- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don't have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Unread`—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don't have a best answer.

Return Value

Type: `ConnectApi.FeedElementPage`

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestGetFeedElementsFromFeed\(`communityId`, `feedType`, `recentCommentCount`, `density`, `pageParam`, `pageSize`, `sortParam`, `filter`, `result`\)](#)

[Testing ConnectApi Code](#)

**getFeedElementsFromFeed(`communityId`, `feedType`, `subjectId`)**

Returns the first page of feed elements for any feed type other than `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`, for the specified user or record. The page contains the default number of elements.

## API Version

31.0

## Available to Guest Users

31.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example for Getting the Context User's News Feed

```
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.News, 'me');
```

Example for Getting Another User's Profile Feed

```
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.UserProfile, '005R0000000HwMA');
```

Example for Getting Another User's Record Feed

```
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.Record, '005R0000000HwMA');
```

SEE ALSO:

[setTestGetFeedElementsFromFeed\(communityId, feedType, subjectId, result\)](#)

[Testing ConnectApi Code](#)

**getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)**

Returns the feed elements on the specified page for any feed type other than `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`, in the specified order.

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

The number of feed elements per page.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

## Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

31.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
    ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

*subjectId*

Type: [String](#)

If *feedType* is *Record*, *subjectId* can be any record ID, including a group ID. If *feedType* is *Streams*, *subjectId* must be a stream ID. If *feedType* is *Topics*, *subjectId* must be a topic ID. If *feedType* is *UserProfile*, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias *me*.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

    ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

[Testing ConnectApi Code](#)

```
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount,  
density, pageParam, pageSize, sortParam, filter)
```

Returns the specified page of feed elements for the `UserProfile` feed.

## API Version

35.0

## Available to Guest Users

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,  
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,  
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,  
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

Value must be `ConnectApi.FeedType.UserProfile`.

*subjectId*

Type: [String](#)

The ID of any user. To specify the context user, use the user ID or the alias `me`.

*recentCommentCount*Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*Type: [ConnectApi.FeedSortOrder](#)

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*filter*Type: [ConnectApi.FeedFilter](#)

Value must be `ConnectApi.FeedFilter.CommunityScoped` or `ConnectApi.FeedFilter.AuthoredBy`.

## Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

This example gets only community-specific feed elements.

```
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.UserProfile, 'me', 3, ConnectApi.FeedDensity.FewerUpdates, null, null,
ConnectApi.FeedSortOrder.LastModifiedDateDesc, ConnectApi.FeedFilter.CommunityScoped);
```

[Testing ConnectApi Code](#)

**getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter)**

Returns the specified page of filtered feed elements from the case feed.

## API Version

40.0

## Available to Guest Users

40.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String customFilter)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

The ID of a case.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*customFilter*

Type: [String](#)

Custom filter that applies only to the case feed. See [customFeedFilter](#) in the *Metadata API Developer Guide* for supported values.

Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestGetFeedElementsFromFeed\(`communityId`, `feedType`, `subjectId`, `recentCommentCount`, `density`, `pageParam`, `pageSize`, `sortParam`, `customFilter`, `result`\)](#)

[Testing ConnectApi Code](#)

**`getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly)`**

Returns the feed elements on the specified page for the specified record feed (including groups) in the specified order. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-community) users only. Specify the maximum number of feed elements in a bundle.

    elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*elementsPerBundle*Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

    elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter
    filter)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*filter*

Type: [ConnectApi.FeedFilter](#)

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.

- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don't have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Unread`—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don't have a best answer.

#### Return Value

Type: [ConnectApi.FeedElementPage](#)

#### Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

[Testing ConnectApi Code](#)

```
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount,
elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly,
customFilter)
```

Returns the filtered feed elements on the specified page for the case feed in the specified order.

#### API Version

40.0

#### Available to Guest Users

40.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

The ID of a case.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`showInternalOnly`

Type: `Boolean`

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

`customFilter`

Type: `String`

Custom filter that applies only to the case feed. See `customFeedFilter` in the *Metadata API Developer Guide* for supported values.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, result)`

[Testing ConnectApi Code](#)

**`getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)`**

Returns the first page of feed elements for the specified user and the specified key prefix.

API Version

31.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

## Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

ConnectApi.FeedSortOrder sortParam)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

## Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

ConnectApi.FeedSortOrder sortParam)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

[Testing ConnectApi Code](#)

**getFeedElementsFromFilterFeedUpdatedSince**(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)

Returns the specified page of feed elements for the specified user and the specified key prefix. Includes only feed elements that have been updated since the time specified in the *updatedSince* parameter.

API Version

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token defining the modification time stamp of the feed and the sort order.

The *updatedSince* parameter doesn't return feed elements that are created in the same second as the call.

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

## Signature

```
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, String updatedSince)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, and `Moderation`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

## Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Signature

```
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. The only valid value is `Home`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

#### *pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

#### *pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

#### *updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

#### *filter*

Type: [ConnectApi.FeedFilter](#)

Specifies the feed filters.

- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a `User` or a `Group` parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don't have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Unread`—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don't have a best answer.

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

One of these values:

- `Files`

- Groups
- News
- People
- Record

*subjectId*

Type: [String](#)

If *feedType* is `ConnectApi.Record`, *subjectId* can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

    Boolean showInternalOnly)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

*showInternalOnly*Type: [Boolean](#)

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

## Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

String updatedSince, ConnectApi.FeedFilter filter)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

Value must be `ConnectApi.FeedType.UserProfile`.

*subjectId*

Type: [String](#)

The ID of any user. To specify the context user, use the user ID or the alias `me`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token defining the modification time stamp of the feed and the sort order.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

*filter*

Type: [ConnectApi.FeedFilter](#)

Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

Return Value

public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, String customFilter)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

The ID of a case.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token defining the modification time stamp of the feed and the sort order.

The *updatedSince* parameter doesn't return feed elements that are created in the same second as the call.

*customFilter*

Type: [String](#)

Custom filter that applies only to the case feed. See [customFeedFilter](#) in the *Metadata API Developer Guide* for supported values.

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetFeedElementsUpdatedSince\(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter, result\)](#)

[Testing ConnectApi Code](#)

**`getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly)`**

Returns the specified page of feed elements for the `Record` feed type. Includes only feed elements that have been updated since the time specified in the *updatedSince* parameter. Specify whether to return feed elements posted by internal (non-community) users only. Specify the maximum number of feed elements in a bundle.

```
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, Boolean showInternalOnly)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed elements from internal (non-community) users ([true](#)), or not ([false](#)). The default value is [false](#).

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, Boolean showInternalOnly, ConnectApi.FeedFilter filter)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*filter*

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a `User` or a `Group` parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don't have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Unread`—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don't have a best answer.

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, Boolean showInternalOnly, String customFilter)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

The ID of a case.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*customFilter*

Type: [String](#)

Custom filter that applies only to the case feed. See [customFeedFilter](#) in the *Metadata API Developer Guide* for supported values.

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

[Testing ConnectApi Code](#)

**`getFeedItem(communityId, feedItemId)`**

Returns a rich description of the specified feed item.

API Version

28.0–31.0

 **Important:** In version 32.0 and later, use [getFeedElement\(communityId, feedElementId\)](#).

Available to Guest Users

31.0 only

Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedItem getFeedItem(String communityId, String feedItemId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

The ID for a feed item.

## Return Value

Type: [ConnectApi.FeedItem](#)

 **Note:** Triggers on `FeedItem` objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

**getFeedItemBatch(*communityId*, *feedItemIds*)**

Returns information about the specified list of feed items. Returns a list of `BatchResult` objects containing `ConnectApi.FeedItem` objects. Errors for feed items that can't be loaded are returned in the results.

## API Version

31.0–31.0

 **Important:** In version 32.0 and later, use [getFeedElementBatch\(\*communityId\*, \*feedElementIds\*\)](#).

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.BatchResult[] getFeedItemBatch(String communityId, List<String> feedItemIds)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemIds*

Type: [List<String>](#)

A list of up to 500 feed item IDs.

## Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.FeedItem` object.

## Example

```
// Create a list of feed items.
ConnectApi.FeedItemPage feedItemPage = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(null,
    ConnectApi.FeedType.Company);
System.debug(feedItemPage);

// Create a list of feed item IDs.
List<String> feedItemIds = new List<String>();
for (ConnectApi.FeedItem aFeedItem : feedItemPage.items){
    feedItemIds.add(aFeedItem.id);
}

// Get info about the feed items in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterFeeds.getFeedItemBatch(null,
    feedItemIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the header for each feed item.
        ConnectApi.FeedItem aFeedItem;
        if(batchResult.getResult() instanceof ConnectApi.FeedItem) {
            aFeedItem = (ConnectApi.FeedItem) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aFeedItem.header.text);
    }
    else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
}
```

**getFeedItemsFromFeed(*communityId*, *feedType*)**

Returns the first page of feed items for the `Company`, `Home`, and `Moderation` feed types. The page contains the default number of items.

## API Version

28.0–31.0

 **Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,  
ConnectApi.FeedType feedType)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

Return Value

Type: [ConnectApi.FeedItemPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

[Testing ConnectApi Code](#)

**`getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)`**

Returns the feed items for the specified page for the `Company`, `Home`, and `Moderation` feed types, in the specified order.

API Version

28.0–31.0

 **Important:** In version 32.0 and later, use [getFeedElementsFromFeed\(communityId, feedType, pageParam, pageSize, sortParam\)](#).

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: [ConnectApi.FeedItemPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

API Version

29.0–31.0

**Important:** In version 32.0 and later, use [getFeedElementsFromFeed\(`communityId`, `feedType`, `subjectId`, `recentCommentCount`, `density`, `pageParam`, `pageSize`, `sortParam`\)](#).

Available to Guest Users

31.0 only

Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam)
```

## Parameters

*communityId*Type: [String](#)Use either the ID for a community, `internal`, or `null`.*feedType*Type: `ConnectApi.FeedType`The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.*subjectId*Type: [String](#)If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.*recentCommentCount*Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: [String](#)The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.*pageSize*Type: [Integer](#)Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.*sortParam*Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.

- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

#### Return Value

Type: [ConnectApi.FeedItemPage](#)

#### Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

#### SEE ALSO:

[Testing ConnectApi Code](#)

**`getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)`**

Returns the feed items on the specified page for the specified user or record, for the `Record` feed type in the specified order. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

#### API Version

30.0–31.0

 **Important:** In version 32.0 and later, use [getFeedElementsFromFeed\(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly\)](#).

#### Available to Guest Users

31.0 only

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
```

```
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)
```

### Parameters

#### *communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

#### *feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

#### *subjectId*

Type: [String](#)

Any record ID, including a group ID.

#### *recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

#### *density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

#### *pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

#### *pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

#### *sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

Return Value

Type: [ConnectApi.FeedItemPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

[Testing ConnectApi Code](#)

### **getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)**

Returns the first page of feed items for the specified user and the specified key prefix. The page contains the default number of items.

API Version

28.0–31.0

 **Important:** In version 32.0 and later, use [getFeedElementsFromFilterFeed\(communityId, subjectId, keyPrefix\)](#).

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId,
String subjectId, String keyPrefix)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

Return Value

Type: [ConnectApi.FeedItemPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId,
String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity
density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: `String`

The ID of the context user or the alias `me`.

*keyPrefix*

Type: `String`

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*recentCommentCount*

Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

## Signature

```
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeedUpdatedSince(String
communityId, String subjectId, String keyPrefix, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call `getFeedItemsFromFilterFeed` and take the value from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

## Return Value

Type: [ConnectApi.FeedItemPage](#)

A paged collection of `ConnectApi.FeedItem` objects.

### Usage

This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn't update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### SEE ALSO:

[setTestGetFeedItemsFromFilterFeedUpdatedSince\(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result\)](#)

### **getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)**

Returns the specified page of feed items for the `Company`, `Home`, and `Moderation` feed types. Includes only feed items that have been updated since the time specified in the `updatedSince` parameter. Each feed item contains no more than the specified number of comments.

### API Version

30.0–31.0

 **Important:** In version 32.0 and later, use [getFeedElementsUpdatedSince\(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince\)](#).

### Available to Guest Users

31.0 only

### Requires Chatter

Yes

### Signature

```
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId,
    ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
    String pageParam, Integer pageSize, String updatedSince)
```

### Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

*recentCommentCount*

Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

## Return Value

Type: `ConnectApi.FeedItemPage`

A paged collection of `ConnectApi.FeedItem` objects.

## Usage

This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn't update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

This example gets the feed items in the company feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```
// Get the feed items in the company feed and return the updatesToken
String communityId = null;

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId,
ConnectApi.FeedType.Company);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
(communityId, ConnectApi.FeedType.Company, 1, ConnectApi.FeedDensity.AllUpdates, null,
1, page.updatesToken);
```

## SEE ALSO:

[setTestGetFeedItemsUpdatedSince\(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, ConnectApi.FeedItemPage, results\)](#)

[Testing ConnectApi Code](#)

**getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)**

Returns the specified page of feed items for the `Files`, `Groups`, `News`, `People`, and `Record` feed types. Includes only feed items that have been updated since the time specified in the `updatedSince` parameter. Each feed item contains no more than the specified number of comments.

## API Version

30.0–31.0

 **Important:** In version 32.0 and later, use [getFeedElementsUpdatedSince\(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince\)](#).

## Available to Guest Users

31.0 only

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

One of these values:

- Files
- Groups
- News
- People
- Record

*subjectId*

Type: [String](#)

If *feedType* is `ConnectApi.Record`, *subjectId* can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

## Return Value

Type: [ConnectApi.FeedItemPage](#)

A paged collection of `ConnectApi.FeedItem` objects.

### Usage

This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn't update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### Example

This example gets the feed items in the news feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId,
ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
    (communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates,
    null, 1, page.updatesToken);
```

### SEE ALSO:

[setTestGetFeedItemsUpdatedSince\(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result\)](#)

[Testing ConnectApi Code](#)

### **getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)**

Returns the specified page of feed items for the `RECORD` feed type. Includes only feed items that have been updated since the time specified in the `updatedSince` parameter. Specify whether to return feed items posted by internal (non-community) users only.

### API Version

30.0–31.0

 **Important:** In version 32.0 and later, use [getFeedElementsUpdatedSince\(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly\)](#).

### Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
Boolean showInternalOnly)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed items from internal (non-community) users (**true**), or not (**false**). The default value is **false**.

Return Value

Type: [ConnectApi.FeedItemPage](#)

A paged collection of [ConnectApi.FeedItem](#) objects.

Usage

This method returns only feed items that have been updated since the time specified in the *updatedSince* argument. A feed item is considered to be updated if it was created since the last feed request, or if *sort=LastModifiedDateDesc* and a comment was added to the feed item since the last feed request. Adding likes and topics doesn't update a feed item.

If *showInternalOnly* is **true** and Salesforce Communities is enabled, feed items from communities are included. Otherwise, only feed items from the internal community are included.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets the feed items in the news feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId,
ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
(communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates,
null, 1, page.updatesToken, true);
```

[Testing ConnectApi Code](#)

**getFeedPoll(communityId, feedItemId)**

Returns the poll associated with the feed item.

API Version

28.0–31.0

 **Important:** In version 32.0 and later, use [getFeedElementPoll\(\*communityId\*, \*feedElementId\*\)](#).

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedPoll getFeedPoll(String communityId, String feedItemId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

The ID for a feed item.

Return Value

Type: [ConnectApi.FeedPoll](#)

 **Note:** Triggers on `FeedItem` objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

### **getFeedWithFeedElements(*communityId*, *feedType*, *pageSize*)**

Get information about the feed and a page of feed elements for the feed type.

API Version

40.0

Available to Guest Users

40.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.Feed getFeedWithFeedElements(String communityId,
ConnectApi.FeedType feedType, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Landing`, `Moderation`, and `PendingReview`. `Landing` is valid only when *communityId* is `internal`.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren't returned with the feed.

## Return Value

Type: [ConnectApi.Feed](#)

**getFeedWithFeedElements(*communityId*, *feedType*, *pageSize*, *recentCommentCount*)**

Get a page of information about the feed and the feed elements with the specified number of comments per feed element for the feed type.

## API Version

40.0

## Available to Guest Users

40.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Feed getFeedWithFeedElements(String communityId,  
ConnectApi.FeedType feedType, Integer pageSize, Integer recentCommentCount)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Landing`, `Moderation`, and `PendingReview`. `Landing` is valid only when `communityId` is `internal`.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren't returned with the feed.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

Return Value

Type: [ConnectApi.Feed](#)

**getFilterFeed(*communityId*, *subjectId*, *keyPrefix*)**

Returns the first page of a feed for the specified user and the given key prefix.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A *key prefix* is the first three characters of a record ID, which specifies the entity type.

Return Value

Type: [ConnectApi.Feed](#)

**getFilterFeed(*communityId*, *subjectId*, *keyPrefix*, *sortParam*)**

Returns the first page of a feed in the specified order for the specified user and the given key prefix.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedType sortParam)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*sortParam*

Type: [ConnectApi.FeedType](#)

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: [ConnectApi.Feed](#)

**getFilterFeedDirectory(*communityId*, *subjectId*)**

Gets a feed directory object that contains a list of filter feeds available to the context user. A filter feed is the news feed filtered to include feed items whose parent is a specific entity type.

## API Version

30.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedDirectory getFilterFeedDirectory(String communityId, String subjectId)
```

## Parameters

*communityId*Type: [String](#)Use either the ID for a community, `internal`, or `null`.*subjectId*Type: [String](#)The ID of the context user or the alias `me`.

## Return Value

Type: [ConnectApi.FeedDirectory](#)

A directory containing a list of filter feeds.

## Usage

Call this method to return a directory containing a list of `ConnectApi.FeedDirectoryItem` objects. Each object contains a key prefix associated with an entity type the context user is following. A *key prefix* is the first three characters of a record ID, which specifies the entity type.

Use the key prefixes to filter the news feed so that it contains only feed items whose parent is the entity type associated with the key prefix, for example, get all the feed items whose parent is an Account. To get the feed items, pass a key prefix to the `ConnectApi.getFeedItemsFromFilterFeed` method.

The information about filter feeds never contains the key prefixes for the User (005) or Group (0F9) entity types, but all users can use those key prefixes as filters.

The `ConnectApi.FeedDirectory.favorites` property is always empty when returned by a call to `getFilterFeedDirectory` because you can't filter a news feed by favorites.

## Example

This example calls `getFilterFeedDirectory` and loops through the returned `FeedDirectoryItem` objects to find the key prefixes the context user can use to filter their news feed. It then copies each `keyPrefix` value to a list. Finally, it passes one of the key prefixes from the list to the `getFeedItemsFromFilterFeed` method. The returned feed items include every feed item from the news feed whose parent is the entity type specified by the passed key prefix.

```
String communityId = null;
String subjectId = 'me';

// Create a list to populate with key prefixes.
List<String> keyPrefixList = new List<String>();

// Prepopulate with User and Group record types
// which are available to all users.
keyPrefixList.add('005');
keyPrefixList.add('0F9');

System.debug(keyPrefixList);

// Get the key prefixes available to the context user.
ConnectApi.FeedDirectory myFeedDirectory =
    ConnectApi.ChatterFeeds.getFilterFeedDirectory(null, 'me');

// Loop through the returned feeds list.
for (ConnectApi.FeedDirectoryItem i : myFeedDirectory.feeds) {

    // Grab each key prefix and add it to the list.
    keyPrefixList.add(i.keyPrefix);
}
System.debug(keyPrefixList);

// Use a key prefix from the list to filter the feed items in the news feed.
ConnectApi.FeedItemPage myFeedItemPage =
    ConnectApi.ChatterFeeds.getFeedItemsFromFilterFeed(communityId, subjectId,
keyPrefixList[0]);
System.debug(myFeedItemPage);
```

**getLike (communityId, likeId)**

Returns the specified like.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterLike getLike(String communityId, String likeId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*likeId*

Type: [String](#)

The ID for a like.

Return Value

Type: [ConnectApi.ChatterLike](#)

**getLikesForComment(*communityId*, *commentId*)**

Returns the first page of likes for the specified comment. The page contains the default number of items.

API Version

28.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterLikePage getLikesForComment(String communityId, String commentId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

The ID for a comment.

Return Value

Type: [ConnectApi.ChatterLikePage](#)

**getLikesForComment(*communityId*, *commentId*, *pageParam*, *pageSize*)**

Returns the specified page of likes for the specified comment.

API Version

28.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterLikePage getLikesForComment(String communityId, String
commentId, Integer pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

The ID for a comment.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ChatterLikePage](#)

**getLikesForFeedElement(*communityId*, *feedElementId*)**

Get the first page of likes for a feed element.

API Version

32.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId,  
String feedElementId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

Return Value

Type: [ConnectApi.ChatterLikePage Class](#)

If the feed element doesn't support the `ChatterLikes` capability, the return value is [ConnectApi.NotFoundException](#).

**`getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)`**

Returns the specified page of likes for a feed element.

API Version

32.0

Available to Guest Users

32.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId,
String feedElementId, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.ChatterLikePage Class](#)

If the feed element doesn't support the `ChatterLikes` capability, the return value is [ConnectApi.NotFoundException](#).

**getLikesForFeedItem(communityId, feedItemId)**

Returns the first page of likes for the specified feed item. The page contains the default number of items.

## API Version

28.0–31.0

 **Important:** In version 32.0 and later, use [getLikesForFeedElement\(communityId, feedElementId\)](#).

## Available to Guest Users

31.0 only

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String
feedItemId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

The ID for a feed item.

## Return Value

Type: [ConnectApi.ChatterLikePage](#)

**getLikesForFeedItem(*communityId*, *feedItemId*, *pageParam*, *pageSize*)**

Returns the specified page of likes for the specified feed item.

## API Version

28.0–31.0

 **Important:** In version 32.0 and later, use [getLikesForFeedElement\(\*communityId\*, \*feedElementId\*, \*pageParam\*, \*pageSize\*\)](#).

## Available to Guest Users

31.0 only

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String
feedItemId, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

The ID for a feed item.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ChatterLikePage](#)

### **getLinkMetadata(*communityId*, *urls*)**

Get link metadata for URLs.

API Version

42.0

Available to Guest Users

42.0

Requires Chatter

No

Signature

```
public static ConnectApi.LinkMetadataCollection getLinkMetadata(String communityId,  
String urls)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*urls*

Type: [String](#)

Comma-separated list of URL-encoded URLs.

Return Value

Type: [ConnectApi.LinkMetadataCollection](#)

### **getPinnedFeedElementsFromFeed(*communityId*, *feedType*, *subjectId*)**

Get pinned feed elements from a group or topic feed.

API Version

41.0

Available to Guest Users

41.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.PinnedFeedElements getPinnedFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

The type of feed. Valid values are `Record` and `Topics`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* must be a group ID. If *feedType* is `Topics`, *subjectId* must be a topic ID.

Return Value

Type: [ConnectApi.PinnedFeedElements](#)

If the feed doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**`getReadByForFeedElement`(`communityId`, `feedElementId`)**

Get information about who read a feed element and when.

API Version

40.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

## Return Value

Type: [ConnectApi.ReadByPage](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**getReadByForFeedElement(*communityId*, *feedElementId*, *pageParam*, *pageSize*)**

Get a page of information about who read a feed element and when.

## API Version

40.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ReadByPage](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**getRelatedPosts(*communityId*, *feedElementId*, *filter*, *maxResults*)**

Get posts related to the context feed element.

API Version

37.0

Available to Guest Users

37.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.RelatedFeedPosts getRelatedPosts(String communityId, String
feedElementId, ConnectApi.RelatedFeedPostType filter, Integer maxResults)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element. The feed element must be a question.

*filter*

Type: [ConnectApi.RelatedFeedPostType](#)

Specifies the type of related post. Values are:

- `Answered`—Related questions that have at least one answer.
- `BestAnswer`—Related questions that have a best answer.
- `Generic`—All types of related questions, including answered, with a best answer, and unanswered.
- `Unanswered`—Related questions that don't have answers.

`Generic` is the default value.

*maxResults*

Type: [Integer](#)

The maximum number of results to return. You can return up to 25 results; 5 is the default.

## Return Value

Type: [ConnectApi.RelatedFeedPosts](#)

In version 37.0 and later, related feed posts are questions.

Each related feed post has a score indicating how closely it's related to the context feed post. We return related feed posts sorted by score, with the highest score first.

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**getStream(*communityId*, *streamId*)**

Get information about a Chatter feed stream.

## API Version

39.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterStream getStream(String communityId, String streamId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*streamId*

Type: [String](#)

ID of the Chatter feed stream.

## Return Value

Type: [ConnectApi.ChatterStream](#)

**getStream(*communityId*, *streamId*, *globalScope*)**

Get information about a Chatter feed stream, regardless of community.

## API Version

41.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterStream getStream(String communityId, String streamId, Boolean globalScope)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*streamId*

Type: [String](#)

ID of the Chatter feed stream.

*globalScope*

Type: [Boolean](#)

Specifies whether to get streams from all the context user's communities, regardless of the *communityId* value.

**Tip:** If you know the community ID for the stream, we recommend setting *globalScope* to `false`.

Return Value

Type: [ConnectApi.ChatterStream](#)

### **getStreams (communityId)**

Get the Chatter feed streams for the context user.

API Version

39.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterStreamPage getStreams(String communityId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

Return Value

Type: [ConnectApi.ChatterStreamPage](#)

### **getStreams (communityId, sortParam)**

Get and sort the Chatter feed streams for the context user.

API Version

40.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterStreamPage getStreams(String communityId,  
ConnectApi.SortOrder sortParam)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*sortParam*

Type: [ConnectApi.SortOrder](#)

Specifies the sort order. Values are:

- `Ascending`—Items are in ascending alphabetical order (A-Z).
- `Descending`—Items are in descending alphabetical order (Z-A).
- `MostRecentlyViewed`—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is `Ascending`.

Return Value

Type: [ConnectApi.ChatterStreamPage](#)

### **getStreams (communityId, pageParam, pageSize)**

Get a page of Chatter feed streams for the context user.

API Version

39.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

Return Value

Type: [ConnectApi.ChatterStreamPage](#)

**getStreams(*communityId*, *pageParam*, *pageSize*, *sortParam*)**

Get a sorted page of Chatter feed streams for the context user.

API Version

40.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

*sortParam*

Type: `ConnectApi.SortOrder`

Specifies the sort order. Values are:

- `Ascending`—Items are in ascending alphabetical order (A-Z).
- `Descending`—Items are in descending alphabetical order (Z-A).
- `MostRecentlyViewed`—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is `Ascending`.

Return Value

Type: `ConnectApi.ChatterStreamPage`

**`getStreams`**(`communityId`, `pageParam`, `pageSize`, `sortParam`, `globalScope`)

Get a sorted page of Chatter feed streams from all communities for the context user.

API Version

41.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: `Integer`

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

*sortParam*

Type: `ConnectApi.SortOrder`

Specifies the sort order. Values are:

- `Ascending`—Items are in ascending alphabetical order (A-Z).
- `Descending`—Items are in descending alphabetical order (Z-A).
- `MostRecentlyViewed`—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is `Ascending`.

*globalScope*

Type: `Boolean`

Specifies whether to get streams from all the context user's communities, regardless of the `communityId` value.

**Tip:** If you know the community ID for the streams, we recommend setting `globalScope` to `false`.

Return Value

Type: `ConnectApi.ChatterStreamPage`

### **getSupportedEmojis ()**

Get supported emojis for the org.

API Version

39.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.SupportedEmojis getSupportedEmojis ()
```

Return Value

Type: `ConnectApi.SupportedEmojis`

Usage

To get the list, emojis must be enabled in your org.

### **getTopUnansweredQuestions (communityId) (Pilot)**

Get top unanswered questions for the context user in a community.

**Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to

change, and we can't guarantee acceptance. Top five unanswered questions isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

#### API Version

42.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId)
```

#### Parameters

*communityId*

Type: [String](#)

ID of the community.

#### Return Value

Type: [ConnectApi.FeedElementPage](#)

#### Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

#### SEE ALSO:

[setTestGetTopUnansweredQuestions\(communityId, result\) \(Pilot\)](#)

[Testing ConnectApi Code](#)

#### **getTopUnansweredQuestions (communityId, filter) (Pilot)**

Get filtered top unanswered questions for the context user in a community.

 **Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Top five unanswered questions isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

#### API Version

42.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId,
ConnectApi.TopUnansweredQuestionsFilterType filter)
```

Parameters

*communityId*

Type: [String](#)

ID of the community.

*filter*

Type: [ConnectApi.FeedFilter](#)

Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### **getTopUnansweredQuestions (communityId, pageSize) (Pilot)**

Get a page of top unanswered questions for the context user in a community.

 **Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Top five unanswered questions isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version

42.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

ID of the community.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.

## Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId,
ConnectApi.FeedFilter filter, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

ID of the community.

*filter*

Type: [ConnectApi.FeedFilter](#)

Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.

## Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**getVotesForComment(communityId, commentId, vote)**

Get the first page of users who upvoted or downvoted a comment.

## API Version

42.0

## Available to Guest Users

42.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.VotePage getVotesForComment(String communityId, String
commentId, ConnectApi.UpDownVoteValue vote)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

ID of the comment.

*vote*

Type: [ConnectApi.UpDownVoteValue](#)

Specifies the value of the vote for the feed element. Values are:

- Down
- Up

You can't specify `None`.

## Return Value

Type: [ConnectApi.VotePage](#)

If the comment doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**`getVotesForComment(communityId, commentId, vote, pageParam, pageSize)`**

Get a page of users who upvoted or downvoted a comment.

## API Version

42.0

## Available to Guest Users

42.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.VotePage getVotesForComment(String communityId, String
commentId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

ID of the comment.

*vote*

Type: [ConnectApi.UpDownVoteValue](#)

Specifies the value of the vote for the feed element. Values are:

- Down
- Up

You can't specify `None`.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.VotePage](#)

If the comment doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**getVotesForFeedElement(*communityId*, *feedElementId*, *vote*)**

Get the first page of users who upvoted or downvoted a feed element.

## API Version

42.0

## Available to Guest Users

42.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*vote*

Type: [ConnectApi.UpDownVoteValue](#)

Specifies the value of the vote for the feed element. Values are:

- Down
- Up

You can't specify `None`.

## Return Value

Type: [ConnectApi.VotePage](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**getVotesForFeedElement(*communityId*, *feedElementId*, *vote*, *pageParam*, *pageSize*)**

Get a page of users who upvoted or downvoted a feed element.

## API Version

42.0

## Available to Guest Users

42.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*vote*

Type: [ConnectApi.UpDownVoteValue](#)

Specifies the value of the vote for the feed element. Values are:

- Down
- Up

You can't specify `None`.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.VotePage](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**isCommentEditableByMe (communityId, commentId)**

Indicates whether the context user can edit a comment.

API Version

34.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedEntityIsEditable isCommentEditableByMe(String communityId,
String commentId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

ID of the comment.

Return Value

Type: [ConnectApi.FeedEntityIsEditable](#)

If the comment doesn't support the `edit` capability, the return value is [ConnectApi.NotFoundException](#).

SEE ALSO:

[Edit a Comment](#)

**`isFeedElementEditableByMe (communityId, feedElementId)`**

Indicates whether the context user can edit a feed element. Feed items are the only type of feed element that can be edited.

API Version

34.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedEntityIsEditable isFeedElementEditableByMe (String
communityId, String feedElementId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element. Feed items are the only type of feed element that can be edited.

Return Value

Type: [ConnectApi.FeedEntityIsEditable](#)

If the feed element doesn't support the `edit` capability, the return value is [ConnectApi.NotFoundException](#).

SEE ALSO:

[Edit a Feed Element](#)

[Edit a Question Title and Post](#)

**isModified(*communityId*, *feedType*, *subjectId*, *since*)**

Returns information about whether a news feed has been updated or changed. Use this method to poll a news feed for updates.

 **Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedModifiedInfo isModified(String communityId,  
ConnectApi.FeedType feedType, String subjectId, String since)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

Specifies the type of feed. The only supported type is `News`

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*since*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Retrieve this token from the [FeedElementPage.isModifiedToken](#) property.

Return Value

Type: [ConnectApi.FeedModifiedInfo](#)

**likeComment(*communityId*, *commentId*)**

Adds a like to the specified comment for the context user. If the user has already liked this comment, this is a non-operation and returns the existing like.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterLike likeComment(String communityId, String commentId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

The ID for a comment.

Return Value

Type: [ConnectApi.ChatterLike](#)

**likeFeedElement**(communityId, feedElementId)

Like a feed element.

API Version

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterLike likeFeedElement(String communityId, String feedElementId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

Return Value

Type: [ConnectApi.ChatterLike](#)

If the feed element doesn't support the `ChatterLikes` capability, the return value is [ConnectApi.NotFoundException](#).

Example

```
ConnectApi.ChatterLike chatterLike = ConnectApi.ChatterFeeds.likeFeedElement(null,
'0D5D00000000KuGh');
```

### **likeFeedItem**(communityId, feedItemId)

Adds a like to the specified feed item for the context user. If the user has already liked this feed item, this is a non-operation and returns the existing like.

API Version

28.0–31.0

 **Important:** In version 32.0 and later, use [likeFeedElement](#)(communityId, feedElementId).

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterLike likeFeedItem(String communityId, String feedItemId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

The ID for a feed item.

Return Value

Type: [ConnectApi.ChatterLike](#)

### **postComment**(communityId, feedItemId, text)

Adds the specified text as a comment to the feed item, for the context user.

API Version

28.0–31.0

 **Important:** In version 32.0 and later, use `postCommentToFeedElement(communityId, feedElementId, text)`.

Requires Chatter

Yes

Signature

```
public static ConnectApi.Comment postComment(String communityId, String feedItemId,
String text)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: `String`

The ID for a feed item.

*text*

Type: `String`

The text of the comment. Mentions are downgraded to plain text. To include a mention that links to a user, call `postComment(communityId, feedItemId, comment, feedItemFileUpload)` and pass the mention in a `ConnectApi.CommentInput` object.

Return Value

Type: `ConnectApi.Comment`

Usage

If hashtags or links are detected in *text*, they are included in the comment as hashtag and link segments. Mentions are not detected in *text* and are not separated out of the text.

Feed items and comments can contain up to 10,000 characters.

**`postComment(communityId, feedItemId, comment, feedItemFileUpload)`**

Adds a comment to the feed item from the context user. Use this method to use rich text, including mentions, and to attach a file to a comment.

API Version

28.0–31.0

 **Important:** In version 32.0 and later, use `postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)`.

Requires Chatter

Yes

Signature

```
public static ConnectApi.Comment postComment(String communityId, String feedItemId,
ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedItemFileUpload)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

The ID for a feed item.

*comment*

Type: [ConnectApi.CommentInput](#)

In the `CommentInput` object, specify rich text, including @mentions. Optionally, in the `CommentInput.attachment` property, specify an existing file or a new file

*feedItemFileUpload*

Type: [ConnectApi.BinaryInput](#)

If you specify a [NewFileAttachmentInput](#) object in the `CommentInput.attachment` property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

Return Value

Type: [ConnectApi.Comment](#)

Usage

Feed items and comments can contain up to 10,000 characters.

Sample: Posting a Comment with a New File Attachment

To post a comment and upload and attach a new file to the comment, create a `ConnectApi.CommentInput` object and a `ConnectApi.BinaryInput` object to pass to the `ConnectApi.ChatterFeeds.postComment` method.

```
String communityId = null;
String feedItemId = '0D5D0000000Kcd1';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.MessageBodyInput messageInput = new ConnectApi.MessageBodyInput();
ConnectApi.TextSegmentInput textSegment;

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Comment Text Body';
```

```

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageInput.messageSegments.add(textSegment);

input.body = messageInput;

ConnectApi.NewFileAttachmentInput attachmentInput = new ConnectApi.NewFileAttachmentInput();
attachmentInput.description = 'The description of the file';
attachmentInput.title = 'contentFile.txt';
input.attachment = attachmentInput;

String fileContents = 'This is the content of the file.';
Blob fileBlob = Blob.valueOf(fileContents);
ConnectApi.BinaryInput binaryInput = new ConnectApi.BinaryInput(fileBlob, 'text/plain',
'contentFile.txt');

ConnectApi.Comment commentRep = ConnectApi.ChatterFeeds.postComment(communityId, feedItemId,
input, binaryInput);

```

### **postCommentToFeedElement(communityId, feedElementId, text)**

Post a plain text comment to a feed element.

API Version

32.0

Requires Chatter

Yes

Signature

```

public static ConnectApi.Comment postCommentToFeedElement(String communityId, String
feedElementId, String text)

```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*text*

Type: [String](#)

Text of the comment. A comment can contain up to 10,000 characters.

Return Value

Type: [ConnectApi.Comment](#)

If the feed element doesn't support the `Comments` capability, the return value is `ConnectApi.NotFoundException`.

#### Example

```
ConnectApi.Comment comment = ConnectApi.ChatterFeeds.postCommentToFeedElement(null,
    '0D5D0000000KuGh', 'I agree with the proposal.' );
```

#### **postCommentToFeedElement**(communityId, feedElementId, comment, feedElementFileUpload)

Post a comment to a feed element. Use this method to post rich text, including mentions, and to attach a file. A comment can contain up to 10,000 characters.

#### API Version

32.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String
    feedElementId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput
    feedElementFileUpload)
```

#### Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: `String`

The ID for a feed element.

*comment*

Type: `ConnectApi.CommentInput`

The comment body, including text and mentions, and capabilities, such as information about an attached file.

*feedElementFileUpload*

Type: `ConnectApi.BinaryInput`

A new binary file to attach to the comment, or `null`. If you specify a binary file, specify the title and description of the file in the *comment* parameter.

#### Return Value

Type: `ConnectApi.Comment`

If the feed element doesn't support the `Comments` capability, the return value is `ConnectApi.NotFoundException`.

## Example for Posting a Comment with Mentions

You can post comments with mentions two ways. Use the [ConnectApiHelper repository on GitHub](#) to write a single line of code, or use this method example.

```
String communityId = null;
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.MessageBodyInput messageBodyInput = new ConnectApi.MessageBodyInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

textSegmentInput.text = 'Does anyone in this group have an idea? ';
messageBodyInput.messageSegments.add(textSegmentInput);

mentionSegmentInput.id = '005D00000000oOT';
messageBodyInput.messageSegments.add(mentionSegmentInput);

commentInput.body = messageBodyInput;

ConnectApi.Comment commentRep = ConnectApi.ChatterFeeds.postCommentToFeedElement(communityId,
    feedElementId, commentInput, null);
```

## Example for Posting a Comment with an Existing File

```
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();

ConnectApi.MessageBodyInput messageBodyInput = new ConnectApi.MessageBodyInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

textSegmentInput.text = 'I attached this file from Salesforce Files.';

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
commentInput.body = messageBodyInput;

ConnectApi.CommentCapabilitiesInput commentCapabilitiesInput = new
ConnectApi.CommentCapabilitiesInput();
ConnectApi.ContentCapabilityInput contentCapabilityInput = new
ConnectApi.ContentCapabilityInput();

commentCapabilitiesInput.content = contentCapabilityInput;
contentCapabilityInput.contentDocumentId = '069D00000001rNJ';

commentInput.capabilities = commentCapabilitiesInput;

ConnectApi.Comment commentRep =
ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId,
```

```
commentInput, null);
```

#### Example for Posting a Comment with a New File

```
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();

ConnectApi.MessageBodyInput messageBodyInput = new ConnectApi.MessageBodyInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

textSegmentInput.text = 'Enjoy this new file.';

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
commentInput.body = messageBodyInput;

ConnectApi.CommentCapabilitiesInput commentCapabilitiesInput = new
ConnectApi.CommentCapabilitiesInput();
ConnectApi.ContentCapabilityInput contentCapabilityInput = new
ConnectApi.ContentCapabilityInput();

commentCapabilitiesInput.content = contentCapabilityInput;
contentCapabilityInput.title = 'Title';

commentInput.capabilities = commentCapabilitiesInput;

String text = 'These are the contents of the new file.';
Blob myBlob = Blob.valueOf(text);
ConnectApi.BinaryInput binInput = new ConnectApi.BinaryInput(myBlob, 'text/plain',
'fileName');

ConnectApi.Comment commentRep =
ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId,
commentInput, binInput);
```

#### Example for Posting a Rich-Text Comment with an Inline Image

You can post rich-text comments with inline images and mentions two ways. Use the [ConnectApiHelper repository on GitHub](#) to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce.

```
String communityId = null;
String feedElementId = '0D5R0000000SBEr';
String imageId = '069R00000000IgQ';
String mentionedUserId = '005R0000000DiMz';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.MessageBodyInput messageInput = new ConnectApi.MessageBodyInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
```

```

ConnectApi.MarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hello ';
messageInput.messageSegments.add(textSegment);

mentionSegment = new ConnectApi.MentionSegmentInput();
mentionSegment.id = mentionedUserId;
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '!';
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupEndSegment);

inlineImageSegment = new ConnectApi.InlineImageSegmentInput();
inlineImageSegment.altText = 'image one';
inlineImageSegment.fileId = imageId;
messageInput.messageSegments.add(inlineImageSegment);

input.body = messageInput;

ConnectApi.ChatterFeeds.postCommentToFeedElement(communityId, feedElementId, input, null);

```

#### Example for Posting a Rich-Text Comment with a Code Block

```

String communityId = null;
String feedElementId = '0D5R000000SBEr';
String codeSnippet = '<html>\n\t<body>\n\t\tHello, world!\n\t</body>\n</html>';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.MessageBodyInput messageInput = new ConnectApi.MessageBodyInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();

```

```
textSegment.text = codeSnippet;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupEndSegment);

input.body = messageInput;

ConnectApi.ChatterFeeds.postCommentToFeedElement(communityId, feedElementId, input, null);
```

### **postFeedElement(communityId, subjectId, feedElementType, text)**

Posts a feed element with plain text from the context user.

API Version

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedElement postFeedElement(String communityId, String
subjectId, ConnectApi.FeedElementType feedElementType, String text)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string `me` to indicate the context user.

*feedElementType*

Type: [ConnectApi.FeedElementType](#)

The only possible value is `FeedItem`.

*text*

Type: [String](#)

The text of the feed element. A feed element can contain up to 10,000 characters.

Return Value

Type: [ConnectApi.FeedElement](#)

## Example

```
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), '0F9d0000000TreH',
ConnectApi.FeedElementType.FeedItem, 'On vacation this week.');
```

**postFeedElement(*communityId*, *feedElement*, *feedElementFileUpload*)**

Posts a feed element from the context user. Use this method to post rich text, including mentions and hashtag topics, to attach a file to a feed element, and to associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

## API Version

31.0–35.0

 **Important:** In version 36.0 and later, this method is no longer available because you can't create a feed post and upload a binary file in the same call. Upload files to Salesforce first, and then use `postFeedElement(communityId, feedElement)` to create the feed post and attach the files.

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElement postFeedElement(String communityId,
ConnectApi.FeedElementInput feedElement, ConnectApi.BinaryInput feedElementFileUpload)
```

## Parameters

*communityId*Type: `String`Use either the ID for a community, `internal`, or `null`.*feedElement*Type: `ConnectApi.FeedElementInput`

Specify rich text, including mentions. Optionally, specify a link, a poll, an existing file, or a new file.

*feedElementFileUpload*Type: `ConnectApi.BinaryInput`Specify the new binary file to attach to the post only if you also specify a `NewFileAttachmentInput` object in the *feedElement* parameter. Otherwise, pass `null`.

## Return Value

Type: `ConnectApi.FeedElement`

Example for Posting a Feed Element with a New (Binary) File

```
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = 'me';

ConnectApi.ContentCapabilityInput contentInput = new ConnectApi.ContentCapabilityInput();
contentInput.title = 'Title';

ConnectApi.FeedElementCapabilitiesInput capabilities = new
ConnectApi.FeedElementCapabilitiesInput();
capabilities.content = contentInput;

input.capabilities = capabilities;

String text = 'These are the contents of the new file.';
Blob myBlob = Blob.valueOf(text);
ConnectApi.BinaryInput binInput = new ConnectApi.BinaryInput(myBlob, 'text/plain',
'fileName');

ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), input, binInput);
```

### **postFeedElement(*communityId*, *feedElement*)**

Posts a feed element from the context user. Use this method to post rich text, including mentions and hashtag topics, to attach already uploaded files to a feed element, and to associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

API Version

36.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedElement postFeedElement(String communityId,
ConnectApi.FeedElementInput feedElement)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElement*

Type: [ConnectApi.FeedElementInput](#)

Specify rich text, including mentions. Optionally, specify a link, a poll, or up to 10 existing files.

Return Value

Type: [ConnectApi.FeedElement](#)

Example for Posting a Feed Element with a Mention

You can post feed elements with mentions two ways. Use the [ConnectApiHelper repository on GitHub](#) to write a single line of code, or use this method example.

```
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.MessageBodyInput messageBodyInput = new ConnectApi.MessageBodyInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

mentionSegmentInput.id = '005RR000000Dme9';
messageBodyInput.messageSegments.add(mentionSegmentInput);

textSegmentInput.text = 'Could you take a look?';
messageBodyInput.messageSegments.add(textSegmentInput);

feedItemInput.body = messageBodyInput;
feedItemInput.feedElementType = ConnectApi.FeedElementType.FeedItem;
feedItemInput.subjectId = '0F9RR0000004CPw';

ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput, null);
```

Example for Posting a Feed Element with Existing Content

```
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Would you please review these docs?';

// The MessageBodyInput object holds the text in the post
ConnectApi.MessageBodyInput messageBodyInput = new ConnectApi.MessageBodyInput();
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define a files capability to hold the file(s).

List<String> fileIds = new List<String>();
fileIds.add('069xx00000000QO');
fileIds.add('069xx00000000QT');
fileIds.add('069xx00000000Qn');
fileIds.add('069xx00000000Qi');
fileIds.add('069xx00000000Qd');
```

```

ConnectApi.FilesCapabilityInput filesInput = new ConnectApi.FilesCapabilityInput();
filesInput.items = new List<ConnectApi.FileIdInput>();

for (String fileId : fileIds) {
    ConnectApi.FileIdInput idInput = new ConnectApi.FileIdInput();
    idInput.id = fileId;
    filesInput.items.add(idInput);
}

ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.files = filesInput;

feedItemInput.capabilities = feedElementCapabilitiesInput;

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

```

#### Example for Posting a Rich-Text Feed Element with an Inline Image

You can post rich-text feed elements with inline images and mentions two ways. Use the [ConnectApiHelper repository on GitHub](#) to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce. The post also includes text and a mention.

```

String communityId = null;
String imageId = '069D00000001INA';
String mentionedUserId = '005D0000001QNpr';
String targetUserOrGroupOrRecordId = '005D0000001Gif0';
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;

ConnectApi.MessageBodyInput messageInput = new ConnectApi.MessageBodyInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hello ';
messageInput.messageSegments.add(textSegment);

mentionSegment = new ConnectApi.MentionSegmentInput();
mentionSegment.id = mentionedUserId;
messageInput.messageSegments.add(mentionSegment);

```

```

textSegment = new ConnectApi.TextSegmentInput ();
textSegment.text = '!';
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput ();
markupEndSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupEndSegment);

inlineImageSegment = new ConnectApi.InlineImageSegmentInput ();
inlineImageSegment.altText = 'image one';
inlineImageSegment.fileId = imageId;
messageInput.messageSegments.add(inlineImageSegment);

input.body = messageInput;

ConnectApi.ChatterFeeds.postFeedElement (communityId, input, null);

```

#### Example for Posting a Rich-Text Feed Element with a Code Block

```

String communityId = null;
String targetUserOrGroupOrRecordId = 'me';
String codeSnippet = '<html>\n\t<body>\n\t\tHello, world!\n\t</body>\n</html>';
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput ();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;

ConnectApi.MessageBodyInput messageInput = new ConnectApi.MessageBodyInput ();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput> ();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput ();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput ();
textSegment.text = codeSnippet;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput ();
markupEndSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupEndSegment);

input.body = messageInput;

ConnectApi.ChatterFeeds.postFeedElement (communityId, input);

```

#### Example for Sharing a Feed Element (in Version 39.0 and Later)

```

// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput ();

```

```

feedItemInput.subjectId = 'me';
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Look at this post I'm sharing.';
// The MessageBodyInput object holds the text in the post
ConnectApi.MessageBodyInput messageBodyInput = new ConnectApi.MessageBodyInput();
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

ConnectApi.FeedEntityShareCapabilityInput shareInput = new
ConnectApi.FeedEntityShareCapabilityInput();
shareInput.feedEntityId = '0D5R0000000SEbc';
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.feedEntityShare = shareInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;
// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

```

#### Example for Sending a Direct Message

```

// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Thanks for attending my presentation test run this morning. Send
me any feedback.';

// The MessageBodyInput object holds the text in the post
ConnectApi.MessageBodyInput messageBodyInput = new ConnectApi.MessageBodyInput();
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define a direct message capability to hold the member(s) and the
subject.

List<String> memberIds = new List<String>();
memberIds.add('005B00000016OUQ');
memberIds.add('005B0000001rIN6');

ConnectApi.DirectMessageCapabilityInput dmInput = new
ConnectApi.DirectMessageCapabilityInput();
dmInput.subject = 'Thank you!';
dmInput.membersToAdd = memberIds;

ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.directMessage = dmInput;

feedItemInput.capabilities = feedElementCapabilitiesInput;

```

```
// Post the feed item.  
ConnectApi.FeedElement feedElement =  
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
```

**SEE ALSO:**

[Define an Action Link and Post with a Feed Element](#)

[Define an Action Link in a Template and Post with a Feed Element](#)

**postFeedElementBatch (communityId, feedElements)**

Posts a batch of up to 500 feed elements for the cost of one DML statement.

## API Version

32.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.BatchResult[] postFeedElementBatch(String communityId,  
List<ConnectApi.BatchInput> feedElements)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElements*

Type: [List<ConnectApi.BatchInput Class>](#)

The list can contain up to 500 `ConnectApi.BatchInput` objects. In the `ConnectApi.BatchInput` constructor, the input object must be a concrete instance of the abstract `ConnectApi.FeedElementInput` class.

## Return Value

Type: [ConnectApi.BatchResult\[\]](#)

The `ConnectApi.BatchResult.getResult()` method returns a [ConnectApi.FeedElement](#) object.

The returned objects correspond to each of the input objects and are returned in the same order as the input objects.

The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the `ConnectApi.BatchResult` list.

## Usage

Use this method to post a list of feed elements efficiently. Create a list containing up to 500 objects and insert them all for the cost of one DML statement.

The `ConnectApi.BatchInput` Class has three constructors, but the `postFeedElementBatch` method only supports the two listed here. It doesn't support multiple binary inputs.

In each constructor, the input object must be an instance of `ConnectApi.FeedElementInput`. Pick a constructor based on whether or not you want to pass a binary input.

- `ConnectApi.BatchInput (Object input)`—No binary input
- `ConnectApi.BatchInput (Object input, ConnectApi.BinaryInput binary)`—One binary input.

### Example

This trigger bulk posts to the feeds of newly inserted accounts.

```
trigger postFeedItemToAccount on Account (after insert) {
    Account[] accounts = Trigger.new;

    // Bulk post to the account feeds.

    List<ConnectApi.BatchInput> batchInputs = new List<ConnectApi.BatchInput>();

    for (Account a : accounts) {
        ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();

        input.subjectId = a.id;

        ConnectApi.MessageBodyInput body = new ConnectApi.MessageBodyInput();
        body.messageSegments = new List<ConnectApi.MessageSegmentInput>();

        ConnectApi.TextSegmentInput textSegment = new ConnectApi.TextSegmentInput();
        textSegment.text = 'Let\'s win the ' + a.name + ' account.';

        body.messageSegments.add(textSegment);
        input.body = body;

        ConnectApi.BatchInput batchInput = new ConnectApi.BatchInput(input);
        batchInputs.add(batchInput);
    }

    ConnectApi.ChatterFeeds.postFeedElementBatch(Network.getNetworkId(), batchInputs);
}
```

### **postFeedItem**(communityId, feedType, subjectId, text)

Posts a feed item with plain text from the context user.

API Version

28.0–31.0

 **Important:** In version 32.0 and later, use `postFeedElement`(communityId, subjectId, feedElementType, text).

Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType
feedType, String subjectId, String text)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

One of the following:

- `News`
- `Record`
- `UserProfile`

Use `Record` to post to a group.

*subjectId*

Type: [String](#)

The value depends on the *feedType*:

- `News`—*subjectId* must be the ID of the context user or the keyword `me`.
- `Record`—The ID of any record with a feed, including groups.
- `UserProfile`—The ID of any user.

*text*

Type: [String](#)

The text of the feed item. Mentions are downgraded to plain text. To include a mention that links to the user, call the [postFeedItem\(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload\)](#) method and pass the mention in a `ConnectApi.FeedItemInput` object.

## Return Value

Type: [ConnectApi.FeedItem](#)

 **Note:** Triggers on `FeedItem` objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

## Usage

Feed items and comments can contain up to 10,000 characters.

Posts to `ConnectApi.FeedType.UserProfile` in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.

**postFeedItem(*communityId*, *feedType*, *subjectId*, *feedItemInput*, *feedItemFileUpload*)**

Posts a feed item to the specified feed from the context user. Use this method to post rich text, including mentions and hashtag topics, and to attach a file to a feed item. You can also use this method to share a feed item and add a comment.

API Version

28.0–31.0

 **Important:** In version 32.0 and later, use [postFeedElement\(\*communityId\*, \*feedElement\*, \*feedElementFileUpload\*\)](#).

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType
feedType, String subjectId, ConnectApi.FeedItemInput feedItemInput,
ConnectApi.BinaryInput feedItemFileUpload)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

One of the following:

- [News](#)
- [Record](#)
- [UserProfile](#)

To post a feed item to a group, use `Record` and use a group ID as the *subjectId*.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*feedItemInput*

Type: [ConnectApi.FeedItemInput](#)

In the `FeedItemInput` object, specify rich text. Optionally, in the `FeedItemInput.attachment` property, specify a link, a poll, an existing file, or a new file.

*feedItemFileUpload*

Type: [ConnectApi.BinaryInput](#)

If you specify a [NewFileAttachmentInput](#) object in the `FeedItemInput.attachment` property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

## Return Value

Type: `ConnectApi.FeedItem`

 **Note:** Triggers on `FeedItem` objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

## Usage

Feed items and comments can contain up to 10,000 characters. Posts to `ConnectApi.FeedType.UserProfile` in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.

## Example for Sharing a Feed Item and Adding a Comment

To share a feed item and add a comment, create a `ConnectApi.FeedItemInput` object containing the comment and the feed item to share, and pass the object to `ConnectApi.ChatterFeeds.postFeedItem` in the `feedItemInput` argument. The message segments in the message body input are used as the comment.

```
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.originalFeedItemId = '0D5D0000000JuAG';

ConnectApi.MessageBodyInput body = new ConnectApi.MessageBodyInput();
List<ConnectApi.MessageSegmentInput> segmentList = new
List<ConnectApi.MessageSegmentInput>();
ConnectApi.TextSegmentInput textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'I hope you enjoy this post I found in another group.';
segmentList.add((ConnectApi.MessageSegmentInput) textSegment);
body.messageSegments = segmentList;
input.body = body;

ConnectApi.ChatterFeeds.postFeedItem(null, ConnectApi.FeedType.UserProfile, 'me', input,
null);
```

## Example for Posting a Mention to a User Profile Feed

To post to a user profile feed and include an @mention, call the `ConnectApi.ChatterFeeds.postFeedItem` method.

```
String communityId = null;
ConnectApi.FeedType feedType = ConnectApi.FeedType.UserProfile;

ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
ConnectApi.MessageBodyInput messageInput = new ConnectApi.MessageBodyInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment = new ConnectApi.MentionSegmentInput();

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hey there ';
messageInput.messageSegments.add(textSegment);

mentionSegment.id = '005D0000001LLO1';
```

```
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '. How are you?';
messageInput.messageSegments.add(textSegment);

input.body = messageInput;

ConnectApi.FeedItem feedItemRep = ConnectApi.ChatterFeeds.postFeedItem(communityId, feedType,
    'me', input, null);
```

### **searchFeedElements(communityId, q)**

Returns the first page of all the feed elements that match the specified search criteria.

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestSearchFeedElements\(communityId, q, result\)](#)

[Testing ConnectApi Code](#)

**searchFeedElements(communityId, q, sortParam)**

Returns the first page of all the feed elements that match the specified search criteria in the specified order.

## API Version

31.0

## Available to Guest Users

31.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, ConnectApi.FeedSortOrder sortParam)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.

- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

#### Return Value

Type: `ConnectApi.FeedElementPage`

#### Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

#### SEE ALSO:

[setTestSearchFeedElements\(communityId, q, sortParam, result\)](#)

#### **searchFeedElements(communityId, q, pageParam, pageSize)**

Searches feed elements and returns a specified page and page size of search results.

#### API Version

31.0

#### Available to Guest Users

31.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize)
```

#### Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*q*

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.

- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

#### Return Value

Yes

Signature

```
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
    ConnectApi.FeedType feedType, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview`.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestSearchFeedElementsInFeed\(`communityId`, `feedType`, `pageParam`, `pageSize`, `sortParam`, `q`, `result`\)](#)

[Testing ConnectApi Code](#)

**`searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)`**

Searches the feed elements for the `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview` feed types and returns a specified page and page size in a specified sort order. Each feed element includes no more than the specified number of comments.

API Version

31.0

Yes

Signature

```
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Signature

```
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q,
ConnectApi.FeedFilter filter)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. The only valid value is `Home`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

When the *sortParam* is `MostViewed`, you must pass in `null` for the *pageParam*.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

When the *sortParam* is `MostViewed`, the *pageSize* must be a value from 1 to 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.

- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds. If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: [ConnectApi.FeedFilter](#)

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a `User` or a `Group` parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don't have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **Unread**—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don't have a best answer.

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the `matching set test` method (prefix the method name with `setTest`). Use the `set test` method with the same parameters or the code throws an exception.

SEE ALSO:

Yes

Signature

```
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String q)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Yes

## Signature

```
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, String q)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Order of feed items in the feed.

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature

```
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.

- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestSearchFeedElementsInFeed\(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result\)](#)

[Testing ConnectApi Code](#)

**`searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter)`**

Searches the feed elements for a specified feed type and context user, and returns a specified page and page size in a specified sort order. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-community) users only. Specify feed filter.

API Version

Yes

## Signature

```
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly,
ConnectApi.FeedFilter filter)
```

## Parameters

*communityId*Type: [String](#)Use either the ID for a community, `internal`, or `null`.*feedType*Type: `ConnectApi.FeedType`Value must be `ConnectApi.FeedType.Record`.*subjectId*Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: [String](#)The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.*pageSize*Type: [Integer](#)Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.*sortParam*Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.

- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*filter*

Type: [ConnectApi.FeedFilter](#)

Specifies the feed filters.

- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a `User` or a `Group` parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don't have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Unread`—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don't have a best answer.

Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Available to Guest Users

40.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
    ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, String
    customFilter)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

The ID of a case.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

#### *density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

#### *pageParam*

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

#### *pageSize*

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

#### *sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

#### *q*

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

#### *showInternalOnly*

Type: `Boolean`

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

#### *filter*

Type: `String`

Custom filter that applies only to the case feed. See [customFeedFilter](#) in the *Metadata API Developer Guide* for supported values.

#### Return Value

Type: `ConnectApi.FeedElementPage`

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**searchFeedElementsInFilterFeed(`communityId`, `subjectId`, `keyPrefix`, `q`)**

Searches the feed elements of a feed filtered by key prefix.

## API Version

31.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

## Return Value

Type: [ConnectApi.FeedElementPage](#)

## Usage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestSearchFeedElementsInFilterFeed\(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result\)](#)

[Testing ConnectApi Code](#)

**`searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)`**

Searches the feed elements of a feed filtered by key prefix, and returns a specified page and page size in a specified sort order. Each feed element includes no more than the specified number of comments.

API Version

31.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String
communityId, String subjectId, String keyPrefix, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.

- **MostViewed**—Sorts by most viewed content. This sort order is available only for **Home** feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for **Company**, **Home**, and **Topics** feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.FeedElementPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.

- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestSearchFeedItemsInFeed\(communityId, feedType, pageParam, pageSize, sortParam, q, result\)](#)

[Testing ConnectApi Code](#)

**`searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)`**

Searches the feed items for the `Company`, `Home`, and `Moderation` feed types and returns a specified page and page size in a specified sort order. Each feed item includes no more than the specified number of comments.

API Version

29.0–31.0

 **Important:** In version 32.0 and later, use [searchFeedElementsInFeed\(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q\)](#).

Available to Guest Users

31.0 only

Requires Chatter

Yes

## Signature

```
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

## Parameters

*communityId*Type: [String](#)Use either the ID for a community, `internal`, or `null`.*feedType*Type: `ConnectApi.FeedType`The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.*recentCommentCount*Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: [String](#)The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.*pageSize*Type: [Integer](#)Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.*sortParam*Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.FeedItemPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature

```
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,  
ConnectApi.FeedType feedType, String subjectId, String q)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

*subjectId*

Type: `String`

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If feed type is `UserProfile`, *subjectId* can be any user ID. If *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*q*

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

## Return Value

Type: `ConnectApi.FeedItemPage`

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

If you pass in `null`, the default size is 25.*sortParam*Type: `ConnectApi.FeedSortOrder`

Order of feed items in the feed.

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.*q*Type: [String](#)

Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

## Return Value

Type: [ConnectApi.FeedItemPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Signature

```
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.FeedItemPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestSearchFeedItemsInFeed\(\*communityId\*, \*feedType\*, \*subjectId\*, \*recentCommentCount\*, \*density\*, \*pageParam\*, \*pageSize\*, \*sortParam\*, \*q\*, \*result\*\)](#)

[Testing ConnectApi Code](#)

**`searchFeedItemsInFeed(String, ConnectApi.FeedType, String, Integer, ConnectApi.FeedDensity, String, Integer, ConnectApi.FeedSortOrder, String, Boolean)`**

Searches the feed items for a specified feed type and user or record, and returns a specified page and page size in a specified sort order. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

API Version

30.0–31.0

 **Important:** In version 32.0 and later, use [searchFeedElementsInFeed\(\*communityId\*, \*feedType\*, \*subjectId\*, \*recentCommentCount\*, \*density\*, \*pageParam\*, \*pageSize\*, \*sortParam\*, \*q\*, \*showInternalOnly\*\)](#).

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

Return Value

Type: [ConnectApi.FeedItemPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

[Testing ConnectApi Code](#)

**`searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)`**

Searches the feed items of a feed filtered by key prefix.

API Version

28.0–31.0

 **Important:** In version 32.0 and later, use [searchFeedElementsInFilterFeed\(communityId, subjectId, keyPrefix, q\)](#).

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId,
String subjectId, String keyPrefix, String q)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

#### Return Value

Type: [ConnectApi.FeedItemPage](#)

public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId,
String subjectId, String keyPrefix, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)
```

#### Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Searches the feed items of a feed filtered by key prefix, and returns a specified page and page size in a specified sort order. Each feed item includes no more than the specified number of comments.

API Version

29.0–31.0

**!** **Important:** In version 32.0 and later, use `searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)`.

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId,
String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity
density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String
q)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: `String`

The ID of the context user or the alias `me`.

*keyPrefix*

Type: `String`

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*recentCommentCount*

Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

[Testing ConnectApi Code](#)

**`searchStreams(communityId, q)`**

Search the Chatter feed streams for the context user.

API Version

40.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

## Return Value

Type: [ConnectApi.ChatterStreamPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestSearchStreams\(communityId, q, result\)](#)

[Testing ConnectApi Code](#)

**searchStreams(communityId, q, sortParam)**

Search and sort the Chatter feed streams for the context user.

## API Version

40.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q,  
ConnectApi.SortOrder sortParam)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*sortParam*

Type: [ConnectApi.SortOrder](#)

Specifies the sort order. Values are:

- `Ascending`—Items are in ascending alphabetical order (A-Z).
- `Descending`—Items are in descending alphabetical order (Z-A).
- `MostRecentlyViewed`—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is `Ascending`.

Return Value

Type: [ConnectApi.ChatterStreamPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestSearchStreams\(communityId, q, sortParam, result\)](#)

**`searchStreams(communityId, q, pageParam, pageSize)`**

Search the Chatter feed streams for the context user and return a page of results.

API Version

40.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q,  
Integer pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

Return Value

Type: [ConnectApi.ChatterStreamPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

*sortParam*

Type: [ConnectApi.SortOrder](#)

Specifies the sort order. Values are:

- `Ascending`—Items are in ascending alphabetical order (A-Z).
- `Descending`—Items are in descending alphabetical order (Z-A).
- `MostRecentlyViewed`—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is `Ascending`.

Return Value

Type: [ConnectApi.ChatterStreamPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestSearchStreams\(communityId, q, pageParam, pageSize, sortParam, result\)](#)

[Testing ConnectApi Code](#)

**`searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)`**

Search the Chatter feed streams from all communities for the context user and return a sorted page of results.

API Version

41.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

*sortParam*

Type: [ConnectApi.SortOrder](#)

Specifies the sort order. Values are:

- `Ascending`—Items are in ascending alphabetical order (A-Z).
- `Descending`—Items are in descending alphabetical order (Z-A).
- `MostRecentlyViewed`—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is `Ascending`.

*globalScope*

Type: [Boolean](#)

Specifies whether to get streams from all the context user's communities, regardless of the *communityId* value.

**Tip:** If you know the community ID for the streams, we recommend setting *globalScope* to `false`.

## Return Value

Type: [ConnectApi.ChatterStreamPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**setCommentIsVerified(*communityId*, *commentId*, *isVerified*)**

Mark a comment as verified or unverified.

API Version

41.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.VerifiedCapability setCommentIsVerified(String communityId,
String commentId, Boolean isVerified)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

ID of the comment on a question post. Only one comment on a question post can be marked as verified.

*isVerified*

Type: [Boolean](#)

Specifies whether to mark the comment as verified (`true`) or unverified (`false`).

Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.

Return Value

Type: [ConnectApi.VerifiedCapability](#)

If the comment doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**setCommentIsVerifiedByAnonymized(*communityId*, *commentId*, *isVerified*,  
*isVerifiedByAnonymized*)**

Mark a comment as verified by an anonymous user.

API Version

43.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.VerifiedCapability setCommentIsVerifiedByAnonymized(String communityId, String commentId, Boolean isVerified, Boolean isVerifiedByAnonymized)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

ID of the comment on a question post. Only one comment on a question post can be marked as verified.

*isVerified*

Type: [Boolean](#)

Specifies whether to mark the comment as verified (`true`) or unverified (`false`).

Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.

*isVerifiedByAnonymized*

Type: [Boolean](#)

Specifies whether to mark the comment as verified by an anonymous user (`true`).

If a user previously verified a comment and then requested the activity to be deleted, use `isVerifiedByAnonymized` to maintain the verification and anonymize the value of `lastVerifiedByUser`.

You can't set `isVerified` and `isVerifiedByAnonymized` to `true` at the same time. `isVerifiedByAnonymized` can be set to `true` only if `isVerified` is already set to `true`.

You can't set `isVerifiedByAnonymized` to `false`. After `isVerifiedByAnonymized` is set to `true`, it can be undone only when another user marks the comment as unverified and then reverifies the comment.

## Return Value

Type: [ConnectApi.VerifiedCapability](#)

If the comment doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**setCommentVote (communityId, commentId, upDownVote)**

Upvote or downvote a comment.

## API Version

41.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.UpDownVoteCapability setCommentVote(String communityId, String
commentId, ConnectApi.UpDownVoteCapabilityInput upDownVote)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

ID of the comment.

*upDownVote*

Type: [ConnectApi.UpDownVoteCapabilityInput](#)

A [ConnectApi.UpDownVoteCapabilityInput](#) object that includes your vote.

## Return Value

Type: [ConnectApi.UpDownVoteCapability](#)

If the comment doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**setFeedCommentStatus(*communityId*, *commentId*, *status*)**

Set the status of a comment.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.StatusCapability setFeedCommentStatus(String communityId,
String commentId, ConnectApi.StatusCapabilityInput status)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

ID of the comment.

*status*

Type: `ConnectApi.StatusCapabilityInput`

A `ConnectApi.StatusCapabilityInput` object that includes the status you want to set.

Return Value

Type: `ConnectApi.StatusCapability`

If the comment doesn't support this capability, the return value is `ConnectApi.NotFoundException`.

Usage

Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.

### **`setFeedElementIsClosed(communityId, feedElementId, isClosed)`**

Set a feed element to closed.

Users can't edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can't vote on it. Users can't edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

API Version

43.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.CloseCapability setFeedElementIsClosed(String communityId,  
String feedElementId, Boolean isClosed)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: `String`

ID of the feed element.

*isClosed*

Type: `Boolean`

Specifies whether to set the feed element to closed (`true`) or not (`false`).

Return Value

Type: [ConnectApi.CloseCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

### **setFeedElementVote (communityId, feedElementId, upDownVote)**

Upvote or downvote a feed element.

API Version

41.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UpDownVoteCapability setFeedElementVote (String communityId,
String feedElementId, ConnectApi.UpDownVoteCapabilityInput upDownVote)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*upDownVote*

Type: [ConnectApi.UpDownVoteCapabilityInput](#)

A [ConnectApi.UpDownVoteCapabilityInput](#) object that includes the your vote.

Return Value

Type: [ConnectApi.UpDownVoteCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

### **setFeedEntityStatus (communityId, feedElementId, status)**

Set the status of a feed post.

API Version

37.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.StatusCapability setFeedEntityStatus(String communityId, String feedElementId, ConnectApi.StatusCapabilityInput status)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*status*

Type: [ConnectApi.StatusCapabilityInput](#)

A [ConnectApi.StatusCapabilityInput](#) object that includes the status you want to set.

Return Value

Type: [ConnectApi.StatusCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

Usage

Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.

**`setIsMutedByMe (communityId, feedElementId, isMutedByMe)`**

Mute or unmute a feed element.

API Version

35.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.MuteCapability setIsMutedByMe(String communityId, String feedElementId, Boolean isMutedByMe)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*isMutedByMe*

Type: [Boolean](#)

Indicates whether the feed element is muted for the context user. Default value is `false`.

## Return Value

Type: [ConnectApi.MuteCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**setIsReadByMe(*communityId*, *feedElementId*, *readBy*)**

Mark a feed element as read for the context user using an input body.

## API Version

40.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, ConnectApi.ReadByCapabilityInput readBy)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element to mark as read.

*readBy*

Type: [ConnectApi.ReadByCapabilityInput](#)

A [ConnectApi.ReadByCapabilityInput](#) body indicating to mark the feed elements as read.

Return Value

Type: [ConnectApi.ReadByCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

### **setIsReadByMe(*communityId*, *feedElementId*, *isReadByMe*)**

Mark a feed element as read for the context user.

API Version

40.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String
feedElementId, Boolean isReadByMe)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element to mark as read.

*isReadByMe*

Type: [Boolean](#)

Specifies to mark the feed element as read (`true`) for the context user.

Return Value

Type: [ConnectApi.ReadByCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

### **shareFeedElement(*communityId*, *subjectId*, *feedElementType*, *originalFeedElementId*)**

Share the *originalFeedElementId* as the context user.

API Version

31.0–38.0

**!** **Important:** In version 39.0 and later, use `postFeedElement(communityId, feedElement)` or `updateFeedElement(communityId, feedElementId, feedElement)` with the `ConnectApi.FeedEntityShareCapabilityInput` to share a feed entity with a feed element.

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedElement shareFeedElement(String communityId, String
subjectId, ConnectApi.FeedElementType feedElementType, String originalFeedElementId)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: `String`

The ID of the user or group with whom to share the feed element.

*feedElementType*

Type: `ConnectApi.FeedElementType`

Values are:

- `Bundle`—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
- `FeedItem`—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
- `Recommendation`—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

*originalFeedElementId*

Type: `String`

The ID of the feed element to share.

Return Value

Type: `ConnectApi.FeedElement`

Example

```
ConnectApi.ChatterFeeds.shareFeedElement(null, '0F9RR0000004CPw',
ConnectApi.FeedElementType.FeedItem, '0D5RR0000004Gxc');
```

**shareFeedItem(*communityId*, *feedType*, *subjectId*, *originalFeedItemId*)**

Share the *originalFeedItemId* to the feed specified by the *feedType*.

API Version

28.0–31.0

 **Important:**

- In version 32.0–38.0, use `shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)`.
- In version 39.0 and later, use `postFeedElement(communityId, feedElement)` or `updateFeedElement(communityId, feedElementId, feedElement)` with the `ConnectApi.FeedEntityShareCapabilityInput`.

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedItem shareFeedItem(String communityId, ConnectApi.FeedType
feedType, String subjectId, String originalFeedItemId)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

One of the following:

- `News`
- `Record`
- `UserProfile`

To share a feed item with a group, use `Record` and use a group ID as the *subjectId*.

*subjectId*

Type: `String`

The value depends on the value of *feedType*:

- `News`—*subjectId* must be the ID of the context user or the keyword `me`.
- `Record`—*subjectId* can be a group ID or the ID of the context user (or `me`).
- `UserProfile`—*subjectId* can be any user ID.

*originalFeedItemId*

Type: `String`

The ID of the feed item to share.

Return Value

Type: [ConnectApi.FeedItem](#)

Example

To share a feed item with a group, pass in to this method the community ID (or `null`), the feed type `Record`, the group ID, and the ID of the feed item to share.

