experience](#)[The News Component](#)[Contacts to Multiple Accounts](#)[Accounts](#)

Set Up Account Hierarchy in Lightning Experience

Account hierarchy gives your sales team a bird's-eye view of the relationships between parent and subsidiary accounts. You can customize hierarchy columns to show the information that's most useful to your sales teams.

1. In Setup, add the View Account Hierarchy action to the Salesforce1 and Lightning Experience Actions section of your account page layout.

The Actions dropdown menu includes the View Account Hierarchy action, unless you customized the account page layout before Spring '17.

EDITIONS

Available in: **Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

You can expand or collapse parts of a hierarchy as you navigate it. You can view up to 2,000 accounts from each point where you enter a hierarchy. To view accounts in a different part of the hierarchy, enter the hierarchy from a different account.

ACCOUNT > DOUBLETREE (FRANCE)
Account Hierarchy

ACCOUNT NAME	ANNUAL REVENUE	BIRTHDATE	FIRST NAME
▼ Hilton Inc	\$125,876,987		
> Canopy	\$1,456,543		
> Conrad	\$4,765,789		
> Curio	\$4,766,123		
▼ DoubleTree	\$5,672,341		
> DoubleTree (Canada)	\$987,654		
> CURRENT DoubleTree (France)	\$109,876		
> DoubleTree (Germany)	\$564,123		
> DoubleTree (Italy)	\$1,765,432		

2. If you want, edit the columns in account hierarchies.
 - a. In Setup, in the Quick Find box, enter *Object Manager* and then click **Object Manager**.
 - b. In Account, click **Hierarchy Columns** and then edit the columns.

By default, account hierarchies display the same columns as the Recently Viewed Accounts standard list view. However, customizing the hierarchy columns doesn't change the list view columns.

All Setup

Considerations for Disabling Account Teams

Before you disable account teams, review these key considerations.

- Disabling account teams irreversibly removes existing teams from all accounts and delete users' default account teams, and removes the Account Team related list from all page layouts.
- You cannot disable account teams for your organization if team members are referenced in Apex. For example, if Apex code references the `TeamMember` field (represented as `AccountTeamMember` in the code), account teams cannot be disabled.

Administering Relationship Groups

Install and Implement Relationship Groups

Obtaining the Relationship Groups Custom App

The relationship groups custom app comes preinstalled in most Salesforce for Wealth Management organizations. If your Salesforce for Wealth Management organization does not have the relationship groups custom app, contact Salesforce to request it.

Verifying the Installation of the Relationship Groups Custom App

If the relationship groups custom app has been installed in your organization, the Relationship Groups option displays in the Force.com app menu.

In addition, administrators can use the following procedure to verify that the relationship groups custom app was successfully installed:

1. From Setup, enter `Apps` in the `Quick Find` box, then select **Apps** and verify that the relationship groups custom app is present and has the  Managed - Installed icon.
2. From your management settings for custom objects, verify that the relationship group and relationship group member objects are present and that each has the  Managed - Installed icon.

Configuring the Relationship Groups Custom App

Perform the following implementation tasks to configure the custom app. If the relationship groups custom app came pre-installed with Salesforce for Wealth Management, some of these configurations may already be set in your organization.

Customizing Account Page Layouts

From the object management settings for accounts, go to Page Layouts, then remove the following related lists from the appropriate account page layouts.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To disable account teams:

- “Customize Application”

EDITIONS

Available in: Salesforce Classic

Available in: Salesforce for Wealth Management

USER PERMISSIONS

To install apps:

- “Download AppExchange Packages”

To configure and deploy installed apps:

- “Customize Application”

- Relationship Groups (Primary Account)
- Relationship Groups (Secondary Account)

Customizing Person Account Page Layouts

From the object management settings for person accounts, go to Page Layouts, then edit the appropriate person account page layouts.

1. In the Related List Section, drag and drop to edit the following related lists:
 - Add **Relationship Group Members**
 - Remove **Relationship Groups (Primary Account)**
 - Remove **Relationship Groups (Secondary Account)**
2. Edit the Relationship Group Members related list as follows:
 - At minimum, include the following fields: Relationship Group Member: Role, Relationship Group Member: Priority, Relationship Group Member: Include in Roll-Up
 - Remove the standard **New** button
 - Add the custom **New** button

Setting Context-Sensitive Help for Relationship Groups

By default, the **Help for this Page** links on relationship group pages open help content about custom objects in general. To redirect those links to help topics that specifically describe relationship groups:

1. Go to the management settings for custom objects.
2. Click **Relationship Group** to open its custom object definition.
3. In the Custom Object Definition Detail section, click **Edit**.
4. For Context-Sensitive Help Setting, choose Open a window using a custom s-control.
5. For Custom S-Control, choose Relationship Groups Help.
6. Click **Save**.

 **Note:** Repeat this procedure for the Relationship Group Member custom object. This sets an appropriate context-sensitive destination for the help links on the Relationship Group Member related lists.

Overriding Standard Relationship Group Buttons

To customize the buttons on the relationship group detail page:

1. Go to the management settings for custom objects.
2. Click **Relationship Group** to open its custom object definition.
3. In the Buttons, Links, and Actions section, click **Edit** next to **New** and replace that button with the NewHousehold s-control.

Customizing Relationship Group Search Layouts

To customize the search layouts for relationship groups:

1. Go to the management settings for custom objects.
2. Click **Relationship Group** to open its custom object definition.
3. In the Search layouts section, click **Edit** to modify the appropriate search layout. At minimum, we recommend setting the following columns for search results:
 - Relationship Group Name
 - Primary Account
 - Secondary Account

- Last Modified By

Customizing Relationship Group Page Layouts

To customize the layout of the relationship group detail page, from the object management settings for relationship groups, go to Page Layouts, then click **Edit** next to the appropriate page layout name. Edit the page layout as follows:

1. Remove the **Clone** button from the detail page.
2. Edit the Open Activities related list as follows:
 - Remove the standard **New Task** and **New Event** buttons
 - Add the custom **New Task** and **New Event** buttons
3. Edit the Activity History related list as follows:
 - Remove the standard **Log a Call**, **Mail Merge**, **Send an Email**, **Request Update**, and **View All** buttons
 - Add the custom **Log a Call**, **Mail Merge**, and **Send an Email** buttons
4. In the Relationship Group Members related list, include the following fields, at minimum:
 - Relationship Group
 - Role
 - Priority
 - Include in Roll-Up

Overriding Standard Relationship Group Member Buttons

To customize the buttons on the relationship group member detail page:

1. Go to the management settings for custom objects.
2. Click **Relationship Group Member** to open its custom object definition.
3. In the Buttons, Links, and Actions section, click **Edit** next to **New** and replace that button with the `Edit Household Members` s-control.

After configuring the relationship groups custom app, verify that a Relationship Groups option displays in the Force.com app menu.

Note:

- In some cases, the custom app and its custom objects may have the label “Households” instead of “Relationship Groups” throughout. Whatever the labels are, they cannot be changed because the app is a managed package.
- Installing the Relationship Groups custom app may cause an error if your organization has fewer than 21 account records. You may ignore this error and continue the installation process.
- For all installations, the API names of the custom objects begin with the namespace prefix `household__`.
- The Relationship Group Member object is only supported in API version 11.0 and later.

SEE ALSO:

[Relationship Groups Overview](#)

[Creating Relationship Groups](#)

[Find Object Management Settings](#)

Testing the Relationship Groups Package

The relationship groups managed package provides unit tests that run when you install the package in your sandbox or production organization. In some cases, a component like an Apex trigger, validation rule, workflow rule, or custom field prevents the unit tests from completing successfully.

If the unit tests fail, do the following before running the tests again:

- Install the latest version of the relationship groups managed package. The functionality of the new version is the same as the older version except the unit tests have been enhanced. Contact Salesforce and request the latest version of the package (not available on the AppExchange).
- Deactivate components that prevent account, household, or household member objects from being edited or deleted. Apex triggers are a common cause of failed unit tests.

To ensure the relationship groups package runs successfully in your organization, the unit tests attempt to edit and delete some account, household, and household member objects. These tests do not permanently modify your organization's data. If a platform element prevents these objects from being edited or deleted, the unit tests fail.

SEE ALSO:

[Relationship Groups Overview](#)

Configuring Contacts and Contact Roles

Creating Contact Sharing Rules

Contact sharing rules can be based on the record owner or on other criteria, including record type and certain field values. You can define up to 300 contact sharing rules, including up to 50 criteria-based sharing rules.

1. If you plan to include public groups in your sharing rule, confirm that the appropriate groups have been created.
2. From Setup, enter *Sharing Settings* in the **Quick Find** box, then select **Sharing Settings**.
3. In the Contact Sharing Rules related list, click **New**.
4. Enter the **Label Name** and **Rule Name**. The Label is the sharing rule label as it appears on the user interface. The Rule Name is a unique name used by the API and managed packages.
5. Enter the **Description**. This field describes the sharing rule. It is optional and can contain up to 1000 characters.
6. Select a rule type.
7. Depending on the rule type you selected, do the following:
 - **Based on record owner**—In the *owned by members of* line, specify the users whose records will be shared: select a category from the first drop-down list and a set of users from the second drop-down list (or lookup field, if your organization has over 200 queues, groups, roles, or territories).
 - **Based on criteria**—Specify the Field, Operator, and Value criteria that records must match to be included in the sharing rule. The fields available depend on the object selected, and the value is always a literal number or string. Click **Add Filter Logic...** to change the default AND relationship between each filter.

EDITIONS

Available in: Salesforce Classic

Available in: Salesforce for Wealth Management

USER PERMISSIONS

To install apps:

- "Download AppExchange Packages"

To configure and deploy installed apps:

- "Customize Application"

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To create sharing rules:

- "Manage Sharing"

 **Note:** To use a field that's not supported by criteria-based sharing rules, you can create a workflow rule or Apex trigger to copy the value of the field into a text or numeric field, and use that field as the criterion.

8. In the **Share with** line, specify the users who get access to the data: select a category from the first drop-down list and a set of users from the second drop-down list or lookup field.
9. Select the sharing access setting for users.

Access Setting	Description
Read Only	Users can view, but not update, records.
Read/Write	Users can view and update records.

10. Click **Save**.

Set Up Contacts to Multiple Accounts

Let your sales reps easily track the relationships between the customers and businesses they work with. Contacts to Multiple Accounts is quick to set up and allows reps to relate a single contact record to multiple accounts.

If you disable Contacts to Multiple Accounts, keep in mind that doing so deletes all indirect account-contact relationships. Associations between a contact and its primary account remain.

 [Watch a Demo](#) (3:58 minutes)

1. If you're already using Account Contact Roles or a custom-built solution with a junction object, [review how those solutions compare with Contacts to Multiple Accounts](#).
2. From Setup, enter *Account Settings* in the **Quick Find** box, then select **Account Settings**.
3. Select **Allow users to relate a contact to multiple accounts**.
4. If you want to use custom fields to capture unique information about relationships—for example, the best time to call a contact—now's a good time to set that up. From the object management settings for Account Contact Relationship:
 - In Lightning Experience, go to **Fields & Relationships**.
 - In Salesforce Classic, go to **Fields**.
5. Make sure that you have the most relevant fields on your Account Contact Relationship page layout. From the object management settings for Account Contact Relationship, go to **Page Layouts**.
6. Add the Related Contacts related list to the account page layouts your reps use.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Contact Manager, Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To enable Contact to Multiple Accounts:

- "Customize Application"

To view page layouts:

- "View Setup and Configuration"

To edit page layouts:

- "Customize Application"

Because the Related Contacts related list automatically includes all direct contacts, you can remove the Contacts related list on your account page layouts.

 **Tip:** Easily see who's a direct contact for the account when you add the Direct field to the Related Contacts related list.

7. Add the Related Accounts related list to the contact page layouts your reps use.

 **Tip:** Easily see which account is the contact's primary account when you add the Direct field to the Related Accounts related list.

8. If you use person accounts, from Salesforce Classic, add the Related Accounts and Related Contacts related lists to the person account page layouts your reps use.
9. Decide whether you want to prevent activities from automatically rolling up to a contact's primary account. If so, from Setup, go to the Activities Settings page and deselect **Roll up activities to a contact's primary account**.
10. If you want to look at the relationships between contacts and accounts, create custom report types.

SEE ALSO:

[Find Object Management Settings](#)

[Considerations for Changing How Activities Roll Up to Accounts](#)

[Create Custom Report Types for Account Contact Relationships](#)

[Validation Rules for Account Contact Relationships](#)

[Contacts to Multiple Accounts Limitations](#)

Validation Rules for Account Contact Relationships

If your org uses Contacts to Multiple Accounts and you've created validation rules for the Account Contact Relationship object, you must bypass those validation rules in some cases.

When a contact with a related account is created, a direct Account Contact Relationship record is also created. Similarly, when a contact gets a new primary account, the current direct Account Contact Relationship record is modified. Validation rules for the Account Contact Relationship are run immediately after the contact is saved to the database.

Because the Account Contact Relationship records are created behind the scenes and users can't access the Account Contact Relationship fields when creating or editing a contact, validation rules can block the contact from being saved.

For example, the following Account Contact Relationship validation rule requires a value for the Roles field.

```
ISNULL (Roles)
```

However, a user can't access the Roles field on the Account Contact Relationship object when creating or editing the contact. Therefore, the criteria in the validation rule can't be met, and the contact can't be saved.

To bypass the validation rule when a direct Account Contact Relationship is created, add the following syntax to your Account Contact Relationship validation rule.

```
(NOT (ISNEW() && IsDirect)) && (NOT ISCHANGED(IsDirect))
```

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Contact Manager, Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Now, the Account Contact Relationship validation rule states that the Roles field is required only if the Account Contact Relationship isn't a direct relationship.

```
(NOT (ISNEW() && IsDirect)) && (NOT ISCHANGED(IsDirect))
&&
ISNULL(Roles)
```

SEE ALSO:

[Define Validation Rules](#)

Create Custom Report Types for Account Contact Relationships

If you've enabled Contacts to Multiple Accounts, run reports that show the relationships between contacts and accounts. First, set up custom report types so that sales managers and other teammates can create the reports they need.

1. Make sure you're familiar with custom report types and the general steps for creating and maintaining them.
2. Create custom report types with the appropriate object relationships, and configure them as necessary.

Check out these examples of custom report types to get you started.

Report type	Lets teammates run reports that show	A (Primary Object)	B	C	Make sure you also
Related Contacts	All the contacts, both direct and indirect, that are related to accounts.	Accounts	Contact Relationships		Add the <code>Direct</code> and <code>Full Name</code> fields to the Contact Relationships page layout.
Related Accounts	All the accounts, both direct and indirect, that are	Contacts	Account Relationships		

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Contact Manager, Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To create or update custom report types:

- "Manage Custom Report Types"

To delete custom report types:

- "Modify All Data"

Report type	Lets teammates run reports that show	A (Primary Object)	B	C	Make sure you also
	related to contacts.				
Related Contacts with or without Activities	All the contacts, both direct and indirect, that are related to accounts, and whether there's recent activity.	Accounts	Contact Relationships	Activities	

3. Deploy the report types you want to make available.
4. Let your sales teams know that they can create reports using these custom report types.

SEE ALSO:

[Set Up a Custom Report Type](#)

[Set Up Contacts to Multiple Accounts](#)

Enable Social Accounts, Contacts, and Leads

Increase your users' access to social intelligence by enabling the Social Accounts, Contacts, and Leads feature for your organization or Salesforce1.

The Social Accounts, Contacts, and Leads feature and access to all available social networks are enabled by default for organizations created after the Spring '12 release. If your organization was created before that, you must enable the feature manually.

 **Note:** If the Social Accounts, Contacts, and Leads feature is already enabled and but users can't see one or more social networks, see [Troubleshoot Social Accounts, Contacts, and Leads](#).

1. From Setup, enter *Social Accounts* in the **Quick Find** box, then select **Social Accounts and Contacts Settings**.
2. Select **Enable Social Accounts and Contacts**.
3. Select the social networks that users in your organization can access. By default, all social networks are selected.
In Salesforce Lightning Experience and the Salesforce1 mobile app, users can access Twitter only, even if other networks are enabled.
4. Click **Save**.
5. To make Twitter accessible in the Salesforce1 mobile app, add the Twitter card to the Mobile Cards section of the accounts, contacts, and leads page layouts.
6. Let your users know that they can configure Social Accounts, Contacts, and Leads for their individual use.

SEE ALSO:

- [Social Accounts, Contacts, and Leads](#)

Considerations for Enabling and Managing the Customer Portal for Contacts

Consider key points before enabling the customer portal for contacts. Then use best practices to maintain your contact information.

Enabling the Customer Portal for Contacts

- Before you enable a contact for the customer portal, make sure that the owner of the contact's account is associated with a role in your organization.
- If a user is a partner user *and* a customer user, two contact records for the user are required to provide separate usernames and passwords for each portal.
- A contact can either be a Self-Service user and a partner user *or* a customer user.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

- Any data that's created or owned by a Self-Service user can be visible to a partner user or customer user who's associated with the same contact.

Person accounts available in: **Enterprise, Performance, Unlimited, and Developer** Editions

Contacts available in **All** Editions except **Database.com**

Leads available in: **Groups, Professional, Enterprise, Unlimited, and Developer** Editions

USER PERMISSIONS

To enable, configure, or disable Social Accounts, Contacts, and Leads:

- "Customize Application"

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

- The user's `Nickname` defaults to the user's email alias unless you specify otherwise. For example, if the user's `Email` is "jsmith@company.com," the user's `Nickname` defaults to "jsmith" when you click **Save**.
- The first time you enable a contact for the customer portal on an account, the contact is assigned to the customer user role, which includes the name of the contact's account. You can update the contact's portal role later. (This behavior doesn't apply to [high-volume customer users](#), because they don't have roles and aren't included in the role hierarchy.)

Managing the Customer Portal for Contacts

- Edit an enabled contact's access to your customer portal. Click **Manage External User**, and then choose **View Customer User**.
- [Merge contacts that are enabled to use a customer portal](#).
- [Change the account on the contact](#).
- Make sure that you keep your contacts' access to your customer portal up-to-date by deactivating and disabling access as needed.
- You can delete contacts only if they're disabled from the portal. Inactive portal users can't be deleted.

SEE ALSO:

- [Enable the Customer Portal for Contacts and Person Accounts](#)
- [Considerations for Merging Contacts That Are Associated with Portal Users](#)
- [Contacts Limitations](#)

Enable the Customer Portal for Contacts and Person Accounts

To allow a customer to access your Salesforce customer portal, enable the customer's contact or person account record as a customer user.

1. From a contact or person account detail page, click **Manage External User**, and then select **Enable Customer User**.
2. Verify the general information and locale settings, and enter any missing information. The customer's `Username` defaults to the customer's `Email`.
3. Select a portal user license. The user license that you choose determines the permission sets, user profile, and role hierarchy options that you can select for the customer user. See [Customer Portal User Licenses](#) on page 2471.
4. Select `Generate new password and notify user immediately` to email a customer portal username and password to the customer.
If your Salesforce org uses multiple customer portals, customer users can access all customer portals that are assigned to their profiles with a single username and password. See [Creating Multiple Customer Portals](#) on page 2442.
5. Click **Save**.
6. To troubleshoot or confirm the portal configuration, on the contact detail page, click **Manage External User**, and then choose **Log in to Portal as User**. A new browser window opens and logs you in to the portal as the partner user.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To enable customer users or to log in as a portal user:

- "Edit" on the account that's associated with the customer user
- AND
- "Edit Self-Service Users"

You can [deactivate customer users](#) as needed.

SEE ALSO:

- [Considerations for Enabling and Managing the Customer Portal for Contacts](#)

Enable Self-Service for Contacts and Person Accounts

To provide access to your Self-Service portal, enable Self-Service for a customer's contact or person account record. A Self-Service user can view cases in the Self-Service portal only if they're associated with the user's account record.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

1. From the contact or person account detail page, click **Enable Self-Service**.
2. Verify the general information and locale settings, and enter any missing information. The customer's Self-Service `Username` defaults to the customer's `Email`.
3. To enable the customer as a Self-Service super user, select the `Super User` checkbox. Super users can view case information, add comments, and upload attachments for all cases that anyone in their company submits.
4. Select `Generate new password and notify user immediately` to email a Self-Service username and password to the customer.
5. Click **Save**.

SEE ALSO:

[What Is a Person Account?](#)

Set Up Contact Roles

Contact roles specify the part that each contact plays in an account, case, contract, or opportunity. When you use contact roles, your sales team always knows who to contact and when. Set up contact roles for each available object you want to use them with. You can define which roles to use and how they appear to your sales reps.

 **Important:** In Salesforce Classic, contact roles are available for accounts, opportunities, cases, and contracts. In Lightning Experience, contact roles are available for opportunities and contracts. Although contact roles work more or less the same for each available object, they work independently. Therefore, you need to set them up and use them separately for each object.

1. From Setup, enter `Contact Roles` in the `Quick Find` box, then select the contact roles you want to set up.
2. Modify the picklist values as needed. You can even create new values and add color to the values whenever they appear in charts.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To enable Self-Service users:

- "Edit Self-Service Users"

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in all editions

3. Save your changes.
4. Add the Contact Roles related list to the appropriate page layout.
For example, if you're creating contact roles for opportunities, add the Contact Roles related list to the opportunity page layouts that your sales reps use.

SEE ALSO:

[Considerations for Using Contact Roles](#)

[Add and Manage Contact Roles](#)

Allow Users to Create Private Contacts

Private contacts are contacts that aren't associated with an account. To give your users the ability to create private contacts, adjust your contact page layouts so the `Account Name` field isn't required.

Contacts that aren't associated with an account are always private, regardless of your organization's sharing model. Before allowing private contacts, consider the downside: they're easy to forget because they're hidden from all users except their owner and the system administrator.

1. From the object management settings for contacts, go to Page Layouts.
2. Select the layout you want to edit.
3. Find the `Account Name` field on the layout and hover over it. Then, click the wrench icon to show the field properties.
4. Deselect the `Required` checkbox.
5. Confirm your changes.

Improve Your Organization's Data Quality

High quality data is key to business success. When data quality is high, it means your records are complete and up-to-date; it means you have the right connections at the companies that interest you; and it means you have the information you need to close deals and expand your business. In short, high quality data lets you understand, adapt, focus, and execute with surgical precision. Data.com offers a suite of products to give your business the high quality data it needs when it needs it. That way, you spend less time entering and updating data and more time growing your business.

[Set Up Data.com Prospector](#)

Let your reps prospect for companies, leads, and contacts right in Salesforce. To do so, just set up and implement Data.com Prospector.

[Set Up Data Integration](#)

Set up Data Integration to continually update your org with the latest data.

[Set Up Data.com Clean](#)

Your business is only as good as its data. Do you want to spend less time updating and enriching data and more time growing your business? Set up and implement Data.com Clean for complete, up-to-date Salesforce records.

[Get an Assessment of Your Account Data](#)

Start making informed decisions about the quality of your account data—request a Data.com data assessment. The assessment summarizes overall data quality for your accounts and provides an analysis of key account fields. It doesn't change data in your org. Data assessments are available for orgs in the United States and Canada. For current Data.com Clean customers, we recommend using the AppExchange package Data.com Clean Reports instead.

Set Up Data.com Prospector

Let your reps prospect for companies, leads, and contacts right in Salesforce. To do so, just set up and implement Data.com Prospector.

 **Important:** You need to assign a Data.com license directly to a user in order for that user to add and export files from Data.com.

1. [Enable Data.com Clean for Data.com Prospector](#)
Let users manually clean account, contact, and lead records. You can even clean records that were added from another source. Clean is automatically enabled when you use Data.com Prospector, and you can manually clean D&B Company records that are linked to account or lead records.
2. [Configure Data.com Prospector](#)
Data.com Prospector provides a basic set of Dun & Bradstreet account and lead data, including D-U-N-S Number, NAICS Code, Tradestyle, and more. Here's how to implement this product.
3. [Configure Data.com Prospector](#)
With Data.com Prospector, you get Dunn & Bradstreet fields for accounts and leads you add to Salesforce from Data.com.
4. [Manage Access to Data.com Search Results and Related Features](#)
Use the **Add to Salesforce** and **Export Results** to limit what users can do with Data.com search results for Data.com features that use the search results.
5. [Respect Do-Not-Contact Settings in Data.com Search Results and Exports](#)
In Data.com search results and export files, you can prevent certain contact information from being displayed.
6. [Enable or Disable Data.com API Functionality](#)
Data.com API functionality is enabled by default.

EDITIONS

Available in: Salesforce Classic

Available with a Data.com Prospector license in:
Contact Manager (no Lead object), **Group, Professional, Enterprise, Performance,** and **Unlimited** Editions

USER PERMISSIONS

To implement Data.com:

- "Customize Application"

To enable Data.com users:

- "Manage Internal Users"

To install AppExchange packages:

- "Download AppExchange Packages"

Set Up Data.com Users

Give users access to Data.com and set their record addition limits so they can start taking advantage of Data.com's rich database of accounts, contacts, and leads. The number of Data.com users you can set up—within Salesforce or via the Data Loader—depends on the number of Data.com licenses you purchased.

 **Important:** You need to assign a Data.com license directly to a user in order for that user to add and export files from Data.com.

[Walk Through It: Set Up Data.com Users](#)

1. From Setup, enter *Manage Users* in the Quick Find box, then select **Users**.
2. Click **Edit** for a user.
3. Select a *Data.com User Type*. (You can [review the types of Data.com users](#) on page 1808.)
4. Select the *Data.com Monthly Addition Limit* for the user.
5. Save the user.

 **Tip:** You can also use the Apex Data Loader to set up Data.com users, select the Data.com user type, and set the monthly addition limit, if applicable. To do so, export your user records to a *.csv* file, change the necessary fields for each user you want to set up, and then import the *.csv* file into Salesforce. The fields to export from the User object are `LastName`, `FirstName`, `UserPermissionsJigsawProspectingUser`, `JigsawImportLimitOverride`, and `UserPreferencesJigsawListUser`. For more information about the User object, see the *Object Reference for Salesforce and Force.com*.

How Do Data.com User Types, Licenses, and Record Addition Limits Work?

User types, licenses, and record addition limits control what users can access Data.com and what Data.com users can do.

[Check Data.com License Information, Record Addition Balances, and Limits](#)

Check important license, record addition, and limits information from the Data.com Licenses & Limits page in Setup. This page also shows daily API limits for Data.com.

[How Do Licenses Work for Data.com Prospector?](#)

Data.com Prospector user licenses let users search Data.com for accounts and contacts, and add them as records to Salesforce. Users can be assigned one of two types of licenses—Data.com User and Data.com List User—and each type has its own characteristics.

[How Do Licenses Work for Data.com Clean?](#)

If your org uses Data.com Prospector, users with those licenses can manually update the account, contact, and lead records they have access to. With a Data.com Clean license, you can use Data.com Clean jobs to update records. You can also use Data Integration to update records as they are added or saved. Users who have a Data.com Clean license can manually update records, even if they don't have a Data.com Prospector license.

[Using Data.com FAQ](#)

[Set Up Data.com Users](#)

Check Data.com License Information, Record Addition Balances, and Limits

Check important license, record addition, and limits information from the Data.com Licenses & Limits page in Setup. This page also shows daily API limits for Data.com.

 **Important:** The Data.com API Limits section has information on calls to the Data.com Match API and calls to the Data.com Search API. You can only see the information on Match calls if your organization has Data.com Clean. You can only see the information on Search calls if you are assigned a Data.com Prospector user license.

[Walk Through It: Check Data.com License Information](#)

1. From Setup, enter *Licenses & Limits* in the Quick Find box, then select **Licenses & Limits**.

To see how many records each user has added or exported, check the All Data.com Users page. From Setup, enter *Users* in the Quick Find box, then select **Prospector Users**. Or, if your organization has access to custom report types, you can use the Data.com Usage object to create a report that shows more detailed usage information.

How Do Licenses Work for Data.com Prospector?

Data.com Prospector user licenses let users search Data.com for accounts and contacts, and add them as records to Salesforce. Users can be assigned one of two types of licenses—Data.com User and Data.com List User—and each type has its own characteristics.

 **Important:** You need to assign a Data.com license directly to a user in order for that user to add and export files from Data.com.

Data.com User

Data.com Users get a limited number of account, contact, and lead records to add or export per month. The default number of records per licensed user is 300. The record addition limit for each licensed user refreshes at midnight on the first of the month (based on the time zone of the organization) regardless of your contract start date. Unused record additions expire at the end of each month, *do not* rollover to the next month, and are not refundable. You can select the `Data.com Monthly Addition Limit` for each user. This is the number of account, contact, and lead records the user can add each month. You can select up to the organization limit for any user or all users, but once the organization's monthly limit is reached, users won't be able to add more records.

 **Example:** The sales division of Universal Telco has 14 sales reps, and they purchase 20 Data.com Prospector licenses, each of which has a record addition limit of 300. This means that Data.com Users within the organization can add as many as 6,000 records per month. The Universal Telco administrator distributes the Data.com Users' monthly record addition limits as follows.

- Ten of the sales reps have limits of 300 each
- Two of the sales reps have limits of 500 each
- Two of the sales reps have a limit of 1,000 each

Data.com List User

Data.com List Users get a limited number of account, contact, and lead records to add or export per month. Unused record additions expire at the end of each month and *do not* rollover to the next month. After the monthly limit is used, List Users draw record additions from a pool that is shared by all List Users in the organization. Unused pool additions expire one year from purchase. Only Data.com List Users can draw from the organization's pool limit. If a Data.com User wants to draw from the organization's pool limit, you need to change that user to a Data.com List User.

 **Example:** The marketing division of Universal Telco has four marketing reps. Each rep has a Data.com Prospector license and each is a Data.com List User. Universal Telco purchases enough monthly record additions so that each Data.com user has a monthly default limit of 300 records. The company also purchases a record addition pool of 5,000 records. This means that after each marketing rep uses his monthly limit, he can start using the pool limit. Together, all four marketing reps can add 5,000 records from the pool. One rep might add 2,500 records, leaving 2,500 to be added by one or more of the other three users.

How Do Licenses Work for Data.com Clean?

If your org uses Data.com Prospector, users with those licenses can manually update the account, contact, and lead records they have access to. With a Data.com Clean license, you can use Data.com Clean jobs to update records. You can also use Data Integration to update records as they are added or saved. Users who have a Data.com Clean license can manually update records, even if they don't have a Data.com Prospector license.

The Data.com Licenses & Limits page in Setup describes the options available for each type of license.

 **Note:** If your org purchased only Data.com Prospector, only users with licenses can update records.

SEE ALSO:

[How Do Data.com User Types, Licenses, and Record Addition Limits Work?](#)

Enable Data.com Clean for Data.com Prospector

Let users manually clean account, contact, and lead records. You can even clean records that were added from another source. Clean is automatically enabled when you use Data.com Prospector, and you can manually clean D&B Company records that are linked to account or lead records.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

 **Note:**

- If you've purchased Data.com Clean, you can clean account, contact, and lead records manually *and with automated jobs*. You can also use automated jobs to clean D&B Company records that are linked to account or lead records. For complete details, see [Set Up Data.com Clean](#).
- Enabling Clean does not clean your records immediately. You can click **Disable** to turn off the feature.
- Data Integration is not automatically available with Data.com Prospector.

1. From Setup, enter *Clean Settings* in the **Quick Find** box, then select **Clean Settings**
2. Confirm that Data.com Clean is enabled.

[Considerations for Custom Mapping of Data.com Clean and Salesforce Fields](#)

Custom mappings for Data.com Clean put Data.com values in the Salesforce account, contact, and lead fields where you want those values. Before mapping fields, make sure that you understand how mapping works, what preparations to make, and what kind of results to expect.

[Considerations for Allowing Duplicate Data.com Records in Salesforce](#)

Organizations that use a sharing model may want to allow Data.com users to add duplicate account, contact, or lead records to Salesforce.

SEE ALSO:

[Data.com Clean](#)

[Data Integration](#)

[Set Up Data.com Clean](#)

[Set Up Data Integration](#)

Considerations for Custom Mapping of Data.com Clean and Salesforce Fields

Custom mappings for Data.com Clean put Data.com values in the Salesforce account, contact, and lead fields where you want those values. Before mapping fields, make sure that you understand how mapping works, what preparations to make, and what kind of results to expect.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

Not all Data.com fields are available for all Salesforce fields. To be mappable, the new Salesforce field must be the same data type as the default field. For example, the `Description` field can be mapped to a long text area field with 1,000 characters or more.

Data.com Clean custom field mappings apply when:

- You add records to Salesforce using Data.com Prospector.
- You clean a single record, clean records in a list, or clean records with automated jobs.

Before you map fields, make sure you understand these potential outcomes and the related actions you should take.

- Mapping fields or updating mappings forces a full sync with Data.com: all records of enabled CRM objects (accounts, contacts, and leads) are updated, even if no records have changed.
- Data.com field mappings may conflict with any Salesforce field customizations (such as approvals, workflow rules, or Apex triggers) you use for accounts, contacts, leads, or D&B Company records. Review and edit your customizations as needed so they will work with the values supplied by your mappings.
- You can skip mapping individual Data.com fields, but values for skipped fields won't be added, exported, or considered when we calculate a record's clean status.
- Skipping or changing mappings for fields used to match Salesforce and Data.com records may change some records' clean status to `Not Found`.
- For account records, skipping or changing the mapping for the `D-U-N-S Number` field will cause all account jobs to use the Data.com matching service, rather than the `D-U-N-S Number` field, to rematch account records.
- If you map fields and also set Clean job preferences to flag, auto-fill, or overwrite Salesforce fields, you'll see any *custom-mapped* fields when you set those preferences. Default mappings (such as from the Data.com `Phone` field to the Salesforce `Phone` field) do not appear.
- If you export Data.com search results, the column headers in your Excel file will show the mapped field names. For example, if you map the Data.com `Phone` field to the Contact object's `Mobile` field, you'll see a header called "Mobile" for contacts, not "Phone".
- If you map Data.com fields that do not have values, some Salesforce records might revert to `Not Found` clean status.
- If you map a Data.com field to a custom Salesforce field, the custom field's label will appear on the Clean comparison page.
- If you want to track changes to field mappings, you'll find them in the Setup Audit Trail. From Setup, enter *View Setup Audit Trail* in the `Quick Find` box, then select **View Setup Audit Trail**.

[Considerations for Custom Mapping of Data.com Clean and Salesforce Fields](#)

Considerations for Allowing Duplicate Data.com Records in Salesforce

Organizations that use a sharing model may want to allow Data.com users to add duplicate account, contact, or lead records to Salesforce.

Keep these considerations in mind when setting your duplicate preferences.

- Records are considered duplicates when they have the same Data.com ID number in the `Data.com Key` field. This includes records that were added from Data.com as both contacts and leads.
- You can allow duplicates by object for the entire organization—not for individual users. If, however, you want to prevent a user or profile from being able to add duplicates, you can create a trigger.

Available with a Data.com Clean license in: **Professional, Enterprise, Performance,** and **Unlimited** Editions

USER PERMISSIONS

To implement Data.com:

- "Customize Application"

To enable Data.com users:

- "Manage Internal Users"

To install AppExchange packages:

- "Download AppExchange Packages"

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available with a Data.com Prospector license in: **Contact Manager** (no Lead object), **Group, Professional, Enterprise, Performance,** and **Unlimited** Editions

- A green dot (●) appears in the search results next to Salesforce records that have a value in the `Data.com Key` field (records that were imported or cleaned by Data.com). These records can be re-added by any Data.com user if your organization allows duplicates for the object.
- Records that have been added to Salesforce from Data.com are marked with a blue checkmark (✓) in search results. These records can be re-added by any Data.com user if your organization allows duplicates for the object. Adding a record affects the record balance only the first time that record is added to Salesforce: adding duplicates *does not* affect the record balance.
- If your Data.com preferences are set to allow duplicates but your organization also uses duplicate rules to prevent the creation of duplicate records, the duplicate rule will determine if the duplicate record is allowed or blocked.

Configure Data.com Prospector

Data.com Prospector provides a basic set of Dun & Bradstreet account and lead data, including `D-U-N-S Number`, `NAICS Code`, `Tradestyle`, and more. Here's how to implement this product.

 **Note:** To find out more about the Data.com Prospector product your organization has, from Setup, enter *Licenses & Limits* in the `Quick Find` box, then select **Licenses & Limits**. On the Licenses & Limits page, check the Data.com Prospector Licenses section.

1. Make sure you've [implemented Data.com](#).
2. [Enable Data.com Clean so your users can manually clean account, contact, and lead records](#).
3. [Configure your account, contact, and lead page layouts with the buttons and fields you need](#).
4. If you use Enterprise, Unlimited, or Performance Editions, you'll need to [update your field-level security so users see fields provided by D&B](#).

Best Practices for Your Configuration

If you create validation rules for the fields that the product provides, those rules will still attempt to run even if you stop using the product, so disable any validation rules using those fields in that case. Data.com Prospector fields are identified in the help topics "Account Fields" and "Lead Fields".

EDITIONS

Available in: Salesforce Classic

Available with a Data.com Prospector license in:
Contact Manager (no Lead object), **Group**, **Professional**, **Enterprise**, **Performance**, and **Unlimited** Editions

USER PERMISSIONS

To implement Data.com Prospector:

- "Customize Application"

Configure Data.com Prospector

With Data.com Prospector, you get Dunn & Bradstreet fields for accounts and leads you add to Salesforce from Data.com.

 **Note:** To find out more about the Data.com Prospector product your organization has, from Setup, enter *Licenses & Limits* in the Quick Find box, then select **Licenses & Limits**. On the Licenses & Limits page, check the Data.com Prospector Licenses section.

Here's how to configure Data.com Prospector.

1. Make sure you've [implemented Data.com Prospector](#).
2. [Confirm that Data.com Clean is enabled, so your users can manually clean account, contact, and lead records.](#)
3. [Configure your account, contact, and lead page layouts with the buttons and fields you need.](#)
4. If you use Professional, Enterprise, Unlimited, or Performance Editions, you'll need to [update your field-level security so users see fields provided by D&B](#).
5. Add the D&B Companies tab to user profiles.
6. Verify that profiles have `D&B Companies` read and delete permissions selected under Standard Object Permissions.
7. (Optional) We've created a default layout for D&B Company records, but you may want to use the Enhanced Page Layout Editor to customize the page layout.

Best Practices for Your Configuration

- You can let your users view and delete D&B Company records. To do this, you'll assign permissions to standard and custom profiles. For standard profiles, assign the permission `Delete D&B Company records` in addition to the preassigned permission `Read D&B Company records`. For custom profiles, assign both of the permissions `Read D&B Company records` and `Delete D&B Company records`.
- If you create validation rules for the fields that the product provides, those rules will still attempt to run even if you stop using the product, so disable any validation rules using those fields in that case. Data.com Prospector fields are identified in the help topics "Account Fields" and "Lead Fields".

Manage Access to Data.com Search Results and Related Features

Use the **Add to Salesforce** and **Export Results** to limit what users can do with Data.com search results for Data.com features that use the search results.

The checkboxes under **Button Preferences** settings control whether specific Data.com Prospector features are visible to users in your org.

Warning: Changing button preferences impacts all features associated with **Find Contacts** and **Find Accounts** for both Classic and Lightning features.

1. From Setup, enter *Prospector Preferences* in the Quick Find box, then select **Prospector Preferences**.
2. In the **Button Preferences** section of the page, deselect what you want to hide or select what you want to show.
3. Click **Save**.

[Make Sure You Can See Data.com Prospecting Insights](#)

Do you already have a Data.com Prospector license, but you don't see the See More Insights button on account details pages? Make sure you've enabled the News feature.

[Enable Get More Contacts Button in Lightning Experience for an Existing Org](#)

The Get More Contacts button shows up on the account details page only when the Button Preferences in Data.com Prospector Preferences are selected.

Make Sure You Can See Data.com Prospecting Insights

Do you already have a Data.com Prospector license, but you don't see the See More Insights button on account details pages? Make sure you've enabled the News feature.

1. From Setup, in the Quick Find box, enter *Account Settings* and then click **Account Settings**.
2. Click **Edit**.
3. Select **Enable News**.
4. Save your changes.

Enable Get More Contacts Button in Lightning Experience for an Existing Org

The Get More Contacts button shows up on the account details page only when the Button Preferences in Data.com Prospector Preferences are selected.

Already have a Data.com Prospector license, but don't see the Get More Contacts button on account detail pages? Make sure to select **Button Preferences** under Data.com Prospector Preferences.

Here is what to do to make the Get More Contacts button show up on your org's account details pages.

1. From Setup, in the Quick Find box, enter *Prospector Preferences* and then scroll to the Button Preferences section.
2. Select **Add to Salesforce** for both Find Contacts and Find Accounts.
3. Click **Save**.

Respect Do-Not-Contact Settings in Data.com Search Results and Exports

In Data.com search results and export files, you can prevent certain contact information from being displayed.

In particular, you can mask out or remove:

- Email and phone values for contact and lead records already in Salesforce that have `Do Not Call` or `Email Opt Out` selected; and
- Email values for all contact and lead records with Canada addresses (to support Canada's privacy requirements)

For example: You have a lead record in Salesforce for Sally Larkin and on that record the `Do Not Call` checkbox is selected. You search for Sally Larkin as a contact on the Data.com tab and her record appears in the search results list, marked as already in Salesforce (●). The `Phone` field is masked in the search results list, and also on Sally's contact card. If you export the record, its `Phone` field is blank in the `.csv` file.

1. From Setup, enter *Preferences* in the `Quick Find` box, then select **Prospector Preferences**.
2. Select `Respect Do-Not-Contact Settings` and `Canada's Privacy Requirements`.

For records that have `Do Not Call` or `Email Opt Out` selected, `Phone` or `Email` field values are masked in the search results and on the contact card, and blank in `.csv` files created when you export records. For records with Canada addresses, `Email` field values are masked in the search results and on the contact card, and blank in `.csv` files created when you export records.

Enable or Disable Data.com API Functionality

Data.com API functionality is enabled by default.

1. From Setup, in the `Quick Find` box, enter *Data.com Administration* and then select **Prospector Preferences**.
2. Select or deselect **Allow Data.com API Access**.
3. Save the page.

Guidelines for Letting Your Users Prospect for Companies, Contacts, and Leads with Data.com Prospector

We offer two versions of Data.com Prospector. Both let you search and add data from Data.com: Check out some guidelines for implementing both versions.

-  **Note:** If a search produces many results, you don't see data past page 10. Contact Salesforce Customer Support to enable unlimited view.
- If you add more than 200 leads to Salesforce at one time, any lead assignment rules your organization uses don't run. To make sure your lead assignment rules run, instruct your users to limit their additions to fewer than 200 leads at any time.
- If your organization uses validation rules on fields that are mapped to Data.com, either deactivate the rules or make sure that they match Data.com field names to avoid errors when adding records.

Resolve Data.com Record Addition Errors

If errors prevent you from adding one or more Data.com records to Salesforce, we'll provide a .csv error log file to help you fix any record addition errors.

How we provide the error log depends on what you were trying to do. If you were trying to add:

- Fewer than 200 records, you'll see a message with a link to the error log on the Files tab.
 - Two hundred records or more, you'll receive an email with a link to the error log on the Files tab.
 - Any number of records and you *do not* have Chatter enabled, you'll receive an email with the error log attached.
1. Open the record addition error log and review the errors, then take one of these actions.
 - If you see errors regarding duplicate records, you don't need to do anything. *Duplicate* errors mean that the records are already in Salesforce, so you don't need to add them again. If your Data.com preferences are set to allow duplicates, the error log will not include any *duplicate* errors. If your Data.com preferences are set to allow duplicates but your organization also uses duplicate rules to prevent the creation of duplicate records, the duplicate rule will determine if the duplicate record is allowed or blocked. Records that are blocked by the duplicate rule will appear in the error log.
 - If you see errors regarding your organization's custom configurations, such as triggers, validation rules, or workflow, let your administrator know because they may need to correct these configurations.
 - If your organization uses state and country picklists and you see errors regarding available states or countries, notify your administrator, who will need to add the particular state or country to the picklist.
 - For all other errors, contact your administrator, who may need to contact Salesforce Customer Support.
 2. After your administrator resolves the errors, try again to add the Data.com records to Salesforce.

Create a Custom Report Type for Account, Contact, or Lead Clean Info

Create custom report types to report on clean information for accounts, contacts, and leads. Clean Info custom report types can help you easily see clean information for multiple records in one report. Use that information to identify patterns and trends in your data and to manage or modify how your records are cleaned.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

1. From Setup, enter *Report Types* in the **Quick Find** box, then select **Report Types**.
2. Click **New Custom Report Type**.
3. For Primary Object, select *Accounts*, *Contacts*, or *Leads*—whatever object you want to report on—and define the other required fields.
4. For Category, select either *Accounts & Contacts* or *Leads*, as appropriate.
5. Click **Next**.
6. Relate the companion Clean Info object (Account Clean Info, Contact Clean Info, or Lead Clean Info) to the primary object you selected. Accept the default for **A to B Relationship**.
7. Select a deployment status.
8. Click **Save**.

Now you can create custom reports based on your new custom report types.

How Does Data.com Clean Match Your Records?

If you clean your account, contact, and lead data with Data.com Clean, it's important to understand how your records are compared and matched with records from Data.com.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

 **Tip:** For complete details about how the Data.com Clean matching service works, including a graphic overview and extensive examples, see the white paper [Data.com Clean Record Matching in Salesforce](#).

Watch a Demo:  [Understanding Matching Rules](#)

Using Data.com Clean, your records and Data.com records can be compared and matched in two ways.

- Manually, when a user clicks **Clean** on an individual account, contact, or lead record.
- Via Clean jobs, which automatically attempt to match all your account, contact, or lead records.

Automated clean jobs are only available to orgs that purchase Data.com Clean. *Manual* clean is available to all licensed Data.com Prospector users.

Contact Manager (no Lead object), **Group, Professional, Enterprise, Performance,** and **Unlimited** Editions

Available with a Data.com Clean license in:

Professional, Enterprise, Performance, and **Unlimited** Editions

The first time one of your records is cleaned, either manually or via an automated job, the matching service searches Data.com for similar records. It examines the field values in each record and looks for enough identical or similar information to indicate that the two records represent the same entity (that is, the same account, contact, or lead). If Data.com finds a match, the two records are linked by a numeric value in the `Data.com Key` field. For contact and lead records, every time your record is cleaned, the matching service is used to match the record. For account records, every time your record is cleaned, the `D-U-N-S Number` field is used to match (or look up) the record. If the `D-U-N-S Number` field is blank, the matching service is used to find a match. If your record changes substantially the next time it is cleaned, the matching service sometimes looks for a better match from other Data.com records.

 **Note:**

- If you prefer to rematch account records with the matching service, regardless of whether a D-U-N-S Number is present, contact Salesforce Customer Support. Doing so, however, can cause some account records to have their Data.com Clean status set to Not Found.
- If you've remapped or skipped mapping for the `D-U-N-S Number` field, or if you purchased Data.com before December 16, 2011, the matching service is used to rematch account records.

For contacts and leads, the important fields are:

- `Name`
- `Email`

Use a direct email address rather than a group address like `info@org.com`. (Identical email values almost always trigger a match unless other values in the record conflict.) **Note:** Data.com does not store emails that contain personal contact information, such as emails from Gmail or Yahoo.

- `Account Name` for contacts; `Company` for leads.
- `Title`
- `Phone`

For accounts, the important fields are:

- `Account Name`
 - Make sure that the account name doesn't contain any unrelated artifacts, such as numbers (1002), special characters (!#@#), or unrelated words. (These symbols are acceptable if they are part of the company's name.)
 - Try to avoid country and state names as values unless they are part of the company's name.
 - If the account name contains more than one word, like DSGI Business (PC World Business), try both.
 - If an account name is also a Website (like `salesforce.com`), try leaving off the subdomain (for example, `.com`).
- `Billing Address`
 - Use a full address, if possible.
 - To optimize match rates, specify a value for the `Country` field.
 - Try to specify a value for the `State` or `ZIP code` field.
 - If you know the account's street name but not its street number, use the street name only. A street name without a street number is better than no value.
- `Website`
- `Phone`

Guidelines for Using D&B Company Records

Review some guidelines so your organization gets the most out of D&B Company records, which contain over 100 fields of industry, financial, and competitive information from Dun & Bradstreet®.

- If your company has Data.com Prospector or Data.com Clean, you have access to the DandBCompany object, which provides Dun & Bradstreet data for accounts and leads that you add to Salesforce.
 -  **Note:** The DandBCompany object is also available when you use the Company Info for Accounts or Company Info for Leads data integration rules.
- Make sure you add the D&B Companies tab to user profiles. That's how users access a list of all D&B Company records. The D&B Companies tab lists all the D&B Company records you have in Salesforce.
- To let your users delete D&B Company records, create a permission set with the "Delete D&B Company records" and "Read D&B Company records" permissions and assign the permission set to users. Also, make sure to add the Delete button to page layouts.
- If your company also uses Data.com Clean, you can use automated jobs to update your D&B Company records.
- Add the Refresh button to your D&B Company page layouts, so you can manually update D&B Company records to get the latest data from Dun & Bradstreet. You can also use automated jobs to update D&B Company records.
- D&B Company records linked to account records are not cleaned along with linked account records.
- For accounts or leads not added from Data.com (for example, created manually), if a corresponding D&B Company record exists, it is added to Salesforce and linked to the account or lead record the first time that record is cleaned.
- SIC8 code fields (for example, Primary SIC8 Code) are not updated when existing D&B Company records are refreshed—either manually or as part of a job. These fields are only populated when the D&B Company record is created. To get SIC8 code values for an existing D&B Company record, you can delete the record and then clean its corresponding account. This recreates the D&B Company record, and it now includes values for the SIC8 code fields. Alternatively, you can get SIC8 values from the Data.com Search API, and add them to the D&B Company record.

D&B Company Fields

When you add or update an account or lead, a D&B Company record is created and linked to that account or lead via the `D&B Company` field. Click the link in the `D&B Company` field to access the associated D&B Company record, which has over 100 fields of industry, financial, and competitive information from Dun & Bradstreet.

-  **Example:** If you add an account record for Starbucks from Data.com, when you open its record, the `D&B Company` field value is Starbucks Corporation. The value is underlined to identify it as a link. Click it to open the Starbucks Corporation D&B Company record.
-  **Example:** If you update an account record for Google, when you open its record, the `D&B Company` field value is Google. The value is underlined to identify it as a link. Click it to open the Google D&B Company record.
-  **Note:** Some D&B field labels are different from the object field labels they are mapped to. For example, the `Account Site` field on account records maps to the `Location Type` field on the linked D&B Company record. For a list of default mappings, see [Default Data.com-to-Salesforce Field Mappings](#) on page 1811

Field	Description
<code>Annual Sales Volume</code>	The total annual sales revenue in the headquarters' local currency. Dun & Bradstreet tracks revenue data for publicly traded companies, Global Ultimates, Domestic Ultimates, and some headquarters. Dun & Bradstreet does not supply this data for branch locations.
<code>Annual Sales Volume Indicator</code>	The reliability of the Annual Sales Volume figure. Available values are <i>Actual number</i> , <i>Low</i> , <i>Estimated (for all records)</i> , <i>Modeled (for non-US records)</i> . A blank value indicates this data is unavailable.
<code>Company Description</code>	A brief description of the company, which may include information about its history, its products and services, and its influence on a particular industry. This data is supplied by Hoover's.
<code>Delinquency Risk</code>	The probability that a company will pay with a significant delay compared to the agreed terms. The risk level is based on the standard Commercial Credit Score, and ranges from low risk to high risk. Also known as marketing prescreen. Available values are <i>High risk of delinquency</i> , <i>Low risk of delinquency</i> , and <i>Moderate risk of delinquency</i> . Dun & Bradstreet

Field	Description
	supplies this data for US and Canadian organizations only.  Important: Use this information for marketing pre-screening purposes only.
Domestic Ultimate Business Name	The primary name of the Domestic Ultimate, which is the highest ranking subsidiary, specified by country, within an organization's corporate structure.
Domestic Ultimate D-U-N-S Number	The D-U-N-S Number for the Domestic Ultimate, which is the highest ranking subsidiary, specified by country, within an organization's corporate structure.
D-U-N-S Number	The Data Universal Numbering System (D-U-N-S) number is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. D-U-N-S numbers are used by industries and organizations around the world as a global standard for business identification and tracking.
Facsimile Number	The company's facsimile number.
Fifth NAICS Code	An additional NAICS code used to further classify an organization by industry. See Primary NAICS Code .
Fifth NAICS Description	A brief description of an organization's line of business, based on the corresponding NAICS code. See Primary NAICS Description .
Fifth SIC8 Code*	An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
Fifth SIC8 Description	A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
Fifth SIC Code	An additional SIC code used to further classify an organization by industry. See Primary SIC Code .
Fifth SIC Description	A brief description of an organization's line of business, based on the corresponding SIC code. See Primary SIC Description .
Fifth Tradestyle	An additional tradestyle used by the organization. See Primary Tradestyle .
FIPS MSA Code	The Federal Information Processing Standards (FIPS) and the Metropolitan Statistical Area (MSA) codes identify the organization's location. The MSA codes are defined by the US Office of Management and Budget. Dun & Bradstreet supplies this data for US organizations only.
FIPS MSA Code Description	A brief description of an organization's FIPS MSA code . Dun & Bradstreet supplies this data for US organizations only.

Field	Description
Fourth NAICS Code	An additional NAICS code used to further classify an organization by industry. See Primary NAICS Code .
Fourth NAICS Description	A brief description of an organization's line of business, based on the corresponding NAICS code. See Primary NAICS Description .
Fourth SIC8 Code*	An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
Fourth SIC8 Description	A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
Fourth SIC Code	An additional SIC code used to further classify an organization by industry. See Primary SIC Code .
Fourth SIC Description	A brief description of an organization's line of business, based on the corresponding SIC code. See Primary SIC Description .
Fourth Tradestyle	An additional tradestyle used by the organization. See Primary Tradestyle .
Fortune 1000 Rank	The numeric value of the company's Fortune 1000 ranking. A null or blank value means that the company isn't ranked as a Fortune 1000 company.
Geocode Accuracy	The level of accuracy of a location's geographical coordinates compared with its physical address. Available values include <i>Rooftop level, Street level, Block level, Census tract level, Mailing address level, ZIP code level, Geocode could not be assigned, Places the address in the correct city, Not matched, State or Province Centroid, Street intersection, PO BOX location, Non-US rooftop accuracy, County Centroid, Sub Locality-Street Level, and Locality Centroid</i>
Global Ultimate Business Name	The primary name of the Global Ultimate, which is the highest entity within an organization's corporate structure and may oversee branches and subsidiaries.
Global Ultimate D-U-N-S Number	The D-U-N-S Number of the Global Ultimate, which is the highest entity within an organization's corporate structure and may oversee branches and subsidiaries.
Import/Export	Identifies whether a business imports goods or services, exports goods or services, and/or is an agent for goods.
International Dialing Code	The required code for international calls.
Latitude	The geographical coordinates that specify the north-south position of a point on the Earth's surface. Used with longitude to specify a

Field	Description
Legal Structure	precise location, which is then used to assess the Geocode Accuracy .
Local Currency Code	Identifies the legal structure of an organization. Available values include <i>Cooperative</i> , <i>Nonprofit organization</i> , <i>Local government body</i> , <i>Partnership of unknown type</i> , and <i>Foreign company</i> .
Local Currency ISO Code	The currency in which the company's sales volume is expressed. The full list of values can be found at the Optimizer Resources page maintained by Dun & Bradstreet.
Location Ownership Indicator	The code used to represent a company's local currency. This data is provided by the International Organization for Standardization (ISO) and is based on their three-letter currency codes. For example, USD is the ISO code for United States Dollar.
Location Type	Indicates whether a company owns or rents the building it occupies.
Longitude	Identifies the organizational status of a company. Available values are <i>Single location</i> , <i>Headquarters/Parent</i> , and <i>Branch</i> .
Mailing Address	The geographical coordinates that specify the east-west position of a point on the Earth's surface. Used with latitude to specify a precise location, which is then used to assess the company's Geocode Accuracy .
Marketing Segmentation Cluster	The address where a company has its mail delivered. If the mailing address is the same as the primary address, this field will be blank.
Minority-Owned Indicator	Twenty-two distinct, mutually exclusive profiles, created as a result of cluster analysis of Dun & Bradstreet data for US organizations. Available values include <i>High-Tension Branches of Insurance/Utility Industries</i> , <i>Rapid-Growth Large Businesses</i> , <i>Labor-Intensive Giants</i> , <i>Spartans</i> , <i>Main Street USA</i> . Dun & Bradstreet supplies this data for US organizations only.
National Identification Number	Indicates whether an organization is owned or controlled by a member of a minority group. Dun & Bradstreet supplies this data for US organizations only.
National Identification System	The identification number used in some countries for business registration and tax collection. This field does not apply to US organizations.
National Identification System	Identifies the type of national identification number used. The full list of values can be found at the Optimizer Resources page maintained by Dun & Bradstreet.

Field	Description
Number of Business Family Members	The total number of family members, worldwide, within an organization, including the Global Ultimate, its subsidiaries (if any), and its branches (if any).
Number of Employees—Global	The total number of employees at the Global Ultimate, which is the highest entity within an organization's corporate structure and may oversee branches and subsidiaries.
Number of Employees—Location	The number of employees at a specified location, such as a branch location.
Number of Employees—Location Indicator	The reliability of the Number of Employees—Location figure. Available values are <i>Actual number</i> , <i>Low</i> , <i>Estimated (for all records)</i> , <i>Modeled (for non-US records)</i> . A blank value indicates this data is unavailable.
Number of Employees—Total	The total number of employees in the company, including all subsidiary and branch locations. This data is only available on records that have a value of <i>Headquarter/Parent</i> in the Location Type field.
Number of Employees—Total Indicator	The reliability of the Number of Employees—Total figure. Available values are <i>Actual number</i> , <i>Low</i> , <i>Estimated (for all records)</i> , <i>Modeled (for non-US records)</i> . A blank value indicates this data is unavailable.
Out of Business Indicator	Indicates whether the company at the specified address has discontinued operations.
Ownership Type Indicator	Indicates whether ownership of the company is public or private. The subsidiaries of a publicly traded parent company will show a value of <i>Private</i> unless the subsidiaries are independently traded.
Parent Company Business Name	The primary name of the parent or headquarters company.
Parent Company D-U-N-S Number	The D-U-N-S Number for the parent or headquarters.
Primary Address	The address where a company is physically located. This field is Billing Address on account records.
Primary Business Name	The primary or registered name of a company.
Primary NAICS Code	The six-digit North American Industry Classification System (NAICS) code is the standard used by business and government to classify business establishments according to their economic activity for the purpose of collecting, analyzing, and publishing statistical data related to the US business economy. The full list of values can be found at the Optimizer Resources page maintained by Dun & Bradstreet.
Primary NAICS Description	A brief description of an organization's line of business, based on its NAICS code.

Field	Description
Primary SIC Code	The four-digit Standard Industrial Classification (SIC) code is used to categorize business establishments by industry. The full list of values can be found at the Optimizer Resources page maintained by Dun & Bradstreet.
Primary SIC Description	A brief description of an organization's line of business, based on its SIC code.
Primary Tradestyle	A name, different from its legal name, that an organization may use for conducting business. Similar to "Doing business as" or "DBA".
Prior Year Employees	The total number of employees for the prior year.
Prior Year Revenue	The annual revenue for the prior year.
Second SIC8 Code*	An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
Second SIC8 Code Description	A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
Second NAICS Code	An additional NAICS code used to further classify an organization by industry. See Primary NAICS Code .
Second NAICS Description	A brief description of an organization's line of business, based on the corresponding NAICS code. See Primary NAICS Description .
Second SIC Code	An additional SIC code used to further classify an organization by industry. See Primary SIC Code .
Second SIC Description	A brief description of an organization's line of business, based on the corresponding SIC code. See Primary SIC Description .
Second Tradestyle	An additional tradestyle used by the organization. See Primary Tradestyle .
Sixth NAICS Code	An additional NAICS code used to further classify an organization by industry. See Primary NAICS Code .
Sixth NAICS Description	A brief description of an organization's line of business, based on the corresponding NAICS code. See Primary NAICS Description .
Sixth SIC8 Code*	An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
Sixth SIC8 Description	A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
Sixth SIC Code	An additional SIC code used to further classify an organization by industry. See Primary SIC Code .
Sixth SIC Description	A brief description of an organization's line of business, based on the corresponding SIC code. See Primary SIC Description .

Field	Description
Small Business Indicator	Indicates whether the company is designated a small business as defined by the Small Business Administration of the US government. Dun & Bradstreet supplies this data for US organizations only.
Stock Exchange	The corresponding exchange for a company's ticker symbol . For example: NASDAQ or NYSE.
Subsidiary Indicator	Indicates whether a company is more than 50 percent owned by another organization.
S&P 500	A true or false value. If <code>true</code> , the company is listed in the S&P 500 Index. If <code>false</code> , the company isn't listed in the S&P 500 Index.
Telephone Number	A company's primary telephone number.
Third NAICS Code	An additional NAICS code used to further classify an organization by industry. See Primary NAICS Code .
Third NAICS Description	A brief description of an organization's line of business, based on the corresponding NAICS code. See Primary NAICS Description .
Third SIC8 Code*	An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
Third SIC8 Description	A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
Third SIC Code	An additional SIC code used to further classify an organization by industry. See Primary SIC Code .
Third SIC Description	A brief description of an organization's line of business, based on the corresponding SIC code. See Primary SIC Description .
Third Tradestyle	An additional tradestyle used by the organization. See Primary Tradestyle .
Ticker Symbol	The abbreviation used to identify publicly traded shares of a particular stock. Also known as the stock symbol.
URL	An organization's primary website address.
US Tax ID Number	The identification number for the company used by the Internal Revenue Service (IRS) in the administration of tax laws. Also referred to as Federal Taxpayer Identification Number. Dun & Bradstreet supplies this data for US organizations only.
Woman-Owned Indicator	Indicates whether a company is more than 50 percent owned or controlled by a woman. Dun & Bradstreet supplies this data for US organizations only.
Year Started	The year the company was established or the year when current ownership or management assumed control of the company. If the company establishment or ownership year is unavailable, then

Field	Description
	the year the Dun & Bradstreet record was created will be used. Dun & Bradstreet does not supply this data for branch locations.

* Available with Data.com Prospector license only.

[Data.com Clean](#)

What should I do if my Data.com Users reach their addition limits and we need more prospecting capacity?

If you need to purchase additional licenses for Data.com Users, contact your Salesforce account executive.

SEE ALSO:

[How Do Data.com User Types, Licenses, and Record Addition Limits Work?](#)

Can I prevent Data.com Clean jobs from automatically updating records?

You sure can. Just follow [these guidelines](#).

SEE ALSO:

[Data.com Clean](#)

[Prevent Data.com Clean Jobs from Updating Records](#)

Why did I receive a message that says, **You have limited access to data, so you can't completely clean this record?**

If you can't edit one or more fields on an account, contact, or lead record, you'll see this message when you use Data.com Clean to manually clean the record. You'll still be able to clean the fields that you can edit.

Ask your administrator to make sure you can edit the [Salesforce fields affected when cleaning records](#), including D&B fields. How your administrator does this depends on which edition of Salesforce your company uses.

- For Contact Manager and Group editions, make sure the fields are on the appropriate page layout.
- For Professional, Enterprise, Performance, and Unlimited editions, make sure field-level security is set to `Visible` for the fields.

SEE ALSO:

[Which Fields Are Affected by Data Integration Rules and Data.com Clean?](#)

[Using Data.com FAQ](#)

How Often Are *All My Accounts*, *Contacts*, *Leads*, and *D&B Companies* Updated with Data.com Clean Jobs?

You choose when you want jobs to run using the Clean Jobs page. There are two types of jobs.

Full Sync Job

All records are cleaned, regardless of their clean status.

 **Note:** If your jobs are set to bypass skipped records, records with a `Skipped` clean status are not cleaned.

Incremental Sync Job

Only records with a `Not Compared` clean status are cleaned.

For a full sync job to run, you must have jobs scheduled for at least one day of the week.

For contacts and leads, a full sync job runs every 14 days for all eligible records.

For D&B Company records, a full sync job runs every 14 days. D&B Company records are cleaned using only a full sync job.

For accounts, how often a full sync job runs depends on the matching service you select and whether accounts have a value for the `Company D-U-N-S Number` field. For accounts *with* a D-U-N-S number, a full sync job runs every 14 days, regardless of the matching service. For accounts *without* a D-U-N-S number, check out this table.

Matching Service	How often can a full sync job clean accounts <i>without</i> a D-U-N-S number?
Data.com matching	Every 14 days
DUNSRight matching	Every 30 days

 **Note:** You must set the `Full Sync With Next Job` option on the Clean Jobs page to `On` each time you want to run a full sync job for accounts without a D-U-N-S number. After a full sync job runs, this option changes to `Off`, and it can't be toggled to `On` for 30 days from the time the last full sync job finished.

Company Info for Accounts and Company Info for Leads rules require a Data.com Premium Clean license.

Available in: **Professional, Enterprise, Performance, and Unlimited** Editions

Set up Data Integration to continually update your org with the latest data.

 **Note:** This information applies to Data Integration and not to Data.com Clean.

1. [Activate a Data Integration Rule](#)

To enable Data Integration for accounts, contacts, or leads, activate data integration rules. After you activate a rule, Data.com updates all records in the object. Data.com then continually updates records when you add or change them.

2. [Configure Page Layouts for Data Integration](#)

When you activate data integration rules, make Data Integration features available to your users by adding buttons and fields to your account, contact, and lead page layouts.

3. [Guidelines for Setting Up Company Info Data Integration Rules](#)

Follow important guidelines when using Data.com data integration rules to automatically update your accounts and leads.

4. [Create a Custom Report Type for Account, Contact, or Lead Data Integration Info](#)

Create custom report types to help you report on Data Integration update information for accounts, contacts, and leads. Data Integration custom report types can help you easily see update information for multiple records in one report. Use that information to identify patterns and trends in your data and to manage or modify how your records are updated.

5. [Considerations for Custom Mapping of Data Integration Rules](#)

Data integration rules have an update field mapping that controls how Data.com updates your records. Rules provide a customizable default field mapping. Before you change an update mapping, make sure that you understand how mapping works, what preparations to make, and what kind of results to expect.

6. [What Is Data Refresh?](#)

Data services can automatically perform a full sync of your records on a regular schedule. The services also report when data they had previously is no longer available.

SEE ALSO:

[Activate a Data Integration Rule](#)

[Configure Page Layouts for Data Integration](#)

[Create a Custom Report Type for Account, Contact, or Lead Data Integration Info](#)

Activate a Data Integration Rule

To enable Data Integration for accounts, contacts, or leads, activate data integration rules. After you activate a rule, Data.com updates all records in the object. Data.com then continually updates records when you add or change them.

 **Note:** This information applies to Data Integration and not to Data.com Clean.

Enable Data Integration for accounts, contacts, or leads by activating the data integration rule you want to use.

1. From Setup, enter *Data Integration Rules* in the **Quick Find** box.
2. From the View dropdown, select **All Data Integration Rules**.
3. Look at the Current Status column. If the status for the rule contains the word Active, you're done. You can activate other data integration rules.
 - a. If the status for the rule is Inactive, click the name of the rule.
 - b. In the detail page for the rule, click **Activate** to activate the rule.
 - c. In the dialog that appears, click **OK** to activate the rule.
 - d. To return to the list of data integration rules, click **Back to List: Data Integration Rules**.

The data integration rule is active, so Data Integration is enabled for this particular rule.

Configure Page Layouts for Data Integration

When you activate data integration rules, make Data Integration features available to your users by adding buttons and fields to your account, contact, and lead page layouts.

 **Note:** This information applies to Data Integration and not to Data.com Clean.

 **Note:** If you use Professional Edition, add *all* available Data.com fields and buttons to your page layout for each object (accounts, contacts, leads, and D&B Companies). Custom page layouts aren't available in Professional Edition.

 **Note:** This task is necessary only in Salesforce Classic.

1. From Setup, *Accounts* in the **Quick Find** box.
2. Select **Page Layouts**, then click **Edit** next to the page layout you want to update.
3. On the **Account Layout** page, from the list of page element categories, click **Related Fields**.
4. Drag the **Data Integration Rules** related list into place on the page where you want it to appear.
The **Data Integration Rules** related list appears.
5. To save the layout, click **Save**.
6. Repeat the previous steps for the **Contacts** and **Leads** page layouts.

Guidelines for Setting Up Company Info Data Integration Rules

Follow important guidelines when using Data.com data integration rules to automatically update your accounts and leads.

Adjustments for Salesforce Classic Users

To allow Salesforce Classic users to check a record's update status and update it manually, adjust the lead or account page layout. Add the Data Integration Rules related list to the layout.

Access for Users Who Update Records Manually

Access to D&B Company Object

Make sure that users have "Read" and "Create" access to the D&B Company object. When a user updates a record, the rule creates an associated D&B Company record (if the record doesn't exist).

Access to Account Fields

For the Company Info for Accounts rule, adjust field-level security to give users access to the account fields containing data provided by the rule.

Account Name	Description	Phone
Account Site	Employees	SIC Code
Annual Revenue	Fax	SIC Description
Billing Address	Industry	Ticker Symbol
Company D-U-N-S Number	NAICS Code	Tradestyle
D&B Company	NAICS Description	Year Started
Data.com Key	Ownership	Website

Access to Lead Fields

For the Company Info for Leads rule, adjust field-level security to give users access to the following fields on leads.

- Annual Revenue
- D&B Company
- Company D-U-N-S Number
- Industry
- No. of Employees

Note: In Professional Edition, you control field-level security using page layouts.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Company Info for Accounts and Company Info for Leads rules require a Data.com Premium Clean license.

Available in: **Professional, Enterprise, Performance, and Unlimited** Editions

Create custom report types to help you report on Data Integration update information for accounts, contacts, and leads. Data Integration custom report types can help you easily see update information for multiple records in one report. Use that information to identify patterns and trends in your data and to manage or modify how your records are updated.

Note: This information applies to Data Integration and not to Data.com Clean.

Note: You can't create custom reports for geocode data integration rules. To view geocode update status, use the Salesforce API.

Use custom reports to see the update status of records updated with data integration rules. Before you create the report itself, you have to create a custom report type that brings together the data you need to report on.

1. From Setup, enter *Report Types* in the *Quick Find* box, then select **Report Types**.
If you see the page entitled **What is a Custom Report Type?**, click **Continue**.
2. Click **New Custom Report Type** to go to the page **Step 1. Define the Custom Report Type**.
3. Enter information for the custom report type:
 - a. For **Primary Object**, select the object type you want to report on.
For example, to report on update status for accounts, select **Accounts**.
 - b. Enter a label and description for the report type.
For the report name, accept the name that Salesforce inserts.
For example:
 - **Report Type Label:** AccountDataIntegrationReportType
 - Custom report type for reporting Data Integration update status for accounts
 - c. From the **Store in Category** dropdown, select a category for the report type.
 - For a report type for accounts or contacts, select **Accounts & Contacts**.
 - For a report type for leads, select **Leads**.
 - d. Until you're ready to give the custom report to users, select a deployment status of **In Development**.
4. Click Next to go to **Step 2. Define Report Records Set**.
5. To connect the data integration status object to an accounts, contacts, or leads object, click the box labeled **(Click to relate another object)**.

- a. From the dropdown, select **Integration Rule Info**.
- b. For A to B relationship, click **Each "A" record must have at least one related "B" record**.

6. Click **Save**.

Now you can create custom reports based on your new custom report types. Add `Data Integration Status` to the report layout, along with any other fields you want to report on.

 **Note:** By default, the report contains all the active data integration rules for the object you're reporting on. To filter the report for a specific rule, use the `Description` field in the `Integration Rule Info` object. For example, use the filter `IntegrationRuleInfo.Description` contains "Company Info for Accounts".

Considerations for Custom Mapping of Data Integration Rules

Data integration rules have an update field mapping that controls how Data.com updates your records. Rules provide a customizable default field mapping. Before you change an update mapping, make sure that you understand how mapping works, what preparations to make, and what kind of results to expect.

 **Note:** This information applies to Data Integration and not to Data.com Clean.

Each data integration rule has a default update field mapping that controls how Data.com data is put into fields in your account, contact, or lead records. Whenever you add an account, contact, or lead, Data.com updates the record according to the active rules. You can customize the update field mappings so that Data.com puts data into different fields, including custom fields.

Before you activate a rule or modify its update mapping, make sure that you understand these considerations.

- When you activate a rule or modify its match or update mappings, Data.com does a *bulk* update of *all* the records affected by the rule. You can control this behavior by editing the rule's settings.
- Rule-based updates are independent of field customizations (such as approvals, workflow rules, or Apex triggers) you use for accounts, contacts, or leads. Review and edit your customizations to ensure they work with updated values.
- Data integration rules automatically fill fields in your records that are blank. Otherwise, rules don't overwrite your data.
- You can create custom fields for your records, and then map them to Data.com fields.

What Is Data Refresh?

Data services can automatically perform a full sync of your records on a regular schedule. The services also report when data they had previously is no longer available.

 **Note:** This information applies to Data Integration and not to Data.com Clean.

Data services keep your data current by doing an update of your records at regular intervals. The process is automatic, and you can't change or view the interval.

As part of the refresh process, a data service detects if data it provided before is no longer current. The data service doesn't delete the data from your records. Instead, it marks the data as **Inactive**.

 **Example:** When you use a data service to update account records, the service displays the data on the account detail page, as either a related list or a link. From the account detail page, you can see all the data the service has added to your org and linked to your account. If the updated data is no longer available, the service marks it as inactive.

Set Up Data.com Clean

USER PERMISSIONS

To implement Data.com Clean:	"Customize Application"
To enable Data.com Clean users:	"Manage Internal Users"
To define triggers:	"Author Apex"
To define workflow rules:	"Customize Application"
To install AppExchange packages:	"Download AppExchange Packages"

Your business is only as good as its data. Do you want to spend less time updating and enriching data and more time growing your business? Set up and implement Data.com Clean for complete, up-to-date Salesforce records.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

 **Note:** If you're using Data.com Prospector together with Data.com Clean, see [Set Up Data.com Prospector](#) on page 1805.

1. [Confirm That Data.com Clean Is Enabled](#)

Learn how to enable Data.com Clean so you can start keeping your records up to date.

2. [Configure Page Layouts for Data.com Prospector and Data.com Clean](#)

When you implement Data.com Prospector and Data.com Clean, make the features available to your users by adding buttons and fields to your Account, Contact, and Lead page layouts. If you use Data.com Prospector or Data.com Clean, you can add a button to your D&B Companies page layouts so users can refresh linked D&B Company records.

3. [Set Field-Level Security for Data.com Clean](#)

If you use Data.com Prospector or Data.com Clean, you can view various D&B fields on account records. Those fields are included when users manually clean records. To make sure that your users can read and edit the fields and their values and that the fields appear on the Account Card, set field-level security.

4. [Define Your Preferences and Select an Account Matching Service for Data.com Clean](#)

Data.com Clean preferences control the records you want to update and how you want to update them. The preferences include selecting the matching service used to update accounts.

5. [Set Up Data.com Clean Jobs](#)

If your org has a Data.com Clean license, you can set up automated jobs to update your records.

6. [Review Triggers and Workflow Rules for Data.com Compatibility](#)

If your orgs uses triggers or workflow rules on objects that you update with Data.com, review the triggers and workflows and consider adjusting them or bypassing them so users don't encounter unexpected results when records are updated.

7. [Configure List Views for Data.com Clean](#)

Before your Data.com Clean users can clean records from a list, add the `Clean Status` field to your org's list views.

8. [Set Up Data Integration Rules](#)

Up-to-date information helps your users maintain customer relationships and pursue promising leads. Give your users the latest account, contact, and lead information by setting up data integration rules.

EDITIONS

[Data Integration](#)

Confirm That Data.com Clean Is Enabled

Learn how to enable Data.com Clean so you can start keeping your records up to date.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

Data.com Clean ensures that your records are always up to date. You can use Clean with all your account, contact, and lead records—not just records added from Data.com. When you purchase a Data.com license, Clean is automatically enabled. You can set up automated Clean jobs, and users can clean individual records manually or groups of records from a list view.

After you enable Clean, you can set preferences and control Clean jobs. The Preferences and Jobs links appear in Setup in the Clean section.

 **Note:** Enabling Clean does not clean your records immediately. You can click **Disable** to turn off the feature.

1. From Setup, enter *Clean Settings* in the `Quick Find` box, then select **Clean Settings**.
2. Confirm that Data.com Clean is enabled.

USER PERMISSIONS

To enable or disable Data.com Clean:

- "Customize Application"

Configure Page Layouts for Data.com Prospector and Data.com Clean

When you implement Data.com Prospector and Data.com Clean, make the features available to your users by adding buttons and fields to your Account, Contact, and Lead page layouts. If you use Data.com Prospector or Data.com Clean, you can add a button to your D&B Companies page layouts so users can refresh linked D&B Company records.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

 **Note:** If you use Professional Edition, add *all* available Data.com fields and buttons to your page layout for each object (accounts, contacts, leads, and D&B Companies). Custom page layouts aren't available in Professional Edition.

1. From the object management settings for accounts, go to Page Layouts.
2. From the list of page layouts, edit each layout to be used by your Data.com Prospector or Data.com Clean users.
3. On the Account Layout page, from the list of page element categories, click **Fields**.
4. Drag the `Clean Status` field into place on the page where you want it to appear.
5. If you use Data.com Prospector, add the D&B fields you want users to see. These include `Account Site`, `D-U-N-S Number`, `NAICS Code`, `Tradestyle`, and more. For a complete list of the D&B fields available on account records, see [Account Fields](#).

 **Tip:** We recommend creating a section for D&B fields and grouping them there. To create a section, from the **Fields** group, drag the `Section` element into place on the page.
6. If you want your users to be able to refresh D&B Company records, add the **Refresh** button to D&B Company page layouts.
7. If you use the Do Not Auto-Update validation rule provided in the Data.com Reports AppExchange package, add the `Data.com Does Not Auto-Update` field.
8. From the list of page element categories, click **Buttons**. Drag the **Clean**, **Get Contacts**, **Prospecting Insights**, and **Company Hierarchy** * buttons into place on the page.

* Available only with a Data.com Prospector license
9. Click **Save**.
10. From the object management settings for leads, go to Page Layouts.
11. Repeat the steps to add the `Clean Status` field and the **Clean** button to your Lead page layouts.
12. If you use Data.com Prospector, add the `Company D-U-N-S Number` and `D&B Company` fields.
13. If you use the Do Not Auto-Update validation rule provided in the Data.com Reports AppExchange package, add the `Data.com Does Not Auto-Update` field.
14. From the object management settings for contacts, go to Page Layouts.
15. Repeat the steps to add the `Clean Status` field and **Clean** button to your Contact page layouts. (Contacts don't include any D&B fields.)
16. If you use the Do Not Auto-Update validation rule provided in the Data.com Reports AppExchange package, add the `Data.com Does Not Auto-Update` field.
17. If you use Data.com Prospector, from the object management settings for D&B Companies, go to Page Layouts.

Set Field-Level Security for Data.com Clean

If you use Data.com Prospector or Data.com Clean, you can view various D&B fields on account records. Those fields are included when users manually clean records. To make sure that your users can read and edit the fields and their values and that the fields appear on the Account Card, set field-level security.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

Set field-level security for these fields.

- Account Site
- D&B Company (Data.com Prospector only)
- D-U-N-S Number
- NAICS Code
- NAICS Description
- Ownership
- SIC Code
- Ticker Symbol
- Tradestyle
- Year Started

There are multiple ways to set field-level security (such as by profile or permission set). However, in this case, field-level security is needed for only 10 fields. We therefore recommend starting from the fields and choosing the user profiles for users who use Data.com.

1. From the management settings for accounts, go to the fields section.
2. Click the field label to open the detail page for each of the fields.
3. On each field's detail page, click **Set Field-Level Security**. For each profile whose users read and edit the fields, select **Visible**. For example, if you want users in the Standard User profile to use Data.com Clean, select **Visible** for that profile.

 **Note:** These fields are maintained by Data.com Clean. For that reason, making them editable by setting the field-level security to **Visible** can create mismatched data when a Clean job is run.

Define Your Preferences and Select an Account Matching Service for Data.com Clean

Data.com Clean preferences control the records you want to update and how you want to update them. The preferences include selecting the matching service used to update accounts.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

If you don't have a Data.com Clean license for your Salesforce org, you can't select preferences for jobs.

1. Review the [guidelines](#) for selecting a matching service used to update accounts.
2. From Setup, enter *Preferences* in the **Quick Find** box, then select **Preferences** under the Clean section.
3. Select the matching service for updating accounts. If you select D&B DUNSRight™ matching service, adjust your confidence code if needed.
D&B's Confidence Code ranks Data.com match candidates based on their similarity to your record, from 1 (not similar) to 10 (identical or highly similar). Data.com doesn't automatically match its records if the similarity score is less than the code you select here. If multiple records match with a similarity score at or above your selection, Data.com returns the best match. When you manually update some records, you can select a match between the preset confidence code (5) and the code you select here.
4. Review the [guidelines](#) for selecting job preferences.
5. Make sure that the **Enable Clean jobs** option is selected for each object that you want to update. If you have a Data.com Clean license and you want to update D&B Company records, select the **Enable Clean jobs for D&B Companies** checkbox.
6. For each object you've enabled, select your Clean preference.
7. Click **Save** to save your preferences.

[Guidelines for Selecting an Account Matching Service](#)

If you use Data.com Prospector or Data.com Clean, you can select the matching service that your org uses to clean account records. It's important to understand each service, its clean behaviors, and related considerations before selecting your service.

Guidelines for Selecting an Account Matching Service

If you use Data.com Prospector or Data.com Clean, you can select the matching service that your org uses to clean account records. It's important to understand each service, its clean behaviors, and related considerations before selecting your service.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

The available matching services are:

Data.com matching

Data.com's own matching technology, which matches on the `Account Name`, `Billing Address`, `Website`, and `Phone` fields.

The Data.com matching service is always used when cleaning accounts that have a valid `D-U-N-S Number`, even if the DUNSRight matching service is selected.

D&B DUNSRight™ matching

D&B's proprietary data-quality technology, which uses a rigorous process to normalize data and match D&B company records to your account records. The process also employs the D&B Confidence Code, which ranks Data.com match candidates based on how similar they are to your record, from 1 (not similar) to 10 (identical or highly similar). D&B also provides letter-coded match grades for individual fields. For details about how D&B DUNSRight matching works, see [D&B Entity Matching](#).

Guidelines for Selecting Data.com Clean Job Preferences

Review the preferences you can set before you define your Data.com Clean jobs.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

- Data.com Clean offers three options for cleaning your data with jobs. Jobs can do the following:
 - Flag all differences per record to *only identify* fields whose values are different from Data.com values
 - Flag differences and auto-fill blank fields to identify fields whose values are different *and fill blank fields* with values from Data.com.
 - Customize settings field by field.
- If you select the `Customize` option for any object, you can do the following:
 - Flag fields on your Salesforce records that have different values from matched Data.com records.
 - Flag different field values on your Salesforce records and automatically fill blank fields with Data.com values.
 - Overwrite different field values on your Salesforce records with Data.com values. If you overwrite Salesforce record values, set history tracking for those fields.
- You can set flag-only and flag and auto-fill preferences for entire records or by field. You set overwrite preferences by field.
- If you use Data.com Clean, you can also clean D&B Company records that are linked to accounts and leads. D&B Company Clean jobs automatically fill or overwrite field values on D&B company records, but do not change data on linked account or lead records.
- Your preferences take effect when the next scheduled Clean job runs, and users see the flags, as appropriate, when they clean records manually.
- If, after changing matching services, you want to do a one-time rematch using the new matching service, you can manually remove the `D-U-N-S Number` on account records to force the matching service to rematch the records. Be aware that this can affect your match rates.
- We don't recommend mapping a custom field or skipping mapping for either matching service.
- Converted leads are excluded from Lead Clean jobs.
- If you select a field to be overwritten by Clean jobs, and a user marks that field as *wrong* on a record, jobs don't overwrite that field on that record.
- Person accounts are excluded from Account and Contact Clean jobs.

Set Up Data.com Clean Jobs

If your org has a Data.com Clean license, you can set up automated jobs to update your records.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

Considerations for Scheduling Data.com Clean Jobs

Review considerations for scheduling your records to be updated automatically using Data.com Clean jobs.

Schedule Data.com Clean Jobs

To keep your records' clean status up to date, schedule automated jobs to compare your records with Data.com. Jobs are only available to organizations with a Data.com Clean license.

Schedule a Full Sync of Your Salesforce Account Records with Data.com Clean

If you use the D&B DUNSRight™ Matching service, you can schedule a full sync of your account records with Data.com's the next time your account clean jobs run. The full sync compares all of your account records with records from Data.com, and may find matches for records that were not matched during previous jobs.

Prevent Data.com Clean Jobs from Updating Records

You can prevent individual account, contact, and lead records from being updated with Data.com data when automated jobs run.

Review Data.com Clean Job History

The Data.com Clean Job History table lets you review your current jobs and access job error logs.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available with a Data.com Clean license

Available in: **Professional, Enterprise, Performance, and Unlimited** Editions

Considerations for Scheduling Data.com Clean Jobs

Review considerations for scheduling your records to be updated automatically using Data.com Clean jobs.

 **Important:** If you have set up triggers to run when account, contact, or lead records are updated, and your triggers perform SOQL queries, the queries may interfere with jobs for those objects. Your Apex triggers (combined) can't exceed 200 SOQL queries per batch. If they do, your job for that object will fail. In addition, if your triggers are @future methods, they are subject to a limit of 10 @future calls per batch.

- Jobs are only available to organizations with a Data.com Clean license.
- You must have jobs scheduled for at least one day in a week them to run.
- Jobs only process records of enabled objects
- In a full sync job, all records are cleaned, regardless of their clean status. In an *incremental sync* job, only records with a `Not Compared` clean status are cleaned.
- When a full sync job runs, it runs instead of an incremental sync job.
- If a full sync job is scheduled to run, it runs even if no records have changed.
- The duration between jobs is counted from the time the previous job finishes to the start of the next job.
- Jobs are queued according to your scheduling settings, and they run independently for accounts, contacts, and leads.
- How long it takes for a job to complete depends on several things, including which matching service you've selected (for account jobs), how many records your job cleans, and overall Salesforce performance. Using Data.com matching, it takes about a day for jobs to clean 3,000,000 records. Using DUNSRight™ matching, it takes about a day for jobs to clean 750,000 records.
- Use your sandbox environment to try out automated Clean jobs before running them in your production org with live data. After Data.com Clean is provisioned in your production org, refresh your sandbox so it has the same permissions and data. Then follow

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available with a Data.com Clean license in: **Professional, Enterprise, Performance, and Unlimited** Editions

the steps in [Implementing Data.com Clean](#) to set up Data.com Clean in your sandbox. If everything runs smoothly in your sandbox environment, follow the same implementation steps in your production org.

- Jobs scheduled in a sandbox environment expire after 30 days.
- For best results, include a valid value for the `Country` and `State/Province` fields.
- Before scheduling jobs, schedule regular backups of your account, contact, and lead data. It's always a good practice, and if your Salesforce records are ever matched inappropriately, you can revert to previous versions.
- Set up field history tracking for accounts, contacts, and leads. Field history tracking helps you identify changes to field values, and tracks who made changes and when. If you use field history tracking, make sure you add the Account History, Contact History, and Lead History related lists to those objects' respective page layouts.
- Jobs do not process person account records.
- The Company Info for Accounts data integration rule conflicts with Clean jobs. To avoid conflicts, see [Considerations for Setting Up Company Info Data Integration Rules](#).

Schedule a Full Sync of Your Salesforce Account Records with Data.com Clean

If you use the D&B DUNSRight™ Matching service, you can schedule a full sync of your account records with Data.com's the next time your account clean jobs run. The full sync compares all of your account records with records from Data.com, and may find matches for records that were not matched during previous jobs.

After the requested full sync has run, the option is turned off. You can turn it back on and schedule another full sync every 30 days. We'll let you know when your full sync is in progress, or how long it's been since your last full sync was run.

1. From Setup, enter *Jobs* in the *Quick Find* box, then select **Jobs** under Data.com.
2. Click the button next to **Full Sync With Next Job** to turn full sync **On**. After the requested full sync runs, the button changes to **Off**.

Use **Skipped** Clean Status to Prevent Data.com Clean Jobs from Updating Records

Use the **Skipped records** Data.com Clean job bypass preference, which makes sure records with a **Clean Status** of **Skipped** are not updated by jobs. This is the recommended method of preventing jobs from updating records.

1. From Setup, enter *Preferences* in the **Quick Find** box, then select **Preferences** under the **Clean** section.
2. Select **Skipped records** from the **Job Bypass Preferences for Accounts, Contacts, and Leads** jobs.
3. Save your preferences.
4. Set the **Clean Status** to *Skipped* for records that you don't want jobs to update.

 **Tip:** You can use the Salesforce API, the Data Loader, or an Apex trigger to set the **Clean Status** for multiple records.

5. To make sure the **Clean Status** for **Skipped** records does not change when records are updated, create an Apex trigger. When a record is updated, the trigger sets its **Clean Status** back to **Skipped**. Then, jobs won't update the record.

SEE ALSO:

[Use Custom Fields and Validation Rules to Prevent Data.com Clean Jobs from Updating Records](#)
[Writing Your First Apex Class and Trigger](#)

Use Custom Fields and Validation Rules to Prevent Data.com Clean Jobs from Updating Records

Use a custom field to identify the records you don't want auto-updated. Then, create a validation rule that tells jobs to skip these records.

-  **Important:** If you create a validation rule to prevent auto-updates, keep this best practice in mind.

The validation rule generates entries and related messages in Data.com Clean job logs, but your jobs may generate other entries and errors, as well, so make sure that you examine your job logs carefully.

1. Create a custom field for each object in which there are records you want to prevent Clean jobs from automatically updating. Here's an example of how to define the custom field.

Field	Value or Selection
Field Type	Checkbox
Field Label	<i>Data.com Does Not Auto-Update</i>
Default Value	Unchecked

USER PERMISSIONS

To create or change custom fields:

- "Customize Application"

To define or change field validation rules:

- "Customize Application"

To view field validation rules:

- "View Setup Configuration"

Field	Value or Selection
Description	<i>Prevents automated Clean jobs from updating fields with the matched Data.com record's values.</i>
Help Text	<i>Exclude this record from automated field updates from Data.com Clean jobs</i>

- To block auto-updates on records that have Data.com Does Not Auto-Update (or whatever you've named the custom field) selected, create a validation rule.

Here's an example of how to define the validation rule for each object.

Field	Value or Selection
Rule Name	<i>Block_autoupdate_from_Data_com</i>
Description	<i>Record-level prevention of automated Clean jobs from automatically updating field values.</i>
Error Condition Formula (for Accounts)	<pre>(YOUR CUSTOM FIELD API NAME) && (\$User.Alias = "autocl") && (ISCHANGED(DunsNumber) ISCHANGED(NumberOfEmployees) ISCHANGED(AnnualRevenue) ISCHANGED(TickerSymbol) ISCHANGED(Website) ISCHANGED(Industry) ISCHANGED(Ownership) ISCHANGED(BillingCity) ISCHANGED(BillingCountry) ISCHANGED(BillingState) ISCHANGED(BillingStreet) ISCHANGED(BillingPostalCode) ISCHANGED(Phone) ISCHANGED(Fax) ISCHANGED(Site) ISCHANGED(Tradestyle) ISCHANGED(YearStarted) ISCHANGED(Sic) ISCHANGED(SicDesc) ISCHANGED(NaicsCode) ISCHANGED(NaicsDesc) ISCHANGED(Description))</pre>
Error Condition Formula (for Contacts)	<pre>(YOUR CUSTOM FIELD API NAME) && (\$User.Alias = "autocl") && (ISCHANGED(Title) ISCHANGED(Email) ISCHANGED(Phone) ISCHANGED(MailingStreet) ISCHANGED(MailingCity) ISCHANGED(MailingState) ISCHANGED(MailingCountry) ISCHANGED(MailingPostalCode)))</pre>

Field	Value or Selection
Error Condition Formula (for Leads)	<pre>(YOUR CUSTOM FIELD API NAME) && (\$User.Alias = "autoclN") && (ISCHANGED(Company) ISCHANGED(Title) ISCHANGED(Email) ISCHANGED(Phone) ISCHANGED(Street) ISCHANGED(City) ISCHANGED(State) ISCHANGED(PostalCode) ISCHANGED(Country) ISCHANGED(NumberOfEmployees) ISCHANGED(AnnualRevenue) ISCHANGED(Industry) ISCHANGED(CompanyDunsNumber))</pre>
Error Message	<i>This record has been excluded from automated field updates from Data.com Clean jobs.</i>

3. Open each record that you don't want to be auto-updated, and select `Do Not Auto-Update` (or whatever you've named the custom field).

When automated jobs run, for each record that is not updated, you see a message in the job log: "This record has been excluded from automated field updates from Data.com Clean jobs."

Tip: You can use the Data Loader or a custom trigger to select this checkbox for multiple records.

[Create Custom Fields](#)

[Define Validation Rules](#)

[Use Skipped Clean Status to Prevent Data.com Clean Jobs from Updating Records](#)

Review Data.com Clean Job History

The Data.com Clean Job History table lets you review your current jobs and access job error logs.

Important: If you use the Do Not Auto-Update validation rule to prevent selected records from being automatically updated by Data.com Clean jobs, make sure you understand its effects on Clean job logs. The rule generates entries and related messages in job logs, but your jobs may generate other entries and errors, as well. So make sure you examine your job logs carefully. The validation rule is available in the Data.com Reports AppExchange package.

1. From Setup, enter `Jobs` in the `Quick Find` box, then select **Jobs**.
2. View job details in the Clean Jobs History section.
3. If the job encountered errors when processing records, click the link in either the `Batch Errors` or `Entity Errors` columns to download the job log `.csv` file.

We store job logs for 21 days.

Here are the definitions for the table columns.

Column Heading	Definition
Date	The date the job was run.
Time Submitted	The time the job was submitted to the job queue. Jobs run independently, so this might not be the exact time the job was run.
Job Type	<p>The type of job: for Accounts, D&B Companies, Contacts, or Leads.</p> <p>There are multiple types of account jobs.</p> <p><code>Account (Data.com Matching)</code>: the Data.com matching service was used to match the account records.</p> <p><code>Account (DUNSRight Matching)</code>: the DUNSRight matching service was used to match the account records.</p> <p><code>Account (D-U-N-S Number Lookup)</code>: the <code>D-U-N-S Number</code> field, if present, was used to rematch (or look up) the account records.</p>
Job Status	<p>The status of the job:</p> <p><code>Queued</code>: the job is in the queue to run. For jobs in this status, the <code>Time Submitted</code> column displays a dash (-).</p> <p><code>Preparing</code>: the job is being prepared to run.</p> <p><code>Processing</code>: the job is in process.</p> <p><code>Completed</code>: the job has finished running (with or without errors).</p>

EDITIONS

Available in: Salesforce Classic

Available with a Data.com Clean license in: **Professional, Enterprise, Performance, and Unlimited** Editions

USER PERMISSIONS

To schedule Data.com Clean jobs and view job history:

- "Customize Application"

Column Heading	Definition
	<p>Failed: the job failed to run.</p> <p>Aborted: the job was aborted before or while it ran.</p>
Records	The total number of Salesforce records processed by the job.
Matched	The total number of Salesforce records the job matched to Data.com records.
Unmatched	The total number of Salesforce records the job did not match to Data.com records.
Inactive	The number of Salesforce records that are marked as Inactive in Data.com.
Batch Errors	The total number of batch errors a job encountered while it ran. A dash indicates either no errors or no data. If the job produces a batch error job log, click the link to download and open its .csv file.
Entity Errors	<p>The total number of entity errors a job encountered while it ran. A dash indicates either no errors or no data. If the job produces an entity error job log, click the link to download and open its .csv file. There you'll find an explanation of any entity error that was produced because a record failed to save—for example, because of a validation rule failure. Entity errors usually result from validation rule failures or required field violation. If an explanation exists, we'll provide it.</p> <p>The unique ID of a record that produced an error during the job. To open the record, append the 15-digit ID to the URL of your Salesforce instance. For example: https://na1.salesforce.com/0013000000hKBTq.</p>

[Set Up Data.com Clean Jobs](#)

Review Triggers and Workflow Rules for Data.com Compatibility

USER PERMISSIONS

To implement Data.com Clean:	"Customize Application"
To implement Data.com Prospector:	"Customize Application"
To implement Data Integration:	"Customize Application"
To define triggers:	"Author Apex"
To define workflow rules:	"Customize Application"

If your orgs uses triggers or workflow rules on objects that you update with Data.com, review the triggers and workflows and consider adjusting them or bypassing them so users don't encounter unexpected results when records are updated.

 **Note:** This information applies to Data Integration *and* to Data.com Clean.

1. If you use triggers on any object that's updated by Data.com, from the object's management settings, go to Triggers.

2. Open and examine each trigger to make sure that your system or users don't encounter unexpected results when records are updated.

If you find that one or two triggers cause unexpected results, try adjusting those triggers.

- If you use Clean jobs and find multiple triggers that can cause unexpected results, bypass the triggers when jobs are run. Select that option on the Clean Preferences page. From Setup, enter *Preferences* in the *Quick Find* box, then select **Preferences** under Clean.
- If you use Data Integration and find multiple triggers that can cause unexpected results, bypass the triggers when data integration rules run. From Setup, enter *Data Integration Rules* in the *Quick Find* box. Select each rule, click **Edit Rule Settings**, select **Bypass triggers**, and then click **Save**.

 **Note:** In data integration rules for custom objects, triggers aren't bypassed even if **Bypass triggers** is selected.

3. If you use workflows, from Setup, enter *Workflow Rules* in the *Quick Find* box, then select **Workflow Rules**.

4. Open and examine each workflow rule to make sure that your system or users don't encounter unexpected results when records are cleaned.

If you find that one or two workflow rules cause unexpected results, try adjusting those rules.

- If you use Clean jobs and find multiple rules that can cause unexpected results, bypass the workflow rules when jobs are run. You can select that option on the Clean Preferences page. You can select that option on the Clean Preferences page. From Setup, enter *Preferences* in the *Quick Find* box, then select **Preferences** under Clean.
- If you use Data Integration and find multiple workflow rules that can cause unexpected results, bypass the workflow rules when data integration rules run. From Setup, enter *Data Integration Rules* in the *Quick Find* box. Select each rule, click **Edit Rule Settings**, select **Bypass workflow rules**, and click **Save**.

5. For all triggers and workflow rules you're using, check results on affected object records.

 **Example:** Your organization has a trigger that creates and assigns a task every time a lead record is updated by any means. If you clean leads using Clean jobs, your users could get more tasks than expected, so adjust the trigger so that tasks are only created

Configure List Views for Data.com Clean

Before your Data.com Clean users can clean records from a list, add the `Clean Status` field to your org's list views.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

1. Click the tab (Accounts, Contacts, or Leads) for the object whose records you want to clean from your list.

 **Note:** If your org uses DUNSRight matching to clean account records, list view cleaning is not available for account records.

2. Select a view from the drop-down and click **Edit**.
3. Scroll the Available Fields list to find the `Clean Status` field, then add it to the list of Selected Fields.
The **Clean** button is automatically added to the list view.

Set Up Data Integration Rules

Up-to-date information helps your users maintain customer relationships and pursue promising leads. Give your users the latest account, contact, and lead information by setting up data integration rules.

Data Integration Rules

Data integration rules are provided by a data service to control how the service updates your Salesforce records. Rules tell the data service how to find records to update and which updates to make. Rules also control how updates affect other features, such as triggers and workflow rules.

Automatically Get Geocodes for Addresses

Take advantage of geocodes to help your sales and marketing teams find nearby prospects and assign territories and campaigns. Using geocode data integration rules, you can automatically get geocodes for addresses on accounts, contacts, and leads.

Automatically Update Accounts and Leads with Critical Company Information

Make it easier for your sales teams to pursue the most promising leads, segment accounts, plan territories and campaigns, and understand customers better. Company Info rules provide access to over 100 fields of company, industry, and financial information from Dun & Bradstreet using the same fields as Data.com Clean.

[Guidelines for Determining How Well Data Integration Rules Are Working](#)

Do you want to know how well Data Integration is working for your organization? Check out the Data Integration Metrics page, which shows the match rate for your data integration rules. You see the percentage of your records that matched a record in the data service. When your record matches, the data service can update it with the latest data.

[Standard Data Integration Rules](#)

Key details about the standard data integration rules include how each rule works and the fields it affects.

[Statuses for Data Integration](#)

If you've activated data integration rules, you see an update status on records. This status indicates how the record's data compares with the data in the rule's data service.

Data Integration Rules

Data integration rules are provided by a data service to control how the service updates your Salesforce records. Rules tell the data service how to find records to update and which updates to make. Rules also control how updates affect other features, such as triggers and workflow rules.

 **Note:** You don't need a Data.com license to use every data integration rule. Some rules provided by Data.com, such as geocode data integration rules, are available for free. You can also use data services in data packages provided by third parties without a Data.com license. Data integration rules are independent of other Data.com features, though some rules update the same records as other Data.com features such as Clean jobs.

Data integration rules control the data service and how it does updates.

Data Service

Each rule is associated with a single data service, but the service can provide more than one rule. For example, a geocode data service can provide one rule for updating accounts and another for updating contacts.

Rule State

Rules are either inactive or active. Inactive rules don't do updates, but you can update their settings. You can also update settings for active rules, but the data service does a full update on all records after you save your changes.

Salesforce Object

The object that the data service updates. The Data.com Company Info for Accounts rule, for example, updates records in the accounts object.

Match Mappings

The criteria the data service uses to find your records. The criteria are stored as a match field mapping between fields in the data service and fields in the object.

Update Mappings

The fields that the data service updates when it finds a match. These fields are stored as an update field mapping between fields in the data service and fields in the object.

Perpetual Updates

Data integration rules are designed to do automatic updates whenever you add or modify a record.

Data Refresh

Active rules automatically refresh all your records at regular intervals.

Trigger and Workflow Rule Control

You can set a rule to bypass triggers and workflow rules after an update.

EDITIONS

Available in: **Salesforce Classic and Lightning Experience**

Company Info for Accounts and Company Info for Leads rules require a Data.com Premium Clean license.

Available in: **Professional, Enterprise, Performance, and Unlimited Editions**

Last-modified Data

You can prevent a rule from changing a record's last-modified data after an update.

After you activate a data integration rule, it immediately goes to work. Existing records are checked to see if new data is available. New records are checked when they're saved. If new data is available, the record is updated based on the data integration rule settings.

 **Example:** You have an app that assigns leads to territories based on the latitude and longitude of lead addresses, but your records don't have the latest latitude and longitude data. To fix the problem, set up and activate the `Geocodes for Lead Address` data integration rule. Then, geocode information is automatically added to all your existing *and* new leads. Here's a summary for this rule.

Attribute	Value
Name	<code>Geocodes for Lead Address</code>
Data Service	Data.com Geo
Object	Lead
Fields Updated	Latitude, longitude, and accuracy fields associated with the <code>Address</code> field: <ul style="list-style-type: none"> • <code>Latitude</code> • <code>Longitude</code> • <code>GeocodeAccuracy</code>  Note: These fields can't be added to the page layout. However, you can view them using custom formula fields or by querying the Salesforce API.
How Fields Are Updated	Overwrite
Update All Records When the Rule Is Activated or Saved	Yes
Bypass Triggers?	Yes
Bypass Workflow Rules?	Yes
Do Not Update Last Modified Info	Yes

[Standard Data Integration Rules](#)

Automatically Get Geocodes for Addresses

Take advantage of geocodes to help your sales and marketing teams find nearby prospects and assign territories and campaigns. Using geocode data integration rules, you can automatically get geocodes for addresses on accounts, contacts, and leads.

Important: Geocodes are added to records using Data.com technology. However, a Data.com license is not required to use this feature.

Considerations for Setting Up Geocode Data Integration Rules

Review these considerations before adding geocode information to accounts, contacts, and leads using Data.com geocode data integration rules.

Set Up Geocode Data Integration Rules

In a few steps, you can set up and activate your Data.com geocode data integration rules. Geocodes are then added to existing accounts, contacts, and leads. New accounts, contacts, and leads get this information when they're saved.

Guidelines for Setting Up Geocode Data Integration Rules

Follow some important guidelines when automatically adding geocode information to your records with Data.com.

Update a Record with Geocode Information

Geocode data integration rules add geocodes for addresses on your accounts, contacts, and leads. From the record's detail page, you can check its update status or manually update the record.

Verify That Geocodes Were Added to Records

Because geocode fields are not typically visible on a record, you need to complete a few steps to verify that a Data.com data integration rule added the geocodes.

Geocode Fields

Geocode information identifies a location using a latitude, a longitude, and an accuracy rating. Geocode fields are available for standard addresses on accounts, contacts, and leads in Salesforce. Geocode fields are not visible on records, but they can be viewed using the Salesforce API.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Considerations for Setting Up Geocode Data Integration Rules

Review these considerations before adding geocode information to accounts, contacts, and leads using Data.com geocode data integration rules.

Important: Geocodes are added to records using Data.com technology. However, a Data.com Clean license is not required to use this feature.

- The following actions occur when geocode information is added to records:
 - Existing values in geocode information fields are overwritten.
 - The `SystemModStamp` field is always updated. Review any integrations that use this field to make sure that they aren't affected.
 - By default, the `LastModifiedDate` and `LastModifiedById` fields aren't updated. You can change this option in the geocode data integration rule settings.
- Geocode information is not visible on records. However, it can be viewed using the Salesforce API. Also, you can create custom fields using formulas to show geocode information fields on records.
- Status information associated with data integration rules can't be copied to or from a sandbox. For example, in your production org, you activate your `Geocodes for Lead Address` data integration rule, and geocode information is successfully added to all your existing leads. As a result, the status of the `Geocodes for Lead Address` data integration rule for each lead is In

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, and Unlimited Editions**

Sync. You can't copy this status information for records to your sandbox. To get status information in your sandbox, activate your data integration rules and process your records in your sandbox.

- Person accounts are not currently supported.

- a. To change the settings, click **Edit Rule Settings**, make your changes, and then click **Save**. If **Update all records after this rule is activated or saved** is selected, geocodes are added to all existing records. New records get geocodes when they're saved. Existing geocode values are overwritten.
 - b. To change the field mapping, click **Edit Field Mapping**.
 - c. To activate a rule, click **Activate**. To deactivate it, click **Deactivate**.
4. To return to the list of geocode rules, click **Back to List: Data Integration Rules**.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To set up and activate data integration rules:

- "Customize Application"

5. Repeat this process for the other geocode data integration rules.
6. In Salesforce Classic, if you want to check the update status of the geocode data integration rules, add the Data Integration Rules related list to the page layout for accounts, contacts, and leads. (This step isn't necessary in Lightning Experience.)

The screenshot shows the Salesforce Classic interface. At the top, there is a toolbar with buttons for 'Save', 'Quick Save', 'Preview As...', 'Cancel', 'Undo', 'Redo', and 'Layout Properties'. Below the toolbar is a 'Quick Find' search bar with the text 'Related List Name'. A grid of related list options is displayed, with 'Data Integration ...' circled in red. A red arrow points from this circled option down to the 'Data Integration Rules' related list in the page layout below. The page layout includes sections for 'System Information', 'Custom Links (Header not visible)', 'Mobile Cards (Salesforce1 only)', and 'Related Lists'. The 'Data Integration Rules' related list is shown as a table with the following data:

Status	Data Integration Rule Name	Data Service	Last Updated
Sample Status	Sample Data Integration Rule Name	Sample Data Service	12/21/2016 3:13 PM

Guidelines for Setting Up Geocode Data Integration Rules

Follow some important guidelines when automatically adding geocode information to your records with Data.com.

-  **Important:** Geocodes are added to records using Data.com technology. However, a Data.com license is not required to use this feature.
- By default, geocode rules don't update last-modified information when they update a record. If you have automated processes that depend on the last-modified information, they don't run when a geocode rule does an update. If you want a geocode rule to update the last-modified information, edit the rule's settings and deselect **Leave last-modified information unchanged**, then click **Save**.
- To let your users manually add geocodes to records using geocode rules, set field-level security for the geocode and accuracy fields.

SEE ALSO:

[Set Up Geocode Data Integration Rules](#)

Update a Record with Geocode Information

Geocode data integration rules add geocodes for addresses on your accounts, contacts, and leads. From the record's detail page, you can check its update status or manually update the record.

-  **Important:** Geocodes are added to records using Data.com technology. However, a Data.com Clean license is not required to use this feature.
1. Open the record that you're checking.
 2. Review the update status for the record's geocode data integration rule. For example, if you're checking the billing address for the account, you review the update status for the Geocodes for Account Billing Address data integration rule. In Salesforce Classic, the status is located in the Data Integration Rules related list. (If you can't find the related list, ask your Salesforce admin to add it to your page layout.) In Lightning Experience, click the **Check Integration Status** quick action.
 3. To manually update the record, click **Update** for the geocode data integration rule.

Data Integration Rules i Data Integration Help ?

Action	Status	Data Integration Rule Name	Data Service	Last Updated
Update	Not Compared	Geocodes for Lead Address	Data.com Geo	Just now

If your record matches a record in the geocode data service, values for the geocode information fields are added, and the existing geocode values are overwritten. The status for the data integration rule is updated. If you can't manually update the record, ask your admin to set field-level security for the geocode latitude, longitude, and accuracy fields so that you can update these fields.

Note: If you change the address on a record, the status for the data integration rule is set to Not Compared until the record is updated again. Fortunately, with geocode data integration rules, the record is automatically updated again almost immediately!

Verify That Geocodes Were Added to Records

Because geocode fields are not typically visible on a record, you need to complete a few steps to verify that a Data.com data integration rule added the geocodes.

Important: Geocodes are added to records using Data.com technology. However, a Data.com license is *not* required to use this feature.

Tip: You can add geocode fields to the page layout using [custom formula fields](#).

1. Review the geocode rule update status.
 - a. Open a record.
 - b. Review the geocode rule update status, which is listed in the Data Integration Rules section.

Data Integration Rules i Data Integration Help ?

Action	Status	Data Integration Rule Name	Data Service	Last Updated
Update	✔ In Sync	Geocodes for Contact Mailing Address	Data.com Geo	Just now

If the geocode rule's update status is In Sync, the record has up-to-date geocode information from the data service. If you see another status, you can manually update the record by clicking **Update**.

2. Make sure that there are values in the geocode fields using the Salesforce API.
 - a. Get the value of the `Id` field for a record.
 - b. Using the `Id`, query the address fields and geocode fields. (Alternatively, you can query all records or the first `x` number of records for an object.)

Example: Salesforce Object Query Language (SOQL) Query for Contacts

```
SELECT Name, Email, MailingAddress, MailingCity, MailingState, MailingCountry,
MailingLatitude, MailingLongitude, MailingGeocodeAccuracy
FROM Contact
WHERE Id IN ('003D000000QRoqW', '003R0000001ySoG', '003D000000QRoqU');
```

- c. Verify that there are values for the geocode information fields.

SEE ALSO:

[Set Up Geocode Data Integration Rules](#)

[Geocode Fields](#)

Geocode Fields

Geocode information identifies a location using a latitude, a longitude, and an accuracy rating. Geocode fields are available for standard addresses on accounts, contacts, and leads in Salesforce. Geocode fields are not visible on records, but they can be viewed using the Salesforce API.

Object	Standard Address	Geocode Fields
Account	Billing Address	<ul style="list-style-type: none"> BillingLatitude BillingLongitude BillingGeocodeAccuracy
Account	Shipping Address	<ul style="list-style-type: none"> ShippingLatitude ShippingLongitude ShippingGeocodeAccuracy
Contact	Mailing Address	<ul style="list-style-type: none"> MailingLatitude MailingLongitude MailingGeocodeAccuracy
Lead	Address	<ul style="list-style-type: none"> Latitude Longitude GeocodeAccuracy

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Accuracy Values

Accuracy tells you more about the location of a latitude and longitude. For example, zip means the latitude and longitude indicate the point at the center of the zip code area for an address. In this case, a match for the exact street address couldn't be found.

Accuracy Value	Description
Address	In the same building
NearAddress	Near the address
Block	Midway point of the block
Street	Midway point of the street
ExtendedZip	Center of the extended zip code area
Zip	Center of the zip code area
Neighborhood	Center of the neighborhood
City	Center of the city
County	Center of the county
State	Center of the state

Accuracy Value	Description
Unknown	No match for the address was found

Automatically Update Accounts and Leads with Critical Company Information

Make it easier for your sales teams to pursue the most promising leads, segment accounts, plan territories and campaigns, and understand customers better. Company Info rules provide access to over 100 fields of company, industry, and financial information from Dun & Bradstreet using the same fields as Data.com Clean.

[Considerations for Setting Up Company Info Data Integration Rules](#)

Review considerations for using Data.com data integration rules to add company information to Salesforce accounts and leads automatically.

[Set Up Company Info Data Integration Rules](#)

Using the Data.com Company Info data integration rules, you can add valuable company information, like annual revenue, D-U-N-S number, and number of employees to all your existing and new accounts and leads.

[Guidelines for Setting Up Company Info Data Integration Rules](#)

Follow important guidelines when using Data.com data integration rules to automatically update your accounts and leads.

[Check the Data Integration Status of Records in Lightning Experience](#)

Check whether an individual record has been processed with a Company Info data integration rule. To test the rule, update a record manually. With data integration rules, your records are automatically updated, so manually updating a record isn't necessary.

[Check the Data Integration Status of Records in Salesforce Classic](#)

You can check whether an individual record has been processed by a data integration rule. You can also update a record manually.

Considerations for Setting Up Company Info Data Integration Rules

Review considerations for using Data.com data integration rules to add company information to Salesforce accounts and leads automatically.

Recommendation to Use AppExchange Package Instead of Assessment Option

The Company Info for Accounts rule provides an option to update your data or generate a read-only assessment. The assessment option applies custom matching criteria to Data.com data assessments. However, the assessment option can produce unexpected results for Data.com Clean customers. If you're a Clean customer, we recommend that you use the [AppExchange package Data.com Clean Reports](#) instead.

Company Info Rules and Data.com Clean

Status Fields

Company Info data integration rules and Data.com Clean use different status fields.

- Company Info rules use the Data Integration Status field in the Integration Rule Info object.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available with a Data.com Premium Clean license in: **Professional, Enterprise, Performance, and Unlimited** Editions

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Company Info for Accounts and Company Info for Leads rules require a Data.com Premium Clean license.

Available in: **Professional, Enterprise, Performance, and Unlimited** Editions

- Data.com Clean uses the Clean Status field in the Account or Lead object.

Conflicts Between Company Info Rules and Data.com Clean

Because Company Info rules and Clean jobs can run at different times, the status fields can contain different values. Workflow rules or triggers that depend on a status field can work incorrectly.

For example, the Company Info for Accounts data integration rule updates fields after a user adds an account. The value of the Data Integration Status field is In Sync. However, if the scheduled Clean job for accounts hasn't run yet, the value of the Clean Status field is still Not Compared.

Clean Button and Data Integration Related List (Salesforce Classic)

Avoid adding the Clean button, Clean Status field and Data Integration Rules related list to the same page layout. The Clean button and Clean Status field are for Data.com Clean, but the Data Integration Rules related list is for data integration rules. Having all these options on the same page can confuse your users.

Company Info Rules and Updates

Company Info rules can modify one or more records, which in turn can set off triggers, workflows, and push notifications. Review your triggers, workflows, and push notifications before activating a rule.

When users edit one of a special set of fields for a record, data integration rules for the object type run automatically. The rules don't always run immediately, so a user who tries to edit a record can encounter a conflict. The user can edit fields, but can't save the record because it's locked by the rule.

The fields that trigger rules automatically are listed in the topic "Standard Data Integration Rules." For the Company Info for Leads rule, only the fields listed under "Matching Fields" are affected. For the Company Info for Accounts rule, all the fields listed under "Matching Fields" and "Fields Updated" are affected.

Company Info For Leads Location Matching

If a lead contains a value for the Country field, the Company Info for Leads rule adds company information for the domestic headquarters in that country. If the lead doesn't contain a value for Country, the rule adds global headquarters information.

Company Info For Accounts Location Matching

Company Info for Accounts matches an account record based on the account's location.

Separate Field Mapping Settings for Rules

The field mapping selections in **Setup > Data.com Administration > Field Mapping** don't affect field mapping for company info rules. Each rule has its own customizable field mapping settings.

SEE ALSO:

[Set Up Company Info Data Integration Rules](#)

Set Up Company Info Data Integration Rules

Using the Data.com Company Info data integration rules, you can add valuable company information, like annual revenue, D-U-N-S number, and number of employees to all your existing and new accounts and leads.

 **Note:** This information applies to Data Integration and not to Data.com Clean.

1. From Setup, enter *Data Integration Rules* in the **Quick Find** box, then select **Data Integration Rules**.
2. Click the Company Info rule you want to set up. A summary of the rule appears.
3. Review the rule.
 - a. To change the settings, click **Edit Rule Settings**.
 - b. To change the field mapping, click **Edit Field Mapping**.
 - c. To activate it, click **Activate**. To de-activate it, click **Deactivate**.

If you chose the option to clean all records when the rule is activated or saved, Salesforce immediately checks for new records and whether new data is available for existing records. New data is added only to blank fields—Salesforce never overwrites your data.

4. To add company information to all existing accounts or leads, select **Update all records after this rule is activated or saved**.
5. Save the rule.
6. Activate the rule.
7. In Salesforce Classic only, to allow users to check the status of a Company Info rule, add the Data Integration Rules related list to the page layout for accounts or leads.

Guidelines for Setting Up Company Info Data Integration Rules

Follow important guidelines when using Data.com data integration rules to automatically update your accounts and leads.

Adjustments for Salesforce Classic Users

To allow Salesforce Classic users to check a record's update status and update it manually, adjust the lead or account page layout. Add the Data Integration Rules related list to the layout.

Access for Users Who Update Records Manually

Access to D&B Company Object

Make sure that users have "Read" and "Create" access to the D&B Company object. When a user updates a record, the rule creates an associated D&B Company record (if the record doesn't exist).

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available with a Data.com Clean license in:

Professional, Enterprise, Performance, and Unlimited Editions

Access to Account Fields

For the Company Info for Accounts rule, adjust field-level security to give users access to the account fields containing data provided by the rule.

Account Name	Description	Phone
Account Site	Employees	SIC Code
Annual Revenue	Fax	SIC Description
Billing Address	Industry	Ticker Symbol
Company D-U-N-S Number	NAICS Code	Tradestyle
D&B Company	NAICS Description	Year Started
Data.com Key	Ownership	Website

Access to Lead Fields

For the Company Info for Leads rule, adjust field-level security to give users access to the following fields on leads.

- Annual Revenue
- D&B Company
- Company D-U-N-S Number
- Industry
- No. of Employees

Note: In Professional Edition, you control field-level security using page layouts.

Check the Data Integration Status of Records in Lightning Experience

Check whether an individual record has been processed with a Company Info data integration rule. To test the rule, update a record manually. With data integration rules, your records are automatically updated, so manually updating a record isn't necessary.

Available in: Lightning Experience

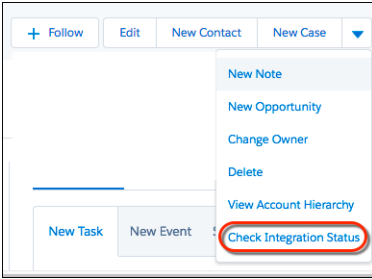

Available with a Data.com Clean license in: **Professional, Enterprise, Performance**, and **Unlimited** Editions

USER PERMISSIONS

To clean accounts and leads:

- "Edit" on accounts and leads

1. Open the account or lead that you want to check.
2. In the action menu, click **Check Integration Status**.

3. Click **Clean**.

Data Integration Rule Status			
DATA INTEGRATION RUL...	DATA SERVICE	LAST UPDATED	STATUS
Company Info for Accounts	Data.com Companies	Never	⚠ Not Compar... Update

The window displays the update status before and after updating.

If an account or lead record matches a record in the data service, any blank fields are filled in automatically. Company Info rules don't overwrite data on your records. If the new data is different from your existing data, you can manually review and select the data you want. The status for the data integration rule is updated.

If you change one or more fields that a rule uses to match or update a record, the status is set to Not Compared until the record is saved and updated again.

 **Note:** On an account, if you update the Company D-U-N-S Number field value while updating manually, delete the D&B Company field value. Otherwise, Data.com can't add updated values for those two fields or link the correct D&B Company record to the account.

Check the Data Integration Status of Records in Salesforce Classic

You can check whether an individual record has been processed by a data integration rule. You can also update a record manually.

1. Open the account, contact, or lead that you want to check.
If you don't see this related list, ask your Salesforce admin to add it to the page.
2. Click **Update**.

Guidelines for Determining How Well Data Integration Rules Are Working

Do you want to know how well Data Integration is working for your organization? Check out the Data Integration Metrics page, which shows the match rate for your data integration rules. You see the percentage of your records that matched a record in the data service. When your record matches, the data service can update it with the latest data.

 **Note:** This information applies to Data Integration and not to Data.com Clean.

- The **Errors** column shows the number of errors that occurred when processing records. An error occurs if a processed record can’t be updated due to a trigger, workflow rule, duplicate rule, or validation rule. Click the number of errors to download a file that includes the ID of each record with an error and the associated error message. Only the most recent error for a record is available. The **Errors** column includes a maximum of 10,000 errors per data integration rule.
- No data is displayed for data integration rules that were activated in the last 24 hours.

Standard Data Integration Rules

Key details about the standard data integration rules include how each rule works and the fields it affects.

 **Note:** You can use the Company Info for Accounts data integration rule in assessment mode without having a Data.com license

Statuses for Data Integration

If you've activated data integration rules, you see an update status on records. This status indicates how the record's data compares with the data in the rule's data service.

Clean Status	Definition	API Value
 Not Compared	The Salesforce record has not been compared with the data service.	Pending
 In Sync	The Salesforce record matches a record in the data service, and the fields to be updated have identical values.	InSync
 Reviewed	The Salesforce record matches a record in the data service, but not all values from the matching record were accepted. Only values for fields to be updated are used to determine the status.	Reviewed
 Different	The Salesforce record matches a record in the data service, but the fields to be	Different

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Company Info for Accounts and Company Info for Leads rules require a Data.com Premium Clean license.

Available in: **Professional, Enterprise, Performance,** and **Unlimited** Editions

Clean Status	Definition	API Value
	updated have different values and the differences have not yet been reviewed.	
 Not Found	The Salesforce record has no similar records in the data service record.	NotFound
 Skipped	The Salesforce record could not be matched or updated due to a validation or trigger error.	Skipped

Report on Records with a Specific Data.com Clean Status

Create a custom report to show Salesforce account, contact, or lead records that have a specific clean status (such as `Different`).

 **Note:** This information applies to Data.com Clean and not to Data Integration.

Choose fields to display from the Account, Contact, or Lead objects. Using data from companion Clean Info objects, show Salesforce and Data.com record values side by side. Report results can help you identify consistent reasons that records have a specific clean status. Use what you learn to manage how records are cleaned in your organization.

For example, you can create a report to show all records whose clean status is `Different` side by side with their matched Data.com records. If you identify patterns in your data that cause this status, you can create triggers or API customizations to adjust your data and have more records with `In Sync` status.

Let's create a Contacts by Clean Status report.

1. Make sure your organization has a custom report type that links the Contact object to the Contact Clean Info object. Also check that fields from both objects are available to report on.
2. Create your report: click the Reports tab, then click **New Report**.
3. Select **Contacts by Clean Status** as the report type.
4. Click **Create**.
5. From the parent object, Contacts, select the fields you want to report on. For example, choose:
 - Contact ID
 - Clean Status
 - Full Name
 - Mailing Address
 - Phone
 - Email
6. From the related object, Contact Clean Info, select fields that correspond to the Contact object fields. For contact clean info, choose:
 - Contact Clean Info ID
 - First Name
 - Last Name
 - Address

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available with a Data.com Prospector license in: **Contact Manager** (no Lead object), **Group, Professional, Enterprise, Performance,** and **Unlimited** Editions

Available with a Data.com Clean license in: **Professional, Enterprise, Performance,** and **Unlimited** Editions

USER PERMISSIONS

To create, edit, and delete reports:

- "Create and Customize Reports"
- AND
- "Report Builder"

- Phone
- Email
- Last Match Date

7. Add a field filter to the report: For the field, select **Clean Status**. For the operator, select *equals*, and for the value, select **Different**.
8. Define the remaining fields.
9. Save the report and run it.
10. Examine the report to see if you can identify patterns in your data that cause certain records to have a clean status of *Different*.

[Create a Custom Report Type for Account, Contact, or Lead Clean Info](#)

Determine How Well Data.com Clean Is Working

Data.com Clean metrics and analytics tell you how your org's accounts, contacts, and leads have been matched and updated with Data.com data, so it's important to check your match and update rates on a regular basis.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

1. From Setup, enter *Metrics* in the *Quick Find* box, then select **Metrics & Analytics** under the Clean section.
2. To find out when the last calculation occurred, check the *Last Calculated* field above the table.

 **Note:** The data in the tables is calculated daily, but we store the time and calculate the date based on GMT, so depending on time adjustments, the date shown may be different from the date when the calculations occurred. Also, because this data is calculated once per day, it may differ slightly from the data in Data.com dashboards and reports.

3. View match and update information in the Match and Update Rates section.

The data represents records that have been matched and updated since your org implemented Data.com. Here are the definitions for the table columns.

Column	Definition
Records	The object enabled for Data.com Clean: accounts, contacts, or leads.  Note: If your Salesforce org uses person accounts, the figures in the <i>Total</i> and <i>Processed</i> columns may differ. Person accounts are included in the account total, but are not processed by Data.com Clean jobs.
Total	The number of object records (accounts, contacts, or leads) that your org has in Salesforce.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available with a Data.com Prospector license in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, **Performance**, and **Unlimited** Editions

Available with a Data.com Clean license in: **Professional**, **Enterprise**, **Performance**, and **Unlimited** Editions

USER PERMISSIONS

To view Data.com Clean match rates:

- "Customize Application"

Column	Definition
Processed	The number of each type of Salesforce record (accounts, contacts, or leads) processed by Data.com Clean.
Matched	The number of each type of processed Salesforce record (accounts, contacts, or leads) that match with Data.com records.
Updated	The number of each type of processed Salesforce record (accounts, contacts, or leads) that have been updated.

Column	Definition
Records	The object enabled for Data.com Clean: accounts, contacts, or leads.
Match Rate (% of Processed)	The percentage of each type of processed Salesforce record (accounts, contacts, or leads) that match with Data.com records.
Update Rate (% of Processed)	The percentage of each type of processed Salesforce record that have been updated.

Find Out How Many of Your Organization's Records Need Better Data

Data.com Data Assessments is a free Salesforce AppExchange package that tells you how many of your organization's records Data.com can enrich with more and better data. It can also tell you how many of your records have been marked as `Inactive` in Data.com, and if you request, how many records in your Salesforce organization appear to be duplicates.

Data.com Data Assessments also lists the fields on accounts, contacts, and leads, and tell you how many are blank within your records and how many have different values from Data.com's. (For example, you can have 10 account records in which the `Phone` field value is blank, or five contacts in which the `Account Name` field is blank.) You can use it to help you decide whether to purchase Data.com Clean, which updates fields with blanks or out-of-date values. If you already use Data.com Clean, it can help show you the value you're getting.

1. [Install the Data.com Assessment app from the AppExchange.](#)
2. From the Force.com app menu, select `Data.com Assessments` to open the Data Assessment app.
3. Click the Data.com Assessment tab and define your assessment preferences.
4. Click **Start My Assessment**.
We tell you how long we expect the assessment to take. The completion calculation is based on 15 records per second, and we round up to the nearest hour. So if you have 200,000 accounts, for example, your assessment takes about 3 hours and 45 minutes to complete. We estimate it at 4 hours.
5. After the assessment is complete, from the Force.com app menu, select `Data.com Assessments`.
6. Click the Data.com Assessment tab, then click the Assessments tab.
7. Click **View Assessments** next to the assessment you want.
8. Click through the assessment tabs. Here's what you find.

Tab	What it Tells You
Summary	Breaks down the set of records we analyzed for the assessment. It tells you how many we can enrich with better data, how many records are likely to be inactive in Data.com and if you requested it when you ran the assessment, how many of your records are likely to be duplicates. We also tell you how many of your records were matched to Data.com records and how many were not.
Accounts	Breaks down the account records we matched, showing the number and percentage of records by status and identifying the match percentage. Data assessments also list Account fields and for a given field, tell you how many records have blank values for that field and how many have values that are different from Data.com's. (For example, you can have 10 account records in which the <code>Phone</code> field value is blank.)
Contacts	Breaks down the contact records we matched, showing the number and percentage of records by status and identifying the match percentage. Data assessments also list Contact fields and for a given field, tell you how many records have blank values for that field and how many have values that are different from Data.com's. (For example, you can have five contact records in which the <code>Account</code> field value is blank.)
Leads	Breaks down the lead records we matched, showing the number and percentage of records by status and identifying the match percentage. Data assessments also list Lead fields and for a given

Tab	What it Tells You
Unmatched	field, tell you how many records have blank values for that field and how many have values that are different from Data.com's. (For example, you can have 12 lead records in which the <code>Title</code> field value is different from Data.com's.)
Unmatched	Data.com's matching algorithm uses key fields to identify matching records. This tab lists those fields, and shows you the number and percentage of blank field values within your unmatched records. Adding valid data to these fields can improve your organization's match results.
DUNSRight	Shows the expected account match rate using D&B DUNSRight Matching. The confidence code is a number from 1 to 10. A match confidence code of 10 is the most precise and the most exact match. You can set a confidence level threshold that identifies records as <code>Matched</code> or <code>Select Match</code> . Matched records are automatically added to your automated clean process. You can manually add <code>Select Match</code> records to your automated clean process.

Find Out How Clean Your Accounts Are

If you use Data.com Clean, you can review the `Clean Status` on all your accounts by running an `Accounts by Clean Status` report.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

 **Note:** This information applies to Data.com Clean and not to Data Integration.

 **Important:** If your records appear to be matched incorrectly with Data.com records, think carefully before selecting `Flag differences` and `auto-fill blank fields` as a clean preference. If mismatches occur with many records, contact Salesforce Support.

1. Click the `Dashboards` tab, then select `Data.com Analytics`. Run the `Accounts by Clean Status` report.
If your clean jobs have run successfully, your accounts are grouped by their clean status values.
2. On the report, find any Salesforce records with a clean status of `Different`. Open several records and click **Clean** to look at the differences.
3. Repeat the comparison process with records that have a clean status of `Not Found`.

USER PERMISSIONS

To install packages:

- "Download AppExchange Packages"

 **Note:** These packages are designed for Data.com Clean and Data.com Prospector. If you're using Data Integration, write your own custom reports.

Multiple Data.com report packages are available on AppExchange. The report packages you install depend on which data you're interested in and which Data.com products you use. Here's a list of the different packages and instructions on how to install them.

Available AppExchange Reports Package	Contents	Considerations
Data.com Prospector Reports	Dashboard and associated reports used primarily by sales management to see the value Data.com provides in terms of converted leads, sales forecast, and revenue.	To install this package, your company must use Data.com Prospector.
Data.com Clean Reports	Dashboard and associated reports used primarily by sales operations and people responsible for keeping Salesforce data updated.	To install this package, your organization must use Data.com Clean.
Running Data.com Data Assessments	Dashboard and associated reports use the rich set of D&B data to give you and your users unparalleled insight into your accounts. They help improve sales planning and business strategy.	To install this package, your organization must use Data.com Prospector or Data.com Clean.
	Tells you how Data.com can enrich your data.	You can request one assessment for your org every 30 days.

1. Go to the Data.com reports package you want to download.
2. Click **Get it Now**.
3. Install the Data.com reports packages you want to use.
4. If your company uses Professional Edition, add these fields to your page layouts. If you don't, these fields aren't included on your reports.

Page Layout

Fields

Account

Sourced from Data.com

Page Layout	Fields
Contact	Sourced from Data.com
Lead	Sourced from Data.com
Opportunity	Sourced from Data.com

5. Let your users know which Data.com reports and dashboards are available.

Get an Assessment of Your Account Data

Start making informed decisions about the quality of your account data—request a Data.com data assessment. The assessment summarizes overall data quality for your accounts and provides an analysis of key account fields. It doesn't change data in your org. Data assessments are available for orgs in the United States and Canada. For current Data.com Clean customers, we recommend using the AppExchange package Data.com Clean Reports instead.

1. [Request an Account Data Assessment](#)

Request your account data assessment by activating the Company Info for Accounts data integration rule in assessment mode.

2. [How to Read Your Account Data Assessment](#)

A data assessment provides an overall data health score for your accounts. It summarizes what account records Data.com can match and update in your org, and it includes customer segmentation charts by industry, geography, employee count, and annual revenue. Data assessments are available for Salesforce orgs in the United States and Canada. This feature is only available in Lightning Experience.

Request an Account Data Assessment

Request your account data assessment by activating the Company Info for Accounts data integration rule in assessment mode.

 **Note:** If you're a Data.com Clean customer and you use Clean jobs, use the free AppExchange package [Data.com Clean Reports](#) to see how well Clean is working for you.

1. From Setup, enter *Data Integration Rules* in the Quick Find box, then select **Data Integration Rules**.
2. In the list of rules, click **Company Info for Accounts**.
3. Click **Edit Rule Settings**.
4. Click **Generate a read-only data assessment**, then click **Save**.
Saving or activating the rule requires agreeing to the terms of the data assessment agreement.
5. If the rule is inactive, activate it by clicking **Activate**.

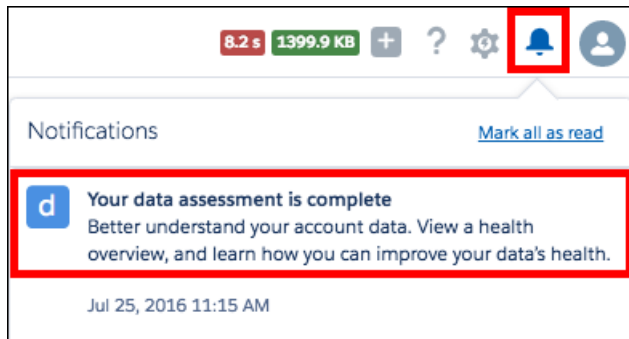

The Current Status field now shows that the rule is active in Assessment mode.

 **Important:** If your org has 100 or fewer accounts, no notification is sent when the assessment is ready.

If your org has more than 100 accounts, when your assessment is ready, Salesforce notifies you by email and in Lightning Experience.

EDITIONS

Available in Lightning Experience and Salesforce Classic in: **Professional**, **Enterprise**, **Performance**, and **Unlimited** Editions

The assessment can take 24 hours or more, depending on the size of your org. When it's ready, view it at any time by going to the App Launcher in Lightning Experience and selecting the Data Assessment app.

To share the assessment with others in your org, give them the Data Assessment permission.

[How to Read Your Account Data Assessment](#)

How to Read Your Account Data Assessment

A data assessment provides an overall data health score for your accounts. It summarizes what account records Data.com can match and update in your org, and it includes customer segmentation charts by industry, geography, employee count, and annual revenue. Data assessments are available for Salesforce orgs in the United States and Canada. This feature is only available in Lightning Experience.

Data Quality

EDITIONS

Available in Lightning Experience in: **Professional, Enterprise, Performance, Unlimited** Editions

Your data's health score is calculated using three factors.

Matchability

Matchability reflects how easy it is to keep your CRM records up-to-date and complete using Dun & Bradstreet data. Highly matchable CRM records generally have good fill rates for key identifiers, such as address fields and company website. A higher rating for matchability improves your overall data health rating.

Accuracy

Accuracy is a measure of the percentage of your account records that are complete and up-to-date when compared to the Dun & Bradstreet data set. If valuable marketing and sales data, such as firmographics and financials, is incomplete or out of date, the record is less useful. A higher rating for accuracy improves your overall data health rating.

Uniqueness

Uniqueness is based on the number of duplicate accounts that were identified from the matched records. The presence of duplicates affects your ability to find and report on data, reducing employee productivity and decreasing customer satisfaction. A higher rating for uniqueness improves your overall data health rating.

Match Analysis

The match analysis summarizes how many of your records can be matched to records in the Dun & Bradstreet data set. It also shows how up-to-date the field values in your records are.

Matched Up-to-Date

Percentage of your account records in which all field values exactly match the field values in the corresponding Dun & Bradstreet record.

Matched Outdated

Percentage of your account records that Data.com matched to a corresponding Dun & Bradstreet record, but that have field values that differ from the Dun & Bradstreet record.