```
ConnectApi.ChatterFeeds.shareFeedItem(null, ConnectApi.FeedType.Record, '0F9D00000000izf',  
'0D5D00000000JuAG');
```

### **updateBookmark**(communityId, feedItemId, isBookmarkedByCurrentUser)

Bookmarks the specified feed item or removes a bookmark from the specified feed item.

API Version

28.0–31.0

 **Important:** In version 32.0 and later, use [updateFeedElementBookmarks](#)(communityId, feedElementId, bookmarks), [updateFeedElementBookmarks](#)(communityId, feedElementId, bookmarks), or [updateFeedElementBookmarks](#)(communityId, feedElementId, isBookmarkedByCurrentUser).

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedItem updateBookmark(String communityId, String feedItemId,  
Boolean isBookmarkedByCurrentUser)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

The ID for a feed item.

*isBookmarkedByCurrentUser*

Type: [Boolean](#)

—Specifying `true` adds the feed item to the list of bookmarks for the context user. Specify `false` to remove a bookmark.

Return Value

Type: [ConnectApi.FeedItem](#)

**updateComment**(communityId, commentId, comment)

Edits a comment.

API Version

34.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.Comment updateComment(String communityId, String commentId,
ConnectApi.CommentInput comment)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

ID of the comment to be edited.

*comment*

Type: [ConnectApi.CommentInput](#)

Information about the comment to be edited.

Return Value

Type: [ConnectApi.Comment](#)

If the comment doesn't support the `edit` capability, the return value is [ConnectApi.NotFoundException](#).

Example

```
String commentId;
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.CommentPage commentPage =
ConnectApi.ChatterFeeds.getCommentsForFeedElement(communityId, feedElementId);
```

```

if (commentPage.items.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
commentId = commentPage.items[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
ConnectApi.ChatterFeeds.isCommentEditableByMe (communityId, commentId);

if (isEditable.isEditableByMe == true){
    ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput ();
    ConnectApi.MessageBodyInput messageBodyInput = new ConnectApi.MessageBodyInput ();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput ();

    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput> ();

    textSegmentInput.text = 'This is my edited comment.';
    messageBodyInput.messageSegments.add(textSegmentInput);

    commentInput.body = messageBodyInput;

    ConnectApi.Comment editedComment = ConnectApi.ChatterFeeds.updateComment (communityId,
commentId, commentInput);
}

```

### **updateDirectMessage (communityId, feedElementId, directMessage)**

Update the members of a direct message.

API Version

40.0

Requires Chatter

Yes

Signature

```

public static ConnectApi.DirectMessageCapability updateDirectMessage (String communityId,
String feedElementId, ConnectApi.DirectMessageCapabilityInput directMessage)

```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, internal, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*directMessage*

Type: [ConnectApi.DirectMessageCapabilityInput](#)

A [ConnectApi.DirectMessageCapabilityInput](#) body that includes the members to add and remove.

Return Value

Type: [ConnectApi.DirectMessageCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**updateFeedElement(*communityId*, *feedElementId*, *feedElement*)**

Edits a feed element. Feed items are the only type of feed element that can be edited.

API Version

34.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedElement updateFeedElement(String communityId, String
feedElementId, ConnectApi.FeedElementInput feedElement)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element to be edited. Feed items are the only type of feed element that can be edited.

*feedElement*

Type: [ConnectApi.FeedElementInput](#)

Information about the feed element to be edited. Feed items are the only type of feed element that can be edited.

Return Value

Type: [ConnectApi.FeedElement](#)

If the feed element doesn't support the `edit` capability, the return value is [ConnectApi.NotFoundException](#).

Example for Editing a Feed Post

```
String communityId = Network.getNetworkId();
```

```

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
    ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
ConnectApi.ChatterFeeds.isFeedElementEditableByMe(communityId, feedElementId);

if (isEditable.isEditableByMe == true){
    ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
    ConnectApi.MessageBodyInput messageBodyInput = new ConnectApi.MessageBodyInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

    textSegmentInput.text = 'This is my edited post.';
    messageBodyInput.messageSegments.add(textSegmentInput);

    feedItemInput.body = messageBodyInput;

    ConnectApi.FeedElement editedFeedElement =
ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}

```

#### Example for Editing a Question Title and Post

```

String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
    ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
ConnectApi.ChatterFeeds.isFeedElementEditableByMe(communityId, feedElementId);

if (isEditable.isEditableByMe == true){

    ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
    ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
    ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapabilityInput = new
ConnectApi.QuestionAndAnswersCapabilityInput();
    ConnectApi.MessageBodyInput messageBodyInput = new ConnectApi.MessageBodyInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

```

```

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

textSegmentInput.text = 'This is my edited question.';
messageBodyInput.messageSegments.add(textSegmentInput);

feedItemInput.body = messageBodyInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;

feedElementCapabilitiesInput.questionAndAnswers = questionAndAnswersCapabilityInput;
questionAndAnswersCapabilityInput.questionTitle = 'Where is my edited question?';

ConnectApi.FeedElement editedFeedElement =
ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}

```

### **updateFeedElementBookmarks(communityId, feedElementId, bookmarks)**

Bookmark or unbookmark a feed element by passing a `ConnectApi.BookmarksCapabilityInput` object.

API Version

32.0

Requires Chatter

Yes

Signature

```

public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String
communityId, String feedElementId, ConnectApi.BookmarksCapabilityInput bookmarks)

```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: `String`

The ID for a feed element.

*bookmarks*

Type: `ConnectApi.BookmarksCapabilityInput`

Information about a bookmark.

Return Value

Type: `ConnectApi.BookmarksCapability`

If the feed element doesn't support this capability, the return value is `ConnectApi.NotFoundException`.

**updateFeedElementBookmarks(*communityId*, *feedElementId*, *isBookmarkedByCurrentUser*)**

Bookmark or unbookmark a feed element by passing a boolean value.

API Version

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String
communityId, String feedElementId, Boolean isBookmarkedByCurrentUser)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*isBookmarkedByCurrentUser*

Type: [Boolean](#)

Specify whether to bookmark the feed element (`true`) or not (`false`).

Return Value

Type: [ConnectApi.BookmarksCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

Example

```
ConnectApi.BookmarksCapability bookmark =
ConnectApi.ChatterFeeds.updateFeedElementBookmarks(null, '0D5D0000000KuGh', true);
```

**updateFeedElementReadByCapabilityBatch(*communityId*, *feedElementIds*, *readBy*)**

Mark multiple feed elements as read by the context user at the same time using an input body.

API Version

40.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, ConnectApi.ReadByCapabilityInput readBy)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementIds*

Type: [String](#)

Up to 500 feed element IDs to mark as read.

*readBy*

Type: [ConnectApi.ReadByCapabilityInput](#)

A [ConnectApi.ReadByCapabilityInput](#) body indicating to mark the feed elements as read.

Return Value

Type: [ConnectApi.BatchResult\[\]](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

The returned objects correspond to each of the input objects and are returned in the same order as the input objects.

The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the [ConnectApi.BatchResult](#) list.

**updateFeedElementReadByCapabilityBatch(*communityId*, *feedElementIds*, *isReadByMe*)**

Mark multiple feed elements as read by the context user at the same time.

API Version

40.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, Boolean isReadByMe)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementIds*

Type: [String](#)

Up to 500 feed element IDs to mark as read.

*isReadByMe*

Type: [Boolean](#)

Specifies to mark the feed element as read (`true`) for the context user.

## Return Value

Type: [ConnectApi.BatchResult\[\]](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**updateLikeForComment(*communityId*, *commentId*, *isLikedByCurrentUser*)**

Like or unlike a comment.

## API Version

39.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterLikePage updateLikeForComment(String communityId, String
commentId, Boolean isLikedByCurrentUser)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

ID of the comment.

*isLikedByCurrentUser*

Type: [Boolean](#)

Specifies if the context user likes (`true`) or dislikes (`false`) the comment.

Return Value

Type: [ConnectApi.ChatterLikePage](#)

**updateLikeForFeedElement**(communityId, feedElementId, isLikedByCurrentUser)

Like or unlike a feed element.

API Version

39.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterLikePage updateLikeForFeedElement(String communityId,
String feedElementId, Boolean isLikedByCurrentUser)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*isLikedByCurrentUser*

Type: [Boolean](#)

Specifies if the context user likes (`true`) or dislikes (`false`) the feed element.

Return Value

Type: [ConnectApi.ChatterLikePage](#)

If the feed element doesn't support the `ChatterLikes` capability, the return value is [ConnectApi.NotFoundException](#).

**updatePinnedFeedElements**(communityId, feedType, subjectId, pin)

Pin or unpin feed elements to a group or topic feed.

API Version

41.0

Available to Guest Users

41.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.PinCapability updatePinnedFeedElements(String communityId,
ConnectApi.FeedType feedType, String subjectId, ConnectApi.PinCapabilityInput pin)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

The type of feed. Valid values are `Record` and `Topics`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* must be a group ID. If *feedType* is `Topics`, *subjectId* must be a topic ID.

*pin*

Type: [ConnectApi.PinCapabilityInput](#)

A [ConnectApi.PinCapabilityInput](#) object indicating the feed element to pin or unpin.

Return Value

Type: [ConnectApi.PinCapability](#)

If the feed doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**updateStream(*communityId*, *streamId*, *streamInput*)**

Update a Chatter feed stream.

API Version

39.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterStream updateStream(String communityId, String streamId,
ConnectApi.ChatterStreamInput streamInput)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*streamId*

Type: [String](#)

ID of the Chatter feed stream.

*streamInput*

Type: [ConnectApi.ChatterStreamInput](#)

A `ConnectApi.ChatterStreamInput` object.

## Return Value

Type: [ConnectApi.ChatterStream](#)

**voteOnFeedElementPoll(*communityId*, *feedElementId*, *myChoiceId*)**

Vote on a poll or change your vote on a poll.

## API Version

32.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.PollCapability voteOnFeedElementPoll(String communityId, String feedElementId, String myChoiceId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*myChoiceId*

Type: [String](#)

The ID of the poll item to vote for. The key prefix for poll items is 09A.

Return Value

Type: [ConnectApi.PollCapability Class](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

Example

```
ConnectApi.PollCapability poll = ConnectApi.ChatterFeeds.voteOnFeedElementPoll(null,
'0D5D0000000XZaUKAW', '09AD00000000TKMAY');
```

### **voteOnFeedPoll**(communityId, feedItemId, myChoiceId)

Used to vote or to change your vote on an existing feed poll.

API Version

28.0–31.0

 **Important:** In version 32.0 and later, use [voteOnFeedElementPoll](#)(communityId, feedElementId, myChoiceId).

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedPoll voteOnFeedPoll(String communityId, String feedItemId,
String myChoiceId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

Specify the feed item that is associated with the poll.

*myChoiceId*

Type: [String](#)

Specify the ID of the item in the poll to vote for.

Return Value

Type: [ConnectApi.FeedPoll](#)

## ChatterFeeds Test Methods

The following are the test methods for `ChatterFeeds`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### **setTestGetFeedElementsFromFeed(*communityId*, *feedType*, *result*)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version

31.0

Signature

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

[getFeedElementsFromFeed\(\*communityId\*, \*feedType\*\)](#)

[Testing ConnectApi Code](#)

### **setTestGetFeedElementsFromFeed(*communityId*, *feedType*, *pageParam*, *pageSize*, *sortParam*, *result*)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version

31.0

## Signature

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

The only valid value for this parameter is `Company`.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

## Return Value

Type: `Void`

## SEE ALSO:

[getFeedElementsFromFeed\(communityId, feedType, pageParam, pageSize, sortParam\)](#)

[Testing ConnectApi Code](#)

```
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density,
pageParam, pageSize, sortParam, result)
```

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

API Version

31.0

Signature

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType
feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam,
Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

*recentCommentCount*

Type: `Integer`

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFeedElementsFromFeed\(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam\)](#)

[Testing ConnectApi Code](#)

**setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

API Version

32.0

Signature

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType
feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam,
Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter,
ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

*recentCommentCount*Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*Type: [ConnectApi.FeedSortOrder](#)

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*filter*Type: [ConnectApi.FeedFilter](#)

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a `User` or a `Group` parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.

- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don't have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **Unread**—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don't have a best answer.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFeedElementsFromFeed\(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter\)](#)

[Testing ConnectApi Code](#)

**setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

API Version

31.0

Signature

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType
feedType, String subjectId, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

The feed type.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFeedElementsFromFeed\(communityId, feedType, subjectId\)](#)

[Testing ConnectApi Code](#)

**setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

API Version

31.0

Signature

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType
feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder
sortParam, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*result*

Type: [ConnectApi.FeedElementPage](#)

[Testing ConnectApi Code](#)

**setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

API Version

31.0

Signature

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType
feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean
showInternalOnly, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFeedElementsFromFeed\(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly\)](#)

[Testing ConnectApi Code](#)

**setTestGetFeedElementsFromFeed(*communityId*, *feedType*, *subjectId*, *recentCommentCount*, *density*, *pageParam*, *pageSize*, *sortParam*, *filter*, *result*)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

35.0

Signature

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType
feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam,
ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.UserProfile`.

*subjectId*

Type: `String`

The ID of any user. To specify the context user, use the user ID or the alias `me`.

*recentCommentCount*

Type: `Integer`

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*filter*

Type: [ConnectApi.FeedFilter](#)

Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a `User` or a `Group` parent record. However, other parent record types could be scoped to communities in the future.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

### Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

The ID of a case.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*customFilter*

Type: [String](#)

Custom filter that applies only to the case feed. See [customFeedFilter](#) in the *Metadata API Developer Guide* for supported values.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFeedElementsFromFeed\(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter\)](#)

[Testing ConnectApi Code](#)

**setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, result)**

Registers a [ConnectApi.FeedElementPage](#) object to be returned when [getFeedElementsFromFeed](#) is called with matching parameters in a test context. Use the [get feed](#) method with the same parameters or the code throws an exception.

API Version

31.0

Signature

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType
feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedElementPage
result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

Value must be [ConnectApi.FeedType.Record](#).

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*elementsPerBundle*Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*Type: [ConnectApi.FeedSortOrder](#)

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*showInternalOnly*Type: [Boolean](#)

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*result*Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[Testing ConnectApi Code](#)

**setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

API Version

32.0

Signature

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType
feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter
filter, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: `String`The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.*pageSize*Type: `Integer`Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.*sortParam*Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.*showInternalOnly*Type: `Boolean`Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.*filter*Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a `User` or a `Group` parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.

- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don't have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Unread`—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don't have a best answer.

*result*

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: Void

```

## Parameters

*communityId*Type: [String](#)Use either the ID for a community, `internal`, or `null`.*feedType*Type: `ConnectApi.FeedType`Value must be `ConnectApi.FeedType.Record`.*subjectId*Type: [String](#)

The ID of a case.

*recentCommentCount*Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*elementsPerBundle*Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: [String](#)The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.*pageSize*Type: [Integer](#)Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.*sortParam*Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*customFilter*

Type: [String](#)

Custom filter that applies only to the case feed. See [customFeedFilter](#) in the *Metadata API Developer Guide* for supported values.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFeedElementsFromFilterFeed\(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam\)](#)

[Testing ConnectApi Code](#)

**setTestGetFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when the `getFeedElementsFromFilterFeedUpdatedSince` method is called in a test context.

API Version

31.0

Signature

```
public static Void setTestGetFeedElementsFromFilterFeedUpdatedSince(String communityId,
String subjectId, String keyPrefix, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token defining the modification time stamp of the feed and the sort order.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[Testing ConnectApi Code](#)

**setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

32.0

Signature

```
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter,
ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

#### *pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

#### *updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

#### *filter*

Type: [ConnectApi.FeedFilter](#)

Specifies the feed filters.

- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a `User` or a `Group` parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don't have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Unread`—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don't have a best answer.

#### *result*

[Testing ConnectApi Code](#)

**setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

31.0

Signature

```
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

One of these values:

- Files
- Groups
- News
- People
- Record

*subjectId*

Type: [String](#)

If *feedType* is `ConnectApi.Record`, *subjectId* can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

*result*

Type: `ConnectApi.FeedElementPage`

The object containing test data.

## Return Value

Type: `Void`

## SEE ALSO:

[getFeedElementsUpdatedSince\(`communityId`, `feedType`, `subjectId`, `recentCommentCount`, `density`, `pageParam`, `pageSize`, `updatedSince`\)](#)

[Testing ConnectApi Code](#)

**`setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)`**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

## API Version

31.0

## Signature

```
public static void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFeedElementsUpdatedSince\(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly\)](#)

[Testing ConnectApi Code](#)

**setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

35.0

Signature

```
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.UserProfile`.

*subjectId*

Type: [String](#)

The ID of any user. To specify the context user, use the user ID or the alias `me`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- [AllUpdates](#)—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- [FewerUpdates](#)—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token defining the modification time stamp of the feed and the sort order.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

*filter*

Type: [ConnectApi.FeedFilter](#)

Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFeedElementsUpdatedSince\(`communityId`, `feedType`, `subjectId`, `recentCommentCount`, `elementsPerBundle`, `density`, `pageParam`, `pageSize`, `updatedSince`, `filter`\)](#)

[Testing ConnectApi Code](#)

```
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId,
recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince,
customFilter, result)
```

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

40.0

Signature

```
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, String customFilter, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

The ID of a case.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token defining the modification time stamp of the feed and the sort order.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

*customFilter*

Type: [String](#)

Custom filter that applies only to the case feed. See [customFeedFilter](#) in the *Metadata API Developer Guide* for supported values.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFeedElementsUpdatedSince\(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter\)](#)

[Testing ConnectApi Code](#)

**setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

31.0

Signature

```

ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFeedElementsUpdatedSince\(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly\)](#)

```
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId,  
recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince,  
showInternalOnly, filter, result)
```

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

32.0

Signature

```
public static Void setTestGetFeedElementsUpdatedSince(String communityId,  
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer  
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,  
String updatedSince, Boolean showInternalOnly, ConnectApi.FeedFilter filter,  
ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*elementsPerBundle*

Type: [Integer](#)

The maximum number of feed elements per bundle. The default and maximum value is 10.

#### *density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

#### *pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

#### *pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

#### *updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

#### *showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

#### *filter*

Type: [ConnectApi.FeedFilter](#)

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a `User` or a `Group` parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don't have any answers.

- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Unread`—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don't have a best answer.

*result*

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: Void

[Testing ConnectApi Code](#)

**setTestGetFeedItemsFromFeed(*communityId*, *feedType*, *pageParam*, *pageSize*, *sortParam*, *result*)**

Registers a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

API Version

28.0–31.0

Signature

```
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType
feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam,
ConnectApi.FeedItemPage result)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

*pageParam*

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*result*

Type: [ConnectApi.FeedItemPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

Registers a [ConnectApi.FeedItemPage](#) object to be returned when [getFeedItemsFromFeed](#) is called with matching parameters in a test context. Use the [get feed](#) method with the same parameters or the code throws an exception.

API Version

29.0–31.0

Signature

```
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType
feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam,
Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*result*Type: [ConnectApi.FeedItemPage](#)

The object containing test data.

## Return Value

Type: `Void`

## SEE ALSO:

[getFeedItemsFromFeed\(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam\)](#)

[Testing ConnectApi Code](#)

**setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, result)**

Registers a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

## API Version

28.0–31.0

## Signature

```
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType
feedType, String subjectId, ConnectApi.FeedItemPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

The type of feed. Valid values include every [ConnectApi.FeedType](#) except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*result*

Type: [ConnectApi.FeedItemPage](#)

The object containing test data.

[Testing ConnectApi Code](#)

**setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)**

Registers a [ConnectApi.FeedItemPage](#) object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

## API Version

28.0–31.0

## Signature

```
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType
feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder
sortParam, ConnectApi.FeedItemPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*result*

Type: [ConnectApi.FeedItemPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFeedItemsFromFeed\(communityId, feedType, subjectId, pageParam, pageSize, sortParam\)](#)

[Testing ConnectApi Code](#)

**setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)**

Registers a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

API Version

29.0–31.0

Signature

```
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType
feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam,
ConnectApi.FeedItemPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*result*Type: `ConnectApi.FeedItemPage`

The object containing test data.

## Return Value

Type: `Void`

If you pass in `null`, the default size is 25.*sortParam*Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.

- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*showInternalOnly*

Type: `Boolean`

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*result*

Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

[Testing ConnectApi Code](#)

**setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)**

Registers a `ConnectApi.FeedItemPage` object to be returned when the matching `getFeedItemsFromFilterFeed` method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version

28.0–31.0

Signature

```
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String
subjectId, String keyPrefix, ConnectApi.FeedItemPage result)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: `String`

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*result*

Type: [ConnectApi.FeedItemPage](#)

The object containing test data.

Return Value

Type: Void

[Testing ConnectApi Code](#)

**setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)**

Registers a [ConnectApi.FeedItemPage](#) object to be returned when the `getFeedItemsFromFilterFeedUpdatedSince` method is called in a test context.

API Version

30.0–31.0

Signature

```
public static Void setTestGetFeedItemsFromFilterFeedUpdatedSince(String communityId,
String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity
density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String
updatedSince, ConnectApi.FeedItemPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: [ConnectApi.FeedDensity](#)

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

#### *pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

#### *pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

#### *sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

#### *updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call `getFeedItemsFromFilterFeed` and take the value from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

#### *result*

Type: `ConnectApi.FeedItemPage`

The object containing test data.

#### Return Value

Type: `Void`

#### SEE ALSO:

ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
ConnectApi.FeedItemPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

One of these values:

- Files
- Groups
- News
- People
- Record

*subjectId*

Type: [String](#)

If *feedType* is `ConnectApi.Record`, *subjectId* can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

Registers a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

30.0–31.0

## Signature

```
public static Void setTestGetFeedItemsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
Boolean showInternalOnly, ConnectApi.FeedItemPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

One of these values:

- Files
- Groups
- News
- People
- Record

*subjectId*

Type: [String](#)

If *feedType* is `ConnectApi.Record`, *subjectId* can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*

Type: [String](#)

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*result*

Type: [ConnectApi.FeedItemPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFeedItemsUpdatedSince\(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly\)](#)

[Testing ConnectApi Code](#)

**setTestGetRelatedPosts(communityId, feedElementId, filter, maxResults, result)**

Registers a `ConnectApi.RelatedFeedPosts` object to be returned when the matching `ConnectApi.getRelatedPosts(communityId, feedElementId, filter, maxResults)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

37.0

Signature

```
public static Void setTestGetRelatedPosts(String communityId, String feedElementId,
ConnectApi.RelatedFeedPostType filter, Integer maxResults, ConnectApi.RelatedFeedPosts
result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element. The feed element must be a question.

*filter*

Type: [ConnectApi.RelatedFeedPostType](#)

Specifies the type of related feed post. Values are:

- **Answered**—Related questions that have at least one answer.
- **BestAnswer**—Related questions that have a best answer.
- **Generic**—All types of related questions, including answered, with a best answer, and unanswered.
- **Unanswered**—Related questions that don't have answers.

`Generic` is the default value.

*maxResults*

Type: [Integer](#)

The maximum number of results to return. You can return up to 25 results; 5 is the default.

*result*

Type: [ConnectApi.RelatedFeedPosts](#)

The object containing test data.

In version 37.0 and later, related feed posts are questions.

Return Value

Type: Void

### **setTestGetTopUnansweredQuestions (communityId, result) (Pilot)**

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getTopUnansweredQuestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

 **Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Top five unanswered questions isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version

42.0

Signature

```
public static Void setTestGetTopUnansweredQuestions(String communityId,
ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

ID of the community.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

### **setTestSearchFeedElements(communityId, q, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

31.0

Signature

```
public static Void setTestSearchFeedElements(String communityId, String q,
ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[Testing ConnectApi Code](#)

**setTestSearchFeedElements(*communityId*, *q*, *sortParam*, *result*)**

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

31.0

Signature

```
public static void setTestSearchFeedElements(String communityId, String q,
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*sortParam*

Type: [ConnectApi.FeedSortOrder](#)

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.

- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a `User` or a `Group` parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don't have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Unread`—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don't have a best answer.

*result*

[Testing ConnectApi Code](#)

**setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

31.0

Signature

```
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

#### *pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

#### *pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

#### *sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

#### *q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

#### *result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

#### Return Value

Type: `Void`

#### SEE ALSO:

[searchFeedElementsInFeed\(communitId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q\)](#)

[Testing ConnectApi Code](#)

**setTestSearchFeedElementsInFeed(*communityId*, *feedType*, *subjectId*, *recentCommentCount*, *density*, *pageParam*, *pageSize*, *sortParam*, *q*, *filter*, *result*)**

Registers a `ConnectApi.FeedElementPage` object to be returned when `searchFeedElementsInFeed` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

35.0

Signature

```
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter,
ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.UserProfile`.

*subjectId*

Type: [String](#)

The ID of any user. To specify the context user, use the user ID or the alias `me`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

The amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: `String`

One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren't wildcards. See [Wildcards](#).

*filter*

Type: `ConnectApi.FeedFilter`

Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a `User` or a `Group` parent record. However, other parent record types could be scoped to communities in the future.

*result*

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

[Testing ConnectApi Code](#)

**`setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter, result)`**

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, String customFilter,
ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

The ID of a case.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

The amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`

Type: [String](#)

One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren't wildcards. See [Wildcards](#).

`customFilter`

Type: [String](#)

Custom filter that applies only to the case feed. See [customFeedFilter](#) in the *Metadata API Developer Guide* for supported values.

`result`

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
```

```
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly,
ConnectApi.FeedElementPage result)
```

### Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

Any record ID, including a group ID.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*showInternalOnly*Type: [Boolean](#)

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*result*Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[searchFeedElementsInFeed\(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly\)](#)

[Testing ConnectApi Code](#)

**setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

32.0

Signature

```
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly,
ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: `String`

Any record ID, including a group ID.

*recentCommentCount*

Type: `Integer`

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*showInternalOnly*

Type: `Boolean`

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*filter*

Type: [ConnectApi.FeedFilter](#)

Specifies the feed filters.

- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don't have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Unread`—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don't have a best answer.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, String
customFilter, ConnectApi.FeedElementPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

*subjectId*

Type: [String](#)

The ID of a case.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed element. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*cusotmFilter*

Type: [String](#)

Custom filter that applies only to the case feed. See [customFeedFilter](#) in the *Metadata API Developer Guide* for supported values.

*result*

Type: [ConnectApi.FeedElementPage](#)

The object containing test data.

[Testing ConnectApi Code](#)

**`setTestSearchFeedItems(communityId, q, result)`**

Registers a test feed item page to be returned when `searchFeedItems(communityId, q)` is called during a test.

API Version

28.0–31.0

## Signature

```
public static Void searchFeedItems(String communityId, String q, ConnectApi.FeedItemPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*result*

Type: [ConnectApi.FeedItemPage](#)

The object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[searchFeedItems\(communityId, q\)](#)

[Testing ConnectApi Code](#)

**setTestSearchFeedItems(communityId, q, sortParam, result)**

Registers a test feed item page to be returned when `searchFeedItems(String, String, ConnectApi.FeedSortOrder)` is called during a test.

## API Version

28.0–31.0

## Signature

```
public static Void setTestSearchFeedItems(String communityId, String q, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*result*

Type: `ConnectApi.FeedItemPage`

The feed item test page.

Return Value

Type: `Void`

SEE ALSO:

[searchFeedItems\(communityId, q, sortParam\)](#)

[Testing ConnectApi Code](#)

**setTestSearchFeedItems(communityId, q, pageParam, pageSize, result)**

Registers a test feed item page to be returned when `searchFeedItems(String, String, String, Integer)` is called during a test.

API Version

28.0–31.0

Signature

```
public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedItemPage result)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*q*Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*pageParam*Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*result*Type: [ConnectApi.FeedItemPage](#)

The test feed item page.

Return Value

Type: Void

SEE ALSO:

[searchFeedItems\(communityId, q, pageParam, pageSize\)](#)

[Testing ConnectApi Code](#)

**setTestSearchFeedItems(communityId, q, pageParam, pageSize, sortParam, result)**

Registers a test feed item page to be returned when `searchFeedItems(String, String, String, Integer, ConnectApi.FeedSortOrder)` is called during a test.

API Version

28.0–31.0

Signature

```
public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

*communityId*Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*result*

Type: `ConnectApi.FeedItemPage`

The test feed item page.

Return Value

Type: `Void`

SEE ALSO:

[searchFeedItems\(communityId, q, pageParam, pageSize, sortParam\)](#)

[Testing ConnectApi Code](#)

**setTestSearchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)**

Registers a test feed item page to be returned when `searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)` is called during a test.

API Version

29.0–31.0

## Signature

```
public static void setTestSearchFeedItems(String communityId, String q, Integer
recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder
sortParam, ConnectApi.FeedItemPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*result*

Type: [ConnectApi.FeedItemPage](#)

The test feed item page.

Return Value

Type: Void

SEE ALSO:

[searchFeedItems\(communityId, q, recentCommentCount, pageParam, pageSize, sortParam\)](#)

[Testing ConnectApi Code](#)

### **setTestSearchFeedItemsInFeed(communityId, feedType, q, result)**

Registers a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

28.0–31.0

Signature

```
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String q, ConnectApi.FeedItemPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*result*

Type: [ConnectApi.FeedItemPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[searchFeedItemsInFeed\(communityId, feedType, q\)](#)

[Testing ConnectApi Code](#)

**setTestSearchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)**

Registers a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

28.0–31.0

Signature

```
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.

- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*result*

Type: [ConnectApi.FeedItemPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[searchFeedItemsInFeed\(communityId, feedType, pageParam, pageSize, sortParam, q\)](#)

[Testing ConnectApi Code](#)

**`setTestSearchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`**

Registers a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

29.0–31.0

Signature

```
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType
feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam,
Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage
result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

*recentCommentCount*

Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*result*

Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value

Type: Void

[Testing ConnectApi Code](#)

### **setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, q, result)**

Registers a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

28.0–31.0

Signature

```
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q, ConnectApi.FeedItemPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: [ConnectApi.FeedType](#)

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

*subjectId*

Type: [String](#)

If *feedType* is `Record`, *subjectId* can be any record ID, including a group ID. If *feedType* is `Streams`, *subjectId* must be a stream ID. If *feedType* is `Topics`, *subjectId* must be a topic ID. If *feedType* is `UserProfile`, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias `me`.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*showInternalOnly*

Type: [Boolean](#)

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

*result*

Type: [ConnectApi.FeedItemPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[searchFeedItemsInFeed\(String, ConnectApi.FeedType, String, Integer, ConnectApi.FeedDensity, String, Integer, ConnectApi.FeedSortOrder, String, Boolean\)](#)

[Testing ConnectApi Code](#)

**setTestSearchFeedItemsInFilterFeed(*communityId*, *subjectId*, *keyPrefix*, *q*, *result*)**

Registers a [ConnectApi.FeedItemPage](#) object to be returned when the matching [ConnectApi.searchFeedItemsInFilterFeed](#) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

28.0–31.0

Signature

```
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, String
subjectId, String keyPrefix, String q, ConnectApi.FeedItemPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*result*

Type: [ConnectApi.FeedItemPage](#)

Specify the test feed item page.

Return Value

Type: Void

Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage
result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*result*

Type: `ConnectApi.FeedItemPage`

Specify the test feed item page.

Return Value

Type: Void

SEE ALSO:

[searchFeedItemsInFilterFeed\(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q\)](#)

[Testing ConnectApi Code](#)

**`setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`**

Registers a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

29.0–31.0

Signature

```
public static void setTestSearchFeedItemsInFilterFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String keyPrefix, Integer
recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedType*

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

*subjectId*

Type: [String](#)

The ID of the context user or the alias `me`.

*keyPrefix*

Type: [String](#)

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*recentCommentCount*

Type: [Integer](#)

The maximum number of comments to return with each feed item. The default value is 3.

*density*

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

*q*

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*result*

Type: `ConnectApi.FeedItemPage`

Specify the test feed item page.

Return Value

Type: `Void`

SEE ALSO:

[Testing ConnectApi Code](#)

**`setTestSearchStreams(communityId, q, result)`**

Registers a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStream(communityId, q)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestSearchStreams(String communityId, String q,
ConnectApi.ChatterStreamPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*result*

Type: [ConnectApi.ChatterStreamPage](#)

The object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[searchStreams\(communityId, q\)](#)

[Testing ConnectApi Code](#)

**setTestSearchStreams(communityId, q, sortParam, result)**

Registers a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStream(communityId, q, sortParam)` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestSearchStreams(String communityId, String q,  
ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*sortParam*

Type: [ConnectApi.SortOrder](#)

Specifies the sort order. Values are:

- `Ascending`—Items are in ascending alphabetical order (A-Z).
- `Descending`—Items are in descending alphabetical order (Z-A).
- `MostRecentlyViewed`—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is `Ascending`.

*result*

Type: `ConnectApi.ChatterStreamPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[searchStreams\(communityId, q, sortParam\)](#)

[Testing ConnectApi Code](#)

**setTestSearchStreams(communityId, q, pageParam, pageSize, result)**

Registers a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStreams(communityId, q, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterStreamPage result)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*q*

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*pageParam*

Type: `Integer`

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

*result*

Type: [ConnectApi.ChatterStreamPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

**setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)**

Registers a [ConnectApi.ChatterStreamPage](#) object to be returned when the matching [ConnectApi.searchStreams\(communityId, q, pageParam, pageSize, sortParam\)](#) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

*sortParam*

Type: [ConnectApi.SortOrder](#)

Specifies the sort order. Values are:

- `Ascending`—Items are in ascending alphabetical order (A-Z).
- `Descending`—Items are in descending alphabetical order (Z-A).
- `MostRecentlyViewed`—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is `Ascending`.

*result*

Type: [ConnectApi.ChatterStreamPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[searchStreams\(communityId, q, pageParam, pageSize, sortParam\)](#)

[Testing ConnectApi Code](#)

**setTestSearchStreams(*communityId*, *q*, *pageParam*, *pageSize*, *sortParam*, *globalScope*, *result*)**

Registers a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

41.0

Signature

```
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope, ConnectApi.ChatterStreamPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

*sortParam*

Type: [ConnectApi.SortOrder](#)

Specifies the sort order. Values are:

- `Ascending`—Items are in ascending alphabetical order (A-Z).
- `Descending`—Items are in descending alphabetical order (Z-A).
- `MostRecentlyViewed`—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is `Ascending`.

*globalScope*

Type: [Boolean](#)

Specifies whether to get streams from all the context user's communities, regardless of the `communityId` value.

*result*

Type: [ConnectApi.ChatterStreamPage](#)

The object containing test data.

Return Value

Type: Void

## ChatterGroups Class

Information about groups, such as the group's members, photo, and the groups the specified user is a member of. Add members to a group, remove members, and change the group photo.

### Namespace

[ConnectApi](#)

### ChatterGroups Methods

The following are methods for `ChatterGroups`. All methods are static.

IN THIS SECTION:

[addMember\(communityId, groupId, userId\)](#)

Adds the specified user to the specified group in the specified community as a standard member. To execute this method, the context user must be the group owner or moderator.

[addMemberWithRole\(\*communityId\*, \*groupId\*, \*userId\*, \*role\*\)](#)

Adds the specified user with the specified role to the specified group in the specified community. To execute this method, the context user must be the group owner or moderator.

[addRecord\(\*communityId\*, \*groupId\*, \*recordId\*\)](#)

Associates a record with a group.

[createGroup\(\*communityId\*, \*groupInput\*\)](#)

Creates a group.

[deleteBannerPhoto\(\*communityId\*, \*groupId\*\)](#)

Delete a group banner photo.

[deleteGroup\(\*communityId\*, \*groupId\*\)](#)

Delete a group.

[deleteMember\(\*communityId\*, \*membershipId\*\)](#)

Deletes the specified group membership.

[deletePhoto\(\*communityId\*, \*groupId\*\)](#)

Deletes the photo of the specified group.

[getAnnouncements\(\*communityId\*, \*groupId\*\)](#)

Gets the first page of announcements in a group.

[getAnnouncements\(\*communityId\*, \*groupId\*, \*pageParam\*, \*pageSize\*\)](#)

Gets the specified page of announcements in a group. You can also specify the page size.

[getBannerPhoto\(\*communityId\*, \*groupId\*\)](#)

Get a group banner photo.

[getGroup\(\*communityId\*, \*groupId\*\)](#)

Returns information about the specified group.

[getGroupBatch\(\*communityId\*, \*groupIds\*\)](#)

Gets information about the specified list of groups. Returns a list of `BatchResult` objects containing `ConnectApi.ChatterGroup` objects. Returns errors embedded in the results for groups that couldn't be loaded.

[getGroupMembershipRequest\(\*communityId\*, \*requestId\*\)](#)

Returns information about the specified request to join a private group.

[getGroupMembershipRequests\(\*communityId\*, \*groupId\*\)](#)

Returns information about every request to join the specified private group.

[getGroupMembershipRequests\(\*communityId\*, \*groupId\*, \*status\*\)](#)

Returns information about every request to join the specified private group that has a specified status.

[getGroups\(\*communityId\*\)](#)

Returns the first page of all the groups. The page contains the default number of items.

[getGroups\(\*communityId\*, \*pageParam\*, \*pageSize\*\)](#)

Returns the specified page of information about all groups.

[getGroups\(\*communityId\*, \*pageParam\*, \*pageSize\*, \*archiveStatus\*\)](#)

Returns the specified page of information about a set of groups with a specified group archive status.

[getMember\(\*communityId\*, \*membershipId\*\)](#)

Returns information about the specified group member.

[getMembers\(communityId, groupId\)](#)

Get the first page of information about members of a group. The page contains the default number of items.

[getMembers\(communityId, groupId, pageParam, pageSize\)](#)

Get the specified page of information about members of a group.

[getMembershipBatch\(communityId, membershipIds\)](#)

Gets information about the specified list of group memberships. Returns a list of `BatchResult` objects containing `ConnectApi.GroupMember` objects. Returns errors embedded in the results for group memberships that couldn't be accessed.

[getMyChatterSettings\(communityId, groupId\)](#)

Returns the context user's Chatter settings for the specified group.

[getPhoto\(communityId, groupId\)](#)

Returns information about the photo for the specified group.

[getRecord\(communityId, groupRecordId\)](#)

Returns information about a record associated with a group.

[getRecords\(communityId, groupId\)](#)

Returns the first page of records associated with the specified group. The page contains the default number of items.

[getRecords\(communityId, groupId, pageParam, pageSize\)](#)

Returns the specified page from the list of records associated with a group.

[inviteUsers\(groupId, invite\)](#)

Invite internal and external users to join a group.

[postAnnouncement\(communityId, groupId, announcement\)](#)

Posts an announcement to the group.

[removeRecord\(communityId, groupRecordId\)](#)

Removes the association of a record with a group.

[requestGroupMembership\(communityId, groupId\)](#)

Requests membership in a private group for the context user.

[searchGroups\(communityId, q\)](#)

Returns the first page of groups that match the specified search criteria. The page contains the default number of items.

[searchGroups\(communityId, q, pageParam, pageSize\)](#)

Returns the specified page of groups that match the specified search criteria.

[searchGroups\(communityId, q, archiveStatus, pageParam, pageSize\)](#)

Returns the specified page of groups that match the specified search criteria and that have the specified archive status.

[setBannerPhoto\(communityId, groupId, fileId, versionNumber\)](#)

Sets the group banner photo to an already uploaded file.

[setBannerPhoto\(communityId, groupId, fileUpload\)](#)

Sets the group banner photo to a file that hasn't been uploaded.

[setBannerPhotoWithAttributes\(communityId, groupId, bannerPhoto\)](#)

Sets and crops an already uploaded file as the group banner photo.

[setBannerPhotoWithAttributes\(communityId, groupId, bannerPhoto, fileUpload\)](#)

Sets the group banner photo to a file that hasn't been uploaded and requires cropping.

[setPhoto\(communityId, groupId, fileId, versionNumber\)](#)

Sets the group photo to an already uploaded file.

[setPhoto\(communityId, groupId, fileUpload\)](#)

Sets the group photo to the specified blob..

[setPhotoWithAttributes\(communityId, groupId, photo\)](#)

Sets and crops an already uploaded file as the group photo.

[setPhotoWithAttributes\(communityId, groupId, photo, fileUpload\)](#)

Sets and crops a binary input as the group photo.

[updateGroup\(communityId, groupId, groupInput\)](#)

Update the settings of a group.

[updateGroupMember\(communityId, membershipId, role\)](#)

Updates the specified group membership with the specified role in the specified community. This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

[updateMyChatterSettings\(communityId, groupId, emailFrequency\)](#)

Updates the context user's Chatter settings for the specified group.

[updateRequestStatus\(communityId, requestId, status\)](#)

Updates a request to join a private group.

[updateRequestStatus\(communityId, requestId, status, responseMessage\)](#)

Updates a request to join a private group and optionally provides a message when the request is denied.

### **addMember(communityId, groupId, userId)**

Adds the specified user to the specified group in the specified community as a standard member. To execute this method, the context user must be the group owner or moderator.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupMember addMember(String communityId, String groupId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*userId*

Type: [String](#)

The ID for a user.

Return Value

Type: [ConnectApi.GroupMember](#)

### **addMemberWithRole(*communityId*, *groupId*, *userId*, *role*)**

Adds the specified user with the specified role to the specified group in the specified community. To execute this method, the context user must be the group owner or moderator.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupMember addMemberWithRole(String communityId, String
groupId, String userId, ConnectApi.GroupMembershipType role)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*userId*

Type: [String](#)

The ID for a user.

*role*

Type: [ConnectApi.GroupMembershipType](#)

The group membership type. One of these values:

- `GroupManager`
- `StandardMember`

Return Value

Type: [ConnectApi.GroupMember](#)

**addRecord(*communityId*, *groupId*, *recordId*)**

Associates a record with a group.

API Version

34.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupRecord addRecord(String communityId, String groupId, String recordId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

ID of the group with which to associate the record.

*recordId*

Type: [String](#)

ID of the record to associate with the group.

Return Value

Type: [ConnectApi.GroupRecord](#)

**createGroup(*communityId*, *groupInput*)**

Creates a group.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterGroupDetail createGroup(String communityId, ConnectApi.ChatterGroupInput groupInput)
```

## Parameters

*communityId*

Type: [String](#),

Use either the ID for a community, `internal`, or `null`.

*groupInput*

Type: [ConnectApi.ChatterGroupInput](#)

The properties of the group.

## Return Value

Type: [ConnectApi.ChatterGroupDetail](#)

**deleteBannerPhoto(*communityId*, *groupId*)**

Delete a group banner photo.

## API Version

36.0

## Requires Chatter

Yes

## Signature

```
public static Void deleteBannerPhoto(String communityId, String groupId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

ID of the group.

## Return Value

Type: Void

## Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**deleteGroup(*communityId*, *groupId*)**

Delete a group.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static void deleteGroup(String communityId, String groupId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

Return Value

Type: Void

**deleteMember (communityId, membershipId)**

Deletes the specified group membership.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static void deleteMember(String communityId, String membershipId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*membershipId*

Type: [String](#)

The ID for a membership.

Return Value

Type: Void

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

### **deletePhoto**(communityId, groupId)

Deletes the photo of the specified group.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static Void deletePhoto(String communityId, String groupId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

Return Value

Type: Void

Usage

This method is only successful when the context user is the group manager or owner, or has Modify All Data permission.

### **getAnnouncements**(communityId, groupId)

Gets the first page of announcements in a group.

API Version

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

Return Value

Type: [ConnectApi.AnnouncementPage](#)

Usage

To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the [ConnectApi.Announcements](#) class.

**`getAnnouncements`(`communityId`, `groupId`, `pageParam`, `pageSize`)**

Gets the specified page of announcements in a group. You can also specify the page size.

API Version

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId, Integer pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.AnnouncementPage](#)

Usage

To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the [ConnectApi.Announcements](#) class.

### **getBannerPhoto(*communityId*, *groupId*)**

Get a group banner photo.

API Version

36.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String groupId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID of the group.

Return Value

Type: [ConnectApi.BannerPhoto](#)

**getGroup(*communityId*, *groupId*)**

Returns information about the specified group.

API Version

28.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterGroupDetail getGroup(String communityId, String groupId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

Return Value

Type: [ConnectApi.ChatterGroupDetail](#)

**getGroupBatch(*communityId*, *groupIds*)**

Gets information about the specified list of groups. Returns a list of `BatchResult` objects containing `ConnectApi.ChatterGroup` objects. Returns errors embedded in the results for groups that couldn't be loaded.

API Version

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.BatchResult[] getGroupBatch(String communityId, List<String> groupIds)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupIds*

Type: [List<String>](#)

A list of up to 500 group IDs.

## Return Value

Type: [BatchResult\[\]](#)

The `BatchResult.getResult()` method returns a `ConnectApi.ChatterGroup` object.

## Example

```
// Create a list of groups.
ConnectApi.ChatterGroupPage groupPage = ConnectApi.ChatterGroups.getGroups(null);

// Create a list of group IDs.
List<String> groupIds = new List<String>();
for (ConnectApi.ChatterGroup aGroup : groupPage.groups) {
    groupIds.add(aGroup.id);
}

// Get info about all the groups in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null,
groupIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the number of members in each group.
        ConnectApi.ChatterGroup aGroup;
        if (batchResult.getResult() instanceof ConnectApi.ChatterGroup) {
            aGroup = (ConnectApi.ChatterGroup) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aGroup.memberCount);
    }
    else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

## SEE ALSO:

[getMembershipBatch\(communityId, membershipIds\)](#)

**getGroupMembershipRequest(*communityId*, *requestId*)**

Returns information about the specified request to join a private group.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupMembershipRequest getGroupMembershipRequest(String communityId, String requestId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*requestId*

Type: [String](#)

The ID of a request to join a private group.

Return Value

Type: [ConnectApi.GroupMembershipRequest](#)

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**getGroupMembershipRequests(*communityId*, *groupId*)**

Returns information about every request to join the specified private group.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String communityId, String groupId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

## Return Value

Type: [ConnectApi.GroupMembershipRequests](#)

## Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**getGroupMembershipRequests(*communityId*, *groupId*, *status*)**

Returns information about every request to join the specified private group that has a specified status.

## API Version

28.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String communityId, String groupId, ConnectApi.GroupMembershipRequestStatus status)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*status*

Type: [ConnectApi.GroupMembershipRequestStatus](#)

*status*—Status of a request to join a private group.

- Accepted
- Declined

- Pending

Return Value

Type: [ConnectApi.GroupMembershipRequests](#)

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

### **getGroups (communityId)**

Returns the first page of all the groups. The page contains the default number of items.

API Version

28.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterGroupPage getGroups(String communityId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

Return Value

Type: [ConnectApi.ChatterGroupPage](#)

### **getGroups (communityId, pageParam, pageSize)**

Returns the specified page of information about all groups.

API Version

28.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ChatterGroupPage](#)

**getGroups(*communityId*, *pageParam*, *pageSize*, *archiveStatus*)**

Returns the specified page of information about a set of groups with a specified group archive status.

API Version

29.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize, ConnectApi.GroupArchiveStatus archiveStatus)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: `Integer`

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*archiveStatus*

Type: `ConnectApi.GroupArchiveStatus`

Set of groups based on whether the groups are archived or not.

- `All`—All groups, including groups that are archived and groups that are not archived.
- `Archived`—Only groups that are archived.
- `NotArchived`—Only groups that are not archived.

If you pass in `null`, the default value is `All`.

Return Value

Type: `ConnectApi.ChatterGroupPage`

### **getMember(*communityId*, *membershipId*)**

Returns information about the specified group member.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupMember getMember(String communityId, String membershipId)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*membershipId*

Type: `String`

The ID for a membership.

Return Value

Type: [ConnectApi.GroupMember](#)

### **getMembers (communityId, groupId)**

Get the first page of information about members of a group. The page contains the default number of items.

API Version

28.0

Available to Guest Users

36.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

Return Value

Type: [ConnectApi.GroupMemberPage](#)

### **getMembers (communityId, groupId, pageParam, pageSize)**

Get the specified page of information about members of a group.

API Version

28.0

Available to Guest Users

36.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId, Integer pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.GroupMemberPage](#)

### **getMembershipBatch(*communityId*, *membershipIds*)**

Gets information about the specified list of group memberships. Returns a list of `BatchResult` objects containing `ConnectApi.GroupMember` objects. Returns errors embedded in the results for group memberships that couldn't be accessed.

API Version

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.BatchResult[] getMembershipBatch(String communityId, List<String> membershipIds)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*membershipIds*

Type: [List<String>](#)

A list of up to 500 group membership IDs.

## Return Value

Type: [BatchResult\[\]](#)

The `BatchResult` `getResults()` method returns a `ConnectApi.GroupMember` object.

## Example

```
// Get members of a group.
ConnectApi.GroupMemberPage membersPage = ConnectApi.ChatterGroups.getMembers(null,
'0F9D00000000oOT');

// Create a list of membership IDs.
List<String> membersList = new List<String>();
for (ConnectApi.GroupMember groupMember : membersPage.members) {
    membersList.add(groupMember.id);
}

// Get info about all group memberships in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getMembershipBatch(null,
membersList);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the first name of each member.
        ConnectApi.GroupMember groupMember;
        if (batchResult.getResult() instanceof ConnectApi.GroupMember) {
            groupMember = (ConnectApi.GroupMember) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupMember.user.firstName);
    }
    else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

## SEE ALSO:

[getGroupBatch\(communityId, groupIds\)](#)

**getMyChatterSettings(*communityId*, *groupId*)**

Returns the context user's Chatter settings for the specified group.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupChatterSettings getMyChatterSettings(String communityId,  
String groupId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

Return Value

Type: [ConnectApi.GroupChatterSettings](#)

**getPhoto(*communityId*, *groupId*)**

Returns information about the photo for the specified group.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.Photo getPhoto(String communityId, String groupId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: `String`

The ID for a group.

Return Value

Type: `ConnectApi.Photo`

### **getRecord(*communityId*, *groupRecordId*)**

Returns information about a record associated with a group.

API Version

34.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupRecord getRecord(String communityId, String groupRecordId)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*groupRecordId*

Type: `String`

ID of the group record.

Return Value

Type: `ConnectApi.GroupRecord`

### **getRecords(*communityId*, *groupId*)**

Returns the first page of records associated with the specified group. The page contains the default number of items.

API Version

33.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

## Return Value

Type: [ConnectApi.GroupRecordPage](#)

**getRecords(communityId, groupId, pageParam, pageSize)**

Returns the specified page from the list of records associated with a group.

## API Version

33.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.GroupRecordPage](#)

### **inviteUsers(groupId, invite)**

Invite internal and external users to join a group.

API Version

39.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.Invitations inviteUsers(String groupId, ConnectApi.InviteInput invite)
```

Parameters

*groupId*

Type: [String](#)

ID of the group.

*invite*

Type: [ConnectApi.InviteInput](#)

A [ConnectApi.InviteInput](#) body.

Return Value

Type: [ConnectApi.Invitations](#)

### **postAnnouncement(communityId, groupId, announcement)**

Posts an announcement to the group.

API Version

31.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.Announcement postAnnouncement(String communityId, String
groupId, ConnectApi.AnnouncementInput announcement)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*announcement*

Type: [ConnectApi.AnnouncementInput](#)

A [ConnectApi.AnnouncementInput](#) object.

## Return Value

Type: [ConnectApi.Announcement](#)

## Usage

Use an announcement to highlight information. Users can discuss, like, and post comments on announcements. Deleting the feed post deletes the announcement.

To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the [ConnectApi.Announcements](#) class.

**removeRecord(*communityId*, *groupRecordId*)**

Removes the association of a record with a group.

## API Version

34.0

## Requires Chatter

Yes

## Signature

```
public static Void removeRecord(String communityId, String groupRecordId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupRecordId*

Type: [String](#)

ID of the group record.

Return Value

Type: Void

### **requestGroupMembership(*communityId*, *groupId*)**

Requests membership in a private group for the context user.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupMembershipRequest requestGroupMembership(String
communityId, String groupId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

Return Value

Type: [ConnectApi.GroupMembershipRequest](#)

Sample: Requesting to Join a Private Group

This sample code calls `ConnectApi.ChatterGroups.requestGroupMembership` to request to join a private group.

```
String communityId = null;
ID groupId = '0F9x0000000hAZ';

ConnectApi.GroupMembershipRequest membershipRequest =
ConnectApi.ChatterGroups.requestGroupMembership(communityId, groupId);
```

**searchGroups (communityId, q)**

Returns the first page of groups that match the specified search criteria. The page contains the default number of items.

API Version

28.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

*q*—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#). Can be specified as `null`.

Return Value

Type: [ConnectApi.ChatterGroupPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestSearchGroups\(communityId, q, result\)](#)

[Testing ConnectApi Code](#)

**searchGroups (communityId, q, pageParam, pageSize)**

Returns the specified page of groups that match the specified search criteria.

API Version

28.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q, Integer pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

*q*—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#). Can be specified as `null`.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ChatterGroupPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestSearchGroups\(communityId, q, pageParam, pageSize, result\)](#)

[Testing ConnectApi Code](#)

**searchGroups**(communityId, q, archiveStatus, pageParam, pageSize)

Returns the specified page of groups that match the specified search criteria and that have the specified archive status.

API Version

29.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q,
ConnectApi.GroupArchiveStatus archiveStatus, Integer pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

*q*—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#). Can be specified as `null`.

*archiveStatus*

Type: [ConnectApi.GroupArchiveStatus](#)

*archiveStatus* Set of groups based on whether the groups are archived or not.

- `All`—All groups, including groups that are archived and groups that are not archived.
- `Archived`—Only groups that are archived.
- `NotArchived`—Only groups that are not archived.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ChatterGroupPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestSearchGroups\(communityId, q, archiveStatus, pageParam, pageSize, result\)](#)

[Testing ConnectApi Code](#)

**setBannerPhoto(communityId, groupId, fileId, versionNumber)**

Sets the group banner photo to an already uploaded file.

## API Version

36.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId,
String fileId, Integer versionNumber)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID of the group.

*fileId*

Type: [String](#)

The ID of the already uploaded file. The key prefix must be 069, and the image must be smaller than 8 MB.

*versionNumber*

Type: [Integer](#)

Version number of the existing file. Specify either an existing version number or, to get the latest version, specify `null`.

## Return Value

Type: [ConnectApi.BannerPhoto](#)

## Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

Photos are processed asynchronously and may not be visible right away.

### **setBannerPhoto(*communityId*, *groupId*, *fileUpload*)**

Sets the group banner photo to a file that hasn't been uploaded.

API Version

36.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId,
ConnectApi.BinaryInput fileUpload)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID of the group.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

A file to use as the photo. The content type must be usable as an image.

Return Value

Type: [ConnectApi.BannerPhoto](#)

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

Photos are processed asynchronously and may not be visible right away.

### **setBannerPhotoWithAttributes(*communityId*, *groupId*, *bannerPhoto*)**

Sets and crops an already uploaded file as the group banner photo.

API Version

36.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,  
String groupId, ConnectApi.BannerPhotoInput bannerPhoto)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID of the group.

*bannerPhoto*

Type: [ConnectApi.BannerPhotoInput](#)

A `ConnectApi.BannerPhotoInput` object that specifies the ID and version of the file, and how to crop the file.

Return Value

Type: [ConnectApi.BannerPhoto](#)

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

Photos are processed asynchronously and may not be visible right away.

**setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)**

Sets the group banner photo to a file that hasn't been uploaded and requires cropping.

API Version

36.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,  
String groupId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput  
fileUpload)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID of the group.

*bannerPhoto*

Type: [ConnectApi.BannerPhotoInput](#)

A [ConnectApi.BannerPhotoInput](#) object specifying the cropping parameters.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

A file to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.BannerPhoto](#)

## Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

Photos are processed asynchronously and may not be visible right away.

**setPhoto(*communityId*, *groupId*, *fileId*, *versionNumber*)**

Sets the group photo to an already uploaded file.

## API Version

28.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo setPhoto(String communityId, String groupId, String
fileId, Integer versionNumber)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*fileId*

Type: [String](#)

ID of a file already uploaded. The key prefix must be 069, and the file must be an image that is smaller than 2 GB.

*versionNumber*

Type: [Integer](#)

Version number of the existing file. Specify either an existing version number or, to get the latest version, specify `null`.

Return Value

Type: [ConnectApi.Photo](#)

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

Photos are processed asynchronously and may not be visible right away.

Sample: Updating a Group Photo with an Existing File

When a group is created, it doesn't have a group photo. You can set an existing photo that has already been uploaded to Salesforce as the group photo. The key prefix must be 069 and the file size must be less than 2 GB.

```
String communityId = null;
ID groupId = '0F9x0000000hAK';
ID fileId = '069x0000001Ion';

// Set photo
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, fileId,
null);
```

**setPhoto(*communityId*, *groupId*, *fileUpload*)**

Sets the group photo to the specified blob..

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.Photo setPhoto(String communityId, String groupId,
ConnectApi.BinaryInput fileUpload)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

A file to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

Photos are processed asynchronously and may not be visible right away.

## Sample: Uploading a New File and Using it as a Group Photo

When a group is created, it doesn't have a group photo. You can upload a photo and set it as the group photo.

```
String communityId = null;
ID groupId = '0F9x0000000hAP';
ID photoId = '069x00000001Ioo';

// Set photo
List<ContentVersion> groupPhoto = [Select c.VersionData From ContentVersion c where
ContentDocumentId=:photoId];
ConnectApi.BinaryInput binary = new ConnectApi.BinaryInput(groupPhoto.get(0).VersionData,
'image/png', 'image.png');
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, binary);
```

**setPhotoWithAttributes(*communityId*, *groupId*, *photo*)**

Sets and crops an already uploaded file as the group photo.

## API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String groupId,
ConnectApi.PhotoInput photo)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*photo*

Type: [ConnectApi.PhotoInput](#)

A `ConnectApi.PhotoInput` object that specifies the ID and version of the file, and how to crop the file.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

Photos are processed asynchronously and may not be visible right away.

**setPhotoWithAttributes(communityId, groupId, photo, fileUpload)**

Sets and crops a binary input as the group photo.

## API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String groupId,
ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*photo*

Type: [ConnectApi.PhotoInput](#)

A [ConnectApi.PhotoInput](#) object that specifies how to crop the file specified in *fileUpload*.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

A file to use as the photo. The content type must be usable as an image.

Return Value

Type: [ConnectApi.Photo](#)

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

Photos are processed asynchronously and may not be visible right away.

**updateGroup(*communityId*, *groupId*, *groupInput*)**

Update the settings of a group.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterGroup updateGroup(String communityId, String groupId,
ConnectApi.ChatterGroupInput groupInput)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*groupInput*

Type: [ConnectApi.ChatterGroupInput](#)

A `ConnectApi.ChatterGroupInput` object.

#### Return Value

Type: `ConnectApi.ChatterGroup`

#### Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Use this method to update any settings in the `ConnectApi.ChatterGroupInput` class. These settings include the group title and text in the “Information” section, whether the group is public or private, and whether the group is archived.

#### Example

This example archives a group:

```
String groupId = '0F9D0000000qSz';
String communityId = null;

ConnectApi.ChatterGroupInput groupInput = new ConnectApi.ChatterGroupInput();
groupInput.isArchived = true;

ConnectApi.ChatterGroups.updateGroup(communityId, groupId, groupInput);
```

#### **updateGroupMember(communityId, membershipId, role)**

Updates the specified group membership with the specified role in the specified community. This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

#### API Version

29.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.ChatterGroup updateGroupMember(String communityId, String
membershipId, ConnectApi.GroupMembershipType role)
```

#### Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*membershipId*

Type: `String`

The ID for a membership.

*role*

Type: [ConnectApi.GroupMembershipType](#)

The group membership type. One of these values:

- [GroupManager](#)
- [StandardMember](#)

Return Value

Type: [ConnectApi.ChatterGroup](#)

### **updateMyChatterSettings(*communityId*, *groupId*, *emailFrequency*)**

Updates the context user's Chatter settings for the specified group.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupChatterSettings updateMyChatterSettings(String communityId,  
String groupId, ConnectApi.GroupEmailFrequency emailFrequency)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, [internal](#), or [null](#).

*groupId*

Type: [String](#)

The ID for a group.

*emailFrequency*

Type: [ConnectApi.GroupEmailFrequency](#)

*emailFrequency*—Frequency with which a user receives email.

- [EachPost](#)
- [DailyDigest](#)
- [WeeklyDigest](#)
- [Never](#)
- [UseDefault](#)

The value [UseDefault](#) uses the value set in a call to [updateChatterSettings\(\*communityId\*, \*userId\*, \*defaultGroupEmailFrequency\*\)](#).

Return Value

Type: [ConnectApi.GroupChatterSettings](#)

### **updateRequestStatus(*communityId*, *requestId*, *status*)**

Updates a request to join a private group.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId,  
String requestId, ConnectApi.GroupMembershipRequestStatus status)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*requestId*

Type: [String](#)

The ID for a request to join a private group.

*status*

Type: [ConnectApi.GroupMembershipRequestStatus](#)

The status of the request:

- `Accepted`
- `Declined`

The `Pending` value of the enum is not valid in this method.

Return Value

Type: [ConnectApi.GroupMembershipRequest](#)

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

## Sample: Accepting or Declining a Request to Join a Private Group

This sample code calls `ConnectApi.ChatterGroups.updateRequestStatus` and passes it the membership request ID and an `ConnectApi.GroupMembershipRequestStatus.Accepted` status. You can also pass `ConnectApi.GroupMembershipRequestStatus.Declined`.

```
String communityId = null;
ID groupId = '0F9x00000000hAZ';
String requestId = '0I5x000000001snCAA';

ConnectApi.GroupMembershipRequest membershipRequestRep =
ConnectApi.ChatterGroups.updateRequestStatus(communityId, requestId,
ConnectApi.GroupMembershipRequestStatus.Accepted);
```

**updateRequestStatus(*communityId*, *requestId*, *status*, *responseMessage*)**

Updates a request to join a private group and optionally provides a message when the request is denied.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId,
String requestId, ConnectApi.GroupMembershipRequestStatus status, String responseMessage)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*requestId*

Type: [String](#)

The ID for a request to join a private group.

*status*

Type: `ConnectApi.GroupMembershipRequestStatus`

The status of the request:

- `Accepted`
- `Declined`

The `Pending` value of the enum is not valid in this method.

*responseMessage*

Type: [String](#)

Provide a message to the user if their membership request is declined. The value of this property is used only when the value of the `status` property is `Declined`.

The maximum length is 756 characters.

#### Return Value

Type: [ConnectApi.GroupMembershipRequest](#)

#### Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

## ChatterGroups Test Methods

The following are the test methods for `ChatterGroups`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### **setTestSearchGroups(*communityId*, *q*, *result*)**

Registers a `ConnectApi.ChatterGroupPage` object to be returned when the matching `ConnectApi.searchGroups` method is called in a test context. Use the test method with the same parameters or you receive an exception.

#### API Version

29.0

#### Signature

```
public static Void setTestSearchGroups(String communityId, String q,
ConnectApi.ChatterGroupPage result)
```

#### Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

*q*—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#). Can be specified as `null`.

*result*

Type: [ConnectApi.ChatterGroupPage](#)

The test `ConnectApi.ChatterGroupPage` object.

Return Value

Type: Void

SEE ALSO:

[searchGroups\(communityId, q\)](#)

[Testing ConnectApi Code](#)

### **setTestSearchGroups(communityId, q, pageParam, pageSize, result)**

Registers a `ConnectApi.ChatterGroupPage` object to be returned when the matching `ConnectApi.searchGroups` method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version

28.0

Signature

```
public static Void setTestSearchGroups(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterGroupPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

*q*—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#). Can be specified as `null`.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*result*

Type: [ConnectApi.ChatterGroupPage](#)

The test `ConnectApi.ChatterGroupPage` object.

Return Value

Type: Void

SEE ALSO:

[searchGroups\(communityId, q, pageParam, pageSize\)](#)

[Testing ConnectApi Code](#)

**setTestSearchGroups (communityId, q, archiveStatus, pageParam, pageSize, result)**

Registers a `ConnectApi.ChatterGroupPage` object to be returned when the matching `ConnectApi.searchGroups` method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version

29.0

Signature

```
public static Void setTestSearchGroups(String communityId, String q,
ConnectApi.GroupArchiveStatus, archiveStatus, Integer pageParam, Integer pageSize,
ConnectApi.ChatterGroupPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

*q*—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#). Can be specified as `null`.

*archiveStatus*

Type: [ConnectApi.GroupArchiveStatus](#)

*archiveStatus* Set of groups based on whether the groups are archived or not.

- `All`—All groups, including groups that are archived and groups that are not archived.
- `Archived`—Only groups that are archived.
- `NotArchived`—Only groups that are not archived.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*result*

Type: [ConnectApi.ChatterGroupPage](#)

The test `ConnectApi.ChatterGroupPage` object.

Return Value

Type: Void

SEE ALSO:

[searchGroups\(communityId, q, archiveStatus, pageParam, pageSize\)](#)

[Testing ConnectApi Code](#)

## ChatterMessages Class

Access and modify message and conversation data.

### Namespace

[ConnectApi](#)

### Usage

Use Chatter in Apex to get, send, search, and reply to messages. You can also get and search conversations, mark conversations as read, and get a count of unread messages.

### ChatterMessages Methods

The following are methods for `ChatterMessages`. All methods are static.

IN THIS SECTION:

[getConversation\(conversationId\)](#)

Returns a conversation the context user has access to.

[getConversation\(conversationId, pageParam, pageSize\)](#)

Returns a conversation the context user has access to.

[getConversation\(communityId, conversationId\)](#)

Returns a conversation the context user has access to across their available communities.

[getConversation\(communityId, conversationId, pageParam, pageSize\)](#)

Returns a conversation from a specific page with a specific number of results the context user has access to across their available communities.

[getConversations\(\)](#)

Returns the most recent conversations the context user has access to.

[getConversations\(pageParam, pageSize\)](#)

Returns a specific page of conversations the context user has access to.

[getConversations\(communityId\)](#)

Returns the most recent conversations the context user has access to across their available communities.

[getConversations\(communityId, pageParam, pageSize\)](#)

Returns a specific page of conversations with a specific number of results the context user has access to across their available communities.

[getMessage\(messageId\)](#)

Returns a message the context user has access to.

[getMessage\(communityId, messageId\)](#)

Returns a message the context user has access to across their available communities.

[getMessages\(\)](#)

Returns a list of the most recent messages the context user has access to.

[getMessages\(pageParam, pageSize\)](#)

Returns the specified page of messages the context user has access to.

[getMessages\(communityId\)](#)

Returns a list of the most recent messages the context user has access to across their available communities.

[getMessages\(communityId, pageParam, pageSize\)](#)

Returns the specified page of messages with the specified number of results the context user has access to across their available communities.

[getUnreadCount\(\)](#)

Returns the number of conversations the context user has marked unread. If the number is less than 50, it will return the exact unreadCount, and hasMore = false. If the context user has more than 50, unreadCount = 50 and hasMore = true.

[getUnreadCount\(communityId\)](#)

Returns the number of conversations the context user has marked unread across their available communities. If the number is less than 50, it will return the exact unreadCount, and hasMore = false. If the context user has more than 50, unreadCount = 50 and hasMore = true.

[markConversationRead\(conversationId, read\)](#)

Marks a conversation as read for the context user.

[markConversationRead\(communityId, conversationID, read\)](#)

Marks a conversation as read or unread for the context user across their available communities.

[replyToMessage\(text, inReplyTo\)](#)

Adds the specified text as a response to a previous message the context user has access to.

[replyToMessage\(communityId, text, inReplyTo\)](#)

Adds the specified text as a response to a previous message the context user has access to across their available communities.

[searchConversation\(conversationId, q\)](#)

Returns the conversation the context user has access to with a page of messages that matches any of the specified search.

[searchConversation\(conversationId, pageParam, pageSize, q\)](#)

Returns the conversation the context user has access to with a page of messages that matches any of the specified search.

[searchConversation\(communityId, conversationId, q\)](#)

Returns the conversation the context user has access to with a page of messages that matches any of the specified search across their available communities.

[searchConversation\(communityId, conversationId, pageParam, pageSize, q\)](#)

Returns the conversation the context user has access to with a page of messages that matches any of the specified search across their available communities.

[searchConversations\(q\)](#)

Returns a page of conversations the context user has access to where member names and messages in the conversations match any of the specified search criteria.

[searchConversations\(pageParam, pageSize, q\)](#)

Returns a page of conversations the context user has access to where member names and messages in the conversations match any of the specified search criteria.

[searchConversations\(communityId, q\)](#)

Returns a page of conversations the context user has access to where member names and messages in the conversations match any of the specified search criteria across their available communities.

[searchConversations\(communityId, pageParam, pageSize, q\)](#)

Returns a specific page of conversations with the specified number of results the context user has access to where member names and messages in the conversations match any of the specified search criteria across their available communities.

[searchMessages\(q\)](#)

Returns a page of messages the context user has access to that matches any of the specified criteria.

[searchMessages\(pageParam, pageSize, q\)](#)

Returns a page of messages the context user has access to that matches any of the specified criteria.

[searchMessages\(communityId, q\)](#)

Returns a page of messages the context user has access to that matches any of the specified criteria across their available communities.

[searchMessages\(communityId, pageParam, pageSize, q\)](#)

Returns a specific page of messages with the specified number of results the context user has access to that matches any of the specified criteria across their available communities.

[sendMessage\(text, recipients\)](#)

Sends the specified text to the indicated recipients.

[sendMessage\(communityId, text, recipients\)](#)

Sends the specified text to the indicated recipients across their available communities.

**getConversation (conversationId)**

Returns a conversation the context user has access to.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversation getConversation(String conversationId)
```

## Parameters

*conversationId*

Type: [String](#)

Specify the ID for the conversation.

## Return Value

Type: [ConnectApi.ChatterConversation](#)

**getConversation(conversationId, pageParam, pageSize)**

Returns a conversation the context user has access to.

## API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterConversation getConversation(String conversationId,  
String pageParam, Integer pageSize)
```

## Parameters

*conversationId*

Type: [String](#)

Specify the ID for the conversation.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.ChatterConversation](#)

**getConversation(communityId, conversationId)**

Returns a conversation the context user has access to across their available communities.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*conversationId*

Type: [String](#)

Specify the ID for the conversation.

Return Value

Type: [ConnectApi.ChatterConversation](#)

A Chatter conversation and the related metadata.

**getConversation(communityId, conversationId, pageParam, pageSize)**

Returns a conversation from a specific page with a specific number of results the context user has access to across their available communities.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId, String pageParam, String pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*conversationId*

Type: [String](#)

Specify the ID for the conversation.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ChatterConversation](#)

A Chatter conversation and the related metadata.

### **getConversations ()**

Returns the most recent conversations the context user has access to.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversationPage getConversations ()
```

Return Value

Type: [ConnectApi.ChatterConversationPage](#)

### **getConversations (pageParam, pageSize)**

Returns a specific page of conversations the context user has access to.

API Version

29.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterConversationPage getConversations(String pageParam,  
Integer pageSize)
```

## Parameters

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.ChatterConversationPage](#)

**getConversations (communityId)**

Returns the most recent conversations the context user has access to across their available communities.

## API Version

30.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterConversationPage getConversations(String communityId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

## Return Value

Type: [ConnectApi.ChatterConversationPage](#)

A list of Chatter conversations on a specific page.

**getConversations (communityId, pageParam, pageSize)**

Returns a specific page of conversations with a specific number of results the context user has access to across their available communities.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversationPage getConversations(String communityId,  
String pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ChatterConversationPage](#)

A list of Chatter conversations on a specific page.

### **getMessage (messageId)**

Returns a message the context user has access to.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterMessage getMessage(String messageId)
```

## Parameters

*messageId*Type: [String](#)

Specify the ID for the message.

## Return Value

Type: [ConnectApi.ChatterMessage](#)**getMessage (communityId, messageId)**

Returns a message the context user has access to across their available communities.

## API Version

30.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterMessage getMessage(String communityId, String messageId)
```

## Parameters

*communityId*Type: [String](#)Use either the ID for a community, `internal`, or `null`.*messageId*Type: [String](#)

Specify the ID for the message.

## Return Value

Type: [ConnectApi.ChatterMessage](#)

A Chatter message and all the related metadata.

**getMessages ()**

Returns a list of the most recent messages the context user has access to.

## API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterMessagePage getMessages ()
```

Return Value

Type: [ConnectApi.ChatterMessagePage](#)

### **getMessages (pageParam, pageSize)**

Returns the specified page of messages the context user has access to.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterMessagePage getMessages (String pageParam, Integer  
pageSize)
```

Parameters

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ChatterMessagePage](#)

### **getMessages (communityId)**

Returns a list of the most recent messages the context user has access to across their available communities.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterMessagePage getMessages (String communityId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

Return Value

Type: [ConnectApi.ChatterMessagePage](#)

The Chatter messages on a specific page.

### **getMessages (communityId, pageParam, pageSize)**

Returns the specified page of messages with the specified number of results the context user has access to across their available communities.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterMessagePage getMessages (String communityId, String pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ChatterMessagePage](#)

The Chatter messages on a specific page.

### **getUnreadCount ()**

Returns the number of conversations the context user has marked unread. If the number is less than 50, it will return the exact unreadCount, and hasMore = false. If the context user has more than 50, unreadCount = 50 and hasMore = true.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UnreadConversationCount getUnreadCount ()
```

Return Value

Type: [ConnectApi.UnreadConversationCount](#)

Example

```
ConnectApi.UnreadConversationCount unread = ConnectApi.ChatterMessages.getUnreadCount ();
```

### **getUnreadCount (communityId)**

Returns the number of conversations the context user has marked unread across their available communities. If the number is less than 50, it will return the exact unreadCount, and hasMore = false. If the context user has more than 50, unreadCount = 50 and hasMore = true.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UnreadConversationCount getUnreadCount (String communityId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

## Return Value

Type: [ConnectApi.UnreadConversationCount](#)

The number of unread messages in a conversation.

**markConversationRead(conversationId, read)**

Marks a conversation as read for the context user.

## API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterConversationSummary markConversationRead(String conversationId, Boolean read)
```

## Parameters

*conversationId*

Type: [String](#)

Specify the ID for the conversation.

*read*

Type: [Boolean](#)

Specifies whether the conversation has been read (`true`) or not (`false`).

## Return Value

Type: [ConnectApi.ChatterConversationSummary](#)

**markConversationRead(communityId, conversationID, read)**

Marks a conversation as read or unread for the context user across their available communities.

## API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversationSummary markConversationRead(String
communityId, String conversationID, Boolean read)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*conversationId*

Type: [String](#)

Specify the ID for the conversation.

*read*

Type: [Boolean](#)

Specifies whether the conversation has been read (`true`) or not (`false`).

Return Value

Type: [ConnectApi.ChatterConversationSummary](#)

The summary of a Chatter conversation, including the members of the conversation, Chatter REST API URL, and contents of the latest message.

### **replyToMessage(text, inReplyTo)**

Adds the specified text as a response to a previous message the context user has access to.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterMessage replyToMessage(String text, String inReplyTo)
```

Parameters

*text*

Type: [String](#)

The text of the message. Cannot be empty or over 10,000 characters.

*inReplyTo*

Type: [String](#)

Specify the ID of the message that is being responded to.

Return Value

Type: [ConnectApi.ChatterMessage](#)

### **replyToMessage**(communityId, text, inReplyTo)

Adds the specified text as a response to a previous message the context user has access to across their available communities.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterMessage replyToMessage(String communityId, String text, String inReplyTo)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*text*

Type: [String](#)

The text of the message. Cannot be empty or over 10,000 characters.

*inReplyTo*

Type: [String](#)

Specify the ID of the message that is being responded to.

Return Value

Type: [ConnectApi.ChatterMessage](#)

A Chatter message and all the related metadata.

### **searchConversation**(conversationId, q)

Returns the conversation the context user has access to with a page of messages that matches any of the specified search.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversation searchConversation(String conversationId,  
String q)
```

Parameters

*conversationId*

Type: [String](#)

Specify the ID for the conversation.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.ChatterConversation](#)

**`searchConversation(conversationId, pageParam, pageSize, q)`**

Returns the conversation the context user has access to with a page of messages that matches any of the specified search.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversation searchConversation(String conversationId,  
String pageParam, Integer pageSize, String q)
```

Parameters

*conversationId*

Type: [String](#)

Specify the ID for the conversation.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*q*

Type: [String](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ChatterConversation](#)

### **searchConversation(*communityId*, *conversationId*, *q*)**

Returns the conversation the context user has access to with a page of messages that matches any of the specified search across their available communities.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversation searchConversation(String communityId,  
String conversationId, String q)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*conversationId*

Type: [String](#)

Specify the ID for the conversation.

*q*

Type: [String](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.ChatterConversation](#)

A Chatter conversation and the related metadata.

**searchConversation(*communityId*, *conversationId*, *pageParam*, *pageSize*, *q*)**

Returns the conversation the context user has access to with a page of messages that matches any of the specified search across their available communities.

## API Version

30.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterConversation searchConversation(String communityId,  
String conversationId, String pageParam, Integer pageSize, String q)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*conversationId*

Type: [String](#)

Specify the ID for the conversation.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*q*

Type: [String](#)

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.ChatterConversation](#)

A Chatter conversation and the related metadata.

**searchConversations (q)**

Returns a page of conversations the context user has access to where member names and messages in the conversations match any of the specified search criteria.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversationPage searchConversations(String q)
```

Parameters

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.ChatterConversationPage](#)

**searchConversations (pageParam, pageSize, q)**

Returns a page of conversations the context user has access to where member names and messages in the conversations match any of the specified search criteria.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversationPage searchConversations(String pageParam,  
Integer pageSize, String q)
```

Parameters

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.ChatterConversationPage](#)

### **searchConversations(*communityId*, *q*)**

Returns a page of conversations the context user has access to where member names and messages in the conversations match any of the specified search criteria across their available communities.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversationPage searchConversations(String communityId,
String q)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.ChatterConversationPage](#)

A list of Chatter conversations on a specific page.

**searchConversations(*communityId*, *pageParam*, *pageSize*, *q*)**

Returns a specific page of conversations with the specified number of results the context user has access to where member names and messages in the conversations match any of the specified search criteria across their available communities.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterConversationPage searchConversations(String communityId,
String pageParam, Integer pageSize, String q)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.ChatterConversationPage](#)

A list of Chatter conversations on a specific page.

**searchMessages(*q*)**

Returns a page of messages the context user has access to that matches any of the specified criteria.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterMessagePage searchMessages(String q)
```

Parameters

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.ChatterMessagePage](#)

### **searchMessages (pageParam, pageSize, q)**

Returns a page of messages the context user has access to that matches any of the specified criteria.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterMessagePage searchMessages(String pageParam, Integer pageSize, String q)
```

Parameters

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.ChatterMessagePage](#)

### **searchMessages (communityId, q)**

Returns a page of messages the context user has access to that matches any of the specified criteria across their available communities.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String q)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.ChatterMessagePage](#)

The Chatter messages on a specific page.

### **searchMessages (communityId, pageParam, pageSize, q)**

Returns a specific page of messages with the specified number of results the context user has access to that matches any of the specified criteria across their available communities.

API Version

30.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String
pageParam, Integer pageSize, String q)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

## Return Value

Type: [ConnectApi.ChatterMessagePage](#)

The Chatter messages on a specific page.

**sendMessage(text, recipients)**

Sends the specified text to the indicated recipients.

## API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterMessage sendMessage(String text, String recipients)
```

## Parameters

*text*

Type: [String](#)

The text of the message. Cannot be empty or over 10,000 characters.

*recipients*

Type: [String](#)

Up to nine comma-separated IDs of the users receiving the message.

Return Value

Type: [ConnectApi.ChatterMessage](#)

### **sendMessage(*communityId*, *text*, *recipients*)**

Sends the specified text to the indicated recipients across their available communities.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterMessage sendMessage(String communityId, String text,
String recipients)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*text*

Type: [String](#)

The text of the message. Cannot be empty or over 10,000 characters.

*recipients*

Type: [String](#)

Up to nine comma-separated IDs of users to receive the message.

Return Value

Type: [ConnectApi.ChatterMessage](#)

A Chatter message and all the related metadata.

## ChatterUsers Class

Access information about users, such as followers, subscriptions, files, and groups.

## Namespace

[ConnectApi](#)

## ChatterUsers Methods

The following are methods for `ChatterUsers`. All methods are static.

### IN THIS SECTION:

[deletePhoto\(\*communityId\*, \*userId\*\)](#)

Deletes the specified user's photo.

[exportUserActivities\(\*communityId\*, \*userId\*\)](#)

Export Chatter-related user activities, such as bookmarks, topic endorsements, and votes.

[follow\(\*communityId\*, \*userId\*, \*subjectId\*\)](#)

Adds the specified *userId* as a follower to the specified *subjectId*.

[getChatterSettings\(\*communityId\*, \*userId\*\)](#)

Returns information about the default Chatter settings for the specified user.

[getFollowers\(\*communityId\*, \*userId\*\)](#)

Returns the first page of followers for the specified user ID. The page contains the default number of items.

[getFollowers\(\*communityId\*, \*userId\*, \*pageParam\*, \*pageSize\*\)](#)

Returns the specified page of followers for the specified user ID.

[getFollowings\(\*communityId\*, \*userId\*\)](#)

Returns the first page of information about the followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

[getFollowings\(\*communityId\*, \*userId\*, \*pageParam\*\)](#)

Returns the specified page of information about the followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

[getFollowings\(\*communityId\*, \*userId\*, \*pageParam\*, \*pageSize\*\)](#)

Returns the specific page of information about the followers of the specified user. This is different than `getFollowers`, which returns the users that follow the specified user.

[getFollowings\(\*communityId\*, \*userId\*, \*filterType\*\)](#)

Returns the first page of information about the specified types of followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

[getFollowings\(\*communityId\*, \*userId\*, \*filterType\*, \*pageParam\*\)](#)

Returns the specified page of information about the specified types of followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

[getFollowings\(\*communityId\*, \*userId\*, \*filterType\*, \*pageParam\*, \*pageSize\*\)](#)

Returns the specified page of information about the specified types of followers of the specified user. This is different than `getFollowers`, which returns the users that follow the specified user.

[getGroups\(\*communityId\*, \*userId\*\)](#)

Returns the first page of groups the specified user is a member of.

[getGroups\(\*communityId\*, \*userId\*, \*pageParam\*, \*pageSize\*\)](#)

Returns the specified page of groups the specified user is a member of.

[getPhoto\(communityId, userId\)](#)

Returns information about the specified user's photo.

[getReputation\(communityId, userId\)](#)

Returns the reputation of the specified user.

[getUser\(communityId, userId\)](#)

Returns information about the specified user.

[getUserBatch\(communityId, userIds\)](#)

Gets information about the specified list of users. Returns a list of `BatchResult` objects containing `ConnectApi.User` objects. Returns errors embedded in the results for those users that couldn't be loaded.

[getUsers\(communityId\)](#)

Returns the first page of users. The page contains the default number of items.

[getUsers\(communityId, pageParam, pageSize\)](#)

Returns the specified page of users.

[purgeUserActivities\(communityId, userId\)](#)

Start a job to purge Chatter-related user activities, such as bookmarks, topic endorsements, and votes.

[searchUserGroups\(communityId, userId, q\)](#)

Returns the first page of groups that match the specified search criteria.

[searchUserGroups\(communityId, userId, q, pageParam, pageSize\)](#)

Returns the specified page of users that matches the specified search criteria.

[searchUsers\(communityId, q\)](#)

Returns the first page of users that match the specified search criteria. The page contains the default number of items.

[searchUsers\(communityId, q, pageParam, pageSize\)](#)

Returns the specified page of users that match the specified search criteria.

[searchUsers\(communityId, q, searchContextId, pageParam, pageSize\)](#)

Returns the specified page of users that match the specified search criteria.

[setPhoto\(communityId, userId, fileId, versionNumber\)](#)

Sets the user photo to be the specified, already uploaded file.

[setPhoto\(communityId, userId, fileUpload\)](#)

Sets the provided blob to be the photo for the specified user. The content type must be usable as an image.

[setPhotoWithAttributes\(communityId, userId, photo\)](#)

Sets and crops the existing file as the photo for the specified user. The content type must be usable as an image.

[setPhotoWithAttributes\(communityId, userId, photo, fileUpload\)](#)

Sets and crops the provided blob as the photo for the specified user. The content type must be usable as an image.

[updateChatterSettings\(communityId, userId, defaultGroupEmailFrequency\)](#)

Updates the default Chatter settings for the specified user.

[updateUser\(communityId, userId, userInput\)](#)

Updates the "About Me" section for a user.

**deletePhoto(communityId, userId)**

Deletes the specified user's photo.

API Version

28.0–34.0

 **Important:** In version 35.0 and later, use `ConnectApi.UserProfiles.deletePhoto(communityId, userId)`

Signature

```
public static Void deletePhoto(String communityId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

Return Value

Type: `Void`

### **exportUserActivities(communityId, userId)**

Export Chatter-related user activities, such as bookmarks, topic endorsements, and votes.

API Version

42.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UserActivitiesJob exportUserActivities(String communityId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

## Return Value

Type: [ConnectApi.UserActivitiesJob](#)

## Usage

The following activities can be exported.

- [Bookmark](#)—User bookmarked a post.
- [ChatterActivity](#)—Total counts of posts and comments made and likes and comments received for a user.
- [ChatterLike](#)—User liked a post or comment.
- [Comment](#)—User commented on a post.
- [CompanyVerify](#)—User verified comment.
- [DownVote](#)—User downvoted a post or comment.
- [FeedEntityRead](#)—User read a post.
- [FeedRead](#)—User read a feed.
- [Mute](#)—User muted a post.
- [Post](#)—User made a post.
- [TopicEndorsement](#)—User endorsed another user on a topic or received endorsement on a topic.
- [UpVote](#)—User upvoted a post or comment.

**follow(*communityId*, *userId*, *subjectId*)**

Adds the specified *userId* as a follower to the specified *subjectId*.

## API Version

28.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Subscription follow(String communityId, String userId, String subjectId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*subjectId*

Type: [String](#)

The ID for the subject to follow.

Return Value

Type: [ConnectApi.Subscription](#)

Example

```
ChatterUsers.ConnectApi.Subscription subscriptionToRecord =  
ConnectApi.ChatterUsers.follow(null, 'me', '001RR000002G4Y0');
```

SEE ALSO:

[Unfollow a Record](#)

**getChatterSettings(*communityId*, *userId*)**

Returns information about the default Chatter settings for the specified user.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UserChatterSettings getChatterSettings(String communityId,  
String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

Return Value

Type: [ConnectApi.UserChatterSettings](#)

**getFollowers (communityId, userId)**

Returns the first page of followers for the specified user ID. The page contains the default number of items.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

Return Value

Type: [ConnectApi.FollowerPage](#)

**getFollowers (communityId, userId, pageParam, pageSize)**

Returns the specified page of followers for the specified user ID.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.FollowerPage](#)

**getFollowings(*communityId*, *userId*)**

Returns the first page of information about the followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

## API Version

28.0

## Available to Guest Users

32.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: `String`

The ID for a user.

Return Value

Type: `ConnectApi.FollowingPage`

### **getFollowings(*communityId*, *userId*, *pageParam*)**

Returns the specified page of information about the followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, Integer pageParam)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: `String`

The ID for a user.

*pageParam*

Type: `Integer`

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

Return Value

Type: `ConnectApi.FollowingPage`

**getFollowings(*communityId*, *userId*, *pageParam*, *pageSize*)**

Returns the specific page of information about the followers of the specified user. This is different than `getFollowers`, which returns the users that follow the specified user.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, Integer pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.FollowingPage](#)

**getFollowings(*communityId*, *userId*, *filterType*)**

Returns the first page of information about the specified types of followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

*filterType*

Type: [String](#)

Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

Return Value

Type: [ConnectApi.FollowingPage](#)

**`getFollowings`(`communityId`, `userId`, `filterType`, `pageParam`)**

Returns the specified page of information about the specified types of followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId,
String filterType, Integer pageParam)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

*filterType*

Type: [String](#)

Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

## Return Value

Type: [ConnectApi.FollowingPage](#)

**getFollowings(*communityId*, *userId*, *filterType*, *pageParam*, *pageSize*)**

Returns the specified page of information about the specified types of followers of the specified user. This is different than `getFollowers`, which returns the users that follow the specified user.

## API Version

28.0

## Available to Guest Users

32.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId,
String filterType, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

*filterType*

Type: [String](#)

Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.FollowingPage](#)

**getGroups (communityId, userId)**

Returns the first page of groups the specified user is a member of.

## API Version

28.0

## Available to Guest Users

32.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.UserGroupPage getGroups(String communityId, String userId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: `String`

The ID for a user.

Return Value

Type: `ConnectApi.UserGroupPage`

### **getGroups(*communityId*, *userId*, *pageParam*, *pageSize*)**

Returns the specified page of groups the specified user is a member of.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UserGroupPage getGroups(String communityId, String userId, Integer pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: `String`

The ID for a user.

*pageParam*

Type: `Integer`

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.UserGroupPage](#)

### **getPhoto**(communityId, userId)

Returns information about the specified user's photo.

API Version

28.0–34.0

 **Important:** In version 35.0 and later, use [ConnectApi.UserProfiles.getPhoto](#)(communityId, userId).

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.Photo getPhoto(String communityId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

Return Value

Type: [ConnectApi.Photo](#)

### **getReputation**(communityId, userId)

Returns the reputation of the specified user.

API Version

32.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.Reputation getReputation(String communityId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

Return Value

Type: [ConnectApi.Reputation](#)

**getUser(communityId, userId)**

Returns information about the specified user.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UserSummary getUser(String communityId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

Return Value

Type: [ConnectApi.UserDetail](#)

Usage

If the user is external, the properties that the `ConnectApi.UserDetail` output class shares with the [ConnectApi.UserSummary](#) output class can have non-null values. Other properties are always `null`.

### **getUserBatch(*communityId*, *userIds*)**

Gets information about the specified list of users. Returns a list of `BatchResult` objects containing `ConnectApi.User` objects. Returns errors embedded in the results for those users that couldn't be loaded.

API Version

31.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.BatchResult[] getUserBatch(String communityId, List<String>
userIds)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userIds*

Type: [List<String>](#)

A list of up to 500 user IDs.

Return Value

Type: [BatchResult\[\]](#)

The `BatchResult` `getResults()` method returns a `ConnectApi.User` object.

Example

```
// Get users in an organization.
ConnectApi.UserPage userPage = ConnectApi.ChatterUsers.getUsers(null);
```

```

// Create a list of user IDs.
List<String> userList = new List<String>();
for (ConnectApi.User user : userPage.users){
    userList.add(user.id);
}

// Get info about all users in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterUsers.getUserBatch(null, userList);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print each user's username.
        ConnectApi.UserDetail user;
        if(batchResult.getResult() instanceof ConnectApi.UserDetail) {
            user = (ConnectApi.UserDetail) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(user.username);
    }
    else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
}

```

**getUsers (communityId)**

Returns the first page of users. The page contains the default number of items.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UserPage getUsers(String communityId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

Return Value

Type: [ConnectApi.UserPage](#)

### **getUsers**(communityId, pageParam, pageSize)

Returns the specified page of users.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UserPage getUsers(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.UserPage](#)

### **purgeUserActivities**(communityId, userId)

Start a job to purge Chatter-related user activities, such as bookmarks, topic endorsements, and votes.

API Version

42.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UserActivitiesJob purgeUserActivities(String communityId,  
String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

Return Value

Type: [ConnectApi.UserActivitiesJob](#)

Usage

The following activities can be purged with this method.

- `Bookmark`—User bookmarked a post.
- `ChatterActivity`—Total counts of posts and comments made and likes and comments received for a user.
- `ChatterLike`—User liked a post or comment.
- `CompanyVerify`—User verified comment.
- `DownVote`—User downvoted a post or comment.
- `FeedEntityRead`—User read a post.
- `FeedRead`—User read a feed.
- `Mute`—User muted a post.
- `TopicEndorsement`—User endorsed another user on a topic or received endorsement on a topic.
- `UpVote`—User upvoted a post or comment.

To delete a user's posts and comments, use these methods, respectively.

- [deleteFeedElement\(communityId, feedElementId\)](#)
- [deleteComment\(communityId, commentId\)](#)

**`searchUserGroups(communityId, userId, q)`**

Returns the first page of groups that match the specified search criteria.

API Version

30.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String
userId, String q)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: [ConnectApi.UserGroupPage](#)

A paginated list of groups the context user is a member of.

**`searchUserGroups(communityId, userId, q, pageParam, pageSize)`**

Returns the specified page of users that matches the specified search criteria.

API Version

30.0

Available to Guest Users

32.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String
userId, String q, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.UserGroupPage](#)

A paginated list of groups the context user is a member of.

**searchUsers (communityId, q)**

Returns the first page of users that match the specified search criteria. The page contains the default number of items.

## API Version

28.0

## Available to Guest Users

32.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.UserPage searchUsers(String communityId, String q)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

## Return Value

Type: [ConnectApi.UserPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestSearchUsers\(communityId, q, result\)](#)

**`searchUsers(communityId, q, searchContextId, pageParam, pageSize)`**

Returns the specified page of users that match the specified search criteria.

## API Version

28.0

## Available to Guest Users

32.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.UserPage searchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*searchContextId*

Type: [String](#)

A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.UserPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestSearchUsers\(communityId, q, searchContextId, pageParam, pageSize, result\)](#)

[Testing ConnectApi Code](#)

**setPhoto(communityId, userId, fileId, versionNumber)**

Sets the user photo to be the specified, already uploaded file.

## API Version

28.0–34.0

 **Important:** In version 35.0 and later, use `ConnectApi.UserProfiles.setPhoto(communityId, userId, fileId, versionNumber)`

Requires Chatter

Yes

Signature

```
public static ConnectApi.Photo setPhoto(String communityId, String userId, String
fileId, Integer versionNumber)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*fileId*

Type: [String](#)

ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

*versionNumber*

Type: [Integer](#)

Version number of the existing file. Specify either an existing version number, or `null` to get the latest version.

Return Value

Type: [ConnectApi.Photo](#)

Usage

Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, userId, fileUpload)**

Sets the provided blob to be the photo for the specified user. The content type must be usable as an image.

API Version

28.0–34.0

 **Important:** In version 35.0 and later, use `ConnectApi.UserProfiles.setPhoto(communityId, userId, fileUpload)`

Requires Chatter

Yes

Signature

```
public static ConnectApi.Photo setPhoto(String communityId, String userId,
ConnectApi.BinaryInput fileUpload)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

A file to use as the photo. The content type must be usable as an image.

Return Value

Type: [ConnectApi.Photo](#)

Usage

Photos are processed asynchronously and may not be visible right away.

#### **setPhotoWithAttributes(*communityId*, *userId*, *photo*)**

Sets and crops the existing file as the photo for the specified user. The content type must be usable as an image.

API Version

29.0–34.0

 **Important:** In version 35.0 and later, use

```
ConnectApi.UserProfiles.setPhotoWithAttributes\(communityId, userId, photo\)
```

Requires Chatter

Yes

Signature

```
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo)
```

## Parameters

*communityId*Type: [String](#)Use either the ID for a community, `internal`, or `null`.*userId*Type: [String](#)The ID for the context user or the keyword `me`.*photo*Type: [ConnectApi.PhotoInput](#)A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Photos are processed asynchronously and may not be visible right away.

**setPhotoWithAttributes(*communityId*, *userId*, *photo*, *fileUpload*)**

Sets and crops the provided blob as the photo for the specified user. The content type must be usable as an image.

## API Version

29.0–34.0

 **Important:** In version 35.0 and later, use `ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo, fileUpload)`

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

## Parameters

*communityId*Type: [String](#)Use either the ID for a community, `internal`, or `null`.*userId*Type: [String](#)The ID for the context user or the keyword `me`.

*photo*

Type: [ConnectApi.PhotoInput](#)

A [ConnectApi.PhotoInput](#) object specifying the cropping parameters.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

A file to use as the photo. The content type must be usable as an image.

Return Value

Type: [ConnectApi.Photo](#)

Usage

Photos are processed asynchronously and may not be visible right away.

### **updateChatterSettings(*communityId*, *userId*, *defaultGroupEmailFrequency*)**

Updates the default Chatter settings for the specified user.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UserChatterSettings updateChatterSettings(String communityId,  
String userId, ConnectApi.GroupEmailFrequency defaultGroupEmailFrequency)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*defaultGroupEmailFrequency*

Type: [ConnectApi.GroupEmailFrequency](#)

*defaultGroupEmailFrequency*—Frequency with which a user receives email. Values:

- `EachPost`
- `DailyDigest`
- `WeeklyDigest`

- `Never`
- `UseDefault`

Don't pass the value `UseDefault` for the `defaultGroupEmailFrequency` parameter because calling `updateChatterSettings` sets the default value.

Return Value

Type: `ConnectApi.UserChatterSettings`

### **updateUser(`communityId`, `userId`, `userInput`)**

Updates the "About Me" section for a user.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UserDetail updateUser(String communityId, String userId,
ConnectApi.UserInput userInput)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: `String`

The ID for the context user or the keyword `me`.

*userInput*

Type: `ConnectApi.UserInput`

Specifies the updated information.

Return Value

Type: `ConnectApi.UserDetail`

## ChatterUsers Test Methods

The following are the test methods for `ChatterUsers`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

**setTestSearchUsers(*communityId*, *q*, *result*)**

Registers a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

28.0

Signature

```
public static Void setTestSearchUsers(String communityId, String q, ConnectApi.UserPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*result*

Type: [ConnectApi.UserPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[searchUsers\(\*communityId\*, \*q\*\)](#)

[Testing ConnectApi Code](#)

**setTestSearchUsers(*communityId*, *q*, *pageParam*, *pageSize*, *result*)**

Registers a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

28.0

Signature

```
public static Void setTestSearchUsers(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*result*

Type: [ConnectApi.UserPage](#)

The object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[searchUsers\(communityId, q, pageParam, pageSize\)](#)

[Testing ConnectApi Code](#)

**setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)**

Registers a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

28.0

## Signature

```
public static Void setTestSearchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*searchContextId*

Type: [String](#)

A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*result*

Type: [ConnectApi.UserPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[searchUsers\(communityId, q, searchContextId, pageParam, pageSize\)](#)

[Testing ConnectApi Code](#)

## Communities Class

Access general information about communities in your organization.

## Namespace

[ConnectApi](#)

## Communities Methods

The following are methods for `Communities`. All methods are static.

IN THIS SECTION:

[getCommunities\(\)](#)

Returns a list of communities the context user has access to.

[getCommunities\(communityStatus\)](#)

Returns a list of communities the context user has access to with the specified status.

[getCommunity\(communityId\)](#)

Returns information about the specific community.

**getCommunities ()**

Returns a list of communities the context user has access to.

API Version

28.0

Requires Chatter

No

Signature

```
public static ConnectApi.CommunityPage getCommunities()
```

Return Value

Type: [ConnectApi.CommunityPage](#)

**getCommunities (communityStatus)**

Returns a list of communities the context user has access to with the specified status.

API Version

28.0

Requires Chatter

No

Signature

```
public static ConnectApi.CommunityPage getCommunities(ConnectApi.CommunityStatus communityStatus)
```

Parameters

*communityStatus*

Type: [ConnectApi.CommunityStatus](#)

*communityStatus*—Status of the community. Values are:

- Live
- Inactive
- UnderConstruction

Return Value

Type: [ConnectApi.CommunityPage](#)

### **getCommunity (communityId)**

Returns information about the specific community.

API Version

28.0

Available to Guest Users

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.Community getCommunity(String communityId)
```

Parameters

*communityId*

Type: [String](#)

Specify an ID for *communityId*. You cannot specify `null` or `'internal'`.

Return Value

Type: [ConnectApi.Community](#)

## CommunityModeration Class

Access information about flagged feed items and comments in a community. Add and remove flags from comments and feed items. To view a feed containing all flagged feed items, pass `ConnectApi.FeedType.Moderation` to the `ConnectApi.ChatterFeeds.getFeedElementsFromFeed` method.

## Namespace

[ConnectApi](#)

## CommunityModeration Methods

The following are methods for `CommunityModeration`. All methods are static.

## IN THIS SECTION:

[addFlagToComment\(communityId, commentId\)](#)

Add a moderation flag to a comment.

[addFlagToComment\(communityId, commentId, visibility\)](#)

Add a moderation flag of the specified visibility to a comment.

[addFlagToComment\(communityId, commentId, type\)](#)

Add a moderation flag of the specified type to a comment.

[addFlagToComment\(communityId, commentId, note\)](#)

Add a moderation flag with a note to a comment.

[addFlagToComment\(communityId, commentId, type, note\)](#)

Add a moderation flag of the specified type with a note to a comment.

[addFlagToComment\(communityId, commentId, type, visibility\)](#)

Add a moderation flag of the specified type and visibility to a comment.

[addFlagToComment\(communityId, commentId, visibility, note\)](#)

Add a moderation flag of the specified visibility with a note to a comment.

[addFlagToComment\(communityId, commentId, type, visibility, note\)](#)

Add a moderation flag of the specified type and visibility with a note to a comment.

[addFlagToFeedElement\(communityId, feedElementId\)](#)

Add a moderation flag to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, visibility\)](#)

Add a moderation flag of the specified visibility to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, type\)](#)

Add a moderation flag of the specified type to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, note\)](#)

Add a moderation flag with a note to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, type, note\)](#)

Add a moderation flag of the specified type with a note to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, type, visibility\)](#)

Add a moderation flag of the specified type and visibility to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, visibility, note\)](#)

Add a moderation flag of the specified visibility with a note to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, type, visibility, note\)](#)

Add a moderation flag of the specified type and visibility with a note to a feed element.

[addFlagToFeedItem\(communityId, feedItemId\)](#)

Add a moderation flag to a feed item. To add a flag to a feed item, `Allow members to flag content` must be selected for a community.

[addFlagToFeedItem\(communityId, feedItemId, visibility\)](#)

Add a moderation flag with specified visibility to a feed item. To add a flag to a feed item, `Allow members to flag content` must be selected for a community.

[getFlagsOnComment\(communityId, commentId\)](#)

Get the moderation flags on a comment. To get the flags, the context user must have the `Moderate Communities Feeds` permission.

[getFlagsOnComment\(communityId, commentId, visibility\)](#)

Get the moderation flags with specified visibility on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

[getFlagsOnComment\(communityId, commentId, pageSize, pageParam\)](#)

Get a page of moderation flags on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

[getFlagsOnComment\(communityId, commentId, visibility, pageSize, pageParam\)](#)

Get a page of moderation flags with specified visibility on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

[getFlagsOnFeedElement\(communityId, feedElementId\)](#)

Get the moderation flags on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

[getFlagsOnFeedElement\(communityId, feedElementId, visibility\)](#)

Get the moderation flags with specified visibility on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

[getFlagsOnFeedElement\(communityId, feedElementId, pageParam, pageSize\)](#)

Get a page of moderation flags on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

[getFlagsOnFeedElement\(communityId, feedElementId, visibility, pageSize, pageParam\)](#)

Get a page of moderation flags with specified visibility on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

[getFlagsOnFeedItem\(communityId, feedItemId\)](#)

Get the moderation flags on a feed item. To get the flags, the context user must have the Moderate Communities Feeds permission.

[getFlagsOnFeedItem\(communityId, feedItemId, visibility\)](#)

Get the moderation flags with specified visibility on a feed item. To get the flags, the context user must have the Moderate Communities Feeds permission.

[removeFlagFromComment\(communityId, commentId, userId\)](#)

Remove a moderation flag from a comment. To remove a flag from a comment the context user must have added the flag or must have the Moderate Communities Feeds permission.

[removeFlagFromFeedElement\(communityId, feedElementId, userId\)](#)

Remove a moderation flag from a feed element. To remove a flag from a feed element, the context user must have added the flag or must have the Moderate Communities Feeds permission.

[removeFlagsOnFeedItem\(communityId, feedItemId, userId\)](#)

Remove a moderation flag from a feed item. To remove a flag from a feed item, the context user must have added the flag or must have the Moderate Communities Feeds permission.

**addFlagToComment (communityId, commentId)**

Add a moderation flag to a comment.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String
commentId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

The ID for a comment.

Return Value

Type: [ConnectApi.ModerationFlags](#)

Usage

To add a flag to a comment, `Allow members to flag content` must be selected for a community.

**addFlagToComment(*communityId*, *commentId*, *visibility*)**

Add a moderation flag of the specified visibility to a comment.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String
commentId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

The ID for a comment.

*visibility*

Type: `ConnectApi.CommunityFlagVisibility`

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: `ConnectApi.ModerationFlags`

Usage

To add a flag to a comment, `Allow members to flag content` must be selected for a community.

**`addFlagToComment(communityId, commentId, type)`**

Add a moderation flag of the specified type to a comment.

API Version

38.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: `String`

The ID for a comment.

*type*

Type: `ConnectApi.CommunityFlagType`

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

#### Return Value

Type: `ConnectApi.ModerationFlags`

#### Usage

To add a flag to a comment, `Allow members to flag content` must be selected for a community.

#### **addFlagToComment(*communityId*, *commentId*, *note*)**

Add a moderation flag with a note to a comment.

#### API Version

38.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String
commentId, String note)
```

#### Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: `String`

The ID for a comment.

*note*

Type: `String`

A note of up to 4,000 characters about the flag.

#### Return Value

Type: `ConnectApi.ModerationFlags`

#### Usage

To add a flag to a comment, `Allow members to flag content` must be selected for a community.

**addFlagToComment(*communityId*, *commentId*, *type*, *note*)**

Add a moderation flag of the specified type with a note to a comment.

API Version

38.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String
commentId, ConnectApi.CommunityFlagType type, String note)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

The ID for a comment.

*type*

Type: [ConnectApi.CommunityFlagType](#)

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

*note*

Type: [String](#)

A note of up to 4,000 characters about the flag.

Return Value

Type: [ConnectApi.ModerationFlags](#)

Usage

To add a flag to a comment, `Allow members to flag content` must be selected for a community.

**addFlagToComment(*communityId*, *commentId*, *type*, *visibility*)**

Add a moderation flag of the specified type and visibility to a comment.

API Version

38.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String
commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility
visibility)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

The ID for a comment.

*type*

Type: [ConnectApi.CommunityFlagType](#)

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: [ConnectApi.ModerationFlags](#)

Usage

To add a flag to a comment, `Allow members to flag content` must be selected for a community.

**`addFlagToComment(communityId, commentId, visibility, note)`**

Add a moderation flag of the specified visibility with a note to a comment.

API Version

38.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String
commentId, ConnectApi.CommunityFlagVisibility visibility, String note)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

The ID for a comment.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

*note*

Type: [String](#)

A note of up to 4,000 characters about the flag.

Return Value

Type: [ConnectApi.ModerationFlags](#)

Usage

To add a flag to a comment, `Allow members to flag content` must be selected for a community.

**`addFlagToComment(communityId, commentId, type, visibility, note)`**

Add a moderation flag of the specified type and visibility with a note to a comment.

API Version

38.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String
commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility
visibility, String note)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

The ID for a comment.

*type*

Type: [ConnectApi.CommunityFlagType](#)

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

*note*

Type: [String](#)

A note of up to 4,000 characters about the flag.

Return Value

Type: [ConnectApi.ModerationFlags](#)

Usage

To add a flag to a comment, `Allow members to flag content` must be selected for a community.

**addFlagToFeedElement (communityId, feedElementId)**

Add a moderation flag to a feed element.

API Version

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,  
String feedElementId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

Return Value

Type: [ConnectApi.ModerationCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

Usage

To add a flag to a feed element, `Allow members to flag content` must be selected for a community.

**addFlagToFeedElement(*communityId*, *feedElementId*, *visibility*)**

Add a moderation flag of the specified visibility to a feed element.

API Version

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,  
String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types. One of these values:

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

## Return Value

Type: [ConnectApi.ModerationCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

## Usage

To add a flag to a feed element, `Allow members to flag content` must be selected for a community.

**`addFlagToFeedElement`(`communityId`, `feedElementId`, `type`)**

Add a moderation flag of the specified type to a feed element.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,  
String feedElementId, ConnectApi.CommunityFlagType type)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*type*

Type: [ConnectApi.CommunityFlagType](#)

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

Return Value

Type: [ConnectApi.ModerationCapability](#)

Usage

To add a flag to a feed element, `Allow members to flag content` must be selected for a community.

**`addFlagToFeedElement`(`communityId`, `feedElementId`, `note`)**

Add a moderation flag with a note to a feed element.

API Version

38.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,  
String feedElementId, String note)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*note*

Type: [String](#)

A note of up to 4,000 characters about the flag.

Return Value

Type: [ConnectApi.ModerationCapability](#)

Usage

To add a flag to a feed element, `Allow members to flag content` must be selected for a community.

**`addFlagToFeedElement`**(**`communityId`**, **`feedElementId`**, **`type`**, **`note`**)

Add a moderation flag of the specified type with a note to a feed element.

API Version

38.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagType type, String note)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*type*

Type: [ConnectApi.CommunityFlagType](#)

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

*note*

Type: [String](#)

A note of up to 4,000 characters about the flag.

Return Value

Type: [ConnectApi.ModerationCapability](#)

## Usage

To add a flag to a feed element, `Allow members to flag content` must be selected for a community.

**addFlagToFeedElement(*communityId*, *feedElementId*, *type*, *visibility*)**

Add a moderation flag of the specified type and visibility to a feed element.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagType type,
ConnectApi.CommunityFlagVisibility visibility)
```

## Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: `String`

The ID for a feed element.

*type*

Type: `ConnectApi.CommunityFlagType`

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

*visibility*

Type: `ConnectApi.CommunityFlagVisibility`

Visibility behavior of a flag for various user types. One of these values:

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

## Return Value

Type: `ConnectApi.ModerationCapability`

## Usage

To add a flag to a feed element, `Allow members to flag content` must be selected for a community.

**addFlagToFeedElement(*communityId*, *feedElementId*, *visibility*, *note*)**

Add a moderation flag of the specified visibility with a note to a feed element.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagVisibility visibility, String note)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types. One of these values:

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

*note*

Type: [String](#)

A note of up to 4,000 characters about the flag.

## Return Value

Type: [ConnectApi.ModerationCapability](#)

## Usage

To add a flag to a feed element, `Allow members to flag content` must be selected for a community.

**addFlagToFeedElement(*communityId*, *feedElementId*, *type*, *visibility*, *note*)**

Add a moderation flag of the specified type and visibility with a note to a feed element.

API Version

38.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagType type,
ConnectApi.CommunityFlagVisibility visibility, String note)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*type*

Type: [ConnectApi.CommunityFlagType](#)

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types. One of these values:

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

*note*

Type: [String](#)

A note of up to 4,000 characters about the flag.

Return Value

Type: [ConnectApi.ModerationCapability](#)

## Usage

To add a flag to a feed element, `Allow members to flag content` must be selected for a community.

**addFlagToFeedItem(*communityId*, *feedItemId*)**

Add a moderation flag to a feed item. To add a flag to a feed item, `Allow members to flag content` must be selected for a community.

## API Version

29.0–31.0

 **Important:** In version 32.0 and later, use [addFlagToFeedElement\(\*communityId\*, \*feedElementId\*\)](#).

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

The ID for a feed item.

## Return Value

Type: [ConnectApi.ModerationFlags](#)

**addFlagToFeedItem(*communityId*, *feedItemId*, *visibility*)**

Add a moderation flag with specified visibility to a feed item. To add a flag to a feed item, `Allow members to flag content` must be selected for a community.

## API Version

30.0–31.0

 **Important:** In version 32.0 and later, use [addFlagToFeedElement\(\*communityId\*, \*feedElementId\*, \*visibility\*\)](#).

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String
feedItemId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

The ID for a feed item.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: [ConnectApi.ModerationFlags](#)

### **getFlagsOnComment(*communityId*, *commentId*)**

Get the moderation flags on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String
commentId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: `String`

The ID for a comment.

Return Value

Type: `ConnectApi.ModerationFlags`

### **getFlagsOnComment(*communityId*, *commentId*, *visibility*)**

Get the moderation flags with specified visibility on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: `String`

The ID for a comment.

*visibility*

Type: `ConnectApi.CommunityFlagVisibility`

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: `ConnectApi.ModerationFlags`

**getFlagsOnComment(*communityId*, *commentId*, *pageSize*, *pageParam*)**

Get a page of moderation flags on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version

40.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, Integer pageSize, String pageParam)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

The ID for a comment.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

Return Value

Type: [ConnectApi.ModerationFlags](#)

**getFlagsOnComment(*communityId*, *commentId*, *visibility*, *pageSize*, *pageParam*)**

Get a page of moderation flags with specified visibility on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version

40.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String
commentId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize, String
pageParam)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

The ID for a comment.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

## Return Value

Type: [ConnectApi.ModerationFlags](#)

**getFlagsOnFeedElement(communityId, feedElementId)**

Get the moderation flags on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

## API Version

31.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,  
String feedElementId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

## Return Value

Type: [ConnectApi.ModerationCapability Class](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**getFlagsOnFeedElement(communityId, feedElementId, visibility)**

Get the moderation flags with specified visibility on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

## API Version

31.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,  
String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types. One of these values:

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

#### Return Value

Type: [ConnectApi.ModerationCapability Class](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

#### **getFlagsOnFeedElement(*communityId*, *feedElementId*, *pageParam*, *pageSize*)**

Get a page of moderation flags on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

#### API Version

40.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,  
String feedElementId, String pageParam, Integer pageSize)
```

#### Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

#### Return Value

Type: [ConnectApi.ModerationCapability Class](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**getFlagsOnFeedElement(*communityId*, *feedElementId*, *visibility*, *pageSize*, *pageParam*)**

Get a page of moderation flags with specified visibility on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version

40.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize,
String pageParam)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

*pageParam*

Type: [String](#)

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

Return Value

Type: [ConnectApi.ModerationCapability](#) Class

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**getFlagsOnFeedItem(*communityId*, *feedItemId*)**

Get the moderation flags on a feed item. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version

29.0–31.0

 **Important:** In version 32.0 and later, use [getFlagsOnFeedElement\(\*communityId\*, \*feedElementId\*\)](#).

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

The ID for a feed item.

Return Value

Type: [ConnectApi.ModerationFlags](#)

**getFlagsOnFeedItem(*communityId*, *feedItemId*, *visibility*)**

Get the moderation flags with specified visibility on a feed item. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version

30.0–31.0

 **Important:** In version 32.0 and later, use [getFlagsOnFeedElement\(\*communityId\*, \*feedElementId\*, \*visibility\*\)](#).

Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

The ID for a feed item.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

## Return Value

Type: [ConnectApi.ModerationFlags](#)

**removeFlagFromComment(*communityId*, *commentId*, *userId*)**

Remove a moderation flag from a comment. To remove a flag from a comment the context user must have added the flag or must have the Moderate Communities Feeds permission.

## API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags removeFlagFromComment(String communityId, String commentId, String userId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*commentId*

Type: [String](#)

The ID for a comment.

*userId*

Type: [String](#)

The ID for a user.

Return Value

Type: Void

### **removeFlagFromFeedElement(*communityId*, *feedElementId*, *userId*)**

Remove a moderation flag from a feed element. To remove a flag from a feed element, the context user must have added the flag or must have the Moderate Communities Feeds permission.

API Version

31.0

Requires Chatter

Yes

Signature

```
public static void removeFlagFromFeedElement(String communityId, String feedElementId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*userId*

Type: [String](#)

The ID for a user.

Return Value

Type: [ConnectApi.ModerationCapability Class](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

**removeFlagsOnFeedItem(*communityId*, *feedItemId*, *userId*)**

Remove a moderation flag from a feed item. To remove a flag from a feed item, the context user must have added the flag or must have the Moderate Communities Feeds permission.

API Version

29.0–31.0

 **Important:** In version 32.0 and later, use [removeFlagFromFeedElement\(\*communityId\*, \*feedElementId\*, \*userId\*\)](#).

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationFlags removeFlagsOnFeedItem(String communityId,  
String feedItemId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedItemId*

Type: [String](#)

The ID for a feed item.

*userId*

Type: [String](#)

The ID for a user.

Return Value

Type: `Void`

## ContentHub Class

Access Files Connect repositories and their files and folders.

### Namespace

[ConnectApi](#)

### ContentHub Methods

The following are methods for `ContentHub`. All methods are static.

Use `ContentHub` methods to work with Files Connect repositories.

## IN THIS SECTION:

[addRepositoryItem\(repositoryId, repositoryFolderId, file\)](#)

Add a repository item.

[addRepositoryItem\(communityId, repositoryId, repositoryFolderId, file\)](#)

Add a repository item in a community.

[addRepositoryItem\(repositoryId, repositoryFolderId, file, fileData\)](#)

Add a repository item, including the binary file.

[addRepositoryItem\(communityId, repositoryId, repositoryFolderId, file, fileData\)](#)

Add a repository item, including the binary file, in a community.

[getAllowedItemTypes\(repositoryId, repositoryFolderId\)](#)

Get the item types that the context user is allowed to create in the repository folder.

[getAllowedItemTypes\(repositoryId, repositoryFolderId, filter\)](#)

Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

[getAllowedItemTypes\(communityId, repositoryId, repositoryFolderId\)](#)

Get the item types that the context user is allowed to create in the repository folder in a community.

[getAllowedItemTypes\(communityId, repositoryId, repositoryFolderId, filter\)](#)

Get the item types, filtered by type, that the context user is allowed to create in the repository folder in a community.

[getFilePreview\(repositoryId, repositoryFileId, formatType\)](#)

Get a repository file preview.

[getFilePreview\(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber\)](#)

Get a page or page range of a repository file preview.

[getFilePreview\(communityId, repositoryId, repositoryFileId, formatType\)](#)

Get a repository file preview in a community.

[getFilePreview\(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber\)](#)

Get a page or page range of a repository file preview in a community.

[getItemType\(repositoryId, repositoryItemTypeId\)](#)

Get information about an item type associated with a repository.

[getItemType\(communityId, repositoryId, repositoryItemTypeId\)](#)

Get information about an item type associated with a repository in a community.

[getPreviews\(repositoryId, repositoryFileId\)](#)

Get information about a repository file's supported previews.

[getPreviews\(communityId, repositoryId, repositoryFileId\)](#)

Get information about a repository file's supported previews in a community.

[getRepositories\(\)](#)

Get a list of repositories.

[getRepositories\(communityId\)](#)

Get a list of repositories in a community.

[getRepositories\(pageParam, pageSize\)](#)

Get a page of repositories.

[getRepositories\(communityId, pageParam, pageSize\)](#)

Get a page of repositories in a community.

[getRepository\(repositoryId\)](#)

Get a repository.

[getRepository\(communityId, repositoryId\)](#)

Get a repository in a community.

[getRepositoryFile\(repositoryId, repositoryFileId\)](#)

Get a repository file.

[getRepositoryFile\(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo\)](#)

Get a repository file with or without permissions information.

[getRepositoryFile\(communityId, repositoryId, repositoryFileId\)](#)

Get a repository file in a community.

[getRepositoryFile\(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo\)](#)

Get a repository file with or without permissions information in a community.

[getRepositoryFolder\(repositoryId, repositoryFolderId\)](#)

Get a repository folder.

[getRepositoryFolder\(communityId, repositoryId, repositoryFolderId\)](#)

Get a repository folder in a community.

[getRepositoryFolderItems\(repositoryId, repositoryFolderId\)](#)

Get repository folder items.

[getRepositoryFolderItems\(communityId, repositoryId, repositoryFolderId\)](#)

Get repository folder items in a community.

[getRepositoryFolderItems\(repositoryId, repositoryFolderId, pageParam, pageSize\)](#)

Get a page of repository folder items.

[getRepositoryFolderItems\(communityId, repositoryId, repositoryFolderId, pageParam, pageSize\)](#)

Get a page of repository folder items in a community.

[updateRepositoryFile\(repositoryId, repositoryFileId, file\)](#)

Update the metadata of a repository file.

[updateRepositoryFile\(repositoryId, repositoryFileId, file, fileData\)](#)

Update the content of a repository file.

[updateRepositoryFile\(communityId, repositoryId, repositoryFileId, file\)](#)

Update the metadata of a repository file in a community.

[updateRepositoryFile\(communityId, repositoryId, repositoryFileId, file, fileData\)](#)

Update the content of a repository file in a community.

**addRepositoryItem(repositoryId, repositoryFolderId, file)**

Add a repository item.

API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId,
String repositoryFolderId, ConnectApi.ContentHubItemInput file)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

Return Value

Type: [ConnectApi.RepositoryFolderItem](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example creates a file without binary content (metadata only) in a repository folder. After the file is created, we show the file's ID, name, description, external URL, and download URL.

```
final String gDriveRepositoryId = '0XCxx0000000ODGAY', gDriveFolderId =
'folder:0B01Tys1KmM3sSVJ2bjIzTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowTypes for any file item types available
for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = 'new folder item name.txt';
newItem.fields.add(fieldValueInput);

//Metadata: description field
```

```

final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

final ConnectApi.RepositoryFolderItem newFolderItem =
ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: \\\'\'{0}\'\'', name: \\\'\'{1}\'\'', description:
\\\'\'{2}\'\' \n external URL: \\\'\'{3}\'\'', download URL: \\\'\'{4}\'\'', new String[]{
newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl,
newFile.downloadUrl}));

```

## SEE ALSO:

[setTestAddRepositoryItem\(repositoryId, repositoryFolderId, file, result\)](#)

[Testing ConnectApi Code](#)

**addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)**

Add a repository item in a community.

API Version

39.0

Requires Chatter

No

Signature

```

public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId,
String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)

```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, internal, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

#### Return Value

Type: [ConnectApi.RepositoryFolderItem](#)

#### Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

#### SEE ALSO:

[setTestAddRepositoryItem\(communityId, repositoryId, repositoryFolderId, file, result\)](#)

[Testing ConnectApi Code](#)

### **addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)**

Add a repository item, including the binary file.

#### API Version

39.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId,  
String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput  
fileData)
```

#### Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*fileData*

Type: [ConnectApi.BinaryInput](#)

The binary file.

Return Value

Type: `ConnectApi.RepositoryFolderItem`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example creates a file with binary content and metadata in a repository folder. After the file is created, we show the file's ID, name, description, external URL, and download URL.

```
final String gDriveRepositoryId = '0XCxx00000000DGAY', gDriveFolderId =
'folder:0B01Tys1KmM3sSVJ2bjIzTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowTypes for any file item types available
for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final String newFileName = 'new folder item name.txt';
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = newFileName;
newItem.fields.add(fieldValueInput);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

//Binary content
final Blob newFileBlob = Blob.valueOf('awesome content for brand new file');
final String newFileMimeType = 'text/plain';
final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(newFileBlob,
newFileMimeType, newFileName);

final ConnectApi.RepositoryFolderItem newFolderItem =
ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem,
fileBinaryInput);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: \\\'{0}\'\'\'', name: \\\'{1}\'\'\'', description:
\\\'{2}\'\'\' \n external URL: \\\'{3}\'\'\'', download URL: \\\'{4}\'\'\'', new String[]{
```

```
newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl,  
newFile.downloadUrl));
```

## SEE ALSO:

[setTestAddRepositoryItem\(repositoryId, repositoryFolderId, file, fileData, result\)](#)

[Testing ConnectApi Code](#)

**addRepositoryItem(*communityId*, *repositoryId*, *repositoryFolderId*, *file*, *fileData*)**

Add a repository item, including the binary file, in a community.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId,  
String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file,  
ConnectApi.BinaryInput fileData)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*fileData*

Type: [ConnectApi.BinaryInput](#)

The binary file.

## Return Value

Type: [ConnectApi.RepositoryFolderItem](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestAddRepositoryItem\(communityId, repositoryId, repositoryFolderId, file, fileData, result\)](#)

[Testing ConnectApi Code](#)

**getAllowedItemTypes(repositoryId, repositoryFolderId)**

Get the item types that the context user is allowed to create in the repository folder.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

## Return Value

Type: [ConnectApi.ContentHubAllowedItemTypeCollection](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestGetAllowedItemTypes\(repositoryId, repositoryFolderId, result\)](#)

[Testing ConnectApi Code](#)

**getAllowedItemTypes(repositoryId, repositoryFolderId, filter)**

Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*filter*

Type: [ConnectApi.ContentHubItemType](#)

Item types. Values are:

- [Any](#)—Includes files and folders.
- [FilesOnly](#)—Includes files only.
- [FoldersOnly](#)—Includes folders only.

Return Value

Type: [ConnectApi.ContentHubAllowedItemTypeCollection](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example calls `getAllowedItemTypes(repositoryId, repositoryFolderId, ConnectApi.ContentHubItemType.FilesOnly)` to get the first `ConnectApi.ContentHubItemTypeSummary.id` of a file. The context user can create allowed files in a repository folder in the external system.

```
final ConnectApi.ContentHubAllowedItemTypeCollection allowedItemTypesColl =  
ConnectApi.ContentHub.getAllowedItemTypes(repositoryId, repositoryFolderId,
```

```
ConnectApi.ContentHubItemType.FilesOnly);
final List<ConnectApi.ContentHubItemTypeSummary> allowedItemTypes =
allowedItemTypesColl.allowedItemTypes;
string allowedFileItemId = null;
if(allowedItemTypes.size() > 0){
    ConnectApi.ContentHubItemTypeSummary allowedItemTypeSummary = allowedItemTypes.get(0);

    allowedFileItemId = allowedItemTypeSummary.id;
}
```

**SEE ALSO:**

[setTestGetAllowedItemTypes\(repositoryId, repositoryFolderId, filter, result\)](#)

[Testing ConnectApi Code](#)

**getAllowedItemTypes (communityId, repositoryId, repositoryFolderId)**

Get the item types that the context user is allowed to create in the repository folder in a community.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes (String
communityId, String repositoryId, String repositoryFolderId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

## Return Value

Type: [ConnectApi.ContentHubAllowedItemTypeCollection](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestGetAllowedItemTypes\(communityId, repositoryId, repositoryFolderId, result\)](#)

[Testing ConnectApi Code](#)

**getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)**

Get the item types, filtered by type, that the context user is allowed to create in the repository folder in a community.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String
communityId, String repositoryId, String repositoryFolderId,
ConnectApi.ConnectContentHubItemType filter)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*filter*

Type: [ConnectApi.ContentHubItemType](#)

Item types. Values are:

- `Any`—Includes files and folders.
- `FilesOnly`—Includes files only.
- `FoldersOnly`—Includes folders only.

Return Value

Type: [ConnectApi.ContentHubAllowedItemTypeCollection](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetAllowedItemTypes\(repositoryId, repositoryFolderId, filter, result\)](#)

[Testing ConnectApi Code](#)

**`getFilePreview(repositoryId, repositoryFileId, formatType)`**

Get a repository file preview.

API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*formatType*

Type: [ConnectApi.FilePreviewFormat](#)

Specifies the format of the file preview. Values are:

- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

## Return Value

Type: [ConnectApi.FilePreview](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

This example calls `getFilePreview(repositoryId, repositoryFileId, ConnectApi.FilePreviewFormat.Thumbnail)` to get the thumbnail format preview along with its respective URL and number of thumbnail renditions. For each thumbnail format, we show every rendition URL available.

```
final String gDriveRepositoryId = '0XCxx0000000ODGAY', gDriveFileId =
'document:1-zcA1BaeoQbo2_yNFiHCcK6QJTPmOke-kHFC4TYg3rk'; final ConnectApi.FilePreview
filePreview =
ConnectApi.ContentHub.getFilePreview(gDriveRepositoryId, gDriveFileId,
ConnectApi.FilePreviewFormat.Thumbnail); System.debug(String.format('Preview - URL:
\\\'\'{0}\'\'', format: '\\\'\'{1}\'\'', nbr of
renditions for this format: {2}', new String[]{ filePreview.url,
filePreview.format.name(), String.valueOf(filePreview.previewUrls.size())}); for (ConnectApi.FilePreviewUrl
filePreviewUrl : filePreview.previewUrls) {
    System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
}
```

## SEE ALSO:

[setTestGetFilePreview\(repositoryId, repositoryFileId, formatType, result\)](#)

[Testing ConnectApi Code](#)

### **getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)**

Get a page or page range of a repository file preview.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String
repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber,
Integer endPageNumber)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*formatType*

Type: [ConnectApi.FilePreviewFormat](#)

Specifies the format of the file preview. Values are:

- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

*startPageNumber*

Type: [Integer](#)

The starting page number in the range of file preview URLs.

*endPageNumber*

Type: [Integer](#)

The ending page number in the range of file preview URLs.

## Return Value

Type: [ConnectApi.FilePreview](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestGetFilePreview\(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result\)](#)

[Testing ConnectApi Code](#)

**`getFilePreview(communityId, repositoryId, repositoryFileId, formatType)`**

Get a repository file preview in a community.

## API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*formatType*

Type: [ConnectApi.FilePreviewFormat](#)

Specifies the format of the file preview. Values are:

- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

Return Value

Type: [ConnectApi.FilePreview](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetFilePreview\(communityId, repositoryId, repositoryFileId, formatType, result\)](#)

[Testing ConnectApi Code](#)

**getFilePreview**(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)

API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*formatType*

Type: [ConnectApi.FilePreviewFormat](#)

Specifies the format of the file preview. Values are:

- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

*startPageNumber*

Type: [Integer](#)

The starting page number in the range of file preview URLs.

*endPageNumber*

Type: [Integer](#)

The ending page number in the range of file preview URLs.

Return Value

Type: [ConnectApi.FilePreview](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[Testing ConnectApi Code](#)

**getPreviews(repositoryId, repositoryFileId)**

Get information about a repository file's supported previews.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.FilePreviewCollection getPreviews(String repositoryId, String repositoryFileId)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

## Return Value

Type: [ConnectApi.FilePreviewCollection](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

This example gets all supported preview formats and their respective URLs and number of renditions. For each supported preview format, we show every rendition URL available.

```
final String gDriveRepositoryId = '0XCxx0000000ODGAY', gDriveFileId =
'document:1-zcA1BaeoQbo2_yNFihCcK6QJTPmOke-kHFC4TYg3rk';
final ConnectApi.FilePreviewCollection previewsCollection =
ConnectApi.ContentHub.getPreviews(gDriveRepositoryId, gDriveFileId);
for(ConnectApi.FilePreview filePreview : previewsCollection.previews){
    System.debug(String.format('Preview - URL: \\\'\'{0}\'\'', format: \\\'\'{1}\'\'', nbr of
renditions for this format: {2}'), new String[]{ filePreview.url,
filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())});
    for(ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){
        System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
    }
}
```

## SEE ALSO:

[setTestGetPreviews\(repositoryId, repositoryFileId, result\)](#)

[Testing ConnectApi Code](#)

**getPreviews(*communityId*, *repositoryId*, *repositoryFileId*)**

Get information about a repository file's supported previews in a community.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.FilePreviewCollection getPreviews(String communityId, String
repositoryId, String repositoryFileId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

Return Value

Type: [ConnectApi.FilePreviewCollection](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetPreviews\(communityId, repositoryId, repositoryFileId, result\)](#)

[Testing ConnectApi Code](#)

### **getRepositories()**

Get a list of repositories.

API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.ContentHubRepositoryCollection getRepositories()
```

Return Value

Type: [ConnectApi.ContentHubRepositoryCollection](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets all repositories and gets the first SharePoint online repository found.

```
final string sharePointOnlineProviderType = 'ContentHubSharepointOffice365';
final ConnectApi.ContentHubRepositoryCollection repositoryCollection =
ConnectApi.ContentHub.getRepositories();
ConnectApi.ContentHubRepository sharePointOnlineRepository = null;
for (ConnectApi.ContentHubRepository repository : repositoryCollection.repositories) {
    if (sharePointOnlineProviderType.equalsIgnoreCase(repository.providerType.type)) {
        sharePointOnlineRepository = repository;
    }
}
```

```
        break;  
    }  
}
```

## SEE ALSO:

[setTestGetRepositories\(result\)](#)[Testing ConnectApi Code](#)**getRepositories (communityId)**

Get a list of repositories in a community.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ContentHubRepositoryCollection getRepositories(String  
communityId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

## Return Value

Type: [ConnectApi.ContentHubRepositoryCollection](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestGetRepositories\(communityId, result\)](#)[Testing ConnectApi Code](#)**getRepositories (pageParam, pageSize)**

Get a page of repositories.

API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.ContentHubRepositoryCollection getRepositories(Integer pageParam, Integer pageSize)
```

Parameters

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

Return Value

Type: [ConnectApi.ContentHubRepositoryCollection](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

**getRepository(communityId, repositoryId)**

Get a repository in a community.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ContentHubRepository getRepository(String communityId, String
repositoryId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

#### Return Value

Type: [ConnectApi.ContentHubRepository](#)

#### Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### **getRepositoryFile(repositoryId, repositoryFileId)**

Get a repository file.

#### API Version

39.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId,  
String repositoryFileId)
```

#### Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

#### Return Value

Type: [ConnectApi.RepositoryFileDetail](#)

#### Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

```
final String gDriveRepositoryId = '0XCxx0000000ODGAY', gDriveFileId =
'file:0B01TyslKmM3sTmxKNjVJbWZja00';
final ConnectApi.RepositoryFileDetail file =
ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId);
System.debug(String.format('File - name: \\\'{0}\'\\\', size: {1}, external URL: \\\'{2}\'\\\',
download URL: \\\'{3}\'\\\'',
new String[]{ file.name, String.valueOf(file.contentSize), file.externalDocumentUrl,
file.downloadUrl}));
```

## SEE ALSO:

[Testing ConnectApi Code](#)

**getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)**

Get a repository file with or without permissions information.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId,
String repositoryFileId, Boolean includeExternalFilePermissionsInfo)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*includeExternalFilePermissionsInfo*

Type: [Boolean](#)

Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.

Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

## Return Value

Type: [ConnectApi.RepositoryFileDetail](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

```
final String gDriveRepositoryId = '0XCxx0000000ODGAY', gDriveFileId =
'file:0B01TyslKmM3sTmxKNjVJbWZja00';

final ConnectApi.RepositoryFileDetail file =
ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId, true);
System.debug(String.format('File - name: \\\'\'{0}\'\'', size: {1}, external URL: \\\'\'{2}\'\'',
download URL: \\\'\'{3}\'\'', new String[]{ file.name, String.valueOf(file.contentSize),
file.externalDocumentUrl, file.downloadUrl}));
final ConnectApi.ExternalFilePermissionInformation externalFilePermInfo =
file.externalFilePermissionInformation;

//permission types
final List<ConnectApi.ContentHubPermissionType> permissionTypes =
externalFilePermInfo.externalFilePermissionTypes;
for(ConnectApi.ContentHubPermissionType permissionType : permissionTypes){
    System.debug(String.format('Permission type - id: \\\'\'{0}\'\'', label: \\\'\'{1}\'\'', new
String[]{ permissionType.id, permissionType.label}));
}

//permission groups
final List<ConnectApi.RepositoryGroupSummary> groups =
externalFilePermInfo.repositoryPublicGroups;
for(ConnectApi.RepositoryGroupSummary ggroup : groups){
    System.debug(String.format('Group - id: \\\'\'{0}\'\'', name: \\\'\'{1}\'\'', type:
\\\'\'{2}\'\'', new String[]{ ggroup.id, ggroup.name, ggroup.type.name()}));
}
```

**updateRepositoryFile(repositoryId, repositoryFileId, file)**

Update the metadata of a repository file.

## API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

Return Value

Type: [ConnectApi.RepositoryFileDetail](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example updates the metadata of a file in a repository. After the file is updated, we show the file's ID, name, description, external URL, download URL.

```
final String gDriveRepositoryId = '0XCxx0000000ODGAY', gDriveFolderId =
'folder:0B01Tys1KmM3sSVJ2bjIzTGFqSWs', gDriveFileId =

**updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)**

Update the content of a repository file.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput
fileData)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*fileData*Type: `ConnectApi.BinaryInput`

The binary file.

## Return Value

Type: `ConnectApi.RepositoryFileDetail`

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

This example updates the content and metadata of a file in a repository. After the file is updated, we show the file's ID, name, description, external URL, and download URL.

```
final String gDriveRepositoryId = '0XCxx0000000ODGAY', gDriveFolderId =

[Testing ConnectApi Code](#)

**updateRepositoryFile**(communityId, repositoryId, repositoryFileId, file)

Update the metadata of a repository file in a community.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId,  
String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

## Return Value

Type: [ConnectApi.RepositoryFileDetail](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestUpdateRepositoryFile\(repositoryId, repositoryFileId, file, fileData, result\)](#)

[Testing ConnectApi Code](#)

**updateRepositoryFile(*communityId*, *repositoryId*, *repositoryFileId*, *file*, *fileData*)**

Update the content of a repository file in a community.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId,
String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file,
ConnectApi.BinaryInput fileData)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*fileData*

Type: [ConnectApi.BinaryInput](#)

The binary file.

Return Value

Type: [ConnectApi.RepositoryFileDetail](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestUpdateRepositoryFile\(communityId, repositoryId, repositoryFileId, file, result\)](#)

[Testing ConnectApi Code](#)

## ContentHub Test Methods

The following are the test methods for `ContentHub`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### **setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)**

Registers a `ConnectApi.RepositoryFolderItem` object to be returned when the matching `addRepositoryItem(repositoryId, repositoryFolderId, file)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFolderItem result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*result*

Type: [ConnectApi.RepositoryFolderItem](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[addRepositoryItem\(repositoryId, repositoryFolderId, file\)](#)

[Testing ConnectApi Code](#)

**setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)**

Registers a `ConnectApi.RepositoryFolderItem` object to be returned when the matching `addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestAddRepositoryItem(String communityId, String repositoryId,
String repositoryFolderId, ConnectApi.ContentHubItemInput file,
ConnectApi.RepositoryFolderItem result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*result*

Type: [ConnectApi.RepositoryFolderItem](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[addRepositoryItem\(communityId, repositoryId, repositoryFolderId, file\)](#)

[Testing ConnectApi Code](#)

**setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, fileData, result)**

Registers a `ConnectApi.RepositoryFolderItem` object to be returned when the matching `addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFolderItem result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*fileData*

Type: [ConnectApi.BinaryInput](#)

The binary file.

*result*

Type: [ConnectApi.RepositoryFolderItem](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[addRepositoryItem\(repositoryId, repositoryFolderId, file, fileData\)](#)

[Testing ConnectApi Code](#)

**setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)**

Registers a `ConnectApi.RepositoryFolderItem` object to be returned when the matching `addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestAddRepositoryItem(String communityId, String repositoryId,
String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput
fileData, ConnectApi.RepositoryFolderItem result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*fileData*

Type: [ConnectApi.BinaryInput](#)

The binary file.

*result*

Type: [ConnectApi.RepositoryFolderItem](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[addRepositoryItem\(repositoryId, repositoryFolderId, file, fileData\)](#)

[Testing ConnectApi Code](#)

### **setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, result)**

Registers a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*result*

Type: [ConnectApi.ContentHubAllowedItemTypeCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getAllowedItemTypes\(repositoryId, repositoryFolderId\)](#)

[Testing ConnectApi Code](#)

**setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, filter, result)**

Registers a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(repositoryId, repositoryFolderId, filter)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static void setTestGetAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemType filter, ConnectApi.ContentHubAllowedItemTypeCollection result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*filter*

Type: [ConnectApi.ContentHubItemType](#)

Item types. Values are:

- `Any`—Includes files and folders.
- `FilesOnly`—Includes files only.
- `FoldersOnly`—Includes folders only.

*result*

Type: [ConnectApi.ContentHubAllowedItemTypeCollection](#)

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

[getAllowedItemTypes\(repositoryId, repositoryFolderId, filter\)](#)

[Testing ConnectApi Code](#)

**setTestGetAllowedItemTypes(*communityId*, *repositoryId*, *repositoryFolderId*, *result*)**

Registers a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*result*

Type: [ConnectApi.ContentHubAllowedItemTypeCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getAllowedItemTypes\(\*communityId\*, \*repositoryId\*, \*repositoryFolderId\*\)](#)

[Testing ConnectApi Code](#)

**setTestGetAllowedItemTypes(*communityId*, *repositoryId*, *repositoryFolderId*, *filter*, *result*)**

Registers a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static void setTestGetAllowedItemTypes(String communityId, String repositoryId,
String repositoryFolderId, ConnectApi.ContentHubItemType filter,
ConnectApi.ContentHubAllowedItemTypeCollection result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*filter*

Type: [ConnectApi.ContentHubItemType](#)

Item types. Values are:

- `Any`—Includes files and folders.
- `FilesOnly`—Includes files only.
- `FoldersOnly`—Includes folders only.

*result*

Type: [ConnectApi.ContentHubAllowedItemTypeCollection](#)

The object containing test data.