Unmatched

Percentage of your account records that Data.com couldn't match to a record in the Dun & Bradstreet data set. If your unmatched record percentage seems high, it's possible that you aren't using the standard fields we match on. To request a custom assessment of your data, contact your Salesforce account manager.

Customer Segmentation

The customer segmentation charts give you detailed, graphical breakdowns of your account data. The charts show the fields for which Data.com can potentially provide more up-to-date and accurate data.

Industry

A breakdown of accounts in the top five industries, as identified by the two-digit Standard Industrial Classification (SIC) code.

Geography

A breakdown of accounts in a specific geographic region, according to companies' Dun & Bradstreet primary billing address.

Employee Count

A breakdown of the number of employees at the companies in your accounts. The count is based on the Dun & Bradstreet data for those companies, not your Salesforce account data.

Revenue

A breakdown of annual revenue for your accounts, based on Dun & Bradstreet annual sales volumes.

Setting Options for Selling

Customize Opportunities and Products

Get the most out of opportunities and products by setting up these additional features.

[Enable and Configure Similar Opportunities](#)

Allow users to find Closed/Won opportunities that match the attributes of an opportunity they're currently working on, so they can quickly access information that might help them close their open deals.

[Make It Easy to Add Products to Opportunities](#)

Set up Salesforce to prompt your users to add products when they create an opportunity. When you select `Prompt users to add products to opportunities` in Opportunity Settings, the label for the save button in a new opportunity record is "Save & Add Product."

[Enable Opportunity Update Reminders](#)

Updated and accurate opportunities drive precise forecasts. Enabling update reminders lets managers send their direct reports automated emails with a report on the team's open opportunities.

[Activate and Deactivate Product Prices with Their Products Simultaneously](#)

Set up Salesforce so that when you activate or deactivate a product, all related prices for that product are activated or deactivated at the same time.

[Restrict Price and Quantity Editing on Opportunity Products](#)

Control whether users can update the `Price` and `Quantity` fields on opportunities.

[Enable Product Schedules](#)

Create default revenue and quantity schedules for products that are delivered or paid for over a period of time. In addition, administrators can enable schedule settings that allow users to create schedules for individual products on opportunities.

[Using Product Families](#)

[Activate Big Deal Alerts](#)

Your organization can use alerts that automatically send an email notification for opportunities with large amounts. You can activate one opportunity alert for your organization. The alert message resembles the opportunity detail page including the page layout and language from a selected user.

[Customize Big Deal Alerts](#)

Your organization can use alerts that automatically send an email notification for opportunities with large amounts. Customize this alert to send an email when an opportunity reaches a threshold.

[Opportunities](#)

Enable and Configure Similar Opportunities

Allow users to find Closed/Won opportunities that match the attributes of an opportunity they're currently working on, so they can quickly access information that might help them close their open deals.

Note:

- Searches are constructed as *OR* statements. Therefore, Closed/Won opportunities need to match only one criteria to be considered similar. For best search results, include multiple search terms.
- When deciding which opportunity fields to display on the Similar Opportunities related list, be aware that users will see all fields that are displayed, regardless of sharing rules and user permissions.

1. From Setup, enter *Similar Opportunities* in the Quick Find box, then select **Similar Opportunities**.
2. Click **Edit**.
3. Select **Enable Similar Opportunities**.
4. Select the fields or related lists that you want Similar Opportunities searches to match against, and then click **Add**.
5. Select the fields to display in the Similar Opportunities related list.
6. Click **Save**.
7. Make sure the Similar Opportunities related list is added to the opportunity page layout.

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Enable Opportunity Update Reminders

Updated and accurate opportunities drive precise forecasts. Enabling update reminders lets managers send their direct reports automated emails with a report on the team's open opportunities.

1. From Setup, enter *Update Reminders* in the Quick Find box, then select **Update Reminders**.
2. Click **Edit**.
3. Select *Enable Update Reminders for My Organization*.
4. Optionally, select *Automatically Activate Reminders for Users with Direct Reports* to schedule opportunity update reminders for all users who have direct reports.
5. Click **Save**.
6. If you didn't automatically activate all users with direct reports, then select which users you want to be able to schedule opportunity update reminders. Any user that has direct reports can be added.
7. Click **Activate**.
8. Let those users know they can [start scheduling update reminders for their direct reports](#).

 **Note:** If an account owner is allowed to send opportunity update reminders, then all partner and customer portal users that are assigned as Executives to the account will receive the reminders, even if they don't have access to the opportunity. To avoid reminders being sent to these users, remove them from the Executive role.

SEE ALSO:

[Guidelines for Finding Similar Opportunities](#)

Activate and Deactivate Product Prices with Their Products Simultaneously

Set up Salesforce so that when you activate or deactivate a product, all related prices for that product are activated or deactivated at the same time.

1. From Setup, enter *Product Settings* in the Quick Find box, then select **Product Settings**.
2. Select *When changing active flag on a product record*.
3. Save your changes.

To activate or deactivate opportunity update reminders:

- "Manage Users"

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To auto-activate or auto-deactivate product prices:

- "Customize Application"

Restrict Price and Quantity Editing on Opportunity Products

Control whether users can update the `Price` and `Quantity` fields on opportunities.

Although `Sales Price` and `Quantity` fields are required, you can remove them from the page layout and they will be populated with a default value. Users will no longer see the fields or be able to add data to them.

To ensure that opportunity products use the price from the associated price book, remove the `Sales Price` field from the opportunity products page layout.

To use a quantity of one for all opportunity products, remove the `Quantity` field from the opportunity products page layout.

 **Note:** If you cannot remove these fields from the page layout, contact Salesforce to enable this option.

SEE ALSO:

[Activate and Deactivate Product Prices with Their Products Simultaneously](#)
[Products Concepts](#)

Enable Product Schedules

Create default revenue and quantity schedules for products that are delivered or paid for over a period of time. In addition, administrators can enable schedule settings that allow users to create schedules for individual products on opportunities.

1. From Setup, enter *Product Schedules* in the `Quick Find` box, then select **Product Schedules Settings**.
2. Select the appropriate checkboxes to enable quantity and revenue schedules for your organization. Note that disabling a schedule type automatically deletes all existing schedule information from products.

For a definition of each schedule type, see [Products, Price Books, and Schedules Overview](#) on page 1449.

3. For each schedule type you enable, select whether to automatically enable that schedule type for every product in your price books. This option automatically selects the `Quantity Scheduling Enabled` or `Revenue Scheduling Enabled` checkboxes on every product in your price books.
4. Click **Save**.

For greater control of schedules on a product-by-product basis, administrators can also determine which schedule types users can establish for each product.

 **Note:** Enabling or disabling schedules does not affect archived products.

If schedules are referenced in Apex, only one of the schedule types (quantity or revenue) can be disabled. For example, if Apex references the schedule object (represented as `OpportunityLineItemSchedule` in the code), one of the schedule types can be disabled, but not both.

[Products Concepts](#)

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To restrict price and unit editing:

- “Customize Application”

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Using Product Families

Use the `Product Family` picklist to categorize your products. For example, if your company sells both hardware and software, you can create two product families: Hardware and Software.

If your organization has customizable forecasting, your users can have a different quota for hardware sales and software sales. Users can also view forecasts for opportunities with hardware products separate from opportunities that include software products.

To begin using product families:

- Customize the `Product Family` picklist to include the different categories of products you sell.
- For each product in your price books, edit the product and select the appropriate `Product Family` value.
- If your organization has customizable forecasting, set a different quota for each product family for your users.
- If your organization has customizable forecasting, consider changing your forecast settings to display a particular forecast family value by default when your users click the Forecasts tab.

SEE ALSO:

[Products Concepts](#)

Activate Big Deal Alerts

Your organization can use alerts that automatically send an email notification for opportunities with large amounts. You can activate one opportunity alert for your organization. The alert message resembles the opportunity detail page including the page layout and language from a selected user.

Before you begin, you may want to decide which user has the page layout and language settings that you would like included in all alerts. This user must also have the “View All Data” permission.

1. From Setup, enter *Big Deal Alert* in the `Quick Find` box, then select **Big Deal Alert**.
2. Enter a name for the alert.
3. Enter a `Trigger Probability` and `Trigger Amount` in the corporate currency. An opportunity alert is triggered for opportunities with this probability and amount or greater. The alert triggers only for those opportunities that meet both the trigger probability and trigger amount threshold settings.

 **Note:** An opportunity can trigger a big deal alert even if it is in a currency that is different from the corporate currency. The `Amount` on an opportunity is converted to corporate currency and compared to the `Trigger Amount`. If you are using advanced currency management, dated exchange rates will be used.

4. Check the `Active` box if you would like to activate the new alert immediately after you save.
5. Enter the `From Email Name`.
6. Enter the `From Email Address`.

 **Note:** The From address must be either one of your verified organization-wide email addresses or the email address listed in your Salesforce profile.

7. Select a user that provides the appropriate opportunity page layout, language, and currency settings for the content of the emails. This user must have the “View All Data” permission.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To edit product families:

- “Customize Application”

For organizations that use multiple currencies, all alerts include the amount in the currency of the opportunity. If the opportunity currency is different than the currency of the user selected in this step, both currencies are included in the email.

Enter a list of email recipients separated by commas. You can also include **CC:** and **BCC:** recipients but all must be valid email addresses.

The **BCC:** field is not available if your organization has enabled compliance BCC emails.

8. Check the **Notify Opportunity Owner** box if you would like to include the owner of the opportunity in the alert emails.
9. Click **Save**.

 **Note:** An opportunity alert sends a notification the first time an opportunity reaches the threshold. So, an opportunity that reaches the threshold with 90% probability will not trigger additional alerts if the probability subsequently goes higher. However, an opportunity that already triggered an alert and then fell below the threshold can trigger a second alert if it crosses that threshold again.

When working remotely in Connect Offline, you can make changes to opportunities that trigger alerts. These alert messages will be sent when you update your data.

[Customize Big Deal Alerts](#)

Customize Big Deal Alerts

Your organization can use alerts that automatically send an email notification for opportunities with large amounts. Customize this alert to send an email when an opportunity reaches a threshold.

Your threshold consists of an opportunity amount and probability. For example, you can send an email to your team when an opportunity of \$500,000 has reached a probability of 90%.

USER PERMISSIONS

To enable team selling:

- “Customize Application”

Considerations for Customizing Opportunity Teams

Make opportunity teams work better for your business by customizing opportunity team roles, page layouts, and more. Before you do, consider these key points.

- Opportunity teams are available in Lightning Experience, but you must switch to Salesforce Classic to use some related features, such as Opportunity Splits. For more information, review the Lightning Experience limitations for Sales features.
- You can create a maximum of 50 custom fields for an opportunity team.
- If you delete a custom field, filters that use the custom field are also deleted, and the result of assignment or escalation rules that rely on the custom field's data can change.
- To display opportunity team member information on a parent page, you must link the team member and the parent. For example, to display team member information on the related account detail page, add a custom lookup field called Account to the Opportunity Team editor, and then set this field to the parent account for each opportunity team member.
- You can't create a lookup from an object, such as an account, to an opportunity team member.
- Validation rules and Apex triggers aren't supported when a user adds his or her default opportunity team on an opportunity.

SEE ALSO:

[Guidelines for Using Opportunity Teams](#)

Customize Opportunity Team Roles

Every opportunity team member has a role in that opportunity, such as Account Manager or Sales Rep. To track the roles that team members play in your company, customize your opportunity team roles in Salesforce.

Warning:

- Leave the Opportunity Owner unchanged. It's needed for Opportunity Splits.
 - Opportunity teams share roles with account teams. If you remove an opportunity team role, that role is no longer listed as an account team role.
1. From Setup, enter *Team Roles* in the *Quick Find* box, then select **Team Roles** under Opportunity Teams.
 2. Edit the picklist values for team roles as needed.
 3. Save your changes.
 4. To update a changed picklist value in all your files, enter *Replace Team Roles* in the *Quick Find* box, then select **Replace Team Role**.

Considerations for Updating Team Members on Multiple Records

Before you use a mass team reassignment wizard, consider a few key points.

- If you don't see the **Mass Reassign Account Teams** or **Mass Reassign Opportunity Teams** option in Setup, go to the Accounts or Opportunities page, and then click the option in the Tools section.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

Opportunity Splits available in: **Performance** and **Developer** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To set up team roles:

- "Customize Application"

- If Opportunity Splits is enabled, and you remove a team member assigned to a split that must total 100%, the removed member's percentage transfers to the opportunity owner. You can't remove the opportunity owner.
- When you're selecting the team members to change in records:
 - For account teams, select the appropriate account, contact, case, and opportunity access.
 - For opportunity teams, select the appropriate opportunity access. Then complete any custom fields that have been defined and added to the opportunity team page layout.

Update Team Members on Multiple Records

If your Salesforce org uses account teams or opportunity teams, keep your records up-to-date the easy way. Use the mass team reassignment wizards to add, remove, and replace team members on multiple records at the same time.

1. From Setup, enter *Mass Reassign* in the *Quick Find* box, then select **Mass Reassign Account Teams** or **Mass Reassign Opportunity Teams**.

The Step 1 page of the wizard appears.

2. Complete the wizard as instructed.
3. Review the number of changed records, and then click **Done** to exit the wizard.

[Considerations for Customizing Opportunity Teams](#)

Considerations for Disabling Team Selling

Before you disable team selling, consider the following key points.

- Disabling team selling permanently removes all opportunity teams from all opportunities and deletes default opportunity teams.
- If Opportunity Splits is enabled, you can't disable team selling.
- If team members are referenced in Apex, you can't disable team selling.
- Before you disable team selling, do the following.
 - Disable Opportunity Splits. This action permanently deletes all split data from your Salesforce org.
 - Delete all custom fields, custom buttons and links, page layouts, validation rules, workflow rules, and Apex triggers that you've added to opportunity teams.
 - Delete all custom reports that include opportunity team information.
 - Uninstall any Apex packages that use opportunity teams.
- To disable team selling:
 - You need the "Customize Application" permission.

2. [Enable Opportunity Splits](#)
Make it easy for your sales reps to collaborate on opportunities and share opportunity revenue with team members.
3. [Create Custom Opportunity Split Types](#)
To better reflect your business operations, create custom opportunity split types on opportunity currency fields. Create up to three types to use in addition to revenue and overlay splits. Then, specify whether each type always totals 100%.
4. [Considerations for Removing Opportunity Split Types](#)
Typically, you *deactivate* an opportunity split type when you have five split types (the maximum) and you need another. Or you *delete* a seldom-used type to reduce storage. Before you deactivate or delete an opportunity split type, consider these key points.
5. [Considerations for Editing Multi-Line Layouts for Opportunity Splits](#)
Before you customize the fields that Salesforce displays when sales reps edit opportunity splits, consider these key points.
6. [Considerations for Disabling Opportunity Splits](#)
If your Salesforce org isn't using Opportunity Splits, you can disable the feature. Before you do so, consider these key points.

EDITIONS

Available in: Salesforce Classic

Available in: **Performance** and **Developer** Editions

Available in: **Enterprise** and **Unlimited** Editions with the Sales Cloud

Considerations for Enabling Opportunity Splits

Before you enable Opportunity Splits, consider these key points.

General considerations

- You must enable team selling before you can enable Opportunity Splits.
- Enabling Opportunity Splits changes the opportunity records in your Salesforce org. Here's what happens.
 - A script temporarily disables triggers, workflows, and validation rules for opportunity team records, mass reassignment of opportunity team members, and mass transfer of accounts and opportunities.
 - The opportunity owner is included on each opportunity team. Because the Opportunity Owner role is essential for splits, you can't remove it.
 - If you enable split types that total 100%, new opportunity split records include a default entry for the owner. This owner initially receives 100% of the split amount. (These additional records require more data storage. To see how this extra storage requirement affects your Salesforce org, search for "Monitoring Storage Resources" in the Salesforce Help.)

EDITIONS

Available in: Salesforce Classic

Available in: **Performance** and **Developer** Editions

Available in: **Enterprise** and **Unlimited** Editions with the Sales Cloud

- You can have up to five split types, including inactive split types. To rename, temporarily deactivate, or permanently delete split types, return to the Opportunity Splits setup page, and then click **Edit Split Types**. Deleting split types deletes splits data. You can't delete the default split types.
- If **Let users add members to opportunity teams while editing splits** isn't selected, users must be added to an opportunity team before they can be added to an opportunity split.

Available time

Enabling Opportunity Splits starts a process that sets up splits on every opportunity in your Salesforce org. Depending on the number of opportunity records, this process can take hours. You can still work with Salesforce while the process is ongoing. Automated email notifications keep you up-to-date on the script's status. Consider running the process overnight.

Inactive currencies

If your Salesforce org has inactive currencies that have been active in the past, you probably have opportunity records that use those currencies. Those records are part of the split enablement process, but the currency's inactive status causes the process to fail. To help prevent a failure, or fix a failure that occurs:

- Make the inactive currency active during the splits enablement. (You can make it inactive again after the process is finished.)
- Delete the opportunities with the inactive currency. This solution works best when your Salesforce org has only a few opportunities with an inactive currency and you don't need them for reporting or historical purposes.

Inactive users

Similar to inactive currencies, if your Salesforce org has inactive users that worked with opportunities, you probably have opportunity records still owned by those users. The split enablement process accesses those records, but the users' inactive status causes the process to fail. To help prevent a failure, or fix a failure that occurs:

- Make the inactive users active during the splits enablement. (You can make them inactive again after the process is finished.)
- Delete all opportunities owned by inactive users. This solution works best when your Salesforce org has only a few opportunities owned by inactive users and you don't need them for reporting or historical purposes.
- Temporarily allow editing of inactive users in your Salesforce org.

Note: Turning on editing of inactive users could alter archived data. If you are enabling this permission only to turn on opportunity splits, we recommend limiting who can use it, and turning it back off again when you're done.

1. From Setup, enter *User Interface* in the Quick Find box, then select **User Interface**.
2. Select **Enable "Set Audit Fields upon Record Creation" and "Update Records with Inactive Owners" User Permissions** and save your changes.
3. Enable **Update Records with Inactive Owners** for profiles or permission sets.

Mass operations in progress

If you're running a mass operation, such as Mass Transfer or Mass Reassign Team Member, enabling Opportunity Splits at the same time can cause the enablement to fail. Make sure that all mass operations are finished before you start to enable Opportunity Splits.

Enable Opportunity Splits

Make it easy for your sales reps to collaborate on opportunities and share opportunity revenue with team members.

1. From Setup, enter *Opportunity Splits* in the Quick Find box, then select **Settings**.
2. Click **Set up Opportunity Splits**.
3. To better reflect your business process, do any of the following.
 - Rename or deactivate the default revenue and overlay splits, which are based on the *Opportunity - Amount* field.
 - Click **Add a new split type** to split another currency field and specify whether splits on that field must total 100%.
4. Save your changes.
5. Select the page layouts to display the Opportunity Splits related list.
6. To ensure that users with customized page layouts see the related list, select **Add to users' customized related lists**.
7. Save your changes.
8. Click **Let users add members to opportunity teams while editing splits** to enable quicker changes to those teams.

For information about letting sales reps include splits in forecasts, see [Enable Forecast Types for Collaborative Forecasts](#).

SEE ALSO:

- [Enable Team Selling](#)
- [Create Opportunity Splits](#)
- [Change a Record's Owner](#)

Create Custom Opportunity Split Types

To better reflect your business operations, create custom opportunity split types on opportunity currency fields. Create up to three types to use in addition to revenue and overlay splits. Then, specify whether each type always totals 100%.

-  **Note:** You can split most currency fields created on opportunities, including custom currency fields and roll-up summary fields, but not formula currency fields.
1. Contact Salesforce to have custom split types enabled for your Salesforce org.
Changes to opportunity split types are completed by a background process. You're notified by email when the process is finished. We recommend not editing splits on opportunities until changes are complete.
 2. From Setup, enter *Opportunity Splits* in the Quick Find box, select **Settings**, and then click **Edit Split Types**.
 3. Click **+ Add a new split type**.
 4. Define the settings as needed.
 5. Save your changes.

USER PERMISSIONS

To create custom split types for opportunities:

- "Customize Application" and "Modify All Data"

Considerations for Removing Opportunity Split Types

Typically, you *deactivate* an opportunity split type when you have five split types (the maximum) and you need another. Or you *delete* a seldom-used type to reduce storage. Before you deactivate or delete an opportunity split type, consider these key points.

- Deactivating a split type removes it from the Salesforce interface while saving the underlying data. That way, you can reactivate it later.
- Deleting a split type permanently removes all related data.
- To deactivate or delete a split type:
 - You need the “Customize Application” permission.
 - Access Opportunity Splits Settings.
- If your Salesforce org contains many opportunities, the script that deletes split types can take several hours.

SEE ALSO:

[Considerations for Disabling Opportunity Splits](#)

[Enable Opportunity Splits](#)

Considerations for Editing Multi-Line Layouts for Opportunity Splits

Before you customize the fields that Salesforce displays when sales reps edit opportunity splits, consider these key points.

- To edit layouts, you need the “Customize Application” permission.
- You can’t add rich text fields or multi-select picklists to the multi-line layout for opportunity splits.
- You edit rich text fields and multi-select picklists on the opportunity split detail page.

Considerations for Disabling Opportunity Splits

If your Salesforce org isn’t using Opportunity Splits, you can disable the feature. Before you do so, consider these key points.

- Disabling Opportunity Splits is irreversible. You can’t retrieve lost splits data.
- If you disable Opportunity Splits, here’s what happens.
 - Splits on all opportunities in your org are deleted.
 - Split reports are deleted.
 - Custom reports that were built using split report templates still appear on the Reports tab, but you can’t access them.
- To disable Opportunity Splits:
 - You need the “Customize Application” permission.
 - You access Opportunity Splits Settings.

Customize Options for Leads

Set Up Lead Management

Help your sales teams track prospects and build a strong pipeline of opportunities. Your sales teams use Salesforce leads to work and qualify their prospects with the goal of creating opportunities.

Using leads can give your sales staff instant access to the latest prospects and ensures that no leads are ever dropped. Successful lead management helps sales and marketing manage the inbound lead process, track lead sources, and analyze return on their marketing investment.

From Setup, get started using lead management.

- Go to the object management settings for leads. From the fields section, create custom lead fields that track information specific to your company. Also, map your custom lead fields to account, contact, and opportunity fields so that the data gets converted when users convert leads. Edit the `Lead Status` picklist to choose the default status for new and converted leads.
- Enter `Lead Settings` in the `Quick Find` box, then select **Lead Settings** to specify your default lead settings.
- Enter `Assignment Rules` in the `Quick Find` box, then select **Lead Assignment Rules** to set up lead assignment rules that automatically assign leads.
- Enter `Web-to-Lead` in the `Quick Find` box, then select **Web-to-Lead** to automatically capture leads from your website.
- To let your marketing and sales operations teams edit converted leads, assign those users the "View and Edit Converted Leads" permission.

To create sales queues for leads or custom objects, from Setup, enter `Queues` in the `Quick Find` box, then select **Queues**.

Managing Leads

Before your organization begins using leads, you can perform the following setup:

- Customize the default Lead Settings.
- Create lead queues to help manage the distribution of leads.
- Set up lead assignment rules to automatically assign leads.
- Set up Web-to-Lead to automatically capture leads from your website.
- Import your organization's existing leads.
- Create custom lead fields.
- Map custom lead fields to other custom fields for lead conversion.

EDITIONS

Available in: **Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

- Edit the `Lead Status` picklist to choose the default status for new and converted leads.

SEE ALSO:

[Leads](#)

Define Default Settings for Lead Creation

Optimize lead management features for your sales teams so they can nurture leads efficiently and prevent duplicate records when it's time to convert the leads to contacts, accounts, and opportunities.

1. From Setup, enter *Lead Settings* in the `Quick Find` box, then select **Lead Settings**, and then click **Edit**.
2. Define the default lead owner and lead conversion settings.
3. Save your settings.

Map Custom Lead Fields for Lead Conversion

Get the most out of records created from the leads your sales teams convert when you map custom lead fields to the fields of records they're converted to.

When sales reps convert qualified leads, the information from the standard lead fields appears in standard fields for contact, account, and opportunity records. If you set up custom lead fields, you specify how that custom information converts to custom fields in accounts, contacts, and opportunities.

1. From the object management settings for leads, go to the fields section, then click **Map Lead Fields**.
2. For each custom lead field, choose a custom account, contact, or opportunity field into which you want the information inserted when you convert a lead. In Lightning Experience, a custom lead field can map to account, contact, and opportunity fields at the same time.
3. Save your work.

 **Note:** In Lightning Experience and Salesforce Classic, custom field mapping for lead conversion is available in orgs that use APEX Lead Convert, and not in orgs that use the older PLSQL Lead Convert.

Guidelines for Mapping Custom Lead Fields for Lead Conversion

Learn the best practices for mapping custom lead fields to custom fields in contacts, accounts, and opportunities. Mapping custom fields helps your sales reps retain that important information when they convert qualified leads to track new potential deals.

- The following Lead custom field types can only be mapped to custom fields of the same data type.
 - Checkbox
 - Currency
 - Date
 - Date/Time
 - Email
 - Geolocation
 - Encrypted (Classic)
 - Number
 - Percent
 - Phone
 - Multi-select Picklist
 - Long Text
 - Rich Text
 - URL
- Each target field can have only 1 source field mapped to it.
- You can map auto-number fields to field types text or text area.
- You can map text and text area fields to custom field types of text, text area, long text, and picklist. If you map to a picklist field, the picklist must be unrestricted.
- You can map custom picklist fields to custom field types of text, text area, and picklist (unrestricted), but not long text.
- When mapping between picklist and text fields, your data truncates if the source field value is longer than the target field allows.
- Custom lookup fields can be mapped to a lookup field pointing to the same object. For example, a lead custom lookup field pointing to the Account object can be mapped to a contact custom lookup field that also points to the Account object.
- When mapping custom lead fields, the selected account, contact, or opportunity field must be of equal or greater length.
- You can't delete lead, account, contact, or opportunity fields included in Lead Custom Field Mapping. To delete a field, first remove its mapping.
- You can't change the field type of a field that's included in Lead Custom Field Mapping. To change a field's type, remove its mapping first.
- You can't uninstall a package that references fields included in Lead Custom Field Mapping. Remove any mappings of referenced fields before uninstalling the package.
- When mapping lead custom number, currency, or percent fields the target field must have the same length and number of decimal places.

 **Note:** Do not map custom formula fields to other formula fields or any other type of field.

[Leads Created from Your Company's Website](#)

[Generate Leads from Your Website for Your Sales Teams](#)

Generate Leads from Your Website for Your Sales Teams

Automatically generate up to 500 leads per day with the prospecting data from your company's website visitors. When you set up Web-to-Lead, Salesforce captures prospects who provide contact information. You can also redirect prospects to other Web pages that are critical to campaign success.

You must have a reCAPTCHA key pair if you want to use spam filtering.

1. From Setup, enter *Web-to-Lead* in the **Quick Find** box, then select **Web-to-Lead**.
2. Click **Edit** to enable or change Web-to-Lead settings.
3. If you want automate email replies to prospects, select a default response template. If you set up response rules to use different email templates based on the information prospects provide, the default response template is used when no auto-response rules apply. Templates must be marked *Available for Use*.
4. Save your changes.
5. To create a form that captures prospect details on your website, click **Create Web-to-Lead Form**, and then select fields you want to include.
6. Select fields to include on your Web-to-Lead form. Use the Add and Remove arrows to move fields between the Available Fields list and the Selected Fields list, and use the Up and Down arrows to change the order of the fields on your form.
 - Select the **Campaign** field.
 - For organizations using multiple currencies, add the **Lead Currency** field if you add currency amount fields, otherwise all amounts will be captured in your corporate currency.
 - Use a custom multi-select picklist to allow potential customers to express interest in several products.
 - For organizations using lead record types, select the **Lead Record Type** field if you want users to select a record type for Web-generated leads.
7. If your organization uses the Translation Workbench or has renamed tabs, select the language for the form labels displayed on your Web-to-Lead form. The source of your Web-to-Lead form is always in your personal language.
8. Specify the complete URL to which users should be directed after they submit their information—for example, your company's home page for a thank you page—and click **Generate**.
9. If you want to add a reCAPTCHA widget to the lead submission form, select **Enable spam filtering (recommended)**.
 - Specify the reCAPTCHA API Key Pair using the lookup.
 - If you want to allow all traffic in the case that the Google reCAPTCHA servers aren't available, select **Enable server fallback**.
10. Copy the generated HTML code and provide it to your company's webmaster to incorporate into your website.

EDITIONS

Available in: Salesforce Classic

Available in: **Group, Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To set up Web-to-Lead:

- "Customize Application"

11. Click **Finished**.

To test the Web-to-Lead form, add the line `<input type="hidden" name="debug" value="1">` to your code. This line redirects you to a debugging page when you submit the form. Remove this line before releasing the Web-to-Lead page to your website.

Leads generated from your website are initially marked with the “default status” specified by the `Lead Status` picklist. For Web leads generated as part of a campaign, the member status of the new leads is set to the `Member Status` value specified in the form, or to the “default” member status if the `Member Status` field is not included in the form.

In addition, new leads are marked as “Unread,” and are changed to “Read” when viewed or edited by the lead owner. Users can select the My Unread Leads list view to quickly locate their new leads.

 **Note:** The format for date and currency fields captured online is taken from your organization’s default settings - `Default Locale` and `Currency Locale`.

The daily limit for Web-to-Lead requests is 500. If your organization exceeds its daily Web-to-Lead limit, the Default Lead Creator (specified in the Web-to-Lead setup page) receives an email containing the additional lead information. See [How many leads can we capture from our website?](#) on page 1396 for additional information on Web-to-Lead limits.

If a new lead cannot be generated due to errors in your Web-to-Lead setup, Customer Support is notified of the problem so that we can help you correct it.

Salesforce runs field validation rules before creating records submitted via Web-to-Lead and only creates records that have valid values.

All universally required fields must have a value before a record can be created via Web-to-Lead.

Salesforce doesn’t support rich text area (RTA) fields on Web-to-Lead forms. If you use RTA fields on your forms, any information entered in them is saved as plain text when the lead is created.

Increase Process Adoption

Path

Path guides your users along the steps in a process, such as working an opportunity from a fresh lead to a successfully closed deal. Path is available for leads, opportunities, quotes, and custom objects in Lightning Experience, and for opportunities in all versions of the Salesforce1 mobile app.

EDITIONS

Available in: **Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

The screenshot shows a Salesforce Lead record for Mr. Damien Joly. At the top, there are buttons for 'Convert', 'Edit', and 'Delete'. Below the record details (Title, Company, Phone, Email), a path is displayed with steps: 'Open' (highlighted in green), 'Contacted', and 'Converted'. A 'Mark Status as Complete' button is also present. Below the path, there are two sections: 'KEY FIELDS' and 'GUIDANCE FOR SUCCESS'. The 'KEY FIELDS' section lists Name, Company, Phone, Website, and Annual Revenue. The 'GUIDANCE FOR SUCCESS' section lists two tips: 'Respond to lead within 5 minutes.' and 'Visit your lead's website to learn about their business.'

You can set up one path for each available record type. Steps for each path (1) are based on values in a picklist you select when you set up the path.

Select up to five key fields to focus users on the most critical information (2). At each step on the path, help users succeed with handy step-specific guidance, such as tips, links, and company policy information (3).

To enable Path and set up new paths, from Setup, enter *Path Settings* in the Quick Find box.

Help Sales Reps Manage Their Meetings and Tasks

Help Your Sales Reps Manage Events and Tasks Together

Give sales reps a more accurate perspective on their leads, contacts, opportunities, and accounts. Use combined activities settings to help them manage and track meetings and tasks. Options differ for Lightning Experience and Salesforce Classic.

[Considerations for the Activity Composer and Activity Timeline in Lightning Experience](#)

In some Salesforce orgs, page layouts or record types need adjustments to prevent tabs from disappearing from the activity composer. Also, if you customize the display and order of fields in the activity timeline, be aware of the behavior of certain fields.

[Considerations for Activity Reminder Setup in Salesforce Classic](#)

Disabling individual preferences for displaying event and task reminders erases users' activity reminder settings. If you re-enable activity reminders later, users receive reminders only for activities they create or edit after you re-enable the setting.

[Considerations for Shared Activities \(Multiple Contacts on an Activity\)](#)

Use Shared Activities to let users relate multiple contacts to each event or task and to view information about open activities and activity history on contact detail pages. If you enable Shared Activities, or if it's enabled by default in your Salesforce org, you can't disable it. Whether you enable Shared Activities or leave it disabled, review these considerations.

[Guidelines for Shared Activities \(Multiple Contacts on an Activity\)](#)

To include related contacts alongside other event and task details, include the Name related list in the event and task detail page layouts.

[Guidelines for Customizing the Task List in Lightning Experience](#)

Display Tabs in Activity Composer by Adjusting Page Layouts and Record Types

In some Salesforce orgs, displaying tabs in the activity composer in Lightning Experience requires you to adjust settings.

[Configure the Call, Task, and Event Tabs in the Activity Composer in Lightning Experience](#)

Is the call, task, or event tab missing from the activity composer on opportunities or other objects in your Salesforce org? Check your layout, record type, and permissions settings.

[Configure the Email Action in the Activity Composer in Lightning Experience](#)

Is the Email action missing from the activity composer on opportunities or other objects in your Salesforce org? Check your layout and permissions settings.

EDITIONS

Available in Lightning Experience in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Configure the Call, Task, and Event Tabs in the Activity Composer in Lightning Experience

Is the call, task, or event tab missing from the activity composer on opportunities or other objects in your Salesforce org? Check your layout, record type, and permissions settings.

1. Look at the object's page layout—opportunities, leads, accounts, contacts, or a custom object that supports activities. Check whether you've included the corresponding action in the Salesforce1 and Lightning Experience Actions section of the object's page layout.

 **Note:** An object page inherits the actions of the global page layout unless you've customized the actions in the Salesforce1 and Lightning Experience Actions section of the object's page layout.

2. Have you created a custom record type for calls, tasks, or events? (Record types determine a record's layout and picklist values. You can define one or more record types for users to choose from when they create an event or a task.) Look at the page layout that you've associated with the custom record type. Ensure that you've assigned the custom record type to the corresponding action. For example, if you created a custom record type for calls, assign it to the Log a Call action.
3. Ensure that your users have permission to view that custom record type.

EDITIONS

Available in Lightning Experience in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Considerations for the Timeline and Activity Related Lists

On the detail page for objects that support activities, Lightning Experience doesn't display the Open Activities and Activity History related lists along with other related lists. It displays the activity timeline instead. Objects that support activities include opportunities, leads, accounts, contacts, contracts, and custom objects on which you enable activities.

EDITIONS

Available in Lightning Experience in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Considerations for Customizing Activity Timeline Fields

You can use compact layouts to customize the display and order of fields for items in the activity timeline. Be aware that certain essential fields remain in the timeline even if you delete them from a layout. Icons in the timeline aren't customizable.

Display and Order of Fields

Use compact layouts to customize the display and order of fields in the timeline. However, certain fields remain in the timeline even if you remove them from the layout, because they contain essential activity information. For example, suppose that you remove the due date, the date and time, or the task status fields from the compact layouts. The event start date and time, the task checkbox, the task due date, and the call logging date still appear on activities in the timeline. The description field on events and the comments field on tasks also always appear in the timeline, although they aren't available in the compact layout. The remaining fields visible in the timeline reflect the fields you include in the compact layout.

EDITIONS

Available in Lightning Experience in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Icons

The icons for activity types (events, tasks, calls, and email) in the timeline aren't customizable.

Considerations for Activity Reminder Setup in Salesforce Classic

Disabling individual preferences for displaying event and task reminders erases users' activity reminder settings. If you re-enable activity reminders later, users receive reminders only for activities they create or edit after you re-enable the setting.

EDITIONS

Available in Salesforce Classic in: **All** Editions

Considerations for Shared Activities (Multiple Contacts on an Activity)

Use Shared Activities to let users relate multiple contacts to each event or task and to view information about open activities and activity history on contact detail pages. If you enable Shared Activities, or if it's enabled by default in your Salesforce org, you can't disable it. Whether you enable Shared Activities or leave it disabled, review these considerations.

Enabling Shared Activities

Limit on Number of Contacts

Your sales reps can relate up to 50 contacts to each event or task.

Time Needed to Enable Shared Activities

Enabling Shared Activities takes up to 48 hours, depending on the volume of activity in your Salesforce org. During this process, sales reps can continue working with events and tasks. The Activity Settings page in Setup displays messages about the status and what to do if the process doesn't finish.

Display of Related Contacts Alongside Other Activity Details

To show related contacts on event and task detail pages, ensure that the Name related list is included on event and task page layouts. Be aware that the items in the Name related list aren't fields, so they don't adhere to field-level security settings.

Visualforce Display of Events

If a Visualforce page uses the standard controller to display Shared Activities events, use API version 26.0 or later.

Reports

When more than one contact is related to an event, activity reports don't show child events to that event if they are assigned to users who aren't below you in the role hierarchy.

Leaving Shared Activities Disabled

Limitations in Custom Reports Based on Activity Relationships

If you don't enable Shared Activities, custom reports based on activity relationships work as follows.

- They show only invitees to an event but not the organizer.
- They don't show events to which no one has been invited.

No Support for Activity Custom Lookups

If you don't enable Shared Activities, custom report types that use activity custom lookup field relationships aren't supported.

Duplicate Records Created for Email

If you don't enable Shared Activities and a sales rep sends an email to multiple contacts, Salesforce creates a closed task for each contact. As a result, Salesforce creates duplicate records instead of just one task corresponding to the email.

Guidelines for Shared Activities (Multiple Contacts on an Activity)

To include related contacts alongside other event and task details, include the Name related list in the event and task detail page layouts.

Help Your Sales Reps Manage Events and Calendars

Optimize the way your sales reps manage their meetings and scheduling. Options differ for Lightning Experience, Salesforce Classic, and Salesforce1.

[Create and Manage a Public Calendar or a Resource Calendar in Salesforce Classic](#)

Use a public calendar to manage group activities. For example, track a group's events, such as marketing events, product releases, or training classes, or schedule a common activity, such as a team vacation. Use a resource calendar to schedule the use of a shared resource, such as a conference room or an overhead projector.

[Set Up Cloud Scheduler in Salesforce Classic](#)

The New Meeting Request button is enabled by default on page layouts. It lets your users use Cloud Scheduler to request meetings with customers. The button appears on the Open Activities related list on the detail pages of contacts, leads, and person accounts.

[Event Fields](#)

Event records have standard fields for tracking and recording event details.

SEE ALSO:

[Customization Options for Events and Calendars](#)

Create and Manage a Public Calendar or a Resource Calendar in Salesforce Classic

Use a public calendar to manage group activities. For example, track a group's events, such as marketing events, product releases, or training classes, or schedule a common activity, such as a team vacation. Use a resource calendar to schedule the use of a shared resource, such as a conference room or an overhead projector.

You can create an unlimited number of calendars.

- View and edit your existing public calendars and resource calendars.
From Setup, enter *Public Calendars and Resources* in the Quick Find box, then select **Public Calendars and Resources**.
- Create a public calendar or a resource calendar.
 1. Click **New**, name the calendar, select **Active**, and save the calendar.
 2. Click **Sharing**. Add the public groups, roles, or people you want to share the calendar with.
 3. In Calendar Access, specify the way you want to share the calendar.

Hide Details

Other people can see whether given times are available, but they can't see other information about events in the calendar.

Hide Details and Add Events

Other people can see whether given times are available, but they can't see details of events. Other people can insert events in the calendar.

Show Details

Other people can see detailed information about events in the calendar.

Show Details and Add Events

Other people can see detailed information about events in the calendar, and they can insert events in the calendar.

EDITIONS

Available in Salesforce Classic in: **All Editions Except Group Edition and Personal Edition**

USER PERMISSIONS

To manage public calendars:

- "Customize Application"

To manage resource calendars:

- "Customize Application"

To view a related record on an event:

- Users must have "Read" permission

Full Access

Other people can see detailed information about events in the calendar, insert events in the calendar, and edit existing events in the calendar.

- Delete a public calendar.
 1. From Setup, enter *Public Calendars and Resources* in the **Quick Find** box, then select **Public Calendars and Resources**.
 2. Click **Del** next to the name of a calendar.

Ensure that users have the appropriate permissions. For example, an event invitee who doesn't have "Read" permission on opportunities can't view the opportunity associated with the event.

SEE ALSO:

[Access to Activities](#)

Set Up Cloud Scheduler in Salesforce Classic

The New Meeting Request button is enabled by default on page layouts. It lets your users use Cloud Scheduler to request meetings with customers. The button appears on the Open Activities related list on the detail pages of contacts, leads, and person accounts.

 **Important:** Cloud Scheduler is unavailable in Salesforce orgs created in Winter '17 or later. If you enabled Cloud Scheduler before Winter '17, it remains available in your org until Winter '18. However, if you remove the **New Meeting Request** button, you can't add it back. For more information, see [Cloud Scheduler to begin phased retirement with Winter '17](#).

Use the following methods alone or in combination to control whether the New Meeting Request button is displayed on detail page layouts. The button is also available in the Calendar section on the Home tab when the Requested Meetings subtab is enabled. The following add and remove actions don't affect the button in the Calendar section.

EDITIONS

Available in Salesforce Classic in: **All Editions Except Personal Edition**

USER PERMISSIONS

To customize page layouts and activity settings:

- "Customize Application"

Cloud Scheduler Quick Setup for Multiple Page Layouts

1. From Setup, enter *Cloud Scheduler* in the **Quick Find** box, and then select **Cloud Scheduler**.
2. If you're adding the button and the new UI theme isn't already enabled, enable it on the User Interface page in Setup.
3. To add the **New Meeting Request** button to the Open Activities related list on all eligible page layouts, click **Add Button**. To remove the button from all current page layouts, click **Remove Button**.

Cloud Scheduler Manual Setup for Individual Page Layouts

1. If you're adding the button and the new UI theme isn't already enabled, enable it on the User Interface page in Setup. See User Interface Settings.
2. Add or remove the **New Meeting Request** button to the Open Activities related list on the page layouts you want.
 - Contacts
 - Leads
 - Person Accounts (if enabled)

To allow users to request a meeting with a person account, add the `Email` field to the page layout. From the object management settings for person accounts, go to Page Layouts.

Cloud Scheduler Optional Settings

You can optionally enable these settings to make Cloud Scheduler even more useful.

- Ask your users to install [Salesforce for Outlook](#).

We recommend that users sync their calendar events between Salesforce and Outlook to propose meeting times based on their availability displayed in their Salesforce calendar.

- Add your company logo to the meeting requests sent to invitees.
- Show requested meetings in the Calendar section on the Home tab.

The Requested Meetings subtab is displayed by default. If you remove the New Meeting Request button from all page layouts, we recommend that you also remove the Requested Meetings subtab because your users can't request meetings.

- Enable your Partner users to request meetings using Cloud Scheduler. The customPartner User profile must have [the correct user permissions](#) on page 1912, and it must be active and assigned to your Partner users.

User Permission Requirements

Users must have the "Send Email" and "Edit Events" permissions to request meetings. These permissions are enabled in most standard profiles.

If users don't have the required permissions, they:

- Can't see the New Meeting Request button on the Open Activities related list
- Can't edit, reschedule, or cancel requested meetings

Field-Level Security Requirements

In most cases, you don't need to change field-level security settings to allow users to request meetings. However, if you've changed the default field-level security settings for certain profiles in your Salesforce org, refer to the following table to check whether the changes prevent users from requesting meetings.

 **Note:** In permission sets and the enhanced profile user interface, the setting labels differ from those in the original profile user interface and in field-level security pages for customizing fields.

Object	Field	Required Field-Level Security Settings		Description
		Permission Sets and Enhanced Profile User Interface	Original Profile User Interface and Customize Field Pages	
Event	Name	Read and Edit	Visible (with Read-Only <i>not</i> selected)	If this field isn't readable, the New Meeting Request button isn't displayed on the Open Activities related list, and an "insufficient privileges" message is displayed when a user tries to change (confirm or reschedule) or view a requested meeting.

Object	Field	Required Field-Level Security Settings		Description
		Permission Sets and Enhanced Profile User Interface	Original Profile User Interface and Customize Field Pages	
				If this field is readable but not editable, the New Meeting Request button isn't displayed on the Open Activities related list, and requested meetings open as read only, preventing users from confirming or rescheduling the meeting.
	Description	Read	Visible	By default, when a requested meeting is confirmed, the last message sent from the meeting organizer is displayed in the <code>Description</code> field for the new event. However, if field-level security for the <code>Description</code> field isn't readable, the last message isn't displayed in the <code>Description</code> field, even if field-level security is later set to readable.

[Guidelines for Adding Custom Logos to Meeting Requests in Salesforce Classic](#)

You can display a custom logo in communications, such as meeting requests. Use these guidelines for custom logo images.

SEE ALSO:

[Activities](#)

Guidelines for Adding Custom Logos to Meeting Requests in Salesforce Classic

You can display a custom logo in communications, such as meeting requests. Use these guidelines for custom logo images.

A custom logo appears in the following locations.

- Email requests sent to invitees when you request a meeting or schedule an event
- Meeting response pages where invitees select the times they can meet
- Event response pages where invitees accept or decline the event

When you use a custom logo, keep the following in mind.

- The image must be smaller than 20 KB and formatted as a .gif, .jpeg, or .png file.
- For best results, use an image smaller than 130 pixels wide, 100 pixels high, and 72 pixels per inch. Automatic resizing can prevent larger images from displaying correctly in some email clients.
- Upload your logo to the Documents tab to make it externally available.

EDITIONS

Available in Salesforce Classic in: **All Editions**

USER PERMISSIONS

To customize activity settings:

- "Customize Application"

**Note:**

- Other users can replace the logo if it's in the Shared Documents folder. To prevent unwanted changes, create a folder accessible only to system administrators and upload the logo to this folder.
 - You can't use a logo that is stored in the My Personal Documents folder or marked Internal Use Only.
- You can't delete a custom logo from the Documents tab when it's being used in meeting requests. Either select another image to use as your logo, or uncheck the option to display a custom logo in meeting requests.

Event Fields

Event records have standard fields for tracking and recording event details.

[Event Fields in Lightning Experience](#)

These standard fields for tracking and recording event details are available in Lightning Experience.

[Event Fields in Salesforce Classic](#)

These standard fields for tracking and recording event details are available in Salesforce Classic.

Event Fields in Lightning Experience

These standard fields for tracking and recording event details are available in Lightning Experience.

Field	Description
Activity Currency	Indicates the default currency for all currency amount fields in the activity. Amounts are displayed in the activity currency. They are also converted to the user's personal currency. Available only in orgs in which multiple currencies are used.
All-Day Event	By selecting this checkbox, a user specifies that the event lasts all day.
Assigned To	Indicates the assigned owner of the event. By default, the event is assigned to the user who created it. On an event detail page or list view, Assigned To denotes the event creator. However, if an event invitee views a report on Activities with Contacts, Assigned denotes the viewer as the invitee. This field isn't available in Personal Edition.
Created By	Indicates the user who created the event, including the creation date and time. Read only.

EDITIONS

Available in Lightning Experience in: **All Editions** except **Personal** and **Contact Manager Editions**

Field	Description
Date	Indicates the planned date of the event. This field is displayed only if multiday events are disabled.
Description	Description of the event. The limit is 32 KB of data.
Division	Indicates the division to which the activity belongs. This value is inherited from the related account, lead, case, or custom object, if any. Otherwise, the activity belongs to the global division. Available only in orgs in which divisions are used to segment data.
Duration	Represents the length of an event spanning less than a full day, in hours and minutes. This field appears only if multiday events are disabled.
Email	Contains the email address of the contact or lead related to the event. This field is filled in with the value from the related contact or lead record.
End	Indicates the planned end date and time of the event. This field appears only if multiday events are enabled.
Event Record Type	Contains the name of the field that determines which picklist values are available for the record. Available in Professional, Enterprise, Unlimited, Performance, and Developer Editions.
Last Modified By	Contains the name of the user who last changed the event, including the modification date and time. Read only.
Name	Contains the name of the contact or lead related to the event. If Shared Activities is enabled in your org, a user can relate up to 50 contacts to a non-recurring event. This field is visible only to users with the "Read" permission for contacts and leads. Relating a contact to an event can affect the account to which Salesforce relates the event. See the <code>Related To</code> field.
Location	Indicates the location of the event.
Phone	Contains the phone number of the contact or lead related to the event. This field is filled in with the value from the related contact or lead record.
Private	Indicates whether users other than the event owner can see the event details when viewing the event owner's calendar. However, users with the "View All Data" or "Modify All Data" permission see private event details in reports and searches or when viewing other users' calendars. Exported data files always contain private events. Events with invitees and events being added or changed in another user's calendar can't be marked private. Private events can't be related to other records.
Public	 Note: Before Summer '13, this field was called <code>Visible in Self-Service</code> .

Field	Description
	<p>This checkbox lets a user specify whether a past event is visible in the Self-Service portal.</p> <p> Note: Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.</p> <p>If Communities is enabled in your org, the value in this field specifies whether the event is visible to external users in communities. If an external user owns the event, that user sees the event in the community regardless of whether the event is marked public.</p> <p>This field is not visible by default. A Salesforce admin can expose it.</p>
Related To	<p>Represents the record that the event is related to, such as an account, an opportunity, or a custom object. This field is available only when a user relates the event to a contact, not to a lead. The record is visible only to users with the "Read" permission for the type of record the event is related to.</p> <p>If you relate the event to an object other than an account, Salesforce determines the account on the event as follows.</p> <ul style="list-style-type: none"> • Suppose that a user relates the event to an opportunity, a contract, or a custom entity that belongs to an account. Salesforce uses that object's account as the account for the event. • Suppose that a user relates the event to some other object and also to a contact. Salesforce uses the primary contact's account as the account for the event. • If a user leaves the <code>Related To</code> field empty, then Salesforce doesn't relate an account to the event.
Show Time As	Determines how the event appears when other users view a user's calendar: busy, out of office, or free.
Start	Planned start date and time of event. This field appears only if multiday events are enabled.
Subject	Contains the subject of the event.
Time	Indicates the start time of a planned event. This field appears only if multiday events are disabled.
Type	Indicates the event type; for example, email or meeting. Limit for values in the picklist is 40 characters.

Event Fields in Salesforce Classic

These standard fields for tracking and recording event details are available in Salesforce Classic.

Field	Description
Activity Currency	Indicates the default currency for all currency amount fields in the activity. Amounts are displayed in the activity currency. They are also converted to the user's personal currency. Available only in orgs in which multiple currencies are used.
All-Day Event	By selecting this checkbox, a user specifies that the event lasts all day.
Assigned To	Indicates the assigned owner of the event. By default, the event is assigned to the user who created it. On an event detail page or list view, <i>Assigned To</i> denotes the event creator. However, if an event invitee views a report on Activities with Contacts, <i>Assigned</i> denotes the viewer as the invitee. This field isn't available in Personal Edition.
Create Recurring Series of Events	By selecting this checkbox, a user can set up a series of recurring events.
Created By	Indicates the user who created the event, including the creation date and time. Read only.
Date	Indicates the planned date of the event. This field is displayed only if multiday events are disabled.
Description	Contains a note describing the event. This field holds up to 32 KB of data.
Division	Indicates the division to which the activity belongs. This value is automatically inherited from the related account, lead, case, or custom object, if any. Otherwise, the activity belongs to the global division. Available only in orgs in which divisions are used to segment data.
Duration	Represents the length of an event spanning less than a full day, in hours and minutes. This field appears only if multiday events are disabled.
Email	Contains the email address of the contact or lead related to the event. This field is

EDITIONS

Events with invitees not available in: **Personal Edition**

Field	Description
	automatically filled in with the value from the related contact or lead record.
End	Indicates the planned end date and time of the event. This field appears only if multiday events are enabled.
Event Record Type	Contains the name of the field that determines what picklist values are available for the record. Available in Professional, Enterprise, Unlimited, Performance, and Developer Editions.
Last Modified By	Contains the name of the user who last changed the event, including the modification date and time. Read only.
Name	Contains the name of the contact or lead related to the event. If Shared Activities is enabled in your org, a user can relate up to 50 contacts to a non-recurring event. This field is visible only to users with the "Read" permission for contacts and leads. Relating a contact to an event can affect the account to which Salesforce relates the event. See the <code>Related To</code> field.
Location	Indicates the location of the event.
Phone	Contains the phone number of the contact or lead related to the event. This field is automatically filled in with the value from the related contact or lead record.
Private	Indicates whether users other than the event owner can see the event details when viewing the event owner's calendar. However, users with the "View All Data" or "Modify All Data" permission can see private event details in reports and searches, or when viewing other users' calendars. Exported data files always contain private events. Events with invitees and events being added or changed in another user's calendar can't be marked private. Private events can't be related to other records.
Public	<p> Note: Before Summer '13, this field was called <code>Visible in Self-Service</code>.</p> <p>This checkbox specifies whether a past event is visible in the Self-Service portal.</p> <p> Note: Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.</p> <p>If Communities is enabled in your org, the value in this field specifies whether the event is visible to external users in communities. If an external user owns the event, that user sees the event in the community regardless of whether the event is marked public.</p>

Field	Description
	This field is not visible by default. A Salesforce admin can expose it.
Related To	<p>Represents the record that the event is related to, such as an account, an opportunity, or a custom object. This field is available only when a user relates the event to a contact, not to a lead. The record is visible only to users with the "Read" permission for the type of record the event is related to.</p> <p>If you relate the event to an object other than an account, Salesforce determines the account on the event as follows.</p> <ul style="list-style-type: none"> • If you relate the event to an opportunity, contract, or custom entity that belongs to an account, Salesforce uses that object's account as the account for the event. • If you relate the event to any other kind of object also relate the event to a contact, Salesforce uses the primary contact's account as the account for the event. • If you leave the Related To field empty, then Salesforce doesn't relate an account to the event.
Response	Optional field; allows users invited to an event to enter a note when they accept or decline the event. This field isn't available in Personal Edition.
Select Invitees	Lets you relate up to 1,000 people (invitees) and resources to the event. When you search for people or resources to invite to an event, the Available list displays up to 300 results.
Show Time As	Picklist. Determines how the event appears when another user views your calendar: busy, out of office, or free.
Start	Planned start date and time of event. This field appears only if multiday events are enabled.
Subject	Contains the subject of the event; for example, "Meeting." A user can enter a subject or select from a list of previously defined subjects.
Time	Indicates the start time of a planned event. This field appears only if multiday events are disabled.
Type	Indicates the event type; for example, email or meeting. Limit for values in the picklist is 40 characters.

Help Your Sales Reps Manage Their Tasks

Optimize the way your sales reps manage their work. Options differ for Lightning Experience, Salesforce Classic, and Salesforce1.

[Considerations for Customizing the Task List in Lightning Experience](#)

Use compact layouts to customize the display and order of fields for items in the task list. However, certain fields remain in the task list even if you remove them from a layout, because they contain essential task information. For example, suppose that you remove the status and due date fields from a compact layout. The task checkbox and the due date still appear on tasks in the list. The remaining fields visible in the list reflect the fields you include in the compact layout.

[Guidelines for Customizing the Task List in Lightning Experience](#)

To customize the action bar next to the task list, use the Salesforce1 and Lightning Experience Actions section of the task page layout.

[Considerations for Closing and Reopening Tasks](#)

Salesforce Classic differs from Lightning Experience and Salesforce1 in the way it handles validation rules on tasks.

[Considerations for Email Notification of Task Assignments](#)

When the setting **Enable user control over task assignment notifications** is enabled in Activity Settings, users see the option **Email me when someone assigns me a task** in their personal settings. Both the setting and the option are enabled by default. Enabling and disabling the setting affects users in different ways. Before migrating a Salesforce org, avoid excessive email notifications by disabling the setting. You can re-enable it after migration.

[Task Fields](#)

Task records have standard fields for tracking and recording task details.

[Email Tracking in Salesforce Classic](#)

If you use HTML email templates in Salesforce Classic, enable Salesforce to track outbound HTML emails as a type of completed task. If you disable this option, Salesforce no longer stores email tracking information. However, email tracking reports remain on the Reports tab. To display email statistics to your users, add the HTML Email Status related list to the relevant page layouts.

SEE ALSO:

[Customization Options for Tasks](#)

Considerations for Customizing the Task List in Lightning Experience

Use compact layouts to customize the display and order of fields for items in the task list. However, certain fields remain in the task list even if you remove them from a layout, because they contain essential task information. For example, suppose that you remove the status and due date fields from a compact layout. The task checkbox and the due date still appear on tasks in the list. The remaining fields visible in the list reflect the fields you include in the compact layout.

Considerations for Closing and Reopening Tasks

Salesforce Classic differs from Lightning Experience and Salesforce1 in the way it handles validation rules on tasks.

Considerations for Closing and Reopening Tasks in Lightning Experience

Suppose that you've created a validation rule for tasks; for example, you require users to enter a comment before closing a task. If you've set up more than one Closed status for tasks, users must choose a status when they reopen or close a task. If you've set up more than one Open status for tasks and a user reopens a task, Lightning Experience remembers the last Open status.

Considerations for Closing and Reopening Tasks in Salesforce Classic

Suppose that you've created a validation rule for closing a task; for example, you require users to enter a comment. Before users can close a task, they must first open the task detail page and edit the task. Likewise, if you've set up more than one Open status for tasks, users must edit the task to choose a status when they reopen a task.

Considerations for Closing and Reopening Tasks in Lightning Experience

Suppose that you've created a validation rule for tasks; for example, you require users to enter a comment before closing a task. If you've set up more than one Closed status for tasks, users must choose a status when they reopen or close a task. If you've set up more than one Open status for tasks and a user reopens a task, Lightning Experience remembers the last Open status.

[Task Fields in Salesforce Classic](#)

These standard fields for tracking and recording task details are available in Salesforce Classic.

Task Fields in Lightning Experience

These standard fields for tracking and recording task details are available in Lightning Experience.

Field	Description
Activity Currency	Indicates the default currency for all currency amount fields in the task. Amounts are displayed in the task currency and are also converted to a user's personal currency. Available only in orgs in which multiple currencies are used.
Assigned To	Indicates the assigned owner of a task. By default, the task is assigned to the user who created it. This field isn't available in Personal Edition.
Call Duration	Indicates the duration of a call in seconds. This field is populated when a call is answered using Salesforce CRM Call Center.
Call Object Identifier	Indicates the ID of a call logged in Salesforce through Salesforce computer-telephony integration (CTI) with a third-party telephony system. This field is often populated with the ID stored in the telephony system. Limit is 255 characters.
Call Result	Represents the result of a given call; for example, "we'll call back" or "call unsuccessful." Limit is

EDITIONS

Available in Lightning Experience in: **All** except **Personal** and **Contact Manager** Editions

Field	Description
	255 characters. A Salesforce admin can customize the selections in the picklist.
Call Type	Indicates the call type: inbound, internal, or outbound. A Salesforce admin can customize the selections in the picklist.
Comments	Contains a description of the task. The limit is 32 KB of data. If Spell Checker is enabled in your org, a user can spell-check the contents.
Create Recurring Series of Tasks	This checkbox lets a user set up a series of recurring tasks. Enabling this option disables the <code>Due Date</code> field, because each task occurrence in a series has a different due date.
Created By	Indicates the user who created the task, along with the task creation date and time. Read only.
Division	Indicates the division to which the task belongs. This value is inherited from the related account, lead, case, or custom object, if any. Otherwise, the task belongs to the global division. Available only in orgs in which divisions are used to segment data.
Due Date	Indicates the date when the task is due.
Email	Contains the email address of the contact or lead associated with the task. This field is filled in with the value from the related contact or lead record.
Last Modified By	Indicates the user who last changed the task, along with the task modification date and time. This field is read only.
Name	Contains the name of the contact or lead related to the task. If Shared Activities is enabled in your org, a user can relate up to 50 contacts to a non-recurring task. This field is visible only to users who have the "Read" permission for contacts and leads. Relating a contact to a task can affect the account to which Salesforce relates the task. See the <code>Related To</code> field.
Phone	Contains the phone number of the contact or lead related to the task. This field is filled in with the value from the related contact or lead record.
Priority	Indicates the urgency of the task; for example, low, medium, or high. A Salesforce admin can customize the selections in the picklist.
Public	<p> Note: Before Summer '13, this field was called <code>Visible in Self-Service</code>.</p> <p>By selecting this checkbox, a user can specify that the completed task is visible in the Self-Service portal.</p> <p> Note: Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.</p>

Field	Description
	<p>If Communities is enabled in your org, this field specifies whether a task is visible to external users in communities. If an external user owns the task, that user sees the task in the community regardless of whether it's marked Public.</p> <p>This field is not visible by default. A Salesforce admin can make it visible.</p>
Related To	<p>Indicates the record that the task is related to, such as an account or an opportunity. This field is available only when a user relates the task to a contact, not to a lead. The record is visible only to users with the "Read" permission for the type of record the task is related to.</p> <p>If a user relates the task to an object other than an account, Salesforce determines the account on the task as follows.</p> <ul style="list-style-type: none"> Suppose that a user relates the task to an opportunity, a contract, or a custom entity that belongs to an account. Salesforce uses that object's account as the account for the task. Suppose that a user relates the task to some other object and also to a contact. Salesforce uses the primary contact's account as the account for the task. If a user leaves the Related To field empty, Salesforce doesn't relate an account to the task.
Status	Indicates the status of a task; for example, "not started" or "completed." A Salesforce admin can customize the selections in the picklist.
Subject	Contains the subject of the task.
Task Record Type	Contains the name of the field that determines which picklist values are available for the record. Available in Professional, Enterprise, Unlimited, Performance, and Developer Editions.
Type	Indicates the task type; for example, Email or Meeting. Limit for values in the picklist is 40 characters.

Notes

Stay organized and on top of all your deals by adding notes to records. There are 2 tools for taking notes in Salesforce: the old note-taking tool and Notes, Salesforce's enhanced note-taking tool, which lets you use rich text, lists and images; relate notes to multiple records; and create notes in Lightning Experience.

You can have both note-taking tools enabled at the same time in Salesforce. However, notes created with a tool can only be read and edited using that tool. To help you decide which tool works for your company, check the following table.

Tool	Interface	Where to Create and Manage Notes	Key Features
Notes	<ul style="list-style-type: none"> Lightning Experience Salesforce Classic Salesforce1 	<ul style="list-style-type: none"> Notes related list on records (must be added to all page layouts) Notes tab in Lightning Experience Notes tab in Salesforce1 	<ul style="list-style-type: none"> Rich text Lists Add notes to multiple records Search notes Automatic saving (Lightning Experience) Revert to earlier versions (Lightning Experience) Create tasks from notes (Salesforce1) Images (Lightning Experience and Salesforce1)

[Guidelines for Working with Notes](#)

Review guidelines for adding and managing notes in Salesforce, including where to manage your notes, deleting notes, and note ownership.

[Increase Collaboration by Sharing Notes](#)

Increase collaboration on deals by sharing your notes with people and groups.

[Revert to a Previous Version of a Note](#)

With Notes, the enhanced note-taking tool for Salesforce, you can see and restore old versions of notes.

[Set Up Notes](#)

To let your sales reps take notes with rich text, lists, and images, set up Notes, the enhanced note-taking tool for Salesforce.

Guidelines for Working with Notes

Review guidelines for adding and managing notes in Salesforce, including where to manage your notes, deleting notes, and note ownership.

- To create or edit a note associated with a record, you must be able to edit the record.
- To delete a note associated with a record, you must be the owner of the note or the owner of the associated record.
- To delete a note that's *not* associated with a record, you must be the owner of the note.
- To create notes in Lightning Experience, you must use Notes. Your Salesforce administrator must enable Notes.
- You can't share notes in Salesforce1.
- When sharing a note in Lightning Experience, you can only give others viewer access, because Notes does not support simultaneous editing. If multiple people edit a note at the same time, they overwrite each other's content.

EDITIONS

Available in: Salesforce1, Salesforce Classic, and Lightning Experience

Available in: **Contact Manager, Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Guidelines for Notes

Watch a video:  [How to Use Notes](#)

- To create and manage notes on records, use the Notes related list, which your Salesforce admin must add to page layouts.
- If Notes is disabled, you can't access notes that were created with it.
- Only notes taken with Notes appear on the Notes tab.
- To create standalone notes or manage all your notes, use the Notes tab (available in Lightning Experience and Salesforce1).
- After Notes is enabled, the old note-taking tool remains available for creating and managing notes in Salesforce Classic and Salesforce1. In Lightning Experience, the old note-taking tool is only used to read and manage notes that were created with it.
- Read old notes that were taken with the old note-taking tool from the Notes & Attachments related list on records. These notes don't appear in the Notes tab.
- In Salesforce1, create a task from a note by swiping a line on the note. Alternatively, tap on a line or highlight some text, and then tap  in the toolbar. If your profile is assigned two or more task record types, you're asked to choose a record type each time you create a task from a note. If your profile is assigned less than two Task record types, the task is immediately created.
- After enabling Notes, the old note-taking tool remains available for creating and managing notes in Salesforce Classic and Salesforce1. In Lightning Experience, the old note-taking tool is only used to read and manage notes that were created with it.

Guidelines for the Old Note-Taking Tool

- All notes added to contacts and opportunities roll up under the associated account as well.
- Notes are automatically related to the parent account.
- To create and manage notes on records, use the Notes & Attachments related list. You can't create notes with the old note-taking tool in Lightning Experience.
- To restore deleted notes, use the Recycle Bin.
- If a note is marked private, it's only accessible to the person who created or attached it.
- If you publish notes to external contacts via Salesforce to Salesforce, all public notes are automatically shared with a connection when you share the parent object. If *Share with Connections* on the attachment is selected, the attachment is automatically shared.
- To stop sharing a note or attachment, select *Private*.

Increase Collaboration by Sharing Notes

Increase collaboration on deals by sharing your notes with people and groups.

-  **Note:** In Lightning Experience, you can only provide Viewer access when sharing a note. Notes doesn't support simultaneous editing, and this restriction prevents multiple people from editing a note at the same time. If multiple people change a note at the same time, they overwrite each other's changes. You can't share notes in Salesforce1.

1. Open a note.
2. Click the share button.
3. Select who you'd like to share with and their level of access.
4. Enter a short message to the recipients.
5. To prevent the recipients from sharing or unsharing the note, click **Prevent others from sharing and unsharing**.
6. Click **Share**.

The people you share with receive an email with your message and a link to the shared note.

EDITIONS

Revert to a Previous Version of a Note

With Notes, the enhanced note-taking tool for Salesforce, you can see and restore old versions of notes.

 **Note:** These steps work in Lightning Experience. If you see the App Launcher icon (☰) on the left side of the navigation bar at the top of your screen, you're in Lightning Experience. If not, you're in Salesforce Classic.

1. From the record's Notes related list, click the note title.
2. In the note window, click .
3. From the list, select the version of the note you'd like to view.
4. To restore the selected version of the note, click **Restore**.

Set Up Notes

To let your sales reps take notes with rich text, lists, and images, set up Notes, the enhanced note-taking tool for Salesforce.

[Walk Through It](#)

1. Make sure that the Notes related list is on all your page layouts. If it's not, your users won't be able to create notes on records using Notes.
2. Make sure that Notes is enabled. From Setup, enter *Notes Settings* in the *Quick Find* box, then select **Notes Settings**.
3. To let reps take notes from the Chatter publisher, the Global Actions menu, and the Salesforce1 action bar, add the **New Note** quick action to Quick Actions in the Salesforce Classic Publisher and Salesforce1 and Lightning Experience Actions sections on the global publisher layout.
4. If you've overridden the global publisher layout on any of your object page layouts, add the **New Note** quick action to your custom layouts, too.
5. To let your reps easily take notes in Salesforce1:
 - a. Make sure that your reps can create tasks from notes in Salesforce1. From Setup, enter *Activity Settings* in the *Quick Find* box, then select **Activity Settings**. Select *Allow Creation of Tasks from Notes*.
 - b. Make sure that **Notes** appears in the Salesforce1 navigation menu. From Setup, enter *Navigation* in the *Quick Find* box, select **Salesforce1 Navigation**, and then move **Notes** from the Available list to the Selected list. We recommend putting it above **Smart Search Items**.

In Salesforce1, your reps can create tasks just by swiping lines in a note. If a user's profile is assigned more than one Task record type, the user is prompted to choose a record type for the task.

Understanding Customizable Campaign Influence

By allowing flexible revenue attribution across multiple campaigns, Customizable Campaign Influence offers better business intelligence, more marketing accountability, and improved alignment between sales and marketing.

Note: This information applies only to Customizable Campaign Influence and not to the original version of Campaign Influence.

Customizable Campaign Influence lets you set up multiple ways of tracking the influence your campaigns have on opportunities. For each method you want to use, create a separate campaign influence attribution model. To give credit to a campaign for the opportunities it helps generate, your marketing and sales users can add campaign influence records manually. Alternatively, you or your partners can create triggers and processes to add records automatically. On campaign detail pages, your users can see the opportunities generated by a campaign, and the total revenue generated.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Campaign Attribution Models

Customizable Campaign Influence includes a default Salesforce revenue attribution model. The Salesforce model attributes 100% revenue credit to the primary campaign on an opportunity and 0% to any other campaigns that users assign to the opportunity. If you'd like to have more flexibility in how revenue is attributed to campaigns, you or your partners can create custom attribution models.

For example, you could create a model that evenly distributes credit for an opportunity across all campaigns that touched it. You could also create a model that gives 100% credit to the first or last campaign that touched an opportunity. With Customizable Campaign Influence, you can create a model for virtually any scenario that suits your business.

If you'd like to prevent your sales or marketing users from adding or editing campaign influence records, you can lock any of your attribution models. Records for locked models can only be updated via the API. The default Salesforce model is always locked.

Campaign Influence Records

Campaign influence records show which campaigns have influenced a specific opportunity. To let users see which campaigns contributed to their opportunities, add the Campaign Influence related list (1) to your Opportunity page layouts. The Campaign Influence related list only displays records for the attribution model you designate as the primary model in Setup. To let your users add and edit campaign influence records from their opportunity detail pages, keep the primary model unlocked. Your other attribution models can accrue campaign influence records, but only via triggers, processes, and the API.

The screenshot shows the Salesforce interface for an Opportunity. At the top, there's a search bar and navigation tabs. The main header displays the opportunity name 'Acme - 10,000 Widgets (Demo)' and buttons for '+ Follow', 'Clone', 'Edit', and 'Change Owner'. Below this, there are fields for 'Account Name' (Acme), 'Close Date' (6/10/2016), 'Amount' (\$100,000.00), and 'Opportunity Owner' (Meredith...). A progress bar shows stages: Proposal (active), Negotiation, and Closed. A 'Mark Stage as Complete' button is visible. The 'ACTIVITY' tab is selected, showing a 'New Task' form. On the right, a related list titled 'Campaign Influence (3+)' is displayed, containing three records for 'Annual Customer Conference' with details like Contact Name, Influence (%), and Revenue Share. A red box with the number '1' points to the related list header.

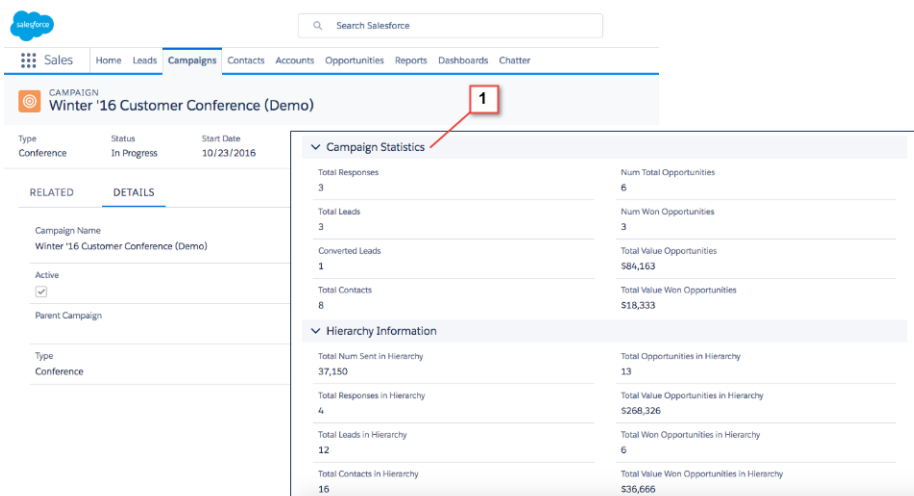

Depending on your business needs, you can add custom fields to your campaign influence records. For example, if you want to track the order in which campaigns contributed to an opportunity, you could add a number field for that purpose.

Campaign Results

Your users can clearly see how many opportunities a campaign has generated when you add the Influenced Opportunities (1) related list to your Campaign page layouts. The records in the related list are based on the campaign influence model assigned as the primary model by the admin.

The Campaign Statistics section (1) of Campaign detail pages shows the revenue generated by the campaign, based on the attribution percentage on the campaign's influence records. The Campaign Statistics section also displays the current number of opportunities generated by the campaign and the total number won.

What's the Difference Between Campaign Influence and Customizable Campaign Influence?

Customizable Campaign Influence includes several capabilities not found in the original version of Campaign Influence.

Note: This information applies only to Customizable Campaign Influence and not to the original version of Campaign Influence.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Set Up Customizable Campaign Influence

Allow your marketing department to attribute revenue across multiple campaigns when you enable Customizable Campaign Influence.

 **Note:** This information applies only to Customizable Campaign Influence and not to the original version of Campaign Influence.

1. From Setup, enter *Campaign Influence* in the **Quick Find** box and then click **Campaign Influence Settings**.
2. Select **Enabled**.
3. If you currently use the original version of Campaign Influence, choose whether to migrate your existing campaign influence records with 0% influence attribution to the new Salesforce model in Customizable Campaign Influence.

To avoid migrating these records, click **Only migrate Campaign Influence records for the primary campaign on opportunities**.

4. Under Salesforce Model Settings, choose whether to enable or disable campaign auto-association. Auto-association is enabled for the Salesforce attribution model by default and is only available for the Salesforce model.

Auto-association adds campaigns to opportunities automatically when the contact on an opportunity is also a member of a campaign. The contact listed on the opportunity must also be assigned a contact role on the opportunity before its close date.

5. Optionally, constrain campaign auto-association by limiting the number of days that can pass between when a contact is added to a campaign and an opportunity's creation date.

For example, to prevent a campaign from being auto-associated with an opportunity when the opportunity is created more than 90 days after the contact was added to the campaign, enter *90*.

6. Optionally, define additional filter criteria that must be met in order for a campaign to be automatically associated with an opportunity.

Enable Users for Customizable Campaign Influence

Be sure the sales and marketing users who plan to use Customizable Campaign Influence have the Sales User permission set assigned with the Campaign Influence permission enabled.

 **Note:** This information applies only to Customizable Campaign Influence and not to the original version of Campaign Influence.

1. Add the Sales User permission set to user profiles assigned to users who plan to track campaigns that influence opportunities.
2. In the Sales User permission set, enable the Campaign Influence permission.

Add Customizable Campaign Influence to Page Layouts

Let your marketing users see the campaigns that influence each opportunity and the results of each campaign.

- ✔ **Note:** This information applies only to Customizable Campaign Influence and not to the original version of Campaign Influence.
- Add the Campaign Influence related list to Opportunity page layouts.

This related list shows the campaigns that have touched the opportunity. Only campaign influence records from your primary influence model appear in the list.
- Add the Influenced Opportunities related list to Campaign page layouts.

This related list shows the opportunities influenced by the campaign. Only campaign influence records from your primary influence model appear in the list.
- Add the Campaign Results section to Campaign page layouts.

The Campaign Results section shows the total amount brought in by the campaign, based on your primary campaign influence model.

Create a Custom Campaign Influence Model

To implement a custom influence attribution model, first add a model in Setup with a few clicks. Then create a set of triggers and processes that add campaign influence records and assign them to the model. Work with partners if you want help implementing your model.

- ✔ **Note:** This information applies only to Customizable Campaign Influence and not to the original version of Campaign Influence.
- 1. From Setup, enter *Model Settings* in the **Quick Find** box, and then click **Model Settings**.
- 2. Click **New Attribution Model**.
- 3. Enter a name for the model.
- 4. To make this model the primary model, select **Is Model Primary**.

Only campaign influence records for the primary model appear in the Campaign Influence related list on opportunities. Records from the primary model also appear in the Influenced Opportunities Related list and Campaign Statistics section on campaigns.
- 5. To prevent users from adding, editing, or deleting campaign influence records for this model on campaign detail pages, select **Is Model Locked**.

Records for locked models can only be created and updated via the API.
- 6. Optionally, enter a description for the model.

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Configure Campaign Influence

 **Note:** This information applies only to the original version of Campaign Influence and not to Customizable Campaign Influence.

Setting up Campaign Influence

You can configure influential campaigns to be automatically added to opportunities. When automatic association is enabled, influential campaigns are added to opportunities when a campaign is related to a contact that is assigned a contact role on an opportunity prior to the close date of the opportunity. For example, if you have an email campaign with a member who is assigned a contact role on an open opportunity, the email campaign will be added to the Campaign Influence related list for that opportunity.

You can set a Campaign Influence Time Frame that specifies the maximum number of days between the campaign first associated date and the opportunity created date, during which a campaign is considered influential. For example, if you specify a Campaign Influence Time Frame of 15 days and one of your contacts becomes a member of a campaign on June 1, the campaign is considered influential to any opportunity that is created and associated with the contact by June 15. Use the association rules to configure additional criteria that campaigns must meet to be automatically associated to an opportunity.

When automatic association is disabled, users must manually add influential campaigns to opportunities using the [Campaign Influence related list](#).

To set up automatic association for campaign influence:

1. From Setup, enter *Campaign Influence* in the **Quick Find** box, then select **Campaign Influence**.
2. Select **Enabled**.
3. In the **Campaign Influence Time Frame** field, optionally specify the maximum number of days between the campaign first associated date and the opportunity created date.

 **Note:** Campaigns associated to a contact prior to this time frame will not be considered influential. The maximum campaign influence time frame is 9,999 days. If you do not want to specify a campaign influence time frame, leave the **Campaign Influence Time Frame** field blank.

Manage Currencies

Manage Multiple Currencies

Your organization can set up the ability to use multiple currencies in opportunities, forecasts, quotes, reports, and other data.

1. [Enable multiple currencies](#) for your organization.
2. To designate your corporate currency, from Setup, enter *Manage Currencies* in the `Quick Find` box, then select **Manage Currencies**, and then click **Change Corporate**.
3. To activate more currencies for your organization, click **New** in the Active Currencies related list.
4. To use dated exchange rates, [enable advanced currency management](#).
5. Set conversion rates for new currencies. See [Edit Conversion Rates](#). If you have enabled advanced currency management, see [Editing Dated Exchange Rates](#) on page 1954.

Using Multiple Currencies

International organizations can use multiple currencies in opportunities, forecasts, reports, quotes, and other currency fields. The administrator sets the “corporate currency,” which reflects the currency of the corporate headquarters. The administrator also maintains the list of active currencies and their conversion rates relative to the corporate currency. The active currencies represent the countries in which the organization does business. Only active currencies can be used in currency amount fields.

Each user has a personal currency, which is used as the default currency in quotas, forecasts [depending on which forecasting version you use](#), opportunities, quotes, and reports. Users can also create opportunities and enter amounts using other active currencies.

All standard and custom object records with currency fields have a field that specifies the currency to use for all amount fields in that record. (Click **Edit** to display this editable `Currency` field on a record.) For example, you can set the `Account Currency` to “USD-U.S. Dollars” so that the `Annual Revenue` shows in dollars for one of your American accounts. All currency amounts are displayed in the default currency of the record. Administrators can choose whether to also display, in parentheses, the user’s personal currency if it is different from the currency of the record. When you change the default currency of a record, currency amounts are not converted. They just display the new currency code.

 **Note:** If your organization uses [advanced currency management](#), the opportunity close date determines which conversion rate to use when displaying currency amounts.

Depending on the forecasting version you have, forecast currency amounts are converted to the user’s personal currency. Additionally, for managers, their team’s opportunities, forecasts, quotes, and other data are converted and rolled up to the manager’s personal currency. The manager can also drill down to see the data in the native currency. All conversion and roll-ups happen automatically.

Amounts in reports are shown in their original currencies, but can be displayed in any active currency. You can change the currency used for report totals by selecting a currency from **Show > Currencies**. The default value is your personal currency. For any amount, you can choose to display the `Converted` column—for example, `Annual Revenue Converted`—which shows amounts in the currency you select.

Custom formula fields are not tied to any particular currency. If the result of a formula field is a currency amount, it displays in the currency of the associated record. This rule is also true for cross-object formulas that reference merge fields with different currencies, and formulas in workflow rules and approval processes. However, workflow rules and approval processes that use filters instead of formulas convert all currency values to the corporate currency.

USER PERMISSIONS

To view currencies:

- “View Setup and Configuration”

To change currencies:

- “Customize Application”

If currency fields are referenced in Apex, you can't disable multiple currencies for your organization. For example, if Apex code references the `Account.Currency` field (represented as `CurrencyIsoCode` in the code), you can't disable multiple currencies.

SEE ALSO:

[Administrator setup guide: Using Multiple Currencies](#)

[Enable Multiple Currencies](#)

Enable Multiple Currencies

To enable multiple currencies in your organization:

1. Familiarize yourself with the [implications of enabling multiple currencies](#).
2. In Setup, enter *Company Information* in the `Quick Find` box, then select **Company Information** and click **Edit**. Ensure that your selected currency locale is the default currency that you want to use for current and future records. Enable **Allow Support to Activate Multiple Currencies**, and then save your changes.

 **Note:** This setting is used to verify the specific organization that's approved for multi-currency activation. It doesn't submit a request to Salesforce. Submit the request via your normal support process.

3. To enable multiple currencies, contact Salesforce. Be prepared to provide the following information.

- The organization ID (production or sandbox)
- Confirmation that you understand that your current currency locale will become the default currency stamp for current and future records (USD, EUR, GBP, and so on)
- Confirmation that you understand that multiple currencies can't be disabled once enabled
- Confirmation that you're a system administrator authorized on behalf of your organization to request multi-currency enablement
- Confirmation that you consent to the lockout of this organization for a certain period, depending on your organization's data usage volume

 **Note:** For large organizations, multiple currencies are sometimes enabled over the weekend to avoid performance issues during the work week.

[Implications of Enabling Multiple Currencies](#)

[Manage Multiple Currencies](#)

[About Advanced Currency Management](#)

EDITIONS

Available in: Salesforce Classic

Available in: **Group, Professional, Enterprise, Performance, Unlimited, Developer,** and **Database.com** Editions

Implications of Enabling Multiple Currencies

Enabling multiple currencies introduces permanent changes in your organization. Before proceeding, be aware of these implications to ensure a smooth transition for your organization.

- After enabled, multiple currencies can't be disabled for your organization.
 - Work with your Salesforce representative to determine the best time for multi-currency enablement. The enablement process temporarily locks your organization, preventing all integration processing and user logins. The lockout duration depends on the data space used by your organization.
 - Upon enablement, existing records are stamped with a default currency code that you provide in your enablement request. For example, if your organization contains records using USD and EUR, switch them all to the same default currency before enablement. Support for this type of conversion is also available as a Salesforce paid implementation service.
 - Standard and custom objects, such as Account, Lead, Case, Opportunities, Opportunity Products, Opportunity Product Schedules, and Campaign Opportunities, have currency fields that support multiple currencies. Reports related to these objects and fields also support multiple currencies. By default, page layouts for these objects have multi-currency-compatible fields in which you can specify the currency for the record. Typically, these fields are available only when creating a record or editing an existing record. The selected currency is used for the primary amount field.
 - After enablement, the primary currency displays as usual and, optionally, a secondary currency amount appears in parentheses. The primary currency is typically the default corporate currency, unless it's overridden at the record level. The amount shown in parentheses is the user's personal default currency, calculated based on the conversion rate settings defined in your organization. To control whether the converted currency amount appears, enable or disable parenthetical currency conversion from the Manage Currencies page.
 - In reports, the primary currency reflects either the default corporate currency or the currency selected for the record. The secondary currency reflects the personal default currency of the user running the report, or the currency specified in the report criteria.
 - Users can specify a personal default currency on their personal information page. If parenthetical currency conversion is enabled, the personal default currency displays as the secondary currency amount (converted amount). Changing the personal default currency updates the converted amount in real time.
 - After a currency is added to an organization's list of supported currencies, it can't be deleted from the administrator's list of currencies, even when it's deactivated. The presence of inactive currencies in the administrator's list is a cosmetic issue that doesn't affect end users. A deactivated currency isn't visible to end users, but remains visible to administrators. Salesforce recommends that you keep this issue in mind during testing and use only those currencies that you eventually plan to use in your organization.
 - After enablement, all currency fields display the ISO code of the currency before the amount. For example, \$100 displays as USD 100.
-  **Note:** If you have only one currency in your multi-currency organization, you can set a preference to display currency symbols instead of ISO codes. To display currency symbols, search Setup for *User Interface*, and then select **Show currency symbols instead of ISO codes** in the Currency Display Settings section of the User Interface settings page. If you later enable more currencies in your organization, ISO codes display and this preference is no longer available. This preference applies only in the standard Salesforce user interface.
- By default, all converted amounts in your organization rely on the current conversion rates defined for your organization. Conversion rates must be set and updated manually. Changing the exchange rate automatically updates converted amounts on all records, including on closed opportunities.

You can opt to use dated exchange rates by using [advanced currency management](#) to track historical exchange rates. Advanced currency management allows you to maintain a list of exchange rates by date range. Converted currency amounts on opportunities display based on the specified Close Date, regardless of the opportunity stage. If the Close Date changes to a different exchange rate period, changing the Close Date impacts converted amounts.

EDITIONS

Available in: Salesforce Classic

Available in: **Group, Professional, Enterprise, Performance, Unlimited, Developer,** and **Database.com** Editions

 **Note:** Dated exchange rates aren't used in forecasting, currency fields in other objects, or currency fields in other types of reports.

Activate and Deactivate Currencies

For orgs with multiple currencies, specify which currencies are supported by activating or deactivating currencies.

- **Active currencies** represent countries in which your org does business. Only active currencies can be entered in opportunities, forecasts, and other items. Once you activate a currency, you can never permanently delete it.
- **Inactive currencies** are currencies that your org no longer uses. You can have existing records that use inactive currencies, but you can't enter new amounts that use inactive currencies.

To activate new currencies:

1. From Setup, enter *Manage Currencies* in the **Quick Find** box, then select **Manage Currencies**.
2. Click **New** in the Active Currencies related list.
3. Select a currency. Currencies are alphabetized using their ISO currency code.
4. Enter the conversion rate relative to your corporate currency.
5. Specify the number of decimal places to display for amounts in this currency.
6. Click **Save**.

To activate a currency from the list of inactive currencies, click **Activate** next to the currency.

To deactivate a currency, click **Deactivate** next to the currency. You can't deactivate the corporate currency. Deactivating a currency does not alter amounts in items that use that currency. However, you can no longer enter new amounts using the inactive currency.

 **Note:** Deactivating a currency that is set as a user's personal currency automatically resets the user's currency to the corporate currency.

About Advanced Currency Management

Advanced currency management allows you to manage dated exchange rates within opportunities using Salesforce. Dated exchange rates allow you to map a conversion rate to a specific date range. For example, the exchange rate on January 1 was 1 USD to 1.39 AUD, but on February 1, it changed to 1 USD to 1.42 AUD. Your opportunities that closed between January 1 and February 1 use the first exchange rate (1 = 1.39), while opportunities that closed after February 1 used the second exchange rate (1 = 1.42).

Dated exchange rates are defined using a start date and a conversion rate. Each rate is in effect until either the end of time or the day before the next start date for that currency. The time between one start date and the next start date is called the exchange rate date range. These ranges can be as small as a day and as large as all of time.

To enable or disable advanced currency management, see [Enabling or Disabling Advanced Currency Management](#) on page 1952.

When advanced currency management is first enabled, your existing exchange rates automatically become the first set of dated exchange rates. These rates will be valid for all time, until you define another set of exchange rates. For more information, see [Editing Dated Exchange Rates](#) on page 1954.

If you disable advanced currency management, all currency conversions will use the static conversion rate. See [Edit Conversion Rates](#) on page 1953.

 **Note:** Although dated exchange rates aren't supported in Lightning Experience or Salesforce1, some limited functionality is available. Opportunities display the correct amount if the CloseDate field is on the page layout for opportunities. Because page layouts control who sees what on object records, only users who have this page layout assigned to them see the correct amount. Otherwise, the amount shown reflects the original amount before a dated exchange rate was applied.

Advanced Currency Management Considerations

- Dated exchange rates are used for opportunities, opportunity products, opportunity product schedules, campaign opportunity fields, opportunity splits, and reports related to these objects and fields. Dated exchange rates are not used in forecasting, currency fields in other objects, or currency fields in other types of reports.
- Organizations with advanced currency management support roll-up summary fields between two advanced currency management objects. For example, roll-up summary fields are supported from an opportunity line object to its opportunity object, because both are advanced currency management enabled. However, if you enable advanced currency management, you can't create roll-up summary fields that calculate currency on the opportunity object rolling up to the account object, and you can't filter on the opportunity currency field on the account object. All existing currency-related roll-up summary fields on the opportunity object are disabled and their values are no longer calculated. If your organization enables advanced currency management, you should delete any currency roll-up summary fields using opportunities and accounts or opportunities and custom objects.
- Campaign opportunity fields use dated exchange rates when calculating the amount in the campaign currency, but are not used when converting those amounts to the user currency.
- Cross-object formulas always use the static conversion rate for currency conversion.

EDITIONS

Available in: Salesforce Classic

Available in: **Group, Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To enable advanced currency management:

- "Customize Application"

To view currencies:

- "View Setup and Configuration"

To change currencies:

- "Customize Application"

- If advanced currency management is enabled, you can't bind Visualforce pages that use `<apex:inputField>` or `<apex:outputField>` components to currency fields that support advanced currency management.

Enabling or Disabling Advanced Currency Management

To enable advanced currency management:

1. Enable multiple currencies for your organization. For more information, see [Manage Multiple Currencies](#) on page 1947.
2. From Setup, enter *Manage Currencies* in the Quick Find box, then select **Manage Currencies**.
3. Click **Enable**.
4. When prompted, select *Yes, I want to enable Advanced Currency Management* and click **Enable**.

When advanced currency management is first enabled, your existing exchange rates automatically become the first set of dated exchange rates. These rates will be valid for all time, until you define another set of exchange rates.

To disable advanced currency management:

1. From Setup, enter *Manage Currencies* in the Quick Find box, then select **Manage Currencies**.
2. Click **Disable**.
3. When prompted, select *Yes, I want to disable Advanced Currency Management* and click **Disable**.

If you disable advanced currency management, all currency conversions will use the static conversion rate. See [Edit Conversion Rates](#) on page 1953.

When advanced currency management is enabled, Visualforce `<apex:inputField>` and `<apex:outputField>` components cannot display currency fields.

- "Customize Application"

Edit Conversion Rates

You can manage static exchange rates between your active and inactive currencies and the corporate currency by editing the conversion rates. These exchange rates apply to all currency fields used in your organization. In addition to these conversion rates, some organizations use dated exchange rates for opportunities and opportunity products.

1. Search Setup for Manage Currencies.
2. If you use advanced currency management, click **Manage Currencies**.
3. In the Active Currencies or Inactive Currencies list, click **Edit Rates**.
4. Enter the conversion rate between each currency and your corporate currency.
5. Click **Save**.

When you change the conversion rates, currency amounts are updated using the new rates. Previous conversion rates are not stored. All conversions within opportunities, forecasts, and other amounts use the current conversion rate.

If your organization uses advanced currency management, you can also manage dated exchange rates for currency fields on opportunities and opportunity products.

Note:

- You cannot track revenue gain or loss based on currency fluctuations.
- Changing conversion rates causes a mass recalculation of roll-up summary fields. This recalculation can take up to 30 minutes, depending on the number of records affected.
- You can also change a conversion rate via the API. However, if another roll-up summary recalculation for the same currency field is in progress, the age of that job affects the recalculation job that you triggered. Here's what happens when you request a currency rate change via the API, and a related job is in progress.
 - If the other recalculation for the same currency field was kicked off less than 24 hours ago, your currency rate change isn't saved. You can try again later or instead change the currency rate from Manage Currencies in Setup. Initiating the change from Setup stops the old job and triggers your recalculation to run.
 - If the other recalculation job was kicked off more than 24 hours ago, you can save your currency rate change and your job starts.

To check the status of your recalculation job, see the Background Jobs page in Setup.

Editing Dated Exchange Rates

To add new dated exchange rates:

1. From Setup, enter *Manage Currencies* in the `Quick Find` box, then select **Manage Currencies**.
2. Click **Manage Dated Exchange Rates**.
3. Click **New Exchange Rates**.
4. Enter the date that the exchange rates go into effect.
5. Enter the exchange rates.

 **Note:** The exchange rates will default to the current exchange rate. If you do not want to set a new exchange rate for a currency, delete the exchange rate (leave the field blank).

6. Click **Save** to save the new dated exchange rates.

To view existing dated exchange rates:

1. From Setup, enter *Manage Currencies* in the `Quick Find` box, then select **Manage Currencies**.
2. Click **Manage Dated Exchange Rates**.
3. Select the date range you want to view either by entering the date and clicking **Go!**, or by selecting **Previous Range** or **Next Range**.

To delete a dated exchange rate for a particular currency:

1. From Setup, enter *Manage Currencies* in the `Quick Find` box, then select **Manage Currencies**.
2. Click **Manage Dated Exchange Rates**.
3. Click the name of the currency you want to edit.
4. Click **Del** for the date range you want to delete.

If the date range you want is not displayed, enter it in the `Show all rates with start dates between` fields and click **Go!**.

To edit your dated exchange rates for a particular currency:

1. From Setup, enter *Manage Currencies* in the `Quick Find` box, then select **Manage Currencies**.
2. Click **Manage Dated Exchange Rates**.
3. Click the name of the currency you want to edit.
4. Click **Edit** for the date range you want to edit. If the date range you want is not displayed, enter it in the `Show all rates with start dates between` fields and click **Go!**.
5. Edit the exchange rate, setting it to the new value for the date range, and click **Save**.

Enable and Customize Quotes

Enable Quotes

Make it easy for your sales reps to show your customers the prices of the products and services that your company offers.

1. From Setup, enter `Quote` in the `Quick Find` box, then select **Quote Settings** (Lightning Experience) or **Quotes Settings** (Salesforce Classic).
2. Select the option for enabling quotes.
3. To display the Quotes related list on the standard opportunity page layout, select `Opportunity Layout`.
4. To add the Quotes related list to all opportunity page layouts that users have customized, select `Append to users' personal related list customization`.
5. Save your changes.

Note: You can't disable the Quotes feature if:

- Your records have any references to quotes, quote line items, or quote PDFs from any application customizations, including formula fields, triggers, workflow rules, and approval processes. Remove these references before you try to disable the feature.
- Any quote is synced with an opportunity. On each synced quote's detail page, choose to stop syncing before you try to disable the feature.

Considerations for Creating Quote Templates

Before you create a quote template, consider a few key points.

- Quote PDFs don't support right-to-left languages. The text aligns to the left side of the page.
- Text formatting isn't available in the `Text/Image Field` for Unicode languages such as Arabic and Japanese. To make these languages visible in plain text, contact Salesforce and ask to enable the feature for foreign character support for rich text area fields in Quote PDFs.
- Advanced Currency Management isn't available with quotes.
- The maximum number of characters that you can use in the quotes template `Text/Image Field` is 32,000. This number includes the hidden HTML characters that are used to format text.
- Sometimes a field doesn't appear on the quote templates palette or on a PDF that's created from a template.
 - If the default value for the field exceeds 255 characters, quote templates can't include text areas or text fields.
 - If a user can't view or update a field because of field-level security settings, that field doesn't appear on PDFs that are created from a template, even if the template includes that field. Read-only fields appear on PDFs.
 - Fields that appear on a quote page layout but don't contain data for a given quote appear on the quote templates palette but not when a PDF is created.
 - Quote line item fields that don't contain data don't appear as columns in a list when a PDF is created, even if the template includes that field. For example, if no quote line items offer a discount, the `Discount` column doesn't appear, even if the list includes the `Discount` field.
 - If a related list isn't included on a quote page layout, it doesn't appear on the template palette or any PDFs for quotes that use that page layout.
 - If the currency of a product on an opportunity differs from the user's currency in a multicurrency org, currency fields for quotes and quote line items appear in both currencies. The product's currency is converted to the user's currency, and the converted amount appears in parentheses. Fields in quote custom reports appear in the report's currency. Currency fields include `Subtotal`, `Tax`, and `Grand Total`.
 - If you create a Developer or Developer Pro sandbox, templates that contain `Text/Image` fields can't be opened for editing within the sandbox.
- Fields within sections have different alignment than columns within lists, so if you place a totals section below a list, its field values won't align directly below the right-hand list values. For example, say your template includes a list of quote line items, including a Total Price column at the far right that shows the total for each line item. If you add a totals section beneath the list, and you include `Subtotal`, `Total Price`, and `Grand Total` fields, their values will show the total of all line items, but the amounts won't align directly below the list's Total Price column.

Create, Preview, and Activate Quote Templates

Define the look of your company's quote PDFs by creating templates that your sales reps can choose when they create quote PDFs.

Watch a Demo: [▶ Creating Quote Templates \(Salesforce Classic\)](#)

1. From Setup, enter *Templates* in the **Quick Find** box, then select **Quote Templates** (Lightning Experience) or **Templates** under Quotes (Salesforce Classic).
2. Click **New**, and then select a template, such as *Standard Template*, on which to base your new template.
3. Give your new template a name, and then click **Save**.
4. In the template editor, drag the elements that you want to the template, and then complete the details. To add:
 - One or more Quote fields or fields from related objects, use a section and add fields to it.
 - Text that you can edit and format, such as terms and conditions, use **Text/Image Field**.
 - An image, such as your company logo, use **Text/Image Field**.
 - A table of Quote fields or fields from a different object, such as Quote Line Item, use a list.
5. Click **Quick Save** to save your changes and continue working on the template.
6. Click **Save and Preview** to make sure that the quote PDFs that users create look the way you want them to.

Preview shows templates in system administrator profile view. The preview and the template show the rich text and images that you've added. Other data is simulated.

 **Important:** **Save and Preview** saves changes to your template, so after you preview, you can't undo them.

7. Click **Save** when you're finished.
8. Return to the Quote Templates page, and then click **Activate**.

Enhance Quote Templates

After you create a quote template, add features to enhance it.

[Add Rich Text to a Quote Template](#)

Include text that you can format, such as your company's address or terms and conditions, in your quote template's body, header, or footer.

[Add a List to a Quote Template](#)

Arrange and display fields from a quote line item or any other standard or custom object that has a lookup relationship to the quote object. The added list looks like a table, with field names appearing as columns.

[Add an Image to a Quote Template](#)

Show an image, such as your company logo, in your quote template's body, header, or footer.

[Add a Totals Section to a Quote Template](#)

Include subtotal and grand total amounts for your quote.

[Add a Signature Block to a Quote Template](#)

Create signature and date lines so that customers can easily sign off on their quotes.

[Guidelines for Using the Quote Templates Editor](#)

While you're creating and editing quote templates, refer to key guidelines for additional information.

Add Rich Text to a Quote Template

Include text that you can format, such as your company's address or terms and conditions, in your quote template's body, header, or footer.

1. Drag `Text/Image Field` into place in the header, the footer, or any section in the body.
2. Type or paste your text into the field.
3. Format the text as needed.
4. Click **OK**.

Add a List to a Quote Template

Arrange and display fields from a quote line item or any other standard or custom object that has a lookup relationship to the quote object. The added list looks like a table, with field names appearing as columns.

A list can include up to 10 fields.

 **Note:** You can't add lists to the header or footer of your quote template.

1. Drag a list from the palette to the template.
2. Enter a title for the list. To suppress the title from appearing on the template or PDF, select **Hide Title**.
3. In the **Object** field, select the object whose fields you want to appear in the list.
4. Use the **Add** and **Remove** arrows to move columns from the Available Fields list to the Selected Fields list. Use the **Up** and **Down** arrows to change the order of the columns.
5. Click **OK**.

SEE ALSO:

[Guidelines for Using the Quote Templates Editor](#)
[Enhance Quote Templates](#)

Add an Image to a Quote Template

Show an image, such as your company logo, in your quote template's body, header, or footer.

Before you begin, review key [considerations](#).

Insert an Uploaded Image

1. To use an image that's stored in Salesforce CRM Content, locate the image, and then download it to your local file directory.
2. Drag **Text/Image Field** into place in the header, the footer, or any section in the body.
3. Click the image icon, click **Choose File**, and then select the image in your file directory.
4. Click **Open** and then **Insert**.
The image appears in the field. To resize it, drag the sizing handles, which show the image's height and width in pixels.
5. Click **OK**.
6. To see how the image looks in PDFs that are created from the template, click **Save and Preview**.
7. To suppress the title from appearing on the template or PDF, select **Hide Title** in Section Properties.

Insert an Image from a Salesforce Web Address

1. If you need to, upload the image to the Documents tab, or define a static resource.
2. Drag **Text/Image Field** into place in the header, the footer, or any section in the body.

3. To suppress the title from appearing on the template or PDF, select **Hide Title**.
4. Click **OK**.
5. On the Documents tab or the Static Resources page, open the image's detail page, click **View File**, and then copy its URL.
6. In the quote template editor, click  in the title bar of `Text/Image Field`.
7. Click the image icon, and then click the Web Address tab.
8. Paste the URL into the URL field, and then click **Insert**.

The image appears in the field. You can resize it by dragging the sizing handles, which show the image's height and width in pixels.

9. Click **OK**.
10. To see how the image looks in PDFs that are created from the template, click **Save and Preview**.

 **Important:** If the image is removed from the Documents tab or Static Resources page where it's stored, the template displays a message that the image isn't available. Restore the image, open the template, delete the error message image, and then paste the URL again.

[Enhance Quote Templates](#)

Add a Totals Section to a Quote Template

Include subtotal and grand total amounts for your quote.

1. Do either of the following.
 - a. Select *Standard Template* when you create a template, and then modify the totals section as needed.
 - b. Drag a section onto the layout of any template, and then drag total-related fields (such as `Subtotal` and `Grand Total`) to the right half of the section. If you're placing the section directly below a list, hide the title.
2. Click , and then select right field alignment.
3. Save your changes.

Guidelines for Using the Quote Templates Editor

While you're creating and editing quote templates, refer to key guidelines for additional information.

General Guidelines

- Click  beneath the palette at the top to expand or collapse it.
- In the left column, select an object to display its fields on the palette.
- Use **Quick Find** to easily locate items on the palette.
- To add an element to the template, drag it from the palette to the layout.
- To remove an element from the layout, drag it back to the palette, or hover over its title bar and click .
- For any section (including a header or footer), double-click its title bar or click  to:
 - Hide the section title.
 - Hide field labels. (Field names appear in gray in the quote template editor, but they don't appear on quote PDFs.)
 - Change the number of columns (one or two).
 - Adjust field alignment.
- To rename the template, click **Quote Template Properties**.
- To show field content without labels in quote template sections, headers, and footers, click , and then select the **Hide** checkbox.
- Use the **Blank Space** field to add vertical space anywhere on the template. Each **Blank Space** field adds five pixels of vertical space to the quote PDF.

 **Note:** The space in the quote template preview doesn't look the same as the space in the quote PDF.

Guidelines for Using Headers and Footers

A header or footer is essentially a section. You can add fields to it and show or hide its title. You can't remove a header or footer or add more sections to it.

- In the quote template editor, select an object, and then drag the fields that you want to the header or footer.
- To use an image, such as your company logo, or include extended information, such as terms and conditions, use **Text / Image Field**.
- To change the number of columns in your header or footer, click , and then select the number (one or two) that you want.
 - To display an image that spans the width of a page, use a one-column header or footer.
 - For terms and conditions text, use a one-column footer.
- To change field alignment within a column, click , and then select left or right alignment.
- To hide field labels, click , and then select the **Hide** checkbox.

Quote Template Fields

If you're working with quote templates, review details about quote template fields.

 **Note:** To help you understand the information that you'll get when you select fields for your template, the Template Field Name column in the following table provides additional information that doesn't appear on PDFs that are created from the template.

Object	Object Field	Template Field Name	PDF Field Name
User	First Name, Last Name	Prepared By (Name)	Prepared By
User	Email	Prepared By (Email)	E-mail
User	Phone	Prepared By (Phone)	Phone
User	Fax	Prepared By (Fax)	Fax
Company Information	Address	Organization (Address)	Company Address
Quote Documents	Hidden. The date when the PDF was generated and saved in the quote documents object.	Quote PDF (Created Date)	Created Date

Considerations for Adding Images to Quote Templates

Before you add images to quote templates, consider a few key points.

- You can store images for uploading in your file system or in Salesforce CRM Content.
- If you store images on the Documents tab or the Static Resources page, you get a web address that you can use to insert the image.
- If you insert an image that's too large, it's cropped when users create quote PDFs from the template. To prevent cropping, click **Save and Preview** after you insert an image, and then resize the image as needed.
- To insert an image from a *public* web address outside the Salesforce application (such as your company's website), contact Salesforce and ask to have the public URL whitelisted for your Salesforce org.

SEE ALSO:

[Add an Image to a Quote Template](#)

Quotes Fields

If you're troubleshooting quotes or working with custom fields, review the details about quote fields.

These tables list the fields that make up a quote. Your page layout, field-level security settings, and Salesforce edition determine what fields are visible and editable. (Field-level security is available in Professional, Enterprise, Unlimited, Performance, and Developer Editions.)

 **Note:** If the currency of a product on an opportunity differs from the user's currency in a multicurrency org, currency fields for quotes and quote line items appear in both currencies. The product's currency is converted to the user's currency, and the converted amount appears in parentheses. Fields in quote custom reports appear in the report's currency. Currency fields include `Subtotal`, `Tax`, and `Grand Total`.

Field	Description
Account Name	The name of the account that the quote's opportunity is linked to. (Read only.)
Additional To	Another address field. By default not displayed on the page layout.
Additional To Name	The name of the person or company that's associated with the additional address.
Bill To	The billing address for the account that's associated with the quote.
Bill To Name	The name of the person or company that the quote is billed to.
Contact Name	The name of the contact that's associated with the quote. By default, this contact is the primary contact on the opportunity.

Field	Description
Contract	The contract that's associated with the quote.
Created By	The user who created the quote, including the creation date and time. (Read only.)
Description	The description of the quote, or notes to help you differentiate between quote versions.
Discount	The weighted average of all line item discounts on the quote. Can be any positive number up to 100. (Read only.)
Email	The email address of the contact who's associated with the quote. If available, automatically completed when you add a contact.
Expiration Date	The date when this quote is no longer valid.
Fax	The fax number for the contact who's associated with the quote. If available, automatically completed when you add a contact.
Grand Total	The total price of the quote plus shipping and taxes. (Read only.)
Last Modified By	The user who most recently changed the quote, including the modify date and time. (Read only.)
Line Items	The number of line items on the quote.
Opportunity Name	The name of the opportunity that's associated with the quote. (Read only.)
Phone	The phone number of the contact who's associated with the quote. If available, automatically completed when you add a contact.
Quote Name	The quote's name.
Quote Number	A system-generated number that identifies the quote. (Read only.)
Quote To	The address to send the quote to for approval, such as the address of a third-party agency that represents a buyer. By default not displayed on the page layout.
Quote To Name	The name of the entity (such as a person or business) that the quote is sent to for approval.
Record Type	The name of the field that determines what picklist values are available for the record. The record type can be associated with a sales process. Available in Professional, Enterprise, Unlimited, Performance, and Developer Editions.
Shipping and Handling	The total shipping and handling costs for the quote.
Ship To	The shipping address for the account that's associated with the quote.
Ship To Name	The name of the entity (such as a person or company) that the quote line items are shipped to.
Status	The status of the quote. The standard options are: <ul style="list-style-type: none"> • —None— • Draft • Needs Review

Field	Description
	<ul style="list-style-type: none"> In Review Approved Rejected Presented Accepted Denied <p>Your admin determines which status is the default for new quotes and which statuses allow you to email a quote PDF.</p>
Subtotal	The total of the quote line items before discounts, taxes, and shipping are applied. (Read only.)
Syncing	Whether the quote syncs with its associated opportunity. (Read only.)
Tax	The total taxes for the quote.
Total Price	The total of the quote line items after discounts and before taxes and shipping. (Read only.)

Quote Line Item Fields

Field	Description
Created By	The user who created the line item, including creation date and time. (Read only.)
Date	The service date, effective date, or other date for the product.
Discount	The discount that you apply to the line item. You can enter a number with or without the percent symbol. You can use up to two decimal places.
Last Modified By	The user who most recently changed the line item, including the modify date and time. (Read only.)
Line Description	The description of the product in the line item.
Line Item Number	A system-generated number that identifies the line item. (Read only.)
List Price	The price of the product within the price book, including currency. (Read only.)
Product	The name of the line item product as listed in the price book. (Read only.)
Product Code	The internal code or product number that's used to identify the product.
Quantity	The number of units of this line item's product included in the quote. The value must be one or greater. If a quote is synced with an opportunity, this field is updated from the quote line item to the opportunity product. If you use forecasting for your opportunities, this field also appears in the Products list on the Opportunity Forecast Edit page, depending on which forecasting version you use .
Quote Name	The name of the quote that the line item is for.

Field	Description
Sales Price	The price that you want to use for the product. Initially, the sales price for a product on an opportunity or quote is the product's list price from the price book, but you can change it here. If a quote is synced with an opportunity, this field is updated from the quote line item to the opportunity product. If you use forecasting for your opportunities, this field also appears in the Products list on the Opportunity Forecast Edit page, depending on which forecasting version you use .
Schedule	Whether the line item uses schedules in the opportunity. Default schedules aren't carried over from the opportunity when opportunity products are copied to a quote.
Subtotal	The line item's sales price multiplied by the quantity.
Total Price	The line item's sales price multiplied by the quantity and minus the discount.

Customize Options for Contracts

Customize Contracts

Customize Salesforce to handle your internal contract management process.

To access the Contract Settings page, from Setup, enter *Contract Settings* in the Quick Find box, then select **Contract Settings**.

Enable Contract Expiration Notices

Send email notifications to account and contract owners when a contract expires.

1. Select **Send Contract Expiration Notice Emails to Account and Contract Owners**, and then save your changes.
2. To stop sending expiration notices, deselect this option, and then save your changes.

Enable Auto-Calculation of Contract End Dates

To automatically calculate contract end dates, select **Auto-calculate Contract End Date**, and then save your changes.

Note:

- If Salesforce automatically calculates a contract end date, it doesn't appear on the contract's edit page.
- If Auto-calculate Contract End Date is enabled, and Contract Start Date or Contract Term is blank, Contract End Date is blank.

Disable Auto-Calculation of Contract End Dates

If your contracts don't have end dates, or if you prefer to let your sales team enter them manually, disable auto-calculation of contract end dates.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Contracts are available in: **Performance** and **Developer** Editions

Contracts are available in: **Professional**, **Enterprise**, and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To change contract settings:

- "Customize Application"

1. Deselect **Auto-calculate Contract End Date**, and then save your changes.
2. View your page layout and field-level security settings for Contract End Date, Contract Start Date, and Contract Term to verify that your sales team can read and edit them as needed.

Track History for All Statuses

The default is to track history for contracts with a status of In Approval Process or Activated.

To track history for contracts for all statuses, select **Track History for All Statuses**, and then save your changes.

Show a Contract on Opportunity or Quote Details

To show a contract on the opportunity or quote details, use field-level security and field accessibility.

1. From Setup, enter *Object Manager* in the **Quick Find** box, then select **Object Manager**.
2. In the object management settings for opportunities or quotes, click **Contract** in the fields area.
3. Click **Set Field-Level Security**.
4. Select **Visible** for each profile that you want to see contracts on opportunity or quote details, and then save your changes.
5. Click **View Field Accessibility**.
6. If any profile is marked hidden, click **Hidden**, and then select **Visible** under Page Layout.
7. Save your changes. The profiles are marked editable.

To show an Opportunities or Quotes related list on contracts, use page layouts.

Enable a Contracts Chatter Feed

Add contract fields to be monitored via Chatter.

1. From Setup, enter *Feed Tracking* in the **Quick Find** box, then select **Feed Tracking**.
2. From the list of objects, select Contract.
3. Select the **Enable Feed Tracking** checkbox and then the checkboxes for the fields that you want to track.
4. Save your changes.

Customize Options for Orders

Customize Order Settings

Customize Salesforce to handle your internal order management process.

Specify the following order settings from the Order Settings page in Setup.

[Enable Orders](#)

To let your sales team track and manage customer requests for products or services, enable orders.

[Enable Reduction Orders](#)

To let your sales team process returns or reductions on activated orders (Salesforce Classic only), enable reduction orders in Salesforce.

[Enable Negative Quantities for Order Products](#)

To let your sales team add order products with quantities of less than zero, enable negative quantities.

SEE ALSO:

[Orders](#)

Enable Orders

To let your sales team track and manage customer requests for products or services, enable orders.

1. From Setup, enter *Order Settings* in the Quick Find box, then select **Order Settings**.
2. Make sure that **Enable Orders** is selected.
3. Save your changes.
4. Select which page layouts have an Orders related list, and then save your changes.
5. Use profiles or permission sets to assign user and object permissions to the appropriate users.

If you disable orders, your order-related data is hidden. To access that data, re-enable orders.

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To modify order settings:

- "Customize Application"

Enable Reduction Orders

To let your sales team process returns or reductions on activated orders (Salesforce Classic only), enable reduction orders in Salesforce.

1. From Setup, enter *Order Settings* in the Quick Find box, then select **Order Settings**.
2. Make sure that **Enable Orders** is selected.
3. Select **Enable Reduction Orders**.
4. Save your changes.
5. Using a profile or permission set, assign the necessary permissions to the appropriate sales team members.
 - To create reduction orders, team members need the “Create Reduction Orders” user permission.
 - To add order products to reduction orders, team members need field-level access to these order product fields: *Start Date*, *End Date*, and *Original Order Product*.
6. Consider adding the Reduction Order Products related list to your page layouts for order products.

 **Note:** If Enable Reduction Orders is later disabled, the “Create Reduction Orders” permission is hidden from all profiles or permission sets, but no data is hidden. Your sales team can’t create or activate reduction orders, but they can view and edit existing ones. If you disable reduction orders, disable the record types and page layouts specific to reduction orders. If you aren’t using record types, remove fields specific to reduction orders from your page layouts. These include *Original Order* and *Reduction Order* on the Order object, *Original Order Product* and *Available Quantity* on the Order Product object, and any custom fields.

SEE ALSO:

[Permission Sets](#)

[Reduction Orders](#)

Enable Negative Quantities for Order Products

To let your sales team add order products with quantities of less than zero, enable negative quantities.

1. From Setup, enter *Order Settings* in the Quick Find box, then select **Order Settings**.
2. Make sure that **Enable Orders** is selected.
3. Select **Enable Negative Quantity**.
4. Save your changes.

If Enable Negative Quantity is disabled, your sales team can’t add order products with negative quantities or activate orders that have order products with negative quantities. But your sales team can still view and edit order products that have negative quantities.

Configure Forecasts

Configure Collaborative Forecasts

Setting Up Collaborative Forecasts

Set up Salesforce so that your sales team can get the most from Collaborative Forecasts.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

[Considerations for Migrating from Customizable Forecasting to Collaborative Forecasts](#)

Before you migrate from Customizable Forecasting to Collaborative Forecasts, consider a few key points.

[Guidelines for Setting Up Collaborative Forecasts](#)

Review key guidelines for setting up Collaborative Forecasts.

[Considerations for Defining Forecasts Settings in Collaborative Forecasts](#)

Before you define forecasts settings, review a few key points.

[Define Forecasts Settings in Collaborative Forecasts](#)

Choose the types of forecasts that you want and the details that appear on the forecasts page so that your sales team can see the revenue and quantity projections from the sales pipeline.

[Enable Users in Collaborative Forecasts](#)

Set up Salesforce so that your sales team can use Collaborative Forecasts.

[Enable Partner Portal Users to Add Collaborative Forecasts Opportunities](#)

If your sales team works with partners, you can include the amounts from partner user opportunities in forecasts and add partner portal users to your team's forecast hierarchy. Your partner portal users can't access the Collaborative Forecasts page or its functionality.

[Set Up Your Forecast Hierarchy in Collaborative Forecasts](#)

Your forecast hierarchy lists all forecast users and determines how their forecasts roll up through your company. Keep your forecast hierarchy up to date to ensure that forecast managers see all subordinates' forecast amounts.

[Select a Forecast Currency in Collaborative Forecasts](#)

Choose the forecast currency option that's right for your sales team.

[Define Your Company's Forecast Date Range](#)

The Collaborative Forecasts rollup table displays forecast amounts for individual months or quarters and a range of months or quarters, depending on your Collaborative Forecasts settings.

[Display Fields in the Collaborative Forecasts Opportunity Pane](#)

Select up to 15 standard and custom fields to appear in the opportunity pane for each enabled forecast type.

[Guidelines for Displaying Fields in the Collaborative Forecasts Opportunity Pane](#)

Refer to key guidelines when you're displaying fields in the Collaborative Forecasts opportunity pane.

[Customize Forecast Categories in Collaborative Forecasts](#)

A forecast category is the category within the sales cycle to which an opportunity is assigned based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can customize the forecast category names.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Professional** (no custom field forecasts), **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Territory management available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

[View and Update Opportunity-Stage-to-Forecast-Category Mappings](#)

Forecasts rely on how opportunity Stage picklist values map to values in the Forecast Category picklist. For example, if you map the Negotiation/Review stage to the Best Case forecast category, the amounts of your opportunities in Negotiation/Review are included in your Best Case forecast amount. If the stage of an opportunity changes, the probability and forecast category also change.

[Considerations for Disabling Collaborative Forecasts](#)

Before you disable Collaborative Forecasts, find out how data is affected.

SEE ALSO:

[Sales Features: What's Different or Not in Lightning Experience](#)

Considerations for Migrating from Customizable Forecasting to Collaborative Forecasts

USER PERMISSIONS

To view Forecasts setup:	"View Setup and Configuration"
To edit Forecasts settings:	"Customize Application"
To enable Forecasts users:	"Manage Internal Users" AND "Customize Application"
To manage quotas:	"Customize Application" AND "Manage Quotas"
To upload quota data to Salesforce:	"Manage Quotas" AND "View All Forecasts"

EDITIONS

Collaborative Forecasts is available in: both Salesforce Classic and Lightning Experience

Collaborative Forecasts is available in: **Professional** (no custom field forecasts), **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Territory management is available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

Before you migrate from Customizable Forecasting to Collaborative Forecasts, consider a few key points.

- To enable Collaborative Forecasts, Customizable Forecasting must be disabled. Contact Salesforce for assistance with disabling Customizable Forecasting.
- When you turn off Customizable Forecasting, the Quotas related list no longer appears on User records. The Edit Personal Quota permission (API name: `PermissionsEditOwnQuota`) also no longer appears in the Profile object.
- If you have the original Territory Management feature enabled, disable Customizable Forecasting and original Territory Management before migrating to Collaborative Forecasts. To disable these features, contact Salesforce. You can enable and use Enterprise Territory Management and Collaborative Forecasts at the same time, but the two features aren't integrated to work together.
- When you migrate, the forecast history, overrides, reports, and sharing data from Customizable Forecasting are purged.
- Consider exporting forecasting report data so that you have a backup.
- Monthly forecasts is the default Collaborative Forecasts period. You can change your settings to quarterly. If you use custom fiscal years, your fiscal period is the default. You can also choose your custom quarters.
- The forecast hierarchy is retained. However, to reduce the risk of data loss, consider migrating to Collaborative Forecasts immediately after disabling Customizable Forecasts. After migrating, don't enable Forecasts users again. Validate all hierarchies for accuracy.

- Before migrating, make sure to review [What's the difference between the Forecasting versions?](#) to determine whether you can benefit from the latest improvements offered in Collaborative Forecasts.

SEE ALSO:

[What's the difference between the Forecasting versions?](#)

Guidelines for Setting Up Collaborative Forecasts

Review key guidelines for setting up Collaborative Forecasts.

-  **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).
-  **Important:** Don't disable the new user interface theme in Salesforce Classic or enable original [Territory Management](#). You can enable Enterprise Territory Management, but forecast rollups are based on the role hierarchy and not the territory hierarchy.
- If you're using Lightning Experience, Collaborative Forecasts isn't accessible from Setup. Switch to Salesforce Classic to set up and configure Collaborative Forecasts.
- [Enable one to four forecast types](#).
- Select the fields that appear in the opportunity pane for each forecast type.
- If your sales team uses quotas, [enable quotas](#).
- If your sales team adjusts forecasts, [enable forecasts adjustments](#).
- [Choose whether to use individual forecast category rollups](#) or [enable cumulative forecast rollups](#).
- [Define your forecast range](#). You can select the time period and default range. Standard and custom fiscal years are supported.
- If your company uses specific terminology, [customize your forecast categories](#).
- If your company uses multiple currencies, set a [forecast currency](#)—your company's corporate currency or the forecast owner's personal currency.
- [Enable users](#) who need forecasts.
- [Set up your forecasts hierarchy](#) to determine how forecasts roll up within your company and who can view and adjust them. The forecast hierarchy is based on the role hierarchy and specifies which users are forecast managers.
- Make sure that your Collaborative Forecasts users can access the forecasts page.
- For best viewing results, keep the Tab Bar Organizer enabled.

Considerations for Defining Forecasts Settings in Collaborative Forecasts

Before you define forecasts settings, review a few key points.

-  **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).
- If you're using Lightning Experience, Collaborative Forecasts isn't accessible from Setup. Switch to Salesforce Classic to set up and configure Collaborative Forecasts.
 - Salesforce recommends that you review the documentation before setting up Collaborative Forecasts. If you change certain settings, you can lose data.
 - For a more detailed step-by-step explanation of setting up Collaborative Forecasts and why you'd enable certain functionality, see the [Collaborative Forecasts Implementation Guide](#).
 - If you disable adjustments, adjustment data is purged.
 - If you change your forecast period, quota data and adjustment data are purged.
 - If you remove a forecast type, quota data and adjustment data are purged for that forecast type.
 - If you change the forecast measurement for a forecast type from revenue to quantity or from quantity to revenue, quota data and adjustment data are purged for that forecast type.

Define Forecasts Settings in Collaborative Forecasts

USER PERMISSIONS

To view Forecasts setup:	"View Setup and Configuration"
To edit Forecasts settings:	"Customize Application"
To enable Forecasts users:	"Manage Internal Users" AND "Customize Application"
To manage quotas:	"Customize Application" AND "Manage Quotas"
To upload quota data to Salesforce:	"Manage Quotas" AND "View All Forecasts"

Choose the types of forecasts that you want and the details that appear on the forecasts page so that your sales team can see the revenue and quantity projections from the sales pipeline.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

 **Important:** Don't disable the new user interface theme in Salesforce Classic or enable original [Territory Management](#). You can enable Enterprise Territory Management, but forecast rollups are based on the role hierarchy and not the territory hierarchy.

1. If you're using Lightning Experience, switch to Salesforce Classic.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Professional** (no custom field forecasts), **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Opportunity Splits available in: **Performance** and **Developer** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

[Collaborative Forecasts Concepts](#)

[Guidelines for Setting Up Collaborative Forecasts](#)

Set Up Your Forecast Hierarchy in Collaborative Forecasts

Your forecast hierarchy lists all forecast users and determines how their forecasts roll up through your company. Keep your forecast hierarchy up to date to ensure that forecast managers see all subordinates' forecast amounts.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

When you assign someone as a forecast manager, all forecasts and adjustments from the manager's subordinates in the hierarchy roll up into the manager's forecasts. Assign a forecast manager to the top level of the forecast hierarchy.

To ensure that the forecast visibility rolls up to every level of the hierarchy, make sure that each sales manager with subordinates is designated as a forecast manager in your forecast hierarchy.

1. If you're using Lightning Experience, switch to Salesforce Classic.
2. From Setup, enter *Forecasts Hierarchy* in the **Quick Find** box, then select **Forecasts Hierarchy**.
3. Click **Expand All** to see the available roles.
4. Click **Enable Users** and then **Add** and **Remove** to move users between the Available Users list and the Enabled Users list. If you previously enabled a user from Setup by entering *Users* in the **Quick Find** box, selecting **Users**, and then editing a user page to allow forecasting, the name appears in the Enabled Users list.
5. To select a forecast manager for each manager role in the hierarchy, click **Edit Manager** next to the role, and then select a name from the Forecast Manager dropdown list.
6. Save your changes.

Define Your Company's Forecast Date Range

The Collaborative Forecasts rollup table displays forecast amounts for individual months or quarters and a range of months or quarters, depending on your Collaborative Forecasts settings.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

 **Warning:** If you change the time period from monthly to quarterly or quarterly to monthly, or you change the standard fiscal year, all adjustments and quotas are purged. If you enable custom fiscal years, creating the first custom fiscal year deletes any quotas and adjustments in the corresponding and subsequent standard fiscal years. These changes trigger a forecast recalculation that can take significant time, depending on the quantity of your data.

If you use custom fiscal years, your custom periods or quarters are displayed. Users can forecast up to 12 months or eight quarters in the future or past. If your forecast range includes the current month or quarter, the forecasts page displays the current month or quarter by default. If not, the first month or quarter of the range is selected.

The forecast date range becomes the default for all Collaborative Forecasts users. Users can use this default, or they can set a different date range display for their own forecasts. After users change their individual forecast date range displays, Salesforce admins can't override them. However, when changing the *period* display from monthly to quarterly or quarterly to monthly, the change is reflected in all users' forecasts.

1. If you're using Lightning Experience, switch to Salesforce Classic.
2. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**.
3. Under Configure the Default Forecast Display, select a beginning period and the number of periods to display.
4. Save your changes.

Display Fields in the Collaborative Forecasts Opportunity Pane

Select up to 15 standard and custom fields to appear in the opportunity pane for each enabled forecast type.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

1. If you're using Lightning Experience, switch to Salesforce Classic.
2. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**.
3. Click the name of the forecast type whose opportunity fields you want to edit.
4. Select the Opportunity fields to display in the list. Arrange the fields from top to bottom to order them left to right in the list.
5. Click **OK**, and then save your changes.

SEE ALSO:

- [Guidelines for Displaying Fields in the Collaborative Forecasts Opportunity Pane](#)
- [Collaborative Forecasts Concepts](#)
- [Guidelines for Setting Up Collaborative Forecasts](#)

Guidelines for Displaying Fields in the Collaborative Forecasts Opportunity Pane

Refer to key guidelines when you're displaying fields in the Collaborative Forecasts opportunity pane.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

- If you add an opportunity field to the opportunity pane, and the field isn't visible to Collaborative Forecasts users, check the field-level security setting for the specific user profile and field. If the forecast is based on that field, the Forecasted Amount column shows the value of the field or the value of the field's split that contributes to the forecast, regardless of field-level security.
- When a rep selects a forecast amount in the rollup table, the list of opportunities that roll up to that amount appears below the table. Select up to 15 standard and custom fields that appear in the opportunity pane for each enabled forecast type. Your sales team sees the selected fields based on their field-level security settings. `Opportunity Name` is a required field. We recommend adding `Forecast Category` to the pane.
- When selecting fields, consider the fields that are used in the forecast rollup.
 - Opportunity-quantity forecasts roll up based on the opportunity's `Quantity` field, while opportunity-revenue forecasts roll up based on the opportunity's `Amount` field.
 - For opportunity splits-revenue forecasts, the rollup is based on the opportunity's `Amount` field and the split percentage that's assigned to the sales rep.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Professional** (no custom field forecasts), **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Opportunity Splits available in: **Performance** and **Developer** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To customize the opportunity pane:

- "Customize Application"

To view setup and configuration:

- "View Setup and Configuration"

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Professional** (no custom field forecasts), **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Opportunity Splits available in: **Performance** and **Developer** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

- For custom opportunity field forecasts, the rollup is based on the custom field amount.
- For product family-revenue forecasts, the rollup is based on the sum of the `Total Price` field for all opportunity line items in that product family.
- Product family-quantity forecasts roll up based on the `Quantity` field for all opportunity line items in that product family.
- For opportunities without opportunity line items or with line items that don't have a specified product family, the totals roll up into the `Products Not Categorized` row on the forecasts page.

Depending on whether your forecast type uses the revenue or quantity measurement, consider adding `Amount` or `Quantity` to the pane.

- If your forecast data source is opportunities or product families, the `Amount` field appears by default. If your data source is opportunity splits, the `Forecasted Amount` and `Split %` fields appear by default. You can change the selected fields for each forecast type even after it has been enabled.

Customize Forecast Categories in Collaborative Forecasts

A forecast category is the category within the sales cycle to which an opportunity is assigned based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can customize the forecast category names.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

1. From the management settings for opportunities, go to Fields.
2. Click **Forecast Category**.
3. Click **Edit** for any value that you want to edit in the Forecasts Category Picklist Values.
4. Enter a forecast category name.
5. Save your changes.

New forecast category names appear on opportunity records and forecasts.

View and Update Opportunity-Stage-to-Forecast-Category Mappings

Forecasts rely on how opportunity Stage picklist values map to values in the Forecast Category picklist. For example, if you map the Negotiation/Review stage to the Best Case forecast category, the amounts of your opportunities in Negotiation/Review are included in your Best Case forecast amount. If the stage of an opportunity changes, the probability and forecast category also change.

Here's an example mapping.

Stage	Probability	Forecast Category
Prospecting	10%	Pipeline
Qualification	10%	Pipeline
Needs Analysis	20%	Pipeline

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Professional** (no custom field forecasts), **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Opportunity Splits available in: **Performance** and **Developer** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To enable Forecasts users:

- "Manage Users"
- AND
- "Customize Application"

Stage	Probability	Forecast Category
Value Proposition	50%	Pipeline
Id Decision Makers	60%	Pipeline
Perception Analysis	70%	Pipeline
Proposal/Price Quote	75%	Pipeline
Negotiation/Review	90%	Best Case
Closed Won	100%	Commit

1. From the management settings for opportunities, go to Fields.
2. Click **Stage**. Each row in Opportunity Stages Picklist Values shows a stage and the forecast category that it's mapped to.
3. Click **Edit** to change a mapping.
4. Save your changes.

[Forecasts FAQ](#)

Considerations for Disabling Collaborative Forecasts

Before you disable Collaborative Forecasts, find out how data is affected.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

 **Warning:** Disabling certain functionality can result in purged quota and adjustment data, so consider exporting your data before disabling anything. When you complete your setting changes, you can import the data back into Salesforce. If you change your time period from monthly to quarterly or from quarterly to monthly, you *can't* import your quota or adjustments data back into Salesforce, because the existing values don't align with your new periods.

If you disable...	These items are purged...
Collaborative Forecasts	Adjustments (your forecast hierarchy stays in place)
A forecast type	Quotas and adjustments for that forecast type
Adjustments	Adjustments
The monthly period setting to use quarterly periods OR The quarterly period setting to use monthly periods	Quotas and adjustments

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Professional** (no custom field forecasts), **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Opportunity Splits available in: **Performance** and **Developer** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

To disable Collaborative Forecasts, contact Salesforce.

When adjustments are purged from forecasts, the underlying data on which the forecasts are based isn't affected.

[Define Forecasts Settings in Collaborative Forecasts](#)

Quotas in Collaborative Forecasts

Enable quotas in Collaborative Forecasts so that users can upload and display quotas alongside forecast amounts.

A quota is the monthly or quarterly sales goal that's assigned to a user. A manager's quota equals the amount that the manager and team are expected to generate together. The quota rollup is done manually by users and managers, and revenue or quantity data can be used. If multiple types of forecasts are enabled, each forecast type maintains separate quota information.

Viewing quota attainment information isn't available in Lightning Experience.

[Enable Quotas in Collaborative Forecasts](#)

If you have API access, you can upload quotas for Collaborative Forecasts users and display them alongside your sales team's forecast amounts.

[Load Quota Data in Collaborative Forecasts](#)

Load quota data for forecasts with Data Loader or Salesforce APIs.

Available in: **Professional** Edition with the "API Enabled" permission

Load quota data for forecasts with Data Loader or Salesforce APIs.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

Data Loader provides a simple point-and-click method for adding, inspecting, and editing data in Salesforce. APIs provide more flexibility but require you to write code. To use either method, make sure that API access is enabled. See [Data Loader](#) for details.

Add Quotas with Data Loader

Before you upload quotas, consider the version of Data Loader that you're using. For Data Loader v.30 and later, specify the forecast type of each quota that you plan to upload.

1. Query the User object for your users' IDs.

Use Data Loader to retrieve your users' IDs.

- a.** From Setup, enter *Data Loader* in the *Quick Find* box, then select **Data Loader**.
- b.** Download and install Data Loader.
- c.** Launch Data Loader.
- d.** Click **Export**.
- e.** Enter your user name and password, and then click **Log in**.
- f.** Click **Next**.
- g.** Select the User object from the list.
- h.** Choose a file name and destination for the exported data.
- i.** Click **Next**.
- j.** Select the **Id** and **Name** fields.
- k.** Click **Finish** and then **Yes**.
- l.** Click **View Extraction**.
- m.** Click **Open in external program**.
- n.** Save the file in the .csv format. Add user names and IDs to your quotas spreadsheet before uploading it.

2. If you're using Data Loader v.30 or later, query the ForecastingType object to get the IDs of your forecast types. If you're not using Data Loader v.30 or later, skip to step 3.

- a.** Launch Data Loader.
- b.** Click **Export**.
- c.** Enter your user name and password, and then click **Log in**.
- d.** Click **Next**.
- e.** Click **Show all Salesforce objects**.
- f.** Select the Forecasting Type object from the list.
- g.** Choose a file name and destination for the exported data.
- h.** Click **Next**.
- i.** Select the **Id** and **DeveloperName** fields.
- j.** Click **Finish** and then **Yes**.
- k.** Click **View Extraction**.
- l.** Click **Open in external program**.
- m.** Save the file in the .csv format.
- n.** Note the `DeveloperName` and `Id` values for each active forecast type. Not all companies use all forecast types that appear in the results. Review this list if you're not sure which forecast type a specific `DeveloperName` refers to.
 - `OpportunityRevenue` : Opportunities - Revenue
 - `OpportunityQuantity` : Opportunities - Quantity

- `OpportunitySplitRevenue` : Opportunity Revenue Splits - Revenue
 - `OpportunityOverlayRevenue` : Opportunity Overlay Splits - Revenue
 - `OpportunityLineItemRevenue` : Product Families - Revenue
 - `OpportunityLineItemQuantity` : Product Families - Quantity
 - The name of a custom opportunity split type that has been enabled as a forecast type. Custom split types are based on currency fields, which can contain revenue amounts only.
- o. Add columns for `DeveloperName` and `Id` to your quota spreadsheet, and then add the name and ID of the forecast type of your quotas to each row. The name is not necessary for uploading quotas, but it helps to know which forecast type you're working with in each row.

3. Prepare your quota spreadsheet for upload.

- If you're using Data Loader v.30 or later, create a .csv file with columns for User Name, User ID, Forecast Type Name, Forecast Type ID, Quota Amount, Quota Quantity, Currency Code, and forecast period Start Date [yyyy-mm-dd or yyyy-mm-ddThh:mm:ss.sssZ; for example, 2012-03-01T08:00:00.00Z].
- If you're using Data Loader v.29 or earlier, create a .csv file with columns for User Name, User ID, Quota Amount, Quota Quantity, Currency Code, and forecast period Start Date [yyyy-mm-dd or yyyy-mm-ddThh:mm:ss.sssZ; for example, 2012-03-01T08:00:00.00Z]. If you use revenue *and* quantity forecasts, specify the quotas for them on separate rows of your .csv file.

You don't need the User Name or Forecast Type Name columns, but including them makes it easy to understand the contents of your .csv file.

User Name	User ID	Forecast Type Name (for Data Loader v.30 or later)	Forecast Type ID (for Data Loader v.30 or later)	Quota Amount	Quota Quantity	Currency Code	Start Date
Kevin Bailey	00599000000Hofh	OpportunityRevenue	0DbD00000001eQBKAY	250000		USD	2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityRevenue	0DbD00000001eQBKAY	250000		USD	2012-04-01
Kevin Bailey	00599000000Hofh	OpportunityRevenue	0DbD00000001eQBKAY	250000		USD	2012-05-01
Kevin Bailey	00599000000Hofh	OpportunityQuantity	0DbD00000001eQAKAY		500		2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityQuantity	0DbD00000001eQAKAY		500		2012-04-01
Kevin Bailey	00599000000Hofh	OpportunityQuantity	0DbD00000001eQAKAY		500		2012-05-01

If your forecast data source is product families, include a Product Family column. (Product family forecasts view isn't available in Lightning Experience.)