Return Value

Type: `void`

SEE ALSO:

[getAllowedItemTypes\(communityId, repositoryId, repositoryFolderId, filter\)](#)

[Testing ConnectApi Code](#)

**setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)**

Registers a `ConnectApi.FilePreview` object to be returned when the matching `getFilePreview(repositoryId, repositoryFileId, formatType)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static void setTestGetFilePreview(String repositoryId, String repositoryFileId,
ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*formatType*

Type: [ConnectApi.FilePreviewFormat](#)

Specifies the format of the file preview. Values are:

- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

*result*

Type: [ConnectApi.FilePreview](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFilePreview\(repositoryId, repositoryFileId, formatType\)](#)

[Testing ConnectApi Code](#)

```
setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber,
endPageNumber, result)
```

Registers a [ConnectApi.FilePreview](#) object to be returned when the matching [getFilePreview\(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber\)](#) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId,
ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber,
ConnectApi.FilePreview result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*formatType*

Type: [ConnectApi.FilePreviewFormat](#)

Specifies the format of the file preview. Values are:

- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

*startPageNumber*

Type: [Integer](#)

The starting page number in the range of file preview URLs.

*endPageNumber*

Type: [Integer](#)

The ending page number in the range of file preview URLs.

*result*

Type: [ConnectApi.FilePreview](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFilePreview\(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber\)](#)

[Testing ConnectApi Code](#)

**setTestGetFilePreview(*communityId*, *repositoryId*, *repositoryFileId*, *formatType*, *result*)**

Registers a `ConnectApi.FilePreview` object to be returned when the matching `getFilePreview(communityId, repositoryId, repositoryFileId, formatType)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: `String`

The ID of the repository.

*repositoryFileId*

Type: `String`

The ID of the repository file.

*formatType*

Type: `ConnectApi.FilePreviewFormat`

Specifies the format of the file preview. Values are:

- `Pdf`—Preview format is PDF.
- `svg`—Preview format is compressed SVG.
- `Thumbnail`—Preview format is 240 x 180 PNG.
- `ThumbnailBig`—Preview format is 720 x 480 PNG.
- `ThumbnailTiny`—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

*result*

Type: `ConnectApi.FilePreview`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getFilePreview\(communityId, repositoryId, repositoryFileId, formatType\)](#)

### **setTestGetItemType(repositoryId, repositoryItemId, result)**

Registers a `ConnectApi.ContentHubItemTypeDetail` object to be returned when the matching `getItemType(repositoryId, repositoryItemId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetItemType(String repositoryId, String repositoryItemId,
ConnectApi.ContentHubItemTypeDetail result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryItemId*

Type: [String](#)

The ID of the repository item type.

*result*

Type: [ConnectApi.ContentHubItemTypeDetail](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getItemType\(repositoryId, repositoryItemId\)](#)

[Testing ConnectApi Code](#)

**setTestGetItemType(communityId, repositoryId, repositoryItemId, result)**

Registers a `ConnectApi.ContentHubItemTypeDetail` object to be returned when the matching `getItemType(communityId, repositoryId, repositoryItemId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetItemType(String communityId, String repositoryId, String repositoryItemId, ConnectApi.ContentHubItemTypeDetail result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryItemId*

Type: [String](#)

The ID of the repository item type.

*result*

Type: [ConnectApi.ContentHubItemTypeDetail](#)

The object containing test data.

Return Value

Type: Void

**setTestGetPreviews(repositoryId, repositoryFileId, result)**

Registers a `ConnectApi.FilePreviewCollection` object to be returned when the matching `getPreviews(repositoryId, repositoryFileId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static void setTestGetPreviews(String repositoryId, String repositoryFileId,
ConnectApi.FilePreviewCollection result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*result*

Type: [ConnectApi.FilePreviewCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getPreviews\(repositoryId, repositoryFileId\)](#)

[Testing ConnectApi Code](#)

**setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)**

Registers a `ConnectApi.FilePreviewCollection` object to be returned when the matching `getPreviews(communityId, repositoryId, repositoryFileId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

## Signature

```
public static Void setTestGetPreviews(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewCollection result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*result*

Type: [ConnectApi.FilePreviewCollection](#)

The object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[getPreviews\(communityId, repositoryId, repositoryFileId\)](#)

[Testing ConnectApi Code](#)

**setTestGetRepositories (result)**

Registers a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories()` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestGetRepositories(ConnectApi.ContentHubRepositoryCollection result)
```

## Parameters

*result*

Type: [ConnectApi.ContentHubRepositoryCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepositories\(\)](#)

[Testing ConnectApi Code](#)

### **setTestGetRepositories (communityId, result)**

Registers a `getRepositories (communityId)` object to be returned when the matching `ConnectApi.ContentHubRepositoryCollection` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetRepositories(String communityId,  
ConnectApi.ContentHubRepositoryCollection result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*result*

Type: [ConnectApi.ContentHubRepositoryCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepositories \(communityId\)](#)

[Testing ConnectApi Code](#)

### **setTestGetRepositories (pageParam, pageSize, result)**

Registers a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories (pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetRepositories(Integer pageParam, Integer pageSize,
ConnectApi.ContentHubRepositoryCollection result)
```

Parameters

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

*result*

Type: [ConnectApi.ContentHubRepositoryCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepositories\(pageParam, pageSize\)](#)

[Testing ConnectApi Code](#)

### **setTestGetRepositories(*communityId*, *pageParam*, *pageSize*, *result*)**

Registers a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories(communityId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetRepositories(String communityId, Integer pageParam, Integer
pageSize, ConnectApi.ContentHubRepositoryCollection result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

*result*

Type: [ConnectApi.ContentHubRepositoryCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepositories\(communityId, pageParam, pageSize\)](#)

### **setTestGetRepository(repositoryId, result)**

Registers a `ConnectApi.ContentHubRepository` object to be returned when the matching `getRepository(repositoryId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetRepository(String repositoryId,  
ConnectApi.ContentHubRepository result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*result*

Type: [ConnectApi.ContentHubRepository](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepository\(repositoryId\)](#)

[Testing ConnectApi Code](#)

### **setTestGetRepository(communityId, repositoryId, result)**

Registers a `ConnectApi.ContentHubRepository` object to be returned when the matching `getRepository(communityId, repositoryId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetRepository(String communityId, String repositoryId,
ConnectApi.ContentHubRepository result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*result*

Type: [ConnectApi.ContentHubRepository](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepository\(communityId, repositoryId\)](#)

[Testing ConnectApi Code](#)

**setTestGetRepositoryFile(repositoryId, repositoryFileId, result)**

Registers a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `getRepositoryFile(repositoryId, repositoryFileId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.RepositoryFileDetail result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*result*

Type: [ConnectApi.RepositoryFileDetail](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepositoryFile\(repositoryId, repositoryFileId\)](#)

[Testing ConnectApi Code](#)

**setTestGetRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)**

Registers a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

## Signature

```
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo, ConnectApi.RepositoryFileDetail result)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*includeExternalFilePermissionsInfo*

Type: [Boolean](#)

Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.

Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

*result*

Type: [ConnectApi.RepositoryFileDetail](#)

The object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[getRepositoryFile\(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo\)](#)

[Testing ConnectApi Code](#)

**setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, result)**

Registers a [ConnectApi.RepositoryFileDetail](#) object to be returned when the matching [getRepositoryFile\(communityId, repositoryId, repositoryFileId\)](#) method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestGetRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.RepositoryFileDetail result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*result*

Type: [ConnectApi.RepositoryFileDetail](#)

The object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[getRepositoryFile\(communityId, repositoryId, repositoryFileId\)](#)

[Testing ConnectApi Code](#)

**`setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)`**

Registers a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestGetRepositoryFile(String communityId, String repositoryId,
String repositoryFileId, Boolean includeExternalFilePermissionsInfo,
ConnectApi.RepositoryFileDetail result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*includeExternalFilePermissionsInfo*

Type: [Boolean](#)

Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.

Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

*result*

Type: [ConnectApi.RepositoryFileDetail](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepositoryFile\(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo\)](#)

[Testing ConnectApi Code](#)

**setTestGetRepositoryFolder(repositoryId, repositoryFolderId, result)**

Registers a `ConnectApi.RepositoryFolderDetail` object to be returned when the matching `getRepositoryFolder(repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetRepositoryFolder(String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderDetail result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*result*

Type: [ConnectApi.RepositoryFolderDetail](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepositoryFolder\(repositoryId, repositoryFolderId\)](#)

[Testing ConnectApi Code](#)

**setTestGetRepositoryFolder(communityId, repositoryId, repositoryFolderId, result)**

Registers a [ConnectApi.RepositoryFolderDetail](#) object to be returned when the matching [getRepositoryFolder\(communityId, repositoryId, repositoryFolderId\)](#) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetRepositoryFolder(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderDetail result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*result*

Type: [ConnectApi.RepositoryFolderDetail](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepositoryFolder\(repositoryId, repositoryFolderId\)](#)

[Testing ConnectApi Code](#)

### **setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, result)**

Registers a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetRepositoryFolderItems(String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*result*

Type: [ConnectApi.RepositoryFolderItemsCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepositoryFolderItems\(repositoryId, repositoryFolderId\)](#)

[Testing ConnectApi Code](#)

**setTestGetRepositoryFolderItems(*communityId*, *repositoryId*, *repositoryFolderId*, *result*)**

Registers a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*result*

Type: [ConnectApi.RepositoryFolderItemsCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepositoryFolderItems\(\*communityId\*, \*repositoryId\*, \*repositoryFolderId\*\)](#)

[Testing ConnectApi Code](#)

**setTestGetRepositoryFolderItems(*repositoryId*, *repositoryFolderId*, *pageParam*, *pageSize*, *result*)**

Registers a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestGetRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

*result*

Type: [ConnectApi.RepositoryFolderItemsCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRepositoryFolderItems\(repositoryId, repositoryFolderId, pageParam, pageSize\)](#)

[Testing ConnectApi Code](#)

**setTestGetRepositoryFolderItems(*communityId*, *repositoryId*, *repositoryFolderId*, *pageParam*, *pageSize*, *result*)**

Registers a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

## Signature

```
public static void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

*result*

Type: [ConnectApi.RepositoryFolderItemsCollection](#)

The object containing test data.

## Return Value

Type: `Void`

## SEE ALSO:

[getRepositoryFolderItems\(communityId, repositoryId, repositoryFolderId, pageParam, pageSize\)](#)

[Testing ConnectApi Code](#)

**setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)**

Registers a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput
fileData, ConnectApi.RepositoryFileDetail result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*fileData*

Type: [ConnectApi.BinaryInput](#)

The binary file.

*result*

Type: [ConnectApi.RepositoryFileDetail](#)

The object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[updateRepositoryFile\(repositoryId, repositoryFileId, file\)](#)

[Testing ConnectApi Code](#)

**setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, result)**

Registers a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `updateRepositoryFile(repositoryId, repositoryFileId, file)` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestUpdateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFileDetail result)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*result*

Type: [ConnectApi.RepositoryFileDetail](#)

The object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[updateRepositoryFile\(repositoryId, repositoryFileId, file, fileData\)](#)

[Testing ConnectApi Code](#)

**setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, fileData, result)**

Registers a [ConnectApi.RepositoryFileDetail](#) object to be returned when the matching [updateRepositoryFile\(repositoryId, repositoryFileId, file, fileData\)](#) method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestUpdateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFileDetail result)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*fileData*

Type: [ConnectApi.BinaryInput](#)

The binary file.

*result*

Type: [ConnectApi.RepositoryFileDetail](#)

The object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[updateRepositoryFile\(communityId, repositoryId, repositoryFileId, file\)](#)

## API Version

40.0

## Signature

```
public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file,
ConnectApi.RepositoryFileDetail result)
```

### Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*result*

Type: [ConnectApi.RepositoryFileDetail](#)

The object containing test data.

### Return Value

Type: Void

### SEE ALSO:

[updateRepositoryFile\(communityId, repositoryId, repositoryFileId, file, fileData\)](#)

## Datacloud Class

Purchase Data.com contact or company records, and retrieve purchase information.

### Namespace

[ConnectApi](#)

### IN THIS SECTION:

[Datacloud Methods](#)

### Datacloud Methods

The following are methods for `Datacloud`. All methods are static.

### IN THIS SECTION:

[getCompaniesFromOrder\(orderId, pageSize, page\)](#)

Retrieves a list of purchased company records for an order.

[getCompany\(companyId\)](#)

Retrieves a company record from an identification number.

[getContact\(contactId\)](#)

Retrieves a contact record from an identification number.

[getContactsFromOrder\(orderId, page, pageSize\)](#)

Retrieves a list of purchased contacts for an order.

[getOrder\(orderId\)](#)

Retrieves purchased records for an order.

[getUsage\(userId\)](#)

Retrieves purchase usage information for a specific user.

[postOrder\(orderInput\)](#)

Purchase records that are listed in an input file.

**getCompaniesFromOrder (orderId, pageSize, page)**

Retrieves a list of purchased company records for an order.

API Version

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.DatacloudCompanies getCompaniesFromOrder(String orderId, String
pageSize, String page)
```

Parameters

*orderId*

Type: [String](#)

A unique number that identifies an order.

*page*

Type: [String](#)

The number of the page that you want returned.

*pageSize*

Type: [String](#)

The number of companies to show on a page. The default *pageSize* is 25.

Return Value

Type: [ConnectApi.DatacloudCompanies](#)

**getCompany (companyId)**

Retrieves a company record from an identification number.

API Version

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.DatacloudCompany getCompany(String companyId)
```

Parameters

*companyId*

Type: [String](#)

A numeric identifier for a company in the Data.com database.

Return Value

Type: [ConnectApi.DatacloudCompany](#)

Example

```
ConnectApi.DatacloudCompany DatacloudCompanyRep = ConnectApi.Datacloud.getCompany(companyId);
```

**getContact (contactId)**

Retrieves a contact record from an identification number.

API Version

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.DatacloudContact getContact(String contactId)
```

Parameters

*contactId*

Type: [String](#)

A unique numeric string that identifies a contact in the Data.com database.

Return Value

Type: [ConnectApi.DatacloudContact](#)

Example

```
ConnectApi.DatacloudContact DatacloudContactRep = ConnectApi.Datacloud.getContact(contactId);
```

### **getContactsFromOrder (orderId, page, pageSize)**

Retrieves a list of purchased contacts for an order.

API Version

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.DatacloudContacts getContactsFromOrder(String orderId, String page, String pageSize)
```

Parameters

*orderId*

Type: [String](#)

A unique number that's associated with an order.

*page*

Type: [String](#)

The number of the page that you want returned.

*pageSize*

Type: [String](#)

The number of contacts to show on a page. The default *pageSize* is 25.

Return Value

Type: [ConnectApi.DatacloudContacts](#)

### **getOrder (orderId)**

Retrieves purchased records for an order.

API Version

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.DatacloudOrder getOrder(String orderId)
```

Parameters

*orderId*

Type: [String](#)

A unique number that identifies an order.

Return Value

Type: [ConnectApi.DatacloudOrder](#)

Example

```
ConnectApi.DatacloudOrder datacloudOrderRep = ConnectApi.Datacloud.getOrder(orderId);
```

### **getUsage (userId)**

Retrieves purchase usage information for a specific user.

API Version

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.DatacloudPurchaseUsage getUsage(String userId)
```

Parameters

*userId*

Type: [String](#)

A unique number that identifies a single user.

Return Value

Type: [ConnectApi.DatacloudPurchaseUsage](#)

## Example

```
ConnectApi.DatacloudPurchaseUsage datacloudPurchaseUsageRep =
ConnectApi.Datacloud.getUsage (userId) ;
```

**postOrder (orderInput)**

Purchase records that are listed in an input file.

## API Version

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.DatacloudOrder postOrder (ConnectApi.DatacloudOrderInput
orderInput)
```

## Parameters

*orderInput*

Type: [ConnectApi.DatacloudOrderInput](#)

A list that contains IDs for the contacts or companies that you want to see.

## Return Value

Type: [ConnectApi.DatacloudOrder](#)

## Example

```
ConnectApi.DatacloudOrderInput inputOrder=new ConnectApi.DatacloudOrderInput ();
List<String> ids=new List<String> ();
ids.add ('1234');
inputOrder.companyIds=ids;
ConnectApi.DatacloudOrder datacloudOrderRep = ConnectApi.Datacloud.postOrder (inputOrder);
```

**EmailMergeFieldService Class**

Extract a list of merge fields for an object. A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

**Namespace**

[ConnectApi](#)

## EmailMergeFieldService Methods

The following are methods for `EmailMergeFieldService`. All methods are static.

### IN THIS SECTION:

[getMergeFields\(objectApiNames\)](#)

Extract the merge fields for a specific object.

### **getMergeFields (objectApiNames)**

Extract the merge fields for a specific object.

API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.EmailMergeFieldInfo getMergeFields (List<String> objectApiNames)
```

Parameters

*objectApiNames*

Type: [List<String>](#)

The API names for the objects being referenced.

Return Value

Type: [ConnectApi.EmailMergeFieldInfo](#)

## ExternalEmailServices Class

Access information about integration with external email services, such as sending email within Salesforce through an external email account.

### Namespace

[ConnectApi](#)

### External Email Services Methods

The following are methods for `ExternalEmailService`. All methods are static.

## IN THIS SECTION:

[getUserOAuthInfo\(landingPage\)](#)

Get information about whether an external email service has been authorized to send email on behalf of a user.

**getUserOAuthInfo (landingPage)**

Get information about whether an external email service has been authorized to send email on behalf of a user.

API Version

37.0

Requires Chatter

No

Signature

```
public static getUserOAuthInfo (String landingPage)
```

Parameters

*landingPage*Type: [String](#)

The landing page that the user starts on when they are finished with the OAuth authorization process.

Return Value

Type: [UserOAuthInfo](#)

SEE ALSO:

[Testing ConnectApi Code](#)

## Knowledge Class

Access information about trending articles in communities.

## Namespace

[ConnectApi](#)

## Knowledge Methods

The following are methods for `Knowledge`. All methods are static.

## IN THIS SECTION:

[getTopViewedArticlesForTopic\(communityId, topicId, maxResults\)](#)

Get the top viewed articles for a topic.

[getTrendingArticles\(communityId, maxResults\)](#)

Get trending articles for a community.

[getTrendingArticlesForTopic\(communityId, topicId, maxResults\)](#)

Get the trending articles for a topic in a community.

### **getTopViewedArticlesForTopic(communityId, topicId, maxResults)**

Get the top viewed articles for a topic.

API Version

41.0

Available to Guest Users

41.0

Requires Chatter

No

Signature

```
public static ConnectApi.KnowledgeArticleVersionCollection  
getTopViewedArticlesForTopic(String communityId, String topicId, Integer maxResults)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*topicId*

Type: [String](#)

ID of the topic.

*maxResults*

Type: [Integer](#)

The maximum number of articles returned for each topic ID. Values can be from 1 to 25. The default value is 5.

Return Value

Type: [ConnectApi.KnowledgeArticleVersionCollection](#)

### **getTrendingArticles(communityId, maxResults)**

Get trending articles for a community.

API Version

36.0

Available to Guest Users

36.0

Requires Chatter

No

Signature

```
public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticles(String communityId, Integer maxResults)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*maxResults*

Type: [Integer](#)

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value

Type: [ConnectApi.KnowledgeArticleVersionCollection](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetTrendingArticles\(communityId, maxResults, result\)](#)

[Testing ConnectApi Code](#)

**`getTrendingArticlesForTopic(communityId, topicId, maxResults)`**

Get the trending articles for a topic in a community.

API Version

36.0

Available to Guest Users

36.0

Requires Chatter

No

Signature

```
public static ConnectApi.KnowledgeArticleVersionCollection  
getTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*topicId*

Type: [String](#)

ID of the topic.

*maxResults*

Type: [Integer](#)

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value

Type: [ConnectApi.KnowledgeArticleVersionCollection](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetTrendingArticlesForTopic\(communityId, topicId, maxResults, result\)](#)

[Testing ConnectApi Code](#)

## Knowledge Test Methods

The following are the test methods for `Knowledge`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### **setTestGetTrendingArticles(communityId, maxResults, result)**

Registers a `ConnectApi.KnowledgeVersionArticleCollection` object to be returned when the matching `ConnectApi.getTrendingArticles` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

36.0

Signature

```
public static void setTestGetTrendingArticles(String communityId, Integer maxResults,
ConnectApi.KnowledgeArticleVersionCollection result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*maxResults*

Type: [Integer](#)

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

*result*

Type: [ConnectApi.KnowledgeArticleVersionCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getTrendingArticles\(communityId, maxResults\)](#)

[Testing ConnectApi Code](#)

**setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)**

Registers a `ConnectApi.KnowledgeVersionArticleCollection` object to be returned when the matching `ConnectApi.getTrendingArticlesForTopic` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

36.0

Signature

```
public static void setTestGetTrendingArticlesForTopic(String communityId, String topicId,
Integer maxResults, ConnectApi.KnowledgeArticleVersionCollection result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*topicId*

Type: [String](#)

ID of the topic.

*maxResults*

Type: [Integer](#)

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

*result*

Type: [ConnectApi.KnowledgeArticleVersionCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getTrendingArticlesForTopic\(communityId, topicId, maxResults\)](#)

[Testing ConnectApi Code](#)

## ManagedTopics Class

Access information about managed topics in a community. Create, delete, and reorder managed topics.

### Namespace

[ConnectApi](#)

### ManagedTopics Methods

The following are methods for `ManagedTopics`. All methods are static.

IN THIS SECTION:

[createManagedTopic\(communityId, recordId, managedTopicType\)](#)

Creates a managed topic of a specific type for the specified community.

[createManagedTopic\(communityId, recordId, managedTopicType, parentId\)](#)

Creates a child managed topic for a community.

[createManagedTopicByName\(communityId, name, managedTopicType\)](#)

Creates a managed topic of a specific type by name for the specified community.

[createManagedTopicByName\(communityId, name, managedTopicType, parentId\)](#)

Creates a child managed topic by name for a community.

[deleteManagedTopic\(communityId, managedTopicId\)](#)

Deletes a managed topic from the specified community.

[getManagedTopic\(communityId, managedTopicId\)](#)

Returns information about a managed topic in a community.

[getManagedTopic\(communityId, managedTopicId, depth\)](#)

Returns information about a managed topic, including its parent and children managed topics, in a community.

[getManagedTopics\(communityId\)](#)

Returns the managed topics for the community.

[getManagedTopics\(communityId, managedTopicType\)](#)

Returns managed topics of a specified type for the community.

[getManagedTopics\(communityId, managedTopicType, depth\)](#)

Returns managed topics of a specified type, including their parent and children managed topics, in a community.

[getManagedTopics\(communityId, managedTopicType, recordId, depth\)](#)

Returns managed topics of a specified type, including their parent and children managed topics, that are associated with a given topic in a community.

[getManagedTopics\(communityId, managedTopicType, recordIds, depth\)](#)

Returns managed topics of a specified type, including their parent and children managed topics, that are associated with topics in a community.

[reorderManagedTopics\(communityId, managedTopicPositionCollection\)](#)

Reorders the relative positions of managed topics in a community.

**createManagedTopic(communityId, recordId, managedTopicType)**

Creates a managed topic of a specific type for the specified community.

API Version

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String
recordId, ConnectApi.ManagedTopicType managedTopicType)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recordId*

Type: [String](#)

ID of the topic.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Specify the type of managed topic.

- **Featured**—Topics that are featured, for example, on the community home page, but don't provide overall navigation.
- **Navigational**—Topics that display in a navigational menu in the community.

A topic can be associated with up to two managed topic types, so a topic can be both a **Featured** topic and a **Navigational** topic.

You can create up to 25 managed topics per `managedTopicType`.

## Return Value

Type: [ConnectApi.ManagedTopic](#)

## Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

**`createManagedTopic`(`communityId`, `recordId`, `managedTopicType`, `parentId`)**

Creates a child managed topic for a community.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType, String parentId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recordId*

Type: [String](#)

ID of the topic.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Specify `Navigational` for the type of managed topic to create a child managed topic.

A topic can be associated with up to two managed topic types, so a topic can be both a `Featured` topic and a `Navigational` topic.

You can create up to 25 managed topics per `managedTopicType`.

*parentId*

Type: `String`

ID of the parent managed topic.

You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

Return Value

Type: `ConnectApi.ManagedTopic`

Usage

Only community managers (users with the `Create and Set Up Communities` or `Manage Communities` permission) can create managed topics.

**`createManagedTopicByName`**(`communityId`, `name`, `managedTopicType`)

Creates a managed topic of a specific type by name for the specified community.

API Version

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId,
String name, ConnectApi.ManagedTopicType managedTopicType)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*name*

Type: `String`

Name of the topic.

*managedTopicType*

Type: `ConnectApi.ManagedTopicType`

Specify the type of managed topic.

- `Featured`—Topics that are featured, for example, on the community home page, but don't provide overall navigation.

- **Navigational**—Topics that display in a navigational menu in the community.

A topic can be associated with up to two managed topic types, so a topic can be both a **Featured** topic and a **Navigational** topic.

You can create up to 25 managed topics per `managedTopicType`.

#### Return Value

Type: `ConnectApi.ManagedTopic`

#### Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

#### **`createManagedTopicByName (communityId, name, managedTopicType, parentId)`**

Creates a child managed topic by name for a community.

#### API Version

35.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.ManagedTopic createManagedTopicByName (String communityId,  
String name, ConnectApi.ManagedTopicType managedTopicType, String parentId)
```

#### Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*name*

Type: `String`

Name of the topic.

*managedTopicType*

Type: `ConnectApi.ManagedTopicType`

Specify `Navigational` for the type of managed topic to create a child managed topic.

A topic can be associated with up to two managed topic types, so a topic can be both a **Featured** topic and a **Navigational** topic.

You can create up to 25 managed topics per `managedTopicType`.

*parentId*

Type: `String`

ID of the parent managed topic.

You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

Return Value

Type: `ConnectApi.ManagedTopic`

Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

### **`deleteManagedTopic (communityId, managedTopicId)`**

Deletes a managed topic from the specified community.

API Version

32.0

Requires Chatter

No

Signature

```
public static deleteManagedTopic(String communityId, String managedTopicId)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*managedTopicId*

Type: `String`

ID of managed topic.

Return Value

Type: `Void`

Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can delete managed topics.

### **`getManagedTopic (communityId, managedTopicId)`**

Returns information about a managed topic in a community.

API Version

32.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*managedTopicId*

Type: [String](#)

ID of managed topic.

Return Value

Type: [ConnectApi.ManagedTopic](#)

**`getManagedTopic(communityId, managedTopicId, depth)`**

Returns information about a managed topic, including its parent and children managed topics, in a community.

API Version

35.0

Available to Guest Users

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId, Integer depth)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*managedTopicId*

Type: [String](#)

ID of managed topic.

*depth*

Type: [Integer](#)

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If `depth` isn't specified, it defaults to 1.

## Return Value

Type: [ConnectApi.ManagedTopic](#)

**getManagedTopics (communityId)**

Returns the managed topics for the community.

## API Version

32.0

## Available to Guest Users

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

## Return Value

Type: [ConnectApi.ManagedTopicCollection](#)

**getManagedTopics (communityId, managedTopicType)**

Returns managed topics of a specified type for the community.

API Version

32.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.ManagedTopicCollection getManagedTopics (String communityId,
ConnectApi.ManagedTopicType managedTopicType)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Type of managed topic.

- **Featured**—Topics that are featured, for example, on the community home page, but don't provide overall navigation.
- **Navigational**—Topics that display in a navigational menu in the community.

A topic can be associated with up to two managed topic types, so a topic can be both a **Featured** topic and a **Navigational** topic.

Return Value

Type: [ConnectApi.ManagedTopicCollection](#)

**getManagedTopics (communityId, managedTopicType, depth)**

Returns managed topics of a specified type, including their parent and children managed topics, in a community.

API Version

35.0

Available to Guest Users

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
ConnectApi.ManagedTopicType managedTopicType, Integer depth)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Type of managed topic.

- `Featured`—Topics that are featured, for example, on the community home page, but don't provide overall navigation.
- `Navigational`—Topics that display in a navigational menu in the community.

A topic can be associated with up to two managed topic types, so a topic can be both a `Featured` topic and a `Navigational` topic.

*depth*

Type: [Integer](#)

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If `depth` isn't specified, it defaults to 1.

Return Value

Type: [ConnectApi.ManagedTopicCollection](#)

**getManagedTopics (communityId, managedTopicType, recordId, depth)**

Returns managed topics of a specified type, including their parent and children managed topics, that are associated with a given topic in a community.

API Version

35.0–37.0

 **Important:** In version 38.0 and later, use `getManagedTopics (communityId, managedTopicType, recordIds, depth)`.

Available to Guest Users

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
ConnectApi.ManagedTopicType managedTopicType, String recordId, Integer depth)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Type of managed topic.

- `Featured`—Topics that are featured, for example, on the community home page, but don't provide overall navigation.
- `Navigational`—Topics that display in a navigational menu in the community.

A topic can be associated with up to two managed topic types, so a topic can be both a `Featured` topic and a `Navigational` topic.

*recordId*

Type: [String](#)

ID of the topic associated with the managed topics.

*depth*

Type: [Integer](#)

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If `depth` isn't specified, it defaults to 1.

Return Value

Type: [ConnectApi.ManagedTopicCollection](#)

**getManagedTopics(*communityId*, *managedTopicType*, *recordIds*, *depth*)**

Returns managed topics of a specified type, including their parent and children managed topics, that are associated with topics in a community.

API Version

38.0

Available to Guest Users

38.0

Requires Chatter

No

Signature

```
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
ConnectApi.ManagedTopicType managedTopicType, List<String> recordIds, Integer depth)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Type of managed topic.

- `Featured`—Topics that are featured, for example, on the community home page, but don't provide overall navigation.
- `Navigational`—Topics that display in a navigational menu in the community.

A topic can be associated with up to two managed topic types, so a topic can be both a `Featured` topic and a `Navigational` topic.

*recordIds*

Type: [List<String>](#)

A list of up to 100 topic IDs associated with the managed topics.

If you list more than 10 topic IDs, you can't specify 2–8 for *depth*.

*depth*

Type: [Integer](#)

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If *depth* isn't specified, it defaults to 1.

Return Value

Type: [ConnectApi.ManagedTopicCollection](#)

**`reorderManagedTopics`(`communityId`, `managedTopicPositionCollection`)**

Reorders the relative positions of managed topics in a community.

API Version

32.0

Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedTopicCollection reorderManagedTopics (String communityId,
ConnectApi.ManagedTopicPositionCollectionInput managedTopicPositionCollection)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*managedTopicPositionCollection*

Type: [ConnectApi.ManagedTopicPositionCollectionInput](#)

A collection of relative positions of managed topics. This collection can include `Featured` and `Navigational` managed topics and doesn't have to include all managed topics.

## Return Value

Type: [ConnectApi.ManagedTopicCollection](#)

## Usage

Only community managers (users with the `Create and Set Up Communities` or `Manage Communities` permission) can reorder managed topics.

You can reorder parent managed topics or children managed topics with the same parent. If you don't include all managed topics in the `ConnectApi.ManagedTopicPositionCollectionInput`, the managed topics are reordered by respecting the positions indicated in the `ConnectApi.ManagedTopicPositionCollectionInput` and then by pushing down any managed topics that aren't included in the `ConnectApi.ManagedTopicPositionCollectionInput` to the next available position.

## Example

If you have these managed topics:

Managed Topic	Position
ManagedTopicA	0
ManagedTopicB	1
ManagedTopicC	2
ManagedTopicD	3
ManagedTopicE	4

And you reorder managed topics by including this information in `ConnectApi.ManagedTopicPositionCollectionInput`:

Managed Topic	Position
ManagedTopicD	0

Managed Topic	Position
ManagedTopicE	2

The result is:

Managed Topic	Position
ManagedTopicD	0
ManagedTopicA	1
ManagedTopicE	2
ManagedTopicB	3
ManagedTopicC	4

## Mentions Class

Access information about mentions. A mention is an “@” character followed by a user or group name. When a user or group is mentioned, they receive a notification.

### Namespace

[ConnectApi](#)

### Mentions Methods

The following are methods for `Mentions`. All methods are static.

#### IN THIS SECTION:

[getMentionCompletions\(\*communityId\*, \*q\*, \*contextId\*\)](#)

Returns the first page of possible users and groups to mention in a feed item body or comment body. A mention is an “@” character followed by a user or group name. When a user or group is mentioned, they receive a notification.

[getMentionCompletions\(\*communityId\*, \*q\*, \*contextId\*, \*type\*, \*pageParam\*, \*pageSize\*\)](#)

Returns the specified page number of mention proposals of the specified mention completion type: All, User, or Group. A mention is an “@” character followed by a user or group name. When a user or group is mentioned, they receive a notification.

[getMentionValidations\(\*communityId\*, \*parentId\*, \*recordIds\*, \*visibility\*\)](#)

Information about whether the specified mentions are valid for the context user.

#### **getMentionCompletions(*communityId*, *q*, *contextId*)**

Returns the first page of possible users and groups to mention in a feed item body or comment body. A mention is an “@” character followed by a user or group name. When a user or group is mentioned, they receive a notification.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.MentionCompletionPage getMentionCompletions (String communityId,  
String q, String contextId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn't require a minimum number of characters. This parameter does not support wildcards.

*contextId*

Type: [String](#)

A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

Return Value

Type: [ConnectApi.MentionCompletionPage](#)

Usage

Call this method to generate a page of proposed mentions that a user can choose from when they enter characters in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetMentionCompletions\(communityId, q, contextId, result\)](#)

[Testing ConnectApi Code](#)

**`getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)`**

Returns the specified page number of mention proposals of the specified mention completion type: All, User, or Group. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.Mentions getMentionCompletions (String communityId, String q,  
String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer  
pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn't require a minimum number of characters. This parameter does not support wildcards.

*contextId*

Type: [String](#)

A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

*type*

Type: [ConnectApi.MentionCompletionType](#)

Type of mention completion.

- `All`—All mention completions, regardless of the type of record to which the mention refers.
- `Group`—Mention completions for groups.
- `User`—Mention completions for users.

*pageParam*

Type: [String](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [String](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.MentionCompletionPage](#)

## Usage

Call this method to generate a page of proposed mentions that a user can choose from when they enter characters in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestGetMentionCompletions\(communityId, q, contextId, type, pageParam, pageSize, result\)](#)

[Testing ConnectApi Code](#)

**getMentionValidations(communityId, parentId, recordIds, visibility)**

Information about whether the specified mentions are valid for the context user.

## API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Mentions getMentionValidations(String communityId, String
parentId, List<String> recordIds, ConnectApi.FeedItemVisibilityType visibility)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*parentId*

Type: [String](#)

The feed item parent ID.

*recordIds*

Type: [List<String>](#)

A comma separated list of IDs to be mentioned. The maximum value is 25.

*visibility*

Type: [ConnectApi.FeedItemVisibilityType](#)

Type of users who can see a feed item.

- `AllUsers`—Visibility is not limited to internal users.
- `InternalUsers`—Visibility is limited to internal users.

Return Value

Type: [ConnectApi.MentionValidations](#)

Usage

Call this method to check whether the record IDs returned from a call to `ConnectApi.Mentions.getMentionCompletions` are valid for the context user. For example, the context user can't mention private groups he doesn't belong to. If such a group were included in the list of mention validations, the `ConnectApi.MentionValidations.hasErrors` property would be `true` and the group would have a `ConnectApi.MentionValidation.validationStatus` of `Disallowed`.

## Mentions Test Methods

The following are the test methods for `Mentions`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### **setTestGetMentionCompletions(*communityId*, *q*, *contextId*, *result*)**

Registers a `ConnectApi.MentionCompletionPage` object to be returned when `getMentionCompletions(String, String, String)` is called in a test context.

API Version

29.0

Signature

```
public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn't require a minimum number of characters. This parameter does not support wildcards.

*contextId*

Type: [String](#)

A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

*result*

Type: [ConnectApi.MentionCompletionPage](#)

A `ConnectApi.MentionCompletionPage` object containing test data.

Return Value

Type: Void

SEE ALSO:

[getMentionCompletions\(communityId, q, contextId\)](#)

[Testing ConnectApi Code](#)

**setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)**

Registers a `ConnectApi.MentionCompletionPage` object to be returned when `getMentionCompletions(String, String, String, ConnectApi.MentionCompletionType, Integer, Integer)` is called in a test context.

API Version

29.0

Signature

```
public static Void setTestGetMentionCompletions (String communityId, String q, String
contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize,
ConnectApi.MentionCompletionPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn't require a minimum number of characters. This parameter does not support wildcards.

*contextId*

Type: [String](#)

A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

*type*

Type: [ConnectApi.MentionCompletionType](#)

Type of mention completion.

- `All`—All mention completions, regardless of the type of record to which the mention refers.
- `Group`—Mention completions for groups.
- `User`—Mention completions for users.

*pageParam*

Type: [String](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [String](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*result*

Type: [ConnectApi.MentionCompletionPage](#)

A `ConnectApi.MentionCompletionPage` object containing test data.

Return Value

Type: Void

SEE ALSO:

[getMentionCompletions\(communityId, q, contextId, type, pageParam, pageSize\)](#)

[Testing ConnectApi Code](#)

## NextBestAction Class (Pilot)

Access recommendations and propositions.

 **Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](#).

## Namespace

[ConnectApi](#)

## NextBestActions Methods (Pilot)

The following are methods for `NextBestActions`. All methods are static.

IN THIS SECTION:

[getProposition\(propositionId\) \(Pilot\)](#)

Get a proposition.

[getRecommendations\(strategyName, maxResults, contextRecordId\) \(Pilot\)](#)

Get recommendations for a strategy.

[setRecommendationReaction\(reaction\) \(Pilot\)](#)

Record user reactions to recommendations.

### **getProposition (propositionId) (Pilot)**

Get a proposition.

 **Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](#).

API Version

43.0

Requires Chatter

No

Signature

```
public static ConnectApi.Proposition getProposition(String propositionId)
```

Parameters

*propositionId*

Type: [String](#)

ID of the proposition.

Return Value

Type: [ConnectApi.Proposition](#)

**getRecommendations(strategyName, maxResults, contextRecordId) (Pilot)**

Get recommendations for a strategy.

 **Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](#).

API Version

43.0

Requires Chatter

No

## Signature

```
public static ConnectApi.NBARRecommendations getRecommendations(String strategyName,  
Integer maxResults, String contextRecordId)
```

## Parameters

*strategyName*

Type: [String](#)

Name of the strategy.

*maxResults*

Type: [Integer](#)

Maximum number of results. Valid values are from 1 to 25. If unspecified, the default value is 3.

*contextRecordId*

Type: [String](#)

ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

## Return Value

Type: [ConnectApi.NBARRecommendations](#)

**setRecommendationReaction (reaction) (Pilot)**

Record user reactions to recommendations.

 **Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](#).

## API Version

43.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.NBARReaction  
setRecommendationReaction(ConnectApi.NBARReactionInput reaction)
```

## Parameters

*reaction*

Type: [ConnectApi.NBARReactionInput](#)

A `ConnectApi.NBAReactionInput` object representing a reaction to a recommendation produced by a recommendation strategy.

Return Value

Type: [ConnectApi.NBAReaction](#)

## Organization Class

Access information about an organization.

### Namespace

[ConnectApi](#)

This is the static method of the Organization class:

### Organization Methods

The following are methods for `Organization`. All methods are static.

IN THIS SECTION:

[getSettings\(\)](#)

Returns information about the organization and context user, including which features are enabled.

#### **getSettings ()**

Returns information about the organization and context user, including which features are enabled.

API Version

28.0

Requires Chatter

No

Signature

```
public static ConnectApi.OrganizationSettings getSettings ()
```

Return Value

Type: [ConnectApi.OrganizationSettings](#)

## QuestionAndAnswers Class

Access question and answers suggestions.

## Namespace

[ConnectApi](#)

IN THIS SECTION:

[QuestionAndAnswers Methods](#)

## QuestionAndAnswers Methods

The following are methods for `QuestionAndAnswers`. All methods are static.

IN THIS SECTION:

[getSuggestions\(communityId, q, subjectId, includeArticles, maxResults\)](#)

Returns question and answers suggestions.

[setTestGetSuggestions\(communityId, q, subjectId, includeArticles, maxResults, result\)](#)

Registers a `ConnectApi.QuestionAndAnswersSuggestions` object to be returned when `getSuggestions` is called with matching parameters in a test context. You must use the method with the same parameters or the code throws an exception.

[updateQuestionAndAnswers\(communityId, feedElementId, questionAndAnswersCapability\)](#)

Choose or change the best answer for a question.

### **getSuggestions(communityId, q, subjectId, includeArticles, maxResults)**

Returns question and answers suggestions.

API Version

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.QuestionAndAnswersSuggestions getSuggestions(String communityId,
String q, String subjectId, Boolean includeArticles, Integer maxResults)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*subjectId*

Type: [String](#)

Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

*includeArticles*

Type: [Boolean](#)

Specify `true` to include knowledge articles in the search results. To return only questions, specify `false`.

*maxResults*

Type: [Integer](#)

The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

Return Value

Type: [ConnectApi.QuestionAndAnswersSuggestions](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetSuggestions\(communityId, q, subjectId, includeArticles, maxResults, result\)](#)

[Testing ConnectApi Code](#)

**`setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)`**

Registers a [ConnectApi.QuestionAndAnswersSuggestions](#) object to be returned when `getSuggestions` is called with matching parameters in a test context. You must use the method with the same parameters or the code throws an exception.

API Version

32.0

Signature

```
public static Void setTestGetSuggestions(String communityId, String q, String subjectId, Boolean includeArticles, Integer maxResults, ConnectApi.QuestionAndAnswersSuggestions result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*subjectId*

Type: [String](#)

Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

*includeArticles*

Type: [Boolean](#)

Specify `true` to include knowledge articles in the search results. To return only questions, specify `false`.

*maxResults*

Type: [Integer](#)

The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

*result*

Type: [ConnectApi.QuestionAndAnswersSuggestions](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getSuggestions\(communityId, q, subjectId, includeArticles, maxResults\)](#)

[Testing ConnectApi Code](#)

**updateQuestionAndAnswers(communityId, feedElementId, questionAndAnswersCapability)**

Choose or change the best answer for a question.

API Version

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.QuestionAndAnswersCapability updateQuestionAndAnswers(String
communityId, String feedElementId, ConnectApi.QuestionAndAnswersCapabilityInput
questionAndAnswersCapability)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*feedElementId*

Type: [String](#)

The ID for a feed element.

*questionAndAnswersCapability*

Type: [ConnectApi.QuestionAndAnswersCapabilityInput](#)

Specify the best answer (comment ID) for the question.

Return Value

Type: [ConnectApi.QuestionAndAnswersCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

Example

```
ConnectApi.QuestionAndAnswersCapabilityInput qaInput = new
ConnectApi.QuestionAndAnswersCapabilityInput();
qaInput.bestAnswerId = '0D7D00000001MAKAY';

ConnectApi.QuestionAndAnswersCapability qa =
ConnectApi.QuestionAndAnswers.updateQuestionAndAnswers(null, '0D5D0000000XZjJ', qaInput);
```

## Recommendations Class

Access information about recommendations and reject recommendations. Also create, delete, get, and update recommendation audiences, recommendation definitions, and scheduled recommendations.

### Namespace

[ConnectApi](#)

### Recommendations Methods

The following are methods for `Recommendations`. All methods are static.

IN THIS SECTION:

[createRecommendationAudience\(communityId, recommendationAudience\)](#)

Create an audience for a recommendation.

[createRecommendationAudience\(communityId, name\)](#)

Create an audience for a recommendation.

[createRecommendationDefinition\(communityId, recommendationDefinition\)](#)

Create a recommendation definition.

[createRecommendationDefinition\(communityId, name, title, actionUrl, actionUrlName, explanation\)](#)

Create a recommendation definition with the specified parameters.

[createScheduledRecommendation\(communityId, scheduledRecommendation\)](#)

Create a scheduled recommendation.

[createScheduledRecommendation\(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId\)](#)

Create a scheduled recommendation with the specified parameters.

[createScheduledRecommendation\(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel\)](#)

Create a scheduled recommendation with the specified parameters.

[deleteRecommendationAudience\(communityId, recommendationAudienceId\)](#)

Delete a recommendation audience.

[deleteRecommendationDefinition\(communityId, recommendationDefinitionId\)](#)

Delete a recommendation definition.

[deleteRecommendationDefinitionPhoto\(communityId, recommendationDefinitionId\)](#)

Delete a recommendation definition photo.

[deleteScheduledRecommendation\(communityId, scheduledRecommendationId, deleteDefinitionIfLast\)](#)

Delete a scheduled recommendation.

[getRecommendationAudience\(communityId, recommendationAudienceId\)](#)

Get information about a recommendation audience.

[getRecommendationAudienceMembership\(communityId, recommendationAudienceId\)](#)

Get the members of a recommendation audience.

[getRecommendationAudienceMembership\(communityId, recommendationAudienceId, pageParam, pageSize\)](#)

Get a page of recommendation audience members.

[getRecommendationAudiences\(communityId\)](#)

Get recommendation audiences.

[getRecommendationAudiences\(communityId, pageParam, pageSize\)](#)

Get a page of recommendation audiences.

[getRecommendationDefinition\(communityId, recommendationDefinitionId\)](#)

Get a recommendation definition.

[getRecommendationDefinitionPhoto\(communityId, recommendationDefinitionId\)](#)

Get a recommendation definition photo.

[getRecommendationDefinitions\(communityId\)](#)

Get recommendation definitions.

[getRecommendationForUser\(communityId, userId, action, objectId\)](#)

Returns the recommendation for the context user for the specified action and object ID.

[getRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, maxResults\)](#)

Returns the user, group, file, record, custom, and static recommendations for the context user.

[getRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, channel, maxResults\)](#)

Returns the user, group, file, article, record, topic, custom, and static recommendations for the context user.

[getRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, maxResults\)](#)

Returns the recommendations for the context user for the specified action.

[getRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, channel, maxResults\)](#)

Returns the recommendations for the context user for the specified action.

[getRecommendationsForUser\(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults\)](#)

Returns the recommendations for the context user for the specified action and object category.

[getRecommendationsForUser\(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults\)](#)

Returns the recommendations for the context user for the specified action and object category.

[getScheduledRecommendation\(communityId, scheduledRecommendationId\)](#)

Get a scheduled recommendation.

[getScheduledRecommendations\(communityId\)](#)

Get scheduled recommendations.

[getScheduledRecommendations\(communityId, channel\)](#)

Get scheduled recommendations.

[rejectRecommendationForUser\(communityId, userId, action, objectId\)](#)

Rejects the recommendation for the context user for the specified action and object ID.

[rejectRecommendationForUser\(communityId, userId, action, objectEnum\)](#)

Rejects the static recommendation for the context user.

[updateRecommendationAudience\(communityId, recommendationAudienceId, recommendationAudience\)](#)

Update a recommendation audience.

[updateRecommendationDefinition\(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation\)](#)

Update a recommendation definition with the specified parameters.

[updateRecommendationDefinition\(communityId, recommendationDefinitionId, recommendationDefinition\)](#)

Update a recommendation definition.

[updateRecommendationDefinitionPhoto\(communityId, recommendationDefinitionId, fileUpload\)](#)

Update a recommendation definition photo with a file that hasn't been uploaded.

[updateRecommendationDefinitionPhoto\(communityId, recommendationDefinitionId, fileId, versionNumber\)](#)

Update a recommendation definition photo with a file that's already uploaded.

[updateRecommendationDefinitionPhotoWithAttributes\(communityId, recommendationDefinitionId, photo\)](#)

Update a recommendation definition photo with a file that's been uploaded but requires cropping.

[updateRecommendationDefinitionPhotoWithAttributes\(communityId, recommendationDefinitionId, photo, fileUpload\)](#)

Update a recommendation definition photo with a file that hasn't been uploaded and requires cropping.

[updateScheduledRecommendation\(communityId, scheduledRecommendationId, scheduledRecommendation\)](#)

Update a scheduled recommendation.

[updateScheduledRecommendation\(communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId\)](#)

Update a scheduled recommendation with the specified parameters.

### **createRecommendationAudience(communityId, recommendationAudience)**

Create an audience for a recommendation.

API Version

35.0

Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, ConnectApi.RecommendationAudienceInput recommendationAudience)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationAudience*

Type: [ConnectApi.RecommendationAudienceInput](#)

A `ConnectApi.RecommendationAudienceInput` object.

## Return Value

Type: [ConnectApi.RecommendationAudience](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**createRecommendationAudience (communityId, name)**

Create an audience for a recommendation.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, String name)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*name*

Type: [String](#)

The name of the audience.

## Return Value

Type: [ConnectApi.RecommendationAudience](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**createRecommendationDefinition(*communityId*, *recommendationDefinition*)**

Create a recommendation definition.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinition*

Type: [ConnectApi.RecommendationDefinitionInput](#)

A [ConnectApi.RecommendationDefinitionInput](#) object.

## Return Value

Type: [ConnectApi.RecommendationDefinition](#)

## Usage

Recommendation definitions allow you to create custom recommendations that appear in communities, encouraging users to watch videos, take training and more.

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

These recommendations appear by default on the Customer Service template. Specifically, on the community home and question detail pages and in the feed in communities in the Salesforce mobile web. They also appear anywhere community managers add recommendations using Community Builder in communities using the Summer '15 or later version of the Customer Service template.

**`createRecommendationDefinition`(`communityId`, `name`, `title`, `actionUrl`, `actionUrlName`, `explanation`)**

Create a recommendation definition with the specified parameters.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String
communityId, String name, String title, String actionUrl, String actionUrlName, String
explanation)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*name*

Type: [String](#)

The name of the recommendation definition. The name is displayed in Setup.

*title*

Type: [String](#)

The title of the recommendation definition.

*actionUrl*

Type: [String](#)

The URL for acting on the recommendation, for example, the URL to join a group.

*actionUrlName*

Type: [String](#)

The text label for the action URL in the user interface, for example, "Launch."

*explanation*

Type: [String](#)

The explanation, or body, of the recommendation.

## Return Value

Type: [ConnectApi.RecommendationDefinition](#)

## Usage

Recommendation definitions allow you to create custom recommendations that appear in communities, encouraging users to watch videos, take training and more.

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

These recommendations appear by default on the Customer Service template. Specifically, on the community home and question detail pages and in the feed in communities in the Salesforce mobile web. They also appear anywhere community managers add recommendations using Community Builder in communities using the Summer '15 or later version of the Customer Service template.

**createScheduledRecommendation(*communityId*, *scheduledRecommendation*)**

Create a scheduled recommendation.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*scheduledRecommendation*

Type: [ConnectApi.ScheduledRecommendationInput](#)

A [ConnectApi.ScheduledRecommendationInput](#) object.

## Return Value

Type: [ConnectApi.ScheduledRecommendation](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**`createScheduledRecommendation`**(`communityId`, `recommendationDefinitionId`, `rank`, `enabled`, `recommendationAudienceId`)

Create a scheduled recommendation with the specified parameters.

## API Version

35.0 only

 **Important:** In version 36.0 and later, use `createScheduledRecommendation`(`communityId`, `recommendationDefinitionId`, `rank`, `enabled`, `recommendationAudienceId`, `channel`).

## Requires Chatter

No

## Signature

```
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String
communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String
recommendationAudienceId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the recommendation definition.

*rank*

Type: [Integer](#)

Relative rank of the scheduled recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled recommendations after it is pushed down. See [Ranking scheduled recommendations example](#).

If the specified `rank` is larger than the size of the list, the scheduled recommendation is put at the end of the list. The `rank` of the scheduled recommendation is the size of the list, instead of the one specified.

If a `rank` is not specified, the scheduled recommendation is put at the end of the list.

*enabled*

Type: [Boolean](#)

Indicates whether scheduling is enabled. If `true`, the recommendation is enabled and appears in communities. If `false`, recommendations in feeds in the Salesforce mobile web aren't removed, but no new recommendations appear. In Customer Service and Partner Central communities, disabled recommendations no longer appear.

*recommendationAudienceId*

Type: [String](#)

ID of the recommendation definition that this scheduled recommendation schedules.

Return Value

Type: [ConnectApi.ScheduledRecommendation](#)

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

### Ranking scheduled recommendations example

If you have these scheduled recommendations:

Scheduled Recommendations	Rank
ScheduledRecommendationA	1
ScheduledRecommendationB	2
ScheduledRecommendationC	3

And you include this information in the Scheduled Recommendation Input:

Scheduled Recommendation	Rank
ScheduledRecommendationD	2

The result is:

Scheduled Recommendation	Rank
ScheduledRecommendationA	1
ScheduledRecommendationD	2
ScheduledRecommendationB	3
ScheduledRecommendationC	4

**`createScheduledRecommendation`**(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)

Create a scheduled recommendation with the specified parameters.

API Version

36.0

Requires Chatter

No

Signature

```
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String
communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String
recommendationAudienceId, ConnectApi.RecommendationChannel channel)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the recommendation definition.

*rank*

Type: [Integer](#)

Relative rank of the scheduled recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled recommendations after it is pushed down. See [Ranking scheduled recommendations example](#).

If the specified `rank` is larger than the size of the list, the scheduled recommendation is put at the end of the list. The `rank` of the scheduled recommendation is the size of the list, instead of the one specified.

If a `rank` is not specified, the scheduled recommendation is put at the end of the list.

*enabled*

Type: [Boolean](#)

Indicates whether scheduling is enabled. If `true`, the recommendation is enabled and appears in communities. If `false`, recommendations in feeds in the Salesforce mobile web aren't removed, but no new recommendations appear. In Customer Service and Partner Central communities, disabled recommendations no longer appear.

*recommendationAudienceId*

Type: [String](#)

ID of the recommendation definition that this scheduled recommendation schedules.

*channel*

Type: [ConnectApi.RecommendationChannel](#)

A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.

- `CustomChannel12`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel13`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel14`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel15`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel1`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

Use these channel values; you can't rename or create other channels.

### Return Value

Type: `ConnectApi.ScheduledRecommendation`

### Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

### Ranking scheduled recommendations example

If you have these scheduled recommendations:

Scheduled Recommendations	Rank
ScheduledRecommendationA	1
ScheduledRecommendationB	2
ScheduledRecommendationC	3

And you include this information in the Scheduled Recommendation Input:

Scheduled Recommendation	Rank
ScheduledRecommendationD	2

The result is:

Scheduled Recommendation	Rank
ScheduledRecommendationA	1
ScheduledRecommendationD	2
ScheduledRecommendationB	3

Scheduled Recommendation	Rank
ScheduledRecommendationC	4

### **deleteRecommendationAudience (communityId, recommendationAudienceId)**

Delete a recommendation audience.

API Version

35.0

Requires Chatter

No

Signature

```
public static Void deleteRecommendationAudience(String communityId, String recommendationAudienceId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationAudienceId*

Type: [String](#)

ID of the recommendation audience.

Return Value

Type: Void

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

### **deleteRecommendationDefinition (communityId, recommendationDefinitionId)**

Delete a recommendation definition.

API Version

35.0

Requires Chatter

No

Signature

```
public static void deleteRecommendationDefinition(String communityId, String recommendationDefinitionId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the recommendation definition.

Return Value

Type: `Void`

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**`deleteRecommendationDefinitionPhoto`(`communityId`, `recommendationDefinitionId`)**

Delete a recommendation definition photo.

API Version

35.0

Requires Chatter

Yes

Signature

```
public static void deleteRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the recommendation definition.

Return Value

Type: Void

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**deleteScheduledRecommendation(*communityId*, *scheduledRecommendationId*, *deleteDefinitionIfLast*)**

Delete a scheduled recommendation.

API Version

35.0

Requires Chatter

No

Signature

```
public static Void deleteScheduledRecommendation(String communityId, String
scheduledRecommendationId, Boolean deleteDefinitionIfLast)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*scheduledRecommendationId*

Type: [String](#)

ID of the scheduled recommendation.

*deleteDefinitionIfLast*

Type: [Boolean](#)

If `true` and if this is the last scheduled recommendation of a recommendation definition, deletes the recommendation definition. Default is `false`.

Return Value

Type: Void

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

Deleting a scheduled recommendation is comparable to a deletion in an ordered list. All scheduled recommendations after the deleted scheduled recommendation receive a new, higher rank automatically.

### **getRecommendationAudience (communityId, recommendationAudienceId)**

Get information about a recommendation audience.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationAudience getRecommendationAudience (String communityId, String recommendationAudienceId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationAudienceId*

Type: [String](#)

ID of the recommendation audience.

## Return Value

Type: [ConnectApi.RecommendationAudience](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

### **getRecommendationAudienceMembership (communityId, recommendationAudienceId)**

Get the members of a recommendation audience.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationAudienceId*

Type: [String](#)

ID of the recommendation audience.

Return Value

Type: [ConnectApi.UserReferencePage](#)

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

```
getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)
```

Get a page of recommendation audience members.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationAudienceId*

Type: [String](#)

ID of the recommendation audience.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of members per page.

## Return Value

Type: [ConnectApi.UserReferencePage](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**getRecommendationAudiences (communityId)**

Get recommendation audiences.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

## Return Value

Type: [ConnectApi.RecommendationAudiencePage](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**getRecommendationAudiences (communityId, pageParam, pageSize)**

Get a page of recommendation audiences.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences (String communityId, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of audiences per page.

## Return Value

Type: [ConnectApi.RecommendationAudiencePage](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**getRecommendationDefinition(*communityId*, *recommendationDefinitionId*)**

Get a recommendation definition.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.RecommendationDefinition getRecommendationDefinition(String communityId, String recommendationDefinitionId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the recommendation definition.

Return Value

Type: [ConnectApi.RecommendationDefinition](#)

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**getRecommendationDefinitionPhoto(*communityId*, *recommendationDefinitionId*)**

Get a recommendation definition photo.

API Version

35.0

Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo getRecommendationDefinitionPhoto(String communityId,  
String recommendationDefinitionId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the recommendation definition.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**getRecommendationDefinitions (communityId)**

Get recommendation definitions.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationDefinitionPage getRecommendationDefinitions(String  
communityId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

## Return Value

Type: [ConnectApi.RecommendationDefinitionPage](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**getRecommendationForUser(*communityId*, *userId*, *action*, *objectId*)**

Returns the recommendation for the context user for the specified action and object ID.

## API Version

33.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationCollection getRecommendationForUser(String
communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*action*

Type: [ConnectApi.RecommendationActionType](#)

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*objectId*

Type: [String](#)

Specifies the object to take action on.

- If *action* is `follow`, *objectId* is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If *action* is `join`, *objectId* is a group ID.
- If *action* is `view`, *objectId* is a user ID, file ID, group ID, record ID, custom recommendation ID (version 34.0 and later), the enum `Today` for static recommendations (version 35.0 and later), or an article ID (version 37.0 and later).

Return Value

Type: [ConnectApi.RecommendationCollection](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetRecommendationForUser\(communityId, userId, action, objectId, result\)](#)

[Testing ConnectApi Code](#)

**`getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)`**

Returns the user, group, file, record, custom, and static recommendations for the context user.

API Version

33.0–35.0

 **Important:** In version 36.0 and later, use [getRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, channel, maxResults\)](#).

Requires Chatter

Yes

Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String
communityId, String userId, ConnectApi.RecommendationActionType contextAction, String
contextObjectId, Integer maxResults)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*contextAction*

Type: [ConnectApi.RecommendationActionType](#)

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

`contextObjectId`

Type: [String](#)

ID of the object that the context user just performed an action on.

- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

`maxResults`

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value

Type: [ConnectApi.RecommendationCollection](#)

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam's user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

[Testing ConnectApi Code](#)

**getRecommendationsForUser(*communityId*, *userId*, *contextAction*, *contextObjectId*, *channel*, *maxResults*)**

Returns the user, group, file, article, record, topic, custom, and static recommendations for the context user.

API Version

36.0

Available to Guest Users

38.0

 **Note:** Only article and file recommendations are available to guest users.

Requires Chatter

Yes

Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String
communityId, String userId, ConnectApi.RecommendationActionType contextAction, String
contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*contextAction*

Type: [ConnectApi.RecommendationActionType](#)

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed.

If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is *follow*, *contextObjectId* is a user ID, file ID, record ID, or topic ID.
- If *contextAction* is *view*, *contextObjectId* is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*channel*Type: [ConnectApi.RecommendationChannel](#)

A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel11`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- `CustomChannel12`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel13`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel14`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel15`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel1`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

*maxResults*Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

## Return Value

Type: [ConnectApi.RecommendationCollection](#)

## Usage

If you want to get recommendations based on a recent action performed, such as following a user, use *contextAction* and *contextObjectId* together. For example, if you just followed Pam, you specify `follow` for *contextAction* and Pam's user ID for *contextObjectId*.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**⚠ Important:** In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter

Yes

Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String
communityId, String userId, ConnectApi.RecommendationActionType action,
ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer
maxResults)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*

Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, or record ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, or record ID.

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

## Return Value

Type: [ConnectApi.RecommendationCollection](#)

## Usage

If you want to get recommendations based on a recent action performed, such as following a user, use *contextAction* and *contextObjectId* together. For example, if you just followed Pam, you specify `follow` for *contextAction* and Pam's user ID for *contextObjectId*.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

[Testing ConnectApi Code](#)

**getRecommendationsForUser**(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)

Returns the recommendations for the context user for the specified action and object category.

API Version

33.0–35.0

 **Important:** In version 36.0 and later, use `getRecommendationsForUser`(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults).

Requires Chatter

Yes

Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String
communityId, String userId, ConnectApi.RecommendationActionType action, String
objectCategory, ConnectApi.RecommendationActionType contextAction, String
contextObjectId, Integer maxResults)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: `String`

The ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*objectCategory*

Type: `String`

- If *action* is `follow`, *objectCategory* is `users`, `files`, or `records`.
- If *action* is `join`, *objectCategory* is `groups`.
- If *action* is `view`, *objectCategory* is `users`, `files`, `groups`, `records`, `custom`, or `apps`.

You can also specify a key prefix, the first three characters of the object ID, as the *objectCategory*. Valid values are:

- If *action* is `follow`, *objectCategory* is `005` (users), `069` (files), or `001` (accounts), for example.
- If *action* is `join`, *objectCategory* is `0F9` (groups).

- If *action* is *view*, *objectCategory* is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), or 001 (accounts), for example.

#### *contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

#### *contextObjectId*

Type: `String`

ID of the object that the context user just performed an action on.

- If *contextAction* is *follow*, *contextObjectId* is a user ID, file ID, or record ID.
- If *contextAction* is *view*, *contextObjectId* is a user ID, file ID, group ID, or record ID.

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

#### *maxResults*

Type: `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

#### Return Value

Type: `ConnectApi.RecommendationCollection`

#### Usage

If you want to get recommendations based on a recent action performed, such as following a user, use *contextAction* and *contextObjectId* together. For example, if you just followed Pam, you specify `follow` for *contextAction* and Pam's user ID for *contextObjectId*.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```

## Parameters

*communityId*Type: [String](#)Use either the ID for a community, `internal`, or `null`.*userId*Type: [String](#)The ID for the context user or the keyword `me`.*action*Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*objectCategory*Type: [String](#)

- If *action* is `follow`, *objectCategory* is `users`, `files`, `topics`, or `records`.
- If *action* is `join`, *objectCategory* is `groups`.
- If *action* is `view`, *objectCategory* is `users`, `files`, `groups`, `records`, `custom`, `apps`, or `articles` (version 37.0 and later).

You can also specify a key prefix, the first three characters of the object ID, as the *objectCategory*. Valid values are:

- If *action* is `follow`, *objectCategory* is `005` (users), `069` (files), `0T0` (topics), or `001` (accounts), for example.
- If *action* is `join`, *objectCategory* is `0F9` (groups).
- If *action* is `view`, *objectCategory* is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), `001` (accounts), or `kA0` (articles), for example, (version 37.0 and later).

*contextAction*Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.*contextObjectId*Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, record ID, or topic ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*channel*Type: [ConnectApi.RecommendationChannel](#)

A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel11`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- `CustomChannel12`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

#### **getScheduledRecommendation(`communityId`, `scheduledRecommendationId`)**

Get a scheduled recommendation.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.ScheduledRecommendation getScheduledRecommendation(String
communityId, String scheduledRecommendationId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*scheduledRecommendationId*

Type: [String](#)

ID of the scheduled recommendation.

Return Value

Type: [ConnectApi.ScheduledRecommendation](#)

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

### **getScheduledRecommendations (communityId)**

Get scheduled recommendations.

API Version

35.0 only

 **Important:** In version 36.0 and later, use [getScheduledRecommendations \(communityId, channel\)](#).

Requires Chatter

No

Signature

```
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

Return Value

Type: [ConnectApi.ScheduledRecommendationPage](#)

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

### **getScheduledRecommendations (communityId, channel)**

Get scheduled recommendations.

API Version

36.0

Requires Chatter

No

Signature

```
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId, ConnectApi.RecommendationChannel channel)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*channel*

Type: [ConnectApi.RecommendationChannel](#)

A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel3`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel4`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel5`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

Return Value

Type: [ConnectApi.ScheduledRecommendationPage](#)

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**rejectRecommendationForUser(*communityId*, *userId*, *action*, *objectId*)**

Rejects the recommendation for the context user for the specified action and object ID.

API Version

33.0

Requires Chatter

Yes

Signature

```
public static rejectRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation. Supported values are:

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*objectId*

Type: [String](#)

Specifies the object to take action on.

- If *action* is `follow`, *objectId* is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If *action* is `join`, *objectId* is a group ID.
- If *action* is `view`, *objectId* is a custom recommendation ID, the enum `Today` for static recommendations, or an article ID (version 37.0 and later).

Return Value

Type: `Void`

**rejectRecommendationForUser(*communityId*, *userId*, *action*, *objectEnum*)**

Rejects the static recommendation for the context user.

API Version

34.0

Requires Chatter

Yes

Signature

```
public static rejectRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, ConnectApi.RecommendedObjectType objectEnum)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*action*

Type: [ConnectApi.RecommendationActionType](#)

Specifies the action to take on a recommendation. Supported values are:

- `view`—View a static recommendation.

*objectEnum*

Type: [ConnectApi.RecommendedObjectType](#)

Specifies the object type to take action on.

- `Today`—Static recommendations that don't have an ID, for example, the Today app recommendation.

Return Value

Type: `Void`

```
updateRecommendationAudience(communityId, recommendationAudienceId,
recommendationAudience)
```

Update a recommendation audience.

API Version

35.0

Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationAudience updateRecommendationAudience(String communityId, String recommendationAudienceId, ConnectApi.RecommendationAudienceInput recommendationAudience)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationAudienceId*

Type: [String](#)

ID of the recommendation audience.

*recommendationAudience*

Type: [ConnectApi.RecommendationAudienceInput](#)

A [ConnectApi.RecommendationAudienceInput](#) object.

## Return Value

Type: [ConnectApi.RecommendationAudience](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

```
updateRecommendationDefinition(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation)
```

Update a recommendation definition with the specified parameters.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, String name, String title, String actionUrl, String actionUrlName, String explanation recommendationDefinition)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the recommendation definition.

*name*

Type: [String](#)

The name of the recommendation definition. The name is displayed in Setup.

*title*

Type: [String](#)

The title of the recommendation definition.

*actionUrl*

Type: [String](#)

The URL for acting on the recommendation, for example, the URL to join a group.

*actionUrlName*

Type: [String](#)

The text label for the action URL in the user interface, for example, "Launch."

*explanation*

Type: [String](#)

The explanation, or body, of the recommendation.

## Return Value

Type: [ConnectApi.RecommendationDefinition](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**`updateRecommendationDefinition`(`communityId`, `recommendationDefinitionId`, `recommendationDefinition`)**

Update a recommendation definition.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the recommendation definition.

*recommendationDefinition*

Type: [ConnectApi.RecommendationDefinitionInput](#)

A `ConnectApi.RecommendationDefinitionInput` object containing the properties to update.

## Return Value

Type: [ConnectApi.RecommendationDefinition](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**updateRecommendationDefinitionPhoto(*communityId*, *recommendationDefinitionId*, *fileUpload*)**

Update a recommendation definition photo with a file that hasn't been uploaded.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId, ConnectApi.BinaryInput fileUpload)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the recommendation definition.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

A file to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**updateRecommendationDefinitionPhoto(*communityId*, *recommendationDefinitionId*, *fileId*, *versionNumber*)**

Update a recommendation definition photo with a file that's already uploaded.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId,
String recommendationDefinitionId, String fileId, Integer versionNumber)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the recommendation definition.

*fileId*

Type: [String](#)

ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

*versionNumber*

Type: [Integer](#)

Version number of the existing file. Specify either an existing version number, or `null` to get the latest version.

Return Value

Type: [ConnectApi.Photo](#)

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**updateRecommendationDefinitionPhotoWithAttributes (communityId, recommendationDefinitionId, photo)**

Update a recommendation definition photo with a file that's been uploaded but requires cropping.

API Version

35.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the recommendation definition.

*photo*

Type: [ConnectApi.PhotoInput](#)

A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

Return Value

Type: [ConnectApi.Photo](#)

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**updateRecommendationDefinitionPhotoWithAttributes (communityId, recommendationDefinitionId, photo, fileUpload)**

Update a recommendation definition photo with a file that hasn't been uploaded and requires cropping.

API Version

35.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the recommendation definition.

*photo*

Type: [ConnectApi.PhotoInput](#)

A `ConnectApi.PhotoInput` object specifying the cropping parameters.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

A file to use as the photo. The content type must be usable as an image.

Return Value

Type: [ConnectApi.Photo](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**updateScheduledRecommendation(*communityId*, *scheduledRecommendationId*, *scheduledRecommendation*)**

Update a scheduled recommendation.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*scheduledRecommendationId*

Type: [String](#)

ID of the scheduled recommendation.

*scheduledRecommendation*

Type: [ConnectApi.ScheduledRecommendationInput](#)

A [ConnectApi.ScheduledRecommendationInput](#) object containing the properties to update.

## Return Value

Type: [ConnectApi.ScheduledRecommendation](#)

## Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

### Ranking scheduled recommendations example

If you have these scheduled recommendations:

Scheduled Recommendations	Rank
ScheduledRecommendationA	1
ScheduledRecommendationB	2
ScheduledRecommendationC	3

And you include this information in the Scheduled Recommendation Input:

Scheduled Recommendation	Rank
ScheduledRecommendationD	2

The result is:

Scheduled Recommendation	Rank
ScheduledRecommendationA	1
ScheduledRecommendationD	2
ScheduledRecommendationB	3
ScheduledRecommendationC	4

**updateScheduledRecommendation (communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId)**

Update a scheduled recommendation with the specified parameters.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String
communityId, String scheduledRecommendationId, Integer rank, Boolean enabled, String
recommendationAudienceId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*scheduledRecommendationId*

Type: [String](#)

ID of the scheduled recommendation.

*rank*

Type: [Integer](#)

Relative rank of the scheduled recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled recommendations after it is pushed down. See [Ranking scheduled recommendations example](#).

If the specified `rank` is larger than the size of the list, the scheduled recommendation is put at the end of the list. The `rank` of the scheduled recommendation is the size of the list, instead of the one specified.

If a `rank` is not specified, the scheduled recommendation is put at the end of the list.

*enabled*

Type: [Boolean](#)

Indicates whether scheduling is enabled. If `true`, the recommendation is enabled and appears in communities. If `false`, recommendations in feeds in the Salesforce mobile web aren't removed, but no new recommendations appear. In Customer Service and Partner Central communities, disabled recommendations no longer appear.

*recommendationAudienceId*

Type: [String](#)

ID of the recommendation definition that this scheduled recommendation schedules.

Return Value

Type: [ConnectApi.ScheduledRecommendation](#)

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

### Ranking scheduled recommendations example

If you have these scheduled recommendations:

Scheduled Recommendations	Rank
ScheduledRecommendationA	1
ScheduledRecommendationB	2
ScheduledRecommendationC	3

And you include this information in the Scheduled Recommendation Input:

Scheduled Recommendation	Rank
ScheduledRecommendationD	2

The result is:

Scheduled Recommendation	Rank
ScheduledRecommendationA	1
ScheduledRecommendationD	2
ScheduledRecommendationB	3
ScheduledRecommendationC	4

## Recommendations Test Methods

The following are the test methods for `Recommendations`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### IN THIS SECTION:

#### [setTestGetRecommendationForUser\(communityId, userId, action, objectId, result\)](#)

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

#### [setTestGetRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, maxResults, result\)](#)

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

#### [setTestGetRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, channel, maxResults, result\)](#)

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

#### [setTestGetRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, maxResults, result\)](#)

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

#### [setTestGetRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result\)](#)

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

#### [setTestGetRecommendationsForUser\(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result\)](#)

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

#### [setTestGetRecommendationsForUser\(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result\)](#)

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

#### **setTestGetRecommendationForUser(communityId, userId, action, objectId, result)**

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

33.0

Requires Chatter

Yes

Signature

```
public static void setTestGetRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectId,
ConnectApi.RecommendationCollection result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*objectId*

Type: [String](#)

Specifies the object to take action on.

- If *action* is `follow`, *objectId* is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If *action* is `join`, *objectId* is a group ID.
- If *action* is `view`, *objectId* is a user ID, file ID, group ID, record ID, custom recommendation ID, the enum `Today` for static recommendations, or an article ID (version 37.0 and later).

*result*

Type: [ConnectApi.RecommendationCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRecommendationForUser\(communityId, userId, action, objectId\)](#)

[Testing ConnectApi Code](#)

**setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)**

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

33.0–35.0

 **Important:** In version 36.0 and later, use `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)`.

Requires Chatter

Yes

Signature

```
public static Void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer
maxResults, ConnectApi.RecommendationCollection result)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: `String`

The ID for the context user or the keyword `me`.

*contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*

Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is *follow*, *contextObjectId* is a user ID, file ID, or record ID.
- If *contextAction* is *view*, *contextObjectId* is a user ID, file ID, group ID, or record ID.

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

*result*

Type: [ConnectApi.RecommendationCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, maxResults\)](#)

[Testing ConnectApi Code](#)

**setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)**

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

36.0

Requires Chatter

Yes

Signature

```
public static Void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType contextAction, String contextObjectId,
ConnectApi.RecommendationChannel channel, Integer maxResults,
ConnectApi.RecommendationCollection result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed.

If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*

Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, record ID, or topic ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed.

If you don't want recommendations based on a recent action, specify `null`.

*channel*

Type: `ConnectApi.RecommendationChannel`

A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel11`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- `CustomChannel12`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel13`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel14`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel15`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

*maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

*result*

Type: [ConnectApi.RecommendationCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, channel, maxResults\)](#)

[Testing ConnectApi Code](#)

**setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)**

Registers a [ConnectApi.RecommendationCollection](#) object to be returned when [getRecommendationsForUser](#) is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

33.0–35.0

 **Important:** In version 36.0 and later, use [setTestGetRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result\)](#).

Requires Chatter

Yes

Signature

```
public static Void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType
contextAction, String contextObjectId, Integer maxResults,
ConnectApi.RecommendationCollection result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*action*

Type: [ConnectApi.RecommendationActionType](#)

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

#### `contextAction`

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

#### `contextObjectId`

Type: `String`

ID of the object that the context user just performed an action on.

- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

#### `maxResults`

Type: `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

#### `result`

Type: `ConnectApi.RecommendationCollection`

The object containing test data.

#### Return Value

Type: `Void`

#### SEE ALSO:

[getRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, maxResults\)](#)

[Testing ConnectApi Code](#)

#### **`setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result)`**

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

#### API Version

36.0

Requires Chatter

Yes

Signature

```
public static void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType
contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer
maxResults, ConnectApi.RecommendationCollection result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*

Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, record ID, or topic ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*channel*

Type: [ConnectApi.RecommendationChannel](#)

A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel11`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- `CustomChannel12`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel13`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel14`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel15`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel1`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

*maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

*result*

Type: [ConnectApi.RecommendationCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, channel, maxResults\)](#)

[Testing ConnectApi Code](#)

**`setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)`**

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

33.0–35.0

 **Important:** In version 36.0 and later, use `setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)`.

Requires Chatter

Yes

## Signature

```
public static void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectCategory,
ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer
maxResults, ConnectApi.RecommendationCollection result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*objectCategory*

Type: [String](#)

- If *action* is `follow`, *objectCategory* is `users`, `files`, or `records`.
- If *action* is `join`, *objectCategory* is `groups`.
- If *action* is `view`, *objectCategory* is `users`, `files`, `groups`, `records`, `custom`, or `apps`.

You can also specify a key prefix, the first three characters of the object ID, as the *objectCategory*. Valid values are:

- If *action* is `follow`, *objectCategory* is `005` (users), `069` (files), or `001` (accounts), for example.
- If *action* is `join`, *objectCategory* is `0F9` (groups).
- If *action* is `view`, *objectCategory* is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), or `001` (accounts), for example.

*contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed.

If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*

Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, or record ID.

- If *contextAction* is *view*, *contextObjectId* is a user ID, file ID, group ID, or record ID.

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

*result*

Type: [ConnectApi.RecommendationCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRecommendationsForUser\(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults\)](#)

[Testing ConnectApi Code](#)

**setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)**

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

36.0

Requires Chatter

Yes

Signature

```
public static Void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectCategory,
ConnectApi.RecommendationActionType contextAction, String contextObjectId,
ConnectApi.RecommendationChannel channel, Integer maxResults,
ConnectApi.RecommendationCollection result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

#### *action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

#### *objectCategory*

Type: `String`

- If *action* is `follow`, *objectCategory* is `users`, `files`, `records`, or `topics`.
- If *action* is `join`, *objectCategory* is `groups`.
- If *action* is `view`, *objectCategory* is `users`, `files`, `groups`, `records`, `custom`, `apps`, or `articles` (version 37.0 and later).

You can also specify a key prefix, the first three characters of the object ID, as the *objectCategory*. Valid values are:

- If *action* is `follow`, *objectCategory* is `005` (users), `069` (files), `0T0` (topics), or `001` (accounts), for example.
- If *action* is `join`, *objectCategory* is `0F9` (groups).
- If *action* is `view`, *objectCategory* is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), `001` (accounts), or `kA0` (articles), for example, (version 37.0 and later).

#### *contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

#### *contextObjectId*

Type: `String`

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, record ID, or topic ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

#### *channel*

Type: `ConnectApi.RecommendationChannel`

A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

- `CustomChannel13`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel14`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel15`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel1`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

*maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

*result*

Type: [ConnectApi.RecommendationCollection](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRecommendationsForUser\(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults\)](#)

[Testing ConnectApi Code](#)

## Records Class

Access information about record motifs, which are small icons used to distinguish record types in the Salesforce UI.

### Namespace

[ConnectApi](#)

### Records Methods

The following are methods for `Records`. All methods are static.

IN THIS SECTION:

[getMotif\(communityId, idOrPrefix\)](#)

Returns a `Motif` object that contains the URLs for a set of small, medium, and large motif icons for the specified record. It can also contain a base color for the record.

[getMotifBatch\(communityId, idOrPrefixList\)](#)

Gets a motif for the specified list of objects. Returns a list of `BatchResult` objects containing `ConnectApi.Motif` objects. Returns errors embedded in the results for those users that couldn't be loaded.

**getMotif(*communityId*, *idOrPrefix*)**

Returns a `Motif` object that contains the URLs for a set of small, medium, and large motif icons for the specified record. It can also contain a base color for the record.

API Version

28.0

Requires Chatter

No

Signature

```
public static ConnectApi.Motif getMotif(String communityId, String idOrPrefix)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*idOrPrefix*

Type: `String`

An ID or key prefix.

Return Value

Type: `ConnectApi.Motif`

Usage

Each Salesforce record type has its own set of motif icons. See `ConnectApi.Motif`.

**getMotifBatch(*communityId*, *idOrPrefixList*)**

Gets a motif for the specified list of objects. Returns a list of `BatchResult` objects containing `ConnectApi.Motif` objects. Returns errors embedded in the results for those users that couldn't be loaded.

API Version

31.0

Requires Chatter

No

## Signature

```
public static ConnectApi.BatchResult[] getMotifBatch(String communityId, List<String>
idOrPrefixList)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*idOrPrefixList*

Type: [List<String>](#)

A list of object IDs or prefixes.

## Return Value

Type: [BatchResult\[\]](#)

The `BatchResult.getResults()` method returns a `ConnectApi.Motif` object.

## Example

```
String communityId = null;
List<String> prefixIds = new List<String> { '001', '01Z', '069' };

// Get info about the motifs of all records in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.Records.getMotifBatch(communityId,
prefixIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the color of each motif.
        ConnectApi.Motif motif;
        if (batchResult.getResult() instanceof ConnectApi.Motif) {
            motif = (ConnectApi.Motif) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(motif.color);
    }
    else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

## SalesforceInbox Class

Access information about Automated Activity Capture, which is available in Einstein and Salesforce Inbox.

## Namespace

[ConnectApi](#)

## SalesforceInbox Methods

The following are methods for `SalesforceInbox`. All methods are static.

### IN THIS SECTION:

[shareActivity\(activityId, sharingInfo\)](#)

Share specific emails or events with certain groups of users.

### **shareActivity(activityId, sharingInfo)**

Share specific emails or events with certain groups of users.

API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.ActivitySharingResult shareActivity(String activityId,
ConnectApi.ActivitySharingInput sharingInfo)
```

Parameters

*activityId*

Type: [String](#)

The ID of the activity.

*sharingInfo*

Type: [ConnectApi.ActivitySharingInput](#)

A `ConnectApi.ActivitySharingInput` object.

Return Value

Type: [ConnectApi.ActivitySharingResult](#)

Usage

This method is a feature of both Sales Cloud Einstein and Inbox. It lets users connect their email and calendar to Salesforce. Then, their emails and events are automatically added to related Salesforce records. Users can specify who their individual emails and events are shared with.

## Topics Class

Access information about topics, such as their descriptions, the number of people talking about them, related topics, and information about groups contributing to the topic. Update a topic's name or description, merge topics, and add and remove topics from records and feed items.

## Namespace

[ConnectApi](#)

## Topics Methods

The following are methods for `Topics`. All methods are static.

### IN THIS SECTION:

#### [assignTopic\(communityId, recordId, topicId\)](#)

Assigns the specified topic to the specified record or feed item. Only users with the Assign Topics permission can add existing topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

#### [assignTopicByName\(communityId, recordId, topicName\)](#)

Assigns the specified topic to the specified record or feed item. Only users with the Assign Topics permission can add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

#### [createTopic\(communityId, name, description\)](#)

Creates a topic. Only users with the Create Topics permission can create a topic.

#### [createTopicDataCategoryRules\(communityId, dataCategoryGroup, dataCategory, topicNames\)](#)

Create topic and article assignment rules by data category.

#### [deleteTopic\(communityId, topicId\)](#)

Deletes the specified topic. Only users with the Delete Topics or Modify All Data permission can delete topics.

#### [getGroupsRecentlyTalkingAboutTopic\(communityId, topicId\)](#)

Returns information about the five groups that most recently contributed to the specified topic.

#### [getRecentlyTalkingAboutTopicsForGroup\(communityId, groupId\)](#)

Returns up to five topics most recently used in the specified group.

#### [getRecentlyTalkingAboutTopicsForUser\(communityId, userId\)](#)

Topics recently used by the specified user. Get up to five topics most recently used by the specified user.

#### [getRelatedTopics\(communityId, topicId\)](#)

List of five topics most closely related to the specified topic.

#### [getTopic\(communityId, topicId\)](#)

Returns information about the specified topic.

#### [getTopicDataCategoryRules\(communityId, dataCategoryGroup, dataCategory\)](#)

Get topic and article assignment rules by data category.

#### [getTopics\(communityId, recordId\)](#)

Returns the first page of topics assigned to the specified record or feed item. Administrators must enable topics for objects before users can add topics to records of that object type.

[getTopics\(communityId\)](#)

Returns the first page of topics for the organization.

[getTopics\(communityId, sortParam\)](#)

Returns the first page of topics for the organization in the specified order.

[getTopics\(communityId, pageParam, pageSize\)](#)

Returns the topics for the specified page.

[getTopics\(communityId, pageParam, pageSize, sortParam\)](#)

Returns the topics for the specified page in the specified order.

[getTopics\(communityId, q, sortParam\)](#)

Returns the topics that match the specified search criteria in the specified order.

[getTopics\(communityId, q, pageParam, pageSize\)](#)

Returns the topics that match the specified search criteria for the specified page.

[getTopics\(communityId, q, pageParam, pageSize, sortParam\)](#)

Returns the topics that match the specified search criteria for the specified page in the specified order.

[getTopics\(communityId, q, exactMatch\)](#)

Returns the topic that matches the exact, case-insensitive name.

[getTopicsOrFallbackToRenamedTopics\(communityId, q, exactMatch, fallbackToRenamedTopics\)](#)

If there isn't an exact match, returns the most recent renamed topic match.

[getTopicSuggestions\(communityId, recordId, maxResults\)](#)

Returns suggested topics for the specified record or feed item. Administrators must enable topics for objects before users can see suggested topics for records of that object type.

[getTopicSuggestions\(communityId, recordId\)](#)

Returns suggested topics for the specified record or feed item. Administrators must enable topics for objects before users can see suggested topics for records of that object type.

[getTopicSuggestionsForText\(communityId, text, maxResults\)](#)

Returns suggested topics for the specified string of text.

[getTopicSuggestionsForText\(communityId, text\)](#)

Returns suggested topics for the specified string of text.

[getTrendingTopics\(communityId\)](#)

List of the top five trending topics for the organization.

[getTrendingTopics\(communityId, maxResults\)](#)

List of the top five trending topics for the organization.

[mergeTopics\(communityId, topicId, idsToMerge\)](#)

Merges up to five secondary topics with the specified primary topic.

[reassignTopicDataCategoryRules\(communityId, dataCategoryGroup, dataCategory, topicNames\)](#)

Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

[reassignTopicsByName\(\*communityId\*, \*recordId\*, \*topicNames\*\)](#)

Reassigns all the topics on a record or feed item, that is, removes all the assigned topics on a record or feed item and adds topics. Optionally, provides a list of suggested topics to assign to a record or feed item to improve future topic suggestions. Only users with the Assign Topics permission can remove topics from records or feed items and add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

[unassignTopic\(\*communityId\*, \*recordId\*, \*topicId\*\)](#)

Removes the specified topic from the specified record or feed item. Only users with the Assign Topics permission can remove topics from feed items or records. Administrators must enable topics for objects before users can add topics to records of that object type.

[updateTopic\(\*communityId\*, \*topicId\*, \*topic\*\)](#)

Updates the description or name of the specified topic or merges up to five secondary topics with the specified primary topic.

[updateTopicsForArticlesInDataCategory\(\*communityId\*, \*dataCategoryGroup\*, \*dataCategory\*, \*articleTopicAssignmentJob\*\)](#)

Assign topics to articles and unassign topics from articles in a data category.

**assignTopic(*communityId*, *recordId*, *topicId*)**

Assigns the specified topic to the specified record or feed item. Only users with the Assign Topics permission can add existing topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

## API Version

29.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Topic assignTopic(String communityId, String recordId, String
topicId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recordId*

Type: [String](#)

The ID for a record or feed item.

*topicId*

Type: [String](#)

The ID for a topic.

## Return Value

Type: [ConnectApi.Topic](#)

**assignTopicByName(*communityId*, *recordId*, *topicName*)**

Assigns the specified topic to the specified record or feed item. Only users with the Assign Topics permission can add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

API Version

29.0

Requires Chatter

No

Signature

```
public static ConnectApi.Topic assignTopicByName(String communityId, String recordId, String topicName)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recordId*

Type: [String](#)

The ID of the record or feed item to which to assign the topic.

*topicName*

Type: [String](#)

The name of a new or existing topic.

Return Value

Type: [ConnectApi.Topic](#)

**createTopic(*communityId*, *name*, *description*)**

Creates a topic. Only users with the Create Topics permission can create a topic.

API Version

36.0

Requires Chatter

No

## Signature

```
public static ConnectApi.Topic createTopic(String communityId, String name, String description)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*name*

Type: [String](#)

The name of the topic.

*description*

Type: [String](#)

The description of the topic.

## Return Value

Type: [ConnectApi.Topic](#)

```
createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
```

Create topic and article assignment rules by data category.

## API Version

40.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage createTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*dataCategoryGroup*

Type: [String](#)

The data category group used by articles.

*dataCategory*

Type: [String](#)

The data category used by articles.

*topicNames*

Type: [ConnectApi.TopicNamesInput](#)

A [ConnectApi.TopicNamesInput](#) object with the names of topics to assign to articles in a data category.

Return Value

Type: [ConnectApi.TopicPage](#)

### **deleteTopic(*communityId*, *topicId*)**

Deletes the specified topic. Only users with the Delete Topics or Modify All Data permission can delete topics.

API Version

29.0

Requires Chatter

No

Signature

```
public static Void deleteTopic(String communityId, String topicId)
```

Parameters

*communityId*

Type: [String](#),

Use either the ID for a community, `internal`, or `null`.

*topicId*

Type: [String](#)

The ID for a topic.

Return Value

Type: Void

Usage

Topic deletion is asynchronous. If a topic is requested before the deletion completes, the response is 200: Successful and the `isBeingDeleted` property of [ConnectApi.Topic](#) is `true` in version 33.0 and later. If a topic is requested after the deletion completes, the response is 404: NOT\_FOUND.

**getGroupsRecentlyTalkingAboutTopic(*communityId*, *topicId*)**

Returns information about the five groups that most recently contributed to the specified topic.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterGroupSummaryPage  
getGroupsRecentlyTalkingAboutTopic(String communityId, String topicId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*topicId*

Type: [String](#)

The ID for a topic.

Return Value

Type: [ConnectApi.ChatterGroupSummaryPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetGroupsRecentlyTalkingAboutTopic\(\*communityId\*, \*topicId\*, \*result\*\)](#)

[Testing ConnectApi Code](#)

**getRecentlyTalkingAboutTopicsForGroup(*communityId*, *groupId*)**

Returns up to five topics most recently used in the specified group.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForGroup(String communityId, String groupId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

Return Value

Type: [ConnectApi.TopicPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetRecentlyTalkingAboutTopicsForGroup\(communityId, groupId, result\)](#)

[Testing ConnectApi Code](#)

**getRecentlyTalkingAboutTopicsForUser(communityId, userId)**

Topics recently used by the specified user. Get up to five topics most recently used by the specified user.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForUser (String communityId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

Return Value

Type: [ConnectApi.TopicPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetRecentlyTalkingAboutTopicsForUser\(communityId, userId, result\)](#)

[Testing ConnectApi Code](#)

**getRelatedTopics (communityId, topicId)**

List of five topics most closely related to the specified topic.

Two topics that are assigned to the same feed item at least three times are related.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicPage getRelatedTopics(String communityId, String topicId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*topicId*

Type: [String](#)

The ID for a topic.

Return Value

Type: [ConnectApi.TopicPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetRelatedTopics\(communityId, topicId, result\)](#)

[Testing ConnectApi Code](#)

**getTopic(communityId, topicId)**

Returns information about the specified topic.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.Topic getTopic(String communityId, String topicId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*topicId*

Type: [String](#)

The ID for a topic.

## Return Value

Type: [ConnectApi.Topic](#)

**getTopicDataCategoryRules (communityId, dataCategoryGroup, dataCategory)**

Get topic and article assignment rules by data category.

## API Version

40.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage getTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*dataCategoryGroup*

Type: [String](#)

The data category group used by articles.

*dataCategory*

Type: [String](#)

The data category used by articles.

## Return Value

Type: [ConnectApi.TopicPage](#)

**getTopics (communityId, recordId)**

Returns the first page of topics assigned to the specified record or feed item. Administrators must enable topics for objects before users can add topics to records of that object type.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, String recordId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recordId*

Type: [String](#)

The ID for a record or feed item.

Return Value

Type: [ConnectApi.TopicPage](#)

**getTopics (communityId)**

Returns the first page of topics for the organization.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicPage getTopics(String communityId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

Return Value

Type: [ConnectApi.TopicPage](#)

**getTopics (communityId, sortParam)**

Returns the first page of topics for the organization in the specified order.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, ConnectApi.TopicSort  
sortParam)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*sortParam*

Type: [ConnectApi.TopicSort](#)

Values are:

- `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
- `alphaAsc`—Sorts topics alphabetically.

Return Value

Type: [ConnectApi.TopicPage](#)

**getTopics(*communityId*, *pageParam*, *pageSize*)**

Returns the topics for the specified page.

API Version

29.0

Available to Guest Users

32.0

Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.TopicPage](#)

**getTopics(*communityId*, *pageParam*, *pageSize*, *sortParam*)**

Returns the topics for the specified page in the specified order.

33.0

Available to Guest Users

33.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, String q, Boolean exactMatch)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Specifies the string to search. The string must contain at least two characters, not including wildcards.

*exactMatch*

Type: [Boolean](#)

Specify `true` to find a topic by its exact, case-insensitive name.

Return Value

Type: [ConnectApi.TopicPage](#)

**getTopicsOrFallbackToRenamedTopics(*communityId*, *q*, *exactMatch*, *fallbackToRenamedTopics*)**

If there isn't an exact match, returns the most recent renamed topic match.

API Version

35.0

Available to Guest Users

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicPage getTopicsOrFallbackToRenamedTopics(String communityId,
String q, Boolean exactMatch, Boolean fallbackToRenamedTopics)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*q*

Type: [String](#)

Specifies the string to search. The string must contain at least two characters, not including wildcards.

*exactMatch*

Type: [Boolean](#)

Specify `true` to find a topic by its exact, case-insensitive name or to find the most recent renamed topic match if there isn't an exact match.

*fallbackToRenamedTopics*

Type: [Boolean](#)

Specify `true` and if there isn't an exact match, the most recent renamed topic match is returned. If there are multiple renamed topic matches, only the most recent is returned. If there are no renamed topic matches, an empty collection is returned.

Return Value

Type: [ConnectApi.TopicPage](#)

**getTopicSuggestions(*communityId*, *recordId*, *maxResults*)**

Returns suggested topics for the specified record or feed item. Administrators must enable topics for objects before users can see suggested topics for records of that object type.

API Version

29.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId,  
String recordId, Integer maxResults)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recordId*

Type: [String](#)

The ID for a record or feed item.

*maxResults*

Type: [Integer](#)

Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value

Type: [ConnectApi.TopicSuggestionPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetTopicSuggestions\(\*communityId\*, \*recordId\*, \*maxResults\*, \*result\*\)](#)

[Testing ConnectApi Code](#)

**getTopicSuggestions(*communityId*, *recordId*)**

Returns suggested topics for the specified record or feed item. Administrators must enable topics for objects before users can see suggested topics for records of that object type.

API Version

29.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId,  
String recordId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recordId*

Type: [String](#)

The ID for a record or feed item.

Return Value

Type: [ConnectApi.TopicSuggestionPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetTopicSuggestions\(communityId, recordId, result\)](#)

[Testing ConnectApi Code](#)

**`getTopicSuggestionsForText(communityId, text, maxResults)`**

Returns suggested topics for the specified string of text.

API Version

29.0

Requires Chatter

No

## Signature

```
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText (String communityId, String text, Integer maxResults)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*text*

Type: [String](#)

String of text.

*maxResults*

Type: [Integer](#)

Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

## Return Value

Type: [ConnectApi.TopicSuggestionPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestGetTopicSuggestionsForText\(communityId, text, maxResults, result\)](#)

[Testing ConnectApi Code](#)

**getTopicSuggestionsForText (communityId, text)**

Returns suggested topics for the specified string of text.

## API Version

29.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText (String communityId, String text)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*text*

Type: [String](#)

String of text.

## Return Value

Type: [ConnectApi.TopicSuggestionPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

### **getTrendingTopics(communityId, maxResults)**

List of the top five trending topics for the organization.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicPage getTrendingTopics(String communityId, Integer maxResults)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*maxResults*

Type: [Integer](#)

Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value

Type: [ConnectApi.TopicPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestGetTrendingTopics\(`communityId`, `maxResults`, `result`\)](#)

[Testing ConnectApi Code](#)

**`mergeTopics(communityId, topicId, idsToMerge)`**

Merges up to five secondary topics with the specified primary topic.

## API Version

33.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Topic mergeTopics(String communityId, String topicId,
List<String> idsToMerge)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*topicId*

Type: [String](#)

The ID for the primary topic for the merge. If this topic is a managed topic, it retains its topic type, topic images, and children topics.

*idsToMerge*

Type: [List<String>](#)

A list of up to five comma-separated secondary topic IDs to merge with the primary topic. If any of these secondary topics are managed topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic.

## Return Value

Type: [ConnectApi.Topic](#)

## Usage

Only users with the Delete Topics or Modify All Data permission can merge topics.

**reassignTopicDataCategoryRules(*communityId*, *dataCategoryGroup*, *dataCategory*, *topicNames*)**

Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

API Version

40.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicPage reassignTopicDataCategoryRules(String communityId,
String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*dataCategoryGroup*

Type: [String](#)

The data category group used by articles.

*dataCategory*

Type: [String](#)

The data category used by articles.

*topicNames*

Type: [ConnectApi.TopicNamesInput](#)

A `ConnectApi.TopicNamesInput` object with the names of topics to reassign to articles in a data category.

Return Value

Type: [ConnectApi.TopicPage](#)

**reassignTopicsByName(*communityId*, *recordId*, *topicNames*)**

Reassigns all the topics on a record or feed item, that is, removes all the assigned topics on a record or feed item and adds topics. Optionally, provides a list of suggested topics to assign to a record or feed item to improve future topic suggestions. Only users with the Assign Topics permission can remove topics from records or feed items and add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicPage reassignTopicsByName(String communityId, String recordId, ConnectApi.TopicNamesInput topicNames)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recordId*

Type: [String](#)

The ID of the record or feed item to which to assign the topic.

*topicNames*

Type: [ConnectApi.TopicNamesInput](#)

A list of topics to replace the currently assigned topics. Optionally, a list of suggested topics to assign to improve future topic suggestions.

Return Value

Type: [ConnectApi.TopicPage](#)

### **unassignTopic(*communityId*, *recordId*, *topicId*)**

Removes the specified topic from the specified record or feed item. Only users with the Assign Topics permission can remove topics from feed items or records. Administrators must enable topics for objects before users can add topics to records of that object type.

API Version

29.0

Requires Chatter

No

Signature

```
public static Void unassignTopic(String communityId, String recordId, String topicId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recordId*

Type: [String](#)

The ID for a record or feed item.

*topicId*

Type: [String](#)

The ID for a topic.

Return Value

Type: Void

### **updateTopic(*communityId*, *topicId*, *topic*)**

Updates the description or name of the specified topic or merges up to five secondary topics with the specified primary topic.

API Version

29.0

Requires Chatter

No

Signature

```
public static ConnectApi.Topic updateTopic(String communityId, String topicId,
ConnectApi.TopicInput topic)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*topicId*

Type: [String](#)

The ID for a topic.

*topic*

Type: [ConnectApi.TopicInput](#)

A `ConnectApi.TopicInput` object containing the name and description of the topic or up to five comma-separated secondary topic IDs to merge with the primary topic.

Return Value

Type: [ConnectApi.Topic](#)

## Usage

Only users with the Edit Topics or Modify All Data permission can update topic names and descriptions. Only users with the Delete Topics or Modify All Data permission can merge topics.

### **updateTopicsForArticlesInDataCategory (communityId, dataCategoryGroup, dataCategory, articleTopicAssignmentJob)**

Assign topics to articles and unassign topics from articles in a data category.

## API Version

40.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage updateTopicsForArticlesInDataCategory(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.ArticleTopicAssignmentJobInput articleTopicAssignmentJob)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*dataCategoryGroup*

Type: [String](#)

The data category group used by articles.

*dataCategory*

Type: [String](#)

The data category used by articles.

*articleTopicAssignmentJob*

Type: [ConnectApi.ArticleTopicAssignmentJobInput](#)

A [ConnectApi.ArticleTopicAssignmentJobInput](#) object that indicates the operation to take on which topics.

## Return Value

Type: [ConnectApi.TopicPage](#)

## Topics Test Methods

The following are the test methods for `Topics`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

**setTestGetGroupsRecentlyTalkingAboutTopic(*communityId*, *topicId*, *result*)**

Registers a `ConnectApi.ChatterGroupSummaryPage` object to be returned when `ConnectApi.getGroupsRecentlyTalkingAboutTopic` is called in a test context.

API Version

29.0

Signature

```
public static Void setTestGetGroupsRecentlyTalkingAboutTopic(String communityId, String
topicId, ConnectApi.ChatterGroupSummaryPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*topicId*

Type: [String](#)

The ID for a topic.

*result*

Type: [ConnectApi.ChatterGroupSummaryPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getGroupsRecentlyTalkingAboutTopic\(\*communityId\*, \*topicId\*\)](#)

[Testing ConnectApi Code](#)

**setTestGetRecentlyTalkingAboutTopicsForGroup(*communityId*, *groupId*, *result*)**

Registers a `ConnectApi.TopicPage` object to be returned when the `ConnectApi.getRecentlyTalkingAboutTopicsForGroup` method is called in a test context.

API Version

29.0

Signature

```
public static Void setTestGetRecentlyTalkingAboutTopicsForGroup(String communityId,
String groupId, ConnectApi.TopicPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*groupId*

Type: [String](#)

The ID for a group.

*result*

Type: [ConnectApi.TopicPage](#)

The object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[getRecentlyTalkingAboutTopicsForGroup\(communityId, groupId\)](#)

[Testing ConnectApi Code](#)

**setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)**

Creates a topics page to use for testing. After you create the page, use the matching

`ConnectApi.getRecentlyTalkingAboutTopicsForUser` method to access the test page and run your tests. Use the method with the same parameters or you receive an exception.

## API Version

29.0

## Signature

```
public static Void setTestGetRecentlyTalkingAboutTopicsForUser(String communityId,  
String userId, ConnectApi.TopicPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

*result*

Type: [ConnectApi.TopicPage](#)

Specify the test topics page.

Return Value

Type: Void

SEE ALSO:

[getRecentlyTalkingAboutTopicsForUser\(communityId, userId\)](#)

[Testing ConnectApi Code](#)

### **setTestGetRelatedTopics (communityId, topicId, result)**

Registers a `ConnectApi.TopicPage` object to be returned when the `ConnectApi.getRelatedTopics` method is called in a test context.

API Version

29.0

Signature

```
public static Void setTestGetRelatedTopics(String communityId, String topicId,
ConnectApi.TopicPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*topicId*

Type: [String](#)

The ID for a topic.

*result*

Type: [ConnectApi.TopicPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getRelatedTopics\(communityId, topicId\)](#)

[Testing ConnectApi Code](#)

### **setTestGetTopicSuggestions (communityId, recordId, maxResults, result)**

Registers a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestions` method is called in a test context. Use the method with the same parameters or you receive an exception. Use the method with the same parameters or you receive an exception.

API Version

29.0

Signature

```
public static Void setTestGetTopicSuggestions(String communityId, String recordId, Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recordId*

Type: [String](#)

The ID for a record or feed item.

*maxResults*

Type: [Integer](#)

Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

*result*

Type: [ConnectApi.TopicSuggestionPage](#)

Specify the test topic suggestions page.

Return Value

Type: Void

SEE ALSO:

[getTopicSuggestions\(communityId, recordId, maxResults\)](#)

[Testing ConnectApi Code](#)

### **setTestGetTopicSuggestions(communityId, recordId, result)**

Registers a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

29.0

Signature

```
public static Void setTestGetTopicSuggestions(String communityId, String recordId, ConnectApi.TopicSuggestionPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*recordId*

Type: [String](#)

The ID for a record or feed item.

*result*

Type: [ConnectApi.TopicSuggestionPage](#)

The object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[getTopicSuggestions\(communityId, recordId\)](#)

[Testing ConnectApi Code](#)

**setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)**

Registers a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestionsForText` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

29.0

## Signature

```
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*text*

Type: [String](#)

String of text.

*maxResults*

Type: [Integer](#)

Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

*result*

Type: [ConnectApi.TopicSuggestionPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getTopicSuggestionsForText\(communityId, text, maxResults\)](#)

[Testing ConnectApi Code](#)

**setTestGetTopicSuggestionsForText(communityId, text, result)**

Registers a [ConnectApi.TopicSuggestionPage](#) object to be returned when the matching [ConnectApi.getTopicSuggestionsForText](#) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

29.0

Signature

```
public static Void setTestGetTopicSuggestionsForText(String communityId, String text,
ConnectApi.TopicSuggestionPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*text*

Type: [String](#)

String of text.

*result*

Type: [ConnectApi.TopicSuggestionPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getTopicSuggestionsForText\(communityId, text\)](#)

[Testing ConnectApi Code](#)

### **setTestGetTrendingTopics (communityId, result)**

Registers a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getTrendingTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

29.0

Signature

```
public static Void setTestGetTrendingTopics(String communityId, ConnectApi.TopicPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*result*

Type: [ConnectApi.TopicPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[getTrendingTopics\(communityId\)](#)

[Testing ConnectApi Code](#)

### **setTestGetTrendingTopics (communityId, maxResults, result)**

Registers a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getTrendingTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

29.0

## Signature

```
public static void setTestGetTrendingTopics(String communityId, Integer maxResults,
ConnectApi.TopicPage result)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*maxResults*

Type: [Integer](#)

Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

*result*

Type: [ConnectApi.TopicPage](#)

The object containing test data.

## Return Value

Type: `Void`

## SEE ALSO:

[getTrendingTopics\(communityId, maxResults\)](#)

[Testing ConnectApi Code](#)

## UserProfiles Class

Access user profile data. The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

## Namespace

[ConnectApi](#)

## UserProfiles Methods

The following are methods for `UserProfiles`. All methods are static.

## IN THIS SECTION:

[deleteBannerPhoto\(communityId, userId\)](#)

Delete a user banner photo.

[deletePhoto\(communityId, userId\)](#)

Deletes the specified user's photo.

[getBannerPhoto\(communityId, userId\)](#)

Get a user banner photo.

[getPhoto\(communityId, userId\)](#)

Returns information about the specified user's photo.

[getUserProfile\(communityId, userId\)](#)

Returns the user profile of the context user.

[setBannerPhoto\(communityId, userId, fileId, versionNumber\)](#)

Set the user banner photo to an already uploaded file.

[setBannerPhoto\(communityId, userId, fileUpload\)](#)

Set the user banner photo to a file that hasn't been uploaded.

[setBannerPhotoWithAttributes\(communityId, userId, bannerPhoto\)](#)

Set and crop an already uploaded file as the user banner photo.

[setBannerPhotoWithAttributes\(communityId, userId, bannerPhoto, fileUpload\)](#)

Set the user banner photo to a file that hasn't been uploaded and requires cropping.

[setPhoto\(communityId, userId, fileId, versionNumber\)](#)

Sets the user photo to be the specified, already uploaded file.

[setPhoto\(communityId, userId, fileUpload\)](#)

Sets the provided blob to be the photo for the specified user. The content type must be usable as an image.

[setPhotoWithAttributes\(communityId, userId, photo\)](#)

Sets and crops the existing file as the photo for the specified user. The content type must be usable as an image.

[setPhotoWithAttributes\(communityId, userId, photo, fileUpload\)](#)

Sets and crops the provided blob as the photo for the specified user. The content type must be usable as an image.

### **deleteBannerPhoto (communityId, userId)**

Delete a user banner photo.

API Version

36.0

Requires Chatter

No

Signature

```
public static void deleteBannerPhoto(String communityId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

Return Value

Type: Void

### **deletePhoto (communityId, userId)**

Deletes the specified user's photo.

API Version

35.0

Requires Chatter

No

Signature

```
public static Void deletePhoto(String communityId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

Return Value

Type: Void

### **getBannerPhoto (communityId, userId)**

Get a user banner photo.

API Version

36.0

Requires Chatter

No

Signature

```
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

Return Value

Type: [ConnectApi.BannerPhoto](#)

**getPhoto(*communityId*, *userId*)**

Returns information about the specified user's photo.

API Version

35.0

Available to Guest Users

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.Photo getPhoto(String communityId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

Return Value

Type: [ConnectApi.Photo](#)

SEE ALSO:

[Methods Available to Communities Guest Users](#)

**getUserProfile(*communityId*, *userId*)**

Returns the user profile of the context user.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UserProfile getUserProfile(String communityId, String userId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for a user.

Return Value

Type: [ConnectApi.UserProfile](#)

**setBannerPhoto(*communityId*, *userId*, *fileId*, *versionNumber*)**

Set the user banner photo to an already uploaded file.

API Version

36.0

Requires Chatter

No

## Signature

```
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId,
String fileId, Integer versionNumber)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

*fileId*

Type: [String](#)

ID of the already uploaded file to use as the user banner. The key prefix must be 069, and the image must be smaller than 8 MB.

*versionNumber*

Type: [Integer](#)

Version number of the file. Specify an existing version number or, to get the latest version, specify `null`.

## Return Value

Type: [ConnectApi.BannerPhoto](#)

## Usage

Photos are processed asynchronously and may not be visible right away.

**setBannerPhoto(*communityId*, *userId*, *fileUpload*)**

Set the user banner photo to a file that hasn't been uploaded.

## API Version

36.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId,
ConnectApi.BinaryInput fileUpload)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: `String`

ID of the user.

*fileUpload*

Type: `ConnectApi.BinaryInput`

A file to use as the photo. The content type must be usable as an image.

Return Value

Type: `ConnectApi.BannerPhoto`

Usage

Photos are processed asynchronously and may not be visible right away.

**`setBannerPhotoWithAttributes`**(`communityId`, `userId`, `bannerPhoto`)

Set and crop an already uploaded file as the user banner photo.

API Version

36.0

Requires Chatter

No

Signature

```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,  
String userId, ConnectApi.BannerPhotoInput bannerPhoto)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: `String`

ID of the user.

*bannerPhoto*

Type: `ConnectApi.BannerPhotoInput`

A `ConnectApi.BannerPhotoInput` object that specifies the ID and version of the file, and how to crop the file.

Return Value

Type: [ConnectApi.BannerPhoto](#)

Usage

Photos are processed asynchronously and may not be visible right away.

**setBannerPhotoWithAttributes(*communityId*, *userId*, *bannerPhoto*, *fileUpload*)**

Set the user banner photo to a file that hasn't been uploaded and requires cropping.

API Version

36.0

Requires Chatter

No

Signature

```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,  
String userId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput  
fileUpload)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

*bannerPhoto*

Type: [ConnectApi.BannerPhotoInput](#)

A `ConnectApi.BannerPhotoInput` object specifying the cropping parameters.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

A file to use as the photo. The content type must be usable as an image.

Return Value

Type: [ConnectApi.BannerPhoto](#)

Usage

Photos are processed asynchronously and may not be visible right away.

**setPhoto(*communityId*, *userId*, *fileId*, *versionNumber*)**

Sets the user photo to be the specified, already uploaded file.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.Photo setPhoto(String communityId, String userId, String
fileId, Integer versionNumber)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*fileId*

Type: [String](#)

ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

*versionNumber*

Type: [Integer](#)

Version number of the existing file. Specify either an existing version number, or `null` to get the latest version.

Return Value

Type: [ConnectApi.Photo](#)

Usage

Photos are processed asynchronously and may not be visible right away.

**setPhoto(*communityId*, *userId*, *fileUpload*)**

Sets the provided blob to be the photo for the specified user. The content type must be usable as an image.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.Photo setPhoto(String communityId, String userId,
ConnectApi.BinaryInput fileUpload)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: [String](#)

The ID for the context user or the keyword `me`.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

A file to use as the photo. The content type must be usable as an image.

Return Value

Type: [ConnectApi.Photo](#)

Usage

Photos are processed asynchronously and may not be visible right away.

**setPhotoWithAttributes(*communityId*, *userId*, *photo*)**

Sets and crops the existing file as the photo for the specified user. The content type must be usable as an image.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: `String`

The ID for the context user or the keyword `me`.

*photo*

Type: `ConnectApi.PhotoInput`

A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

Return Value

Type: `ConnectApi.Photo`

Usage

Photos are processed asynchronously and may not be visible right away.

**`setPhotoWithAttributes`(`communityId`, `userId`, `photo`, `fileUpload`)**

Sets and crops the provided blob as the photo for the specified user. The content type must be usable as an image.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

Parameters

*communityId*

Type: `String`

Use either the ID for a community, `internal`, or `null`.

*userId*

Type: `String`

The ID for the context user or the keyword `me`.

*photo*

Type: `ConnectApi.PhotoInput`

A `ConnectApi.PhotoInput` object specifying the cropping parameters.

*fileUpload*

Type: `ConnectApi.BinaryInput`

A file to use as the photo. The content type must be usable as an image.

Return Value

Type: [ConnectApi.Photo](#)

Usage

Photos are processed asynchronously and may not be visible right away.

## Wave Class

Send a query string to Wave Analytics and get the results as JSON.

## Namespace

[ConnectApi](#)

## Usage

The Wave class is part of the Wave Analytics Apex SDK. Use the `executeQuery` method to pass a SAQL query from an Apex page to Wave, and get a response in the form of JSON.

This example will send 'your SAQL query' to Wave:

```
String query = '[your SAQL query]';
ConnectApi.LiteralJson result = ConnectApi.Wave.executeQuery(query);
String response = result.json;
```

Also refer to the classes in the `wave` namespace.

## Wave Methods

The following are methods for `wave`. All methods are static.

IN THIS SECTION:

[executeQuery\(query\)](#)

Send a SAQL query string to Wave Analytics, and get a response in the form of JSON.

### **executeQuery (query)**

Send a SAQL query string to Wave Analytics, and get a response in the form of JSON.

API Version

40.0

Requires Chatter

No

Signature

```
public ConnectApi.LiteralJson ConnectApi.Wave.executeQuery(String query)
```

Parameters

*query*

Type: [String](#)

The SAQL query to send to Wave.

Return Value

Type: [LiteralJson](#)

## Zones Class

Access information about Chatter Answers zones in your organization. Zones organize questions into logical groups, with each zone having its own focus and unique questions.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

## Namespace

[ConnectApi](#)

## Zones Methods

The following are methods for `zones`. All methods are static.

### IN THIS SECTION:

[getZone\(communityId, zoneId\)](#)

Returns a specific zone based on the zone ID.

[getZones\(communityId\)](#)

Returns a paginated list of zones.

[getZones\(communityId, pageParam, pageSize\)](#)

Returns a paginated list of zones with the specified page and page size.

[searchInZone\(communityId, zoneId, q, filter\)](#)

Search a zone by keyword. Specify whether to search articles or questions.

[searchInZone\(communityId, zoneId, q, filter, pageParam, pageSize\)](#)

Search a zone by keyword. Specify whether to search articles or questions and specify the page of information to view and the page size.

[searchInZone\(communityId, zoneId, q, filter, language\)](#)

Search a zone by keyword. Specify the language of the results and specify whether to search articles or questions.

**getZone (communityId, zoneId)**

Returns a specific zone based on the zone ID.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

API Version

29.0

Requires Chatter

No

Signature

```
public static ConnectApi.Zone getZone(String communityId, String zoneId)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*zoneId*

Type: [String](#)

The ID of a zone.

Return Value

Type: [ConnectApi.Zone](#)

**getZones (communityId)**

Returns a paginated list of zones.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

API Version

29.0

Requires Chatter

No

## Signature

```
public static ConnectApi.ZonePage getZones(String communityId)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

## Return Value

Type: [ConnectApi.ZonePage](#)

**getZones (communityId, pageParam, pageSize)**

Returns a paginated list of zones with the specified page and page size.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

## API Version

29.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Zone getZones(String communityId, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*pageParam*

Type: [Integer](#)

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ZonePage](#)

### **searchInZone**(communityId, zoneId, q, filter)

Search a zone by keyword. Specify whether to search articles or questions.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

API Version

29.0

Available to Guest Users

37.0

Requires Chatter

No

Signature

```
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*zoneId*

Type: [String](#)

*zoneId*—The ID of a zone.

*q*

Type: [String](#)

*q*—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: [ConnectApi.ZoneSearchResultType](#)

A `ZoneSearchResultType` enum value. One of the following:

- `Article`—Search results contain only articles.
- `Question`—Search results contain only questions.

## Return Value

Type: [ConnectApi.ZoneSearchPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestSearchInZone\(communityId, zoneId, q, filter, result\)](#)

[Testing ConnectApi Code](#)

**searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)**

Search a zone by keyword. Specify whether to search articles or questions and specify the page of information to view and the page size.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

## API Version

37.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*zoneId*

Type: [String](#)

*zoneId*—The ID of a zone.

*q*

Type: [String](#)

*q*—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: [ConnectApi.ZoneSearchResultType](#)

A [ZoneSearchResultType](#) enum value. One of the following:

- [Article](#)—Search results contain only articles.
- [Question](#)—Search results contain only questions.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as [currentPageToken](#) or [nextPageToken](#). If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: [ConnectApi.ZoneSearchPage](#)

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestSearchInZone\(communityId, zoneId, q, filter, pageParam, pageSize, result\)](#)

[Testing ConnectApi Code](#)

### **searchInZone (communityId, zoneId, q, filter, language)**

Search a zone by keyword. Specify the language of the results and specify whether to search articles or questions.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

API Version

36.0

Available to Guest Users

37.0

Requires Chatter

No

## Signature

```
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language)
```

## Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*zoneId*

Type: [String](#)

The ID of a zone.

*q*

Type: [String](#)

Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: [ConnectApi.ZoneSearchResultType](#)

- `Article`—Search results contain only articles.
- `Question`—Search results contain only questions.

*language*

Type: [String](#)

The language of the articles or questions. The value must be a Salesforce supported locale code.

## Return Value

Type: [ConnectApi.ZoneSearchPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestSearchInZone\(communityId, zoneId, q, filter, language, result\)](#)

## Zones Test Methods

The following are the test methods for `Zones`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### **setTestSearchInZone(communityId, zoneId, q, filter, result)**

Registers a `ConnectApi.ZoneSearchPage` object to be returned when `searchInZone(communityId, zoneId, q, filter)` is called in a test context.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

API Version

29.0

Signature

```
public static void setTestSearchInZone(String communityId, String zoneId, String q,
ConnectApi.ZoneSearchResultType filter, ConnectApi.ZoneSearchPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*zoneId*

Type: [String](#)

*zoneId*—The ID of a zone.

*q*

Type: [String](#)

*q*—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: [ConnectApi.ZoneSearchResultType](#)

A `ZoneSearchResultType` enum value. One of the following:

- `Article`—Search results contain only articles.
- `Question`—Search results contain only questions.

*result*

Type: [ConnectApi.ZoneSearchPage](#)

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

[searchInZone\(communityId, zoneId, q, filter\)](#)

[Testing ConnectApi Code](#)

```
setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)
```

Registers a `ConnectApi.ZoneSearchPage` object to be returned when `searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)` is called in a test context.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

API Version

29.0

Signature

```
public static Void setTestSearchInZone(String communityId, String zoneId, String q,
ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize,
ConnectApi.ZoneSearchPage result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*zoneId*

Type: [String](#)

*zoneId*—The ID of a zone.

*q*

Type: [String](#)

*q*—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: [ConnectApi.ZoneSearchResultType](#)

A `ZoneSearchResultType` enum value. One of the following:

- `Article`—Search results contain only articles.
- `Question`—Search results contain only questions.

*pageParam*

Type: [String](#)

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*result*

Type: [ConnectApi.ZoneSearchPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[searchInZone\(communityId, zoneId, q, filter, pageParam, pageSize\)](#)

[Testing ConnectApi Code](#)

### **setTestSearchInZone(communityId, zoneId, q, filter, language, result)**

Registers a `ConnectApi.ZoneSearchPage` object to be returned when `searchInZone(communityId, zoneId, q, filter, language)` is called in a test context.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

API Version

36.0

Signature

```
public static Void setTestSearchInZone(String communityId, String zoneId, String q,
ConnectApi.ZoneSearchResultType filter, String language, ConnectApi.ZoneSearchPage
result)
```

Parameters

*communityId*

Type: [String](#)

Use either the ID for a community, `internal`, or `null`.

*zoneId*

Type: [String](#)

The ID of a zone.

*q*

Type: [String](#)

Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: [ConnectApi.ZoneSearchResultType](#)

- `Article`—Search results contain only articles.
- `Question`—Search results contain only questions.

*language*

Type: [String](#)

The language of the articles or questions. The value must be a Salesforce supported locale code. In an `<apex:page>`, the default value is the language of the page. Otherwise, the default value is the user's locale.

*result*

Type: [ConnectApi.ZoneSearchPage](#)

The object containing test data.

Return Value

Type: Void

SEE ALSO:

[searchInZone\(communityId, zoneId, q, filter, language\)](#)

[Testing ConnectApi Code](#)

## ConnectApi Input Classes

Some `ConnectApi` methods take arguments that are instances of `ConnectApi` input classes.

Input classes are concrete unless marked abstract in this documentation. Concrete input classes have public constructors that have no parameters.

Some methods have parameters that are typed with an abstract class. You must pass in an instance of a concrete child class for these parameters.

Most input class properties can be set. Read-only properties are noted in this documentation.

### ConnectApi.ActionLinkDefinitionInput Class

The definition of an action link. An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

### Usage

You can use context variables in the `actionUrl`, `headers`, and `requestBody` properties. Use context variables to pass information about the user who executed the action link to your server-side code. Salesforce substitutes the value when the action link is executed.

These are the available context variables:

Context Variable	Description
<code>{!actionLinkId}</code>	The ID of the action link the user executed.
<code>{!actionLinkGroupId}</code>	The ID of the action link group containing the action link the user executed.
<code>{!communityId}</code>	The ID of the community in which the user executed the action link. The value for your internal organization is the empty key <code>"000000000000000000"</code> .
<code>{!communityUrl}</code>	The URL of the community in which the user executed the action link. The value for your internal organization is empty string <code>""</code> .

Context Variable	Description
{!orgId}	The ID of the organization in which the user executed the action link.
{!userId}	The ID of the user that executed the action link.

Property	Type	Description	Required or Optional	Available Version
actionType	<a href="#">ConnectApi.ActionLinkType</a>	<p>Defines the type of action link. Values are:</p> <ul style="list-style-type: none"> <li><b>Api</b>—The action link calls a synchronous API at the action URL. Salesforce sets the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> based on the HTTP status code returned by your server.</li> <li><b>ApiAsync</b>—The action link calls an asynchronous API at the action URL. The action remains in a <code>PendingStatus</code> state until a third party makes a request to <code>/connect/action-links/<i>actionLinkId</i></code> to set the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> when the asynchronous operation is complete.</li> <li><b>Download</b>—The action link downloads a file from the action URL.</li> <li><b>Ui</b>—The action link takes the user to a web page at the action URL.</li> </ul> <p>Use <code>Ui</code> if you need to load a page before the user performs an action, for example, to have the user provide input or view something before the action happens.</p> <p> <b>Note:</b> Invoking <code>ApiAsync</code> action links from an app requires a call to set the status. However, there isn't currently a way to set the status of an action link using Apex. To set the status, use Chatter REST API. See the Action Link resource in the <a href="#">Chatter REST API Developer Guide</a> for more information.</p>	<p>Required</p> <p>Can be defined in an action link template.</p>	33.0

Property	Type	Description	Required or Optional	Available Version
<code>actionUrl</code>	<a href="#">String</a>	<p>The action link URL. For example, a <code>Ui</code> action link URL is a Web page. A <code>Download</code> action link URL is a link to the file to download. <code>Ui</code> and <code>Download</code> action link URLs are provided to clients. An <code>Api</code> or <code>ApiAsync</code> action link URL is a REST resource. <code>Api</code> and <code>ApiAsync</code> action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with <code>https://</code>.</p> <p> <b>Tip:</b> To avoid issues due to upgrades or changing functionality in your API, we recommend using a versioned API for <code>actionUrl</code>, for example, <code>https://www.example.com/api/v1/exampleResource</code>. If your API isn't versioned, you can use the <code>expirationDate</code> property of the <code>ConnectApi.ActionLinkGroupDefinitionInput</code> class to avoid issues due to upgrades or changing functionality in your API.</p>	<p>Required</p> <p>Can be defined in an action link template.</p>	33.0
<code>excludedUserId</code>	<a href="#">String</a>	ID of a single user to exclude from performing the action. If you specify an <code>excludedUserId</code> , you can't specify a <code>userId</code> .	<p>Optional</p> <p>Can be defined in an action link template using the <code>UserVisibility</code> and <code>CustomUserAlias</code> fields.</p>	33.0
<code>groupDefault</code>	<a href="#">Boolean</a>	<code>true</code> if this action is the default action link in the action link group; <code>false</code> otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.	<p>Optional</p> <p>Can be defined in an action link template.</p>	33.0
<code>headers</code>	<a href="#">List&lt;ConnectApi.RequestHeaderInput&gt;</a>	<p>The request headers for the <code>Api</code> and <code>ApiAsync</code> action link types.</p> <p>See <a href="#">Action Links Overview, Authentication, and Security</a>.</p>	<p>Optional</p> <p>Can be defined in an action link template.</p>	33.0

Property	Type	Description	Required or Optional	Available Version
labelKey	String	<p>Key for the set of labels to show in the user interface. A set includes labels for these states: <code>NewStatus</code>, <code>PendingStatus</code>, <code>SuccessStatus</code>, <code>FailedStatus</code>. For example, if you use the <code>Approve</code> key, you get these labels: <code>Approve</code>, <code>Pending</code>, <code>Approved</code>, <code>Failed</code>.</p> <p>For a complete list of keys and labels, see <a href="#">Action Links Labels</a>.</p> <p>If none of the predefined labels work for your action link, use a custom label. To use a custom label, create an action link template. See <a href="#">Create Action Link Templates</a>.</p>	<p>Required</p> <p>Can be defined in an action link template.</p>	33.0
method	ConnectApi.HttpRequestMethod	<p>One of these HTTP methods:</p> <ul style="list-style-type: none"> <li><code>HttpDelete</code>—Returns HTTP 204 on success. Response body or output class is empty.</li> <li><code>HttpGet</code>—Returns HTTP 200 on success.</li> <li><code>HttpHead</code>—Returns HTTP 200 on success. Response body or output class is empty.</li> <li><code>HttpPatch</code>—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> <li><code>HttpPost</code>—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.</li> <li><code>HttpPut</code>—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> </ul>	<p>Required</p> <p>Can be defined in an action link template.</p>	33.0
requestBody	String	<p>The request body for <code>Api</code> action links.</p> <p> <b>Note:</b> Escape quotation mark characters in the <code>requestBody</code> value.</p>	<p>Optional</p> <p>Can be defined in an action link template.</p>	33.0
requiresConfirmation	Boolean	<p><code>true</code> to require the user to confirm the action; <code>false</code> otherwise.</p>	<p>Required</p> <p>Can be defined in an action link template.</p>	33.0

Property	Type	Description	Required or Optional	Available Version
<code>userId</code>	<a href="#">String</a>	The ID of the user who can execute the action. If not specified or <code>null</code> , any user can execute the action. If you specify a <code>userId</code> , you can't specify an <code>excludedUserId</code> .	Optional  Can be defined in an action link template using the <code>User Visibility</code> and <code>Custom User Alias</code> fields.	33.0

## SEE ALSO:

[ConnectApi.ActionLinkGroupDefinitionInput Class](#)

## ConnectApi.ActionLinkGroupDefinitionInput Class

The definition of an action link group. All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define stand-alone actions in their own action group.

Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

Property	Type	Description	Required or Optional	Available Version
<code>actionLinks</code>	<a href="#">List&lt;ConnectApi.ActionLinkDefinitionInput&gt;</a>	The action links that make up this group.  Within an action link group, action links are displayed in the order listed in the <code>actionLinks</code> property of the <code>ConnectApi.ActionLinkGroupDefinitionInput</code> class. Within a feed item, action link groups are displayed in the order specified in the <code>actionLinkGroupIds</code> property of the <code>ConnectApi.AssociatedActionsCapabilityInput</code> class.  You can create up to three action links in a <code>Primary</code> group and up to four in an <code>Overflow</code> group.	Required to instantiate this action link group without a template.  To instantiate from a template, don't specify a value.	33.0

Property	Type	Description	Required or Optional	Available Version
category	<a href="#">ConnectApi.PlatformActionGroupCategory</a>	<p>Indicates the priority and relative locations of action links in an associated feed item. Values are:</p> <ul style="list-style-type: none"> <li><code>Primary</code>—The action link group is displayed in the body of the feed element.</li> <li><code>Overflow</code>—The action link group is displayed in the overflow menu of the feed element.</li> </ul>	<p>Required to instantiate this action link group without a template.</p> <p>To instantiate from a template, don't specify a value.</p>	33.0
executionsAllowed	<a href="#">ConnectApi.ActionLinkExecutionsAllowed</a>	<p>Defines the number of times an action link can be executed. Values are:</p> <ul style="list-style-type: none"> <li><code>Once</code>—An action link can be executed only once across all users.</li> <li><code>OncePerUser</code>—An action link can be executed only once for each user.</li> <li><code>Unlimited</code>—An action link can be executed an unlimited number of times by each user. If the action link's <code>actionType</code> is <code>Api</code> or <code>ApiAsync</code>, you can't use this value.</li> </ul>	<p>Required to instantiate this action link group without a template.</p> <p>To instantiate from a template, don't specify a value.</p>	33.0
expirationDate	<a href="#">Datetime</a>	<p>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, that represents the date and time this action link group is removed from associated feed items and can no longer be executed. The <code>expirationDate</code> must be within one year of the creation date.</p> <p>If the action link group definition includes an OAuth token, it is a good idea to set the expiration date of the action link group to the same value as the expiration date of the OAuth token so that users can't execute the action link and get an OAuth error.</p> <p>To set a date when instantiating from a template, see <a href="#">Set the Action Link Group Expiration Time</a>.</p>	<p>Required to instantiate this action link group without a template.</p> <p>Optional to instantiate from a template.</p>	33.0

Property	Type	Description	Required or Optional	Available Version
templateBindings	<a href="#">List&lt;ConnectApi.ActionLinkTemplateBindingInput&gt;</a>	A collection of key-value pairs to fill in binding variable values or a custom user alias from an action link template. To instantiate this action link group from an action link template that uses binding variables, you must provide values for all the variables. See <a href="#">Define Binding Variables</a> .	To instantiate without a template, don't specify a value.  Required to instantiate this action link group from a template that uses binding variables.	33.0
templateId	<a href="#">String</a>	The ID of the action link group template from which to instantiate this action link group.	To instantiate without a template, don't specify a value.  Required to instantiate this action link group from a template.	33.0

## SEE ALSO:

## ConnectApi.ActionLinkTemplateBindingInput

A key-value pair to fill in a binding variable value from an action link template.

Property	Type	Description	Required or Optional	Available Version
key	<a href="#">String</a>	The name of the binding variable key specified in the action link template in Setup. For example, if the binding variable in the template is <code>{!Binding.firstName}</code> , the key is <code>firstName</code>	Required	33.0
value	<a href="#">String</a>	The value of the binding variable key. For example, if the key is <code>firstName</code> , this value could be <code>Joan</code> .	Required	33.0

## SEE ALSO:

[ConnectApi.ActionLinkGroupDefinitionInput Class](#)

## ConnectApi.ActivitySharingInput

Defines who a captured email or event is shared with.

Property	Type	Description	Required or Optional	Available Version
groupsToShareWith	List<String>	List of IDs for the groups that you share the activity with. Valid only if <code>sharingType</code> is <code>MyGroups</code> .	Optional	39.0
sharingType	ConnectApi.ActivitySharingType	Type of sharing operation. Values are: <ul style="list-style-type: none"> <li><code>Everyone</code>—The activity is shared with everyone.</li> <li><code>MyGroups</code>—The activity is shared only with a selection of the context user's groups.</li> <li><code>OnlyMe</code>—The activity is private.</li> </ul>	Required	39.0

## ConnectApi.AlternativeInput

Alternative representation for an extension on a feed element.

Property	Type	Description	Required or Optional	Available Version
textRepresentation	String	Text representation of the extension.	Required	40.0
thumbnailUrl	String	Thumbnail URL for the extension.	Optional	40.0
title	String	Title of the extension.	Optional	40.0

## ConnectApi.AnnouncementInput Class

An announcement.

Property	Type	Description	Required or Optional	Available
body	ConnectApi.MessageBodyInput Class	Text of the announcement.	Required for creating an announcement if <code>feedItemId</code> isn't specified  Don't specify for updating an announcement.	31.0

Property	Type	Description	Required or Optional	Available
<code>expirationDate</code>	<a href="#">Datetime</a>	The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the <code>expirationDate</code> . However, you can use the time value to create your own display logic in your own UI.	Required for creating an announcement  Optional for updating an announcement	31.0
<code>feedItemId</code>	<a href="#">String</a>	ID of an <code>AdvancedTextPost</code> feed item that is the body of the announcement.	Required for creating an announcement if <code>body</code> isn't specified  Don't specify for updating an announcement.	36.0
<code>isArchived</code>	<a href="#">Boolean</a>	Specifies whether the announcement is archived.	Optional	36.0
<code>parentId</code>	<a href="#">String</a>	ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.	Required for creating an announcement if <code>feedItemId</code> isn't specified  Don't specify for updating an announcement.	36.0
<code>sendEmails</code>	<a href="#">Boolean</a>	Specifies whether the announcement is sent as an email to all group members regardless of their email setting for the group. If Chatter emails aren't enabled for the organization, announcement emails aren't sent. Default value is <code>false</code> .	Optional for creating an announcement  Don't specify for updating an announcement	36.0

## SEE ALSO:

[postAnnouncement\(communityId, groupId, announcement\)](#)

**ConnectApi.ArticleTopicAssignmentJobInput**

An article and topic assignment job.

Property	Type	Description	Required or Optional	Available Version
operation	<a href="#">ConnectApi.ArticleTopicJobType</a>	Type of operation to perform on articles and topics. Values are: <ul style="list-style-type: none"> <li>AssignTopicsToArticle—Assign topics to articles in a data category.</li> <li>UnassignTopicsFromArticle—Unassign topics from articles in a data category.</li> </ul>	Required	40.0
topicNames	<a href="#">ConnectApi.TopicNamesInput</a>	List of topic names to assign to or unassign from articles.	Required	40.0

### ConnectApi.AssociatedActionsCapabilityInput Class

A list of action link groups to associate with a feed element. To associate an action link group with a feed element, the call must be made from the Apex namespace that created the action link definition. In addition, the user making the call must have created the definition or have View All Data permission.

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

Property	Type	Description	Required or Optional	Available Version
actionLinkGroupIds	<a href="#">List&lt;String&gt;</a>	The action link group IDs to associate with the feed element. Associate one <code>Primary</code> and up to 10 total action link groups to a feed item. Action link groups are returned in the order specified in this property.  An action link group ID is returned from a call to <a href="#">ConnectApi.ActionLinks.createActionLinkGroupDefinition(<code>communityId</code>, <code>actionLinkGroup</code>)</a> .	Required	33.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

### ConnectApi.AudienceCriteriaInput

Recommendation audience criteria type.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:

- [ConnectApi.CustomListAudienceCriteriaInput](#)

- [ConnectApi.NewUserAudienceCriteriaInput](#)

Property	Type	Description	Required or Optional	Available Version
type	<a href="#">ConnectApi.RecommendationAudienceCriteriaType</a>	Specifies the recommendation audience criteria type. One of these values: <ul style="list-style-type: none"> <li>• <code>CustomList</code>—A custom list of users makes up the audience.</li> <li>• <code>MaxDaysInCommunity</code>—New community members make up the audience.</li> </ul>	Optional If not specified, defaults to <code>CustomList</code> .	36.0

SEE ALSO:

[ConnectApi.RecommendationAudienceInput](#)

## ConnectApi.BannerPhotoInput

A banner photo.

Property	Type	Description	Required or Optional	Available Version
cropHeight	<a href="#">Integer</a>	Height of the crop rectangle in pixels.	Optional	36.0
cropWidth	<a href="#">Integer</a>	Width of the crop rectangle in pixels.	Optional	36.0
cropX	<a href="#">Integer</a>	X position of the crop rectangle from the left edge of the image in pixels. Top left is position (0,0).	Optional	36.0
cropY	<a href="#">Integer</a>	Y position of the crop rectangle from the top edge of the image in pixels. Top left is position (0,0).	Optional	36.0
fileId	<a href="#">String</a>	ID of an existing file. The key prefix must be 069, and the file size must be less than 8 MB.   <b>Note:</b> Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used.	Required	36.0
versionNumber	<a href="#">Integer</a>	Version number of an existing file. If not provided, the latest version is used.	Optional	36.0

## ConnectApi.BinaryInput Class

Create a `ConnectApi.BinaryInput` object to attach files to feed items and comments and to add repository files.

The constructor is:

```
ConnectApi.BinaryInput(blob, contentType, filename)
```

The constructor takes these arguments:

Argument	Type	Description	Available Version
blob	<a href="#">Blob</a>	Contents of the file to be used for input	28.0
contentType	<a href="#">String</a>	MIME type description of the content, such as <code>image/jpeg</code>	28.0
filename	<a href="#">String</a>	File name with the file extension, such as <code>UserPhoto.jpg</code>	28.0

SEE ALSO:

[Post a Feed Element with a New File \(Binary\) Attachment](#)

[Post a Comment with a New File](#)

[ConnectApi.BatchInput Class](#)

## ConnectApi.BatchInput Class

Construct a set of inputs to be passed into a method at the same time.

Use this constructor when there isn't a binary input:

```
ConnectApi.BatchInput(Object input)
```

Use this constructor to pass one binary input:

```
ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)
```

Use this constructor to pass multiple binary inputs:

```
ConnectApi.BatchInput(Object input, List<ConnectApi.BinaryInput> binaries)
```

The constructors takes these parameters:

Argument	Type	Description	Available Version
input	Object	An individual input object to be used in the batch operation. For example, for <code>postFeedElementBatch()</code> , this should be <code>ConnectApi.FeedElementInput</code> .	32.0
binary	<a href="#">ConnectApi.BinaryInput</a>	A binary file to associate with the input object.	32.0
binaries	<a href="#">List&lt;ConnectApi.BinaryInput&gt;</a>	A list of binary files to associate with the input object.	32.0

SEE ALSO:

[Post a Batch of Feed Elements](#)

[Post a Batch of Feed Elements with New \(Binary\) Files](#)

## ConnectApi.BookmarksCapabilityInput

Create or update a bookmark on a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

Property	Type	Description	Required or Optional	Available Version
<code>isBookmarkedByCurrentUser</code>	Boolean	Specifies if the feed element should be bookmarked for the user ( <code>true</code> ) or not ( <code>false</code> ).	No	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.CanvasAttachmentInput Class

**!** **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use [ConnectApi.CanvasCapabilityInput](#).

Used to attach a canvas app to a feed item.

Subclass of [ConnectApi.FeedItemAttachmentInput Class](#)

Property	Type	Description	Available Version
<code>description</code>	String	Optional. The description of the canvas app.	29.0–31.0
<code>developerName</code>	String	The developer name (API name) of the canvas app	29.0–31.0
<code>height</code>	String	Optional. The height of the canvas app in pixels. Default height is 200 pixels.	29.0–31.0
<code>namespacePrefix</code>	String	Optional. The namespace prefix of the Developer Edition organization in which the canvas app was created.	29.0–31.0
<code>parameters</code>	String	Optional. Parameters passed to the canvas app in JSON format. Example: <pre>{ 'isUpdated': 'true' }</pre>	29.0–31.0
<code>thumbnailUrl</code>	String	Optional. A URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.	29.0–31.0
<code>title</code>	String	The title of the link used to call the canvas app.	29.0–31.0

## ConnectApi.CanvasCapabilityInput

Create or update a canvas app associated with a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

Property	Type	Description	Required or Optional	Available Version
description	<a href="#">String</a>	A description of the canvas app. The maximum size is 255 characters.	Optional	32.0
developerName	<a href="#">String</a>	The API name (developer name) of the connected app.	Required	32.0
height	<a href="#">String</a>	The height of the canvas app in pixels.	Optional	32.0
namespacePrefix	<a href="#">String</a>	A unique namespace prefix for the canvas app.	Optional	32.0
parameters	<a href="#">String</a>	JSON parameters passed to the canvas app.	Optional	32.0
thumbnailUrl	<a href="#">String</a>	A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.	Optional	32.0
title	<a href="#">String</a>	A title for the canvas link.	Required	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.ChatterStreamInput

A Chatter feed stream.

Property	Type	Description	Required or Optional	Available Version
description	<a href="#">String</a>	Description of the stream, up to 1,000 characters.	Optional	39.0
name	<a href="#">String</a>	Name of the stream, up to 120 characters.	Required when creating a stream Optional when updating a stream	39.0
subscriptionsToAdd	<a href="#">List&lt;<a href="#">ConnectApi.StreamSubscriptionInput</a>&gt;</a>	List of up to 25 entities whose feeds are included in the stream. Adding an entity that is already added results in no operation. Including the same entity in <code>subscriptionsToAdd</code> and <code>subscriptionsToRemove</code> results in no operation.	Optional	39.0

Property	Type	Description	Required or Optional	Available Version
subscriptionsToRemove	List<ConnectApi.StreamSubscriptionInput>	List of entities whose feeds are removed from the stream. Removing an entity that is already removed results in no operation. Including the same entity in <code>subscriptionsToAdd</code> and <code>subscriptionsToRemove</code> results in no operation.	Optional when updating a stream Not supported when creating a stream	39.0

## ConnectApi.ChatterGroupInput Class

Property	Type	Description	Available
announcement	String	The 18-character ID of an announcement. An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.	31.0
canHaveChatterGuests	Boolean	<code>true</code> if this group allows Chatter customers, <code>false</code> otherwise. After this property is set to <code>true</code> , it cannot be set to <code>false</code> .	29.0
description	String	The "Description" section of the group.	29.0
information	ConnectApi.GroupInformationInput	The "Information" section of a group. If the group is private, this section is visible only to members.	28.0
isArchived	Boolean	<code>true</code> if the group is archived, <code>false</code> otherwise. Defaults to <code>false</code> .	29.0
isAutoArchiveDisabled	Boolean	<code>true</code> if automatic archiving is turned off for the group, <code>false</code> otherwise. Defaults to <code>false</code> .	29.0
name	String	The name of the group.	29.0
owner	String	The ID of the group owner. This property is available for PATCH requests only.	29.0

Property	Type	Description	Available
visibility	<a href="#">ConnectApi.GroupVisibilityType</a>	Group visibility type. <ul style="list-style-type: none"> <li>• <code>PrivateAccess</code>—Only members of the group can see posts to this group.</li> <li>• <code>PublicAccess</code>—All users within the community can see posts to this group.</li> <li>• <code>Unlisted</code>—Reserved for future use.</li> </ul>	29.0

## SEE ALSO:

[createGroup\(communityId, groupInput\)](#)

[updateGroup\(communityId, groupId, groupInput\)](#)

## ConnectApi.CommentInput Class

Used to add rich comments, for example, comments that include @mentions or attachments.