User Name	User ID	Forecast Type Name (for Data Loader v.30 or later)	Forecast Type ID (for Data Loader v.30 or later)	Product Family	Quota Amount	Quota Quantity	Currency Code	Start Date
Kevin Bailey	00599000000Hofh	OpportunityLineItemRevenue	0DbD00000001eQ9KAI	Hardware	250000		USD	2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityLineItemRevenue	0DbD00000001eQ9KAI	Software	150000		USD	2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityLineItemRevenue	0DbD00000001eQ9KAI	Services	50000		USD	2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityLineItemQuantity	0DbD00000001eQ8KAI	Hardware		500		2012-03-01

User Name	User ID	Forecast Type Name (for Data Loader v.30 or later)	Forecast Type ID (for Data Loader v.30 or later)	Product Family	Quota Amount	Quota Quantity	Currency Code	Start Date
Kevin Bailey	00599000000Hofh	OpportunityLineItemQuantity	0DbD00000001eQ8KAI	Software		300		2012-03-01
Kevin Bailey	00599000000Hofh	OpportunityLineItemQuantity	0DbD00000001eQ8KAI	Services		100		2012-03-01

4. Use Data Loader to upload your quota information to Salesforce.
 - a. Launch Data Loader.
 - b. Click **Insert**.
 - c. Log in with your user name and password.
 - d. Click **Next**.
 - e. Click **Show All Salesforce Objects**.
 - f. Select the Forecasting Quota object from the list.
 - g. Click **Browse**, and then choose the .csv file to upload.
 - h. Click **Next**.
 - i. Click **OK** in the Data Selection dialog box.
 - j. Click **Create or Edit a Map**.
 - k. Map columns to fields in the ForecastingQuota object as shown in this table.

Column Headers in CSV File	ForecastingQuota Fields
User ID	QuotaOwnerID
Quota Amount	QuotaAmount
Quota Quantity	QuotaQuantity
Currency Code	CurrencyIsoCode
Start Date	StartDate
Product Family (needed only when the forecast data source is Product Families)	ProductFamily
Forecast Type ID (needed only for Data Loader v.30 or later)	ForecastingTypeID

- l. Click **OK**.
- m. Click **Next**.
- n. Click **Browse**, and then choose the directory where you want to save the log file containing messages about the success or failure of the upload.
- o. Click **Finish**.
- p. Click **Yes** to proceed with the upload.
- q. Click **OK**.

As a best practice, load quota data in the quota owner's [personal currency](#). You can still upload quota data using the API even if `Show Quotas` is disabled. If your Data Loader time zone setting is ahead of quota owners' time zones, the month can be off by one. To avoid this problem, use a date greater than or equal to the third day of each month when inserting quotas.

Uploading Quotas with the API

When uploading quota information with the API, be sure to use the correct API version, depending on the type of quota data that you're working with. If multiple types of forecasts are enabled, each forecast type maintains separate quota information.

When importing...	Use API version...
Revenue quotas for opportunity-based forecasts	25.0 or later
Quantity quotas for opportunity-based forecasts	28.0 or later
Revenue quotas for opportunity splits-based forecasts	29.0 or later
Revenue or quantity quotas for product family-based forecasts	29.0 or later
Quotas in orgs with multiple forecast types enabled	30.0 or later

Cumulative Forecast Rollups in Collaborative Forecasts

Learn about methods for rolling up opportunities into forecasts for your sales teams.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

- Individual forecast category rollups combine the opportunities from each individual forecast category into separate forecast amounts for each category.
- Cumulative forecast rollups combine opportunities from multiple forecast categories into cumulative forecast amounts.

The default rollup setting is individual forecast category rollups. If you choose **Cumulative Forecast Rollups**, the way opportunities roll up to forecast amounts is different. The column names on the forecasts page are also different.

Category Rollup Method	Column Name on the Forecasts Page	Opportunities That Roll Up to It
Individual	Pipeline	Pipeline
	Best Case	Best Case
	Commit	Commit
	Closed	Closed
Cumulative	Open Pipeline	<ul style="list-style-type: none"> • Pipeline • Best Case • Commit
	Best Case Forecast	<ul style="list-style-type: none"> • Best Case • Commit • Closed
	Commit Forecast	<ul style="list-style-type: none"> • Commit • Closed
	Closed Only	Closed

Advantages of Cumulative Forecast Rollups

With individual forecast category rollups, each total and subtotal represents opportunities from only one of the individual forecast categories. This type of rollup means that if forecast users want to know the total that they're going to bring for the month or quarter, they need to add the Best Case, Commit, and Closed forecast amounts together.

Example: Individual Forecast Rollup				
Forecast amounts	Closed	Commit	Best Case	Pipeline
	\$50	\$100	\$150	\$200
Opportunities	Closed	Commit	Best Case	Pipeline

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Professional** (no custom field forecasts), **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Opportunity Splits available in: **Performance** and **Developer** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

Example: Individual Forecast Rollup

\$50	• \$50	• \$50	• \$50
	• \$50	• \$50	• \$50
		• \$50	• \$50
			• \$50

With Cumulative Forecast Rollups, the forecast columns show cumulative amounts from the opportunities in the named forecast category and subsequent categories in your sales funnel. This view makes it easier for sales team members to see the total numbers that they're likely to bring in without combining the category totals themselves.

For example, this table shows the cumulative forecast rollup amounts when there are four Pipeline, three Best Case, two Commit, and one Closed opportunity, each worth \$50.

Example: Cumulative forecast rollup

Forecast amounts	Closed Only	Commit Forecast	Best Case Forecast	Open Pipeline
	\$50	\$150	\$300	\$450
Opportunities	Closed	Commit	Best Case	Pipeline
	\$50	• \$50 • \$50	• \$50 • \$50 • \$50	• \$50 • \$50 • \$50 • \$50

Note: You can't use Forecast Historical Trending with Cumulative Forecast Rollups.

Enable Cumulative Forecast Rollups in Collaborative Forecasts

Choose between Cumulative Forecast Rollup columns or individual forecast category columns.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

Changing the forecast column display purges all adjustments to Commit and Best Case forecast amounts, but not quota data.

1. If you're using Lightning Experience, switch to Salesforce Classic.
2. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**.
3. Select **Enable Cumulative Forecast Rollups**, and then save your changes.

Forecast Types

Use forecast types to give your sales team maximum flexibility with Collaborative Forecasts.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

[Forecast Types in Collaborative Forecasts](#)

A forecast type is a forecast that's configured to use a specific type of data. You can use the opportunity `Amount` field, opportunity splits, overlay splits, custom opportunity fields, or product families. Each forecast type specifies a measurement: revenue or quantity.

[Enable Forecast Types for Collaborative Forecasts](#)

Let your sales team choose from four types of forecasts to predict sales from multiple perspectives.

[Enable Revenue Splits Forecasts or Overlay Splits Forecasts in Collaborative Forecasts for Sales Managers](#)

Add revenue splits forecasts so that your sales team can track revenue from opportunities with multiple sales reps. Add overlay forecasts so that your sales team can track revenue from overlay sales roles.

[Enable Custom Field Forecasts in Collaborative Forecasts for Sales Managers](#)

For each custom opportunity field that your sales team wants to forecast on, enable a custom split type, even if the field doesn't include splits. When a sales rep creates an opportunity, the rep receives a 100% split for any 100% validated custom split type that you enable. So even if you don't intend to split the custom field, the forecast rollup includes 100% of the amount in the custom field.

SEE ALSO:

[Sales Features: What's Different or Not in Lightning Experience](#)

Forecast Types in Collaborative Forecasts

A forecast type is a forecast that's configured to use a specific type of data. You can use the opportunity `Amount` field, opportunity splits, overlay splits, custom opportunity fields, or product families. Each forecast type specifies a measurement: revenue or quantity.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

Forecast Type	What the Rollup Is Based On
Opportunities - Revenue	The opportunity <code>Amount</code> field.
Opportunities - Quantity	The opportunity <code>Quantity</code> field.
Product Families - Revenue	The opportunity <code>Amount</code> field. Forecast amounts are separated by product family. To use a Product Family forecast, use Opportunity Products and Product Families.
Product Families - Quantity	The opportunity <code>Quantity</code> field. Forecast amounts are separated by product family. To use a Product Family forecast, use Opportunity Products and Product Families.
Opportunity Splits - Revenue	The opportunity <code>Amount</code> field and each sales team member's split percentage. For Opportunity Splits - Revenue forecasts, the split percentages for each opportunity must total 100%. To use opportunity splits forecasts, enable Opportunity Teams, Opportunity Splits, and the Revenue split type.
Overlay Splits - Revenue	The opportunity <code>Amount</code> field and each overlay sales team member's split percentage. For Overlay Splits - Revenue forecasts, the split percentages don't need to total 100%. To use overlay splits forecasts, enable Opportunity Teams, Opportunity Splits, and the Overlay split type.
Custom Opportunity Currency Field - Revenue	The amount in the custom opportunity currency field that you specify. To use custom opportunity currency field forecasts, Opportunity Teams and

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Professional** (no custom field forecasts), **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Opportunity Splits available in: **Performance** and **Developer** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

Forecast Type	What the Rollup Is Based On
	Opportunity Splits must be enabled. Enable a custom split type for the field, even if you don't intend to split credit for the field amount.
Expected Revenue - Revenue	The amount in the opportunity <code>Expected Revenue</code> field. To forecast on the <code>Expected Revenue</code> field, enable Opportunity Teams and Opportunity Splits. Enable a custom split type for the field, even if you don't intend to split credit for the field amount.

Opportunities

- To forecast on the `Amount` field of opportunities, use an opportunity revenue forecast.
- To forecast on the `Quantity` field of opportunities, use an opportunity quantity forecast.

Product Families

If your company groups its products and services into families and needs to forecast based on those families, use a product family forecast. With product families, keep the following in mind.

- Product family forecasts view isn't available in Lightning Experience.
- The Amount column appears in the opportunity list on the forecasts page.
- You can forecast on revenue, quantity, or both.
- Forecast users can view individual product family forecasts for each sales team member below them in the forecast hierarchy.
- Use Opportunity Products and Product Families.
- We recommend completing the `Product Family` field on each product record. Forecasts for products without a Product Family value appear in a forecast row titled Products Not Categorized. (If an opportunity lacks line items, the opportunity amount or quantity also appears in this row.)
- Adjustments can be made to the forecasts for a sales rep's product family forecasts but not directly to the rep's total forecast for all product families.
- You can set separate product family quotas for each sales rep but not a single quota for each sales rep.

Opportunity Splits

If your sales team uses team selling and opportunity splits, use an opportunity splits revenue forecast. With opportunity splits, keep the following in mind.

- You can forecast on revenue but not on quantity.
- You must have Team Selling, Opportunity Splits, and the Revenue split type enabled.

Overlay Splits

Use overlay splits to track revenue from sales team members who help close opportunities but aren't directly responsible for them.

- The overlay splits on a specific opportunity don't have to total 100%.
- You can forecast on revenue but not on quantity.
- You must have Team Selling, Opportunity Splits, and the Overlay split type enabled.

Custom Opportunity Currency Fields

If you use custom currency fields on opportunities, you can forecast on the amounts in those fields.

- Because the field must be a custom currency field, you can forecast on revenue but not quantity.
- You can forecast on the custom field regardless of whether it includes opportunity splits.
- Regardless of whether the field uses splits, you must have Team Selling, Opportunity Splits, and a custom split type enabled for the field.

Expected Revenue

If the value of the `Amount` field and the actual revenue brought in by the opportunity often differ, the `Expected Revenue` field on opportunities is useful. If your sales team anticipates this difference, consider using the `Expected Revenue` field and forecasting on it.

- You can forecast on revenue but not quantity.
- You can forecast on the `Expected Revenue` field regardless of whether you use opportunity splits with it.
- Regardless of whether you use splits with the `Expected Revenue` field, you must enable Team Selling, Opportunity Splits, and a custom split type for it.

When you enable multiple types of forecasts, Custom Forecast Views lets you customize the opportunity information that's displayed for each forecast.

For example, if your sales team forecasts revenue from opportunities and product families, enable opportunity and product family forecasts based on revenue.

Here you can see the Opportunities Revenue forecasts page, which shows revenue totals for each sales rep in each forecast rollup.

	Quota	Closed	Commit	Best Case	Pipeline

Enable Forecast Types for Collaborative Forecasts

Let your sales team choose from four types of forecasts to predict sales from multiple perspectives.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

With opportunities and product families, you can set up forecast types for quantity and revenue.

With opportunity splits, the only choice is revenue.

When you enable a forecast type, the initial calculation of the new forecast can take some time, depending on the number of opportunities, users, and product families in Salesforce.

1. [Review the details](#) of each forecast type.
2. If you're using Lightning Experience, switch to Salesforce Classic.
3. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**.
4. Do one of the following.
 - If you don't have forecast types enabled, click **Add a Forecast Type**.
 - If you have at least one forecast type enabled, click **Add another forecast type**.
5. From the Forecast Type menu, choose the data source to use for the forecast.
6. Choose the forecast measurement to use: Revenue or Quantity. To use both, add a separate forecast type for each.
7. Choose the columns that you want to display in the related opportunities list on the forecasts page for the forecast type.

If your forecast data source is opportunities or product families, the **Amount** field appears by default. If your data source is opportunity splits, the **Forecasted Amount** and **Split %** fields appear by default. You can change the selected fields for each forecast type even after it has been enabled. Depending on whether your forecast type uses the revenue or quantity measurement, consider adding **Amount** or **Quantity** to the pane.

8. Click **OK**, and then save your changes.
9. Repeat this procedure for each forecast type that you want to add.

 **Warning:** If you disable a forecast type, all related quota and adjustment information is purged.

USER PERMISSIONS

To enable a forecast type:

- "Customize Application"

Enable Revenue Splits Forecasts or Overlay Splits Forecasts in Collaborative Forecasts for Sales Managers

Add revenue splits forecasts so that your sales team can track revenue from opportunities with multiple sales reps. Add overlay forecasts so that your sales team can track revenue from overlay sales roles.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

1. Make sure that the following are enabled.
 - Collaborative Forecasts
 - Team Selling and Opportunity Splits
 - The revenue opportunity split type or overlay opportunity split type
2. If you're using Lightning Experience, switch to Salesforce Classic.
3. From Setup, enter *Forecasts Settings* in the *Quick Find* box, then select **Forecasts Settings**.
4. Enable up to four forecast types.
 - If you don't have forecast types enabled, click **Add a Forecast Type**.
 - If you have at least one forecast type enabled, click **Add another forecast type**.
5. From the Forecast Type menu, choose **Opportunity Revenue Splits** or **Opportunity Overlay Splits**. Revenue is the only forecast measurement available for overlay splits.
6. Choose the columns to display in the related opportunities list on the forecasts page for the overlay forecast. To make it easy for forecast users to see the split amounts on each opportunity, include the Split column.
7. Click **OK**, and then save your changes.

EDITIONS

Available in: **Performance, Unlimited, Enterprise, and Developer** Editions

USER PERMISSIONS

To view Forecast Setup:

- "View Setup and Configuration"

To edit Forecast Settings:

- "Customize Application"

Enable Custom Field Forecasts in Collaborative Forecasts for Sales Managers

For each custom opportunity field that your sales team wants to forecast on, enable a custom split type, even if the field doesn't include splits. When a sales rep creates an opportunity, the rep receives a 100% split for any 100% validated custom split type that you enable. So even if you don't intend to split the custom field, the forecast rollup includes 100% of the amount in the custom field.

 **Note:** This information applies to Collaborative Forecasts and not to [Customizable Forecasts](#).

1. Make sure that the following are enabled.
 - Collaborative Forecasts
 - At least one custom opportunity currency field
 - Team Selling and Opportunity Splits
 - A custom opportunity split type based on the custom field
2. If you're using Lightning Experience, switch to Salesforce Classic.
3. From Setup, enter *Forecasts Settings* in the **Quick Find** box, then select **Forecasts Settings**.
4. Enable up to four forecast types.
 - If you don't have forecast types enabled, click **Add a Forecast Type**.
 - If you have at least one forecast type enabled, click **Add Another Forecast Type**.
5. From the Forecast Type menu, choose the name of the custom opportunity split type that you created based on your custom opportunity field. Revenue is the only forecast measurement available for custom field forecasts.
6. Choose the columns to display in the related opportunities list on the forecasts page for the custom field forecast. Include the Split column to make it easy for Collaborative Forecasts users to see the split amounts on each opportunity.
7. Click **OK**, and then save your changes.

Configure Customizable Forecasts

Setting Up Customizable Forecasting

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

Sales forecasts represent the best estimate of how much revenue you can generate. They give your managers and executives a view of your overall business no matter how dispersed your sales teams are.

Because forecasting is so universal, customizable forecasting is a flexible solution for even the most advanced requirements. Get started using customizable forecasting in Setup by entering *Forecasts (Customizable)* in the **Quick Find** box, then selecting **Forecasts (Customizable)**:

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Professional** (no custom field forecasts), **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Opportunity Splits available in: **Performance** and **Developer** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

Define Customizable Forecast Settings

Once you enable Customizable Forecasts for your organization, you need specify the settings that are most appropriate to how you run your business.

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

Define the following settings for your organization:

- **Forecast Data Aggregation** determines the type of data that is displayed on forecasts.
- **Forecast Summary Default View** determines the default product family, date start, date range, and forecast numbers for default forecasts.
- **Forecast Data Sharing** determines whether forecast data can be shared.

To set forecast options:

1. From Setup, enter *Forecasts* in the **Quick Find** box, then select **Forecasts Settings**.
2. Select *Forecast Revenue* if you want forecasts to include revenue amount. If you disable this setting, you lose all revenue overrides on your forecasts.
3. Select *Forecast Quantity* if you want forecasts to include quantity totals. If you disable this setting, you lose all quantity overrides on your forecasts.
4. Choose a *Forecast Period*. If you do not have custom fiscal years enabled, choose monthly or quarterly depending on your organization's forecasting cycle. The month or quarter start date is based on Greenwich Mean Time (GMT). If you have enabled custom fiscal years, you can choose to forecast by fiscal period or by fiscal quarter. The forecast period you choose determines the time increment your organization uses for quotas and forecasts. If you choose monthly, you can still see totals by quarters but, if you choose quarterly, monthly forecast totals are not available. If you change this setting, you lose all overrides and forecasts, including all forecast history.
5. Choose a *Forecast Date* that determines how opportunity amounts contribute to forecasts:
 - If you want the entire opportunity amount to contribute to the forecast period for that date, choose *Opportunity Close Date*. If your organization does not use products, this option is the only one available.
 - If you want the amount of the product on the opportunity to contribute to the forecast period that corresponds with the *Product Date*, choose *Product Date*. When no products exist on an opportunity or the product date is blank, Salesforce uses the *Opportunity Close Date* in the user's forecast instead.
 - If you want the individual revenue schedule amounts to contribute to the forecast periods that correspond with the schedule dates, choose *Schedule Date*. If a product does not have a revenue schedule, Salesforce uses the *Product Date* in the user's forecast instead.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

USER PERMISSIONS

To define forecast settings:

- "Customize Application"

6. Choose a Forecast Type:

- Choose `Use Overall Forecast` if your organization does not use products. Your users have one forecast and one quota for each period. If your organization does not use products, this option is the only one available.
- Choose `Use Product Families` if your users have one quota and one forecast for each product family. See [Using Product Families](#).

7. Choose a default view for your users. This setting determines what forecast product family, date start, date range, and forecast totals to display for users when they first click the Forecasts tab. Users can change their view but the default remains the same for all users.

8. Enable or disable forecast sharing by selecting or deselecting `Enable Forecast Sharing`.

9. Click **Save**.

If you have enabled forecast sharing, you are prompted to choose who can share existing forecast views. The options are:

- `Require Administrator assistance for forecast sharing` - Only administrators can share existing forecast data.
- `Forecast managers can share their own forecast data` - Administrators can share existing forecast data, and existing forecast managers can also share their own views.

 **Note:** This choice applies to existing forecasting views only; it is not a default setting for your organization. Each time you edit or assign a forecast manager in the role hierarchy, define who can share that view.

If you have chosen to disable forecast sharing, you are prompted to confirm your choice.

Customizable Forecasting includes five standard report types. You can't create custom report types with Customizable Forecasting.

SEE ALSO:

[Setting Up Customizable Forecasting](#)

[Manually Sharing a Forecast](#)

[Set Your Fiscal Year for Customizable Forecasting](#)

Set Your Fiscal Year for Customizable Forecasting

Your fiscal year determines your monthly or quarterly forecasting cycle, the month it starts, and whether the `Fiscal Year` is named for the starting or ending year. For example, if your fiscal year starts in April 2015 and ends in March 2016, your fiscal year setting can be either 2015 or 2016.

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

To set your fiscal year for customizable forecasting:

1. Archive your data. We recommend running your weekly or monthly data export before setting the fiscal year, because changing the setting affects your opportunity and forecast data.
2. From Setup, enter `Fiscal Year` in the `Quick Find` box, then select **Fiscal Year**.
3. Choose a `Forecast Period` of monthly or quarterly depending on your forecasting cycle. The month or quarter start date is based on Greenwich Mean Time (GMT).
The forecast period you choose determines the time increment your company uses for quotas and forecasts. If you choose monthly, you can still see totals by quarters but, if you choose quarterly, monthly forecast totals are not available.

4. Choose a `Fiscal Year Start Month` that represents the beginning of your fiscal year.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To set fiscal year:

- "Customize Application"

5. Select a `Fiscal year is based on` option that represents how your company refers to a fiscal year. For example, if your fiscal year starts in April 2015 and ends in March 2016 and is called *Fiscal Year 2016*, choose `The ending month`. The last month determines how your company refers to that fiscal year.
6. If you want to change the fiscal year settings of forecasts created before you enabled customizable forecasts, select `Apply to all forecasts and quotas`. This option changes your historical forecast data.
7. Click **Save**.

SEE ALSO:

[Setting Up Customizable Forecasting](#)

Set Up Your Forecast Hierarchy

Your forecast hierarchy lists all forecast users and determines how their forecasts roll up through your Salesforce org. Keep your forecast hierarchy up-to-date to ensure that forecast managers see all subordinates' forecast amounts.

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

Your forecast is based on the role hierarchy by default, or the territory hierarchy if your org has territory management.

When customizable forecasting is enabled for your org, it automatically generates a forecast hierarchy based on your org's role hierarchy. The forecast hierarchy becomes based on your territory hierarchy only when you enable territory management. To customize your forecast hierarchy:

- Make sure that all the appropriate users are in your forecast hierarchy. If any are not and should be, see [Enable Users for Customizable Forecasting](#).
- Make sure that the appropriate users are the assigned forecast manager whenever there is more than one user in a role or territory in your forecast hierarchy. Each user at the bottom of your forecast hierarchy can be a forecast manager. However, above that, a single user must be chosen as the forecast manager for forecasts to roll up to that user. See [Assigning Forecast Managers in Your Forecast Hierarchy](#).
- Share forecast manager views with other users. See [Manually Sharing a Forecast](#).

Be sure each sales manager with subordinates is designated as a forecast manager in your forecast hierarchy. This ensures that the forecast visibility rolls up to every level of the hierarchy.

If `Nonforecasting` appears next to a role or territory in the forecast hierarchy, it means that a forecast manager has not been assigned to that role or territory.

 **Note:** When you remove a user from the forecast hierarchy or the role hierarchy, all their quota and override data is permanently deleted.

- "Customize Application"

Enable Users for Customizable Forecasting

To give users access to sales forecasts, add them to the forecast hierarchy and give them the Allow Forecasting permission.

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

To enable users for customizable forecasting if your organization does not use territory management:

1. From Setup, enter *Forecasts Hierarchy* in the *Quick Find* box, then select **Forecasts Hierarchy**.
2. To view a list of users assigned to a level, click **Enable Users** next to a role at that level.
3. To enable the user for customizable forecasting, select a user and click **Add**. To disable a user, select the user and click **Remove**.
4. Click **Save**.

 **Note:** When you remove a user from the forecast hierarchy or the role hierarchy, all their quota and override data is permanently deleted.

To enable a user for customizable forecasting if your organization uses territory management:

1. From Setup, enter *Users* in the *Quick Find* box, then select **Users**.
2. Click **Edit** next to the user's name.
3. Select **Allow Forecasting**.
4. Click **Save**.
5. [Add the user to a territory](#).

Customizable Forecasting includes five standard report types. You can't create custom report types with Customizable Forecasting.

 **Note:** To view a list of users for a territory, select the territory name in the territory hierarchy or run a territory report. For more information on territory reports, see [Territory Reports](#).

If you add multiple users to a role or territory, assign only one as the forecast manager for that role or territory. See [Assigning Forecast Managers in Your Forecast Hierarchy](#)

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Territory management available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To set up forecast hierarchy:

- "Customize Application" or "Manage Users"

Assigning Forecast Managers in Your Forecast Hierarchy

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

After users are enabled for customizable forecasting, assign a user as a forecast manager for each role in your forecast hierarchy. Assigning someone as a forecast manager means that all forecasts from users below that user in the forecast hierarchy roll up to that person. For example, an executive and executive assistant may have the same role, but the executive is the assigned forecast manager in the forecast hierarchy because all subordinates' forecasts roll up to the executive. Both the executive and executive assistant can submit forecasts, but forecasts of other users do not roll up to the executive assistant.

If a role in the forecast hierarchy has no forecast manager, that role and all its subordinate roles are not included in your forecasts.

If `Nonforecasting` appears next to a role or territory in the forecast hierarchy, it means that a forecast manager has not been assigned to that role or territory.

1. From Setup, enter `Forecasts (Customizable)` in the `Quick Find` box, then select **Forecasts Hierarchy**.
2. Click **Assign Manager** or **Edit Manager** next to a role to assign a user as the forecast manager of that role.
Roles without roles below them cannot have forecast managers unless your organization has [territory management](#), which supports forecast managers at all levels.
3. Choose a user to be assigned as the forecast manager of the selected role. If no users are available for the role, enable the appropriate user; see [Enable Users for Customizable Forecasting](#).
4. If forecast sharing is enabled, choose the sharing settings:
 - Choose `Require Administrator assistance for forecast sharing` to limit forecast sharing for this view to administrators. This is the default option.
 - Choose `Forecast managers can share their own forecast views` to allow the administrator or the forecast manager to share this view.
5. Click **Save**.

Enabling Customizable Forecasting

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

Enabling customizable forecasting for your organization allows your forecast users to view and submit their customizable forecasts from the Forecasts tab based on your customizable forecast settings. Customizable Forecasting includes five standard report types. You can't create custom report types with Customizable Forecasting.

1. From Setup, enter *Forecasts Hierarchy* in the **Quick Find** box, then select **Forecasts Hierarchy**.
2. Click **Enable Customizable Forecasting**. If this option is not available, customizable forecasting is already enabled for your organization. After you enable customizable forecasting, three new user permissions are available:

Permission	Description
Override Forecasts	Allows users to override their own forecasts and forecasts for users below them in the forecast hierarchy. All standard profiles except Read Only receive this permission.
Edit Personal Quota	Allows users to change their individual quotas. All standard profiles except Read Only receive this permission. Users with the "Manage Users" permission can always edit any quota. Users can always edit the quotas of users that report directly to them.
View All Forecasts	Allows users to view any forecast regardless of their place in the forecast hierarchy. The System Administrator profile includes this permission.

3. Choose the appropriate opportunity page layouts that you want to include the new Opportunity Forecasts related list. Optionally, choose the **Append . . .** option to add this related list to page layouts even if users have customized them.
4. Click **Save**.
5. Enable or disable these permissions where necessary..

 **Note:** With customizable forecasts, your forecasts still depend on how your **Opportunity Stage** picklist values map to Forecast Categories.

USER PERMISSIONS

To enable customizable forecasts:

- "Customize Application"

Manually Sharing a Forecast

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

Your administrator defines your organization's forecasting hierarchy, which determines which users can view the forecast data. However, your administrator can manually extend sharing privileges for forecast data, and you may be able to manually extend sharing privileges for your own forecast data as well. Manual forecast sharing can only increase access to forecast data; it cannot restrict access for users who already have access. To manually share a forecast, you must be an administrator or a forecast manager who has been given access to share your forecast data.

To see which users can view your forecast or to share your forecast data, do one of the following:

- From Setup, enter *Forecasts Hierarchy* in the **Quick Find** box, then select **Forecasts Hierarchy**, then click **Share** next to the view you want to share.
- Click **Sharing** on the forecast home page to share your own forecast data.

The User and Group Sharing list shows you all the users who currently have access to this forecast data. It also details the level of access they have, whether they can submit a forecast, and the reason they have that access. The reasons a user might have access to forecast data are:

Reason	Description
Administrator	The user is an administrator, or has the "Modify All Data" permission.
Delegated Forecast Manager	A user has access to forecast data that was granted via the Sharing button on the forecast.
Forecast Manager	A user has access due to being a forecast manager in the forecast hierarchy.
Owner	The owner can always see his or her own forecast data.
View All Forecasts Permission	The user has the "View All Forecasts" permission.

On the Forecast Sharing Detail page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the **view** drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the **view** drop-down list and click **Edit**.
- Click **Add** to grant other users or groups access to the forecast data.

 **Note:** Manual sharing extends to the opportunity data that makes up the forecast. If a user has permission to override forecast data, then the user also has permission to override the opportunity forecast data.

- Click **Expand List** to view all users that have access to the forecast data.
- For manual sharing rules that you created, click **Edit** or **Del** next to an item in the list to edit or delete the access level.

Submit Customizable Forecasts in Batches

Submitting forecasts takes a snapshot of forecast data and makes that data available in forecast history and reports. Save time by submitting multiple forecast at once.

 **Note:** This information applies to Customizable Forecasting and not [Collaborative Forecasts](#).

To submit multiple forecasts at once:

1. From Setup, enter *Batch Submit* in the *Quick Find* box, then select **Batch Submit Forecasts**.
2. Choose the appropriate forecast period.
3. Select the users that have forecasts you want to submit and click **Add** to add them to the list of *Selected Users for Batch Submit*. Select more than one at a time using **CTRL+click**.
4. Click **Submit**.
5. Click **OK**.

Users can also submit their forecasts individually by clicking **Submit** from their forecast.

[Setting Up Customizable Forecasting](#)

Customize Territories

Enterprise Territory Management

Enterprise Territory Management helps you model your sales territories into a logical but flexible structure that connects sales reps to the accounts they sell to.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management. Enterprise Territory Management and Collaborative Forecasts can both be enabled and used at the same time in your Salesforce organization, but the two features are not currently integrated to work together.

Salesforce's original territory management feature lets you grant users access to accounts based on criteria such as postal code, industry, revenue, or a custom field relevant to your business. Enterprise Territory Management builds upon the original feature by introducing territory types, territory models, and territory model states. These components let you create and preview multiple territory structures and strategies before you activate and implement the one that works best. Enterprise Territory Management also offers easier assignments between territories, accounts, and opportunities. Custom reports help you organize your territory model for optimum coverage, assess territory effectiveness, and modify your model if necessary. Your team can use Chatter to collaborate as you design and build your territory model.

For comprehensive instructions for implementing this feature, see the *Enterprise Territory Management Implementation Guide*.

[Enterprise Territory Management Concepts](#)

Learn about the features and related concepts that make Enterprise Territory Management so powerful and easy to use. Understanding these concepts will help you model your territories more effectively.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To submit forecasts in batches:

- "Modify All Data"

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

[Manage Your Salesforce Org's Sales Territories](#)

Use Enterprise Territory Management to manage and maintain your org's sales territories. Create territory types, build a model, and then add and test your account assignment rules. When you're satisfied with your model, activate it, then assign users and accounts. Roll it out to your org, and then run reports to assess its impact and make adjustments if necessary.

[Create Custom Report Types for Enterprise Territory Management Reports](#)

Organizations using Enterprise Territory Management can run reports that show account assignments, user assignments, and more. Set up custom report types so sales managers and other users can create the reports they need.

[Report on Accounts Assigned to Territories](#)

Manage account assignments to sales territories by reporting on which accounts have been assigned to territories. See which accounts belong to which territories.

[Report on Territories Without Assigned Accounts](#)

Manage account assignments to sales territories by reporting on which territory models' territories do not have assigned accounts.

[Report on Users Not Assigned to Territories](#)

Manage user assignments to sales territories by reporting on which users have not been assigned to territories.

[Report on Territories with Assigned Users](#)

Manage user assignments to sales territories finding out which territory models' territories have users assigned. See which assigned users belong to which territories.

[Report on Summarizable Account Fields by Territory](#)

Gauge territory size by reporting on summarizable account data, such as annual revenue or number of employees.

[Archive a Territory Model](#)

Archiving a territory model deactivates it in your organization, but the model remains in your territory model list, where you can reference its associated assignment rules and the resulting account-to-territory assignments generated by the rules. You can only archive a model that is in the `Active` state. After archiving a model, you cannot return it to the `Active` state or the `Planning` state.

[Delete a Territory Model](#)

Delete a territory model if your organization no longer actively uses the model for territory management or reference. You can't delete an active territory: the model must be in `Planning` or `Archived` state.

[View and Manage Assignment Rules at the Territory Model Level](#)

If you want to view and manage account assignment rules at a high level, you can. Start from the territory model record to create, edit, or view rules for the model's territories. From the model-level list of rules, you can view rule criteria, or open a rule record to find out which territories it's assigned to, if any.

[Activating Assignment Rules and Applying them to Descendant Territories](#)

The ability to apply an assignment rule to descendant territories is available at the territory level only. You cannot apply assignment rules to descendants at the territory model level. Therefore, you only get the option to apply a rule to descendant territories if you access the rule's record from an individual territory.

[Disable Enterprise Territory Management](#)

If you wish, you can disable Enterprise Territory Management for your organization and use another means of record sharing.

[Enterprise Territory Management Implementation Guide](#)

Enterprise Territory Management Concepts

Learn about the features and related concepts that make Enterprise Territory Management so powerful and easy to use. Understanding these concepts will help you model your territories more effectively.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Territory Type

Territory types help you organize your territories by key characteristics important to your company. Every territory you create must have a territory type. Territory types are used for organizing and creating territories *only*: they do not appear on territory model hierarchies.

Territory Type Priority

Specifying and managing territory type priority information helps you choose the appropriate territory type for territories you create or edit. There are no predefined priority options, so your organization should create its own priority scheme. For example, *001* may indicate that a territory type is the highest priority or the lowest. Make sure your scheme can scale as you add more territory types.

Territory

Territories organize groups of accounts and the Salesforce users who work with those accounts. Territories are created based on territory types.

Territory Model

A territory model represents a complete territory management system for your organization. Modeling lets you create and preview multiple territory structures and different account and user assignments before you activate the model that works best.

Territory Hierarchy

The territory hierarchy shows a model's territory structure and serves as its main interaction point. Start from the hierarchy to create, edit, and delete territories; run assignment rules for territories, and navigate to territory detail pages for more information. From the hierarchy, you can also assign territories to opportunities, run assignment rules at the model level, and activate or archive the model.

Territory Model State

Territory model state indicates whether a territory is in the planning stage, in active use, or archived. Your organization can have only one *active* territory model at a time, but you can create and maintain multiple models in *planning* or *archived* state to use for additional modeling or reference.

How Do Permissions Affect Feature and Data Access in Enterprise Territory Management?

When implementing Enterprise Territory Management, make sure you understand how the feature's permissions affect administration and provide access to records and data.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

Territory Type

Territory types help you organize your territories by key characteristics important to your company. Every territory you create must have a territory type. Territory types are used for organizing and creating territories *only*: they do not appear on territory model hierarchies.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

For example, you might create a territory type called *Universal Telco Named Accounts*, then from that type, create territories that include named accounts. Or you might create a territory type called *US Geographic*, and from that type create territories based on states or regions.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

When you create a territory type, make sure the label and description clearly indicate what kinds of territories should belong to that type.

Territory Type Priority

Specifying and managing territory type priority information helps you choose the appropriate territory type for territories you create or edit. There are no predefined priority options, so your organization should create its own priority scheme. For example, *001* may indicate that a territory type is the highest priority or the lowest. Make sure your scheme can scale as you add more territory types.

When you create a new territory, you select a territory type from the `Territory Type` lookup field. From the lookup, you can view the territory type's assigned priority.

 **Example:** Your organization uses territory type priority to reflect your sales strategy for the year. Your organization expects more opportunities within the US east coast than the US west coast in the coming year, so the East Coast territory type is assigned priority *001* and the West Coast territory type is assigned *005*. These priority assignments help those creating territory records make the right territory type choice. At mid-year, you project unexpected growth opportunities in the Great Lakes region, so you create a new territory type called Great Lakes and assign it priority *003* to reflect the change in your sales strategy.

Territory

Territories organize groups of accounts and the Salesforce users who work with those accounts. Territories are created based on territory types.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

The territory record shows you assigned users, manually assigned accounts, and rules that assign accounts automatically. A territory can have both parent and child territories. Depending on how your organization assigns accounts, an account may be assigned to more than one territory.

Territory Model

A territory model represents a complete territory management system for your organization. Modeling lets you create and preview multiple territory structures and different account and user assignments before you activate the model that works best.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Each territory model features a graphical hierarchy. The hierarchy shows your model's territory structure (including parent and child territories) and lets you create, edit, and delete territories and view their detail pages. Your organization can create and modify up to four different territory models at a time, but only one model can be active at any time. Activate the model you want to use to finalize its user and account assignments.

EDITIONS

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

Territory Hierarchy

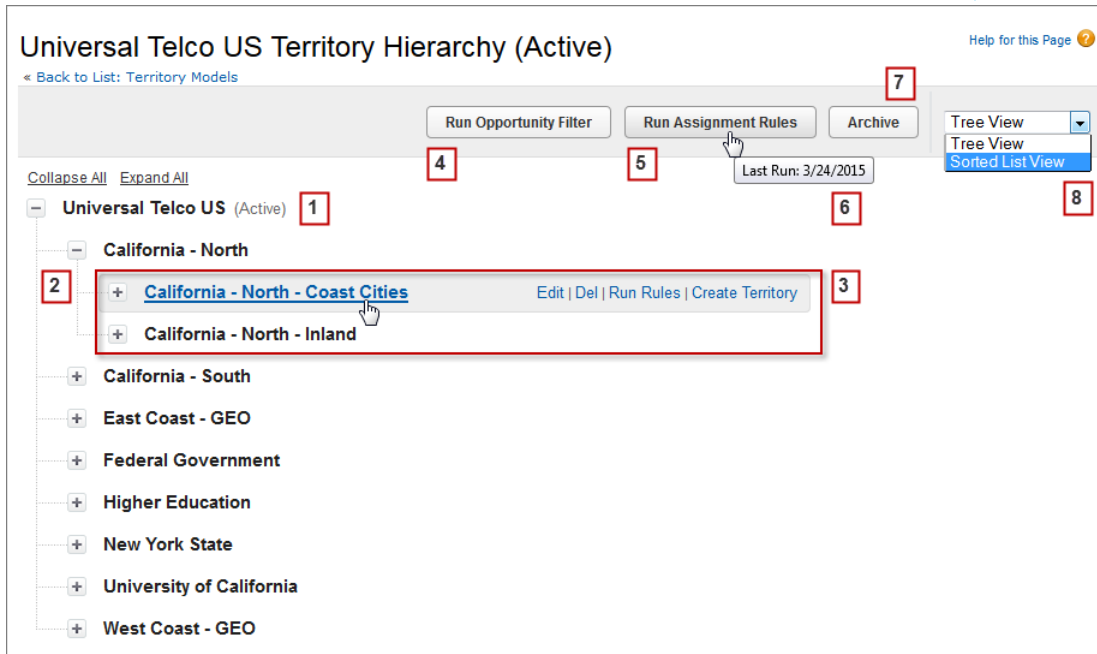

The territory hierarchy shows a model's territory structure and serves as its main interaction point. Start from the hierarchy to create, edit, and delete territories; run assignment rules for territories, and navigate to territory detail pages for more information. From the hierarchy, you can also assign territories to opportunities, run assignment rules at the model level, and activate or archive the model.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

The name and state of the territory model appear at the top node of the hierarchy (1). Parent and child territories are nested beneath the model name (2). Create or edit new child territories or run their assignment rules (3). Run the filter that assigns territories to opportunities (4). Run assignment rules for all territories in the model (5). Hover to learn when rules were last run (6). Set the model's state to *Active* or *Archive* (7). Toggle to a sorted list view and back to tree view (8).

Territory Model State

Territory model state indicates whether a territory is in the planning stage, in active use, or archived. Your organization can have only one *active* territory model at a time, but you can create and maintain multiple models in *planning* or *archived* state to use for additional modeling or reference.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Some states reflect a territory model's lifecycle and others indicate errors in processing when states are changed.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

Lifecycle State**Definition**

Planning

The default state for every new territory model you create. The `Planning` state lets you preview a model's territory hierarchy before deploying it. Users have no territory-related access to accounts in models that are in the `Planning` state.

Active

The state of a territory model after you activate it and all processing is complete. Only *one* model in your Salesforce organization can be active at a time.

A model in `Active` state lets users view model details, including hierarchies, territories, and all assigned accounts and users. Users assigned to territories within an active model can access and modify accounts they are assigned to within that model.

Archived

The state of a territory model after you archive it and all processing is complete. An archived model no longer provides account access to users, but it does let administrators view hierarchy and rule assignments as they were configured when the model was active. Only the *active* model can be archived, and archived models cannot be reactivated.

When you archive a territory model or delete a territory on an active model, the `Territory` field is reset to a blank value on opportunity records with those territories assigned.

Error State**Definition**

Activation Failed

An error occurred during activation. Check your email for more information from Salesforce.

Archiving Failed

An error occurred during activation. Check your email for more information from Salesforce.

How Do Permissions Affect Feature and Data Access in Enterprise Territory Management?

When implementing Enterprise Territory Management, make sure you understand how the feature's permissions affect administration and provide access to records and data.

Note: This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Make sure user permissions provide the appropriate level of access for users. For example, you might want Sales Operations managers and selected Sales managers to be able to manage territories. If so, assign them the "Manage Territories" permission. Anyone who will also create account assignment rules also needs the "View All" permission on Accounts.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

Users who need to:**Require these permissions, roles, or ownership:**

- Create territory models and all related records (such as territory types)
- View and manage territory models in all states: `Planning`, `Active`, and `Archived`
- Activate, archive, delete, or clone territory models
- View territory information on territory-assigned account records for territories in models in *all* states (`Planning`, `Active`, and `Archived`)

Manage Territories

- Create or edit account assignment rules

Manage Territories AND View All on Accounts

 **Note:** Which fields are available for account assignment rules depends on account field-level security settings, if any. For example, a user has the appropriate permissions for creating account assignment rules, but her profile prevents her from viewing the Account object's `Annual Revenue` field. She will not be able to create account assignment rules that include that field.

- View the Salesforce Setup tree, including territories settings
- View the territory model in `Active` state, including its related records (such as territory types and assignment rules) and other elements (such as the territory hierarchy)
- View the names of all account records assigned to territories in the `Active` territory model
- View territory information on territory-assigned account records for territories in models in the `Active` state only

View Setup and Configuration

 **Note:** View Setup and Configuration is enabled by default for the Standard User profile.

View data for models in `Planning` and `Archived` states on reports that include territories, assigned records, or rules

Manage Territories

Manually assign a territory to an opportunity

Sharing access for the opportunity's account. Users who have sharing access to the account can assign any active territory to the opportunity. Those who do not can assign only a territory that is also assigned to the opportunity's account.

 **Note:** For manual territory assignments, Salesforce suggests opportunities assigned to the territory's account, but those with sharing access can search for and assign any territory in the active territory model.

When a territory is assigned to an opportunity, that opportunity is shared with all Salesforce users assigned to that territory's parent in the territory model hierarchy.

Manage Your Salesforce Org's Sales Territories

Use Enterprise Territory Management to manage and maintain your org's sales territories. Create territory types, build a model, and then add and test your account assignment rules. When you're satisfied with your model, activate it, then assign users and accounts. Roll it out to your org, and then run reports to assess its impact and make adjustments if necessary.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Before you begin building your territory model, plan your approach. Choose organizing characteristics such as industry, annual revenue, or location information to divide your organization's accounts into logical segments that work for the way you do business.

Enable Enterprise Territory Management

Starting with Winter '15, Enterprise Territory Management is ready to be enabled by administrators in new Salesforce organizations. Organizations created before Winter '15 need to call salesforce.com to enable the feature. Enterprise Territory Management cannot be enabled in existing organizations that have Customizable Forecasting enabled.

Define Enterprise Territory Management Settings

Define and configure settings for Enterprise Territory Management.

Use Chatter to Collaborate on Territory Models

Enable Chatter Feed Tracking on the Territory Model object to collaborate on model development directly within model records. Your team can post and respond to comments, attach files, and get notifications when model states change or key fields are updated.

Build a Territory Model

A territory model organizes all the elements of your organization's territory management plan, including a territory hierarchy, account assignments, and user assignments. Keep your model in the `planning` state as you build your hierarchy, define assignment rules for territories, add users to territories, and run your rules to see the resulting account assignments.

Manually Assign One or More Territories to an Account

Assign one or more territories to an account directly from the account record. Only territories that belong to models in `Planning` or `Active` state can be assigned to accounts.

Manually Assign One or More Assignment Rules to a Territory

Assign one or more object assignment rules to a territory directly from the territory record. Available rules come from the territory model the territory belongs to.

Manually Assign a Territory to an Opportunity

On an opportunity record, you can assign and track the territory whose assigned sales reps work that opportunity. Manual territory assignments are controlled by your sharing access to the opportunity's assigned (parent) account. When you assign a territory to an opportunity, that opportunity is shared with all Salesforce users assigned to that territory's parent in the territory model's hierarchy.

Run the Opportunity Territory Assignment Filter

The opportunity territory assignment filter assigns territories to opportunities based on the filter logic in the Apex class.

Clone a Territory Model

Cloning lets you make a copy of a territory model that you can use to test out different territory characteristics. The new model includes the original's territories, assignment rules, users, and manually assigned accounts. Only models in `Planning`, `Active`, or `Archived` state can be cloned. When cloning is complete, the new model is in `Planning` state.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To manage territories:

- "Manage Territories"

[Assign Users to Territories](#)

Assign users to the territories they will operate in to sell products and services. You can assign users to territories that belong to models in **Active** or **Planning** state, though assignments made within **Planning** state models are for planning purposes only: they *do not* affect user access to records.

[Identify Territory Users by Territory Role](#)

Keep track of user functions within territories by creating territory roles and assigning them to territory users as needed. Users can even have different roles in different territories.

[Activate a Territory Model](#)

When you're satisfied with the structure of your territory model and its territory account assignments, you're ready to activate it. Remember that you can also maintain models in **Planning** and **Archived** states for further modeling and reference.

[Configure Enterprise Territory Management Permissions and Access for Administrators and Users](#)

An important step in implementing Enterprise Territory Management is making sure the right users can access the right territory model elements, records, and record elements.

[Run Assignment Rules for a Territory](#)

Run account assignment rules for any territory that has rules defined and belongs to a territory model in **Planning** or **Active** state. If your territory is in **Planning** state, running rules lets you *preview* account assignments. If your territory is in **Active** state when you run rules, accounts are assigned to territories according to your rules.

[Find Out Which Territories an Assignment Rule Applies To](#)

If you use rules to assign accounts to territories, it can be helpful to find out which territories a single rule applies to.

Enable Enterprise Territory Management

Starting with Winter '15, Enterprise Territory Management is ready to be enabled by administrators in new Salesforce organizations. Organizations created before Winter '15 need to call `salesforce.com` to enable the feature. Enterprise Territory Management cannot be enabled in existing organizations that have Customizable Forecasting enabled.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management. Enterprise Territory Management and Collaborative Forecasts can both be enabled and used at the same time in your Salesforce organization, but the two features are not currently integrated to work together.

1. From Setup, enter *Territories* in the **Quick Find** box, then select **Settings**.
2. Click **Enable Enterprise Territory Management**.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To enable Enterprise Territory Management:

- "Customize Application"

Define Enterprise Territory Management Settings

Define and configure settings for Enterprise Territory Management.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

[Define Default User Access for Territory Records](#)

Specify the *default* settings for how users can access and modify records associated with the sales territories you set up. The access provided by default settings can be modified when you create or edit an individual territory.

[Enable Filter-Based Opportunity Territory Assignment](#)

Enable and configure filter-based assignment of territories to opportunities..

Define Default User Access for Territory Records

Specify the *default* settings for how users can access and modify records associated with the sales territories you set up. The access provided by default settings can be modified when you create or edit an individual territory.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

The standard record access settings apply to accounts and opportunities. If your organization uses *Private* default internal access for contacts or cases, you can also set access for those records.

1. From Setup, enter *Territories* in the **Quick Find** box, then select **Settings**.
2. Select the default access levels you want for accounts and opportunities.
3. If applicable, select the default access levels for contacts and cases.
4. Click **Save**.

USER PERMISSIONS

To set up Enterprise Territory Management:

- “View Setup and Configuration”
- AND
- “Manage Territories”

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To create a territory model:

- “View Setup and Configuration”
- AND
- “Manage Territories”

Enable Filter-Based Opportunity Territory Assignment

Enable and configure filter-based assignment of territories to opportunities..

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From Setup, enter *Territories* in the **Quick Find** box, then select **Settings**.
2. Enable Filter-Based Opportunity Territory Assignment.
3. If your organization is using the Apex code Salesforce provides, first create the class and then return to this Settings page and enter the class name: `OppTerrAssignDefaultLogicFilter`. If you opt to use your own code for the Apex class, you'll come back and enter the name of the class that you create.
4. If you want to run the filter-based opportunity territory assignment job when opportunities are created, select that option.
5. Save your settings.

Use Chatter to Collaborate on Territory Models

Enable Chatter Feed Tracking on the Territory Model object to collaborate on model development directly within model records. Your team can post and respond to comments, attach files, and get notifications when model states change or key fields are updated.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

After you enable and configure Chatter Feed Tracking, anyone with access to a territory model record can use Chatter to collaborate on that model. Those who follow the record will get updates in their own Chatter feeds when tracked fields are updated.

1. Make sure Chatter has been enabled for your organization.
2. From Setup, enter *Feed Tracking* in the **Quick Find** box, then select **Feed Tracking**.
3. Select the Territory Model object. Enable Feed Tracking, then select the territory model fields you want to track.
4. Click **Save**.
The Chatter feed appears at the top of your organization's territory model records.
5. Make sure to tell others who maintain territory models that they can now use Chatter to follow and collaborate on territory models directly from model records.

Build a Territory Model

A territory model organizes all the elements of your organization's territory management plan, including a territory hierarchy, account assignments, and user assignments. Keep your model in the `planning` state as you build your hierarchy, define assignment rules for territories, add users to territories, and run your rules to see the resulting account assignments.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management. Enterprise Territory Management and Collaborative Forecasts can both be enabled and used at the same time in your Salesforce organization, but the two features are not currently integrated to work together.

1. Create Territory Types

Territory types help you categorize and define individual territories. Creating territory types is the first step in building your territory model in Salesforce.

2. Create a Territory Model Record

The first step in building your territory model is creating the record that connects the other elements, including territories, user assignments, and account assignments. When you create a territory model record, Salesforce generates a territory hierarchy for it.

3. Create Territories

Create territories as you build your organization's territory model. When you create a territory, it appears on the model's territory hierarchy.

4. Create and Preview Territory Account Assignments

You assign accounts to territories by either creating rules that assign them automatically or adding them manually. Rules can be configured to apply to both parent territories and their descendents. Manual assignments apply only to the territory where they are made.

Create Territory Types

Territory types help you categorize and define individual territories. Creating territory types is the first step in building your territory model in Salesforce.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Examples of territory types you might create include *Named Accounts*, *Direct Accounts*, and *Overlay Sales*.

1. From Setup, enter *Territory Types* in the Quick Find box, then select **Territory Types**.
2. Click **New Territory Type**.
3. Enter a label and a description. In your description, make sure you clearly indicate what kinds of territories should belong to that type.
4. Specify a territory type priority.
5. Click **Save**.

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To create a territory type:

- "View Setup and Configuration"
- AND
- "Manage Territories"

Create a Territory Model Record

The first step in building your territory model is creating the record that connects the other elements, including territories, user assignments, and account assignments. When you create a territory model record, Salesforce generates a territory hierarchy for it.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Your organization's Salesforce edition determines the number of territory models you can create in production and sandbox orgs. This limit includes models created by cloning.

Edition	Number of Models in Production Orgs	Number of Models in Sandbox Orgs
Developer	4	4
Enterprise	2	2
Performance	4	4
Unlimited	4	4

1. From Setup, enter *Territory Models* in the Quick Find box, then select **Territory Models**.
2. Click **New Territory Model**.
3. Define the label and description fields.
4. Click **Save**.

SEE ALSO:

[Enterprise Territory Management Limits](#)

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To create a territory model record:

- "View Setup and Configuration"
- AND
- "Manage Territories"

Create Territories

Create territories as you build your organization's territory model. When you create a territory, it appears on the model's territory hierarchy.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

By default, each territory model can have up to 1,000 territories.

1. Open the territory model where you want to create the territory.
2. If you need to, select **Tree View** from the drop-down to show the model's territory hierarchy, including any existing territories.
3. To create a top-level territory, hover over the territory model name and click **Create Territory**. To create a child territory from an existing territory, hover over the territory name and click **Create Territory**.
4. On the New Territory page, define the territory: give it a meaningful label, choose its territory type. If the territory requires *different* user access for accounts and opportunities than the *default* user access for those records, define the territory's user access levels.
5. Click **Save**.

Create and Preview Territory Account Assignments

You assign accounts to territories by either creating rules that assign them automatically or adding them manually. Rules can be configured to apply to both parent territories and their descendents. Manual assignments apply only to the territory where they are made.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Before you commit to your model's account assignments, you should preview them by running assignment rules and related reports while the model is in `Planning` state. When you're satisfied with your planned account assignments, change the model to `Active` state. Then, run assignment rules again so that your territories include affected accounts that were created or updated during the activation process.

[Use Rules to Assign Accounts to Territories](#)

Create and run rules that automatically assign new or edited accounts to territories. A rule identifies one or more characteristics you use to define that territory, and tells Enterprise Territory Management to assign accounts with those characteristics to that territory automatically. If your territory is in `Planning` state, running rules lets you *preview* account assignments. If your territory is in `Active` state when you run rules, accounts are assigned to territories according to your rules.

[Manually Assign Accounts to a Territory](#)

Accounts that are not assigned to territories by rules can be assigned manually to one or more territories, one territory at a time. Manual assignment is useful for accounts that have unique characteristics and therefore can't be assigned by rules.

[Preview Territory Account Assignments](#)

Before you activate a territory model, you should preview and validate its territory account assignments. Preview assignments by running assignment rules when the model is in `Planning` state. Also verify your manual assignments.

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

Identify Users in Territories Assigned to an Account

Accounts and users are assigned to territories independently, but when an account is assigned to a territory, that territory's users have access to the account. It's easy to find out who those users are by looking at the account record.

Use Rules to Assign Accounts to Territories

Create and run rules that automatically assign new or edited accounts to territories. A rule identifies one or more characteristics you use to define that territory, and tells Enterprise Territory Management to assign accounts with those characteristics to that territory automatically. If your territory is in `Planning` state, running rules lets you *preview* account assignments. If your territory is in `Active` state when you run rules, accounts are assigned to territories according to your rules.

-  **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.
 -  **Tip:** It's a best practice *not* to assign a rule to a territory if that rule is a child of another rule *already assigned* to the territory. To find out what rules apply to a territory, just open the territory's record detail page and look at the Assignment Rules Assigned to this Territory related list. If a rule has `Apply to Child Territories` selected, do not assign the rule separately to child territories.
1. From the territory model hierarchy, open the territory where you want to create a rule.
 2. On the detail page, in the Assignment Rules Defined in this Territory related list, click **New**.
 3.  **Note:** If your org has enabled state and country picklists, territory assignment rules using states as a criteria must use `contains` matching instead of `equals` matching.

On the rule edit page, enter a name for the new rule and define selection criteria.

4. If you want the rule to also apply to the current territory's descendents, select the **Apply to child territories** checkbox.
 5. If you want the rule to run automatically when a user creates or updates an account, select the **Active** checkbox.
-  **Note:** For account updates, these conditions are required for the territory rules to run.
 - If the account is updated via the UI, **Evaluate this account against territory rules on save** is selected.
 - If the account is updated via API, `AssignmentRuleHeader` is specified.
6. Click **Save** to save the rule and return to the territory detail page.
 7. (Optional) In the Assignment Rules Defined in This Territory related list, click **Run Rules**. You'll receive an email when the process is complete.

 **Example:** Rules can work together within territories and child territories. For example, you create a territory called Western States, with child territories Washington, Oregon, and California. From the Western States territory record, you create a rule that assigns accounts in Washington, Oregon, and California to that territory. You apply that rule to child territories and then, from the California territory record, you create a rule that assigns accounts in California to the California territory.

For any child territories for the California territory, you don't need to specify the state in the criteria if you mark the California territory rule as inheritable to child territories. Instead, you can use more specific criteria, such as ZIP code or industry.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To create rules within your territories:

- "Customize Application"
- "Manage Territories"

Manually Assign Accounts to a Territory

Accounts that are not assigned to territories by rules can be assigned manually to one or more territories, one territory at a time. Manual assignment is useful for accounts that have unique characteristics and therefore can't be assigned by rules.

-  **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.
- 1. From the territory model hierarchy, open the territory where you want to assign one or more accounts.
- 2. On the territory's detail page, in the Manually Assigned Accounts related list, click **Add Accounts** to see a list of your organization's accounts. Adjust the list view if you need to.
- 3. In the `Available` related list, select the checkbox for each account you want to assign. If you need to view more records, click **More** beneath the list. Each selected account appears in the Selected related list.
- 4. Click **Assign**.

Preview Territory Account Assignments

Before you activate a territory model, you should preview and validate its territory account assignments. Preview assignments by running assignment rules when the model is in `Planning` state. Also verify your manual assignments.

-  **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.
 -  **Important:** To protect data quality, you cannot modify a territory until you receive the email confirming that the rules have been run successfully. If rules do not run successfully, follow instructions provided in the email for troubleshooting specific issues.
 - 1. Open the record for the territory model whose assigned accounts you want to preview and click **View Hierarchy**.
 - 2. Verify that the model is in `Planning` state.
 - 3. Click **Run All Rules**.
When rules are finished running, we'll send an email to let you know. Processing may take some time, depending on the size and complexity of your organization.
 - 4. From the territory model hierarchy, open each territory and descendent affected assignment rules. Also open territories that have manual account assignments.
 - 5. On the territory detail page, click **View Accounts** to see assigned accounts. The `Method` column indicates how each account was assigned: by a rule or manually.
-  **Note:** If you make changes to the rules for a territory, you must run rules again to view those changes. In this case, you may want to run rules on that territory only. To do so, navigate to the territory's detail page, scroll to the Assignment Rules Defined in this Territory related list, and click **Run Rules**.

USER PERMISSIONS

To preview territory model account assignments:

- "View Setup and Configuration"
- AND
- "Manage Territories"

Identify Users in Territories Assigned to an Account

Accounts and users are assigned to territories independently, but when an account is assigned to a territory, that territory's users have access to the account. It's easy to find out who those users are by looking at the account record.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Open the account record that has territories assigned.
2. Identify the users from the Users in Assigned Territories related list.

 **Note:** The `Modified Date` field in this related list tells the last time the user territory association record was modified. It may or may not indicate when the user was assigned to the territory.

 **Example:** Six sales reps are assigned to the East Coast territory. Because XYZ Publishing is also assigned to the East Coast territory, the six sales reps in the territory appear in the Users in Assigned Territories related list on the XYZ Publishing account record.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To view users in territories from `Active`, `Planning`, or `Archived` territory models that are assigned to an account:

- "View Setup and Configuration"
- AND
- "Manage Territories"

To view users in territories in the `Active` territory model that are assigned to an account:

- "View Setup and Configuration"

Manually Assign One or More Territories to an Account

Assign one or more territories to an account directly from the account record. Only territories that belong to models in **Planning** or **Active** state can be assigned to accounts.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Open the account you want to assign territories to.
2. On the account's detail page, in the Assigned Territories related list, click **Assign Territories** to see a list of your organization's territories. Adjust the list view if you need to.
3. Select the territory model that contains the territories you want to associate.
4. In the **Available** related list, select the checkbox for each territory you want to assign. If you need to view more records, click **More** beneath the list. Each selected territory appears in the **Selected** related list.
5. Click **Assign**.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To assign territories manually within your accounts:

- "View Setup and Configuration"

- "Manage Territories"

To view territories from **Active**, **Planning**, or **Archived** territory models that are assigned to an account:

- "View Setup and Configuration"
- AND
- "Manage Territories"

To view territories assigned from the **Active** territory model that are assigned to an account:

- "View Setup and Configuration"

Manually Assign One or More Assignment Rules to a Territory

Assign one or more object assignment rules to a territory directly from the territory record. Available rules come from the territory model the territory belongs to.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Territories can have up to 15 assignment rules each.

1. Open the territory you want to assign rules to.
2. On the territory's detail page, in the **Assignment Rules Assigned to This Territory** related list, click **Assign Rules** to see a list of rules available in the model.
3. In the **Available** related list, hover over the names of available rules to view the details of their criteria. Select the checkbox for each rule you want to assign to the territory. If you need to view more rules, click **More** beneath the list. Each selected rule appears in the **Selected** related list.
4. Apply selected rules to child territories as appropriate.
5. Click **Assign**.

Manually Assign a Territory to an Opportunity

On an opportunity record, you can assign and track the territory whose assigned sales reps work that opportunity. Manual territory assignments are controlled by your sharing access to the opportunity's assigned (parent) account. When you assign a territory to an opportunity, that opportunity is shared with all Salesforce users assigned to that territory's parent in the territory model's hierarchy.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Users who *have* sharing access to the opportunity's account can assign *any* territory from the active model to the opportunity. Those who *do not* can assign *only* a territory that is *also* assigned to the opportunity's account. For manual territory assignments, Salesforce suggests opportunities assigned to the territory's account, but those with sharing access can search for and assign any territory in the active territory model.

1. Open the opportunity record.
2. In the **Territory** field, specify the territory you want to assign.
3. Save the opportunity record.

 **Example:** The Utel.com account has six opportunities and two territories (East Coast and West Coast). They can assign East Coast, West Coast, or any other territory within the active model to any or all of those six opportunities. One of their sales reps has sharing access to the account assigned to one of the opportunities, so she can assign any territory to that opportunity. For the other five opportunities, she does not have sharing access to assigned accounts, for each of those, she can only assign a territory that is already assigned to the opportunity's assigned account.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To assign rules to a territory:

- "View Setup and Configuration"
- AND
- "Manage Territories"

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To manually assign territories to opportunities:

- "View Setup and Configuration"
- AND
- "Manage Territories"

Run the Opportunity Territory Assignment Filter

The opportunity territory assignment filter assigns territories to opportunities based on the filter logic in the Apex class.

1. From Setup, enter *Manage Territories* in the Quick Find box, then select **Settings**.
2. Verify these settings.
 - Filter-based opportunity territory assignment is enabled.
 - An Apex class is specified.
3. From Setup, enter *Manage Territories* in the Quick Find box, then select **Territory Models**.
4. View the active territory model's hierarchy.
5. Click **Run Opportunity Filter**, and then select options for the opportunities and date ranges to include.
6. Run the opportunity filter.
When the job is complete, you receive an email.

Clone a Territory Model

Cloning lets you make a copy of a territory model that you can use to test out different territory characteristics. The new model includes the original's territories, assignment rules, users, and manually assigned accounts. Only models in **Planning**, **Active**, or **Archived** state can be cloned. When cloning is complete, the new model is in **Planning** state.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

After the cloning process is complete, the new territory model it creates is in **Planning** state.

1. Open the territory model you want to clone.
2. Click **Clone**.
3. Define the label and description fields.
4. Click **Save**.
The model state changes to **Cloning** while Salesforce processes your request. Cloning may take some time, depending on the size and complexity of your model. When the process is complete, we'll send you an email to let you know

USER PERMISSIONS

To clone a territory model:

- "View Setup and Configuration"
- AND
- "Manage Territories"

Assign Users to Territories

Assign users to the territories they will operate in to sell products and services. You can assign users to territories that belong to models in `Active` or `Planning` state, though assignments made within `Planning` state models are for planning purposes only: they *do not* affect user access to records.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From the territory model hierarchy, open the territory where you want to assign users.
2. On the territory's detail page, in the Assigned Users related list, click **Manage Users**.
3. On the Assign Users page, select or search for the user you want to add.
4. Click **Save**.

Identify Territory Users by Territory Role

Keep track of user functions within territories by creating territory roles and assigning them to territory users as needed. Users can even have different roles in different territories.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

 **Example:** For example, you might create roles like Territory Owner, Sales Manager, Product Specialist, or Sales Representative.

[Define a Picklist for Territory User Roles](#)

Add territory roles to the UserTerritoryAssociation object's `Role in Territory` picklist so you can select roles for territory users. The Role in Territory picklist you define can be used for all territories in `Active` or `Planning` state.

[Assign Territory Roles to Users](#)

Assign territory roles to identify the roles of users within territories.

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

Define a Picklist for Territory User Roles

Add territory roles to the UserTerritoryAssociation object's `Role in Territory` picklist so you can select roles for territory users. The Role in Territory picklist you define can be used for all territories in `Active` or `Planning` state.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From the object management settings for user territory associations, go to the fields area.
2. Click **Role in Territory**, and then click **New**.
3. Enter the picklist values you want and click **Save**.
The values you entered are now available for selection from the `Role in Territory` picklist on the territory's Users Assigned edit page.

Assign Territory Roles to Users

Assign territory roles to identify the roles of users within territories.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure you have created a Role in Territory picklist so you have some roles to select for users.
2. Open the record of the territory where you want to assign territory roles.
3. In the Assigned Users list, click **Edit** next to the name of a user to whom you're assigning a territory role.
4. From the `Role in Territory` picklist, select the user's territory role.
5. Click **Save**.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To define picklists:

- "Customize Application"

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To assign territory roles to users:

- View Setup and Configuration
- AND
- "Manage Territories"

Activate a Territory Model

When you're satisfied with the structure of your territory model and its territory account assignments, you're ready to activate it. Remember that you can also maintain models in `Planning` and `Archived` states for further modeling and reference.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

 **Important:** Only one model can be in the `Active` state at one time in your organization, and you can only activate a model that is in the `Planning` state. After activating a model, you cannot reset it to `Planning` state; you can only set it to `Archived` state.

1. If you need to, preview account assignments before activating the model.
2. Open the record for the territory model you want to activate and click **View Hierarchy**.
3. Click **Activate**.

The model state changes to `Activating` while Salesforce processes your request. Activation may take some time, depending on the size and complexity of your model. When the process is complete, we'll send you an email to let you know.

Configure Enterprise Territory Management Permissions and Access for Administrators and Users

An important step in implementing Enterprise Territory Management is making sure the right users can access the right territory model elements, records, and record elements.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure you understand how permissions affect territory model and record access in Enterprise Territory Management.
2. Assign user permissions as needed.
3. Add the Assigned Territories related list to your account page layouts. This list lets administrators manually assign territories to accounts and it lets users can identify which territories are assigned to their accounts. Make sure the related list includes the standard and custom fields (if any) that administrators and users need to view.
4. Add the Users in Assigned Territories related list to your account page layouts. This list lets administrators and users see all users assigned to the territories that are assigned to an account, according to their permissions. Make sure the related list includes the standard and custom fields (if any) that administrators and users need to view.
5. Add the `Territory` field to your Opportunity page layouts. This field lets administrators and sales managers manually assign a territory to an opportunity from a list of the territories assigned to the opportunity's account. Add the `Territory Name` and `Territory Description` fields to Opportunity list views and reports so that users can identify assigned territories there.

Run Assignment Rules for a Territory

Run account assignment rules for any territory that has rules defined and belongs to a territory model in **Planning** or **Active** state. If your territory is in **Planning** state, running rules lets you *preview* account assignments. If your territory is in **Active** state when you run rules, accounts are assigned to territories according to your rules.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Open the hierarchy for the territory model the territory model belongs to.
2. In the tree view or list view, find the territory you want to run rules for.
3. In list view, click **Run Rules**. In tree view, hover over the territory name and then click **Run Rules**. If you want to view the territory record's details, including its assigned rules, *before* you run its rules, open the record and then click the **Run Rules** button in the Assignment Rules Assigned to This Territory related list.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To run rules within your territories:

- "Customize Application"
- AND
- "Manage Territories"

Find Out Which Territories an Assignment Rule Applies To

If you use rules to assign accounts to territories, it can be helpful to find out which territories a single rule applies to.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From Setup, enter *Territory Models* in the **Quick Find** box, then select **Territory Models** to view a list of your organization's territory models.
2. Find the model in which the rule operates and click **View Rules** to see a list of all the rules associated to the model and its territories.
3. Click the rule name and look for the territories it applies to in the Assigned Territories related list.

Create Custom Report Types for Enterprise Territory Management Reports

Organizations using Enterprise Territory Management can run reports that show account assignments, user assignments, and more. Set up custom report types so sales managers and other users can create the reports they need.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure you're familiar with custom report types and the general steps for creating and maintaining them.
2. Create custom report types relating these objects and configuring them as necessary. Make all fields available for reporting. Add each report to the Territory Management report type category. Provide a clear name and description for each report type so users who create reports can understand which one to use for their needs.

Report (Topics for selected reports are linked)	A (Primary Object)	B	C
Accounts assigned to territories	Accounts	Territories	–
		Select "A" records must have related "B" records.	
Accounts not assigned to territories	Accounts	Territories	–
		Select "A" records may or may not	

EDITIONS

Report on Accounts Assigned to Territories

Manage account assignments to sales territories by reporting on which accounts have been assigned to territories. See which accounts belong to which territories.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure your organization has a custom report type that links the Accounts and Territories objects. It should specify that the Accounts object *must* have related Territory records and it should make all fields on these objects available for reporting.
2. Create your report: click the Reports tab, then click **New Report**.
3. From the Territory Management category, select the custom report type created for this report.
4. Click **Create**.
5. Make sure that the Accounts field *Account Name* and the Territories field *Label* appear on the report. If they do not, add them.
6. (Optional) Filter the report results. To show data from territory models in *Active* state *only*, from the *Filters* drop-down list, select *Field Filter*. Configure the filter options to show *Territory Model: Label equals <name of active territory model>* and then click **OK**. From the **Show** field, to filter by account ownership, select *My accounts, My team's accounts, or My territory teams' accounts*. To filter by user territory assignment, select *My territories' accounts*.

 **Important:** If you later activate a different territory model, make sure you update the territory model name variable in this report.
7. Add any other fields you find useful for this report.
8. Save the report and run it.
9. (Optional) Summarize information by Accounts field *Account Name* to show each account along with the number of territories it's assigned to.

Report on Summarizable Account Fields by Territory

Gauge territory size by reporting on summarizable account data, such as annual revenue or number of employees.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. Make sure your organization has a custom report type that links the Accounts and Territories objects. It should specify that the Accounts object *must have* at least one Territory object record and should make all fields on these objects available for reporting.
2. Create your report: click the Reports tab, then click **New Report**.
3. From the Territory Management category, select the custom report type created for this report.
4. Click **Create**.
5. Select *Matrix Format* for the report.
6. From the Territories field list, select the *Label* field. Drag it to create a row grouping.
7. From the Accounts field list, select the *Account Name* field. Drag it to create a row grouping.
8. From the Accounts field list, select summarizable fields, such as *Annual Revenue* and *Employees*, to show those totals. Drag them into the summarizable fields area. When prompted, select the *Sum* checkbox.
9. (Optional) Filter the report results. From the **Show** field, to filter by account ownership, select *My accounts, My team's accounts, or My territory teams' accounts*. To filter by user territory assignment, select *My territories' accounts*.
10. Add any other fields you find useful for this report.
11. Run the report and make sure it shows the data and the arrangement you want.
12. Summarize information by the Territories field *Label* to total all the summarizable field values by territory.
13. Save the report.

Archive a Territory Model

Archiving a territory model deactivates it in your organization, but the model remains in your territory model list, where you can reference its associated assignment rules and the resulting account-to-territory assignments generated by the rules. You can only archive a model that is in the **Active** state. After archiving a model, you cannot return it to the **Active** state or the **Planning** state.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From Setup, enter *Territory Models* in the **Quick Find** box, then select **Territory Models**.
2. Click **Edit** next to the territory model you want to archive.
3. Choose **Archiving** from the **State** drop-down.
The model state changes to **Archiving** while Salesforce processes your request. When processing is complete, the model state changes to **Archived**, and you receive a confirmation via email. This may take some time, depending on the size and complexity of your organization.

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To archive a territory model:

- "Manage Territories"

Delete a Territory Model

Delete a territory model if your organization no longer actively uses the model for territory management or reference. You can't delete an active territory: the model must be in **Planning** or **Archived** state.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

Deleting a territory model also deletes all its associated territories and account assignments. You can't cancel the process or restore a deleted model. The process may take several hours, so we'll send you an email when it's complete.

1. From Setup, enter *Territory Models* in the **Quick Find** box, then select **Territory Models**.
2. Find the model in the list. Check the value in the **State** column to make sure the model is in the **Planning** or **Archived** state.
3. Click **Del**.
4. Later, check your email for confirmation that the deletion process is complete.

View and Manage Assignment Rules at the Territory Model Level

If you want to view and manage account assignment rules at a high level, you can. Start from the territory model record to create, edit, or view rules for the model's territories. From the model-level list of rules, you can view rule criteria, or open a rule record to find out which territories it's assigned to, if any.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

1. From Setup, enter *Territory Models* in the **Quick Find** box, then select **Territory Models**.
2. Click **View Rules** next to the territory model whose rules you want to manage.
3. On the Assignment Rules list view, you can create a new rule, open a rule record for complete details, or hover over the rule name to view its criteria.

SEE ALSO:

[Find Out Which Territories an Assignment Rule Applies To](#)

Activating Assignment Rules and Applying them to Descendant Territories

The ability to apply an assignment rule to descendant territories is available at the territory level only. You cannot apply assignment rules to descendants at the territory model level. Therefore, you only get the option to apply a rule to descendant territories if you access the rule's record from an individual territory.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

With this restriction in mind, make sure you create or edit a rule record from the appropriate place. Starting from the territory record gives you the most options. Make sure you activate all assignment rules you want to use: inactive rules *do not* affect assignments for associated territories or any descendant territories they have been applied to.

 **Example:** For example, you have a territory model called US, and its hierarchy has two territories: Eastern States and Western States. The Eastern States territory has an assigned rule called Eastern States Accounts. If you open the record for the territory model, US, then click `View Rules` and from there click **Edit** to edit the Eastern States Accounts rule record, the final step lets you activate the rule.

If you start from the Eastern States territory record, then click **Edit** next to the Eastern States Accounts rule record, in addition to the step where you activate or deactivate the rule, you'll see an additional step that lets you apply the rule to the Eastern States territory's descendants.

Disable Enterprise Territory Management

If you wish, you can disable Enterprise Territory Management for your organization and use another means of record sharing.

 **Note:** This information applies to Enterprise Territory Management only, not to previous versions of Territory Management.

 **Important:** If you disable Enterprise Territory Management, your users lose record access that's based on territory assignments, and your organization no longer has access to territory management data. If you re-enable Enterprise Territory Management, you may lose data that had previously been available through the feature.

1. If you haven't already, [archive your active territory model](#) before disabling Enterprise Territory Management.
2. From Setup, enter *Territories* in the `Quick Find` box, then select **Settings**.
3. Click **Disable Territory Management 2.0**.

USER PERMISSIONS

To disable Enterprise Territory Management:

- "Customize Application"

Original Territory Management

Enable Territory Management

Before you enable Territory Management, contact Salesforce, and then check that your organization meets the prerequisites.

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

Territory management is not enabled by default in Salesforce. To request territory management for your organization, contact Salesforce.

 **Note:** Original Territory Management is available only with [Customizable Forecasts](#) and is not supported with [Collaborative Forecasts](#). If original Territory Management is enabled, you can no longer use Collaborative Forecasts. The newer Enterprise Territory Management can't be used with [Customizable Forecasts](#). Enterprise Territory Management and Collaborative Forecasts can both be enabled and used at the same time in your Salesforce organization, but the two features are not currently integrated to work together.

Ensure that you meet the following prerequisites before enabling territory management:

- To enable territory management, your organization must be using customizable forecasting. If you do not know whether you have customizable forecasting, see [Do I Have Customizable Forecasting?](#) on page 1569.
- To prepare your organization for territory management, follow the steps in the [Deploying Territory Management Guide](#).

After you have completed the prerequisites, you will be ready to turn on territory management for your organization:

1. In Salesforce, from Setup, enter *Territory* in the *Quick Find* box, then select **Territory Settings**.
2. Optionally, change the organization-wide territory management settings that are configurable from the Territory Settings page. See [Configure Territory Management Settings](#) on page 2041.
3. There are two different options for enabling territory management, which depend on your preference to retain or purge pre-existing forecast data. Click either **Enable Territory Management** or **Enable Territory Management from Scratch**.

What the Enable Territory Management Button Does

When you click this button, your organization's current forecast hierarchy and forecast data are automatically copied to the territory hierarchy as follows:

- The name of your organization is set as the top of the territory hierarchy.
- For each role in the forecast hierarchy, a corresponding territory is created in the new territory hierarchy.
- Manual forecast sharing settings on the roles are copied to the new territory. For more information on manual forecast sharing, see [Manually Sharing a Forecast](#) on page 2006.
- Active Salesforce users are added to territories based on their roles.
- Opportunities are assigned to the opportunity owner's territory.
- Accounts are not assigned anywhere in the territory hierarchy.
- Until you add or edit territories, your forecasts work the same as they did before you enabled territory management.

What the Enable Territory Management from Scratch Button Does

When you click this button, the following occurs:

- All pre-existing forecast data is deleted.
- An empty territory hierarchy is created.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To enable territory management:

- "Manage Territories"

Using this button is only recommended when you are setting up a brand new organization in Salesforce that does not have an existing forecast hierarchy.

 **Warning: Irreversible data loss** can result from clicking **Enable Territory Management from Scratch**.

4. Configure territory-related fields, page layouts, and user permissions:
 - From the object management settings for accounts, go to Page Layouts and add the `Territories` and `Exclude from territory assignment rules` fields to account page layouts. For each account page layout, you can set whether users can choose to run account assignment rules when they save accounts. You can also set whether account assignment rules run by default whenever accounts are saved.:
 - From the object management settings for opportunities, go to Page Layouts and add the `Territory` field to opportunity page layouts.
 - To allow a user to be an administrator of the territory hierarchy, grant them the “Manage Territories” permission using permission sets or profiles. Users that had the “Customize Application” permission before you enabled territory management are automatically given the “Manage Territories” permission.
5. To begin working with your new territory hierarchy, from Setup, enter `Hierarchy` in the `Quick Find` box, then select **Territory Hierarchy**. See [Building Your Territory Hierarchy](#) on page 2042.

Administrator setup guide: [Deploying Territory Management](#)

Configure Territory Management Settings

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

You can set default account, contact, opportunity, and case access levels for new territories, as well as whether forecast managers can administer the territories located below them in the territory hierarchy.

1. From Setup, enter `Territory` in the `Quick Find` box, then select **Territory Settings**.
2. Choose default access levels for accounts, contacts (depending on your organization-wide default setting), opportunities, and cases. These are the access levels that will be selected by default when a new territory is created. For descriptions of these fields, see [Territory Fields](#) on page 2045.

 **Note:** These settings are not retroactive and do not affect territories that already exist. When creating or editing an individual territory, you can override these default access levels. See [Create Territories](#) on page 2044.

3. Optionally, check `Forecast managers can manage territories`. When this box is checked, forecast managers can administer subordinate territories: they can manage users, manually add accounts, and manage account assignment rules for

[Territory Management](#)

[Building Your Territory Hierarchy](#)

Building Your Territory Hierarchy

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

 **Note:** If you clicked the **Enable Territory Management** button to [enable territory management](#), your existing forecast hierarchy was used as the basis of the territory hierarchy.

To work with your organization's territory hierarchy, from Setup, enter *Hierarchy* in the **Quick Find** box, then select **Territory Hierarchy**. The following terms are used when referring to territories in the hierarchy.

Parent Territory

A territory that is located immediately above another territory in the hierarchy. A territory has exactly one parent territory in the hierarchy, except for the top-level territory which does not have a parent.

Child Territory

A territory that is immediately below another territory in the hierarchy. A parent territory can have an unlimited number of child territories.

Sibling Territory

Child territories that share the same parent territory.

Choose an option from the drop-down list to change how the territory hierarchy is displayed:

Show in tree view

See a visual representation of the parent-child relationships between your territories. Click **Expand All** to see all territories, or **Collapse All** to see only top-level territories. To expand or collapse an individual node, click the plus (+) or minus (-) icon.

Show in sorted list view

See a territory list that you can sort alphabetically by territory name, parent territory (**Reports to**), or description.

To show a filtered list of items, select a predefined list from the **view** drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the **view** drop-down list and click **Edit**.

Show in list view

See a list of territories and their children, grouped alphabetically by the name of the top-level territory. The columns are not sortable. This view is not available for hierarchies with more than 1,000 territories.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To view territories:

- "View Setup and Configuration"

To edit territories:

- "Manage Territories"

OR

You are a forecast manager. Forecast managers can manage territories of those users working below them in territory hierarchy.

Each view provides links for you to create, edit, and delete territories.

SEE ALSO:

[Managing Territories](#)

[Display and Edit Territories](#)

Display and Edit Territories

From the territory detail page, you can view and modify different aspects of the territory, including related territories, assigned users, and included accounts.

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

Displaying Territories

1. From Setup, enter *Hierarchy* in the **Quick Find** box, then select **Territory Hierarchy**.
2. Select the name of the territory you want to view.

Viewing Related Territories

The *Hierarchy* list at the top of the territory detail page shows how this territory is related to the top-level territory in the territory hierarchy. To see the names of other territories that share parent territory of this one, refer to the *Siblings* list. In either list, you can click a territory name to view that territory. The territory detail page also includes a Child Territories related list; see [Working with Territory Related Lists](#) on page 2044.

Editing Territories

To update an existing territory, click **Edit**, and then change the fields you want to modify. For more information, see [Territory Fields](#) on page 2045 and [Create Custom Territory Fields](#) on page 2046.

If an edit to a territory affects a large amount of data, you receive a confirmation email when the operation has completed.

 **Note:** When you edit groups, roles, and territories, sharing rules are recalculated to add or remove access as needed.

Cloning Territories

Click **Clone** to create a territory with the same standard and custom field values as the current territory. The cloned territory has the same parent territory as the original territory. However, assigned users, account assignment rules, and manually assigned accounts are not cloned.

 **Note:** If you have read-only access to a field, the value of that field is not carried over to the cloned record.

Viewing Accounts Assigned to a Territory

Click **View Accounts** to see a list of the accounts that have been assigned to this territory and territories below it in the territory hierarchy. The list includes both manually assigned accounts and accounts that were assigned via rules.

Working with Territory Related Lists

Each territory detail page has the following related lists:

- **Assigned Users** - Lists the users in the territory. See [Manage Users in Territories](#) on page 2047.
 - **Inherited Account Assignment Rules** - Lists the account assignment rules for this territory that are defined in a parent territory. See [Managing Account Assignment Rules](#) on page 2051.
 - **Account Assignment Rules Defined in This Territory** - Lists the account assignment rules for this territory. See [Managing Account Assignment Rules](#) on page 2051.
 - **Manually Assigned Accounts** - Lists the accounts that have been manually added to this territory. See [Manually Assign Accounts to Territories](#) on page 2058.
 - **Child Territories** - Lists the territories located immediately below this territory in the territory hierarchy. To create a child territory for this territory, click **Add Territory**. To view a child territory's detail page, click the territory name.
-  **Note:** Hover over the links at the top of a detail page to display the corresponding related list and its records. If Chatter is enabled, hover links display below the feed. An interactive overlay allows you to quickly view and manage the related list items. Click a hover link to jump to the content of the related list. If hover links are not enabled, contact your Salesforce administrator.

Territory Fields

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

A territory has the following fields, listed in alphabetical order.

Field Name	Description
Account Access	Sets how much access territory members have to the territory's accounts: view only, view and edit, or view, edit, transfer and delete.
Case Access	Sets how much access territory members have to cases on the territory's accounts, regardless of who owns the cases: no access, view only, or view and edit.
Confine Opportunity Assignment	Select this checkbox to prevent the opportunities in this territory from being moved out of this territory and its child territories when account assignment rules are run.
Contact Access	Sets the level of access territory members have to contacts on the territory's accounts, regardless of who owns the contacts. The options are no access, view only, or view and edit.
Forecast Manager	The user to whom forecasts from child and lower-level territories roll up. Only modifiable by clicking Change on the territory detail page. If enabled via the Territory Settings page, a forecast manager can administer lower territories in the hierarchy.
Label	The name used to refer to the territory in any user interface pages.
Opportunity Access	Sets how much access territory members have to opportunities on the territory's accounts, regardless of who owns the opportunities: no access, view only, or view and edit.
Parent Territory	Territory immediately above this territory in the territory hierarchy. The parent territory must be an existing territory. Use the lookup icon to select the parent territory.
Sharing Groups	Read-only and only displays on the territory detail page. For every territory, two sharing groups are created; one for the territory, and another for the territory and its children. Click Territory to see the users who are in the sharing

USER PERMISSIONS

To create or edit custom territory fields:

- "Manage Territories"

OR

You are a forecast manager. Forecast managers can manage territories of those users working below them in territory hierarchy.

Delete Territories

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

You can only delete territories that do not have any child territories. When a territory is deleted, the following items are no longer associated with that territory:

- All users, whether or not `Active in Territory` is checked
- All accounts, whether assigned manually or by account assignment rules
- All opportunities

To delete a territory:

1. From Setup, enter `Hierarchy` in the `Quick Find` box, then select **Territory Hierarchy**.
2. Click **Del** next to a territory in the hierarchy. Alternatively, select the name of a territory and click **Delete**.

 **Note:** Restoring an account or opportunity from the Recycle Bin restores the territory assignment, but it does not trigger the evaluation of account assignment rules. If account assignment rules changed while the record was in the Recycle Bin, the restored record may have territories that are inconsistent with the new rules.

SEE ALSO:

[Display and Edit Territories](#)

[Building Your Territory Hierarchy](#)

Manage Users in Territories

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

A territory can have an unlimited number of users, and a user can be assigned to an unlimited number of territories.

In the context of a specific territory, users have both an `Active` status and an `Active in Territory` status:

Active

An active user is able to log in to Salesforce.

Deactivated users, such as employees who are no longer with your company, are disabled from logging in to Salesforce. Deactivated users continue to own opportunities and appear in forecasts and territories. When users are deactivated, their opportunity forecast overrides, adjusted total overrides, and manager's choice overrides on subordinates' forecasts are frozen. However, the manager of a deactivated user can apply manager's choice overrides to that user's forecasts. Rollup amounts are kept current. If a deactivated user is later reactivated, the user can resume normal work as before. If "Allow Forecasting" is disabled for a user who is deactivated, the user is removed from any territories he or she is assigned to.

Users can set their active status by modifying their personal information page in their personal settings.

EDITIONS

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To assign users to territories:

- "Manage Territories"

AND

"Manage Users"

Active in Territory

Users with `Active in Territory` checked on the territory detail page have open opportunities, closed opportunities, or no opportunities at all in that territory. Users with `Active in Territory` deselected have been transferred out of or removed from the territory, but retain ownership of opportunities in the old territory.

To view the territories to which you belong, view the Territories related list on your personal information page. To view this related list for any user, from Setup, enter `Users` in the `Quick Find` box, then select **Users**.

Adding Users to Territories

To add users to a territory:

1. From a territory detail page, click **Add Users**.
2. To show a filtered list of items, select a predefined list from the `view` drop-down list, or click **Create New View** to define your own custom views.
3. Select and deselect checkboxes in the Action column to move users between the Available and Selected areas. Also, you can:
 - Click a letter to view users who correspond to that letter.
 - Click **All** to display all users who match the criteria of the current view.
 - Click **select shown** to move all users that are shown on the current list page to the Selected area below.
 - Click **deselect shown** or **deselect all** to move users from the Selected area to the Available area.

Note: Users already assigned to the territory will not appear in the Available users list even if they meet the list view criteria.

4. When the Selected area includes all users that you want to assign to the territory, click **Assign**.

Removing Users from Territories

You can remove a user from a territory and choose who will receive his or her open opportunities:

1. In the Assigned Users related list on the territory detail page, click **Remove** next to the user's name.
2. Click the `New Owner` lookup icon () to select a recipient for any open opportunities the user may have.
3. Alternatively, leave the `New Owner` field blank. One of the following results will occur:
 - If the parent territory has a forecast manager, then that forecast manager takes ownership of the user's open opportunities. Also, the forecast manager is assigned to the territory with `Active in Territory` unchecked.
 - If the parent territory does not have a forecast manager, then the user remains in the territory with `Active in Territory` unchecked.
4. Click **Save**.

If very large amounts of data are affected, you will be sent a confirmation email when the operation has completed.

Transferring Users Between Territories

The user transfer wizard allows you to move a user from one territory to another, choose which open opportunities the user will continue to own, and designate a recipient for open opportunities the user leaves behind.

To transfer a user to another territory:

1. In the Assigned Users related list on the territory detail page, click **Transfer** next to the user's name.

2. Click **Select** next to the territory to which you are transferring the user. If necessary, expand or collapse nodes in the territory hierarchy to display the desired destination territory.
3. Click the **New Owner** lookup icon () to select the user who will take ownership of the open opportunities that the transferred user does not keep. Click **Next** to proceed.

If you skip this step and choose not to select a recipient, the forecast manager of the parent territory of the user's former territory automatically receives the open opportunities that the user does not keep. If there is no forecast manager in the parent territory of the user's former territory, then the user being moved retains ownership of his or her opportunities.

4. Choose a list view of the user's open opportunities.
5. Click **Select** and **Deselect** to move opportunities between the Available and Selected areas. Also, you can:
 - Click a letter to view opportunities that correspond to that letter.
 - Click **All** to display all opportunities that match the criteria of the current view.
 - Click **select shown** to move all opportunities that are shown on the current list page to the Selected area below.
 - Click **deselect shown** or **deselect all** to move opportunities from the Selected area to the Available area.

6. When the Selected area shows the opportunities that you want the user to retain after the transfer, click **Transfer**.
If very large amounts of data are affected, you will be sent a confirmation email when the operation has completed.

Note: If you transfer the forecast manager out of a territory, that territory will no longer have a forecast and any opportunity overrides for that territory that were created by forecast managers above it in the territory hierarchy will be deleted. See [Overriding Customizable Forecasts](#) on page 1573.

Add Forecast Managers to Territories

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

Consider the following before assigning the forecast manager for a territory:

- A territory can have only one forecast manager. See [Assigning Forecast Managers in Your Forecast Hierarchy](#) on page 2004.
- Forecasts from child and lower-level territories roll up to forecast managers.
- If a territory has no forecast manager, there is no forecast for that territory.
- Forecast managers can receive opportunities when users are transferred out of or removed from a territory.
- Forecast managers can receive opportunities when account assignment rules are run.
- On the territory settings page, you can enable forecast managers to act as delegated administrators for territories below them in the hierarchy.

To assign or change the forecast manager for a territory:

1. On the territory detail page, click **Change** next to the `Forecast Manager` field.
2. Select a name from the drop-down list to specify the territory's forecast manager.

On the right, a tree view of the territory hierarchy allows you to see the child and lower-level territories whose forecasts will roll up to the forecast manager.

Managing Account Assignment Rules

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

You can create account assignment rules that automatically move accounts and their associated opportunities and cases into territories based on any standard or custom account field, such as zip code, state, industry, revenue, or number of employees. Each rule consists of multiple rows of criteria that specify exactly how the accounts are assigned.

Account assignment rules are governed by the following:

- A territory can have inherited account assignment rules, meaning that the rules were created somewhere higher in the territory hierarchy and consequently also impact the given territory.
- A territory can have locally defined account assignment rules, meaning that the rule was created at the given territory.
- If a territory doesn't have any inherited or locally-defined account assignment rules, then it only contains accounts that were [manually added](#).
- If an account matches all inherited and locally-defined account assignment rules for multiple territories on the same branch of the hierarchy, then the account is assigned to the lowest matching territory.
- If an account matches a territory's inherited account assignment rules but not all of the territory's locally-defined rules, then the account isn't assigned to the territory, but is evaluated for child territories.

For example, you have three territories:

- Territory A has four rules marked “Apply to child territories”, and is a parent of territory B.
 - Territory B has three rules not marked “Apply to child territories”, and is a parent of territory C.
 - Territory C has two rules.

If you assign an account that matches all of territory A's and territory C's rules but only one of territory B's rules, then the account is assigned to territory C. However, if territory B's rules are marked “Apply to child territories,” then the account is assigned only to territory A.

Working with Account Assignment Rules

Click **Run Rules** on the territory detail page to evaluate the active inherited, locally defined rules shown on the page against all existing accounts in your organization. The rules for all subordinate territories are also evaluated—that is, when you run rules on the top-level territory, all rules in the entire hierarchy are evaluated. When you click **Run Rules**, an icon () displays next to the button for all affected territories to indicate that rules are being processed. An email confirmation is sent when processing is complete.

 **Note:** To protect data quality, you can't modify a territory while the processing icon displays.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To manage account assignment rules:

- “Manage Territories”

OR

You are a forecast manager. Forecast managers can manage territories of those users working below them in territory hierarchy.

Click **Manage Rules** on the territory detail page to access the Manage Account Assignment Rules page, where you can create, edit, preview, and run account assignment rules:

- Click **New** to create a new rule, or **Edit** to edit an existing rule. See [Create and Edit Account Assignment Rules](#) on page 2056.
- Use the `Active` checkbox to set a locally-defined rule as active or inactive.

Active account assignment rules automatically evaluate accounts and assign them to territories when:

- An account is created using the Salesforce user interface, the Force.com API version 20.0 or earlier, or a client such as Connect Offline.
 - An account is imported using an import wizard.
 - An account is created by the conversion of a lead.
 - An account is edited and saved if the `Select by default` checkbox is selected for the “Evaluate this account against territory rules on save” checkbox option under **Layout Properties**. If the account assignment rule initiates an opportunity ownership change, you must have transfer access on the opportunity.
 - An account is edited and saved via the Force.com API.
 - **Run Rules** is clicked on a territory detail page, provided the `Exclude from territory assignment rules` checkbox on the account is deselected.
 - **Save & Run Rules** is clicked on the manage account assignment rules page for a territory, provided the `Exclude from territory assignment rules` checkbox on the account is deselected.
 - Duplicate accounts are merged.
- Click a rule name to see the details of that rule, including its active status and criteria. From a rule detail page you can edit, delete, or clone a rule.
 - Click **Preview** to see the accounts that would be assigned to this territory and its child territories if the rules currently marked active were run. See [Preview Account Assignments](#) on page 2057.
 - Click **Save** to save the current active status of locally-defined rules.
 - Click **Save & Run Rules** to save the current active status of locally-defined rules and evaluate the inherited and locally-defined rules shown on the page against all existing accounts in your organization. Running account assignment rules affects accounts in the Recycle Bin.

Click **Edit** on the territory detail page to toggle the `Confine Opportunity Assignment` checkbox. When it is selected, the territory's opportunities remain in the territory or its child territories when you run account assignment rules. The following exceptions apply:

- If an opportunity's account moves to only one of the territory's children, then the opportunity follows the account and is reassigned to the account's new territory. This includes when an account moves to multiple territories and only one of the new territories is a child of the original territory.
- If an opportunity's account moves to more than one of the territory's children, then the opportunity's territory field is set to blank.
- If an opportunity's account moves completely out of the territory and its children, then the opportunity's territory field is set to blank.

 **Tip:** You can also manage account assignment rules using the Data Loader or the Web services API.

Account Assignment Rules and Opportunities

Several factors determine how account assignment rules assign opportunities to territories, including:

- Whether the account associated with the opportunity is assigned to one or more territories
- Whether the opportunity owner is a member of the same territory as the account
- The number of users assigned to the territory

- Whether a forecast manager is assigned to the territory

 **Note:** If you're updating an account which triggers an account assignment rule that is part of territory management, you must have transfer access on the opportunity if the account assignment rule initiates a change in the opportunity ownership.

Accounts with One Territory

If the account associated with the opportunity is assigned to only one territory, use the following table to determine how the opportunity's territory is assigned:

Opportunity Owner Belongs to Same Territory as Account	Number of Users Assigned to Territory	A Forecast Manager is Assigned to the Territory	Results
Yes	1	N/A	The opportunity is assigned to the same territory as the account. The opportunity owner is unchanged.
No	1	N/A	The opportunity is assigned to the same territory as the account and the opportunity owner is the sole member of the territory.
No	0	N/A	The opportunity is assigned to the same territory as the account and the opportunity owner is added as an inactive member of the territory. The owner of the opportunity remains unchanged.
Yes	>1	Yes	The opportunity is assigned to the same territory as the account and the forecast manager becomes the opportunity owner.
Yes	>1	No	The opportunity is assigned to the same territory as the account. The owner of the opportunity remains unchanged if the opportunity owner has <code>Active in Territory</code> selected on the territory detail page.
No	>1	Yes	The opportunity is assigned to the forecast manager of the territory.
No	>1	No	The opportunity is assigned to the same territory as the account and the opportunity owner is added as an inactive member of the territory. The owner of the opportunity remains unchanged.

Accounts with Multiple Territories

If the account associated with the opportunity is assigned to more than one territory, use the following table to determine how the opportunity's territory is assigned:

Opportunity Owner's Territory Membership	Results
Opportunity owner has one territory in common with the account	The opportunity is not assigned to any territories. The opportunity owner can assign the opportunity to the

Opportunity Owner's Territory Membership	Results
	territory that he or she has in common with the account.
Opportunity owner has more than one territory in common with the account	The opportunity is not assigned to any territories. The opportunity owner can assign the opportunity to any territory that he or she has in common with the account.
Opportunity owner has no territories in common with the account	The opportunity is not assigned to any territories. The opportunity owner cannot assign the opportunity to any territories.

Territory Assignments for Standard Users

If the user creating the opportunity is a standard user, Salesforce automatically assigns a territory to a new opportunity only if the user and account have exactly one territory in common. For example, James, who is a standard user assigned to the Westlake territory only, creates an opportunity on the Filmore, Inc. account. Filmore, Inc. belongs to the Westlake territory and one other territory. Because James and Filmore, Inc., have exactly one territory in common, the new opportunity is assigned to the Westlake territory. If James belonged to the account's other territory, the opportunity would not be assigned to a territory.

Use the following table to determine when a territory will be assigned to an opportunity created by a standard user.

Number of Territories Assigned to User	Number of Territories Assigned to Account	Opportunity Owner Belongs to Same Territory as Account	Results
1	1	Yes	The opportunity is assigned to the territory in common.
>1	1	Yes	The opportunity is assigned to the account's territory if the user belongs to that same territory.
1	>1	Yes	The opportunity is assigned to the user's territory if the account is associated with that same territory.
>1	>1	Yes	The opportunity is not assigned to any territories. The opportunity owner can assign the opportunity to any territory that he or she has in common with the account.
N/A	N/A	No	The opportunity is not assigned to any territories.

Territory Assignments for Administrators

A user who is an administrator or has "Manage Territories" permission can view all territories.

If the user is an administrator, a territory-delegated administrator, or a user with the "Manage Territories" permission, Salesforce automatically assigns a territory to a new opportunity only if the administrator, the account, and the account's parent accounts have exactly one territory in common. For example, Jennifer is an administrator who manages the Northlake and Westlake territories. She creates an opportunity on the Richmond Brothers account. Richmond Brothers is associated with the Northlake and Southlake territories. Richmond

Brothers has one parent account, Zyman Products, which is assigned to the Northlake and Eastlake territories. Because Jennifer, Richmond Brothers, and Zyman Products have only the Northlake territory in common, the new opportunity is assigned to the Northwest territory. If Richmond Brothers or Zyman Products also belonged to the Westlake territory, the opportunity would not be assigned to a territory.

Use the following table to determine when a territory will be assigned to an opportunity created by an administrator.

Number of Territories Administrator Manages	Number of Territories Assigned to Account	Number of Territories Assigned to Account's Parent Account(s)	Opportunity Owner Manages Same Territory as Account and Parent Account(s)	Results
1	1	1	Yes	The opportunity is assigned to the territory in common.
>1	1	1	Yes	The opportunity is assigned to the territory in common.
1	>1	1	Yes	The opportunity is assigned to the territory in common.
1	1	>1	Yes	The opportunity is assigned to the territory in common.
>1	>1	1	Yes	The opportunity is assigned to the parent account's territory if the administrator and the account have no other territories in common. The opportunity owner can manually assign the opportunity to any territory that he or she has in common with the account
1	>1	>1	Yes	The opportunity is assigned to the administrator's territory if the account and the account's parent account(s) have no other territories in common. The opportunity owner can manually assign the opportunity to any territory that he or she has in common with the account
>1	1	>1	Yes	The opportunity is assigned to the account's territory if the administrator and the account's parent account(s) have no other territories in common. The opportunity owner can manually assign the opportunity to any territory that he or she has in common with the account
>1	>1	>1	Yes	The opportunity is assigned to the administrator's territory if the administrator, the account, and the account's parent account(s) have no other territories in common. The opportunity owner can manually assign the opportunity to any territory that he or she has in common with the account.

Number of Territories Administrator Manages	Number of Territories Assigned to Account	Number of Territories Assigned to Account's Parent Account(s)	Opportunity Owner Manages Same Territory as Account and Parent Account(s)	Results
N/A	N/A	N/A	No	The opportunity is not assigned to any territories.

[Assigning Opportunities to Territories](#)

Create and Edit Account Assignment Rules

 **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

A territory can have a maximum of 15 account assignment rules, including both active and inactive rules. To create or edit an account assignment rule:

1. From Setup, enter *Hierarchy* in the *Quick Find* box, then select **Territory Hierarchy**.
2. Select the territory you want to modify.
3. Click **Manage Rules** in the Account Assignment Rules related list.
4. Click **New** to create a new account assignment rule. To edit an existing account assignment rule, click **Edit**.
5. Enter a name for the rule. Rule names must be unique and can have a maximum of 80 characters.
6. Define filter criteria that accounts must match to be included in the territory.

If your organization uses multiple languages, use your organization's default language when specifying your criteria. When you use picklists to specify filter criteria, the selected values are stored in the organization's default language. If you edit or clone existing filter criteria, first set the *Default Language* on the Company Information page to the same language that was used to set the original filter criteria. Otherwise, the filter criteria may not be evaluated as expected.

7. Optionally, check the *Apply to child territories* box that makes the rule applicable to child territories
8. Optionally, check the *Active* box to activate the rule. Inactive rules never run.

Active account assignment rules automatically evaluate accounts and assign them to territories when:

- An account is created using the Salesforce user interface, the Force.com API version 20.0 or earlier, or a client such as Connect Offline.
- An account is imported using an import wizard.
- An account is created by the conversion of a lead.

EDITIONS

Available in: Salesforce Classic

Available in: **Developer** and **Performance** Editions and in **Enterprise** and **Unlimited** Editions with the Sales Cloud

USER PERMISSIONS

To create or edit account assignment rules:

- "Manage Territories"
- OR

You are a forecast manager. Forecast managers can manage territories of those users working below them in territory hierarchy.

- An account is edited and saved if the `Select by default` checkbox is selected for the “Evaluate this account against territory rules on save” checkbox option under **Layout Properties**. If the account assignment rule initiates an opportunity ownership change, you must have transfer access on the opportunity.
- An account is edited and saved via the Force.com API.
- **Run Rules** is clicked on a territory detail page, provided the `Exclude from territory assignment rules` checkbox on the account is deselected.
- **Save & Run Rules** is clicked on the manage account assignment rules page for a territory, provided the `Exclude from territory assignment rules` checkbox on the account is deselected.
- Duplicate accounts are merged.

9. Click **Save** to finish, or **Save & New** to save the rule and begin defining another rule.

Tip: By creating at least one account assignment rule at the top of your territory hierarchy that applies to child territories, you can build a hierarchy where all accounts match the top-level criteria and subordinate territories differentiate accounts by more specific criteria.

Similarly, if your organization uses divisions, create a rule at the top of your territory hierarchy that filters accounts by division and applies to child territories.

[Manually Assign Accounts to Territories](#)

Manually Assign Accounts to Territories

-  **Note:** This information applies to the original Territory Management feature only, and not to Enterprise Territory Management.

As an alternative to creating and running account assignment rules, you can add accounts to territories manually:

- On the territory detail page, click **Add Accounts** on the Manually Assigned Accounts related list.
- Choose a view from the drop-down list, or click **Create New View** to build a new custom view.
- Click **Select** and **Deselect** to move accounts between the Available and Selected areas. Also, you can:
 - Click a letter to view accounts that correspond to that letter.
 - Click **All** to display all accounts that match the criteria of the current view.
 - Click **select shown** to move all accounts that are shown on the current list page to the Selected area below.
 - Click **deselect shown** or **deselect all** to move accounts from the Selected area to the Available area.
- When the accounts in the Selected area includes all accounts that you want to manually add to the territory, click **Assign**.

-  **Note:** Manually adding accounts and running account assignment rules are completely independent. A manually added account remains in a territory until it is manually removed. There is nothing to prevent assignment rules also adding the account to the territory.

Enable Business Networks for Collaboration Across Organizations

Enable Salesforce to Salesforce

 **Warning:** Enabling Salesforce to Salesforce is not reversible, however, you control the information you share and the connections you share with. You can stop sharing or modify sharing settings at any time. By enabling Salesforce to Salesforce, you agree to allow salesforce.com to process updates to information in your organization that is shared with other organizations. Salesforce to Salesforce allows you to share your data with third-party recipients, and those recipients may in turn use Salesforce to Salesforce to share your data with further third-party recipients unknown to you. You are responsible for ensuring that appropriate contractual or other legal arrangements are in place between you and your recipients to limit those recipients' use and disclosure of your shared data.

To enable Salesforce to Salesforce:

1. From Setup, enter *Salesforce to Salesforce Settings* in the Quick Find box, then select **Salesforce to Salesforce Settings**.
2. Click **Edit**.
3. Select **Enable**.
4. Click **Save**.

When you enable Salesforce to Salesforce, a new user named "Connection User" is created. This user does not count towards the number of used licenses for your organization, and is not included in any user management view.

When your business partner updates a shared record, the `Last Modified By` field on the record in your organization displays `Connection User`, allowing you to easily track all changes made by your business partners.

The Connection User is automatically assigned to the Partner Network profile. The Partner Network profile cannot be modified and is not included in any profile management view.

After Salesforce to Salesforce is enabled:

1. Create a permission set with the "Manage Connections" permission enabled and the Connection tab set to `Visible`, and assign the permission set to users who will be working with Salesforce to Salesforce connections.

We also recommend giving the "Manage Queues" user permission to all users with the "Manage Connections" user permission. This lets users create and manage queues for connections without needing assistance from an administrator.

2. [Configure Salesforce to Salesforce settings](#), such as communication templates for sending invitations to your business partners.
3. Add the External Sharing related list to page layouts for the appropriate profiles.

 **Note:** This related list can be made available to all users, not just users with the "Manage Connections" permission.

4. Optionally, create custom list views on the External Sharing related list and give access to the appropriate users, so that they can view and accept shared records.
5. Optionally add the Received Connection Name and Sent Connection Name columns to the related lists on the page layouts of the desired objects.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Contact Manager, Group, Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To enable Salesforce to Salesforce:

- "Modify All Data"

6. Create and manage connections with your business partners.

Configure Salesforce to Salesforce

You can configure Salesforce to Salesforce to use communication templates for interacting with your business partners. In addition, you can configure the email address and name used on the templates. To configure any of these settings:

1. From Setup, enter *Salesforce to Salesforce Settings* in the Quick Find box, then select **Salesforce to Salesforce Settings**.
2. Click **Edit** and modify the following settings:

Setting	Description
From Email Address	The email address from which all Salesforce to Salesforce communication templates are sent, for example, "partner@acme.com." Salesforce sends the emails automatically, but they appear to your contacts as if they were sent from this email address. If a contact responds to a communication template, the response is sent to this address.
From Email Name	The name that will be associated with the "From" Email Address, for example, "Acme Channel Manager".
Invitation Template	Used to send invitations.
Deactivation Template	Used to notify a business partner that you have deactivated the connection.
Accept Invitation Template	Used to notify a business partner that you have accepted an invitation.
Reject Invitation Template	Used to notify a business partner that you have not accepted an invitation.
Update Connection Profile Template	Used to notify business partners of changes to an active connection profile.

Enhanced Email: Improve Email in Salesforce with Key Customizations and a Better Email Page

Enhanced Email gives you and your users a ton of email functionality to better drive your business processes, including the ability to relate emails to other records, add custom fields to emails, use triggers with emails, modify the email layout, and manage emails using the Salesforce API. You also get a new and improved email detail page that shows emails in their original format.

With Enhanced Email, emails in Salesforce are saved as EmailMessage records. EmailMessage is a standard Salesforce object, and that's how you get all of these great new email features.

-  **Note:** With Enhanced Email, for backwards compatibility, we still create a Task record for each email message. However, when you view emails in Salesforce, you see the Email Message record for the email. That's a good thing, because now emails display in their original format. So, HTML emails show the HTML format, and plain text emails show plain text format. That's what your users expect.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Considerations for Setting Up Enhanced Email

Consider a few tidbits of wisdom before using Enhanced Email, including limitations, details for Email-to-Case customers, and information about working with EmailMessage and Task records.

- Enhanced Email is automatically enabled for most organizations except ones that use Email-to-Case.
- If you use Email-to-Case, you can already use custom fields, customized layouts, workflow rules, and triggers with emails without enabling Enhanced Email. Plus, you already use the EmailMessage object to store emails associated with cases. If you want to be able to relate EmailMessage records to other objects (besides cases), then we recommend that you enable Enhanced Email.
- With Enhanced Email, your emails are stored using the standard Salesforce object, EmailMessage. This gets you all the usual goodies that come with standard objects, including custom fields, customized layouts, and a better record detail page. If your organization uses Email-to-Case, the EmailMessage object is already used to store emails associated with cases. If your organization does not use Email-to-Case, and you want to store emails with the EmailMessage object, you must enable Enhanced Email.
- With Enhanced Email, emails sent from Salesforce are saved as both EmailMessage records and Task records. However, only the EmailMessage record is shown on the email detail page in the UI.
- Even if your organization uses Enhanced Email, emails added from Web-to-Lead and Salesforce for Outlook are still only stored as Task records.
- You can't use custom currency fields with the EmailMessage object.
- EmailMessage records can have only one record type.
- Workflow rules can use EmailMessage records only to update fields on Case records.
- You can relate emails to contacts, leads, accounts, opportunities, cases, campaigns, person accounts, and other records. In Salesforce Classic, these related emails are displayed in the Activity History list. In Lightning Experience, they are displayed in the Activity Timeline.
- Email is logged as an EmailMessage record, not an Activity record, and how you modify the content has changed. Email fields, including RelatedToId, can only be changed when the email is in draft status. The IsExternallyVisible field and custom fields are the exception. This restriction is true for changes made in the UI and through the API.
- Before using Enhanced Email, we recommend that you:
 - Review triggers and workflow rules that use the EmailMessage object. For EmailMessage records associated with cases, the ParentID field is always populated. With Enhanced Email, you can associate EmailMessage records with other records and the ParentID field may be blank. As a result, you may need to update your triggers and workflow rules to handle email messages with a blank ParentID field.
 - Review custom business logic that incorporates tasks and emails. We recommend that you:
 - Recreate any custom Task object fields on the EmailMessage object.
 - Migrate any Task object triggers to the EmailMessage object.
 - Test it in a sandbox with any workflows and customizations, including Email-to-Case customizations.

Get the most out of sending email from Salesforce with features that let you monitor emails, including email logs and the mass email queue.

[Improve Deliverability of Emails Sent from Salesforce](#)

Email deliverability is the likelihood of a company’s or individual’s email reaching its intended recipient. To improve the deliverability of email you send through Salesforce, we offer several settings and compliance options.

[Organization-Wide Addresses: Let Users Send Email from Salesforce Using a Common From Address](#)

If your Salesforce org requires users to share a common email alias, you can define a list of organization-wide addresses for each user profile. When sending email from Salesforce, users with these profiles can select their own address or the organization-wide address for the email’s `FROM` address. Replies are delivered to selected address.

[Organization-Wide Footers: Let Users Send Email from Salesforce with Common Footers](#)

Let your users save time and apply common messaging to all emails sent from Salesforce by creating organization-wide footers. You can create a separate email footer for each encoding and choose default footers for single and mass email. In Lightning Experience, mail sent via Gmail or Office 365 can contain an organization-wide footer; you choose if it is included.

Which Option for Sending Email from Salesforce Is Best for Your Organization?

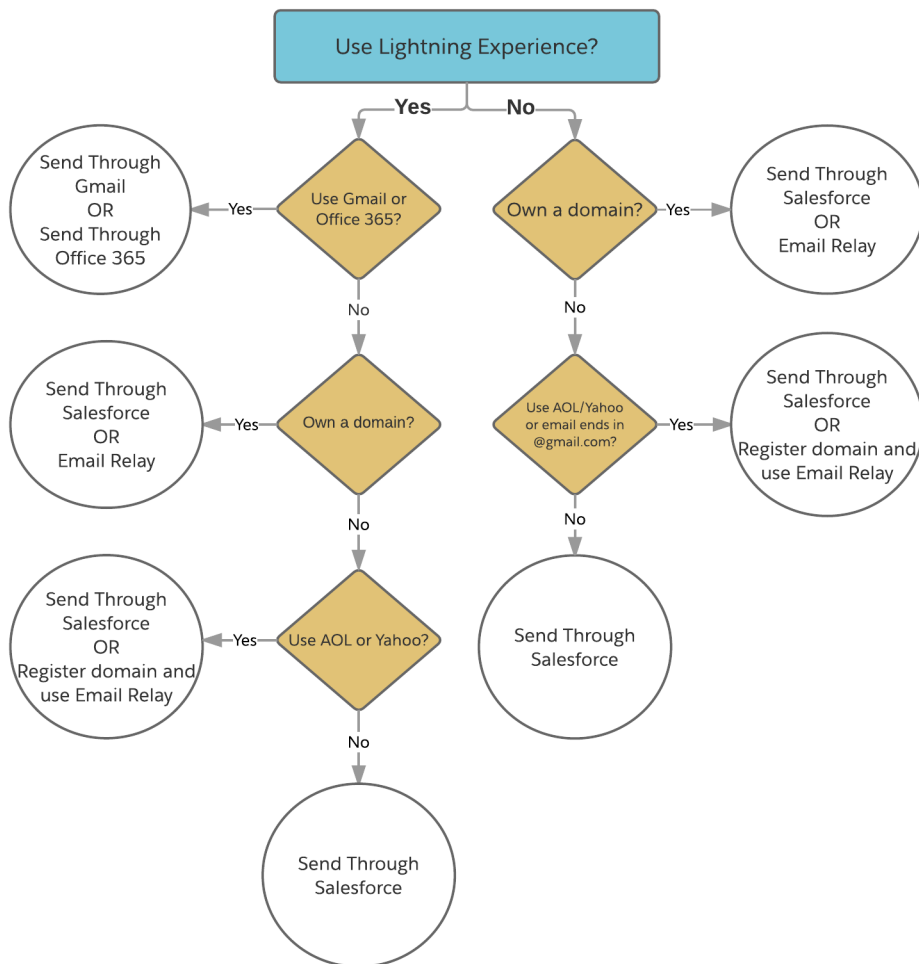

There are several options that let your users send email right from Salesforce. These options depend on whether your organization uses Lightning Experience, whether your company owns an email domain, and which email application your company uses.

Use this flowchart to figure out which option for sending email from Salesforce is right for your org. It all starts with whether you use Lightning Experience or not.

[Considerations for Setting Up Send Email through Gmail™ or Office 365™](#)

Review a few details before setting up Send through Gmail or Office 365, including details about triggers and workflow rules and information for organizations that use Communities.

[Set Up Send Email Through Gmail™ or Office 365™](#)

With a few quick steps, you can let your users send email in Salesforce using their Gmail or Office 365 accounts.

Considerations for Setting Up Send Email through Gmail™ or Office 365™

Review a few details before setting up Send through Gmail or Office 365, including details about triggers and workflow rules and information for organizations that use Communities.

- Send through Gmail or Office 365 is not available in Communities. If your organization has Send Through Gmail or Office 365 enabled, it will not work in Communities. Instead, emails sent in Communities will go through Salesforce or Email Relaying, depending on which option your organization has configured.
- If you use Send through Gmail, you can visit your My Email Settings page in Salesforce to customize the name that shows up in the From field of your outgoing emails. If you use Send Through Office 365, you can't change the name in Salesforce.

When using Send through Gmail or Office 365:

EDITIONS

Available in: Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited**, and **Developer** Editions

- Emails are not stored in Salesforce email logs, which are only used for emails sent through Salesforce. This means email delivery information is not available in Salesforce. Obtain email logs from Gmail or Office 365.
- Emails sent by triggers and workflow rules are still sent through Salesforce.
- Bounce management isn't supported, so contacts and leads aren't automatically updated with bounce information. However, you can view bounced emails in your email inbox. If you require bounce management, use Send through Salesforce instead.
- Transport Layer Security (TLS) is handled through the external email service and not through Salesforce settings.
- Organization-wide footers do not appear in emails sent from Salesforce.

Test the Deliverability of Emails Sent Through Salesforce

When a user sends an email through Salesforce, the email is routed through one of a number of possible Salesforce IP addresses. If the email's recipient blocks any of these IP addresses, the email might not be received. It's hard to test whether your customers are receiving emails from all possible Salesforce IP addresses. However, using the Test Deliverability feature, you can easily send an email to yourself from each of the potential Salesforce IP addresses. If you receive all emails, then you aren't blocking any of the Salesforce IP addresses.

Considerations for Setting Up Send through Salesforce

Review a few details before setting up Send through Salesforce, including details about bounce management and spam.

- Send through Salesforce is a good option if:
 - You need bounce management.
 - You don't want to integrate Salesforce with an external email service.
 - You aren't using Gmail™ or Office 365™ with Lightning Experience.
- If email authentication is not configured properly following the recommendations below, emails are flagged as spam by certain email providers.
- If your company doesn't own the domain or has bounce management enabled, your sent emails may be identified as being sent through Salesforce and may appear like they're coming from you.
- If the Deliverability settings, `Enable compliance with standard email security mechanisms` or `Activate bounce management`, are enabled, Gmail recipients see [extra information](#)
- If `Enable Sender ID compliance` is enabled, Outlook and email clients supporting Sender ID don't see "Sent on behalf of [sender name]."
- If your company owns a domain, we recommend that you set up email authentication methods like Sender Policy Framework (SPF) or DomainKeys Identified Mail (DKIM) in your DNS. This ensures better delivery and acceptance by recipients.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in all editions

Set Up Send Email Through Salesforce

Review a few details before setting up Send through Salesforce, including details about bounce management and spam.

For Companies that Own a Domain (mycompany.com)

1. Turn off "Enable compliance with standard email security mechanisms."
2. Turn off "Enable Sender ID compliance."
3. [Add Salesforce's SPF record](#) to client's domain DNS to indicate that Salesforce is an approved sender e.g SPF record: "v=spf1 mx include:_spf.salesforce.com ~all".
4. [Set up DKIM](#) for better deliverability.

For Companies that Don't Own a Domain

If your email address domain is not owned by your company and ends in @gmail.com, @aol.com or @yahoo.com, you need to register for a domain that you control, and use this new domain for all of your emails sent from Salesforce due to the Domain-based Message Authentication, Reporting & Conformance (DMARC) policy at Gmail, AOL™, and Yahoo™. [Learn More](#) Other:

1. Turn on "Enable compliance with standard email security mechanisms."

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in all editions

2. Turn off "Enable Sender ID compliance." We recommend enabling Sender ID compliance only if you have recipients using the Sender ID email authentication protocol, which isn't widely used.

Test the Deliverability of Emails Sent Through Salesforce

When a user sends an email through Salesforce, the email is routed through one of a number of possible Salesforce IP addresses. If the email's recipient blocks any of these IP addresses, the email might not be received. It's hard to test whether your customers are receiving emails from all possible Salesforce IP addresses. However, using the Test Deliverability feature, you can easily send an emails to yourself from each of the potential Salesforce IP addresses. If you receive all emails, then you aren't blocking any of the Salesforce IP addresses.

1. From Setup, enter *Test Deliverability* in the Quick Find box, then select **Test Deliverability**.
2. Enter your business email address.
3. Click **Send**. Salesforce sends a test message from all IP addresses to your business email address. Each test message specifies the IP address from which it was sent.
4. To make sure that you received all test messages, check your business email account.

If you didn't receive all the test messages, your organization's email administrator must whitelist the Salesforce IP ranges on your organization's email server. Whitelisting an IP address allows the email server to receive email from an IP address that is otherwise blocked. For a current list of Salesforce IP ranges, see [What are the Salesforce IP Addresses to whitelist?](#)

Salesforce maintains separate IP addresses for inbound and outbound email. The IP addresses used for outbound email don't accept inbound email connections.

Available in: **Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

- Email Relay is a good option if:
 - You want to route email sent from Salesforce through your company's mail service. This is helpful for compliance.
 - Your company owns the domain (mycompany.com).
- Email Relay is configured for your Salesforce org only. Email Relay enables you to store copies of all email for auditing. You can also append content such as standard footers into all emails. Bounce management is also supported.
- For bounce management to work, your email server must allow the relaying of email sent from Salesforce.
- Salesforce send limits still apply to email relaying.
- Email Relay requires some technical expertise to set up.

Set Up Email Relay

Email Relay uses your company's email server to send email from Salesforce. Companies set up email relaying to:

- Route all email from Salesforce through their own email servers. This prevents the appearance of email spoofing by Salesforce. Email spoofing is the forging of email headers to make messages appear as if they came from someone other than the original sender.
- Store copies of all email as required by government regulations in various industries.
- Apply existing content filters that scan messages for data and content that is not approved to be sent out through company email.
- Run outbound email through antivirus software before sending it to customers.
- Append data such as company-wide disclaimers at the bottom of email messages.

You can set up Email Relay for Salesforce-generated email by configuring Salesforce to automatically route email through your company's Simple Mail Transfer Protocol (SMTP) server. Contact Salesforce to enable email relaying for your organization.

-  **Warning:** If you plan to activate both bounce management and email relaying, check with your email administrator to ensure that your organization's email server allows the relaying of email sent from Salesforce; otherwise, the email you send from Salesforce may not get delivered. For more information on bounce management, see [Guidelines for Configuring Deliverability Settings for Emails Sent from Salesforce](#) on page 2080.

To set up email relaying:

1. From Setup, enter *Email Relay Activation* in the **Quick Find** box, then select **Email Relay Activation**.
2. Configure the following settings:

Setting	Description
Email Host	The host name or IP address of your company's SMTP server. Obtain this information from your email administrator.
	 Important: If you plan to use Transport Layer Security (TLS) with this connection, enter the host name instead of the IP address. TLS requires the host name for verifying certificates.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To configure Email Relay:

- "Modify All Data"

Setting	Description
	<p>For host names, use the following format:</p> <pre data-bbox="841 304 1442 346"><mail server>.<domain>.<domain extension></pre> <p>For example:</p> <pre data-bbox="841 409 1442 451">mail.acme.com</pre>
Port	<p>The port number of your company's SMTP server. Obtain this information from your email administrator. Email relaying is supported on port numbers 25, 587, 10025, and 11025.</p>
TLS Setting	<p>Specifies whether Salesforce uses TLS for SMTP sessions. Select one of the following options:</p> <ul data-bbox="841 693 1453 1543" style="list-style-type: none"> • Preferred (default): If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. If TLS is unavailable, Salesforce continues the session without TLS. • Required: Salesforce continues the session only if the remote server offers TLS. If TLS is unavailable, Salesforce terminates the session without delivering the email. • Preferred Verify: If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. Before the session initiates, Salesforce verifies the certificate is signed by a valid certificate authority, and that the common name presented in the certificate matches the domain or mail exchange of the current connection. If TLS is available but the certificate is not signed or the common name does not match, Salesforce disconnects the session and does not deliver the email. If TLS is unavailable, Salesforce continues the session without TLS. • Required Verify: Salesforce continues the session only if the remote server offers TLS, the certificate is signed by a valid certificate authority, and the common name presented in the certificate matches the domain or mail exchange to which Salesforce is connected. If any of these criteria are not met, Salesforce terminates the session without delivering the email.
Restrict Relay to Domains	<p>Specifies whether to restrict the email relaying functionality to certain domains. If you select this option, enter the names of those domains separated by commas in the text field below. (The asterisk (*) wildcard is allowed; for example, *.subdomains.com matches john@aco.subdomains.com and john@bco.subdomains.com (but not john@subdomains.com)). This causes Salesforce to route email to your company's SMTP server only if the email is addressed to one of the listed domains. If you select the checkbox but do not</p>

Setting	Description
	list any domains, Salesforce routes all email to your company's SMTP server.
Active	Enables email relaying for your organization. If you deselect this checkbox, Salesforce keeps the email relay configuration but does not route email to your company's email server.

3. Save the page.

Salesforce recommends sending a test message each time you change the email relay configuration.

Monitor Emails Sent from Salesforce

Get the most out of sending email from Salesforce with features that let you monitor emails, including email logs and the mass email queue.

Email Logs: Monitor Emails Sent Through Salesforce

With email logs, you can easily monitor emails sent through Salesforce in the last 30 days. Logs contain information on each email, including the sender and recipient, date and time, delivery status, and any associated error codes. Email logs are in CSV format.

Mass Email Queue: Monitor the Status of Mass Emails Sent Through Salesforce

The mass email queue lets you view the status of scheduled mass emails that you've personally sent or the status of scheduled mass emails for your Salesforce org. You can cancel mass emails if necessary. You can view the status of your personal mass emails from your personal settings. If you have permission, you can view the status of organization-wide mass emails from Setup.

[Request an Email Log](#)

With email logs, you can easily monitor emails sent through Salesforce in the last 30 days. It's a cinch to request a new log at any time.

[Email Log Reference](#)

SEE ALSO:

[Monitor Emails Sent from Salesforce](#)[Let Your Users Send Email from Salesforce](#)

Considerations for Using Email Logs

Before creating organization-wide footers for users in your Salesforce org, review a few details, including information about encoding and defaults.

- Requests for email logs are queued in the order that they are received. Email logs should be available within 30 minutes of your request.
- The pending email log requests list provides the status on email log requests that have not yet completed.
- The email log errors list provides descriptions for requests that failed. You cannot resubmit a failed request if it requires data that has exceeded the 30 day limit, or if you already have three pending requests.
- Email logs are CSV files contained within a compressed file that contains a maximum of 100,000 records. Since email log requests return up to 500,000 records, there may be up to five .zip files to download. Logs contribute to your overall file storage limits.
- You can have a maximum of three pending log requests at one time. If you already have three pending requests, you cannot request another log until at least one of those requests completes.
- Email logs are available for messages sent within the past 30 days prior to your request.
- Each email log can span a maximum of seven days. To see email log data from a period of time greater than seven days, create multiple requests.

SEE ALSO:

[Email Logs: Monitor Emails Sent Through Salesforce](#)

Request an Email Log

With email logs, you can easily monitor emails sent through Salesforce in the last 30 days. It's a cinch to request a new log at any time.

1. From Setup, enter *Email Log Files* in the **Quick Find** box, then select **Email Log Files**.
2. Click **Request an Email Log**.
3. Optionally, you can filter an email log to only include rows where a specific domain name or email address appears in a field, such as *Recipient* or *Message ID Header*. To enter more than one filter term, separate each value with a comma. If you leave this field blank, the log is not filtered and all email addresses are returned within the specified time range.
4. Enter the email addresses that you want to receive notification when the email log request is complete. Separate each email address with a comma.

Mass Email Queue: Monitor the Status of Mass Emails Sent Through Salesforce

The mass email queue lets you view the status of scheduled mass emails that you've personally sent or the status of scheduled mass emails for your Salesforce org. You can cancel mass emails if necessary. You can view the status of your personal mass emails from your personal settings. If you have permission, you can view the status of organization-wide mass emails from Setup.

The mass email queue shows the number of recipients that the mass email was addressed to and sent to. These numbers may differ because:

- The mass email would cause your organization to exceed its daily mass email limit. Salesforce does not send the message to any of the intended recipients in this case.
- One or more selected recipients opted out of receiving mass email after the mass email was scheduled but before it was processed.
- One or more selected recipient email addresses were removed from the contact or lead after the mass email was scheduled but before it was processed.
- The user who sent the mass email was deactivated after the mass email was scheduled but before it was processed. Salesforce does not send mass emails scheduled by a user who is deactivated.

Improve Deliverability of Emails Sent from Salesforce

Email deliverability is the likelihood of a company's or individual's email reaching its intended recipient. To improve the deliverability of email you send through Salesforce, we offer several settings and compliance options.

[Configure Deliverability Settings for Emails Sent from Salesforce](#)

Use the available deliverability options to configure your Salesforce org so that your users' emails from Salesforce get where they're going fast.

[Guidelines for Configuring Deliverability Settings for Emails Sent from Salesforce](#)

Two things affect email deliverability: past bounced emails to the same email domain, and email that doesn't comply with a recipient's email security framework. Check out some guidelines to help you handle these roadblocks so your users' emails get where they're going fast.

[Create a DKIM Key](#)

Use the DKIM (DomainKeys Identified Mail) key feature to enable Salesforce to sign outbound emails sent on your organization's behalf. A valid signature provides recipients confidence that the email was handled by a third party such as Salesforce in a way authorized by your organization.

[Import a DKIM Key](#)

Use the DKIM (DomainKeys Identified Mail) key feature to enable Salesforce to sign outbound emails sent on your organization's behalf.

[Enabling Compliance BCC Emails](#)

Guidelines for Configuring Deliverability Settings for Emails Sent from Salesforce

Two things affect email deliverability: past bounced emails to the same email domain, and email that doesn't comply with a recipient's email security framework. Check out some guidelines to help you handle these roadblocks so your users' emails get where they're going fast.

Using the Deliverability page in Setup, you can improve email deliverability.

- To control the type of email that your organization sends, use the *Access level* option in the Access to Send Email section. The available options include:
 - *No access*: Prevents all outbound email to and from users.
 - *System email only*: Allows only automatically generated emails, such as new user and password reset emails. Especially useful for controlling email sent from sandboxes so that testing and development work doesn't send test emails to your users. Newly created sandboxes default to *System email only*.

EDITIONS

Available in: Lightning Experience and Salesforce Classic

Available in all editions

- `All_email`: Allows all types of outbound email. Default for new, non-sandbox organizations. Sandboxes created before Spring '13 default to `All_email`.
- When using bounce management:
 - If you also use Email Relay, make sure that your organization's email server allows the relaying of email sent from Salesforce.
 - If an email to the address for a contact, lead, or person account bounces, an alert shows up next to the address. Other users can't send an email to the address until it's updated or confirmed.
 - Emails bounce to Salesforce and not to the sender's personal email account.
 - Use the Bounced Contacts and Bounced Leads standard report to view a list of email all addresses that have bounced email. The report includes the reason the email was bounced, the date the bounce occurred, and the contact, lead, or person account that bounced the email.
- To comply with your recipients' email security frameworks like SPF:
 - Check `Enable compliance with standard email security mechanisms`. This setting modifies the envelope `From` address of emails sent from Salesforce. The header `From` address remains set to the sender's email address. Usually security frameworks only check the envelope address.
 - If you have recipients using the sender ID email authentication protocol, which isn't widely used, check `Enable Sender ID compliance`. This setting modifies the `Sender` field in the envelope of emails sent from Salesforce to automatically include `no-reply@Salesforce`. All replies from the recipients are still delivered to the sender's email address. The recipients' email client (not Salesforce) may append the phrase "Sent on behalf of" to the `From` field of emails sent from Salesforce.
- To specify how Salesforce uses the Transport Layer Security (TLS) protocol for secure email communication for SMTP sessions, select a `TLS Setting`. The available options include:
 - `Preferred` (default): If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. If TLS is unavailable, Salesforce continues the session without TLS.
 - `Required`: Salesforce continues the session only if the remote server offers TLS. If TLS is unavailable, Salesforce terminates the session without delivering the email.
 - `Preferred Verify`: If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. Before the session initiates, Salesforce verifies the certificate is signed by a valid certificate authority, and that the common name presented in the certificate matches the domain or mail exchange of the current connection. If TLS is available but the certificate is not signed or the common name does not match, Salesforce disconnects the session and does not deliver the email. If TLS is unavailable, Salesforce continues the session without TLS.
 - `Required Verify`: Salesforce continues the session only if the remote server offers TLS, the certificate is signed by a valid certificate authority, and the common name presented in the certificate matches the domain or mail exchange to which Salesforce is connected. If any of these criteria are not met, Salesforce terminates the session without delivering the email.
- If you select a setting other than `Preferred` (the default setting), select `Restrict TLS to these domains` and specify a comma-separated domain list. The asterisk (*) wildcard is allowed; for example, `*.subdomains.com` matches `john@aco.subdomains.com` and `john@bco.subdomains.com` (but not `john@subdomains.com`). If you don't specify domains, Salesforce uses the TLS setting you specify for all outbound emails. This can cause undelivered emails.

Create a DKIM Key

Use the DKIM (DomainKeys Identified Mail) key feature to enable Salesforce to sign outbound emails sent on your organization's behalf. A valid signature provides recipients confidence that the email was handled by a third party such as Salesforce in a way authorized by your organization.

When you create a DKIM key, Salesforce generates a public and private key pair. You must publish the public key in the DNS, which tells recipients that you, as the owner of the domain, have authorized the use of this key to sign your mail. Salesforce uses the private key to create DKIM signature headers on your outgoing email. Then, recipients of the mail, can compare the signature header with the public key in the DNS to determine that the mail was signed with an authorized key. If your domain also publishes a Domain-based Message Authentication, Reporting and Conformance (DMARC) policy, recipients can use the DKIM signature to verify that the mail conforms to DMARC.

To create a new key:

1. From Setup, enter *DKIM Keys* in the **Quick Find** box, then select **DKIM Keys**.
2. Click **Create New Key**.
3. For **Selector**, enter a unique name.
4. Enter your Domain name.
5. Select the type of Domain Match you'd like to use.
6. Click **Save**.
 - The key defaults to Inactive state. Make sure you add the public key to the DNS record before activating the key. DKIM signing is active whenever you have an active DKIM key.
 - You can't have more than one active DKIM key per domain name. You might have multiple active DKIM keys if your organization sends mail from more than a single domain or if you use `subdomains` under your organizational domain and have specified domain matching at the `subdomain` level.
 - When you insert or update a domain key, it's possible that the change affects existing DKIM keys. For example, if you've set `DomainMatch` to `DomainAndSubdomains` for the `example.com` domain, and you then set `DomainMatch` to `SubdomainsOnly` for the `mail.example.com` domain, either key could be used. Here's how we resolve conflicts in the case when domain keys overlap.
 1. If two keys are equally specific about matching for the same domain, the new key replaces and deactivates the existing key.
 2. If a new key is more specific about matching than an existing key, the new key is used and the existing key is modified to no longer apply to the case covered by the new key. For example, because `DomainOnly` and `SubdomainsOnly` are more specific than `DomainAndSubdomains`, a new `DomainOnly` key would change the `DomainMatch` for an existing `DomainAndSubdomains` key to become `SubdomainsOnly`.
 3. If multiple keys have different domains that match the sending domain, the key with the longest domain name is used. In case of a tie, the most specific key is used.

For information about DKIM, see <http://dkim.org>

Import a DKIM Key

Use the DKIM (DomainKeys Identified Mail) key feature to enable Salesforce to sign outbound emails sent on your organization's behalf.

Some companies have multiple Salesforce organizations, and users in those organizations share a domain name in their email address. Therefore, companies that want Salesforce to sign the email sent by those users sometimes want to share DKIM keys. You can do that using this page.

First, create the key and ensure it's working for one organization. To import and use it in another organization, copy the selector name, domain name, and public and private key data from the working key. You can get this data from the detail page for the key you want to import. After you've copied the key data, log in to the target organization and follow these steps to import the key.

1. From Setup, enter *DKIM Keys* in the *Quick Find* box, then select **DKIM Keys**.
2. Click **Import a Key**.
3. Enter the same selector name you copied from the original organization.
4. Enter the same domain name you copied from the original organization.
5. Paste in the public and private key data you copied into their respective fields.
6. Select the type of Domain Match you'd like to use. Most likely you'll use the same value that was selected for the key in the original organization.
7. Click **Save**.

Because the public and private key data worked for the original organization, you can typically activate the key in the target organization immediately.

 **Note:** The private key data is an encrypted form of the private key data that's used to sign emails. It's decrypted internally when signing emails. Therefore, it can be used only within Salesforce. For example, you can't take the public and private key data and plug it into an external mail system.