Property	Type	Description	Available Version
attachment	<a href="#">ConnectApi.FeedItemAttachmentInputClass</a>	Optional. Specifies an attachment for the comment. Valid values are: <ul style="list-style-type: none"> <li>• <code>ContentAttachmentInput</code></li> <li>• <code>NewFileAttachmentInput</code></li> </ul> <p><code>LinkAttachmentInput</code> is not permitted for comments.</p> <p> <b>Important:</b> As of version 32.0, use the <code>capabilities</code> property.</p>	28.0–31.0
body	<a href="#">ConnectApi.MessageBodyInputClass</a>	Description of message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a <code>describeSObjects()</code> call on the <code>FeedItem</code> or <code>FeedComment</code> object and look at the length of the <code>Body</code> or <code>CommentBody</code> field to determine the maximum number of allowed characters. <p>To edit this property in a comment, use <code>updateComment(communityId, commentId, comment)</code>. Editing comments is supported in version 34.0 and later.</p> <p>Rich text and inline images are supported in comment bodies in version 35.0 and later. Entity links are supported in version 43.0 and later.</p>	28.0

Property	Type	Description	Available Version
capabilities	<a href="#">ConnectApi.CommentCapabilitiesInput</a>	Optional. Specifies any capabilities for the comment, such as a file attachment.	32.0

## SEE ALSO:

[Post a Comment with a Mention](#)

[Post a Comment with a New File](#)

[Post a Comment with an Existing File](#)

[Post a Rich-Text Feed Comment with a Code Block](#)

[Edit a Comment](#)

[postCommentToFeedElement\(communityId, feedElementId, comment, feedElementFileUpload\)](#)

## ConnectApi.CommentCapabilitiesInput

A container for all capabilities that can be included with a comment.

Property	Type	Description	Required or Optional	Available Version
content	<a href="#">ConnectApi.ContentCapabilityInput</a>	Content to attach to the comment.	Optional	32.0
feedEntityShare	<a href="#">ConnectApi.FeedEntityShareCapabilityInput</a>	Feed entity to share to the comment.	Optional	42.0
record	<a href="#">ConnectApi.RecordCapabilityInput</a>	Existing knowledge article to attach to the comment.	Optional	42.0

## SEE ALSO:

[ConnectApi.CommentInput Class](#)

## ConnectApi.ContentAttachmentInput Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use [ConnectApi.ContentCapabilityInput](#).

Used to attach existing content to a comment or feed item.

Subclass of [ConnectApi.FeedItemAttachmentInput Class](#)

Property	Type	Description	Available Version
contentDocumentId	<a href="#">String</a>	ID of the existing content.	28.0–31.0

## ConnectApi.ContentCapabilityInput

Attach or update a file on a comment. Use this class to attach a new file or update a file that has already been uploaded to Salesforce.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

To attach or remove files from a feed post (instead of a comment) in version 36.0 and later, use [ConnectApi.FilesCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
content DocumentId	<a href="#">String</a>	ID of the existing content.	Required for existing content	32.0
description	<a href="#">String</a>	Description of the file to be uploaded.	Optional	32.0
sharingOption	<a href="#">ConnectApi.FileSharingOption</a>	Sharing option of the file. Values are: <ul style="list-style-type: none"> <li>Allowed—Resharing of the file is allowed.</li> <li>Restricted—Resharing of the file is restricted.</li> </ul>	Optional	35.0
title	<a href="#">String</a>	Title of the file. This value is used as the file name for new content. For example, if the title is My Title, and the file is a .txt file, the file name is My Title.txt.	Required for new content	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.ContentHubFieldValueInput

The fields of the item type.

Property	Type	Description	Required or Optional	Available Version
name	<a href="#">String</a>	Name of the item field.	Required	39.0
value	<a href="#">String</a>	Value of the item field.	Required	39.0

SEE ALSO:

[ConnectApi.ContentHubItemInput](#)

## ConnectApi.ContentHubItemInput

The item type ID and fields of the item type.

Property	Type	Description	Required or Optional	Available Version
fields	<a href="#">List&lt;ConnectApi.ContentHubFieldValueInput&gt;</a>	List of fields for the item to be created.	Required to create a SharePoint file in a repository because the file name is required; otherwise optional	39.0
itemTypeId	<a href="#">String</a>	ID of the item type.	Required to create a file in a repository	39.0

### ConnectApi.CustomListAudienceCriteriaInput

The criteria for the custom list type of recommendation audience.

Subclass of [ConnectApi.AudienceCriteriaInput](#).

Property	Type	Description	Required or Optional	Available Version
memberOperationType	<a href="#">ConnectApi.RecommendationAudienceMemberOperationType</a>	The operation to carry out on the audience members. Values are: <ul style="list-style-type: none"> <li><b>Add</b>—Adds specified members to the audience.</li> <li><b>Remove</b>—Removes specified members from the audience.</li> </ul>	Required to update a recommendation audience  Don't use or specify <b>null</b> to create a recommendation audience	36.0
members	<a href="#">List&lt;String&gt;</a>	A collection of user IDs.  When updating an audience, you can include up to 100 members. An audience can have up to 100,000 members, and each community can have up to 100 audiences.	Required to update a recommendation audience  Don't use or specify <b>null</b> to create a recommendation audience	36.0

### ConnectApi.DatacloudOrderInput Class

Input representation for a Datacloud order to purchase contacts or companies and retrieve purchase information.

Property	Type	Description	Required or Optional	Available Version
companyIds	<a href="#">String</a>	A comma-separated list of identification numbers for the companies to be purchased.  You can't include any contact IDs or your purchase fails.	Required to purchase companies	32.0
contactIds	<a href="#">String</a>	A comma-separated list of identification numbers for the contacts to be purchased.  You can't include any company IDs or your purchase fails.	Required to purchase contacts	32.0
userType	<a href="#">ConnectDatacloudUserTypeEnum</a>	Indicates the Data.com user type to be used. There are two user types. <ul style="list-style-type: none"> <li>• <code>Monthly</code> (default)</li> <li>• <code>Listpool</code></li> </ul>	Optional	32.0

SEE ALSO:

[postOrder\(orderInput\)](#)

## ConnectApi.DirectMessageCapabilityInput

Create or update the members of a direct message.

Property	Type	Description	Required or Optional	Available Version
membersToAdd	<a href="#">List&lt;String&gt;</a>	List of user IDs for members to include in the direct message.	Required when creating a direct message (POST)  Optional when updating a direct message (PATCH)	39.0
membersToRemove	<a href="#">List&lt;String&gt;</a>	List of user IDs for members to remove from the direct message.	Optional when updating a direct message (PATCH)  Not supported when creating a direct message (POST)	40.0

Property	Type	Description	Required or Optional	Available Version
subject	<a href="#">String</a>	Subject of the direct message.	Optional when creating a direct message (POST) Not supported when updating a direct message (PATCH)	39.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.EntityLinkSegmentInput

An entity link segment.

Subclass of [ConnectApi.MessageSegmentInput Class](#)

Property	Type	Description	Required or Optional	Available Version
entityId	<a href="#">String</a>	ID of the entity to link to. Only users with access to the entity see it. It's hidden for users without access.	Required	43.0

## ConnectApi.ExtensionInput

An extension.

Property	Type	Description	Required or Optional	Available Version
alternativeRepresentation	<a href="#">ConnectApi.AlternativeInput</a>	Alternative representation of the extension.	Required	40.0
extensionId	<a href="#">String</a>	ID of the extension.	Required	40.0
payload	<a href="#">String</a>	Payload associated with the extension.	Required	40.0
payloadVersion	<a href="#">String</a>	Payload version that identifies the structure of the payload associated with the extension.	Optional	40.0

SEE ALSO:

[ConnectApi.ExtensionsCapabilityInput](#)

## ConnectApi.ExtensionsCapabilityInput

Create or update extensions associated with a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

Property	Type	Description	Required or Optional	Available Version
itemsToAdd	<a href="#">List&lt;ConnectApi.ExtensionInput&gt;</a>	List of extensions to associate with the feed element.	Required for creating an extension  Optional for updating an extension	40.0
itemsToRemove	<a href="#">List&lt;String&gt;</a>	List of attachment IDs to remove from the feed element.	Optional for updating an extension  Don't specify for creating an extension	41.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.FeedElementCapabilitiesInput

A container for all capabilities that can be included when creating a feed element.

Property	Type	Description	Required or Optional	Available Version
associated Actions	<a href="#">ConnectApi.AssociatedActionsCapabilityInput Class</a>	Describes actions added to the feed element.	Optional	33.0
bookmarks	<a href="#">ConnectApi.BookmarksCapabilityInput</a>	Describes bookmarks added to the feed element.	Optional	32.0
canvas	<a href="#">ConnectApi.CanvasCapabilityInput</a>	Describes a canvas app added to the feed element.	Optional	32.0
content	<a href="#">ConnectApi.ContentCapabilityInput</a>	Describes content added to the feed element.	Optional	32.0–35.0

 **Important:** This class isn't available for feed posts in version 36.0 and

Property	Type	Description	Required or Optional	Available Version
		later. In version 36.0 and later, use <a href="#">ConnectApi.FilesCapabilityInput</a> .		
directMessage	<a href="#">ConnectApi.DirectMessageCapabilityInput</a>	Describes the direct message.	Optional	39.0
extensions	<a href="#">ConnectApi.ExtensionsCapabilityInput</a>	Describes the extensions associated with the feed element.	Optional	40.0
feedEntityShare	<a href="#">ConnectApi.FeedEntityShareCapabilityInput</a>	Describes the feed entity shared with the feed element.	Optional	39.0
files	<a href="#">ConnectApi.FilesCapabilityInput</a>	Describes files attached to the feed element.	Optional	36.0
link	<a href="#">ConnectApi.LinkCapabilityInput</a>	Describes a link added to the feed element.	Optional	32.0
poll	<a href="#">ConnectApi.PollCapabilityInput</a>	Describes a poll added to the feed element.	Optional	32.0
questionAndAnswers	<a href="#">ConnectApi.QuestionAndAnswersCapabilityInput</a>	Describes a question and answer capability added to the feed element.	Optional	32.0
topics	<a href="#">ConnectApi.TopicsCapabilityInput</a>	Describes topics assigned to the feed element.	Optional	38.0

SEE ALSO:

[ConnectApi.FeedElementInput Class](#)

## ConnectApi.FeedElementCapabilityInput Class

A feed element capability.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of *capabilities*. If a capability property exists on a feed element, that capability is available, even if the capability property doesn't have a value. For example, if the `ChatterLikes` capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn't exist, it isn't possible to like that feed element. A capability can also contain associated data. For example, the `Moderation` capability contains data about moderation flags.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

This class is a superclass of:

- [ConnectApi.AssociatedActionsCapabilityInput](#)

- [ConnectApi.BookmarksCapabilityInput](#)
- [ConnectApi.CanvasCapabilityInput](#)
- [ConnectApi.ContentCapabilityInput](#)
- [ConnectApi.DirectMessageCapabilityInput](#)
- [ConnectApi.ExtensionsCapabilityInput](#)
- [ConnectApi.FeedEntityShareCapabilityInput](#)
- [ConnectApi.FilesCapabilityInput](#)
- [ConnectApi.LinkCapabilityInput](#)
- [ConnectApi.MuteCapabilityInput](#)
- [ConnectApi.PollCapabilityInput](#)
- [ConnectApi.QuestionAndAnswersCapabilityInput](#)
- [ConnectApi.ReadByCapabilityInput](#)
- [ConnectApi.RecordCapabilityInput](#)
- [ConnectApi.StatusCapabilityInput](#)
- [ConnectApi.TopicsCapabilityInput](#)

## ConnectApi.FeedElementInput Class

Feed elements are the top-level items that a feed contains. Feeds are feed element containers.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass of [ConnectApi.FeedItemInput Class](#).

Property	Type	Description	Required or Optional	Available Version
capabilities	<a href="#">ConnectApi.FeedElementCapabilitiesInput</a>	The capabilities that define auxiliary information on this feed element.	Optional	31.0
feedElementType	<a href="#">ConnectApi.FeedElementType</a>	The type of feed element this input represents.	Required	31.0

Property	Type	Description	Required or Optional	Available Version
subjectId	<a href="#">String</a>	The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string <code>me</code> to indicate the context user.	Required	31.0

## SEE ALSO:

- [Post a Feed Element with a Mention](#)
- [Post a Feed Element with Existing Content](#)
- [Post a Feed Element with a New File \(Binary\) Attachment](#)

- [Share a Feed Element \(in Version 39.0 and Later\)](#)
- [Edit a Feed Element](#)
- [Edit a Question Title and Post](#)
- [Post a Rich-Text Feed Element with Inline Image](#)

## ConnectApi.FeedEntityShareCapabilityInput

Share a feed entity with a feed post or comment.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

Property	Type	Description	Required or Optional	Available Version
feedEntityId	<a href="#">String</a>	ID of the feed entity to share with the feed post or comment.	Required	39.0

## SEE ALSO:

- [ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.FeedItemAttachmentInput Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use [ConnectApi.FeedElementCapabilityInput Class](#).

Used to attach a file to a feed item.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:

- [ConnectApi.CanvasAttachmentInput Class](#)
- [ConnectApi.ContentAttachmentInput Class](#)
- [ConnectApi.LinkAttachmentInput Class](#)

- [ConnectApi.NewFileAttachmentInput Class](#)
- [ConnectApi.PollAttachmentInput Class](#)

## ConnectApi.FeedItemInput Class

Used to create rich feed items, for example, feed items that include @mentions or files.

Subclass of [ConnectApi.FeedElementInput Class](#) as of version 31.0.

Property	Type	Description	Required or Optional	Available Version
attachment	<a href="#">ConnectApi.FeedItemAttachmentInput Class</a>	Specifies the attachment for the feed item. The feed item type is inferred based on the provided attachment.   <b>Important:</b> As of API version 32.0, use the inherited <code>capabilities</code> property.	Optional	28.0–31.0
body	<a href="#">ConnectApi.MessageBodyInput Class</a>	Message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a <code>describeObjects()</code> call on the <code>FeedItem</code> or <code>FeedComment</code> object and look at the length of the <code>Body</code> or <code>CommentBody</code> field to determine the maximum number of allowed characters.  If you specify <code>originalFeedElementId</code> to share a feed item, use the <code>body</code> property to add the first comment to the feed item.  To edit this property in a feed item, use <code>updateFeedElement(communityId, feedElementId, feedElement)</code> . Editing feed posts is supported in version 34.0 and later.	Required unless the feed item has a link capability or a content capability.	28.0
isBookmarkedByCurrentUser	<a href="#">Boolean</a>	Specifies if the new feed item should be bookmarked for the user ( <code>true</code> ) or not ( <code>false</code> ).   <b>Important:</b> As of API version 32.0, use the <code>capabilities.bookmarks.isBookmarkedByCurrentUser</code> property.	Optional	28.0–31.0
originalFeedElementId	<a href="#">String</a>	To share a feed element, specify its 18-character ID.   <b>Important:</b> As of API version 39.0, use the <code>capabilities.feedEntityShare.feedEntityId</code> property.	Optional	31.0–38.0
originalFeedItemId	<a href="#">String</a>	To share a feed item, specify its 18-character ID.   <b>Important:</b> In API version 32.0–38.0, use the <code>originalFeedElementId</code> property. In API version 39.0 and later, use the	Optional	28.0–31.0

Property	Type	Description	Required or Optional	Available Version
		<p><code>capabilities.feedEntity</code> <code>Share.feedEntityId</code> property.</p>		
<code>visibility</code>	<code>ConnectApi.FeedItemVisibilityType</code> Enum	<p>Type of users who can see a feed item.</p> <ul style="list-style-type: none"> <li><code>AllUsers</code>—Visibility is not limited to internal users.</li> <li><code>InternalUsers</code>—Visibility is limited to internal users.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p>	Optional when posting a feed item Not supported when updating a feed item	28.0

## ConnectApi.FileIdInput

Attach a file that has already been uploaded or remove a file from a feed element.

Property	Type	Description	Required or Optional	Available Version
<code>id</code>	<code>String</code>	ID of a file that has already been uploaded.	Required	36.0
<code>operationType</code>	<code>ConnectApi.OperationType</code>	<p>Operation to carry out on the file. Values are:</p> <ul style="list-style-type: none"> <li><code>Add</code>—Adds the file to the feed element.</li> <li><code>Remove</code>—Removes the file from the feed element.</li> </ul> <p><code>Remove</code> operations are processed before <code>Add</code> operations. Adding content that is already added and removing content that is already removed result in no operation.</p>	Optional If not specified, defaults to <code>Add</code> .	36.0

SEE ALSO:

[ConnectApi.FilesCapabilityInput](#)

## ConnectApi.FilesCapabilityInput

Attach up to 10 files that have already been uploaded or remove one or more files from a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

Property	Type	Description	Required or Optional	Available Version
items	List< <a href="#">ConnectApi.FileIdInput</a> >	List of file IDs and operations to be carried out on those files.	Required	36.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.GroupInformationInput Class

Property	Type	Description	Available Version
text	String	The text in the “Information” section of a group.	28.0
title	String	The title of the “Information” section of a group.	28.0

SEE ALSO:

[ConnectApi.ChatterGroupInput Class](#)

## ConnectApi.HashtagSegmentInput Class

Used to include a hashtag in a feed item or comment.

Subclass of [ConnectApi.MessageSegmentInput Class](#)

Property	Type	Description	Available Version
tag	String	Text of the hash tag without the # (hash tag) prefix	28.0

 **Note:** Closing square brackets (]) are not supported in hash tag text. If the text contains a closing square bracket (]), the hash tag ends at the bracket.

SEE ALSO:

[ConnectApi.MessageBodyInput Class](#)

## ConnectApi.InlineImageSegmentInput

An inline image segment.

Subclass of [ConnectApi.MessageSegmentInput Class](#)

Property	Type	Description	Required or Optional	Available Version
altText	<a href="#">String</a>	Alt text for the inline image.	Optional If not specified, the title of the inline image file is used as the alt text.	35.0
fileId	<a href="#">String</a>	ID of the inline image file.	Required	35.0

## SEE ALSO:

[Post a Rich-Text Feed Element with Inline Image](#)

[ConnectApi.MessageBodyInput Class](#)

## ConnectApi.InviteInput

An invitation.

Property	Type	Description	Required or Optional	Available Version
invitees	<a href="#">List&lt;String&gt;</a>	List of email addresses to send the invitation to.	Required	39.0
message	<a href="#">String</a>	Message to include in the invitation.	Optional	39.0

## ConnectApi.LinkAttachmentInput Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use [ConnectApi.LinkCapabilityInput](#).

Used as part of a feed item attachment, to add links.

Subclass of [ConnectApi.FeedItemAttachmentInput Class](#)

Property	Type	Description	Available Version
url	<a href="#">String</a>	URL to be used for the link	28.0–31.0
urlName	<a href="#">String</a>	Title of the link	28.0–31.0

## ConnectApi.LinkCapabilityInput

Create or update a link on a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

Property	Type	Description	Required or Optional	Available Version
url	<a href="#">String</a>	Link URL. The URL can be to an external site.	Required	32.0
urlName	<a href="#">String</a>	Description of the link.	Optional	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.LinkSegmentInput Class

Used to include a link segment in a feed item or comment.

Subclass of [ConnectApi.MessageSegmentInput Class](#)

Property	Type	Description	Available Version
url	<a href="#">String</a>	URL to be used for the link	28.0

SEE ALSO:

[ConnectApi.MessageBodyInput Class](#)

## ConnectApi.ManagedTopicPositionCollectionInput Class

A collection of relative positions of managed topics.

Property	Type	Description	Required or Optional	Available Version
managedTopicPositions	<a href="#">List&lt;ConnectApi.ManagedTopicPositionInput&gt;</a>	<p>List of relative positions of managed topics. This list can include <code>Featured</code> and <code>Navigational</code> managed topics and doesn't need to include all managed topics.</p> <p>For more information about reordering managed topics, see the example in <a href="#">reorderManagedTopics(communitId, managedTopicPositionCollection)</a>.</p>	Required	32.0

## ConnectApi.ManagedTopicPositionInput Class

Relative position of a managed topic.

Property	Type	Description	Required or Optional	Available Version
managedTopicId	<a href="#">String</a>	ID of existing managed topic.	Required	32.0

Property	Type	Description	Required or Optional	Available Version
<code>position</code>	<a href="#">Integer</a>	Relative position of the managed topic, indicated by zero-indexed, ascending whole numbers.	Required	32.0

SEE ALSO:

[ConnectApi.ManagedTopicPositionCollectionInput Class](#)

## ConnectApi.MarkupBeginSegmentInput

The beginning tag for rich text markup.

Subclass of [ConnectApi.MessageSegmentInput Class](#)

Property	Type	Description	Required or Optional	Available Version
<code>markupType</code>	<a href="#">ConnectApi.MarkupType</a>	Type of rich text markup. <ul style="list-style-type: none"> <li>• <code>Bold</code>—Bold tag.</li> <li>• <code>Code</code>—Code tag.</li> <li>• <code>Italic</code>—Italic tag.</li> <li>• <code>ListItem</code>—List item tag.</li> <li>• <code>OrderedList</code>—Ordered list tag.</li> <li>• <code>Paragraph</code>—Paragraph tag.</li> <li>• <code>Strikethrough</code>—Strikethrough tag.</li> <li>• <code>Underline</code>—Underline tag.</li> <li>• <code>UnorderedList</code>—Unordered list tag.</li> </ul> <p>Markup segments with a <code>markupType</code> of <code>Code</code> can include only text segments.</p>	Required	35.0

SEE ALSO:

[Post a Rich-Text Feed Element with Inline Image](#)

[ConnectApi.MessageBodyInput Class](#)

## ConnectApi.MarkupEndSegmentInput

The end tag for rich text markup.

Subclass of [ConnectApi.MessageSegmentInput Class](#)

Property	Type	Description	Required or Optional	Available Version
markupType	<a href="#">ConnectApi.MarkupType</a>	Type of rich text markup. <ul style="list-style-type: none"> <li>• <b>Bold</b>—Bold tag.</li> <li>• <b>Code</b>—Code tag.</li> <li>• <b>Italic</b>—Italic tag.</li> <li>• <b>ListItem</b>—List item tag.</li> <li>• <b>OrderedList</b>—Ordered list tag.</li> <li>• <b>Paragraph</b>—Paragraph tag.</li> <li>• <b>Strikethrough</b>—Strikethrough tag.</li> <li>• <b>Underline</b>—Underline tag.</li> <li>• <b>UnorderedList</b>—Unordered list tag.</li> </ul>	Required	35.0

## SEE ALSO:

[Post a Rich-Text Feed Element with Inline Image](#)

[ConnectApi.MessageBodyInput Class](#)

## ConnectApi.MentionSegmentInput Class

Include an @mention of a user or group in a feed post or comment. When creating a feed post or comment, you can include up to 25 mentions.

Subclass of [ConnectApi.MessageSegmentInput Class](#)

Property	Type	Description	Available Version
id	<a href="#">String</a>	ID of the user or group to mention.  To mention a user, use either <code>id</code> or <code>username</code> . You can't include both.  To mention a group, you must use <code>id</code> .	28.0  Groups are available in 29.0.
username	<a href="#">String</a>	User name of the user to mention.  To mention a user, use either <code>id</code> or <code>username</code> . You can't include both.	38.0

## SEE ALSO:

[ConnectApi.MessageBodyInput Class](#)

## ConnectApi.MessageBodyInput Class

Used to add rich messages to feed items and comments.

Property	Type	Description	Available Version
messageSegments	List< <a href="#">ConnectApi.MessageSegmentInput Class</a> >	List of message segments contained in the body	28.0

## SEE ALSO:

- [ConnectApi.FeedItemInput Class](#)

## ConnectApi.MuteCapabilityInput

Mute or unmute a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

Property	Type	Description	Required or Optional	Available Version
isMutedByMe	Boolean	Indicates whether the feed element is muted for the context user. Default value is <code>false</code> .	Required	35.0

SEE ALSO:

[setIsMutedByMe\(communityId, feedElementId, isMutedByMe\)](#)

## ConnectApi.NBAReactionInput (Pilot)

A reaction to a recommendation produced by a recommendation strategy.

 **Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](#).

Property	Type	Description	Required or Optional	Available Version
contextRecordId	String	ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.	Optional	43.0
executionId	String	ID of the original recommendation strategy execution.	Optional	43.0
onBehalfOfId	String	ID of the user or entity for which the reaction took place.	Optional	43.0
reactionType	ConnectApi.NBAReactionType	Type of reaction to a recommendation. Values are: <ul style="list-style-type: none"> <li>Accepted</li> <li>Rejected</li> </ul>	Required	43.0
strategyName	String	Name of the recommendation strategy.	Required	43.0
targetActionId	String	ID of the target action.	Optional	43.0
targetActionName	String	Name of the target action.	Required	43.0
targetId	String	ID of the recommendation that is being reacted to.	Required	43.0

## ConnectApi.NewFileAttachmentInput Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use [ConnectApi.ContentCapabilityInput](#).

Describes a new file to be attached to a feed item. The actual binary file, that is the attachment, is provided as part of the [BinaryInput](#) in the method that takes this attachment input, such as `postFeedItem` or `postComment`.

Subclass of [ConnectApi.FeedItemAttachmentInput Class](#)

Property	Type	Description	Available Version
<code>description</code>	<a href="#">String</a>	Description of the file to be uploaded.	28.0–31.0
<code>title</code>	<a href="#">String</a>	The title of the file. This value is required and is also used as the file name. For example, if the title is My Title, and the file is a .txt file, the file name is My Title.txt.	28.0–31.0

## ConnectApi.NewUserAudienceCriteriaInput

The criteria for the new members type of recommendation audience.

Subclass of [ConnectApi.AudienceCriteriaInput](#).

Property	Type	Description	Required or Optional	Available Version
<code>value</code>	<a href="#">Double</a>	The maximum number of days since a user became a community member. For example, if you specify <code>30</code> , anyone who became a community member in the last 30 days is included in the new members audience.	Required	36.0

## ConnectApi.PhotoInput Class

Use to specify how crop a photo. Use to specify an existing file (a file that has already been uploaded).

Property	Type	Description	Available version
<code>cropSize</code>	<a href="#">Integer</a>	The length, in pixels, of any edge of the crop square.	29.0
<code>cropX</code>	<a href="#">Integer</a>	The position X, in pixels, from the left edge of the image to the start of the crop square. Top left is position (0,0).	29.0
<code>cropY</code>	<a href="#">Integer</a>	The position Y, in pixels, from the top edge of the image to the start of the crop square. Top left is position (0,0).	29.0
<code>fileId</code>	<a href="#">String</a>	18 character ID of an existing file. The key prefix must be 069 and the file size must be less than 2 GB.	25.0

 **Note:** Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used.

Property	Type	Description	Available version
<code>versionNumber</code>	<a href="#">Integer</a>	Version number of the existing content. If not provided, the latest version is used.	25.0

## SEE ALSO:

## ConnectApi.PinCapabilityInput

Pin or unpin a feed element to a feed.

Property	Type	Description	Required or Optional	Available Version
<code>entityId</code>	<a href="#">String</a>	ID of the entity to pin or unpin. In version 41.0 and later, <code>entityId</code> must be a feed item ID. In version 41.0–42.0, only one feed item can be pinned per feed. In version 43.0 and later, three feed items can be pinned per feed.	Required	41.0
<code>isPinned</code>	<a href="#">Boolean</a>	Specifies whether to pin ( <code>true</code> ) or unpin ( <code>false</code> ) the entity.	Required	41.0

## ConnectApi.PollAttachmentInput Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use [ConnectApi.PollCapabilityInput](#).

Used to attach a poll to a feed item.

Subclass of [ConnectApi.FeedItemAttachmentInput Class](#)

Property	Type	Description	Available Version
<code>pollChoices</code>	<a href="#">List&lt;String&gt;</a>	The text labels for the poll items. Polls must contain between 2 to 10 poll choices.	28.0–31.0

## ConnectApi.PollCapabilityInput

Create, update, or vote on a poll on a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

Property	Type	Description	Required or Optional	Available Version
choices	List<String>	The choices used to create a new poll. You must specify 2–10 poll choices for each poll.	Required for creating a poll	32.0
myChoiceId	String	ID of an existing choice on the feed poll. Used to vote on an existing poll.	Required for voting on a poll	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.QuestionAndAnswersCapabilityInput

Create or edit a question feed element or set the best answer of the existing question feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

Property	Type	Description	Required or Optional	Available Version
bestAnswerId	String	A comment ID to use as a best answer for a question feed element. The best answer comment must already exist on the question feed element.	Required to update a feed element. Not supported when posting a feed element.	32.0
questionTitle	String	Title for a question feed element. To edit the title of a question, use <a href="#">updateFeedElement (communityId, feedElementId, feedElement)</a> . Editing question titles is supported in version 34.0 and later.	Required to post a feed element. Not supported when updating a feed element.	32.0

SEE ALSO:

[Edit a Question Title and Post](#)

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.ReadByCapabilityInput

Mark feed elements as read by the context user.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

Property	Type	Description	Required or Optional	Available Version
<code>isReadByMe</code>	<a href="#">Boolean</a>	Specifies to mark the feed element as read ( <code>true</code> ) for the context user.	Required	40.0
<code>lastReadDateByMe</code>	<a href="#">Datetime</a>	Specifies the last date when the feed element is marked as read for the context user. If you don't specify a date or you specify a future date, the current system date is used.	Optional	40.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.RecommendationAudienceInput

A recommendation audience.

Property	Type	Description	Required or Optional	Available Version
<code>criteria</code>	<a href="#">ConnectApi.AudienceCriteriaInput</a>	The criteria for the recommendation audience type.	Optional If not specified when creating a recommendation audience, the audience criteria type defaults to custom list.	36.0
<code>memberOperationType</code>	<a href="#">ConnectApi.RecommendationAudienceMemberOperationType</a>	<p> <b>Important:</b> This property is available only in version 35.0. In version 36.0 and later, use <a href="#">ConnectApi.CustomListAudienceCriteriaInput</a>.</p> <p>The operation to carry out on the audience members.</p> <ul style="list-style-type: none"> <li><code>Add</code>—Adds specified members to the audience.</li> <li><code>Remove</code>—Removes specified members from the audience.</li> </ul>	Required to update a recommendation audience Don't use or specify <code>null</code> to create a recommendation audience	35.0 only

Property	Type	Description	Required or Optional	Available Version
members	List<String>	<p> <b>Important:</b> This property is available only in version 35.0. In version 36.0 and later, use <a href="#">ConnectApi.CustomListAudienceCriteriaInput</a>.</p> <p>A collection of user IDs.</p> <p>When updating an audience, you can include up to 100 members. An audience can have up to 100,000 members, and each community can have up to 100 audiences.</p>	<p>Required to update a recommendation audience</p> <p>Don't use or specify <code>null</code> to create a recommendation audience</p>	35.0 only
name	String	The unique name of the recommendation audience.	<p>Optional to update a recommendation audience</p> <p>Required to create a recommendation audience</p>	35.0

## SEE ALSO:

[createRecommendationAudience\(communityId, recommendationAudience\)](#)

## ConnectApi.RecommendationDefinitionInput

A recommendation definition.

Property	Type	Description	Required or Optional	Available Version
actionUrl	String	The URL for acting on the recommendation, for example, the URL to join a group.	<p>Required to create a recommendation definition</p> <p>Optional to update a recommendation definition</p>	35.0
actionUrlName	String	The text label for the action URL in the user interface, for example, "Launch."	<p>Required to create a recommendation definition</p> <p>Optional to update a recommendation definition</p>	35.0

Property	Type	Description	Required or Optional	Available Version
explanation	<a href="#">String</a>	The explanation, or body, of the recommendation.	Required to create a recommendation definition Optional to update a recommendation definition	35.0
name	<a href="#">String</a>	The name of the recommendation definition. The name is displayed in Setup.	Required to create a recommendation definition Optional to update a recommendation definition	35.0
title	<a href="#">String</a>	The title of the recommendation definition.	Optional	35.0

SEE ALSO:

[createRecommendationDefinition\(communityId, recommendationDefinition\)](#)

### ConnectApi.RecordCapabilityInput

Attach an existing knowledge article to a comment.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

Property	Type	Description	Required or Optional	Available Version
recordId	<a href="#">String</a>	ID of the existing knowledge article to attach.	Required	42.0

### ConnectApi.RequestHeaderInput Class

An HTTP request header name and value pair.

Property	Type	Description	Required or Optional	Available Version
name	<a href="#">String</a>	The name of the request header.	Required	33.0
value	<a href="#">String</a>	The value of the request header.	Required	33.0

SEE ALSO:

[Define an Action Link and Post with a Feed Element](#)

## ConnectApi.ScheduledRecommendationInput

A scheduled recommendation.

Property	Type	Description	Required or Optional	Available Version
channel	<a href="#">ConnectApi.ScheduledRecommendationChannel</a>	<p>A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:</p> <ul style="list-style-type: none"> <li><code>CustomChannel1</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.</li> <li><code>CustomChannel2</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li><code>CustomChannel3</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li><code>CustomChannel4</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li><code>CustomChannel5</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li><code>DefaultChannel</code>—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.</li> </ul> <p>Use these channel values; you can't rename or create other channels.</p>	<p>Optional for creating a scheduled recommendation</p> <p>If not specified, defaults to <code>DefaultChannel</code>.</p> <p>Don't use when updating a scheduled recommendation</p>	36.0

Property	Type	Description	Required or Optional	Available Version
<code>enabled</code>	Boolean	Indicates whether scheduling is enabled. If <code>true</code> , the recommendation is enabled and appears in communities. If <code>false</code> , recommendations in feeds in the Salesforce mobile web aren't removed, but no new recommendations appear. In Customer Service and Partner Central communities, disabled recommendations no longer appear.	Optional	35.0
<code>rank</code>	Integer	Relative rank of the scheduled recommendation indicated by ascending whole numbers starting with 1.  Setting the rank is comparable to an insertion into an ordered list. The scheduled recommendation is inserted into the position specified by the <code>rank</code> . The <code>rank</code> of all the scheduled recommendations after it is pushed down. See <a href="#">Ranking scheduled recommendations example</a> .  If the specified <code>rank</code> is larger than the size of the list, the scheduled recommendation is put at the end of the list. The <code>rank</code> of the scheduled recommendation is the size of the list, instead of the one specified.  If a <code>rank</code> is not specified, the scheduled recommendation is put at the end of the list.	Optional	35.0
<code>recommendationAudienceId</code>	String	ID of the audience for this scheduled recommendation. When updating a scheduled recommendation, specify <code>ALL</code> to remove the association between a recommendation audience and a scheduled recommendation.	Optional	35.0
<code>recommendationDefinitionId</code>	String	ID of the recommendation definition that this scheduled recommendation schedules.	Required to create a scheduled recommendation  You can't specify a <code>recommendationDefinitionId</code> when updating an existing scheduled recommendation.	35.0

**Ranking scheduled recommendations example**

If you have these scheduled recommendations:

Scheduled Recommendations	Rank
ScheduledRecommendationA	1
ScheduledRecommendationB	2
ScheduledRecommendationC	3

And you include this information in the Scheduled Recommendation Input:

Scheduled Recommendation	Rank
ScheduledRecommendationD	2

The result is:

Scheduled Recommendation	Rank
ScheduledRecommendationA	1
ScheduledRecommendationD	2
ScheduledRecommendationB	3
ScheduledRecommendationC	4

SEE ALSO:

[createScheduledRecommendation\(communityId, scheduledRecommendation\)](#)

**ConnectApi.StatusCapabilityInput**

Change the status of a feed post or comment.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

Property	Type	Description	Required or Optional	Available Version
feedEntityStatus	<a href="#">ConnectApi.FeedEntityStatus</a>	Status of the feed post or comment. Values are: <ul style="list-style-type: none"> <li><code>PendingReview</code>—The feed post or comment isn't approved yet and therefore isn't published or visible.</li> <li><code>Published</code>—The feed post or comment is approved and visible.</li> </ul>	Required	37.0

## ConnectApi.StreamSubscriptionInput

An entity to subscribe to for a Chatter feed stream.

Property	Type	Description	Required or Optional	Available Version
<code>entityId</code>	<a href="#">String</a>	The ID of any feed-enabled entity, such as a group, record, or user, that the context user can access. When subscribed, the entity's feed is included in the feed stream.	Required	39.0

SEE ALSO:

[ConnectApi.ChatterStreamInput](#)

## ConnectApi.TextSegmentInput Class

Used to include a text segment in a feed item or comment.

Subclass of [ConnectApi.MessageSegmentInput Class](#)

Property	Type	Description	Available Version
<code>text</code>	<a href="#">String</a>	Plain text for this segment. If hashtags or links are detected in <code>text</code> , they are included in the comment as hashtag and link segments. Mentions are not detected in <code>text</code> and are not separated out of the text. Mentions require <a href="#">ConnectApi.MentionSegmentInput Class</a> .	28.0

SEE ALSO:

[Edit a Comment](#)

[Edit a Feed Element](#)

[Edit a Question Title and Post](#)

[Post a Rich-Text Feed Element with Inline Image](#)

[ConnectApi.MessageBodyInput Class](#)

## ConnectApi.TopicInput Class

Update a topic's name or description or merge topics.

Property	Type	Description	Available Version
<code>description</code>	<a href="#">String</a>	Description of the topic	29.0
<code>idsToMerge</code>	<a href="#">List&lt;String&gt;</a>	List of up to five secondary topic IDs to merge with the primary topic If any of these secondary topics are managed topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic.	33.0

Property	Type	Description	Available Version
name	<a href="#">String</a>	Name of the topic  Use this property to change only the capitalization and spacing of the topic name.	29.0

SEE ALSO:

[updateTopic\(communityId, topicId, topic\)](#)

## ConnectApi.TopicNamesInput

A list of topic names to replace currently assigned topics. Also a list of suggested topics to assign.

Property	Type	Description	Required or Optional	Available Version
topicNames	<a href="#">List&lt;String&gt;</a>	A list of up to 10 topic names for a feed item or 100 topic names for a record.	Required	35.0
topicSuggestions	<a href="#">List&lt;String&gt;</a>	A list of suggested topics to assign to a record or feed item to improve future topic suggestions.	Optional	37.0

SEE ALSO:

[reassignTopicsByName\(communityId, recordId, topicNames\)](#)

[ConnectApi.ArticleTopicAssignmentJobInput](#)

## ConnectApi.TopicsCapabilityInput

Assign topics to a feed element.

Property	Type	Description	Required or Optional	Available Version
contextTopic Name	<a href="#">String</a>	Name of the parent topic in the community to which the feed element belongs.	Optional	38.0
topics	<a href="#">List&lt;String&gt;</a>	List of topics to assign to the feed element.	Required	38.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.UpDownVoteCapabilityInput

Upvote or downvote a feed element or a comment.

Property	Type	Description	Required or Optional	Available Version
vote	<a href="#">ConnectApi.UpDownVoteValue</a>	Type of vote for a feed element or comment. Values are: <ul style="list-style-type: none"> <li>• Down</li> <li>• None</li> <li>• Up</li> </ul>	Required	41.0

## ConnectApi.UserInput Class

Used to update a user.

Property	Type	Description	Available Version
aboutMe	<a href="#">String</a>	The aboutMe property of a <a href="#">ConnectApi.UserDetail</a> output object. This property populates the “About Me” section of the user profile, which is visible to all members of a community or organization.	29.0

SEE ALSO:

[updateUser\(communityId, userId, userInput\)](#)

## ConnectApi Output Classes

Most [ConnectApi](#) methods return instances of [ConnectApi](#) output classes.

All properties are read-only, except for instances of output classes created within test code.

All output classes are concrete unless marked abstract in this documentation.

All concrete output classes have no-argument constructors that you can invoke only from test code. See [Testing ConnectApi Code](#).

## ConnectApi.AbstractContentHubItemType

An item type associated with a repository folder.

This class is abstract.

Superclass of:

- [ConnectApi.ContentHubItemTypeDetail](#)
- [ConnectApi.ContentHubItemTypeSummary](#)

Property Name	Type	Description	Available Version
contentStream Support	<a href="#">ConnectApi.ContentHubStreamSupport</a>	Support for content streaming. Values are: <ul style="list-style-type: none"> <li>• ContentStreamAllowed</li> <li>• ContentStreamNotAllowed</li> <li>• ContentStreamRequired</li> </ul>	39.0

Property Name	Type	Description	Available Version
description	String	Description of the item type.	39.0
displayName	String	Display name of the item type.	39.0
id	String	ID of the item type.	39.0
isVersionable	Boolean	Indicates whether the item type can have versions.	39.0
url	String	URL to the detailed information of the item type.	39.0

## ConnectApi.AbstractDirectoryEntrySummary

A directory entry with summary information.

This class is abstract.

Superclass of:

- [ConnectApi.RepositoryGroupSummary](#)
- [ConnectApi.RepositoryUserSummary](#)

Property Name	Type	Description	Available Version
domain	String	Domain of the directory entry.	39.0
email	String	Email of the directory entry.	39.0
id	String	ID of the directory entry.	39.0
type	ConnectApi. ContentHub DirectoryEntry Type	Type of directory entry. Values are: <ul style="list-style-type: none"> <li>• GroupEntry</li> <li>• UserEntry</li> </ul>	39.0

## ConnectApi.AbstractExtensionInformation

Extension information.

This class is abstract.

Superclass of [.ConnectApi.LightningExtensionInformation](#)

Property Name	Type	Description	Available Version
extension InformationType	ConnectApi. ExtensionInformation Type	Information type of the extension. Values are: <ul style="list-style-type: none"> <li>• Lightning</li> </ul>	40.0

## ConnectApi.AbstractMessageBody Class

This class is abstract.

Superclass of:

- [ConnectApi.FeedBody Class](#)
- [ConnectApi.MessageBody Class](#)

Name	Type	Description	Available Version
<code>isRichText</code>	<a href="#">Boolean</a>	Indicates whether the body is rich text.	35.0
<code>messageSegments</code>	<a href="#">List&lt;ConnectApi.MessageSegment&gt;</a>	List of message segments	28.0
<code>text</code>	<a href="#">String</a>	Display-ready text. Use this text if you don't want to process the message segments.	28.0

## ConnectApi.AbstractNBARecommendation (Pilot)

A recommendation returned by a recommendation strategy.

-  **Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](#).

This class is abstract.

Superclass of [ConnectApi.NBARecommendationProposition \(Pilot\)](#).

Property Name	Type	Description	Available Version
<code>actionReference</code>	<a href="#">String</a>	Reference to the action to perform, for example, to a flow to launch.	43.0
<code>description</code>	<a href="#">String</a>	Description of the recommendation.	43.0
<code>id</code>	<a href="#">String</a>	ID of the recommended entity.	43.0
<code>name</code>	<a href="#">String</a>	Name of the recommended entity.	43.0
<code>url</code>	<a href="#">String</a>	URL to the recommended entity.	43.0

SEE ALSO:

[ConnectApi.NBARecommendations \(Pilot\)](#)

## ConnectApi.AbstractRecommendation Class

A recommendation.

This class is abstract.

Superclass of:

- [ConnectApi.EntityRecommendation Class](#)

- [ConnectApi.NonEntityRecommendation Class](#)

ConnectApi.NonEntityRecommendation Class isn't used in version 34.0 and later. In version 34.0 and later, [ConnectApi.EntityRecommendation Class](#) is used for all recommendations.

Property Name	Type	Description	Available Version
explanation	<a href="#">ConnectApi.RecommendationExplanation</a>	The recommendation explanation.	32.0
platformAction Group	<a href="#">ConnectApi.PlatformActionGroup</a>	A platform action group instance with state appropriate for the context user.	34.0
recommendation Type	<a href="#">ConnectApi.RecommendationType</a>	Specifies the type of record being recommended.	32.0
url	<a href="#">String</a>	URL for the recommendation.	34.0

SEE ALSO:

[ConnectApi.RecommendationsCapability](#)

[ConnectApi.RecommendationCollection Class](#)

## ConnectApi.AbstractRecommendationExplanation Class

Explanation for a recommendation.

This class is abstract.

Superclass of [ConnectApi.RecommendationExplanation Class](#).

Property Name	Type	Description	Available Version
summary	<a href="#">String</a>	Summary explanation for recommendation.	32.0
type	<a href="#">ConnectApi.RecommendationExplanationType</a>	Indicates the reason for the recommendation. <ul style="list-style-type: none"> <li>• <a href="#">ArticleHasRelatedContent</a>—Articles with related content to a context article.</li> <li>• <a href="#">ArticleViewedTogether</a>—Articles often viewed together with the article that the context user just viewed.</li> <li>• <a href="#">ArticleViewedTogetherWithViewers</a>—Articles often viewed together with other records that the context user views.</li> <li>• <a href="#">Custom</a>—Custom recommendations.</li> <li>• <a href="#">FilePopular</a>—Files with many followers or views.</li> </ul>	32.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>• <code>FileViewedTogether</code>—Files often viewed at the same time as other files that the context user views.</li> <li>• <code>FollowedTogetherWithFollowees</code>—Users often followed together with other records that the context user follows.</li> <li>• <code>GroupMembersFollowed</code>—Groups with members that the context user follows.</li> <li>• <code>GroupNew</code>—Recently created groups.</li> <li>• <code>GroupPopular</code>—Groups with many active members.</li> <li>• <code>ItemViewedTogether</code>—Records often viewed at the same time as other records that the context user views.</li> <li>• <code>PopularApp</code>—Applications that are popular.</li> <li>• <code>RecordOwned</code>—Records that the context user owns.</li> <li>• <code>RecordParentOfFollowed</code>—Parent records of records that the context user follows.</li> <li>• <code>RecordViewed</code>—Records that the context user recently viewed.</li> <li>• <code>TopicFollowedTogether</code>—Topics often followed together with the record that the context user just followed.</li> <li>• <code>TopicFollowedTogetherWithFollowees</code>—Topics often followed together with other records that the context user follows.</li> <li>• <code>TopicPopularFollowed</code>—Topics with many followers.</li> <li>• <code>TopicPopularLiked</code>—Topics on posts that have many likes.</li> <li>• <code>UserDirectReport</code>—Users who report to the context user.</li> <li>• <code>UserFollowedTogether</code>—Users often followed together with the record that the context user just followed.</li> <li>• <code>UserFollowsSameUsers</code>—Users who follow the same users as the context user.</li> <li>• <code>UserManager</code>—The context user’s manager.</li> <li>• <code>UserNew</code>—Recently created users.</li> <li>• <code>UserPeer</code>—Users who report to the same manager as the context user.</li> </ul>	

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>• <code>UserPopular</code>—Users with many followers.</li> <li>• <code>UserViewingSameRecords</code>—Users who view the same records as the context user.</li> </ul>	

## ConnectApi.AbstractRecordField Class

This class is abstract.

Superclass of:

- [ConnectApi.BlankRecordField Class](#)
- [ConnectApi.LabeledRecordField Class](#)

A field on a record object.

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

 **Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

Name	Type	Description	Available Version
type	<a href="#">String</a>	The type of the field. One of these values: <ul style="list-style-type: none"> <li>• Address</li> <li>• Blank</li> <li>• <a href="#">Boolean</a></li> <li>• Compound</li> <li>• CreatedBy</li> <li>• <a href="#">Date</a></li> <li>• DateTime</li> <li>• Email</li> <li>• LastModifiedBy</li> <li>• Location</li> <li>• Name</li> <li>• Number</li> <li>• Percent</li> <li>• Phone</li> <li>• Picklist</li> <li>• Reference</li> <li>• Text</li> <li>• <a href="#">Time</a></li> </ul>	29.0

SEE ALSO:

[ConnectApi.RecordViewSection Class](#)

## ConnectApi.AbstractRecordView Class

This class is abstract.

Subclass of [ConnectApi.ActorWithId Class](#)

Superclass of:

- [ConnectApi.RecordSummary Class](#)
- [ConnectApi.RecordView Class](#)

A view of any record in the organization, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type.

Name	Type	Description	Available Version
name	<a href="#">String</a>	The localized name of the record.	29.0

## ConnectApi.AbstractRepositoryFile

A repository file.

This class is abstract.

Subclass of [ConnectApi.AbstractRepositoryItem](#).

Superclass of:

- [ConnectApi.RepositoryFileDetail](#)
- [ConnectApi.RepositoryFileSummary](#)

Property Name	Type	Description	Available Version
checkinComment	String	Checkin comment of the file.	39.0
contentBody	String	Text of the file's content if available, otherwise <code>null</code> .	43.0
contentSize	Integer	Length in bytes of the content of the file.	39.0
downloadUrl	String	URL to the repository file content.	39.0
externalContentUrl	String	URL of this file's content in the external system.	39.0
externalDocumentUrl	String	URL of this file in the external system.	39.0
externalFilePermissionInformation	<a href="#">ConnectApi.ExternalFilePermissionInformation</a>	External file permission information, such as available groups, available permission types, and current sharing status, or <code>null</code> if <code>includeExternalFilePermissionsInfo</code> is <code>false</code> .	39.0
mimeType	String	Mime type of the file.	39.0
previewUrlThumbnail	String	URL to the thumbnail preview (240 x 180 PNG).	39.0
previewUrlThumbnailBig	String	URL to the big thumbnail preview (720 x 480 PNG).	39.0
previewUrlThumbnailTiny	String	URL to the tiny thumbnail preview (120 x 90 PNG).	39.0
previewsUrl	String	URL to the previews.	39.0
title	String	Title of the file.	39.0
versionId	String	ID of the file version in the external system.	39.0

## ConnectApi.AbstractRepositoryFolder

A repository folder.

This class is abstract.

Subclass of [ConnectApi.AbstractRepositoryItem](#).

Superclass of:

- [ConnectApi.RepositoryFolderDetail](#)

- [ConnectApi.RepositoryFolderSummary](#)

Property Name	Type	Description	Available Version
externalFolderUrl	<a href="#">String</a>	URL of this folder in the external system.	39.0
folderItemsUrl	<a href="#">String</a>	URL that lists the files and folders in this folder.	39.0
path	<a href="#">String</a>	Absolute path of the folder in the external system.	39.0

## ConnectApi.AbstractRepositoryItem

A repository item.

This class is abstract.

Superclass of:

- [ConnectApi.AbstractRepositoryFile](#)
- [ConnectApi.AbstractRepositoryFolder](#)

Property Name	Type	Description	Available Version
createdBy	<a href="#">String</a>	Name of the user who created the item.	39.0
createdDate	<a href="#">Datetime</a>	Date the item was created.	39.0
description	<a href="#">String</a>	Description of the Item.	39.0
id	<a href="#">String</a>	ID of the item.	39.0
itemTypeUrl	<a href="#">String</a>	URL to the item type information.	39.0
modifiedBy	<a href="#">String</a>	Name of the user who last modified the item.	39.0
modifiedDate	<a href="#">Datetime</a>	Date the item was last modified.	39.0
motif	<a href="#">ConnectApi.Motif</a>	Motif of the item.	39.0
name	<a href="#">String</a>	Name of the item.	39.0
repository	<a href="#">ConnectApi.Reference</a>	Item external repository.	39.0
type	<a href="#">String</a>	Item type, file or folder.	39.0
url	<a href="#">String</a>	The URL to the item.	39.0

## ConnectApi.ActionLinkDefinition Class

The definition of an action link. Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

Property Name	Type	Description	Available Version
<code>actionUrl</code>	<a href="#">String</a>	The action link URL. For example, a <code>Ui</code> action link URL is a Web page. A <code>Download</code> action link URL is a link to the file to download. <code>Ui</code> and <code>Download</code> action link URLs are provided to clients. An <code>Api</code> or <code>ApiAsync</code> action link URL is a REST resource. <code>Api</code> and <code>ApiAsync</code> action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with <code>https://</code> .	33.0
<code>createdDate</code>	<a href="#">Datetime</a>	An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.	33.0
<code>excludedUserId</code>	<a href="#">String</a>	ID of a single user to exclude from performing the action. If you specify an <code>excludedUserId</code> , you can't specify a <code>userId</code> .	33.0
<code>groupDefault</code>	<a href="#">Boolean</a>	<code>true</code> if this action is the default action link in the action link group; <code>false</code> otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.	33.0
<code>headers</code>	<a href="#">List&lt;ConnectApi.RequestHeader&gt;</a>	The request headers for the <code>Api</code> and <code>ApiAsync</code> action link types.	33.0
<code>id</code>	<a href="#">String</a>	The 18-character ID for the action link definition.	33.0
<code>label</code>	<a href="#">String</a>	<p>A custom label to display on the action link button. A <code>label</code> value can be set only in an action link template.</p> <p>Action links have four statuses: <code>NewStatus</code>, <code>PendingStatus</code>, <code>SuccessStatus</code>, and <code>FailedStatus</code>. These strings are appended to the label for each status:</p> <ul style="list-style-type: none"> <li>• <code>label</code></li> <li>• <code>label Pending</code></li> <li>• <code>label Success</code></li> <li>• <code>label Failed</code></li> </ul> <p>For example, if the value of <code>label</code> is "See Example," the values of the four action link states are: See Example, See Example Pending, See Example Success, and See Example Failed.</p> <p>An action link can use either <code>label</code> or <code>labelKey</code> to generate label names, it can't use both. If <code>label</code> has a value, the value of <code>labelKey</code> is <code>None</code>. If <code>labelKey</code> has a value other than <code>None</code>, the value of <code>label</code> is <code>null</code>.</p>	34.0

Property Name	Type	Description	Available Version
labelKey	String	Key for the set of labels to show in the user interface. A set includes labels for these states: <code>NewStatus</code> , <code>PendingStatus</code> , <code>SuccessStatus</code> , <code>FailedStatus</code> . For example, if you use the <code>Approve</code> key, you get these labels: <code>Approve</code> , <code>Pending</code> , <code>Approved</code> , <code>Failed</code> .  For a complete list of label keys, see <a href="#">Action Links Labels</a> .	33.0
method	ConnectApi. HttpRequestMethod	The HTTP method. One of these values: <ul style="list-style-type: none"> <li><code>HttpDelete</code>—Returns HTTP 204 on success. Response body or output class is empty.</li> <li><code>HttpGet</code>—Returns HTTP 200 on success.</li> <li><code>HttpHead</code>—Returns HTTP 200 on success. Response body or output class is empty.</li> <li><code>HttpPatch</code>—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> <li><code>HttpPost</code>—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.</li> <li><code>HttpPut</code>—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> </ul>	33.0
modifiedDate	Datetime	An ISO 8601 format date string, for example, <code>2011-02-25T18:24:31.000Z</code> .	33.0
requestBody	String	The request body for <code>Api</code> and <code>ApiAsync</code> action link types.   <b>Note:</b> Escape quotation mark characters in the <code>requestBody</code> value.	33.0
requiresConfirmation	Boolean	<code>true</code> to require the user to confirm the action; <code>false</code> otherwise.	33.0
templateId	String	The ID of the action link template from which to instantiate this action link. If the action link isn't associated with a template, the value is <code>null</code> .	33.0
type	ConnectApi. ActionLinkType	Defines the type of action link. Values are: <ul style="list-style-type: none"> <li><code>Api</code>—The action link calls a synchronous API at the action URL. Salesforce sets the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code></li> </ul>	33.0

Property Name	Type	Description	Available Version
		<p>based on the HTTP status code returned by your server.</p> <ul style="list-style-type: none"> <li><code>ApiAsync</code>—The action link calls an asynchronous API at the action URL. The action remains in a <code>PendingStatus</code> state until a third party makes a request to <code>/connect/action-links/<b>actionLinkId</b></code> to set the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> when the asynchronous operation is complete.</li> <li><code>Download</code>—The action link downloads a file from the action URL.</li> <li><code>Ui</code>—The action link takes the user to a web page at the action URL.</li> </ul> <p> <b>Note:</b> Invoking <code>ApiAsync</code> action links from an app requires a call to set the status. However, there isn't currently a way to set the status of an action link using Apex. To set the status, use Chatter REST API. See the Action Link resource in the <a href="#">Chatter REST API Developer Guide</a> for more information.</p>	
<code>userId</code>	<code>String</code>	The ID of the user who can execute the action. If not specified or <code>null</code> , any user can execute the action. If you specify a <code>userId</code> , you can't specify an <code>excludedUserId</code> .	33.0

SEE ALSO:

[ConnectApi.ActionLinkGroupDefinition Class](#)

## ConnectApi.ActionLinkDiagnosticInfo Class

Any diagnostic information that may exist for an executed action link. Diagnostic info is provided only for users who can access the action link.

Property Name	Type	Description	Available Version
<code>diagnosticInfo</code>	<code>String</code>	Any diagnostic information returned when an action link is executed. Diagnostic information is provided only for users who can access the action link.	33.0
<code>url</code>	<code>String</code>	The URL for this action link diagnostic information.	33.0

## ConnectApi.ActionLinkGroupDefinition Class

The definition of an action link group. Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

Property Name	Type	Description	Available Version
<code>actionLinks</code>	<a href="#">List&lt;ConnectApi.ActionLinkDefinition&gt;</a>	A collection of action link definitions that make up the action link group. Within an action link group, action links are displayed in the order listed in the <code>actionLinks</code> property of the <code>ConnectApi.ActionLinkGroupDefinitionInput</code> class. Within a feed item, action link groups are displayed in the order specified in the <code>actionLinkGroupIds</code> property of the <code>ConnectApi.AssociatedActionsCapabilityInput</code> class.	33.0
<code>category</code>	<a href="#">ConnectApi.PlatformActionGroupCategory</a>	Indicates the priority and location of the action links. Values are: <ul style="list-style-type: none"> <li><code>Primary</code>—The action link group is displayed in the body of the feed element.</li> <li><code>Overflow</code>—The action link group is displayed in the overflow menu of the feed element.</li> </ul>	33.0
<code>createdDate</code>	<a href="#">Datetime</a>	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z.	33.0
<code>executionsAllowed</code>	<a href="#">ConnectApi.ActionLinkExecutionsAllowed</a>	Defines the number of times an action link can be executed. Values are: <ul style="list-style-type: none"> <li><code>Once</code>—An action link can be executed only once across all users.</li> <li><code>OncePerUser</code>—An action link can be executed only once for each user.</li> <li><code>Unlimited</code>—An action link can be executed an unlimited number of times by each user. If the action link's <code>actionType</code> is <code>Api</code> or <code>ApiAsync</code>, you can't use this value.</li> </ul>	33.0
<code>expirationDate</code>	<a href="#">Datetime</a>	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, that represents the date and time this action group expires and can no longer be executed. If the value is <code>null</code> , there isn't an expiration date.	33.0
<code>id</code>	<a href="#">String</a>	18-character ID of the action link group definition.	33.0
<code>modifiedDate</code>	<a href="#">Datetime</a>	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z.	33.0

Property Name	Type	Description	Available Version
templateId	<a href="#">String</a>	The ID of the action link group template from which to instantiate this action link group, or <code>null</code> if this group isn't associated with a template.	33.0
url	<a href="#">String</a>	The URL for this action link group definition.	33.0

## ConnectApi.ActivitySharingResult

The results of sharing a captured email or event.

Property Name	Type	Description	Available Version
success	<a href="#">Boolean</a>	Whether the share operation succeeded or not.	39.0

## ConnectApi.Actor Class

This class is abstract.

Superclass of:

- [ConnectApi.ActorWithId Class](#)
- [ConnectApi.RecommendedObject](#)
- [ConnectApi.UnauthenticatedUser Class](#)

Name	Type	Description	Available Version
name	<a href="#">String</a>	Name of the actor, such as the group name.	28.0

Name	Type	Description	Available Version
<code>type</code>	<a href="#">String</a>	One of the following: <ul style="list-style-type: none"> <li><code>file</code></li> <li><code>group</code></li> <li><code>recommendedObject</code> (version 34.0 and later)</li> <li><code>unauthenticateduser</code></li> <li><code>user</code></li> <li><i>record type name</i>—the name of the record type, such as <code>myCustomObject__c</code> or <code>Account</code></li> </ul>	28.0

## ConnectApi.ActorWithId Class

This class is abstract.

Subclass of: [ConnectApi.Actor Class](#)

Superclass of:

- [ConnectApi.AbstractRecordView Class](#)
- [ConnectApi.ArticleSummary](#)
- [ConnectApi.ChatterGroup Class](#)
- [ConnectApi.ContentHubRepository](#)
- [ConnectApi.File Class](#)
- [ConnectApi.RelatedFeedPost](#)
- [ConnectApi.User Class](#)

Name	Type	Description	Available Version
<code>id</code>	<a href="#">String</a>	Actor's 18-character ID	28.0
<code>motif</code>	<a href="#">ConnectApi.Motif</a>	An icon that identifies the actor as a user, group, file, or custom object. The icon isn't the user or group photo, and it isn't a preview of the file. The motif can also contain the object's base color.	28.0
<code>mySubscription</code>	<a href="#">ConnectApi.Reference</a>	If the context user is following the item, this contains information about the subscription, else returns <code>null</code> .	28.0

Name	Type	Description	Available Version
url	<a href="#">String</a>	Chatter REST API URL for the resource	28.0

**ConnectApi.Alternative**

Alternative representation for an extension on a feed element.

Property Name	Type	Description	Available Version
text Representation	<a href="#">String</a>	Text representation of the extension.	40.0
thumbnailUrl	<a href="#">String</a>	Thumbnail URL for the extension.	40.0
title	<a href="#">String</a>	Title of the extension.	40.0

## ConnectApi.Announcement

An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.

Name	Type	Description	Available Version
expirationDate	<a href="#">Datetime</a>	The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the <code>expirationDate</code> . However, you can use the time value to create your own display logic in your own UI.	31.0
feedElement	<a href="#">ConnectApi.FeedElement Class</a>	The feed element that contains the body of the announcement and its associated comments, likes, and so on.	31.0
id	<a href="#">String</a>	18-character ID of the announcement.	31.0
isArchived	<a href="#">Boolean</a>	Specifies whether the announcement is archived.	36.0
sendEmails	<a href="#">Boolean</a>	Specifies whether the announcement is sent as an email to all group members.	36.0
url	<a href="#">String</a>	The URL to the announcement.	33.0

SEE ALSO:

[ConnectApi.AnnouncementPage](#)

[ConnectApi.ChatterGroup Class](#)

## ConnectApi.AnnouncementPage

A collection of announcements.

Name	Type	Description	Available Version
announcements	<a href="#">List&lt;ConnectApi.Announcement&gt;</a>	A collection of <code>ConnectApi.Announcement</code> objects.	31.0
currentPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the current page.	31.0
nextPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	31.0
previousPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	31.0

## ConnectApi.ApprovalAttachment Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.ApprovalCapability Class](#) is used.

Subclass of [ConnectApi.FeedItemAttachment Class](#)

Name	Type	Description	Available Version
id	String	A work item ID.	28.0–31.0
postTemplateFields	List <ConnectApi. ApprovalPost TemplateField>	Collection of approval post template fields	28.0–31.0
process InstanceStepId	String	An approval step ID.	30.0–31.0
status	ConnectApi. WorkflowProcess Status Enum	Status of a workflow process. <ul style="list-style-type: none"> <li>• Approved</li> <li>• Fault</li> <li>• Held</li> <li>• NoResponse</li> <li>• Pending</li> <li>• Reassigned</li> <li>• Rejected</li> <li>• Removed</li> <li>• Started</li> </ul>	28.0–31.0

## ConnectApi.ApprovalCapability Class

If a feed element has this capability, it includes information about an approval.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
id	String	The work item ID. The work item ID is <code>null</code> if there isn't a pending work item associated with the approval record.	32.0
postTemplate Fields	List<ConnectApi. ApprovalPost TemplateField>	The details of the approval post template field.	32.0
processInstance StepId	String	The process instance step ID. The associated record represents one step in an approval process.	32.0

Property Name	Type	Description	Available Version
status	<a href="#">ConnectApi.WorkflowProcessStatus</a>	The status of the approval.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.ApprovalPostTemplateField Class

Name	Type	Description	Available Version
displayName	<a href="#">String</a>	The field name	28.0
displayValue	<a href="#">String</a>	The field value or <code>null</code> if the field is set to <code>null</code> .	28.0
record	<a href="#">ConnectApi.Reference</a>	A record ID If no record exists or if the reference is <code>null</code> , this value is <code>null</code> .	28.0

SEE ALSO:

[ConnectApi.ApprovalCapability Class](#)

## ConnectApi.ArticleItem Class

Article item in question and answers suggestions.

Property Name	Type	Description	Available Version
id	<a href="#">String</a>	Id of the article.	32.0
rating	<a href="#">Double</a>	The rating of the article.	32.0
title	<a href="#">String</a>	Title of the article.	32.0
urlLink	<a href="#">String</a>	Link URL of the article.	32.0
viewCount	<a href="#">Integer</a>	Number of votes given to the article.	32.0

SEE ALSO:

[ConnectApi.QuestionAndAnswersSuggestions Class](#)

## ConnectApi.ArticleSummary

A knowledge article summary.

Subclass of [ConnectApi.ActorWithId Class](#)

Property Name	Type	Description	Available Version
articleType	String	Type of the knowledge article.	37.0
knowledgeArticleVersionId	String	ID of the knowledge article version.	39.0
lastPublishedDate	Datetime	Last published date of the knowledge article.	37.0
rating	Double	The rating of the article.	37.0
summary	String	Summary of the knowledge article contents.	37.0
title	String	Title of the knowledge article.	37.0
urlName	String	URL name of the knowledge article.	37.0
viewCount	Integer	Number of times the knowledge article has been viewed.	38.0

## ConnectApi.AssociatedActionsCapability Class

If a feed element has this capability, it has platform actions associated with it.

Property Name	Type	Description	Available Version
platformActionGroups	List<ConnectApi.PlatformActionGroup>	The platform action groups associated with a feed element. Platform action groups are returned in the order specified in the <code>ConnectApi.AssociatedActionsCapabilityInput</code> class.	33.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.AudienceCriteria

Recommendation audience criteria.

This class is abstract.

This class is a superclass of:

- [ConnectApi.CustomListAudienceCriteria](#)
- [ConnectApi.NewUserAudienceCriteria](#)

Property Name	Type	Description	Available Version
type	<a href="#">ConnectApi.RecommendationAudienceCriteriaType</a>	Specifies the recommendation audience criteria type. One of these values: <ul style="list-style-type: none"> <li><code>CustomList</code>—A custom list of users makes up the audience.</li> <li><code>MaxDaysInCommunity</code>—New community members make up the audience.</li> </ul>	36.0

SEE ALSO:

[ConnectApi.RecommendationAudience](#)

## ConnectApi.BannerCapability Class

If a feed element has this capability, it has a banner motif and style.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
motif	<a href="#">ConnectApi.Motif</a>	A banner motif.	31.0
style	<a href="#">ConnectApi.BannerStyle</a>	Decorates a feed item with a color and set of icons. Possible value: <ul style="list-style-type: none"> <li><code>Announcement</code>—An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.</li> </ul>	31.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.BannerPhoto

A banner photo.

Property Name	Type	Description	Available Version
bannerPhotoUrl	<a href="#">String</a>	URL to the banner photo in a large format. This URL is available only to authenticated users.	36.0
bannerPhotoVersionId	<a href="#">String</a>	18-character version ID of the banner photo.	36.0

Property Name	Type	Description	Available Version
<code>url</code>	<a href="#">String</a>	URL to the banner photo.	36.0

SEE ALSO:

[ConnectApi.ChatterGroup Class](#)

[ConnectApi.UserDetail Class](#)

## ConnectApi.BasicTemplateAttachment Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.EnhancedLinkCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment Class](#)

Attachments in feed items with type `BasicTemplate` return objects of this type.

Property	Type	Description	Available Version
<code>description</code>	<a href="#">String</a>	An optional description with a 500 character limit.	28.0–31.0
<code>icon</code>	<a href="#">ConnectApi.Icon</a>	An optional icon.	28.0–31.0
<code>linkRecordId</code>	<a href="#">String</a>	If <code>linkURL</code> refers to a Salesforce record, <code>linkRecordId</code> contains the ID of the record.	28.0–31.0
<code>linkUrl</code>	<a href="#">String</a>	An optional URL to a detail page if there is more content that can't be displayed inline. Do not specify <code>linkUrl</code> unless you specify a <code>title</code> .	28.0–31.0
<code>title</code>	<a href="#">String</a>	An optional title to the detail page. If <code>linkUrl</code> is specified, the title links to <code>linkUrl</code> .	28.0–31.0

## ConnectApi.BatchResult

The result of an operation returned by a batch method.

### Namespace

[ConnectApi](#)

### Usage

Calls to batch methods return a list of `BatchResult` objects. Each element in the `BatchResult` list corresponds to the strings in the list parameter passed to the batch method. The first element in the `BatchResult` list matches the first string passed in the list parameter, the second element corresponds with the second string, and so on. If only one string is passed, the `BatchResult` list contains a single element.

## Example

The following example shows how to obtain and iterate through the returned `ConnectApi.BatchResult` objects. The code adds two group IDs to a list. One of group IDs is incorrect, which causes a failure when the code calls the batch method. After it calls the batch method, it iterates through the results to determine whether the operation was successful or not for each group ID in the list. The code writes the ID of every group that was processed successfully to the debug log. The code writes an error message for every failed group.