Enabling Compliance BCC Emails

If your organization evaluates all outbound email messages for compliance, you can enable compliance BCC emails to automatically send a hidden copy of each outbound email message to an email address you specify. Enabling compliance BCC emails prevents users from editing the BCC field on any email and disables their `Automatic Bcc` setting under My Email Settings.

To enable compliance BCC emails for your organization:

1. From Setup, enter `Compliance BCC Email` in the `Quick Find` box, then select **Compliance BCC Email**.
2. Select the `Enable` checkbox.
3. Enter your compliance email address.
4. Click **Save**.

 **Note:** The BCC email is automatically sent to the address you specify for any emails your users send, excluding system emails such as password reset or import completion notifications.

Organization-Wide Addresses: Let Users Send Email from Salesforce Using a Common From Address

If your Salesforce org requires users to share a common email alias, you can define a list of organization-wide addresses for each user profile. When sending email from Salesforce, users with these profiles can select their own address or the organization-wide address for the email's `From` address. Replies are delivered to selected address.

 **Example:** Your org has several users assigned a Support Profile. This profile is associated with an email address called `support@acme.com` and a `Display Name` of `Acme Support`. When these users send an outbound email through Salesforce, they can choose to have their `From` address appear as `support@acme.com` instead of their own Salesforce email address.

The highlighted sections in the following image represents the changes to the `From` address and `Display Name` that the recipient of an email might see.

```
Date: Wed, 22 Apr 2009 18:44:19 +0000
From: Acme Support <support@acme.com>
Sender: <no-reply@salesforce.com>
To: "friend@xyz.com" <friend@xyz.com>
Message-ID: <21746402.461240425859813.JavaMail.sfdc@na1-app1-12-sfm.ops.sfdc.net>
Subject: Here is your data
```

SEE ALSO:

[Let Your Users Send Email from Salesforce](#)

Considerations for Setting Up Organization-Wide Footers for Sending Emails from Salesforce

Before creating organization-wide footers for users in your Salesforce org, review a few details, including information about encoding and defaults.

- Footers are text only. HTML tags aren't rendered.
- If your organization uses Send Through Gmail or Office 365, organization-wide footers do not appear in emails sent from Salesforce.
- You can choose one default footer for single email and one for mass email. These defaults are used when no footer matches an outgoing email's encoding.
- The maximum size of a footer is 32 KB.
- Encoding
 - In Salesforce Classic, the `Email encoding` field lets you determine which emails the footer appears on. For each encoding, you can have one active single email footer and one active mass email footer.
 - In Lightning Experience, the footers are sent in the user's encoding setting.

Set Up Organization-Wide Email Footers

With organization-wide email footers, you can apply common messaging to all emails sent from Salesforce. In just a few clicks, you can create, edit, and deactivate footers, and set default footers.

1. From Setup, enter *Email Footers* in the **Quick Find** box, then select **Email Footers**.
2. To create, edit, and deactivate footers; set default footers; and deactivate organization-wide email footers, use the available options.

SEE ALSO:

[Organization-Wide Footers: Let Users Send Email from Salesforce with Common Footers](#)

Enable Email to Salesforce

Let your users add email to Salesforce records. Email to Salesforce lets users assign emails to leads, contacts, opportunities, and other specific records in Salesforce. That way, it's easy to track sales-related communications.

1. From Setup, enter *Email to Salesforce* in the **Quick Find** box, then select **Email to Salesforce**.
2. Click **Edit**.
3. Select **Active**.
4. If you plan to configure Email to Salesforce to verify the legitimacy of the sending server before processing a message, ensure that the senders who you expect to use Email to Salesforce support at least one of these [authentication protocols](#).
 - SPF
 - SenderId
 - DomainKeys

Email to Salesforce accepts the email only if the sending server passes at least one of these protocols and doesn't fail any of them.

To configure Email to Salesforce to verify the legitimacy of the sending server before processing a message, select **Advanced Email Security Settings**.

5. Click **Save**.
6. To notify users that Email to Salesforce is activated, click **Send Notification Email**. Otherwise, click **Skip This Step**.

Salesforce creates a unique Email to Salesforce address for each user. Users view their Email to Salesforce address and customize their settings on the My Email to Salesforce page in their personal settings. For more information, see [How Does Email to Salesforce Work?](#) on page 1620.

Deleting Email Attachments Sent as Links

You can find and delete attachments sent as links. Recipients who subsequently click on the attachment link see a message asking them to contact the email sender to view the attachment. You can search only within your organization's email retention period (typically 30 days, but contact Salesforce Support for your organization's details).

To find and delete email attachments sent as links:

1. From Setup, enter *Attachments* in the **Quick Find** box, then select **Delete Attachments Sent as Links**.
2. Enter either of these.
 - File name (optional), username, and date range:
 - Optionally, attachment file name, including the file extension (for example, *ThisYearResults.pdf*). You can use wildcards (for example, *ThisYearRes* would find *ThisYearResults.pdf*).
 - Sender's username
 - Date range during which the email was sent
 - Attachment URL: Click the attachment link (.html) in the email to open it in a browser, and copy and paste the URL.
3. Click **Search**.
 - Search results show up to 100 matching entries.
 - If the attachment was sent using mass email, search results show one entry for every 100 emails sent—delete one of these entries to delete the attachment.
4. In Search Results, click **Del** next to the attachment you want to delete. Recipients who subsequently click on the attachment link see a message asking them to contact the email sender to view the attachment.

 **Note:** You cannot recover deleted attachments from the Recycle Bin.

Troubleshoot with Inbound Email Snapshots

Take a snapshot of inbound email messages so you can more easily troubleshoot inbound email errors.

Inbound email snapshots capture a copy of inbound email messages, helping you diagnose issues with email services such as Email to Salesforce, Email-to-Case, and Apex email services. Request a snapshot by specifying criteria for the email's To and From addresses, and when an inbound message meets that criteria, the snapshot records a single copy that you can view and download. The email itself is processed normally without alteration. Snapshots contain the:

- Sender's address
- Inbound email service address
- Date and time of the snapshot
- Full message contents, including headers and attachments

To enable inbound email snapshots, contact Salesforce.

- To access inbound email, from Setup, enter *Email Snapshots* in the **Quick Find** box, then select **Email Snapshots**.

EDITIONS

Available in: Salesforce Classic

Available in all editions

USER PERMISSIONS

To delete email attachments sent as links:

- "Modify All Data"

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **All Editions** except for **Database.com**

USER PERMISSIONS

To request, view, download, and delete email snapshots:

- "Modify All Data"

- To request an inbound email snapshot, enter criteria for the To address (required) and From address (optional). Then click **Request Snapshot**.
The requested snapshot is added to the list of Pending and Completed Snapshots. When an inbound message meets your specified criteria, we take a snapshot and complete the request.
- To view a completed snapshot:

Option	Description
View snapshot details	Click Show Details to see when the snapshot was taken, the sender's address, and the inbound email service address. Click Hide Details to collapse the details section.
Download the snapshot	Click Download then either open the email as a .txt file or save it to your computer.

Consider these tips when using inbound email snapshots:

- You can have a maximum combined total of 25 pending and completed snapshots. Delete some to free up space for new snapshots. You can delete any pending or completed snapshot, even if someone else originally requested it.
- Deleted snapshots are permanently deleted. They're not moved to the Recycle Bin.
- When specifying criteria for the To address, keep these tips in mind.
 - The criteria apply to any of the addresses specified in an email's To, CC, or BCC fields (not only the To field).
 - Inbound email service addresses always end in *salesforce.com*.
 - You may want to look up the addresses your organization uses. This table summarizes where to find them.

Type of inbound email address	Where to find addresses
The user's unique Email to Salesforce address	From the user's personal settings, enter <i>Email to Salesforce</i> in the Quick Find box, then select Email to Salesforce to view the unique address assigned to them by Email to Salesforce.
Email routing addresses for Email-to-Case or On-Demand Email-to-Case	From Setup, enter <i>Email-to-Case</i> in the Quick Find box, then select Email-to-Case to open the Email-to-Case settings page. View the Routing Addresses section.
Your organization's email service addresses	From Setup, enter <i>Email Services</i> in the Quick Find box, then select Email Services , then the name of an email service.

- You can use an asterisk (*) wildcard in both the local-part of the email address (the part before the @ symbol) and in the domain-part (the part after the @ symbol). Spaces, commas, and semicolons aren't valid characters. Each address field can contain a maximum of 255 characters.
- If you want to request more than one snapshot with identical criteria, click **Request Snapshot** multiple times.
- If you believe that a snapshot should have completed but it still shows Pending status, try refreshing the page.

- Snapshots don't expire. If no inbound emails match the specified criteria, a requested snapshot remains in Pending status indefinitely. Completed snapshots persist until you delete them.

Working with Mail Merge Templates

Managing Mail Merge Templates

Mail merge templates define the content of a form letter or other mail merge document. They include variables called merge fields where data from your records—for example a contact's name and address—displays in the generated document.

As an administrator, you're responsible for building mail merge templates in Microsoft Word and uploading them to Salesforce to make them available for your users. See the following topics:

- [Create Mail Merge Templates](#) explains how to build a new mail merge template from a blank Word document.
- [Modify Existing Mail Merge Templates](#) explains how to download sample templates and modify them to meet your unique business needs.
- [Uploading Mail Merge Templates to Salesforce](#) explains how to upload completed mail merge templates to Salesforce.

 **Tip:** [Download sample mail merge templates](#) to help you get started.

SEE ALSO:

[Mail Merge](#)

[Considerations for Using Merge Fields in Mail Merge Templates](#)

[Send a Single Mail Merge Document](#)

EDITIONS

Available in: Lightning Experience and Salesforce Classic

Available in all editions

USER PERMISSIONS

To upload mail merge templates:

- "Manage Public Templates"

To edit mail merge templates:

- "Manage Public Templates"

Create Visualforce Email Templates

You can create email templates for use in Visualforce pages.

- Do one of the following:
 - If you have permission to edit public templates, from Setup, enter *Email Templates* in the **Quick Find** box, then select **Email Templates**.
 - If you don't have permission to edit public templates, go to your personal settings. Enter *Templates* in the **Quick Find** box, then select **Email Templates** or **My Templates**—whichever one appears.
- Click **New Template**.
- Choose **Visualforce** and click **Next**.
You can't send a mass email using a Visualforce email template.
- Choose a folder in which to store the template.
- To make the template available for use, select the **Available For Use** checkbox.
- Enter a name in **Email Template Name**.
- If necessary, change the **Template Unique Name**. This unique name refers to the component when you use the Force.com API. In managed packages, this unique name prevents naming conflicts in package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the **Template Unique Name** field, you can change certain components' names in a managed package and the changes are reflected in a subscriber's organization.
- If desired, choose a different character set from the **Encoding** drop-down list.
- Enter a description for the template. Both template name and description are for your internal use only.
- Enter a subject line for your template in **Email Subject**.
- In the **Recipient Type** drop-down list, select the type of recipient to receive email created from the template.
- If desired, in the **Related To Type** drop-down list, select the object from which the template retrieves merge field data.
- Click **Save**.
- On the Viewing Email Templates page, click **Edit Template**.
- Enter markup text for your Visualforce email template.

Note: If you are including an image, we recommend uploading it to the Documents tab to reference the copy of the image on our server. For example:

```
<apex:image id="Logo"
value="https://yourInstance.salesforce.com/servlet/servlet.ImageServer?
id=015D0000000Dpwc&oid=00DD0000000FHaG&lastMod=127057656800" />
```

- To specify the version of Visualforce and the API used with this email template, click **Version Settings**. If you've installed managed packages from the AppExchange, you can also specify which version of each managed package to use with this email template. Generally, use the default value for all versions, to associate the email template with the most recent version of Visualforce, the API, and each managed package. To maintain specific behavior, you can specify an older version of Visualforce and the API. To access components or functionality that differ from the most recent package version, you can specify an older version of a managed package.

EDITIONS

Available in: Salesforce Classic

Available in: **Group, Enterprise, Performance, Unlimited, Developer, and Contact Manager** Editions

Mass email not available in: **Personal, Contact Manager, and Group** Editions

USER PERMISSIONS

To create or change Visualforce email templates:

- "Customize Application"

To create or change public email template folders:

- "Manage Public Templates"

17. To view the details of the template, click **Save**. To continue editing your template, click **Quick Save**. Your Visualforce markup must be valid before you can save your template.

 **Note:** The maximum size of a Visualforce email template is 1 MB.

You can't send a mass email using a Visualforce email template. The `{!Receiving_User.field_name}` and `{!Sending_User.field_name}` merge fields work only for mass email and are unavailable in Visualforce email templates.

 **Tip:**

- View a sample of the template populated with data from records you choose and send a test email by clicking **Send Test and Verify Merge Fields**. If the email template includes encrypted data, remember that the data is displayed as encrypted within the generated email and in the Visualforce template page. For security reasons, it isn't displayed in plain text.
- To translate Visualforce email templates based on recipients' or related objects' languages, use the `<messaging:emailTemplate>` tag's `language` attribute (valid values: Salesforce supported language keys, for example, "en-US"). The language attribute accepts merge fields from the email template's `recipientType` and `relatedToType` attributes. You create custom language fields for use in the merge fields. The Translation Workbench is required to translate email templates.

[Create Text Email Templates](#)

[Developer's Guide: Visualforce Developer's Guide](#)

Create Custom HTML Email Templates

You can create custom HTML email templates without using letterhead. If you don't know HTML, you can paste HTML code into your template.

- Do one of the following:
 - If you have permission to edit public templates, from Setup, enter *Email Templates* in the **Quick Find** box, then select **Email Templates**.
 - If you don't have permission to edit public templates, go to your personal settings. Enter *Templates* in the **Quick Find** box, then select **Email Templates** or **My Templates**—whichever one appears.
- Click **New Template**.
- Choose **Custom (without using Letterhead)** and click **Next**.
- Choose a folder in which to store the template.
- To make the template available for use, select the **Available For Use** checkbox.
- Enter a name in **Email Template Name**.
- If necessary, change the **Template Unique Name**. This unique name refers to the component when you use the Force.com API. In managed packages, this unique name prevents naming conflicts in package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the **Template Unique Name** field, you can change certain components' names in a managed package and the changes are reflected in a subscriber's organization.
- If desired, choose a different character set from the **Encoding** drop-down list.
- Enter a **Description** for the template. Both template name and the description are for your internal use only. The description is used as the title of any email activities you log when sending mass email.
- Click **Next**.
- Enter a **Subject** for the message.
- Enter the HTML source text for the message. Include all the HTML tags.

 **Note:** If you are including an image, we recommend uploading it to the Documents tab. Then you can reference the copy of the image on our server. For example:

```

```

- If desired, enter merge fields in the template subject and body. When you send an email, these fields are replaced with information from your lead, contact, account, opportunity, case, or solution.
- Click **Next**.
- If desired, enter the text-only version of your email or click **Copy text from HTML version** to paste the text from your HTML version without the HTML tags automatically. The text-only version is available to recipients who can't view HTML emails.

 **Warning:** We recommend that you leave the text-only version blank. If you leave it blank, Salesforce automatically creates the text-only content based on the current HTML version. If you enter content manually, subsequent edits to the HTML version aren't reflected in the text-only version.

[Create Visualforce Email Templates](#)

[Create a Letterhead](#)

[Add Images to Email Templates](#)

Create HTML Email Templates

You can create HTML email templates using letterhead. You can't change the letterhead or the layout in an existing template. To create an HTML email template, you must have at least one active letterhead.

To create an HTML email template:

1. Do one of the following:
 - If you have permission to edit public templates, from Setup, enter *Email Templates* in the **Quick Find** box, then select **Email Templates**.
 - If you don't have permission to edit public templates, go to your personal settings. Enter *Templates* in the **Quick Find** box, then select **Email Templates** or **My Templates**—whichever one appears.
2. Click **New Template**.
3. Choose **HTML (using Letterhead)** and click **Next**.
4. Choose a folder in which to store the template.
5. To make the template available for use, select the **Available For Use** checkbox.
6. Enter an **Email Template Name**.
7. If necessary, change the **Template Unique Name**. This unique name refers to the component when you use the Force.com API. In managed packages, this unique name prevents naming conflicts in package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the **Template Unique Name** field, you can change certain components' names in a managed package and the changes are reflected in a subscriber's organization.
8. Select a **Letterhead**. The letterhead determines the logo, page color, and text settings of your email. In an existing template, you can't change this field. To use a different letterhead after you've created a template, create another template.

Available in: **All Editions**, except **Personal**

Mass email not available in: **Personal, Contact Manager, and Group Editions**

HTML and Visualforce email templates not available in: **Personal Edition**

USER PERMISSIONS

To create or change HTML email templates:

- "Edit HTML Templates"

To create or change public email template folders:

- "Manage Public Templates"

9. Select the `Email Layout`. The email layout determines the columns and page layout of the message text. To see samples, click **View Email Layout Options**. In an existing template, you can't change this field. To use a different email layout after you've created a template, create another template.
 10. If desired, choose a different character set from the `Encoding` drop-down list.
 11. Enter a `Description` of the template. Both template name and description are for your internal use only. The description is used as the title of any email activities you log when sending mass email.
 12. Click **Next**.
 13. Enter a subject for the email you send.
 14. Enter the text of the message by clicking any section and entering text. To prevent anyone using the template from editing a section, click the padlock icon.
 15. Change the style of your text by selecting the text and using the format toolbar.
 16. If desired, enter merge fields in the template subject and body. When you send an email, these fields are replaced with information from your lead, contact, account, opportunity, case, or solution.
 17. Click **Next**.
 18. If desired, enter the text-only version of your email or click **Copy text from HTML version** to paste the text from your HTML version without the HTML tags automatically. The text-only version is available to recipients who can't view HTML emails.
 -  **Warning:** We recommend that you leave the text-only version blank. If you leave it blank, Salesforce automatically creates the text-only content based on the current HTML version. If you enter content manually, subsequent edits to the HTML version aren't reflected in the text-only version.
 19. Click **Save**.
-  **Tip:** View a sample of the template populated with data from records you choose and send a test email by clicking **Send Test and Verify Merge Fields**.

Considerations for Using Merge Fields in Email Templates

A merge field is a field you can put in an email, an email template, a mail merge template, a custom link, or a formula to incorporate values from a record. You can use merge fields in the subject and body of custom HTML templates. When using merge fields, it's a good idea to understand how they work and what to expect in your merged emails.

Guidelines for Syntax and Formatting

The syntax consists of an open curly brace and exclamation point, followed by the object name, a period, the field name, and a closing curly brace. For example, if you want to include the account number of your recipient, you could enter `ID: {!Account.AccountNumber}`, and your recipient's email displays `ID: 001234567890123`.

A merge field's syntax can vary depending on where you're using the field. To make sure you're using the correct syntax, select merge fields from the drop-down list in the editor where you're using the merge field. Most merge fields for email templates correspond directly with email template fields.

Important:

- If two or more custom objects have matching names or labels, only one of the objects appears when you select from available merge fields. Make sure that all custom objects have unique names and labels so that you can select merge fields from any of the objects.

Guidelines for Using Merge Fields

General

- Don't use a hyperlink formula field in the subject of an email template or in the body of a text email template.
- In email templates, you can add substitute text to any merge field. Substitute text appears in a sent email if the merge record does not contain data for that field. To add substitute text, place a comma after the field name and enter the text before the closing bracket, for example: `Dear {!Contact.FirstName, Valued Customer}`. When you save the template, the merge field appears in the template as `Dear {!BLANKVALUE(Contact.FirstName, "Valued Customer")}`. In this example, if there is no information in the `First Name` field of the contact record, the email you create with your template begins with "Dear Valued Customer".
- The `{!Receiving_User.field_name}` and `{!Sending_User.field_name}` merge fields work only for mass email and are unavailable in Visualforce email templates.
- User fields are also known as `Sending User` fields for administrators and users with the "Manage Users" permission. Use them in email templates when referencing the person sending the email.
- Administrators and users with the "Manage Users" permission can use `Receiving User` merge fields for email templates to reference the recipient of the email.
- The `Created Date` and `Last Modified Date` fields display only the date, not the date and time.
- If your template contains a merge field for which there is no data in a particular record, that field does not appear in the email you send. To find blank fields, modify your recipient list view to search for the merge fields you are using in your template, and enter the criterion "<field> equals," leaving the third field blank. Edit those records that have blank fields before you send your emails.
- Merge fields have no value if they are defined for an object which doesn't match the recipient and related to record.

EDITIONS

Available in: Salesforce Classic

Available in: **All Editions**, except **Personal**

Mass email not available in: **Personal, Contact Manager, and Group Editions**

HTML and Visualforce email templates not available in: **Personal Edition**

Accounts

When account merge fields are included in an email template and this template is selected after a contact is added to the email `To` field, the account merge fields are populated from the contact's account, not the case's account.

Campaigns

- Campaign and campaign member merge fields can be used in email templates, but not mail merge templates.
- Campaign member merge fields cannot be used with other types of merge fields in the same email template. For example, if you create an email template using a campaign member merge field and you want to include the title of the recipient, use `{!CampaignMember.Title}` instead of `{!Lead.Title}` or `{!Contact.Title}`.

Cases

If you have enabled Email-to-Case or On-Demand Email-to-Case, you can create email templates that support agents can use to respond to case emails. These templates can include merge fields that display information from the original email in the response.

Connection Finder

Custom email templates must contain the survey URL. `{!Contact.PartnerSurveyURL}` is available as a contact merge field when creating templates.

Contacts

- In Salesforce Classic, templates with Contact merge fields can be used to generate mail merge documents for leads. Likewise, templates with Lead fields can be used to generate mail merge documents for contacts.
- You can use custom Contact or Lead fields for merging in Salesforce Classic and Lightning Experience, but only for documents for the object the custom fields come from. For example, a custom Lead field can only be used for templates for leads.

Opportunities

Merge fields for products on opportunities are only available to organizations that have enabled products and can only be used in mail merge templates, but not email templates.

Orders

Merge fields for products on orders in email templates aren't supported.

Workflow

To use merge fields from user records in email templates, select from the following merge field types:

- User Fields—Use these merge fields to represent the sending user. Merge fields named `{!User.field_name}` return values from the user record of the person who created or updated the record that triggered the workflow rule.
- Workflow Target User Fields—Use these merge fields only in email templates for workflow rules on the User object. Merge fields named `{!Target_User.field_name}` return values from the user record that was created or updated to trigger the workflow rule.

This release contains a beta version of workflow on the User object that is production quality but has known limitations. To provide feedback and suggestions, go to [IdeaExchange](#).

SEE ALSO:

[Generate Emails From Records](#)

[Merge Fields for Approvals](#)

Merge Fields for Visualforce Email Templates

A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

Syntax and Formatting

Merge fields for Visualforce email templates use the same expression language as formulas:

```
{!Object_Name.Field_Name}
```

For example, you can start your email template with `Hello, {!Contact.FirstName}`. When you send the template, each recipient will see their first name in place of the merge field. If your recipient's first name is John, he will see `Hello, John!` when he opens the email.

Tips

- You can't send a mass email using a Visualforce email template. `{!Receiving_User.field_name}` and `{!Sending_User.field_name}` are used for mass email and aren't available for Visualforce email templates.
- To translate Visualforce email templates based on recipients' or related objects' languages, use the `<messaging:emailTemplate>` tag's language attribute. Valid values are Salesforce-supported language keys, such as "en-us" for English (US). The language attribute accepts merge fields from the email template's `recipientType` and `relatedToType` attributes. You create custom language fields for use in the merge fields. The Translation Workbench is required to translate email templates.

Considerations for Using Merge Fields in Mail Merge Templates

When you use merge fields in mail merge templates, you can incorporate data from your records into the mail merge templates you create in Microsoft Word. It's a good idea to understand how merge fields work so that you know what to expect in your merged documents.

Guidelines for Syntax and Formatting

Mail merge templates are created by uploading documents to Salesforce from your desktop. The syntax for these merge fields is `OBJECT_FIELD_NAME` or `FIELD_NAME`. Merge fields for mail merge templates must:

EDITIONS

Available in: Salesforce Classic

Available in: **Group, Enterprise, Performance, Unlimited, Developer, and Contact Manager** Editions

Mass email not available in: **Personal, Contact Manager, and Group** Editions

EDITIONS

This feature is available in Salesforce Classic

Available in all editions

- Be unique
- Contain only letters, numbers, and the underscore (`_`) character
- Not exceed 40 characters

For example: `AccountNumber`. To make sure that you're using the correct syntax, use Connect for Office to insert merge fields into your mail merge template.

Merge Field Compatibility

- You can use custom Contact or Lead fields for merging, but only for documents generated from that field's object. For example, a custom Lead field can only be used for templates for leads.
- Merge fields for products on opportunities are only available to organizations that have enabled products.
- Approval Process merge fields can be used in email templates, but not mail merge templates.
- Campaign and campaign member merge fields cannot be used in mail merge templates.

SEE ALSO:

[Mail Merge](#)

[Generate Emails From Records](#)

Managing Version Settings for Visualforce Email Templates

To aid backwards-compatibility, each Visualforce email template is saved with version settings for the specified version of Visualforce and the API. If the Visualforce email template references installed managed packages, the version settings for each managed package referenced by the Visualforce component are saved too. This ensures that as Visualforce, the API, and the components in managed packages evolve in subsequent versions, a Visualforce email template is still bound to versions with specific, known behavior.

A package version is a number that identifies the set of components uploaded in a package. The version number has the format *majorNumber.minorNumber.patchNumber* (for example, 2.1.3). The major and minor numbers increase to a chosen value during every major release. The *patchNumber* is generated and updated only for a patch release. Publishers can use package versions to evolve the components in their managed packages gracefully by releasing subsequent package versions without breaking existing customer integrations using the package.

To set the Salesforce API and Visualforce version for an existing Visualforce email template:

1. Do one of the following:
 - If you have permission to edit public templates, from Setup, enter *Email Templates* in the **Quick Find** box, then select **Email Templates**.
 - If you don't have permission to edit public templates, go to your personal settings. Enter *Templates* in the **Quick Find** box, then select **Email Templates** or **My Templates**—whichever one appears.
2. Click the **Email Template Name** for the Visualforce email template.
3. Click **Edit Template** and then click **Version Settings**.
4. Select the **Version** of the Salesforce API. This is also the version of Visualforce used with this template.
5. Click **Save**.

EDITIONS

Available in: Salesforce Classic

Available in: **Group, Enterprise, Performance, Unlimited, Developer, and Contact Manager** Editions

Mass email not available in: **Personal, Contact Manager, and Group** Editions

USER PERMISSIONS

To set version settings for Visualforce email templates:

- "Customize Application"

To configure the package version settings for a Visualforce email template:

1. Do one of the following:
 - If you have permission to edit public templates, from Setup, enter *Email Templates* in the **Quick Find** box, then select **Email Templates**.
 - If you don't have permission to edit public templates, go to your personal settings. Enter *Templates* in the **Quick Find** box, then select **Email Templates** or **My Templates**—whichever one appears.
2. Click the **Email Template Name** for the Visualforce email template.
3. Click **Edit Template** and then click **Version Settings**.
4. Select a **Version** for each managed package referenced by the Visualforce email template. This version of the managed package continues to be used by the Visualforce email template if later versions of the managed package are installed, unless you manually update the version setting. To add an installed managed package to the settings list, select a package from the list of available packages. The list is only displayed if you have an installed managed package that is not already associated with the Visualforce email template.
5. Click **Save**.

Note the following when working with package version settings:

- If you save a Visualforce email template that references a managed package without specifying a version of the managed package, the Visualforce email template is associated with the latest installed version of the managed package by default.
- You can't **Remove** a Visualforce email template's version setting for a managed package if the package is referenced by the Visualforce email template.

Connect Offline

Desktop Client Access

Connect Offline and Connect for Office are desktop clients that integrate Salesforce with your PC. As an administrator, you can control which desktop clients your users can access as well as whether users are automatically notified when updates are available.

To set permissions for Salesforce for Outlook, use the “Manage Email Client Configurations” permission.

You can set users' access to desktop client by editing their profiles.

The desktop client access options are:

Option	Meaning
Off (access denied)	The respective client download page in users' personal settings is hidden. Also, users can't log in from the client.
On, no updates	The respective client download page in users' personal settings is hidden. Users can log in from the client but can't upgrade it from their current version.
On, updates w/o alerts	Users can download, log in from, and upgrade the client, but don't see alerts when a new version is made available.
On, updates w/alerts	Users can download, log in from, and upgrade the client. They can see update alerts, and can follow or ignore them.
On, must update w/alerts	Users can download, log in from, and upgrade the client. When a new version is available, they can see an update alert. They can't log in from the client until they have upgraded it.

Connect Offline is the only client available with Developer Edition. In Personal, Group, and Professional Editions, all users have the system default “On, updates w/o alerts” for all clients.

Note:

- Desktop client access is available only for users whose profiles have the “API Enabled” permission.

If users can see alerts and they have logged in to Salesforce from the client in the past, an alert banner automatically appears in the Home tab when a new version is available. Clicking the banner opens the Check for Updates page, where users can download and run installer files. From their personal settings, users can also access the **Check for Updates** page, regardless of whether an alert has occurred.

EDITIONS

Connect Offline available in:
Salesforce Classic

Connect Offline available in:
Professional, Enterprise, Performance, Unlimited,
and **Developer** Editions

Connect for Office available
in: both Salesforce Classic
and Lightning Experience

Connect for Office available
in: **All** Editions except
Database.com

Install Connect Offline

Allocating Connect Offline Licenses

For Salesforce orgs using Professional, Performance, Unlimited, Enterprise, and Developer Editions, Salesforce provides one Connect Offline license for each Salesforce license. Users without a Connect Offline license can use for a 30-day trial period.

To allocate a Connect Offline license to a user within your organization, edit the user's record and select the `Offline User` checkbox. Users must have this checkbox selected to use Force.com Connect Offline.

Verifying System Requirements

The system requirements for Connect Offline are:

- Microsoft® Internet Explorer® 6, 7, or 8 (We don't support other browsers, including Mozilla® Firefox®, Apple® Safari®, and Google Chrome™.)
- Microsoft Windows® 2000, Windows XP, Windows Vista®, or Windows 7
 -  **Note:** The 32-bit version of Internet Explorer 8 with its Compatibility View option is required for the 64-bit version of these operating systems.
- 256 MB of RAM (512 MB recommended)
- 20 MB of disk space minimum (250 MB recommended depending on the size of the briefcase)
- Intel® Pentium® II processor, 500 MHz or above

Installing an Individual Client

To download and install the Connect Offline client:

1. From your personal settings, enter `Connect Offline` in the `Quick Find` box, then select **Connect Offline**.
2. Click **Install Now**.

 **Note:** You must have administrator privileges on the computer on which you install Connect Offline.

3. Click **Yes** when prompted to install and run the client.
4. Follow the prompts in the setup wizard to complete the installation.
5. Log in to Connect Offline to verify the installation.

Deploying Connect Offline System-Wide

If your organization uses Windows, network administrators can install Connect Offline on several machines at once. For mass deployments, go to the Connect Offline page in your personal settings and click the link to download the zipped MSI package.

 **Tip:** The login history lists the version of Connect Offline that each user is using.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

USER PERMISSIONS

To view records in Connect Offline:

- "Read" on the appropriate type of record such as accounts, contacts, or opportunities

To update records in Connect Offline:

- "Create," "Edit," or "Delete" on the appropriate type of record such as accounts, contacts, or opportunities

Updating Connect Offline

Salesforce periodically releases Connect Offline updates and notifies users according to settings in their user profiles.

[Troubleshoot Connect Offline](#)

Sample Offline Data Sets

Many administrators create briefcase configurations based on the functional groups in their organization because users in the same group usually have similar offline requirements for data. Below are sample data sets for common Salesforce groups. Your Connect Offline users have unique needs, but you can use the examples as a reference to help you get started with data sets in briefcase configurations.

Sales Manager

Sales managers usually need to see records they own and also the records of their subordinates. They also tend to closely monitor large deals in the pipeline.

This briefcase configuration allows sales managers to see:

- The opportunities they own
- The opportunities owned by users who report to them in the role hierarchy
- All opportunities scheduled to close in the current quarter with an amount greater than \$100,000
- All accounts related to the opportunities
- A subset of their contact and activity records

Sample Briefcase Configuration for Sales Managers

Object	Ownership Filter	Field Filter	Max Records	Order By
Opportunity	User's Team's Records	(Close Date equals THIS QUARTER) AND (Amount greater than "100,000")	No Limit	
Account	All Records		No Limit	
Contact	User's Records		500	Last Activity (Decending)
Task	User's Records	Closed equals False	No Limit	
Event	All Records	Date equals TODAY OR Date equals NEXT 30 DAYS	No Limit	

Sales Engineer

The sales engineer briefcase configuration retrieves opportunities owned by the other members of the user's opportunity team, but does not include the user's records. The sales engineer briefcase configuration is opportunity-based because all accounts and contacts included in the briefcase are related to the opportunities. The sales engineers would see:

- Up to 5000 opportunities they own and up to 5000 opportunities that list them on the opportunity team. These opportunities must be either open or have a close date in the current month, the past two months, or up to 24 months in the future. If more than 5000 opportunities exist, the 5000 most recently modified records are synchronized.
- All accounts, contacts, and opportunity products related to those opportunities
- A subset of tasks and events related to those opportunities

Sample Briefcase Configuration for Sales Engineers

Object	Ownership Filter	Field Filter	Max Records	Order By
Opportunity	User's Sales Team's Records	Closed equals False	No Limit	
└─ Account	All Records		No Limit	
└─ Contact	All Records		No Limit	
└─ Task	All Records	Due Date equals LAST 30 DAYS OR Due Date equals NEXT 30 DAYS	No Limit	
└─ Event	All Records	Date equals LAST 30 DAYS OR Date equals NEXT 30 DAYS	No Limit	
Task	User's Records	Closed equals False	No Limit	
Event	User's Records	Date equals TODAY OR Date equals NEXT 30 DAYS	No Limit	

Account Executive

The account executive briefcase configuration is account-based, which means the briefcase includes the user's accounts and opportunities related to those accounts. The opportunities are filtered so that only open opportunities scheduled to close in the current quarter are synchronized. The Task and Event child data sets retrieve all activities related to those opportunities, not just the user's activities. Only open tasks and events from a two-month window are sent to the briefcase. The Task and Event parent data sets pull down just the user's activities and restrict the activities to open tasks and events scheduled for the next 30 days. The Contact data set delivers the user's contact records, but limits the record count to the 500 most recently active contacts.

Sample Briefcase Configuration for Account Executives

Object	Ownership Filter	Field Filter	Max Records	Order By
Account	User's Records		No Limit	
└─ Opportunity	User's Records	(Closed equals False) AND (Close Date equals THIS QUARTER)	No Limit	
└─ Event	All Records	(Date equals LAST 30 DAYS) AND (Date equals NEXT 30 DAYS)	No Limit	
└─ Task	All Records	Due Date equals LAST 30 DAYS OR Due Date equals NEXT 30 DAYS	No Limit	
Contact	User's Records		500	Last Activity (Decending)
Task	User's Records	Closed equals False	No Limit	
Event	User's Records	Date equals TODAY OR Date equals NEXT 30 DAYS	No Limit

Set Up Users to Experience Salesforce from Microsoft® or Google Email and Calendar Applications

You know that your reps spend tons of time working prospects from their email and scheduling appointments from their calendars. Help reps be more productive by setting them up to get their Salesforce work done directly from those applications. Our email integration features let reps view and create Salesforce records and add emails to Salesforce without ever leaving Microsoft Outlook® or Gmail™. You can also set up users to sync Microsoft or Google contacts and events with Salesforce.

Which Email Integration Product Is Right for My Company?

Salesforce offers several products that let the reps at your company integrate Salesforce with Microsoft® or Google email and calendar applications. Before settling on a product, review your options to choose the one that best addresses your reps' needs.

Lightning for Outlook: Set Up Sales Reps to Experience Salesforce from Microsoft® Outlook®

Get your sales teams to stay on top of important sales opportunities. Using Microsoft® Outlook® Web App (OWA), Outlook 2016, Outlook for Mac 2016, or Outlook 2013, sales teams can manage their sales more efficiently. Your sales reps can add email and attachments to Salesforce records. Also, they can create Salesforce records using global actions—directly in their email applications.

Lightning for Gmail: Let Sales Reps Experience Salesforce from Gmail™ (Beta)

Give your sales teams visibility into Salesforce content right where they work, so they can efficiently manage their sales pipeline and close deals faster—directly from Gmail™. Lightning for Gmail—the email integration for Gmail users—gives reps a quick view of their sales-related records without making them switch between Salesforce and Gmail.

Lightning Sync: Sync Your Sales Reps' Microsoft® or Google Contacts and Events with Salesforce

Help your sales reps keep contacts and events in sync between their email applications and Salesforce using our cloud-based email integration feature. What's so great about syncing from the cloud, you ask? Well, it means that to get the job done, you don't have to ask your reps to install software. It also means that your IT pros do less work to maintain the feature.

Email Application Publisher Layouts: Set Up Reps to Create Records Directly from Microsoft® Outlook® or Gmail™

Let Lightning for Outlook, Lightning for Gmail, or Salesforce for Outlook users create accounts, cases, leads, opportunities, and even custom objects directly from their email applications. Reps create records using actions menus, which you set up from Salesforce. Your Salesforce edition determines how you set up action menus and whether you can customize them.

Connect for Outlook: (Retired)

Before you get interested in our retired, legacy Connect for Outlook product, we urge you to explore either our cloud- or desktop-based Microsoft integration products: Lightning for Outlook or Salesforce for Outlook.

EDITIONS

Lightning for Outlook, Lightning for Gmail (beta), Lightning Sync, and Salesforce for Outlook are available to be managed from both Salesforce Classic and Lightning Experience

How Lightning Sync Manages Sync Conflicts with Salesforce for Outlook

Learn how Salesforce manages sync conflicts when users are assigned to sync the same records for both features.

If you're migrating your users from Salesforce for Outlook to Lightning Sync, we recommend disabling Salesforce for Outlook for your Lightning Sync users.

Though Salesforce manages these conflicts for you, this best practice prevents you from creating complicated sync configurations that could become difficult to manage later.

If you don't disable Salesforce for Outlook for Lightning Sync users, and you've assigned a user to sync the same records with conflicting settings in both an Outlook configuration and a Lightning Sync configuration, Salesforce automatically gives preference to the settings you've set for that kind of record in the Lightning Sync configuration.

Because Salesforce gives preference by record, not by configuration, either or both features could sync your reps Microsoft® items.

For example, if a user is assigned to sync contacts, events, and tasks in an Outlook configuration and contacts and events in an Lightning Sync configuration, then the users' tasks would sync with Salesforce for Outlook, and the users' contacts and events would sync with Lightning Sync.

Sales reps can create Salesforce records directly from Outlook (4). Reps select the record to see more details about it, including Chatter feed, activity timeline, and related lists in Lightning for Outlook. With the inline edit feature, they can also modify records in their email application. Or, reps get complete details about the record or the email related to it directly in Salesforce (5).

Similar to the way sales reps relate emails, Lightning for Outlook lets reps relate these calendar events to Salesforce records.

- Any event that reps attend
- Any event that reps organize, provided they're working in Outlook 2016 for Windows or Outlook Web App on Office 365

To relate an event, reps select it in their Microsoft email application. Then, they select Salesforce (1).

Quotes discussion

Relevant Salesforce records appear (2). And like when reps work with emails, your reps can select a record to see more details in their email application. Or, they can create a record or get complete details about the record directly in Salesforce (3).

[Set Up Sales Teams to Experience Salesforce in Microsoft® Outlook®](#)

Help your teams see and create Salesforce records with global actions directly in Outlook Web App (OWA), Outlook 2016, Outlook for Mac 2016, and Outlook 2013.

[Customize Lightning for Outlook for Your Sales Reps](#)

Help your Lightning for Outlook users get more done by customizing the Salesforce content they see and work with from Microsoft® Outlook®.

Set Up Sales Teams to Experience Salesforce in Microsoft® Outlook®

Help your teams see and create Salesforce records with global actions directly in Outlook Web App (OWA), Outlook 2016, Outlook for Mac 2016, and Outlook 2013.

1. From Salesforce Setup, enter *Lightning for Outlook* in the Quick Find box, then select **Lightning for Outlook Settings**.

USER PERMISSIONS

To enable Lightning for Outlook

- "Customize Application"

2. Enable Lightning for Outlook. Save your changes.

After the whitelist and mapping sections appear, there's no need for you to change them.

3. Choose the environment in which you're setting up Lightning for Outlook.

Tip: Help your sales teams help themselves! From the Microsoft Office Store, make Lightning for Outlook available for your sales teams to install. That way, you spend less time installing Lightning for Outlook for fewer teammates.

4. If you're using Office 365, allow Salesforce access from the Office 365 Outlook Web App domain. If you're using custom Outlook Web App domains, add those domains to allow access.

Add Lightning for Outlook from the Microsoft® Exchange® Center

Before your sales teams can experience Lightning for Outlook, your team members need access to the Lightning for Outlook add-in. Team members can get and enable the add-in themselves. Alternatively, you can help them complete this step faster and avoid setup issues at the same time. Ask your company's Microsoft Exchange administrator to give all team members access to the Lightning for Outlook add-in simultaneously. That way, your sales reps can save time and begin working in Lightning for Outlook right away.

Add Lightning for Outlook from the Microsoft® Exchange® Center

Before your sales teams can experience Lightning for Outlook, your team members need access to the Lightning for Outlook add-in. Team members can get and enable the add-in themselves. Alternatively, you can help them complete this step faster and avoid setup issues at the same time. Ask your company's Microsoft Exchange administrator to give all team members access to the Lightning for Outlook add-in simultaneously. That way, your sales reps can save time and begin working in Lightning for Outlook right away.

 **Tip:** To authorize Outlook users to add Office add-ins, such as Lightning for Outlook, make sure they have the right permissions. For more information, review this [Microsoft article](#).

To enable the Lightning for Outlook add-in for your team, work with your Exchange administrator to complete these steps from the Microsoft Exchange admin center.

1. In the Exchange admin center, click the **Admin** tile to go to the Admin center.
2. From the Admin center, click **Exchange**.
3. Under organization, click **add-ins**.
4. Click  and select the **Add from the Office Store** option.

 **Note:** The **Add from URL** and **Add from file** options are not available.

5. From the Add-ins for Outlook page, enter *Lightning for Outlook* in the Search box and select **Salesforce Lightning for Outlook** from the search results.
6. Click **Add** to confirm that you want to get the Lightning for Outlook add-in.

 **Important:** To avoid errors at this step, make sure your Exchange server can connect to the Microsoft Office Store.

7. From the **Manage Add-in** page, set one of these options depending on how you want to give your reps access to the Lightning for Outlook add-in.
 - **Optional, enabled by default**
 - **Optional, disabled by default**
 - **Mandatory, always enabled. Users can't disable this add-in.**

 **Note:** To enable the Lightning for Outlook add-in for a subset of your reps, you can use Powershell™ commands. For more information, review the [Microsoft Exchange Mailbox cmdlets article](#).

To make Lightning for Outlook available to your sales teams, complete the steps to enable Lightning for Outlook in Salesforce.

Create Custom Email Application Panes for Lightning for Outlook Users

Choose the Salesforce content that sales reps see from Lightning for Outlook by creating custom email application panes with the Lightning App Builder.

Create an email application pane and add the standard or custom components you want your Lightning for Outlook users to see and work with from Outlook. You can also use components you find on AppExchange.

1. Create an email application pane. The steps are different depending on whether you're working from Lightning Experience or Salesforce Classic.
 - In Lightning Experience:

From Setup, enter *Lightning for Outlook* in the Quick Find box, and select **Settings**. Click **New** under Email Application Panes.
 - In Salesforce Classic:

From Setup, enter *App Builder* in the Quick Find box, and select **New** under Lightning Pages.
2. Select **Email Application Pane (Beta)**.
3. Give your pane a unique label, and click **Next**.
4. To start with an empty layout, select the Pane template. To start with a layout prepopulated with standard components, clone the system default page.
5. Click **Finish**.
6. Drag components onto the pane.

You can drag components up or down to rearrange their order.
7. Click in the empty area of the canvas to view the page properties and add a description for your pane.
8. Click **Save**.

To make the email application pane available to Lightning for Outlook users, activate the pane and assign it to user profiles.

Lightning for Gmail: Let Sales Reps Experience Salesforce from Gmail™ (Beta)

Give your sales teams visibility into Salesforce content right where they work, so they can efficiently manage their sales pipeline and close deals faster—directly from Gmail™. Lightning for Gmail—the email integration for Gmail users—gives reps a quick view of their sales-related records without making them switch between Salesforce and Gmail.

 **Note:** This release contains a beta version of Lightning for Gmail, which means it's a high-quality feature with known limitations. Lightning for Gmail isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for this feature in the [IdeaExchange](#)

After you enable Lightning for Gmail for your sales team, your team members can:

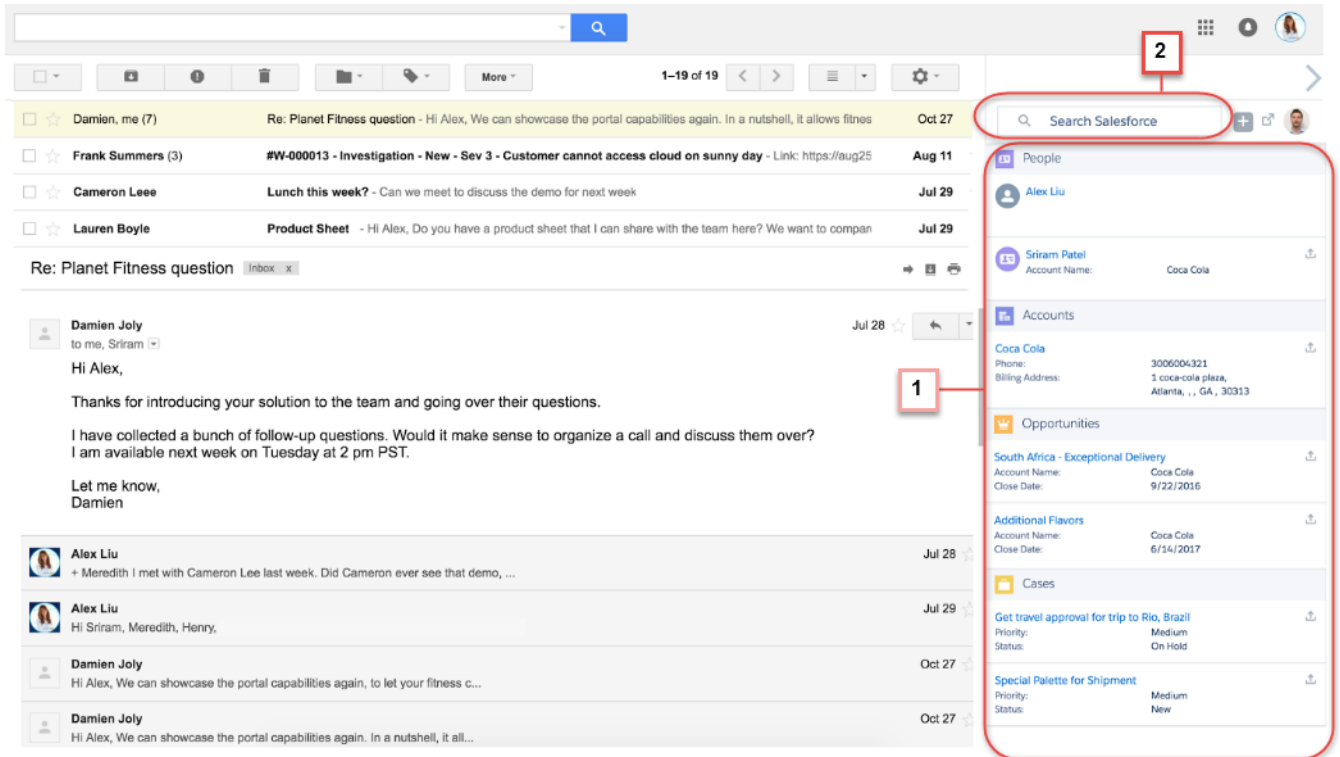

- View Salesforce contacts, leads, accounts, opportunities, and cases relevant to the Gmail messages they received or sent (1).

EDITIONS

Available to manage from Salesforce Classic and Lightning Experience

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

- Search for custom object records and create a Salesforce record using actions available to them. With the inline editing feature, they can also modify records without leaving Gmail (2).

- Drill down for more details on a Salesforce record right from Lightning for Gmail. In addition to a record's detail page, reps get to see its Chatter feed, activity timeline, and related lists.

- View and relate Salesforce records to Google Calendar events and emails.

[Lightning for Gmail: Set Up Sales Reps to Experience Salesforce from Gmail™ \(Beta\)](#)

Help your sales teams see, create, and modify Salesforce records directly in Gmail.

[Lightning for Gmail: Enhanced Email \(Beta\)](#)

Turn on Enhanced Email with Lightning for Gmail for your reps, so they can relate emails to relevant Salesforce records quickly and easily.

Lightning for Gmail: Set Up Sales Reps to Experience Salesforce from Gmail™ (Beta)

Help your sales teams see, create, and modify Salesforce records directly in Gmail.

Important: Before you let your sales teams experience Lightning for Gmail, verify that [Enhanced Email is enabled for your organization](#). Then, contact Salesforce Customer Support to get access to Enhanced Email for Lightning for Gmail.

After getting access to Enhanced Email for Lightning for Gmail, complete these steps to enable Lightning for Gmail for your sales teams.

1. From Salesforce Setup, enter *Lightning for Gmail* in the **Quick Find** box, then select **Lightning for Gmail (beta) Settings**.
2. Enable Lightning for Gmail.
3. To let reps relate emails to relevant Salesforce records, enable Enhanced Email with Lightning for Gmail.
4. To give sales reps access to global actions in Lightning for Gmail, create new or assign existing publisher layouts from the **Lightning for Gmail Publisher Layouts** section. Save your changes.

Next, to begin working with Lightning for Gmail, your sales team members complete their short setup procedure in Gmail.

Lightning for Gmail: Enhanced Email (Beta)

Turn on Enhanced Email with Lightning for Gmail for your reps, so they can relate emails to relevant Salesforce records quickly and easily.

With Enhanced Email, when reps relate an email to a relevant account, opportunity, case, custom object, or contact, all contacts, leads, and users on the email are automatically related. The emails are added to Salesforce as Email Message records. So, reps can view emails in rich text format from Salesforce. Emails in Salesforce appear with their bold, italic, underlined, and colored characters, and their lists and tables intact. When you enable Enhanced Email for your reps, they can also add attachments to relevant Salesforce records.

Considerations for Enhanced Email with Lightning for Gmail

Before turning on Enhanced Email for Lightning for Gmail, there are some considerations to think about.

- Sales reps can relate an email to people, including contacts, leads, and Salesforce users who are included on the email recipient list.
- In addition to the email recipients, sales reps can relate an email to one more Salesforce record, such as account, opportunity, case, or custom object.
- For emails related to a case, sales reps can change the relationship to another case after deleting the original Email Message record to remove the original relationships.
- For emails related to a lead, sales reps can change the relationship to another lead if that lead is the email's recipient or sender.

- For emails related to an account, opportunity or a custom object record, sales reps can change the relationship to any other Salesforce records, except cases.

Lightning Sync: Sync Your Sales Reps' Microsoft® or Google Contacts and Events with Salesforce

Help your sales reps keep contacts and events in sync between their email applications and Salesforce using our cloud-based email integration feature. What's so great about syncing from the cloud, you ask? Well, it means that to get the job done, you don't have to ask your reps to install software. It also means that your IT pros do less work to maintain the feature.

Lightning Sync is compatible with several versions of Microsoft Exchange, Google Contacts, and Google Calendar™.

Lightning Sync for Microsoft Exchange syncs reps' contacts between systems, and reps' events from their Exchange-based calendar to Salesforce. Lightning Sync for Google (Beta) syncs reps' contacts from Salesforce to Google Contacts and their events from their Google Calendar to Salesforce.

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Event Attendees Sync

Learn how and when Lightning Sync can sync event attendee details from sales reps' Microsoft® or Google Calendars™ to Salesforce.

That way, your whole sales team can see which prospects, customers, and coworkers are attending their sales meetings directly from Salesforce. Team members can also see who's going to show, because attendees' responses sync, too.

No additional setup is required to get event attendees to start syncing. Event attendee details sync to Salesforce automatically when:

- The event organizer is set up to sync events with Lightning Sync.
- The event attendees' email addresses match contacts, leads, or user profiles in Salesforce.

Event attendee sync works through the event organizer. Your sales teams get the most from event attendee sync when you set up event sync for all Salesforce users who meet together frequently. Otherwise, your teams could experience event attendee sync limitations.

Limitations

If you set up an organizer to sync after attendees have already been syncing, sales teams could experience these limitations.

- Some event attendees aren't visible on events in Salesforce
- After resetting sync for an event attendee, that attendee could see some duplicate events in Salesforce

Private Event Sync

Learn how private events sync from your sales reps' calendar applications to Salesforce when you've set up reps to use Lightning Sync.

Reps can prevent colleagues from viewing their events in Salesforce and in their calendar applications by marking events as private.

Lightning Sync doesn't sync your reps' private events between systems unless you select to sync events and select to enable `Sync Private Events` in a rep's Lightning Sync configuration.

After enabling, new and updated private events sync during the next sync cycle (usually sync cycles occur every few minutes). Private events sync according to the filters you've determined in the rep's configuration.

When private events start syncing, private event details are visible to reps' colleagues depending on two factors: Which system events are viewed in, and how reps have set their calendar sharing settings in Salesforce.

In Salesforce, private event start and end times are visible to colleagues, but event details are hidden. All private event details are visible to Salesforce administrators who can view, edit, and report on events. Reps can choose to share more private event details with their colleagues by changing their calendar sharing level in their `Personal Settings`.

In your calendar application, private event details are shared with colleagues and supervisors as they always have been. Refer to that calendar application documentation for more information.

If you decide to disable private event sync, your reps' private events don't sync during the next sync cycle, and do not sync again. A version of each private event that was previously syncing remains in both Salesforce and the rep's calendar until the rep deletes one or both.

 **Important:** Salesforce doesn't communicate to reps how their private events are set up to sync, nor does it communicate that you've changed the setting. It's important that you communicate which experience reps can expect so they can prepare their

EDITIONS

calendars accordingly. This practice can help keep reps comfortable with syncing their private events. It also guarantees that you keep Great Aunt Alberta's 95th birthday party out of Salesforce.

SEE ALSO:

[What's the difference between private items in both Salesforce and Microsoft® Outlook®?](#)

Event Delete

You can set up sales reps to delete events—from both their calendar and Salesforce—in one action.

You can set up reps to automatically delete syncing events in one action. Select this setting for reps from their Lightning Sync configurations.

Then reps can delete an event from their calendar application and Lightning Sync removes the event's counterpart in Salesforce automatically.

Because events sync only from reps' calendars to Salesforce, event delete only deletes both events in one action when reps delete events from their calendars. If a rep deletes an event from Salesforce, the event's counterpart remains in the rep's calendar.

Events that reps move out of their default calendar and into a secondary calendar are also deleted from Salesforce automatically.

Lightning Sync Considerations

Before you roll out Lightning Sync to your sales reps, familiarize yourself with these considerations.

[Considerations for Syncing Events](#)

Before you roll out Lightning Sync to your sales reps, familiarize yourself with these considerations for syncing events. That way, your rollout generates no surprises.

[Considerations for Companies With Multiple Salesforce Organizations](#)

If your company uses Lightning Sync in multiple Salesforce organizations, make sure the data in those organizations remains separate by being mindful about how you set up your Lightning Sync configurations.

EDITIONS

Available to manage from: both Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

SEE ALSO:

[Considerations for Migrating from Salesforce for Outlook to Lightning for Outlook and Lightning Sync](#)

Considerations for Syncing Events

Before you roll out Lightning Sync to your sales reps, familiarize yourself with these considerations for syncing events. That way, your rollout generates no surprises.

Lightning Sync can sync your sales reps' events from their Microsoft® Exchange-based calendars or Google Calendars to Salesforce. You decided whether reps sync events by setting up the feature from Lightning Sync configurations in Salesforce Setup.

Keep in mind that there's potential for Lightning Sync to overwrite event data unless you're considerate about how you roll out the feature to your reps.

First, does one of these scenarios describe your rollout?

EDITIONS

Available to manage from: both Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

- You're migrating reps from Salesforce for Outlook
- Your reps edit their events records in Salesforce
- Your reps already have access to Lightning for Outlook (previously known as Salesforce App for Outlook)

For example, say that your rep maintains meeting notes in Salesforce event records. But the matching event in that rep's calendar doesn't include those notes. During the first sync, Lightning Sync overwrites the event in Salesforce with the one from the calendar.

You can prevent reps' events from being overwritten by following our guidelines for syncing events.

Guidelines for Syncing Events

Before you roll out Lightning Sync, address these guidelines to avoid overwriting event data during certain sync scenarios.

Guidelines for Syncing Events

Before you roll out Lightning Sync, address these guidelines to avoid overwriting event data during certain sync scenarios.

If you fall into one of the sync scenarios outlined in [Considerations for Syncing Events](#), follow these guidelines when you set up your reps for Lightning Sync.

- In Lightning Sync configurations, don't change the default setting, `TODAY`, for the event sync filter. That way, edits that your reps made to past events in Salesforce are excluded from the initial sync.
- Tell reps to edit event fields that sync (like date, time, subject, or description) in their calendars, and not in Salesforce. That way, Lightning Sync doesn't overwrite those edits in Salesforce. (Reps can continue to use Salesforce features that don't involve editing their Salesforce event fields, however, like relating events to Salesforce records.)

Considerations for Companies With Multiple Salesforce Organizations

If your company uses Lightning Sync in multiple Salesforce organizations, make sure the data in those organizations remains separate by being mindful about how you set up your Lightning Sync configurations.

You're using multiple organizations if you either:

- Test new features in a sandbox organization before setting up the feature in your live organization.
- Maintain separate Salesforce organizations for different divisions of your company.

To prevent Lightning Sync from syncing contacts and events between your Salesforce organizations, don't add the same user to Lightning Sync configurations in more than one organization.

We don't recommend marking a Lightning Sync configuration as inactive to prevent data from syncing between your Salesforce organizations. While marking a configuration as inactive prevents it from syncing a user's data, you risk forgetting that user is included in multiple Lightning Sync configurations, and marking the configuration as active later.

 **Example:** You're testing Lightning Sync features in your sandbox organization, so you add user Marianne Schumacher to an Lightning Sync configuration in the sandbox organization. After you're satisfied with how you've set up Lightning Sync features for Marianne, you're ready to add her to a Lightning Sync configuration in your live organization.

Before you add Marianne to a Lightning Sync configuration in your live organization, remove her from the configuration in your sandbox organization. Otherwise, Lightning Sync can sync contacts and events between Marianne's email application, the sandbox organization, and the live organization, saving test and live data to all three data sources.

Lightning Sync for Microsoft® Exchange

Help your sales reps keep their contacts and events in sync between your Microsoft® Exchange server and Salesforce without asking them to install and maintain software.

When you set up users' contacts and events to sync between your company's Microsoft® Exchange server and Salesforce, you help your users increase their productivity. That's because there's no need for users to duplicate their work between the two systems. In addition, Lightning Sync offers users with compatible computing environments the flexibility to sync items whether working from their desks or from their mobile devices.

You define your users' Lightning Sync experience by selecting sync settings for users in Salesforce. You can set up users to sync contacts between Exchange and Salesforce in both directions, or just one. You can also set up users to sync events in one direction, from Exchange to Salesforce.

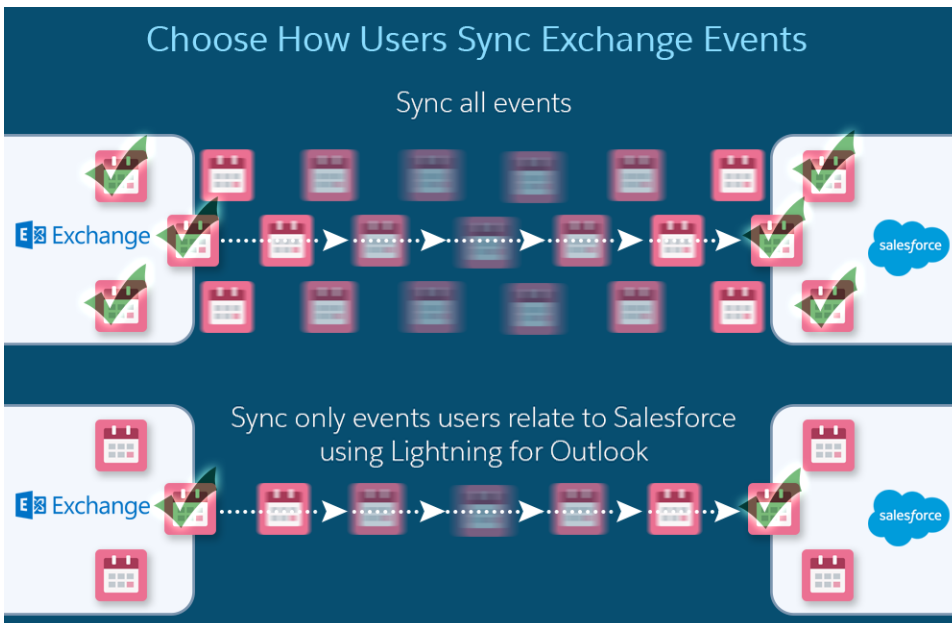

EDITIONS

Available to manage from: both Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

You can also decide how users' Exchange events sync to Salesforce. Set up users to sync all their events, or only the events they select. Users select which Exchange events sync to Salesforce using [Lightning for Outlook](#), a Microsoft integration feature that lets users experience Salesforce directly from Microsoft Outlook.

You can select more settings to define your users' sync experiences. For example, set up Lightning Sync to sync events your users mark as private. Or, to automatically remove events in Salesforce that your users delete from their calendars.

Lightning Sync for Microsoft Exchange Limitations

Currently, Lightning Sync doesn't:

- Sync events from Salesforce to Exchange
- Sync recurring events
- Delete syncing contacts in one action

Get Started with Lightning Sync for Microsoft Exchange

[Lightning Sync System Requirements for Microsoft® Exchange](#)

Confirm that your Microsoft® Exchange-based server meets these system requirements before you set up your sales reps to sync contacts and events with Lightning Sync.

[See the Big Picture for Setting Up Lightning Sync for Microsoft® Exchange](#)

Set up Lightning Sync so your users can sync contacts and events between your company's Microsoft® Exchange server and Salesforce. You complete several steps to prepare the systems to communicate, both on your Exchange server and in Salesforce.

USER PERMISSIONS

To set up a service account to communicate with Lightning Sync:

- Administrative access to your company's Exchange server

To access and edit Lightning Sync Setup

- "Customize Application"

Prepare Your Microsoft® Exchange Server for Lightning Sync

The first step in setting up Lightning Sync is to enable several settings on your Exchange server, including Exchange Web Services, Exchange Autodiscover Service, and Basic authentication.

These instructions vary depending on the version of Microsoft® Exchange your company uses. For more support, visit Microsoft's support website, search for the keywords mentioned here, and follow the instructions intended for your Exchange version.

Complete the following steps on your Exchange server.

1. Enable Exchange Web Services (EWS) on an SSL connection.
 - Make sure your Exchange server has a signed certificate from one of the [Salesforce-approved Certificate Authorities](#).
 - If your organization has configured a firewall, allow an inbound connection to your Exchange client access server on port 443.
2. Enable Exchange Autodiscover Service.
3. Enable Basic authentication on both your Exchange server and your Autodiscover service. If you need to run additional authentication methods (such as Microsoft NTLM), there is no need to disable those methods; you can run Lightning Sync without conflict.

Set Up a Microsoft® Exchange Service Account to Communicate with Lightning Sync

After you've enabled the right settings on your Exchange server, create an Exchange service account with impersonation rights for the mailbox of each Lightning Sync user.

Before setting up an Exchange Service account, make sure you've [enabled the appropriate Exchange server settings to set up Lightning Sync](#).

To set up an Exchange service account, work with your Exchange admin to complete these steps on your Exchange server.

Watch a Demo:

-  [Set Up a Microsoft® Exchange Service Account to Sync with Salesforce \(for administrators using Office 365™ Admin Center\)](#)
-  [Set Up a Microsoft® Exchange Service Account to Sync with Salesforce \(for administrators using command shell\)](#)

 **Note:** For more support, visit Microsoft's support website, search for the keywords mentioned here, and follow the instructions intended for your Exchange version.

1. Create an Exchange user with a mailbox that acts as the service account. You use this email address later to configure Exchange impersonation for the service account.
2. Using Exchange Management Shell, enter the commands that enable service account impersonation for your version of Exchange. If you receive a pipeline error message, wait a few minutes and reenter the command to let your server process the requests.
 - If you're using Exchange 2013:
 - a. Enable the Active Directory extended permission for `ms-Exch-EPI-Impersonation` on all Client Access servers.

```
Get-ExchangeServer | where {$_IsClientAccessServer -eq $TRUE} | ForEach-Object
{Add-ADPermission -Identity $_.distinguishedname -User (Get-User -Identity
<EnterExchangeSyncServiceAccountEmailAddress> | select-object).identity
-extendedRight ms-Exch-EPI-Impersonation}
```

EDITIONS

USER PERMISSIONS

To set up a service account
to communicate with
Lightning Sync:

- Administrative access to
your company's
Exchange server

- b. Enable the Active Directory extended rights for `ms-Exch-EPI-May-Impersonate` to let your service account impersonate all accounts on your Exchange server. Set a filter later that lets you limit the users the service account syncs with Salesforce.

```
Get-MailboxDatabase | ForEach-Object {Add-ADPermission -Identity $_.distinguishedname
  -User <EnterExchangeSyncServiceAccountAddress> -ExtendedRights
  ms-Exch-EPI-May-Impersonate}
```

- If you're using Exchange Online offered by Microsoft Office 365™:
- a. Enable customization on your Exchange server.

```
Enable-OrganizationCustomization
```

3. Using Exchange Management Shell, enter these commands to configure your service account to impersonate the group of users who'll sync with Lightning Sync.

- a. Create a management scope to define a filter that groups the Exchange users who sync with Lightning Sync. For example, if you want only sales reps to sync, and their Exchange mailboxes all have the same value `Sales` for the filterable property `Department`, enter `Department -eq 'Sales'` in place of `<ChooseRecipientFilter>`.

```
New-ManagementScope -Name:<ChooseExchangeSyncScopeName>
-RecipientRestrictionFilter:{<ChooseRecipientFilter>}
```

- b. Create a management role assignment that restricts the service account to impersonate only the users you defined in the management scope.

```
New-ManagementRoleAssignment -Name:<ChooseExchangeSyncRoleAssignmentName>
-Role:ApplicationImpersonation -User:<EnterExchangeSyncServiceAccountAddress>
-CustomRecipientWriteScope:<EnterExchangeSyncScopeName>
```

Run the Microsoft® Remote Connectivity Analyzer with Lightning Sync Parameters

Run the Remote Connectivity Analyzer—the free web-based tool provided by Microsoft—to confirm whether you and your Exchange administrator have set up Lightning Sync for Microsoft Exchange successfully. Or, run the Remote Connectivity Analyzer if Lightning Sync for Microsoft Exchange was syncing your reps' items successfully, but suddenly stops. Use the parameters provided to run the test for Lightning Sync.

Before you run the Remote Connectivity Analyzer, make sure that you've [selected your preferred connection method](#) so that Exchange and Salesforce can communicate. Wait a few minutes after completing those tasks to let your Exchange server process the changes you've made. Otherwise, the Remote Connectivity Analyzer can show a failed test summary, even though you've configured setup correctly.

The Remote Connectivity Analyzer checks several points of connectivity between your Salesforce organization and your Exchange server. When the test is complete, Microsoft provides a summary describing your connection status.

-  **Note:** The Microsoft Remote Connectivity Test and the Lightning Sync Connection Test check general connectivity between your email server and your Salesforce organization. If you want to test connectivity for only one (or a few) of your reps, check their sync statuses from `Lightning Sync Status` in Setup.

1. Visit Microsoft's website and search for the Remote Connectivity Analyzer.

EDITIONS

Available to manage from: both Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To get the necessary parameters to run the test:

- Administrative access to your company's Microsoft® Exchange server

2. On the `Exchange Server` tab, select **Service Account Access (Developers)**.
3. Click **Next**.
4. Complete the test fields:

For this test field`Target mailbox email address``Service Account User Name (Domain\User Name or UPN)``Service Account Password`**Type this parameter**

The email address of a sales rep you've set up to be impersonated by your Lightning Sync service account

The service account domain\user name or UPN you've set up for Lightning Sync

The service account password you've set up for Lightning Sync

5. Select `Use Autodiscover` to detect server settings.
6. Select `Test predefined folder`.
7. Choose `Contacts` if you'd like to test sync connectivity for this user's contacts, or `Calendar` for this user's events.
8. Check `Use Exchange Impersonation`.
9. In the `Impersonated User` field, type the same Exchange email address you specified for `Target mailbox email address`.
10. For `Impersonated user identifier`, select `SMTP Address`.
11. Check the `I understand that I must use the credentials of a working account...` acknowledgment.
12. Type the analyzer verification code and click **verify**.
13. At the top of the page, click **Perform Test**.
Running the test usually takes less than 30 seconds. When the test is complete, the analyzer displays a summary evaluating the sync connectivity for the Exchange user you've specified.
14. Take action based on the test results.
 - If the test summary displays "Connectivity Test Successful" or "Connectivity Test Successful with Warnings," it's likely that you've set up your service account correctly. and you're ready to [provide your service account credentials to Salesforce](#).
 - If the test summary displays "Connectivity Test Failed," review the test details to troubleshoot setup issues. If the test continues to fail, verify that you've completed the previous setup steps correctly and then contact Salesforce Customer Support for help.

Set Up Salesforce to Communicate with Microsoft® Exchange Using a Service Account

After running the Remote Connectivity Analyzer, log in to Salesforce to enable Lightning Sync for Microsoft Exchange and provide your service account credentials.

1. From Salesforce Setup, enter *Lightning Sync Setup* in the **Quick Find** box, then select **Lightning Sync Setup**.
2. Under Enable Lightning Sync, click **Edit**.
3. Check **Enable Lightning Sync** and click **Save**.
4. Enter the service account user name you created in Exchange, including your company's domain and top-level domain. For example, if you work for AW Computing, and the service account mailbox you've created is *svcacct@awcomputing.com*, enter your user name in either of these formats:
 - *svcacct@awcomputing.com*
 - *awcomputing.com\svcacct*

Some network configurations require one format rather than the other. If your first attempt to get Salesforce and Exchange to communicate is unsuccessful, try the other format.
5. Enter your service account password.
6. If your sales reps' email domains are different than your service account domain, enter the additional domains in a comma-separated list. For example, if your service account is *svcacct@awcomputing.com*, but your reps' email addresses are in the domain *awcomputing.net*, enter *awcomputing.net* as an additional domain so Lightning Sync can recognize it.
7. Click **Save**.

Connect Salesforce and Microsoft® Exchange Using OAuth 2.0

Give Salesforce access to Microsoft Exchange Online using OAuth 2.0. To complete setup, you need a Microsoft Office 365® account and help from your Office 365 global administrator to provide credentials for your company's account.

1. From Setup, enter *Lightning Sync Setup* in the **Quick Find** box, then select **Lightning Sync Setup**.
2. Enable Lightning Sync.
3. Select **OAuth 2.0 for Microsoft Exchange** as your preferred connection method.
4. Under Accept and Enable Access to Your Server, have your Office 365 global administrator log in to your Office 365 account.
5. When the Microsoft Azure™ login page opens, accept Lightning Sync access to your account by following the prompts until you're directed back to Salesforce.
6. From Salesforce, under Accept and Enable Access to Your Server, enable OAuth 2.0.

Run the Lightning Sync Connection Test for Microsoft® Exchange Users

Run the Lightning Sync connection test to confirm whether you and your IT pros have set up Lightning Sync successfully. Or, run the connection test if Lightning Sync was syncing your reps' items successfully, but suddenly stops.

After taking the necessary steps to prepare your Microsoft Exchange server and Salesforce to sync, you're ready to run the Lightning Sync connection test.

The Lightning Sync connection test checks several points of connectivity between Salesforce and your email server. When the test is complete, it provides a summary describing your connection status.

Lightning Sync for Microsoft® Exchange users should run both the Lightning Sync connection test and the Microsoft Remote Connectivity Analyzer to test connectivity. The tests differ slightly, so running both gives you more information about your connection status. Lightning Sync for Google users need only run the Lightning Sync connection test.

The Microsoft Remote Connectivity Test and the Lightning Sync Connection Test check general connectivity between your email server and your Salesforce organization. If you want to test connectivity for only one (or a few) of your reps, check their sync statuses from `Lightning Sync Status` in Setup.

1. From Setup, enter `Lightning Sync Setup` in the `Quick Find` box, then select **Lightning Sync Setup**.
2. From the `Connection Test` section, provide the email address for one of the reps you've set up to sync on your email server.
3. Click **Test**.
Lightning Sync checks the connection between Salesforce and your email server and summarizes your connection status.

Tell Sales Reps How to Prevent Certain Microsoft® Outlook Calendar Events from Syncing to Salesforce

Tell your Lightning Sync users how to manage which of their Outlook calendar events sync with Salesforce. We recommend that sales reps prepare events that they don't want to sync before you kick off the sync process. However, reps can manage which events sync at anytime.

Sales reps can prevent some of their calendar events—like personal events—from syncing to Salesforce.

Later in the setup process, you have to define reps' sync settings in Lightning Sync configurations. If you define sync settings for events, all events from a rep's default calendar sync to Salesforce—unless you tell reps to manage those events now.

Reps can prevent personal events from syncing from their calendars to Salesforce in different ways.

- Reps can create a separate calendar in their calendar application to track personal events. (Lightning Sync is designed to sync only a reps' default calendar to Salesforce.)
- When you define sync settings in Lightning Sync configurations, you choose whether you want to sync reps' private events. If you opt not to sync private events, reps can prevent events from syncing by assigning the private option to events from their calendar applications.

If users don't manage their personal events before syncing begins, users can still remove those events from Salesforce by deleting personal events Salesforce manually.

Define Sync Settings for Sales Reps Using Lightning Sync

After sales reps prepare their Exchange events to sync with Salesforce, you can define sync settings for groups of reps in Lightning Sync configurations. This step kicks off the sync process for your reps.

Before you begin, make sure that you understand how to [avoid syncing data between Salesforce organizations](#). Syncing data between Salesforce organizations is possible if you test Lightning Sync before rolling it out to reps, or your company uses multiple Salesforce orgs.

Defining sync settings lets you control which of your users can sync contacts and events. You can also control which direction your users sync, and create filters to limit certain records from syncing.

1. From Salesforce Setup, enter *Sync Configurations* in the Quick Find box, then select **Sync Configurations**.
2. Click **New Lightning Sync Configuration**.

3. Enter the name of the configuration. For example, if you're creating a configuration for users in a particular region, enter a unique name for it, and then select **Active**.

4. Assign users and profiles to this configuration.

EDITIONS

USER PERMISSIONS

To access Lightning Sync
setup in Salesforce:

- "View Setup and Configuration"

To create, edit, or delete
Lightning Sync
configurations:

- "Manage Exchange Configurations"

AND

"Manage Users"

- Indicate the sync direction for your users' contacts.

Data Settings

Contacts

Sync Direction: Sync both ways

Conflict Behavior: Salesforce always wins

[▶ Edit Field Mappings](#)

If an Exchange contact matches multiple Salesforce contacts, sync it with the Salesforce contact that:

- Has the most recent activity
- Was last updated
- Has the oldest creation date

- To change field mappings between Salesforce and Exchange contacts, click **Edit Field Mappings**.
- Indicate whether you'd like to sync your users' events from Exchange to Salesforce.

Events

Sync Direction: Exchange to Salesforce

Conflict Behavior: Exchange always wins

Specify Which Exchange Events Sync to Salesforce: All events

[▶ Edit Field Mappings](#)

- Indicate whether you want all Exchange events to sync to Salesforce, or only the events your users select. If you set up users to select events, events users relate to Salesforce from Lightning for Outlook begin to sync between the two systems. To finish setting up that option, you're required to enable Lightning for Outlook, and your users are required to complete Lightning for Outlook setup.
- To change field mappings between Salesforce and Exchange events, click **Edit Field Mappings**.
- Click **Save**.
- Set filters to specify the contacts users can sync from Salesforce to Exchange. You are required to set filters based on your users' record ownership. Choose whether you want to:
 - Limit contacts that users sync to only what users own, choose **Selected Contacts**, and then select **User's Records**. Make sure that you select both of these settings together, or no contacts sync for users in this configuration.
 - Let users sync all contacts they can see in Salesforce, choose **All Contacts**.

Contact Filters ! Required Information

Filter the contacts users of this configuration can sync. Contacts can be filtered by the records they're related to.

Filter By Record Ownership

Sync: Selected Contacts All Contacts

Contacts

User's Records

Set more sync filters, if you wish. For example, to prevent contacts from outside your users' territories from syncing, create sync filters for specific fields on users' contact records. Contact filters don't apply to contacts syncing from Exchange to Salesforce.

Filter By Additional Objects and Fields (Optional)				
Object	Field	Operator	Value	
Contact	Mailing Country	not equal to	United States	AND
Contact	Mailing Country	not equal to	Japan	AND
--None--	--None--	--None--		AND
--None--	--None--	--None--		AND
--None--	--None--	--None--		AND

[Add Row](#) [Remove Row](#)

Other Contacts to Include

Sync contacts users follow in Chatter

12. Select `Sync private events` to sync events your users have marked private either in Salesforce or their calendars.
13. Select `Automatically remove deleted Exchange events from Salesforce` to let reps delete Exchange events and Salesforce events in one action.
14. Select `Automatically relate Google events to Salesforce records` to let Lightning Sync review reps' calendars and intelligently relate important events to the appropriate Salesforce contacts or leads automatically.
15. Specify the specific events users can sync from Exchange to Salesforce. Enter a filter in the `Greater or equal to` field. Doing so limits the events users can sync to these time frames.
 - `TODAY`—Syncs events that end on or after today. The start time is 12:00 a.m. [Learn more](#) on page 2120 about why this selection is recommended in certain scenarios.
 - `LAST MONTH`—Syncs events that ended on or after the first day of last month.
 - `LAST N DAYS`—Syncs events that ended on or after a specified number of days ago, such as `LAST 30 DAYS`. You can sync events that ended up to 180 days ago.
16. Click **Save**.

Contact and event syncing has begun for users in this Lightning Sync configuration.

SEE ALSO:

[How Lightning Sync Manages Sync Conflicts with Salesforce for Outlook Considerations for Companies With Multiple Salesforce Organizations](#)

Tell Sales Reps How to Sync Microsoft® Contacts with Salesforce

Tell your Lightning Sync for Microsoft Exchange users that it's time to manage the Microsoft contacts that users want to sync with Salesforce.

If you've set up sales reps to sync contacts from only Salesforce to Microsoft Exchange, you can skip this step: Reps' contacts and events are already syncing.

Reps set up to sync contacts from Exchange to Salesforce or sync both ways can kick off sync by choosing which Microsoft contacts sync to Salesforce.

After you define reps' sync settings by adding them to active Lightning Sync configurations, Lightning Sync creates a folder called `Salesforce_Sync` within each reps' email account. Lightning Sync nests `Salesforce_Sync` within reps' Contacts directories.

Reps choose which contacts sync by moving those contacts into the `Salesforce_Sync` folder. When reps can see and access the `Salesforce_Sync` folder in their email application, they can start moving contacts into it.

Lightning Sync for Google (Beta)

Help users keep their contacts and events in sync between their Google applications and Salesforce.

 **Note:** This release contains a beta version of Lightning Sync for Google, which means it's a high-quality feature with known limitations. Lightning Sync for Google isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Lightning Sync for Google in the [Lightning Sync Success Community](#).

When you set up sales reps' contacts and events to sync between their Google applications and Salesforce, you help reps increase their productivity. That's because there's no need for reps to duplicate their work between the two applications. In addition, Lightning Sync offers reps the flexibility to sync items whether working from their desks or from their mobile devices.

You define your reps' Lightning Sync experience by selecting sync settings for reps in Salesforce. For example, you can set up Lightning Sync to sync your reps' contacts from Salesforce to Google Contacts (which reps can access from their Gmail™). You can also set up reps' events to sync from Google Calendar™ to Salesforce.

Lightning Sync for Google Limitations

Keep in mind that for now, Lightning Sync for Google doesn't:

- Sync contacts from Google Contacts to Salesforce
- Sync events from Salesforce to Google Calendar
- Sync recurring events
- Sync Available or Busy status on events
- Let you edit which Google contact and event fields map to Salesforce contact and events fields

Get Started with Lightning Sync for Google

[See the Big Picture for Setting Up Lightning Sync for Google \(Beta\)](#)

Set up Lightning Sync so sales reps can sync contacts and events between your company's Google for Work account and Salesforce. You complete several steps to prepare the systems to communicate, both from your Google account and from Salesforce.

See the Big Picture for Setting Up Lightning Sync for Google (Beta)

Set up Lightning Sync so sales reps can sync contacts and events between your company's Google for Work account and Salesforce. You complete several steps to prepare the systems to communicate, both from your Google account and from Salesforce.

 **Note:** This release contains a beta version of Lightning Sync for Google, which means it's a high-quality feature with known limitations. Lightning Sync for Google isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Lightning Sync for Google in the [Lightning Sync Success Community](#).

Complete these steps to set up Lightning Sync for Google.

1. [Prepare Your Google for Work Account for Lightning Sync](#)

Get help from the IT pros or Google administrator at your company to prepare Google servers to communicate with Salesforce. Your Google admin can complete these steps by logging in to your company's Google API Console and Google Admin Console.

2. [Prepare Salesforce for Lightning Sync](#)

After an IT pro or Google administrator has prepared your Google for Work account for Lightning Sync, complete the necessary steps to prepare Salesforce, too. From Salesforce, first register the Google API site. Then, select settings to connect the applications using OAuth 2.0 for Google.

3. [Run the Lightning Sync Connection Test for Google Users](#)

Run the Lightning Sync connection test to confirm whether you and your IT pros have set up Lightning Sync successfully. Or, run the connection test if Lightning Sync was syncing your reps' items successfully, but suddenly stops.

4. [Tell Sales Reps How to Prevent Certain Google Calendar Events from Syncing to Salesforce](#)

Tell your Lightning Sync users how to manage which of their calendar events sync with Salesforce. We recommend that sales reps prepare events that they don't want to sync before you kick off the sync process. However, reps can manage which events sync at anytime.

5. [Define Sync Settings for Sales Reps Using Lightning Sync for Google](#)

Define sync settings for groups of reps in Lightning Sync configurations. This step kicks off the sync process for your reps, and determines how their contacts and events sync between the two systems.

To prepare your Google for Work account to communicate with Salesforce:

- The Owner role on your company's Google for Work account, which gives you administrative permissions

To access and edit Lightning Sync Setup

- "Customize Application"

Prepare Your Google for Work Account for Lightning Sync

Get help from the IT pros or Google administrator at your company to prepare Google servers to communicate with Salesforce. Your Google admin can complete these steps by logging in to your company's Google API Console and Google Admin Console.

For more support, refer to Google developer documentation.

1. Complete these steps from Google API Console.
 - a. Create a Google project dedicated to Lightning Sync.
 - b. From the new project, to set up reps to sync events, enable Google Calendar™ API.
 - c. From the new project, to set up reps to sync contacts, enable Google Contacts API.
 - d. Create credentials for a service account with the role *Project Owner* and the key type *JSON*.
 - e. Enable *Domain-Wide Delegation* for the service account. Doing so generates a Client ID (also known as Client name) for the service account, which you need later.
 - f. Save the JSON private key from your service account in a secure location and share it with your Salesforce admin. (But only your Salesforce admin.)

 **Important:** Let's consider your private key the "key to the Google Calendar castle." People in possession of the key have access to your company's Google account. Therefore, only share the key with team members who need it, and share it via secure pathways. For example, emailing your key probably isn't a good idea.

2. Complete these steps from Google Admin Console.
 - a. Navigate to your security settings, select the advanced section, and click **Manage API client access**.
 - b. Authorize read-only calendar scope for the service account by entering the service account Client ID (also known as Client name) you generated in Google API Console. Enter the scope:

```
https://www.googleapis.com/auth/calendar.readonly
```

 If you like, you can authorize other scopes, but this scope is required.

 **Tip:** If you didn't retain your Client ID (also known as Client name) from Google API Console, you can locate it within your service account private key.
 - c. Authorize read-only contact scope for the service account by entering the service account Client ID (also known as Client name) you generated in Google API Console. Enter these scopes:

```
https://www.googleapis.com/auth/contacts.readonly
```

 and

```
https://www.google.com/m8/feeds
```

 If you like, you can authorize other scopes, but this scope is required.

When you're finished, your Salesforce admin can take the next steps by preparing Salesforce for Lightning Sync.

Prepare Salesforce for Lightning Sync

After an IT pro or Google administrator has prepared your Google for Work account for Lightning Sync, complete the necessary steps to prepare Salesforce, too. From Salesforce, first register the Google API site. Then, select settings to connect the applications using OAuth 2.0 for Google.

Before preparing Salesforce for Lightning Sync, make sure that you've taken the necessary steps to prepare your company's Google for Work account to communicate with Salesforce.

1. From Salesforce Setup, [Register a new remote site](https://www.googleapis.com) for `https://www.googleapis.com`. Don't disable protocol security for the site, or Salesforce can't connect with Google.
2. From Salesforce Setup, enter *Lightning Sync Setup* in the **Quick Find** box, then select **Lightning Sync Setup**.
3. Enable Lightning Sync.
4. Select **OAuth 2.0 for Google (Beta)** as your preferred connection method.
5. Upload the private key for your Google service account. Your Google admin generated the key when setting up the service account for Lightning Sync.

 **Important:** Let's consider your private key the "key to the Google Calendar castle." People in possession of the key have access to your company's Google account. Therefore, only share the key with team members who need it, and share it via secure pathways. For example, emailing your key probably isn't a good idea.

6. Click **Save**.

When you're finished, run the Lightning Sync connection test to make sure that you've set up your connection correctly.

Run the Lightning Sync Connection Test for Google Users

Run the Lightning Sync connection test to confirm whether you and your IT pros have set up Lightning Sync successfully. Or, run the connection test if Lightning Sync was syncing your reps' items successfully, but suddenly stops.

After taking the necessary steps to prepare your Google for Work account and Salesforce to sync, you're ready to run the Lightning Sync connection test.

The Lightning Sync connection test checks several points of connectivity between Salesforce and your email server. When the test is complete, it provides a summary describing your connection status.

1. From Setup, enter *Lightning Sync Setup* in the **Quick Find** box, then select **Lightning Sync Setup**.
2. From the **Connection Test** section, provide the email address for one of the reps you've set up to sync on your email server.
3. Click **Test**.
Lightning Sync checks the connection between Salesforce and your email server and summarizes your connection status.

Tell Sales Reps How to Prevent Certain Google Calendar Events from Syncing to Salesforce

Tell your Lightning Sync users how to manage which of their calendar events sync with Salesforce. We recommend that sales reps prepare events that they don't want to sync before you kick off the sync process. However, reps can manage which events sync at anytime.

Sales reps can prevent some of their calendar events—like personal events—from syncing to Salesforce.

Later in the setup process, you have to define reps' sync settings in Lightning Sync configurations. If you define sync settings for events, all events from a rep's default calendar sync to Salesforce—unless you tell reps to manage those events now.

Reps can prevent personal events from syncing from their calendars to Salesforce in different ways.

- Reps can create a separate calendar in their calendar application to track personal events. (Lightning Sync is designed to sync only a reps' default calendar to Salesforce.)
- When you define sync settings in Lightning Sync configurations, you choose whether you want to sync reps' private events. If you opt not to sync private events, reps can prevent events from syncing by assigning the private option to events from their calendar applications.

If users don't manage their personal events before syncing begins, users can still remove those events from Salesforce by deleting personal events Salesforce manually.

Define Sync Settings for Sales Reps Using Lightning Sync for Google

Define sync settings for groups of reps in Lightning Sync configurations. This step kicks off the sync process for your reps, and determines how their contacts and events sync between the two systems.

Before you begin, make sure that you understand how to [avoid syncing data between Salesforce organizations](#). Syncing data between Salesforce organizations is possible if you test Lightning Sync before rolling it out to reps, or your company uses multiple Salesforce orgs.

Defining sync settings lets you manage how your sales reps sync. You can:

- Define which sales reps sync
- Define whether contacts, events, or both items sync
- Create filters to limit certain contacts or events from syncing
- Define whether users' private events sync
- Define whether events reps delete in their Google calendars are automatically removed from Salesforce, too
- Define whether important events are automatically related to the appropriate Salesforce contacts or leads

Make sure you've had your reps prepare their Google Calendar™ events to sync with Salesforce before you define sync settings. It's easier for reps to manage events before sync starts than to remove syncing items from Salesforce later. Reps don't have to prepare their contacts; Because contacts sync from Salesforce to Google Contacts, the contact filters you create in sync configurations control that.

Follow these steps to define your reps' Lightning Sync for Google settings.

1. From Salesforce Setup, enter *Sync Configurations* in the **Quick Find** box, then select **Sync Configurations**.
2. Click **New Lightning Sync Configuration**.

USER PERMISSIONS

To access Lightning Sync setup in Salesforce:

- "Customize Application"

To create, edit, or delete Lightning Sync configurations:

- "Manage Exchange Configurations"
AND
"Manage Users"

- Enter the name of the configuration. For example, if you're creating a configuration for reps in a particular region, enter a unique name, and then select **Active**.

The screenshot shows the 'Basic Information' section of a configuration form. It includes a 'Name' field with the value 'Sales Reps Europe', an 'Active' checkbox that is checked, and a 'Description' field with the text 'Sync settings for sales reps in Europe'.

- Assign reps and profiles to this configuration.

The screenshot shows the 'Assign Users and Profiles' section. It features a search bar with 'Users' selected and a 'Find' button. Below are two columns: 'Available Members' containing 'User: Gordon Nodrog' and 'Assigned Members' containing 'User: Celia Kung', 'User: Johannes Kienzle', and 'User: Lance Santin'. Between the columns are 'Add', 'Remove', and 'Remove' buttons.

- Indicate that you'd like to sync your reps' contacts from Salesforce to Google, and select your preferred matching behavior.

The screenshot shows the 'Data Settings' section, specifically the 'Contacts' subsection. It has two columns: 'Sync Direction' set to 'Salesforce to Google' and 'Conflict Behavior' set to 'Salesforce always wins'. Below this, a text prompt asks: 'If a Google contact matches multiple Salesforce contacts, sync it with the Salesforce contact that:'. Three radio button options are listed: 'Has the most recent activity' (selected), 'Was last updated', and 'Has the oldest creation date'.

- Indicate that you'd like to sync your reps' events from Google Calendar to Salesforce.

The screenshot shows the 'Events' subsection of the 'Data Settings' form. It has two columns: 'Sync Direction' set to 'Google to Salesforce' and 'Conflict Behavior' set to 'Google always wins'.

- Click **Save**.

8. Set filters to specify the contacts reps can sync from Salesforce to Google. You are required to set filters based on your reps' record ownership. Choose whether you want to:
 - Limit contacts that users sync to only what reps own, choose **Selected Contacts**, and then select **User's Records**. Make sure that you select both of these settings together, or no contacts sync for users in this configuration.
 - Let reps sync all contacts they can see in Salesforce, choose **All Contacts**.

Set more sync filters, if you wish. For example, to prevent contacts from outside your reps' territories from syncing, create sync filters

for specific fields on reps' contact records.

9. Select `Sync private events` to sync events your reps have marked as private in their Google calendars.
10. Select `Automatically remove deleted Google events from Salesforce` to let reps delete Google events and Salesforce events in one action.
11. Select `Automatically relate Google events to Salesforce records` to relate important events to the appropriate Salesforce contacts or lead automatically.
12. Specify the specific events reps can sync from Google to Salesforce. Enter a filter in the `Greater or equal to` field. Doing so limits the events reps can sync to these time frames.
 - *TODAY*—Syncs events that end on or after today. The start time is 12:00 a.m. [Learn more](#) on page 2120 about why this selection is recommended in certain scenarios.
 - *LAST MONTH*—Syncs events that ended on or after the first day of last month.
 - *LAST N DAYS*—Syncs events that ended on or after a specified number of days ago, such as *LAST 30 DAYS*. You can sync events that ended up to 180 days ago.
13. Click **Save**.

Syncing has begun for reps in this Lightning Sync configuration.

Manage Lightning Sync Users

After you've set up Lightning Sync, manage how your sales reps experience the feature and assist users in troubleshooting problems.

[Assign Users to Lightning Sync Configurations](#)

To get your Lightning Sync users' contacts or events to sync, assign users to a Lightning Sync configuration. You can assign individual users or add user profiles to assign multiple users.

[Fix Sync Issues for Lightning Sync Users](#)

If an Lightning Sync user has trouble syncing between your email server and Salesforce, you can troubleshoot sync issues by checking your users' sync statuses or running a Lightning Sync error report. If you find a sync issue that a user can't overcome, then you can reset that user's sync process for them.

Assign Users to Lightning Sync Configurations

To get your Lightning Sync users' contacts or events to sync, assign users to a Lightning Sync configuration. You can assign individual users or add user profiles to assign multiple users.

Before you assign a user to a Lightning Sync configuration, consider how that user's records sync if they're already mentioned in another configuration:

- If you assign an individual user to two Lightning Sync configurations, the user is removed from the first configuration automatically and assigned to the new one.
- If you assign a user to two Lightning Sync configurations as both an individual user and as part of a profile, the user is not removed from either configuration, but the user's records will sync according to the configuration that lists the user individually.
- If you assign a user to one Lightning Sync configuration and one configuration, the user is not removed from either configuration, but the user's records will sync according to the Lightning Sync configuration.

Users observe the assignments you've created, added, or removed the next time Lightning Sync runs a sync cycle.

To assign a user to a Lightning Sync configuration,

1. From Setup, enter *Lightning Sync Configurations* in the **Quick Find** box, then select **Lightning Sync Configurations**.
2. If you're modifying a Lightning Sync configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Lightning Sync Configuration**, and then complete the required fields.
3. In the Assign Users and Profiles section, select either *Profiles* or *Users* in the **Search** drop-down list.
4. If you don't see the member you want to add, enter keywords in the search box and click **Find**.
5. Select members from the Available Members box, and click **Add** to add them to the group. If all available users are assigned to this configuration, the Users list is empty and you can only assign profiles.
6. To remove members, select those members and click **Remove**.

Check Lightning Sync Users' Sync Statuses

If your users can't sync, you can check their sync statuses—and the sync status of your Lightning Sync setup—to troubleshoot the problem.

1. From Setup, enter *Lightning Sync Status* in the **Quick Find** box, then select **Lightning Sync Status**.
2. Type the name of the user whose sync status you'd like to check, and click **Check Status**. The sync status for that user is displayed.

In some cases, you may need to reset sync for a user.

If you need help interpreting sync statuses, or need recommendations on correcting sync issues, check out [Lightning Sync for Microsoft® Exchange Statuses](#).

SEE ALSO:

- [Build and Run a Lightning Sync Error Report](#)
- [Reset Sync for Lightning Sync Users](#)

Build and Run a Lightning Sync Error Report

If your Lightning Sync users can't sync, you can build and run an error report to discover what's causing sync to fail in your organization, and for which users. The report details provide suggestions to help you troubleshoot sync issues.

First, you create a custom report type using a Lightning Sync Error Report custom object we've set up for you in Salesforce. Then create a Lightning Sync error report. Finally, run your report to help your users fix those pesky sync errors they're experiencing.

1. [Create a custom report type](#). Set the **Primary Object** to **Lightning SyncError**.
2. Create your Lightning Sync error report. From the Reports tab, click **New Report**. Set the **Report Type** to the Lightning Sync report type you created in step 1, and click **Create**.
3. Save and run your Lightning Sync error report. From the unsaved report, click **Save**, complete the required fields, and click **Save and Run Report**. Salesforce generates a list of errors sync errors found in your organization, or displays "Grand Totals (0 records)" if the report couldn't identify any sync errors.

If the report couldn't identify any errors, but users still can't sync, contact Salesforce.

Reset Sync for Lightning Sync Users

If a sales rep has trouble syncing between your email server and Salesforce, you can reset that rep's sync process. Resetting sync clears out and then restores the connections between a rep's email and calendar applications and Salesforce records. Resetting the sync process doesn't affect information stored in those records.

1. If set up to sync contacts using Lightning Sync for Microsoft Exchange, make sure that the rep's `Salesforce_Sync` folder contains only contacts the rep wants to sync with Salesforce. Lightning Sync for Google users can ignore this step.
2. If set up to sync events, make sure that events that the rep doesn't want to sync are managed from the rep's calendar application.
3. From Salesforce Setup, enter *Lightning Sync Status* in the `Quick Find` box, then select **Lightning Sync Status**.
4. Type a rep's name, and click **Reset Sync**.
During the next sync cycle, Lightning Sync:
 - Syncs all contacts between the rep's `Salesforce_Sync` folder (Microsoft Exchange) or `Salesforce_Sync` group (Google Contacts) and Salesforce. Lightning Sync excludes contacts that fall outside of the filters you set in the rep's sync configuration.
 - Syncs all events from the rep's calendar application to Salesforce. Lightning Sync excludes events that fall outside of the filters you set in the rep's sync configuration, or events that the rep prevented from syncing.

Test Your Connection Between Your Email and Calendar Server and Salesforce

Lightning Sync for Microsoft® Exchange users should run both the Lightning Sync connection test and the Microsoft Remote Connectivity Analyzer to test connectivity. The tests differ slightly, so running both gives you more information about your connection status. Lightning Sync for Google users need only run the Lightning Sync connection test.

Test your connection status to confirm whether you and your IT pros have set up Lightning Sync successfully. Or, run the connection tests if Lightning Sync was syncing successfully, but syncing suddenly stops for all reps in your Salesforce organization.

-  **Note:** The Microsoft Remote Connectivity Test and the Lightning Sync Connection Test check general connectivity between your email server and your Salesforce organization. If you want to test connectivity for only one (or a few) of your reps, check their sync statuses from `Lightning Sync Status` in Setup.
- [Run the Microsoft® Remote Connectivity Analyzer with Lightning Sync Parameters](#)
 - [Run the Lightning Sync Connection Test for Microsoft® Exchange Users](#)
 - [Run the Lightning Sync Connection Test for Google Users](#)

Table 15: Events Statuses

if	Provides this status	This status means that
Last sync activity:	An event sync time within the last few minutes	Your organization last synced events with Lightning Sync on this date, at this time. In general, Lightning Sync is syncing records as expected. If you see this status and individual users still report that events are not syncing as expected, check your Exchange server or Lightning Sync configurations for settings related to those particular users.
	An event sync time within a few hours	Your organization last synced events on this date, at this time. You might have recently set up Lightning Sync, because the initial events sync might take up to several hours to complete. If you haven't initiated events sync for your organization for the first time, this status might indicate a problem with events sync in your organization. Monitor the last sync activity over the next 24 hours to see if syncing resumes.
	An event sync time on a past date	Your organization last synced events on this date, at this time. If your organization doesn't sync again within 24 hours or longer, verify that you provided the correct Exchange service account credentials, that Salesforce recognized your service account, and that you've used Microsoft's Remote Connectivity Analyzer to verify that your Exchange server can communicate with Lightning Sync. If the analyzer shows that your connection is working, contact Salesforce Customer Support.
Records synced in last 60 minutes:	The number of events that were synced in your organization in the last 60 minutes	Within the last 60 minutes, your organization last synced this number of events.
	0	Your organization hasn't synced any events within the last 60 minutes. Monitor record sync activity over the next 24 hours to see if syncing resumes. If syncing doesn't resume, use Microsoft's Remote Connectivity Analyzer to verify that your Exchange server can communicate with Lightning Sync. If the analyzer shows that your connection is working, contact Salesforce Customer Support.

If	Provides this status	This status means that
Records synced in last 24 hours:	The number of contacts that were synced in your organization in the last 24 hours	Within the last 24 hours, your organization synced this number of contacts.
	0	Your organization hasn't synced any events within the last 60 minutes. Use Microsoft's Remote Connectivity Analyzer to verify that your Exchange server can communicate with Lightning Sync. If the analyzer shows that your connection is working, contact Salesforce Customer Support.

User Statuses

Table 16: Configuration Setup Statuses

If	Provides this status	This status means that
User assigned to active Exchange configuration:		This user is set up to sync in an active Lightning Sync configuration.
		This user isn't set up to sync in an active Lightning Sync configuration.
User mailbox is running on supported version of Microsoft Exchange:		Lightning Sync supports this user's version of Microsoft Exchange.
		Lightning Sync doesn't support this user's version of Microsoft Exchange.
User recognized by Exchange service account:		This user is represented by the service account that you've set up in Exchange, and Lightning Sync can communicate with your Exchange service account.
		This user isn't represented by the service account that you've set up in Exchange, or Lightning Sync can't communicate with the Exchange service account that you provided. Check your Exchange service account setup to verify that you've set up a valid service account and that it accurately represents this user.
User's reset sync status:	Marked for reset	You've reset this user for sync, but the reset hasn't started. Your reset request is in the system queue and will be completed when the system is available.
	Reset in progress	The reset sync process is in progress. When reset is complete, "User's reset sync status" is no longer displayed on this page.

If	Provides this status	This status means that
User set up Lightning for Outlook:	Yes	This sales rep has set up Lightning for Outlook. If you've set up reps to select which Microsoft events sync to Salesforce, reps select events using Lightning for Outlook.
	No	This sales rep hasn't set up Lightning for Outlook. If you've set up reps to select which Microsoft events sync to Salesforce, reps can't select events until they've set up Lightning for Outlook.

Table 17: Contacts Statuses

If	Provides this status	This status means that
Salesforce_Sync folder found:		The Salesforce_Sync folder was found in this user's email account under the Contacts directory.
		Lightning Sync can't find the Salesforce_Sync folder on your Exchange server or can't create it automatically for this user. You can create the folder Salesforce_Sync for this user as a subdirectory under the Contacts directory in this user's email account.
Salesforce and Exchange email addresses linked:		This user's Microsoft Exchange email address has mapped to the user's Salesforce email address correctly.
		This user's Microsoft Exchange email address hasn't mapped to the user's Salesforce email address correctly. Reset sync for this user.
Salesforce to Exchange sync status:	Not started	This user's contacts hasn't started syncing from Salesforce to Exchange.
	Initial sync in progress	This user's contacts are syncing from Salesforce to Exchange for the first time. This initial sync might take several hours.
	Initial sync completed	This user's contacts have completed syncing from Salesforce to Exchange for the first time.
	Sync in progress	This user's contacts are syncing from Salesforce to Exchange right now.
	In sync	This user's contacts have completed syncing from Salesforce to Exchange.

If	Provides this status	This status means that
	Exchange configuration not set to sync	This user isn't set up to sync contacts from Salesforce to Exchange in an active Lightning Sync configuration.
Exchange to Salesforce sync status:	Not started	This user's contacts have not started syncing from Exchange to Salesforce yet.
	Initial sync in progress	This user's contacts are syncing from Exchange to Salesforce for the first time. This initial sync might take several hours.
	Initial sync completed	This user's contacts have completed syncing from Exchange to Salesforce for the first time.
	Sync in progress	This user's contacts are syncing from Exchange to Salesforce.
	In sync	This user's contacts have completed syncing from Exchange Salesforce.
	Exchange configuration not set to sync	This user isn't set up to sync contacts from Exchange to Salesforce in an active Lightning Sync configuration.
Records in sync	The number of contacts that are syncing for this user	This user has this number of contacts syncing between Exchange and Salesforce. If this user's contacts are syncing as expected, this number matches the number of contacts in this user's Salesforce_Sync folder.

Table 18: Event Statuses

If	Provides this status	This status means that
Calendar folder found:		The calendar folder was found in this user's email account.
		Lightning Sync can't find the user's calendar folder on your Exchange server.
Salesforce and Exchange email addresses linked:		This user's Microsoft Exchange email address has mapped to the user's Salesforce email address correctly.
		This user's Microsoft Exchange email address hasn't mapped to the user's Salesforce email address correctly. Reset sync for this user.
Salesforce to Exchange sync status:	Not started	This user's events haven't started syncing from Salesforce to Exchange.

If	Provides this status	This status means that
	Initial sync in progress	This user's events are syncing from Salesforce to Exchange for the first time. This initial sync might take several hours.
	Initial sync completed	This user's events have completed syncing from Salesforce to Exchange for the first time.
	Sync in progress	This user's events are syncing from Salesforce to Exchange right now.
	In sync	This user's events have completed syncing from Salesforce to Exchange.
	Exchange configuration not set to sync	This user isn't set up to sync events from Salesforce to Exchange in an active Lightning Sync configuration.
Exchange to Salesforce sync status:	Not started	This user's events haven't started syncing from Exchange to Salesforce.
	Initial sync in progress	This user's events are syncing from Exchange to Salesforce for the first time. This initial sync might take several hours.
	Initial sync completed	This user's events have completed syncing from Exchange to Salesforce for the first time.
	Sync in progress	This user's events are syncing from Exchange to Salesforce.
	In sync	This user's events have completed syncing from Exchange to Salesforce.
	Exchange configuration not set to sync	This user isn't set up to sync events from Exchange to Salesforce in an active Lightning Sync configuration.
Records in sync	The number of events that are syncing for this user	This user has this number of events syncing from Exchange to Salesforce. If this user reports difficulty syncing only some events, verify that the user is set up to sync events as expected in the user's Lightning Sync configuration and that the user didn't assign the <code>private</code> option to the event. Also remember that at this time, Lightning Sync doesn't sync recurring events or invitees on events.

Salesforce for Outlook: Set up Sales Reps to Experience Salesforce from Microsoft Outlook Using a Desktop-Based Product

Salesforce for Outlook System Requirements

Confirm that your computing systems meet these system requirements before you download and install Salesforce for Outlook.

Basic Resource	Required Version
SalesforceforOutlook	Salesforce for Outlook v3.0.0 or later after Salesforce Disables TLS 1.0 encryption protocol.
Default email program	<p>Any of the following versions of Microsoft® Outlook® using Microsoft Exchange Online (part of Microsoft Office 365™) or Microsoft Exchange Server (on-premises), along with the latest updates.</p> <ul style="list-style-type: none"> • 2016 (32 and 64 bit) • 2013 (32 and 64 bit) • 2010 (32 and 64 bit) • Outlook 2007 (until Microsoft retirement in October 2017) <p>Salesforce for Outlook supports Outlook installed using Click-to-Run (a streaming installer for Microsoft Office).</p>
Operating system	<p>Any of the following versions of Microsoft Windows®, along with the latest hot fixes.</p> <ul style="list-style-type: none"> • Windows 10 • Windows 8.1 (Pro and Enterprise) • Windows 7 <p>For customers using Apple® Mac OS®, consider setting up Lightning for Outlook and Lightning Sync.</p>
Browser	Microsoft Internet Explorer® with TLS encryption protocol 1.1 or later enabled. See "Other Requirements" for feature-specific browser limitations.

SEE ALSO:[Desktop-Based Salesforce for Outlook](#)[Install and Set Up Salesforce for Outlook](#)[Salesforce for Outlook Supported Languages](#)[Lightning for Outlook: Set Up Sales Reps to Experience Salesforce from Microsoft® Outlook®](#)[Lightning Sync: Sync Your Sales Reps' Microsoft® or Google Contacts and Events with Salesforce](#)

Outlook Configurations and Email Application Publisher Layouts

To set up your Salesforce for Outlook users with the settings they need, create Outlook configurations and email application publisher layouts. With Outlook configurations, you can choose how your reps sync contacts, events, and tasks between Microsoft Outlook and Salesforce, or how reps can access Salesforce content from the Salesforce Side Panel in Outlook. With email application publisher layouts, set up your reps to create Salesforce records directly from the Salesforce Side Panel. To create Outlook configurations and email application publisher layouts from Setup, enter *Outlook Configurations* in the *Quick Find* box, then select **Outlook Configurations**.

Salesforce for Outlook Configurations

Salesforce for Outlook configurations include settings for the data that Salesforce for Outlook users can sync between Microsoft® Outlook® and Salesforce. Administrators can create separate configurations for different types of users, and give users permission to edit some of their own settings. For example, an opportunity team might want to sync everything, while a manager might want to sync only events.

In addition, you can set up your users to create, view, and work with Salesforce records directly in Outlook from the Salesforce Side Panel. The side panel allows users to easily add Outlook emails, events, and tasks to related Salesforce records. Here's how:

🔗 [Using the Salesforce Side Panel to Work with Records in Microsoft® Outlook®](#)

Email Application Publisher Layouts

Users can create accounts, cases, leads, opportunities, and even custom objects directly from the side panel using the email application actions menu. To set up your users to work with the actions menu for Salesforce for Outlook, create the quick actions that you want users to have access to, add those quick actions to the appropriate publisher layouts, and assign the publisher layouts to the right users.

Create Salesforce for Outlook Configurations

Before reps can start using Salesforce for Outlook, you define their experience by creating Outlook configurations. Outlook configurations define Salesforce for Outlook settings for reps, like which features reps have access to, and how reps' records sync between Outlook and Salesforce. If you'd like to define unique settings for a subset of your sales team, create multiple Outlook configurations, and assign reps accordingly.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. Click **New Outlook Configuration**.
3. Enter a name and description of the configuration.
4. Select **Active** to activate the configuration.
5. Select **Notify of product updates** so that sales reps can see when upgrades for Salesforce for Outlook are available to download.
6. Depending on the experience you want your reps to have, define some or all these settings.

Assign Users to Salesforce for Outlook Configurations

After you define basic information for a Salesforce for Outlook configuration, you select the Salesforce for Outlook users that the configuration's settings will apply to.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.
3. In the Assign Users and Profiles section, select either *Profiles* or *Users* in the **Search** drop-down list.
4. If you don't see the member you want to add, enter keywords in the search box and click **Find**.
5. Select members from the Available Members box, and click **Add** to add them to the group. If all available users are assigned to this configuration, the Users list is empty and you can only assign profiles.
6. To remove members, select those members and click **Remove**. If removed users are assigned to another active configuration through a profile, that other configuration is used the next time they open Outlook. Otherwise, removed users are unable to use Salesforce for Outlook.
7. Click **Save**. All changes take effect the next time data syncs for the users in this configuration. If you assign a user who is already assigned to a different configuration, that user is removed from the other configuration and assigned to this one. If an assigned user is also part of a profile assigned to another active configuration, the configuration that lists the user directly is used.

Define Data Settings for Salesforce for Outlook

Data settings control the sync behavior and email functionality of Salesforce for Outlook. You can define the following settings using the Data Settings fields in a Salesforce for Outlook configuration.

- [Email-related options for the Salesforce Side Panel, as well as add email and create cases](#)
- [Sync direction](#)
- [Conflict behavior](#)
- [Field mappings](#)
- [Matching criteria](#)
- [Modification permissions](#)

Set Up Email Options for Salesforce for Outlook

Help your sales teams track important Microsoft® Outlook® emails related to Salesforce contacts and leads. And get those contacts and leads to appear directly in Outlook.

Enable the Salesforce Side Panel

Let your sales reps see Salesforce contacts and leads that are relevant to your reps' emails and events.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.
3. Select *Side Panel*.
4. Save your changes.

Let Side Panel Sales Reps Add Emails, Attachments, Events, and Tasks to Records

The *Add Email* setting lets them add Outlook emails and their attachments (✉), events (📅), and tasks (📋) to their Salesforce records directly from the side panel. You can also let your reps *Allow users to select attachments* (📎), which lets sales reps choose specific attachments to add to Salesforce, instead of automatically including them all.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.

To enable Add Email, Side Panel, and Create Case:

- "Customize Application"

3. Select `Side Panel`.
4. Select `Add Email`.
5. To let reps choose specific attachments to add to Salesforce, select **Allow users to select attachments**.
6. Save your changes.

Let Users Who Aren't Working in the Side Panel Add Emails and Attachments to Records

For sales reps who don't have the side panel enabled, the `Add Email` setting adds the **Add Emails** and **Send and Add** buttons to the Outlook ribbon. The setting also lets your reps add up to 10 emails simultaneously to Salesforce.

1. From Setup, enter *Outlook Configurations* in the `Quick Find` box, then select **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.
3. Deselect `Side Panel`.
4. Select `Add Email`.
5. Save your changes.
6. If you don't have My Email to Salesforce enabled, click **Enable** in the popup message to enable it.

Let Users Who Aren't Working in the Side Panel Create Cases from Outlook

For sales reps who don't have the side panel enabled, the **Create Cases** setting adds the drop-down list button to Outlook. The setting also lets your reps create Salesforce cases from Outlook emails. If you've enabled the side panel for your reps, you can give them access to the Side Panel Publisher. The publisher lets your reps create various kinds of Salesforce records directly from the side panel.

 **Note:** Before you can enable the Create Case feature, review and complete the procedures in [Set Up Create Case for Salesforce for Outlook Users](#) on page 2160. Then, return to this topic to complete the following procedure.

1. From Setup, enter *Outlook Configurations* in the `Quick Find` box, then select **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.
3. Clear the `Side Panel` option.
4. Select `Create Case`. Then, choose one of these links.
 - **Recommended: Choose an Existing Create Case Destination**, which lets you choose existing destinations. You can choose up to 10 destinations for each Outlook configuration.
 - **Create a New Create Case Destination**. To create one, save your work first, then create the destination. After that, return to the Outlook Configuration page to complete the Create Case setup requirements.
5. Save your changes.

Set Up Create Case for Salesforce for Outlook Users

The Create Case feature in Salesforce for Outlook lets users create cases in Salesforce from emails in Microsoft® Outlook®. As an administrator, you can create Email-to-Case destinations that appear in the drop-down list button **Create Cases** in Outlook. For each destination, you choose the assignee, which can be either individual users or queues. You can add up to 10 destinations for each Outlook configuration. When users create cases, they can add up to 10 emails simultaneously for each destination.

Before Salesforce for Outlook users can create cases from Outlook emails, you'll need to perform the following procedures.

1. If you haven't already done so, enable and configure On-Demand Email-to-Case.
2. Define Email-to-Case destinations (also known as email routing addresses).
3. Enable the Create Case feature in your configurations, which adds the **Create Cases** drop-down list button in Outlook.

Define Sync Directions for Your Salesforce for Outlook Users

Set sync directions for sales reps who sync contacts, events, and tasks between Microsoft® Outlook® and Salesforce.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. Create or edit a configuration, and select one of these sync directions under Data Settings for each object being synced.
 - *Don't sync*—Outlook and Salesforce records aren't synced, and you can't select an Outlook folder to sync within the setup wizard.
 - *Salesforce to Outlook*—When data first syncs, a record in Salesforce creates or updates a record in Outlook. During future syncs, changes made to Salesforce records appear in Outlook, regardless of whether the Outlook version of the record has changed. In addition, deleting a synced record in Salesforce deletes its Outlook counterpart. Outlook changes are never sent to Salesforce. The required conflict behavior setting for this option is *Salesforce always wins*.
 - *Outlook to Salesforce*—During its first sync, a record in Outlook creates or updates a record in Salesforce. During future syncs, changes made to Outlook records appear in Salesforce, regardless of whether the Salesforce version has changed. In addition, deleting a synced record in Outlook deletes its Salesforce counterpart. Salesforce changes are never sent to Outlook. The required conflict behavior setting for this option is *Outlook always wins*. This option isn't available for contacts.
 - *Sync both ways*—When records sync, changes to Outlook and Salesforce sync between the two systems. If records conflict, the conflict behavior setting determines which record wins.
3. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.
4. Define a data set for each object that has a sync direction.

- [Define Sync Directions for Your Salesforce for Outlook Users](#)

Customize the Fields That Sync Between Salesforce and Microsoft® Outlook®

Customize fields in the records that your sales reps sync using Salesforce for Outlook. Also add custom Outlook or Salesforce fields you want your reps to sync.

Field mappings define which Salesforce and Outlook fields correspond when items sync between the two systems. Salesforce comes with a set of default mappings. Decide whether to let your sales reps edit their own field mappings in their personal settings.

Map these custom field types.

- Outlook text fields
- Salesforce text fields
- Some Salesforce picklist fields

Edit default field mappings or set up custom field mappings for your reps.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. Select an Outlook Configuration you'd like to edit, or create a new one.
3. Under Data Settings, click **Edit Field Mappings** under *Contacts*, *Events*, or *Tasks* to display all the fields for records on that object.
4. Review which Salesforce fields are mapping to each Outlook field.
5. Edit the Salesforce or Outlook field mappings you'd like to change, or create mappings for custom fields. Salesforce for Outlook lets you edit any field mapping with a picklist. You can add more mappings at the bottom of the list. You can remove mappings by clicking the X next to the mapping.

- [Define Matching Criteria for Salesforce for Outlook](#)
- [Define Conflict Behavior for Salesforce for Outlook](#)

Define Matching Criteria for Salesforce for Outlook

Define how Salesforce for Outlook handles multiple matching Salesforce contacts when a contact first syncs from Outlook.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. Edit a configuration, and select one of these matching criteria options under Data Settings for contacts.
 - **Most recent activity**—Choose the Salesforce contact that shows the most recent activity (such as a phone call or email), as shown in the contact’s Activity History related list. This option is the default matching criteria.
 - **Last updated**—Choose the Salesforce contact that was most recently modified.
 - **Oldest**—Choose the Salesforce contact that has the earliest creation date.
3. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

If we don’t find a matching contact in Salesforce, we create one that syncs with the Outlook contact. We then either assign the synced contact to a Salesforce account, leave it unassigned, or place it in your sales rep’s My Unresolved Items page.

Let Users Modify Salesforce for Outlook Settings

1. From Setup, enter *Outlook Configurations* in the *Quick Find* box, then select **Outlook Configurations**.
2. Edit a configuration, and select any of the following options under Data Settings for each object being synced. You can allow users to modify:
 - Whether object is synced
 - Sync direction
 - Conflict behavior
 - Field mappings
 - Outlook folder for syncing
3. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

You can overwrite users' modifications any time by selecting *Overwrite configuration changes made by users* in a configuration. After you save the updated configuration, the new settings replace the existing settings for users of the configuration the next time their data syncs.

Assign Users' Sync Folders in Microsoft® Outlook®

You can assign your Salesforce for Outlook users' contact, event, and task sync folders in Outlook to simplify their setup process and keep sync folders consistent across your company. You can specify Outlook sync folders from Salesforce Outlook configurations.

By default, users can change the Outlook folders where their Salesforce contacts, events, and tasks sync from the Settings menu in their Salesforce for Outlook system tray. You can prevent users from changing their Outlook sync folders when you clear this default setting for contacts, events, and tasks, and assign specific Outlook sync folders from users' Outlook configurations.

 **Note:** Assigning Outlook sync folders might create Outlook directory folders for all of the users in your Outlook configuration. Salesforce for Outlook can't remove Outlook sync folders from your users' Outlook directories after they've been created. If you reassign a different folder later, the original folder remains in users' local Outlook directories until users delete the folder.

1. From Setup, enter *Outlook Configurations* in the *Quick Find* box, then select **Outlook Configurations**.
2. Open an Outlook configuration.
3. To assign a folder where users sync contacts, in Data Settings, deselect **Outlook folder for syncing contacts** on the *Allow users to modify:* setting.
4. In the text box that appears, type the name of the Outlook folder where you want your users' contacts to sync with Salesforce. Type the name of a common folder that exists in the Outlook directory for each of your users, at the same directory level as the Outlook default contacts folder. Folder names are case sensitive. If you type the name of a folder that doesn't exist at that level for each user, Salesforce creates the folder in Outlook for those users. To have Salesforce for Outlook sync with a nested Outlook folder, type a filepath, including backslashes (\).
For example, to assign the Outlook folder "sfdc_sync_contacts" as a nested directory under your users' default Outlook contacts folder, type *Contacts\sfdc_sync_contacts* in the *Outlook folder for syncing contacts* text box,

USER PERMISSIONS

To create and edit Outlook configurations:

- "Configure Application"

where *Contacts* is your users' default contacts folder, and *sfdc_sync_contacts* is the folder where you want your users' Salesforce contacts to sync.

The screenshot shows the 'Contacts' configuration window. It includes sections for 'Sync Direction' (set to 'Sync both ways'), 'Conflict Behavior' (set to 'Salesforce always wins'), and 'Edit Field Mappings'. Under 'Edit Field Mappings', there are three radio button options: 'Has the most recent activity' (selected), 'Was last updated', and 'Has the oldest creation date'. At the bottom, there are several checkboxes for 'Allow users to modify' and a text field for 'Outlook folder for syncing contacts' containing the path 'Contacts\sfdc_sync_contacts', which is highlighted with a red circle.

If the folder exists in your users' Outlook directories, Salesforce for Outlook syncs your contacts with it. If the folder doesn't exist, Salesforce for Outlook creates a folder at "Contacts\sfdc_sync_contacts."

5. Click **Save**.
6. Instruct your users to save their Salesforce for Outlook settings again to confirm the changes that you've made to their systems. To do so, instruct your users to:
 - a. In the settings wizard, right-click the Salesforce for Outlook icon (📧) in their system tray, and then click **Settings**.
 - b. Click **Next** from Review Your Sync Direction.
 - c. Click **Next** from Control Which Outlook Items Sync.
 - d. Click **Save** from Syncing Private Items.

Salesforce for Outlook locates Outlook folders that exist in your users' Outlook directories or creates them for your users.

7. Instruct your users to move the Outlook contacts that they want to sync to the folder that you specified.

To change the Outlook folder locations where users sync events and tasks with Salesforce, repeat steps 3 through 7 in the events and tasks sections.

Define Advanced Settings for Salesforce for Outlook

Use advanced settings in a Salesforce for Outlook configuration to customize the default behavior of Salesforce for Outlook, such as setting the maximum size of the sync log. Click **Edit** to change the value of an advanced setting or **Remove** to remove it from the configuration.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one that you want to modify. Otherwise, click **New Outlook Configuration**, and then complete the required fields.
3. Click **Add Advanced Setting** in the Advanced Settings section of an Outlook configuration.
4. Choose one of these settings and enter a value.

Advanced Setting	This setting indicates
HTTPTimeout	The number of seconds Salesforce for Outlook waits while trying to establish an HTTP connection with Salesforce. The value must be between 15 and 360 seconds, and the default is 30.
MaxLogFileSize	The maximum file size of the sync log you'll maintain. Value must be between 1 and 128 MB, and the default is 1.
MaxRetries	The number of times Salesforce for Outlook tries to connect to Salesforce. The value must be between 0 and 10, and the default is 3.

5. Click **OK**.
6. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

Define Data Sets for Salesforce for Outlook

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records sync. Each configuration must have a data set in order for users to sync with Outlook.

The Outlook Configuration detail page shows a summary of the configuration's current filters.

 **Note:** If your company uses Platform Encryption, you can't set filters on fields you've encrypted. Otherwise, Salesforce for Outlook can't sync contacts, events, or tasks for users assigned to that configuration.

1. From Setup, enter *Outlook Configurations* in the **Quick Find** box, then select **Outlook Configurations**.
2. Click the name of an Outlook configuration.
3. In the Data Sets related list, click **Edit**.
4. Specify filters.
5. To see how many items sync with the filters you've specified, you can check the data set size.
6. Click **Save**.

Learning about Data Sets for Salesforce for Outlook

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records sync.

Knowing What Syncs

Salesforce for Outlook syncs records based on definitions in data sets, along with records related to them.

Understanding Limits to Data Sets

When using data sets, users can sync up to 5,000 records per filter between Microsoft® Outlook® and Salesforce at a time. This means that if users have more than 5,000 records to sync based on the configuration of their data sets, Salesforce for Outlook won't sync some of them. In addition, users may find that syncing these large quantities of records may slow down the sync process. You can, however, increase the limits for the number of records users can sync. Just keep in mind that you can't reduce the likelihood of the sync process slowing down.

Increasing Limits to Data Sets

If your users are working with more than 5,000 records, you can configure their data sets so that they can sync larger quantities of records. To do this, you'll edit data sets to include additional filters. For example, under Filter By Record Ownership in the Contact Filters section, choose **Selected Contacts**. Then, choose **User's Records** under Contacts, Contacts on Opportunities, and Contacts on Accounts. Because the data set now has three filters, your users can now sync up to 15,000 contact records.

Keep in mind that these various filters you set up won't necessarily select records that are mutually exclusive. Therefore, the sync process might not sync exactly 15,000 records. To avoid this situation, you can further refine the group of contacts you want to sync. Just define additional parameters under Filter By Additional Objects and Fields.

After defining the filters, you can get a record count for your users in the Data Set Size section. To do so, enter a user, and then click **Get Record Count**. If your users still exceed sync limits for the filters you set up, your users may find that the sync process selects records in a random fashion.

About Person Accounts

If your organization enabled person accounts and your users have more than 5,000 records in Salesforce, data sets work in a different way. Specifically, Salesforce runs a query first on person accounts that match filter criteria, and then on contacts assigned to these accounts. So it's possible for the sync process to reach the 5,000 record limit (including person accounts and contacts) and not include some of the contacts your users would expect to sync.

Available in all editions

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records sync. For example, you may want to let certain users sync all contacts, but let other users sync only contacts related to their opportunity teams. In addition, you can filter by the fields in the records, such as letting users sync only contacts related to specific accounts and opportunities.

The Outlook Configuration detail page shows a summary of the configuration's current filters.

Note: If your company uses Platform Encryption, you can't set filters on fields you've encrypted. Otherwise, Salesforce for Outlook can't sync contacts, events, or tasks for users assigned to that configuration.

1. [Define a data set](#) for a configuration.
2. Under Filter By Record Ownership, specify the contacts users can sync.
3. If you choose **Selected Contacts**, you can further limit which contacts users sync.

For	To allow users to sync	Select
Contacts	All contacts that they own	User's Records
	All contacts they and their subordinates in the role hierarchy own	User's Team's Records
Contacts on Opportunities	Contacts related to their opportunities	User's Records
	Contacts related to opportunities that they and their subordinates in the role hierarchy own	User's Team's Records
	Contacts related to opportunities of which they are members of opportunity teams, but not opportunities that users own	User's Opportunity Teams' Records
Contacts on Accounts	Contacts related to their accounts	User's Records
	Contacts related to accounts they and their subordinates in the role hierarchy own	User's Team's Records
	Contacts related to accounts of which they are a team member, but not accounts that users own	User's Account Teams' Records

4. Under Filter By Additional Objects and Fields, add field-level filters you need.

- a. Select an object and a field within that object.
 - b. Select the correct filter operator.
 - c. Enter a value for the selected field.
5. To add a new filter, click **Add Row**; to delete the last one in the list, click **Remove Row**.
 6. Under Other Contacts to Include, you can choose to have Chatter contacts automatically sync for users of this configuration. To do this, select `Sync contacts users follow in Chatter`.

[Sample Lightning Sync and Salesforce for Outlook Data Sets](#)

Salesforce for Outlook Contact Filters

Contact filters control the number of records that Salesforce for Outlook users can sync between Outlook and Salesforce. Note the following when using contact filters.

- The criteria you specify are AND based. That is, if you specify more than one criterion, the result includes only records that match all of the criteria.
- If entering a date, use the format allowed by your `Locale` setting. You can also use special date values like TODAY, NEXT WEEK, NEXT YEAR, LAST <number> DAYS, and so on.
- Place quotation marks around numbers or other data that includes commas. For example `Amount equals "10,000"` returns records that have an amount of \$10,000 but `Amount equals 10,000` returns \$10,000 as well as \$10 and \$0.
- When you use the "less than," "greater than," "less or equal," or "greater or equal" operators on fields that have numeric values, records with blank or "null" values are returned as if their value is zero (0).
- To limit results to records that are blank or contain "null" values for a particular field, choose the field and the "equals" or "not equal to" operators, leaving the third field blank. For example, `Amount equals` returns records with blank amount fields. You can search for blank values or other specified values at the same time. For example, `Amount equals 1,,2` returns records where the `Amount` is blank or contains the value "1" or "2". For example, if you create a workflow a filter for accounts with the criteria `Annual Revenue less than 100000`, account records match if their `Annual Revenue` is blank.
- To search for phone numbers, include the exact phone number formatting or example, `Phone starts with (561)`.
- Separate search terms by commas to filter by more than one value. You can enter up to 80 characters, including commas and spaces. For example, to search for accounts in California, New York, or Washington, use `State contains CA,NY,WA`.
- When you filter on standard long text area fields, such as `Description`, only the first 1000 characters of the field are searched.
- You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration's filters.
- If you need to reference user information in your contact filters, you can add the following merge fields to them.

EDITIONS

This feature available to manage from: both
Salesforce Classic and
Lightning Experience

Available in all editions

Merge Field	Description
<code>\$User.ID</code>	References the ID of the current user. This merge field can be applied to fields that contain a user lookup. The valid operators for this merge field are Equals and Not Equal To. When creating

Merge Field	Description
	mobile view filters that reference an owner field, you can only use the <code>\$User.ID</code> merge field.
<code>\$User.Username</code>	References the username of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.
<code>\$User.Firstname</code>	References the first name of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.
<code>\$User.Lastname</code>	References the last name of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.
<code>\$User.Fullname</code>	References the first and last name of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.

Enter Event Filters for Lightning Sync and Salesforce for Outlook

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records sync. For example, most users may sync only current and future events, while some users may need to also sync past events. Salesforce for Outlook syncs events based on their end dates rather than their start dates. For example, if you're syncing current and future events only, a two-day event that started yesterday still syncs.

The Data Sets section of the Outlook Configuration detail page shows a summary of the configuration's current event filters.

1. [Define a data set](#) for a configuration.
 2. Under Events, enter one of these filters in the `Greater or equal to` field.
 - *TODAY*—Syncs events that end on or after today. The start time is 12:00 a.m.
 - *LAST MONTH*—Syncs events that ended on or after the first day of last month.
 - *LAST N DAYS*—Syncs events that ended on or after a specified number of days ago, such as *LAST 30 DAYS*.
 3. You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration's filters.
 4. Save the data set.
-  **Note:** The following items don't sync: all-day events beginning on the first day you're configured to sync, and event attendees. Multiday events sync as single events in either direction. Multi-day events do sync.

Create Task Filters for Salesforce for Outlook

Specify which tasks sync between Microsoft® Outlook® and Salesforce for your sales teams.

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records sync. For example, most users may sync past-due tasks, while other users sync only current and future tasks. Salesforce for Outlook syncs tasks based on their due dates rather than their start dates. For example, if you're syncing current and future tasks only, a task that started yesterday still syncs.

The Data Sets section of the Outlook Configuration detail page shows a summary of the configuration's current task filters.

1. [Define a data set](#) for a configuration.
2. Under Tasks, enter one of these filters in the `Greater or equal to` field.
 - *TODAY*—Syncs tasks that are due on or after today. The start time is 12:00 a.m.
 - *LAST MONTH*—Syncs tasks that were due on or after the first day of last month.
 - *LAST N DAYS*—Syncs tasks that were due on or after a specified number of days ago, such as *LAST 30 DAYS*.
3. Choose whether recurring Salesforce tasks sync to Outlook.

4. You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration's filters.
5. Save the data set.

 **Note:** Salesforce for Outlook doesn't sync every kind of task. These kinds of tasks never sync:

- Recurring Outlook tasks to Salesforce
- Completed tasks, if marked as completed before Salesforce for Outlook syncs
- Emails or contacts added to your to-do list when you flag items for follow-up (because Outlook doesn't consider these items to be tasks)

Sample Lightning Sync and Salesforce for Outlook Data Sets

Because users with the same role usually have similar data sync requirements, many administrators create sync configurations based on the positions in their organization. Below are sample data sets for common Salesforce groups. Your Salesforce for Outlook and Lightning Sync users have unique needs, but you can use these examples as a reference to help you get started creating Outlook configurations (for Salesforce for Outlook users) and Lightning Sync configurations (for Lightning Sync users).

EDITIONS

This feature available to manage from: both Salesforce Classic and Lightning Experience

Available in all editions

Sales Manager

Sales managers usually need to see records they own and the records of the users who report to them. In addition, they need to see the latest contact information for anyone associated with large deals in the pipeline and any upcoming meetings that might be related to these deals. They may also like to have their Chatter contacts in Outlook.

Sample Outlook Configuration for Sales Managers:

```
Contacts
Contacts: User's Records, User's Team's Records
Contacts on Opportunities: User's Team's Records
Contacts on Accounts: User's Team's Records
Contacts in Chatter: Records User is Following

Events
Events: User's Records
Date greater or equal TODAY

Tasks
Tasks: User's Records
Date greater or equal TODAY
```

Sales Engineer

Sales Engineers often only need the contacts owned by them and the other members of their opportunity teams. They may also want their Chatter contacts, a record of the past month's meetings, and a schedule of all future meetings.

Sample Outlook Configuration for Sales Engineers:

```
Contacts
Contacts: User's Records
Contacts on Opportunities: User's Opportunity Teams' Records
Contacts in Chatter: Records User is Following

Events
Events: User's Records
Date greater or equal LAST MONTH

Tasks
Tasks: User's Records
Date greater or equal LAST MONTH
```

Account Executive

Account executives need to see contacts related to their accounts and opportunities. The opportunities are filtered so only contacts related to open opportunities with a probability over 40% sync. They'd also like to sync their Chatter contacts, all future meetings, and all meetings from the last two months.

Sample Outlook Configuration for Account Executives:

```

Contacts
Contacts on Opportunities: User's Records
  (Probability (%) greater than 40) AND (Stage not equal to Closed Won,Closed Lost
Contacts on Accounts: User's Records
Contacts in Chatter: Records User is Following

Events
Events: User's Records
Date greater or equal LAST 60 DAYS

Tasks
Tasks: User's Records
Date greater or equal LAST 60 DAYS

```

Check the Size of Salesforce for Outlook Data Sets

You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration's filters. If the numbers are too high or low, you can adjust the filters and check the size again. The maximum record count is 5000 per object.

1. Define a data set for a configuration.
2. Under Data Set Size, click the lookup icon next to the `User` field.
3. Select a user. To test maximum size, choose a user who owns a lot of records, even one who may not be currently assigned to the configuration.
4. Click **Get Record Count**. The number of records that would sync between Outlook and Salesforce for that user appear.
5. Adjust the filters or selected user and retest the data set as needed. Nothing is saved until you click **Save**.

Email Application Publisher Layouts: Set Up Reps to Create Records Directly from Microsoft® Outlook® or Gmail™

Let Lightning for Outlook, Lightning for Gmail, or Salesforce for Outlook users create accounts, cases, leads, opportunities, and even custom objects directly from their email applications. Reps create records using action menus, which you set up from Salesforce. Your Salesforce edition determines how you set up action menus and whether you can customize them.

You can set up action menus for reps working from Lightning for Outlook, Lightning for Gmail, and Salesforce for Outlook.

Follow these steps to set up action menus for reps to access from their email applications.

1. [Create Quick Actions for Email Application Action Menus.](#)
2. Add actions to the appropriate publisher layout.
 - If you're working from Contact Manager, Group, or Professional Edition, [Add Actions to Global Publisher Layout](#). These actions are display for all action menus that use the global publisher layout. However, reps see only **Create a Record** actions from their email applications.
 - If you're working from Enterprise, Performance, Unlimited, or Developer Edition, you [Customize Action Menus for Email Applications](#) by creating publisher layouts specifically for email applications. You can create multiple layouts to give different reps access to different actions.
3. Give reps access to their action menus.
 - If you're working from Contact Manager, Group, or Professional Edition, [Assign Global Publisher Layouts to User Profiles](#).
 - If you're working from Enterprise, Performance, Unlimited, or Developer Edition, [Assign Email Application Publisher Layouts to User Profiles](#).

[Create Quick Actions for the Salesforce Side Panel Publisher](#)

Take the first step in preparing your Salesforce for Outlook users to create records directly from the Salesforce Side Panel. You'll set up **Create a Record** global quick actions for each kind of record you want to appear in users' Side Panel Publisher menus.

[Customize Email Application Action Menus](#)

Take the second step in preparing reps to create records directly from Lightning for Outlook, Lightning for Gmail, or Salesforce for Outlook. You can create multiple layouts to give different reps access to different actions.

EDITIONS

Lightning for Outlook, Lightning for Gmail (beta), and Salesforce for Outlook are available from both Salesforce Classic and Lightning Experience

Action menus are available in: **All Editions**

Customizable email application action menus are available in: **Enterprise, Performance, Unlimited, and Developer Editions**

USER PERMISSIONS

To create actions, customize, and assign email application action menus:

- "Customize Application"

To view email application publisher layouts:

- "View Setup and Configuration"

[Assign Email Application Publisher Layouts to User Profiles](#)

Enterprise, Performance, Unlimited, and Developer Editions let you customize the action menus for Outlook or Gmail using email application publisher layouts. After you've created the email application publisher layout, give your users access by assigning it to their user profiles.