This example generates one successful operation and one failure.

```
List<String> myList = new List<String>();
// Add one correct group ID.
myList.add('0F9D00000000oOT');
// Add one incorrect group ID.
myList.add('0F9D00000000izf');

ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null,
myList);

// Iterate through each returned result.
for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the group ID.
        ConnectApi.ChatterGroupSummary groupSummary;
        if (batchResult.getResult() instanceof ConnectApi.ChatterGroupSummary) {
            groupSummary = (ConnectApi.ChatterGroupSummary) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupSummary.id);
    }
    else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

IN THIS SECTION:

[BatchResult Methods](#)

## BatchResult Methods

The following are instance methods for `BatchResult`.

IN THIS SECTION:

[getError\(\)](#)

If an error occurred, returns a `ConnectApi.ConnectApiException` object providing the error code and description.

[getErrorMessage\(\)](#)

Returns a `String` that contains an error message.

### `getErrorTypeName()`

Returns a `String` that contains the name of the error type.

### `getResult()`

Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call `getMembershipBatch()`, a successful call to `BatchResult.getResult()` returns a `ConnectApi.GroupMembership` object.

### `isSuccess()`

Returns a `Boolean` that is set to `true` if the batch operation was successful for this object, `false` otherwise.

### `getError()`

If an error occurred, returns a `ConnectApi.ConnectApiException` object providing the error code and description.

#### Signature

```
public ConnectApi.ConnectApiException getError()
```

#### Return Value

Type: `ConnectApi.ConnectApiException`

### `getErrorMessage()`

Returns a `String` that contains an error message.

#### Signature

```
public String getErrorMessage()
```

#### Return Value

Type: `String`

#### Usage

The error message doesn't make a round trip through a Visualforce view state, because exceptions can't be serialized.

### `getErrorTypeName()`

Returns a `String` that contains the name of the error type.

#### Signature

```
public String getErrorTypeName()
```

#### Return Value

Type: `String`

`getResult()`

Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call `getMembershipBatch()`, a successful call to `BatchResult.getResult()` returns a `ConnectApi.GroupMembership` object.

### Signature

```
public Object getResult()
```

### Return Value

Type: `Object`

`isSuccess()`

Returns a Boolean that is set to `true` if the batch operation was successful for this object, `false` otherwise.

### Signature