SEE ALSO:

[View and Work with Salesforce Records from Microsoft® Outlook®](#)

Create Quick Actions for the Salesforce Side Panel Publisher

Take the first step in preparing your Salesforce for Outlook users to create records directly from the Salesforce Side Panel. You'll set up `Create a Record` global quick actions for each kind of record you want to appear in users' Side Panel Publisher menus.

The Salesforce Side Panel Publisher is a menu that lets users create accounts, cases, contacts, leads, opportunities or custom objects records directly from the side panel. You'll choose which quick actions appear in users' side panel publisher menus by creating global `Create a Record` actions for each kind of record.

 **Note:** You can use global actions for several types of publisher menus found in Salesforce, like the ones for the Home page or the Chatter tab. If you've already set up global `Create a Record` actions for the kinds of records you want available to your users, there's no need to set up the actions again—you'll find these actions already available to add to all publisher layouts.

If you haven't created global `Create a Record` actions for the kinds of records you want available to your users, you'll have to do so now.

1. From Setup, enter `Global Actions` in the `Quick Find` box, then select **Global Actions**.
2. Click **New Action**.
3. Select `Action Type` **Create a Record**.
Only `Create a Record` actions appear in the side panel publisher menu.
4. Select a `Target Object` for the type of record you want available to users with this action.
If the `Target Object` requires a `Record Type`, make sure that the users you'll assign to this action also have access to that record type.
5. Enter a `Label` for the new action that tells your users what it does.
6. Click **Save**.
7. From the Action Layout Editor, drag the fields you want to appear on the side panel publisher record detail page.
If any of these fields are marked as required for this type of record elsewhere in your organization, make sure to include the fields in this action, too. This is because Salesforce won't let your users save records from the side panel publisher if the required fields aren't included in the record detail. The action layout editor displays red asterisks next to required fields.

After creating your `Create a Record` actions, the next step to setting up the side panel publisher for your users is to add your global actions to the appropriate side panel publisher layout. If you're working from Contact Manager, Group, or Professional Edition,

EDITIONS

[Email Application Publisher Layouts: Set Up Reps to Create Records Directly from Microsoft® Outlook® or Gmail™](#)
[Customize Email Application Action Menus](#)

Customize Email Application Action Menus

Take the second step in preparing reps to create records directly from Lightning for Outlook, Lightning for Gmail, or Salesforce for Outlook. You can create multiple layouts to give different reps access to different actions.

Before you can customize email application action menus for your reps, make sure you [Create Quick Actions for Email Application Action Menus](#).

Enterprise, Performance, Unlimited, and Developer Editions let you customize the action menus that display in your reps' email applications. You can do this by adding quick actions to email application publisher layouts. In addition, you can create multiple email application layouts so that reps with different job responsibilities can see only the quick actions that they need. For example, maybe your sales reps need to create contacts, leads, and opportunities, but your service reps need to create contacts and cases.

Follow these steps to customize action menus for email applications.

1. From Setup, use the **Quick Find** box to search for settings for your email integration feature. Search for Lightning for Outlook or Lightning for Gmail for those features. For Salesforce for Outlook, search for **Outlook Configurations**.
2. Under Email Application Publisher Layouts, click **New**. Give your new layout a name, and then click **Save**.
3. Drag the quick actions that you want into the Quick Actions in the Salesforce Classic Publisher section. For help using the publisher, see [Add Actions to Global Publisher Layouts](#).

After you add actions to your email application publisher layout, the final step to setting up email application action menus is to give users access. If you're working from Enterprise, Performance, Unlimited, or Developer Edition, [Assign Email Application Publisher Layouts to User Profiles](#).

SEE ALSO:

Assign Email Application Publisher Layouts to User Profiles

Enterprise, Performance, Unlimited, and Developer Editions let you customize the action menus for Outlook or Gmail using email application publisher layouts. After you've created the email application publisher layout, give your users access by assigning it to their user profiles.

If you're working from Contact Manager, Group, or Professional Edition, [Assign Global Publisher Layouts to User Profiles](#). For all other editions, assign Email Application Publisher Layouts by following these steps.

1. From Setup, use the **Quick Find** box to search for settings for your email integration feature. Search for Lightning for Outlook or Lightning for Gmail for those features. For Salesforce for Outlook, search for **Outlook Configurations**.
2. Under Email Application Publisher Layouts, click **Publisher Layout Assignment > Edit Assignment**.
3. Select a user profile by clicking anywhere on its row in the table.
4. From the Publisher Layout to Use drop-down, select the layout that you want to assign to the profile.
5. Click **Save**.

Connect for Outlook: (Retired)

Before you get interested in our retired, legacy Connect for Outlook product, we urge you to explore either our cloud- or desktop-based Microsoft integration products: Lightning for Outlook or Salesforce for Outlook.

 **Important:** Effective Winter '16, we retired Connect for Outlook. This means the product no longer saves your emails or syncs your contacts, events, and tasks between Microsoft® Outlook® and Salesforce.

But don't worry! Become even more productive when you migrate to either Lightning for Outlook or Salesforce for Outlook. Team up with your Salesforce administrator to determine which product is best for you and your colleagues.

Set Up Voice

Voice allows users to access telephony features directly in Salesforce.

To use Voice in your org:

1. [Voice Prerequisites](#)
Plan out your implementation before enabling Voice in your organization.
2. [Enable Voice](#)
Turn on Voice from the Voice Settings page in Lightning Experience.
3. [Add Voice to the Utility Bar](#)
Use the App Manager to make Voice available from the utility bar at the bottom of the page. The utility bar gives your sales reps quick access to commonly used tools.
4. [Create a Permission Set with Voice Features](#)
Assign the Voice app permissions with a custom permission set.
5. [Assign the Voice Permission Set to Users](#)
Assign the Voice licenses to users from Setup.
6. [How Do I Manage Voice Usage?](#)
See your org's Voice usage from Setup.

EDITIONS

Available in: Lightning Experience

Available in: **Professional, Enterprise, Performance, and Unlimited** Editions

Voice is available for an additional cost as an add-on license.

Voice Prerequisites

Plan out your implementation before enabling Voice in your organization.

Having a dedicated network for your Voice calls is best. We recommend having at least 10 kbps per Voice session available, but having 500 kbps+ per Voice session is optimal.

The supported browsers for Voice include the most recent versions of Chrome, Firefox, and Edge. You also need open ports on your computer and network firewalls for Voice to work. Make sure that the following ports aren't blocked:

- TCP: port 80 and 443
- UDP: all ports between 10,000 and 60,000

 **Note:** Voice should not be assigned to users already using Open CTI.

To disable Open CTI for users, from Setup, enter *Users* in the **Quick Find** box, then select **Users**. Then deselect the **Call Center** field for Voice users.

The Voice product currently includes the following limitations:

- Voice features are available in Lightning Experience on the desktop only.
- Phone numbers in reports and dashboards can't be directly called with Voice.
- Outgoing calls are supported to the U.S. and Canada only.
- Every license is allowed one dedicated number. To change it, an admin can release the number, and the Voice user can then reassign themselves another number. Admins can release and replace, at most, a single number for each user each month.
- If your org has record types enabled for tasks, you need to [assign the Log a Call quick action to a specific record type](#) in order to log calls.
- Phone numbers are subject to availability, and numbers from all area codes may not be available.

Before beginning the implementation process, Salesforce must enable Voice permissions and provision Voice licenses for your organization. Your Salesforce contact coordinates it with you, but you can check if your organization has available Voice licenses. In Setup, enter *Company Information* in the **Quick Find** box, then select **Company Information**, and check for **Voice Outbound User**, **Voice Minutes**, and **Voice Inbound User** under Permission Set Licenses.

For information about using Voice in a sandbox environment, see [Test Voice Features in Sandbox](#).

EDITIONS

Available in: Lightning Experience

Available in: **Professional**, **Enterprise**, **Performance**, and **Unlimited** Editions

Voice is available for an additional cost as an add-on license.

USER PERMISSIONS

To enable Voice features:

- "Customize Application"

To assign permission sets:

- "Assign Permission Sets"

To manage users:

- "Manage Users"

AND

"Manage Profiles and Permission Sets"

Enable Voice

Turn on Voice from the Voice Settings page in Lightning Experience.

1. From Setup, enter *Voice Settings* in the *Quick Find* box, then select **Voice Settings**.
2. Enable Voice.

Optionally, enable personal voicemail and prioritized call lists for your org as well.

Add Voice to the Utility Bar

Use the App Manager to make Voice available from the utility bar at the bottom of the page. The utility bar gives your sales reps quick access to commonly used tools.

1. From Setup, enter *App Manager* in the *Quick Find* box, then select **App Manager**.
2. Edit an existing Lightning app or click **New Lightning App**. You can also upgrade a custom Classic app to a Lightning app.
If available, the Lightning Sales app contains numerous options preconfigured for sales users.
3. On the Utility Bar tab, click **Add** and select **Voice**.
4. On the Assign to User Profiles tab, make the app available to relevant user profiles.
5. Verify the other app details, including the app name, branding information, and available menu items.
6. Save your changes.

To verify your changes, click the App Launcher and select the app that has Lightning Voice enabled.

EDITIONS

Available in: Lightning Experience

Available in: **Professional, Enterprise, Performance,** and **Unlimited** Editions

Voice is available for an additional cost as an add-on license.

USER PERMISSIONS

To enable Voice features:

- "Customize Application"

EDITIONS

Available in: **Professional, Enterprise, Performance,** and **Unlimited** Editions

Voice is available for an additional cost as an add-on license.

USER PERMISSIONS

To enable Voice features:

- "Customize Application"

Create a Permission Set with Voice Features

Assign the Voice app permissions with a custom permission set.

1. From Setup, enter *Permission Sets* in the **Quick Find** box, then select **Permission Sets**.
2. Click **New**.
3. Enter a name for the permission set.
Naming it *Voice* makes it easy to identify.
 -  **Note:** The **License** dropdown should have **None** selected. Don't select a specific user license for the permission set.
4. Click **Save**.
5. Click **App Permissions**.
6. Click **Edit**.
7. Select **Access Voice Minutes**, **Access Voice Outbound Calls**, and (if available) **Access Voice Inbound Calls**.
8. Click **Save**.

If your Voice users have custom profiles, they won't be able to assign themselves phone numbers without the **View Setup and Configuration** permission. Enable it through the custom profile or Voice permission set under **Administrative Permissions** or **System Permissions**.

Assign the Voice Permission Set to Users

Assign the Voice licenses to users from Setup.

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Select a user.
3. In the Permission Set License Assignments related list, click **Edit Assignments**.
4. Assign the Voice Minutes, Voice Outbound User, and (if available) Voice Inbound User licenses and click **Save**.
5. In the Permission Set Assignments related list, click **Edit Assignments**.
6. Add the Voice permission set under Enabled Permission Sets and click **Save**.
7. Repeat the process for other users you want to grant Voice access to.

The number of permission sets you can assign is limited by the number of feature licenses you've purchased.

How Do I Manage Voice Usage?

See your org's Voice usage from Setup.

From Setup, enter *Usage Report* in the **Quick Find** box, then select **Usage Report**.

The page displays your org's total minutes used this month and last month. You can view usage by date, and also sort and filter the usage data.

[Release a Voice Number](#)

Release a number from the Number Management page in Setup.

[Test Voice Features in Sandbox](#)

Test Voice in a sandbox environment by re-enabling the feature in a full sandbox org. Calls placed in a sandbox are test calls, and phone numbers aren't actually dialed.

[Voice Troubleshooting Tips](#)

Make sure your environment is set up to use Voice, and you have the most recent version of Chrome, Firefox, or Edge.

Release a Voice Number

Release a number from the Number Management page in Setup.

Once you release a number, it can't be recovered. You can still access calling data, but you can't make calls with the number. Admins can release, at most, a single number for each user each month.

1. From Setup, enter *Number Management* in the **Quick Find** box, then select **Number Management**.
2. Click  next to a number.
3. Click **Release**.

EDITIONS

Available in: Lightning Experience

Test Voice Features in Sandbox

Test Voice in a sandbox environment by re-enabling the feature in a full sandbox org. Calls placed in a sandbox are test calls, and phone numbers aren't actually dialed.

If you have an org with Voice enabled, you can test some Voice features in a sandbox environment. You can place fake outbound calls in sandbox. Inbound calls are not supported.

1. Create a [full sandbox](#) of your Voice org.
2. Log in to your sandbox.
3. From Setup, enter *Voice Settings* in the Quick Find box, then select **Voice Settings**.
4. Toggle the Voice setting off, then back on again.
5. Finish [setting up Voice](#) in your sandbox org.

If you haven't finished setting up Voice, this includes adding Voice to the utility bar, creating a Voice permission set, and assigning the permission set to users.

 **Note:** When selecting phone numbers in sandbox, each user can choose from the same list of dummy numbers. An error may occur if multiple users are assigned to the same phone number.

Voice Troubleshooting Tips

Make sure your environment is set up to use Voice, and you have the most recent version of Chrome, Firefox, or Edge.

Problem	Potential Solutions
I can't make a call.	<ul style="list-style-type: none"> • Make sure you have a network connection. • Make sure you've granted your browser permission to access your microphone. • Check that Voice is properly set up in your org. For more information about initial set up, see "Voice Prerequisites" in the Salesforce Help.
The audio is dropping in-and-out of my call.	Check the quality of your network connection. It's best to use a high speed or separate network for calling activity, or to prioritize Voice traffic on your network.
I'm getting one-way audio (on either end).	<ul style="list-style-type: none"> • Make sure your microphone and speaker are attached and enabled, and that your microphone isn't muted. • Check that you have opened the correct ports in your computer and network firewalls.

EDITIONS

Available in: Lightning Experience

Available in: **Professional, Enterprise, Performance, and Unlimited** Editions

Voice is available for an additional cost as an add-on license.

USER PERMISSIONS

To enable Voice features:

- "Customize Application"

To view a sandbox:

- "View Setup and Configuration"

To create, refresh, activate, and delete a sandbox

- "Manage Sandbox"

EDITIONS

Available in: Lightning Experience

Available in: **Professional, Enterprise, Performance, and Unlimited** Editions

Voice is available for an additional cost as an add-on license.

Problem

The audio quality is poor on my call.

Potential Solutions

- Use a wired USB headset over wireless or mobile headphones.
- Try to reduce the noise in your area, and take calls in a quiet location.
- Adjust the microphone and speaker volume settings.
- If you're using a wireless connection, switch to a hardwired connection with adequate bandwidth.
- Close extra applications and browser tabs to make sure your computer has enough resources to make a quality call.

Set Up Work.com

Work.com Implementation Overview

Work.com is a suite of sales-management and service-management tools that help managers and teams learn faster and perform better.

Work.com has various features to help your sales and service teams. This includes recognition tied to real rewards, detailed goals and real-time coaching, and full-featured performance reviews.

After you receive your Work.com licenses, you'll need to set up Work.com by performing the following activities.

- Assign a Work.com administrator to complete the setup process.
- Enable preferences for Work.com features.
- Set up permissions to Work.com features with profiles or permission sets.
- Assign Work.com licenses to users.
- Configure Work.com features for your organization.

SEE ALSO:

[Prerequisites](#)

[Assign a Work.com Administrator](#)

[Enable Work.com Features](#)

[Work.com Feature Access](#)

[Work.com License Types](#)

[Work.com Feature Overview](#)

EDITIONS

Available in: Salesforce Classic

Work.com is available as an add-on license for **Professional Edition**, **Enterprise Edition**, **Unlimited Edition**, or **Developer Edition**, and is included in **Performance Edition**.

Prerequisites

USER PERMISSIONS

To enable Work.com features:	"Customize Application"
To assign permission sets:	"Assign Permission Sets"
To assign profiles:	"Manage Users"
To set field-level security:	"Manage Profiles and Permission Sets" AND "Customize Application"
To view the Calibration tab:	"Enable Work.com Calibration"

EDITIONS

Available in: Salesforce Classic

Work.com is available as an add-on license for **Professional Edition**, **Enterprise Edition**, **Unlimited Edition**, or **Developer Edition**, and is included in **Performance Edition**.

Plan out your implementation before enabling Work.com in your organization.

Administrators should make the decisions outlined in the [Business Decision Checklist](#) before enabling Work.com.

Before beginning the implementation process, Salesforce must enable Work.com permissions and provision Work.com licenses for your organization. Your Salesforce contact will coordinate this with you, but you can check if your organization has available Work.com licenses. In Setup, enter *Company Information* in the **Quick Find** box, then select **Company Information**, and check for Work.com User under **Feature Licenses**.

 **Note:** We recommend that you enable Chatter regardless of the edition your org is using. Many Work.com features use the Chatter feed to notify and interact with users. To confirm that Chatter is enabled, from Setup, enter *Chatter Settings* in the **Quick Find** box, then select **Chatter Settings**, and verify that Chatter Settings is enabled.

SEE ALSO:

[Assign a Work.com Administrator](#)

Enable Work.com

Assign a Work.com Administrator

Before enabling Work.com in your organization, you must assign a Work.com user feature license to the person who will be the system administrator and responsible for setting up Work.com for your organization.

If you're the administrator setting up Work.com, assign the license to yourself.

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Find the name of the person who will be the system administrator and click **Edit** next to their name.
3. In the right-hand column, select the **Work.com User** checkbox.
4. Click **Save**.

We strongly recommend that you create a separate Work.com Administrator profile with limited access because the standard Salesforce System Administrator profile is so powerful. For more information, see the [Create Your Work.com Administrator Profile](#).

SEE ALSO:

[Enable Work.com Features](#)

Enable Work.com Features

Administrators can enable preferences for Work.com features on the Work.com Settings page.

All the settings except for Thanks Settings and Skills Settings require a Work.com license.

1. From Setup, enter *Work.com Settings* in the **Quick Find** box, then select **Work.com Settings**.
2. Select the Work.com features you want to enable:

For users that purchased Work.com prior to the Spring '15 release, the features that appear differ depending on whether you have add-on licenses to **Work.com Motivate**, **Work.com Align**, or **Work.com Perform**.

Feature	Section	Description
Enable Thanks	Thanks Settings	Enable Thanks to allow users to recognize others with thanks badges on the Chatter feed. If you disable this setting, users no longer see the Thanks action in the Chatter publisher. However, they can still see previously created Thanks posts.
Restrict Custom Badge Creators	Thanks Settings	By default, all users can create custom badges. This setting restricts badge creation to users that have the "Create" permission on the Reward object.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer Editions**

USER PERMISSIONS

To assign a Work.com administrator:

- "Customize Application"

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer Editions**

USER PERMISSIONS

To enable Work.com features:

- "Customize Application"

Feature	Section	Description
Enable Rewards	Recognition Settings	Enable Rewards to tie tangible rewards to badges. Reward creators can upload gift codes to create Reward funds. See the "Reward Funds" topic for more information about creating rewards.
Enable Manager Groups for Coaching	Coaching Settings	Enable manager groups to give managers access to the coaching spaces of the users that report to them. To enable this setting, the Manager Groups setting must first be enabled in Setup, under Sharing Settings .
Enable Manager Groups for Goals	Goal Settings	Enable manager groups to give managers access to the goals of the users that report to them. To enable this setting, the Manager Groups setting must first be enabled in Setup, under Sharing Settings .
Enable Calibration	Perform Settings	<p>Enable Calibration to see and update performance across teams and individuals.</p> <p> Note: For Performance Edition organizations, Calibration is not available for the following profiles: Contract Manager, Marketing User, Read Only, and Solution Manager.</p>
Enable Skills	Skills Settings	Enable Skills to allow users to add skills to their profiles and endorse the skills of other users. Enabling this setting replaces the Knowledgeable About widget on Chatter profiles.
Restrict Skill and Endorsement Editing to Record Detail Pages	Skills Settings	<p>Disables inline editing of skills and endorsements on Chatter profiles, and restricts editing to record detail pages. Recommended if you have customized these objects with custom required fields.</p> <p> Note: Don't enable this setting if you want to use skills in Chatter profiles.</p>
Enable Automatic Skill Feed Posts	Skills Settings	Enable to automatically create Chatter feed posts when a user adds a new skill.
Enable Suggested Skills	Skills Settings	Enable Suggested Skills to have the skills widget suggest skills for users to add based on their Chatter Topics activity.

3. Click **Save**.

SEE ALSO:

[Work.com Feature Access](#)

Work.com Feature Access

Once Work.com is enabled for your organization, grant users access to Work.com features using either profiles or permission sets.

Administrators can grant users access to Work.com features with either profiles or permission sets.

 **Note:** Professional Edition organizations will need to grant access through existing profiles.

- A profile contains user permissions and access settings that control what users can do within their organization. Each user can only have one profile. Refer to [Recommended Work.com Profiles](#) for more information about creating profiles.
- A permission set is a collection of settings and permissions that gives users access to various tools and functions. Permission sets extend users' functional access without changing their profiles. Refer to [Recommended Work.com Permission Sets](#) for more information about creating the proper permission sets.

If your organization has provisioned Work.com Only user licenses, they come with a standard Work.com Only profile. Keep in mind that you can't modify the standard profile, but you can clone it and modify the cloned profile.

Assign Work.com Permission Sets

Assign permission sets with Work.com access to your users from Setup.

Before you can assign permission sets to your users, you must create permission sets with Work.com access. Refer to [Recommended Work.com Permission Sets](#) for more information.

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Select a user.
3. In the Permission Set Assignments related list, click **Edit Assignments**.
4. To assign a permission set, select it from the Available Permission Sets box and click **Add**. To remove a permission set assignment, select it from the Enabled Permission Sets box and click **Remove**.

You can also assign permission sets to many users at the same time. For more information, see "Assign a Permission Set to Multiple Users" in the Salesforce Help.

 **Note:** Some permissions require users to have a permission set license before you can grant the permissions. For example, if you add the "Use Identity Connect" user permission to the Identity permission set, you can assign only users with the Identity Connect permission set license to the permission set.

5. Click **Save**.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To assign permission sets:

- "Assign Permission Sets"

Assign Work.com Profiles

Assign profiles with Work.com access to your users from Setup.

Before you can assign profiles to your users, you must create profiles with Work.com access. Refer to [Recommended Work.com Profiles](#) for more information.

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Click **Edit** next to a user.
3. From the **Profile** drop-down, select the profile you would like to assign.
4. Click **Save**.

Work.com License Types

After granting access to Work.com features with permission sets or profiles, assign users a Work.com license.

Work.com has two types of licenses.

- Work.com Only user licenses are for users who don't have a Salesforce license and will only use the Work.com features in your organization.
 -  **Note:** Work.com Only user licenses have limited administrator functionality. Assign Work.com User Feature licenses instead for users who will be administering performance summary cycles or other Work.com features.
- Work.com User Feature licenses are for users who also have a Salesforce license.

You may want to configure Work.com features before assigning licenses to all users. For example, you may want to initially limit licenses to Work.com administrators to avoid exposing certain features prior to your launch date.

Configure Thanks in the Chatter Publisher and Salesforce1 Action Bar

You can change the position of the Thanks action in the Chatter publisher and the Salesforce1 action bar, or even hide Thanks for specific profiles.

To modify the Chatter publisher, actions in the publisher must be enabled.

1. From Setup, enter *Chatter Settings* in the Quick Find box, then select **Chatter Settings**.
2. Confirm that **Enable Actions in the Publisher** is selected in the Actions in the Publisher section. If it isn't enabled, click **Edit**, select **Enable Actions in the Publisher**, and click **Save**.
3. From Setup, enter *Publisher Layouts* in the Quick Find box, then select **Publisher Layouts**.
4. Click **Edit** next to the Global Publisher Layout.
5. Drag the **Thanks** action to where you want it to appear in the Chatter publisher or the Salesforce1 action bar.
6. Click **Save**.

You can hide Thanks for specific users by changing profile visibility settings.

SEE ALSO:

[Thanks and Skills Features](#)

[Assign Publisher Layout to Profiles](#)

Assign Publisher Layout to Profiles

Assign the publisher layout with Thanks to user profiles. People with these profiles can thank their coworkers directly from the publisher.

If not everyone in your organization should have this feature, create another layout without Thanks and assign it to a profile. People with that profile won't see Thanks in their publisher.

1. From Setup, enter *Publisher Layouts* in the Quick Find box, then select **Publisher Layouts**.
2. Click **Publisher Layout Assignment**.
3. Click **Edit Assignment**.
4. Select a user profile by clicking anywhere on its row in the table.
5. From the Publisher Layout to Use drop-down, select the global publisher layout that you want to assign to the highlighted profile.
6. Save the layout.

Performance Summary and Calibration Features

Set up Calibration reports to compare and update performance ratings in your organization.

Work.com performance summaries gather feedback about people in your organization with a custom questionnaire. You can create, deploy, and share different performance summaries across your organizations by managing performance summary cycles. Once users have submitted performance summary details, you can see and update performance ratings across the organization with the Calibration feature.

You can create and deploy performance summary cycles from the **Performance Cycles** tab. Users with the Performance Cycle Manager permission set or profile will be able to access the **Performance Cycles** tab.

For detailed information about creating and deploying performance summary cycles, refer to [Performance Summary Cycles Overview](#) in the Salesforce Help. For more information about the Calibration feature, refer to the [Calibration Overview](#) topic.

SEE ALSO:

- [Work.com Feature Overview](#)
- [Set Up Calibration Reports](#)

Set Up Calibration Reports

Calibration reports are populated with data from performance summary cycles. They are designed for managers and executives to review overall performance of their teams or organizations. Before using the Calibration feature, you must create a report that loads the performance summary data.

Define your own calibration report or download the calibration reports package from the Package Installation page.

- [Production Calibration Report Package](#)
- [Sandbox Calibration Report Package](#)

1. On the Calibration tab, select a calibration report from the drop-down list.
2. Click **View/Edit Report**.
3. Click **Save As**.
4. Type a name, an optional description, unique name, and specify the report folder.
If the report is saved to a public folder, anyone with permission to view the folder sees this report, but each user will only see performance summaries they have access to. If the report is saved to "My Personal Custom Reports," only you will see the Calibration report.
5. Click **Save & Return to Report**.

Tip: You can also create a new report. Once a report meets specific criteria, it automatically appears in the Calibration drop down.

- The report must be a **Work.com Calibration** report type.
- The report must be in a **Summary Format**, grouped by Feedback Question Name and then by Feedback.
- These columns should be listed in the report:
 - Performance Cycle ID
 - Feedback Request ID

EDITIONS

Available in: Salesforce Classic

Configure Work.com Reports

Work.com Report and Dashboard Overview

Use reports and dashboards to see how Work.com features are being used in your organization.

Salesforce reports and dashboards are available for all Work.com users. Administrators should install the reporting package that applies to their Work.com edition. The Work.com reporting package contains:

- Custom report types for Work.com objects
- Custom fields for Work.com objects
- Example dashboards

Install one of the following packages based on the Work.com edition you purchased. For example, if your organization has Work.com Align, only install the Align package. Refer to your product contract to confirm which Work.com edition you have.

Note:

- Make sure you've enabled the features related to your Work.com edition prior to installing the package. The package will only install correctly if you've enabled the features beforehand.
- If you purchased Work.com after the Spring '15 release, install the Work.com Perform package.
- It is not possible or necessary to install all the packages.

Production Packages:

- [Work.com Motivate](#)
- [Work.com Align](#)
- [Work.com Perform](#)
- [Thanks and Skills Reports and Dashboards](#)

Sandbox Packages:

- [Work.com Motivate](#)
- [Work.com Align](#)
- [Work.com Perform](#)

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

- [Thanks and Skills Reports and Dashboards](#)

Work.com Report and Dashboard Details

The Work.com reports and dashboards included in the reporting package are a good starting point. Use these examples to create reports and dashboards that are useful to your organization.

Work.com Perform Package Reports

These reports are available after installing the [Work.com Perform](#) package. Work.com reports are organized in folders based on features:

- Work.com Coaching Reports
- Work.com Goal Reports
- Work.com Performance Summary Reports
- Work.com Recognition Reports
- Work.com Skills Reports

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer Editions**

Table 20: Work.com Coaching Reports

Report Name	Description
Coaching Activities (Tasks and Events)	Tasks and events related to coaching spaces
Coaching Activities Team - Last 30 Days	Coaching activities of your team over the last 30 days
Coaching Activity Last 30 Days	Coaching activities over the last 30 days sorted by department
Coaching Coverage Report	The percentage of users that have coaching spaces by department
Coaching Events by Relationship	Events related to coaching spaces
Coaching Relationships	All coaching spaces in your organization

Table 21: Work.com Goal Reports

Report Name	Description
All Goals	All goals in your organization
All Metrics	All metrics in your organization
Goals Created by Date	Goals sorted by the date they were created
Key Company Goal Progress	Key company goals, their status, and other details
Metrics Flagged as Behind or Critical	Metrics with a Status of Behind or Critical

Report Name	Description
Stale Goals	Goals that haven't been modified in 30 days
Work.com Team Goals Progress	Your team's goals and their progress

Table 22: Work.com Performance Summary Reports

Report Name	Description
All Active Users with a Manager	All active users with a manager in your org
Manager Questions - X	The manager questions asked in a performance summary
Performance Answers by Question - Q1	Sample report for tracking performance cycle activity
Performance Answers by Question - Q3	Sample report for tracking performance cycle activity
Performance Summaries by Department	Performance summaries grouped by department
Performance Summaries with Answers - Q1	Sample report for tracking performance cycle activity
Performance Summaries with Answers - Q3	Sample report for tracking performance cycle activity
Performance Summary Cycle Status Update	The request status across different performance summaries
Self Summary Questions - X	The questions asked in self summaries
Summary Cycle Details	The percentage of participants per performance cycle
Summary Cycle Details - Submitted	The percentage of submitted requests per performance cycle

Table 23: Work.com Recognition Reports

Report Name	Description
Badges Given - By Date Given	Thanks badges given grouped by the date each badge was given
Breakdown of Badges Given	Thanks badges given grouped by individual badges and the role of the badge giver
Breakdown of Badges Received	Thanks badges received grouped by individual badges and the role of the badge recipient
Reward Funds Given	The amount of each reward fund that has been distributed
Reward Funds Remaining	The amount of each reward fund that is still remaining
Thanks by Giver	Thanks badges given by each user
Thanks Given - Recipient Data	Thanks badges received by each user
Thanks Received by Role	Thanks badges received by each role

Table 24: Work.com Skills Reports

Report Name	Description
Most Endorsed People	Users with the most skill endorsements
Most Skilled People	Users with the most associated skill records
New Skill Creation By Date	Skills arranged by the date they were created
Skill Endorsements By Date	Endorsements arranged by the date they were created
Skills Added To Profiles By Date	Skills arranged by the date they were associated with different user profiles
Top Skills	Skills arranged by the number of people with the skill

Work.com Perform Package Dashboards

These dashboards are available after installing the [Work.com Perform](#) package:

- Work.com Coaching Dashboards
- Work.com Performance Summary Dashboards
- Work.com Recognition Dashboards
- Work.com Skills Dashboards

Table 25: Work.com Coaching Dashboards

Report Name	Description
Company Coaching Dashboard	Displays coaching coverage and activity across your company
Company Goals Dashboard	Displays Key Company Goals and the number of goals created
Manager Coaching Dashboard	Displays coaching and goals related to your team

Table 26: Work.com Performance Summary Dashboards

Report Name	Description
Performance Cycle Dashboard	Displays statistics about the participants, questions, and progress of a specific performance cycle

Table 27: Work.com Recognition Dashboards

Report Name	Description
Recognition Dashboard	Displays badge statistics and users giving and receiving badges
Recognition with Rewards Dashboard	Displays badge and rewards statistics and users giving and receiving badges

Table 28: Work.com Skills Dashboards

Report Name	Description
Skills Dashboard	Displays skills statistics for your organization

Recommended Work.com Permission Sets

Create different permission sets for different types of Work.com users.

Create new permission sets for each type of Work.com user.

[Walk Through It: create, edit, and assign a permission set](#)

Use the tables below to assign the appropriate object settings and system permissions for each permission set.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Standard User

The Standard User permission set gives a user all the basic Work.com functionality.

Table 29: Standard User Object Settings

Object Name	Tab Settings	Read	Create	Edit	Delete	View All Data (VAD)	Modify All Data (MAD)
Badges (tab)	Available <input checked="" type="checkbox"/> Visible <input checked="" type="checkbox"/>						
Coaching (object)		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Recommended Work.com Profiles

Create different profiles for different types of Work.com users.

Create a new profile for each type of Work.com user. For more information about creating profiles, see either [Work in the Original Profile Interface](#) or [Work in the Enhanced Profile User Interface Page](#) depending on whether you have the Enable Enhanced Profile User Interface preference turned on.

Note: Professional Edition organizations will need to grant access through existing profiles. The Work.com Only User, Chatter Only User, and Standard User profiles grant basic access to Work.com objects. The System Administrator profile grants users full administrative access to all Work.com features.

Use the tables below to assign the appropriate object settings and system permissions for each profile.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Standard User

The Standard User profile gives a user all the basic Work.com functionality.

Manage Work.com Features

Enable or Disable Work.com Settings

On the Work.com Settings page, you can enable and disable features like Thanks, Rewards, Calibration, and Skills for your organization.

All the settings except for Thanks Settings and Skills Settings require a Work.com license. Work.com is available as an add-on license for **Professional Edition**, **Enterprise Edition**, or **Unlimited Edition** and is included in **Performance Edition**.

1. From Setup, enter "Work.com Settings" in the **Quick Find** box, then select **Work.com Settings**.
2. Select the Work.com feature you want to enable or deselect the feature you want to disable.

Feature	Section	Description
Enable Thanks	Thanks Settings	Enable Thanks to allow users to recognize others with thanks badges on the Chatter feed. If you disable this setting, users no longer see the Thanks action in the Chatter publisher. However, they can still see previously created Thanks posts.
Restrict Custom Badge Creators	Thanks Settings	By default, all users can create custom badges. This setting restricts badge creation to users that

EDITIONS

USER PERMISSIONS

To edit Work.com settings:

- "Customize Application"

Feature	Section	Description
		have the "Create" permission on the Reward object.
Enable Rewards	Recognition Settings	Enable Rewards to tie tangible rewards to badges. Reward creators can upload gift codes to create Reward funds. See the "Reward Funds" topic for more information about creating rewards.
Enable Manager Groups for Coaching	Coaching Settings	Enable manager groups to give managers access to the coaching spaces of the users that report to them. To enable this setting, the Manager Groups setting must first be enabled in Setup, under Sharing Settings .
Enable Manager Groups for Goals	Goal Settings	Enable manager groups to give managers access to the goals of the users that report to them. To enable this setting, the Manager Groups setting must first be enabled in Setup, under Sharing Settings .
Enable Calibration	Perform Settings	<p>Enable Calibration to see and update performance across teams and individuals.</p> <p> Note: For Performance Edition organizations, Calibration is not available for the following profiles: Contract Manager, Marketing User, Read Only, and Solution Manager.</p>
Enable Skills	Skills Settings	Enable Skills to allow users to add skills to their profiles and endorse the skills of other users. Enabling this setting replaces the Knowledgeable About widget on Chatter profiles.
Restrict Skill and Endorsement Editing to Record Detail Pages	Skills Settings	<p>Disables inline editing of skills and endorsements on Chatter profiles, and restricts editing to record detail pages. Recommended if you have customized these objects with custom required fields.</p> <p> Note: Don't enable this setting if you want to use skills in Chatter profiles.</p>
Enable Automatic Skill Feed Posts	Skills Settings	Enable to automatically create Chatter feed posts when a user adds a new skill.
Enable Suggested Skills	Skills Settings	Enable Suggested Skills to have the skills widget suggest skills for users to add based on their Chatter Topics activity.

3. Click **Save**.

Work.com Editions and Permissions

Most Work.com features require the Work.com add-on, but Skills and Thanks functionality (excluding Rewards) are freely available to Sales Cloud users. The permissions and preferences necessary for different tasks are broken up by feature area.

General Work.com Administrator Tasks

This includes tasks for administering and implementing Work.com.

Administrator Task	Preferences and Permissions Required
Enable Work.com features:	"Customize Application"
Assign a Work.com administrator:	"Customize Application"
Assign permission sets:	"Assign Permission Sets"
Assign profiles:	"Manage Users"
Assign user licenses:	"Manage Users"
Assign user feature licenses	"Manage Users"
Set up actions:	"Customize Application"
Customize fields tracked in feeds:	"Customize Application"
Set field-level security:	"Manage Profiles and Permission Sets" "Customize Application"

EDITIONS

Available in: Salesforce Classic

Work.com is available as an add-on license for **Professional Edition**, **Enterprise Edition**, **Unlimited Edition**, or **Developer Edition**, and is included in **Performance Edition**.

Thanks and Reward Tasks

This includes tasks for Work.com end users, such as viewing and creating thanks badges and rewards.

End User Task	Preferences and Permissions Required
View the Badges tab:	No additional user permissions needed

End User Task	Preferences and Permissions Required
Build a badge:	"Create" on Documents The "Restrict Custom Badge Creator" setting is disabled by default. If the setting is enabled, users need the "Create Custom Badge Definitions" permission.
View Reward Funds:	"Read" on Reward Funds
Create Reward Funds:	"Create" on Rewards "Create" on Reward Funds
View Reward Fund Types:	"Read" on Reward Fund Types
Create Reward Fund Types:	"Create" on Reward Fund Types "Read" and "Create" on Reward Funds "Read" and "Create" on Rewards

Skills Tasks

This includes tasks for Work.com end users using skills.

End User Task	Preferences and Permissions Required
Add skills:	"Create" on Skills and Skill Users
Remove skills:	"Read" on Skills "Delete" on Skill Users
Add endorsements to skills:	"Create" on Endorsements "Read" on Skills and Skill Users

Goal Tasks

This includes tasks for Work.com end users using goals.

End User Task	Preferences and Permissions Required
View goals:	"Read" on Goals and Goal Links
Create goals:	"Create" on Goals and Goal Links
Edit goals:	"Edit" on Goals and Goal Links
Delete goals:	"Delete" on Goals and Goal Links

Metric Tasks

This includes tasks for Work.com end users using metrics.

End User Task	Preferences and Permissions Required
View metrics:	"Read" on Metrics
Create metrics:	"Create" on Metrics
Link metrics to reports:	"Create" on Metric Data Links

Coaching Tasks

This includes tasks for Work.com end users using coaching spaces.

End User Task	Preferences and Permissions Required
View coaching spaces:	"Read" on Coaching
Create coaching spaces:	"Create" on Coaching
Set coaching to Inactive:	"Edit" on Coaching

Feedback Tasks

This includes tasks for Work.com end users using feedback.

End User Task	Preferences and Permissions Required
View Feedback:	"Read" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests "Read" on Performance Cycles
Create Feedback:	"Create" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests "Read" on Performance Cycles
Edit or submit Feedback:	"Edit" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests "Read" on Performance Cycles
Delete Feedback (only for administrators with MAD/VAD permissions)	"Delete" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests "Read" on Performance Cycles

Performance Summary Tasks

This includes tasks for Work.com end users using performance summaries.

End User Task	Preferences and Permissions Required
View performance summaries:	"Read" on Performance Cycles
Create performance summaries:	"Create" on Performance Cycles
Answer and submit performance summaries:	"Create," "Read," and "Edit" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests "Read" on Performance Cycles
Add peers to performance summaries	"Create," "Read," and "Edit" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests "Read" on Performance Cycles

Performance Summary Cycle Tasks

This includes tasks for Work.com administrators managing performance summary cycles.

Administrator Task	Preferences and Permissions Required
Create a performance summary cycle:	"Create," "Read," "Edit," "Delete," "View All," and "Modify All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles
Add people to a performance summary cycle:	"View Setup and Configuration" "Create," "Read," "Edit," "Delete," "View All," and "Modify All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles
Delete people from a performance summary cycle:	"Create," "Read," "Edit," "Delete," "View All," and "Modify All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles
Edit a performance summary cycle:	"Create," "Read," "Edit," "Delete," "View All," and "Modify All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles
View the Calibration tab:	"Enable Work.com Calibration"
Edit performance ratings:	"Create," "Read," and "Edit" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests "Read" on Performance Cycles "Enable Work.com Calibration"

Create a Support Case

Log a new case with support if you need certain permissions enabled or are experiencing technical difficulties.

1. Log in to Salesforce, then go to the [Help and Training](#) page.
2. In the Contact Support section, click **Create a Case**.

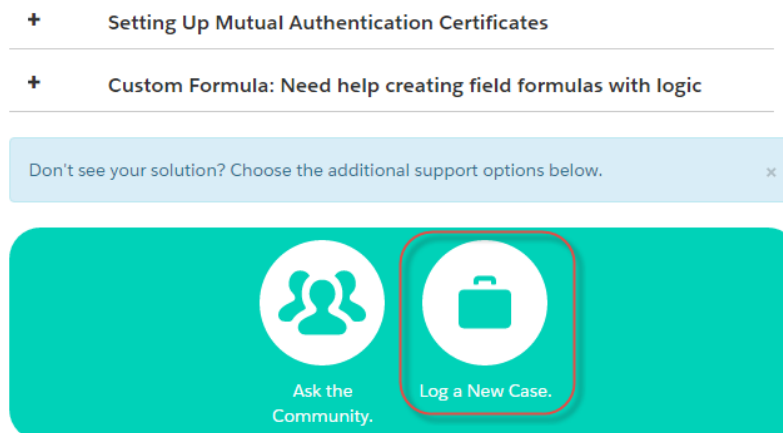

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in all editions

3. Select your support topic and category.
For example, if your issue is related to Work.com, click **Sales Cloud > Work.com**.
4. Select a question that relates to your issue.
5. If you don't find the solution to your problem, click **Log a New Case**.

6. Enter case details and click **Submit**.

 **Note:** To attach related files, click **Attach a File** after the case is created.

Performance Summary Cycles Overview

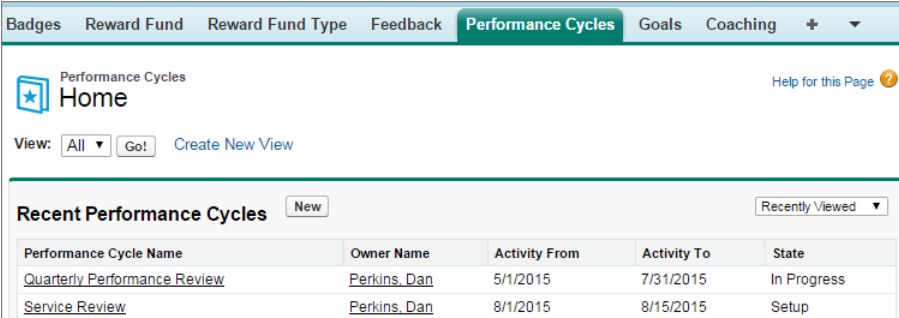

Use Work.com performance summary cycles to create, deploy, and share performance summaries across your company.

In a typical performance summary cycle, you perform the following activities:

1. Plan—Create a performance summary cycle and add the people you want reviewed.
2. Deploy—Make the performance summaries available for users to complete.
3. Evaluate—Write performance summaries and submit them.
4. Calibrate—Optionally compare and update submitted performance summaries with the Calibration feature.
5. Share—Share the submitted performance summaries with summary subjects.
6. Finish—End the performance summary cycle.

Click the Performance Cycles tab to see a list of recently viewed performance cycles.

 **Note:** If the Performance Cycles tab isn't displayed, select Work.com from the Force.com app drop-down menu at the top-right or click  to the right of your current tabs and select it from the All Tabs page.

Performance Cycle Name	Owner Name	Activity From	Activity To	State
Quarterly Performance Review	Perkins, Dan	5/1/2015	7/31/2015	In Progress
Service Review	Perkins, Dan	8/1/2015	8/15/2015	Setup

Click **New** to create a performance cycle, or click the name of a cycle to see more details.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Performance summaries require a license to **Work.com**, which is available as an add-on license for **Professional Edition, Enterprise Edition, Unlimited Edition, or Developer Edition**, and is included in **Performance Edition**.

Create a Performance Summary Cycle

Create a Work.com performance summary cycle from the Performance Cycles page to gather feedback about people in your organization.

1. Click the Performance Cycles tab.

If the Performance Cycles tab isn't displayed, select Work.com from the Force.com app drop-down menu at the top-right or click  to the right of your current tabs and select it from the All Tabs page.

2. Click **New**.

Note: You can also create performance cycles by clicking **Clone** on another performance cycle's detail page, but cloning a cycle copies only the cycle name, activity start date, and activity end date. Question sets, due dates, and other details are not copied.

3. Enter a cycle name, an activity start date, and an activity end date.
4. Click **Save**.
5. Click **New Feedback Question Set**.
6. Enter a question set name, feedback type, and due date.

Question sets group questions according to their intended audience. For example, a performance summary about Bill Jones could have up to four different audiences:

- **Manager Summary**—Questions for Bill's manager. By default, every cycle must include a manager summary.
- **Self Summary**—Questions for Bill.
- **Peer Summary**—Questions for Bill's peers.
- **Skip Level Summary**—Questions for Bill's direct reports.

7. Click **Save**.
8. Click **New Feedback Question**.
9. Enter question details.

You can specify rules for each question:

- **Optional**—The person writing the summary isn't required to answer this question.
- **Confidential**—The subject of the summary won't see the submitted answer. This rule isn't available for self summaries.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer Editions**

Performance summaries require a license to **Work.com**, which is available as an add-on license for **Professional Edition, Enterprise Edition, Unlimited Edition,** or **Developer Edition**, and is included in **Performance Edition**.

USER PERMISSIONS

To view performance summaries:

- "Read" on Performance Cycles

To create a Performance Summary Cycle:

- "Create," "Read," "Edit," "Delete," "Modify All," and "View All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles

You can also add instructions at the beginning of each question.

10. Click **Save**.

11. Add additional question sets and questions, as needed.

Once you're done adding questions, add people to the performance summary cycle.

SEE ALSO:

[Performance Summary Overview](#)

[Add People to a Performance Summary Cycle](#)

[Deploy a Performance Summary Cycle](#)

Add People to a Performance Summary Cycle

Add people to a performance summary cycle manually or through a CSV file.

You can only add people to summary cycles with a state of Setup or In Progress.

1. Click the Performance Cycles tab.

If the Performance Cycles tab isn't displayed, select Work.com from the Force.com app drop-down menu at the top-right or click  to the right of your current tabs and select it from the All Tabs page.

2. Click a performance summary cycle.

3. In the Feedback Requests section, add users to the performance cycle.

- To manually enter subjects, click **Add Subject**. Enter the user's name and click **Save**.
- To upload subjects through a CSV file, click **Upload Subject CSV**, then select **Choose File**. Select a CSV file, click **Upload**, and save your changes.

The CSV file should contain a list of either user IDs (example: 005R0000000DjZW) or usernames (example: john@acme.com) in the first column. The data should begin on the second row, because the first row is seen as the header row and is not uploaded.

Tip: Many organizations have specific requirements about participation in a performance summary cycle. Use the Users report to narrow down the list of users you want to add to performance summaries and obtain the usernames there.

The Job Tracker displays the status of the CSV upload. Additionally, you can confirm the users included in a performance summary cycle in the Feedback Requests section.

[Deploy a Performance Summary Cycle](#)

[Delete People from a Performance Summary Cycle](#)

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Performance summaries require a license to **Work.com**, which is available as an add-on license for **Professional Edition, Enterprise Edition, Unlimited Edition, or Developer Edition**, and is included in **Performance Edition**.

USER PERMISSIONS

To view performance summaries:

- "Read" on Performance Cycle

To add people to a Performance Summary Cycle:

- "View Setup and Configuration"

AND

"Create," "Read," "Edit," "Delete," "Modify All," and "View All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles

Delete People from a Performance Summary Cycle

If you added someone you don't need to evaluate, delete them from the performance summary cycle.

You can only delete people from summary cycles with a state value of Setup.

1. Click the Performance Cycles tab.
If the Performance Cycles tab isn't displayed, select Work.com from the Force.com app drop-down menu at the top-right or click  to the right of your current tabs and select it from the All Tabs page.
2. Click a performance summary cycle.
3. In the Feedback Requests section, click **Del** in the Action column of the subject you want to delete.

SEE ALSO:

[Performance Summary Cycles Overview](#)

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Performance summaries require a license to **Work.com**, which is available as an add-on license for **Professional Edition, Enterprise Edition, Unlimited Edition, or Developer Edition**, and is included in **Performance Edition**.

USER PERMISSIONS

To view performance summaries:

- "Read" on Performance Cycle

To delete people from a Performance Summary Cycle:

- "Create," "Read," "Edit," "Delete," "Modify All," and "View All" on Feedback, Feedback Questions, Feedback Question Sets, Feedback Requests, and Performance Cycles

Deploy a Performance Summary Cycle

Deploy a performance summary cycle to make the summaries available for people to complete.

 **Note:** You can't edit questions or cycle details after a performance summary cycle is deployed, but you can add more people.

1. Click the Performance Cycles tab.

If the Performance Cycles tab isn't displayed, select Work.com from the Force.com app drop-down menu at the top-right or click  to the right of your current tabs and select it from the All Tabs page.

2. Click a performance summary cycle.

3. Click **Deploy**.

Any inactive users are automatically removed prior to cycle deployment. When deployment is complete, you'll receive a detailed email that describes the cycle deployment and any users that were removed. You can add them back again later, if necessary.

Once deployed, a manager summary is assigned to the manager of each person added to the cycle. If the cycle contains self summaries, the self summary is assigned to the associated person. Each person assigned a summary receives an email notification and can start working on their summaries.

Performance Summary Cycle Actions

Different actions are available on a performance cycle's detail page depending on the cycle's state.

Action	Available In	Description
Edit	Setup	Allows user to edit a performance cycle's name, activity start date, and activity end date.
Deploy	Setup	Deploys the summary cycle and associated summaries. Changes the summary cycle status to In Progress.
Delete	Setup	Deletes a summary cycle and the associated summaries.
Finish	In Progress	Completes a performance summary cycle and changes the summary cycle status to Finished. This also removes declined summaries and summaries that were not submitted.
Clone	Setup, In Progress, Finished	Clones a summary cycle. This copies the cycle name, activity start date, and activity end date. However, question sets, due dates, people, and other details are not copied.
Share All	In Progress	Shares the submitted performance summaries with the summary subjects. This doesn't include questions marked Confidential.

Calibration Overview

Use Work.com calibration reports to visualize, compare, and update performance ratings across your entire company.

 **Note:** For **Performance Edition** organizations, Calibration is not available for the following profiles: Contract Manager, Marketing User, Read Only, and Solution Manager.

Calibration reports are populated with data from performance summary cycles. They are designed for managers and executives to review overall performance of their teams or organizations. You can quickly identify high and low performers, and depending on user permissions, make changes to a person's individual performance ratings directly in the calibration report.

Create your own calibration report or download the calibration reports package from the Package Installation page.

- [Production Calibration Report Package](#)
- [Sandbox Calibration Report Package](#)

Access calibration reports from the Calibration tab. Note that you can only view the results for a single performance summary cycle at a time.

The Distribution Graph shows the distribution of ratings for each multiple choice question. Select different questions in the drop-down list to view the associated rating distribution.

The Employees in Graph section shows the performance summary details for users included in the performance review. You can filter and sort each column. Filtering the columns also updates the distribution graph. You can also add custom columns to filter performance summary details by location, department, or other measures. View individual performance summaries by clicking on the View column.

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Calibration requires a license to **Work.com**, which is available as an add-on license for **Professional Edition, Enterprise Edition, Unlimited Edition, or Developer Edition**, and is included in **Performance Edition**.

USER PERMISSIONS

To view the Calibration tab:

- "Enable Work.com Calibration"

To edit performance ratings:

- "Create," "Read," and "Edit" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests

AND

"Read" on Performance Cycles

Create a Calibration Report

Create a calibration report by copying an existing report or creating a new report that meets the proper criteria.

Alternatively, you can download the calibration report package from the Package Installation page.

- [Production Calibration Report Package](#)
- [Sandbox Calibration Report Package](#)

1. On the Calibration tab, select a calibration report from the drop-down list.
2. Click **View/Edit Report**.
3. Click **Save As**.

4. Type a name, an optional description, unique name, and specify the report folder.

If the report is saved to a public folder, anyone with permission to view the folder sees this report, but each user will only see performance summaries they have access to. If the report is saved to “My Personal Custom Reports,” only you will see the Calibration report.

5. Click **Save & Return to Report**.

Tip: You can also create a new report. Once a report meets specific criteria, it automatically appears in the Calibration drop down.

- The report must be a **Work.com Calibration** report type.
- The report must be in a **Summary Format**, grouped by Feedback Question Name and then by Feedback.
- These columns should be listed in the report:
 - Performance Cycle ID
 - Feedback Request ID
 - Feedback ID
 - Subject: User ID
 - Subject: Full Name (or Subject: First Name and Subject: Last Name)
- The report must be filtered to only view one performance summary cycle.

USER PERMISSIONS

To view the Calibration tab:

- “Enable Work.com Calibration”

Customize a Calibration Report

Enhance your calibration report with additional columns and filters.

Calibration reports use Salesforce reporting. You can filter and specify additional custom columns for your calibration report. The columns display in the order you specify. However, the sort order in reports doesn't apply in calibration reports.

1. On the Calibration tab, select a calibration report from the drop-down list.
2. Click **View/Edit Report**.
3. Click **Customize**.
4. Add filters and columns to your report, as necessary.
 - The following columns are required and can't be removed from calibration reports:
 - Performance Cycle ID
 - Feedback Request ID
 - Feedback ID
 - Subject: User ID
 - Subject: Full Name (or Subject: First Name and Subject: Last Name)
5. Click **Save**.

Example: Some common uses include:

- Filter by Performance Summary Cycle for the required performance summary cycle
- Filter by Department to create a report for the department
- Filter by Location to create a report for that location

Update Performance Summary Details

Easily update performance summary details directly in the calibration report.

You can only update performance summaries you have access to. If you have “Modify All Data” or “View All Data” permissions for performance summaries, then you can see the ratings of performance summaries before they are submitted. The only editable fields are the multiple choice questions answered by a user’s manager, and do not include peer, self, or skip level summaries. Once the performance summary is finalized and shared with the user, answers can’t be edited.

1. On the Calibration tab, select a calibration report from the drop-down list.
2. On the Employees in Graph section, double-click the rating to you want to change.
You can only change ratings on a submitted performance summary.
3. Select the new value.
4. Click **Save**.

Skills Customization

You can change object permissions for the skill and endorsement objects to suit the needs of your organization.

Customize the skill and endorsement objects in the same way you edit other objects. This includes adding custom fields, modifying page layouts, and adding triggers, workflow, and validation rules. You can also customize the hovers that appear on skills, so that you expose specific standard and custom fields.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Calibration requires a license to **Work.com**, which is available as an add-on license for **Professional Edition, Enterprise Edition, Unlimited Edition,** or **Developer Edition**, and is included in **Performance Edition**.

USER PERMISSIONS

To view the Calibration tab:

- "Enable Work.com Calibration"

To edit performance ratings:

- "Create," "Read," and "Edit" on Feedback, Feedback Questions, Feedback Question Sets, and Feedback Requests

AND

"Read" on Performance Cycles

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Administrators can change object permissions for the skill and endorsement objects to suit the needs of their organization. For example, you can configure object settings so users can't create skills, and only skills created by an administrator can be assigned to others. By default, supported user profiles have the ability to see, create, edit, and remove skills, and administrators have "Modify All Data" and "View All Data" permissions.

Additionally, administrators can change some skills settings on the Work.com Settings page. From Setup, enter *Work.com Settings* in the Quick Find box, then select **Work.com Settings**.

Edit Skills and Endorsements via record detail pages

Disables inline editing of skills and endorsements on Chatter profiles. Recommended if you have customized these objects with custom required fields.

 **Note:** Don't enable this setting if you want to use skills in Chatter profiles.

Generate feed posts when users add a new skill

Automatically creates a Chatter feed post when a user adds a new skill to a profile.

Enable Suggested Skills

Automatically suggests skills based on users' Chatter topics.

You can also install a package with additional reports and dashboards for thanks and skills features:

- [Thanks and Skills Reports and Dashboards \(Production Package\)](#)
- [Thanks and Skills Reports and Dashboards \(Sandbox Package\)](#)

SEE ALSO:

- [Skills Overview](#)
- [Skills Limitations](#)
- [Object Permissions](#)
- [Edit Object Permissions in Profiles](#)
- [Enable or Disable Work.com Settings](#)
- [Work.com Report and Dashboard Overview](#)

Skills Limitations

Skills and endorsements have special behaviors and limitations.

Note the following restrictions:

- The Skills feature is not supported in Communities.
- All skill records are visible to users with the “Read” permission on Skills.
- Skill User and Endorsement records can only be deleted by the owner and users with the “Modify All Data” permission.
- To restore the users and endorsements associated with a deleted skill, retrieve the skill from the recycle bin. Creating a skill with the same name will not restore the prior associations.
- Users can only endorse others, not themselves. Users can’t be endorsed more than once by the same person on the same skill.

Administrators can endorse users on behalf of other users through the API.

- Users can’t see the skills widget on a Chatter profile page unless Chatter is enabled and users have the “Read” permission on Skills and Skill Users.

SUPPORT YOUR CUSTOMERS

Service Cloud

Use Service Cloud to wow your customers with awesome service and boost your support team's productivity.

With Service Cloud, let your customers choose how they communicate with your support agents, whether it's by web, email, phone, or social media. Make life easier for your support agents by automating processes like case assignment, notifications, escalations, milestones, service contracts, and more. And, give your team a unified help desk from which to see a 360-degree view of each customer case and the tools to resolve them quickly.

Tracking Customer Inquiries

Cases

Cases

A case is a customer's question or feedback. Support agents can review cases to see how they can deliver better service. Sales reps can use cases to see how they affect the sales process. Responding to cases keeps your customers happy and enhances your brand.

Your administrator can set up communication channels to gather cases from customers' preferred forms of contact. Channels include Communities for online forums, Email-to-Case for emails, Web-to-Case for websites, Salesforce Call Center for phone calls, and more. Some channels aren't available for Lightning Experience.

From the Cases home page, you can create, locate, and edit cases and also sort and filter cases and queues using standard and custom list views.

EDITIONS

Available in both: Salesforce Classic and Lightning Experience

Available in: **Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

 **Tip:** If a Salesforce console is set up, you can use its dashboard-like interface to respond to multiple cases faster. If entitlements are set up, you can check whether customers are eligible for support or if cases are close to violating a milestone. If Salesforce to Salesforce is set up and cases are shared with external contacts, choose one of the list views to see cases that your business partners have shared with you. These features are available only in Salesforce Classic.

Viewing Case Lists

The cases list page displays a list of cases in your current view. To show a filtered list of items, select a predefined list from the `view` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `view` drop-down list and click **Edit**.

If the Salesforce console is set up, view case lists by selecting Cases from the navigator tab (if Cases is available).

- Click **Edit** or **Del** to [edit or delete a case](#).
- If Chatter is enabled, click  or  to follow or stop following a case in your Chatter feed.
- Click **New Case** or select **Case** from the Create New drop-down list in the sidebar to [create a case](#).
- Select the box next to one or more cases and then use the buttons at the top of the view to [close the cases, take ownership of them, or change the case status or owner](#).

 **Note:** Cases with a red arrow have been automatically escalated via your organization's escalation rules.

Taking Ownership of Cases

To take ownership of cases in a queue, view the queue list view, check the box next to one or more cases, and then click **Accept**. Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations can grant additional access to cases beyond what the sharing model allows.

 **Note:** The org-wide sharing model for an object determines the access users have to that object's records in queues:

Public Read/Write/Transfer

Users can view and take ownership of records from any queue.

Public Read/Write or Public Read Only

Users can view any queue but only take ownership of records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

Private

Users can only view and accept records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

Regardless of the sharing model, users must have the "Edit" permission to take ownership of records in queues of which they are a member. Salesforce admins, users with the "Modify All" object-level permission for Cases or Leads, and users with the "Modify All Data" permission, can view and take records from any Case or Lead queue regardless of their membership in the queue.

Changing Multiple Cases

From any case list page, administrators can “mass update” multiple cases at once. From any queue list view, users can take ownership of one or more cases if they are a member of that queue, if they are higher in the role or territory hierarchy than a queue member, or if the organization’s default sharing for cases is Public Read/Write/Transfer. Simply check the boxes next to the desired cases and click the appropriate button. The following actions are possible:

- **Accept**—Assigns you as the owner of the selected cases in a queue list view. Any attached open activities are transferred to you as well. In organizations that do not have the Public Read/Write/Transfer sharing model for cases, you can take cases only from queues of which you are a member or if you are higher in the role hierarchy than a queue member.
- **Change Owner**—Assigns the cases to the one user or queue you specify. Any attached open activities are transferred to the new owner as well. When putting cases in a queue, the open activities are not transferred.

In addition to the required user permissions for this feature, you must have read sharing access to the cases you are updating.

 **Note:** When you change case ownership, any associated open activities that are owned by the current case owner are transferred to the new owner.

- **Close**—Closes the selected cases using the values you specify. You can set a common `Status` and `Reason` and add any comments.

You must have the “Manage Cases” permission and read/write sharing access to the cases to use this feature.

- **Change Status**—Changes the `Status` of the cases to the value you set.

You must have the “Manage Cases” permission and read/write sharing access to the cases to use this feature.

EDITIONS

Available in: Salesforce Classic

Available in: **Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To change case owner:

- “Transfer Cases” OR “Transfer Record”

AND

“Edit” on cases

To close and change the status of cases:

- “Manage Cases”

Create Cases

You can create cases in various ways:

- Your admin can set up Web-to-Case and either Email-to-Case or On-Demand Email-to-Case to automatically capture cases from your website and customer emails.
- Your customers can log their own cases from a community, Customer Portal, Self-Service portal, or Chatter Answers.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

- You can create cases manually from the Cases tab, the Cases related list, or, depending on your org's settings, in the feed on record detail pages.
- If you have an answers community, you can [escalate an unanswered or problematic question](#) into a new case.

You can create or update cases only for contacts that are eligible to receive customer support. For how to find out if a contact is eligible, or if a service contract includes an entitlement, see [Verify Entitlements](#) on page 2365.

To create a case for a support email or phone call:

1. Use Search to find the individual's account and then locate the contact in the Contacts related list.

If the contact doesn't exist, create a contact for that account.

2. Click **New** in the Cases related list of the contact.

If your org uses record types, you might be prompted to choose a `Record Type` when creating a case. Different record types can have different fields and different picklist values.

3. Enter information for the case.

When you enter or select a contact for the `Contact Name` field, the `Account Name` field defaults to the account associated with the contact when you save the case. However, you can change the account in the `Account Name` field during subsequent updates.

4. To associate the case with an asset:

- a. Click the **Asset** lookup icon. Initially, the asset lookup lists all assets for the selected contact. Enter search criteria and click **Go!** to refine this list.

- b. Select an asset from the assets listed to associate it with the case.

- c. If you do not find a matching asset, click **New** to create a asset from the lookup dialog and associate it with the new case. The **New** button displays if your org has enabled Quick Create and you have the "Create" permission on assets.

- d. To associate the new asset with a product, enter your product search criteria and click **Go!** or select a product from the list of matches. Click **Skip** if you do not want to associate the asset with a product.

- e. Enter the asset details and click **Save**.

5. If your org settings allow it, you can associate the case with another case. Simply type the case number of the parent in the `Parent Case` field. Alternatively, you can click the lookup icon to search for a case's case number.

When a case is associated with a parent case it signifies a relationship between cases. The relationship can be a grouping of similar cases for easy tracking, or a division of one case into multiple cases for various users to resolve.

EDITIONS

Available in: Salesforce Classic

Case assignment rules, Web-to-Case, Email-to-Case, and the Self-Service portal are available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions.

USER PERMISSIONS

To view cases:

- "Read" on cases

To create cases:

- "Create" on cases

6. Optionally set who sees the case and how, depending on how your org is set up.
 - To prevent the case from appearing in the Self-Service portal, deselect `Visible in Self-Service Portal`.
 - To automatically assign the case using your org's active assignment rule, select `Assign using active assignment rules`. If `Assign using active assignment rules` is selected and no assignment rule criterion is met, the case is assigned to the Default Case Owner. If this setting isn't active, you are assigned as the owner.

If `Assign using active assignment rules` is selected by default and you deselect it, you override your org's default assignment rules and you're assigned as the owner.
 - To automatically send an email to the contact indicating that the case was create, select `Send notification email to contact`.
 7. Click **Save**, or click **Save & New** to save the case and create another. Alternatively, click **Save & Close** to save and close the case immediately. This action sets the `Closed When Created` field on the case, which indicates that the case was closed during creation.
-  **Note:** When you save a newly-created case with an active assignment rule, the record type of the case can change, depending on how your admin configured assignment rules.

If your org uses divisions, the division of a new case is automatically set to the division of the related contact.

Guidelines for Working with Cases

A case is a customer question or feedback. The fields and related lists you see on a case are determined by your customizations or features set up by your administrator. Learn how you can get the most out of working with cases.

Updating Cases

When you change a contact, the account doesn't update to the contact's account, but you can edit the account yourself.

Contacts who are portal users can only view cases associated with the account on their contact record.

When you change an account, manual shares on a case are deleted for users who don't have read access on the new account.

If set up, select **Send notification email to contact** to let the contact know that you've updated the case. An email is sent only if you have access to the contact.

If set up, select **Assign using active assignment rules** to reassign a case using an assignment rule. If the case doesn't match rule criteria, it's reassigned to your organization's default case owner.

If set up, click **Sharing** to share a case with other users, groups, or roles.

If set up, close a case by selecting `Closed` under `STATUS`. Otherwise, click **Close Case** and change any fields as needed. If knowledge article submissions are set up, click **Save and Create**

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Case assignment rules, case escalation rules, web-to-case, and customer portals are available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions.

USER PERMISSIONS

To view cases:

- "Read" on cases

To update cases:

- "Edit" on cases

Article to store information that would help others close similar cases. When the draft article you submit is published, it's attached to the case and available in the knowledge base for easy reference.

If set up, a Web-to-Case Information section lists information entered by the customer who created the case from a website form.

Using Case Related Lists

To reply and work with cases created from Email-to-Case, use the Emails related list.

To view the required steps in a support process or to add the date of a completed milestone, use the Case Milestones related list.

To find articles from your organization's knowledge base to help solve a case, use the Articles related list. To initiate a search, type keywords. Attach relevant articles to the case to track solutions and help others solve similar cases. Attached articles appear on the related list. If you create a draft article while closing a case, the article appears on the related list after the draft article is published.

To find solutions (version 1.0 of articles) to help solve a case, use the Solutions related list. If solution categories are set up, choose them to refine your search, along with keywords. If suggested solutions are set up, click **View Suggested Solutions** to see relevant solutions. The solutions are suggested based on relevancy and case similarity.

Replying to Cases from Chatter Answers (Not Available in Lightning Experience)

To reply to a case converted from a question on a web community, type your response in the Chatter-like feed, and click **Answer Customer**. Your response is tracked on the Case Comments related list.

Case comments marked `Public` display as private messages from customer support in Chatter Answers. They don't display to the entire community. For example, if a support agent adds a public case comment, it displays only to the case's contact private messages in Chatter Answers. Support agents can read all private and public case comments.

Case Comments

Case comments let you and your support agents add, edit, and delete public and private comments on a case. All comments appear in the Case Comments related list.

Comments can remain private or be made publicly available to a case's contact on the Customer Portal, Self-Service portal, or Chatter Answers. You can also set up your portal or Web community to let customers comment on their cases. When a portal user adds a comment, the case owner receives an email. A comment icon () remains on the case heading until the case owner views it.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Creating and Editing Case Comments on Case Detail Pages

1. Click **New** or **Edit** on the Case Comments related list.
2. Optionally, select `Public` to enable comment notifications to the contact on the case, and to let the contact view the comment on the Customer Portal or Self-Service.
3. Type comments in `Comment`.
4. Click **Save**.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

 **Note:** If you publish cases and case comments to external contacts via Salesforce to Salesforce, all public case comments are automatically shared with a connection when you share a case. To stop sharing a comment, select **Make Private**.

 **Tip:** On the Case Comments related list:

- Click **Del** to delete an existing comment.
- Click **Make Public** or **Make Private** to change the public status of a comment on the Customer Portal or Self-Service portal. Case comments marked `Public` display as private messages from customer support in Chatter Answers. They don't display to the entire community. For example, if a support agent adds a public case comment, it displays only to the case's contact private messages in Chatter Answers. Support agents can read all private and public case comments.

Case History

The Case History related list of a case detail page tracks the changes to the case. Any time a user modifies any of the standard or custom fields whose history is set to be tracked on the case, a new entry is added to the Case History related list. All entries include the date, time, nature of the change, and who made the change. Modifications to the related lists on the case are not tracked in the case history.

-  **Note:** Changes to the `Closed When Created` field are only tracked when the field is updated via the Force.com API.

In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, for automated case changes that result from Web-to-Case or case assignment or escalation rules, the user listed in the history is the `Automated Case User` chosen in the Support Settings.

Case Fields

Depending on your page layout and field-level security settings, some fields may not be visible or editable.

Field	Description
	Indicates that an escalation rule escalated a case. The escalation icon disappears when a case is closed or no longer meets escalation rule criteria.
	Indicates that a customer added a comment to a case from a web portal. The icon appears until the case owner views the case.
Account Name	Name of the account associated with a case's contact. The name is added when you link the case to a contact and save the case. When updating a case, you can add a different account.
Asset	The customer's product model. On edit pages, this field shows only assets associated with a case's contact, but you can use inline editing to see a list of all assets on a case.
Business Hours	Indicates the hours at which escalation actions or entitlement processes run on a case.
Case Currency	The currency for all currency amounts on a case. Amounts display in the case currency and are also converted to your personal currency. Only available for organizations that use multiple currencies.
Case Division	The division to which a case belongs. Division is inherited from a case's contact. If it has no contact, it's set to the default global division. Only available in organizations that use divisions to segment data.
Case Number	Unique number assigned to the case. Numbers start at 1000 and are read only, but administrators can change the format. Case numbers often increase sequentially, but sometimes they skip numbers in a sequence.
Case Owner	User assigned to own a case.
Case Record Type	Field name that determines the picklist values available on a case. Record types are often related to a support process.

EDITIONS

Available in both: Salesforce Classic and Lightning Experience

Available in: **Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Field	Description
Closed by Self-Service User	Indicates if a case's contact closed the case from a web portal. This field is read only.
Closed When Created	Indicates if a case was closed during creation using the Save and Close button. This field is read only.
Contact Email	Email address of a case's contact. The address is added when you add a contact to a case. This field is read only.
Contact Fax	Fax number of a case's contact. This number is added when you add a contact to a case. This field is read only.
Contact Mobile	Mobile phone number of a case's contact. The number is added when you add a contact to a case. This field is read only.
Contact Name	Name of a case's contact.
Contact Phone	Phone number of a case's contact. The number is added when you add a contact to a case. This field is read only.
Created By	User who created a case, including creation date and time. This field is read only.
Custom Links	Lists of custom links for cases created by an administrator.
Date/Time Closed	Date and time that a case was closed. This field is read only.
Date/Time Opened	Date and time that a case was opened. This field is read only.
Description	Description of a case,- usually a customer question or feedback. This field can store up to 32 KB of data, but only the first 255 characters display in reports.
Entitlement Name	Name of an entitlement added to a case. Only available if entitlements are set up.
Entitlement Process Start Time	<p>The time the case entered an entitlement process. If you have "Edit" permission on cases, you can update or reset the time. When you reset the time:</p> <ul style="list-style-type: none"> • Closed or completed milestones aren't affected • Incomplete milestones are recalculated based on the new start time <p>If an entitlement process applies to a case, this field appears.</p>
Entitlement Process End Time	The time a case exited an entitlement process. If an entitlement process applies to a case, this field appears.
Internal Comments	Internal notes related to a case. Each comment can store up to 4 KB of data and appears on the Case Comments related list. Comments marked "public" can appear on web portals.
Milestone Status	A milestone is a step in an entitlement process. If an entitlement process applies to a case, this field appears.

Field	Description
Milestone Status Icon	<p>Indicates a milestone's status on a case by displaying one of the following icons:</p> <ul style="list-style-type: none"> •  Compliant •  Open Violation •  Closed Violation <p>If an entitlement process applies to a case, this field appears.</p>
Modified By	User who last changed a case, excluding any changes made to a case's related list items. This field also includes the date and time of the change. This field is read only.
Origin	Source of a case, for example, phone, email, or web. Administrators set field values, and each value can have up to 40 characters. When editing a case created from a community with quick actions, add an origin because it isn't set by default.
Parent Case	A case above one or more related cases in a case hierarchy. A case number identifies a parent case, and a parent case must exist before you can add it to another case.
Priority	Urgency of a case. Administrators set field values, and each value can have up to 20 characters.
Product	Name of a case's product. This field is only available if entitlements are set up to include products.
Question	A question on the Q&A tab that is related to a case. This field is populated when you create a case from a question or a question is escalated to a case.
Reason	The reason a case was created. Administrators set field values.
Status	Status of a case, for example, open or closed. Administrators set field values.
Stopped	Lets you stop an entitlement process on a case, which might be necessary if you're waiting for a customer's response. You can stop an entitlement process up to 300 times. If an entitlement process applies to a case, this field appears.
Stopped Since	Shows the date and time an entitlement process was stopped on a case. If an entitlement process applies to a case, this field appears.
Subject	Brief description of the customer's question or feedback, for example, <code>Printing Gives Error on Internet Explorer</code> .

Field	Description
Timeline	<p>How far along a case is to reaching an entitlement process's milestones. You can click or hover your mouse pointer over each milestone to view its details. These icons represent milestones:</p> <ul style="list-style-type: none">  Completed milestone  Violated milestone <p>You can drag the Handle icon () along the Timeline Zoom tool to view past and future milestones. If an entitlement process applies to the case, this field appears.</p>
Type	Type of case, for example, question or problem. Administrators set field values.
Visible in Self-Service Portal	Indicates if a case is visible to users in a web portal. If you want web-generated cases visible in a portal, include this field in Web-to-Case setup.
Web Company	Company name provided by a customer who created a case from Web-to-Case or Email-to-Case.
Web Email	Email address provided by a customer who created a case from Web-to-Case or Email-to-Case.
Web Name	Customer's name as provided by a customer who created a case from Web-to-Case or Email-to-Case.
Web Phone	Phone number provided by the customer who created a case from Web-to-Case or Email-to-Case.

[Guidelines for Working with Cases](#)

How is the "Age" calculated in case reports?

The Age of an open case is the time that has elapsed from its creation to the present. The Age of a closed case is the elapsed time from its creation to the time it was closed. Case reports display a drop-down list labeled "Units" that lets you choose to view the Age in days, hours, or minutes.

SEE ALSO:

[Web-to-Case FAQ](#)

Using the Case Milestones Related List

The Case Milestones related list on a case detail page displays a list of milestones that automatically apply to the case due to an entitlement process. Milestones are required steps in your support process. They're metrics that represent service levels to provide to each of your customers. Examples of milestones include First Response and Resolution Times on cases.

Note:

- `No records to display` appears in the related list if no milestones apply to the case.
- The related list contains fields that your company has chosen to display, based on its business processes. Depending on your company's requirements, you may see some or all of the following fields.

Action

Lists the actions you can perform on the milestone. For example, if you have the "Edit" permission on cases, you can click **Edit** to select the milestone completion date.

 **Note:** Customer Portal users can't edit case milestones.

Milestone

The name of a set of steps in an entitlement process that applies to the case. Users with the "Manage Entitlements" permission can click a milestone's name to view the entitlement process, case criteria, time triggers, and actions associated with it.

The following table lists the types of actions associated with milestones:

Action Type	Description
 Success Actions	The actions to take when a milestone successfully completes. Success actions still fire on milestones that are closed late.
 Warning Actions	The actions to take when a milestone is near violation.
 Violation Actions	The actions to take when a milestone is violated.

Administrators can set up milestones to automate the following for each action type:

Workflow Action	What It Does	Example
New Task	Create a workflow task	Create a task for a support agent to call a customer when a First Response milestone is violated.
New Email	Create an email alert	Notify case owners when a First Response milestone on their case is near violation.
New Field Update	Define a field update	Update the case Priority field to <code>High</code> when a First Response milestone is near violation.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To view case milestones:

- "Read" on cases

To edit case milestones:

- "Edit" on cases

Workflow Action	What It Does	Example
New Outbound Message	Define an outbound message	Send data about parts or services to an external system after a First Response milestone is completed.
Select Existing Action	Select an existing action	Use an existing email alert to notify a case owner when their case is near violation of a first response.

Start Date

The date and time that the milestone tracking started.

Target Date

The date and time to complete the milestone.

Completion Date

The date and time the milestone was completed.

Target Response

Shows the time to complete the milestone. Automatically calculated to include any business hours on the case. Depending on your company's business requirements, the time can appear in minutes, hours, or days.

Time Remaining

Shows the time that remains before a milestone violation. Automatically calculated to include any business hours on the case. Depending on your company's business requirements, the time can appear in minutes, hours, or days.

Elapsed Time

Shows the time it took to complete a milestone. Automatically calculated to include any business hours on the case. Elapsed Time is calculated only after the Completion Date field is populated. Depending on your company's business requirements, the time can appear in minutes, hours, or days.

Violation

Icon (🚫) that indicates a milestone violation.

Time Since Target

Shows the time that has elapsed since a milestone violation. Automatically calculated to include any business hours on the case. You can choose to display the time in days, hours and minutes, or minutes and seconds.

Completed

Icon (✅) that indicates a milestone completion.

Because they're part of a case's history, completed milestones remain on a case even if they're no longer applicable.

[What Is Entitlement Management?](#)

Searching for Cases

1. Enter your search terms in the sidebar or header search box.
2. Click **Search**.
3. From the search results, click an item to open it or click **Edit**, if available.

You can also create a case list view to find cases that match specific criteria.

SEE ALSO:

[Cases](#)

Cloning Cases

The **Clone** button on a case quickly creates a new case using information from the existing case, for example, when you need to log multiple issues for a customer on a support call.

1. Click **Clone** on an existing case.
2. Enter or change any information for the new case.
3. Check the box to assign the case automatically using your active assignment rule.
4. Click **Save**.

 **Note:** If you have read-only access to a field, the value of that field is not carried over to the cloned record.

SEE ALSO:

[Case Fields](#)

Deleting Cases

To delete a case, click **Del** next to the case on the cases list page, or click **Delete** on the case detail page. The **Del** link and **Delete** button do not display for users who do not have the “Delete” permission on cases.

When you delete a case, all related events and tasks, case comments, and attachments are also deleted. Associated contacts, accounts, and solutions are not deleted with the case. The deleted case is moved to the Recycle Bin. If you undelete the case, any related items are also restored.

 **Note:** If you delete an event, task, case comment, or attachment from a case—and then delete the case—the event, task, case comment, or attachment cannot be restored via undelete.

Assigning Cases

You can assign cases to users or queues in a variety of ways.

- **Using an Assignment Rule for Web-to-Case, Email-to-Case, or On-Demand Email-to-Case**

In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, web- and email-generated cases are automatically assigned to users or queues based on criteria in your active case assignment rule.

Cases that do not match the assignment rule criteria are automatically assigned to the `Default Case Owner` specified in the Support Settings.

- **Using an Assignment Rule when Creating or Editing a Case**

In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, when creating or editing a case, you can check a box to assign the case automatically using your active case assignment rule. An email is automatically sent to the new owner if your administrator specified an email template in the matching rule entry. If you want this checkbox to be selected by default, your administrator can modify the appropriate page layout. If required, your administrator can edit the page layout to hide the assignment checkbox but still force case assignment rules.

- **Changing Ownership of Multiple Cases (administrators only)**

From any case list page, an administrator, or a user with the “Manage Cases” permission, can manually assign one or more cases to a single user or queue.

- **Taking Cases from a Queue**

To take ownership of cases in a queue, go to the queue list view, check the box next to one or more cases, and click **Accept**.

 **Note:** The org-wide sharing model for an object determines the access users have to that object’s records in queues:

Public Read/Write/Transfer

Users can view and take ownership of records from any queue.

Public Read/Write or Public Read Only

Users can view any queue but only take ownership of records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

Private

Users can only view and accept records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

Regardless of the sharing model, users must have the “Edit” permission to take ownership of records in queues of which they are a member. Salesforce admins, users with the “Modify All” object-level permission for Cases or Leads, and users with the “Modify All Data” permission, can view and take records from any Case or Lead queue regardless of their membership in the queue.

- **Changing Ownership of One Case**

To transfer a single case you own or have read/write privileges to, click **Change** next to the `Case Owner` field on the case detail page, and specify a user, partner user, or queue. Make sure that the new owner has the “Read” permission on cases. The **Change** link displays only on the detail page, not the edit page.

In Group, Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, check the `Send Notification Email` box to automatically send an email to the new case owner.

- **Creating a Case Manually (default assignment)**

EDITIONS

Available in: Salesforce Classic

The case assignment options vary according to which Salesforce Edition you have.

USER PERMISSIONS

To view cases:

- “Read” on cases

To take ownership of cases from queues:

- “Edit” on cases

When you create a case from the Cases tab, you are automatically listed as the case owner, unless the assignment rule checkbox is displayed and you select it to enable the assignment rule. If it's selected by default, you can override the assignment rule and assign yourself as the owner by deselecting the checkbox.

-  **Note:** You can use case assignment rules in Lightning communities if your cases are created using the **New** button on top of the Record List component (when mapped to cases). Case assignment rules aren't supported in Lightning community cases made using the Create Case Form, Create Record Button, or Contact Support & Ask Button components.

[Changing Multiple Cases](#)

Sharing Cases

Your administrator defines the default sharing model for your entire organization. You can change this model to extend sharing to more users than the default set by your administrator. However, you cannot change the sharing model to make it more restrictive than the default.

To view and manage sharing details, click **Sharing** on the case detail page. The Sharing Detail page lists the users, groups, roles, and territories that have sharing access to the case. On this page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the `view` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `view` drop-down list and click **Edit**.
- To grant access to the record for other users, groups, roles, or territories, click **Add**.

-  **Note:** To share a case with another user, that user must have access to the account associated with the case and the "Read" permission on cases.

- Click **Expand List** to view all users that have access to the record.
- For manual sharing rules that you created, click **Edit** or **Del** next to an item in the list to edit or delete the access level.

[Cases](#)

Case Feed

Case Feed Overview

Case Feed gives support agents a more streamlined way of creating, managing, and viewing cases. It includes actions and a Chatter feed. The actions let agents create case notes, log calls, change the status of cases, and communicate with customers. The feed displays important case events in chronological order, so it's easy to see the progress of each case.

Agents assigned to a Case Feed page layout see a page that typically looks like the page shown in the screenshot when they view a case.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To view cases:

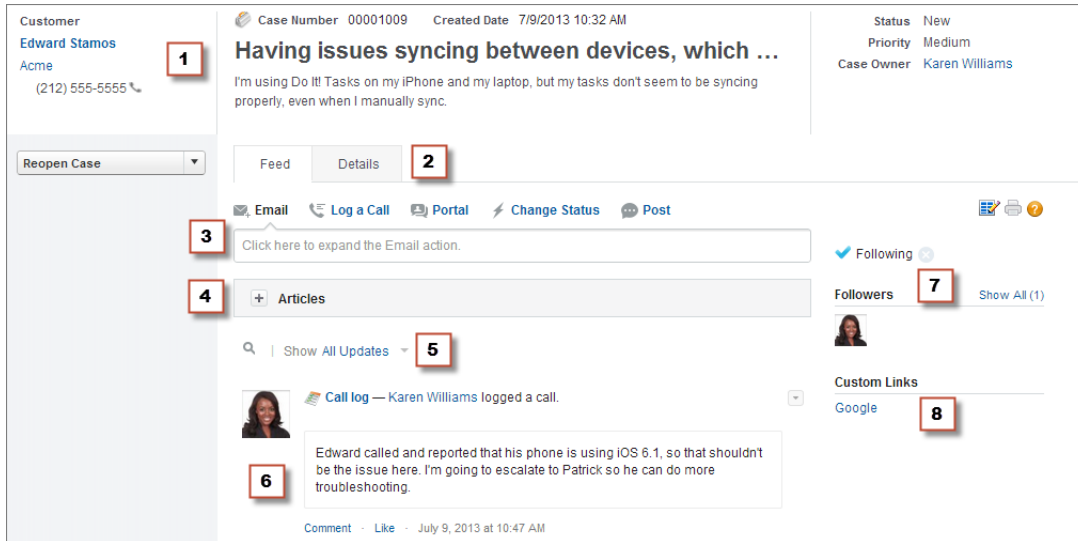

- "Read" on cases

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

 **Note:** Administrators can customize case page layouts, so your org's page layout may look different from the screenshot.

The screenshot shows a Salesforce Case Feed interface. At the top left, a customer profile for Edward Stamos is shown with a red box labeled '1'. The case title is 'Having issues syncing between devices, which ...' with a red box labeled '2'. The case description follows. Below the case title, there are tabs for 'Feed' and 'Details', with 'Feed' selected and a red box labeled '2'. A row of action buttons includes 'Email', 'Log a Call', 'Portal', 'Change Status', and 'Post', with a red box labeled '3' over the 'Email' button. Below the actions is a search bar with a red box labeled '4'. A section titled 'Articles' is visible with a red box labeled '4'. Below that is a search filter 'Show All Updates' with a red box labeled '5'. The main feed area shows a 'Call log' entry with a red box labeled '6' over the user's profile picture. On the right side, there is a 'Following' button with a red box labeled '7' and a 'Followers' list with a red box labeled '7'. At the bottom right, there is a 'Custom Links' section with a red box labeled '8' over the 'Google' link.

- **Highlights Panel (1)**—Provides an overview of the most important information about a case, such as the contact information, case name, case description, status, priority, and case owner. Agents can use the column dividers to resize sections of the highlights panel so they can see more of the info that's most relevant.
- **Feed and Detail Views (2)**—From the feed view, which includes the publisher and feed, agents can easily switch to the case detail view to see more in-depth information and work with related lists.
- **Publisher (3)**—Contains the actions agents use to work with cases, such as the Email, Case Note, and Change Status actions.
- **Articles Tool (4)**—Lets agents find Knowledge articles that can help them resolve cases, and then attach them to a case or email them to customers.
- **Feed Filters (5)**—Help agents quickly find specific information in the feed by limiting the feed items that appear.
- **Feed (6)**—Offers a chronological view of the case's history. Feed items are created for:
 - Incoming and outgoing email related to the case
 - Comments related to the case on a customer portal or Chatter Answers
 - Calls logged about the case
 - Changes to the case status
 - Comments made on the case
 - Links or files added to the case
 - Milestone activity related to the case
 - Case actions that result from workflow events
 - New tasks and events related to the cases
- **Follow Button and Followers List (7)**—Let agents follow the case so they're notified in Chatter of updates to it, and let them see other followers.
- **Custom Buttons and Links (8)**—Give agents access to more tools and functionality.

Administrators can customize most aspects of Case Feed, including:

- Fields in the highlight panel
- Actions that appear and the fields they include

- Feed filters that are available and where on the page the list appears
- Width of the feed
- Availability of tools, custom buttons, and custom links, and where they appear on the page

[Case Feed and Related Lists](#)

[View and Edit Cases from the Case Detail Page in Case Feed](#)

Using Feed Filters in Case Feed

Feed filters make it easy for support agents to see all updates of one type, such as all call logs or all email messages, when working with cases in Case Feed. By using filters, agents can find the information they need more quickly, without having to browse through each case event.

When [creating or editing feed layouts](#), administrators can specify which filters are available:

- Choosing only **All Updates** automatically shows all events on a case and hides the list of individual feed filters. Use this option if you want support agents to see the complete history of a case.
- Choosing only one type of feed filter automatically shows only case events of that type and hides the list of individual feed filters. For example, if you select only **All Emails**, the feed for each case shows the email messages related to the case but not case notes, portal replies, or other activities. This option is useful for agents who provide support primarily by one channel—phone, email, or portal—and who need to see case events only for that channel.
- Choosing more than one type of feed filter shows a list of available filters in the left sidebar of the Case Feed page or above the feed in the center of the page, with the first filter selected by default. For example, if you make the **All Emails**, **Status Changes**, and **Portal Answers** filters available, the feed for each case shows, by default, the email messages related to the case; users can click the other filters to see other types of case events. Use this option if your agents tend to provide support in one channel but also need to be able to see other types of case updates.

In addition, administrators can specify how and where the list of feed filters appears:

- As a fixed list in the left column.
- As a floating list in the left column. With this option, the feed filters list remains visible as users scroll down the page. This can be useful with long feeds, as it lets agents quickly filter case activities from anywhere on the page, without having to scroll to the top.
- As a drop-down list in the center column.
- As in-line links in the compact feed view. This option is available only for compact feed view.

Case Feed and Related Lists

In the traditional case interface, support agents complete tasks such as logging calls and sending emails primarily by working with related lists. In Case Feed, agents can do several of these tasks directly in the feed.

Here's an overview of the most common related lists included in the traditional case interface, the tasks agents do from them, and where agents can complete those tasks in Case Feed.

Activity History

Task	Case Feed Feature Agents Use for this Task
Logging a call	Log a Call action in the publisher
Viewing call logs	Call log feed items
Creating and replying to customer emails	<ul style="list-style-type: none"> Email action in the publisher Emails related list
Viewing emails	<ul style="list-style-type: none"> Email feed items Activity History related list Emails related list

EDITIONS

[Printable View in Case Feed](#)

Printable View in Case Feed

Use the printable view option to view and print a comprehensive list of the information related to a case.

Printable view, which you access by clicking  on any Case Feed page, displays information in the following order:

1. Case details
2. Contents of related lists that are included on the Case Detail page
3. Internal notes

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

Notes and Tips

- Depending on the related lists that are included on the Case Detail page, certain case events, such as email messages and logged calls, may not appear in the printable view. To ensure that emails and call logs are included, customize your Case Detail page layouts for Case Feed users to add the `Activity History` related list. To include public portal posts, add the `Case Comments` related list.
- Internal notes are listed under the heading **Chatter** on the printable view page.
- Related lists that don't have data in them aren't displayed in the printable view, even if they're included in the Case Detail page layout.
- If your Case Detail page layout includes custom links and buttons, they appear in the case details section in the printable view.
- Printable view shows 500 each of the most recent internal note posts, links, and documents, and 100 of the most recent comments on each of these posts.

Case Hierarchies

Viewing Case Hierarchies

A case hierarchy shows you cases that are associated with one another via the `Parent Case` field. When a case is associated with a parent case it signifies a relationship between cases. The relationship can be a grouping of similar cases for easy tracking, or a division of one case into multiple cases for various users to resolve. In the case hierarchy, cases are indented to show that they are related to the parent case above them.

- To view the hierarchy for a case, click **View Hierarchy** next to the `Case Number` field on the case detail page.
- To specify that a case is associated with another case, edit the case and type the case number of the parent in the `Parent Case` field. Alternatively, you can click the lookup icon to search for a case's case number.

 **Note:** A parent case must exist before it can be entered and saved in the `Parent Case` field.

- To create a new case that is automatically associated with a case whose detail page you are viewing, click the **New** button on the Related Cases related list. From the **New** drop-down button, you can choose to create either a blank case or a case with information from the parent case.

SEE ALSO:

[Guidelines for Working with Cases](#)

[Create Cases](#)

Related Cases

If set up by your administrator, case detail pages include a Related Cases related list, which displays all of the cases directly below a parent case in a case hierarchy. Cases can be associated with each other via the `Parent Case` lookup field on a case edit page. When a case is associated with a parent case it signifies a relationship between cases. The relationship can be a grouping of similar cases for easy tracking, or a division of one case into multiple cases for various users to resolve.

From the Related Cases related list, click:

- **New** and choose from the drop-down button to [create either a blank case or a case with information from the parent case](#).
- **Edit** to [modify an existing case](#).
- **Close** to [close an existing case](#).

To perform mass actions from the Related Cases related list, select the checkboxes next to the cases you wish to update, and click:

- **Close** to close the selected cases using the values you specify.
- **Change Owner** to assign the cases to the one user or queue you specify.

Using Suggested Articles to Solve Cases

Suggested articles help knowledge base users solve cases quickly. When a new case is saved, the search engine automatically looks for articles that have keywords in common with the admin-selected case fields. The user working the case can scan the articles and attach them to the case if needed, or initiate another search with different keywords. Articles attached to the case appear on the Articles related list, which also provides a **Find Articles** button to search the knowledge base at any time.

To enable suggested articles:

1. From Setup, enter *Support Settings* in the *Quick Find* box, then select **Support Settings**.
2. Click **Edit** and choose **Enable suggested articles**. Suggested articles and suggested solutions cannot be enabled at the same time.
3. Choose each audience (channel) that receives suggested articles when submitting a case. Suggested articles are available for the internal app and the portals.
4. When you're done with the Support Settings page click **Save**.

SEE ALSO:

[Welcome to Salesforce Knowledge](#)

Use Actions to Work with Cases in Case Feed

Case Feed actions make it easy for support agents to do tasks like send email, post to portals and communities, log calls, change case status, and write case notes, all on the same page.

Actions appear in the publisher at the top of the feed.

Here are some common Case Feed actions. Depending on how your administrator has set up your organization, you might not see all of these actions.

- Use the Email action to [respond to customers by email](#). In some organizations, the Email and Portal actions are combined in an Answer Customer action.

EDITIONS

Available in: Salesforce Classic, Lightning Experience

Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Professional**, **Enterprise**, and **Unlimited** Editions.

USER PERMISSIONS

To change support settings:

- "Manage Cases"
- AND
- "Customize Application"

To view articles:

- "Read" on the article's article type

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

- The Log a Call action lets you create a record of the details of a phone call. Call logs are visible only to other users in your organization, not to customers.
-  **Note:** If you're using a SoftPhone, completed calls and call notes are logged automatically in the case's feed, as are interaction log entries whose `STATUS` is Completed.
- With the Portal action, you can [post replies to a customer portal or a Chatter Answers community](#).
- Use the Change Status action to escalate, close, or make other changes to the status of a case.
- The Question action lets you search for and create questions.
- The Post, File, and Link actions are the same ones you're used to seeing in Chatter.
 - Use the Post action to create case notes to share information about the case or get help from others in your organization. (Notes created with the Post action aren't included in the Case Comments related list on the case detail page.)
 - Add a PDF, photo, or other document to the case with the File action. (Documents you add with File aren't included in the Attachments related list on the case detail page.)
 - Use the Link action to share a link that's relevant to the case.

Find, Attach, and Email Articles with the Case Feed Articles Tool

Knowledge articles can help you solve cases more quickly by providing in-depth troubleshooting steps and other detailed information. Use the articles tool in Case Feed to search for articles relevant to the case you're working with, attach articles to the case, and email them to customers.

-  **Note:** Before you can use the articles tool, your administrator needs to [set up and configure Salesforce Knowledge](#).

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To use articles in Case Feed:

- "Manage Cases"

AND

"Read" on at least one article type

- Click  to open the articles tool.

- By default, the tool shows articles with keywords or phrases similar to the subject and description of the case you're working with. If you don't see the article you want, type new terms in the search box and click **Search Again**, or click **Advanced Article Search** for more options.
- Click the title of an article to open it in a new window if you want to see more information about it than just the title and the summary.
- When you find the article you want, choose what you want to do with it:
 - Select `Email to customer` to attach the article to a message as a PDF.
 - Select `Attach to case` to include the article as a case attachment.

Close Cases

After you solve a customer's case, you can close it from a few locations and create a solution or article to help solve similar cases.

1. Click **Close Case** on a case's detail page, **Cls** on the Cases related list, or **Save & Close** while editing a case. If enabled by your administrator, you can select Closed from `Status` on a case's edit page and click **Save** without completing any more steps.
2. Update `Status`, `Case Reason`, or any other fields as necessary.
3. If solutions are enabled, you can fill in the `Solution Details` for the case. If you don't want to save the solution or submit it for review to a solution manager, uncheck `Submit to public solutions`. When this field is checked, the new solution is automatically linked to the case.
4. If there's a contact on the case, select `Notify contact on case close` to send an email to the contact based on a predefined case close template.
5. Click **Save** or **Save and Create Article**. The article option is available if both Salesforce Knowledge and article submission during case close is enabled.

 **Tip:** If you have the "Manage Cases" permission, you can close multiple cases at once using the **Close** button on case lists.

Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Professional**, **Enterprise**, and **Unlimited** Editions.

If articles are associated with a case, users working on the case can attach PDF versions of the articles to an email simply by choosing a template you create. This capability is available if [Email-to-Case or On-Demand-Email-to-Case](#) is set up and the Email related list is visible on case page layouts.

Creating an Email Template that Converts Articles to PDF Files

To allow users working on a case to automatically attach article PDFs to an email message:

1. From Setup, enter *Email Templates* in the *Quick Find* box, then select **Email Templates**.
2. Click **New Template** to create a template from scratch or click **Edit** next to an existing template. The new or edited template must include the *Articles as PDFs* case field.
3. For example, If you want to edit the *SUPPORT: Case Response with Solution (SAMPLE)* template to include articles instead of solutions, complete these steps:
 - a. Click **Edit** next to the *SUPPORT: Case Response with Solution (SAMPLE)* template.
 - b. Change the *Email Template Name* to *SUPPORT: Case Response with Article (SAMPLE)*.
 - c. Modify the *Template Unique Name* as needed.
 - d. Choose **Case Fields** from the *Select Field Type* drop-down menu.
 - e. Choose **Articles as PDFs** from the *Select Field* drop-down menu.
 - f. Copy the value from the *Copy Merge Field Value* field and paste it in the email body.
4. Click **Save**.

On the case detail page in the Emails related list, users can now click **Send an Email** and choose the new template. Articles associated with the case are automatically converted to PDF attachments, and the attachments can be previewed or deleted if needed before the email is sent.

-  **Note:** Both the article and the knowledge base must be in the same language. For example, if your knowledge base language is English but you want a Japanese article converted into a PDF, change your knowledge base language to Japanese (in Setup, enter *Knowledge* in the *Quick Find* box, select **Knowledge Settings**, then click **Edit**) before converting the article.

Notes on Field Visibility in Article PDFs

Consider the following information when using email templates that include the **Articles as PDFs** function:

- The fields that appear in article PDFs are determined by your profile if the `Use a profile to create customer-ready article PDFs on cases` checkbox (from Setup, enter *Knowledge Settings* in the *Quick Find* box, then select **Knowledge Settings**) is not selected. If you can see all fields in the original article, all fields also appear in the automatically generated PDF. If field-level security restricts you from seeing a field on an article, that field and its data do not appear in the article's PDF.
- If the `Use a profile to create customer-ready article PDFs on cases` checkbox is selected and a profile is chosen from the **Profile** menu (from Setup, enter *Knowledge Settings* in the *Quick Find* box, then select **Knowledge Settings**), the chosen profile determines which fields appear in automatically generated PDFs. For example, if you are sending article PDFs to customers, you might choose the Customer Portal User profile to ensure that internal-only fields do not appear in article PDFs.
- Fields in the Properties section of an article, including `First Published`, `Last Modified`, `Last Published`, and `Summary`, are not included in any PDF version regardless of setting or profile.

Responding to Customers

Email Customers

Working with Case Emails

Cases generated via Email-to-Case or On-Demand Email-to-Case display in an Emails related list. The Emails related list includes all emails sent by your customer regarding a particular case, as well as the email threads between you and your customer. The first 77 characters of an email message appear in the related list so that you can see what the message is about without having to click on it.

To work with Email-to-Case or On-Demand Email-to-Case emails:

- Click **Send An Email** to send an email to a contact, another user, or any other email address.
- Click **Reply** to respond to an email. The email response automatically includes the email body as received from the customer. Enter your response and click **Send**.

When you reply to email messages in the Email related list on cases, the `From:` field on your email may display to recipients as `no-reply@salesforce.com` or `support@company.com`. This is due to how the recipients' email applications receive `Sender` and `From` headers on inbound email. By default, an `Enable Sender ID compliance` setting is selected for your organization, which enables email messages sent from Salesforce to comply with email applications that require `Sender` headers for delivery.

- Click **To All** to respond to all participants on an email thread.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To view cases:

- “Read” on cases

To work with case emails:

- “Edit” on cases

- Click the subject of the email to view the email. From the email, you can reply to the sender, reply to everyone, forward the email, or delete it.
- While viewing an email, you can display a list of all the emails associated with the case by clicking **Email Message List**, and you can navigate to the case's other emails by clicking **Next** or **Previous**.

 **Note:** The **Email Message List**, **Next**, and **Previous** links are not available in the Customer Portal and partner portal.

- While viewing an email, click **Forward** to forward it. The email automatically includes the email body as received from the customer. Optionally, enter text and click **Send**.
- If the original email was an HTML email, you can click the **Click here to view HTML version** link to see the HTML version. If you want to see the entire email header, click the **Click here to view original email headers** link.
- To view any attachments contained in incoming emails, go to the Attachments related list of the email. To view attachments sent with outbound emails, view the Attachments related list of outbound emails.

The size limit for an attachment is 5 MB. The user who configured the email agent can view its log file to see if any attachments exceeded the size limit.

- Click **Del** to delete an email. Note that a deleted email can be retrieved from the Recycle Bin. However, if you delete an email from a case, then delete the case, you will not be able to retrieve the deleted email from the Recycle Bin.

In the Email related list, emails are listed in the order received according to the most recent. Emails in the related list display one of the following statuses:

Email Status	Description
New 	An inbound email that has not been read. The contents of the <code>Subject</code> field display in bold for emails with a <code>New Status</code> .
Read 	An inbound email that has been read but not replied to.
Sent 	An outbound email.
Replied 	An inbound email that has been replied to. Replying to a sent email gives it a replied status.

When a case contains a new (unread) email, an "Email" task associated with that case is automatically created in the case owner's task list with the email subject displayed. The owner can easily see the new task on the Home tab or from the Open Activities related list of the case. From the task, the owner can click a link to view the email associated with the case. When the user responds to the email, the task is removed from the owner's task list and added to the case's Activity History related list. The user can also move an email task to which they have not responded to the Activity History related list by changing its status to "Completed."

 **Note:** When inbound emails create a new case and your assignment rules route that case to a queue, the "Email" task is assigned to the user configured in the email agent.

If an inbound email does not contain the email address of an existing contact, then the `Web Name` field on the case is automatically updated with the name in the `From` field of the email, and the `Web Email` field on the case is automatically updated with the address provided in the inbound email.

 **Tip:** When running the Cases with Emails report, add the `Is Incoming` field to the report to see the cases received via Email-to-Case.

Send and Reply to Email from Case Feed

Use the features of the Case Feed email action to save time when writing messages and customize the emails you send to customers.

The email action in Case Feed is available only if your organization uses Email-to-Case and if the `Enable Case Feed Actions` and `Feed Items` setting is enabled.

 **Note:** Depending on how your administrator has set up Case Feed, some of the options described in the screenshot might not be available to you or might look different.

Here's how to use the email action:

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To send emails:

- "Send Email"

1. In the feed for the case, click **Email**. Depending on how your administrator has set up Case Feed, some of the options described in the screenshot might not be available to you or might look different. To write a reply to a message, click **Reply** or **Reply All** below an email message in the feed.

2. If your department uses email templates, [choose one for your message](#).
3. Select a **From** address.
If this field doesn't appear as a picklist, your administrator has already defined a From address.
4. The email address of the contact who created the case automatically appears in the **To** field, as long as the creator is an existing contact. To add more recipients, click  to look up an address, or type or paste email addresses or names in the **To** field.
 - When you enter an email address or name that matches one contact or user, the address appears as a button with the person's name.
 - To add several addresses at once, copy and paste them separated by spaces or commas. These email addresses appear as buttons, and, if they're associated with a contact or user, show the contact's name.
 - When you enter an email address that matches multiple contacts or users, the address appears as a button. Click the button to see a list of people associated with the email address. Choose the contact or user that you want to associate with the message.
5. If you want to copy other people on the message, click **Add Cc** or **Add Bcc**.
6. By default, the email subject is the name of the case it's related to. If you apply an email template that includes a subject, then the template subject is shown. You can edit the subject if you want to.
7. [Use the rich text editor](#) to add formatting to your message.
8. Create your message. If your department uses Quick Text messages, you can [add them in the body of your email](#).
9. If your administrator has enabled email drafts, you can click **Save** to save a copy of your message without sending it. When you save a message as a draft, any agent with access to the case can edit it.
10. Click **Attach File** or drag and drop files in the attachments pane to add files to the message.
11. Optionally, [attach an article to the message](#).
12. Click **Send Email**.

Note: Depending on how your administrator has set up Case Feed, this button might have a different name.

Tip: Click and drag  in the bottom right corner to change the height of the message pane. Make it larger so you can see more of what you're writing. Make it smaller so you can see more of the case history in the feed without scrolling. Once you resize the message pane, it appears in the new size each time you write an email, until you resize it again.

Add Images and Files to Email Messages in Case Feed

Give customers comprehensive information to help resolve their issues more quickly by attaching files to email messages, and add inline images to include pictures that enhance your text.

For example, if you're working on a case that requires a customer to try a few different solutions to resolve an issue, you might attach a how-to video or a document with multiple sets of detailed troubleshooting steps. If the customer has to follow a particular set of troubleshooting steps very carefully, you could use inline images after each step in the body of a message.

- To add an inline image, click  in the toolbar of the Case Feed email publisher and upload or link to the image you want. Each image you embed must be no larger than 1 MB, and in .png, .jpg, .jpeg, .jpe, .jfif, .jpeg, .bmp, or .gif format. The total size of your email message, including images and text, can be no more than 12 MB.

 **Note:** You need to use the rich text editor in the email publisher to embed images. You can't embed images in plain text messages.

- To attach files to an email, click **Upload files** to choose a file from your computer or Salesforce, or to use a file that's already attached to the case, or drag and drop files to the attachments area at the bottom of the email publisher. You can attach up to a total of 10 MB to each email message. Salesforce supports all file types.

 **Note:** Drag-and-drop functionality is available only on browsers that support HTML5.

- Click **Files:** to see a list of the attachments you've added.

- Click  next to an attachment to remove it.

When the recipient of your email views the message, any images you've embedded appear in the body of the email. If the total size of everything you've attached to the message is greater than 3 MB, all of the attachments appear as links, which the recipient can use to download the files. If the total attachment size is less than 3 MB, each file appears as an attachment.

 **Example:** For example, let's say you're a support agent for an appliance company, and you're working on a case for a customer who's having trouble with the ice maker on her fridge. You could email the customer step-by-step instructions for troubleshooting the ice maker and include an image after each step, and could attach two documents: a PDF of the user manual for the fridge (a 2 MB file) and a list of maintenance tips to keep the fridge working well (a 10 KB file). When the customer receives the email, she'll see:

- The images embedded in the body of the email message so she can refer to them one at a time as she works through the troubleshooting steps
- The user manual and list of maintenance tips as attachments to the message, as their total size is less than 3 MB

If you also attached a troubleshooting video (a 2.5 MB file), all three of the attachments would appear to the customer as links, as the total size of all attachments would be greater than 3MB.

USER PERMISSIONS

To send emails with attachments or inline images:

- "Send Email"

Use Email Templates in Case Feed

Templates help you ensure consistency, save time, and include basic information, such as a customer's name and their case number, all with one click. If your administrator has created text, HTML, or Visualforce email templates, or if you've created your own templates, you can use them when emailing customers in Case Feed.

For best results, we recommend using the [rich text editor](#) when working with email templates.

 **Note:** Depending on how your administrator has set up Case Feed, you may see a pre-loaded template when you use the Email action. Use the steps below to choose a different template if needed.

To use a template:

1. Depending on which action appears, click **Answer Customer** and select `Email`, or just click `Email`.
2. Click `Select a Template`.
3. Choose the folder that has the template you want.
4. Click the name of the template to add it to the email.

Tip:

- If you choose more than one text or HTML template, each template is added in the order you choose it. If you choose a Visualforce template after choosing another template, it replaces the earlier template.
- If the template you choose has attachments, they're included with the message.
- If the template you choose has merge fields, only the case-related fields are merged.
- To remove a template, click . This also deletes any text you've entered and removes all template attachments.

5. [Finish writing and sending your message.](#)

Work with Draft Emails in Case Feed

With draft emails, support agents can save messages they write to customers without having to send them immediately, and administrators can create approval processes for email messages.

Drafts are only supported if your administrator has enabled them.

As a support agent, you might want to save a message as a draft while you gather additional information about the issue you're solving, confirm troubleshooting steps with a colleague, or take a break and log out of Salesforce. To save an email as a draft, click **Save** under the text box when you're writing an email.

 **Note:** Drafts aren't auto-saved.

Each case can have only one draft email associated with it, so if you're working on a case with a draft you or someone else has saved, you won't be able to write another email until that draft is sent or discarded. When you view a case with a draft associated with it, you see a notification with the name of the user who wrote the draft and a link to view it. Any agent or supervisor with access to a case can edit the draft email, unless it's awaiting approval.

If your company uses approval processes for email messages, when you submit a message, it's sent to a supervisor for review. (Depending on how your administrator has set up approval processes, you may have the option of submitting the message for review or sending it without review.) When a supervisor approves the message, it's sent to the customer. If your email isn't approved, a message with an

explanation appears at the top of the publisher when you click **Email** while viewing the case. You can edit the message and resubmit it.

SEE ALSO:

[Review and Approve Email Drafts](#)

Review and Approve Email Drafts

Depending on how your administrator has set up draft emails and approval processes for your organization, you may need to review and approve messages written by the agents you oversee before those messages are sent to customers.

When an agent submits a message for approval, you receive an email notification with a link to the case that includes the message. A notice appears at the top of the publisher when you click **Email**. Click **View email** to go to the message detail page. On that page:

- Click **Unlock Record** to make the message editable.
- Click **Delete** if you want to discard the draft.
- Click **Approve/Reject** in the Approval History related list to approve or reject the message.
- Click **Reassign** to assign the approval to another supervisor.

If you approve the message, it's sent to the customer. If you reject it, you have the option of writing a note explaining why. This note appears above the publisher on the case page when the agent clicks **Email**, along with a notice that the draft has been rejected.

Customize Emails with the Rich Text Editor in Case Feed

The rich text editor lets you customize the emails you send to customers. Use it to format text, add bulleted or numbered lists, and add images and links.

Accessing the Editor

The rich text editor appears when you click **Email**, or **Answer Customer** and then **Email**, in the publisher on the Case Feed. You won't see the editor if:

- Your administrator hasn't enabled it.
- You used the plain text editor the last time you wrote an email in Case Feed. Just click the toggle icon  to switch to rich text.

Tips on Using the Rich Text Editor

- The rich text editor is available only for the Email action.
- If you enter HTML and other kinds of markup in the editor, it won't render when you send a message.

Use Quick Text in Case Feed

Quick Text helps you respond to customers and update cases more quickly. Insert pre-written messages, such as greetings and common troubleshooting steps, into customer communications like emails and portal posts. You also can insert pre-written notes into case status changes and call logs. In Case Feed, you can use Quick Text with the Email, Portal, Change Status, and Log a Call actions.

-  **Note:** Only Quick Text messages assigned to the channel for the action you're working with are available in that action. For example, only messages assigned to the Email channel are available in the Email action.

- Choose the Email, Portal, Change Status, or Log a Call action.
- In the body of the action, type `;/`.
If you've used Quick Text before, then a list of Quick Text messages appears, with the messages you've used most recently at the top. If this time is the first time you've used Quick Text, then no messages appear.
- To see more messages, type a word or phrase.
A list of messages that include those words appears.
- To see the title and full text of a message, click it once or highlight it using the arrow keys on your keyboard.
The full message appears at the bottom of the Quick Text list.
- To select a message, double-click it or highlight it and press ENTER.
If the message you select contains merge fields, they are resolved when you add the message.

Chat with Customers in Live Agent

Live Agent is a chat solution that's fully integrated with the rest of Salesforce, making it easy for you to access all the information you need about your customers in a single workspace.

Live Agent for Support Agents

Welcome to Live Agent for support agents! Live Agent is a comprehensive chat solution that makes it easy for you to support customers.

As a support agent, you assist dozens of customers with their support issues every day. Live Agent is a chat solution that's fully integrated with the rest of Salesforce, making it easy for you to access all the information you need about your customers in a single workspace. In addition, Salesforce leverages the power of the Service Cloud, giving you access to important tools like a knowledge base and pre-defined support messages, that let you assist your customers and close cases more quickly.

Whether you're a seasoned veteran or new to Live Agent, there are several tools at your disposal that make it easy to assist multiple customers at the same time with chat. Let's get started.

EDITIONS

Available in: **Salesforce Classic**

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

Assist Customers with Chat

Use Live Agent to quickly help your customers solve issues.

Using Live Agent in the Salesforce console gives you access to several other Service Cloud products that let you assist customers in a comprehensive way.

[Change Your Live Agent Status](#)

Change your Live Agent status to control when you're available to receive new and transferred chats.

[Chat with Customers](#)

Accept incoming chat requests to begin chatting with customers.

[Access Customer Details During a Chat](#)

When you accept a chat request, a details tab for that chat opens automatically. The details tab includes information about the visitor and lets you look up records related to the chat, such as contacts and cases.

[Send Quick Text Messages in Chats](#)

Send pre-written messages to chat customers to send common messages more quickly.

[Transfer Files During a Chat](#)

Give customers the ability to upload and transfer files during a chat so they can easily share more information about their issues.

[Block Unwanted Chat Customers](#)

You can block chats from troublesome customers right from the Salesforce console. For example, if a customer is using abusive language or sending spam messages, you can block that user from starting a new chat.

[End a Chat Session](#)

End a chat session after you've finished chatting with a customer and updating the records related to their chat.

Access Customer Details During a Chat

When you accept a chat request, a details tab for that chat opens automatically. The details tab includes information about the visitor and lets you look up records related to the chat, such as contacts and cases.

- To search for a record, type a name in the relevant box in the Related Entities section of the page, then click . To associate a record you find to the chat, select it from the search results list and click **Save**.

In older organizations, you could access records and visitor details from the Related Entities panel during chats. However, starting with Summer '14, the Related Entities panel in the details tab isn't available for new Live Agent customers. Existing customers will continue to have access to the Related Entities panel.

- Once you associate an existing record to the chat, click the name of the record to open it in a new tab.
- To create a new record, click **New Case**, **New Lead**, **New Contact**, or **New Account**.

- "Read" on Quick Text

Transfer Files During a Chat

Give customers the ability to upload and transfer files during a chat so they can easily share more information about their issues.

For example, if a customer is receiving an error when they try to complete a process, they can upload and transfer a screenshot of the error message to the agent.

Before a customer can upload a file, you must associate the chat with a record, such as a case or a contact. Since the chat transcript isn't created until you end the chat, you can't attach a customer's file directly to the transcript during the chat.

1. Click  to search for or create a record to attach to the chat.
2. Click the file transfer icon ().
 -  **Note:** A customer can't upload a file until you initiate the file transfer by clicking the file transfer icon. This helps prevent customers from uploading unsolicited or potentially dangerous files into the chat.
3. Select the record you chose in the first step to attach the transferred file to.
The customer receives a prompt to upload their file to the chat window. The file can't exceed 25 MB.
4. When the customer has sent the file through the chat, click the link in the chat log to view the file.

Add Attachments to a Chat

Attach Articles to Live Agent Chats

Use the Knowledge One widget to find articles that help solve customer issues during chats.

The Knowledge One widget is only available if your Salesforce org uses Knowledge and your Salesforce admin has included the tool in your Salesforce console app.

1. When chatting with a visitor, click an article from the list in the Knowledge One widget. A tab with the full text of the article opens.
2. To search for a specific article in the list, type a word or phrase in the text box in the widget and click  or press ENTER.
 - Alternatively, click  at the top of the widget to search all articles, including those not in the list. The main widget search gives you the option of limiting your results to specific types of articles.
 - To filter your search results, click **Filters** and choose how you want to restrict your search.
3. When you find the article you want, click , then click **Share**.
The text of the article appears in the chat text box.
4. Click **Send** or press ENTER on your keyboard to send the article to the visitor.

 **Note:** You can send articles to visitors only if your admin has set up a Chat Answer field on articles. If this field isn't set up, you can view articles but can't include them in chats.

Attach Records to Chat Transcripts

Search for or create records to attach to a chat transcript as you chat with customers.

Find existing records or create new ones to associate with a transcript as you chat with customers. For example, you can create a new case based on the customer's issue, or search for the customer's existing contact record and attach these records to the transcript for later reference. You can attach standard or custom records to your chat transcripts.

1. While chatting with a customer, click  to attach a record to the transcript.
 -  **Note:** You can only attach one of each type of record to a chat transcript. For example, you can't attach more than one case to a single transcript.
2. To search for an existing record:
 - a. Click the search icon () in the records window next to the type of record you want to search for.
 - b. Type the name of the record and hit ENTER.
The record opens in a new tab.
 - c. Click the attach icon () again.
 - d. Select the check box next to the record you searched for to link it to the chat transcript.
3. To create a new record:
 - a. Click the create icon () next to the type of record you want to create.
 - b. Complete the information in the new record and save it.
The record will automatically link to the transcript once the record is created.
4. After you complete the chat with the customer, exit the chat.
5. If prompted, click **Save**.
The records you linked are now attached to the transcript. You can access them from the transcript's detail view.

Block Unwanted Chat Customers

You can block chats from troublesome customers right from the Salesforce console. For example, if a customer is using abusive language or sending spam messages, you can block that user from starting a new chat.

Blocking a chat ends the chat and blocks any new chat requests coming from that user's IP (Internet Protocol) address.

If your Salesforce org is receiving many spam chats from a particular region, your administrator can block entire ranges of IP addresses.

1. In the interaction pane, click the  icon.
2. (Optional) Enter a comment explaining why you're blocking this visitor.
3. Click **Block**.

When you click **Block**, you immediately end the chat, and the visitor sees a notification that an agent ended the chat. If multiple agents are engaged in a conference, **Block** immediately ends the conference, and the other agents are also notified.

If you don't see the  icon in your console, contact your Salesforce admin to enable it. Only a Salesforce admin can unblock an IP address.

EDITIONS

Available in: **Salesforce Classic**

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

End a Chat Session

End a chat session after you've finished chatting with a customer and updating the records related to their chat.

After you end a chat with a customer, the primary and secondary tabs related to that chat remain open in your console. Close them to save your work and free up space to take on more chats.

1. Close the primary tab for the chat.
2. If prompted, click **Save**.

Collaborate and Request Help

Transfer Chats to an Agent, Skill, or Button

Live Agent chats can be transferred to another agent, skill, or button so your customers always receive the highest-quality help from the most relevant sources.

Just as you forward an email or pass a case to another agent, you can transfer a Live Agent chat. Transferring is useful when a customer has an issue that another agent can solve, or requires an agent with a particular skill. How the chat gets to the next agent depends on the kind of transfer you use.

There are three types of transfers: Transfer to Agent, Transfer to Skill, and Transfer to Button. To ensure that your customers get help as quickly as possible, certain chat transfer types can exceed agents' configured capacity. You can set agent capacity through the Live Agent Configuration, or the Presence Configuration if your organization uses Omni-Channel.

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Type of Transfer	Scenario	Method of Transfer	Can Exceed Configured Agent Capacity?
Transfer to Agent	You want to transfer the chat to Agent Jane, because she's the perfect fit for the case.	A chat request is sent to Agent Jane. If she accepts the request, the chat is transferred to her, and your chat workspace closes.	Yes
Transfer to Skill	You want to forward the chat to an agent who has the skill "billing specialist."	A chat request is sent to all agents assigned to the skill, and the chat is transferred to the first agent to accept it.	Yes
Transfer to Button	You want to transfer a chat from the sales queue to the service queue.	The chat is transferred to an available agent assigned to the selected button or queue.	No

When chats are transferred directly to an agent or skill group, the transferred chats are allowed to exceed the accepting agent's capacity. This means that agents always receive a chat request, even if they're handling the maximum allowed number of chats. If the transfer request is rejected or times out, the original agent can try another recipient or transfer method.

Chats routed from buttons or queues always respect the configured agent capacity. So, agents assigned to that button or queue don't receive the transfer request—or any other chat requests—until they have open capacity. But don't worry: customers still won't get stuck waiting for another agent. When a chat is sent to the next queue, it's added into the list of incoming chats by its age, so it will appear higher up than brand-new chat requests.

When an agent accepts a transferred chat, the records attached to the chat transcript, like a case or contact, open alongside the chat in the workspace. The accepting agent has the information to start assisting the customer right away, without having to search for related records. These records are also completely up-to-date, as the previous agent is prompted to save any changes when the transfer is initiated.

 **Note:** If the accepting agent doesn't have permissions to view one or more of the attached objects, those items won't open in the transferred workspace.

Transfer Chats

You can transfer chat sessions to other agents when a customer needs extra help with an issue, or to make room for new requests.

Transfer Chats

You can transfer chat sessions to other agents when a customer needs extra help with an issue, or to make room for new requests.

1. While chatting with a customer, click **Transfer**.

2. Select a transfer option from one of the menus.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

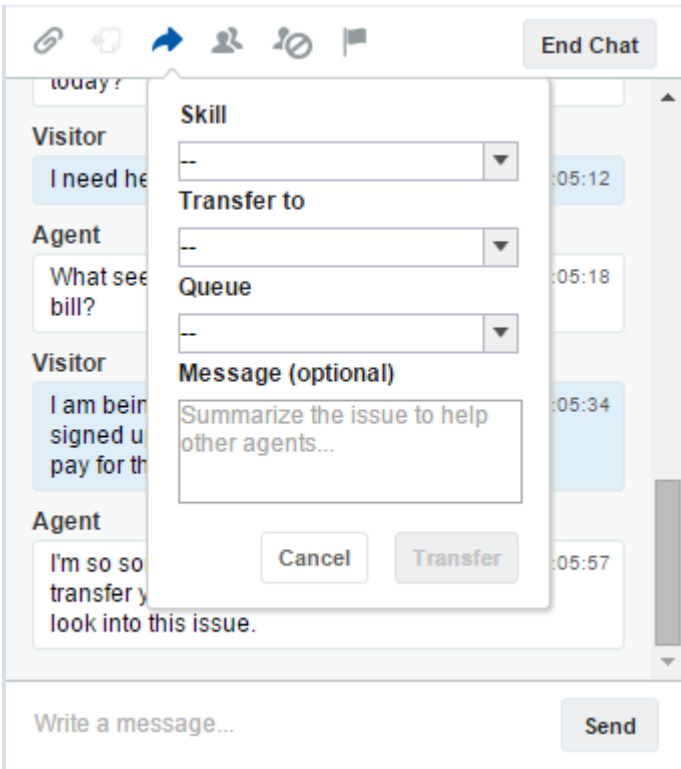

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

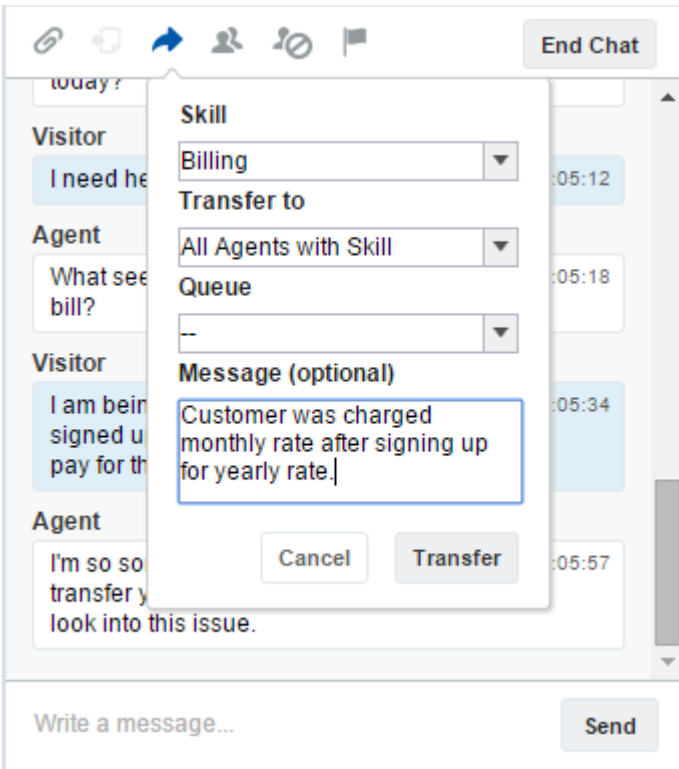

To chat with visitors in Live Agent in the Salesforce console:

- Live Agent is enabled, set up, and included in a Salesforce console app

 **Note:** There are options for each type of transfer that's enabled for your Salesforce org. If you don't see the option you need, ask your administrator to add it for you.

3. (Optional) Write a message for the agent receiving the chat. This message is part of the chat request to provide context for the next agent.

4. If the transfer is accepted, your chat and any associated records automatically close (don't worry, you'll be prompted to save your changes if you haven't already). If it's rejected, you can try again with another recipient or transfer method.

Send a Chat Conferencing Request

As wise as support agents are, sometimes a single support agent doesn't have all the information that's required to solve a customer's problem. Chat conferencing lets you invite one or more agents into your customer chats. That way, your agents can turn boring chats into veritable support parties for your customers—all without disrupting the flow of conversation! Send a chat conferencing request to ask another agent to join you in a customer chat.

 **Note:** You can conference in a single agent, or send a request to all agents and the first to accept will join the conference. You can conference multiple agents into a chat, but you need to send each request individually.

1. While you're chatting with a customer, click .
2. Select the skill group of the agents that you want to transfer into the chat.
3. Select whether to send the conference request to all agents with that skill or to a specific agent.
4. Click **Conference** to send the conference request.
If the agent accepts the conference request, you see a notification in the chat log, and that agent can start chatting with you and the customer. If the agent declines the request, you see a notification above the chat log. The customer receives a notification when an agent joins or leaves a conference.
5. If you decide to exit the conference, click **Leave**, and then click **Leave** again.
If the other agent leaves the conference, you'll see a notification in the chat log.

Any saved and attached records will open for other agents who join the conference. But only the originating or longest-attending agent will be able to attach other records. If the longest-attending agent attaches or removes records during the conference, other agents won't see these changes in their workspaces.

For more about transferring chats and workspaces, see [Transfer Chats](#).

Request Help with a Chat

When you need help with a chat, you can raise a virtual flag to alert a supervisor. Supervisors are alerted that you need help, and they can respond directly via the console.

1. In the interaction pane, click the  icon.
2. Enter a message briefly explaining what help you need.
3. Click **Raise Flag**.

Either you or a supervisor can lower the flag when your issue is resolved.

If you don't see the  icon in your console, contact your Salesforce admin to enable it.

View Customer Records

Salesforce automatically creates some records when a chat ends. These records store information about chat customers and their interactions with agents.

These records are mostly used internally to provide an audit trail about your customers and their chats with agents. However, you can access these records yourself if you ever need them.

1. To access customer records in the Salesforce console, select the type of record you want to view from the Salesforce console navigation list.

A list of those records will appear in the main window.

Live Agent Session Records

Every time your agents log in to Live Agent, a Live Agent session record is automatically created. These session records store information about your agents' and customers' interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers.

Live Agent Visitor Records

Every time an agent chats with a customer, Salesforce automatically creates a visitor record that identifies the customer's computer.

Live Agent Transcripts

A Live Agent transcript is a record of a chat between a customer and an agent. Salesforce automatically creates a transcript for each chat session.

Live Agent Session Records

Every time your agents log in to Live Agent, a Live Agent session record is automatically created. These session records store information about your agents' and customers' interactions online, such as how many chat requests were processed, how long agents spent online, or how long agents were actively engaged in chats with customers.

Use Live Agent sessions to find and edit information about your support agents' chats with customers. For example, you can create a list called "Today's Sessions" to view chat activity that occurred in one day.

You can associate session records with cases, accounts, contacts, and leads or link them with other objects through custom lookup fields.

-  **Note:** If you have the correct permissions, you can create, view, edit, or delete session records, just like other record types in Salesforce. However, session records are meant to provide a paper trail for the chats between your agents and customers, so we don't recommend tampering with these records in most cases.

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Live Agent Visitor Records

Every time an agent chats with a customer, Salesforce automatically creates a visitor record that identifies the customer's computer.

Each new visitor is associated with a session key, which Salesforce creates automatically. A session key is a unique ID that is stored in the visitor record and on the visitor's PC as a cookie. If a customer participates in multiple chats, Salesforce uses the session key to link the customer to their visitor record, associating that record to all related chat transcripts.

 **Note:** If you have the correct permissions, you can create, view, edit, or delete visitor records, just like other record types in Salesforce. However, visitor records are meant to provide a paper trail that associates your customers with their chat transcripts, so we don't recommend tampering with these records in most cases.

Live Agent Transcripts

A Live Agent transcript is a record of a chat between a customer and an agent. Salesforce automatically creates a transcript for each chat session.

When a chat ends successfully—that is, when the chat is ended by a customer or an agent—the chat transcript is created as soon as the agent closes the chat window and any related tabs.

If a chat is disconnected or experiences another error, Salesforce still creates a chat transcript for it, though it takes up to 30 minutes to create the transcript after the chat is disconnected.

You can associate a transcript with cases, accounts, contacts, and leads, or you can link it to other objects.

 **Note:** If you have the correct permissions, you can create, view, edit, or delete chat transcripts, just like other record types in Salesforce. However, chat transcripts are meant to provide a paper trail for the chats between your agents and customers, so we don't recommend tampering with these records in most cases.

[Live Agent Transcript Fields](#)

Live Agent transcript fields help you track information about your agents' chats with customers.

[Live Agent Transcript Events](#)

Live chat transcript events automatically track events that occur between your agents and customers during chats.

Live Agent Transcript Fields

Live Agent transcript fields help you track information about your agents' chats with customers.

A Live Agent transcript has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields might not be visible or editable.

Field	Definition
Abandoned After	The amount of time in seconds an incoming chat request went unanswered by an agent before the chat was disconnected by the customer
Account Name	The name of the account associated with the transcript
Agent Average Response Time	The average time that it took an agent to respond to a chat visitor's message
Agent Maximum Response Time	The maximum time it took an agent to respond to a chat visitor's message
Agent Message Count	The number of messages an agent sent during the chat
Agent Skill	The skill associated with the live chat button used to initiate the chat
Body	The transcribed chat between an agent and a visitor
Browser	The type and version of the browser used by the visitor
Browser Language	The visitor's browser language selection
Case	The case associated with the chat
Chat Button	The chat button that the visitor clicked to initiate the chat
Chat Duration	The total duration of the chat in seconds
Contact Name	The name of the contact that participated in the chat Note that contacts and visitors are not the same. See Live Chat Visitor for more information.
Created By	The user who created the transcript, including creation date and time (Read only)
Created Date	The date and time the transcript was created (Read only)
Deployment	The deployment from which the visitor initiated the chat

EDITIONS

Available in: **Salesforce Classic**

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Field	Definition
End Time	The time the chat ended
Ended By	Indicates whether the visitor or the agent ended the chat
Last Modified By	The user who last modified the transcript, including date and time (Read only)
Last Modified Date	The date and time the transcript was last modified (Read only)
Lead	The name of the lead that was generated by the chat or discussed during the chat
Live Chat Transcript	<p>Unique, numerical identifier automatically assigned to the transcript.</p> <p>Administrators can modify the format and numbering for this field. Transcript numbers usually increase sequentially, but sometimes they can skip numbers in a sequence.</p>
Live Chat Visitor	<p>Unique, numerical identifier automatically assigned to the visitor. Administrators can modify the format and numbering for this field. Visitor numbers usually increase sequentially, but sometimes they can skip numbers in a sequence.</p> <p>Note that visitors and contacts are different: a visitor might be a contact, but this is not a requirement, and there is no relationship between contacts and visitors.</p>
Location	The visitor's geographic location. Either the city and state, or city and country (if the visitor is located outside of the United States).
Network	The visitor's network or Internet Service Provider.
Owner	<p>The name of the transcript owner. By default, the owner is the user who originally created the transcript (for example, the agent who answered the chat).</p> <p>You can select a different user as the owner, or assign the transcript to a queue. When assigning transcripts to other users, make sure those users have the "Read" permission on live chat transcripts.</p>
Platform	The user's operating system
Referring Site	<p>Site the visitor was on before they came to your website.</p> <p>For example, if the visitor used Google to search for your support organization's website, the referring site is Google.</p>
Request Time	The time that the visitor initially requested the chat
Screen Resolution	The screen resolution used by the visitor
Start Time	The time that the agent answered the chat request

Field	Definition
Status	Completed or Missed. A missed chat was requested but not answered
Supervisor Transcript Body	Contains the whisper messages from supervisors
User Agent	A string that identifies the type of browser and operating system the visitor used
Visitor Average Response Time	The average time that it took a visitor to respond to an agent comment
Visitor Maximum Response Time	The maximum time it took a customer to respond to an agent's message
Visitor IP Address	The IP address of the computer that the visitor used during the chat
Visitor Message Count	The number of messages a visitor sent during the chat
Wait Time	The total amount of time a chat request was waiting to be accepted by an agent

Live Agent Transcript Events

Live chat transcript events automatically track events that occur between your agents and customers during chats.

You can edit live chat transcripts to track events that occur between your agents and customers during live chats. You can add the following events to a live chat transcript:

Event	Description
Chat Requested	Visitor requested a chat
Queued	Chat request was placed in queue
Routed (Push)	Chat request was routed to agent
Routed (Choice)	Chat request was routed to all available, qualified agents
Accepted	Chat request was accepted by agent
Critical Wait Alert Time Reached	Agent failed to respond to the customer's message before reaching the critical wait alert time
Critical Wait Alert Cleared	Agent responded to the customer's message after the critical wait alert was received
Transfer Requested	Agent requested chat transfer
Transfer Accepted	Chat transfer was accepted by agent
Transfer Request Canceled	Chat transfer request was canceled by the agent who sent the request

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Event	Description
Transfer Request Declined	Chat transfer request was declined by the agent who received the request
Transferred to Button	Chat was transferred to a button
Transfer to Button Failed	Chat transfer to button was unsuccessful
Chat Conference Requested	Agent sent a request to start a conference
Chat Conference Canceled	Conference request was canceled
Chat Conference Declined	Conference request was declined by an agent
Agent Joined Conference	An agent joined the conference
Agent Left Conference	An agent left the conference
File Transfer Requested	A file transfer was requested
File Transfer Canceled by Agent	File transfer was canceled by an agent
File Transfer Canceled by Visitor	File transfer was canceled by the visitor
File Transfer Succeeded	File transfer was successful
File Transfer Failed	File transfer failed
Canceled (Blocked)	An attempted chat was blocked via an IP blocking rule
Blocked by Agent	An agent blocked an active chat (creating an IP blocking rule)
Declined (Manual)	Chat request was declined by agent
Declined (Time-Out)	Chat request timed out while assigned to agent
Canceled (No Agent)	Chat request was canceled because no qualified agents were available
Canceled (No Queue)	Chat request was canceled because there was no room in queue
Canceled by Visitor	Visitor clicked Cancel Chat
Agent Left	Agent left chat
Visitor Left	Visitor left chat
Ended by Agent	Agent clicked End Chat
Ended by Visitor	Visitor clicked End Chat
Other	Another event occurred

Live Agent for Support Supervisors

Welcome to Live Agent for support supervisors! Live Agent is a comprehensive chat solution that makes it easy for your agents to support customers. With Live Agent's supervisor tools, you can easily monitor your agents' activities, assist your agents in chats, and view data on your agents' chat sessions.

As a support supervisor, you oversee your employees to ensure that they provide the best customer support possible. Live Agent is a chat solution that's fully integrated with the rest of Salesforce, making it easy for you to access the information you need about your agents and their chat activity in a single workspace.

Whether you're a seasoned veteran or new to Live Agent, there are several tools at your disposal that make it easy to support and monitor your chat agents as they work with customers. Let's get started.

The Live Agent Supervisor Panel

The Live Agent supervisor panel is your one-stop shop to find information about your department's chat buttons and chat agents. From the supervisor panel, you can monitor agents' chat activities as they chat with customers and view customer traffic on specific chat buttons, all in real time. The supervisor panel is conveniently located in the Salesforce console, so it's easy to access it without switching out of the app.

EDITIONS

Access the Supervisor Panel

Access the supervisor panel conveniently from the Salesforce console to easily monitor your agents' chat activity.

1. To access the supervisor panel in the Salesforce console, select **Live Agent Supervisor** in the console's navigation list.

The supervisor panel appears in the main console window, giving you access to real-time information about your Salesforce org's chat buttons and agents.

Agent Status List

The agent status list in the supervisor panel gives you access to real-time information about your agents' chat activity.

Agent Detail	Description
Agent Name	The name of the agent.  Note: If a red flag appears next to the name, the agent has requested help. Respond via the chat detail module (far right).
Status	The agent's Live Agent status.
Action	The actions you can take to change the agent's status.
No. Chats in Progress	The number of chats that an agent is engaged in.
No. Requests Assigned	The number of pending chat requests that are currently assigned to the agent.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To use the Live Agent supervisor panel in the Salesforce console:

- Access to the Live Agent supervisor tab in a user profile or permission set, and included in a Salesforce console app

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Agent Detail	Description
Time Elapsed Since Login	The amount of time the agent has been logged in to Live Agent.
Time Elapsed Since Last Accept	The amount of time since the agent last accepted a chat request.
Message to Supervisor (optional)	The private message that the agent sent with a help flag.

Expand each agent's name to see details about the customers they're chatting with.

Customer Detail	Description
Visitor Name	The name of the customer, if available.
IP	The IP address of the customer's device.
Network	The customer's network, if available.
Browser	The type of internet browser the customer is using to connect to their chat window.
City	The city the customer is chatting from.
Country	The country the customer is chatting from.
Duration	The amount of time the customer has been engaged in a chat with the agent.
Action	The actions you can take to view the customer's chat with the agent.

Queue Status List

The queue status list in the supervisor panel gives you access to real-time information about your organization's chat buttons and queues.

Queue Detail	Description
Button Name	The name of the chat button.
ID	The unique Salesforce ID of the chat button.
Queue Length	The number of chats that are waiting to be assigned to an agent.
Longest Wait	The longest amount of time a customer chat has waited to be connected to an agent.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Monitor Your Agents' Chats

View your agents' chats from the supervisor panel as they help customers. You can monitor agents' performance and give them real-time feedback and help as they serve customers.

1. In the Agent Status list, click  to expand the information about the agent whose chat you want to view. If an agent has requested help, you see a red flag next to the name and a private message (far right) if the agent entered one.
2. To view a chat, click **View** in the Action column of the chat you want to monitor.
The chat monitor opens in the Agent Status list.
3. To send a private message to an agent as the agent is chatting with a customer, type your message in the message field and press **Enter**.

The agent can see your message in the chat log, but the message is invisible to the customer.

When you finish monitoring your agent's chat, click  again to collapse the chat monitor.

To remove a flag after you've provided help, click **Lower Flag**.

EDITIONS

Available in: **Salesforce Classic**

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To use the Live Agent supervisor panel in the Salesforce console:

- Access to the Live Agent supervisor tab in a user profile or permission set, and included in a Salesforce console app

To view agents' chats:

- "Agent Sneak Peek Enabled" in your Live Agent configuration

To send whisper messages to agents:

- "Whisper Messages Enabled" in your Live Agent configuration

Assign Skills to Agents

Assign skills to your agents as the expertise of your team evolves.

1. In Setup, enter *skills* in the **Quick Find** box, then select **Skills**.
2. Click the name of the skill you want to assign.
3. Click **Edit**.
4. Select either the profiles (recommended) or individual users who have this skill.
5. Click **Save**.

If you don't have access to the Skills page, ask your Salesforce administrator about enabling this permission. Only your administrator can create skills.

USER PERMISSIONS

To assign skills:

- "Assign Live Agent Skills to Users"

Report on Live Agent Sessions

Gain insight into your agents' chat activities by building reports about Live Agent chat sessions.

You can create a custom report type for Live Agent chat sessions and use it to run reports on your agents' sessions using the Report Builder. These Live Agent session reports can provide insight about your agents' chat activities—for example, whether or not your agent team is able to handle all chat requests from your customers.

1. Create a custom report type using Live Agent Sessions as the primary object.
2. Create a new Live Agent report using the Report Builder.
3. Customize your report to include the columns of information you want to feature.
4. Save or run the report.

Call Customers on the Phone

Salesforce CRM Call Center System Requirements

 **Important:** The CTI Toolkit is retired. Softphones built with the CTI Toolkit aren't supported. To continue using your softphone, migrate your CTI implementation to [Salesforce Open CTI](#). For more information about the retirement of CTI Toolkit and details about how to migrate to Open CTI, see [CTI Toolkit Retirement FAQ](#).

Salesforce CRM Call Center requires the installation of a light-weight computer-telephony integration (CTI) adapter on every Salesforce user's machine. The **minimum** system requirements for an adapter are:

- For adapters built with CTI version 4.0 or higher:
 - Microsoft® Internet Explorer® 8; Mozilla® Firefox® 3.5; Apple® Safari® 4; Google Chrome™ 10.0 (Internet Explorer 11 isn't supported)
 - Microsoft Windows® XP (with Microsoft .NET framework)
- For adapters built with previous versions of CTI:
 - Internet Explorer 7 or 8; Firefox 3.5 or 3.6 (Safari, Chrome, and Internet Explorer 11 aren't supported)

[Tip sheet: Getting Started with your SoftPhone](#)

Softphone Overview

A softphone is a customizable call-control tool that appears to users assigned to a call center. A softphone's functionality and user interface are determined by the Salesforce admin.

 **Important:** CTI Toolkit, also known as the Desktop CTI, is [retired](#). The CTI Toolkit is no longer supported, and any adapters built on the CTI Toolkit won't work. To continue using CTI functionality, migrate to [Salesforce Open CTI](#).

[Editing Personal Softphone Settings](#)

About CTI 1.0 and 2.0 SoftPhones

 **Important:** The CTI Toolkit is retired. Softphones built with the CTI Toolkit aren't supported. To continue using your softphone, migrate your CTI implementation to [Salesforce Open CTI](#). For more information about the retirement of CTI Toolkit and details about how to migrate to Open CTI, see [CTI Toolkit Retirement FAQ](#).

A softphone is a customizable call-control tool that appears to users assigned to a call center. SoftPhones built with versions 1.0 or 2.0 of the CTI Toolkit display in the sidebar of every Salesforce page. Although administrators and developers can customize CTI 1.0 or 2.0 SoftPhones, they usually include the following components:

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

The screenshot displays the SoftPhone interface with the following components labeled:

- Call center state area:** A dropdown menu at the top left showing "On a Call".
- Phone line header:** A header bar showing "Line 1 On Call" with a green status icon.
- Call information area:** A section containing call details: "Dial Number 9055551212", "Duration 04:43", "Account Global Media", and "Contact Jon Amos".
- Call button area:** A set of control buttons including "End Call" (red), "Hold", "Transfer", "Conference", and "New Line".
- Current call log area:** A section titled "Current Call Log" with a note "Log will auto-save when call ends." and fields for "Subject" (Call 2/2/2010 9:23 AM), "Name" (Contact: Jon Amos), "Related To" (Account: Global Media), and "Comments" (Needs updated files).
- Recent calls area:** A section titled "Last Call" showing details for a previous call: "Subject Call 2/2/2010 9:12 AM", "Name Contact: Jon Amos", and "Related To Account: Global Media".
- My Calls Today report:** A link labeled "My Calls Today" at the bottom of the interface.
- SoftPhone logo:** The SoftPhone logo icon located at the bottom right of the interface.

Call center state area

Includes a drop-down list that lets you specify whether you're ready to receive calls. See [Changing Your Call Center State](#) on page 2317.

Phone line header

Shows the status of the phone line. A status icon changes colors and blinks (●), and provides a text description. You can click the name of the line (Line 1) to show or hide the line's dial pad and call information area.

Call information area

Shows data related to the call, such as the phone number the customer used to dial, the duration of the call, and links to any records associated with the call.

Call button area

Shows buttons that let you make call commands, such as dialing, hanging up, putting a caller on hold, transferring, conferencing, and opening a second line while on a call. See [Using a Softphone](#) on page 2316.

Current call log area

Displays log information for the call. By default, the `Subject` field includes the date and time of the call, but users can edit this field. The `Name` field lets users specify a related contact, lead, or person account, while the `Related To` field lets them attach an additional record to the call log once the call ends. Users can enter additional information about the call in the `Comments` text

box. Call logs are saved in an activity record that can be retrieved from the recent calls area of the SoftPhone, or the Activity History related list of the associated records. See [Creating Call Logs in the Softphone](#) on page 2312.

Recent calls area

Displays saved logs for calls that have recently completed. Click a log's `Subject` to open its detail page, or click a log's `Name` or `Related To` link to open its associated record. Click **Edit** to reopen a call log for editing in the SoftPhone.

My Calls Today report

Opens a report of all the calls you've made or received in the last day.

SoftPhone logo

Displays a customizable logo for each CTI adapter.

 **Note:** Some Salesforce CRM Call Center features might not be available with your softphone because of customizations that have been made for your organization. See your administrator for details.

Answering a Call Using the Softphone

When logged in to a softphone, you can receive a call when:

- The call originates from a queue and your call center state is set to Ready for Calls
- The call is dialed directly to your extension and you are not already on a call

You can tell that you have an incoming call if you see a flashing red button and the words "Incoming Call," "Incoming Transfer," or "Incoming Conference" next to the name of a telephone line in your softphone.

Details about the call, if any, are displayed just above the **Answer** button, and typically include the phone number of the caller and the number that the caller dialed to reach you. When the caller's phone number can be matched with a number in an existing Salesforce record, a link to that record is also displayed. Likewise, if your call center prompts callers to enter an account number or other data before being connected with a representative, your softphone searches for records that contain that information and automatically displays links to matching results.

To answer an incoming call, you can:

- Click **Answer** in the softphone.
- Use your physical telephone set to pick up the call.

When you answer a call, the `Call Duration` clock starts ticking, and your call center state is automatically set to Busy. If you do not answer the call, the system forwards it to another user and your call center state is automatically set to Not Ready for Calls.

Once you have answered a call, you can:

- [Log comments and associate Salesforce records with the call](#)
- [Put the caller on hold](#)
- [Transfer the call to another call center user](#)
- [Conference another call center user into the call](#)
- [End the call](#)

If your softphone supports multiple lines and you answer Line 2 while speaking on Line 1, Line 1 is automatically put on hold.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To answer calls with a softphone:

- Member of a call center

 **Note:** Some Salesforce CRM Call Center features might not be available with your softphone because of customizations that have been made for your organization. See your administrator for details.

 **Tip:** *Screen pops* are pages that display when incoming calls match the phone number of an existing Salesforce record. The following table describes when screen pops display (they can only display when your call center state is set to Ready for Calls):

Screen Pops On	Display	Don't Display
Edit pages		
Detail pages		
Detail pages when inline editing is in use		
Edit pages and detail pages in the Salesforce Console		
Outbound calls		

SEE ALSO:

[Using a Softphone](#)

[Changing Your Call Center State](#)

[Tip sheet: Getting Started with your SoftPhone](#)

Creating Call Logs in the Softphone

Every external call that you make or receive with a softphone automatically generates a call log activity record. You can view these call logs in the Activity History related list of any Salesforce record that is associated with the call or by running a report. Automatically generated call log records include values for:

- The call center user who received or initiated the call
- The phone number of the contact who called or who was called by the call center user
- The date on which the call took place
- The duration of the call, in seconds
- Whether the call was inbound or outbound
- The call center system's unique identifier for the call

You can associate up to two records, edit the subject, and add comments to a call log while the call is underway. To do so:

1. Associate up to two the records with the call log:
 - When you view or create a contact, lead, or person account, a **Name** drop-down list appears in the call log. Use this list to select a single contact, lead, or person account record to associate with the call.
 - When you view or create any other type of Salesforce record, a **Related to** drop-down list appears in the call log. Use this list to select a single record of any other type to associate with the call.

 **Note:** Custom object records can only be associated with a call log if the custom object tracks activities.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To create a call log:

- Member of a call center

By default, the most recently viewed records are selected in the `Name` and `Related to` lists unless you manually choose a different record. The records that you choose in these lists will include the call log in their Activity History related lists once the call ends. These records are also displayed with the call if it is transferred to or conferenced with another Salesforce CRM Call Center user.

2. Edit the `Subject` and `Comments` fields with information about what happened during the call.

After the call ends, the call log is automatically saved as a completed task. You can quickly access the saved call logs for calls that were just completed by expanding the `Last N Calls` section of the softphone. Up to three of your last calls are displayed in this list with your most recent call displayed first:

- To modify a recent call log, click **Edit** next to the call log's `Subject` field.
- To view a saved call log, click the call log's `Subject`.
- To view a record that is associated with a call log, click the name of the record.

To view a list of all calls that you've made or received in the past day, click **My Calls Today**. This link opens the My Calls Today report in the Reports tab.

 **Note:** Some Salesforce CRM Call Center features might not be available with your softphone because of customizations that have been made for your organization. See your administrator for details.

SEE ALSO:

[Wrapping Up a Call Using the Softphone](#)

[Tip sheet: Getting Started with your SoftPhone](#)

Putting a Caller on Hold Using the Softphone

Salesforce CRM Call Center allows you to put any caller on hold so that the caller can't hear you speaking. To put a caller on hold, click **Hold** in the softphone line that is currently active. The `Hold Time` clock that shows how long the caller has been waiting automatically starts, and the line light icon () begins to blink yellow.

- Callers are automatically put on hold whenever you initiate a [call transfer](#), dial a number on a second line, or initiate a [conference call](#).
- If you click **Hold** while on a conference, your line becomes mute but other conference participants can still speak to one another.

To resume the call, click **Retrieve from Hold**. If you want to end the call without retrieving the caller from hold, click **End Call**.

 **Note:** Some Salesforce CRM Call Center features might not be available with your softphone because of customizations that have been made for your organization. See your administrator for details.

USER PERMISSIONS

To put a caller on hold:

- Member of a call center

Transferring a Call Using the Softphone

To transfer a call to another call center user or to an external phone number:

1. [Attach any relevant Salesforce records](#) to the call that you want to transfer. For example, if you created a case for the call, save it, and make sure that it is selected in one of the `Related To` fields of the current call log. By doing this, the user to whom you are transferring the call will have access to the case in his or her softphone.
2. Click **Transfer** in the softphone line that you want to transfer. You remain on the line with your first caller and a new dial pad becomes active.
3. Use the dial pad, your keyboard, or the [call center directory](#) to enter the phone number of the person to whom the call should be transferred.
4. Click **Initiate Transfer**. Your first caller is automatically put on hold while you are on the call with the destination number. If a number you dial is busy, a message appears and you have the option to dial again or cancel the call.
5. When you are ready to transfer your first caller to the destination number, click **Complete Transfer**. If you no longer want to transfer the call, click **Cancel Transfer**.

Once you complete a transfer, your line is immediately freed and you return to the Ready for Calls state.

Making a Conference Call Using the Softphone

To initiate a conference call with another call center user or an outside phone number:

1. While on a call, click **Conference** in the softphone line that is currently active. Your caller is automatically put on hold and a new dial pad becomes active.
2. Use the dial pad, your keyboard, or the [phone directory](#) to enter the phone number of the person who you want to include in the conference.
3. Click **Initiate Conference**. Your first caller remains on hold while you are on the call with the destination number. If a number you dial is busy, a message appears and you have the option to dial again or cancel the call.
4. Once you have connected with the second caller and are ready to start the conference, click **Complete Conference**. The second caller joins the first on your original telephone line and all three of you can speak freely to one another. If you no longer want to conference the call after dialing the second number, click **Cancel Conference** to hang up on the second caller and return to your original caller.

Note:

- If you click **Hold** while on a conference, your line becomes mute but other conference participants can still speak to one another.

Wrapping Up a Call Using the Softphone

When you are ready to end a call:

1. [Update the associated call log](#). For example, if you created a case or viewed a contact while you were on the call, verify that they are selected in one of the `Related To` fields of the log, and use the `Comments` text box to enter any notes about the call.
Call logs are not created for internal calls.
2. Click **End Call** in the active softphone line or use your physical phone set to hang up. This terminates the call and frees the line.
3. If wrap up codes are not enabled, your call center state is set back to Ready for Calls and the log for your call is automatically saved.
4. If wrap up codes are enabled, your [call center state](#) is set to Wrap Up and a set of reason codes are displayed in the softphone. While in this state you cannot receive any incoming calls.
 - a. Select the reason code that best represents the outcome of the call.
 - b. Optionally make any additional modifications to your call log.
 - c. Click **Done**. Your call center state returns to Ready for Calls, and the log for your call is automatically saved.

All saved call logs are placed in the Last N Calls section of the softphone for quick reference. You can review details of these call logs by clicking any of the associated links:

- The `subject` link (for example, "Call 6/01/2006 12:34 PM") opens the call log details page.
- Either of the `Related To` links opens the detail page for the specified record.

 **Note:** Some Salesforce CRM Call Center features might not be available with your softphone because of customizations that have been made for your organization. See your administrator for details.

Logging In to the Softphone

[Salesforce CRM Call Center](#) requires you to first log in to Salesforce and then to log in separately to your organization's phone system. The phone system login is located in the sidebar and only appears if you are assigned to a call center in Salesforce. If a phone system login does not appear, contact your administrator.

Depending on the phone system that your organization uses, the login prompts you to enter your user ID, password, and other credentials. Once you have entered these values, click **Log In** to complete the connection to your phone system.

To automatically log in to your phone system without having to click the **Log In** button:

1. From your personal settings, enter *Softphone* in the **Quick Find** box, then select **My Softphone Settings**.
2. Select **Automatically log in to your call center when logging into Salesforce**. Once you have logged in to your phone system, Salesforce remembers your login information and automatically makes a connection to your phone system whenever you log in to Salesforce.

Changing Your Call Center State

While logged in to [Salesforce CRM Call Center](#), there may be times when you do not want to receive calls on your softphone, or when you need to step away from your desk. To avoid receiving calls

when you do not want them, you can set your call center state next to the  icon in the softphone. Possible values for call center state include:

Call Center State	Description
Ready for Calls	You are not currently on a call, and you are prepared to receive the next direct or queued call.
Not Ready for Calls	You are not currently on a call, and you are not prepared to receive the next queued call. In this state you can still receive calls that are dialed directly to your extension.
On a Call	You are currently connected to a caller and cannot receive either a direct or a queued call.
Wrap-Up	You are currently on a call, and you wish to go directly to the Not Ready for Calls state when the call is complete.
Log Out	You want to log out from your call center phone system and remain logged in to Salesforce. After you select this option, Salesforce CRM Call Center automatically closes the connection to your call center and displays the softphone login screen .

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To change your call center state:

- Member of a call center

When you first log in to Salesforce CRM Call Center, your call center state is automatically set to Not Ready for Calls. You must choose Ready for Calls from the drop-down list before you can receive any calls.

 **Note:** Some Salesforce CRM Call Center features might not be available with your softphone because of customizations that have been made for your organization. See your administrator for details.

Using the Call Center Directory

Every call center has an associated call center directory that includes the name and number of every user that belongs to that call center, as well as other phone numbers that are related to records in your system.

To use your call center directory:

1. In the softphone, click the name of the open line that you want to use. This action opens the dial pad for that line. Click  next to the dial pad to open your call center directory.
2. Search the call center directory for a phone number:
 - a. In the **Pick an object** drop-down, choose the type of record that you want to search. Any object with a phone number field is included in this list.
 - b. In the **Search** text box, type all or part of the name for which you are searching.
 - c. Click **Go** to view a list of only those records that include your search text.
3. When you find the phone number that you want, click its associated record name to automatically enter the number into the softphone.
4. Click **Dial** to make the call.

Making a Call Using the Softphone

In [Salesforce CRM Call Center](#) there are three ways to make a call:

- [Dialing a number manually](#)
- [Using the call center directory](#)
- [Using click-to-dial](#)

While on a call, you can also make a call on a second phone line by clicking **New Line**. The new line allows you to enter a new phone number while remaining connected to your original caller. Once you click **Dial**, your original call is placed on hold, and your new call begins.

If you make a call while your [call center state](#) is set to Ready for Calls, your state moves directly to Not Ready, and you must enter Not Ready reason codes.

To end a call that you just dialed, click **End Call**. Some phone systems don't allow you to end a call from a softphone before it is answered. In these cases, an **End Call** button isn't displayed, and you must use your physical phone set to terminate the call.

If a number you dial is busy, a message appears and you have the option to dial again or cancel the call.

 **Note:** Some Salesforce CRM Call Center features might not be available with your softphone because of customizations that have been made for your organization. See your administrator for details.

[Tip sheet: Getting Started with your SoftPhone](#)

Checking the Version of Your CTI Adapter

 **Important:** The CTI Toolkit is retired. Softphones built with the CTI Toolkit aren't supported. To continue using your softphone, migrate your CTI implementation to [Salesforce Open CTI](#). For more information about the retirement of CTI Toolkit and details about how to migrate to Open CTI, see [CTI Toolkit Retirement FAQ](#).

To check which version of the CTI adapter you've installed on your machine:

1. Run the CTI adapter from where it's installed. For example, from the Start menu, select **All Programs > salesforce.com > CTI Adapter 2.0 > Salesforce Adapter 2.0**.
2. Right-click the  icon in the system tray of your computer. The system tray is located next to the clock in the lower-right corner of your screen.
3. Click **About...**
The version of your CTI adapter displays under **CTI Connector**.

 **Note:** If you're using a CTI adapter built with version 4.03 of the CTI Toolkit, a popup window displays when using Firefox or Chrome browsers. This popup window must display on your machine to stay connected to Salesforce CRM Call Center.

Reply to Portals and Web Communities

Viewing Community Activity for Ideas and Questions

Activity statistics, such as how many posts you've made and how many likes you've received in Ideas and Questions appear on your profile page so that others can learn about your participation in the community.

Click your name anywhere around the application to view your profile. If available, you can also click the Profile tab or *Your Name* > **My Profile** at the top of the page. View other people's profiles by clicking their name.

Community Activity appears on the Overview tab of your profile and shows how your activity stacks up to other people's. You can also evaluate the activity of other members of the community when you look at their profile.

EDITIONS

Available in: Salesforce Classic

Ideas available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Chatter Answers available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

The screenshot shows a Salesforce Chatter profile for An Lin, a Moderator. The profile includes a photo, contact information (APAC Sales Director, admin@wwcomputing.com), and a contribution bar showing 3 posts & comments, 2 comments received, and 0 likes received. A red box highlights the 'Community Activity' section, which displays the following statistics:

Community Activity	
Questions	
Questions Asked	1
Questions Answered	4
Solved Questions	0
Ideas	
Ideas Created	2
Idea Comments Received	1
Ideas Voted On	0

When Chatter Answers is enabled for your organization, the total numbers for the following activities appear on your profile page:

- Questions you've asked
- Questions you've answered
- Questions you've solved with a best answer

Click **Questions** to navigate back to the Q&A tab.

When **Reputation** in Ideas is enabled by your administrator, the total numbers for the following activities appear on your profile page:

- Ideas you've created
- Comments you've received
- Comments and ideas you've voted on

Click **Ideas** to navigate back to the Ideas tab.

Working with Customer Portal Users

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

 **Note:** High-volume portal users are available for customer portals or communities intended for many thousands to millions of users. See [About High-Volume Portal Users](#) on page 2472.

Some common tasks when managing Customer Portal users include:

- [Setting up the Customer Portal for users](#)
- Enabling Customer Portal users individually from the Contacts tab
- [Disabling and deactivating Customer Portal users](#)
- [Changing Customer Portal users' information and roles](#)
- Changing Customer Portal users' accounts
- Merging Customer Portal users
- [Resetting Customer Portal users' passwords](#)
- Viewing Customer Portal users' user licenses
- [Granting high-volume portal users access to object's records](#)
- [Sharing high-volume portal users' records with Salesforce users](#)
- Managing Customer Portal users' permissions and access settings
- [Assigning profiles to a Customer Portal](#)
- [Delegating Customer Portal user management and case and contact management to portal users](#)
- Reporting on Customer Portal users

 **Tip:** To troubleshoot issues for Customer Portal users, click **Manage External User** and choose **Log in to Portal as User** on the portal user's contact detail page. This selection opens a new browser window and automatically logs you into the portal as the portal user. This option also ensures that the portal is configured appropriately.

The **Log in to Portal as User** button is only available if you have the "Edit Self-Service Users" permission and "Edit" access on the account. The **Log in to Portal as User** button does not display for inactive portal users.

Post on Cases and Community Questions with the Community Action in the Case Feed

The Community action in the case feed is your default option for responding to customers on cases that originated from a community or customer portal.

To post on cases in a customer portal or community:

1. Click **Answer Customer** on the Case Feed page.
2. Click and select **Community**.
Depending on how your administrator has set up Case Feed, you may be able to click **Community** without first having to click **Answer Customer**.
3. Enter the message to the customer.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To create case posts in customer portals or communities:

- "Edit" on cases

Post Email Log a Call Community Change Status More

Hi Pete,
We're sending you a new climbing harness system to replace the defective one. Please let us know if you have any questions or feedback on the new system!

Your message will be posted to the customer case. **Post**

4. If you're working on a case that was escalated from a question in Chatter Questions or Chatter Answers, choose who you want your post to be visible to:
 - Select **Customer Only** to post your answer as a private reply, or **Everyone** to post it as a public reply.
 - Select **Customer Case** to make a post visible to all internal and external users with access to the case, or **Community Question** to post a public answer on the community user's question. If you select **Customer Case** and your Salesforce administrator has enabled the community case feed, you'll be creating a Chatter post instead of a case comment.

Post Email Log a Call Community Change Status More

Pete, thanks for your question! The TX20 climbing harness system supports up to 300 pounds.

Customer Case Community Question **Answer**

5. Optionally, select **Send Email** to send a message to the customer letting them know that a reply to their question has been posted to the case.

 **Note:** This option is only available if your administrator has enabled it, and if the customer you're replying to is associated with the case and has a valid email address. If your organization uses the community case feed and email notifications for Chatter case posts are enabled, users are automatically notified by email about public posts on their cases and this option doesn't appear.

6. Optionally, attach a Knowledge article to the post.
 7. Click the button to publish your post.
-  **Note:** If the community case feed is enabled in your organization, you can change the visibility of case posts after they are published. For details, see [Expose or Hide a Published Post or Email in the Community Case Feed](#).

Answers Overview

-  **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

Answers Terminology

The following terms are used when describing answers features and functionality:

Answers

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

Best Answer

When a member of an answers community asks a question and other community members post a reply, the asker can mark one of the replies as the best answer. The best answer then appears directly under the question (above the other replies). Identifying the best answer helps other community members with the same question quickly find the most relevant, useful information.

Community

Communities are customizable public or private spaces for employees, end-customers, and partners to collaborate on best practices and business processes.

Data Category for Answers

On the Answers tab, *data categories* allow users to classify questions in an answers zone. For example, if you have a zone for hardware products, your data categories may include laptops, desktops, and printers. Zone members can quickly browse within a specific category to find answers to their questions. Administrators can use data categories to control access to questions.

Idea

Ideas are suggestions posted by the members of an ideas community and are organized by zones. For example, if the focus of a particular zone is "Ideas for car features," an appropriate idea for that zone might have the title "Insulated cup holders that keep your beverage hot or cold." Or, if the focus of a particular zone is "Ideas for our company's employee benefits," an appropriate idea for that zone might have the title "On-site day care."

EDITIONS

Answers is available in: **Enterprise, Performance, Unlimited, and Developer** Editions.

USER PERMISSIONS

To view the Answers tab:

- "Read" on questions

To ask and reply to questions:

- "Create" on questions

To vote for replies:

- "Read" on questions

Question

An issue posted to an answers community. When a community member asks a question, other community members post replies to help resolve the question.

Reply

The response to a question in an answers community. When community members reply to a question, the person who asked the question can mark one of the replies as the best answer to resolve and close the question.

Vote, Reply

In an answers community, a vote means you either like or dislike a reply to a question.

Zone

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions.

Icon Descriptions

Icon	Description
	A question that has been resolved. To resolve a question, the person who asked the question chooses a reply as the best answer .
	A question that community members have replied to. For example, this icon represents a question with four replies. If a question has no replies, a "0" appears in this icon.
	A reply to a question.
	A reply that has been marked as the best answer to a question.

Using Answers

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

On the Answers tab you can:

- [Ask a question](#)
- [Find an answer to a question](#)
- [Reply to a question](#)
- [Vote for a reply](#)
- [Identify a reply as the best answer to your question](#)
- [View all of your questions and replies](#)

Asking a Question

-  **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

To ask a question:

1. From the Answers tab, enter your question and click **Ask**.
Salesforce searches the titles and descriptions of the other questions in the zone and lists ones that are similar to yours. If your question has already been asked, click the question title to view the replies that other zone members have posted to that question.
Alternatively, click **Start Over** to clear the similar questions results and ask another question.
2. If your question has not already been asked, click **Continue**.
3. Enter a description of your question. Use the [HTML editor](#) to format your text or upload an image.
4. Select a category for your question. If you do not assign a category, community members may have difficulty finding your question, as they must use search or [view all questions in the community](#).
5. Click **Post Question**.

After asking your question, wait for community members to post replies. Then you can [choose a reply as the best answer](#) to resolve your question.

Creating Questions from the Questions Tab

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

 **Note:** Since your administrator determines the fields on questions, some fields might not be included in the following steps.

You can use the Questions tab in both the application and the console to ask questions of the zones that you moderate and manage. Asking community members for input or opinions is an easy way to assess interest in topics or create engagement in the community.

To post a question to the community from the Questions tab:

1. Click **New Question** from the Questions list view page or click **New** from the Recent Questions list on the Questions overview page.
2. Select a zone for your question.
3. Add a title for your question.
4. Optionally, enter a description of your question.

Use the rich text editor to format your text or upload an image. To ensure that your images appear correctly in the feed, Salesforce recommends that they be less than 450 pixels wide.

5. Select a category for your question.

Questions must be assigned to a category to appear in the community. Questions that don't have a category are still visible to the owner of the question, but not to other members of the community.

6. Click **Save**.

Editing and Deleting a Question

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

Standard users can delete their own questions if the questions have not received replies. Once a question receives a reply, the owner of the question can no longer delete it. As the Salesforce administrator, you can edit or delete any question posted to a community. For example, you may want to monitor your answers community and edit or delete questions that contain inappropriate content or offensive language.

To edit or delete a question:

1. Click the question title to view the question detail page.
2. Click **Edit** or **Delete** at the top of the page. When editing a question, you can change the title or description and select a different category for the question. When deleting a question, the question (and all associated replies) goes to the Recycle Bin.

EDITIONS

Another way to prevent offensive language is to create a validation rule that prevents users from entering specific words when asking a question.

To create validation rules, from the object management settings for Chatter Answers question and Chatter Answers reply, go to Validation Rules.

Finding and Viewing Questions

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

There are a couple ways to find a question:

- [Browse all questions within a community or category.](#)
- Search for a question using the search field on the Answers tab. This field searches the title and description fields for both questions and replies and displays matching results.

Once you've found your question, click the question title to view the question detail page, which lists all the replies for the question. The question detail page lists the number of community members who liked and disliked each reply, and also shows the best answer to the question (if one has been chosen).

From the question detail page, you can:

- [Reply to the question.](#)
- [Vote for a reply.](#)
- [Choose a reply as the best answer.](#) You can only choose a best answer if you asked the question or are a Salesforce administrator.

If a question has already been resolved, you can click **Mark as Not Answered** above the question to re-open it.

- Sort replies by
 - Newest—Shows the most recently posted replies at the top of the list.
 - Oldest—Shows the oldest replies at the top of the list.
 - Most Votes—Shows the replies with the greatest number of “likes” and “dislikes” (added together) at the top of the list.

Browsing Questions within a Zone or Category

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

To view all questions within a zone or category, go to the Answers tab and click the zone name or category that appears below the *Get an Answer* heading.

Browsing Questions within a Zone

After clicking the zone name to view all questions within that zone, you can:

- [Ask a question](#).
- Filter questions so you only see the open or resolved questions. A question is considered resolved when the person who asked the question selects one of the replies as the best answer. Community members can continue to post replies and vote for replies even when the question has been resolved.
- Sort questions by:
 - Recent Activity—Shows the questions that have the most recent replies at the top of the list
 - Newest—Shows the questions that have been most recently asked at the top of the list
 - Oldest—Shows the oldest questions at the top of the list
- Click **Reply** below a question to [post a reply](#).
- Click a category to view all the questions associated with that category.

All the categories within your zone appear under the zone name at the top of the page.

The [question icons](#) identify whether the question has been resolved or is still open.

Browsing Questions within a Category

When community members ask a question, they associate a single category with their question to make it easier to find within the community. To browse all questions associated with a category, click the category name to display the category detail page.

You can click on a category from the following locations:

- When [viewing a question](#), the categories associated with that question appear below the question description.
- When browsing questions within a zone, all the categories in the zone appear below the zone name.
- On the [answers home page](#), all the categories in the zone appear below the zone name.

From the category detail page, you can:

- [Ask a question](#) that is automatically associated with the category you are viewing.
- View all questions associated with that category, or filter the questions so you only see the open or resolved questions. A question is considered resolved when the person who asked the question selects one of the replies as the best answer. Community members can continue to post replies and vote for replies even when the question has been resolved.
- Sort questions by:

Editing and Deleting a Reply

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

Standard users without the "edit" and "delete" permissions on the answers object cannot edit or delete their replies. However, as the Salesforce administrator, you can edit or delete any reply posted to a community. For example, you may want to monitor your answers community and edit or delete replies that contain inappropriate content or offensive language.

To edit or delete a reply:

1. Click the question title to view a list of all replies for the question.
2. Click **Edit** or **Delete** next to the reply you want to change or remove. When deleting a reply, the reply goes to the Recycle Bin.

Another way to prevent offensive language is to create a validation rule that prevents users from entering specific words when posting a reply.

To create validation rules, from the object management settings for Chatter Answers question and Chatter Answers reply, go to Validation Rules.

Voting for a Reply

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

When you vote on a reply, you contribute to the answers community by identifying the replies that contains the most helpful (and unhelpful) information. When other community members look for an answer to a question, they can quickly look at the number of "likes" and "dislikes" a reply has received and make a more informed decision about which reply to read.

In addition, the more votes a reply receives the easier it is for the person who asked the question to [choose a reply as the best answer](#).

When [viewing a question](#), review the replies and click **Like** to voice your approval of a reply or **Dislike** if a reply contains incorrect or unhelpful information. Your vote (either a +1 or -1) is included in the Like or Dislike total for that reply. You can't vote for your own reply and you can only vote once for each reply.

Choosing the Best Answer to a Question

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

After you ask a question, you should monitor the replies posted by other community members and eventually choose one of the replies as the best answer. The best answer is highlighted directly below the question so it's easy to find, which helps community members quickly identify the most useful resolution to the question.

Only Salesforce administrators and the person who asked the question can mark a reply as the best answer.

To choose the best answer:

1. From the Answers tab, find your question and click its title.
2. Decide which reply is the best answer, and click **Choose as Best Answer**.

To identify the best answer, look at the votes ("likes" and "dislikes") for each reply. The reply with the most "likes" probably contains the most useful information. If a question has many replies, try sorting the replies by **Most Votes** so the replies with the most likes and dislikes appear at the top of the list.

After you choose a best answer:

- The question is marked as "resolved". Community members can continue to post and vote on replies for resolved questions.
- If another reply that you like better is posted in the future, simply choose that reply as the best answer to replace the old best answer.
- You can remove the best answer status of the reply at any time. Removing the best answer status from a reply makes it a regular reply.

Viewing Your Questions and Replies

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

Once you become an active community member, you can view a list of all the questions you asked and replies you posted by clicking **My Questions & Replies** at the top of any page in the Answers tab.

When viewing a list of your questions, you can quickly identify which questions you resolved and which questions are still open. (Resolved questions have a best answer.) You can sort your questions by:

- **Newest**—Shows your most recently asked questions at the top of the list
- **Recent Activity**—Shows your most recently asked questions and your questions that have the most recent replies at the top of the list
- **Oldest**—Shows your oldest questions at the top of the list

When viewing a list of your replies, the question title appears as a link followed by your reply. You can sort your replies by:

- **Newest**—Shows your most recently posted replies at the top of the list.
- **Oldest**—Shows your oldest replies at the top of the list.
- **Most Votes**—Shows your replies that have received the greatest number of "likes" and "dislikes" (added together) at the top of the list.

The following table describes the icons displayed on the page:

Icon	Description
	A question that has been resolved. To resolve a question, the person who asked the question chooses a reply as the best answer .
	A question that community members have replied to. For example, this icon represents a question with four replies. If a question has no replies, a "0" appears in this icon.
	A reply to a question.
	A reply that has been marked as the best answer to a question.

Creating an Article from a Reply

-  **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

In an answers community, you may want to turn a particularly helpful answer into an article in your [knowledge base](#). To create an article:

1. Click the question title to view a detail page showing the question and its replies.
 2. On the reply you want to add to the knowledge base, click **Promote to Article**.
 3. Edit your article. The fields that appear depend on the default article type assigned to replies, but the following is true for all article types:
 - The `title` field contains the title of the question.
 - The `summary` field contains the reply.
 - You can make new data category selections for the article. Unlike answers, articles support multiple category groups.
-  **Note:** An administrator can [change the article type and assignee](#).
4. Click **Save**. The original reply now has a status message indicating its association with an article. When the article is published, the message on the reply includes a link to the article.

Escalating a Question to a Case

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

If a question remains unresolved or its reply isn't satisfactory, administrators and trusted community members can escalate the question to a case. After a case is created, the question detail page provides a link to the case for the life of the question. This link also shows the status of the case.

 **Note:** Closing the case does not mark the question as resolved, and resolving the question does not close the case. The case and the question must be updated separately.

To escalate a question to a case:

1. Click the question title.
2. On the question detail page, click **Escalate to Case**. This button only appears if an administrator has [configured the appropriate case settings](#).
3. Update the case fields if you want to change any default values. The question title automatically becomes the case `Subject`.
4. Click **Save**. You are returned to the question detail page and the case is now available for the `Case Owner` to resolve.

Ideas Overview

Ideas is a community of users who post, vote for, and comment on ideas. An Ideas community provides an online, transparent way for you to attract, manage, and showcase innovation.

Tip: Salesforce offers its own Ideas community for Salesforce users to submit product feedback and suggest new features. To visit, go to <http://ideas.salesforce.com>.

Ideas Terminology

The following terminology is used for Ideas:

Category, Ideas

Categories are administrator-defined values that help organize ideas into logical sub-groups within a zone. The View Category drop-down list on the Ideas tab allows users to filter ideas by category, and the Categories picklist on the Post Ideas page lets users add categories to their ideas. For example, if your ideas zone has the focus "Improvements to our clothing line," then you might set up categories such as "Shirts," "Jackets," and "Slacks." Each organization has one common set of categories that can be added or removed from each zone. An administrator defines separate categories for their ideas and answers zones.

Comment

Comments are plain text responses to posted ideas that enable discussions about the ideas. On the Ideas tab, the Comments subtab lists the comments that have most recently been submitted. On the detail page of an idea, comments are sorted in chronological order from oldest to newest.

Community

Communities are customizable public or private spaces for employees, end-customers, and partners to collaborate on best practices and business processes.

Community Expert

A community expert is a member of the community who speaks credibly and authoritatively on behalf of your organization. When community experts post comments or ideas, a unique icon (🌟) displays next to their name. The Salesforce administrator can designate as many community experts as necessary.

Demote

If you dislike an idea, you can click **demote** to subtract 10 points from its overall score and decrease the idea's overall popularity ranking. You cannot demote the same idea more than once, and after you demote an idea you cannot promote it. An idea can have negative overall points if more users demote the idea than promote it.

Half-life

The half-life setting determines how quickly old ideas drop in ranking on the Popular Ideas subtab, to make room for ideas with more recent votes. A shorter half-life moves older ideas down the page faster than a longer half-life. This setting affects all zones in your organization.

Idea

Ideas are suggestions posted by the members of an ideas community and are organized by zones. For example, if the focus of a particular zone is "Ideas for car features," an appropriate idea for that zone might have the title "Insulated cup holders that keep your beverage hot or cold." Or, if the focus of a particular zone is "Ideas for our company's employee benefits," an appropriate idea for that zone might have the title "On-site day care."

Idea Themes

Idea Themes provide a forum in which you invite community members to post ideas about specific topics so that community members can solve problems or propose innovations for your company.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer Editions**

USER PERMISSIONS

To view the Ideas tab:

To view and vote for ideas:

- "Read" on ideas

To create ideas and add comments to ideas:

- "Create" on ideas

To edit ideas and edit comments on ideas:

- "Edit" on ideas

Point

A point is a unit of measurement that represents the popularity of an idea. Each vote for an idea is worth ten points (promote adds 10 points and demote removes 10 points). An idea's total number of points displays to the left of the idea.

Popular Ideas

On the Popular Ideas subtab, ideas are sorted by an internal calculation that reflects the age of an idea's positive votes. Regardless of an idea's static total number of points, ideas with newer positive votes display higher on the page than ideas with older positive votes. This allows you to browse ideas that have most recently gained popularity, with less precedence given to long-established ideas that were positively voted on in the past.

Portal

If your organization has a [Customer Portal](#) or partner portal, you can add the Ideas tab to either or both portals so that portal users can participate in their own Ideas communities. The Zone list at the top of the Ideas tab lists all the available zones, and each zone contains its own unique group of ideas.

Promote

If you agree with or like an idea, click **promote** to add 10 points to the idea. You cannot promote the same idea more than once and you cannot promote an idea that you have already demoted. Salesforce automatically adds your promote vote to any idea you post.

Recent Activity

Your Recent Activity page contains a summary of all the recent activity that relates to your participation within a zone. For example, this page lists all the ideas and comments you have posted to a zone as well as the ideas you have voted on. You can view your Recent Activity page by clicking your nickname located on the right side of the Ideas tab.

Status

An idea's status helps zone members track the progress of the idea. For example, "Under Review", "Reviewed", "Coming Soon", and "Now Available" are common status values an administrator can define and assign to ideas. An idea's status appears next to the idea's title for all zone members to see.

Top All Time Ideas

On the Top All-Time subtab, ideas are sorted from most number of points to fewest. This allows you to see the most popular ideas in the history of your Ideas zone.

Vote, Idea

In an ideas community, a vote means you have either promoted or demoted an idea. After you vote on an idea, your nickname displays at the bottom of the idea's detail page to track that your vote was made. You can use your Recent Activity page to see a list of all the ideas you have voted on.

Zone

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions.

Using Ideas

Ideas is a community of users who post, vote for, and comment on ideas. An Ideas community provides an online, transparent way for you to attract, manage, and showcase innovation. You can:

- [Post ideas](#)
- [View ideas](#) or [Idea Themes](#)
- [Search for ideas](#)
- [Vote for ideas](#)
- [Comment on ideas](#)
- [View recent activity and replies](#)
- [Subscribe to syndication feeds](#)

Each time you click the Ideas tab, the Popular Ideas subtab displays ideas in all categories. To change your current view, click one of the other subtabs like Recent Ideas or Top All-Time. Click  **List** to toggle back to the list view.

Viewing Ideas

The following sections describe how to view ideas:

- [Accessing the Ideas Tab in Salesforce](#)
- [Accessing the Ideas Tab in a Portal](#)
- [Browsing Popular Ideas](#)
- [Browsing Recent Ideas](#)
- [Browsing Top Ideas of All Time](#)
- [Viewing Ideas by Category](#)
- [Viewing Ideas by Status](#)
- [Browsing Ideas in Other Zones](#)
- [Viewing the Details of an Idea](#)

Accessing the Ideas Tab in Salesforce

In Salesforce, the Ideas tab is available by default in the Community app. You can select this app from the Force.com app menu in the top right corner of any Salesforce page.

Note that your administrator may have customized your profile to also display the Ideas tab in other apps. Also, your administrator may have renamed the Ideas tab to an alternate tab name.

Click  **Tab** to display the Ideas tab. Click  **List** to toggle back to the list view.

- "Create" on ideas

To edit ideas and edit comments on ideas:

- "Edit" on ideas

 **Tip:** The Zone list at the top of the Ideas tab lists all the available zones, and each zone contains its own unique group of ideas.

Accessing the Ideas Tab in a Salesforce.com Community

If your organization has created a Salesforce.com Community, your administrator can display the Ideas tab to the community by adding it to the list of selected tabs during setup of the community.

Accessing the Ideas Tab in a Portal

If your organization has portal users who have access to a Customer Portal or partner portal, your portal's administrator can display the Ideas tab on either type of portal. The ideas that display in a portal are either created through a portal or are created internally in Salesforce and published for display in a portal.

Browsing Popular Ideas

On the Popular Ideas subtab, ideas are sorted by an internal calculation that reflects the age of an idea's positive votes. Regardless of an idea's static total number of points, ideas with newer positive votes display higher on the page than ideas with older positive votes. This allows you to browse ideas that have most recently gained popularity, with less precedence given to long-established ideas that were positively voted on in the past.

Browsing Recent Ideas

The Recent Ideas subtab lists the ideas that have most recently been submitted. Newer ideas display above older ideas.

Browsing Top Ideas of All Time

The Top All-Time subtab lists the ideas with the most points. The difference between the Top All-Time subtab and the Popular Ideas subtab is that the Top All-Time subtab displays the top ideas of all time by number of points, whereas the Popular Ideas subtab uses an algorithm to display the ideas that have received the most recent positive votes.

Viewing Ideas by Category

Categories are administrator-defined values that help organize ideas into logical sub-groups within a zone. The View Category drop-down list on the Ideas tab allows users to filter ideas by category, and the `Categories` picklist on the Post Ideas page lets users add categories to their ideas.

To browse ideas by category, select a category from the `View Category` drop-down list. Alternatively, click the category link at the bottom of the idea description, next to the user who posted the idea.

Viewing Ideas by Idea Themes

You can view all of the ideas that are posted to an idea theme. From the Idea Themes detail page, you can manage an idea theme and its related ideas.

Viewing Ideas by Status

An idea's status helps zone members track the progress of the idea. For example, "Under Review", "Reviewed", "Coming Soon", and "Now Available" are common status values an administrator can define and assign to ideas. An idea's status appears next to the idea's title for all zone members to see.

To view all ideas of a particular status, go to the Ideas tab and select a value from the `STATUS` drop-down list. Alternatively, click the status link next to an idea to view all ideas in the zone with that status.

Browsing Ideas in Other Zones

Administrators can create multiple zones with each zone having its own unique list of ideas. For this reason, it is important to verify you are viewing the correct zone when browsing ideas. To browse ideas in a specific zone, select a zone from the list of zones the top of the page.

Viewing the Details of an Idea

Click the title of an idea to open the detail page of that idea. The detail page of an idea includes the following sections:

- The details of the idea, including its full text and number of points
- The related idea theme and the zone to which it belongs.
- All [comments](#) that have been submitted for the idea
- An area for adding a new comment
- A list of the last 100 users who have voted (promoted or demoted) for the idea, sorted left to right from most recent vote to oldest vote
- If you are an administrator, the detail page lets you edit, delete, and merge ideas.

[Commenting on Ideas](#)

[Posting and Editing Ideas](#)

[Using Ideas](#)

[Tip sheet: Using Salesforce Ideas](#)

Voting on Ideas

In an ideas community, a vote means you have either promoted or demoted an idea. If you agree with or like an idea, click **promote** to add 10 points to the idea. You cannot promote the same idea more than once and you cannot promote an idea that you have already demoted. Salesforce automatically adds your promote vote to any idea you post.

If you dislike an idea, you can click **demote** to subtract 10 points from its overall score and decrease the idea's overall popularity ranking. You cannot demote the same idea more than once, and after you demote an idea you cannot promote it. An idea can have negative overall points if more users demote the idea than promote it.

To vote on an idea:

1. On the Ideas tab, locate an idea you want to promote or demote.
2. To add 10 points to the idea, click **promote** next to the idea. To subtract 10 points from the idea, click **demote**. After you have voted, your Nickname displays at the bottom of the idea's detail page to track that your vote was made.

Note: When you [post a new idea](#), you automatically cast a vote for that idea and 10 points are added to the idea's score.

Commenting on Ideas

Comments are plain text responses to posted ideas that enable discussions about the ideas. On the Ideas tab, the Comments subtab lists the comments that have most recently been submitted. On the detail page of an idea, comments are sorted in chronological order from oldest to newest.

Adding Comments to Ideas

Add comments to ideas to share your thoughts and opinions with other community members:

1. On the Ideas tab, locate an idea on which you want to add a comment.
2. Click either the title of the idea or the **Comments** link below the idea description.
3. On the detail page for the idea, type your comments into the text entry area in the Add Your Comment section. You can enter up to 4,000 characters.

If your organization has enabled the HTML editor for Ideas, the description can include HTML and reference online images. If the HTML editor is not enabled, use plain text only.

4. Click **Post** to submit your comment.

Your newly added comment displays in the Comments related list on the idea detail page.

Editing Comments on Ideas

To edit a comment that you have submitted on an idea:

1. On the detail page of the idea, click **Edit** next to your comment.
2. Modify your comment as desired.
3. Click **Apply** to save your work.

Deleting Comments on Ideas

Deleting comments on ideas requires the "Delete" permission on ideas.

1. On the detail page of the idea, click **Del** next to your comment.
2. Click **OK**.

Viewing Recently Posted Comments

To view the comments that have most recently been posted in your Ideas community, click the Comments subtab and select a zone in which to view comments. Click the text of a comment to view the detail page of the appropriate idea.

On the Comments subtab:

- Comments are listed in chronological order from newest to oldest.
- The title of the idea on which the comment was posted displays above the comment.
- The alias of the user who posted the comment displays next to the comment text.

Viewing Your Recent Activity Page

Your Recent Activity page contains a summary of all the recent activity that relates to your participation within a zone. To view your Recent Activity page, go to the Ideas tab and click your Nickname link on the right side of the page. To view the Recent Activity page of another member of the zone, click the community member's name that appears below any idea or comment they have posted. You can view activity for the different zones you have access to by selecting a zone from the `zone` list.

The Recent Activity page uses the following icons to identify the various types of activity:

-  identifies the ideas you have submitted.
-  identifies the ideas you have voted on.
-  identifies the comments you have posted to ideas as well as the comments other users have posted to your ideas.

For additional detail, click the following links located on the left side of the Recent Activity page:

- Ideas Submitted lists the ideas you have posted to this zone. The most recent idea appears first.
- Ideas Voted On lists the ideas in this zone that you have either promoted or demoted.
- Recent Replies displays the most recent comment posted to each of your ideas, as well as the most recent comment posted to each idea you have previously commented on. This section is not displayed when viewing another community member's recent activity.

To quickly determine the number of recent replies you have received, look next to the recent replies icon () in the upper right corner of the Ideas tab. This icon only appears when you have received a new reply.

 **Note:** You can't upload your own picture to replace the default image.

Subscribing to Syndication Feeds for Ideas

Syndication feeds enable users to subscribe to changes within Ideas and receive updates in external news readers. For users to be able to subscribe to Ideas syndication feeds, the following prerequisites are necessary:

- Ideas must be exposed publicly using Force.com sites.
- The `Categories` field must be enabled in Ideas. This field is enabled by default for some organizations.

To subscribe to a syndication feed, click the feeds icon () on the following Ideas pages:

- [Popular Ideas](#) subtab
- [Recent Ideas](#) subtab
- [Top All-Time](#) subtab
- [Comments](#) subtab

This feed lists comments separately even when they belong to the same idea, whereas the Comments subtab groups comments for a single idea together and only shows the number of recent comments for that idea.

- [Recent Activity page](#)

To subscribe to a feed that includes all the comments posted by a specific community member, click the community member's name that appears below any idea or comment he or she has posted. Then click the feeds icon on the community member's Recent Activity page. When you subscribe to another community member's Recent Activity feed, the feed only includes recent comments from that community member and no other user.

 **Note:** Child ideas (ideas that have been merged with a master idea) are not included in any feeds. Only master ideas are included.

Posting and Editing Ideas

Posting Ideas

1. Use the search box in the sidebar to search for existing ideas that match your idea. This helps reduce the number of duplicate ideas in the community. If no existing ideas match your idea, proceed to the next step.
2. Create a new idea using one of the following options:
 - On the Ideas tab, select the appropriate community from the Community list at the top of the page and click **Post Idea**.
 - From the Ideas list view, click **New Idea**, then select a community, and click **Continue**.
 - From the sidebar, select **Idea** from the **Create New** drop-down list, select a community, and click **Continue**.
3. If you're posting the idea to an [idea theme](#), select one from the list. You can only post ideas to idea themes that exist within your community.
4. Enter a title for your idea no longer than 255 characters.

After you enter the title, Salesforce searches the community for ideas with the same words in their title or description and then displays the top five matching ideas. If one of these ideas looks similar to your own, click that idea's title to open its detail page in a new window. From the detail page, you can read a description of the idea and vote for it instead of posting your duplicate idea to the community. If none of the ideas in the list are similar to your idea, proceed with the following steps to post your unique idea.

5. In the description area, enter the details of your idea.

If your organization has enabled the HTML editor for Ideas, the description can include HTML and reference online images. If the HTML editor is not enabled, use plain text only.

6. Choose one or more categories for your idea.
7. If you are an administrator, optionally choose a status for your idea. The **Status** drop-down list is only visible to administrators.
8. If enabled by your administrator, you can add an attachment to your idea:
 - Click **Browse** to locate and attach a file from your computer.

You can attach any supported file types, including Microsoft® PowerPoint® presentations and Excel® spreadsheets, Adobe® PDF files, image files, audio files, and video files. The maximum attachment size is determined by your organization.
 - Optionally, type a title for the file. If you don't enter a title, the filename appears as the attachment's title.

9. Click **Post**.

Your new idea displays at the top of the Recent Ideas subtab, and your vote (promote) is automatically applied to the idea. Each vote is always worth 10 points.

 **Tip:** Use the following writing tips to make your idea easier for others to read and understand:

- Use complete sentences.
- Be as concise and direct as possible.
- Check your spelling and punctuation.

[Ideas Overview](#)

[Using Ideas](#)

[Tip sheet: Using Salesforce Ideas](#)

Merging Ideas

Overview

As more users contribute to a zone, the number of duplicate ideas often increases. Duplicate ideas make it difficult to measure feedback because votes and comments are spread out over many similar ideas. The best way to resolve this issue is to merge duplicate ideas together so one idea becomes the master to one or more child ideas.

Note the following about merging ideas.

- Once you merge ideas they cannot be separated.
- All votes belonging to child ideas are transferred to the master idea. If the same community member votes for two ideas that are eventually merged, only the vote for the master idea is kept; the vote for the child idea is discarded.
- Users can only vote for and add comments to a master idea.
- You cannot merge ideas in separate zones.
- Deleting a parent idea automatically deletes all child ideas. Child ideas cannot be deleted individually.
- The master idea does not inherit the status and category values of its child ideas.
- When an idea is merged and becomes a child idea, the child idea still appears on the Ideas Submitted page but not on any other pages in a zone member's [Recent Activity](#).
- Merged ideas don't appear in the list of submitted ideas on the Idea Themes detail page and aren't counted in the `Submitted Ideas` field.
- When you merge a child idea, you can no longer edit the Idea Theme field.
- A child idea that has been merged is still visible to the user who submitted the idea from the Ideas Submitted list on the user's Recent Activity page.

Merging Ideas

To locate duplicate ideas and merge them together:

1. On the Ideas tab, click the title of an idea that you want to merge.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

USER PERMISSIONS

To merge multiple ideas:

- “Edit” on ideas

2. On the idea's detail page, click **Find Duplicates**. Salesforce searches all the ideas within the zone and displays the five ideas with titles that most closely match the current idea's title.
3. If the Possible Duplicates list does not contain any ideas that you want to merge, enter keywords in the `Search for Duplicates` field and click **Search**. Salesforce displays a new list of possible duplicate ideas.
4. From the Possible Duplicates list, select the ideas that you want to merge.
To view the details of a possible duplicate idea, click the idea's title. Use your browser's back button to return to the search results.
5. Click **Merge with Current Idea**.
6. Select the idea that you want to be the master idea, and click **Merge**.
7. Click **OK** to complete the merge.

Tips on Using Ideas

USER PERMISSIONS

To view and vote for ideas:	"Read" on ideas
To create ideas and add comments to ideas:	"Create" on ideas
To edit ideas and edit comments on ideas:	"Edit" on ideas
To create communities:	"Customize Application"

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Consider the following information when setting up and using Ideas:

- To monitor the activity of Ideas, you can:
 - Create a workflow rule or trigger based on the number of comments an idea receives. You cannot create a workflow rule or trigger based on an idea's vote total or vote count. You also cannot create a trigger that inserts or deletes a comment when the Idea object is updated.
 - Create a custom report based on an idea's vote score or number of comments.
- When posting an idea or comment, you can include a URL in the idea's description or comment field, but you cannot attach a file or add a note to an idea.
- Master detail relationships are not supported.
- Ideas does not support workflow tasks, outbound messages, and approvals.
- Ideas does not support custom links.
- The Ideas detail page does not contain related lists.
- The data export feature archives all your Ideas data with the exception of deleted ideas and deleted comments.
- You cannot create activities and events for Ideas.
- When using standard or custom Idea fields, note the following:
 - History tracking is not supported.
 - Field dependencies and roll-up summary fields are not supported.
 - Formula fields are not available for the Community object.

Tips for Using the HTML Editor

The HTML editor gives users WYSIWYG HTML editing capabilities, allowing them to:

- Insert an image
- Insert hyperlinks
- Change paragraph alignment
- Create bulleted and numbered lists

Implementation Tips

- HTML tags you enter into the HTML editor will display to users as text.
- In related lists, search results, and hover details, Salesforce does not display text with HTML formatting or images.
- Hyperlinks open in a new browser window when users click on them. The HTML editor supports HTTP, HTTPS, and mailto hyperlinks.
- To insert an image, click  and either browse to an image file or specify the image's web address. Enter a description that appears when a user hovers over the image and when the image is not available. The image must have a URL that Salesforce can access.
- Images do not show up in list views and reports.
- You cannot disable individual features of the HTML editor. For example, you cannot disable its hyperlink and image capabilities.
- The HTML editor supports all languages that Salesforce supports.
- For security purposes, the HTML editor only allows the tags and attributes listed in [Supported HTML Tags and Attributes](#) on page 2350. Salesforce automatically removes unsupported tags and attributes when you save an idea description or comment. Salesforce also removes potentially malicious HTML. Note that Salesforce does not notify users when unsupported or potentially malicious HTML is removed.
- The HTML editor does not support JavaScript or Cascading Style Sheets (CSS).

Supported HTML Tags and Attributes

The HTML editor supports the following tags:

<a>	<dt>	<q>
<abbr>		<samp>
<acronym>		<small>
<address>	<h1>	
	<h2>	<strike>
<bdo>	<h3>	
<big>	<h4>	<sub>
<blockquote>	<h5>	<sup>
 	<h6>	<table>
<caption>	<hr>	<tbody>
<cite>	<i>	<td>
<code>		<tfoot>

<code><col></code>	<code><ins></code>	<code><th></code>
<code><colgroup></code>	<code><kbd></code>	<code><thead></code>
<code><dd></code>	<code></code>	<code><tr></code>
<code></code>	<code></code>	<code><tt></code>
<code><dfn></code>	<code><p></code>	<code></code>
<code><div></code>	<code><pre></code>	<code><var></code>
<code><dl></code>		

The above tags can include the following attributes:

<code>alt</code>	<code>face</code>	<code>size</code>
<code>background</code>	<code>height</code>	<code>src</code>
<code>border</code>	<code>href</code>	<code>style</code>
<code>class</code>	<code>name</code>	<code>target</code>
<code>colspan</code>	<code>rowspan</code>	<code>width</code>

The above attributes can include URLs that begin with the following:

- `http:`
- `https:`
- `file:`
- `ftp:`
- `mailto:`
- `#`
- `/` for relative links

Enabling the HTML Editor in Ideas

The HTML editor is enabled by default for most organizations. If your organization does not have the HTML editor already enabled, an administrator can enable it as described in [Customizing Ideas Settings](#) on page 2527.

 **Warning:** Once you enable the HTML editor, you cannot disable it.

Before enabling the HTML editor, note the following:

- Each HTML idea description has a maximum size of the 32 KB. Each comment has a maximum size of 4 KB.
- If you use the HTML editor to edit and save an idea description or comment that was in text format, Salesforce saves the description or comment in HTML format.

- In list views and search results, Salesforce displays only the first 255 characters of an idea's description or comment. This number includes HTML tags.

Idea Themes

Idea Themes lets you invite community members to post ideas about specific topics so that members can solve problems or propose innovations for your company. For example, to engage with your community and create excitement around the launch of a new product, you can ask members to work together to create the product's name. Community members collaborate and add ideas to the idea theme, while you monitor their activities as they vote and comment on each other's ideas until they find a winner.

When you create an idea theme, you can add pictures, videos, and other multimedia content to showcase or explain the idea that you're presenting to the community. You can also view and manage the list of ideas that have been posted to the idea theme.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

The screenshot shows the 'Idea Theme Detail' page for the theme 'What colors should Spider Laptops use?'. The page includes a title, status (New), categories, and a description: 'What color would you like for our new line of laptops?'. A central image shows a laptop with a 'Salesforce' logo on the screen. Below the image is a table of submitted ideas.

Action	Title	Posted By	Vote Score	Comments
Edit Del	Solid primary colors	ludatta	20	1
Edit Del	Metallic colors: bronze, gold, silver	alrcs140	10	0
Edit Del	Pastels are too boring	lthana	20	2

Using the Chatter Answers Q&A Tab

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

Chatter Answers is a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience.

Chatter Answers lets your customers:

- Post, browse, and reply to questions using the Q&A tab.
- Delete their own questions and replies.
- Flag questions and replies as spam, hateful, or inappropriate.
- Receive emails when their questions are answered or when best answers are chosen for questions they're following.
- Collaborate publicly or privately with support agents to resolve issues related to open cases.
- Search and review articles from Salesforce Knowledge.
- Like a post or Salesforce Knowledge article to help determine its popularity.
- Upload photos of themselves to their user profiles.
- View other users' total number of posts and number of replies marked as best answers by others.

To view cases:

- "Read" on case

To change cases:

- "Edit" on case

- 1. Search:** Customers can search for existing questions before they post their own.
- 2. Filter and Sort:** Community members and support agents can select different viewing options for questions in the feed. Searches in the Chatter Answers Q&A tab can be filtered to show questions based on:
 - **All Questions** shows all questions in the zone, as well as Salesforce Knowledge articles, when enabled.
 - **Unanswered Questions** shows all questions that don't have replies.
 - **Unsolved Questions** shows all questions that don't have a best answer.
 - **Solved Questions** shows all questions that have a best answer, as well as Salesforce Knowledge articles, when enabled.
 - **My Questions** shows all questions you've asked and are following.

You can then sort the results based on the following options:

- **Date Posted** sorts questions with the most recently asked questions appearing first.
 - **Recent Activity** sorts questions with the most recent replies and comments appearing first.
 - **Most Popular** sorts questions that have received the most likes, upvotes, and followers appearing first.
- 3. Question:** Customers can post a question to the community for help. Other members of the community can post answers or follow the question to receive email notifications on subsequent posts.
 - 4. Browse by Category:** If categories are enabled in the community, members can click the category name to show questions related to that category.
 - 5. Reputation:** Community members can earn points and ratings that display on hover over their photos in the feed
 - 6. Comment:** Community members and support agents can comment on the question, and the customer or agent can select a comment as the best answer.

Chatter Answers lets service organizations:

- Create multiple communities and organize them into different zones, with each zone having its own focus and questions.
- Brand and customize communities.
- Give agents the opportunity to respond to customers publicly or privately.
- Automate the creation of cases from questions using an Apex trigger and workflow rules.
- Deflect customer inquiries through participation.
- Encourage participation by publicly displaying user statistics.
- Moderate questions and answers from the Q&A tab in the internal Salesforce application or from the community.

A customer's question is typically answered on the Q&A tab using one of these processes:

Question Answered by a Similar Question with a Best Answer	Question Answered by the Members within the Community	Question Answered by a Support Agent	Question Answered by a Salesforce Knowledge Article
<ol style="list-style-type: none"> 1. A customer types a question or keyword into the Chatter Answers Q&A tab and clicks Post Your Question. 2. A similar question with a best answer appears in search results. 3. The customer selects that question, and views the answer. 	<ol style="list-style-type: none"> 1. A customer types a question or keyword into the Chatter Answers Q&A tab and clicks Post Your Question. 2. No similar questions display in search results. 3. The customer continues to enter a description of the question and clicks Post to Community to post a public question. 4. A community member or support agent reads the question and adds a comment, which answers the customer's question. 	<ol style="list-style-type: none"> 1. A customer types a question or keyword into the Chatter Answers Q&A tab and clicks Post Your Question. 2. No similar questions display in search results. 3. The customer continues to enter a description of the question and selects Post Privately to Representative to post a private question. 4. The private question is converted to a case. 5. A support agent reads the case and adds a private comment, which answers the customer's question. 	<ol style="list-style-type: none"> 1. A customer types a question or keyword into the Chatter Answers Q&A tab and clicks Post Your Question. 2. A similar Salesforce Knowledge article with an answer displays in search results. 3. The customer selects the article, and views the answer.

[Chatter Answers Terminology](#)

Chatter Answers Terminology

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

The following terms are used when describing Chatter Answers features and functionality.

Answers

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

Article

Articles capture information about your company's products and services that you want to make available in your knowledge base.

Best Answer

When a member of an answers community asks a question and other community members post a reply, the asker can mark one of the replies as the best answer. The best answer then appears directly under the question (above the other replies). Identifying the best answer helps other community members with the same question quickly find the most relevant, useful information.

Flag

An icon that users can click on a question or reply to report it as spam, hateful, or inappropriate.

Follow

A subscription to a question that lets you receive emails when someone answers or comments on a specific question.

Like

To show support or indicate quality or usefulness for a question, answer, or knowledge article.

Popular

Each question's popularity is based on the number of users who **Like** it within a certain amount of time.

Question

An issue posted to an answers community. When a community member asks a question, other community members post replies to help resolve the question.

Question, Private

An issue posted to an answers community, but marked **Private** so that only support agents can view and respond to it.

Reply

The response to a question in an answers community. When community members reply to a question, the person who asked the question can mark one of the replies as the best answer to resolve and close the question.

Topics

The sidebar that lists data categories from which your customers can browse questions and replies. For example, if you have a zone for hardware products, your topics may include laptops, desktops, and printers.

Vote, Reply

In an answers community, a vote means you either like or dislike a reply to a question.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

Zones

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions

To change cases:	"Edit" on case
To manage Chatter Answers (Customer Portal) users:	"Edit Self-Service Users"
To ask a private question:	"Read" on account

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

Chatter Answers lets you work with questions and cases that originate from customers in a zone. Once a customer posts a question to the zone, you or other customers can reply. Questions are converted to cases when they're marked `Private`, or after a time specified by your administrator.

With Chatter Answers, you can:

- [Reply to questions converted to cases](#).
- Create custom views for cases converted from questions by filtering on `Case Origin`.
- Upload a photo to your profile so that customers can see who you are.
- [Work with Chatter Answers users, who are essentially Customer Portal users](#).
- Assign the Chatter Answers User feature license to portal users who don't self-register so that they can access your community.
- Use the Q&A tab to moderate questions and to:
 - Review lists of questions.
 - Answer questions or add replies to questions.
 - Escalate a question to a case.
 - Delete questions or replies.
 - Select best answers for questions.
 - Promote helpful replies to Salesforce Knowledge articles.

-  **Note:** We recommend that you assign a support agent to review public questions from the Q&A tab. Agents can't click **Flag** next to questions or replies that are spam, hateful, or inappropriate, but they can edit and delete questions or replies from a zones via the Q&A tab if they have the "Delete" permission on questions.
-  **Tip:** To moderate many questions quickly, we recommend that support agents review questions from pinned lists on the Salesforce console (this requires adding the Q&A tab to the console's Navigation tab).

EDITIONS

Available in: Salesforce Classic

Answers is available in: **Enterprise, Performance, Unlimited,** and **Developer Editions.**

-  **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

The Questions tab lets you view, search, filter, moderate, and create questions from lists.

- Search for questions by typing two or more letters of a question in the Search All Questions box. As you type, questions that match your search terms appear.
- Select predefined list views from the View drop-down list. Some predefined lists from which you can filter questions include:
 - Questions with Best Replies
 - Questions without Best Replies
- Click **Create New View** to define your own custom list views. To edit or delete any view you created, select it from the View drop-down list and click **Edit**.
- Click **New Question** from the Questions list view page or click **New** from the Recent Questions list on the Questions overview page to create a new question.
- Click  to refresh a list that's been updated.
- After you select a question from the list:
 - Type an answer or comment and click **Answer Customer & Zone** to reply to customers.
 - Click  and choose:
 - **Delete** to delete the question from the community.

- **Escalate to Case** to create a case from the question.
 - **Edit** to edit the fields in an existing question.
- Click  on one of the question's replies and choose:
- **Delete** to delete the reply from the community.
 - **Promote to Article** to add the reply as a draft article to the knowledge base (available if it's set up by your administrator).
 - **Edit** to edit the fields in an existing reply.
- If the question is private, meaning only support agents can view and answer it, you can click the case link to view the case automatically associated with the question.

 **Note:** The Questions tab is intended for Chatter Answers, but you can also use it to view questions from the answers feature.

[Questions Home](#)

Searching for Questions and Answers in the Chatter Answers Q&A Tab

Search the Chatter Answers Q&A tab to find questions and replies, best answers, and Salesforce Knowledge articles that can help find answers quickly. Searching in the Q&A tab might help you avoid posting redundant questions.

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

1. In the Q&A tab, enter your question in the search box.
2. Click the magnifying glass to view matching questions and articles from within the zone. If enabled, Salesforce Knowledge articles appear in the results, as well.

Searches in the Chatter Answers Q&A tab can be filtered to show questions based on:

- **All Questions** shows all questions in the zone, as well as Salesforce Knowledge articles, when enabled.
- **Unanswered Questions** shows all questions that don't have replies.
- **Unsolved Questions** shows all questions that don't have a best answer.
- **Solved Questions** shows all questions that have a best answer, as well as Salesforce Knowledge articles, when enabled.
- **My Questions** shows all questions you've asked and are following.

You can then sort the results based on the following options:

- **Date Posted** sorts questions with the most recently asked questions appearing first.
- **Recent Activity** sorts questions with the most recent replies and comments appearing first.
- **Most Popular** sorts questions that have received the most likes, upvotes, and followers appearing first.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

USER PERMISSIONS

To view questions:

- "Read" on questions

 **Note:** From the header search box at the top of the page you can search more objects than from within the Q&A tab. Global searches by internal users return results from all questions that are available within the organization. Searches performed by all other users in Salesforce Communities return results from the questions that are available within the community.

Choose the Best Answer to a Question

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

After you ask a question, you should monitor the replies posted by other community members and eventually choose one of the replies as the best answer. The best answer is highlighted directly below the question so it's easy to find, which helps community members quickly identify the most useful resolution to the question.

Only Salesforce administrators and the person who asked the question can mark a reply as the best answer.

To choose the best answer:

1. From the Q&A tab, find your question and click its title.
2. Decide which reply is the best answer, and click **Choose as Best Answer**.

To identify the best answer, look at the votes ("likes" and "dislikes") for each reply. The reply with the most "likes" probably contains the most useful information. If a question has many replies, try sorting the replies by **Most Votes** so the replies with the most likes and dislikes appear at the top of the list.

After you choose a best answer:

- The question is marked as "resolved". Community members can continue to post and vote on replies for resolved questions.
- If another reply that you like better is posted in the future, simply choose that reply as the best answer to replace the old best answer.
- You can remove the best answer status of the reply at any time. Removing the best answer status from a reply makes it a regular reply.

Replying to Chatter Answers Email Notifications

When you receive an email notification, you can post a response back to the community by replying to the email.

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

When you receive email notifications related to a question, you can conveniently reply directly from your email and the reply appears as an answer on the Q&A tab. You'll receive an email notification for the following events:

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

USER PERMISSIONS

To view questions:

- "Read" on questions

To ask and reply to questions:

- "Create" on questions

EDITIONS

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

- Someone answers a question you've asked or are following.
- Customer support or a moderator selects a best answer for a question you've asked or are following.

 **Note:** To reply to email notifications, your administrator must enable email replies on the Chatter Answers Settings page.

Consider these tips when sending email replies:

- Replies must be sent from the email address specified on your profile. If you use email aliases or email forwarding services that send replies from a different email address, your replies won't be processed.
- If replies contain your personal email signature, the signature text is treated as part of your comment. Default signatures inserted by mobile devices, such as `Sent from my iPhone`, are automatically removed from replies. Before replying, delete custom signatures and any extra text you don't want posted to the community.
- Attachments in replies are ignored.
- Posts that include rich text or other types of markup appear as plain text in the body of the email notification.
- Automated messages such as "out of office" responses are ignored by the system.
- Before replying, check the email address that displays in the `To` field of your email. Valid addresses contain tokens, or long character strings, both before and after the `@` symbol, such as `w8t27apy1@j321imd9gbs.d8rx.d.chatter.salesforce.com`. Some email applications may automatically use the `From` address from the original email, such as `ReplyToQ&A@<your.com>.com`, which is not a valid address for receiving replies. If you see this shortened address in the `To` field of your reply email, replace it with the valid reply-to address in the email header information. For example, in an application such as IBM® Lotus Notes®:
 1. Open the original email.
 2. Click **View** > **Show** > **Page Source**.
 3. In the `ReplyToQ&A` section, copy the email address that looks like:
`w8t27apy1@j321imd9gbs.d8rx.d.chatter.salesforce.com`.
 4. Paste the reply-to address in the `To` field of your reply email.

Resolving Customer Inquiries with Others

Case Team Fields

Case teams have the following fields, listed in alphabetical order. Availability of fields depends on how your admin set up Salesforce.

Field	Description
Case Access	The level of access a team member has to a case, such as Read/Write, Read Only, or Private. Case access can't be less than your org's default case sharing access.
Member Name	The name of a user on a case team.
Member Role	The team member's role on the case, such as support agent or case manager.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Field	Description
Visible in Customer Portal	Indicates whether the case team member appears in the customer portal.

[Case Teams](#)

Creating and Verifying Service Agreements

Entitlements

Entitlements

Entitlements are units of customer support in Salesforce, such as “phone support” or “web support.” They’re typically used to represent terms in service agreements. Entitlements help you determine if your customers are eligible for support so you can create support records like cases or work orders for them.

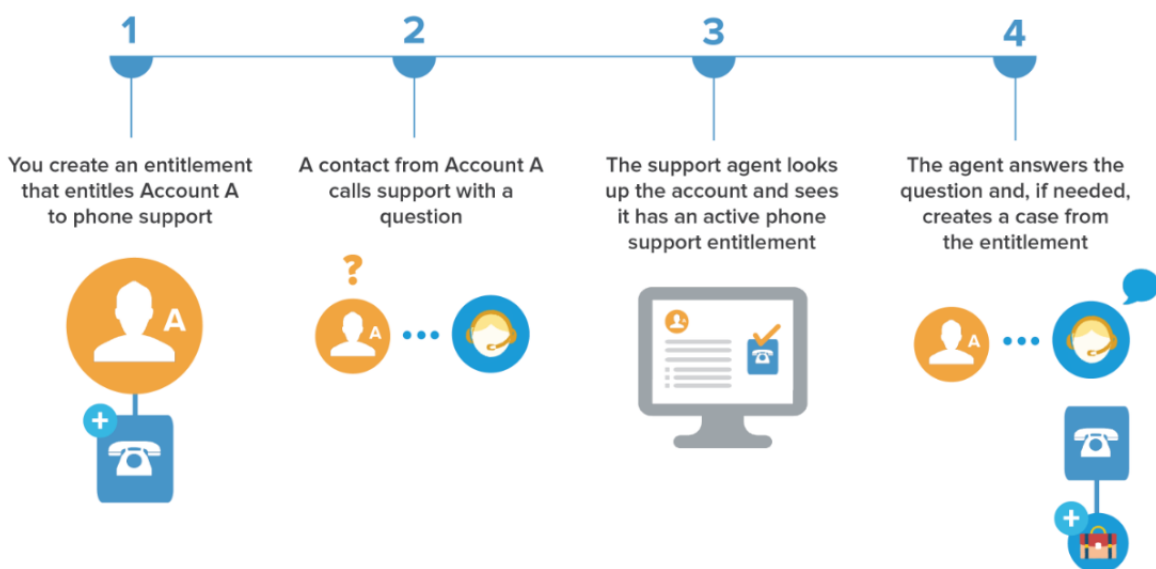

You can associate entitlements with accounts, assets, contacts, and service contracts. For example, a phone support entitlement can be added to an account. When a contact from that account calls your service department, support agents can quickly verify that they’re entitled to phone support.

Determining Whether a Customer is Entitled to Support

You can use entitlements on their own or as part of *entitlement processes*. Entitlement processes are timelines that contain all the steps that agents must complete to resolve a support record. To represent more complex service-level agreements in Salesforce—with features like renewal processes and multiple service levels—you can use *service contracts* and *contract line items*.

View and manage entitlements in Salesforce from the Entitlements tab. Depending on how entitlements are set up, you can also use the Entitlements related list on accounts, contacts, assets, or service contracts.

SEE ALSO:

[Guidelines for Working with Entitlements](#)

[Entitlements: Terms to Know](#)

Guidelines for Working with Entitlements

Entitlements in Salesforce specify whether a customer is entitled to customer support. Learn how to perform common actions on entitlements.

Viewing Entitlements

You can view entitlements on the Entitlements tab or the Entitlements related list on:

- Accounts
- Assets
- Contacts
- Service contracts

To view entitlements that are associated with a particular account, contact, asset, or service contract, go to the Entitlements related list on the record.

 **Tip:** Has the console in your org been set up to include entitlements? If so, click the Console tab to view and edit entitlements and their associated records in one place.

Creating Entitlements

You can create and edit entitlements from the Entitlements tab or the Entitlements related list on accounts, assets, or service contracts.

Your business may have its own processes for how to link entitlements to customers in Salesforce. The simplest approach is to create an entitlement on the customer's account via the Entitlements related list. Then, use the entitlement for every contact on the account. Keep in mind that when you create a contact on an account, the contact doesn't automatically inherit an entitlement from the account. Your admin may set up automation that creates an entitlement for new contacts on an account.

 **Note:**

- You can add existing entitlements to contacts or products, but you can't create entitlements from a contact or product record.
- Click **Clone** on an entitlement to quickly create an entitlement from an existing one.

Deleting Entitlements

You can delete entitlements on the entitlement's detail page, the Entitlements related list, or the Entitlements tab. Deleting an entitlement moves it to the Recycle Bin. Any notes, attachments, or activities associated with the entitlement are also deleted. If you undelete the entitlement, the associated items are undeleted.

 **Note:** You can't delete an entitlement with an open case or work order.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions with the Service Cloud

USER PERMISSIONS

To view entitlements:

- "Read" on entitlements

To edit entitlements:

- "Edit" on entitlements

To create or clone entitlements:

- "Create" on entitlements

To delete entitlements:

- "Delete" on entitlements

Sharing Entitlements

You can't share entitlements. Entitlements use the same sharing model as the account they're associated with.

Associating a customer with an entitlement doesn't share the entitlement with them. For customers to be able to see their entitlements, entitlements must be set up in your external community.

SEE ALSO:

[Verify Entitlements](#)

[Entitlements: Terms to Know](#)

[Entitlement Fields](#)

Verify Entitlements

Each entitlement in Salesforce is associated with a specific account. Verify that a customer is entitled to customer support before you create or update a case or work order.

What to Verify	Where to Verify It	Steps To Verify
Whether at least one contact on a specific account is entitled to support	Account detail page	<ol style="list-style-type: none"> 1. View the account. 2. Confirm that the entitlement is on the Entitlements related list.
Whether a specific contact is entitled to support Contact detail page	Contact detail page	<ol style="list-style-type: none"> 1. View the contact. 2. Confirm that the entitlement is on the Entitlements related list.
Whether specific assets (purchased products) are entitled to support	Asset detail page	<ol style="list-style-type: none"> 1. Locate the asset from a related list or an assets list view on the Products tab. 2. Click the asset name. 3. Confirm that the entitlement is on the Entitlements related list.
Whether a service contract includes a specific entitlement	Service Contract detail page	<ol style="list-style-type: none"> 1. Click the Service Contracts tab. 2. Click the service contract name. 3. Confirm that the entitlement in question is on the Entitlements related list.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To view entitlements:

- "Read" on entitlements

To view accounts, contacts, assets, and service contracts:

- "Read" on that object

After you verify an entitlement, click **New Case** on the entitlement's detail page to create a case associated with the entitlement. The case automatically includes the correct entitlement, account, contact, and asset information. Alternatively, you can add an entitlement to an existing case using the `Entitlement Name` lookup field on the case.

[Guidelines for Working with Entitlements](#)

Entitlements: Terms to Know

Learn useful terms related to entitlement features in Salesforce.

Entitlement

A unit of customer support in Salesforce, such as “phone support” or “web support.” It’s typically used to represent terms in warranties. You can associate entitlement with accounts, assets, contacts, and service contracts. View entitlements from the Entitlements tab or the Entitlements related list on accounts, assets, contacts, and service contracts.

Entitlement Contact

Contacts who are entitled to customer support—for example, a named caller. The Contacts related list on an entitlement shows which contacts are eligible for that entitlement. You can remove or add contacts directly from the related list, or by updating the contact record itself. Your business may not allow you to provide support to customers unless they are a contact on the entitlement.

Note:

- Contacts on an account don't automatically inherit the account's entitlements. Depending on your business processes, you may need to create a separate entitlement for each contact on an account. You can also set up an Apex trigger that automatically assigns an entitlement to a contact when you create the contact.
- Entitlement contacts don't have page layouts, search layouts, buttons, links, or record types.
- The same visibility and sharing settings that apply to the parent account apply to contacts. Associating a contact with an entitlement doesn't share the entitlement record with the contact or the related community user.

Entitlement Template

Predefined terms of customer support that can be quickly added to products in Salesforce. For example, you can create entitlement templates for phone or web support so users can easily add entitlements to products purchased by customers.

Entitlement Management

A collection of Salesforce features that help you provide the correct service levels to your customers. It includes:

- *Entitlements*, which let support agents determine whether a customer is eligible for support.
- *Entitlement processes*, which are timelines that include all the steps that your support team must complete to resolve support records like cases or work orders.
- *Service contracts*, which let you represent different kinds of customer support agreements like warranties, subscriptions, or maintenance agreements. You can restrict service contracts to cover specific products.
- *Community access to entitlements*, which lets community users view entitlements and service contracts and create support records from them.
- *Reporting on entitlement management*, which lets you track the way entitlements are used in your Salesforce org and whether service contract terms are being met.

Depending on your business needs, you may decide to use all of these features or just a few of them.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions** with the Service Cloud

Service Contract

A customer support agreement between you and your customers. Service contracts in Salesforce can represent warranties, subscriptions, service level agreements (SLAs), and other types of customer support. View service contracts in the Service Contracts tab or on the Service Contracts related list on accounts and contacts.

Contract Line Item

Specific products covered by a service contract. View contract line items in the Contract Line Items related list on service contracts (not contracts!). You can only use contract line items if your org uses products.

 **Note:** Schedules aren't available for contract line items, and community users can't access them.

Entitlement Process

A timeline that includes all the steps (milestones) that support agents must complete to resolve a support record. Each process includes the logic needed to determine how to enforce the correct service level for your customers. Entitlement processes come in two types: Case and Work Order.

Not all entitlements need processes. For example, a simple entitlement might just state that a customer is eligible for phone support 24/7. If you need to add time-dependent steps or service levels to that definition—for example, if you want a supervisor to be notified by email when a customer's case goes unresolved for two hours—you need an entitlement process.

Milestone

A required step in your entitlement process. Milestones are metrics that represent service levels to provide to each of your customers. Examples of milestones include First Response and Resolution Time on cases.

Milestone Action

A time-dependent workflow action that occurs on a milestone in an entitlement process. For example, you might add the following actions to a milestone:

- Send an email alert to certain users one hour before a first response milestone is scheduled to expire
- Update certain fields on a case one minute after a first response is completed

There are three types of milestone actions:

- *Success actions* are triggered when a milestone is completed
- *Warning actions* are triggered when a milestone is about to be violated
- *Violation actions* are triggered when a milestone is violated

You can automate tasks, email alerts, field updates, and outbound messages for each action type.

[Entitlements](#)

Entitlement Fields

Entitlements have the following fields. Some fields may not be visible or editable depending on your page layout and field-level security settings.

Field	Description
Account Name	The account associated with the entitlement. Every entitlement must be linked to an account.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer Editions** with the Service Cloud

Field	Description
Asset Name	<p>The asset associated with the entitlement.</p> <p>Products represent the items your company sells (for example, a laptop case), whereas assets represent the specific products your customers have purchased (the laptop case purchased by John).</p>
Business Hours	<p>The entitlement's supported business hours.</p> <p>To learn more about business hours on entitlements, see How Business Hours Work in Entitlement Management.</p>
Per Incident	<p>Lets you limit the number of cases the entitlement supports.</p> <p>Use this field if your service agreements with your customers are based on number of cases (as opposed to number of days or other criteria). Otherwise, you probably don't need it.</p> <p> Note: This option is not available for work orders.</p>
Cases Per Entitlement	<p>The total number of cases the entitlement supports.</p> <p>This field is only available if <code>Per Incident</code> is selected.</p>
Contract Line Item	The contract line item (product) associated with the entitlement.
End Date	<p>The last day the entitlement is in effect.</p> <p>This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the <code>End Date</code> to 365 days after the <code>Start Date</code>.</p>
Entitlement Name	<p>The entitlement's name.</p> <p>We recommend using a descriptive name, such as <i>Phone Support</i>. This helps users better understand entitlements when they see them on related lists for accounts, contacts, and assets.</p>
Operating Hours	The operating hours that the entitlement's work orders should respect. This field is visible only if Field Service Lightning is enabled.
Service Contract	<p>The service contract associated with the entitlement.</p> <p>To quickly find a service contract in the lookup dialog box, select criteria from the <code>Filter by</code> fields. Admins can set lookup filters to restrict filter values and results.</p>
Start Date	<p>The first day the entitlement is in effect.</p> <p>This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the <code>Start Date</code> to the date when the <code>Status</code> changes to <i>Active</i>.</p>

Field	Description
Entitlement Process	<p>The entitlement process associated with the entitlement.</p> <p>Entitlement processes are timelines that include all the steps (milestones) that your support team must complete to resolve cases. Each process includes logic to determine how to enforce the correct service level for your customers.</p>
Remaining Cases	<p>The number of cases the entitlement can support. This field decreases in value by one each time a case is created with the entitlement.</p> <p>This field is only available if <code>Per Incident</code> is selected.</p>
Status	<p>The entitlement's status.</p> <p>Status is determined by your Salesforce org's current system date and the entitlement's <code>Start Date</code> and <code>End Date</code>. The status is:</p> <ul style="list-style-type: none">• Active if the system date is equal to or later than the <code>Start Date</code> and equal to or earlier than the <code>End Date</code>.• Expired if the system date is later than the <code>End Date</code>.• Inactive if the system date is earlier than the <code>Start Date</code>.
Status Icon	<p>Represents the entitlement's status with one of the following icons:</p> <ul style="list-style-type: none">•  Active•  Expired•  Inactive
Type	<p>The type of entitlement, such as Web or phone support.</p> <p>Admins can customize this field's values.</p>

Service Contracts

Service Contracts

Service contracts in Salesforce represent a customer support agreement between you and your customers. You can use them to represent warranties, subscriptions, service level agreements (SLAs), and other types of customer support.

Service contracts are an advanced entitlement feature. You may need to use them if:

- You want to define specific service levels for your customers, such as warranties, subscriptions, and service level agreements.
- Your customers' entitlements are renewed at the contract level. In other words, your business processes allow you to create an entitlement for a customer only if they have an active service contract.

View and manage service contracts in Salesforce from the Service Contracts tab. Depending on how service contracts are set up, you can also use the Service Contracts related list on accounts and contacts.

[Guidelines for Working with Service Contracts](#)

[Service Contract Fields](#)

[Set Up Service Contracts](#)

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

Guidelines for Working with Service Contracts

Service contracts are agreements between you and your customers for a type of customer support. Learn how to perform basic actions on service contracts.

Viewing Service Contracts

View service contracts from the Service Contracts tab or on the Service Contracts related list on accounts and contacts. To view a service contract's details, click the service contract name. You can see associated entitlements, contract line items, field update history, and more.

The Service Contracts related list on an account or contact shows all the service contracts associated with that item.

 **Tip:** If service contracts have been set up in the console, click the Console tab to find, view, and edit service contracts and their associated records in one place.

Creating Service Contracts

You can create and edit service contracts from:

- The Service Contracts tab
- The Service Contracts related list on accounts and contacts

We recommend linking each service contract to an account in Salesforce. Then, you can create entitlements on the service contract and assign the entitlements to contacts associated with the account.

 **Tip:**

- Click **Clone** on a service contract to quickly create a new service contract from an existing one.
- Use the `Parent Service Contract` field and `Child Service Contracts` related list to make one service contract the parent of another. This helps you represent complex contracts.
- Entitlements reflect terms in a service contract, and a service contract may be associated with multiple entitlements. Link an entitlement to a service contract via the Entitlements related list on the service contract or the `Service Contract` lookup field on the entitlement.

Deleting Service Contracts

You can delete service contracts from the service contract's detail page or the Service Contracts related list.

Deleting a service contract moves it to the Recycle Bin. Any notes, attachments, activities, or contract line items associated with the service contract are also deleted. If you undelete the service contract, the associated items are undeleted.

 **Note:**

- You can't delete service contracts with active or expired entitlements. If you want to delete a service contract with entitlements—for instance, because there's a problem with the service contract—add its entitlements to another service contract first, then delete it.
- If you delete a service contract with both a parent service contract and child service contract(s), keep in mind that its parent and children will no longer be linked in a service contract hierarchy.

Sharing Service Contracts

You can use sharing rules to grant extra access to service contracts beyond what your organization's default sharing model allows. However, you can't make the sharing model more restrictive than the default model.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions with the Service Cloud

USER PERMISSIONS

To view service contracts:

- "Read" on service contracts

To edit service contracts:

- "Edit" on service contracts

To create or clone service contracts:

- "Create" on service contracts

To delete service contracts:

- "Delete" on service contracts

To see who has access to a service contract, click **Sharing** on the service contract's detail page. This takes you to the sharing detail page. There, you can:

- View a list of who has access to the service contract.
- Click **Add** to grant access to the record for other users, groups, roles, or territories. You can only share service contracts with users who have the "Read" permission on service contracts.
- Create, edit, and delete manual sharing rules.
- Define a custom view to filter the list of users with access to the service contract.

Transferring Service Contracts Between Users

You may need to transfer multiple service contracts to a user. To do this, click the Service Contracts tab and click **Transfer Service Contracts** in the Tools section.

[Service Contracts](#)

[Service Contract Fields](#)

Service Contract Fields

Service contracts have the following fields. Some fields may not be visible or editable depending on your page layout and field-level security settings.

Field	Description
Account Name	The account that purchased or owns the service contract.
Activation Date	The day the service contract first went into effect.*
Approval Status	An approval process status field. If your business has an approval process for service contracts, this field indicates the current stage of the approval process.
Billing City	City portion of billing address. Up to 40 characters are allowed.
Billing Country	Country portion of billing address. Entry is selected from a picklist of standard values or entered as text. If the field is a text field, up to 80 characters are allowed.
Billing State	State or province portion of billing address. Entry is selected from a picklist of standard values or entered as text. If the field is a text field, up to 80 characters are allowed.
Billing Zip	Zip or postal code portion of billing address. Up to 20 characters are allowed.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions with the Service Cloud

Field	Description
Contact Name	The contact associated with the service contract. Select from the drop-down list.
Contract Name	Name of the service contract. Depending on your business needs, you may want to include the name of the customer, the contract end date, the type of product covered by the contract, or other information.
Contract Number	Auto-generated number identifying the service contract. (Read only)
Created By	User who created the service contract. (Read only)
Created Date	The date the service contract was created.*
Currency	The currency for all amount fields in the service contract. Available only for organizations that use multiple currencies. You can't change the currency on a service contract that has contract line items.
Description	Description of the service contract. Up to 32 KB of data are allowed in this field. Try to include information that helps agents understand the coverage provided by the service contract. For example, "This contract entitles the customer to a first response within 2 hours and a case resolution within 24 hours."
Discount	Weighted average of all contract line item discounts on the service contract. Can be any positive number up to 100. (Read only)
End Date	The last day the service contract is in effect.* This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the End Date to 365 days after the Start Date.
Grand Total	Total price of the service contract plus shipping and taxes. (Read only)
Last Modified By	User who most recently changed the service contract. (Read only)
Line Items	Number of contract line items (products) on the service contract.
Parent Service Contract	The service contract's parent service contract, if it has one.  Tip: View, create, and delete a service contract's child service contracts in the Child Service Contracts related list.
Root Service Contract	The top-level service contract in a service contract hierarchy. Depending on where a service contract lies in the hierarchy, its root may be the same as its parent. (Read only)

Field	Description
Service Contract Owner	The assigned owner of the service contract.
Shipping and Handling	Total shipping and handling costs for the service contract.
Shipping City	City portion of primary mailing or shipping address. Up to 40 characters are allowed.
Shipping Country	Country portion of primary mailing or shipping address. Entry is selected from a picklist of standard values or entered as text. If the field is a text field, up to 80 characters are allowed.
Shipping State	State or province portion of primary mailing or shipping address. Entry is selected from a picklist of standard values or entered as text. If the field is a text field, up to 80 characters are allowed.
Shipping Street	Primary mailing or shipping street address of account. Up to 255 characters are allowed.
Shipping Zip	Zip or postal code portion of primary mailing or shipping address. Up to 20 characters are allowed.
Special Terms	Any terms that you have agreed to and want to track in the service contract.
Start Date	The first day the service contract is in effect.* This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the <code>Start Date</code> to the date when the <code>Status</code> changes to Active.
Status	The status of the service contract. Status is determined by your organization's current system date and the service contract's <code>Start Date</code> and <code>End Date</code> . The status is: <ul style="list-style-type: none"> • Active if the system date is equal to or later than the <code>Start Date</code> and equal to or earlier than the <code>End Date</code>. • Expired if the system date is later than the <code>End Date</code>. • Inactive if the system date is earlier than the <code>Start Date</code>.
Status Icon	Represents the service contract's status with one of the following icons: <ul style="list-style-type: none"> •  Active •  Expired •  Inactive
Subtotal	Total of the service contract line items (products) before discounts, taxes, and shipping are applied. (Read only)

Field	Description
Tax	Total taxes for the service contract. This is a currency field, so enter the amount, not percentage. For example, enter <i>\$10.50</i> .
Term (months)	Number of months that the service contract is in effect. This field is independent of the <code>Start Date</code> and <code>End Date</code> values. Depending on how your business uses service contracts, you may choose to hide the <code>Term</code> field or set up data validation that populates the <code>End Date</code> when a <code>Term</code> is specified, for example.
Total Price	Total of the contract line items (products) after discounts and before taxes and shipping. (Read only)

*Service contracts have four date fields. `Created Date` is the date the service contract was created in Salesforce, so it's the earliest of the dates. `Activation Date` is the date that it was first activated for an account or customer. Finally, `Start Date` represents the date the service contract was put into effect or last renewed, while `End Date` is the last date the service contract is in effect. `Start Date` and `End Date` are blank by default, but you can create Apex triggers that populate these fields based on other service contract fields like `Status`.

[Guidelines for Working with Service Contracts](#)

[Contract Line Item Fields](#)

Contract Line Items

Contract Line Items

Contract line items are specific products covered by a service contract, not by a general contract. You can only use contract line items if your Salesforce org uses products.

A service contract's line items are listed in the Contract Line Items related list.

 **Note:** Schedules aren't available for contract line items, and community users can't access them.

 **Example:** You can create a service contract that covers products X, Y, and Z, and then create entitlements on the service contract that are assigned to contacts on a particular account. When one of the contacts calls support, the agent checks whether the entitlement associated with the service contract is active. If it's active, the agent can provide support for any of the products (represented by the contract line items) covered by the service contract.

SEE ALSO:

[Guidelines for Working with Contract Line Items](#)

[Contract Line Item Fields](#)

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions with the Service Cloud

Guidelines for Working with Contract Line Items

Contract line items are specific products covered by a service contract. Learn how to perform basic actions on contract line items.

Viewing Contract Line Items

To view a contract line item, navigate to the service contract that covers it. The Contract Line Items related list shows all the line items associated with a service contract. Click the contract line item to view its associated entitlements, history, and more.

 **Note:** You can't create custom list views for contract line items.

Adding Contract Line Items to a Service Contract

You can add line items to a service contract from the Contract Line Items related list on the service contract's detail page.

1. Click **Add Line Item** in the Contract Line Items related list.
2. Select a price book if prompted. If only the standard price book is activated, it's automatically assigned to the service contract.
3. Select one or more products from the list, or search for a product and then click the product name.
4. Enter the attributes for each product. Your admin may have customized this page to include fields specific to your business.
5. Enter the Sales Price for the product. The Sales Price defaults to the List Price specified in the price book assigned to the opportunity. If your user permissions allow it, you can override this value. You might want to give a discount, for example.
6. Enter the number of products at this price in the Quantity box.
7. Click **Save**.

 **Tip:** Use the `Parent Contract Line Item` field and Child Contract Line Items related list to make one line item the parent of another. This helps you represent complex products with multiple components.

Deleting Contract Line Items

You can delete contract line items from the contract line item's detail page or the Contract Line Items related list on a service contract.

Deleting a contract line item moves it to the Recycle Bin. Any notes, attachments, or activities associated with the contract line item are also deleted. If you undelete the contract line item, the associated items are undeleted.

Sharing Contract Line Items

You can't share contract line items. Sharing for contract line items is inherited from service contract sharing. For example, users with the "Read" permission on service contracts inherit the "Read" permission on contract line items.

- "Edit" on service contracts

AND

"Create" on contract line items and "Read" on products and price books

To view contract line items:

- "Read" on contract line items AND "Read" on products and price books

To edit contract line items:

- "Edit" on contract line items AND "Read" on products and price books

To delete contract line items:

- "Delete" on contract line items AND "Read" on products and price books

Contract Line Item Fields

Contract line items have the following fields. Some fields may not be visible or editable depending on your page layout and field-level security settings.

Field	Description
Asset Name	The asset associated with the contract line item. Products represent the items your company sells (for example, a laptop case), whereas assets represent the specific products your customers have purchased (the laptop case purchased by John).
Created By	User who created the contract line item. (Read only)
Created Date	The date the contract line item was created.
Description	Description of the contract line item. Up to 32 KB of data are allowed in this field. Only the first 255 characters display in reports.
Discount	Discount you apply to the contact line item. You can enter a number with or without the percent symbol and you can use up to two decimal places.
End Date	The last day the contract line item is in effect. This field is blank unless you set up an Apex trigger or quick action to populate it.
Last Modified By	User who most recently changed the contract line item. (Read only)
Line Item Number	Auto-generated number that identifies the contract line item. (Read only)
List Price	Price of the contract line item (product) within the price book including currency. (Read only)
Parent Contract Line Item	The contract line item's parent line item, if it has one.  Tip: View, create, and delete a contract line item's child line items in the Child Contract Line Items related list.
Product	The name of the contract line item (product) as listed in the price book.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions with the Service Cloud

Field	Description
Quantity	<p>Number of units of the contract line item (product) included in the service contract.</p> <p>The value must be 1 or greater.</p>
Root Contract Line Item	<p>The top-level contract line item in a contract line item hierarchy. Depending on where a line item lies in the hierarchy, its root might be the same as its parent. (Read only)</p>
Sales Price	<p>Price to use for the contract line item.</p> <p>By default, the Sales Price for a contract line item (product) added to an opportunity or quote is the line item's List Price from the price book. However, you can update it.</p>
Service Contract	<p>The service contract associated with the contract line item.</p>
Start Date	<p>Start date of the contract line item.</p> <p>This field is blank unless you set up an Apex trigger or quick action to populate it.</p>
Status	<p>The status of the contract line item.</p> <p>Status is determined by your organization's current system date and the contract line item's <code>Start Date</code> and <code>End Date</code>. The status is:</p> <ul style="list-style-type: none"> • Active if the system date is equal to or later than the <code>Start Date</code> and equal to or earlier than the <code>End Date</code>. • Expired if the system date is later than the <code>End Date</code>. • Inactive if the system date is earlier than the <code>Start Date</code>.
Status Icon	<p>Represents the contract line item's status with one of the following icons:</p> <ul style="list-style-type: none"> •  Active •  Expired •  Inactive
Subtotal	<p>The contract line item's sales price multiplied by the quantity.</p>
Total Price	<p>The contract line item's sales price multiplied by the quantity minus the discount.</p>

Accessing Knowledge

Salesforce Knowledge

Work with Articles and Translations

EDITIONS

Available in: Salesforce Classic, Lightning Experience

Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Professional**, **Enterprise**, and **Unlimited** Editions.

The Article Management tab is your home page for working with articles throughout the publishing cycle as they are created, assigned to collaborators, translated, published, archived, and deleted.

Agents need the correct permissions on an article's article type and article actions to complete some tasks. For more information see, [Assign Article Actions to Public Groups](#).

To specify which articles appear in the list view, use the following options in the sidebar:

- In the View area, select Draft Articles, Published Articles, or Archived Articles. You can filter draft articles by those assigned to you or those assigned to anyone (all draft articles for your organization).
- If applicable, click the Translations tab in the View area, and select Draft Translations or Published Translations. You can filter draft translations by those assigned to you, those assigned to a translation queue, or those assigned to anyone (all draft translations in your organization).
- To refine the current view, first select an article language filter and then enter a keyword or phrase in the Find in View field. The Find in View field is inactivated for archived articles.
- In the Filter area, choose a category from a drop-down menu to filter the current view.

To modify which columns display, click **Columns**. The following columns are available depending on what is selected in the view area:

Column	Description	View
Action	Displays the actions available for the article or translation.	All articles and translations
All User Ratings	Average ratings from users of your internal Salesforce organization, Customer Portal, partner portal, and your public knowledge base.	Published and archived articles and published translations
Archived Date	Date the article was archived.	Archived articles
Article Number	Unique number automatically assigned to the article.	All articles and translations
Article Title	Click to view the article.	All articles
Assigned to	The user who is assigned work on the article.	Draft articles and translations
Assignment Details	Instructions for the assignment.	Draft articles and translations
Assignment Due Date	Date to complete work on the article. If the date has passed, it displays in red.	Draft articles and translations
Created Date	Date the article was written.	Draft articles and translations
Customer Ratings	Average ratings from users on the Customer Portal and the public knowledge base.	Published and archived articles and published translations

USER PERMISSIONS

To create, edit, or delete articles:

- "Manage Articles"
- AND
- "Create," "Read," "Edit," or "Delete" on the article type

To publish or archive articles:

- "Manage Articles"
- AND
- "Create," "Read," "Edit," and "Delete" on the article type

To submit articles for translation:

- "Manage Articles"
- AND
- "Create," "Read," and "Edit" on the article type

To submit articles for approval:

- Permissions vary depending on the approval process settings

Column	Description	View
Language	The language an article is translated into.	Draft and published translations
Last Action	The date and type of the last action taken on a translation.	Draft and published translations
Last Modified by	Last person to update the article.	Draft articles and translations
Last Modified Date	Last date the article was edited.	All articles and translations
Most Viewed by all Users	Average views from users of your internal Salesforce organization, Customer Portal, partner portal, and your public knowledge base.	Published and archived articles and published translations
Most Viewed by Customers	Average views from users on the Customer Portal and the public knowledge base.	Published and archived articles and published translations
Most Viewed by Partners	Average views from users on the partner portal and the public knowledge base.	Published and archived articles and published translations
Partner Ratings	Average ratings from users of your partner portal and public knowledge base.	Published and archived articles and published translations
Published Date	Date the article was published.	Published articles and translations
Source Article	The original article before translation. Click the article title to view the article.	Draft and published translations
Translated Article	The title of the translated article. Click the translation title to edit the translation.	Draft and published translations
Translation Status	Status in the translation cycle. Hover over the icon to view the status for each translation. If a translation has been published, there are separate tabs for draft and published translations.	Articles submitted for translation
Type	The article's type, such as FAQ or Product Description, that determines what information the article contains.	All articles
Validation Status	Shows whether the content of the article has been validated.	All articles and translations, when enabled
Version	The article's version. Hover over the version number to view details about other versions of the article.	All articles

On the Article Management tab, you can:

- Find an article or translation by entering a search term or using the category drop-down menu.
- Create an article by clicking **New**.

- Publish an article or translation by selecting it and clicking **Publish...** If you have the “Publish Articles” article action and an approval process is set up for an article, you see both **Publish...** and **Submit for Approval** buttons.
- Modify an article or translation by clicking **Edit** next to it.
- See how an article or translation appears for end users by clicking **Preview** next to it. From the **Channel** drop-down menu you can choose any channel where an article is visible except the public knowledge base.

Note: Voting and Chatter information is not available when previewing a Knowledge article.

- See a list of an article’s or translation’s other versions by clicking its version number.
- Change the owner of an article or translation by selecting it and clicking **Assign...**

Note: All draft articles must have an assignee.

- Send an article or translation to the Recycle Bin by selecting it and clicking **Delete**.
- Archive a published article or translation by selecting it and clicking **Archive...**
- Submit articles for translation by selecting them and clicking **Submit for Translation**. You can set due dates for each language and assign it to another agent or a queue for export to a translation vendor.
- Go directly to the Setup pages for exporting and importing articles for translation with **Export Articles for Translation** and **Import Article Translations** in the Related Links area.

[Search Articles and External Sources on the Knowledge Tab](#)

Use federated search to search all your resources at once.

[Create and Edit Articles](#)

You can create or edit an article from the Knowledge tab or Article Management tab. If you’re creating an article, you may need to select the article type and language. If you’re editing a published article or translation, choose whether to leave it published while you work on a draft copy, or whether to remove the original article from publication and work on it directly. If you work on a copy, publishing the copy replaces the last published version of the article. If you work on the original article, it is unavailable in the channels until you republish it.

[Publish Articles and Translations](#)

Publishing articles and translations makes them visible in all channels selected. If you publish an article that has translations, all translations of the article are published as well.

[Translate Articles Within Salesforce Knowledge](#)

If your organization translates Salesforce Knowledge articles internally, you can enter the translation from the translation detail page.

[Archive Articles and Translations](#)

Archiving removes published articles and translations that are obsolete so they no longer display to agents and customers on your organization's Salesforce Knowledge channels.

[Salesforce Knowledge Article Versions](#)

Article versions allow you to save an older version of a published article and then see which version of the article is associated with a case. To save the previous version, select the **Flag as new version** checkbox when publishing a new version. The previously published version is saved and the new version is published with the next sequential version number as an identifier.

[Delete Articles and Translations](#)

You can delete articles and translations on the Article Management tab or the detail page of the article or translation. Deleting permanently removes articles from the knowledge base. You can delete draft articles, draft translations of articles, or archived articles, but not published articles or translations.

[Articles or Knowledge Tab](#)

USER PERMISSIONS

To view articles:	"Read" on the article type
To create articles:	"Manage Articles" AND "Read" and "Create" on the article type
To edit draft articles:	"Manage Articles" AND "Read" and "Edit" on the article type
To edit published or archived articles:	"Manage Articles" AND "Create," "Read," and "Edit" on the article type
To delete a draft, published, or archived article:	"Manage Articles" AND "Read," "Edit," and "Delete" on the article type
To create and edit external data sources:	"Customize Application"

EDITIONS

Available in: Salesforce Classic, Lightning Experience

Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Professional**, **Enterprise**, and **Unlimited** Editions.

Use federated search to search all your resources at once.

1. Enter your search terms in the Search box.

You can use search wildcards and operators in your search terms. If your organization has any auto-complete options enabled, you can select from the suggestions.

 **Note:** In the auto-complete drop-down, article titles have a paper icon while the keywords have a magnifying glass icon.

2. Click the search icon or press *Enter* on your keyboard.

3. Optionally, select filters to refine your search results.

Depending on the source you are searching, filter by language, data category, article status, article type, and article validation. Click **Reset** to return all filters to their default setting.

- When **All** is selected, you can filter by language and data category, depending on what your organization supports.
- When **Articles** or **My Draft** is selected you can filter by:
 - Article status: Published, Draft, and Draft Translations
 - Language: Values depend on those supported in your organization
 - Data categories: Values depend on those created in your organization
 - Article type: Values depend on those created in your organization
 - Validation Status: No Filter (all articles), Not Validated (articles that are not validated), Validated (validated articles), and any other values supported in your organization such as in review.
- When an external source is selected, there are no filters and the general article information displayed is controlled by your external object search layout.

4. For articles, you can sort by:

- Published Date
- Best Rating
- Most Viewed
- Title: A to Z
- Title: Z to A

5. View information by clicking the article or external source title. Below the title you can find general article information such as: new article indication, article number, article type, validation status, last published date, article view comparison, and article rating comparison.

6. Use the drop-down by each article to follow or unfollow, [edit](#), [publish](#), and [delete](#) an article, depending on your permissions.

[Promote Articles in Search Results](#)

Associate keywords with articles to optimize search results in Salesforce Knowledge. Users who search for these keywords see the article first in their search results. Promoted search terms are useful for promoting an article that you know is commonly used to resolve a support issue when a user's search contains certain keywords.

[Article Search Results](#)

How search works for articles depends on your use of search options, search terms, wildcards, and operators. Salesforce Knowledge search uses the same custom search algorithms that are available throughout Salesforce, which include mechanisms such as tokenization, lemmatization, and stopword lists, to return relevant search results.

Promote Articles in Search Results

Associate keywords with articles to optimize search results in Salesforce Knowledge. Users who search for these keywords see the article first in their search results. Promoted search terms are useful for promoting an article that you know is commonly used to resolve a support issue when a user's search contains certain keywords.

Articles must be in published status for you to manage their promoted terms.

1. In the Article Management tab, select **Published Articles** in the View section, and then click the title of the published article that you want to promote for a search term.
2. In the Promoted Search Terms related list, click **New Promoted Term**.
3. Enter the keywords that you want to associate with the article.
 - You can associate the same term with multiple articles. If the user's search matches the promoted term, all associated articles are promoted in search results, ordered by relevancy.
 - The maximum number of characters per promoted term is 100. For best results matching users' search terms, limit each promoted term to a few keywords.
4. Click **Save**.

-  **Example:** For example, if an article addresses a common support issue such as login problems, you can associate the terms *password* and *password change*. Article search matches a promoted term whenever all keywords within the term occur within the user's search terms, in any sequence. Each keyword must match exactly. For example:
- The promoted term *password* matches a search for *change password*.
 - The promoted term *password change* matches a search for *how do I change my password* but doesn't match *forgot password*.
 - The promoted term *password* doesn't match a search for *change passwords*.

Consider these limitations and general limits when you use promoted search terms.

- Your organization can create a maximum of 2,000 promoted terms. For best results, use them selectively, which means create a limited number of promoted terms and a limited number of promoted articles per term.
- If your organization translates articles into multiple languages, each promoted term is associated with one article version and the article version's language. If you need equivalent promoted terms to be associated with each translation, you must specify promoted terms for each translation. For example, associate change password with an English language article version and changer mot de passe with a French language article version.
- The end user's language setting determines the scope of the article search. Search results exclude article versions and any associated promoted terms that are not in the user's language.

Article Search Results

How search works for articles depends on your use of search options, search terms, wildcards, and operators. Salesforce Knowledge search uses the same custom search algorithms that are available throughout Salesforce, which include mechanisms such as tokenization, lemmatization, and stopword lists, to return relevant search results.

Many factors influence the order in which articles appear in the results list. Salesforce evaluates your search terms and your data to move more relevant matches higher in your list of results. Some of these factors include:

Operators

When you don't specify an operator in your article search, the search engine determines the best operator to use.

Many searches use "AND" as the default operator. This means that when you search for multiple terms, all the terms must match to generate a result. Matching on all terms tends to produce search results that are more relevant than searches using the "OR" operator, where matches on any of the search query terms appear in the results.

If the search engine doesn't return any results that match all the terms, it looks for matches using the "OR" operator. With the "OR" operator, the search engine boosts documents that contain more terms from the search query, so that they appear higher in the results list.

Frequency

This algorithm calculates the frequency with which a term appears within each article. The algorithm then weighs them against each other to produce the initial set of search results.

Relevancy

Articles that are frequently viewed or that are frequently attached to cases appear higher in the results. Article ownership and recent activity also boost an article in the results list.

Proximity of Terms

Articles that contain all the keywords in a search are ranked highest, followed by those with fewer keywords, followed by those with single keyword matches. Terms that are closer together in the matched document, with few or no intervening words, are ranked higher in the list.

Exact Matches

Matches on exact keywords are ranked higher than matches on synonyms or lemmatized terms.

Title Field

If any search terms match words in an article title, the article is boosted in the search results.

Token Sequence

If the search term is broken up into multiple tokens because it contains both letters and numbers, the system boosts results based on the same sequence of tokens. That way, exact matches are ranked higher than matches on the tokens with other tokens in between.

EDITIONS

Available in: Salesforce Classic, Lightning Experience

Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Professional**, **Enterprise**, and **Unlimited** Editions.

Create and Edit Articles

You can create or edit an article from the Knowledge tab or Article Management tab. If you're creating an article, you may need to select the article type and language. If you're editing a published article or translation, choose whether to leave it published while you work on a draft copy, or whether to remove the original article from publication and work on it directly. If you work on a copy, publishing the copy replaces the last published version of the article. If you work on the original article, it is unavailable in the channels until you republish it.

 **Note:** When applying categories, choose the categories that a user would naturally look for as they navigate. Users only find an article if they select its explicitly applied category, the parent of that category, or a child of that category.

Once your article is complete, you can assign it to another agent to edit or review the article, [publish the article](#) directly, or submit the article for approval. If you have the "Publish Articles" article action and an approval process is set up for an article, you'll see both **Publish...** and **Submit for Approval** buttons..

[Smart Links to Salesforce Knowledge Articles](#)

Smart linking from one article to another.

Salesforce Knowledge is available for an additional cost in: **Professional**, **Enterprise**, and **Unlimited** Editions.

Smart Links to Salesforce Knowledge Articles

Smart linking from one article to another.

Smart links automatically adjust when the name or URL of an article is changed. For example, when the URL Name of an article is changed, Salesforce Knowledge automatically updates the article's URL based on the channel, adds the site prefix for a public knowledge base, and adds the community name for the community portal. There are two ways to create a smart link in the rich text editor to a Salesforce Knowledge article within another article:

- [Search for the article.](#)
- [Enter the article URL.](#)

 **Important:** Smart links are based on the channels they are in. Therefore, you can't add a smart link to an article in another channel. For example, an article on your public knowledge base can't link to an article only published in your internal channel.

[Smart Links to Salesforce Knowledge Articles Through Search](#)

Smart linking from one article to another using the Link Article dialog in the rich text editor.

[Smart Links to Salesforce Knowledge Articles with URLs](#)

Smart linking from one Salesforce Knowledge article to another by manually entering the article URL in the rich text editor.

Smart Links to Salesforce Knowledge Articles Through Search

Smart linking from one article to another using the Link Article dialog in the rich text editor.

When creating or editing an article, you can use a keyword search to create a smart link in a rich text area field.

1. Place your cursor where you'd like to place the link.

2. Click the link icon, . The Link Article dialog appears.

3. Optionally, select which language to search.

If no language is selected, Salesforce Knowledge returns those articles in your knowledge base's default language that are related to your keyword search.

4. Optionally, select the publish status type to search.

- Online (default if no publish status is selected)
- Draft
- Draft translations (if your knowledge base supports multiple languages)

5. Enter article keywords into the search bar.

6. Click the search icon at the end of the search bar.

The top 20 related articles display.

7. Select the article to reference in a smart link from the article list.

 **Important:** Smart links are based on the channels they are in. Therefore, you can't add a smart link to an article in another channel. For example, an article on your public knowledge base can't link to an article only published in your internal channel.

8. Optionally, click **Go to Article** to view the article in another window and ensure that it is the correct reference.

9. Optionally, click the Target tab and select where the referenced article displays.

- **Not Set:** Opens the linked article in the same frame as it was clicked.
- **Frame:** Opens the linked article in a designated frame.
- **New Window (_blank):** Opens the linked article in a new window or tab.
- **Topmost Window (_top):** Opens the linked article in the full body of the window.
- **Same Window (_self):** Opens the linked article in the same frame as it was clicked.
- **Parent Window (_parent):** Opens the linked article in the parent frame.

10. Click **OK**.

Smart Links to Salesforce Knowledge Articles with URLs

Smart linking from one Salesforce Knowledge article to another by manually entering the article URL in the rich text editor.

When creating or editing an article, you can manually create a smart link in a rich text area field.

1. Highlight the content or place your cursor where you'd like to place the link.
2.  Click the link icon,
3. Select Link Type **URL**.
4. Select Protocol **<other>**.
5. Enter the article URL as: `/articles/[language]/[articleType]/[URLName]`.
For example, for an English article in a multiple language knowledge base, of article type FAQ, with a URL Name of About-Passwords the article URL is: `/articles/en_US/FAQ/About-Passwords`. Add a language only if your Salesforce Knowledge base supports multiple languages.

 **Important:** Smart links are based on the channels they are in. Therefore, you can't add a smart link to an article in another channel. For example, an article on your public knowledge base can't link to an article only published in your internal channel.
6. Optionally, click the Target tab and select where the referenced article displays.
 - **Not Set:** Opens the linked article in the same frame as it was clicked.
 - **Frame:** Opens the linked article in a designated frame.
 - **New Window (_blank):** Opens the linked article in a new window or tab.
 - **Topmost Window (_top):** Opens the linked article in the full body of the window.
 - **Same Window (_self):** Opens the linked article in the same frame as it was clicked.
 - **Parent Window (_parent):** Opens the linked article in the parent frame.
7. Click **OK**.

EDITIONS

Available in: Salesforce Classic, Lightning Experience

Publish Articles and Translations

Publishing articles and translations makes them visible in all channels selected. If you publish an article that has translations, all translations of the article are published as well.

You can publish an article or translation from the Article Management tab or the article's or translation's detail page. To publish, you need the publish permission on an article's article type and the "Publish Articles" or "Publish Translated Articles" article action to publish an article or translation.

When publishing articles keep the following in mind.

- You can choose to publish directly or schedule publishing for a future date. Articles you scheduled for publication later continue to appear in the Draft Articles filter, now with the pending icon (🕒) next to the article title. To see the publication date, hover over the icon.
 -  **Tip:** To cancel a scheduled publication, click **Cancel Publication** on the article or translation detail or edit page.
- If your organization has implemented approval processes, you need the same permissions and actions to publish an article after it has been approved. Approval processes aren't available for translations.
- An article in an approval process might be sent to a queue to be published even if it is scheduled to publish immediately. This happens when the article is very large, there are many active languages, or there are many other articles to publish at that time. To mitigate performance issues, the article is sent to a queue until it can be published successfully, usually within minutes. Also, note that the `Last Modified By` field shows **Automated Process** as the last user to modify the article.
- If the draft being published is a working copy of a currently published article, it is published as a new version of the original.
- For articles and translations that have already been published, select the `Flag as new version` checkbox to make the new article icon (🚩) display next to your article in the selected channels. Readers from these channels can see that this article has been modified since the last time they've read it. This checkbox is not available when you publish an article for the first time, as the icon displays by default for new articles.
- If you assign an article that is scheduled for publication, you also cancel the scheduled publication.
- Scheduling a publication removes any assignment information. The user who scheduled the publication is assigned to the article.
- Conflicts might occur when different agents perform actions on the same articles simultaneously. Depending on who performs the action first, the articles will not be available for subsequent users though the articles still display momentarily in the articles list. Performing an action on these articles results in a conflict error.

EDITIONS

Available in: Salesforce Classic, Lightning Experience

Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Professional**, **Enterprise**, and **Unlimited** Editions.

- If you have the “Publish Articles” article action and an approval process is set up for an article, you see both **Publish...** and **Submit for Approval** buttons.

Translate Articles Within Salesforce Knowledge

If your organization translates Salesforce Knowledge articles internally, you can enter the translation from the translation detail page.

Depending on the status of your translation and [the article actions assigned to you](#), you can do the following from the translation detail page.

Action	Description	Article Status
Archive	Archiving removes published translations that are obsolete so they no longer display to agents and customers on your organization's Salesforce Knowledge channels.	To archive a translation, archive its master article.
Assign...	Assigning changes the owner of the translation.	Draft translations
Delete	Deleting a translation permanently removes it from the knowledge base.  Note: You can't undelete a draft translation.	Draft translations
Edit	Editing modifies the translation's content or properties.	Draft and published translations
Preview	Previewing shows how the translation appears to end users.  Note: Voting and Chatter information is not available when previewing a Knowledge article.	Draft and published translations
Publish...	Publishing translations makes them visible in all channels selected.	Draft translations

EDITIONS

Available in: Salesforce Classic, Lightning Experience

Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Professional**, **Enterprise**, and **Unlimited** Editions.

USER PERMISSIONS

To work with translated articles:

- “Manage Articles”

AND

“Create,” “Read,” “Edit,” or “Delete” on the article type (depending on the action)

1. Click the **Article Management** tab and select **Translations** in the View area.
2. Select **Draft Translations**.
 -  **Note:** You can also edit a published translation. It reverts to draft status until you republish it, although you can choose to keep the existing version published while you update it.
3. Optionally, change the **Assigned To** filter to view articles that are not assigned to you for translation. For example, you might want to view articles assigned to a translation queue.
4. Click **Edit** next to the article and language you want to translate.
5. Enter your translation.
6. Click **Save**.

SEE ALSO:

- [Salesforce Knowledge Documentation Overview](#)
- [Complete Guide to Salesforce Knowledge](#)

Archive Articles and Translations

Archiving removes published articles and translations that are obsolete so they no longer display to agents and customers on your organization's Salesforce Knowledge channels.

You can archive published articles and translations on the Article Management tab. You can choose to archive either real time (now) or schedule the archival.

Articles you're archiving now move directly to the Archived Articles view. Articles you scheduled for archiving later continue to display on the Published Articles view, now with the pending icon (🕒). Hover over the icon to see the archive date. On the archive date, the article automatically moves to the Archived Articles view.

-  **Note:**
 - Conflicts might occur when different agents perform actions on the same articles simultaneously. Depending on who performs the action first, the articles will not be available for subsequent users though the articles still display momentarily in the articles list. Performing an action on these articles results in a conflict error.
 - If you edit a published article that is scheduled for archiving, you also cancel the archiving.
 - If an article has a published translation with a draft version, on archive, the draft version is deleted. Published translations are archived along with the article.

 **Tip:** To cancel a scheduled archive, click **Cancel Archive** on the article detail page.

SEE ALSO:

- [Salesforce Knowledge Documentation Overview](#)
- [Complete Guide to Salesforce Knowledge](#)

EDITIONS

Available in: Salesforce Classic, Lightning Experience

Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Professional**, **Enterprise**, and **Unlimited** Editions.

Salesforce Knowledge Article Versions

Article versions allow you to save an older version of a published article and then see which version of the article is associated with a case. To save the previous version, select the `Flag as new version` checkbox when publishing a new version. The previously published version is saved and the new version is published with the next sequential version number as an identifier.

When an article is attached to a case and a new version of the article is published, the version attached to the case as being outdated. For example, if Version 2 is attached to a case and a third version is published, the article attached to the case becomes Version 2 (outdated). This notation ensures that there is a permanent record of which content was associated with the case.

When you click the version number in the Article View, and the Article or Translation Detail pages, you see the Version History list. In this list you can:

- View the list of archived versions.
- To view a version, click its title.
- Expand the version to view its field change history (if you have history tracking enabled for the article type and for fields).

By default, the system stores up to ten versions of an article, plus any versions that are attached to cases.

When several versions of an article exist, you can restore an older version and republish it. Click `Revert to Draft Version` to copy the archived version's content into a draft article, then republish it as a new version. You can also restore the older version of any associated translations at the same time.

 **Note:** When there is an existing draft for the article, the option to revert isn't available.

You can delete an older, outdated version of a published article by selecting `Delete This Version` from the article detail page. If you delete an article version associated to a case, it is no longer be attached to the case. Translated article versions depend on the master language article. If the master language version is deleted, the translated versions are also deleted.

Versions also appear in custom reports, allowing you to find and read the article version attached to a case.

EDITIONS

Available in: Salesforce Classic, Lightning Experience

Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Professional**, **Enterprise**, and **Unlimited** Editions.

Delete Articles and Translations

You can delete articles and translations on the Article Management tab or the detail page of the article or translation. Deleting permanently removes articles from the knowledge base. You can delete draft articles, draft translations of articles, or archived articles, but not published articles or translations.

Note:

- To delete published article and translations, first remove them from publication by choosing edit or archive.
- When a user without delete access cancels the editing on published article, the newly created article draft is not deleted automatically.

Deleting articles moves them to the Recycle Bin, where you can undelete them if you change your mind. If you delete an article with translations, the translations are also moved to the Recycle Bin. However, if you delete a single translation, you can't undelete it. Deleting an article or translation may fail if another user or the system simultaneously modifies it while the deletion is being processed. You receive an error message when this occurs.

Note:

- Conflicts might occur when different agents perform actions on the same articles simultaneously. Depending on who performs the action first, the articles will not be available for subsequent users though the articles still display momentarily in the articles list. Performing an action on these articles results in a conflict error.
- If you delete a draft article that is a working copy of a currently published article, the original published version is not affected but the draft version is permanently removed. It does not go to the Recycle Bin. You can edit the published version to work again on a draft copy.
- When a user without delete access cancels editing a published article, the newly created article draft is not deleted automatically.

EDITIONS

Available in: Salesforce Classic, Lightning Experience

Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Professional**, **Enterprise**, and **Unlimited** Editions.

Articles or Knowledge Tab

Find out which Salesforce Knowledge tab you are using and what you can do on each.

There are two tabs for searching Salesforce Knowledge articles: the [Knowledge](#) tab or the [Articles](#) tab. The one you use depends on when your organization started using Salesforce Knowledge or if it adopted the Knowledge tab.

The Knowledge tab

If the search bar is at the top of the main frame of the page you are using the Knowledge One on the Knowledge tab.

EDITIONS

Available in: Salesforce Classic, Lightning Experience

Salesforce Knowledge is available in **Performance** and **Developer** Editions and in **Unlimited** Edition with the Service Cloud.

Salesforce Knowledge is available for an additional cost in: **Professional**, **Enterprise**, and **Unlimited** Editions.

The Knowledge tab merges functionality of the old Articles tab and the Article Management tab and uses federated search to search all your resources at once. On the Knowledge tab, you can:

- [Search](#) all your Salesforce Knowledge articles and any of your external data sources, such as Microsoft® SharePoint®.
- [Filter](#) articles by language and data categories.
- Sort articles by published date, rating, most viewed, and title.
- Use the **Create Article** drop-down to select an article type and [create an article](#).
- Use the drop-down by each article to follow or unfollow, [edit](#), [publish](#), and [delete](#) an article, depending on your permissions.

 **Note:** For information on article permissions see [Knowledge Article Access](#) on page 2955.

Also, when you use case feed, the Knowledge tab layout is applied to the article sidebar.

 **Note:** Community members without the Knowledge One permission cannot access Knowledge through Communities. They also can't access Knowledge in communities via the Salesforce1 mobile browser and downloadable apps.

To switch to the Knowledge One and the Knowledge tab, have your administrator add the `Knowledge One` permission to your [profile](#) or [permission set](#).

The Articles tab

If the search bar is in the left-side panel of the page you are using the Articles tab.

The Articles tab presents a list of your Salesforce Knowledge published articles. On the Articles tab, you can:

- Search for published articles
- View published articles
- [Create an article](#)
- Customize how the article information is displayed

SEE ALSO:

- [Salesforce Knowledge Documentation Overview](#)
- [Complete Guide to Salesforce Knowledge](#)

Solutions

Solutions Overview

A solution is a detailed description of a customer issue and the resolution of that issue. Solution managers, administrators, and users with the appropriate permissions can create, review, and categorize solutions. They can also publish solutions to the Self-Service portal and make solutions public.

The Solutions tab displays a home page that lets you quickly locate and manage solutions. If your organization uses solution categories, you can browse for and find solutions by category. You can also sort and filter solutions using standard and custom list views.

Administrators, and users with the “Import Solutions” permission, can import solutions.

-  **Note:** By default, solutions are created and displayed in text format. Administrators can enable HTML solutions so that all solutions are displayed in HTML format and created using an HTML editor.

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Searching for Solutions

You can find solutions by:

- Searching from the Cases Tab
- Searching from the Solutions Tab
- Browsing for Solutions
- Searching Using Global Search
- Create a Custom List View in Salesforce Classic

When you search for solutions, all standard text fields on solutions are searched, as well as the following custom field types:

- Auto-number
- Text
- Text area
- Long text area
- Email
- Phone
- Any field set as an external ID

Be aware of these behaviors in solution searches:

- Solution Search returns solutions that include all or any of your keywords. For example, searching for *data loader* may return results with just *data*, just *loader*, or both keywords in any order. Items that include more of your keywords are listed higher in results, and items that contain your keywords as a phrase or near each other are also listed higher.
- Solution Search can stem—or find variants of your search terms. For example, searching for *creating* finds solutions containing *create*, *created*, and *creating*.

 **Note:** This behavior applies only to the type of word you search for: a search for a noun matches variants of the noun form, a search for a verb matches variants of the verb form, and so on.

- You can use search wildcards and operators to improve your Solution Search results.
- If any search terms match words in a solution title, the solution is boosted in the search results.
- The numbers displayed in parentheses and brackets alongside search results indicate the number of matching solutions found. For example, if you search for *Truck* and *Truck (35)* displays, then your organization has 35 solutions with the term *Truck*.

Searching from the Cases Tab

1. On a case detail page in the Solutions related list, enter keywords related to a possible solution in the search box. You can use search wildcards and operators in your query.
2. If your organization uses categories, select a category in which to search.
3. Click **Find Solution**. The search returns a list of relevant solutions.
 - Click column headings to sort the results in ascending or descending order.
 - Sorting applies across all search results for a particular object, including those on subsequent pages.
 - You can't click on column headings for multi-select picklist fields because you can't sort the multi-select picklist field type.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To view solutions:

- "Read" on solutions

- If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently.
 - If solution summaries and inline category breadcrumbs are enabled for your organization, search results display up to 150 characters of the solution details and up to 150 characters of the category trail to which the solution belongs.
 - Note that if HTML Solutions is enabled, all tags and images are removed from solution details.
 - If [suggested solutions](#) is enabled, click **View Suggested Solutions** to view relevant solutions using a formula that automatically scores the relevancy of each solution to the particular case via word frequency, word proximity, case similarity, and related solutions.
4. If search results filters are enabled for your organization, you can filter the search results. Click the **Show Filters** link in the appropriate results related list, enter the filter criteria, and click **Apply Filters**.

Searching from the Solutions Tab

1. On the Solutions tab, enter keywords related to a possible solution in the search box at the top of the page. You can use search wildcards and operators in your query.
2. If your organization uses categories, select a category in which to search.
3. Click **Find Solution**. The search returns a list of matching records.

Click column headings to sort the results in ascending or descending order.

 **Note:** Sorting applies across all search results for a particular object, including those on subsequent pages. You can't click on column headings for multi-select picklist fields because you can't sort the multi-select picklist field type.

If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently. If solution summaries and inline category breadcrumbs are enabled for your organization, search results display up to 150 characters of the solution details and up to 150 characters of the category trail to which the solution belongs. Note that if HTML Solutions is enabled, all tags and images are removed from solution details.

4. If search results filters are enabled for your organization, you can filter the search results. Click the **Show Filters** link in the appropriate results related list, enter the filter criteria, and click **Apply Filters**.
5. From the list, select a record to jump directly to that record. If you do not find a matching record, browse for a relevant solution using categories.

The fields you see in search results are determined by the search layout defined by your administrator and by your field-level security settings (available in Professional, Enterprise, Unlimited, Performance, and Developer Editions only).

Browsing for Solutions

1. In the Browse Solutions section of the Solutions tab, click a solution category to view a list of solutions in that category and its subcategories.
2. Optionally, use the drop-down list to sort the solutions by category, most commonly used, or recently updated.
3. Select a record from the results to jump directly to that record.

Searching Using Global Search

1. Enter your search terms in the header search box.

You can use search wildcards and operators in your query.

2. Select **Search Options...** from the drop-down and select `Solutions` to narrow your search results.
3. Click **Search**.

Displaying and Selecting Solutions

USER PERMISSIONS

To view solutions:	"Read" on solutions
To attach a solution to a case:	"Read" on solutions and cases AND "Edit" on cases
To change unpublished solutions:	"Edit" on solutions
To delete unpublished solutions:	"Delete" on solutions
To change published solutions:	"Manage Published Solutions"
To delete published solutions:	"Manage Published Solutions"

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Displaying Solutions

When you have located a solution, either by searching from a case or from the solutions home or list pages, click the solution title to display detailed information. If hover details are enabled, hover over any lookup field on the detail page to view key information about a record before clicking into that record's detail page.

Viewing Solution Updates and Comments (Chatter)

Display a Chatter feed of updates, comments, and posts about the solution.

Selecting Solutions

To attach the solution to your case, click **Select** from the solution detail page or the search results list. The solution is automatically added to the case. The **Select** option is available only if you searched for a solution from within a case, or you searched for solutions to add to your Self-Service portal Home page.

Editing and Deleting Unpublished Solutions

Users with the "Edit" permission on solutions can update unpublished solutions by clicking **Edit**, changing the necessary fields, and then clicking **Save**. To delete an unpublished solution, a user with the "Delete" permission on solutions can click the **Delete** button.

 **Note:** If HTML Solutions is enabled for your organization, and you open a text solution with the HTML editor and save it, the solution will become an HTML solution.

Editing and Deleting Published Solutions

The ability to edit and delete published solutions is restricted to users who have the "Managed Published Solutions" permission, such as solution managers and administrators.

 **Note:** Translated solutions inherit the record type of the master solution from which they are translated. You cannot change the record type of translated solutions.

Solution Related Lists

Below the solution details is information related to the solution, including a history of changes to the solution, open and closed activities, attachments, related cases, translated solutions, and the categories to which the solution belongs. The related lists you see are determined by your personal customization, and by any customization your administrator has made to page layouts or your permissions to view related data.

 **Note:** The size limit for a file attached to a solution is 5 MB. You cannot upload solution attachments with the following file extensions: htm, html, htt, htx, mhtm, mhtml, shtm, shtml, acgi.

Hover over the links at the top of a detail page to display the corresponding related list and its records. If Chatter is enabled, hover links display below the feed. An interactive overlay allows you to quickly view and manage the related list items. Click a hover link to jump to the content of the related list. If hover links are not enabled, contact your Salesforce administrator.

Printing Solutions

To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.

 **Note:** If HTML solutions is enabled for your organization, any HTML formatting applied in your solution details will appear in the Printable View.

To return to the last list page you viewed, click **Back to list** at the top of the solution detail page. If your organization has enabled collapsible page sections, use the arrow icons next to the section headings to expand or collapse each section on the detail page.

SEE ALSO:

[Solution History](#)

[Solution Fields](#)

[Creating Solutions](#)

[Categorizing Solutions](#)

Viewing Solution Lists

The Solutions list page displays a list of solutions in your current view. To show a filtered list of items, select a predefined list from the `view` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `view` drop-down list and click **Edit**.

- Click a solution title to view the detail. Click **Edit** or **Del** to [change the solution or move it to the Recycle Bin](#).
- If Chatter is enabled, click **+** or **x** to follow or stop following a solution in your Chatter feed.
- Click **New Solution** or select **Solution** from the Create New drop-down list in the sidebar to [create a solution](#).

SEE ALSO:

[Solutions Overview](#)

Creating Solutions

You can create a solution in the following ways:

- Create a solution from the sidebar or Solutions tab:
 1. Select **Solution** from the Create New drop-down list in the sidebar, or click **New** next to **Recent Solutions** on the solutions home page.

If multilingual solutions is enabled for your org, you can create a translated solution by clicking **New** on the Translated Solutions related list of the master solution. Translated solutions inherit the record type of the master solution from which they are translated. You cannot change the record type of translated solutions.

2. If multilingual solutions is enabled for your org, select the language for the solution from the `Language` picklist.

The languages available are the languages supported by Salesforce. The `Language` picklist excludes languages already used in the master solution or in other translated solutions associated with the master solution.

3. Enter the solution title, details, and any other information.

Tip: In solution searches, if any search terms match words in a solution title, the solution is boosted in the search results. Thus, it's a good idea to write a solution title with relevant words that users are likely to use in searches.

If HTML Solutions is enabled for your org, you can enter solution details in an HTML editor. The HTML editor allows you to use a toolbar to insert images and format the text and paragraphs in your solution.

4. Click **Save**.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To view solution lists:

- "Read" on solutions

To create solutions:

- "Create" on solutions

To change solutions:

- "Edit" on solutions

To delete solutions:

- "Delete" on solutions

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To create solutions:

- "Create" on solutions

 **Note:** Images in HTML solution details don't show up in list views and reports.

- Create a new solution while closing a case:
 1. Choose **Close Case** on a case detail page, or click **Save & Close** while editing a case.
 2. Enter the title and details under **Solution Information**, and check `Submit to knowledge base` to submit the solution for review by your solution managers.
 3. Click **Save**.

Tips on Writing Solutions

To assist users in solving their cases, it is important to write good solutions. Review the guidelines below, and also see the [Tips & Hints for Solutions](#) document.

Reusable

- Include all facts and symptoms of the problem.
- Include any necessary analysis or troubleshooting ideas.
- Include a concise, accurate description of the cause and resolution of the problem.
- Include only one cause and one resolution per solution. If there are a number of steps to the resolution, number each step and put it on a separate line.
- Make sure the text is clear and in the language of the intended audience—both customer support users and your customers.
- Make sure the title properly describes the problem or question.
- Associate as many relevant solutions to a particular case as possible to increase the usefulness of the suggested solutions feature. Suggested solutions are found using a formula that automatically scores the relevancy of each solution to a particular case via the number of times the solution is related to similar cases.

 **Note:** Use a consistent format to ensure that all solutions are reusable. You can determine the best format for your organization, but make sure each solution contains a title, the symptoms of the problem, the cause of the problem, and the resolution to the problem.

Findable

- Make sure the solution can be found by multiple troubleshooting paths and by different people who will describe problems in different ways.
- Make sure the solution is unique and can exist as a discrete piece of knowledge.
- Make sure the solution is meaningful to your organization and is worth sharing with your customers.
- Make sure the solution includes words that customers use so that when they log their own cases via the Self-Service Portal or the Customer Portal, the suggested solutions feature can return useful results based on word frequency. For example, if customers use the word “hub” for “router,” include “hub” in the solution to increase the likelihood of it being returned in the results of suggested solutions.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Technically Accurate

- Make sure the solution is accurate and up-to-date.
- Make sure the level of technical detail is appropriate for the intended audience.

Sample Solution

This example provides a clear solution to a specific problem.

How do I change an account's billing information?

Problem—Users aren't sure how to change an account's billing information, such as the credit card number or payment type.

Solution—Change billing information in the active contract on the account.

1. Open an account by clicking its name on the Accounts home page or an Accounts related list.
2. Scroll to the Contracts related list and click Edit next to the active contract on the account.
3. Enter the correct billing information.
4. Click Save.

SEE ALSO:

[Creating Solutions](#)

Reviewing Solutions

Solution managers, administrators, and users with the “Edit” permission on solutions can review existing solutions. Solution managers, administrators, and users with the “Manage Published Solutions” can publish solutions.

1. Click **Edit** on the solution detail page.
2. Edit the necessary information, and change the `Status` to Reviewed.
3. Check `Visible in Self-Service Portal` to make the solution available in your organization's customer Self-Service portal and Salesforce Customer Portal.

 **Note:** The `Status` picklist field on a solution does not need to be set to Reviewed for a solution to be visible in the Customer Portal; a solution is visible in the Customer Portal if the `Visible in Self-Service Portal` checkbox is selected on a solution.

4. Optionally, check `Visible in Public Knowledge Base` to also make the solution available to users accessing public solutions.

This field only applies to solutions, not articles in the [public knowledge base](#).

5. Click **Save**.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer Editions**

USER PERMISSIONS

To review solutions:

- “Edit” on solutions

To publish solutions:

- “Manage Published Solutions”

For organizations with multilingual solutions, if you modify a master solution that has translated solutions, the Translated Solutions Status page displays. From there, you can adjust the statuses of translated solutions and notify users to update those translations.

SEE ALSO:

- [Solution Fields](#)
- [Creating Solutions](#)
- [Categorizing Solutions](#)

Deleting Solutions

To delete a solution, click **Del** next to the solution on the solutions list page, or click **Delete** on the solutions detail page. The **Del** link is displayed only for solution managers, administrators, and users with the “Manage Published Solutions” or “Delete” permission on solutions.

When you delete a solution, all related history and attachments are also deleted. The solution is moved to the Recycle Bin. Associated cases are not deleted with the solution, but the case associations are removed and are not restored if you later undelete the solution.

For organizations with multilingual solutions enabled:

- Deleting a master solution does not delete the translated solutions associated with it. Instead, each translated solution becomes a master solution.
- Deleting a translated solution removes the association with its master solution.
- Undeleting a master or translated solution from the Recycle Bin does not restore its associations with other master or translated solutions. You can manually restore the associations by modifying the `Master Solution` lookup field on the edit page of translated solutions.
- After deleting a translated solution, you can create a new translated solution in the same language. However, you will not be able to undelete the original translated solution from the Recycle Bin until you delete the second translated solution.

SEE ALSO:

- [Solutions Overview](#)

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

USER PERMISSIONS

To delete unpublished solutions:

- “Delete” on solutions

To delete published solutions:

- “Manage Published Solutions”

Categorizing Solutions

Use solution categories to group similar solutions together. Each solution can belong to more than one category. Once your solutions are categorized, you can browse for and find solutions by category from the Solutions tab or when solving a case. Customers can also browse published solutions by category in public solutions, the Self-Service portal, and the Customer Portal.

Administrators, and users with the “Manage Categories” permission, can categorize solutions prior to enabling solution categories for the entire organization. Once solution category browsing is enabled, all users with the appropriate permissions can categorize solutions.

If multilingual solutions is enabled for your organization, translated solutions inherit solution categories from their master solutions. The categories on a translated solution are synchronized with the categories on the master solution. To modify a translated solution's categories, you have to modify the categories of its master solution.

1. View the solution you want to categorize.
2. Click **Select Categories** in the Solution Categories related list.
This related list is not visible unless your administrator has defined and enabled categories.
3. In the solution category hierarchy, click **Select** to add a category to the solution. Repeat until you have added all applicable categories.
We recommend that you limit the number of categories to which a solution belongs. If you put solutions into only the most relevant categories, they will be easier for users and customers to find.
If necessary, click **Deselect** to remove a category from the solution.
4. Click **Save**.

To later remove a category from a solution, click **Del** in the Solution Categories related list on the solution detail page.

 **Note:** You can create a custom report on solution categories. However, solution category information is not available in list views.

- “Edit” on solutions

Setting Multilingual Solution Statuses

After you modify a master solution, you can adjust the statuses of each translated solution associated with it and notify users to update those translations, if necessary:

1. Choose a status for the translated solution from the `STATUS` picklist. For example, Draft, Reviewed, or Duplicate. The picklist values available for you to choose from are set by your administrator.
2. Select the `Out of Date` checkbox to indicate that the master solution has been updated and that the translated solution may need translating. The translated solution will be marked `Out of Date` on the Translated Solution related list of the master solution.
3. Select the `Send Notification` checkbox if you want the last active user who created or modified the solution to receive an email notifying them that the master solution has been updated and that the translated solution may need translating.

The user displayed in the `Notification Recipient` column will receive the email. Email notices are system-generated and cannot be modified. The email notification is in the language of the notification recipient.

4. Click **Save**.

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Solution Fields

A solution has the following fields, listed in alphabetical order.

Field	Description
Created By	User who created the solution including creation date and time. (Read only)
Language	The language in which a solution is written. Available for organizations with multilingual solutions enabled.
Master Solution	The solution with which a translated solution is associated and from which its title and details are derived. Available for organizations with multilingual solutions enabled.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Field	Description
Master Solution Details	Detailed description of the master solution from which a translated solution's details are derived. (Read only) Available for organizations with multilingual solutions enabled.
Master Solution Title	Title of the master solution from which a translated solution's title is derived. (Read only) Available for organizations with multilingual solutions enabled.
Modified By	User who last changed the solution fields, including modification date and time. This does not track changes made to any of the related list items on the solution. (Read only)
Open Case Detail	Link to printable view of the case that was used to create the solution. Displays only if the solution was created when the case was closed. Displays only when editing a solution. (Read only)
Out of Date	Checkbox that indicates that a translated solution's title and details may need translating to match the title and details of the master solution with which it is associated. Available for organizations with multilingual solutions enabled.
Public	 Note: Before Spring '14, this field was called <code>visible</code> in Self-Service Portal. Indicates the solution is available in the Self-Service Portal and Customer Portal. If Communities is enabled in your organization, this field specifies whether a solution is visible to external users in communities.
Solution Details	Detailed description of the solution. Up to 32 KB of data are allowed. Solution details are either displayed in text or HTML, depending on how your organization is set up. When the HTML solution detail is displayed in list views and search results, only the first 255 characters are displayed. This number includes HTML tags and images that are removed.
Solution Number	Automatically generated identifying number. (Read only) Administrators can modify the format and numbering for this field.
Solution Title	Title of the solution describing the customer's problem or question.
Status	Status of the solution, for example, Draft, Reviewed. Entry is selected from a picklist of available values, which are set by an administrator. Each picklist value can have up to 40 characters.
Visible in Public Knowledge Base	Indicates the solution is a public solution. This field only applies to solutions, not articles in the public knowledge base .

Field	Description
Custom Links	Listing of custom links for solutions set up by your administrator.

[What is a solution manager?](#)

[Why are solutions used?](#)

[What is the difference between a solution and a FAQ?](#)

[How can I write good solutions?](#)

[What should I look for when I review solutions?](#)

[What are the Visible in Self-Service Portal and Visible in Public Knowledge Base checkboxes on a solution?](#)

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

What is a solution manager?

A solution manager can edit, delete, and make solutions visible in the Self-Service Portal and Customer Portal and visible in public solutions. Typically, these individuals are product experts with excellent written communication skills and advanced knowledge in a particular area of your product. To designate one or more users as solution managers, your administrator can assign those users to the Solution Manager profile when creating or editing the users' personal information.

SEE ALSO:

[Solutions FAQ](#)

Why are solutions used?

Solutions provide a quick means to identify and resolve a customer issue. By capturing customer issues and structuring findable, reusable solutions, your customer support team can leverage existing knowledge to provide answers to issues that have been solved previously, increasing customer satisfaction and your team's productivity.

SEE ALSO:

[Solutions FAQ](#)

What is the difference between a solution and a FAQ?

A FAQ serves mostly as a useful tip for how the product or service is supposed to work. Solutions answer customer questions when the product or service is not working as expected. Because customers' expectations may not always be accurate, a solution may describe

how the product or service is supposed to work (very similar to a FAQ), help troubleshoot a problem, or provide a work-around to a bug or product limitation.

SEE ALSO:

[Solutions FAQ](#)

How can I write good solutions?

A good solution is reusable, easy to find, and technically accurate. For more information, download [Tips & Hints for Solutions](#).

SEE ALSO:

[Solutions FAQ](#)

What should I look for when I review solutions?

Solution managers can use these guidelines when reviewing solutions:

1. **Structure:** The solution should include a clear title, the symptom(s), cause, and resolution.
2. **Language:** The solution should be clear and easy to read in the language of the customer.
3. **No Customer-Specific Information:** Solutions should never contain customer-specific information.
4. **Technically Accurate:** The solution should accurately and effectively solve the problem posed by the customer.
5. **Professional:** Check for spelling and correct sentence structure.
6. **Sensitivity:** The solution should not contain any confidential or proprietary information that you wouldn't want a competitor to read.

[Solutions FAQ](#)

What are the Visible in Self-Service Portal and Visible in Public Knowledge Base checkboxes on a solution?

The `Visible in Self-Service Portal` and `Visible in Public Knowledge Base` checkboxes, when selected, indicate that a solution is available for external use on your organization's Self-Service Portal and Customer Portal and public solutions. Solutions available for external use are regarded as published.

Visible in Public Knowledge Base only applies to solutions, not articles in the [public knowledge base](#).

Note: Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

[Solutions FAQ](#)

Agent Console

The Agent console in the console tab makes it easier to find related information with less switching between pages.

 **Note:** As of the Spring '15 release, Agent console is not available to new organizations.

The newer Salesforce console improves the Agent console by providing you with more options and more advanced technologies. See [Salesforce Console](#).

You can set up the Agent console to display the information most important to your work according to your business needs. Before setting up or using the Agent console, review [Agent console terminology](#).

[Tip Sheet: Using the Console](#)

EDITIONS

Agent console available in Salesforce Classic. Setup for Agent console available in Salesforce Classic and Lightning Experience.

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Agent Console Concepts

Review the following terminology used to describe the components of the Agent console:

Frames

Separate sections of the console, each displaying a different record, list view, or other page.

List View

The console's top frame, which is a list view of records based on specific criteria. The list views you can select to display in the Console tab are the same list views defined on the tabs of other objects. You cannot create a list view within the console.

Detail View

The Agent console's center frame, which is the detail page view of any record selected from any of the console's other frames. The detail view displays the same page layouts defined for the object's detail pages. When a record is displayed in the detail view, it is highlighted in the list view.

Mini View

The Agent console's right frame which displays the records associated with the record displayed in the detail view. The fields displayed in the mini view are defined in the mini page layouts by an administrator. The mini view does not display if the record in the detail view does not have any records associated with it.

Sidebar

The Agent console's left frame, which displays recent items, the Recycle Bin, and other components, just like the sidebar displayed on every Salesforce page. To show or hide the sidebar in the console, click the border of the left frame.

Related Objects

Objects chosen by an administrator to display in the Agent console's mini view when records of a particular type are shown in the console's detail view. For example, when a case is in the detail view, an administrator can choose to display an associated account, contact, or asset in the mini view.

EDITIONS

Agent console available in Salesforce Classic. Setup for Agent console available in Salesforce Classic and Lightning Experience.

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Mini Page Layouts

A subset of the items in a record's existing page layout that administrators choose to display in the Agent console's Mini View and in Hover Details. Mini page layouts inherit record type and profile associations, related lists, fields, and field access settings from the page layout.

Console Layout

Objects chosen by an administrator to display in the list view frame of the Agent console. For example, if an administrator adds cases to a console layout, then users whose profiles are assigned to that console layout can see list views of cases in the console's list view frame.

[Agent Console](#)

[Displaying the Agent Console](#)

[Navigating within the Agent Console](#)

[Tip Sheet: Using the Console](#)

Navigating within the Agent Console

What you click in the Agent console determines which frame a record displays in.

In the detail view, clicking:

- Buttons or links on the record displays the record in the detail view.
- **Email this page** (✉) displays a link to the record in an email.
- **Link to this page** (🔗) displays the record and the URL of the record in a new browser window.
- **Printable View** (🖨) displays a printable view of the record in a popup window.
- **Customize Page** (🔧) allows you to customize the display of related lists in the detail view of the record.
- **Help for this page** (🔍) displays an online help page for the record.

In the mini view, clicking:

- **Links** displays the record in the detail view. Associated records display in the mini view.
- **View** displays the entire record in the detail view.
- **Edit** displays a mini edit page in the mini view.

To edit a field not displayed on the mini edit page, click **View** to display the entire record in the detail view, and then click **Edit** from the detail view.

- **Show more** below a related list displays more of the records included in the related list in the mini view. **Show more** displays an additional five records every time you click it, up to a maximum of 100.

Note: The mini view does not display if the record in the detail view does not have any records associated with it.

In the list view, clicking:

- A link displays the record in the detail view.
- **Refresh** reloads the list view with any updates that have occurred to the records since you began viewing the list.

EDITIONS

Agent console available in Salesforce Classic. Setup for Agent console available in Salesforce Classic and Lightning Experience.

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

- A column heading sorts that column in ascending order. Click the heading a second time to sort in descending order.
- A letter at the bottom of the list view filters your list view records by the letter.
- **fewer** or **more** at the bottom of the list view displays a shorter or longer list.
- **Previous Page** or **Next Page** at the bottom of the list view displays the previous or next page of items on the list.
- For more information, see [Using the Agent Console List View](#).

In the sidebar, clicking:

- The border of the left frame opens the sidebar in the console. Click the border of the left frame a second time to hide the sidebar.
- A record under **Recent Items** displays the record in the detail view.
- **Calendar** displays the calendar in the detail view.
- **Recycle Bin** displays the Recycle Bin in the detail view.

Tip: Clicking the back or forward buttons on your browser cycles you through pages in the console. You will not immediately exit the console by clicking them.

Note: Not all pages open within the console. For example, clicking **Printable View**, **Check Spelling**, **Help for this Page**, lookup icons, email addresses, and custom links set to open in a new browser window all open outside of the console in a new browser window or popup.

Drag-and-drop editing is not available for calendar views in the Agent console.

Using the Agent Console List View

The Agent console's list view allows you to quickly perform actions within Salesforce without leaving the console.

Display list views

From the drop-down list in the top left of the list view frame, select an object, and then a list view of the object to display in the console's list view frame. You cannot create a list view within the console.

Click **Refresh** to reload the list view with any updates that have occurred to the records since you began viewing the list. The refresh button automatically changes colors when record updates have occurred.

Records italicize in the list view when you edit them in the detail view. This shows you the records you have edited.

Search

Enter keywords in the search box above the list view and click **Go!** to use advanced search across all the searchable records you can access in your organization. Terms in an advanced search are treated as separate words rather than a phrase and can be found in different indexed fields within a record. So, searching for *Pat Powers* in advanced search will find a contact named "Pat P Powers," as well as a contact named "Pat Smith" with an email address of "smith@powers.com.". Search results display in the detail view.

Create records

From the New drop-down list, select any object to create a new record. New record pages display in the detail view.

View recent items

From the Recent Items drop-down list, you can choose to display any of the 10 records you most recently viewed. Recent items display in the detail view.

Perform mass actions

Select the checkbox next to items in the list view, and from the Mass Action drop-down list, choose the action you want to perform on all the selected records.

If you perform a mass action on more than 200 records while using Internet Explorer, you might be automatically logged out of Salesforce.

 **Note:** No data displays in the console if the selected list view does not contain any records.

Agent Console FAQ

- [How is the Console tab different from other tabs in Salesforce?](#)
- [How do I view the Agent console?](#)
- [Why do I only see the list views of certain objects in the Agent Console?](#)
- [Can I view more than one Agent console?](#)
- [Is the Agent console the same thing as the Salesforce console?](#)

How is the Console tab different from other tabs in Salesforce?

The Console tab is just like other tabs in Salesforce except that the console can display records from several different Salesforce tabs all on one Console tab. This specialized display is called the Agent console, and it allows you to have all the information you need on one tab when interacting with Salesforce. By using the Agent console in the Console tab, you can quickly find, view, and edit records, such as cases, accounts, and contacts, with fewer clicks and without switching back and forth between screens.

SEE ALSO:

[Agent Console FAQ](#)

How do I view the Agent console?

You can view the Agent console by clicking the Console tab. You can only access the Agent console if your administrator has assigned your user profile to a console layout and granted you access to the Console tab. You can customize your display to make the Console tab visible in your tab sets.

SEE ALSO:

[Agent Console FAQ](#)

Why do I only see the list views of certain objects in the Agent Console?

The list views of objects you can display in the Agent console are defined by your administrator in the console layout assigned to your user profile.

SEE ALSO:

[Agent Console FAQ](#)

EDITIONS

Agent console available in Salesforce Classic. Setup for Agent console available in Salesforce Classic and Lightning Experience.

Available in: **Professional**, **Enterprise**, **Performance**, **Unlimited**, and **Developer Editions**

Can I view more than one Agent console?

No. You can only view one Agent console. However, your administrator can customize many different Agent console layouts to display a variety of objects in the Agent console's list view, and then assign those console layouts to different user profiles to satisfy business needs for different users.

SEE ALSO:

[Agent Console FAQ](#)

Is the Agent console the same thing as the Salesforce console?

No. The Salesforce console improves on the Agent console by providing you with more advanced options and technologies.

[Agent Console FAQ](#)

Using Social Customer Service

Social Action Tips

Use the social action on the case or lead feed to respond to social posts. Choose an appropriate message type when composing a response. For example, you can choose to reply with a direct message on Twitter rather than a public tweet.

We recommend that the layout of the social action includes the following fields, at minimum.

Field	Description
In Reply To	The social post you are replying to and its content. Use the Reply, Retweet, and Comment links in the feed to add content to a specific item in the feed.
Managed Social Account	You must have access to the managed social account by a profile or permission set. Use the drop-down to change to another account you have access to.
Message Type	By default the message type is set to Reply for inbound posts. Use the drop-down to change to another valid message type.
Content	All outbound content must be unique for the interaction, you can't send the same content in the same conversation. All Twitter replies must start with a handle: @[social handle].

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Social Customer Service is available in API enabled **Professional** editions, **Enterprise**, **Performance**, and **Unlimited** editions.

USER PERMISSIONS

To send and receive social media posts or messages:

- "Social Objects"
- AND
- "Social Publisher"
- AND
- Case Feed enabled
- AND
- Social account

 **Note:** The Social Customer Service setup pages, the moderation and authorization pages, and the Reply action in the case feed are only available in Salesforce Classic.

If your posts require approval before they are sent, you can click **Submit for Approval** to start the review process. You can **Recall** it before it is approved or rejected. If a post is rejected, you can **Retry** a rewritten post. When your post is approved, it is automatically published.

Here are some tips for working with social networks.

- You can like, unlike, view source, and delete social media from the case feed while in Lightning Experience. However, you must reply to posts in Salesforce Classic.
- URLs in a social post are turned into clickable links.
- When deleting posts, consider that Twitter Direct Messages behave like to emails. For example, the sender can delete their direct message from a conversation view. However, receiver has that direct message in their conversation view until they choose to delete it.
- Speaking of Twitter Direct Messages, Twitter has a preference to "Receive Direct Messages from Anyone". Therefore, depending on if this permission is set on the recipient's or your account, you may not have to follow each other to direct message.
- If your Twitter settings allow you to receive direct messages from anyone, you can send deep links to invite users to direct message conversations. To send a deep link direct message invitation, paste this link into your outbound message:

```
https://twitter.com/messages/compose?recipient_id={your Twitter account's numeric user ID}
```

You can find your twitter account's numeric ID on twitter.com by going to **Your Twitter User > Settings > Your Twitter Data**. Twitter handles the URLs and the rendering in their native clients.

- Agents can use the **View Source** link to go to the original post within its social network.
- In Salesforce1, agents can see and reply to social content from mobile devices.
- Only change the Status picklist field on social posts if you are working with outbound posts. If an agent manually sets the status on the inbound social post detail page, the social posts in the case feed may not match. We recommend removing the Status field on the inbound social post detail page layout. For example, if you change the Status of an inbound post to Sending, the Reply link in the case feed item disappears until you change the status back to None.

For Twitter accounts, agents can use case and lead feeds to see the content that they are responding to, retweet, mark as Like and follow tweets, send replies to tweets and direct messages, and delete tweets managed by your social accounts.

For Facebook accounts, cases and leads are created from your managed Facebook page and agents can use the feeds to see the content that they are replying to, like posts and comments, send posts, comments, replies, and private messages, and delete posts managed by your social accounts.

Here are tips for dealing with some possible error messages.

Message	Action
You can't send a direct message to this Twitter user because the user is not following you.	Use a reply to ask the Twitter user to follow your managed social account. Once they are following you, send them a direct message.
Whoops! You already said that... Change your message and try again.	You can't post the same text twice. Change your content and send again.
Your content is too long.	Reduce your content to 140 characters or less. For Twitter replies, the handle is included in the character count.

Message	Action
Twitter replies must begin with a handle.	The content field for a Twitter reply must be in the form: @[sender's handle] message text. Ensure that there is a space between the sender's handle and your message.
Your response message type must be compatible with the original post's message type.	Change the message type to match the original message.
Your login to Social Studio has failed. The username or password may be incorrect. Update your credentials or reset your password.	An administrator must edit the Social Studio credentials on the Social Media settings page.  Note: When an administrator makes a copy of or refreshes a Sandbox organization, a new organization is created, with a new ID, making the Social Studio login invalid.
Your post did not send.	We recommend creating a workflow to notify the case owner that an attempt to send a response via Twitter has failed.

Manage Social Posts

A social post is a Salesforce object that represents a post on a social network such as Facebook or Twitter.

 **Note:** The Social Customer Service setup pages, the moderation and authorization pages, and the Reply action in the case feed are only available in Salesforce Classic.

The Social Posts tab or object is a collection of information about a post from a person or company on a social network, such as Twitter or Facebook. The available information for a post varies depending on the social network. You can view and manage social posts.

 **Note:** For inbound posts, setting a Status picklist value on the social post detail page does not stay with the post, as this field is for outbound posts only.

1. Click the **Social Posts** tab.
2. Optionally, select a view.
The list defaults to those recently viewed. Select a `View` or create one to filter the list of posts. If your organization has moderation enabled, select **Social posts without case** to view and either create a case for or ignore posts. You can also create a view to fit your needs.
3. Click the social post name you'd like to manage or click **New Social Post** to create a post.
If you selected a view, you can click **Edit** or **Del** (delete) as appropriate.

 **Note:** On the Social Post tab, you can only create, edit, and delete posts in your Salesforce organization, not on the social networks.

EDITIONS

Available in: Lightning Experience and Salesforce Classic

Social personas and posts are available in API enabled **Professional** editions, **Enterprise**, **Performance**, and **Unlimited** editions.

USER PERMISSIONS

To install and deploy Social Studio for Salesforce:

- "Customize Application"

4. To manage posts without cases, select the posts you'd like to either create a case for or ignore and click **Create Case** and **Ignore** as appropriate.

For example, an agent can ignore a Facebook post of "I love you guys!" as it does not warrant a case.

If you are using the Social Customer Service Starter Pack, you can enable case moderation on the Social Accounts tab in Setup, see [Set Up Social Customer Service](#) on page 3067. To enable moderation through Social Studio see, [Enable Moderation for Social Customer Service](#) on page 3071.

5. If you have [Approvals enabled](#), Social Posts tab has a `Social posts pending approval` list view that allows you to review multiple pending posts and approve or reject them as desired.

Note: Once approvals are enabled, the Approve Posts and Reject Posts buttons remain on the Social Posts tab. However they don't work for inbound and posts not needing approval.

Tip: If you approve a post from the Social posts pending approval list view and a system interruption, session timeout, or other unexpected issue prevents the post from being published on the intended social network, an error message displays on the individual case only, not on the list view. To help honor any commitments, your company may have regarding response times on social networks, after approving posts from the list view, we recommend checking the posts' statuses to ensure that they were sent successfully and don't need to be resent.

On the social post detail page you can:

- View, edit, and create the post's content and information.

Note: The information varies depending on the social network the persona is from.

Don't forget to click **Save** to save changes or create a post.

- If your organization has moderation enabled, you can create a case for a post or ignore it if it does not warrant a case.
- Delete the post in your Salesforce organization.

Note: Social posts are not deleted when their parent record, usually a case, is deleted. Similarly, if a social post is associated with an account, contact, or lead through the polymorphic Who field, deleting any of those related records does not affect the social post.

You can reply to a social post from the case or lead feeds only, not the Social Posts tab.

SEE ALSO:

[Manage Social Personas](#)

[Social Action Tips](#)

[Welcome to Social Customer Service](#)

[Complete Guide to Social Customer Service](#)

Manage Social Personas

A social persona is a Salesforce object that represents a contact's profile on a social network such as Facebook, or Twitter.

-  **Note:** The Social Customer Service setup pages, the moderation and authorization pages, and the Reply action in the case feed are only available in Salesforce Classic.

The Social Personas tab or object is a collection of publicly available information about a person or company from Twitter or Facebook. A Persona is relative to the social network and there can be multiple personas attached to a single contact. You can edit or delete a persona but you can't manually create a social persona from Salesforce. The personas are created from public information on social networking sites. You can view and manage your social persona records like other records in Salesforce.

-  **Note:** Social persona fields may have maximum character lengths set by standard or custom Salesforce limits. For example, the first name field is limited to 40 characters. If a social persona with a first name longer than 40 characters is created from an inbound social post, the first name is truncated at the 40th character.

1. Click the **Social Personas** tab.
2. Optionally, select a view.

The list defaults to those recently viewed. Select **All** in the **View** drop-down to show all social personas in your organization. You can also create a view to fit your needs.

3. Click the social handle you'd like to manage.
If you selected a view, click **Edit** or **Del** (delete) as appropriate.

-  **Warning:** If you delete a social persona through the Social Accounts and Contacts feature, all related social posts are also deleted.

On the social persona detail page you can:

- View and edit the contact's available information for that social network.
-  **Note:** The information varies depending on the social network the persona is from.
- Delete the social persona from your organization.
- Create, edit, and delete [social posts](#).
- View which social network created the persona, in the **Source App** field. This field is set on creation and is not updateable. Social Personas created prior to the Summer '15 release do not have this field.
-  **Warning:** There is no field level security and you can't control who can create, read, edit, or delete Social Personas. Anyone in your organization can see all the data on a Social Persona object.

SEE ALSO:

SET UP AND MAINTAIN CUSTOMER SUPPORT TOOLS

Welcome, Support Administrators

This documentation is for administrators who want to set up Salesforce customer service and support features, also known as the Service Cloud. It's organized by tasks so that you can quickly find information about setting up features that solve support issues for your company. For example, information about setting up self-service websites is located in a section named Creating Web and Social Channels, rather than a section that includes the feature names, Customer Portal or Chatter Answers. However, you can search this documentation by keywords to find a feature name or support solution. Note that this documentation doesn't include many feature-specific concepts or overviews. For those, please refer to the documentation, *Support Your Customers*.

Together, *Set Up and Maintain Customer Support Tools* and *Support Your Customers* contain the information you need to set up and deliver customer service with Salesforce.

Setting Up Customer Channels

Creating Email Channels

Email-to-Case

Automatically turn emails from your customers into cases in Salesforce to track and resolve customer cases quickly.

There are two versions of Email-to-Case:

- Email-to-Case, which uses an agent on your machine
- On-Demand Email-to-Case, which uses Salesforce Apex email services

Each version supports a different business case.

Details	Email-to-Case	On-Demand Email-to-Case
Business case:	Keep email traffic <i>inside</i> your network's firewall and accept emails larger than 25 MB	Keep email traffic <i>outside</i> your network's firewall and refuse emails larger than 25 MB
Set up:	Requires you to download and install the Email-to-Case agent on your local machine to turn emails into cases	Requires you to set up Salesforce Apex email services to turn emails into cases
Maximum number of emails converted to cases each day:	2,500	Number of user licenses multiplied by 1,000, up to a daily maximum of 1,000,000

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Email-to-Case and On-Demand Email-to-Case are available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions.

Details	Email-to-Case	On-Demand Email-to-Case
Email size limit, including header, message, and attachments:	Over 25 MB	Under 25 MB

SEE ALSO:

[Set Up Email-to-Case](#)

[Set Up On-Demand Email-to-Case](#)

Set Up Email-to-Case

Email-to-Case helps your company efficiently resolve and correspond with customer inquiries via email. Salesforce automatically creates cases and auto-populates case fields when customers send messages to the email addresses you specify.

Email-to-Case requires [downloading the Email-to-Case agent](#). The Email-to-Case agent software allows you to keep all email traffic within your network's firewall and to accept emails larger than 25 MB from customers.

1. Download the [Email-to-Case agent](#).
2. [Install the agent](#) behind your network's firewall.
3. [Enable Email-to-Case and configure your Email-to-Case settings](#).
4. [Configure your routing address settings](#) to customize the way Salesforce handles your customer emails.
5. Test your email routing addresses by manually sending emails to them and verify that these emails convert to cases based on their routing address settings.
6. Add the email address that you configured to your company's support website. Customers can use this email address to submit cases to your support team.
7. Add the Emails related list to the Cases page layout.
8. Optionally, create email templates agents can use when replying to email. These templates can include merge fields that display information from the original email in the reply.

USER PERMISSIONS

To set up Email-to-Case:

- "Customize Application"

To enable Email-to-Case:

- "Modify All Data"

AND

"Customize Application"

Enable and Configure Email-to-Case

Get your company ready to automatically turn incoming email messages into cases by enabling Email-to-Case and choosing the settings that fit your needs.

 **Note:** Before you can enable and configure Email-to-Case, [download and install the Email-to-Case agent](#) onto your local machine. If you're using On-Demand Email-to-Case, then it's not necessary to download and install the Email-to-Case agent.

1. From Setup, enter *Email-to-Case* in the **Quick Find** box, then select **Email-to-Case**.
2. Click **Edit**.
3. Select **Enable Email-to-Case**.
4. [Configure your Email-to-Case settings](#).
5. Click **Save**.

SEE ALSO:

[Email-to-Case](#)

[Email-to-Case Settings](#)

[Configure Routing Addresses for Email-to-Case and On-Demand Email-to-Case](#)

Email-to-Case Settings

Configure your Email-to-Case settings to customize the way Salesforce handles and creates cases from incoming emails.

To access these settings, from Setup, enter *Email-to-Case* in the **Quick Find** box, then select **Email-to-Case**.

Email-to-Case Setting	Description
Enable Email-to-Case	Enables Salesforce to create cases from inbound emails.
Notify Case Owners on New Email	Allows case owners to automatically receive notifications of new emails for their existing cases. Email notifications assign a task to the case owner to respond to the new email. Responding to the email closes the task. To disable email notifications at any time, simply deselect the checkbox.
Enable HTML Email	Warns users before they view incoming HTML email content so that they can avoid opening potentially malicious HTML that could harm their computers. If this setting isn't selected, support agents see text instead of HTML in the email message detail pages. When agents reply to an email, the text version of the message is

EDITIONS

USER PERMISSIONS

To set up Email-to-Case:

- "Customize Application"

To enable Email-to-Case:

- "Modify All Data"

AND

"Customize Application"

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Email-to-Case Setting	Description
	copied to the email editor, instead of the HTML version.
Insert Thread ID in the Email Subject	Adds the thread ID to the subject of email. The thread ID is a unique number that identifies the organization and case associated with the outgoing email. It helps ensure that replies to the original email are associated with the correct case.
Insert Thread ID in the Email Body	Adds the thread ID to the body of email.
Place User Signatures before Email Threads	Adds the user signature after the reply, but before the email thread. If this setting isn't selected, the user signature is placed at the bottom of the email thread.

Use Unique Email Subject and Email Body IDs

Make sure the subject line and body of your outgoing emails are unique.

 **Warning:** If the `Email Subject ID` and `Email Body Text ID` are the same, Email-to-Case creates an infinite loop of emails related to each case. If these settings are not selected, Email-to-Case eventually could stop accepting new emails.

To exclude the thread ID from email, deselect both the `Insert Thread ID in the Email Subject` and `Insert Thread ID in the Email Body` checkboxes. A new case is created when a support agent responds to an outbound case email.

SEE ALSO:

[Email-to-Case](#)

Set Up On-Demand Email-to-Case

On-Demand Email-to-Case helps your company efficiently resolve customer inquiries via email. Salesforce automatically creates cases and auto-populates case fields when customers send messages to email addresses you specify. On-Demand Email-to-Case lets you process customer emails up to 25 MB.

Unlike Email-to-Case, you don't need to download and install an agent to use On-Demand Email-to-Case.

1. [Set the Default Case Owner and Automated Case Owner](#) for your organization.
2. [Enable and configure Email-to-Case](#).
3. [Enable and configure On-Demand Email-to-Case](#).
4. [Configure your routing address settings](#) to customize the way Salesforce handles your customer emails.
5. Test your email routing addresses by manually sending emails to them and verify that these emails convert to cases based on their routing address settings.
6. Add the email address that you configured to your company's support website. Customers can use this email address to submit cases to your support team.
7. Add the Emails related list to the Cases page layout.

EDITIONS

Available in: Salesforce Classic

On-Demand Email-to-Case is available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions.

USER PERMISSIONS

To set up On-Demand Email-to-Case:

- "Customize Application"

To enable On-Demand Email-to-Case:

- "Modify All Data"

- Optionally, create email templates agents can use when replying to email. These templates can include merge fields that display information from the original email in the reply.

 **Note:** On-Demand Email-to-Case automatically shortens email text to 32,000 characters. Contact Salesforce if you'd like this limit raised to 128,000 characters for your organization.

EDITIONS

Available in: Salesforce Classic

On-Demand Email-to-Case is available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions.

On-Demand Email-to-Case Setting**Description****Over Email Rate Limit Action**

Choose what On-Demand Email-to-Case does with email that surpasses your organization's daily email processing limit:

- Bounce message—The email service returns the message to the sender or to the `Automated Case User` for On-Demand Email-to-Case, with a notification that explains why the message was rejected.
- Discard message—The email service deletes the message without notifying the sender.
- Requeue message—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected.

Unauthorized Sender Action

If you limited the email addresses and domains available for On-Demand Email-to-Case in the `Accept Email From` field, choose what happens to messages received from senders who are blocked:

- Bounce message—The email service returns the message to the sender or to the `Automated Case User` for On-Demand Email-to-Case, with a notification that explains why the message was rejected.
- Discard message—The email service deletes the message without notifying the sender.

Make sure the subject line and body of your outgoing emails are unique.

Warning: If the `Email Subject ID` and `Email Body Text ID` are the same, Email-to-Case creates an infinite loop of emails related to each case. If these settings are not selected, Email-to-Case eventually could stop accepting new emails.

Routing Address Settings for Email-to-Case and On-Demand Email-to-Case

You can define your email routing address settings after you add and verify your email routing addresses for Email-to-Case and On-Demand Email-to-Case.

Setting	Description
Routing Name	The name for the routing address—for example, Gold Support or Standard Support.
Email Address	<p><i>Email-to-Case source only:</i> The inbound email address for this On-Demand Email-to-Case routing address. Emails sent to this address creates cases using the specified settings. The email address must be unique.</p> <p>Note that this is the email address to which you will provide a link on your company's support website.</p>
Save Email Headers	<p><i>Email-to-Case source only:</i> Select this checkbox to save the email routing information associated with each email submitted as a case. Saving email routing information counts towards your organization's overall storage limit.</p> <p>To view email headers from an email converted to a case, see Working with Case Emails on page 2271.</p>

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Email-to-Case and On-Demand Email-to-Case are available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions.

Setting	Description
Accept Email From	To limit the email addresses and domains available for On-Demand Email-to-Case, entering them in this field. Leave it blank to allow On-Demand Email-to-Case to receive email from any email address or domain.
Create Task from Email	<p><i>Email-to-Case source only:</i> Select this checkbox to automatically assign a task to the case owner when an email is submitted as a case.</p> <p>Assignment rules automatically assign owners to a case. However, if a case does not match assignment rule criteria, then the user in the <code>Default Case Owner</code> field on the Support Settings page is assigned to the case.</p>
Task Status	<p><i>Email-to-Case source only:</i> Choose a status from this drop-down list with which to predefine the <code>Status</code> field on tasks automatically assigned to case owners when email is submitted as cases.</p> <p>This setting is only available if you selected the <code>Create Task from Email</code> checkbox.</p>
Case Owner	<p>The owner of the case, which can be either an individual user or a queue.</p> <p> Note: You can't delete a queue that a routing address refers to. Either delete the routing address, or edit the routing address settings to point to a different queue.</p>
Case Priority	The priority assigned to cases created from emails sent to this email routing address.
Case Origin	The value assigned to the <code>Case Origin</code> field for email sent to this email routing address.

 **Note:** The `Priority` and `Case Origin` fields auto-populate the case via the routing address settings when the routing address is included in either the `To`, `CC`, or `BCC` fields of an inbound email.

Creating Web and Social Channels

Web Cases

Get Ready to Capture Cases with Web-to-Case

Gather customer support requests directly from your company's website and automatically generate up to 5,000 new cases a day with Web-to-Case. This can help your organization respond to customers faster, improving your support team's productivity.

Before you set up Web-to-Case:

- Create custom case fields, if needed.
- Create a default email template for the automated notification that will be sent to your customers when they submit a case.
- Create case queues if you wish to assign incoming cases to queues as well as to individual users.
- [Customize Support settings](#) on page 2723 to select the default owner of cases that don't meet the criteria in your assignment rule.
- Create an active case assignment rule to determine how web-generated cases are assigned to users or put into queues. If you do not set an active assignment rule, all web-generated cases are assigned to the default owner you specify in the Support Settings.

Next, you're ready to [set up Web-to-Case](#) on page 2431.

USER PERMISSIONS

To set up Web-to-Case:

- "Customize Application"

Set Up Web-to-Case

Gather customer support requests directly from your company's website and automatically generate up to 5,000 new cases a day with Web-to-Case. Setting up Web-to-Case involves enabling the feature, choosing settings, and adding the Web-to-Case form to your website.

 **Note:** Before you start, review [Get Ready to Capture Cases with Web-to-Case](#) and [Web-to-Case Notes and Limitations](#) for information on prerequisites and things to consider as you set up Web-to-Case.

1. From Setup, enter *Web-to-Case* in the **Quick Find** box, then select **Web-to-Case**.
2. Select **Enable Web-to-Case**.
3. Choose a default case origin.
4. Select a default response template for automatically notifying customers that their case was created.

If you set up response rules to use different email templates based on the information submitted, the default email template is used when no response rules apply. Leave this option blank if you do not wish to send emails when no response rules apply. This template must be marked as "Available for Use."

5. Select **Hide Record Information** to hide the record information in the email sent to customers if the case creation fails.
6. Enter an email signature if you'd like to use a different signature than the default.
7. Click **Save**.

After enabling and setting up Web-to-Case, generate the HTML code that your webmaster can put on your website so that customers can submit cases. To generate HTML code, see [Generate Web-to-Case HTML Code](#).

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To set up Web-to-Case:

- "Customize Application"

Generate Web-to-Case HTML Code

Generate HTML code that your webmaster can insert into your company's website to capture cases in a web form. Whenever someone submits information on any of those web pages, a case is created.

You must have Web-to-Case enabled.

1. From Setup, enter *Web-to-Case HTML Generator* in the **Quick Find** box, then select **Web-to-Case HTML Generator**.
2. Use the Add and Remove arrows to move fields between the Available Fields list and the Selected Fields list to select the fields to include on your Web-to-Case form. Use the Up and Down arrows to change the order of the fields on your form.

For organizations using multiple currencies, add the *Case Currency* field to the HTML if you add any other currency amount fields, otherwise all amounts will be captured in your corporate currency. For organizations using record types on cases, select the *Case Record Type* field if you want users submitting Web-generated cases to select specific record types.
3. If your organization uses the Self-Service portal or the Customer Portal and you want Web-generated cases to be visible to users in these portals, select *Visible in Self-Service Portal*.
4. Specify the complete URL to which customers should be directed after they submit their information. For example, the URL can be for a "thank you" page or your company's home page.
5. If your organization uses the Translation Workbench or has renamed tabs, select the language for the form labels displayed on your Web-to-Case form. The source of your Web-to-Case form is always in your personal language.
6. Click **Generate**.
7. Copy the generated HTML code and provide it to your company's webmaster so he or she can incorporate it into your website.
8. Click **Finished**.

 **Tip:** Use a custom multi-select picklist to allow customers to report cases on several products at a time.

If you want to test the Web-to-Case form, add the line `<input type="hidden" name="debug" value="1">` to the code. This line redirects you to a debugging page when you submit the form. Don't forget to remove it before releasing the Web-to-Case page to your website.

[Enable reCAPTCHA to Prevent Spam Cases](#)

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To set up Web-to-Case:

- "Customize Application"

Enable reCAPTCHA to Prevent Spam Cases

Enable reCAPTCHA in Web-to-Case to make it easy for customers to contact your company while making it difficult for spambots to waste service representatives' time.

Web-to-Case must be enabled to use reCAPTCHA for case submission.

The reCAPTCHA widget requires customers to select a checkbox successfully before they can create a case. Enabling spam filtering lets customer service agents focus on actual customer cases, and not on spam cases.

To use Google's reCAPTCHA service, go to the [Google reCAPTCHA website](#) and click **Get reCAPTCHA** to register your domain and receive a public and private key pair. Google reCAPTCHA is a resource leveraged by Salesforce to support its users and partners, and is not considered part of our Services for purposes of the salesforce.com Master Subscription Agreement.

1. From Setup, enter *Web-to-Case HTML Generator* in the Quick Find box, then select **Web-to-Case HTML Generator**.
2. Select **Enable Spam Filtering (Recommended)**.
3. Enter the key pair that you obtained from Google and registered on the Salesforce Platform. Use the lookup window to select a key that's already registered on the Salesforce Platform.
4. Ensure that the Enable Server Fallback setting is selected.
If the Google reCAPTCHA server fails or goes offline and spam filtering isn't available, this setting allows all case traffic through. This setting is enabled by default and we recommend that you use it. If this setting is disabled and the Google reCAPTCHA server fails or goes offline, then case traffic might be lost.
5. Click **Generate**.
Salesforce creates an HTML code that you can add to your website so that customers can create cases.
6. Add the HTML code to your website.

Web-to-Case Notes and Limitations

Learn more about how Web-to-Case works to be sure you set it up in the most effective way for your company.

Keep these considerations in mind as you decide how to set up Web-to-Case.

- Whenever possible, Web-generated cases are automatically linked to the relevant contact and account based on the customer's email address.
- Salesforce runs field validation rules before creating records submitted via Web-to-Case and only creates records that have valid values. All universally required fields must have a value before a record can be created via Web-to-Case.
- The format for date and currency fields captured online is taken from your organization's default settings - `Default Locale` and `Currency Locale`.
- Salesforce doesn't support rich text area (RTA) fields on Web-to-Case forms. If you use RTA fields on your forms, any information entered in them is saved as plain text when the case is created.

- [How can I be sure that cases won't be lost?](#)

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Group, Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

What is the maximum number of web cases we can capture?

In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, you can capture up to 5,000 cases in a 24-hour period. If your company generates more case requests than that, click **Help & Training** at the top of any page and select the My Cases tab to submit a request for a higher limit directly to Salesforce Customer Support.

When your organization reaches the 24-hour limit, Salesforce stores additional requests in a pending request queue that contains both Web-to-Case and Web-to-Lead requests. The requests are submitted when the limit refreshes. The pending request queue has a limit of 50,000 combined requests. If your organization reaches the pending request limit, additional requests are rejected and not queued. Your administrator receives email notifications for the first five rejected submissions. Contact Salesforce Customer Support to change your organization's pending request limit.

SEE ALSO:

[Web-to-Case FAQ](#)

Who owns new web-generated cases?

Your administrator can set an active case assignment rule to automatically assign web-generated cases to users or queues based on specific criteria in those cases. Cases that do not match any of the assignment rule criteria are assigned to the Default Case Owner specified in the Support Settings.

SEE ALSO:

[Web-to-Case FAQ](#)

How do I specify which information to capture?

When you generate the HTML for your company's website, you can choose which standard or custom case fields for which you want to gather information. You must create the custom case fields prior to generating the HTML code. From Setup, enter *Web-to-Case* in the `Quick Find` box, then select **Web-to-Case** to set up the feature and generate the HTML.

SEE ALSO:

[Web-to-Case FAQ](#)

Can I capture cases from multiple web pages?

Yes. Insert the generated HTML code into the web pages from which you want to capture cases. Whenever someone submits information on any of those web pages, a case will be created.

SEE ALSO:

[Web-to-Case FAQ](#)

How can our webmaster test the Web-to-Case page?

Add the following line to your Web-to-Case code if you want to see a debugging page when you submit the form. Don't forget to remove this line before releasing the Web-to-Case page on your website.

```
<input type="hidden" name="debug" value="1">
```

SEE ALSO:

[Web-to-Case FAQ](#)

What status and origin are assigned to Web-generated cases?

New Web cases are marked with the default status that your administrator selected from the `Case Status` picklist values. The default value for the `Origin` field is determined by your administrator when setting up Web-to-Case.

SEE ALSO:

[Web-to-Case FAQ](#)

How can I prevent spam from becoming cases?

You can limit spam through the following options:

- Create a black list rule to reject emails from specified IP addresses.
- Download spam filter apps from [AppExchange](#).

SEE ALSO:

[Email-to-Case FAQ](#)

How can I be sure that cases won't be lost?

If your organization exceeds its daily Web-to-Case limit, the Default Case Owner (specified in the Support Settings) will receive an email containing the additional case information. If a new case cannot be generated due to errors in your Web-to-Case setup, Customer Support is notified so that we can assist you in correcting it.

If your organization is using On-Demand Email-to-Case, Salesforce ensures that your cases won't be lost if users submit them during a scheduled Salesforce downtime.

SEE ALSO:

[Web-to-Case FAQ](#)

How is the "Age" calculated in case reports?

The Age of an open case is the time that has elapsed from its creation to the present. The Age of a closed case is the elapsed time from its creation to the time it was closed. Case reports display a drop-down list labeled "Units" that lets you choose to view the Age in days, hours, or minutes.

[Case Fields](#)

[Web-to-Case FAQ](#)

Customer Portals

Setting Up Your Customer Portal

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Whether you call it a portal, a help forum, a support site, or something else, an online community is a great place to connect with customers. Customer Communities have replaced Customer Portals and are where all the features and development are happening. If you don't have a Customer Portal license, Customer Communities are your option. If you do have a Customer Portal license, we still encourage you to check out Customer Communities to see what we've been up to and how it can benefit you.

A Salesforce Customer Portal provides an online support channel for your customers—allowing them to resolve their inquiries without contacting a customer service representative. With a Customer Portal, you can customize and deliver a visually stunning user interface to your customers, and use the following Salesforce features to help you and your customers succeed:

- Determine which pages and fields customers see with page layouts and field-level security
- Manage customers with profiles, permission sets, roles, and sharing rules
- Provide and organize documents via Salesforce CRM Content or the Documents tab
- Create a knowledge base for your customers using [Salesforce Knowledge](#)
- Allow customers to participate in [Ideas](#) communities.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To set up and update the Customer Portal:

- "Customize Application"

- Display and collect data that is unique to your organization with custom objects
- Display custom s-controls and content from other websites via Web tabs
- Provide customized reports via the Reports tab

 **Note:** High-volume portal users are available for customer portals or communities intended for many thousands to millions of users. See [About High-Volume Portal Users](#) on page 2472.

Setting up your Customer Portal consists of the following steps:

1. [Enable the Customer Portal.](#)
2. [Create one or more portals.](#)

For each portal:

- a. [Configure the settings and communication templates.](#)

You can standardize the communication templates sent to the users of all your Customer Portals by clicking the **Set Default Email Templates for All Customer Portals** link on the Tools section of the Customer Portal Setup page. For more information, see [Creating Multiple Customer Portals](#) on page 2442.

The [Convert Portal User Access wizard](#) automatically displays after the first time you save settings for your first portal, whether it is the Customer Portal or partner portal. You can use this wizard to help ensure that records and folders owned by Salesforce users are not shared with portal users.

- b. [Customize the fonts and colors.](#)

- c. [Customize the available tabs and tab order.](#)

- d. [Configure portal languages.](#)

3. Optionally, if [available to your portal user licenses](#), you can enable [Salesforce CRM Content, Ideas, Answers, Entitlement Management](#) or [Salesforce Knowledge](#) as needed.

4. [Create Customer Portal profiles.](#)

For each profile:

- a. [Customize page layouts.](#) See [Customize Your Customer Portal Pages](#).

For set up tips and general information about Salesforce Customer Portal pages, see [Setup Tips and Considerations for Customer Portal Pages](#) on page 2463.

- b. [Customize list views.](#)

Customer Portal users can automatically see any list view with visibility settings marked `Visible to all users`. We recommend that you create specific list views on all objects accessible to portal users, and then assign portal users to only the list views you want them to view.

- c. [Customize search layouts.](#)

The search layouts in your Salesforce organization are the same search layouts used in your Customer Portal. Verify that search layouts on objects accessible to portal users only include fields you want them to view in search results.

5. [Set up workflow:](#)

- a. [Set up workflow rules or case assignment rules](#) to automatically assign cases created by portal users to Salesforce users or queues by using the criteria `Current User: User Type contains Customer Portal`.

For case assignment rules to work on the Customer Portal, select the `Select Case Assignment` checkbox by default checkbox on case page layouts assigned to portal profiles. Portal users cannot view these checkboxes on the Customer Portal. Note that assignment rules trigger when a case is created *and* when it is edited. To prevent cases from being automatically

reassigned when edited by portal users, add a rule entry using the criteria *Current User: User Type contains Customer Portal* and select the *Do Not Reassign User* checkbox

- b. Create workflow alerts or case auto-response rules to automatically respond to portal users when they create a case on your portal.

6. [Configure portal user access.](#)
7. [Grant high-volume portal users access to objects.](#)
8. Optionally, enable single sign-on.
9. [Enable login on each Customer Portal.](#)
10. Add a link on your organization's website to the portal.

Users can navigate to your Customer Portal after you copy the `Login URL` from your portal's settings and paste it into the HTML of your website. For more information, see [Enable Customer Portal Login and Settings](#) on page 2444.

11. Enable contacts to use your portal.

To learn more about implementing a Customer Portal, see [Preparation for Setting Up Your Portal](#) on page 2502.

 **Note:** Contact Salesforce about activating a Customer Portal for your organization.

SEE ALSO:

- [Customer Portal Setup Limits](#)
- [Creating Multiple Customer Portals](#)
- [Enable Single Sign-On for Portals](#)
- [Configuring Multilingual HTML Messages for Customer Portals](#)

What customer portals can I create with Salesforce?

Salesforce provides three ways to help you manage your customers. The following table briefly describes the differences between them:

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

	Chatter Answers	Salesforce Customer Portal	Self-Service Portal
Purpose	Provides customers with a Web Community to resolve their inquiries with other community members or by contacting a support agent	Provides customers with an online support channel to resolve their inquiries without contacting a support agent	Provides customers with an online support channel to resolve their inquiries without contacting a support agent
User Interface	Highly customizable via a point-and-click editor and Visualforce pages, as well as functionality from Salesforce features such as Answers, Customer Portal, Force.com Sites, and Salesforce Knowledge	Highly customizable via a point-and-click editor, as well as functionality similar to Salesforce such as permissions, custom objects, sharing rules, and Web tabs	Customizable via a cascading style sheet (CSS) or point-and-click editor

	Chatter Answers	Salesforce Customer Portal	Self-Service Portal
Supported Record Types	<ul style="list-style-type: none"> Articles Cases Questions (answers) 	<ul style="list-style-type: none"> Activities Assets Cases Documents Solutions Custom objects 	<ul style="list-style-type: none"> Cases Solutions
Quantity	Contact Salesforce for more information	Contact Salesforce for more information	One
Administrator Controls	<ul style="list-style-type: none"> Customize the look and feel of the community Moderate questions and answers Generate usernames and passwords Manage Customer Portal user information Manage Customer Portal users via permissions, roles, and sharing rules 	<ul style="list-style-type: none"> Customize the look and feel of the Customer Portal Generate Customer Portal usernames and passwords Manage Customer Portal user information Manage Customer Portal users via permissions, roles, and sharing rules 	<ul style="list-style-type: none"> Generate Self-Service usernames and passwords Manage Self-Service user information
User Controls	<p>Users can click Edit My Settings after they sign in to change their:</p> <ul style="list-style-type: none"> Community username Community password Locale Language Time zone Notification settings Contact information 	<p>Users can use the Customer Portal Welcome component to change their:</p> <ul style="list-style-type: none"> Portal username Portal password Locale Language Time zone Contact information 	None

 **Note:** Contact Salesforce to activate a specific portal for your organization.

Enabling Your Customer Portal

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

To enable the Salesforce Customer Portal:

1. From Setup, enter *Customer Portal Settings* in the Quick Find box, then select **Customer Portal Settings**.
2. Click **Edit**.
3. Select **Enable Customer Portal**.
4. Click **Save**.
5. Continue [setting up the portal](#).

Tips on Enabling the Customer Portal

Consider the following when enabling the Customer Portal:

- After you enable the Customer Portal, you can [create multiple Customer Portals](#) to satisfy the various business needs of your customers.
- These items become available after you enable the Customer Portal:
 - The High Volume Customer Portal, Authenticated Website, Customer Portal Manager, and Customer Portal User profiles, if you purchased [user licenses](#) for them.
 - The **Enable Customer Portal User** and **View Customer Portal User** buttons on contact and person account records.
 - The All Customer Portal Users and All Internal Users groups along with the Roles and Internal Subordinates sharing rule category.
- After you enable a Customer Portal, you cannot disable it. However, you can prevent users from logging into it. See [Enable Customer Portal Login and Settings](#) on page 2444.

SEE ALSO:

[Setting Up Your Customer Portal](#)

Considerations for the Convert Portal User Access Wizard

Your Customer Portal and partner portal users appear in the role hierarchy, however, they're external contacts who don't need access to your organization's internal data. When setting up a Customer Portal or partner portal, you can use the Convert Portal User Access wizard to help ensure that no records or folders are shared with a portal user.

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

The wizard affects the following areas of your Salesforce org:

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To enable the Customer Portal:

- "Customize Application"

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To set sharing rules:

- "Manage Sharing"

Sharing Rules

The Convert Portal User Access wizard converts any sharing rules that include the Roles, Internal and Portal Subordinates data set category to include the Roles and Internal Subordinates data set category instead.

The Roles and Internal Subordinates data set category allows you to create sharing rules that include all users in a specified role plus all users in roles below that role, excluding any Customer Portal and partner portal roles.

Only organization-wide sharing rules are updated when you convert Roles, Internal and Portal Subordinates to Roles and Internal Subordinates. The Roles, Internal and Portal Subordinates category for queues, public groups, list views, documents, and manual sharing created on specific records by clicking the **Sharing** button is not converted to Roles and Internal Subordinates.

 **Note:** After running the Convert Portal User Access wizard, you must recalculate the sharing rules to apply the changes. From the Setup **Quick Find** box, enter *Sharing Settings*. Under *Account Sharing Rules*, click **Recalculate**, then click **OK**.

The Roles, Internal and Portal Subordinates data set category is only available in your organization after you create at least one role in the role hierarchy.

The Roles and Internal Subordinates data set category is only available in your organization after you create at least one role in the role hierarchy *and* enable a portal.

Folder Sharing

The Convert Portal User Access wizard also enables you to automatically convert the access levels of any report, dashboard, or document folders that are accessible to Roles, Internal and Portal Subordinates to a more restrictive access level: Roles and Internal Subordinates. This helps prevent Customer Portal and partner portal users from accessing folders. Using the wizard is more efficient than locating various folders in Salesforce and setting their access levels individually.

The wizard does not convert folders that are accessible to all users or accessible to public groups. You must manually update the access levels on those folders.

When you first save a Customer Portal or partner portal, Salesforce automatically displays the Convert Portal User Access wizard.

Using the Convert Portal User Access Wizard

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

When setting up a Customer Portal or partner portal, you can use the Convert Portal User Access wizard to help ensure that no records or folders are shared with a portal user.

To use the wizard:

1. For the Customer Portal, from Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**. For the partner portal, from Setup, enter *Partners* in the **Quick Find** box, then select **Settings**.
2. Click the **Convert Portal User Access** link.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To set sharing rules:

- "Manage Sharing"

3. Select the checkboxes next to the sharing rules you want to convert to Roles and Internal Subordinates.
If there are no sharing rules to convert but you want to convert the access level for folders, proceed to the following step.

4. Click **Next**.

5. Select the checkboxes next to the folders whose access levels you want to change to Roles and Internal Subordinates.

The wizard does not convert folders that are accessible to all users or accessible to public groups. You must manually update the access levels on those folders.

A particular folder may display on multiple rows in the wizard. This is because the wizard displays a row for each Role, Internal and Portal Subordinates category to which a folder is shared.

6. Click **Next**.

7. Click **Save** to apply your selected changes.

[Considerations for the Convert Portal User Access Wizard](#)

Creating Multiple Customer Portals

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

After you have [enabled the Salesforce Customer Portal](#), you can create multiple Customer Portals to satisfy the various business needs of your customers.

To create more than one Customer Portal:

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Click **New**.
3. Follow the same steps used to set up your organization's first Customer Portal. See [Setting Up Your Customer Portal](#) on page 2436.

 **Note:** Contact Salesforce for information about the number of Customer Portals you can activate for your organization.

Before you begin creating multiple Customer Portals for your organization, review the following implementation tips and best practices.

Implementation Tips

- Portal users can only log into Customer Portals assigned to their profile. To assign a profile to a Customer Portal, select the name of a portal from the Customer Portal Setup page, click **Edit Profiles** in the Assigned Profiles section, and select the **Active** checkbox next to the profile you want to assign to the portal.

A portal user can access all the Customer Portals assigned to his or her profile with one username and password.

You can view the number of active users associated with each profile assigned to a Customer Portal by creating a custom summary report and adding **Profile** to your report columns.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To create multiple Customer Portals:

- "Customize Application"

- The login URL of each Customer Portal you create contains a unique identifier, such as `portalId=060D00000000Q1F`. The unique identifier determines the specific portal a user can access. If a user accesses a login URL that does not contain a unique identifier, they are automatically directed to the login URL of the first Customer Portal you created. Note that portal users can only log into a Customer Portal via the portal's login page and not through the Salesforce login page.
- The settings on the following items apply to both your organization *and* your Customer Portals:
 - List views
 - Search layouts
 - Case assignment rules
 - Workflow alerts

Best Practices

- Because you can uniquely customize the fonts, colors, email templates, and login message of each Customer Portal you create, you can build a Customer Portal for each product and customer service level supported by your organization. For example, if your organization provides gold, silver, and bronze levels of customer support, then you could create a unique Customer Portal for each.

Note: JavaScript and CSS code are automatically removed from HTML files used as the portal login message.

- You can standardize the communication templates sent to the users of all your Customer Portals by clicking the **Set Default Email Templates for All Customer Portals** link on the Tools section of the Customer Portal Setup page. These settings determine the email templates to use when sending email notifications, such as a new case comment or a reset password, to portal users whose profiles are associated with more than one Customer Portal.

By default, sample templates are automatically selected for you in the `New User Template`, `New Password Template`, and `Lost Password Template` lookup fields. However, sample templates are not selected for you in the `New Comment Template` and `Change Owner to Portal User Template` lookup fields. Unless you select templates for these fields, users whose profiles are associated with more than one Customer Portal will not receive email notifications when new comments are added to their cases or when they become the new owner of a record in the Customer Portal. Email templates must be marked as `Available for Use` to be sent to portal users.

Tip: Because the default email templates are sent to users of multiple Customer Portals, we recommend that you create default email templates that do not contain portal-specific branding.

- You cannot delete a Customer Portal, but you can prevent users from logging into a portal by deselecting the `Login Enabled` checkbox. For more information, see [Enable Customer Portal Login and Settings](#) on page 2444.
- You can create multiple Customer Portals that display different tabs for users with the same profile, as long as the profile has access to each object displayed on a tab. For more information, see [Customizing Your Customer Portal Tabs](#) on page 2453.

Enable Customer Portal Login and Settings

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Click **Edit** next to the name of the Salesforce Customer Portal you want to customize.
3. Set the following options:

Setting	Description
Name	<p>Name of the Customer Portal as displayed on the portal's detail and edit pages, as well as the Customer Portal Setup page. The name of the Customer Portal is not displayed on portal pages, but it does display in the browser title bar.</p> <p>The name of your portal must be unique for your organization and not already in use by a Customer Portal or partner portal. Furthermore, an error may occur if you name a Customer Portal "partner portal" Customer Portal</p>
Description	<p>A description of the Customer Portal as displayed on the portal's detail and edit pages. The description of the Customer Portal is not displayed in the portal.</p>
Login Enabled	<p>Allows users to log in to the Customer Portal.</p> <p>We recommend that you do not select this checkbox until you have completed the steps described in Setting Up Your Customer Portal.</p> <p> Note: Users must be able to log in to the Customer Portal, be within their user profile's restricted IP range, and be within designated Login Hours in order to be able to reset their passwords.</p>
Administrator	<p>Click the lookup icon () to choose a default administrator for your Customer Portal. All email notifications regarding users who</p>

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To enable login and settings for the Customer Portal:

- "Customize Application"

Setting	Description
	<p>self-register for your Customer Portal will be sent to this Salesforce user.</p> <p>Notifications include information about registration errors and any other issues self-registering customers may experience, such as inadvertently entering duplicate email addresses, creating duplicate contact records, and exceeding your organization's user license limit.</p> <p>When choosing an administrator for your Customer Portal, you can only select users that have the "Edit Self-Service Users" permission. Furthermore, you cannot deactivate a user selected as a portal administrator.</p>

Portal Default Settings

Setting	Description
Login URL	<p>The URL of the Web page that displays when users log in to your Customer Portal.</p> <p>You can click this URL to log in to your portal and interact with it.</p> <p>Insert this URL into your website so users can access the login page to your Customer Portal.</p> <p>The login URL of each Customer Portal you create contains a unique identifier, such as <code>portalId=060D00000000Q1F</code>. The unique identifier determines the specific portal a user can access. If a user accesses a login URL that does not contain a unique identifier, they are automatically directed to the login URL of the first Customer Portal you created. Note that portal users can only log into a Customer Portal via the portal's login page and not through the Salesforce login page.</p>
Logout URL	<p>The URL of the Web page that displays when users log out of the Customer Portal—for example, "http://www.acme.com." If a logout URL is not specified, portal users return to the login page when they log out.</p>
Top-Level Category for Portal	<p>The top-level category accessible by customers in the Customer Portal. Customers can view all solutions marked <code>Visible in Self-Service Portal</code> in this category and its subcategories.</p> <p>This field is available only if you have enabled solution browsing. See Customizing Solution Settings on page 3031.</p>
Enable Self-Close Case from Suggested Solutions	<p>Allows users to close cases in the Customer Portal directly from suggested solutions. For example, when a user views a suggested</p>

Portal Default Settings

Setting	Description
	solution that helps them solve a case, he or she can click Yes, please close my case if this setting is enabled.
Show Action Confirmation	Allows users to view confirmation messages after they complete an action in the Customer Portal. For example, after a user creates a case in your Customer Portal, he or she views the message "Case has been submitted" if this setting has been enabled. Confirmation messages may help users clearly understand actions they have completed in your Customer Portal.
HTML Messages Default Language	Specifies the language that portal HTML messages are displayed in when custom language portal HTML messages are not configured. This setting is only available for organizations that have multiple languages enabled.

Email Notification Settings

Setting	Description
From Email Address	The email address from which all Customer Portal communication templates are sent—for example, "support@acme.com." Salesforce sends the emails automatically, but they appear to portal users as if they were sent from this email address. If a portal user responds to a communication template, the response is sent to this address.
From Email Name	The name associated with the "From" Email Address—for example, "Acme Customer Support."
New User Template	The email template used to send a username and initial password to all newly enabled and self-registering Customer Portal users. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as <i>Available for Use</i> .
New Password Template	The email template used to send a new password to existing Customer Portal users when you reset their passwords. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as <i>Available for Use</i> .
Lost Password Template	The email template used to send a new password to existing Customer Portal users when they reset their own passwords by clicking Forgot your password? on the login page of the Customer Portal. By default, a sample template is automatically selected for you. You can also create your own template or

Email Notification Settings

Setting	Description
	modify the sample. Be sure to mark the template as <code>Available for Use</code> .
New Comment Template	The email template used to send a notification to Customer Portal users when a public comment is added to one of their cases. This template must be marked as <code>Available for Use</code> .
Change Owner to Portal User Template	The email template used to send a notification to Customer Portal users when they become the new owner of a record in the portal. This template must be marked as <code>Available for Use</code> .

 **Note:** You can standardize the communication templates sent to the users of all your Customer Portals by clicking the **Set Default Email Templates for All Customer Portals** link on the Tools section of the Customer Portal Setup page. For more information, see [Creating Multiple Customer Portals](#) on page 2442.

 **Tip:** If you plan to use the same communication template for different objects, such as the Change Owner to Portal User Template, we recommend that you include text and merge fields on the template that are appropriate for both objects. For example, if your organization has a Warranty custom object and a Training custom object, and you want to use the Change Owner to Portal User Template for both, the text and merge fields on the template should read: "A new record has been assigned to you. Id: {!Training.ID}{!Warranty.Id}." When the template is sent, only the relevant merge fields will display.

Look and Feel

Setting	Description
Header	<p>A text or HTML file that allows you to incorporate your organization's branding into the header of your Customer Portal. Click the lookup icon () to choose a file that has been uploaded to a publicly accessible folder on the Documents tab.</p> <p>The files you include in the <code>Header</code> and <code>Footer</code> lookup fields can have a combined size of up to 10 KB.</p> <p>We recommend that you do not add a header <i>and</i> a logo to your portal because they may not display properly together.</p> <p>You can position the logout link anywhere on the header by using the HTML tag: "<code>Logout</code>."</p>
Footer	<p>A text or HTML file that allows you to incorporate your organization's branding into the footer of your Customer Portal. Click the lookup icon () to choose a file that has been uploaded to a publicly accessible folder on the Documents tab.</p> <p>The files you include in the <code>Header</code> and <code>Footer</code> lookup fields can have a combined size of up to 10 KB.</p>

Look and Feel

Setting	Description
Logo	<p>An image file that allows you to incorporate your organization's branding into the top left header of your Customer Portal. Click the lookup icon () to choose a file that has been uploaded to a publicly accessible folder on the Documents tab and marked as an <code>Externally Available Image</code>.</p> <p>The file you include in the <code>Logo</code> lookup field can be up to 20 KB.</p> <p>We recommend that you do not add a header <i>and</i> a logo to your portal because they may not display properly together.</p>
Login Message	<p>A text or HTML file that allows you to incorporate your organization's branding into the header of the login page, forgot password page, and change password page of your Customer Portal. Click the lookup icon () to choose a file that has been uploaded to a publicly accessible folder on the Documents tab.</p> <p>The file you include in the <code>Login Message</code> lookup field can be up to 2 KB.</p> <p> Note: JavaScript and CSS code are automatically removed from HTML files used as the portal login message.</p>

Self-Registration Settings

Setting	Description
Self-Registration Enabled	<p>Allows existing contacts to register themselves for access to your Customer Portal.</p> <p>When you select this checkbox and add the <code>Allow Customer Portal Self-Registration</code> checkbox to contact page layouts, contacts whose records are marked <code>Allow Customer Portal Self-Registration</code> can view a self-registration area on the Login page of your Customer Portal. From the self-registration area, users can enter their email address and click Submit to receive an automatically assigned username and password for logging in to your Customer Portal. Other email notifications sent to users regarding their registration status include:</p> <ul style="list-style-type: none"> Existing user, from which the user can enter another email address or click a Forgot Password? link to retrieve his or her password. New user, which informs the user that the email address he or she submitted does not match an existing contact in your

Self-Registration Settings

Setting	Description
New User Form URL	<p>organization. If an administrator has implemented Web-to-Case or Web-to-Lead to capture new user information, then the user can click a link to enter his or her information on the appropriate form.</p> <ul style="list-style-type: none"> • Internal error, which informs the user that an error occurred during the self-registration process and that your portal's administrator has been notified about the error. • Ineligible user, which informs the user that he or she is not eligible for self-registration to your Customer Portal. This notification is sent when a submitted email address matches a contact that does not have the <code>Allow Customer Portal Self-Registration</code> checkbox selected. It is also sent when a submitted email address does not match any contacts, and your administrator has not set up Web-to-Lead or Web-to-Case to capture new user information. <p>Ensure that all required custom fields on users have default values. Otherwise, users who self-register for your Customer Portal will receive an error message.</p> <p>Note that person account users cannot self-register for your Customer Portal. When person account users self-register for your Customer Portal, they receive an email notification that instructs them to contact the portal administrator.</p>
Registration Error Template	<p>Allows you to specify the URL of a Web-to-Lead or Web-to-Case form for users who self-register for access to your Customer Portal.</p> <p>The URL to this form is offered via the template selected in the <code>Registration Error Template</code> field to self-registering users who lack an existing contact record, so that their information can be captured and converted to a contact.</p> <p>The email template sent to users who self-register for your Customer Portal, but experience a registration error, or need to complete a Web-to-Case or Web-to-Lead form to register for your portal. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as <code>Available for Use</code>.</p> <p>The <code>From Email Address</code> and <code>From Email Name</code> fields on Customer Portal settings specify who this template is sent from.</p>

Self-Registration Settings

Setting	Description
Default New User License	Click the lookup icon (🔍) to choose a default portal user license for users who self-register for your Customer Portal.
Default New User Role	Click the lookup icon (🔍) to choose a default portal role for users who self-register for your Customer Portal.
Default New User Profile	Click the lookup icon (🔍) to choose a default portal profile for users who self-register for your Customer Portal. You cannot delete the profile selected as the default portal profile.

Customize Your Customer Portal Fonts and Colors

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can customize the fonts and colors of the Salesforce Customer Portal to reflect your company's branding. Your portal's fonts and colors are specified in a portal "color theme." Select a predefined color theme and, optionally, customize it to better match your branding. You can click the **See examples** link to see all of the theme attributes you can customize.

- From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
- Select the name of your Customer Portal.
- Click **Change Portal Fonts and Colors**.
- Select a color theme from the **Color Theme** drop-down list. Select Custom from the **Color Theme** drop-down list to create your own theme from scratch. A preview of the color theme you select is automatically displayed in the Preview sections.
- Optionally, customize the color of any theme you select by either:
 - Entering a hexadecimal value into any theme attribute, or
 - Clicking the hexadecimal value of any theme attribute and selecting a color from the point-and-click editor

When you customize a theme, it is automatically renamed Custom when saved. You can customize the following options, which, when customized, automatically display in the Preview sections:

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To change the fonts and colors of the Customer Portal:

- "Customize Application"

[Customizing Your Customer Portal Tabs](#)

Customizing Your Customer Portal Tabs

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

The Salesforce Customer Portal can display the following tabs:

- Answers
- Articles
- Ideas
- Home
- Cases
- Reports
- Solutions
- Web tabs

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To customize Customer Portal tabs:

- "Customize Application"

- Entitlements
- Custom objects
- Service contracts
- Chatter Answers
- Documents from the Documents tab
- Salesforce CRM Content tabs: Libraries, Content, and Subscriptions

Additionally, the Customer Portal can display the following tabs to [delegated external user administrators](#):

- Accounts
- Contacts

To choose which tabs display to users logged in to a Customer Portal, and to customize the order in which tabs display to portal users:

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Select the name of the Customer Portal whose tabs you want to customize.
3. Click **Customize Portal Tabs**.
4. To add or remove tabs, select a tab title, and click the **Add** or **Remove** arrow to add or remove the tab to or from the Selected Tabs box. To change the order of the tabs, select a tab title in the Selected Tabs box, and click the **Up** or **Down** arrow.
5. Optionally, from the **Default Landing Tab** drop-down, you can select which tab to display to users when they log into your portal.
6. Click **Save**.

You can further specify which tabs users can access by editing tab settings in users' associated profiles and permission sets.

 **Tip:** You can [create multiple Customer Portals](#) that display different tabs for users with the same profile, as long as they have access to each object displayed on a tab.

To make the following tabs visible in the Customer Portal, use the steps above and change the tab visibility setting to Default On in all Customer Portal profiles.

Allowing Portal Users to View Web Tabs

To allow portal users to view Web tabs, simply create Web tabs and assign them to Customer Portal profiles.

Granting Portal Users Access to the Documents Tab

To allow portal users to view a Documents tab, grant Customer Portal users access to the folders on your Salesforce Documents tab that contain the files you want them to view.

Allowing Portal Users to View the Reports Tab

To allow portal users to view a Reports tab:

1. Grant portal users access to the folders on your Salesforce Reports tab that contain the reports you want them to run.
2. Set the organization-wide default sharing model to Private on objects you want portal users to report on.
3. Assign portal users to permission sets or profiles that include the "Run Reports" permission.

When you add the Reports tab to your Customer Portal, portal users:

- Cannot customize reports or filter report results; they can only run reports.
- Can export reports to Excel if they have the "Export Reports" permission.

- Do not have access to the Unfiled Public Reports and My Personal Custom Reports folders.
- Will receive an insufficient privileges error if they run a report that contains objects they do not have permission to view.

Providing Portal Users with Access to the Ideas Tab

To allow portal users to access the Ideas tab, configure Ideas to display in the portal. For more information, see [Creating and Editing Zones](#) on page 2520 and [Enabling Ideas in the Customer Portal](#) on page 2457.

If your organization has the Ideas and Answers Portal license, hide the Reports tab in the Customer Portal. Otherwise, your Customer Portal users receive an Insufficient Privileges message when they click the Reports tab. For information on hiding tabs, see [Customizing Your Customer Portal Tabs](#) on page 2453.

Allowing Portal Users to Access Salesforce CRM Content Tabs

To allow portal users to access Salesforce CRM Content, see [Enabling Salesforce CRM Content in the Customer Portal](#) on page 2455.

SEE ALSO:

Enabling Salesforce CRM Content in the Customer Portal

USER PERMISSIONS

To set up and update the Customer Portal:	"Customize Application"
To create and edit profiles:	"Manage Profiles and Permission Sets"
To manage Customer Portal users:	"Edit Self-Service Users"
To create Salesforce CRM Content library permissions:	"Manage Salesforce CRM Content" OR "Manage Content Permissions"
To add users to a Salesforce CRM Content library:	"Manage Salesforce CRM Content" OR Manage Library checked in your library permission definition

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Salesforce CRM Content is available in the Customer Portal. Two levels of access to Salesforce CRM Content can be granted to Customer Portal users:

- Portal users without a Salesforce CRM Content feature license can download, rate, comment on, and subscribe to content if they have the “View Content on Portals” user permission. They cannot view potentially sensitive data such as usernames, download history, and version history. The content delivery feature is not available to portal users.
- Portal users with a Salesforce CRM Content feature license can access all Salesforce CRM Content features granted by their library permission(s), including contributing content, moving and sharing content among libraries, and deleting content. They can also view Salesforce CRM Content reports. The content delivery feature is not available to portal users.

Enabling Salesforce CRM Content for Non-Licensed Users

After you have [enabled your Customer Portal](#), complete the following steps to enable Salesforce CRM Content in your portals. Use these steps if you have not purchased Salesforce CRM Content feature licenses for your portal users.

1. Update Customer Portal profiles:
 - a. Clone the Customer Portal User or Customer Portal Manager profile.
 - b. In the cloned profiles, add the “View Content in Portals” user permission.
 - c. Change the tab visibility for the Libraries, Content, and Subscriptions tabs from Tab Hidden to Default On.
 - d. Assign the cloned profiles to your Customer Portal users.
2. Determine what privileges your portal users will have in each Salesforce CRM Content library by creating one or more library permissions.

 **Note:** A library permission can only grant privileges that a user’s feature license or profile permits. For example, even though `Tag Content` is a library permission option, selecting it does not allow portal users without a Salesforce CRM Content feature license to tag content.
3. Determine which libraries you want your portal users to have access to. Ensure that confidential content is not available in these libraries.
4. Add portal users to libraries. Portal users with the Customer Portal User profile or a clone of that profile can only be added to a library as part of a public group. Portal users with the Customer Portal Manager profile or a clone of that profile can be added to a library individually.
5. [Add the Salesforce CRM Content tabs](#) to each Customer Portal.

 **Note:** The Documents tab is not part of Salesforce CRM Content.

Enabling Salesforce CRM Content for Licensed Users

After you have [enabled your Customer Portal](#), complete the following steps to enable Salesforce CRM Content in your portals. Use these steps if you have purchased Salesforce CRM Content feature licenses for your portal users

1. Update Customer Portal profiles:
 - a. Optionally, clone the Customer Portal User and Customer Portal Manager profile to include the “Create Libraries” user permission if you want to allow portal users to create and administer new libraries.
 - b. In your standard or cloned Customer Portal profiles, change the tab visibility for the Libraries, Content, and Subscriptions tabs from Tab Hidden to Default On.
 - c. Assign the cloned profiles to your Customer Portal users as needed.
2. Select the `Salesforce CRM Content User` checkbox on the user detail page for each Customer Portal user.

- Determine what privileges your portal users will have in each Salesforce CRM Content library by creating one or more library permissions.

 **Note:** A library permission can only grant privileges that a user's feature license or profile permits. For example, even though `Tag Content` is a library permission option, selecting it does not allow portal users without a Salesforce CRM Content feature license to tag content.

- Determine which libraries you want your portal users to have access to. Ensure that confidential content is not available in these libraries.
- Add portal users to libraries. Portal users with the Customer Portal User profile or a clone of that profile can only be added to a library as part of a public group. Portal users with the Customer Portal Manager profile or a clone of that profile can be added to a library individually.
- Add the [Salesforce CRM Content tabs](#) to each Customer Portal.

 **Note:** The Documents tab is not part of Salesforce CRM Content.

Enabling Ideas in the Customer Portal

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Ideas is available in the Customer Portal.

After you have [set up your Customer Portal](#), follow the steps below to enable Ideas in your portal.

- Create zones in the Ideas context that are active and configured to display in the portal. For more information, see [Creating and Editing Zones](#) on page 2520.
- Add the Ideas tab to your Customer Portal. For more information, see [Customizing Your Customer Portal Tabs](#) on page 2453.
- If your organization has the Ideas and Answers Portal license, hide the Reports tab in the Customer Portal. Otherwise, your Customer Portal users receive an Insufficient Privileges message when they click the Reports tab. For information on hiding tabs, see [Customizing Your Customer Portal Tabs](#) on page 2453.

Enabling Entitlement Management in the Customer Portal

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the Customer Portal to provide your customers with access to their entitlements and service contracts. Contract line items don't display in the Customer Portal.

-  **Note:** High-volume customer portal users do not have access to service contracts and entitlements.

After you have [set up entitlement management](#) and [enabled a Customer Portal](#), complete the following steps to add entitlement management to your portals.

1. Update Customer Portal profiles:
 - a. Clone Customer Portal profiles and enable the "Read" permission on entitlements or service contracts.
 - b. Optionally, on the profiles of [delegated external user administrators](#), enable the "Create" and "Delete" permissions on entitlement contacts. This lets delegated external user administrators update entitlement contacts.
 - c. In the cloned profiles, verify that the tab visibility for the Entitlements or Service Contracts tabs are Default On.
2. At the bottom of the customer portal detail page, click **Edit Profiles** and activate the new profiles.
3. Customize case page layouts to add the `Entitlement Name` lookup field. This lets portal users add entitlements to cases.

 **Tip:** *Don't* add the following entitlement process fields to case page layouts for portal users because portal users shouldn't access information related to your internal support processes: `Entitlement Process Start Time`, `Entitlement Process End Time`, `Stopped`, and `Stopped Since`.
4. Optionally, customize related lists on accounts and contacts to add Entitlements. This lets delegated external user administrators create cases automatically associated with the right entitlements.
5. [Add the Entitlements or Service Contract tabs](#) to each Customer Portal.
6. Assign the cloned profiles to your Customer Portal users:
 - a. To create a new Customer Portal user, click **Manage External User** and choose **Enable Customer User** on the contact detail page. To update an existing user, click **Manage External User** and choose **View Customer User**.
 - b. For a new user, select the cloned profile from the **Profile** drop-down menu. For an existing user, click **Edit** and then select the profile.
 - c. Click **Save**.

Enabling Salesforce Knowledge in the Customer Portal

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the Customer Portal to provide your customers with access to Salesforce Knowledge articles. Portal users can view and rate articles but cannot create or edit articles.

After you have [set up Salesforce Knowledge in your organization](#) and [enabled your Customer Portal](#), complete the following steps to enable Salesforce Knowledge in your portals.

1. Update Customer Portal profiles:
 - a. Clone the Customer Portal User or Customer Portal Manager profiles and enable the "Read" permission for article types you want to share with customers.
 - b. In the cloned profiles, verify that the tab visibility for the Articles tab is Default On.
2. At the bottom of the customer portal detail page, click **Edit Profiles** and activate the new profile.
3. Assign the cloned profiles to your Customer Portal users:
 - a. To create a new Customer Portal user, click **Manage External User** and choose **Enable Customer User** on the contact detail page. To update an existing user, click **Manage External User** and choose **View Customer User** on the contact detail page.
 - b. For a new user, select the cloned profile from the **Profile** drop-down menu. For an existing user, click **Edit** and then select the profile.
 - c. Click **Save**.
4. [Add the Articles tab](#) to each Customer Portal.
5. If you want your Customer Portal users to have different category group visibility settings than the account owner, [change the visibility settings for the Customer Portal user](#).
By default, Customer Portal users inherit their data category access from the account owner. For example, if the account owner has a role of CEO and the CEO role has full access to all the data categories in a category group, then Customer Portal users can also access all categories in that group. In some cases, you may want to limit which categories a Customer Portal user can access.
6. If you have high-volume portal users, [make the categories these users need to access visible by default](#). Because high-volume portal users don't have roles, they can only access categorized articles if the associated data categories have been made visible to all users regardless of role.
7. Notify users who create articles that they must select **Customer Portal** as a channel option when creating or modifying an article. If the Customer Portal channel is not selected, the article will not be published in the portal.
8. To allow users to search for articles from the Home tab, add the Article Search component to the home page layout. Ensure that you assign the layout to the Customer Portal profiles.

To view Salesforce Knowledge articles:

- "Read" on the article's article type

Enabling Answers in the Customer Portal

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the Customer Portal to provide your customers with access to an answers community.

To enable answers in your portal:

1. [Set up your Customer Portal.](#)

When [customizing your portal fonts and colors](#), note that answers only supports the following changes:

- All tab styles
- The following page styles:
 - Page Background
 - Text
 - Link
 - Link Hover

2. [Set up answers](#), making sure that your answers community is configured to display in the Customer Portal.

3. [Add the Answers tab](#) to your Customer Portal.

4. Create Customer Portal users:

- a. On the contact detail page, click **Manage External User** and then choose **Enable Customer User**.
- b. Enter the required information, making sure to select the correct Customer Portal profile from the **Profile** drop-down menu.
- c. Click **Save**.

5. If you want your Customer Portal users to have different category group visibility settings than the account owner, [change the visibility settings for the Customer Portal user](#).

By default, Customer Portal users inherit their category access from the account owner. For example, if the account owner has a role of CEO and the CEO role has full access to all the data categories in the category group assigned to answers, then Customer Portal users can also access all categories in the answers community. In some cases, you may want to limit which categories a Customer Portal user can access.

6. If you have high-volume portal users, [make the data categories these users need to access visible through permission sets or profiles](#).

7. If your organization has the Ideas and Answers Portal license, hide the Reports tab in the Customer Portal. Otherwise, your Customer Portal users receive an Insufficient Privileges message when they click the Reports tab. For information on hiding tabs, see [Customizing Your Customer Portal Tabs](#) on page 2453.

Customize Your Customer Portal Pages

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can customize your Salesforce Customer Portal pages just as you customize pages in Salesforce: with page layouts.

Page layouts control the layout and organization of buttons, fields, s-controls, Visualforce, custom links, and related lists on object record pages. They also help determine which fields are visible, read only, and required. Page layouts can include s-controls and Visualforce pages that are rendered within a field section when the page displays. You can control the size of the s-controls and Visualforce pages, and determine whether or not a label and scroll bars display.

Customer Portal users view the layouts assigned to their profile when they log in to your Customer Portal. You can customize the following objects' page layouts for your portal:

- Home
- Tasks
- Events
- Cases
- Assets
- Accounts
- Solutions
- Contacts
- Entitlements
- Custom Objects
- Service Contracts

Customizing Portal Page Layouts

From the object management settings for the object whose page layout you want to edit, go to Page Layouts.

By default, Customer Portal users have "Read" permissions on accounts, contacts, assets, products and price books, so that they can view their account name and choose a contact and asset for the cases they create on your portal. They may also have "Update" or "Create" permissions for assets and accounts, depending on the type of customer portal.

-  **Note:** Customer Portal users can't view the tags section of a page, even if it is included in a page layout.

To display a custom object in your Customer Portal, you must:

- Select the `Available for Customer Portal` checkbox on the custom object. You cannot assign a portal profile to a custom-object page layout unless this checkbox is selected.
- Grant user permissions to the custom object on permission sets or profiles assigned to portal users.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To modify page layouts:

- "Customize Application"

To assign page layouts to profiles:

- "Manage Profiles and Permission Sets"

- Add the tab of the custom object to your Customer Portal so that the tab is accessible to your Customer Portal users. For more information, see [Customizing Your Customer Portal Tabs](#) on page 2453.

Configuring Multilingual HTML Messages for Customer Portals

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

If your organization has multiple languages enabled, you can upload HTML messages in any of the languages supported by Salesforce and configure the messages to display in the portal based on portal user language settings. For example, you can upload an HTML message in French to display on the Home tab for portal users with French language settings, and an HTML message in English to display on the Home tab for portal users with English language settings.

Note the following before configuring multilingual HTML messages:

- Before you can add a multilingual HTML message to a portal, you must upload the HTML-formatted file in the Documents tab.
- Even if configured, portal HTML messages will not display on the Ideas, Reports, Content, or Solutions tabs.

To configure multilingual HTML messages:

1. To configure a display language for the Customer Portal, from Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Click the name of the portal to edit.
3. Click **Add New Language** in the Assigned Languages related list.
4. Select a language from the **Language** drop-down list.
5. Click the lookup icon () next to a tab name, then select the HTML message to display on that tab. Optionally repeat this step for each tab that you want to display an HTML message.
6. Click **Save**.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To configure languages in portals:

Setup Tips and Considerations for Customer Portal Pages

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Consider the following set up tips and general information about Salesforce Customer Portal pages.

Setting Up Cases

- When setting up your Customer Portal, clone the page layout for cases (Case Layout), and rename it *Portal Case Layout*. This allows you to easily differentiate between case page layouts for internal users and case page layouts for portal users.
- By default, new cases are accessible in the Customer Portal, but you can include the `Visible in Self-Service` checkbox on case page layouts so that you can deselect the checkbox to prevent a case from being displayed.
- Do not select the `Show Case Email Notification` and `Show Case Email Notification by default` checkboxes on case page layouts. These features only apply to Salesforce users.
- Do not add the `Internal Comments` field to case page layouts assigned to portal profiles because portal users may view comments intended only for Salesforce users.
- Include the `Asset` field on case page layouts if you want portal users to be able to associate cases with an asset related to their account.
- Include the `Contact Name` lookup field on case page layouts so that users with "Edit" permissions on that field can change a case's contact to another portal user in the same account.
- If a portal user is the owner of a case, the `Contact Name` field on the case must be the contact associated with the same portal user who owns the case. You can't specify a different contact, even if they're associated with the same portal account.
- Do not select the `Show solution information section`, `Show Contact Notification checkbox`, and `Select Contact Notification checkbox by default` checkboxes on close-case page layouts because their functions only apply to Salesforce users.
- Create case record types to set the default value of the `Case Origin` picklist field for cases logged on your Customer Portal.
- For case assignment rules to work on the Customer Portal, select the `Select Case Assignment checkbox by default` checkbox on case page layouts assigned to portal profiles. Portal users cannot view these checkboxes on the Customer Portal. Note that assignment rules trigger when a case is created *and* when it is edited. To prevent cases from being automatically reassigned when edited by portal users, add a rule entry using the criteria `Current User: User Type contains Customer Portal` and select the `Do Not Reassign User` checkbox.
- Portal users can view all the values in the `Type`, `Status`, `Priority`, and `Case Reason` picklist fields unless you create record types for cases that contain separate picklist values for them.
- You can prevent portal users from submitting cases with attachments by removing the **Submit & Add Attachment** button from case page layouts:
 1. Edit a case page layout with the enhanced page layout editor.
 2. Click **Layout Properties**.
 3. Deselect **Show Submit & Add Attachment Button**.
 4. Click **OK**.
 5. Click **Save**.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

Cases

- Portal users need the “Read” permission on contacts to create cases.
- Portal users cannot edit the value of the `STATUS` picklist field on cases.
- Portal users can edit and delete attachments they have added to their cases, but portal users cannot edit and delete attachments added to cases by Salesforce users.
- The **Delete** and **Sharing** buttons on case detail pages are not available to portal users.
- The **Email Message List**, **Next**, and **Previous** links are not available to Customer Portal users when they view emails from the [Email related list](#) on case detail pages. The Email related list is only available in organizations where Email-to-Case or On-Demand Email-to-Case is enabled.
- Optionally, you can create case auto-response rules to automatically respond to portal users when they create a case on your portal.
- Portal users can view, search, and create notes and attachments on cases.
- When creating a case, a portal user bypasses the Suggested Solutions page and is directed to their case if:
 - No relevant suggested solutions match the case.
 - He or she creates the case by clicking **Submit & Add Attachment**.

Note that suggested solutions are only available in organizations where they are enabled. For more information on suggested solutions, see [Suggested Solutions Overview](#) on page 3030. For more information about how Customer Portal users can self-close their own cases from suggested solutions, see [Enable Customer Portal Login and Settings](#).

- If [Salesforce Knowledge](#) is enabled, you can add the Articles related list to case page layouts assigned to portal users so that they can find articles that help them solve their cases.
- If Chatter is enabled for your organization, feed attachments are included in the Notes and Attachments related list. Portal users can download feed attachments, but can’t preview, edit, or delete them.

Solutions

- The `STATUS` picklist field on solutions is not available to portal users.
- The `STATUS` picklist field on a solution does not need to be set to Reviewed for a solution to be visible in the Customer Portal; a solution is visible in the Customer Portal if the `Visible in Self-Service Portal` checkbox is selected on a solution.
- If you enable [solution categories](#) for your organization, solution categories are also available in your Customer Portal. Uncategorized solutions do not display in the solution categories of your Customer Portal, but they do display in your portal’s search and list views.
- The [top solutions feature](#) is not available for your Customer Portal, but you can create links on your Customer Portal home page to your organization’s most relevant solutions.

Home Page

- Include the Customer Portal Welcome component on home page layouts assigned to Customer Portal users. Each Customer Portal user who logs in to your portal receives a welcome message with his or her name. The users can also change their own portal username, password, locale, language, time zone, and contact information. When portal users change information about themselves their user records are updated but their contact records aren’t automatically updated with those changes.

Note that Customer Portal users who have the “Is Single Sign-On Enabled” permission cannot change their usernames from the Customer Portal Welcome component.

- When designing home page layouts for your Customer Portal, we recommend adding the following components: Search, Solution Search, Recent Items, Customer Portal Welcome, and a custom HTML Area component that includes your corporate branding in the wide column.

- Create custom components to put on the home page layouts of your Customer Portal, such as links to custom list views, specific documents, and top solutions.
- Custom component names do not display in the wide section of the home page in the Customer Portal.
- You can position the logout link anywhere on the header by using the HTML tag: “Logout.” For more information on the header, see [Enable Customer Portal Login and Settings](#) on page 2444.
- We recommend *not* adding the following components to your Customer Portal home page layouts because they are for Salesforce users: `Tasks`, `Calendar`, `Product Search`, `Recent Items`, `Dashboard Snapshot`, `Messages & Alerts`, and `Items To Approve`.

Activities

- Portal users can't be assigned to activities.
- Portal users can view completed tasks and past events marked `Visible in Self-Service` that are associated with objects they have permission to view.

Documents

Verify that none of your organization's internal documents on the Documents tab are available in folders accessible to portal users.

Reports

- Portal users can run reports if they have the “Run Reports” permission.
- Portal users can export reports if they have the “Export Reports” permission.
- The Report Options section does not display on report results for portal users because portal users cannot customize report results. Also, the Generated Chart section, which includes the **Edit**, **Large**, **Medium**, and **Small** links, does not display on report results.
- Report results for portal users only include links to objects the portal users have permission to access.
- Portal users can only report on objects set to Private in the organization-wide default sharing model. Some objects, such as solutions and articles, are not included in the sharing model and cannot be reported on by Customer Portal users.
- Portal users will receive an insufficient privileges error if they run a report that contains objects they do not have permission to view.
- By default all users, including portal users, can view report folders. To prevent portal users from viewing report folders, update the sharing settings on report folders to the All Internal Users group.

Custom Objects

- When you deselect the `Available for Customer Portal` checkbox on a custom object, the custom object is no longer available on the Customer Portal, and all of the permissions for the custom object are automatically removed from portal profiles. If you select the `Available for Customer Portal` checkbox on a custom object again, you must update the permissions for the custom object on portal profiles.

Note: If you configure custom object access at a later time, permission sets retain their configuration.

- Portal users can view, search, and create notes and attachments on custom objects.
- If Chatter is enabled for your organization, feed attachments are included in the Notes and Attachments related list. Portal users can download feed attachments, but can't preview, edit, or delete them.

Articles

For setup information, see [Enabling Salesforce Knowledge in the Customer Portal](#) on page 2459.

Assets

- Portal users can create, view, and update assets associated with their accounts.

- Assets are only visible to portal users if you include the `Assets` lookup field on case page layouts. From case detail pages, portal users can view an asset by clicking it in the `Asset` field.
- Portal users can view and search attachments on assets.
- If Chatter is enabled for your organization, feed attachments are included in the Notes and Attachments related list. Portal users can download feed attachments, but can't preview, edit, or delete them.

Salesforce CRM Content

- Portal users with a Salesforce CRM Content feature license can perform any tasks granted by their library permission.
- Portal users with the "View Content on Portals" user permission have view-only access to Salesforce CRM Content.
- Portal users with the "Create Libraries" user permission can create and administer libraries.

For more information, see [Enabling Salesforce CRM Content in the Customer Portal](#) on page 2455.

Answers

For setup information, see [Enabling Answers in the Customer Portal](#) on page 2460. When [customizing your portal fonts and colors](#), note that answers only supports the following changes:

- All tab styles
- The following page styles:
 - Page Background
 - Text
 - Link
 - Link Hover

Ideas

For setup information, see [Enabling Ideas in the Customer Portal](#) on page 2457.

Accounts

Only users with delegated external user administrator rights can view the Accounts tab and their account's detail page in your Customer Portal. See [Delegating Customer Portal User Administration and Portal Super User](#) on page 2488.

 **Note:** Customer portal users don't see the Notes & Attachments related list on accounts.

Contacts

Only users with delegated external user administration rights can view their account's contacts. See [Delegating Customer Portal User Administration and Portal Super User](#) on page 2488.

Only users with the "Portal Super User" permission can view the Contacts tab and edit and detail pages for contacts in your Customer Portal. See [Delegating Customer Portal User Administration and Portal Super User](#) on page 2488.

 **Note:** Customer portal users don't see the Notes & Attachments related list on contacts.

Entitlements

- For set up information, see [Enabling Entitlement Management in the Customer Portal](#) on page 2458.
- Add the "Read" permission on entitlements to custom portal profiles; assign the profiles to portal users who need access to entitlements. See [Configuring User Access to the Customer Portal](#) on page 2479.
- Add the `Entitlement Name` lookup field to case page layouts so that portal users can add entitlements to cases.
- *Don't* add the following entitlement process fields to case page layouts for portal users because portal users shouldn't access information related to your internal support processes: `Entitlement Process Start Time`, `Entitlement Process End Time`, `Stopped`, and `Stopped Since`. See [Case Fields](#) on page 2249.

- Optionally, add the Entitlements tab to your Customer Portal so that portal users can view entitlements associated with their accounts and create cases from entitlements.
- Add the Entitlements related list to account and contact page layouts so that delegated external user administrators can create cases automatically associated with the right entitlements. See [Delegating Customer Portal User Administration and Portal Super User](#) on page 2488.

Service Contracts

- For set up information, see [Enabling Entitlement Management in the Customer Portal](#) on page 2458.
- Grant the “Read” permission on service contracts to the portal users who need access to service contracts. See [Configuring User Access to the Customer Portal](#) on page 2479.
- Add the Service Contracts tab to your Customer Portal so that portal users can view the details of their service contracts. See [Customizing Your Customer Portal Tabs](#) on page 2453.
- Contract line items don't display in the Customer Portal.

Flows

- You can include Force.com flows in your Customer Portal by embedding them in a Visualforce page.
- Users can run only flows that have an active version. If the flow you embed doesn't have an active version, users see an error message. If the flow you embed includes a subflow element, the flow that is referenced and called by the subflow element must have an active version.
- When you make a flow available to site or portal users, point them to the Visualforce page that contains the embedded flow, not the flow itself. Site and portal users aren't allowed to run flows directly.

[Customize Your Customer Portal Pages](#)

Customer Portal Setup Limits

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Contact Salesforce for information about the number of Customer Portals and Customer Portal user licenses you can activate.

The maximum number of custom objects you can include in a Customer Portal is determined by the total number of custom objects your Edition allows.

Also, user licenses control the number of custom objects a portal user can see in a Customer Portal. For information, contact Salesforce.

[Setting Up Your Customer Portal](#)

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

Enable Single Sign-On for Portals

Single sign-on (SSO) lets users access authorized network resources with one login. You validate usernames and passwords against your corporate user database or other client app rather than Salesforce managing separate passwords for each resource.

You can set up Customer Portals and partner portals to use [SAML single sign-on](#), so that a customer only has to login once.

 **Note:** Single sign-on with portals is only supported for SAML 2.0.

To enable single sign-on for portals:

1. In addition to the [SAML sign-on information](#) that must be gathered and shared with your identity provider, you must supply your information provider with the Organization ID and the Portal ID. In the SAML assertion that is sent from your identity provider, the `portal_id` and `organization_id` must be added as attributes.

 **Note:** You can leave these attributes blank to differentiate between portal and platform users. For example, when blank, the user is a regular platform user and when populated, the user is a portal user.

- a. From Setup, enter *Company Information* in the Quick Find box, then select **Company Information** and copy the ID located in the `Salesforce Organization ID`.
- b. For Customer Portals, from Setup, enter *Customer Portal Settings* in the Quick Find box, select **Customer Portal Settings**, click the name of the Customer Portal, and then copy the ID located in the `Portal ID`.
- c. For partner portals, from Setup, enter *Partners* in the Quick Find box, then select **Settings**. Next, click the name of the partner portal, and copy the ID located in the `Salesforce Portal ID`.

Partner Portal is available in: **Enterprise, Performance,** and **Unlimited** Editions

USER PERMISSIONS

To view the settings:

- "View Setup and Configuration"

To edit the settings:

- "Customize Application"
- AND
- "Modify All Data"

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Managing Customer Portal users is similar to managing regular Salesforce users. General user administration concepts like profiles and page layouts still apply. Review the following advice for managing Customer Portal users:

- [Customer Portal Profiles](#)
- [Customer Portal Sharing Rules](#)
- [Customer Portal Role Hierarchy](#)
- [Customer Portal User Licenses](#)

 **Note:** High-volume portal users include both the High Volume Customer Portal and Authenticated Website license types.

Customer Portal Profiles

The profiles you assign to Customer Portal users define permissions for them to perform different functions within a Customer Portal, such as whether they can view, create, edit, or delete cases and custom object records.

When you enable a Customer Portal, the following profiles are automatically created if you purchased [user licenses](#) for them:

- High Volume Customer Portal
- Authenticated Website
- Customer Portal User
- Customer Portal Manager

The settings on Customer Portal profiles are similar. However, you can grant users with the Customer Portal Manager profile greater access to data via the Customer Portal role hierarchy and sharing rules (neither of which apply to [high-volume portal users](#)). You can also clone and customize each profile to suit the various support requirements of specific customers. You can also use permission sets to grant additional permissions and access settings to Customer Portal users.

Depending on the user licenses you purchased, you can configure Customer Portal profiles for custom objects, [Salesforce CRM Content](#), reporting, and customer support functionality, such as cases and solutions.

 **Important:** For portal users to be able to view their new cases, the **New Cases Visible in Portal** support setting must be selected. From Setup, enter *Support Settings* in the Quick Find box, select **Support Settings**, then select **New Cases Visible in Portal**.

Customer Portal Sharing Rules

After you enable a Customer Portal, the following groups and sharing rule category are created:

Groups and Sharing Rule Category	Description
All Customer Portal Users group	Contains all Customer Portal users, except for high-volume portal users.
All Internal Users group	Contains all Salesforce users in your organization.

Groups and Sharing Rule Category	Description
----------------------------------	-------------

Roles and Internal Subordinates sharing rule category	<p>Lets you create sharing rules with specific Salesforce users in your organization by role plus all of the users in roles below that role, excluding any Customer Portal and partner portal roles.</p> <p>Because high-volume portal users don't have roles, they aren't included in this or any other sharing rule category.</p>
---	---

You can use these groups and the sharing rule category to create sharing rules that:

- Grant Customer Portal or Salesforce users access to specific data (except for high-volume portal users, because you can't include them in any groups or sharing rules)
- Link Customer Portal users and Salesforce users
- Link Customer Portal users from different accounts as long as they have the Customer Portal Manager user license

Customer Portal Role Hierarchy

When you enable a Customer Portal on an account, the system creates a role hierarchy for the account's portal users. The portal roles are unique for each account and include the account's name—or example, "Account A Customer User." In your organization's overall role hierarchy, this account-specific hierarchy is directly below the account owner.

The roles in a portal role hierarchy are fixed. You cannot customize them or add new ones. They are:

- Executive—for contacts
- Manager—for contacts
- User—for contacts
- Person Account—for person accounts

 **Note:** All users in a customer portal role (Executive, Manager, and User roles) have read access to all portal-enabled contacts under their portal account even when the contact sharing model is private.

As you enable customers as Customer Portal users, the system automatically assigns roles based on the [user license](#). Person accounts always have the Person Account role. Contacts with the High Volume Customer Portal or Authenticated Website license do not have a role.

If access to contacts are set to private, high-volume portal users only have access to their own contact and those they are granted access to.

Role hierarchies ensure that portal users from different accounts never see each other's data. Even though high-volume portal users aren't included in role hierarchies, they're restricted from seeing records that aren't associated with their account or contact, and they can only see objects to which they've been [granted access](#). You can, however, create sharing rules so that users with the Customer Portal Manager license from different accounts can see each other's data.

Accounts with different portal types—Customer Portal *and* partner portal—have a separate role hierarchy for each portal. Role names include the portal type with which they are associated. For example, if Account A has both a Customer Portal and a partner portal, then roles for the Customer Portal are named "Account A Customer User" and roles for the partner portal are named "Account A Partner User."

To view the roles assigned to your Customer Portal users, create a custom report, choose Administrative Reports, select Users as the data type, and add `Role` to your report columns. Note that you can't report on roles for high-volume portal users because they don't have roles.

 **Note:** You cannot create a Customer Portal user associated with an account owned by a partner user.

Customer Portal User Licenses

A user license determines the baseline of features that the user can access. Every user must have exactly one user license.

You can assign the following user licenses to Customer Portal users:

- High Volume Customer Portal
- Authenticated Website
- Customer Portal Manager Custom
- Customer Portal Manager Standard (not available for new customers)

These user licenses determine the available Customer Portal profiles. They also determine users' positions in the Customer Portal role hierarchy.

The following table shows the Customer Portal user licenses with their associated profiles and positions in the Customer Portal role hierarchy.

User License	Profiles	Roles and Sharing
High Volume Customer Portal and Authenticated Website Both user licenses are high-volume portal users (Available to purchase)	High Volume Customer Portal or Authenticated Website profile, or a profile cloned and customized from one of these.	High-volume portal users don't have roles. See About High-Volume Portal Users on page 2472. Can't share but can transfer records they own. Can't transfer cases from non-high-volume portal users to them. Can't include in: <ul style="list-style-type: none"> • Personal groups or public groups. • Sharing rules. • Account teams, opportunity teams, or case teams. • Salesforce CRM Content libraries. • High-volume portal users can't access standard Account and Contact detail pages. However, you can create a custom solution, using tools like Visualforce or the API, where they can access those records. Can access custom objects depending on profile settings.
Customer Portal Manager Custom (Available to purchase)	Customer Portal Manager profile or a profile cloned and customized from the Customer Portal Manager profile.	Can assign to either the Executive, Manager, or User role. Can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy; and they can view and edit cases where they are listed in the <code>Contact Name</code> field. Can have data shared to them just like other Salesforce users. <ul style="list-style-type: none"> • Can access custom objects depending on profile settings. • Can access reports depending on profile settings. • Can access Salesforce CRM Content depending on feature license and profile settings. See Enabling Salesforce CRM Content in the Customer Portal on page 2455. • Can receive the "Portal Super User" and "Delegated External User Administrator" permissions.

User License	Profiles	Roles and Sharing
Customer Portal Manager Standard	Customer Portal User profile or a profile cloned and customized from the Customer Portal User profile.	<p>Can only assign to either the Executive, Manager, or User role.</p> <p>Can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy; and they can view and edit cases where they are listed in the <code>Contact Name</code> field.</p> <p>Can have data shared to them just like other Salesforce users.</p> <ul style="list-style-type: none"> • Can access custom objects depending on profile settings. • Can receive the “Portal Super User” permission. • Can access Salesforce CRM Content depending on feature license and profile settings. See Enabling Salesforce CRM Content in the Customer Portal on page 2455. <p> Note: This license is not available for new customers.</p>

 **Note:** Person accounts enabled as Customer Portal users are automatically assigned the Person Account role, which you cannot change. Person accounts are automatically assigned to this role because they include a single user, so multiple roles are not necessary for their account. Furthermore, all person accounts owned by the same user are assigned the same role.

About High-Volume Portal Users

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

High-volume portal users are limited-access portal users intended for organizations with many thousands to millions of portal users. Unlike other portal users, high-volume portal users don't have roles, which eliminates performance issues associated with role hierarchy calculations. High-volume portal users include both the High Volume Customer Portal and Authenticated Website license types.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

Characteristics

High-volume portal users:

- Are contacts enabled to access a Customer Portal.
- Are assigned to the High Volume Customer Portal or Authenticated Website license.
- Only share the records they own with Salesforce users in the high-volume portal users sharing group.

Access to Records

High-volume portal users can access records if any of the following conditions are met:

- They have “Update” access on the account they belong to.
- They own the record.
- They can access a record’s parent, and the organization-wide sharing setting for that record is Controlled by Parent.
- The organization-wide sharing setting for the object is Public Read Only or Public Read/Write.
- They access the account or contact that they’re enabled under via the API (not via the standard account or contact detail page).

Administrators can create sharing sets to grant high-volume portal users additional access to records; see [Granting High-Volume Portal Users Access to Records](#) on page 2475.

Limitations

- High-volume portal users can’t manually share records they own or have access to.
- You can’t transfer cases from non-high-volume portal users to high-volume portal users.
- High-volume portal users can’t own accounts.
- You can’t add case teams to cases owned by high-volume portal users.
- You can’t include high-volume portal users in:
 - Personal groups or public groups.
 - Sharing rules.
 - Account teams, opportunity teams, or [case teams](#).
 - Salesforce CRM Content libraries.
 - High-volume portal users can’t access standard Account and Contact detail pages. However, you can create a custom solution, using tools like Visualforce or the API, where they can access those records.

These limitations also apply to records owned by high-volume portal users.

- You can’t assign high-volume portal users to territories.

SEE ALSO:

[Sharing Records Owned by High-Volume Portal Users to Salesforce Users](#)

[Granting High-Volume Portal Users Access to Records](#)

[Sharing Set Overview](#)

Sharing Set Overview

Grant portal or community users access to records that are associated with their accounts or contacts using sharing sets, based on their user profiles.

Previously, a sharing set granted access to any record that has a lookup field to an account or contact that matches the user’s account or contact. With Spring ’14, you can also determine how access is granted using an access mapping in the sharing set, which supports indirect lookups from the user and target record to the account or contact. You can determine the objects to use in the access mapping, and they must both either point to an account or contact.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

For example, you might want to use a sharing set if you would like to:

- Grant users access to all cases related to their account or contact record.
- Grant users access to all cases related to a parent account or contact that is identified on the user’s account or contact record.

You can use sharing sets to grant access to accounts, contacts, cases, service contracts, users, and custom objects. Sharing sets can be used with these user profiles:

- Authenticated Website
- Customer Community User
- Customer Community Login User
- High Volume Customer Portal
- High Volume Portal
- Overage Authenticated Website User
- Overage High Volume Customer Portal User

The following example shows an access mapping on a sharing set, which grants portal or community users access to all cases associated with the entitlements on their account, even if they are not directly associated with the case.

Example:

1. Account lookup on portal or community user
2. Related account on entitlement
3. Entitlement lookup on case

 **Note:** Portal or community users gain access to all order entitlements and order items under an account to which they have access. To share records owned by high-volume portal users, use a share group instead.

SEE ALSO:

- [Granting High-Volume Portal Users Access to Records](#)
- [Granting High-Volume Portal or Community Users Access to User Records](#)
- [About High-Volume Community Users](#)
- [Grant High-Volume Community Users Access to Records](#)
- [Share Records Owned By High-Volume Community Users](#)

Granting High-Volume Portal Users Access to Records

Grant users access to records based on their profiles using sharing sets.

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

A sharing set grants high-volume portal users access to any record that has a lookup field to an account or contact that matches the user's account or contact.

You can also grant access to records via access mapping in a sharing set, which supports indirect lookups from the user and target record to the account or contact. For example, grant users access to all cases related to an account that's identified on the users' contact records.

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. In the Sharing Sets related list, click **New** to create a sharing set, or click **Edit** next to an existing sharing set.
3. In the Sharing Set Edit page, fill in the **Label** and **Sharing Set Name** fields. **Label** is the sharing set label as it appears on the user interface. **Sharing Set Name** is the unique name used by the API.
4. Enter a description.
5. Select the profiles of the users to whom you want to provide access.
6. Select the objects you want to grant access to.

The Available Objects list excludes:

 - Objects with an organization-wide sharing setting of Public Read/Write
 - Custom objects that don't have an account or contact lookup field
7. In the Configure Access section, click **Set Up** or **Edit** next to an object name to configure access for the selected profiles, or click **Del** to remove access settings for an object.

 **Note:** Objects with **Set Up** in the Action column aren't configured for high-volume portal user access. Until you configure an object, high-volume portal users have limited or no access to its records. For more information on access, see [About High-Volume Portal Users](#) on page 2472.
8. Grant access based on an account or contact lookup:

EDITIONS

Available in: **Salesforce Classic**

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To grant high-volume portal users access to records:

- "Customize Application"

- Select a value in the User drop-down list to determine the account or contact lookup on the user.
- Select a value in the Target Object field to determine the account or contact lookup on the target object.

For example, to grant access to all cases associated with an account identified on the user's contact record, select `Contact.Account` and `Account` respectively.

 **Note:** Both selected fields must point to either an account or contact. For example, `Contact.Account` and `Entitlement.Account` both point to an account.

9. Choose an access level of Read Only or Read/Write. (If the object's organization-wide sharing setting is Public Read Only, then only Read/Write is available.)
10. Click **Update**, then click **Save**.

Your settings apply to all of your organization's Customer Portals or sites.

SEE ALSO:

[About High-Volume Portal Users](#)
[Sharing Set Overview](#)

Granting High-Volume Portal or Community Users Access to User Records

Grant users access to other users using sharing sets.

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities. Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can create a sharing set to grant high-volume portal users access to internal users or other users in the same portal, enabling them to see or edit the target user records.

With Spring '14, you can also grant access to users in other portals through an indirect lookup to an account or contact.

To grant access to selected users in the same portal, you would typically create a sharing set if you deselected the `Portal User Visibility` checkbox on the Sharing Settings page.

To create a sharing set to grant access to other users:

1. From Setup, enter *Customer Portal Settings* in the `Quick Find` box, then select **Customer Portal Settings**.
2. In the Sharing Settings for High-Volume Portal Users related list, click **New** to create a sharing set, or click **Edit** next to an existing sharing set.
3. In the Sharing Set Edit page, fill in the **Label** and **Sharing Set Name** fields. **Label** is the sharing set label as it appears on the user interface. **Sharing Set Name** is the unique name used by the API.
4. Select the profiles of the users you want to have access.
5. Select the User object.
Target users can be other high-volume portal or community users or internal users.
6. In the Configure Access section, click **Set Up** or **Edit** next to the User object to configure access for the selected profiles, or click **Del** to remove access settings for an object.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To grant high-volume portal users access to records:

- "Customize Application"

7. Grant access based on an account or contact lookup:

- Select a value in the User drop-down list to determine the account or contact that's related to the user, either by a direct lookup or indirect lookup via an intermediate object.
- Select a value in the Target User drop-down list to determine the account or contact that's related to the target user, either by a direct lookup or indirect lookup via an intermediate object.

For example, to grant access to target users associated with another account identified on the user's account record, select *Account.Parent* and *Account* respectively.

 **Note:** Both selected fields must point to either an account or contact. For example, *Account.Parent* and *Contact.Account* both point to an account.

8. Choose an access level of *Read Only* or *Read/Write*. (If the User object's organization-wide sharing setting is Public Read Only, then only Read/Write is available.)

9. Click **Update**, then click **Save**.

Your settings apply to all of your organization's Customer Portals or sites.

 **Example:** The following example grants your portal users access to users whose contacts are related to the accounts identified on the portal users' managers records. In other words, the account field on the portal user's manager record must match the account field identified on the target user's contact

record.

1. Manager lookup on portal user
2. Account lookup on manager
3. Account lookup on contact
4. Contact lookup on target user

In this example, to grant access to the target users, you would select *Manager.Account* and *Contact.Account* in the User and Target User drop-down list respectively.

[Controlling Who Community or Portal Users Can See](#)
[Sharing Set Overview](#)

Sharing Records Owned by High-Volume Portal Users to Salesforce Users

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

High-volume portal users are limited-access portal users intended for organizations with many thousands to millions of portal users. Unlike other portal users, high-volume portal users don't have roles, which eliminates performance issues associated with role hierarchy calculations. Because high-volume portal users are not in the role hierarchy while Salesforce users are, a *share group* allows you to specify the Salesforce users who can access records owned by high-volume portal users. Each Customer Portal has its own share group.

To specify the Salesforce users who can access records owned by high-volume portal users:

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Click the name of a Customer Portal.
3. Click the Share Group Settings subtab.
4. Click **Activate** to turn on the share group.

Activating the share group can take a while. An email is sent to you when the process finishes.

 **Note:** Deactivating a share group removes *all* Salesforce users' access to records owned by high-volume portal users. An email isn't sent to you when the deactivation process finishes.

5. Click **Edit** to add Salesforce users to the share group:
 - a. From the **Search** drop-down list, select the type of member to add.
 - b. If you don't see the member you want to add, enter keywords in the search box and click **Find**.
 - c. Select members from the Available Members box, and click **Add** to add them to the group.
 - d. Click **Save**.

- "Customize Application"

Viewing Sharing Sets for High-Volume Portal Users

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Administrators can create sharing sets to grant high-volume portal users access to objects based on their profiles. To view detailed information about a sharing set:

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. In the Sharing Settings for High-Volume Portal Users related list, click the name of a sharing set.

The Sharing Set detail page shows the profiles included and the access granted to objects in the set. On this page, you can do any of the following:

- To edit the sharing set, click **Edit**.
- To remove the sharing set, click **Delete**.
- To view the details of an included profile, click its name.
- To change or remove access settings for an object, click the **Edit** or **Del** link next to the object name.

To create, edit, and delete profiles:	"Manage Profiles and Permission Sets"
To set default sharing access and sharing rules:	"Manage Sharing"
To enable Customer Portal users:	"Edit Self-Service Users"

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To grant high-volume portal users access to records:

- "Customize Application"

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

When setting up a Salesforce Customer Portal for the first time, configure the following before enabling users to access your portal:

1. Set up your portal as described in [Setting Up Your Customer Portal](#).
2. Assign Customer Portal profiles to a portal:
 - a. Select the name of a portal from the Customer Portal Setup page.
 - b. Click **Edit Profiles** in the Assigned Profiles section.
 - c. Select the `Active` checkbox next to the profile you want to assign to the portal.Portal users can only log into Customer Portals assigned to their profile. If you are [creating multiple portals](#), you must assign profiles to each portal you want users to access.
3. Set the organization-wide defaults in your organization's sharing model to Private on accounts, contacts, contracts, assets, and cases. This ensures that portal users can only view and edit data related to their accounts.

Tip: To maintain Public organization-wide default behavior for Salesforce users, while ensuring that portal users can only view and edit data related to their accounts, you can create self-referencing sharing rules of "All Internal Users" to "All Internal Users".

4. Optionally, set sharing rules for portal users (except for high-volume portal users). This lets you share records between portal users and Salesforce users or vice versa.

Note: If your organization uses sharing rules that share to Roles, Internal and Portal Subordinates, then update those sharing rules to share to Roles and Internal Subordinates instead. This is to help ensure that no records owned by a Salesforce user are accidentally shared with a portal user.

The Roles and Internal Subordinates data set category allows you to create sharing rules that include all users in a specified role plus all users in roles below that role, excluding any Customer Portal and partner portal roles.

You can easily convert sharing rules that include Roles, Internal and Portal Subordinates to include Roles and Internal Subordinates instead by using the Convert Portal User Access wizard. Furthermore, you can use this wizard to convert any publicly accessible report, dashboard, and document folders to folders that are accessible by all users except for portal users.

5. Verify that portal users are not added to any queues and are not included in any public groups added to queues. This is because portal users added to queues may be able to access records from accounts to which they are not related.
6. Optionally, add the Welcome component to home page layouts assigned to portal users.

The Welcome component allows portal users to receive a welcome message with their name, plus the ability to change their own portal username, password, locale, language, time zone, and contact information. For details, see [Setup Tips and Considerations for Customer Portal Pages](#) on page 2463.
7. Optionally, allow contacts to register themselves for access to your portal. See [Enable Customer Portal Login and Settings](#) on page 2444.

[About Customer Portal User Management](#)

[Administrator setup guide: Salesforce Customer Portal Implementation Guide](#)

Enable the Customer Portal for Contacts and Person Accounts

To allow a customer to access your Salesforce customer portal, enable the customer's contact or person account record as a customer user.

1. From a contact or person account detail page, click **Manage External User**, and then select **Enable Customer User**.
2. Verify the general information and locale settings, and enter any missing information. The customer's `Username` defaults to the customer's `Email`.
3. Select a portal user license. The user license that you choose determines the permission sets, user profile, and role hierarchy options that you can select for the customer user. See [Customer Portal User Licenses](#) on page 2471.
4. Select `Generate new password and notify user immediately` to email a customer portal username and password to the customer.

If your Salesforce org uses multiple customer portals, customer users can access all customer portals that are assigned to their profiles with a single username and password. See [Creating Multiple Customer Portals](#) on page 2442.
5. Click **Save**.
6. To troubleshoot or confirm the portal configuration, on the contact detail page, click **Manage External User**, and then choose **Log in to Portal as User**. A new browser window opens and logs you in to the portal as the partner user.

You can [deactivate customer users](#) as needed.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To enable customer users or to log in as a portal user:

- "Edit" on the account that's associated with the customer user
- AND
- "Edit Self-Service Users"

Roles Per Customer Portal Account

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can set the default number of roles for Customer Portal accounts. This benefits your customer portal by reducing the number of unused roles for Customer Portal accounts. You must have a Customer Portal enabled to use this functionality.

For example, if you currently have three roles created when an account is enabled for your Customer Portal, but only need one role for new accounts, you can reduce the number of roles to one. You can set up to three roles for Customer Portal accounts. The default number of roles for Customer Portal accounts is three.

To set the number of roles per Customer Portal account:

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Click **Set number of roles per Portal Account**.
3. Click **Edit**.
4. In the **Number of Roles** drop-down list, set your default number of roles per Customer Portal account.
5. Click **Save**.

The number of roles for existing portal accounts doesn't change with this setting.

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To set the number of roles per portal account:

- "Customize Application"

Disabling and Deactivating Portal Users

-  **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.
- Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

There are two ways in which you can remove a customer's access to your Salesforce Customer Portal or partner portal. As described in detail below, *disabling* a portal user is permanent, while *deactivating* a portal user is not:

Disabling a portal user

Disabling a portal user includes the following actions:

- Termination of the user's access to your portal
- Removal from all groups, teams, and sharing rules with which the user is associated.
- Permanent loss of the portal user's association with the contact

If you later re-enable a contact for portal access, a new portal user is created that is not related to the previous portal user record in any way.

- The `Role` on the portal user record is removed.
- For partner users, the partner user role becomes obsolete. As a result:
 - The user's data no longer rolls up to the partner account owner role
 - Opportunities owned by that user are removed from your organization's forecast hierarchy

-  **Note:** Before disabling a partner user, we recommend transferring opportunities owned by that user to an active user.

We recommend disabling a portal user if:

- A contact was accidentally enabled as a portal user
- The portal user is associated with a duplicate contact
- You do not want a contact to access the portal in the future

-  **Note:** Salesforce doesn't delete user records, including portal user records. While you can't re-enable a disabled portal user, you can view and update the record for a disabled user in Setup by entering `Users` in the `Quick Find` box, then selecting **Users**.

Deactivating a portal user

Deactivating a portal user prevents that user from logging into your portal and gives you the option to remove the user from any teams in which he or she is a member (for example, [case teams](#) and account teams). When you deactivate a portal user, the portal user record does *not* permanently lose its association with the contact. You can reactivate the portal user at any time.

-  **Note:** When a delegated external user admin deactivates a portal user, the admin doesn't have the option to remove the portal user from teams that user is a member of.

We recommend deactivating a portal user if you may reactivate the portal user in the future.

If a user on an account team has Read/Write access (**Account Access**, **Contact Access**, **Opportunity Access**, and **Case Access**) and is deactivated, the access will default to Read Only if the user is reactivated.

EDITIONS

Available in: Salesforce Classic

Customer Portal is available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer Editions**

Partner Portal is available in: **Enterprise**, **Performance**, and **Unlimited Editions**

USER PERMISSIONS

To disable or deactivate Customer Portal users:

- "Edit" on the account associated with the Customer Portal user
- AND
- "Edit Self-Service Users"

To disable or deactivate partner portal users:

- "Edit" on the account associated with the partner portal user

AND

"Manage External Users"

Disabling a Portal User

To disable a portal user:

1. On the contact detail page, click **Manage External User** and choose either **Disable Customer User** or **Disable Partner User**. On the account detail page of a person account, click **Manage External Account** and choose **Disable Customer Account**.

Person accounts are not available for the partner portal.

2. Click **OK**.

Deactivating a Portal User

To deactivate a portal user:

1. For the Customer Portal, click **Manage External User** and choose **View Customer User** on the contact or person account detail page. For the partner portal, click **Manage External User** and choose **View Partner User** on the contact detail page.

Person accounts are not available for the partner portal.

2. Click **Edit**, and deselect the `Active` checkbox.

To reactivate a portal user at any time, select the `Active` checkbox.

3. Click **Save**.

Note: You can't mass deactivate portal users.

Tips on Disabling and Deactivating Portal Users

Consider the following when disabling or deactivating portal users (*disabling* is permanent; *deactivating* is not):

- You can't delete an active portal user; you can only disable or deactivate his or her access to the portal.
- The following table describes whether you can delete contacts that are associated with portal users:

State of Portal User Associated to Contact	Can You Delete the Contact?
Active portal user	No. This is to ensure that the contact is available if you choose to reactivate the portal user.
Inactive portal user	No. This is to ensure that the contact is available if you choose to reactivate the portal user.
Disabled portal user	Yes. Deleted contacts are sent to the Recycle Bin.

- To delete a portal-enabled contact, first disable the portal user, then delete the contact.
- Cases associated with a portal user are not updated in any way when you disable or deactivate the portal user. For example, if a portal user owns a case, and the portal user is disabled, he or she remains the owner of the case until the case is updated with a new owner.
- Before you disable a partner user, we recommend that you transfer any opportunities owned by the user to another user who will remain active. This is because when you disable a partner user, any opportunities he or she owns are removed from your organization's forecast hierarchy (the partner user's role becomes obsolete).
- After you disable a portal user, it may take Salesforce up to ten seconds to disable the user. During that time, a portal user may still perform actions on a portal.

- You can remove the **Disable Customer User** and **Disable Partner User** buttons from contact page layouts at any time. Doing so would prevent users with the “Edit Self-Service Users” or “Manage External Users” permissions from disabling portal users.
- A disabled or deactivated portal user does not count against your organization’s available user licenses. However, disabling or deactivating a portal user does not reduce the number of licenses for which your organization is billed; you must change your organization’s license count to change your billing.
- To disable *all* portal users associated with an account and permanently delete all of the account’s portal roles and groups:
 - Click **Manage External Account** and choose **Disable Partner Account** on a partner portal account.
 - Click **Manage External Account** and choose **Disable Customer Account** on a Customer Portal account or Customer Portal person account.

You can remove the **Disable Customer Account** and **Disable Partner Account** buttons from account page layouts at any time. Doing so would prevent users with the “Edit Self-Service Users” or “Manage External Users” permissions from disabling portal accounts.

- When you disable a portal user or portal account, the change is tracked in the setup audit trail.
- Portal roles are not removed from disabled portal users associated with person accounts. However, you can remove the portal roles manually:
 1. From Setup, enter `Users` in the `Quick Find` box, then select **Users**.
 2. Select the name of a disabled portal user.
 3. Click **Edit**.
 4. Select `None` from the `Role` drop-down list.
 5. Click **Save**.

SEE ALSO:

[Enable the Customer Portal for Contacts and Person Accounts](#)

Disabling Customer Accounts

Disabling a customer account disables customer users associated with the account. We recommend disabling a customer account only if the account was accidentally enabled.

You can’t delete customer accounts, but you can disable them. Disabling the account permanently disables up to 100 external users associated with the account and removes them from all communities, groups, teams, permission sets, and sharing rules that they’re associated with. This includes both active and inactive external users, but excludes partner users associated with the account. Additionally, roles and groups associated with the account are permanently deleted and you won’t have the option to restore them from the Recycle Bin.

 **Note:** You can’t disable an account if there are more than 100 active or inactive external users associated with it. You must disable the users before disabling the account.

1. Go to the Account detail page for the account you want to disable.
2. Click **Manage External Account**, then click **Disable Customer Account**.
3. Click **OK** to confirm.

If you decide to re-enable the account in the future, you can re-enable individual contacts as Customer Portal users. Re-enabling a contact for a Customer Portal creates a new customer portal user record and role that is not associated with the previous customer portal user record and role. You can’t restore deleted roles and groups.

Editing Customer Portal User Information

USER PERMISSIONS

To manage Customer Portal users:	"Edit Self-Service Users"
To manage profiles and permission sets:	"Manage Profiles and Permission Sets"
To create, edit, and delete page layouts:	"Customize Application"
To set field-level security:	"Manage Profiles and Permission Sets" AND "Customize Application"
To set sharing rules:	"Manage Sharing"

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can edit Salesforce Customer Portal user information for contacts associated with accounts you have permission to access. To edit information for a Customer Portal user:

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Click **Edit** next to a user's name.
3. Change the necessary information and click **Save**.

Tips for Editing Customer Portal User Information

Consider the following when editing Customer Portal user information:

- Create a custom list view to display only Customer Portal users by filtering on the Customer Portal Manager and Customer Portal User license types. For example, use the criteria "License Type equals Customer Portal User, Customer Portal Manager."
- When generating a new password for a user, the new password is automatically sent to the user's email address and email verification is not enforced.
- When changing a user's email address to a new email address, email confirmation isn't enforced.
- Include the Customer Portal Welcome component on home page layouts assigned to Customer Portal users so that, upon logging in to the portal, they receive a welcome message with their name. From the component, a user can change their own portal username, password, locale, language, time zone, and contact information. When portal users change information about themselves, their user record is updated but their contact record is not automatically updated with those changes.

Resetting Customer Portal User Passwords

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

If a Salesforce Customer Portal user loses his or her password, the user can click the **Forgot your password?** link on the Customer Portal login page to have a new password emailed to him or her.

To reset a Customer Portal user's password:

1. From Setup, enter *Users* in the *Quick Find* box, then select **Users**.
2. Select the checkbox next to the user's name. Optionally, to change the passwords for all currently displayed users, check the box in the column header to select all rows.
3. Click **Reset Password**. The user receives an email that contains a link and instructions to reset the password.

 **Tip:** You can include the Customer Portal Welcome component on home page layouts assigned to Customer Portal users. Each Customer Portal user who logs in to your portal receives a welcome message with his or her name. The users can also change their own portal username, password, locale, language, time zone, and contact information. When portal users change information about themselves their user records are updated but their contact records aren't automatically updated with those changes.

USER PERMISSIONS

To reset Customer Portal users' passwords:

- "Edit Self-Service Users"

Delegating Customer Portal User Administration and Portal Super User

 **Note:** Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can delegate some administrative rights to Customer Portal users with the Customer Portal Manager Custom user license. Delegated external user administrators can do the following for external users, including both customer users and partner users, associated with their own account:

- Create new external users
- Edit existing external users
- Reset passwords for external users
- Deactivate existing external users

 **Note:** When a delegated external user admin deactivates a portal user, the admin doesn't have the option to remove the portal user from teams that user is a member of.

Delegated external user administrators can also view their account's detail page, along with contacts and cases related to their account via the Accounts tab. In addition, delegated external user administrators receive the "Portal Super User" permission. This permission lets delegated external user administrators do the following for their own account:

- View, edit, and transfer all cases
- Create cases for contacts
- View and edit all contacts, whether portal enabled or not
- View account details when they're the contact on a case
- Report on all contacts, whether portal enabled or not, if the Reports tab is added to your Customer Portal and the user has the "Run Reports" permission

You can add just the "Portal Super User" permission to the profiles of external users (except for high-volume portal users) so that they have access to their account and can view and edit all of its cases and contacts without having the ability to manage other external users. However, super users can't view the Contacts tab on the Customer Portal without the Delegated External User Administrator permission. To edit contacts, super users must select a contact from a case record. For more information, see:

- [Delegating External User Administration Rights](#)
- [Providing Users with the "Portal Super User" Permission](#)
- [Tips on Setting Up Delegated Customer Portal User Administration](#)

Delegating External User Administration Rights

 **Note:** You must use the original profile user interface to delegate administration rights for external users. If you're using the enhanced profile user interface, disable it temporarily in the User Interface settings to complete this procedure.

To delegate External User Administration Rights:

1. From Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles** and click a custom Customer Portal profile.

You can't add delegation rights or the "Portal Super User" permission to the standard Customer Portal Manager, Customer Portal User, or High Volume Customer Portal profiles.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To manage Customer Portal users:

- "Delegated External User Administrator"

To create, edit, and delete profiles:

- "Manage Profiles and Permission Sets"

To view and edit all cases and contacts for an account:

- "Portal Super User"

2. Click **Edit**.
3. Select **Delegated External User Administrator**.
When you select **Delegated External User Administrator**, the **Portal Super User** is automatically selected after you click **Save**.
4. Click **Save**.
5. In the Delegated External Users Profiles related list, click **Edit**.
6. Select the external user profiles you want users with this profile to be able to administer. An external user delegated administrator can manage external users with Customer Portal, partner portal, or Communities profiles, as long as the users with the profile are under the same account.
7. Click **Save**.

To change which profiles a delegated Customer Portal user administrator can edit:

1. From Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles** and click a custom Customer Portal profile.
2. Click **Edit** in the Delegated External User Profiles related list.
3. Select the external user profiles you want this profile to be able to administer.
4. Click **Save**.

Delegated Customer Portal administrators can perform the following tasks from a contact's detail page:

- Click **Enable Customer Portal User** to allow a contact to use a Customer Portal.
- Click **View Customer Portal User** to view the Customer Portal user's details. From a Customer Portal user's detail page, delegated Customer Portal users can:
 - Click **Edit** to edit a Customer Portal user's details.
 - Click **Reset Password** to reset the Customer Portal user's password.
 - Click **Edit** and deselect the **Active** checkbox to deactivate the user.

Providing Users with the "Portal Super User" Permission

To provide users with the "Portal Super User" permission:

1. From Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles** and click a custom Customer Portal profile.
You can't add the "Portal Super User" permission to the standard Customer Portal Manager, Customer Portal User, or High Volume Customer Portal profiles.
2. Click **Edit**.
3. Select **Portal Super User**.
4. Click **Save**.

 **Tip:** To report on profiles with the "Portal Super User" permission:

1. Note the names of profiles with the "Portal Super User" permission.
2. Select the Reports tab.
3. From the Administrative Reports folder, select the All Active Users report.

Tips on Setting Up Delegated Customer Portal User Administration

Consider the following when setting up delegated Customer Portal User Administration:

- On the profile of users you are granting delegated portal administration:
 - Add the “Create” and “Edit” permissions on contacts so that delegated portal administrators and users with the “Portal Super User” permission can create and update contacts related to their account.
 - Set the Accounts and Contacts tab settings to Default On so that delegated portal administrators can view the Accounts and Contacts tabs and easily manage contacts related to their accounts.
 - Add the Accounts and Contacts tabs to your Customer Portal.
 - Set field-level security and page layouts so that delegated Customer Portal user administrators and portal super users can only access the account, contact, and case fields you specify.
-  **Note:** To allow portal super users to create cases for contacts other than themselves, set the field-level security on the `Contact Name` field on cases to Editable.
- Customer Portal users are prevented from viewing related lists to objects they don't have access to. For example, if a Customer Portal user views a contact, and the contact page layout includes the Opportunities related list, the portal user can't view the Opportunities related list because portal users don't have access to opportunities.
 - Delegated Customer Portal user administrators can update portal users on any account to which they are transferred.

Customer Portal Health

Portal Health Check

Your customers and partners can access your information via portals in many ways. With portal health check reports, you can easily monitor this access. Portal health check reports show your security-related portal settings and provide information you can use to improve portal security.

Customer Portals and partner portals let you collaborate with and provide services to your customers and partners. With portals, you share and capture information from third-party users. To ensure that you don't expose more information than intended, it's important to follow best practices for portal implementation.

-  **Note:** Portal health check reports show sensitive user permissions, object permissions, and field permissions granted through profiles, as well as organization-wide sharing settings and sharing rules. Your portal users can also access records via the following means, which aren't included in portal health check reports.
- Permission sets
 - Manual sharing
 - Apex managed sharing
 - Territories
 - List views
 - Groups
 - Queues
 - Teams
 - Content libraries

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To view portal health check reports:

- “Customize Application”
- AND
- “Manage Users”
- AND
- “Modify All Data”

- Folders

To view portal health check reports, from Setup enter *Portal Health Check* in the **Quick Find** box, then select **Portal Health Check**. Lastly, click the report you want.

The following reports are included:

- Administrative and User Permissions
- Object Access and Field-Level Security
- Sharing Organization-Wide Defaults
- Sharing Rules

 **Note:** The portal health check reports don't include information for criteria-based sharing, high-volume portal users, or Self-Service portal users.

SEE ALSO:

[View the Object Access and Field-Level Security Report for Portal Users](#)

[View the Sharing Organization-Wide Defaults Report for Portal Users](#)

[View the Sharing Rules Report for Portal Users](#)

View the Administrative and User Permissions Report for Portal Users

User permissions are powerful, as they expand users' access to data. It's important to use caution when setting permissions for a profile. Use the Administrative and User Permissions report—one of the portal health check reports—to see portal profiles and their critical permission settings.

 **Note:** This report doesn't show permissions granted through permission sets.

For each profile, the report lists the number of portal users assigned to it and the following permission settings:

- Delegated External User Administrator
- Send Email
- Convert Leads
- Edit Events
- Edit Opportunity Product Sales Price
- Edit Tasks
- Transfer Cases
- Portal Super User
- API Enabled
- Password Never Expires
- Create Libraries
- View Content in Portals
- Export Reports
- Run Reports

 **Note:** Depending on your organization's settings, some permissions won't appear in the report.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To view portal health check reports:

To view this report:

1. From Setup, enter *Portal Health Check* in the **Quick Find** box, then select **Portal Health Check**.
2. Click **Administrative and User Permissions**.

From the report page, you can:

- View a profile detail page by clicking the profile name.
- Show a filtered list of items by selecting a predefined view from the drop-down list.
- Return to the list of reports by clicking **Back to list: Portal Health Check Reports**.

SEE ALSO:

[Portal Health Check](#)

View the Object Access and Field-Level Security Report for Portal Users

Object permissions specify the access that users have to standard and custom objects. It is important to monitor this information for portal user profiles to ensure that portal users have access to only the appropriate objects and fields. The Object Access and Field-Level Security report—one of the portal health check reports—allows you to do just that.

The Object Access and Field-Level Security report shows how many portal profiles can access each standard and custom object in your organization. For each object, it also lists the number of portal users with access, the object access level, and the fields that are visible to those users.

 **Note:** The Object Access and Field-Level Security report doesn't show permissions granted through permission sets.

To view this report:

1. From Setup, enter *Portal Health Check* in the **Quick Find** box, then select **Portal Health Check**.
2. Click **Object Access and Field-Level Security**.
3. From the report page, click an object name.

On the object detail page, you can:

- View a profile detail page by clicking the profile name.
- View a profile's field-level security detail page by clicking **visible fields**.
- Return to the high-level object access and field-level security report by clicking **Object Access and Field-Level Security**.

From both report pages, you can:

- Show a filtered list of items by selecting a predefined view from the drop-down list.
- Return to the list of reports by clicking **Back to list: Portal Health Check Reports**.

To view portal health check reports:

- “Customize Application”
AND
“Manage Users”
AND
“Modify All Data”

View the Sharing Organization-Wide Defaults Report for Portal Users

The Sharing Organization-Wide Defaults report—one of the portal health check reports—lists standard and custom objects and the default access setting for each object. You can use this report to review and edit the organization-wide default settings that expose records to portal users.

Organization-wide default settings specify each object's default access level for users in your organization. If an object's default access level is Public, users with enabled object permissions ("Read," "Create," "Edit," or "Delete") may be able to access records that they don't own. For example, if the default access setting for the account object is Public Read/Write, then any user with the "Read" permission on the account object can view any account record. When setting organization-wide defaults, you want to make sure you don't let portal users see objects they shouldn't access.

To view this report:

1. From Setup, enter *Portal Health Check* in the **Quick Find** box, then select **Portal Health Check**.
2. Click **Sharing Organization-Wide Defaults**.

The report lists the default access setting for each object. If an object's default access is Public, Show Details (for calendar), or Use (for price book), portal users with object permissions can access other users' records. In this case, the Security column indicates a weak organization-wide default setting. You can view the specific object permissions granted to portal profiles in the [Object Access and Field-Level Security report](#).

If the object's default access is Private, Hide Details (for calendar), or No Access (for price book), the Security column indicates a strong organization-wide default setting.

 **Note:** Even with a strong organization-wide default setting, portal users may have access to other users' records through exceptions such as sharing rules.

If **Grant Access Using Hierarchies** is checked, any user above a record owner in a territory or role hierarchy can access the owner's records for that object.

From the report page, you can:

- Change the organization-wide sharing settings for any object by clicking **Edit**, then changing the settings on the Organization-Wide Sharing Defaults Edit page.
- Show a filtered list of items by selecting a predefined view from the drop-down list.
- Return to the list of reports by clicking **Back to list: Portal Health Check Reports**.

Available in: both Salesforce Classic and Lightning Experience

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To view portal health check reports:

- "Customize Application"
- AND
- "Manage Users"
- AND
- "Modify All Data"

To set default sharing access:

- "Manage Sharing"

View the Sharing Rules Report for Portal Users

The Sharing Rules report—one of the portal health check reports—lists all sharing rules that give portal users access to records they don't own. It shows how many portal users can access records as a result of each sharing rule, and lets you edit access levels for each rule. For some user sets (like groups, roles, and territories), you can drill down to detail pages, and edit, delete, or manage the users in the set.

To view this report:

1. From Setup, enter *Portal Health Check* in the **Quick Find** box, then select **Portal Health Check**.
2. Click **Sharing Rules**.

The Number of Portal Users Affected column shows the number of portal users who can get access as a result of the sharing rule. This number includes users specified in the rule and, if **Grant Access Using Hierarchies** is enabled for the object, any portal users above them in the role or territory hierarchy. If any users in this set have enabled object permissions (“Read,” “Create,” “Edit,” or “Delete”), they can access records exposed by the rule.

Note:

- The Sharing Rules report doesn't include criteria-based sharing rules.
- The Sharing Rules report doesn't check portal users' object permissions. You can view the specific object permissions granted to portal profiles in the [Object Access and Field-Level Security report](#).

From the report page, you can:

- Change the access level in a sharing rule by clicking **Edit**, then changing the settings on the sharing rule edit page.
- View the details of a user set in a sharing rule by clicking the link in the Owned By or Shared With column.
- Show a filtered list of items by selecting a predefined view from the drop-down list.
- Return to the list of reports by clicking **Back to list: Portal Health Check Reports**.

Note: Account and account territory sharing rules can grant access to contacts, opportunities, and cases associated with the shared accounts. The Sharing Rules report shows access levels only for top-level objects, not associated objects.

Self-Service Portal

Self-Service Jump Start

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Get your Self-Service portal running quickly using the **Jump Start** button. It automates the setup process by choosing some default settings for you.

 **Note:** You can't save any JavaScript as part of your custom code, and [can only use certain HTML elements and attributes](#).

1. From Setup, enter *Self-Service Portal* in the **Quick Find** box, select **Settings**, then click **Jump Start**.
 2. Review the process and click **Continue**.
 3. Choose a color theme.
 4. Edit the default settings as needed and click **Save**.
 5. Test your Self-Service portal by:
 - a. Clicking **Generate** to retrieve a test username and password.
 - b. Clicking **Access Self-Service Portal** to preview your pages.
 - c. Optionally, click **Invite** to notify other users how to log in and preview your pages.
 6. Enable your Self-Service portal by copying the link provided in the **Enable Self-Service...** section to an appropriate place on your website.
 7. Click **Done** when finished.
 8. Enable your customers to use your Self-Service portal. See [Managing Self-Service Users](#) on page 2517.
-  **Tip:** To make changes to your settings, see [Enable Self-Service Features and Settings](#) on page 2497. The Self-Service Jump Start automatically enables the **Enable Self-Service** button on contact detail pages.

Enable Self-Service Features and Settings

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

1. From Setup, enter *Self Service Portal* in the *Quick Find* box, then select **Settings**.
2. Click **Self-Service Setup** on the Self-Service Settings page.
3. Set the following options:

Setting	Description
Login Enabled	Allows users to log into the Self-Service portal.
Edit Self-Service Users	Displays the Enable Self-Service button on contact detail pages. Or, for contacts in which Self-Service is already enabled, the View Self-Service button displays.
Logout URL	The URL of the web page that will be displayed when users log out of the Self-Service portal, for example, <code>http://www.acme.com</code> . If a logout URL is not specified, the Logout button does not display to users.
Default Case Origin	The default origin assigned to all cases submitted via the Self-Service portal. Available values are taken from your organization's <i>Case Origin</i> picklist. You can assign different default origins for cases submitted via Self-Service and Web-to-Case.
New Cases Visible in Portal	Automatically selects the <i>Visible in Self-Service Portal</i> checkbox for all new cases, including cases created via Web-to-Case, Email-to-Case, and On-Demand Email-to-Case. Regardless of this default, users creating new cases can manually set the <i>Visible in Self-Service Portal</i> checkbox.
Enable Solution Browsing	Enables solution categories in the Self-Service portal so that customers can browse solutions by category. If multilingual solutions is enabled, you can translate solution categories.
Top-Level Category for Self-Service Portal	The top-level category accessible by customers in the Self-Service portal. Customers can view all solutions marked

USER PERMISSIONS

To set up the Self-Service portal:

- "Manage Self-Service Portal"

To modify Self-Service pages:

- "Manage Self-Service Portal"

AND

"Customize Application"

Setting	Description
	<p>Visible in Self-Service Portal in this category and its subcategories.</p> <p>Leave this blank to let customers view all solutions marked Visible in Self-Service Portal in all categories.</p>
Case Record Type	The record type to assign to any case submitted via the Self-Service portal.
"From" Email Address	<p>The email address from which all new user and password emails will be sent, for example, support@acme.com. When this field is blank, Salesforce uses:</p> <ul style="list-style-type: none"> The Automated Case User's email address for users who receive an email with a temporary password by clicking Forgot your password? on the Login Page of the Self-Service portal. The Automated Case User is specified on the Support Settings page in Setup. The email address of the user who last posted a comment for users who receive a case comment notification email.
"From" Email Name	<p>The name that will be associated with the "From" Email Address, for example, "Acme Customer Support." When this field is blank, Salesforce uses:</p> <ul style="list-style-type: none"> Your organization's name for users who receive an email with a temporary password by clicking Forgot your password? on the Login Page of the Self-Service portal. The name of the user who last posted a comment for users who receive a case comment notification email.
New User Template	The email template used to send a username and initial password to all newly-enabled Self-Service users. Self-Service automatically selects a sample template for you, but you can modify the sample or create your own email template. This template must be marked as "Available for Use."
New Password Template	The email template used to send a new password to existing Self-Service users when you reset their passwords or when they reset their own passwords by clicking Forgot your password? on the Login Page of the Self-Service portal. Self-Service automatically selects a sample template for you, but you can modify the sample or create your own email template. This template must be marked as "Available for Use."
Enable Notification Email on New Case Comment	<p>When selected, indicates that the Send Customer Notification option on a case comment is displayed.</p> <p>Even if this checkbox is not selected, the Send Customer Notification option still displays on cases if you have enabled email notifications to contacts who are not members</p>

Setting	Description
	of your Self-Service portal. See Customize Support Settings on page 2723.
New Comment Template	The email template used to send a notification to Self-Service users when a public comment is added to one of their cases. Self-Service automatically selects a sample template for you, but you can modify the sample or create your own email template. This template must be marked as "Available for Use." Note that case owners are sent a separate notification that you can't customize.
Enable Case Auto-Response Rules for Self-Service Cases	Indicates if cases submitted through your Self-Service portal will trigger your auto-response rules.
Case Creation Template	The email template to use when cases submitted through your Self-Service portal do not match any auto-response rules.
Maximum Page Width	The maximum pixel width of the Self-Service pages from Salesforce. If hosting the portal yourself, this is the width of the inner HTML frame on your Self-Service login page.
Minimum Page Height	The minimum pixel height of the Self-Service pages from Salesforce.
Style Sheet URL	The complete, publicly accessible URL of your organization's Self-Service style sheet, for example, "http://www.acme.com/styles/selfservice.css." See Customizing Your Self-Service Look and Feel on page 2500. If you use a predefined color theme, leave this field blank.
Color Theme	Use one of Salesforce's color themes if you do not have your own style sheet to use. Click the View link to see template settings. To change the fonts and colors of one of Salesforce's color themes, see Customizing Your Self-Service Fonts and Colors on page 2501.
Case Single Term	Term used on the Self-Service portal instead of "case" (singular form).
Case Plural Term	Term used on the Self-Service portal instead of "cases" (plural form).
Solution Single Term	Term used on the Self-Service portal instead of "solution" (singular form).
Solution Plural Term	Term used on the Self-Service portal instead of "solutions" (plural form).

4. Click **Save** to save your Self-Service settings.

AND

"Customize Application"

Customizing Your Self-Service Fonts and Colors

-  **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

You can customize the fonts and colors of the Self-Service portal to reflect your company's branding. Your portal's fonts and colors are specified in a portal "color theme." Select a predefined color theme and customize it using a point-and-click editor.

1. From Setup, enter *Fonts and Colors* in the **Quick Find** box, then select **Fonts and Colors**. Salesforce offers predefined themes that you can customize. Click **Preview** to view any theme.

2. Select the color theme you want to customize.

From the color theme page, you can:

- Click the **Reset to Default** link to remove all customizations from a theme.
- Click the **Back to All Themes** link to return to the list of color themes.
- Click **Preview** *Theme Name* to view the theme you are customizing.

3. Choose a portal page to customize. Color themes are customized page-by-page with some page elements being shared by multiple pages.

From the portal page, you can:

- Click **See Examples** to see all of the elements that you can customize.
- Click **Clear** next to an element to remove customizations.
- Click **Preview** *Theme Name* to view the theme you are customizing.
- Click the **Back to All Pages** link to return to the list of all portal pages.

4. Click **Edit** next to the visual element you want to customize. Some elements are visible only on the selected portal page, and some are shared across multiple portal pages. Changes you make to shared elements affect all pages.

-  **Note:** Depending on the visual element, you can customize attributes using a point-and-click editor or a custom style sheet editor which lets you modify the cascading style sheets (CSS) directly. Choose the [click here](#) link to switch between the two. If you are using the point-and-click editor, select the Show advanced attributes box to access the [click here](#) link. We recommend that only users familiar with cascading style sheets (CSS) define them.

5. Edit the visual element as desired.

If you are using the point-and-click editor:

- Click **Edit** next to a basic or advanced attribute. If you do not see the advanced attributes, select the **Show advanced attributes** box.
- In the popup window, change the attribute as needed.
- Click **OK** to confirm your changes in the popup window.

If you are using the custom style sheet editor, enter valid CSS code.

For a list of all the page attributes you can edit, see [Self-Service Page Attributes](#) on page 2514.

6. Click **Save** to save all changes to the visual element and its attributes. Customizations are not visible to your Self-Service users until you set the color theme as active.

7. Repeat these steps to customize all visual elements and their attributes as necessary.

8. Return to the list of color themes by clicking the **Back to All Pages** link and then the **Back to All Themes** link.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

USER PERMISSIONS

To set up the Self-Service portal:

- "Manage Self-Service Portal"

To modify Self-Service pages:

- "Manage Self-Service Portal"

AND

"Customize Application"

9. Click **Set Active Theme**.

10. Select the theme to activate for your portal, live and in real-time. Your organization can only have one active theme.

11. Click **Save**.

 **Note:** Since changes to an active theme take effect immediately, we recommend that you fully customize a theme before activating it so as not to disturb your customers.

Preparation for Setting Up Your Portal

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Before setting up your [Self-Service portal](#) or your [Salesforce Customer Portal](#):

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To modify Self-Service pages:

- "Manage Self-Service Portal"
- AND
- "Customize Application"

- **Build your public solutions** - Review and mark your solutions as `Visible in Self-Service Portal`. Only solutions marked `Visible in Self-Service Portal` can appear in the Self-Service portal or the Customer Portal. For your Self-Service portal only, identify the top five solutions you want to feature on the Home Page.
- **Determine the information to show and collect** - Decide which case fields will be available when users view their cases. You should also decide which fields should be required when users submit cases online and which picklist values users can select when they solve their own cases with suggested solutions. (See [Case Fields](#) on page 2249.)
- **Designate the portal's location** - Choose where to add your portal's login URL on your corporate website. To locate the login URL for your Self-Service portal, see [Generating Login HTML](#); to locate the login URL for your Customer Portal, see [Enable Customer Portal Login and Settings](#) on page 2444.
- **Customize your portal communication templates** - Decide which email templates to send to users to communicate a variety of information, such as reset passwords, notifications when public comments are added to cases, and case auto-responses with suggested solutions.
- **Customize and distribute the portal tip sheet** - Download the [Using the Self-Service Portal and Customer Portal](#) tip sheet and edit it to match your portal's branding and features, such as suggested solutions and the ability to attach files to submitted cases. Then distribute the document to your customers who want to learn how to answer their own inquiries using your portal.

[Customize the Self-Service Style Sheet](#)

Customize the Self-Service Style Sheet

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Select a predefined color theme, or download a sample Self-Service color theme so you can customize it. This color theme allows you to incorporate your organization's branding into your Self-Service portal.

 **Note:** To customize the Self-Service color theme using a point-and-click editor, see [Customizing Your Self-Service Fonts and Colors](#) on page 2501.

1. From Setup, enter `Self-Service Portal` in the `Quick Find` box, then select **Settings**.
2. Click **Self-Service Setup**.
3. Click the **View Color Theme Options** link in the page settings section.
4. Find a set of fonts and colors you like and click **Download This Color Theme**.
To use a predefined color theme without customizing it, simply click **Select This Color Theme**.
5. Save the color theme you downloaded and give it to your webmaster if it needs more customization. The downloaded color theme is a CSS style sheet that your webmaster can edit.
6. Store the downloaded style sheet in a publicly accessible location and enter the URL for your style sheet in the `Style Sheet URL` field.
7. Click **Save**.

USER PERMISSIONS

To modify Self-Service pages:

- "Manage Self-Service Portal"
- AND
- "Customize Application"

Customize the Self-Service Portal Log a Case Page

The Log a Case Page on the Self-Service portal lets users submit new cases to your customer support team. Customize the page by creating a page message, adding merge fields, and choosing the case fields you want to include.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

New cases submitted from this page are automatically created in Self-Service and assigned to the support representative or queue defined by your case assignment rules.

1. From Setup, enter *Self-Service Portal* in the **Quick Find** box, then select **Settings**.
2. In the Portal Pages list, click **Edit** next to Log a Case Page.
3. Select the **Show Log a Case Page** checkbox.
4. Select **Show Message** to display a message on this page.
5. If you enabled a page message, enter it in the text box, using the formatting toolbar to change the size, color, or font.
Select **Show HTML** to view and edit your page message in HTML. You can't save any JavaScript as part of your custom code, and [can only use certain HTML elements and attributes](#).
6. Optionally, insert merge fields for data that you want to replace dynamically.
7. Click **Save**.
8. To change the fields that display on the page, click the **Page Layout** link.

 **Note:** If a case field is tied to a validation rule, the rule can prevent Self-Service portal users from logging a case if they do not have access to fill in that field. Consider making those fields visible on the Log A Case page.

9. Click **Save** at any time to finish.
10. To see how your Log a Case Page will look, click **Preview** next to Log a Case Page in the Portal Pages list. If you have customized the Self-Service style sheet, the preview shows your custom styles.

USER PERMISSIONS

To modify Self-Service pages:

- "Manage Self-Service Portal"
- AND
- "Customize Application"

Customize the View Cases Page

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

You can enable and customize the View Cases Page from the Self-Service Portal Pages related list. The View Cases Page allows users to view their open and closed cases, related solutions, completed activities, comments, and (optionally) to add comments to their cases.

1. Click **Edit** on the View Cases Page line.
2. Select the `Show View Cases Page` box to allow users to view their open and closed cases.
3. Select `Add Comments to Cases` to allow users to add comments to their cases. When a user adds a comment, an email is automatically sent to the case owner.
4. Select `Add Attachments to Cases` to allow users to upload files to their cases. When a user adds an attachment, an email is automatically sent to the case owner.

When editing the page layout for the View Cases Page, add the Case Attachments related list to allow Self-Service users to view the files they've added to their cases. Be aware that this related list also shows any files that support reps have added to the case.

5. Check `Show Message` to display a message on this page.
6. If you enabled the message, enter your message in the text box, using the formatting toolbar to format the size, color, or font.

Optionally, check `Show HTML` to view your page message in HTML code. You can't save any JavaScript as part of your custom code, and [can only use certain HTML elements and attributes](#).

7. Optionally, insert any merge fields for data that you want to replace dynamically.
8. Click **Save**.
9. To change the fields and related lists that display on the page, click the **Page Layout** link.

Add the Case Activities related list to allow Self-Service users to view public, completed activities related to their cases. You also need to set field-level security to visible for the `Visible in Self-Service Portal` checkbox on activity page layouts so support reps will be able to display or hide completed activities in the Self-Service portal by clicking `Make Public` or `Make Private` in the case's Activity History related list.

10. Click **Save** at any time to finish.
11. To see how your View Cases Page will look, click **Preview** on the View Cases Page line. If you have customized the Self-Service style sheet, the preview shows your custom styles.

 **Tip:** To hide specific cases from users in the portal, you can deselect the `Visible in Self-Service Portal` checkbox on the case.

 **Note:** View Cases pages list cases in descending order via the `Case Number` field. Portal users cannot change this order; nor can they sort case columns in the Self-Service portal.

Customize the Suggested Solutions Page

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

You can enable and customize the Suggested Solutions Page from the Self-Service Portal Pages related list. The Suggested Solutions Page displays up to ten relevant solutions that may help users solve a particular case. When submitting a case or viewing cases in the Self-Service portal, users can view suggested solutions and close their cases themselves.

To customize the Suggested Solutions Page:

1. Click **Edit** on the Suggested Solutions Page line.
2. Select `Show Suggested Solutions Page` to enable the page in the Self-Service portal.
3. Select a `Self-Closed Case Status` to show in the `Status` field for cases closed by Self-Service users. You must select at least one "Closed" value for this field.
4. Choose the maximum number of suggested solutions to display to users at one time. You can show a maximum of ten.
5. Select the `Self-Closed Case Reasons` that Self-Service users can choose from when they self-close their cases.
6. Check `Show Message` to display a message on this page.
7. If you enabled the message, enter your message in the text box, using the formatting toolbar to format the size, color, or font.

Optionally, check `Show HTML` to view your page message in HTML code.

You can't save any JavaScript as part of your custom code, and [can only use certain HTML elements and attributes](#).
8. Optionally, insert any merge fields for data that you want to replace dynamically..
9. Click **Save**.
10. To see how your Suggested Solutions Page will look, click **Preview** on the Suggested Solutions Page line. If you have customized the Self-Service style sheet, the preview shows your custom styles.

Self-Service Page Attributes

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

The following is a list of Self-Service page attributes which can be modified with the point-and-click editor:

Page Attribute	Description
Color	The color of the text.
Bold	The bolded value of the text. For example, whether the text is bolded or not.
Font size	The size of the text.
Font	A specific style of type in which letters are displayed.
Font Family	A prioritized list of font family names for an element. Web browsers use the first font value recognized.
Underline	The underline value of the text. For example, whether the text is underlined or not.
Border Color	The color of a border.
Border Style	The style of a border, such as dotted, dashed, or solid.
Border Width	The width of a border.
Bottom Border Width	The width of a bottom border.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To set up the Self-Service portal:

- "Manage Self-Service Portal"

To modify Self-Service pages:

- "Manage Self-Service Portal"
- AND
- "Customize Application"

Page Attribute	Description
Padding	The amount of space between the border and the element.
Padding Top	The amount of space to put between the top border and the element.
Padding Right	The amount of space to put between the right border and the element.
Padding Left	The amount of space to put between the left border and the element.
Padding Bottom	The amount of space to put between the bottom border and the element.
Height	The height of the element.
Line Height	The height of a line.
Background Color	The background color of the element.
Background Repeat	The format in which the background image displays. For example, whether the image displays repeatedly in a horizontal or vertical format.
Background Image	The background image of the element. The relative or absolute URL which hosts the image must be inside the surrounding URL() syntax. For example, <code>url (/sserv/img/tabBg_gray.gif)</code> .

Generating Login HTML

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

After enabling and customizing your Self-Service portal, generate the URL or HTML code where users will log in to your Self-Service portal.

1. From Setup, enter *Self-Service Portal* in the **Quick Find** box, then select **Settings**.
2. Click **Generate Login HTML**.
3. Insert the URL or HTML code provided into your portal's Web page.
4. Click **Finished** to return to the Self-Service Settings page.

 **Note:** You can't be logged into Salesforce and the Self-Service portal at the same time, with the same browser. For example, if you log into Salesforce and then the Self-Service portal using the same browser, your Salesforce session becomes invalid. Conversely, if you log into the Self-Service portal and then Salesforce using the same browser, your Self-Service portal session becomes invalid.

[Setting Up Self-Service](#)

Using the Portals Tab

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

The Portals Tab is where you set up an online support channel for your Self-Service customers - allowing them to resolve their inquiries without contacting a customer service representative.

Clicking on the Portals tab displays the portals home page. From there, you can:

- View your customer Self-Service portal home page.
- Click on your Self-Service portal pages to see how your customers will interact with them.
- Under **Reports**, click any report name to jump to that report.
- Select any of the links under **Tools** to access utilities for managing your Self-Service portal and Self-Service users.

 **Note:** The Portals tab does not include the Customer Portal.

Managing Self-Service Users

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

Manage your Self-Service user information from a single place and make changes to more than one user at a time. Before your customers can take advantage of the Self-Service portal, you must enable Self-Service access for each contact. You can enable access for one contact at a time from the Contacts tab or for multiple contacts via the Self-Service setup pages.

- To enable Self-Service users individually from the Contacts tab, select a contact and click **Enable Self-Service** on the contact's detail page.
- To enable multiple Self-Service users at once, see [Enabling Multiple Self-Service Users](#) on page 2517.
- To change Self-Service user information, see [Editing Self-Service User Information](#) on page 2518.
- To reset Self-Service user passwords, see [Resetting Self-Service User Passwords](#) on page 2518.

[Setting Up Self-Service](#)

Enabling Multiple Self-Service Users

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

You can perform mass actions for Self-Service user management such as enabling Self-Service access for many contacts at once. Each contact must have an email address and must be associated with an account to be a Self-Service user.

To enable new users for your Self-Service portal:

1. From Setup, enter `users` in the `Quick Find` box, then select **Users**.
2. Click **Enable New User(s)**.
3. Enter search criteria to compile a list of the contacts you want to enable and click **Search**.
4. Select the contacts you want to enable and click **Next**.
5. Modify Self-Service user information as necessary.
6. Select the `Super User` checkbox to enable the contact as a Self-Service super user who can view case information, add comments, and upload attachments for all cases submitted by anyone in his or her company.
7. Click **Save**.

Zones for Salesforce Communities and Customer Portals

Using Zones to Organize Communities

 **Note:** Starting with the Summer '13 release, Chatter Answers and Ideas “communities” have been renamed to “zones.”

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions. Zones are shared by the Ideas, Answers, and Chatter Answers applications, allowing you to view and create zones from those locations. Professional Edition organizations can have only one internal zone. All other editions can have up to 50 zones shared between Ideas, Answers, and Chatter Answers.

 **Note:** If you need more than 50 zones, contact Salesforce.

You can display a zone to the following types of users:

- Salesforce Communities users.
- Public users (requires setting up a Force.com site).
- Internal Salesforce users. Salesforce users can access all zones regardless of whether the community is internal-only or displayed in a portal.
- Customer Portal or partner portal users.
- Salesforce console users.

 **Note:** You cannot use Salesforce sharing rules to restrict access to zones. When you create a zone, you can restrict access by selecting the portal where the zone should appear. Only the users assigned to that portal (and internal Salesforce users) will be able to access that unless you expose it publicly using Force.com sites.

Users will see zones, search results, and content that are associated with the context defined by their user profile:

- Community users see the zones associated with the community they're signed in to.
- Internal users with permission to see Ideas can see all internal-only zones in the organization. If internal users sign in to a community, they see only those zones associated with that community.
- Internal users with permission to see Chatter Answers can see all internal-only zones for the organization in the Q&A tab. If internal users sign in to a community, they see only those zones associated with that community.
- Portal users can see the zones associated with their portal.
- Portal users with access to both a portal and a community can see the zones associated with the portal or community that they are currently signed in to.
- Users who are accessing the portal or community through an API can access all zones that they have access to in all contexts.
- Global searches in the internal application performed by internal users return results from all ideas that are available within the organization. Searches performed by all other users in Salesforce Communities return results from the ideas that are available within the community.

- “Customize Application”

Creating and Editing Zones

Zones are shared by the Ideas, Answers, and Chatter Answers applications, allowing you to view and create zones from those locations. Answers can only have one zone displayed at a time. Supported editions allow up to 50 zones per organization.

To create a new zone or edit the details of an existing zone:

1. From Setup, enter *zones* in the **Quick Find** box, then select **Zones** under **Answers**, **Ideas Zones**, or **Chatter Answers Zones**.
2. Click **Edit** next to the zone you want to change or **New** to create a new zone.
3. Enter a unique name for your zone that clearly identifies the zone's purpose.
4. Optionally, enter a description in plain text. HTML and other markup languages are not supported.
5. Select the **Active** checkbox to display the zone to your community.

You can't delete zones, so if you need to hide a zone, make sure **Active** isn't selected. All active zones are automatically available from the Ideas tab, but you can only assign one active zone to Answers.

6. Select the **Username Format** to specify how usernames appear in posted questions and answers throughout the zone. Chatter Answers uses the Username Format for questions and answers only. Ideas uses the Nickname for usernames within a community rather than the Username Format within in a zone.

 **Note:** For Chatter Answers, first names are used for users in the Customer Support Agents Group even if Nickname is selected as the Username Format for the zone.

7. Specify where you want this zone displayed.

- **Community** lets you select a community in which to display the zone. For Chatter Answers only, you can also select **Visible Without Authentication** to allow guest users to view activity within the zone through the community without signing in.
- **Internal Only** displays the zone to internal users only. Portal and Salesforce Communities members can't see internal zones.
- **Portal** lets you select from a list of existing portals.

To make a zone publicly available, you must select the Customer Portal that you plan to expose publicly using Force.com sites. Chatter Answers is supported on Force.com sites. Answers isn't supported on Force.com sites.

 **Note:** If you re-assign a zone to another community, the items associated with that zone move to the new community, as well. Users who are logged in to the original community can't view the items that have been moved to the new community, including from the Recent Items section of the sidebar column. If the zone is moved back to the original community, the ability to view those items is restored.

8. To set up zones for Chatter Answers, follow these steps:

- a. Select **Enable for Chatter Answers** to associate the zone with Chatter Answers.
- b. Select **Enable Private Questions** to let customers post their questions privately to customer support (create cases). If you don't select this setting, support agents can still initiate private communications with customers.
- c. In **Visualforce Page That Hosts Your Zone's Feeds**, click  and choose the Visualforce page on which questions, replies, and knowledge articles display.

EDITIONS

Available in: Salesforce Classic

Ideas zones available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Answers zones available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

Chatter Answers zones available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To create or edit a zone:

- "Customize Application"

The page you choose must include either the `chatteranswers:allfeeds` component or a combination of the following components: `chatteranswers:aboutme`, `chatteranswers:guestsignin`, `chatteranswers:feedfilter`, `chatteranswers:feeds`, `chatteranswers:searchask`, `chatteranswers:datacategoryfilter` so that the zone is linked to your Force.com site correctly. If you don't choose a Visualforce page, one is automatically generated when you save your zone. The generated page includes your zone's ID so that topics, questions, and replies are associated with your specific zone and can display on it. The page is named after your zone with a suffix of "_main," for example, `ZoneName_main`. The page also includes a language attribute that matches your organization's default language.

You can use the `NoSignIn` Boolean attribute in the `chatteranswers:allfeeds`, `chatteranswers:aboutme`, `chatteranswers:feeds` or `chatteranswers:searchask` components to remove all sign-in links from your zone. Use this option when you have an external sign-in path and want to ensure that your users follow it instead of the standard Chatter Answers sign-in. When the `NoSignIn` Boolean attribute is `true`, users can still search and view publicly accessible content for the zone. If they already have a valid session, they can still post questions, replies, vote, and flag content.

- d. In **Site That Hosts Your Zone**, click  and choose the Force.com site on which you want to host the zone.
 - If you associated the zone with a portal, you can enter a Force.com site domain.
 - If you associated the zone with a Salesforce Community that does not require authentication for users to view zone activity, we populate the Force.com site domain for you.
 - e. Optionally, in **Email Notification URL**, customize the URL that's included in email notifications sent from the zone.

The email notification URL is generated automatically to be adapted to the visibility settings of the zone, but it can be modified to fit specific needs or use cases. If you have a customized login page, enter its URL. For example, if you've created a login page from which users can access multiple zones, you can customize **Email Notification URL** to redirect users to that page from email notifications.

 **Note:** If you have an existing URL for email notifications for an internal zone and subsequently set up a custom domain using My Domain, you must manually update the Email Notification URL. To update the URL, clear the existing URL so that the field is blank. Save the page, and the system populates the field with the new My Domain URL.
 - f. In **Customer Support Agents Group**, select the public group of users who will act as support agents for the zone. These users will have a headset icon next to their username in the zone.
 - g. Optionally, in **Header** or **Footer**, click  and choose a text or HTML file that incorporates your organization's branding into the headers or footers of email notifications sent from the zone.

You can only choose a file that has been uploaded to a publicly accessible folder on the Documents tab and marked **Externally Available Image**. The files you include in the fields can have a combined size of up to 10 KB.
 - h. Select the data categories that you want exposed to the zone from the list of pre-defined data categories.
9. To set up Ideas for the zone, use the **Experts group** field to select the public group of experts who will monitor the zone for Ideas.
 10. Click **Save**.

Answers Communities

Setting Up Answers

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

To set up answers:

1. [Enable answers and set the default zone](#).
2. [Create a category group](#) for answers and [add data categories](#) to the category group.

 **Note:** Even though you can create up to five hierarchy levels of categories in a category group, only the first level of categories is supported in your answers community. Child categories below the first level are not displayed in the community, and community members can't assign these child categories to questions.
3. [Assign the data categories to your answers community](#).
4. [Review the category group visibility settings](#) to decide how you want to restrict access to categories and categorized questions in the answers community.
5. Using roles, permission sets, or profiles:
 - a. [Customize data category group visibility](#).
 - b. (Optional) [Designate default category group visibility](#) for users without visibility through roles, permission sets, or profiles.
6. (Optional) To allow community members who work with cases to [escalate an unanswered or problematic question to a new case](#):
 - a. From the object management settings for cases, go to Page Layouts. Then edit the case page layouts to include the `Question` field.
 - b. From the object management settings for cases, go to Fields. Then ensure that field-level security for the `Question` field makes the field visible in the necessary profiles.

Only community members who have permission to create cases will see an **Escalate to Case** option on questions.
7. (Optional) If your organization uses Salesforce Knowledge, users can convert particularly helpful replies into articles in the knowledge base. From Setup, enter *Knowledge Settings* in the Quick Find box, then select **Knowledge Settings** and ensure that `Allow users to create an article from a reply` is checked.
8. (Optional) Create validation rules for questions and replies to prevent offensive language from being posted to the answers community. To create validation rules, from the object management settings for Chatter Answers question and Chatter Answers reply, go to Validation Rules.
9. (Optional) Create workflow rules for questions. For example, you may want to create a workflow rule that sends the community administrator an email whenever a question has ten or more replies but no best answer. Questions do not support approval processes or workflow tasks.
10. (Optional) Create reports for your answers community.
11. (Optional) [Enable answers in your Customer Portal](#) or enable answers in your partner portal.

EDITIONS

Available in: Salesforce Classic

Data categories and answers are available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions.

USER PERMISSIONS

To customize answers settings:

- "Customize Application"

 **Tip:** Any custom fields you create for questions or replies can't display in the Salesforce user interface. However, you can add custom fields to questions or replies for API integration purposes. For example, add a custom text field to questions and use the API to populate that text field with the name of the country from which each question is posted.

SEE ALSO:

[Salesforce Answers Implementation Guide](#)

[Setting Up Answers](#)

Enabling Answers and Assigning the Default Zone

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

To enable the answers feature:

1. From Setup, enter *Answers Settings* in the Quick Find box, then select **Answers Settings**.
2. Click **Edit**.
3. Use the **Enable Answers** checkbox to enable answers.

Enabling answers adds the Answers tab to the Community application and creates a zone named Internal Zone.

4. Select the default zone for the Answers tab. You can only display one answers zone at a time. You can either use Internal Zone as the default or [create a new zone](#) and use it as the default.
5. Click **Save**.

EDITIONS

Available in: Salesforce Classic

Answers is available in: **Enterprise, Performance, Unlimited, and Developer Editions.**

USER PERMISSIONS

To customize answers settings:

- "Customize Application"

Assigning Data Categories to Answers

 **Note:** Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '13, Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Answers if it was enabled before the Summer '13 release from now until Winter '18.

In an answers zone, a *category group* provides one or more categories that help organize questions for easy browsing. If the category group contains a hierarchy, only the first-level categories display on the Answers tab. For example, if you're a computer manufacturer you might create a Products category group for your Products zone that has four categories: Performance Laptops, Portable Laptops, Gaming Desktops, and Enterprise Desktops. Zone members can choose one of the categories to assign to a question.

The following example shows how the categories within a category group appear on the Answers tab.

Answers tab displaying categories

1. The zone assigned to answers.
2. When you assign a category group to answers, the data categories within the group appear beneath the zone name on the Answers tab. Zone members can assign these categories to their questions and browse within categories to see related questions. The name of the category group isn't displayed within the answers community.

The name of the category group is not displayed in the answers community; however, all the categories within the group appear below the zone name on the Answers tab.

To assign a category group to answers:

1. [Create a category group](#) for answers and [add data categories](#) to the category group.

We recommend naming the category group the same as the answers community so other administrators understand where the category group is being used.

EDITIONS

Available in: Salesforce Classic

Answers is available in: **Enterprise, Performance, Unlimited, and Developer** Editions.

USER PERMISSIONS

To customize answers settings:

- "Customize Application"

 **Note:** Even though you can create up to five hierarchy levels of categories in a category group, only the first level of categories is supported in your answers community. Child categories below the first level are not displayed in the community, and community members can't assign these child categories to questions.

2. From Setup, enter *Data Category Assignments* in the **Quick Find** box, then select **Data Category Assignments** under Answers. The category group assignments page only displays after you [enable answers](#).

3. Click **Edit**.

4. Select the category group you want to assign to your answers zone.

 **Note:** If you change the category group for answers later, all the existing categories associated with your questions are removed. The questions in your answers community become uncategorized until community members assign the new categories to them.

5. Click **Save**.

You receive an email after the save process completes..

[Data Categories in Salesforce.com](#)

Ideas Communities

Encourage Idea Creation and Sharing in Salesforce Communities

Add your Ideas users to Salesforce Communities to take advantage of new ways to collaborate.

Create more engagement and collaboration around Ideas as you enable your customers to post and comment on Ideas right from their Salesforce Communities home page. Adding Ideas to Salesforce Communities lets your users reap the benefits of a vibrant, creative partnership between community members. Communities are customizable, public or private spaces for employees, customers, and partners to collaborate on best practices and business processes. When you enable Ideas in Salesforce Communities, you give your community members the ability to create ideas and idea themes and have a dialog around them. You can create public communities that let your customers or partners exchange ideas, as well as private internal communities that are specific to your employees.

Moderating and managing ideation communities can be assigned to internal community members, depending on their privileges. Internal users can moderate both internal and external communities because they have access to internal communities as well as any public communities that they have permission to access.

To organize your community into smaller groups, you can create zones within a community that reflect special interests, product groupings, or types of customers. Zones are shared by the Ideas, Answers, and Chatter Answers applications, allowing you to view and create zones from those locations. For example, if you're a computer manufacturer you can create a community named Laptop Products and another named Desktop Products. Within each of those communities, you can create zones that are specific to different aspects of the products.

Community members have visibility into different zones based on their user profiles:

- Community users see the zones associated with the community they're signed in to.
- Internal users with permission to see Ideas can see all internal-only zones in the organization. If internal users sign in to a community, they see only those zones associated with that community.

EDITIONS

Available in: **Salesforce Classic**

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

USER PERMISSIONS

To customize Ideas settings for Salesforce Communities:

- "Customize Application"

- Internal users with permission to see Chatter Answers can see all internal-only zones for the organization in the Q&A tab. If internal users sign in to a community, they see only those zones associated with that community.
- Portal users can see the zones associated with their portal.
- Portal users with access to both a portal and a community can see the zones associated with the portal or community that they are currently signed in to.
- Users who are accessing the portal or community through an API can access all zones that they have access to in all contexts.
- Global searches in the internal application performed by internal users return results from all ideas that are available within the organization. Searches performed by all other users in Salesforce Communities return results from the ideas that are available within the community.

Managing Ideas

Ideas is a community of users who post, vote for, and comment on ideas. Consider it an online suggestion box that includes discussions and popularity rankings for any subject. To further organize your community into smaller groups, you can create zones within a community that reflect special interests, product groupings, or types of customers.

You can display Ideas to internal Salesforce users, a Salesforce.com Community, Customer Portal or partner portal users, or to public users (requires setting up a Force.com site). You can also manage Ideas from the console.

Professional Edition organizations can have only one internal zone. All other editions can have up to 50 zones shared between Ideas, Answers, and Chatter Answers.

As an administrator, you can:

- Control whether ideas are enabled for your organization and customize the [half-life](#) of ideas. See [Customizing Ideas Settings](#).
- Create zones to organize ideas. See [Creating and Editing Zones](#).
- Create [Idea Themes](#) that let you invite community members to post ideas about specific topics so that members can solve problems or propose innovations for your company.
- Define picklist values for the `Categories` and `Status` fields. See [Define Picklist Values for the Categories and Status Fields](#).
- Specify the layout of custom fields. See [Set Page Layouts for Ideas](#).
- Make idea reports available to your users.
- Customize idea search layouts.
- Merge ideas to reduce the number of duplicate ideas.
- Assign a status to an idea.
- Delete a vote through the API to erase all history that the vote ever occurred.

Specifically, deleting a vote does the following:

- Removes 10 points from the idea's overall score
- Removes the user's name from the Last 100 Votes section on the idea's detail page

USER PERMISSIONS

To manage Ideas communities:

- "Customize Application"

Customizing Ideas Settings

To manage organization-wide settings for Ideas:

1. From Setup, enter *Ideas Settings* in the Quick Find box, then select **Ideas Settings**.
2. Click **Edit**.
3. Use the **Enable Ideas** checkbox to enable or disable Ideas for your organization.

Disabling Ideas removes the Ideas tab and users will no longer be able to access active zones, but these zones will reappear on the Ideas tab the next time you enable Ideas.

4. Optionally, select **Enable Text-Formatting, Images and Links** to enable the Ideas HTML editor, which gives users WYSIWYG HTML editing and image referencing capabilities when they post or comment on ideas.

 **Warning:** Once you enable the Ideas HTML editor, you cannot disable it. If you do not see the **Enable Text-Formatting, Images and Links** checkbox, the Ideas HTML editor is enabled for your organization by default.

5. If your organization does not already have the multi-select **Categories** field enabled, click the **Enable** button located below the **Categories** message at the top of the page. This button is not displayed if your organization already has the **Categories** field enabled.

If the **Categories** field is already enabled, the **Enable Categories** checkbox is selected. Once the field is enabled, you cannot disable it.

6. Select **Enable Reputation** to let users earn points and ratings based on their activity in each zone.
7. Select an **Ideas User Profile** type for all user profiles in the zone.

User Profile Type	Description
Chatter profile	The user's Chatter profile is the default user profile type. If you select this option and a user doesn't have a Chatter profile, then the Ideas zone profile is used.
Ideas zone profile	The profile that the user sets up for the Ideas zone. This profile type is used for Ideas zones in portals.
Custom profile with a Visualforce page	You can specify a Visualforce page for a custom profile for all Ideas users in the zone. If you select this profile type, you must specify a Visualforce page in Custom Profile Page .

8. In the **Half-Life (in Days)** field, enter a number of days.

The half-life setting determines how quickly old ideas drop in ranking on the Popular Ideas subtab, to make room for ideas with more recent votes. A shorter half-life moves older ideas down the page faster than a longer half-life.

 **Note:** This field does not appear if Ideas is disabled. To modify the **Half-Life (in Days)** field, save your changes after enabling ideas, and then click **Edit** on the Ideas Settings page.

[Encouraging Innovation with Idea Reputation](#)

Encouraging Innovation with Idea Reputation

Reward the most influential and innovative members of your Ideas community by acknowledging their participation and contribution to the community. By enabling Reputation in Ideas, and then choosing level names and thresholds, you let users earn points and ratings that reward and encourage frequent, meaningful activity in the community. As community members engage more frequently, they improve the overall quality of ideas, which means that everyone reaps the benefits of a vibrant, creative partnership with your customers.

Users are awarded points for many activities including:

- Creating an idea
- Receiving a comment on their idea
- Receiving an upvote on their idea or comment
- Commenting on someone else's idea

Reputation points are calculated separately for each zone, and for the cumulative activity within the entire organization. Users who participate in different zones will have different reputation values for each zone based on their activity in that zone. When users are logged into the internal application, their reputation score is based on their participation in all zones to which they belong.

Ideas comes with the following pre-defined reputation levels that apply to all zones and to the internal application. Using the API, reputation levels and points for each level can be added or edited to reflect the levels of participation in your community.

Name	Points per Level
Observer	0 – 99
Contributor	100 – 399
Influencer	400 – 1499
Thought Leader	1500+

Reputation levels are available through the API and can be displayed in custom Ideas implementations. To add or edit reputation level names, points per level, or other attributes of a reputation in any of your zones, use the `IdeaReputation` and `IdeaReputationLevel` objects in the API. You can create up to 25 different reputation levels for each zone.

Designating Community Experts

Designate your star users as experts in their communities.

A community expert is a member of the community who speaks credibly and authoritatively on behalf of your organization. When community experts post comments or ideas, a unique icon (★👤) displays next to their name. The Salesforce administrator can designate as many community experts as necessary.

If you want to have experts within your community, set up [Zones](#) and create a public group that includes the expert users. Then, during the setup process you can designate this public group as your community experts.

Before you select a public group to be community experts, note the following:

- A community expert can be an employee of your organization who is responsible for providing official responses to the community. A community expert can also be someone outside your organization who is active within the community and knowledgeable about the subject matter.
- The only difference between a community expert and other community members is the unique icon that displays next to the community expert's name. Community experts do not have any extra permissions beyond what is specified in their user profile and permission sets.
- Community experts must be part of a public group and that public group must be specified in the `Experts Group` drop-down list. You might need to create a public group for each community if the experts within those communities are different.
- If a community is displayed in a Customer Portal or partner portal, you can use a cascading style sheet (CSS) to change the icon associated with the community expert. When creating a portal, specify your CSS in the `Header` of your portal and use the `expertUserBadge` class to reference the new background image for the community expert. We recommend the icon be no larger than 16 by 16 pixels.

Set Page Layouts for Ideas

When you create a custom field for Ideas, you can add it to the Additional Information section that appears on the Post Idea and Idea Detail pages.

You can specify the order in which a custom field appears in the Additional Information section as well as remove a custom field from these pages without permanently deleting the field from the system. Although it's possible to move standard fields onto the page layout, by default they already appear in the Idea Detail section at the top of the page and their order is not customizable. However, you can drag the `Status` field to the Additional Information section to have the status of an idea appear in the page layout.

 **Note:** The label and layout of the Additional Information section can't be customized.

1. From the object management settings for ideas, go to Page Layouts.
2. Click **Edit**.
3. Select a custom field from the box on the right and drag it to the Additional Information section. Custom fields appear in the order they are placed in the Additional Information section.
4. To display an idea's status to zone members, select the `Status` field and drag it to the Additional Information section.

Adding Apex Triggers to Idea Comments

Adding Apex triggers to Idea Comments lets you perform actions related to comments that users post to an idea.

A trigger is a set of Apex code that fires at a particular time in the life cycle of a record. You can add Apex triggers to comments in Ideas to better manage ideas in your community.

Use triggers on comments to perform actions such as:

- Send an email notification to the moderator or other user when a comment is left on an idea.
- Send an email notification to the user with the contents of their comment.
- Notify the moderator when a specified number of comments is reached for an idea.
- Prevent posting of comments with specific words.

Migrating to the Community Application

If your organization enabled Ideas prior to the Winter '10 release, we recommend that you migrate to the new Community application. The Community application:

- Replaces the Ideas application in the Force.com app menu.
- Includes the Ideas and Answers tabs.

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

 **Warning:** Once you migrate to the Community application, you cannot return to the old Ideas application. The Ideas tab with all your existing data will still be available in the new Community application.

To migrate to the Community application:

- From Setup, enter *Ideas Settings* in the Quick Find box, then select **Ideas Settings**.

The Community message appears at the top of the Ideas Settings page. If the Community message does not appear, the Community application is already enabled for your organization.

EDITIONS

- "Customize Application"

2. Click **Enable** below the Community message. Salesforce checks your organization for any custom objects named Community. If such an object exists, you must delete or rename the object before enabling the Community app.
3. Click **Enable** when Salesforce confirms it's okay to migrate to the Community application.

Customizing Ideas Standard and Custom Fields

USER PERMISSIONS

To define picklist values:	"Customize Application"
To set field level security:	"Customize Application"
To define or change field validation rules:	"Customize Application"
To create Ideas custom fields:	"Customize Application"
To enable attachments for ideas:	"Customize Application"

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Administrators can customize Ideas standard and custom fields to meet the needs of an organization's unique requirements:

- Define picklist values for the Categories and Status fields.
- Click the name of a standard or custom field to set field-level security.
- Click the name of a custom field to set validation rules.
- Create a custom field for Ideas. Custom fields appear in the Additional Information section on the Post Idea and Idea Detail pages.
- Add the `Attachment` field to the layout and set field-level security. Users can attach all supported file types, including Microsoft® PowerPoint® presentations and Excel® spreadsheets, Adobe® PDF files, image files, audio files, and video files. The maximum attachment size is determined by your organization.

 **Note:** In custom implementations of Ideas, you can use the `URL.getFileFieldURL` Apex method to retrieve the download URL for file attachments.

[Customizing Ideas Settings](#)

Select Picklist Values and Defaults for a Zone

After you define picklist values for the `Categories` and `Status` fields, you can add and remove picklist values from these fields on a per-zone basis and specify a default value. This allows you to customize the `Categories` and `Status` fields based on the unique purpose of a zone. For information, see [Define Picklist Values for the Categories and Status Fields](#) on page 2532.

To add or remove picklist values from a specific zone:

1. From Setup, enter `Zones` in the `Quick Find` box, then select **Zones**.
2. Click the name of the zone.
3. In the `Idea Picklists Available for Editing` section, click **Edit** next to the `Categories` or `Status` field.
4. To remove a picklist value, select the value from the `Selected Values` list and click **Remove**.
5. To add a picklist value to the zone, select the value from the `Available Values` list and click **Add**.
6. To specify a default value for the field, use the `Default` drop-down list.
7. Click **Save**.

SEE ALSO:

[Creating and Editing Zones](#)

Define Picklist Values for the Categories and Status Fields

Overview

For members of a zone to assign categories to an idea or be able to view an idea's status, the Ideas administrator needs to define picklist values for the `Categories` and `Status` fields. These fields are only available in an ideas community and not in an answers community.

Categories are administrator-defined values that help organize ideas into logical sub-groups within a zone. The `View Category` drop-down list on the `Ideas` tab allows users to filter ideas by category, and the `Categories` picklist on the `Post Ideas` page lets users add categories to their ideas.

An idea's status helps zone members track the progress of the idea. For example, "Under Review", "Reviewed", "Coming Soon", and "Now Available" are common status values an administrator can define and assign to ideas. An idea's status appears next to the idea's title for all zone members to see.

 **Note:** If the `Category` field is displayed (instead of `Categories`), then your zone members can only assign a single category to an idea. To allow them to assign multiple categories to an idea, from Setup, enter `Ideas Settings` in the `Quick Find` box, then select **Ideas Settings** and enable `Categories`.

Defining Picklist Values

To define picklist values for the `Categories` and `Status` standard fields:

1. From Setup, enter `Ideas` in the `Quick Find` box, then select **Fields** From the management settings for ideas, go to `Fields`.
2. Click **Edit** next to the `Categories` or `Status` standard field.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To add or remove picklist values from a zone:

- "Customize Application"

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To define picklist values:

- "Customize Application"

- On the picklist edit page, click **New** to add new picklist values to the standard field. You can also edit, delete, reorder, and replace picklist values.

 **Note:** Once you add picklist values to the `Categories` or `Status` field, the field will always require at least one picklist value. This means you can delete picklist values until there is one remaining for the field.

- Add one or more picklist values (one per line) in the provided text area.
- Select the zones that you want to include the new picklist values.
- Save your changes.
- To specify a default value for the `Categories` or `Status` fields, see [Select Picklist Values and Defaults for a Zone](#).

 **Note:** Do not use the **Edit** link on the Fields page to specify a default value for `Categories` or `Status`. You can only specify a default value from the Zone Detail page.

- To display an idea's status to zone members, select the `Status` field and drag it to the Additional Information section. You can find this field from Setup by entering `Ideas` in the `Quick Find` box, then selecting **Fields**.

Once you select this checkbox, you can assign a status to any idea when you post a new idea or edit an existing idea.

SEE ALSO:

[Select Picklist Values and Defaults for a Zone](#)

[Find Object Management Settings](#)

Enabling the Categories Field

Organizations using the `Category` field can switch to the multi-select `Categories` field that allows zone members to associate more than one category with an idea. The `Category` field only allows one category to be associated with an idea.

 **Warning:** Once you enable the `Categories` field, you cannot disable it. Also, enabling the `Categories` field automatically disables the old `Category` field in Salesforce and the API.

When you enable the `Categories` field, Salesforce automatically does the following:

- Checks your organization's workflow rules, triggers, validation rules, custom fields, and Apex code and lists any area that references the `Category` field. You must manually fix or remove these references before Salesforce allows you to enable the `Categories` field.
- Automatically moves all picklist values and search layouts from the old `Category` field to the new `Categories` field.
- Ensures each idea is associated with the appropriate picklist value in the new `Categories` field.
- Makes the new `Categories` field available in Salesforce and the API.

To enable the `Categories` field:

- From Setup, enter `Ideas Settings` in the `Quick Find` box, then select **Ideas Settings**.
- Click **Enable** located below the `Categories` message at the top of the page. This button is not displayed if your organization already has the `Categories` field enabled.

EDITIONS

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To customize Ideas settings:

- "Customize Application"

Salesforce checks your organization's workflow rules, triggers, validation rules, custom fields, and Apex code for references to the `Category` field and lists any areas where this reference needs to be removed.

3. If you need to remove references to the `Category` field, click **Cancel**. Once you have removed the references, try enabling the `Categories` field again.

 **Note:** For validation and workflow rules you must delete the rule or fix the `Category` reference within the rule. It is not sufficient to deactivate the rule. If you need to delete a custom field that references the `Category` field, make sure to erase the field after it has been deleted.

4. Read the information in the pop-up window, and click **Enable**. It may take several minutes for Salesforce to enable the new field.
5. Fix any custom reports that reference the old `Category` field.

Chatter Answers Communities

Chatter Answers Implementation Overview

-  **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

 **Note:** We recommend that advanced Salesforce administrators and developers set up and maintain Chatter Answers, as it involves several Salesforce features.

Chatter Answers is a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Before administrators can set up Chatter Answers, their organizations must have implemented [Data Categories](#). If you want Salesforce Knowledge articles to display in your zones, then administrators need to implement [Salesforce Knowledge](#).

Unlike other Salesforce features, Chatter Answers spans across several areas of setup. There isn't one location in Salesforce where you can update and configure all the settings related to Chatter Answers. For example, configuring Chatter Answers might require you to update Customer Portal settings from Setup by entering *Customer Portal Settings* in the **Quick Find** box, then selecting **Customer Portal Settings**, and Force.com Site settings by entering *Sites* in the **Quick Find** box, then selecting **Sites**.

Setting up Chatter Answers also includes customizing or maintaining:

- [Cases](#)
- [Case assignment rules](#)
- Workflow rules on cases or questions
- Apex triggers on questions
- Visualforce pages
- [Customer Portal users](#)
- Organization-wide sharing defaults
- Feature licenses

Customizing the appearance of your Chatter Answers zone to match your company's branding involves creating or updating Visualforce pages and adding them to the Force.com Site used to host your zone.

SEE ALSO:

[Setting Up Chatter Answers](#)

Setting Up Chatter Answers

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

 **Note:** The steps below are general guidelines for setting up Chatter Answers. Chatter Answers integrates several Salesforce features, including features administrators may have implemented already, so each Chatter Answers implementation may be different. Contact Salesforce for specifics on your implementation.

Before administrators can set up Chatter Answers, their organizations must have implemented [Data Categories](#). If you want Salesforce Knowledge articles to display in your zones, then administrators need to implement [Salesforce Knowledge](#).

1. [Enable Chatter Answers](#).
2. [Configure email notification settings](#).
3. [Implement a Customer Portal](#) (if one doesn't already exist for your organization).
4. [Configure your organization's Customer Portal for Chatter Answers](#).
5. [Configure high-volume portal users for self-registration](#).
6. [Implement a Force.com site](#) (if one doesn't already exist for your organization and you want to use a site).
7. [Configure your organization's Force.com site for Chatter Answers](#).
8. [Configure cases for Chatter Answers](#).
9. [Set Questions tab visibility](#).
10. Optionally:
 - [Assign data categories to Chatter Answers](#).
 - [Configure Salesforce Knowledge for Chatter Answers](#).
 - [Add Chatter Answers to your Customer Portals or Partner Portals](#).
11. [Configure one or more zones](#).
12. [Troubleshoot any setup issues](#).

 **Important:** After you set up Chatter Answers, it may not work properly if you change any of the configurations in the features mentioned above. If certain configuration issues are detected, Salesforce sends email notifications to the [Site Contact user](#).

 **Tip:**

- You can [add custom fields](#) to questions or replies for API integration purposes only. For example, add a custom text field to questions and use the API to populate that text field with the name of the country from which each question is posted. Any custom fields you create for questions or replies can't display in the Salesforce user interface.
- You can customize fields, page layouts, buttons and links, Apex triggers, and validation rules for questions and replies for Chatter Answers from Setup by entering "Chatter Answers" in the [Quick Find](#) box, then selecting **Chatter Answers** and choosing the appropriate setting.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

USER PERMISSIONS

To set up Chatter Answers:

- "Customize Application"
- AND
- "Manage Users"
- AND
- "Edit Self-Service Users"

- You can rename `Customer Support` on your zones' user interface. For example, you can change "Customer Support" to "Acme Support." Just edit the Customer Support label on the Question object.
- You can rename the Chatter Answers tab in your portal, as well.

SEE ALSO:

[Chatter Answers Implementation Overview](#)

[Chatter Answers Implementation Guide](#)

Enable Chatter Answers

-  **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

Enable Chatter Answers to set up Chatter Answers zones.

1. From Setup, enter *Chatter Answers Settings* in the `Quick Find` box, then select **Chatter Answers Settings**.
2. Click **Edit**.
3. Select **Enable Chatter Answers**.
4. Optionally, select:

Option	Description
Show Chatter Answers in Portals	Lets you add Chatter Answers as a tab to your Customer Portal or Partner Portal. If you choose this option, you must add the Chatter Answers tab to each portal and assign the Chatter Answers User license to portal users. If you only want to display Chatter Answers in your portals, then you don't need to set up a Force.com site to host Chatter Answers. However, a site lets guest users access some Chatter Answers data without a login, whereas portals do not.
Optimize Question Flow	Lets users filter search results by articles or questions before they post a question to any of your Chatter Answers zones. Also, adds <code>Title</code> and <code>Body</code> fields to questions for easier text input and scanning. This setting is turned on automatically when you enable Chatter Answers.
Enable Rich Text Editor	Lets zone members use the rich text editor to format text and upload images when posting questions and replies. This setting is turned on automatically when you enable Chatter Answers.  Note: Optimize Question Flow must be enabled to select this option.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

USER PERMISSIONS

To enable Chatter Answers:

- "Customize Application"

Option	Description
Show Search/Ask Publisher Inline	<p>Embeds the Search/Ask Publisher inline instead of using a pop-up window.</p> <p> Note: Optimize Question Flow must be enabled to select this option.</p>
Enable Reputation	<p>Lets users earn points and ratings that display as hover text on their profile pictures. Reputation is enabled across all zones. This setting is turned on automatically when you enable Chatter Answers.</p>
Allow Posting Answers via Email	<p>Lets users post answers by replying to email notifications.</p>
Enable Facebook Single Sign On	<p>Lets users sign in to your Chatter Answers zones with their Facebook logins. If you choose this setting, your zones display an option to Sign in with Facebook next to your zones' Sign In. When a user signs in to Chatter Answers with a Facebook login, the first name, last name, and the photo associated with the Facebook account is used in posts to your zones.</p> <p>When you enable this feature, you must define and enable a Facebook authentication provider in your organization's security controls.</p>
Facebook Authentication Provider	<p>Lets you choose an existing Facebook authentication provider after you select Enable Facebook Single Sign On. You must choose a Facebook authentication provider to implement Facebook Single Sign On for your Chatter Answers zones. This setting is ignored if you have associated the Chatter Answers zone to a Chatter community with a different Facebook authentication provider.</p>
Custom Profile Page	<p>Lets you select a custom Visualforce page for users' profiles for Chatter Answers on a public Chatter community site. You must have Visible without authentication set for the zone in order for the user profile pages to be used. The following attributes are passed to the custom Visualforce page that you select:</p> <ul style="list-style-type: none"> • <code>communityId</code>. This attribute indicates which zone the currently selected feed item, such as a question or a reply, belongs to. • <code>userId</code>. This attribute indicates the owner of the currently selected feed item, such as a question or a reply. • <code>showHeader</code>. This attribute is a Boolean value that specifies whether the Salesforce tab header is included in the page. If this attribute is set to true, the Salesforce tab header is displayed.

5. Click **Save**.

After you enable Chatter Answers, several items are automatically added to your organization for use with setting up zones:

- A Q&A tab where internal users and administrators can view and use Chatter Answers. Administrators can rename this tab.
- Standard permission settings for Questions on user profiles so that you can grant users permissions to questions and replies.
- Visualforce pages that you can add to a Force.com site, a tab in a Community, or a Customer Portal so that users can register, sign in, and view feed items on a zone.
- An Apex class named `ChatterAnswersRegistration` with a method for customizing Account creation for portal users.
- An Apex trigger for questions named `chatter_answers_question_escalation_to_case_trigger` so that questions with specified attributes are automatically escalated to cases.
- A workflow field update named `chatter_answers_num_subscriptions_above_` so that when a question is escalated to a case, `Priority` on questions is updated.
- Two workflow rules, `chatter_answers_no_best_reply_within_time_limit_wf` and `chatter_answers_num_subscriptions_above_limit_wf`, which you can customize and activate so that questions without best replies or questions with a specified number of followers are automatically escalated to cases.

Visualforce Pages for Chatter Answers

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

After you enable Chatter Answers, the Visualforce pages below are automatically added to your organization. You can use these pages to set up and configure Chatter Answers.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

Visualforce page	Description
<code>ChatterAnswersAgentView</code>	The Visualforce component that displays questions on case detail pages when questions are converted to cases. This component is optional and offers an alternative to the case detail page.
<code>ChatterAnswersChangePassword</code>	The page where users can change their passwords to your zone.
<code>ChatterAnswersForgotPassword</code>	The forgot password page for your zone.
<code>ChatterAnswersForgotPasswordConfirm</code>	The forgot password confirmation page for your zone.
<code>ChatterAnswersHelp</code>	The online help page displayed to users when they click Need Help?
<code>ChatterAnswersLogin</code>	The login page for your zone.
<code>ChatterAnswersRegistration</code>	The page where users can self-register for access to your zone.

Visualforce page

When you create a zone, the following page is added to your organization: *Community Name_main*
(Home Page)

Description

The page that includes the question, reply, and Salesforce Knowledge article feeds for your zone. This page is also used to determine the community from which email notifications are sent to users.

This page is automatically generated when you save a new zone without choosing *Visualforce Page That Hosts Your Community's Feeds*. The generated page includes your zone's ID so that topics, questions, and replies are associated with your specific zone and can display on it. The page is named after your zone with a suffix of "_main," for example, *ZoneName_main*. The page also includes a language attribute that matches your organization's default language.

[Visualforce](#)

[Customizing Chatter Answers using Visualforce Pages](#)

Customizing Chatter Answers using Visualforce Pages

You can create a Visualforce page that displays a Chatter Answers zone customized for your users.

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

By using a Visualforce page, you can add custom widgets to Chatter Answers, such as announcements or ads, which let you extend your branding and change the experience for users.

You can also control the arrangement of elements on the page. Your customers can access your custom Chatter Answers zone through a Force.com site, a tab in a Community, or a Customer Portal to which you've added the Visualforce page. When internal users access a Chatter Answers zone that uses a Visualforce page, they see only the zone that is related to the page; they can't switch zones as they can when using the standard Q&A tab.

 **Note:** You can't customize the Chatter Answers Q&A tab with a Visualforce page, but you can add a Visualforce tab in your organization and create an internal Chatter Answers experience with your custom Visualforce page.

In order to display the zone, the Visualforce page you create must include either the `chatteranswers:allfeeds` component or a combination of the following components: `chatteranswers:aboutme`, `chatteranswers:guestsignin`, `chatteranswers:feedfilter`, `chatteranswers:feeds`, `chatteranswers:searchask`, `chatteranswers:datacategoryfilter`.

EDITIONS

Available in: **Salesforce Classic**

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

Example: Custom Visualforce Page using the `chatteranswers:allfeeds` Component

The `chatteranswers:allfeeds` component provides an out-of-the-box Chatter Answers Visualforce page. A page that uses the `chatteranswers:allfeeds` component includes the following Chatter Answers elements:

- Chatter Answers sign in
- Chatter Answers profile
- Data category filters
- The Search/Ask bar
- Feed filters
- The questions feed

For example, the following Visualforce page including the `chatteranswers:allfeeds` component has all of the Chatter Answers elements in the standard arrangement for a zone without any other custom widgets.

```
<apex:page>
  <body>
    <chatteranswers:allfeeds communityId="09aD00000000K7c"/>
  </body>
</apex:page>
```

Example: Custom Visualforce Page using All of the Chatter Answers Page Components

Using the Chatter Answers page components allows you to pick and choose which elements of your Chatter Answers zone appear to your customers. You can use as few as one component or you can customize your page to use all of them. You can include the following components:

- `chatteranswers:aboutme`
- `chatteranswers:guestsignin`
- `chatteranswers:feedfilter`
- `chatteranswers:feeds`
- `chatteranswers:searchask`
- `chatteranswers:categoryfilter`

Using the Chatter Answers page components instead of the `chatteranswers:allfeeds` component allows you more flexibility over the arrangement of the elements on the page. For example, the following Visualforce page includes all of the standard Chatter Answers elements, but they appear in a different order on the resulting page than they do when you use the `chatteranswers:allfeeds` component. In this example, the Search/Ask component and the feed filter appear below the feed instead of above it.

```
<apex:page language="en_US" showHeader="false" cache="true">
  <body>
    <div class="csMini">
      <div class="threecolumn">
        <div class="leftContent">
          <chatteranswers:guestsignin />
          <chatteranswers:aboutme communityId="09aD00000000cfE"/>
          <chatteranswers:categoryfilter communityId="09aD00000000cfE"/>
        </div>
        <div class="mainContent">
          <div class="lowerMainContent" id="lowerMainContent">
```

```

<div id="rightContent" class="rightContent"></div>
<div id="centerContent" class="centerContent">
  <chatteranswers:feeds communityId="09aD00000000cfE"/>
  <chatteranswers:searchask communityId="09aD00000000cfE"/>
  <chatteranswers:feedfilter />
</div>
</div>
</div>
<div class="clearingBox"></div>
</div>
</div>
</body>
</apex:page>

```

Configuring Email Notifications for Chatter Answers Users

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

Determine when emails are sent to users by configuring the notification settings that apply to all of your zones. Each email includes a link to a specific zone so that users can easily return to it.

1. From Setup, enter *Email Notification Settings* in the Quick Find box, then select **Email Notification Settings**.
2. Click **Edit**.
3. Choose from the following settings:

Option	Description
Replies to a question they own	Notify customers when other users reply to their questions.
Replies to a question they follow	Notify customers when other users reply to questions they're following.
Selects a best answer on a question they follow	Notify customers when a best answer is selected for a question they're following.
Sends a private reply to their question (Customer Support)	Notify customers when customer support responds to their questions privately.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

USER PERMISSIONS

To configure email notifications for your Chatter Answers users:

- "Customize Application"

4. Click **Save**.

Configuring a Customer Portal for Chatter Answers

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

 **Note:** Even if you don't plan on using a Customer Portal, you must configure one for Chatter Answers to authenticate users who sign in to your Chatter Answers zone.

1. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
2. Click **Edit** next to the Customer Portal you want to configure for Chatter Answers.
3. Click **Login Enabled** to let customers sign in to Chatter Answers.
4. In **From Email Address**, type the address from which all email communications from your Chatter Answers zone are sent. For example, support@acme.com.
5. In **From Email Address Name**, type the name associated with the **From Email Address**. For example, Acme Customer Support.
6. Click **Self-Registration Enabled** to let customers register themselves for access to Chatter Answers.
7. In **Default New User License**, choose the portal user license that's automatically assigned to customers who self-register. We recommend you choose the High Volume Customer Portal license.
8. In **Default New User Profile**, choose the profile that's automatically assigned to customers who self-register. We recommend you [choose the profile you cloned and customized for self-registration](#).
9. Click **Save**.
10. Assign the profile you selected as the **Default New User Profile** to your Customer Portal so that users can sign in to your zone:
 - a. From Setup, enter *Customer Portal Settings* in the **Quick Find** box, then select **Customer Portal Settings**.
 - b. Select your portal's name.
 - c. In the **Assigned Profiles** section, click **Edit Profiles**.
 - d. Click **Active** next to the profile you selected as the **Default New User Profile**.

EDITIONS

Available in: Salesforce Classic

Configuring Portal Users for Self-Registration to Chatter Answers

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

Configure Customer Portal users for self-registration to your Chatter Answers community.

1. Clone the High Volume Customer Portal profile so that you can customize it:
 - a. From Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles**.
 - b. Click **Clone** next to High Volume Customer Portal.
 - c. Type a name for the new profile.
 - d. Click **Save**.
2. Customize the cloned profile to include permissions to the standard objects on your community:
 - a. From Setup, enter *Profiles* in the **Quick Find** box, then select **Profiles**.
 - b. Click the name of the cloned profile.
 - c. Click **Edit**.
 - d. In Standard Object Permissions, click on the following permissions to these objects:

Object	Permissions
Cases	Read, Create
Contacts	Read
Questions	Read, Create
Account	Read

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

Configuring a Force.com Site for Chatter Answers

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

 **Note:** Configuring a Force.com site is recommended for self-service communities.

Configure a Force.com site for Chatter Answers to host a domain and publicly display some of your Salesforce data, such as questions, replies, and Salesforce Knowledge articles.

1. From Setup, enter *Sites* in the **Quick Find** box, then select **Sites**.
2. Click **Edit** next to the name of the site you want to configure for Chatter Answers.
3. Click **Active** to activate the site.
You can activate the site after you've finished [setting up Chatter Answers](#).
4. In **Active Site Home Page**, choose a Visualforce page as the home page for your site.
5. Click **Save**.
6. Click **Edit** on the Site Visualforce Pages related list.
 - a. Use the **Add** and **Remove** buttons to enable the following Visualforce pages for your site:
 - ChatterAnswersAgentView
 - ChatterAnswersChangePassword
 - ChatterAnswersForgotPassword
 - ChatterAnswersForgotPasswordConfirm
 - ChatterAnswersHelp
 - ChatterAnswersLogin
 - ChatterAnswersRegistration
 - b. Click **Save**.
7. Click **Public Access Settings** to grant guest users (unauthenticated, non-Customer Portal users) access to cases, questions, and Salesforce Knowledge articles.
 - a. Click **Edit** on the profile for Chatter Answers users.
 - b. In Standard Object Permissions, click **Read** on Cases and Questions.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

USER PERMISSIONS

To create and edit Force.com sites:

- "Customize Application"

- c. Optionally, if you want articles to display in Chatter Answers, click **Read** on articles types in Article Type Permissions.
 - d. Click **Save**.
8. Click **Edit** next to a category group in the Category Group Visibility Settings related list to grant users access to the categories so that they can browse questions, replies, and Salesforce Knowledge articles.
 - a. Next to `Visibility`, click `All Categories`.
 - b. Click **Save**.
9. Return to the site and select its name from Setup by entering `Sites` in the `Quick Find` box, then selecting **Sites**.
10. Click **Login Settings** to enable user authentication for the site.
 - a. Click **Edit**.
 - b. In `Enable Login For`, choose the Customer Portal you created for Chatter Answers.
 - c. Click **Save**.

After you configure your Force.com site for Chatter Answers, you can replace the default Visualforce pages that make up your community with customized ones. The Visualforce pages are automatically set to your site's URL so that portal users can navigate to them.

 **Note:** To make your site's page URLs short and easy to remember, you can use the Chatter Answers URL rewriter. The following pages use the URL rewriter:

- `ChatterAnswersHelp`
- `ChatterAnswersLogin`
- `ChatterAnswersRegistration`
- `ChatterAnswersForgotPassword`

Chatter Answers is also compatible with custom URL rewriters for sites.

1. From Setup, enter `Sites Settings` in the `Quick Find` box, then select **Sites Settings**.
2. Click **Edit** next to a site.
3. Choose the pages to replace. If you replace the `Change Password Page`, the `Change Password Page` for your site is automatically updated too.
4. Click **Save**.

 **Note:** Internet Explorer 8 users receive a security warning if you customize with URLs that don't include `https://`.

Configuring Cases for Chatter Answers

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

Configure case features for Chatter Answers so that cases are created, escalated, and accessed by the appropriate users of your Chatter Answers zones.

1. Set your organization-wide sharing defaults to `Private on Account`, `Controlled by Parent on Contact`, and `Private on Case` to prevent users from accessing each others' information.
2. Set field-level security on `Question` on cases to `Visible` for profiles assigned to your Customer Portal so that users can access their private questions.
3. Update `Origin` on cases with the value in the Question trigger so that support agents can see which cases originated from Chatter Answers.
4. Create a case assignment rule where Case Origin equals the value of Chatter Answers so that cases created from private questions are assigned to support agents.
5. [Grant high-volume portal users access to cases](#) so that they can access their private questions on Chatter Answers.

SEE ALSO:

[Setting Up Chatter Answers](#)

Setting Q&A Tab Visibility

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

Set the visibility of the Q&A tab to `Default On` so that support agents can view, search, filter, and moderate questions posted to your Chatter Answers zones.

1. From Setup, enter `Profiles` in the `Quick Find` box, then select **Profiles**.
2. Select a support agent profile.
3. Depending on which user interface you're using, do one of the following:
 - Enhanced profile user interface—In the **Find Settings...** box, enter the name of the tab you want and select it from the list, then click **Edit**.
 - Original profile user interface—Click **Edit**, then scroll to the Tab Settings section.
4. Specify the visibility of the Q&A tab to `Default On`.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance,** and **Unlimited** Editions.

USER PERMISSIONS

To set organization-wide sharing defaults:

- "Manage Sharing"

To set field-level security:

- "Manage Profiles and Permission Sets"

AND

"Customize Application"

To customize fields:

To create assignment rules:

To grant high-volume portal users access to cases:

- "Customize Application"

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance,** and **Unlimited** Editions.

USER PERMISSIONS

To set Q&A tab visibility:

- "Manage Profiles and Permission Sets"

5. (Original profile user interface only) To reset users' tab customizations to the tab visibility settings that you specify, select **Overwrite users' personal tab customizations**.
6. Click **Save**.

[Setting Up Chatter Answers](#)

Assigning Data Categories to Chatter Answers

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

Assign a data category group to Chatter Answers so that it's available to all of your Chatter Answers zones. You configure each zone with a top-level data category (topic) in which customers and support agents can categorize and filter questions and knowledge articles.

1. From Setup, enter *Data Category Assignments* in the **Quick Find** box, then select **Data Category Assignments** under Chatter Answers.
2. Click **Edit**.
3. Select a category group.
4. Click **Save**.

 **Note:** Each zone in Chatter Answers can be associated with a top-level category. For a zone to be visible to a customer, the customer's user profile must have visibility to that zone's top-level data category. In addition, if a customer has visibility to child data categories but not to the top-level data category associated with a zone, the zone won't be visible to them.

Configure Salesforce Knowledge for Chatter Answers

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

To display Salesforce Knowledge articles in your Chatter Answers zones, you must:

1. [Implement Data Categories](#) (if you haven't done so already).
2. [Implement Salesforce Knowledge](#) (if you haven't done so already).
3. Configure both for Chatter Answers.

You configure each zone with a top-level data category (topic) in which customers and support agents can categorize and filter questions and knowledge articles.

1. If you use role-based data category visibility, [set the Default Data Category Visibility to All Categories](#) so that customers not included in your organization's role hierarchy, such as high-volume portal users, can access categories that include questions and Salesforce Knowledge articles.

Alternatively, use permission sets or profiles to [set data category visibility](#).

2. [Create one category group for all of your communities](#) so that you're less likely to reach the limit of three active data categories. Then add a child category for each community; and add child categories to those categories to provide topics.
3. [Activate the category group you want available to Chatter Answers](#) so that users can access it.
4. [Grant "Read" permissions to specific article types](#) on the profiles of Chatter Answers users so that they can access articles from your zones.
5. [Optionally, allow support agents to promote replies to draft articles in the knowledge base](#) so that your support team can capture useful information quickly.

Adding Chatter Answers to a Portal

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

You can add Chatter Answers to an existing Customer Portal or Partner Portal so that portal users can access Chatter Answers zones from one of your established channels. After users log in to one of your portals, they can access Chatter Answers from a tab and choose which zone to view from a drop-down list. If you only want to display Chatter Answers in your portals, then you don't need to set up a Force.com site to host Chatter Answers. However, a site lets guest users access some Chatter Answers data without a login, whereas portals do not.

The following occurs to Chatter Answers when it appears in a portal:

- Chatter Answers displays as a tab, which you can rename.
- A drop-down list lets portal users switch between all of your Chatter Answers zones.
- The **My Settings** link for users is replaced by **Enable Emails** and **Disable Emails**.
- **Sign In** and **Sign Up** are removed because portal users can only view Chatter Answers after they've logged in to your portal.
- Chatter Answers displays a look and feel, which you can't customize.
- The **Need help?** link is removed.
- If you display Chatter Answers with a Visualforce page on a portal, the option for users to switch zones in a portal isn't available.

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

USER PERMISSIONS

To add Chatter Answers to a Customer Portal:

- "Customize Application"

2. Edit Customer Portal user profiles to support Chatter Answers.

Using the enhanced profile user interface, follow these steps:

- a.** From Setup, enter *Profiles* in the Quick Find box, then select **Profiles**.
- b.** Click **Edit** next to a portal user profile.
- c.** In the Apps section of the page, select **Object Settings**.
- d.** On the Object Settings page, select **Q&A**.
- e.** In Tab Settings, select *Default On*.
- f.** Click *Save* and navigate back to the Objects Settings page.
- g.** Select **Questions and Answers**, and in the Object Permissions section select *Read* and *Create*.
- h.** Click **Save**.

Using the original profile interface, follow these steps:

- a.** From Setup, enter *Profiles* in the Quick Find box, then select **Profiles**.
- b.** Click **Edit** next to a portal user profile.
- c.** In Tab Settings, select *Default On* for **Q&A**.
- d.** In Standard Object Permissions, select *Read* and *Create* on Questions.
- e.** Click **Save**.

3. Add the Chatter Answers User feature license to Customer Portal users:

- a.** From Setup, enter *Users* in the Quick Find box, then select **Users**.
- b.** Click **Edit** next to a portal user.
- c.** In the General Information area, select *Chatter Answers User*.
- d.** Click **Save**.

4. Add Chatter Answers as a tab to your Customer Portal:

- a.** From Setup, enter *Customer Portal Settings* in the Quick Find box, then select **Customer Portal Settings**.
- b.** Click the name of a Customer Portal.
- c.** Click **Customize Portal Tabs**.
- d.** Select Q&A and click the **Add** arrow to move it into the Selected Tabs box.
- e.** Click **Save**.

5. Optionally, rename the Q&A tab for your Customer Portal:

- a.** From Setup, enter *Rename Tabs and Labels* in the Quick Find box, then select **Rename Tabs and Labels**.
- b.** Click **Edit** next to Questions.
- c.** Click **Next**.
- d.** In Other Labels, rename Q&A. You can only rename it as *Singular*, not *Plural*.
- e.** Click **Save**.

 - c. Select *Show Chatter Answers in Portals*.
 - d. Click **Save**.
2. Edit Partner Portal user profiles to support Chatter Answers:
 - a. From Setup, enter *Profiles* in the Quick Find box, then select **Profiles**.
 - b. Click **Edit** next to a portal user profile.
 - c. In the Apps section of the page, select **Object Settings**.
 - d. On the Object Settings page, select **Q&A**.
 - e. In Tab Settings, select *Default On*.
 - f. Click *Save* and navigate back to the Objects Settings page.
 - g. Select **Questions and Answers**, and in the Object Permissions section select *Read and Create*.
 - h. Click **Save**.
3. Add the Chatter Answers User feature license to Partner Portal users:
 - a. From Setup, enter *Users* in the Quick Find box, then select **Users**.
 - b. Click **Edit** next to a portal user.
 - c. In the General Information area, select *Chatter Answers User*.
 - d. Click **Save**.
4. Add Chatter Answers as a tab to your Partner Portal:
 - a. From Setup, enter *Partners* in the Quick Find box, then select **Settings**.
 - b. Click the name of a Partner Portal.
 - c. Click **Customize Portal Tabs**.
 - d. Select Chatter Answers and click the **Add** arrow to move the Chatter Answers tab into the Selected Tabs box.
 - e. Click **Save**.
5. Optionally, rename the Chatter Answers tab for your Partner Portal:

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance,** and **Unlimited** Editions.

USER PERMISSIONS

To add Chatter Answers to a Partner Portal:

- "Customize Application"

- a. From Setup, enter *Rename Tabs and Labels* in the Quick Find box, then select **Rename Tabs and Labels**.
- b. Click **Edit** next to Questions.
- c. Click **Next**.
- d. In Other Labels, rename Q&A. You can only rename it as Singular, not Plural.
- e. Click **Save**.

SEE ALSO:

[Adding Chatter Answers to a Portal](#)

Adding a Custom Visualforce Page to Display Chatter Answers

Use a Visualforce page to provide a custom Chatter Answers experience for your customers.

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

You must have a Visualforce page created that includes either the `chatteranswers:allfeeds` component or a combination of the following components: `chatteranswers:aboutme`, `chatteranswers:guestsignin`, `chatteranswers:feedfilter`, `chatteranswers:feeds`, `chatteranswers:searchask`, `chatteranswers:categoryfilter`.

To add a custom Visualforce page for displaying Chatter Answers:

1. From Setup, enter *Tabs* in the Quick Find box, then select **Tabs** to display a list of your organization's Visualforce tabs.
2. In the Visualforce section, click **New** to create a new Visualforce tab.
3. Select the Visualforce page you want to use and add details for the other fields on the page.
4. Click **Next**.
5. Select which user profiles can see the tab.
6. Select the custom apps from which the tab will be available.
7. Click **Save**.

To add the Visualforce tab as a Community tab, make sure the page is available in the community's tabs.

To add the Visualforce tab to a Customer Portal, make sure the Visualforce tab is configured to show in the portal.

You don't need to add the Visualforce tab to a Force.com site. Just make sure that you have created the Visualforce page with Chatter Answers components before you set up the site.

Troubleshooting Chatter Answers Setup

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

After you set up a Chatter Answers community, you can view a snapshot of all of its configurations on one page so that you don't have to visit several pages in setup to diagnose issues.

1. From Setup, enter *Sites Settings* in the **Quick Find** box, then select **Sites Settings**.
2. In the Site Snapshot column, click **View** next to the Force.com site associated with your community.
3. Click  to show or  to hide various settings.
4. Click **Go!** to go to a specific page in setup where you can change settings.

 **Example:** For example, you can use a site snapshot to see if the Force.com site hosting your community is marked *Active* or to verify the names of the user profiles assigned to your Customer Portal.

Chatter Answers Users Overview

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

Because Chatter Answers integrates several features with the Customer Portal, managing Chatter Answers users is similar to managing Customer Portal users. Use the following to manage the data and functions that are accessible to Chatter Answers users:

- Profiles, permissions, and access settings determine a user's permission to perform different functions, such as adding comments to a case.
- User licenses define which profiles and permission sets are available to a user, such as the High Volume Customer Portal (Service Cloud Portal User) or Customer Portal Manager Custom license.
- Feature licenses entitle a user to additional Salesforce features, such as Chatter Answers.
- Field-level security defines which fields users can access, such as fields on Salesforce Knowledge articles.
- [Sharing sets](#) let you selectively grant record access to defined groups of high-volume portal users.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance,** and **Unlimited** Editions.

USER PERMISSIONS

To view Setup:

- "View Setup and Configuration"

To set up Chatter Answers:

- "Customize Application"

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance,** and **Unlimited** Editions.

Chatter Answers excludes some features typically available to Customer Portal users, such as:

- Ideas
- Groups
- Teams
- Reports
- Content
- Page layouts
- Custom objects
- Delegated external user administration
- Customer Portal role hierarchy (available, but not used)
- Customer Portal sharing rules, except for high-volume portal users

Chatter Answers users can only access the following records from your zone:

- Cases
- Questions
- Replies (answers)
- Salesforce Knowledge articles

Chatter Answers is designed to support one user language for each zone that you create. When you [enable Chatter Answers](#), the Visualforce pages automatically added to your organization inherit your organization's default language. However, you can change the language attribute on each Visualforce page. Users who self-register for your zone inherit your organization's default language. Guest users view your zone in the language specified in the Visualforce pages, no matter the language chosen for their browsers.

 **Note:**

- Chatter Answers users can't change their language, timezone, or locale settings.
- Portal users must have the Chatter Answers User feature license to use Chatter Answers. This feature license is automatically assigned to high-volume portal users who self-register for Chatter Answers. You can manually assign the license to users who don't self-register by editing a user and clicking `Chatter Answers User`.
- Authenticated Website User profiles don't have access to Chatter Answers.

Internal users with permission to see Chatter Answers can see all zones in the Q&A tab in their organization. If internal users sign in to a community, they see only those zones associated with that community.

Encouraging Participation with Chatter Answers Reputation

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** Editions.

Tap into the expertise and knowledge of your most active community members by rewarding their activity. By enabling reputations, you let users earn points and ratings that display in hover details over a user's photo in the feed. As your star posters engage more frequently, they improve the overall content in your community and provide better answers for users who are searching for help with an issue. This means that users who are searching for a solution can be confident that an answer from an expert can be trusted, which means fewer support calls for your organization.

Users earn points when their posts receive votes or are selected as having resolved the question in any of the zones to which they belong. When they earn enough points, the hover details show their reputation as well as the number of posts and questions they've resolved in that zone. Reputation points are calculated separately for each zone, and for the cumulative activity within the entire organization. Users who participate in different zones will have different reputation values for each zone based on their activity in that zone. When users are logged into the internal application, their reputation score is based on their participation in all zones to which they belong. Chatter Answers comes with the following pre-defined reputation levels that apply to all zones:

Name	Points per Level	Color
Newbie	0 – 499	Green
Smartie	500 – 1999	Blue
Pro	2000 – 4999	Purple
All Star	5000+	Orange

To add or edit reputation level names or points per level in any of your zones, use the ChatterAnswersReputationLevel object in the API. You can create up to 25 different reputation levels for each zone. Colors for the different reputation levels can be changed at the style sheet (CSS) level.

[Chatter Answers Users Overview](#)

Chatter Answers Implementation Tips

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

Consider the following information when planning and implementing Chatter Answers.

- We recommend that advanced Salesforce administrators and developers set up and maintain Chatter Answers, as it involves several Salesforce features.
- Before administrators can set up Chatter Answers, their organizations must have implemented [Data Categories](#). If you want Salesforce Knowledge articles to display in your zones, then administrators need to implement [Salesforce Knowledge](#).
- You can customize fields, page layouts, buttons and links, Apex triggers, and validation rules for questions and replies for Chatter Answers from Setup by entering "Chatter Answers" in the `Quick Find` box, then selecting **Chatter Answers** and choosing the appropriate setting.
- After you enable Chatter Answers, several items are automatically added to your organization for use with setting up zones:
 - A Q&A tab where internal users and administrators can view and use Chatter Answers. Administrators can rename this tab.
 - Standard permission settings for Questions on user profiles so that you can grant users permissions to questions and replies.
 - Visualforce pages that you can add to a Force.com site, a tab in a Community, or a Customer Portal so that users can register, sign in, and view feed items on a zone.
 - An Apex class named `ChatterAnswersRegistration` with a method for customizing Account creation for portal users.
 - An Apex trigger for questions named `chatter_answers_question_escalation_to_case_trigger` so that questions with specified attributes are automatically escalated to cases.
 - A workflow field update named `chatter_answers_num_subscriptions_above_` so that when a question is escalated to a case, `Priority` on questions is updated.
 - Two workflow rules, `chatter_answers_no_best_reply_within_time_limit_wf` and `chatter_answers_num_subscriptions_above_limit_wf`, which you can customize and activate so that questions without best replies or questions with a specified number of followers are automatically escalated to cases.
- You can add Chatter Answers to an existing Customer Portal or Partner Portal so that portal users can access Chatter Answers zones from one of your established channels.
- Chatter Answers is designed to support one user language for each zone that you create. When you [enable Chatter Answers](#), the Visualforce pages automatically added to your organization inherit your organization's default language. However, you can change the language attribute on each Visualforce page. Users who self-register for your zone inherit your organization's default language. Guest users view your zone in the language specified in the Visualforce pages, no matter the language chosen for their browsers.
- You can rename `Customer Support` on your zones' user interface. For example, you can change "Customer Support" to "Acme Support." Just edit the Customer Support label on the Question object.
- Questions escalated to cases display a Chatter-like feed on case detail pages. The case detail page also includes a Customer View section that lets support agents reply publicly or privately to the thread posted to the zone.
- Case comments marked `Public` display as private messages from customer support in Chatter Answers. They don't display to the entire community. For example, if a support agent adds a public case comment, it displays only to the case's contact private messages in Chatter Answers. Support agents can read all private and public case comments. .
- Chatter Answers sends email to users when they:

EDITIONS

Available in: Salesforce Classic

Chatter Answers is available in: **Enterprise, Developer, Performance, and Unlimited** Editions.

- Sign up for an account.
- Follow a question (answers or comments).
- Receive an answer or comment to their question.
- Receive a private reply to their question from customer support.
- Internet Explorer 8 users receive a security warning if you customize with URLs that don't include https://.
- Before you make a zone public, add at least 20 frequently asked questions, answers, or articles. This content will generate conversations.
- Create Salesforce Knowledge articles that contain:
 - Your support organization's phone number so that customers can contact your support agents directly.
 - Terms and conditions for zone members, such as when support agents might delete customers' questions and comments.
- Chatter Answers uses the following API objects:
 - Case
 - ChatterAnswersActivity
 - ChatterAnswersReputationLevel
 - Community (Zone)
 - Question
 - QuestionReportAbuse
 - QuestionSubscription
 - Reply
 - ReplyReportAbuse

[Chatter Answers Best Practices](#)

[Setting Up Chatter Answers](#)

Escalating a Question to a Case in Chatter Answers

If a question in Chatter Answers isn't resolved or its replies aren't satisfactory, administrators and trusted community members such as moderators can escalate the question to a case.

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

After a case is created, the question detail page provides a link to the case for the life of the question. This link also shows the status of the case.

To escalate a question to a case:

1. Click the question title.
2. Click the triangle next to the question to display the drop-down menu, and click **Escalate to Case**.

 **Note:** This option only appears if the user has permission to create cases. Users created from contacts cannot escalate questions to cases.

3. Update the case fields if you want to change any default values. The question title automatically becomes the case subject.
4. Click **Save**. You are returned to the question detail page, and the case is now available for the Case Owner to resolve.

 **Note:** Closing the case does not mark the question as resolved, and resolving the question does not close the case. The case and the question must be updated separately.

Chatter Answers Best Practices

 **Note:** Chatter Answers is scheduled for retirement in all Salesforce orgs as of Winter '18 release. For more information, see [Chatter Answers to Retire in Winter '18](#). Starting with Summer '16, Chatter Answers isn't available in new orgs. Instead, you can use Chatter Questions, a Q&A feature that's seamlessly integrated into Chatter. With Chatter Questions, users can ask questions and find answers without ever needing to leave Chatter. Existing orgs will continue to have access to Chatter Answers if it was enabled before the Summer '16 release from now until Winter '18.

Consider the following tips when planning and using Chatter Answers.

- We recommend that you tell support agents that:
 - The `Case Origin` field lists Chatter Answers on any case converted from a question.
 - If they answer a question privately, they can't convert it to a public answer.
- We recommend that you assign a support agent to review public questions from the Q&A tab. Agents can't click **Flag** next to questions or replies that are spam, hateful, or inappropriate, but they can edit and delete questions or replies from a zones via the Q&A tab if they have the "Delete" permission on questions.
- To moderate many questions quickly, we recommend that support agents review questions from pinned lists on the Salesforce console (this requires adding the Q&A tab to the console's Navigation tab).
- To see a list of cases converted from questions, we recommend that administrators or support agents create a case view where Case Origin equals Chatter Answers.

EDITIONS

Available in: Salesforce Classic

Available in: **Enterprise**, **Developer**, **Performance**, and **Unlimited** editions

USER PERMISSIONS

To view the Q&A tab:

- "Read" on questions

To ask and reply to questions:

- "Create" on questions

To create cases:

- "Create" on cases

- Because photos added to profiles display externally on Chatter Answers, we recommend that support agents choose photos that match their company's policies and branding.

[Setting Up Chatter Answers](#)

Creating Phone Channels

Salesforce Open CTI

Open CTI is a JavaScript API that lets you build and integrate third-party computer-telephony integration (CTI) systems with Salesforce Call Center. To display CTI functionality in Salesforce, Open CTI uses browsers as clients. With Open CTI, you can make calls from a softphone directly in Salesforce without installing CTI adapters on your machines.

Here's how Open CTI connects to your telephony system.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Note: The way you implement Open CTI depends on your org's user interface. There are separate Open CTI APIs for Salesforce Classic and Lightning Experience. You can't swap the two Open CTI APIs in custom JavaScript code because they behave and function differently. Make sure that you think about where you want to implement your CTI system before you begin developing.

Before the introduction of Open CTI, Salesforce users could only use the features of a CTI system after they installed a CTI adapter program on their machines. These types of programs often included desktop software that required maintenance and didn't offer the benefits of cloud architecture.

Important: CTI Toolkit, also known as the Desktop CTI, is **retired**. The CTI Toolkit is no longer supported, and any adapters built on the CTI Toolkit won't work. To continue using CTI functionality, migrate to [Salesforce Open CTI](#).

Typically, CTI vendors or partners create Open CTI implementations. After you have an Open CTI implementation, it's integrated with Salesforce using the Salesforce Call Center. Keep in mind that the out-of-the-box Service app is a Salesforce Classic app and only supports Open CTI for Salesforce Classic. To make calls in Lightning Experience, use Open CTI for Lightning Experience in a Lightning Experience app, like our out-of-the-box Service Console app.

CTI vendors and partners use Open CTI in JavaScript to embed API calls and processes. With Open CTI vendors and partners can:

- Build CTI systems that integrate with Salesforce without the use of CTI adapters.
- Create customizable softphones (call-control tools) that function as fully integrated parts of Salesforce and the Salesforce console.
- Provide users with CTI systems that are browser and platform agnostic, for example, CTI for Microsoft® Internet Explorer®, Mozilla® Firefox®, Apple® Safari®, or Google Chrome™ on Mac, Linux, or Windows machines.

SEE ALSO:

[Open CTI Developer Guide](#)

[Salesforce Call Center](#)

[Supported Browsers](#)

Salesforce CTI Toolkit

The CTI Toolkit lets developers build computer-telephony integration (CTI) adapters that integrate Salesforce with third-party CTI systems. With the CTI Toolkit, developers can build CTI adapters that Salesforce Call Center users install on their machines so they can use the features of a CTI system through a softphone.

Available in: Salesforce Classic

Available in: **Professional, Enterprise, Performance, Unlimited**, and **Developer** Editions

 **Important:** The CTI Toolkit is retired. Softphones built with the CTI Toolkit aren't supported. To continue using your softphone, migrate your CTI implementation to [Salesforce Open CTI](#). For more information about the retirement of CTI Toolkit and details about how to migrate to Open CTI, see [CTI Toolkit Retirement FAQ](#).

There are three versions of the CTI Toolkit. Each version provides users with different Salesforce CRM Call Center functionality. However, Salesforce only distributes CTI Toolkit version 4.0 or higher. The following table lists the functionality available in CTI adapters built with each CTI Toolkit:

Functionality	Version 1.0 or Higher	Version 2.0 or Higher	Version 3.0 or Higher	Version 4.0 or Higher
Change the fields and order of fields that display in a SoftPhone	✓	✓	✓	✓
Change the objects and order of links to objects that display in a SoftPhone	✓	✓	✓	✓
Specify the fields that display in the SoftPhone if a single record for a particular object is found	✓	✓	✓	✓
Specify screen pop settings for inbound calls with single, multiple, or no record matches		✓	✓	✓

Functionality	Version 1.0 or Higher	Version 2.0 or Higher	Version 3.0 or Higher	Version 4.0 or Higher
Specify screen pops for inbound calls to display in browser windows that are already open, or in new browser windows or tabs		✓	✓	✓
Specify screen pops to Visualforce pages for inbound calls		✓	✓	✓
Specify screen pops to search pages for inbound calls with multiple record matches		✓	✓	✓
View a call center's version in a <code>Version</code> field (from Setup, enter <i>Call Centers</i> in the Quick Find box, then select Call Centers and choose a call center)		✓	✓	✓
View an enhanced SoftPhone user-interface in the footer of the Salesforce console			✓	✓
Log calls in the customizable interaction log of the Salesforce console			✓	✓
Support browsers that are cross-domain messaging compatible				✓
Reduce CTI adapter size and complexity				✓

For information about customizing and building CTI adapters, see:

- [CTI Toolkit Developer's Guide \(Version 4.0\)](#)
- [CTI Toolkit Developer's Guide \(Versions 1.0 to 3.0\)](#)

Partners and developers can download the CTI Toolkit by visiting developer.salesforce.com. The CTI Toolkit provides you with all of the source code, libraries, and files you need to develop your own custom CTI adapter.

SEE ALSO:

[Salesforce Call Center](#)

Salesforce Call Center

Call Center integrates Salesforce with third-party computer-telephony integration (CTI) systems. Call center users can see Salesforce information for incoming calls, make out-going calls directly from Salesforce, and report on call outcome, duration, and more. A call center is great for boosting productivity for Salesforce users that spend time on the phone.

 **Note:** Keep in mind that the out-of-the-box Service app is a Salesforce Classic app and only supports Open CTI for Salesforce Classic. To make calls in Lightning Experience, use Open CTI for Lightning Experience in a Lightning Experience app, like our out-of-the-box Service Console app.

To set up a call center, work with a developer or partner to create a CTI implementation that uses the Open CTI API and works with your existing telephony system. Most call centers are created by installing an AppExchange package, then all you have to do is decide which users you want to access the call center.

After a call center is set up, call center users can make and receive calls with a softphone. Each softphone looks and behaves differently because each CTI implementation is unique. In the console and in Lightning Experience, softphones appear in a footer. In Salesforce Classic, softphones appear in the left sidebar of every Salesforce page.

The call center is all about customization. You can modify softphone layouts and assign specific layouts to selected user profiles. You can also add phone numbers to call center directories so your users all have access to key phone numbers. As your needs change, your call center can be customized and changed too. As an admin, some customization you can do yourself. However, you might want to work with your developers or partners to make functionality changes.

[Open CTI Developer Guide](#)

[Set Up a Call Center](#)

[Creating a Call Center](#)

[Managing Call Center Users](#)

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Set Up a Call Center

Before Salesforce users can access and use a call center, an administrator must complete various tasks.

 **Note:** Keep in mind that the out-of-the-box Service app is a Salesforce Classic app and only supports Open CTI for Salesforce Classic. To make calls in Lightning Experience, use Open CTI for Lightning Experience in a Lightning Experience app, like our out-of-the-box Service Console app.

1. Work with a developer or partner to create a computer-telephony integration (CTI) implementation that uses the Open CTI API and works with your existing telephony system. Most call centers are created by installing a package from the AppExchange.

If you're developing your own implementation, [define a new call center record](#) for every CTI system in use at your business.

2. [Assign Salesforce users to the appropriate call center](#). A call center user must be associated with a call center to view the softphone.
3. Optionally, you can make further customizations.
 - [Configure call center phone directories](#) with additional directory numbers and updated phone number search layouts.
 - [Customize softphone layouts](#) for different user profiles, so that the softphone of a sales person might show related leads, accounts, and opportunities, while the softphone of a support rep might show related cases and solutions.

SEE ALSO:

[Open CTI Developer Guide](#)

Deploying Adapters to Call Center Machines

 **Important:** The CTI Toolkit is retired. Softphones built with the CTI Toolkit aren't supported. To continue using your softphone, migrate your CTI implementation to [Salesforce Open CTI](#). For more information about the retirement of CTI Toolkit and details about how to migrate to Open CTI, see [CTI Toolkit Retirement FAQ](#).

Except for call centers built with Open CTI, any machine that uses Salesforce CRM Call Center must have a *CTI adapter* installed. A CTI adapter is a light-weight software program that controls the appearance and behavior of a Salesforce SoftPhone. The [CTI Developer's Toolkit](#) version determines a SoftPhone's functionality.

Because a CTI adapter communicates directly with an individual CTI system, an organization must use a different CTI adapter for each type of CTI system that is in use. For example, if an organization wants to integrate one call center that runs Cisco IPCC Enterprise™ and one call center that runs Cisco IPCC Express™, the organization must have two CTI adapters available. A call center user's machine only requires the SoftPhone CTI adapter for the call center to which it connects.

To download a SoftPhone CTI adapter, visit [AppExchange](#). Adapter installation packages include both the adapter setup files and a [call center definition file](#) that can be used in conjunction with the adapter.

To install a CTI adapter on a single machine, run the CTI adapter's `Setup.exe` application as a Windows administrator user.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To manage call centers, call center users, call center directories, and SoftPhone layouts:

- "Manage Call Centers"

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

To deploy a CTI adapter to all the machines in a call center at once, use the `.msi` file that is packaged with the installer and your preferred Software Management System.

Once a CTI adapter is installed, you can perform the following operations:

- Start the CTI adapter application by clicking **Start > Programs > salesforce.com > <Your CTI System Name> Adapter**. You can verify that the CTI adapter is running by looking for the  icon in the system tray of the computer.
- Stop the CTI adapter application by right-clicking the CTI adapter system tray icon () and choosing **Exit**.
- Modify CTI adapter log settings by right-clicking the CTI adapter system tray icon () and choosing **Logging...** In the CTI Log Settings dialog:
 - Select the types of messages that you want to log. Keep log levels at **Low - Errors** unless you are troubleshooting an issue with your adapter.
 - Specify the location for the two log files that the CTI adapter generates. For more information on these files, see the [CTI Toolkit Developer's Guide](#).

SEE ALSO:

[Set Up a Call Center](#)

[Managing Call Center Users](#)

Call Center Definition Files

A call center definition file specifies a set of fields and values that are used to define a call center in Salesforce for a particular CTI system. Salesforce uses call center definition files in order to support the integration with multiple CTI system vendors.

By default, any CTI adapter installation package includes a default call center definition file that works specifically with that adapter. This XML file is located in the adapter installation directory and is named after the CTI system that it supports. For example, the Cisco IPCC Enterprise™ adapter's default call center definition file is named `CiscoIPCCEnterprise7x.xml`.

The first instance of a call center for a particular CTI adapter must be defined by [importing the call center definition file](#) into Salesforce. Subsequent call centers can be created by [cloning the original call center](#) that was created with the import.

If your organization modifies an adapter or builds a new one, you must customize the adapter's call center definition file so that it includes any additional call center information that is required. For example, if you are building a CTI adapter for a system that supports a backup server, your call center definition file should include fields for the backup server's IP address and port number. CTI adapters for systems that do not make use of a backup server do not need those fields in their associated call center definition files.

 **Note:** Once a call center definition file has been imported into Salesforce, the set of fields that were specified in the file cannot be modified. The values assigned to those fields, however, can be changed within Salesforce.

See the following topics for information about creating and importing a call center definition file:

- To create a call center definition file for a custom CTI adapter, see [Creating a Call Center Definition File](#) on page 2566.
- To view a sample call center definition file, see [Sample Call Center Definition File](#) on page 2566.

Importing a Call Center Definition File

To create your first call center for a [CTI adapter](#) that was just installed, you can import the adapter's default [call center definition file](#) into Salesforce:

1. From Setup, enter *Call Centers* in the **Quick Find** box, then select **Call Centers**.
2. Click **Import**.
3. Next to the **Call Center Definition File** field, click **Browse** to navigate to the default call center definition file in your CTI adapter installation directory. This XML file is named after the type of CTI system that the adapter supports. For example, the Cisco™ IPCC Enterprise adapter's default call center definition file is named `CiscoIPCCEnterprise7x.xml`. Click **Open** to enter the path in the **Call Center Definition File** field.
4. Click **Import** to import the file and return to the All Call Centers page. The new call center record is listed with the other call centers in your organization.

 **Note:** If you receive the error *A call center with this internal name already exists*, a call center definition file for this CTI adapter has already been imported into Salesforce. To create additional call center records for this CTI adapter, [clone the adapter's existing call center](#), or [modify the call center definition file](#) to include a different value for `reqInternalName`.

5. Click **Edit** next to the name of the new call center to modify the call center's settings.

To create additional call centers for a particular CTI adapter, see [Cloning a Call Center](#) on page 2573.

To define a new call center definition file for a CTI adapter that was customized specifically for your organization, see [Creating a Call Center Definition File](#) on page 2566.

Call Center Definition XML Format

A [call center definition file](#) consists of three XML elements: `callCenter`, `section`, and `item`. The following list provides details about the properties and attributes of each element:

`callCenter`

This element represents a definition for a single call center phone system. At least one `<callCenter>` element must be included in every call center definition file. A `<callCenter>` element consists of one or more `<section>` elements.

`section`

This element represents a grouping of related data fields, such as server information or dialing prefixes. When a call center is edited in Salesforce, fields are organized by the section to which they are assigned. A `<section>` element belongs to a single `<callCenter>` element, and consists of one or more `<item>` elements.

Attributes:

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To import call center definition files:

- "Customize Application"
- AND
- "Manage Call Centers"

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Name	Type	Required?	Description
<code>sortOrder</code>	Positive Integer	Required	<p>The order in which the section should appear when the call center is edited in Salesforce. For example, a section with <code>sortOrder="1"</code> comes just before a section with <code>sortOrder="2"</code>.</p> <p>The values for <code>sortOrder</code> must be non-negative integers, and no numbers can be skipped within a single call center definition. For example, if there are three section elements in a call center definition file, one <code><section></code> element must have <code>sortOrder="0"</code>, one <code><section></code> element must have <code>sortOrder="1"</code>, and one <code><section></code> element must have <code>sortOrder="2"</code>.</p>
<code>name</code>	String	Required	<p>The internal name of the section as defined in the Salesforce database. You can use this value to refer to the section when writing custom adapter or SoftPhone code.</p> <p>Names must be composed of only alphanumeric characters with no white space or other punctuation. They are limited to 40 characters each.</p> <p>Names beginning with <code>req</code> are reserved for required Salesforce sections only (see Required Call Center Elements and Attributes on page 2570). Other reserved words that cannot be used for the name attribute include <code>label</code>, <code>sortOrder</code>, <code>internalNameLabel</code>, and <code>displayNameLabel</code>.</p>
<code>label</code>	String	Optional	<p>The name of the section when viewed in Salesforce. Labels can be composed of any string of UTF-8 characters. They are limited to 1000 characters each.</p>

item

This element represents a single field in a call center definition, such as the IP address of a primary server or the dialing prefix for international calls. When call centers are edited in Salesforce, each `<item>` element is listed under the section to which it belongs. You can have multiple `<item>` elements in a `<section>` element.

Attributes:

Name	Type	Required?	Description
<code>sortOrder</code>	Positive Integer	Required	<p>The order in which the item should appear when the call center is edited in Salesforce. For example, an item with <code>sortOrder="1"</code> comes just before an item with <code>sortOrder="2"</code>.</p> <p>The values for <code>sortOrder</code> must be non-negative integers, and no numbers can be skipped within a single call center definition. For example, if there are three item elements in a call center definition file, one <code><item></code> element must have <code>sortOrder="0"</code>, one <code><item></code> element must have</p>

Name	Type	Required?	Description
			sortOrder="1", and one <item> element must have sortOrder="2".
name	String	Required	<p>The internal name of the item as defined in the Salesforce database. You can use this value to refer to the item when writing custom adapter or SoftPhone code.</p> <p>Names must be composed of only alphanumeric characters with no white space or other punctuation. They are limited to 40 characters each.</p> <p>Names beginning with <code>req</code> are reserved for required Salesforce sections only (see Required Call Center Elements and Attributes on page 2570). Other reserved words that cannot be used for the <code>name</code> attribute include <code>label</code>, <code>sortOrder</code>, <code>internalNameLabel</code>, and <code>displayNameLabel</code>.</p>
label	String	Optional	The name of the item when viewed in Salesforce. Labels can be composed of any string of UTF-8 characters. They are limited to 1,000 characters each.

- [Creating a Call Center Definition File](#)
- [Required Call Center Elements and Attributes](#)
- [Specifying Values for <item> Elements](#)
- [Sample Call Center Definition File](#)

Required Call Center Elements and Attributes

There must be one <section> that includes <item> elements with the following names in every [call center definition file](#):

<item> Name	Description
reqInternalName	Represents the unique identifier for the call center in the database. It must have a <code>sortOrder</code> value of 0, and its value must be specified in the call center definition (see Specifying Values for <item> Elements on page 2571). A value for <code>reqInternalName</code> must be composed of no more than 40 alphanumeric characters with no white space or other punctuation. It must start with an alphabetic character and must be unique from the <code>reqInternalName</code> of all other call centers defined in your organization.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

<item> Name	Description
reqDisplayName	Represents the name of the call center as displayed in Salesforce. It must have a <code>sortOrder</code> value of 1. A value for <code>reqDisplayName</code> has a maximum length of 1,000 UTF-8 characters.
reqDescription	Represents a description of the call center. A value for <code>reqDescription</code> has a maximum length of 1,000 UTF-8 characters.
reqProgId	Represents the Program ID (<code>progId</code>) of the CTI adapter that should be used for this call center. This value is specified in the default call center definition file that comes bundled with every CTI adapter installer, or in the base COM class of a custom CTI adapter.
reqVersion	Represents the version of the CTI Toolkit with which the adapter was built. This element is available for call centers built with CTI Toolkit versions 3.0 or higher.
reqAdapterUrl	Represents the location of where the CTI adapter is hosted. For example, <code>http://localhost:11000</code> . This element is available for call centers built with CTI Toolkit versions 4.0 or higher.

You can add additional `<item>` elements to this section if needed.

SEE ALSO:

- [Creating a Call Center](#)
- [Creating a Call Center Definition File](#)
- [Call Center Definition XML Format](#)
- [Required Call Center Elements and Attributes](#)
- [Specifying Values for `<item>` Elements](#)
- [Sample Call Center Definition File](#)

Specifying Values for `<item>` Elements

With the exception of the `reqInternalName` `<item>`, whose value must always be specified in a [call center definition file](#), you can specify `<item>` values either in the call center definition file or in Salesforce once the definition file has been imported.

To specify a value for an `<item>` element in a call center definition file, place the value between the opening and closing tags of the `<item>`. For example:

```
<item sortOrder="0" name="reqInternalName" label="Call Center Internal Label">MyCallCenter</item>
```

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

sets the value of the `reqInternalName` `<item>` to `MyCallCenter`. Note that any `<item>` value other than the value for `reqInternalName` can be edited in Salesforce after the call center definition is imported.

Creating a Call Center

A call center in [Salesforce CRM Call Center](#) corresponds to a single computer-telephony integration (CTI) system already in place at your organization. Salesforce users must be assigned to a call center record before they can use any Salesforce CRM Call Center features.

There are two ways to create a call center record in Salesforce:

- [Import a call center definition file into Salesforce](#). Use this method to create your first call center for a CTI adapter that was just installed.
- [Clone an existing call center definition](#). Use this method to create additional call centers for a particular CTI adapter. For example, if you already have a call center record for a Cisco IPCC Enterprise™ call center based in one location, you can clone that record for a Cisco IPCC Enterprise call center based in another location.

To view a list of call centers that have already been created, from Setup, enter *Call Centers* in the `Quick Find` box, then select **Call Centers**.

SEE ALSO:

- [Open CTI Developer Guide](#)

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To create a call center by importing or cloning:

- “Manage Call Centers”

Cloning a Call Center

To create more than one call center for a particular CTI adapter, you can clone an existing one. For example, if you already have a call center record for a Cisco IPCC Enterprise™ call center based in one location, you can clone that record for a Cisco IPCC Enterprise call center based in another location.

To clone a call center:

1. From Setup, enter *Call Centers* in the **Quick Find** box, then select **Call Centers**.
2. Click the name of the call center that you want to clone.
3. Click **Clone**. This action opens a new call center for editing with the same fields and values as the original call center. Only the **Internal Name** field is left intentionally blank to allow you to provide a new name. The **Internal Name** field is limited to 40 alphanumeric characters and must start with an alphabetic character. **Internal Name** must be unique for every call center defined in your organization. For more information, see [Call Center Fields](#) on page 2580.
4. Make any additional changes to the new call center as necessary.
5. Click **Save** to save the new call center, or click **Cancel** to return to the All Call Centers page without saving the cloned call center.

 **Note:** If you have read-only access to a field, the value of that field is not carried over to the cloned record.

Displaying and Editing a Call Center

A call center in [Salesforce CRM Call Center](#) corresponds to a single computer-telephony integration (CTI) system already in place at your organization. Salesforce users must be assigned to a call center record before they can use any Salesforce CRM Call Center features.

To view call center details:

1. From Setup, enter *Call Centers* in the **Quick Find** box, then select **Call Centers**.
2. Click the name of the call center that you want to view.

From the Call Center Detail page you can:

- Click **Edit** to modify the properties of the call center.
- Click **Delete** to erase the call center record from Salesforce. When you delete a call center, all associated [directory numbers](#) are also deleted. Any users associated with the call center must be reassigned to another call center to continue using Salesforce CRM Call Center features .
- Click **Clone** to [create a duplicate copy of the call center](#) with the same fields and values as the current call center.
- Click **Manage Call Center Users** to [designate Salesforce users as members of this call center](#).

Adding a Number to a Call Center Directory

To customize call center directories by adding additional directory numbers, either to a single call center or to all defined call centers in your organization:

1. From Setup, enter *Directory Numbers* in the **Quick Find** box, then select **Directory Numbers**. From this page, you can:
 - Click **Edit** to edit an existing additional directory number.
 - Click **Del** to delete an existing additional directory number.
 - Click the name of an existing additional directory number to view its details in the Additional Directory Number Detail page. From this page you can click **Edit** to edit the number, click **Delete** to delete it, or click **Clone** to quickly create a new additional directory number with the same information as the existing number.
2. Click **New** to define a new additional directory number.
3. In the **Name** field, enter a label that identifies the additional directory number.
4. In the **Phone** field, enter the phone number, including any international country codes. Dialing prefixes, such as 9 or 1, do not need to be included.

[Customizing a Call Center Directory](#)

Customizing Softphone Layouts

A softphone is a customizable call-control tool that appears to users assigned to a call center. Similar to page layouts, you can design custom softphone layouts and assign them to Call Center users based on their user profile. See:

- [Designing a Custom Softphone Layout](#)
- [Assigning a Softphone Layout to a User Profile](#)

SEE ALSO:

[Open CTI Developer Guide](#)

[Set Up a Call Center](#)

[Managing Call Centers](#)

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To view, create, edit, or delete a softphone layout:

- "Manage Call Centers"

Designing a Custom Softphone Layout

In a [softphone layout](#) you can control the call-related fields that are displayed and the Salesforce objects that are searched for an incoming call. To design a custom softphone layout:

1. From Setup, enter *Softphone Layouts* in the Quick Find box, then select **Softphone Layouts**.
2. Click **New** to create a new softphone layout definition, or click **Edit** next to the name of an existing layout definition to view or modify it.
3. In the **Name** field, enter a label that uniquely identifies your softphone layout definition.
4. In the **Select Call Type** picklist, choose the type of call for which the currently displayed softphone layout should be used. Every softphone layout definition allows you to specify different layouts for inbound, outbound, and internal calls. These three layouts are grouped together in a single softphone layout definition.
5. In the **Display these call-related fields** section, click **Edit** to add, remove, or change the order of fields in the currently-displayed softphone layout:
 - To add a field to the softphone layout, select it in the Available list and click **Add**.
 - To remove a field from the softphone layout, select it in the Selections list and click **Remove**.
 - To change the order of a field in the softphone layout, select it in the Selections list and click **Up** or **Down**.

Any changes that you make are automatically updated in the softphone layout preview image on the right side of the page. To hide the Available and Selections lists, click **Collapse**.

Phone-related fields only appear in a user's softphone if a valid value for that field is available. For example, if you add a Caller ID field to the layout of an outbound call, Caller ID will not appear.

6. In the **Display these Salesforce Objects** section, click **Add/Remove Objects** to add, remove, or change the order of links to call-related objects.
7. Below the list of selected objects, click **Edit** next to each **If single <Object> found, display** row to specify the fields that should be displayed in the softphone layout if a single record for that object is the only record found. You can add, remove, or change the order of fields.
8. In the **Screen Pop Settings** section (for inbound call types), click **Edit** next to each type of record-matching row to specify which screens should display when the details of an inbound call match or don't match existing record(s) in Salesforce. The following table describes each record-matching row and its screen pop options:

Record-Matching Row	Description	Screen Pop Options
Screen pops open within	Use to set where screen pops display.	<p>Existing browser window Select to display in open browser windows.</p> <p>New browser window or tab Select to display in new browser windows or tabs.</p> <p>Users' browsers may handle these settings differently:</p> <ul style="list-style-type: none"> • Internet Explorer 6.0 always displays screen pops in new windows.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited, and Developer** Editions

USER PERMISSIONS

To view, create, edit, or delete a softphone layout:

- "Manage Call Centers"

Record-Matching Row	Description	Screen Pop Options
No matching records	Use to set the screen pop options for when the details of an inbound call don't match any existing Salesforce records.	<ul style="list-style-type: none"> • Internet Explorer 7.0 displays screen pops based on what users select in its tabs settings. • Firefox 3.5 displays screen pops based on what users select in its tabs settings. <p>Don't pop any screen Select if you don't want any screen to display.</p> <p>Pop to new Select to display a new record page you specify from the drop-down list.</p> <p>Pop to Visualforce page Select to display a specific Visualforce page.</p> <p>The CTI adapter passes data from the call to the Visualforce page via a URL. This includes at least <code>ANI</code> (the caller ID) and <code>DNIS</code> (the number that the caller dialed). The URL can pass additional data to the Visualforce page if necessary.</p>
Single-matching record	Use to set the screen pop options for when the details of an inbound call match one existing Salesforce record.	<p>Don't pop any screen Select if you don't want any screen to display.</p> <p>Pop detail page Select to display the matching record's detail page.</p> <p>Pop to Visualforce page Select to display a specific Visualforce page.</p> <p>The CTI adapter passes data from the call to the Visualforce page via a URL. This includes at least <code>ANI</code> (the caller ID) and <code>DNIS</code> (the number that the caller dialed). The URL can pass additional data to the Visualforce page if necessary.</p>
Multiple-matching records	Use to set the screen pop options for when the details of an inbound call match more than one existing Salesforce record.	<p>Don't pop any screen Select if you don't want any screen to display.</p>

Record-Matching Row	Description	Screen Pop Options
		<p>Pop to search page Select to display a search page.</p> <p>Pop to Visualforce page Select to display a specific Visualforce page.</p> <p>The CTI adapter passes data from the call to the Visualforce page via a URL. This includes at least <code>ANI</code> (the caller ID) and <code>DNIS</code> (the number that the caller dialed). The URL can pass additional data to the Visualforce page if necessary.</p>

To hide expanded record-matching rows, click **Collapse**.

- Configure softphone layouts for any remaining call types in the `Select Call Type` picklist.
- Click **Save**.

 **Note:** Some Salesforce CRM Call Center features might not be available with your softphone because of customizations that have been made for your organization. See your administrator for details.

Enabling HTTPS in a Call Center

With CTI adapters built with version 4.0 of the CTI Toolkit, you can specify a secure URL, or one that uses the secure hypertext transfer protocol (HTTPS), for your call center. Using HTTPS provides added security for your call center, and also helps prevent the Mixed Content warnings that can appear in your browser if your Salesforce organization uses the HTTPS protocol but your call center does not.

 **Important:** The CTI Toolkit is retired. Softphones built with the CTI Toolkit aren't supported. To continue using your softphone, migrate your CTI implementation to [Salesforce Open CTI](#). For more information about the retirement of CTI Toolkit and details about how to migrate to Open CTI, see [CTI Toolkit Retirement FAQ](#).

To enable HTTPS:

1. From Setup, enter *Call Centers* in the **Quick Find** box, then select **Call Centers**.
2. Click the name of a call center.
3. Click **Edit**.
4. Type the secure URL for your adapter in **CTI Adapter URL**. For example, `https://localhost:11000`.
5. Click **Save**.

 **Important:** In addition to specifying a secure URL on the Call Center Settings page, you also need to make changes to the CTI adapter's configuration file, and create and install a new certificate for the CTI adapter. For more information, see the [CTI Toolkit Developer's Guide](#).

 **Note:** Previous versions of CTI are secure but use Windows® technologies that are different than those in CTI 4.0.

[Call Center Definition Files](#)

[Managing Call Center Users](#)

Call Center Fields

All call centers include the following required fields, though additional fields may be available depending on the content of the [call center definition file](#) that was used to create the call center:

Field	Description
Internal Name	Represents the unique identifier for the call center in the database. <code>Internal Name</code> must be composed of no more than 40 alphanumeric characters with no white space or other punctuation. It must start with an alphabetic character and must be unique from the <code>Internal Name</code> of all other call centers defined in your organization. Once a value for <code>Internal Name</code> has been saved for a call center, it cannot be changed.
Display Name	Represents the name of the call center as displayed in Salesforce. It must have a <code>sortOrder</code> value of 1. <code>Display Name</code> has a maximum length of 1,000 UTF-8 characters.
Description	Represents a description of the call center. <code>Description</code> has a maximum length of 1,000 UTF-8 characters.
CTI Connector ProgId	Represents the Program ID (progId) of the CTI adapter that should be used for this call center. This value is specified in the default call center

Managing Call Center Users

A Salesforce user cannot use a softphone unless an administrator has assigned the user to a call center.

Also keep in mind that every call center user has access to a set of [personal softphone settings](#). These settings specify:

- Whether the user should be automatically logged into his or her softphone when he or she logs into Salesforce
- How a record should be displayed when it is the only one that matches an incoming call

To change the default personal softphone settings for all new call center users, use the Force.com API.

USER PERMISSIONS

To add or remove users from a call center:

- “Manage Call Centers”

Adding a User to a Call Center

To add a user to a call center in [Salesforce CRM Call Center](#):

1. From Setup, enter *Call Centers* in the **Quick Find** box, then select **Call Centers**.
2. Click the name of the call center to which you want to assign the Salesforce user.
3. In the Call Center Users related list, click **Manage Call Center Users**.
4. Click **Add More Users**.
5. Specify search criteria to find the Salesforce users who should be assigned to the call center.
6. Click **Find** to display the list of Salesforce users that meet your search criteria. All users who already belong to a call center are excluded from search results because a user can only be assigned to one call center at a time.
7. Select the checkbox next to each user who should be assigned to the call center and click **Add to Call Center**.

Alternatively, you can change a particular user's call center in the User Edit page:

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Click **Edit** next to the name of the user.
3. Modify the *Call Center* field as appropriate. You can change the user's call center by clicking the lookup icon () and choosing a new call center, or you can remove the user from his or her current call center by deleting the call center name from the field.

Removing a User from a Call Center

To remove a user from a call center in [Salesforce CRM Call Center](#):

1. From Setup, enter *Call Centers* in the **Quick Find** box, then select **Call Centers**.
2. Click the name of the call center from which you want to remove the Salesforce user.
3. In the Call Center Users related list, click **Manage Call Center Users**.
4. Click **Remove** next to the name of the user that you want to remove from the call center.

To remove multiple users at once, select the **Action** checkbox next to each user you want to remove and click **Remove Users**.

Alternatively, you can change a particular user's call center in the User Edit page:

1. From Setup, enter *Users* in the **Quick Find** box, then select **Users**.
2. Click **Edit** next to the name of the user.

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To add users to a call center:

- "Manage Call Centers"

EDITIONS

Available in: Salesforce Classic and Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited,** and **Developer** Editions

USER PERMISSIONS

To remove users from a call center:

- "Manage Call Centers"

3. Modify the `Call Center` field as appropriate. You can change the user's call center by clicking the lookup icon (🔍) and choosing a new call center, or you can remove the user from his or her current call center by deleting the call center name from the field.

Live Agent for Administrators

Welcome to Live Agent for administrators! Live Agent is a comprehensive chat solution that makes it easy for your support organization's agents and support supervisors to assist customers. With Live Agent, your support organization can leverage the comprehensive customer service tools that are available in the Salesforce console while providing real-time chat support.

As an administrator, you can set up and customize Live Agent for your users, including agents and support supervisors. Live Agent is easy to set up and highly customizable. You can enable a suite of features that your agents and supervisors can use to assist customers.

Watch a Demo: [▶ Live Agent Configuration \(Salesforce Classic\)](#)

A few major steps are involved in enabling, setting up, and deploying Live Agent in your Salesforce org. Let's get started.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To set up Live Agent:

- "Customize Application"

To create user profiles or permission sets:

- "Manage Profiles and Permission Sets"

Create a Basic Live Agent Implementation

Before you customize Live Agent, you need to create the basic Live Agent implementation for your Salesforce org. After you complete the basic setup steps, you'll have a functioning Live Agent implementation that your agents can use to chat with customers.

Watch a Demo: [▶ Live Agent Configuration \(Salesforce Classic\)](#)

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To set up Live Agent:

- "Customize Application"

To create user profiles or permission sets:

- "Manage Profiles and Permission Sets"

Enable Live Agent

Get started with Live Agent by enabling it for your Salesforce org. After you enable Live Agent, you can customize it.

1. From Setup, enter *Live Agent Settings* in the Quick Find box, then select **Live Agent Settings**.
2. Select **Enable Live Agent**.
3. Click **Save**.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To enable Live Agent:

- "Customize Application"

Create Live Agent Users

Before your users can assist customers with chat, you need to assign the users as Live Agent users. Live Agent users are support agents and supervisors who have the Salesforce permissions to assist customers with chat.

All Live Agent users need the `API Enabled` administrative permission enabled on their associated profile before they can use Live Agent.

1. From Setup, enter `Users` in the `Quick Find` box, then select **Users**.
2. Click **Edit** next to a user's name.
3. Select `Live Agent User`. If you don't see this checkbox, verify that your support organization has purchased enough Live Agent feature licenses.
4. Click **Save**.

After creating users, make sure that you assign them a Live Agent configuration and associate them with the appropriate skills.

Permissions for Live Agent Support Agents

You need to enable a few specific permissions for Live Agent support agents so that they have access to all the tools that they'll need to provide help to customers.

General Permissions

Necessary Permission	Description
"API Enabled"	Required for all Live Agent users

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To create or edit users:

- "Manage Internal Users"

To enable agents to use Live Agent:

- "API Enabled" administrative permission

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Object Permissions

Record Type	Permission	Description	Considerations
Live Agent Sessions	"Read"	Enables agents to view session records	We don't recommend giving agents the ability to create, edit, and delete session records. Session records are created automatically and are meant to provide a paper trail with information about the time that agents spend online, so we don't recommend giving agents the ability to change these records.
Live Chat Visitors	"Read"	Enables agents to view visitor records	We don't recommend giving agents the ability to create, edit, and delete visitor records. Visitor records are created automatically and are meant to provide a paper trail that associates your customers with their chat transcripts, so we don't recommend giving agents the ability to change these records.
Live Chat Transcripts	"Read"	Enables agents to view chat transcripts	We don't recommend giving agents the ability to create, edit, and delete chat transcripts. Transcripts are created automatically and are meant to provide a paper trail about your agents' interactions with customers, so we don't recommend giving agents the ability to change these records.
Quick Text	"Read"	Enables agents to view Quick Text messages and include Quick Text in chats.	Without the "Read" permission on Quick Text, agents can't access the Quick Text sidebar in the Salesforce console.
	"Create"	Enables agents to create Quick Text messages	If your Quick Text messages need to be standardized across your organization, limit your agents' ability to create Quick Text messages. In that case, give the "Create" permission to support supervisors instead.

Record Type	Permission	Description	Considerations
	"Edit"	Enables agents to edit Quick Text messages	If your Quick Text messages need to be standardized across your support organization, limit your agents' ability to edit Quick Text messages. In that case, give the "Edit" permission to support supervisors instead.
	"Delete"	Enables agents to delete Quick Text messages	If your Quick Text messages need to be standardized across your organization, limit your agents' ability to delete Quick Text messages. In that case, give the "Delete" permission to support supervisors instead.

Permissions for Live Agent Support Supervisors

You must enable certain permissions for Live Agent support supervisors so that they have all the tools they need to monitor agents' activities and review customers' information.

General Permissions

Necessary Permission	Description
"API Enabled"	Required for all Live Agent users

Optional Permission	Description
"Assign Live Agent Skills to Users"	Enables supervisors to assign skills to agents.

Object Permissions

Record Type	Permission	Description	Considerations
Live Agent Sessions	"Read"	Enables supervisors to view session records	None
	"Create"	Enables supervisors to create session records	Session records are created automatically and are meant to provide a paper trail that provides information about the time that agents

Quick Text	"Read"	Enables supervisors to view Quick Text messages	None
	"Create"	Enables supervisors to create Quick Text messages	None

Record Type	Permission	Description	Considerations
	"Edit"	Enables supervisors to edit Quick Text messages	None
	"Delete"	Enables supervisors to delete Quick Text messages	None

Create and Assign Live Agent Skills

Skills identify your agents' areas of expertise. When you assign an agent to a skill, that agent receives chat requests that are related to the agent's skill areas. You can also empower your supervisors to assign skills to agents.

1. From Setup, enter *Skills* in the **Quick Find** box, then select **Skills**.
2. Click **New**.
3. Enter a name for the skill.
For example, you can create a skill that's called "Accounts" for agents who specialize in questions about customer accounts.
4. In the Assign Users area, select the users whom you want to associate with the skill.
5. In the Assign Profiles area, select the profiles that you want to associate with the skill.
6. Click **Save**.

To enable supervisors to assign skills, enable the "Assign Live Agent Skills to Users" permission on their profiles, or assign it to individual users via a permission set. When supervisors have this permission, they can go to **Setup > Customize > Live Agent Skills** and update the assigned profiles or users under each skill.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To create skills:

- "Customize Application"

To assign skills (supervisors):

- "Assign Live Agent Skills to Users"

Create Live Agent Configurations

Live Agent configurations define the Live Agent functionality that's available to your agents and support supervisors when agents chat with customers. Create Live Agent configurations to control the functionality of Live Agent in the Salesforce console.

For efficiency, create profiles and users before you create configurations. That way, you can create a configuration and assign it to users and profiles at the same time.

Live Agent configurations enable you to control your users' access to certain Live Agent features. You can create multiple configurations that define Live Agent's functionality for multiple types of users. For example, you might create a configuration specifically for experienced agents that gives them more permissions than new agents have, or you might create a configuration for support supervisors that gives them the permissions that they need to monitor their employees.

1. To get started with creating a configuration, in Setup, enter *Live Agent Configurations* in the *Quick Find* box, then select **Live Agent Configurations**.
2. Click **New**.
3. Choose the settings for your Live Agent configuration.
4. Click **Save**.

Live Agent Configuration Settings

Live Agent configuration settings control the functionality that's available to agents and their supervisors while agents chat with customers.

Apply settings when you create or edit a Live Agent configuration.

Basic Information

Configure the basic functionality that's available to agents when they chat with customers.

Setting	What It Does
Live Agent Configuration Name	Names the configuration. This configuration name, or a version of it, automatically becomes the <code>Developer Name</code> .
Developer Name	Sets the API name for the Live Agent configuration.
Chat Capacity	Indicates how many chats an agent who is assigned to this configuration can be engaged in at the same time.

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

USER PERMISSIONS

To create and edit configurations:

- "Customize Application"

EDITIONS

Available in: Salesforce Classic

Live Agent is available in: **Performance** Editions and in **Developer** Edition orgs that were created after June 14, 2012

Live Agent is available in: **Unlimited** Edition with the Service Cloud

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Setting	What It Does
Sneak Peek Enabled	Indicates whether agents can see what a chat customer is typing before the customer sends a chat message.
Request Sound Enabled	Indicates whether to play an audio alert when the agent receives a new chat request.
Disconnect Sound Enabled	Indicates whether to play an audio alert when a chat is disconnected.
Notifications Enabled	Indicates whether to display a desktop alert when an agent receives a new chat request.
Custom Agent Name	Sets the agent's name as it appears to customers in the chat window.
Auto Greeting	<p>Sets a customized greeting message that the customer receives automatically when an agent accepts the customer's chat request.</p> <p>Optionally, use merge fields to customize the information in your greeting by using the Available Merge Fields tool. For example, you can personalize the chat experience by using merge fields to include the customer's name in the greeting.</p> <p> Note: If you specify an automatic greeting message in both your Live Agent configuration and in an individual chat button, the message that's associated with your chat button overrides the message that's associated with your configuration.</p>
Auto Away on Decline	<p>Sets the agent's Live Agent status to "Away" automatically when the agent declines a chat request.</p> <p>This option applies only when agents are assigned to chat buttons that use push routing.</p>
Auto Away on Push Time-Out	<p>Sets an agent's Live Agent status to "Away" automatically when a chat request that's been pushed to the agent times out.</p> <p>This option applies only when agents are assigned to chat buttons that use push routing.</p>
Critical Wait Alert Time	Determines the number of seconds that the agent has to answer a customer's chat before the chat tab alerts the agent to answer it.
Agent File Transfer Enabled	Indicates whether an agent can enable customers to transfer files through a chat.
Visitor Blocking Enabled	Indicates whether an agent can block visitors from an active chat within the Salesforce console. See Let Your Agents Block Visitors by IP Address .

Setting	What It Does
Assistance Flag Enabled	Indicates whether an agent can send a request for help (“raise a flag”) to a supervisor.

Chatlets

Chatlets are tools that are available only to organizations that use Live Agent in the Live Agent console. The Live Agent console is no longer supported, so we don’t recommend setting up chatlets. But don’t worry—if you use Live Agent in the Salesforce console, you don’t need chatlets.

Assign Users

Assign eligible users to the configuration to give them access to Live Agent functionality. Later, you’ll see that you can also assign profiles to a configuration. If a user is assigned a configuration at the profile and user levels, the user-level configuration overrides the configuration that’s assigned to the profile.

Warning: Users can be assigned to only one Live Agent configuration at a time. If you assign the same user to a second Live Agent configuration, the system removes that user from the first Live Agent configuration without warning you. So make sure that you know exactly which Live Agent configuration each user should be assigned to!

For example, let’s say that User A is assigned to Live Agent Configuration A. Then, you create Live Agent Configuration B and accidentally assign User A to it. Salesforce automatically removes User A from Live Agent Configuration A and reassigns the user to Live Agent Configuration B without notifying you.

Setting	What It Does
Available Users	Indicates the users who are eligible to be assigned to the configuration.
Selected Users	Indicates the users who are assigned to the configuration.

Assign Profiles