```
public Boolean isSuccess()
```

### Return Value

Type: `Boolean`

## ConnectApi.BlankRecordField Class

Subclass of [ConnectApi.AbstractRecordField Class](#)

A record field displayed as a place holder in a grid of fields.

## ConnectApi.BookmarkSummary

Summary of a bookmark.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#)

No additional properties.

## ConnectApi.BookmarksCapability Class

If a feed element has this capability, the context user can bookmark it.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
isBookmarked ByCurrentUser	Boolean	Indicates whether the feed element has been bookmarked by the context user ( <code>true</code> ) or not ( <code>false</code> ).	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.BundleCapability Class

If a feed element has this capability, it has a container of feed elements called a *bundle*.

This class is abstract.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Superclass of:

- [ConnectApi.GenericBundleCapability Class](#)
- [ConnectApi.TrackedChangeBundleCapability](#)

Property Name	Type	Description	Available Version
bundleType	<a href="#">ConnectApi.BundleType</a>	Defines this feed element's bundle type. The bundle type determines what additional information appears in the bundle.	31.0
page	<a href="#">ConnectApi.FeedElementPage</a>	A collection of feed elements.	31.0
totalElements	Integer	The total number of feed elements that this bundle aggregates.	31.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.CandidateAnswersStatus

The status of candidate answers on a feed element.

Property Name	Type	Description	Available Version
hasCandidate Answers	Boolean	Indicates whether candidate answers are available for a question.	41.0
hasCandidate AnswersPublished	Boolean	Indicates whether any candidate answers are published.	41.0

Property Name	Type	Description	Available Version
hasCandidateAnswersRated	Boolean	Indicates whether any candidate answers are rated.	41.0

SEE ALSO:

[ConnectApi.QuestionAndAnswersCapability Class](#)

## ConnectApi.CanvasCapability Class

If a feed element has this capability, it renders a canvas app.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
description	String	A description of the canvas app. The maximum size is 255 characters.	32.0
developerName	String	The API name (developer name) of the connected app.	32.0
height	String	The height of the canvas app in pixels.	32.0
icon	<a href="#">ConnectApi.Icon</a>	The icon for the canvas app.	32.0
namespacePrefix	String	A unique namespace prefix for the canvas app.	32.0
parameters	String	JSON parameters passed to the canvas app.	32.0
thumbnailUrl	String	A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.	32.0
title	String	A title for the canvas link.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.CanvasTemplateAttachment Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.CanvasCapability Class](#) is used.

Subclass of [ConnectApi.FeedItemAttachment Class](#)

Objects of this type are returned by attachments in feed items with type `CanvasPost`.

Property	Type	Description	Available Version
description	String	Optional. Description of the canvas app. The maximum length of this field is 500 characters.	29.0–31.0
developerName	String	Specifies the developer name (API name) of the canvas app.	29.0–31.0

Property	Type	Description	Available Version
height	String	Optional. The height of the canvas app in pixels. Default height is 200 pixels.	29.0–31.0
icon	<a href="#">ConnectApi.Icon</a>	The canvas app icon.	29.0–31.0
namespacePrefix	String	Optional. The namespace prefix of the Developer Edition organization in which the canvas app was created.	29.0–31.0
parameters	String	Optional. Parameters passed to the canvas app in JSON format. Example: <pre>{'isUpdated':'true'}</pre>	29.0–31.0
thumbnailUrl	String	Optional. A URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.	29.0–31.0
title	String	Specifies the title of the link used to call the canvas app.	29.0–31.0

## ConnectApi.CaseComment Class

**!** **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.CaseCommentCapability Class](#) is used.

Subclass of [ConnectApi.FeedItemAttachment Class](#)

Objects of this type are returned by attachments in feed items with type `CaseCommentPost`.

Name	Type	Description	Available Version
actorType	<a href="#">ConnectApi.CaseActorTypeEnum</a>	Type of user who made the comment. <ul style="list-style-type: none"> <li><code>Customer</code>—if a Chatter customer made the comment</li> <li><code>CustomerService</code>—if a service representative made the comment</li> </ul>	28.0–31.0
createdBy	<a href="#">ConnectApi.UserSummary</a>	Comment's creator	28.0–31.0
createdDate	Datetime	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z	28.0–31.0
id	String	Comment's 18-character ID	28.0–31.0
published	Boolean	Specifies whether the comment has been published	28.0–31.0
text	String	Comment's text	28.0–31.0

## ConnectApi.CaseCommentCapability Class

If a feed element has this capability, it has a case comment on the case feed.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
actorType	<a href="#">ConnectApi.CaseActorType</a>	Specifies the type of user who made the comment.	32.0
createdBy	<a href="#">ConnectApi.Actor</a>	Information about the user who created the comment.	32.0
createdDate	<a href="#">Datetime</a>	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z.	32.0
eventType	<a href="#">ConnectApi.CaseCommentEventType</a>	Specifies an event type for a comment in the case feed.	32.0
id	<a href="#">String</a>	18-character ID of case comment.	32.0
published	<a href="#">Boolean</a>	Specifies whether the comment has been published.	32.0
text	<a href="#">String</a>	Text of the case comment.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.ChatterActivity Class

Name	Type	Description	Available Version
commentCount	<a href="#">Integer</a>	Total number of comments in the org or community made by the user.	28.0
commentReceivedCount	<a href="#">Integer</a>	Total number of comments in the org or community received by the user.	28.0
likeReceivedCount	<a href="#">Integer</a>	Total number of likes on posts and comments in the org or community received by the user.	28.0
postCount	<a href="#">Integer</a>	Total number of posts in the org or community made by the user.	28.0

SEE ALSO:

[ConnectApi.UserDetail Class](#)

## ConnectApi.ChatterActivitySummary

Summary of Chatter activity.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#)

Property Name	Type	Description	Available Version
commentCount	<a href="#">Integer</a>	Total number of comments in the org or community made by the user.	42.0

Property Name	Type	Description	Available Version
commentReceivedCount	Integer	Total number of comments in the org or community received by the user.	42.0
likeReceivedCount	Integer	Total number of likes on posts and comments in the org or community received by the user.	42.0
postCount	Integer	Total number of likes on posts and comments in the org or community received by the user.	42.0

### ConnectApi.ChatterConversation Class

Name	Type	Description	Available Version
conversationId	String	The ID for the conversation	29.0
conversationUrl	String	Chatter REST API URL identifying the conversation	29.0
members	List<ConnectApi.UserSummary>	List of users in the conversation	29.0
messages	ConnectApi.ChatterMessagePage	The content of the conversation	29.0
read	Boolean	Specifies if the conversation is read ( <code>true</code> ) or not read ( <code>false</code> )	29.0

### ConnectApi.ChatterConversationPage Class

Name	Type	Description	Available Version
conversations	List<ConnectApi.ChatterConversationSummary>	List of conversations on the page	29.0
currentPageToken	String	Token identifying the current page.	29.0
currentPageUrl	String	Chatter REST API URL identifying the current page.	29.0
nextPageToken	String	Token identifying the next page, or <code>null</code> if there isn't a next page.	29.0
nextPageUrl	String	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0

## ConnectApi.ChatterConversationSummary Class

Name	Type	Description	Available Version
id	String	The ID for the conversation summary	29.0
latestMessage	<a href="#">ConnectApi.ChatterMessage</a>	The contents of the latest message	29.0
members	<a href="#">List&lt;ConnectApi.UserSummary&gt;</a>	List of members in the conversation	29.0
read	Boolean	Specifies if the conversation is read ( <code>true</code> ) or not read ( <code>false</code> )	29.0
url	String	Chatter REST API URL to the conversation summary	29.0

SEE ALSO:

[ConnectApi.ChatterConversationPage Class](#)

## ConnectApi.ChatterGroup Class

This class is abstract.

Subclass of [ConnectApi.ActorWithId Class](#)

Superclass of:

- [ConnectApi.ChatterGroupDetail Class](#)
- [ConnectApi.ChatterGroupSummary Class](#)

Name	Type	Description	Available Version
additional Label	String	An extra label for the group, for example, "Archived," "Private," or "Private With Customers." If there isn't an extra label, the value is <code>null</code> .	30.0
announcement	<a href="#">ConnectApi.Announcement</a>	The current announcement for this group. An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.	31.0
bannerPhoto	<a href="#">ConnectApi.BannerPhoto</a>	The banner photo for the group.	36.0
canHave ChatterGuests	Boolean	<code>true</code> if this group allows Chatter guests.	28.0
community	<a href="#">ConnectApi.Reference</a>	Information about the community the group is in.	28.0
description	String	Group's description.	28.0
emailTo ChatterAddress	String	Group's email address for posting to this group by email. Returns <code>null</code> if Chatter emails and posting to Chatter by email aren't both enabled in your organization.	30.0

Name	Type	Description	Available Version
isArchived	Boolean	Specifies whether the group is archived ( <code>true</code> ) or not ( <code>false</code> ).	29.0
isAutoArchiveDisabled	Boolean	Specifies whether automatic archiving is disabled for the group ( <code>true</code> ) or not ( <code>false</code> ).	29.0
isBroadcast	Boolean	Specifies whether the group is a broadcast group ( <code>true</code> ) or not ( <code>false</code> ). In a broadcast group, only group owners and managers can post to the group.	36.0
lastFeedElementPostDate	Datetime	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z, of the most recent feed element posted to the group.	31.0
lastFeedItemPostDate	Datetime	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z, of the most recent feed item posted to the group.  Use <code>lastFeedElementPosted</code> .	28.0–30.0
memberCount	Integer	Total number of group members.	28.0
myRole	ConnectApi.GroupMembershipType Enum	Type of membership the user has with the group. <ul style="list-style-type: none"> <li>• GroupOwner</li> <li>• GroupManager</li> <li>• NotAMember</li> <li>• NotAMemberPrivateRequested</li> <li>• StandardMember</li> </ul>	28.0
mySubscription	ConnectApi.Reference	If the context user is a member of this group, contains information about that subscription; otherwise, returns <code>null</code> .	28.0
name	String	Name of the group.	28.0
owner	ConnectApi.UserSummary	Information about the owner of the group.	28.0
photo	ConnectApi.Photo	Information about the group photo.	28.0
visibility	ConnectApi.GroupVisibilityType Enum	Group visibility type. Valid values are: <ul style="list-style-type: none"> <li>• PrivateAccess—Only members of the group can see posts to this group.</li> <li>• PublicAccess—All users within the community can see posts to this group.</li> <li>• Unlisted—Reserved for future use.</li> </ul>	28.0

## ConnectApi.ChatterGroupDetail Class

Subclass of [ConnectApi.ChatterGroup Class](#)

Name	Type	Description	Available Version
fileCount	<a href="#">Integer</a>	The number of files posted to the group.	28.0
information	<a href="#">ConnectApi.GroupInformation</a>	Describes the Information section of the group. If the group is private, this section is visible only to members. If the context user is not a member of the group or does not have Modify All Data or View All Data permission, this value is <code>null</code> .	28.0
pendingRequests	<a href="#">Integer</a>	The number of requests to join a group that are in a pending state.	29.0

SEE ALSO:

[ConnectApi.ChatterGroupPage Class](#)

## ConnectApi.ChatterGroupPage Class

Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the current page.	28.0
groups	<a href="#">List&lt;ConnectApi.ChatterGroupDetail&gt;</a>	List of group details	28.0
nextPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0
previousPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0

## ConnectApi.ChatterGroupSummary Class

Subclass of [ConnectApi.ChatterGroup Class](#)

Name	Type	Description	Available Version
fileCount	<a href="#">Integer</a>	The number of files posted to the group.	28.0

SEE ALSO:

[ConnectApi.ChatterGroupSummaryPage Class](#)

## ConnectApi.ChatterGroupSummaryPage Class

Name	Type	Description	Available Version
currentPageUrl	String	Chatter REST API URL identifying the current page.	29.0
groups	List<ConnectApi.ChatterGroupSummary>	List of group summary objects	29.0
nextPageUrl	String	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0
previousPageUrl	String	Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	29.0

## ConnectApi.ChatterLike Class

Name	Type	Description	Available Version
id	String	Like's 18-character ID	28.0
likedItem	ConnectApi.Reference	A reference to the liked comment or feed element.	28.0
url	String	Like's Chatter REST API URL	28.0
user	ConnectApi.UserSummary	Like's creator	28.0

SEE ALSO:

[ConnectApi.Comment Class](#)

## ConnectApi.ChatterLikesCapability Class

If a feed element has this capability, the context user can like it. Exposes information about existing likes.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
isLikedBy CurrentUser	<a href="#">Boolean</a>	Indicates whether the feed element is liked by the context user ( <code>true</code> ) or not ( <code>false</code> ).	32.0
page	<a href="#">ConnectApi.ChatterLikePage</a>	Likes information for this feed element.	32.0
likesMessage	<a href="#">ConnectApi.MessageBody</a>	A message body that describes who likes the feed element.	32.0
myLike	<a href="#">ConnectApi.Reference</a>	If the context user has liked the feed element, this property is a reference to the specific like, <code>null</code> otherwise.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.ChatterMessage Class

Name	Type	Description	Available Version
body	<a href="#">ConnectApi.MessageBody</a>	Contents of the message	29.0

Name	Type	Description	Available Version
conversationId	<a href="#">String</a>	The ID for the conversation	29.0
conversationUrl	<a href="#">String</a>	Chatter REST API URL identifying the conversation	29.0
id	<a href="#">String</a>	The ID of the message	29.0
recipients	<a href="#">List&lt;ConnectApi.UserSummary&gt;</a>	List of the recipients of the message	29.0
sender	<a href="#">ConnectApi.UserSummary</a>	The sender of the message	29.0
sendingCommunity	<a href="#">ConnectApi.Reference</a>	Information about the community from which the message was sent  Returns <code>null</code> for the default community or if communities aren't enabled.	32.0
sentDate	<a href="#">Datetime</a>	The date and time the message was sent	29.0
url	<a href="#">String</a>	Chatter REST API URL identifying the current page of the conversation	29.0

SEE ALSO:

[ConnectApi.ChatterConversationSummary Class](#)

[ConnectApi.ChatterMessagePage Class](#)

## ConnectApi.ChatterMessagePage Class

Name	Type	Description	Available Version
currentPageToken	<a href="#">String</a>	Token identifying the current page.	29.0
currentPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the current page.	29.0
messages	<a href="#">List&lt;ConnectApi.ChatterMessage&gt;</a>	The messages on the current page	29.0
nextPageToken	<a href="#">String</a>	Token identifying the next page, or <code>null</code> if there isn't a next page.	29.0
nextPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0

SEE ALSO:

[ConnectApi.ChatterConversation Class](#)

## ConnectApi.ChatterStream

A Chatter feed stream.

Property Name	Type	Description	Available Version
community	<a href="#">ConnectApi.CommunitySummary</a>	Community summary for the stream.	41.0
createdDate	<a href="#">Datetime</a>	Date the stream was created.	39.0
description	<a href="#">String</a>	Description of the stream.	39.0
id	<a href="#">String</a>	18-character ID of the stream.	39.0
name	<a href="#">String</a>	Name of the stream.	39.0
subscriptions	<a href="#">List&lt;ConnectApi.FeedEnabledEntity&gt;</a>	List of entities whose feeds are included in the stream.	39.0
url	<a href="#">String</a>	URL to the stream.	39.0

SEE ALSO:

[ConnectApi.ChatterStreamPage](#)

## ConnectApi.ChatterStreamPage

A collection of Chatter feed streams.

Property Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	URL to the current page of streams.	39.0
items	<a href="#">List&lt;ConnectApi.ChatterStream&gt;</a>	List of streams.	39.0
nextPageUrl	<a href="#">String</a>	URL to the next page of streams.  In version 39.0, all streams are included in <code>currentPageUrl</code> and <code>nextPageUrl</code> is <code>null</code> .	39.0
total	<a href="#">Integer</a>	Total number of streams in the collection.	39.0

## ConnectApi.ClientInfo Class

Name	Type	Description	Available Version
applicationName	<a href="#">String</a>	Name of the connected app used for authentication.	28.0

Name	Type	Description	Available Version
<code>applicationUrl</code>	<a href="#">String</a>	Value from the <code>Info URL</code> field of the connected app used for authentication	28.0

SEE ALSO:

[ConnectApi.Comment Class](#)

[ConnectApi.FeedItem Class](#)

## ConnectApi.CloseCapability

If a feed element has this capability, users with permission can close it.

Users can't edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can't vote on it. Users can't edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

Property Name	Type	Description	Available Version
<code>canContextUserUpdateIsClosed</code>	<a href="#">Boolean</a>	Specifies whether the context user has permission to set the feed element to closed ( <code>true</code> ) or not ( <code>false</code> ).	43.0
<code>isClosed</code>	<a href="#">Boolean</a>	Specifies whether the feed element is closed ( <code>true</code> ) or not ( <code>false</code> ).	43.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.Comment Class

Name	Type	Description	Available Version
<code>attachment</code>	<a href="#">ConnectApi.FeedItem Attachment</a>	If the comment contains an attachment, property value is <code>ContentAttachment</code> . If the comment does not contain an attachment, it is <code>null</code> .   <b>Important:</b> As of version 32.0, use the <code>capabilities</code> property.	28.0–31.0
<code>body</code>	<a href="#">ConnectApi.FeedBody</a>	Body of the comment.	28.0
<code>capabilities</code>	<a href="#">ConnectApi.CommentCapabilities</a>	Capabilities associated with the comment, such as any file attachments.	32.0

Name	Type	Description	Available Version
clientInfo	<a href="#">ConnectApi.ClientInfo</a>	Information about the connected app used to authenticate the connection.	28.0
createdDate	<a href="#">Datetime</a>	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z.	28.0
feedElement	<a href="#">ConnectApi.Reference</a>	Feed element on which the comment is posted.	
feedItem	<a href="#">ConnectApi.Reference</a>	Feed item on which the comment is posted.  <b>Important:</b> As of version 32.0, use the <code>feedElement</code> property.	28.0–31.0
id	<a href="#">String</a>	Comment's 18-character ID.	28.0
isDelete Restricted	<a href="#">Boolean</a>	If this property is <code>true</code> , the context user can't delete the comment. If it's <code>false</code> , the context user might be able to delete the comment.	28.0
likes	<a href="#">ConnectApi.ChatterLikePage</a>	The first page of likes for the comment. This property has no information for comments on direct messages.	28.0
likesMessage	<a href="#">ConnectApi.MessageBody</a>	A message body that describes who likes the comment. This property is <code>null</code> for comments on direct messages.	28.0
moderation Flags	<a href="#">ConnectApi.ModerationFlags</a>	Information about the moderation flags on a comment. If <code>ConnectApi.Features.communityModeration</code> is <code>false</code> , this property is <code>null</code> .	29.0
myLike	<a href="#">ConnectApi.Reference</a>	If the context user liked the comment, this property is a reference to the specific like, <code>null</code> otherwise. This property is <code>null</code> for comments on direct messages.	28.0
parent	<a href="#">ConnectApi.Reference</a>	Information about the parent feed-item for this comment.	28.0
relativeCreatedDate	<a href="#">String</a>	The created date formatted as a relative, localized string, for example, "17m ago" or "Yesterday."	28.0
type	<a href="#">ConnectApi.CommentType</a> Enum	Type of comment. <ul style="list-style-type: none"> <li><code>ContentComment</code>—Comment holds a content capability.</li> <li><code>TextComment</code>—Comment contains only text.</li> </ul>	28.0
url	<a href="#">String</a>	Chatter REST API URL to this comment.	28.0

Name	Type	Description	Available Version
user	<a href="#">ConnectApi.UserSummary</a>	Information about the comment author.	28.0

SEE ALSO:

[ConnectApi.CommentPage Class](#)

[ConnectApi.QuestionAndAnswersCapability Class](#)

## ConnectApi.CommentCapabilities Class

A set of capabilities on a comment.

Property Name	Type	Description	Available Version
content	<a href="#">ConnectApi.ContentCapability</a>	If a comment has this capability, it has a file attachment.  Most <a href="#">ConnectApi.ContentCapability</a> properties are null if the content has been deleted from the feed element or if the access has changed to private.	32.0
edit	<a href="#">ConnectApi.EditCapability</a>	If a comment has this capability, users who have permission can edit it.	34.0
feedEntityShare	<a href="#">ConnectApi.FeedEntityShareCapability</a>	If a comment has this capability, a feed entity is shared with it.	42.0
record	<a href="#">ConnectApi.RecordCapability</a>	If a comment has this capability, it has a record attachment.	42.0
status	<a href="#">ConnectApi.StatusCapability</a>	If a comment has this capability, it has a status that determines its visibility.	38.0
upDownVote	<a href="#">ConnectApi.UpDownVoteCapability</a>	If a comment has this capability, users can upvote or downvote it.	41.0
verified	<a href="#">ConnectApi.VerifiedCapability</a>	If a comment has this capability, users with permission can mark it as verified or unverified.	41.0

SEE ALSO:

[ConnectApi.Comment Class](#)

## ConnectApi.CommentPage Class

Name	Type	Description	Available Version
comments	<a href="#">List&lt;ConnectApi.Comment&gt;</a>	Collection of comments.  <b>Important:</b> As of version 32.0, use the <code>items</code> property.	28.0–31.0
currentPageToken	String	Token identifying the current page.	28.0
currentPageUrl	String	Chatter REST API URL identifying the current page.	28.0
items	<a href="#">List&lt;ConnectApi.Comment&gt;</a>	Collection of comments for this feed element.	32.0
nextPageToken	String	Token identifying the next page, or <code>null</code> if there isn't a next page. If you want to read more of the comments in search results, all the comments in the thread are refreshed, not just the ones that match the search term. Avoid using <code>nextPageToken</code> until the comments are refreshed.	28.0
nextPageUrl	String	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page. If you want to read more of the comments in search results, all the comments in the thread are refreshed, not just the ones that match the search term. Avoid using <code>nextPageUrl</code> until the comments are refreshed.	28.0
total	Integer	Total number of published comments for the parent feed element.	28.0

SEE ALSO:

[ConnectApi.CommentsCapability Class](#)

## ConnectApi.CommentSummary

Summary of the comment.

Subclass of [ConnectApi.UserActivitySummary](#)

Property Name	Type	Description	Available Version
commentId	String	ID of the comment.	42.0

## ConnectApi.CommentsCapability Class

If a feed element has this capability, the context user can add a comment to it.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
page	<a href="#">ConnectApi.CommentPage Class</a>	The comments information for this feed element.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.Community Class

Name	Type	Description	Available Version
allowChatterAccessWithoutLogin	<a href="#">Boolean</a>	Specifies if guest users can access public groups in the community without logging in.	31.0
allowMembersToFlag	<a href="#">Boolean</a>	Specifies if members of the community can flag content.	30.0
description	<a href="#">String</a>	Community description.	28.0
id	<a href="#">String</a>	Community ID.	28.0
invitationsEnabled	<a href="#">Boolean</a>	Specifies whether users can invite other external users to the community.	28.0
knowledgeableEnabled	<a href="#">Boolean</a>	Specifies whether knowledgeable people and endorsements are available for topics ( <code>true</code> ), or not ( <code>false</code> ).	30.0
loginUrl	<a href="#">String</a>	Login URL for the community.	36.0
name	<a href="#">String</a>	Community name.	28.0
nicknameDisplayEnabled	<a href="#">Boolean</a>	Specifies whether nicknames are displayed in the community.	32.0
privateMessagesEnabled	<a href="#">Boolean</a>	Specifies whether members of the community can send and receive private messages to and from other members of the community ( <code>true</code> ) or not ( <code>false</code> ).	30.0
reputationEnabled	<a href="#">Boolean</a>	Specifies whether reputation is calculated and displayed for members of the community.	31.0
sendWelcomeEmail	<a href="#">Boolean</a>	Specifies whether emails are sent to all new users when they join.	28.0
siteAsContainerEnabled	<a href="#">Boolean</a>	Specifies whether the community uses Site.com pages ( <code>true</code> ) or Visualforce tabs ( <code>false</code> ).	41.0
siteUrl	<a href="#">String</a>	Site URL for the community, which is the custom domain plus a URL prefix.	30.0
status	<a href="#">ConnectApi.CommunityStatus Enum</a>	Status of the community. <ul style="list-style-type: none"> <li>• Live</li> </ul>	28.0

Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>Inactive</li> <li>UnderConstruction</li> </ul>	
url	String	Full URL to community.	28.0
urlPathPrefix	String	Community-specific URL prefix.	28.0

SEE ALSO:

[ConnectApi.CommunityPage Class](#)

## ConnectApi.CommunityPage Class

Name	Type	Description	Available Version
communities	List<ConnectApi.Community>	List of communities context user has access to	28.0
total	Integer	Total number of communities	28.0

## ConnectApi.CommunitySummary

A community summary.

Property Name	Type	Description	Available Version
id	String	18-character ID of the community.	41.0
name	String	Localized name of the community.	41.0

SEE ALSO:

[ConnectApi.UserActivitySummary](#)

## ConnectApi.CompanyVerifySummary

Company verify summary.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#)

No additional properties.

## ConnectApi.ComplexSegment Class

This class is abstract.

Subclass of [ConnectApi.MessageSegment Class](#)

Superclass of [ConnectApi.FieldChangeSegment Class](#)

ComplexSegments are only part of field changes.

Name	Type	Description	Available Version
segments	List<ConnectApi.MessageSegment>	List of message segments.	28.0

## ConnectApi.CompoundRecordField Class

Subclass of [ConnectApi.LabeledRecordField Class](#)

A record field that is a composite of subfields.

Name	Type	Description	Available Version
fields	List<ConnectApi.AbstractRecordField>	A collection of subfields that make up the compound field.	29.0

## ConnectApi.Content

A file attached to a feed item.

Property Name	Type	Description	Available Version
checksum	String	MD5 checksum for the file.	36.0
contentUrl	String	URL of the content for links.	36.0
description	String	Description of the attachment.	36.0
downloadUrl	String	URL to the content.	36.0
fileExtension	String	Extension of the file.	36.0
fileSize	String	Size of the file in bytes. If size can't be determined, returns <code>unknown</code> .	36.0
fileType	String	Type of file, such as PDF.	36.0
hasPdfPreview	Boolean	<code>true</code> if the file has a PDF preview available; <code>false</code> otherwise.	36.0
id	String	18-character ID of the content.	36.0
imageDetails	ConnectApi.ContentImageFileDetails	Image details, or <code>null</code> if the file isn't an image.	40.0
isInMyFileSync	Boolean	<code>true</code> if the file is synced with Salesforce Files Sync.	36.0
		 <b>Note:</b> Salesforce Files Sync was retired on May 25, 2018.	
mimeType	String	MIME type of the file.	36.0

Property Name	Type	Description	Available Version
renditionUrl	String	URL to the rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	36.0
renditionUrl 240By180	String	URL to the 240 x 180 pixel rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	36.0
renditionUrl 720By480	String	URL to the 720 x 480 pixel rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	36.0
sharingOption	ConnectApi. FileSharingOption	Sharing option of the file. Values are: <ul style="list-style-type: none"> <li>Allowed—Resharing of the file is allowed.</li> <li>Restricted—Resharing of the file is restricted.</li> </ul>	36.0
textPreview	String	Text preview of the file if available; null otherwise.	36.0
thumb120By90 RenditionStatus	String	Specifies the rendering status of the 120 x 90 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	36.0
thumb240By180 RenditionStatus	String	Specifies the rendering status of the 240 x 180 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	36.0
thumb720By480 RenditionStatus	String	Specifies the rendering status of the 720 x 480 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> </ul>	36.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>Na—Rendering is not available for this image.</li> </ul>	
title	String	Title of the file.	36.0
versionId	String	Version ID of the file.	36.0

## ConnectApi.ContentAttachment Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.ContentCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment Class](#)

Objects of this type are returned by attachments in feed items with the type `ContentPost`.

Name	Type	Description	Available Version
checksum	String	MD5 checksum for the file	28.0–31.0
contentUrl	String	URL for link files and Google Docs; otherwise the value is <code>null</code> .	31.0–31.0
description	String	Description of the attachment	28.0–31.0
downloadUrl	String	File's URL. This value is <code>null</code> if the content is a link or a Google Doc.	28.0–31.0
fileExtension	String	File's extension	28.0–31.0
fileSize	String	Size of the file in bytes. If size cannot be determined, returns <code>unknown</code> .	28.0–31.0
fileType	String	Type of file	28.0–31.0
hasImagePreview	Boolean	<code>true</code> if the file has a preview image available, otherwise, <code>false</code>	28.0–29.0
hasPdfPreview	Boolean	<code>true</code> if the file has a PDF preview available, otherwise, <code>false</code>	28.0–31.0
id	String	Content's 18-character ID	28.0–31.0
isInMyFileSync	Boolean	<code>true</code> if the file is synced with Salesforce Files Sync; <code>false</code> otherwise.	28.0–31.0
		 <b>Note:</b> Salesforce Files Sync was retired on May 25, 2018.	
mimeType	String	File's MIME type	28.0–31.0
renditionUrl	String	URL to the file's rendition resource	28.0–31.0
renditionUrl 240By180	String	URL to the 240 x 180 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	30.0–31.0

Name	Type	Description	Available Version
<code>renditionUrl</code> <code>720By480</code>	<a href="#">String</a>	URL to the 720 x 480 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	30.0–31.0
<code>textPreview</code>	<a href="#">String</a>	Text preview of the file if available; <code>null</code> otherwise.	30.0–31.0
<code>thumb120By90</code> <code>RenditionStatus</code>	<a href="#">String</a>	Specifies the rendering status of the 120 x 90 preview image of the file. One of these values: <ul style="list-style-type: none"> <li><code>Processing</code>—Image is being rendered.</li> <li><code>Failed</code>—Rendering process failed.</li> <li><code>Success</code>—Rendering process was successful.</li> <li><code>Na</code>—Rendering is not available for this image.</li> </ul>	30.0–31.0
<code>thumb240By180</code> <code>RenditionStatus</code>	<a href="#">String</a>	Specifies the rendering status of the 240 x 180 preview image of the file. One of these values: <ul style="list-style-type: none"> <li><code>Processing</code>—Image is being rendered.</li> <li><code>Failed</code>—Rendering process failed.</li> <li><code>Success</code>—Rendering process was successful.</li> <li><code>Na</code>—Rendering is not available for this image.</li> </ul>	30.0–31.0

One of these values: <ul style="list-style-type: none"> <li><code>Processing</code>—Image is being rendered.</li> <li><code>Failed</code>—Rendering process failed.</li> <li><code>Success</code>—Rendering process was successful.</li> <li><code>Na</code>—Rendering is not available for this image.</li> </ul>	30.0–31.0
<code>title</code>	<a href="#">String</a>	Title of the file	28.0–31.0
<code>versionId</code>	<a href="#">String</a>	18-character ID for this version of the content	28.0–31.0

## ConnectApi.ContentCapability

If a comment has this capability, it has a file attachment.

Subclass of [ConnectApi.FeedElementCapability Class](#).

For files attached to a feed post (instead of a comment) in version 36.0 and later, use [ConnectApi.FilesCapability](#).

If content is deleted from a feed element after it's posted or if the access to the content is changed to private, the `ConnectApi.ContentCapability` exists, however most of its properties are null.

Property Name	Type	Description	Available Version
<code>checksum</code>	<a href="#">String</a>	MD5 checksum for the file.	32.0
<code>contentUrl</code>	<a href="#">String</a>	URL of the content for links and Google docs.	32.0

Property Name	Type	Description	Available Version
description	String	Description of the attachment.	32.0
downloadUrl	String	URL to the content.	32.0
fileExtension	String	Extension of the file.	32.0
fileSize	String	Size of the file in bytes. If size cannot be determined, returns <code>Unknown</code> .	32.0
fileType	String	Type of file.	32.0
hasPdfPreview	Boolean	<code>true</code> if the file has a PDF preview available, <code>false</code> otherwise.	32.0
id	String	18-character ID of the content.	32.0
isInMyFileSync	Boolean	<code>true</code> if the file is synced with Salesforce Files Sync; <code>false</code> otherwise.  <b>Note:</b> Salesforce Files Sync was retired on May 25, 2018.	32.0
mimeType	String	MIME type of the file.	32.0
renditionUrl	String	URL to the rendition resource for the file. Renditions are processed asynchronously and may not be available immediately after the file has been uploaded.	32.0
renditionUrl240By180	String	URL to the 240x180 size rendition resource for the file. Renditions are processed asynchronously and may not be available immediately after the file has been uploaded.	32.0
renditionUrl720By480	String	URL to the 720x480 size rendition resource for the file. Renditions are processed asynchronously and may not be available immediately after the file has been uploaded.	32.0
sharingOption	ConnectApi. FileSharingOption	Sharing option of the file. Values are: <ul style="list-style-type: none"> <li>• <code>Allowed</code>—Resharing of the file is allowed.</li> <li>• <code>Restricted</code>—Resharing of the file is restricted.</li> </ul>	35.0
textPreview	String	Text preview of the file if available, <code>null</code> otherwise. The maximum number of characters is 200.	32.0
thumb120By90 RenditionStatus	String	The status of the rendering of the 120x90 pixel sized preview image of the file. Should be either <code>Processing</code> , <code>Failed</code> , <code>Success</code> , or <code>Na</code> if unavailable.	32.0

Property Name	Type	Description	Available Version
thumb240By180RenditionStatus	String	The status of the rendering of the 240x180 pixel sized preview image of the file. Should be either Processing, Failed, Success, or Na if unavailable.	32.0
thumb720By480RenditionStatus	String	The status of the rendering of the 720x480 pixel sized preview image of the file. Should be either Processing, Failed, Success, or Na if unavailable.	32.0
title	String	Title of the file.	32.0
versionId	String	Version ID of the file.	32.0

[ConnectApi.CommentCapabilities Class](#)

## ConnectApi.ContentHubAllowedItemTypeCollection

The item types that the context user is allowed to create in a repository folder.

Property Name	Type	Description	Available Version
allowedItemTypes	List< <a href="#">ConnectApi.ContentHubItemTypeSummary</a> >	A collection of item types that the context user is allowed to create in a repository folder.	39.0

## ConnectApi.ContentHubFieldDefinition

A field definition.

Property Name	Type	Description	Available Version
displayName	String	Label or caption of this field.	39.0
isMandatory	Boolean	Specifies whether this field is mandatory for the item type.	39.0
maxLength	Integer	Maximum length of the value of this field.	39.0
name	String	Name of the field.	39.0

Property Name	Type	Description	Available Version
type	<a href="#">ConnectApi.ContentHub.VariableType</a>	Data type of the value of the field. Values are: <ul style="list-style-type: none"> <li>• <a href="#">BooleanType</a></li> <li>• <a href="#">DateTimeType</a></li> <li>• <a href="#">DecimalType</a></li> <li>• <a href="#">HtmlType</a></li> <li>• <a href="#">IdType</a></li> <li>• <a href="#">IntegerType</a></li> <li>• <a href="#">StringType</a></li> <li>• <a href="#">UriType</a></li> <li>• <a href="#">XmlType</a></li> </ul>	39.0

SEE ALSO:

[ConnectApi.ContentHubItemTypeDetail](#)

## ConnectApi.ContentHubItemTypeDetail

The details of an item type associated with a repository folder.

Subclass of [ConnectApi.AbstractContentHubItemType](#)

Property Name	Type	Description	Available Version
fields	<a href="#">List&lt;ConnectApi.ContentHub.FieldDefinition&gt;</a>	A list of fields that the context user is allowed to set in the metadata of this item type.	39.0

## ConnectApi.ContentHubItemTypeSummary

The summary of an item type associated with a repository folder.

Subclass of [ConnectApi.AbstractContentHubItemType](#)

No additional properties.

SEE ALSO:

[ConnectApi.ContentHubAllowedItemTypeCollection](#)

## ConnectApi.ContentHubPermissionType

A permission type.

Property Name	Type	Description	Available Version
id	<a href="#">String</a>	Internal ID of the permission type in the repository.	39.0

Property Name	Type	Description	Available Version
label	String	Label as returned by the repository.	39.0

SEE ALSO:

[ConnectApi.ExternalFilePermissionInformation](#)

## ConnectApi.ContentHubProviderType

The type of repository.

Property Name	Type	Description	Available Version
label	String	Localized label of the provider type.	39.0
type	String	Provider type. One of these values: <ul style="list-style-type: none"> <li>ContentHubBox</li> <li>ContentHubGDrive</li> <li>ContentHubSharepoint</li> <li>ContentHubSharepointOffice365</li> <li>ContentHubSharepointOneDrive</li> <li>SimpleUrl</li> </ul>	39.0

SEE ALSO:

[ConnectApi.ContentHubRepository](#)

## ConnectApi.ContentHubRepository

A repository.

Subclass of [ConnectApi.ActorWithId Class](#)

Property Name	Type	Description	Available Version
authentication	<a href="#">ConnectApi.ContentHubRepositoryAuthentication</a>	Repository authentication information.	40.0
features	<a href="#">ConnectApi.ContentHubRepositoryFeatures</a>	Repository features.	39.0
label	String	Repository label.	39.0
name	String	Repository name.	39.0

Property Name	Type	Description	Available Version
providerType	<a href="#">ConnectApi.ContentHub.ProviderType</a>	Repository provider type.	39.0
rootFolderItemsUrl	<a href="#">String</a>	URL to the list of items in the repository root folder.	39.0

SEE ALSO:

[ConnectApi.ContentHubRepositoryCollection](#)

## ConnectApi.ContentHubRepositoryAuthentication

Authentication information for a repository.

Property Name	Type	Description	Available Version
authFlowUrl	<a href="#">String</a>	Depends on the <code>authProtocol</code> . <ul style="list-style-type: none"> <li><code>NoAuthentication</code>—<code>null</code>.</li> <li><code>Oauth</code>—URL to start the OAuth flow.</li> <li><code>Password</code>—URL to the authentication settings for external systems.</li> </ul>	40.0
authProtocol	<a href="#">ConnectApi.ContentHub.Authentication.Protocol</a>	Authentication protocol used for the repository. Values are: <ul style="list-style-type: none"> <li><code>NoAuthentication</code>—Repository doesn't require authentication.</li> <li><code>Oauth</code>—Repository uses OAuth authentication protocol.</li> <li><code>Password</code>—Repository uses user name and password authentication protocol.</li> </ul>	40.0
userHasAuthSettings	<a href="#">Boolean</a>	Specifies whether the user has credentials or the administrator configured the external data source to use the same set of credentials for every user ( <code>true</code> ). Otherwise, <code>false</code> .	40.0

SEE ALSO:

[ConnectApi.ContentHubRepository](#)

## ConnectApi.ContentHubRepositoryCollection

A collection of repositories.

Property Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	URL to the current page of repositories.	39.0
nextPageUrl	<a href="#">String</a>	URL to the next page of repositories.	39.0
previousPageUrl	<a href="#">String</a>	URL to the previous page of repositories.	39.0
repositories	<a href="#">List&lt;ConnectApi.ContentHubRepository&gt;</a>	Collection of repositories.	39.0

## ConnectApi.ContentHubRepositoryFeatures

The features of a repository.

Property Name	Type	Description	Available Version
canBrowse	<a href="#">Boolean</a>	Specifies whether the repository's folder hierarchy can be browsed ( <code>true</code> ) or not ( <code>false</code> ).	39.0
canSearch	<a href="#">Boolean</a>	Specifies whether the repository can be searched ( <code>true</code> ) or not ( <code>false</code> ).	39.0

SEE ALSO:

[ConnectApi.ContentHubRepository](#)

## ConnectApi.ContentImageFileDetails

Image file details.

Property Name	Type	Description	Available Version
height	<a href="#">Integer</a>	Image's height in pixels.	40.0
imageFormat	<a href="#">String</a>	Image's format.	40.0
orientation	<a href="#">String</a>	Image's EXIF orientation value, if present.	40.0
width	<a href="#">Integer</a>	Image's width in pixels.	40.0

SEE ALSO:

[ConnectApi.InlineImageSegment](#)

## ConnectApi.CurrencyRecordField Class

Subclass of [ConnectApi.LabeledRecordField Class](#)

A record field containing a currency value.

## ConnectApi.CustomListAudienceCriteria

The criteria for the custom list type of recommendation audience.

Subclass of [ConnectApi.AudienceCriteria](#).

Property Name	Type	Description	Available Version
memberCount	<a href="#">Integer</a>	Total number of members in the recommendation audience.	36.0
members	<a href="#">ConnectApi.UserReferencePage</a>	The members of the recommendation audience.	36.0

## ConnectApi.DashboardComponentAttachment Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.DashboardComponentSnapshotCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment Class](#)

Objects of this type are returned as attachments in feed items with type `DashboardSnapshot`.

Name	Type	Description	Available Version
componentId	<a href="#">String</a>	Component's 18-character ID	28.0–31.0
componentName	<a href="#">String</a>	Name of the component. If no name is saved with the component, returns the localized string, "Untitled Component."	28.0–31.0
dashboardBodyText	<a href="#">String</a>	Text displayed next to the actor in the body of a feed item. This is used instead of the default body text. If no text is specified, and there is no default body text, returns null.	28.0–31.0
dashboardId	<a href="#">String</a>	Dashboard's 18-character ID	28.0–31.0
dashboardName	<a href="#">String</a>	Name of the dashboard.	28.0–31.0
fullSizeImageUrl	<a href="#">String</a>	URL of the full-sized dashboard image	28.0–31.0
lastRefreshDate	<a href="#">Datetime</a>	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z, specifying when this dashboard was last refreshed.	28.0–31.0
lastRefreshDateDisplayText	<a href="#">String</a>	The text of the last refresh date to be displayed, such as, "Last refreshed on October 31, 2011."	28.0–31.0
runningUser	<a href="#">ConnectApi.UserSummary</a>	The user running the dashboard.	28.0–31.0
thumbnailUrl	<a href="#">String</a>	URL of the thumbnail-sized dashboard image.	28.0–31.0

## ConnectApi.DashboardComponentSnapshotCapability

If a feed element has this capability, it has a dashboard component snapshot. A snapshot is a static image of a dashboard component at a specific point in time.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
dashboardComponentSnapshot	<a href="#">ConnectApi.DashboardComponentSnapshot</a>	The dashboard component snapshot.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.DashboardComponentSnapshot

Represents both dashboard component snapshots and alerts you receive when a dashboard component value crosses a threshold.

Property Name	Type	Description	Available Version
componentId	<a href="#">String</a>	18-character ID of the dashboard component.	32.0
componentName	<a href="#">String</a>	The dashboard component name.	32.0
dashboardBodyText	<a href="#">String</a>	Display this text next to the actor in the feed element. Use this text in place of the default body text.	32.0
dashboardId	<a href="#">String</a>	18-character ID of the dashboard.	32.0
dashboardName	<a href="#">String</a>	The name of the dashboard.	32.0
fullSizeImageUrl	<a href="#">String</a>	The source URL to retrieve the full-size image of a snapshot. Access this URL with OAuth credentials.	32.0
lastRefreshDate	<a href="#">Datetime</a>	ISO-8601 formatted date specifying when this dashboard component was last refreshed.	32.0
lastRefreshDateDisplayText	<a href="#">String</a>	Display text for the last refresh date, for example, "Last Refreshed on October 31, 2013."	32.0
runningUser	<a href="#">ConnectApi.UserSummary</a>	The running user of the dashboard at the time the snapshot was posted. This value may be <code>null</code> . Each dashboard has a running user, whose security settings determine which data to display in a dashboard.	32.0

Property Name	Type	Description	Available Version
thumbnailUrl	String	The source URL to retrieve the thumbnail image of a snapshot. Access this URL with OAuth credentials.	32.0

SEE ALSO:

[ConnectApi.DashboardComponentSnapshotCapability](#)

[ConnectApi.DatacloudCompanies Class](#)

## ConnectApi.DatacloudCompany Class

Information about a Data.com company.

All company information is visible for companies that you purchased and own. If you haven't purchased a company, some of the fields are hidden. Hidden fields are fully or partially hidden by asterisks "\*\*\*\*."

Property Name	Type	Description	Available Version
activeContacts	Integer	The number of active Data.com contacts who work in the company.	32.0
address	ConnectApi.Address	The postal address for the company. This is typically a physical address that can include the city, state, street, and postal code.	32.0
annualRevenue	Double	The amount of money that the company makes in one year. Annual revenue is measured in US dollars.	32.0
companyId	String	A unique numerical identifier for the company. This is the Data.com identifier for a company.	32.0
description	String	A brief synopsis of the company that provides a general overview of the company and what it does.	32.0
dunsNumber	String	A randomly generated nine-digit number that's assigned by Dun & Bradstreet (D&B) to identify unique business establishments.	32.0
industry	String	A description of the type of industry such as "Telecommunications," "Agriculture," or "Electronics."	32.0
isInactive	Boolean	Indicates whether this company is active (true) or not (false). Inactive companies have out-of-date information in Data.com.	32.0
isOwned	Boolean	<ul style="list-style-type: none"> <li>• True: You or your organization owns this company.</li> <li>• False: Neither you nor your organization owns this company.</li> </ul>	32.0

Property Name	Type	Description	Available Version
naicsCode	String	North American Industry Classification System (NAICS) codes were created to provide more details about a business's service orientation. The code descriptions are focused on what a business does.	32.0
naicsDescription	String	A description of the NAICS classification.	32.0
name	String	The name of the company.	32.0
numberOfEmployees	Integer	The number of employees who are working for the company.	32.0
ownership	String	The type of ownership of the company: <ul style="list-style-type: none"> <li>• Public</li> <li>• Private</li> <li>• Government</li> <li>• Other</li> </ul>	32.0
phoneNumbers	ConnectApi.PhoneNumber	The list of telephone numbers for the company, including the type. Here are some possible types of telephone numbers. <ul style="list-style-type: none"> <li>• Mobile</li> <li>• Work</li> <li>• Fax</li> </ul>	32.0
sic	String	Standard Industrial Codes (SIC) is a numbering convention that indicates what type of service a business provides. It's a four-digit value.	32.0
sicDescription	String	A description of the SIC classification.	32.0
site	String	Company's site. For example, HQ, Single Location, or Branch. <p>An organization status of the company.</p> <ul style="list-style-type: none"> <li>• Branch: a secondary location to a headquarter location.</li> <li>• Headquarter: the parent company has branches or subsidiaries.</li> <li>• Single Location: a single business with no subsidiaries or branches.</li> </ul>	32.0
tickerSymbol	String	The symbol that uniquely identifies companies that are traded on public stock exchanges.	32.0
tradeStyle	String	A legal name under which a company conducts business.	32.0

Property Name	Type	Description	Available Version
updatedAtDate	Datetime	The date of the most recent change to this company's information.	32.0
website	String	The standard URL for the company's home page.	32.0
yearStarted	String	The year when the company was founded.	32.0

## ConnectApi.DatacloudCompanies Class

Lists all companies that were purchased in a specific order, page URLs, and the number of companies in the order.

Property Name	Type	Description	Available Version
companies	ConnectApi.DatacloudCompany	A detailed list of companies that were part of a single order.	32.0
currentPageUrl	String	The URL for the current page of a list of companies.	32.0
nextPageUrl	String	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	32.0
previousPageUrl	String	The URL to the previous page of companies that were viewed before the current page. If this value is <code>null</code> , there's no previous page.	32.0
total	Integer	The number of companies in the order. You can calculate the number of pages to display by dividing this number by your page size. The default page size is 25.	32.0

## ConnectApi.DatacloudContact

Information about a Data.com contact.

All contact information is visible for contacts that you purchased. If you have not purchased a contact, some of the fields will be hidden. Hidden fields are fully or partially hidden by asterisks "\*\*\*\*."

Property Name	Type	Description	Available Version
address	ConnectApi.Address	The contact's business address.	32.0
companyId	String	A unique numerical identifier for the company where the contact works. This is the Data.com identifier for a company.	32.0
companyName	String	The company name where the contact works.	32.0

Property Name	Type	Description	Available Version
contactId	String	A unique numerical identifier for the contact. This is the Data.com identifier for a contact.	32.0
department	String	The department in the company where the contact works. Here are some possible departments. <ul style="list-style-type: none"> <li>• Engineering</li> <li>• IT</li> <li>• Marketing</li> <li>• Sales</li> </ul>	32.0
email	String	The most current business email address for the contact.	32.0
firstName	String	The first name of the contact.	32.0
isInactive	Boolean	Whether this contact is active (true) or not (false). Inactive contacts have out-of-date information in Data.com.	32.0
isOwned	Boolean	Whether this contact is owned (true) or not (false).	32.0
lastName	String	The last name of the contact.	32.0
level	String	A human resource label that designates a person's level in the company. Here are some possible levels. <ul style="list-style-type: none"> <li>• C-Level</li> <li>• Director</li> <li>• Manager</li> <li>• Staff</li> </ul>	32.0
phoneNumbers	ConnectApi.PhoneNumber	Telephone numbers for the contact, which can include direct-dial business telephone numbers, mobile telephone numbers, and business headquarters telephone numbers. The type of telephone number is also indicated.	32.0
title	String	The title of the contact, such as CEO or Vice President.	32.0
updatedAtDate	Datetime	The date of the most recent change to this contact's information.	32.0

SEE ALSO:

[ConnectApi.DatacloudContacts](#)

## ConnectApi.DatacloudContacts

Lists all contacts that were purchased in the specific order, page URLs, and the number of contacts in the order.

Property Name	Type	Description	Available Version
contacts	List<ConnectApi.DatacloudContact>	A detailed list of purchased contacts.	32.0
currentPageUrl	String	URL to the current page of contacts.	32.0
nextPageUrl	String	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	32.0
previousPageUrl	String	URL to the previous page of contacts. This value is null if there is no previous page.	32.0
total	Integer	Number of contacts that are associated with this order. Can be greater than the number of contacts that are shown on a single page.	32.0

### ConnectApi.DatacloudOrder Class

Represents a Datacloud order.

Property Name	Type	Description	Available Version
entityUrl	String	URL to a list of contacts or companies that were purchased with this order.	32.0
id	String	Unique number that's used to track your order information.	32.0
purchaseCount	Integer	Number of contacts or companies that were purchased for this order.	32.0
purchaseDate	Datetime	Purchase date for this order.	32.0
url	String	GET request URL for this order.	32.0

### ConnectApi.DatacloudPurchaseUsage Class

Information about Data.com point usage for monthly and list pool users.

Property Name	Type	Description	Available Version
listpoolCreditsAvailable	Integer	The points or credits that are available in a pool of credits for your organization. This pool of credits can be used by any List Pool User in your organization.	32.0
listpoolCreditsUsed	Integer	The points or credits that have been used from a pool of credits that are used by List Pool Users to purchase records.	32.0

Property Name	Type	Description	Available Version
monthlyCreditsAvailable	Integer	The total credits that are assigned to a Monthly User. Unused credits expire at the end of each month.	32.0
monthlyCreditsUsed	Integer	The credits that are used by a Monthly User for the current month.	32.0

## ConnectApi.DateRecordField Class

Subclass of [ConnectApi.LabeledRecordField Class](#)

A record field containing a date.

Name	Type	Description	Available Version
dateValue	Datetime	A date that a machine can read. Ignore the trailing 00:00:00.000z characters.	29.0

## ConnectApi.DigestJob

Represents a successfully enqueued API digest job request.

Property Name	Type	Description	Available Version
period	<a href="#">ConnectApi.DigestPeriod</a>	Period of time that is included in a Chatter email digest. Values are: <ul style="list-style-type: none"> <li><code>DailyDigest</code>—The email includes up to the 50 latest posts from the previous day.</li> <li><code>WeeklyDigest</code>—The email includes up to the 50 latest posts from the previous week.</li> </ul>	37.0

## ConnectApi.DirectMessageCapability

If a feed element has this capability, it's a direct message.

Property Name	Type	Description	Available Version
memberChanges	<a href="#">ConnectApi.DirectMessageMemberActivityPage</a>	Member activities of the direct message, with the most recent activity first.	40.0
members	<a href="#">ConnectApi.DirectMessageMemberPage</a>	Members included in the direct message.	39.0

Property Name	Type	Description	Available Version
originalMembers	<a href="#">ConnectApi.DirectMessageMemberPage</a>	Original members of the direct message.	40.0
subject	<a href="#">String</a>	Subject of the direct message.	39.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.DirectMessageMemberActivity

Direct message member activity.

Property Name	Type	Description	Available Version
activityDate	<a href="#">Datetime</a>	Direct message member activity date.	40.0
actor	<a href="#">ConnectApi.UserSummary</a>	User who changed the direct message membership.	40.0
membersAdded	<a href="#">ConnectApi.DirectMessageMemberPage</a>	Members added to the direct message as part of the activity.	40.0
membersRemoved	<a href="#">ConnectApi.DirectMessageMemberPage</a>	Members removed from the direct message as part of the activity.	40.0

SEE ALSO:

[ConnectApi.DirectMessageMemberActivityPage](#)

## ConnectApi.DirectMessageMemberActivityPage

A page of direct message member activities.

Property Name	Type	Description	Available Version
activities	<a href="#">List&lt;ConnectApi.DirectMessageMemberActivity&gt;</a>	Collection of direct message member activities.	40.0
currentPageToken	<a href="#">String</a>	Token identifying the current page.	40.0
currentPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the current page.	40.0
nextPageToken	<a href="#">String</a>	Token identifying the next page, or <code>null</code> if there isn't a next page.	40.0

Property Name	Type	Description	Available Version
<code>nextPageUrl</code>	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	40.0

SEE ALSO:

[ConnectApi.DirectMessageCapability](#)

## ConnectApi.DirectMessageMemberPage

A collection of direct message members.

Property Name	Type	Description	Available Version
<code>currentPageToken</code>	<a href="#">String</a>	Page token to access the current page of direct message members.	39.0
<code>currentPageUrl</code>	<a href="#">String</a>	URL to the current page of direct message members.	39.0
<code>nextPageToken</code>	<a href="#">String</a>	Page token to access the next page of direct message members.	39.0
<code>nextPageUrl</code>	<a href="#">String</a>	URL to the next page of direct message members.	39.0
<code>users</code>	<a href="#">List&lt;ConnectApi.UserSummary&gt;</a>	Collection of direct message members.	39.0

SEE ALSO:

[ConnectApi.DirectMessageCapability](#)

[ConnectApi.DirectMessageCapability](#)

[ConnectApi.DirectMessageMemberActivity](#)

## ConnectApi.DownVoteSummary

Summary of a downvote.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#)

No additional properties.

## ConnectApi.EditCapability

If a feed element or comment has this capability, users who have permission can edit it.

Property Name	Type	Description	Available Version
<code>isEditRestricted</code>	<a href="#">Boolean</a>	Specifies whether editing this feed element or comment is restricted. If <code>true</code> , the context user can't edit this feed element or comment. If <code>false</code> , the context user may or may not have permission to edit	34.0

Property Name	Type	Description	Available Version
		this feed element or comment. To determine if the context user can edit a feed element or comment, use the <a href="#">isFeedElementEditableByMe (communityId, feedElementId)</a> or <a href="#">isCommentEditableByMe (communityId, commentId)</a> method.	
<code>isEditableByMeUrl</code>	<a href="#">String</a>	The URL to check if the context user is able to edit this feed element or comment.	34.0
<code>lastEditedBy</code>	<a href="#">ConnectApi.Actor</a>	Who last edited this feed element or comment.	34.0
<code>lastEditedDate</code>	<a href="#">Datetime</a>	The most recent edit date of this feed element or comment.	34.0
<code>latestRevision</code>	<a href="#">Integer</a>	The most recent revision of this feed element or comment.	34.0
<code>relativeLastEditedDate</code>	<a href="#">String</a>	Relative last edited date, for example, "2h ago."	34.0

SEE ALSO:

[ConnectApi.CommentCapabilities Class](#)

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.EmailAddress

An email address.

Name	Type	Description	Available Version
<code>displayName</code>	<a href="#">String</a>	The display name for the email address.	29.0
<code>emailAddress</code>	<a href="#">String</a>	The email address.	29.0
<code>relatedRecord</code>	<a href="#">ConnectApi.RecordSummary Class</a>	The summary of a related record, for example, a contact or user summary.	36.0

SEE ALSO:

[ConnectApi.EmailMessageCapability](#)

## ConnectApi.EmailAttachment

An email attachment in an email message.

Property Name	Type	Description	Available Version
attachment	<a href="#">ConnectApi.RecordSummary</a>	Record summary of the attachment.	36.0
contentType	<a href="#">String</a>	Type of attachment.	36.0
fileName	<a href="#">String</a>	Name of the attachment.	36.0

SEE ALSO:

[ConnectApi.EmailMessageCapability](#)

## ConnectApi.EmailMergeFieldInfo

The map for objects and their merge fields.

Property Name	Type	Description	Available Version
entityToMergeFieldsMap	<a href="#">Map&lt;String, ConnectApi.EmailMergeFieldCollectionInfo&gt;</a>	Map for multiple objects and their merge field collections.	39.0

## ConnectApi.EmailMergeFieldCollectionInfo

The merge fields for an object.

Property Name	Type	Description	Available Version
mergeFields	<a href="#">List&lt;String&gt;</a>	List of merge fields for a single object.	39.0

SEE ALSO:

[ConnectApi.EmailMergeFieldInfo](#)

## ConnectApi.EmailMessage Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.EmailMessageCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment Class](#)

An email message from a case.

Name	Type	Description	Available Version
direction	<a href="#">ConnectApi.EmailMessageDirection Enum</a>	The direction of the email message. <ul style="list-style-type: none"> <li>Inbound—An inbound message (sent by a customer).</li> </ul>	29.0–31.0

Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>Outbound—An outbound message (sent to a customer by a support agent).</li> </ul>	
emailMessageId	String	The ID of the email message.	29.0–31.0
subject	String	The subject of the email message.	29.0–31.0
textBody	String	The body of the email message.	29.0–31.0
toAddresses	List<ConnectApi.EmailAddress>	A list of email addresses to send the message to.	29.0–31.0

### ConnectApi.EmailMessageCapability

If a feed element has this capability, it has an email message from a case.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
attachments	List<ConnectApi.EmailAttachment>	The attachments in the email message.	36.0
bccAddresses	List<ConnectApi.EmailAddress>	The BCC addresses for the email message.	36.0
body	String	The body of the email message.	36.0
ccAddresses	List<ConnectApi.EmailAddress>	The CC addresses for the email message.	36.0
direction	ConnectApi.EmailMessageDirection	The direction of the email message. Values are: <ul style="list-style-type: none"> <li>Inbound—An inbound message (sent by a customer).</li> <li>Outbound—An outbound message (sent to a customer by a support agent).</li> </ul>	32.0
emailMessageId	String	The ID of the email message.	32.0
fromAddress	ConnectApi.EmailAddress	The From address for the email message.	36.0
isRichText	Boolean	Indicates whether the body of the email message is in rich text format.	36.0
subject	String	The subject of the email message.	32.0
textBody	String	The body of the email message.	32.0–35.0
 <b>Important:</b> In version 36.0 and later, use the <code>body</code> property.			

Property Name	Type	Description	Available Version
toAddresses	List<ConnectApi.EmailAddress>	The To addresses of the email message.	32.0
totalAttachments	Integer	The total number of attachments in the email message.	38.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.Emoji

An emoji.

Property Name	Type	Description	Available Version
category	String	Emoji category.	39.0
shortcut	String	Emoji shortcut.	39.0
unicodeCharacter	String	Emoji's unicode character.	39.0

SEE ALSO:

[ConnectApi.EmojiCollection](#)

## ConnectApi.EmojiCollection

A collection of emojis.

Property Name	Type	Description	Available Version
emojis	List<ConnectApi.Emoji>	A collection of emojis.	39.0

SEE ALSO:

[ConnectApi.SupportedEmojis](#)

## ConnectApi.EnhancedLinkCapability

If a feed element has this capability, it has a link that may contain supplemental information like an icon, a title, and a description.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
description	String	A description with a 500 character limit.	32.0
icon	ConnectApi.Icon	A icon.	32.0

Property Name	Type	Description	Available Version
linkRecordId	<a href="#">String</a>	A ID associated with the link if the link URL refers to a Salesforce record.	32.0
linkUrl	<a href="#">String</a>	A link URL to a detail page if available content can't display inline.	32.0
title	<a href="#">String</a>	A title to a detail page.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.EntityLabel

An entity's label.

Property Name	Type	Description	Available Version
label	<a href="#">String</a>	Localized singular label of the entity.	40.0
labelPlural	<a href="#">String</a>	Localized plural label of the entity.	40.0

SEE ALSO:

[ConnectApi.RecordSummary Class](#)

## ConnectApi.EntityLinkSegment Class

Subclass of [ConnectApi.MessageSegment Class](#)

Name	Type	Description	Available Version
motif	<a href="#">ConnectApi.Motif Class</a>	A set of small, medium, and large icons that indicate whether the entity is a file, group, record, or user. The motif can also contain the object's base color.	28.0
reference	<a href="#">ConnectApi.Reference</a>	A reference to the link object if applicable, otherwise, null.	28.0

## ConnectApi.EntityRecommendation Class

Represents a recommendation, including file, group, record, topic, user, and custom recommendations.

Subclass of [ConnectApi.AbstractRecommendation Class](#).

Property Name	Type	Description	Available Version
<code>actOnUrl</code>	<a href="#">String</a>	For user, file, group, topic, and record <code>entity</code> types, use this Chatter REST URL with a POST request to take action on the recommendation.  For <code>ConnectApi.RecommendedObject</code> <code>entity</code> types, such as custom recommendations, use the <code>actOnUrl</code> property of the <a href="#">ConnectApi.PlatformAction Class</a> to take action on the recommendation.	32.0
<code>action</code>	<a href="#">ConnectApi.Recommendation.ActionType</a>	Specifies the action to take on a recommendation. <ul style="list-style-type: none"> <li><code>follow</code>—Follow a file, record, topic, or user.</li> <li><code>join</code>—Join a group.</li> <li><code>view</code>—View a file, group, article, record, user, custom, or static recommendation.</li> </ul>	32.0
<code>entity</code>	<a href="#">ConnectApi.Actor</a>	The entity with which the receiver is recommended to take action.	32.0

## ConnectApi.Extension

An extension.

Property Name	Type	Description	Available Version
<code>alternativeRepresentation</code>	<a href="#">ConnectApi.Alternative</a>	Alternative representation of the extension.	40.0
<code>attachmentId</code>	<a href="#">String</a>	Attachment ID of the extension.	41.0
<code>extensionId</code>	<a href="#">String</a>	ID of the extension.	40.0
<code>payload</code>	<a href="#">String</a>	Payload associated with the extension.	40.0
<code>payloadVersion</code>	<a href="#">String</a>	Payload version that identifies the structure of the payload associated with the extension.	40.0

SEE ALSO:

[ConnectApi.ExtensionsCapability](#)

## ConnectApi.ExtensionDefinition

An extension's definition.

Property Name	Type	Description	Available Version
<code>canAccess</code>	<a href="#">Boolean</a>	Indicates whether users can access the extension when it's associated with a feed element.	40.0

Property Name	Type	Description	Available Version
canCreate	Boolean	Indicates whether users can create a feed element with the extension in the org.	40.0
createdDate	Datetime	Date when the extension was created.	40.0
description	String	Description of the extension.	40.0
iconUrl	String	URL to the icon for the extension.	40.0
id	String	ID of the extension.	40.0
information Collection	List<ConnectApi. AbstractExtension Information>	Collection of extension information.	40.0
isEnabled InCommunity	Boolean	Indicates whether the extension is enabled in communities.	40.0 only
isEnabled InLightningPublisher	Boolean	Indicates whether the extension is enabled in the Lightning publisher.	40.0 only
name	String	Name of the extension.	40.0
position	Integer	Position in which the extension is displayed in the publisher.	41.0

SEE ALSO:

[ConnectApi.ExtensionDefinitions](#)

## ConnectApi.ExtensionDefinitions

A collection of extension definitions.

Property Name	Type	Description	Available Version
currentPageToken	String	Token identifying the current page.	40.0
currentPageUrl	String	Chatter REST API URL identifying the current page.	40.0
extension Definitions	List<ConnectApi. ExtensionDefinition>	Collection of extension definitions.	40.0
nextPageToken	String	Token identifying the next page, or <code>null</code> if there isn't a next page.	40.0
nextPageUrl	String	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	40.0
total	Integer	Total number of extensions returned.	40.0

## ConnectApi.ExtensionsCapability

If a feed element has this capability, it has one or more extension attachments.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
items	List< <a href="#">ConnectApi.Extension</a> >	List of extensions associated with the feed element.	40.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.ExternalFilePermissionInformation

External file permission information.

Property Name	Type	Description	Available Version
externalFilePermissionTypes	List< <a href="#">ConnectApi.ContentHubPermissionType</a> >	Available permission types for the parent folder of the external file, or <code>null</code> for non-external files or when <code>includeExternalFilePermissionsInfo</code> is false.	39.0
externalFilePermissionsFailure	Boolean	<code>true</code> if the retrieval of external file information failed or if <code>includeExternalFilePermissionsInfo</code> is false; <code>false</code> otherwise.	39.0
externalFilePermissionsInfoFailureReason	String	Explanation of the failure if a failure occurred and <code>includeExternalFilePermissionsInfo</code> is <code>true</code> ; <code>null</code> otherwise.	39.0
externalFileSharingStatus	<a href="#">ConnectApi.ContentHubExternalItemSharingType</a>	Sharing status for the external file. Values are: <ul style="list-style-type: none"> <li>• <code>DomainSharing</code>—File is shared with the domain.</li> <li>• <code>PrivateSharing</code>—File is private or shared only with individuals.</li> <li>• <code>PublicSharing</code>—File is publicly shared.</li> </ul> Value is <code>null</code> for non-external files or when <code>includeExternalFilePermissionsInfo</code> is false.	39.0

Property Name	Type	Description	Available Version
repository PublicGroups	<a href="#">List&lt;ConnectApi. RepositoryGroupSummary&gt;</a>	Available public groups in the external repository or null for non-external files or when includeExternalFilePermissionsInfo is false.	39.0

SEE ALSO:

[ConnectApi.AbstractRepositoryFile](#)

## ConnectApi.Features Class

Property	Type	Description	Available Version
activityReminder NotificationsEnabled	<a href="#">Boolean</a>	Reserved for future use.	37.0
chatter	<a href="#">Boolean</a>	Indicates whether Chatter is enabled for an org.	28.0
chatterActivity	<a href="#">Boolean</a>	Indicates whether the user details include information about Chatter activity.	28.0
chatterAnswers	<a href="#">Boolean</a>	Indicates whether Chatter Answers is enabled.	29.0
chatter GlobalInfluence	<a href="#">Boolean</a>	Indicates whether the user details include global Chatter activity.	28.0
chatterGroup Records	<a href="#">Boolean</a>	Specifies whether Chatter groups can have records associated with them.	30.0
chatterGroup RecordSharing	<a href="#">Boolean</a>	Specifies whether Chatter records are implicitly shared among group members when records are added to groups.	30.0
chatter Messages	<a href="#">Boolean</a>	Indicates whether Chatter messages are enabled for the org.	28.0
chatterTopics	<a href="#">Boolean</a>	Indicates whether Chatter topics are enabled.	28.0
communities Enabled	<a href="#">Boolean</a>	Indicates whether Salesforce Communities is enabled.	31.0
community Moderation	<a href="#">Boolean</a>	Specifies whether community moderation is enabled.	29.0
community Reputation	<a href="#">Boolean</a>	Specifies whether reputation is enabled for communities in the org.	32.0
dashboard Component Snapshots	<a href="#">Boolean</a>	Indicates whether the user can post dashboard component snapshots.	28.0

Property	Type	Description	Available Version
defaultCurrencyIsoCode	String	ISO code of the default currency. Applicable only when <code>multiCurrency</code> is false.	28.0
feedPolling	Boolean	Reserved for future use.	28.0
feedStreamEnabled	Boolean	Indicates whether Chatter feed streams are enabled for the org.	39.0
files	Boolean	Indicates whether files can act as resources for Chatter API.	28.0
filesOnComments	Boolean	Indicates whether files can be attached to comments.	28.0
groupsCanFollow	Boolean	Reserved for future use.	28.0–29.0
ideas	Boolean	Indicates whether Ideas is enabled.	29.0
liveAgentHostName	String	Live Agent host name configured for the org.	41.0
managedTopicsEnabled	Boolean	Indicates access to the community home feed and the managed topic feed.	32.0
maxEntitySubscriptionsPerStream	Integer	Specifies the maximum number of feed-enabled entities that can be subscribed to in a Chatter stream.	39.0
maxFilesPerFeedItem	Integer	Specifies the maximum number of files that can be added to a feed item.	36.0
maxStreamsPerPerson	Integer	Specifies the maximum number of Chatter streams that a user can have.	39.0
mobileNotificationsEnabled	Boolean	Reserved for future use.	29.0
multiCurrency	Boolean	Indicates whether the user's org uses multiple currencies ( <code>true</code> ) or not ( <code>false</code> ). When <code>false</code> , the <code>defaultCurrencyIsoCode</code> indicates the ISO code of the default currency.	28.0
offlineEditEnabled	Boolean	Specifies whether the offline object permissions are enabled for Salesforce for Android and Salesforce for iOS mobile clients.	37.0
publisherActions	Boolean	Indicates whether actions in the publisher are enabled.	28.0
storeDataOnDevicesEnabled	Boolean	Indicates whether the Salesforce for Android and Salesforce for iOS can use secure, persistent storage on mobile devices to cache data.	30.0
thanksAllowed	Boolean	Reserved for future use.	28.0
trendingTopics	Boolean	Indicates whether trending topics are enabled.	28.0

Property	Type	Description	Available Version
viralInvites Allowed	Boolean	Indicates whether existing Chatter users can invite people in their company to use Chatter.	28.0
wave	Boolean	Indicates whether Wave is enabled.	36.0

[ConnectApi.OrganizationSettings Class](#)

## ConnectApi.Feed Class

Name	Type	Description	Available Version
feedElement PostUrl	String	Chatter REST API URL for posting feed elements to this subject.	31.0
feedElements	<a href="#">ConnectApi.FeedElement Page</a>	Page of feed elements for the feed specified in <code>redirectedFeedType</code> . Otherwise, <code>null</code> .	40.0
feedElementsUrl	String	Chatter REST API URL of feed elements.	31.0
feedItemsUrl	String	Chatter REST API URL of feed items.	28.0–31.0
isModifiedUrl	String	A Chatter REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates.	28.0
		 <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.	
pinnedFeed ElementsUrl	String	URL of pinned feed items.	41.0
redirected FeedFilter	<a href="#">ConnectApi.FeedFilter</a>	Filter for the feed specified in <code>redirectedFeedType</code> . Otherwise, <code>null</code> .	42.0
redirected FeedSort	<a href="#">ConnectApi.FeedSort Order</a>	Sort order for the feed specified in <code>redirectedFeedType</code> . Otherwise, <code>null</code> .	42.0
redirected FeedType	<a href="#">ConnectApi.FeedType</a>	Specifies which feed is returned if <code>pageSize</code> is specified. Otherwise, <code>null</code> .	40.0
respectsMute	Boolean	Indicates whether the feed respects the mute feature. If <code>true</code> , the feed shows the ability to mute or unmute each element, depending on the	35.0

Name	Type	Description	Available Version
		value of <code>isMutedByMe</code> ; <code>null</code> if the mute feature is disabled for the organization.	

## ConnectApi.FeedBody Class

Subclass of [ConnectApi.AbstractMessageBody Class](#)

No additional properties.

SEE ALSO:

[ConnectApi.Comment Class](#)

[ConnectApi.FeedElement Class](#)

[ConnectApi.FeedEntitySummary](#)

## ConnectApi.FeedDirectory Class

A directory of feeds and favorites.

Name	Type	Description	Available Version
favorites	<a href="#">List&lt;ConnectApi.FeedFavorite&gt;</a>	A list of feed favorites	30.0
feeds	<a href="#">List&lt;ConnectApi.FeedDirectoryItem&gt;</a>	A list of feeds	30.0

## ConnectApi.FeedDirectoryItem Class

The definition of a feed.

Name	Type	Description	Available Version
feedElementsUrl	<a href="#">String</a>	Chatter REST API resource URL for the feed elements.	
feedItemsUrl	<a href="#">String</a>	Chatter REST API resource URL for the feed items of a specific feed.	30.0–31.0
feedType	<a href="#">ConnectApi.FeedTypeEnum</a>	The feed type. One of these values: <ul style="list-style-type: none"> <li><b>Bookmarks</b>—Contains all feed items saved as bookmarks by the context user.</li> <li><b>Company</b>—Contains all feed items except feed items of type <code>TrackedChange</code>. To see the feed item, the user must have sharing access to its parent.</li> <li><b>DirectMessageModeration</b>—Contains all direct messages that are flagged for moderation. The Direct Message Moderation</li> </ul>	30.0

Name	Type	Description	Available Version
		<p>feed is available only to users with Moderate Communities Chatter Messages permissions.</p> <ul style="list-style-type: none"> <li data-bbox="566 365 1252 432">• <code>DirectMessages</code>—Contains all feed items of the context user's direct messages.</li> <li data-bbox="566 445 1252 512">• <code>Files</code>—Contains all feed items that contain files posted by people or groups that the context user follows.</li> <li data-bbox="566 525 1252 592">• <code>Filter</code>—Contains the news feed filtered to contain feed items whose parent is a specified object type.</li> <li data-bbox="566 604 1252 672">• <code>Groups</code>—Contains all feed items from all groups the context user either owns or is a member of.</li> <li data-bbox="566 684 1252 751">• <code>Home</code>—Contains all feed items associated with any managed topic in a community.</li> <li data-bbox="566 764 1252 852">• <code>Landing</code>—Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren't many personalized feed items.</li> <li data-bbox="566 865 1252 999">• <code>Moderation</code>—Contains all feed items that are flagged for moderation, except direct messages. The Communities Moderation feed is available only to users with Moderate Community Feeds permissions.</li> <li data-bbox="566 1012 1192 1045">• <code>Mute</code>—Contains all feed items that the context user muted.</li> <li data-bbox="566 1058 1252 1260">• <code>News</code>—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user. Contains every feed item and comment that mentions the context user or that mentions a group the context user is a member of.</li> <li data-bbox="566 1272 1252 1339">• <code>PendingReview</code>—Contains all feed items and comments that are pending review.</li> <li data-bbox="566 1352 1252 1419">• <code>People</code>—Contains all feed items posted by all people the context user follows.</li> <li data-bbox="566 1432 1252 1633">• <code>Record</code>—Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user's record feed.</li> <li data-bbox="566 1646 1252 1743">• <code>Streams</code>—Contains all feed items for any combination of up to 25 feed-enabled entities, such as people, groups, and records, that the context user subscribes to in a stream.</li> <li data-bbox="566 1755 1252 1852">• <code>To</code>—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.</li> <li data-bbox="566 1864 1252 1898">• <code>Topics</code>—Contains all feed items that include the specified topic.</li> </ul>	

Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>UserProfile</code>—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user's user profile feed.</li> </ul>	
<code>feedUrl</code>	<a href="#">String</a>	Chatter REST API resource URL for a specific feed	30.0
<code>keyPrefix</code>	<a href="#">String</a>	<p>A <i>key prefix</i> is the first three characters of a record ID, which specifies the entity type.</p> <p>For filter feeds, this value is the key prefix associated with the entity type used to filter this feed. All feed items in this feed have a parent whose entity type matches this key prefix value. For non-filter feeds, this value is <code>null</code>.</p>	30.0
<code>label</code>	<a href="#">String</a>	Localized label of the feed	30.0

[ConnectApi.FeedDirectory Class](#)

## ConnectApi.FeedElement Class

Feed elements are the top-level items that a feed contains. Feeds are feed element containers.

This class is abstract.

Superclass of:

- [ConnectApi.FeedItem Class](#)
- [ConnectApi.GenericFeedElement Class](#)

Property Name	Type	Description	Available Version
<code>body</code>	<a href="#">ConnectApi.FeedBody</a>	<p>Information about the feed element.</p> <p> <b>Important:</b> Use the <code>header.text</code> property as the default value for rendering text because the <code>body.text</code> property can be <code>null</code>.</p>	22.0
<code>capabilities</code>	<a href="#">ConnectApi.FeedElementCapabilities Class</a>	A container for all capabilities that can be included with a feed element.	31.0
<code>createdDate</code>	<a href="#">Datetime</a>	An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.	31.0

Property Name	Type	Description	Available Version
feedElementType	<a href="#">ConnectApi.FeedElementType</a>	<p>Feed elements are the top-level objects that a feed contains. The feed element type describes the characteristics of that feed element. One of these values:</p> <ul style="list-style-type: none"> <li><b>Bundle</b>—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li><b>FeedItem</b>—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li><b>Recommendation</b>—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.</li> </ul>	31.0
header	<a href="#">ConnectApi.MessageBody</a>	The header is the title of the post. This property contains renderable plain text for all the segments of the message. If a client doesn't know how to render a feed element type, it should render this text.	31.0
id	<a href="#">String</a>	18-character ID of the feed element.	22.0
modifiedDate	<a href="#">Datetime</a>	An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.	31.0
parent	<a href="#">ConnectApi.ActorWithId</a>	Feed element's parent	28.0
relativeCreatedDate	<a href="#">String</a>	The created date formatted as a relative, localized string, for example, "17m ago" or "Yesterday."	31.0
url	<a href="#">String</a>	Chatter REST API URL to this feed element.	22.0

## ConnectApi.FeedElementCapabilities Class

A container for all capabilities that can be included with a feed element.

Property Name	Type	Description	Available Version
approval	<a href="#">ConnectApi.ApprovalCapability Class</a>	If a feed element has this capability, it includes information about an approval.	32.0
associatedActions	<a href="#">ConnectApi.AssociatedActionsCapability Class</a>	If a feed element has this capability, it has platform actions associated with it.	33.0
banner	<a href="#">ConnectApi.BannerCapability Class</a>	If a feed element has this capability, it has a banner motif and style.	31.0
bookmarks	<a href="#">ConnectApi.BookmarksCapability Class</a>	If a feed element has this capability, the context user can bookmark it.	31.0
bundle	<a href="#">ConnectApi.BundleCapability Class</a>	If a feed element has this capability, it has a container of feed elements called a <i>bundle</i> .	31.0
canvas	<a href="#">ConnectApi.CanvasCapability Class</a>	If a feed element has this capability, it renders a canvas app.	32.0
caseComment	<a href="#">ConnectApi.CaseCommentCapability Class</a>	If a feed element has this capability, it has a case comment on the case feed.	32.0
chatterLikes	<a href="#">ConnectApi.ChatterLikesCapability Class</a>	If a feed element has this capability, the context user can like it. Exposes information about existing likes.	31.0
close	<a href="#">ConnectApi.CloseCapability Class</a>	If a feed element has this capability, users with permission can close it.	43.0
comments	<a href="#">ConnectApi.CommentsCapability Class</a>	If a feed element has this capability, the context user can add a comment to it.	31.0
content	<a href="#">ConnectApi.ContentCapability Class</a>	<p>If a comment has this capability, it has a file attachment.</p> <p>Most <code>ConnectApi.ContentCapability</code> properties are null if the content has been deleted from the feed element or if the access has changed to private.</p> <p> <b>Important:</b> In version 36.0 and later, use the <code>files</code> property.</p>	32.0–35.0

Property Name	Type	Description	Available Version
dashboardComponentSnapshot	<a href="#">ConnectApi.DashboardComponentSnapshotCapability</a>	If a feed element has this capability, it has a dashboard component snapshot. A snapshot is a static image of a dashboard component at a specific point in time.	32.0
directMessage	<a href="#">ConnectApi.DirectMessageCapability</a>	If a feed element has this capability, it's a direct message.	39.0
edit	<a href="#">ConnectApi.EditCapability</a>	If a feed element has this capability, users who have permission can edit it.	34.0
emailMessage	<a href="#">ConnectApi.EmailMessageCapability</a>	If a feed element has this capability, it has an email message from a case.	32.0
enhancedLink	<a href="#">ConnectApi.EnhancedLinkCapability</a>	If a feed element has this capability, it has a link that may contain supplemental information like an icon, a title, and a description.	32.0
extensions	<a href="#">ConnectApi.ExtensionsCapability</a>	If a feed element has this capability, it has one or more extension attachments.	40.0
feedEntityShare	<a href="#">ConnectApi.FeedEntityShareCapability</a>	If a feed element or comment has this capability, a feed entity is shared with it.	39.0
files	<a href="#">ConnectApi.FilesCapability</a>	If a feed element has this capability, it has one or more file attachments.	36.0
interactions	<a href="#">ConnectApi.InteractionsCapability</a>	If a feed element has this capability, it has information about user interactions.	37.0
link	<a href="#">ConnectApi.LinkCapability</a>	If a feed element has this capability, it has a link.	32.0
mediaReferences	<a href="#">ConnectApi.MediaReferenceCapability</a>	If a feed element has this capability, it has one or more media references.	41.0
moderation	<a href="#">ConnectApi.ModerationCapability Class</a>	If a feed element has this capability, users in a community can flag it for moderation.	31.0
mute	<a href="#">ConnectApi.MuteCapability</a>	If a feed element has this capability, users can mute it.	35.0
origin	<a href="#">ConnectApi.OriginCapability</a>	If a feed element has this capability, it was created by a feed action.	33.0
pin	<a href="#">ConnectApi.PinCapability</a>	If a feed element has this capability, users who have permission can pin it to a feed.	41.0

Property Name	Type	Description	Available Version
poll	<a href="#">ConnectApi.PollCapability Class</a>	If a feed element has this capability, it includes a poll.	31.0
questionAndAnswers	<a href="#">ConnectApi.QuestionAndAnswersCapability Class</a>	If a feed element has this capability, it has a question and comments on the feed element are answers to the question.	31.0
readBy	<a href="#">ConnectApi.ReadByCapability</a>	If a feed element has this capability, the context user can mark it as read.	40.0
recommendations	<a href="#">ConnectApi.RecommendationsCapability</a>	If a feed element has this capability, it has a recommendation.	32.0
recordSnapshot	<a href="#">ConnectApi.RecordSnapshotCapability</a>	If a feed element has this capability, it contains all the snapshotted fields of a record for a single create record event.	32.0
socialPost	<a href="#">ConnectApi.SocialPostCapability</a>	If a feed element has this capability, it can interact with a social post on a social network.	36.0
status	<a href="#">ConnectApi.StatusCapability</a>	If a feed post or comment has this capability, it has a status that determines its visibility.	37.0
topics	<a href="#">ConnectApi.TopicsCapability Class</a>	If a feed element has this capability, the context user can add topics to it. Topics help users organize and discover conversations.	31.0
trackedChanges	<a href="#">ConnectApi.TrackedChangesCapability</a>	If a feed element has this capability, it contains all changes to a record for a single tracked change event.	32.0
upDownVote	<a href="#">ConnectApi.UpDownVoteCapability</a>	If a feed post or comment has this capability, users can upvote or downvote it.	41.0

## ConnectApi.FeedElementCapability Class

A feed element capability, which defines the characteristics of a feed element.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of *capabilities*. If a capability property exists on a feed element, that capability is available, even if the capability property doesn't have a value. For example, if the `ChatterLikes` capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn't exist, it isn't possible to like that feed element. A capability can also contain associated data. For example, the `Moderation` capability contains data about moderation flags.

This class is abstract.

This class is a superclass of:

- [ConnectApi.AssociatedActionsCapability Class](#)
- [ConnectApi.ApprovalCapability Class](#)
- [ConnectApi.BannerCapability Class](#)
- [ConnectApi.BookmarksCapability Class](#)
- [ConnectApi.BundleCapability Class](#)
- [ConnectApi.CanvasCapability Class](#)
- [ConnectApi.CaseCommentCapability Class](#)
- [ConnectApi.ChatterLikesCapability Class](#)
- [ConnectApi.CloseCapability](#)

This class doesn't have any properties.

## ConnectApi.FeedElementPage

A paged collection of `ConnectApi.FeedElement` objects.

Property Name	Type	Description	Available Version
<code>currentPageToken</code>	<code>String</code>	Token identifying the current page.	31.0
<code>currentPageUrl</code>	<code>String</code>	Chatter REST API URL identifying the current page.	31.0
<code>elements</code>	<code>List&lt;ConnectApi.FeedElement Class&gt;</code>	Collection of feed elements.	31.0
<code>isModifiedToken</code>	<code>String</code>	<p>An opaque polling token to use in the <code>since</code> parameter of the <code>ChatterFeeds.isModified</code> method. The token describes when the feed was last modified.</p> <p><b>!</b> <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.</p>	31.0
<code>isModifiedUrl</code>	<code>String</code>	<p>A Chatter REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates.</p> <p><b>!</b> <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.</p>	31.0
<code>nextPageToken</code>	<code>String</code>	Token identifying the next page, or <code>null</code> if there isn't a next page.	31.0
<code>nextPageUrl</code>	<code>String</code>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	31.0
<code>updatesToken</code>	<code>String</code>	A token to use in a request to the <code>ConnectApi.ChatterFeeds.getFeedElementsUpdatedSince</code> method.	31.0

Property Name	Type	Description	Available Version
updatesUrl	String	A Chatter REST API feed resource containing the feed elements that have been updated since the feed was refreshed. If the feed doesn't support this feature, the value is <code>null</code> .	31.0

## ConnectApi.FeedEnabledEntity

An entity that can have feeds associated with it.

Property Name	Type	Description	Available Version
id	String	The 18-character ID of the record.	39.0
motif	ConnectApi.Motif	Small, medium, and large icons indicating the record's type.	39.0
name	String	The localized name of the record.	39.0
type	String	The type of the record.	39.0
url	String	URL to the record.	39.0

SEE ALSO:

[ConnectApi.ChatterStream](#)

## ConnectApi.FeedEntityIsEditable

Indicates if the context user can edit a feed element or comment.

Property Name	Type	Description	Available Version
areAttachmentsEditableByMe	Boolean	<code>true</code> if the context user can add and remove attachments on the feed element or comment, <code>false</code> otherwise.	36.0
feedEntityUrl	String	URL of the feed element or comment.	34.0
isEditableByMe	Boolean	<code>true</code> if the context user can edit the feed element or comment, <code>false</code> otherwise.	34.0

## ConnectApi.FeedEntityNotAvailableSummary

A summary when the feed entity isn't available.

This output class is a subclass of [ConnectApi.FeedEntitySummary](#) and has no properties.

## ConnectApi.FeedEntityReadSummary

Summary of the feed post or comment that was read.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#)

No additional properties.

## ConnectApi.FeedEntityShareCapability

If a feed element or comment has this capability, a feed entity is shared with it.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
feedEntity	<a href="#">ConnectApi.FeedEntitySummary</a>	The summary of the feed entity that is shared with the feed element or comment.	39.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.FeedEntitySummary

The summary of a feed entity that is shared with a feed element.

This class is abstract.

Superclass of:

- [ConnectApi.FeedItemSummary](#)
- [ConnectApi.FeedEntityNotAvailableSummary](#)

Property Name	Type	Description	Available Version
actor	<a href="#">ConnectApi.Actor</a>	Entity that created the feed entity.	39.0
body	<a href="#">ConnectApi.FeedBody</a>	Information about the feed entity.	39.0
createdDate	<a href="#">Datetime</a>	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z, when the entity was created.	39.0
feedElementType	<a href="#">ConnectApi.FeedElementType</a>	Type of feed entity. <ul style="list-style-type: none"> <li>• <code>Bundle</code>—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.</li> </ul>	39.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><b>FeedItem</b>—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li><b>Recommendation</b>—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.</li> </ul>	
id	String	18-character ID of the feed entity.	39.0
isEntityAvailable	Boolean	Specifies whether the entity is available. If <b>false</b> , either the user doesn't have access to the entity or the entity was deleted.	39.0
parent	ConnectApi.ActorWithId	Parent of the feed entity.	39.0
relativeCreatedDate	String	Relative created date, for example, "2h ago."	39.0
url	String	URL to the feed entity.	39.0

SEE ALSO:

## ConnectApi.FeedFavorite Class

Name	Type	Description	Available Version
community	ConnectApi.Reference	Information about the community that contains the favorite	28.0
createdBy	ConnectApi.UserSummary	Favorite's creator	28.0
feedUrl	String	Chatter REST API URL identifying the feed item for this favorite	28.0
id	String	Favorite's 18-character ID	28.0
lastViewDate	Datetime	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z	28.0
name	String	Favorite's name	28.0

Name	Type	Description	Available Version
searchText	<a href="#">String</a>	If the favorite is from a search, contains the search text, otherwise, an empty string	28.0
target	<a href="#">ConnectApi.Reference</a>	A reference to the topic if applicable, <code>null</code> otherwise	28.0
type	<a href="#">ConnectApi.FeedFavoriteType</a> Enum	An empty string or one of the following values: <ul style="list-style-type: none"> <li>• <code>ListView</code></li> <li>• <code>Search</code></li> <li>• <code>Topic</code></li> </ul>	28.0
url	<a href="#">String</a>	Chatter REST API URL to this favorite	28.0
user	<a href="#">ConnectApi.UserSummary</a>	Information about the user who saved this favorite	28.0

SEE ALSO:

[ConnectApi.FeedDirectory Class](#)

[ConnectApi.FeedFavorites Class](#)

## ConnectApi.FeedFavorites Class

Name	Type	Description	Available Version
favorites	<a href="#">List&lt;ConnectApi.FeedFavorite&gt;</a>	Complete list of favorites	28.0
total	<a href="#">Integer</a>	Total number of favorites	28.0

## ConnectApi.FeedItem Class

Subclass of [ConnectApi.FeedElement Class](#) as of 31.0.

Name	Type	Description	Available Version
actor	<a href="#">ConnectApi.Actor</a>	The entity that created the feed item.	28.0
attachment	<a href="#">ConnectApi.FeedItemAttachment</a>	Information about the attachment. If there is no attachment, returns <code>null</code> . <p> <b>Important:</b> As of version 32.0, use the inherited <code>capabilities</code> property.</p>	28.0–31.0
canShare	<a href="#">Boolean</a>	Indicates whether the feed item can be shared. <p>If a feed item has multiple file attachments and at least one attachment has been deleted or is inaccessible,</p>	28.0–38.0

Name	Type	Description	Available Version
		<p>the feed item can't be shared. The <code>canShare</code> value is incorrectly set to <code>true</code> in these cases.</p> <p> <b>Important:</b> As of version 39.0, use the <code>isSharable</code> property.</p>	
<code>clientInfo</code>	<a href="#">ConnectApi.ClientInfo</a>	Information about the connected app used to authenticate the connection.	28.0
<code>comments</code>	<a href="#">ConnectApi.CommentPage</a>	<p>First page of comments for this feed item.</p> <p> <b>Important:</b> As of version 32.0, use the inherited <code>capabilities.comments.page</code> property.</p>	28.0–31.0
<code>event</code>	<a href="#">Boolean</a>	<code>true</code> if feed item is created due to an event change, <code>false</code> otherwise.	22.0
<code>hasVerifiedComment</code>	<a href="#">Boolean</a>	<code>true</code> if the feed item has a verified comment, otherwise <code>false</code> .	41.0
<code>isBookmarkedByCurrentUser</code>	<a href="#">Boolean</a>	<p><code>true</code> if the context user has bookmarked this feed item, otherwise, <code>false</code>.</p> <p> <b>Important:</b> As of version 32.0, use the inherited <code>capabilities.bookmarks.isBookmarkedByCurrentUser</code> property.</p>	28.0–31.0
<code>isDeleteRestricted</code>	<a href="#">Boolean</a>	If this property is <code>true</code> the comment cannot be deleted by the context user. If it is <code>false</code> , it might be possible for the context user to delete the comment, but it is not guaranteed.	28.0
<code>isLikedByCurrentUser</code>	<a href="#">Boolean</a>	<p><code>true</code> if the context user has liked this feed item, otherwise, <code>false</code>.</p> <p> <b>Important:</b> As of version 32.0, use the inherited <code>capabilities.chatterLikes.isLikedByCurrentUser</code> property.</p>	28.0–31.0
<code>isSharable</code>	<a href="#">Boolean</a>	Indicates whether the feed item can be shared.	39.0
<code>likes</code>	<a href="#">ConnectApi.ChatterLikePage</a>	<p>First page of likes for this feed item.</p> <p> <b>Important:</b> As of version 32.0, use the inherited <code>capabilities.chatterLikes.page</code> property.</p>	28.0–31.0

Name	Type	Description	Available Version
likesMessage	<a href="#">ConnectApi.MessageBody</a>	A message body the describes who likes the feed item.   <b>Important:</b> As of version 32.0, use the inherited <code>capabilities.chatterLikes.likesMessage</code> property.	28.0–31.0
moderationFlags	<a href="#">ConnectApi.ModerationFlags</a>	Information about the moderation flags on a feed item. If <code>ConnectApi.Features.communityModeration</code> is <code>false</code> , this property is <code>null</code> .   <b>Important:</b> As of version 31.0, use the inherited <code>capabilities.moderation.moderationFlags</code> property.	29.0–30.0
myLike	<a href="#">ConnectApi.Reference</a>	If the context user has liked the feed item, this property is a reference to the specific like, otherwise, <code>null</code> .   <b>Important:</b> As of version 32.0, use the inherited <code>capabilities.chatterLikes.myLike</code> property.	28.0–31.0
originalFeedItem	<a href="#">ConnectApi.Reference</a>	A reference to the original feed item if this feed item is a shared feed item, otherwise, <code>null</code> .	28.0
originalFeedItemActor	<a href="#">ConnectApi.Actor</a>	If this feed item is a shared feed item, returns information about the original poster of the feed item, otherwise, returns <code>null</code> .	28.0
photoUrl	<a href="#">String</a>	URL of the photo associated with the feed item	28.0
preamble	<a href="#">ConnectApi.MessageBody</a>	A collection of message segments, including the unformatted text of the message that you can use as the title of a feed item. Message segments include name, link, and motif icon information for the actor that created the feed item.   <b>Important:</b> For API versions 29.0 and 30.0, use the <code>ConnectApi.FeedItem.preamble.text</code> property as the default case to render text. For API versions 31.0 and later, use the <code>ConnectApi.FeedElement.header.text</code> property as the default case to render text.	28.0–30.0

Name	Type	Description	Available Version
topics	<a href="#">ConnectApi.FeedItemTopicPage</a>	Topics for this feed item.   <b>Important:</b> As of version 31.0, use the inherited <code>capabilities.topics.items</code> property.	28.0–31.0
type	<a href="#">ConnectApi.FeedItemType</a>	Type of feed item.   <b>Important:</b> As of API version 32.0, use the <code>capabilities</code> property to determine what can be done with a feed item. See <a href="#">Capabilities</a> .  One of these values: <ul style="list-style-type: none"> <li>• <code>ActivityEvent</code>—Feed item generated in Case Feed when an event or task associated with a parent record with a feed enabled is created or updated.</li> <li>• <code>AdvancedTextPost</code>—A feed item with advanced text formatting, such as a group announcement post.</li> <li>• <code>ApprovalPost</code>—Feed item with an approval capability. Approvers can act on the feed item parent.</li> <li>• <code>AttachArticleEvent</code>—Feed item generated when an article is attached to a case in Case Feed.</li> <li>• <code>BasicTemplateFeedItem</code>—Feed item with an enhanced link capability.</li> <li>• <code>CallLogPost</code>—Feed item generated when a call log is saved to a case in Case Feed.</li> <li>• <code>CanvasPost</code>—Feed item generated by a canvas app in the publisher or from Chatter REST API or Chatter in Apex. The post itself is a link to a canvas app.</li> <li>• <code>CaseCommentPost</code>—Feed item generated when a case comment is saved in Case Feed.</li> <li>• <code>ChangeStatusPost</code>—Feed item generated when the status of a case is changed in Case Feed.</li> <li>• <code>ChatTranscriptionPost</code>—Feed item generated in Case Feed when a Live Agent chat transcript is saved to a case.</li> </ul>	28.0

Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>• <code>CollaborationGroupCreated</code>—Feed item generated when a new public group is created. Contains a link to the new group.</li> <li>• <code>CollaborationGroupUnarchived</code>—<del>Deprecated</del>. Feed item generated when an archived group is activated.</li> <li>• <code>ContentPost</code>—Feed item with a content capability.</li> <li>• <code>CreateRecordEvent</code>—Feed item that describes a record created in the publisher.</li> <li>• <code>DashboardComponentAlert</code>—Feed item with a dashboard alert.</li> <li>• <code>DashboardComponentSnapshot</code>—Feed item with a dashboard component snapshot capability.</li> <li>• <code>EmailMessageEvent</code>—Feed item generated when an email is sent from a case in Case Feed.</li> <li>• <code>FacebookPost</code>—<del>Deprecated</del>. Feed item generated when a Facebook post is created from a case in Case Feed.</li> <li>• <code>LinkPost</code>—Feed item with a link capability.</li> <li>• <code>MilestoneEvent</code>—Feed item generated when a case milestone is either completed or reaches a violation status. Contains a link to the case milestone.</li> <li>• <code>PollPost</code>—Feed item with a poll capability. Viewers of the feed item are allowed to vote on the options in the poll.</li> <li>• <code>ProfileSkillPost</code>—Feed item generated when a skill is added to a user's profile.</li> <li>• <code>QuestionPost</code>—Feed item generated when a question is asked.  As of API version 33.0, a feed item of this type can have a content capability and a link capability.</li> <li>• <code>ReplyPost</code>—Feed item generated by a Chatter Answers reply.</li> <li>• <code>RypplePost</code>—Feed item generated when a user posts thanks.</li> <li>• <code>SocialPost</code>—Feed item generated when a social post is created from a case in Case Feed.</li> <li>• <code>TextPost</code>—Feed item containing text only.</li> </ul>	

Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>TrackedChange</code>—Feed item created when one or more fields on a record have been changed.</li> <li><code>UserStatus</code>—Deprecated. A user's post to their own profile.</li> </ul>	
<code>visibility</code>	<code>ConnectApi.FeedItemVisibilityType</code>	Type of users who can see a feed item. <ul style="list-style-type: none"> <li><code>AllUsers</code>—Visibility is not limited to internal users.</li> <li><code>InternalUsers</code>—Visibility is limited to internal users.</li> </ul>	28.0

## ConnectApi.FeedItemAttachment Class

**Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.FeedElementCapability Class](#) is used.

This class is abstract.

Subclasses:

- [ConnectApi.ApprovalAttachment Class](#)
- [ConnectApi.BasicTemplateAttachment Class](#)
- [ConnectApi.CanvasTemplateAttachment Class](#)
- [ConnectApi.EmailMessage Class](#)
- [ConnectApi.CaseComment Class](#)
- [ConnectApi.ContentAttachment Class](#)
- [ConnectApi.DashboardComponentAttachment Class](#)
- [ConnectApi.FeedPoll Class](#)
- [ConnectApi.LinkAttachment Class](#)
- [ConnectApi.RecordSnapshotAttachment Class](#)
- [ConnectApi.TrackedChangeAttachment Class](#)

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

## ConnectApi.FeedItemPage Class

**Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.FeedElementPage](#) is used.

A paged collection of `ConnectApi.FeedItem` objects.

Name	Type	Description	Available Version
<code>currentPageToken</code>	<a href="#">String</a>	Token identifying the current page.	28.0–31.0
<code>currentPageUrl</code>	<a href="#">String</a>	Chatter REST API URL identifying the current page.	28.0–31.0
<code>isModifiedToken</code>	<a href="#">String</a>	An opaque polling token to use in the <code>since</code> parameter of the <code>ChatterFeeds.isModified</code> method. The token describes when the feed was last modified.   <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.	28.0–31.0
<code>isModifiedUrl</code>	<a href="#">String</a>	A Chatter REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates.   <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.	28.0–31.0
<code>items</code>	<a href="#">List&lt;ConnectApi.FeedItem&gt;</a>	List of feed items	28.0–31.0
<code>nextPageToken</code>	<a href="#">String</a>	Token identifying the next page, or <code>null</code> if there isn't a next page.	28.0–31.0
<code>nextPageUrl</code>	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0–31.0
<code>updatesToken</code>	<a href="#">String</a>	Token to use in an <code>updatedSince</code> parameter, or <code>null</code> if not available.	30.0–31.0
<code>updatesUrl</code>	<a href="#">String</a>	A Chatter REST API resource with a query string containing the value of the <code>updatesToken</code> property. The resource returns the feed items that have been updated since the last request. Use the URL as it is—do not modify it. Property is <code>null</code> if not available.	30.0–31.0

## ConnectApi.FeedItemSummary

A feed item summary.

Subclass of [ConnectApi.FeedEntitySummary](#).

Property Name	Type	Description	Available Version
<code>capabilities</code>	<a href="#">ConnectApi.FeedElementCapabilities</a>	Container for all capabilities that can be included with a feed item.	39.0

Property Name	Type	Description	Available Version
header	<a href="#">ConnectApi.MessageBody</a>	Title of the post. This property contains renderable plain text for all the message segments. If a client doesn't know how to render a feed element type, it should render this text.	39.0
modifiedDate	<a href="#">Datetime</a>	When the feed item was modified in the form of an ISO8601 date string, for example, 2011-02-25T18:24:31.000Z.	39.0
originalFeedItem	<a href="#">ConnectApi.Reference</a>	Reference to the original feed item if this feed item is a shared feed item; otherwise, <code>null</code> .	39.0
originalFeedItemActor	<a href="#">ConnectApi.Actor</a>	If this feed item is a shared feed item, information about the original poster of the feed item; otherwise, <code>null</code> .	39.0
photoUrl	<a href="#">String</a>	URL of the photo associated with the feed item.	39.0
visibility	<a href="#">ConnectApi.FeedItemVisibility</a>	Specifies who can see a feed item. <ul style="list-style-type: none"> <li><code>AllUsers</code>—Visibility is not limited to internal users.</li> <li><code>InternalUsers</code>—Visibility is limited to internal users.</li> </ul>	39.0

## ConnectApi.FeedItemTopicPage Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.TopicsCapability Class](#) is used.

Name	Type	Description	Available Version
canAssignTopics	<a href="#">Boolean</a>	<code>true</code> if a topic can be assigned to the feed item, <code>false</code> otherwise	28.0–31.0
topics	<a href="#">List&lt;ConnectApi.Topic&gt;</a>	List of topics	28.0–31.0

## ConnectApi.FeedModifiedInfo Class

 **Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

Name	Type	Description	Available Version
isModified	<a href="#">Boolean</a>	<code>true</code> if the news feed has been modified since the last time it was polled; <code>false</code> otherwise. Returns <code>null</code> if the feed is not a news feed.	28.0

Name	Type	Description	Available Version
isModifiedToken	String	An opaque polling token to use in the <code>since</code> parameter of the <code>ChatterFeeds.isModified</code> method. The token describes when the feed was last modified.	28.0
nextPollUrl	String	A Chatter REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates.	28.0

## ConnectApi.FeedPoll Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.PollCapability Class](#) is used.

Subclass of [ConnectApi.FeedItemAttachment Class](#)

This object is returned as the attachment of `ConnectApi.FeedItem` objects where the `type` property is `PollPost`.

Name	Type	Description	Available Version
choices	List< <a href="#">ConnectApi.FeedPollChoice</a> >	List of choices for poll.	28.0–31.0
myChoiceId	String	ID of the poll choice that the context user has voted for in this poll. Returns <code>null</code> if the context user hasn't voted.	28.0–31.0
totalVoteCount	Integer	Total number of votes cast on the feed poll item.	28.0–31.0

## ConnectApi.FeedPollChoice Class

Name	Type	Description	Available Version
id	String	Poll choice ID	28.0
position	Integer	The location in the poll where this poll choice exists. The first poll choice starts at 1.	28.0
text	String	Label text associated with the poll choice	28.0
voteCount	Integer	Total number of votes for this poll choice	28.0
voteCountRatio	Double	The ratio of total number of votes for this poll choice to all votes cast in the poll. Multiply the ratio by 100 to get the percentage of votes cast for this poll choice.	28.0

SEE ALSO:

[ConnectApi.PollCapability Class](#)

## ConnectApi.FeedPostSummary

Summary of the post.

Subclass of [ConnectApi.UserActivitySummary](#)

Property Name	Type	Description	Available Version
feedItemId	<a href="#">String</a>	ID of the post.	42.0

## ConnectApi.FeedReadSummary

Summary of the feed that was read.

Subclass of [ConnectApi.UserActivitySummary](#).

Property Name	Type	Description	Available Version
containerId	<a href="#">String</a>	ID of the parent of the feed.	42.0
feedType	<a href="#">ConnectApi.FeedType</a>	Type of feed. <ul style="list-style-type: none"> <li>• <b>Bookmarks</b>—Contains all feed items saved as bookmarks by the context user.</li> <li>• <b>Company</b>—Contains all feed items except feed items of type <code>TrackedChange</code>. To see the feed item, the user must have sharing access to its parent.</li> <li>• <b>DirectMessageModeration</b>—Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Communities Chatter Messages permissions.</li> <li>• <b>DirectMessages</b>—Contains all feed items of the context user's direct messages.</li> <li>• <b>Files</b>—Contains all feed items that contain files posted by people or groups that the context user follows.</li> <li>• <b>Filter</b>—Contains the news feed filtered to contain feed items whose parent is a specified object type.</li> <li>• <b>Groups</b>—Contains all feed items from all groups the context user either owns or is a member of.</li> <li>• <b>Home</b>—Contains all feed items associated with any managed topic in a community.</li> <li>• <b>Landing</b>—Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren't many personalized feed items.</li> </ul>	42.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><b>Moderation</b>—Contains all feed items that are flagged for moderation, except direct messages. The Communities Moderation feed is available only to users with Moderate Community Feeds permissions.</li> <li><b>Mute</b>—Contains all feed items that the context user muted.</li> <li><b>News</b>—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user. Contains every feed item and comment that mentions the context user or that mentions a group the context user is a member of.</li> <li><b>PendingReview</b>—Contains all feed items and comments that are pending review.</li> <li><b>People</b>—Contains all feed items posted by all people the context user follows.</li> <li><b>Record</b>—Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user's record feed.</li> <li><b>Streams</b>—Contains all feed items for any combination of up to 25 feed-enabled entities, such as people, groups, and records, that the context user subscribes to in a stream.</li> <li><b>To</b>—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.</li> <li><b>Topics</b>—Contains all feed items that include the specified topic.</li> <li><b>UserProfile</b>—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user's user profile feed.</li> </ul>	

## ConnectApi.FieldChangeSegment Class

Subclass of [ConnectApi.ComplexSegment Class](#)

No additional properties.

SEE ALSO:

[ConnectApi.MoreChangesSegment Class](#)

## ConnectApi.FieldChangeNameSegment Class

Subclass of [ConnectApi.MessageSegment Class](#)

No additional properties.

## ConnectApi.FieldChangeValueSegment Class

Subclass of [ConnectApi.MessageSegment Class](#)

Name	Type	Description	Available Version
valueType	ConnectApi. FieldChange ValueType Enum	Value type of a field change. <ul style="list-style-type: none"> <li>NewValue—A new value</li> <li>OldValue—An old value</li> </ul>	28.0
url	String	URL value if the field change is to a URL field (such as a web address)	28.0

## ConnectApi.File Class

This class is abstract.

Subclass of [ConnectApi.ActorWithId Class](#)

Superclass of [ConnectApi.FileSummary Class](#)

Name	Type	Description	Available Version
checksum	String	MD5 checksum for the file.	28.0
content ModifiedDate	Datetime	An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z. File-specific modified date, which is updated only for direct file operations, such as rename. Modifications to the file from outside of Salesforce can update this date.	32.0
contentSize	Integer	Size of the file in bytes.	28.0
contentUrl	String	If the file is a link, returns the URL, otherwise, the string <code>null</code> .	28.0
createdDate	Datetime	ISO8601 date string when the file was created.	41.0
description	String	Description of the file.	28.0

Name	Type	Description	Available Version
downloadUrl	String	URL to the file, that can be used for downloading the file.	28.0
fileExtension	String	Extension of the file.	28.0
fileType	String	Type of file, such as PDF, PowerPoint.	28.0
flashRenditionStatus	String	Specifies if a flash preview version of the file has been rendered.	28.0
isInMyFileSync	Boolean	<p><code>true</code> if the file is synced with Salesforce Files Sync; <code>false</code> otherwise.</p> <p> <b>Note:</b> Salesforce Files Sync was retired on May 25, 2018.</p>	28.0
isMajorVersion	Boolean	<code>true</code> if the file is a major version; <code>false</code> if the file is a minor version. Major versions can't be replaced.	31.0
mimeType	String	File's MIME type.	28.0
moderationFlags	ConnectApi.ModerationFlags	Information about the moderation flags on a file. If <code>ConnectApi.Features.communityModeration</code> is <code>false</code> , this property is <code>null</code> .	30.0
modifiedDate	Datetime	An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z. Modifications to the file from within Salesforce update this date.	28.0
name	String	Name of the file.	28.0
origin	String	Specifies the file source. Valid values are: <ul style="list-style-type: none"> <li>• <code>Chatter</code>—file came from Chatter</li> <li>• <code>Content</code>—file came from content</li> </ul>	28.0
owner	ConnectApi.UserSummary	File's owner.	28.0
pdfRenditionStatus	String	Specifies if a PDF preview version of the file has been rendered.	28.0
publishStatus	ConnectApi.FilePublishStatus	Specifies the publish status of the file. <ul style="list-style-type: none"> <li>• <code>PendingAccess</code>—File is pending publishing.</li> <li>• <code>PrivateAccess</code>—File is private.</li> <li>• <code>PublicAccess</code>—File is public.</li> </ul>	28.0
renditionUrl	String	URL to the rendition for the file.	28.0
renditionUrl240By180	String	URL to the 240 x 180 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	29.0

Name	Type	Description	Available Version
renditionUrl 720By480	String	URL to the 720 x 480 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	29.0
sharingOption	ConnectApi. FileSharingOption	Sharing option of the file. Values are: <ul style="list-style-type: none"> <li>Allowed—Resharing of the file is allowed.</li> <li>Restricted—Resharing of the file is restricted.</li> </ul>	35.0
sharingPrivacy	ConnectApi. FileSharingPrivacy	Sharing privacy of a file. Values are: <ul style="list-style-type: none"> <li>None—File is visible to anyone with record access.</li> <li>PrivateOnRecords—File is private on records.</li> </ul>	41.0
sharingRole	ConnectApi. FileSharingType	Sharing role of the file. <ul style="list-style-type: none"> <li>Admin—Owner permission, but doesn't own the file.</li> <li>Collaborator—Viewer permission, and can edit, change permissions, and upload a new version of a file.</li> <li>Owner—Collaborator permission, and can make a file private, and delete a file.</li> <li>Viewer—Can view, download, and share a file.</li> <li>WorkspaceManaged—Permission controlled by the library.</li> </ul>	28.0
systemModstamp	Datetime	ISO8601 date string indicating when a user or any automated system process, such as a trigger, updated the file.	41.0
textPreview	String	Text preview of the file if available; null otherwise.	30.0
thumb120By90 RenditionStatus	String	Specifies the rendering status of the 120 x 90 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	28.0
thumb240By180 RenditionStatus	String	Specifies the rendering status of the 240 x 180 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	28.0

Name	Type	Description	Available Version
thumb720By480RenditionStatus	String	Specifies the rendering status of the 720 x 480 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	28.0
title	String	Title of the file.	28.0
versionNumber	String	File's version number.	28.0

## ConnectApi.FilePreview

A file preview.

Property Name	Type	Description	Available Version
format	ConnectApi.FilePreviewFormat	The format of the preview. Values are: <ul style="list-style-type: none"> <li>Pdf—Preview format is PDF.</li> <li>svg—Preview format is compressed SVG.</li> <li>Thumbnail—Preview format is 240 x 180 PNG.</li> <li>ThumbnailBig—Preview format is 720 x 480 PNG.</li> <li>ThumbnailTiny—Preview format is 120 x 90 PNG.</li> </ul>	39.0
previewUrlCount	Integer	The total number of preview URLs for this preview format.	39.0
previewUrls	List<ConnectApi.FilePreviewUrl>	A list of file preview URLs.	39.0
status	ConnectApi.FilePreviewStatus	The availability status of the preview. Values are: <ul style="list-style-type: none"> <li>Available—Preview is available.</li> <li>InProgress—Preview is being processed.</li> <li>NotAvailable—Preview is unavailable.</li> <li>NotScheduled—Generation of the preview isn't scheduled yet.</li> </ul>	39.0
url	String	The URL for the file preview.	39.0

SEE ALSO:

[ConnectApi.FilePreviewCollection](#)

## ConnectApi.FilePreviewCollection

A collection of file previews.

Property Name	Type	Description	Available Version
fileId	<a href="#">String</a>	ID of the file.	39.0
previews	<a href="#">List&lt;ConnectApi.FilePreview&gt;</a>	Previews supported for the file.	39.0
url	<a href="#">String</a>	URL to the current page of file previews.	39.0
versionNumber	<a href="#">String</a>	Version number of the file.	40.0

SEE ALSO:

[ConnectApi.InlineImageSegment](#)

## ConnectApi.FilePreviewUrl

A URL to a file preview.

Property Name	Type	Description	Available Version
pageNumber	<a href="#">Integer</a>	Preview page number starting from zero, or <code>null</code> for PDF files.	39.0
previewUrl	<a href="#">String</a>	File preview URL.	39.0

SEE ALSO:

[ConnectApi.FilePreview](#)

## ConnectApi.FilesCapability

If a feed element has this capability, it has one or more file attachments.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
items	<a href="#">List&lt;ConnectApi.Content&gt;</a>	Collection of files.	36.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.FileSummary Class

A file summary

Subclass of [ConnectApi.File Class](#)

No additional properties.

## ConnectApi.FollowerPage Class

Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the current page.	28.0
followers	<a href="#">List&lt;ConnectApi.Subscription&gt;</a>	List of subscriptions	28.0
nextPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0
previousPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
total	<a href="#">Integer</a>	Total number of followers across all pages	28.0

## ConnectApi.FollowingCounts Class

Name	Type	Description	Available Version
people	<a href="#">Integer</a>	Number of people user is following	28.0
records	<a href="#">Integer</a>	Number of records user is following Topics are a type of record that can be followed as of version 29.0.	28.0
total	<a href="#">Integer</a>	Total number of items user is following	28.0

SEE ALSO:

[ConnectApi.UserDetail Class](#)

## ConnectApi.FollowingPage Class

Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the current page.	28.0
following	<a href="#">List&lt;ConnectApi.Subscription&gt;</a>	List of subscriptions	28.0
nextPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0
previousPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0

Name	Type	Description	Available Version
total	<a href="#">Integer</a>	Total number of records being followed across all pages	28.0

### ConnectApi.GenericBundleCapability Class

If a feed element has this capability, the feed element has a group of other feed elements condensed into one feed element. This group is called a *bundle*.

Subclass of [ConnectApi.BundleCapability Class](#).

### ConnectApi.GenericFeedElement Class

A concrete implementation of the abstract `ConnectApi.FeedElement` class.

Subclass of [ConnectApi.FeedElement Class](#)

### ConnectApi.GlobalInfluence Class

Name	Type	Description	Available Version
percentile	<a href="#">String</a>	Percentile value for the user's influence rank within the organization or community	28.0
rank	<a href="#">Integer</a>	Number indicating the user's influence rank, relative to all other users within the organization or community	28.0

SEE ALSO:

[ConnectApi.UserDetail Class](#)

### ConnectApi.GroupChatterSettings Class

A user's Chatter settings for a specific group.

Name	Type	Description	Available Version
emailFrequency	<code>ConnectApi.GroupEmailFrequency Enum</code>	The frequency with which a group member receives email from a group.	28.0

### ConnectApi.GroupInformation Class

Describes the Information section of the group. If the group is private, this section is visible only to members.

Name	Type	Description	Available Version
text	<a href="#">String</a>	The text of the "Information" section of the group.	28.0

Name	Type	Description	Available Version
title	<a href="#">String</a>	The title of the “Information” section of the group.	28.0

SEE ALSO:

[ConnectApi.ChatterGroupDetail Class](#)

## ConnectApi.GroupMember Class

Name	Type	Description	Available Version
id	<a href="#">String</a>	User’s 18-character ID	28.0
lastFeed AccessDate	<a href="#">Datetime</a>	The date and time at which the group member last accessed the group feed.	31.0
role	<a href="#">ConnectApi. GroupMembership Type Enum</a>	Type of membership the user has with the group. <ul style="list-style-type: none"> <li>• <a href="#">GroupOwner</a></li> <li>• <a href="#">GroupManager</a></li> <li>• <a href="#">NotAMember</a></li> <li>• <a href="#">NotAMemberPrivateRequested</a></li> <li>• <a href="#">StandardMember</a></li> </ul>	28.0
url	<a href="#">String</a>	Chatter REST API URL to this membership	28.0
user	<a href="#">ConnectApi.User Summary</a>	Information about the user who is subscribed to this group	28.0

SEE ALSO:

[ConnectApi.GroupMemberPage Class](#)

## ConnectApi.GroupMemberPage Class

Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the current page.	28.0
members	<a href="#">List&lt;ConnectApi. GroupMember&gt;</a>	List of group members	28.0
myMembership	<a href="#">ConnectApi. Reference</a>	If the context user is a member of this group, returns information about that membership, otherwise, <code>null</code> .	28.0
nextPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn’t a next page.	28.0

Name	Type	Description	Available Version
previousPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
totalMemberCount	<a href="#">Integer</a>	Total number of group members across all pages	28.0

## ConnectApi.GroupMembershipRequest Class

Name	Type	Description	Available Version
createdDate	<a href="#">Datetime</a>	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z	28.0
id	<a href="#">String</a>	ID for the group membership request object	28.0
lastUpdateDate	<a href="#">Datetime</a>	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z	28.0
requestedGroup	<a href="#">ConnectApi.Reference</a>	Information about the group the context user is requesting to join.	28.0
responseMessage	<a href="#">String</a>	A message for the user if their membership request is declined. The value of this property is used only when the value of the <code>status</code> property is <code>Declined</code> . The maximum length is 756 characters.	28.0
status	<a href="#">ConnectApi.GroupMembershipRequestStatusEnum</a>	Status of a request to join a private group. Values are: <ul style="list-style-type: none"> <li>Accepted</li> <li>Declined</li> <li>Pending</li> </ul>	28.0
url	<a href="#">String</a>	URL of the group membership request object.	28.0
user	<a href="#">ConnectApi.UserSummary</a>	Information about the user requesting membership in a group.	28.0

SEE ALSO:

[ConnectApi.GroupMembershipRequests Class](#)

## ConnectApi.GroupMembershipRequests Class

Name	Type	Description	Available Version
requests	<a href="#">List&lt;ConnectApi.GroupMembershipRequest&gt;</a>	Information about group membership requests.	28.0
total	<a href="#">Integer</a>	The total number of requests.	28.0

## ConnectApi.GroupRecord Class

A record associated with a group.

Property	Type	Description	Available Version
id	String	Record's 18-character ID	33.0
record	<a href="#">ConnectApi.ActorWithId</a>	Information about the record associated with the group	33.0
url	String	Record URL	33.0

SEE ALSO:

[ConnectApi.GroupRecordPage Class](#)

## ConnectApi.GroupRecordPage Class

A paginated list of `ConnectApi.GroupRecord` objects.

Property	Type	Description	Available Version
currentPageUrl	String	Chatter REST API URL identifying the current page.	33.0
nextPageUrl	String	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	33.0
previousPageUrl	String	Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	33.0
records	<a href="#">List&lt;ConnectApi.GroupRecord&gt;</a>	List of records on the current page.	33.0
totalRecordCount	Integer	Total number of records associated with the group.	33.0

## ConnectApi.HashtagSegment Class

Subclass of [ConnectApi.MessageSegment Class](#)

Name	Type	Description	Available Version
tag	String	Text of the topic without the hash symbol (#)	28.0
topicUrl	String	Chatter REST API Topics resource that searches for the topic: <div style="border: 1px solid #ccc; padding: 5px; margin-top: 5px;"> <pre>/services/data/v43.0/chatter /topics?exactMatch=true&amp;q=<b>topic</b></pre> </div>	28.0

Name	Type	Description	Available Version
url	String	Chatter REST API Feed Items resource URL that searches for the topic in all feed items in an organization:	28.0
		<code>/services/data/v43.0/chatter/feed-items?q=<b>topic</b></code>	

## ConnectApi.Icon Class

Property	Type	Description	Available Version
height	Integer	The height of the icon in pixels.	28.0
width	Integer	The width of the icon in pixels.	28.0
url	String	The URL of the icon. This URL is available to unauthenticated users. This URL does not expire.	28.0

SEE ALSO:

[ConnectApi.CanvasCapability Class](#)

[ConnectApi.EnhancedLinkCapability](#)

[ConnectApi.SocialPostCapability](#)

## ConnectApi.InlineImageSegment

An inline image in the feed body.

Subclass of [ConnectApi.MessageSegment Class](#)

Property Name	Type	Description	Available Version
altText	String	Alt text for the inline image.	35.0
contentSize	Integer	Size of the file in bytes.	35.0
fileExtension	String	Extension of the file, such as gif.	37.0
imageDetails	<a href="#">ConnectApi.ContentImageFileDetails</a>	Details for the image, or <code>null</code> if the file isn't an image.	41.0
thumbnails	<a href="#">ConnectApi.FilePreviewCollection</a>	Information about the available thumbnails for the image.	35.0
url	String	URL to the latest version of the inline image.	35.0

## ConnectApi.InteractionsCapability

If a feed element has this capability, it has information about user interactions.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
count	Long	The number of individual views, likes, and comments on a feed post.	37.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

[ConnectApi.RelatedQuestion](#)

## ConnectApi.Invitation

An invitation.

Property Name	Type	Description	Available Version
email	String	Email address of the user.	39.0
status	<a href="#">ConnectApi.GroupViralInvitationsStatus</a>	Specifies the status of an invitation to join a group. Values are: <ul style="list-style-type: none"> <li>• <code>ActedUponUser</code>—The user was added to the group. An email was sent asking the user to visit the group.</li> <li>• <code>Invited</code>—An email was sent asking the user to sign up for the org.</li> <li>• <code>MaxedOutUsers</code>—The group has the maximum allowed members.</li> <li>• <code>MultipleError</code>—The user wasn't invited due to multiple errors.</li> <li>• <code>NoActionNeededUser</code>—The user is already a member of the group.</li> <li>• <code>NotVisibleToExternalInviter</code>—The user is not accessible to the user sending the invitation.</li> <li>• <code>Unhandled</code>—The user couldn't be added to the group for an unknown reason.</li> </ul>	39.0
userId	String	ID of the user.	39.0

SEE ALSO:

[ConnectApi.Invitations](#)

## ConnectApi.Invitations

A collection of invitations.

Property Name	Type	Description	Available Version
invitations	List<ConnectApi.Invitation>	Collection of invitations.	39.0

## ConnectApi.KnowledgeArticleVersion

A knowledge article version.

Property Name	Type	Description	Available Version
articleType	String	Type of the knowledge article.	36.0
id	String	ID of the knowledge article version.	36.0
knowledgeArticleId	String	ID of the corresponding knowledge article.	36.0
lastPublishedDate	Datetime	Last published date of the knowledge article.	36.0
summary	String	Summary of the knowledge article contents.	36.0
title	String	Title of the knowledge article.	36.0
urlName	String	URL name of the knowledge article.	36.0

SEE ALSO:

[ConnectApi.KnowledgeArticleVersionCollection](#)

## ConnectApi.KnowledgeArticleVersionCollection

A collection of knowledge article versions.

Property Name	Type	Description	Available Version
items	List<ConnectApi.KnowledgeArticleVersion>	A collection of knowledge article versions.	36.0

## ConnectApi.LabeledRecordField Class

This class is abstract.

Subclass of [ConnectApi.AbstractRecordField Class](#)

Superclass of:

- [ConnectApi.CompoundRecordField Class](#)
- [ConnectApi.CurrencyRecordField Class](#)
- [ConnectApi.DateRecordField Class](#)
- [ConnectApi.PercentRecordField Class](#)
- [ConnectApi.PicklistRecordField Class](#)

- [ConnectApi.RecordField Class](#)
- [ConnectApi.ReferenceRecordField Class](#)
- [ConnectApi.ReferenceWithDateRecordField Class](#)

A record field containing a label and a text value.

**!** **Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

Name	Type	Description	Available Version
label	<a href="#">String</a>	A localized string describing the record field.	29.0
text	<a href="#">String</a>	The text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field's <code>type</code> property. If it isn't recognized, render the text value as the default case.	29.0

## ConnectApi.LightningExtensionInformation

Lightning extension information.

Subclass of [ConnectApi.AbstractExtensionInformation](#).

Property Name	Type	Description	Available Version
compositionComponent	<a href="#">String</a>	Component to use in compose state.	40.0
headerTextLabel	<a href="#">String</a>	Label for the extension's header.	40.0
hoverTextLabel	<a href="#">String</a>	Label for hovering over the extension.	40.0
renderComponent	<a href="#">String</a>	Component to use in render or preview state.	40.0

SEE ALSO:

[ConnectApi.ExtensionDefinition](#)

## ConnectApi.LikeSummary

Summary of a like.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#)

Property Name	Type	Description	Available Version
likeId	<a href="#">String</a>	ID of the like.	42.0

## ConnectApi.LinkAttachment Class

**!** **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.LinkCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment Class](#)

Name	Type	Description	Available Version
title	String	Title given to the link if available, otherwise, <code>null</code>	28.0–31.0
url	String	The link URL	28.0–31.0

## ConnectApi.LinkCapability

If a feed element has this capability, it has a link.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
url	String	Link URL. The URL can be to an external site.	32.0
urlName	String	Description of the link.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.LinkSegment Class

Subclass of [ConnectApi.MessageSegment Class](#)

Name	Type	Description	Available Version
url	String	The link URL	28.0

## ConnectApi.LinkMetadata

Metadata for a link.

Property Name	Type	Description	Available Version
description	String	Description of the link.	42.0
frameSource	String	HTML required to display the resource.	42.0
height	Integer	Height required to display the HTML.	42.0
originalUrl	String	Original URL that was used to request the metadata.	42.0
providerUrl	String	URL of the provider that the information is retrieved from.	42.0
source	<a href="#">ConnectApi.LinkMetadataSource</a>	Source of the link metadata. Values are: <ul style="list-style-type: none"> <li>None—Link metadata wasn't retrieved.</li> <li>Sfdc—Salesforce is the source.</li> </ul>	42.0
thumbnailUrl	String	Thumbnail of the resource.	42.0

Property Name	Type	Description	Available Version
<code>title</code>	<a href="#">String</a>	Title of the link.	42.0
<code>type</code>	<a href="#">ConnectApi.LinkMetadataType</a>	Type of link that the metadata represents. Values are: <ul style="list-style-type: none"> <li><code>Error</code>—Link metadata couldn't be retrieved.</li> <li><code>Link</code>—Represents a link.</li> <li><code>None</code>—Link metadata wasn't retrieved because the link isn't a whitelisted domain.</li> <li><code>Photo</code>—Represents a photo.</li> <li><code>Rich</code>—Represents rich content, typically HTML content.</li> <li><code>Unknown</code>—Link metadata was retrieved, but the type is unknown.</li> <li><code>Video</code>—Represents a video.</li> </ul>	42.0
<code>url</code>	<a href="#">String</a>	URL of the image to display, if one is available.	42.0
<code>width</code>	<a href="#">Integer</a>	Width required to display the HTML.	42.0

SEE ALSO:

[ConnectApi.LinkMetadataCollection](#)

## ConnectApi.LinkMetadataCollection

Collection of link metadata.

Property Name	Type	Description	Available Version
<code>linkMetadataList</code>	<a href="#">List&lt;ConnectApi.LinkMetadata&gt;</a>	List of metadata for links.	42.0

## ConnectApi.MaintenanceInfo

Information about the upcoming scheduled maintenance for the organization.

Property Name	Type	Description	Available Version
<code>description</code>	<a href="#">String</a>	Description of the maintenance.	34.0
<code>maintenanceTitle</code>	<a href="#">String</a>	Title of the maintenance.	34.0
<code>maintenanceType</code>	<a href="#">ConnectApi.MaintenanceType</a>	Type of maintenance. Values are: <ul style="list-style-type: none"> <li><code>Downtime</code>—Downtime maintenance.</li> <li><code>GenerallyAvailable</code>—Maintenance with generally available mode.</li> </ul>	34.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>MaintenanceWithDowntime—Scheduled maintenance with downtime.</li> <li>ReadOnly—Maintenance with read-only mode.</li> </ul>	
messageEffectiveTime	Datetime	Effective time when users start seeing the maintenance message.	34.0
messageExpirationTime	Datetime	Expiration time of the maintenance message.	34.0
scheduledEndDowntime	Datetime	Scheduled end of downtime. <code>null</code> for <code>GenerallyAvailable</code> and <code>ReadOnly</code> maintenance types.	34.0
scheduledEndMaintenanceTime	Datetime	Scheduled end of maintenance. <code>null</code> for <code>Downtime</code> maintenance type.	34.0
scheduledStartDowntime	Datetime	Scheduled start of downtime. <code>null</code> for <code>GenerallyAvailable</code> and <code>ReadOnly</code> maintenance types.	34.0
scheduledStartMaintenanceTime	Datetime	Scheduled start time of maintenance. <code>null</code> for <code>Downtime</code> maintenance type.	34.0

SEE ALSO:

[ConnectApi.OrganizationSettings Class](#)

## ConnectApi.ManagedTopic Class

Represents a managed topic in a community.

Property Name	Type	Description	Available Version
children	List< <a href="#">ConnectApi.ManagedTopic</a> >	Children managed topics of the managed topic; <code>null</code> if the <code>depth</code> request parameter isn't specified or is <code>1</code> .	35.0
id	String	ID of managed topic.	32.0
managedTopicType	<a href="#">ConnectApi.ManagedTopicType</a>	Type of managed topic. <ul style="list-style-type: none"> <li>Featured—Topics that are featured, for example, on the community home page, but don't provide overall navigation.</li> <li>Navigational—Topics that display in a navigational menu in the community.</li> </ul>	32.0
parent	<a href="#">ConnectApi.Reference Class</a>	Parent managed topic of the managed topic.	35.0

Property Name	Type	Description	Available Version
topic	<a href="#">ConnectApi.Topic</a>	Information about the topic.	32.0
url	<a href="#">String</a>	Chatter REST API URL to the managed topic.	32.0

SEE ALSO:

[ConnectApi.ManagedTopicCollection Class](#)

## ConnectApi.ManagedTopicCollection Class

A collection of managed topics.

Property Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the current page.	32.0
managedTopics	<a href="#">List&lt;ConnectApi.ManagedTopic&gt;</a>	List of managed topics.	32.0

## ConnectApi.MarkupBeginSegment

The beginning of rich text markup.

Subclass of [ConnectApi.MessageSegment Class](#)

Property Name	Type	Description	Available Version
htmlTag	<a href="#">String</a>	The HTML tag for this markup.	35.0
markupType	<a href="#">ConnectApi.MarkupType</a>	Type of rich text markup. <ul style="list-style-type: none"> <li>• <code>Bold</code>—Bold tag.</li> <li>• <code>Code</code>—Code tag.</li> <li>• <code>Italic</code>—Italic tag.</li> <li>• <code>ListItem</code>—List item tag.</li> <li>• <code>OrderedList</code>—Ordered list tag.</li> <li>• <code>Paragraph</code>—Paragraph tag.</li> <li>• <code>Strikethrough</code>—Strikethrough tag.</li> <li>• <code>Underline</code>—Underline tag.</li> <li>• <code>UnorderedList</code>—Unordered list tag.</li> </ul>	35.0

## ConnectApi.MarkupEndSegment

The end of rich text markup.

Subclass of [ConnectApi.MessageSegment Class](#)

Property Name	Type	Description	Available Version
htmlTag	String	The HTML tag for this markup.	35.0
markupType	ConnectApi.MarkupType	Type of rich text markup. <ul style="list-style-type: none"> <li>• <code>Bold</code>—Bold tag.</li> <li>• <code>Code</code>—Code tag.</li> <li>• <code>Italic</code>—Italic tag.</li> <li>• <code>ListItem</code>—List item tag.</li> <li>• <code>OrderedList</code>—Ordered list tag.</li> <li>• <code>Paragraph</code>—Paragraph tag.</li> <li>• <code>Strikethrough</code>—Strikethrough tag.</li> <li>• <code>Underline</code>—Underline tag.</li> <li>• <code>UnorderedList</code>—Unordered list tag.</li> </ul>	35.0

## ConnectApi.MediaReference

A media reference.

Property Name	Type	Description	Available Version
mediaUrl	String	URL to stream or download the media.	41.0
thumbnailUrl	String	URL of the media's thumbnail, if one exists.	41.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

[ConnectApi.MediaReferenceCapability](#)

## ConnectApi.MediaReferenceCapability

If a feed element has this capability, it has one or more media references.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
media	List<ConnectApi.MediaReference>	Collection of media references.	41.0

## ConnectApi.MentionCompletion Class

Information about a record that could be used to @mention a user or group.

Name	Type	Description	Available Version
additionalLabel	String	An additional label (if one exists) for the record represented by this completion, for example, "(Customer)" or "(Acme Corporation)".	29.0
description	String	A description of the record represented by this completion.	29.0
name	String	The name of the record represented by this completion. The name is localized, if possible.	29.0
outOfOffice	ConnectApi. OutOfOffice	If the record represented by this completion is a user, an additional out-of-office message, if one exists, for the user.	40.0
photoUrl	String	A URL to the photo or icon of the record represented by this completion.	29.0
recordId	String	The ID of the record represented by this completion.	29.0
userType	ConnectApi. UserType Enum	If the record represented by this completion is a user, this value is the user type associated with that user; otherwise the value is <code>null</code> .  One of these values: <ul style="list-style-type: none"> <li>ChatterGuest—User is an external user in a private group.</li> <li>ChatterOnly—User is a Chatter Free customer.</li> <li>Guest—User is unauthenticated.</li> <li>Internal—User is a standard organization member.</li> <li>Portal—User is an external user in a customer portal, partner portal, or community.</li> <li>System—User is Chatter Expert or a system user.</li> <li>Undefined—User is a user type that is a custom object.</li> </ul>	30.0

SEE ALSO:

[ConnectApi.MentionCompletionPage Class](#)

## ConnectApi.MentionCompletionPage Class

A paginated list of Mention Completion response bodies.

Name	Type	Description	Available Version
currentPageUrl	String	Chatter REST API URL identifying the current page.	29.0
mentionCompletions	List<ConnectApi. MentionCompletion>	A list of mention completion proposals. Use these proposals to build a feed post body.	29.0
nextPageUrl	String	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0
previousPageUrl	String	Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	29.0

## ConnectApi.MentionSegment Class

Subclass of [ConnectApi.MessageSegment Class](#)

Name	Type	Description	Available Version
<code>accessible</code>	<a href="#">Boolean</a>	Specifies whether the mentioned user or group can see the post in which they are mentioned ( <code>true</code> ) or not ( <code>false</code> ).	28.0
<code>name</code>	<a href="#">String</a>	Name of the mentioned user or group	28.0
<code>record</code>	<a href="#">ConnectApi.ActorWithId</a>	Information about the mentioned user or group	29.0
<code>user</code>	<a href="#">ConnectApi.UserSummary</a>	Information about the mentioned user  <b>Important:</b> In versions 29.0 and later, use the <code>record</code> property.	28.0 only  In versions before 29.0, if the mention is not a user, the mention is in a <a href="#">ConnectApi.TextSegment</a> object.

## ConnectApi.MentionValidation Class

Information about whether a proposed mention is valid for the context user.

Name	Type	Description	Available Version
<code>recordId</code>	<a href="#">String</a>	The ID of the mentioned record.	29.0
<code>validationStatus</code>	<a href="#">ConnectApi.MentionValidationStatus Enum</a>	Type of validation error for a proposed mention, if any. <ul style="list-style-type: none"> <li><code>Disallowed</code>—The proposed mention is invalid and is rejected because the context user is trying to mention something that is not allowed. For example, a user who is not a member of a private group is trying to mention the private group.</li> <li><code>Inaccessible</code>—The proposed mention is allowed but the user or record being mentioned isn't notified because they don't have access to the parent record being discussed.</li> <li><code>Ok</code>—There is no validation error for this proposed mention.</li> </ul>	29.0

SEE ALSO:

[ConnectApi.MentionValidations Class](#)

## ConnectApi.MentionValidations Class

Information about whether a set of mentions is valid for the context user.

Name	Type	Description	Available Version
hasErrors	<a href="#">Boolean</a>	Indicates whether at least one of the proposed mentions has an error ( <code>true</code> ), or not ( <code>false</code> ). For example, context users can't mention private groups they don't belong to. If such a group is included in the list of mention validations, <code>hasErrors</code> is <code>true</code> and the group has a <code>validationStatus</code> of <code>Disallowed</code> in its mention validation.	29.0
mentionValidations	<a href="#">List&lt;ConnectApi.MentionValidation&gt;</a>	A list of mention validation information in the same order as the provided record IDs.	29.0

## ConnectApi.MessageBody Class

Subclass of [ConnectApi.AbstractMessageBody Class](#)

No additional properties.

SEE ALSO:

- [ConnectApi.ChatterLikesCapability Class](#)
- [ConnectApi.ChatterMessage Class](#)
- [ConnectApi.Comment Class](#)
- [ConnectApi.FeedElement Class](#)
- [ConnectApi.FeedItemSummary](#)

## ConnectApi.MessageSegment Class

This class is abstract.

Superclass of:

- [ConnectApi.ComplexSegment Class](#)
- [ConnectApi.EntityLinkSegment Class](#)
- [ConnectApi.FieldChangeSegment Class](#)
- [ConnectApi.FieldChangeNameSegment Class](#)
- [ConnectApi.FieldChangeValueSegment Class](#)
- [ConnectApi.HashtagSegment Class](#)
- [ConnectApi.InlineImageSegment](#)
- [ConnectApi.LinkSegment Class](#)
- [ConnectApi.MarkupBeginSegment](#)
- [ConnectApi.MarkupEndSegment](#)
- [ConnectApi.MentionSegment Class](#)
- [ConnectApi.MoreChangesSegment Class](#)

- [ConnectApi.ResourceLinkSegment Class](#)
- [ConnectApi.TextSegment Class](#)

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**!** **Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

Name	Type	Description	Available Version
text	<a href="#">String</a>	Text-only rendition of this segment. If a client encounters an unknown message segment type, it can render this value.	28.0
type	<code>ConnectApi.MessageSegmentType</code> Enum	The message segment type. One of these values: <ul style="list-style-type: none"> <li>• <a href="#">EntityLink</a></li> <li>• <a href="#">FieldChange</a></li> <li>• <a href="#">FieldChangeName</a></li> <li>• <a href="#">FieldChangeValue</a></li> <li>• <a href="#">Hashtag</a></li> <li>• <a href="#">InlineImage</a></li> <li>• <a href="#">Link</a></li> <li>• <a href="#">MarkupBegin</a></li> <li>• <a href="#">MarkupEnd</a></li> <li>• <a href="#">Mention</a></li> <li>• <a href="#">MoreChanges</a></li> <li>• <a href="#">ResourceLink</a></li> <li>• <a href="#">Text</a></li> </ul>	28.0

SEE ALSO:

[ConnectApi.AbstractMessageBody Class](#)

## ConnectApi.ModerationCapability Class

If a feed element has this capability, users in a community can flag it for moderation.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
moderationFlags	<a href="#">ConnectApi.ModerationFlags</a>	The moderation flags for this feed element. Community moderators can view and take action on flagged items.	31.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.ModerationFlagItemDetail

Flag details on a feed item, comment, or file.

Property Name	Type	Description	Available Version
createdBy	<a href="#">String</a>	ID of the user who flagged the item.	40.0
createdDate	<a href="#">Datetime</a>	Date when the item was flagged.	40.0
id	<a href="#">String</a>	ID of the moderation flag.	40.0
moderationType	<a href="#">ConnectApi.CommunityFlagType</a>	Type of moderation flag. Values are: <ul style="list-style-type: none"> <li><code>FlagAsInappropriate</code>—Flag for inappropriate content.</li> <li><code>FlagAsSpam</code>—Flag for spam.</li> </ul>	40.0
note	<a href="#">String</a>	Note from user who flagged the item.	40.0
visibility	<a href="#">ConnectApi.CommunityFlagVisibility</a>	Visibility behavior of a flag for various user types. Values are: <ul style="list-style-type: none"> <li><code>ModeratorsOnly</code>—The flag is visible only to users with moderation permissions on the flagged element or item.</li> <li><code>SelfAndModerators</code>—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.</li> </ul>	40.0

SEE ALSO:

[ConnectApi.ModerationFlagsCollection](#)

## ConnectApi.ModerationFlags

Information about the moderation flags on a feed item, comment, or file.

Name	Type	Description	Available Version
flagCount	<a href="#">Integer</a>	Number of moderation flags on this feed item, comment, or file. If the context user is not a community moderator, the property is <code>null</code> .	29.0
flagCountByReason	<a href="#">Map&lt;ConnectApi.CommunityFlagReasonType, Integer&gt;</a>	Number of moderation flags categorized by reason. Values for <code>ConnectApi.CommunityFlagReasonType</code> are: <ul style="list-style-type: none"> <li>• <code>FlaggedByRule</code>—Moderation rule flagged the item.</li> <li>• <code>FlaggedBySystem</code>—Einstein flagged the item.</li> <li>• <code>FlaggedByUserAsInappropriate</code>—User flagged the item as inappropriate.</li> <li>• <code>FlaggedByUserAsSpam</code>—User flagged the item as spam.</li> </ul>	40.0
flaggedByMe	<a href="#">Boolean</a>	<code>true</code> if the context user flagged the feed item, comment, or file for moderation; <code>false</code> otherwise.	29.0
flags	<a href="#">ConnectApi.ModerationFlagsCollection</a>	Collection of flags.	40.0

## SEE ALSO:

[ConnectApi.Comment Class](#)[ConnectApi.File Class](#)[ConnectApi.ModerationCapability Class](#)

## ConnectApi.ModerationFlagsCollection

A collection of flags on a feed item, comment, or file.

Property Name	Type	Description	Available Version
currentPageToken	<a href="#">String</a>	Token identifying the current page.	40.0
currentPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the current page.	40.0
flags	<a href="#">List&lt;ConnectApi.ModerationFlagItemDetail&gt;</a>	List of flag details.	40.0
nextPageToken	<a href="#">String</a>	Token identifying the next page, or <code>null</code> if there isn't a next page.	40.0
nextPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	40.0

Property Name	Type	Description	Available Version
pageSize	Integer	Number of items per page.	40.0

SEE ALSO:

[ConnectApi.ModerationFlags](#)

## ConnectApi.MoreChangesSegment Class

Subclass of [ConnectApi.MessageSegment Class](#)

In feed items with a large number of tracked changes, the message is formatted as: "changed A, B, and made X more changes." The `MoreChangesSegment` contains the "X more changes."

Name	Type	Description	Available Version
moreChanges	<a href="#">List&lt;ConnectApi.FieldChangeSegment&gt;</a>	Complete list of tracked changes.	29.0
moreChangesCount	Integer	Number of additional changes	28.0

## ConnectApi.Motif Class

The motif properties contain URLs for small, medium, and large icons that indicate the Salesforce record type. Common record types are files, users, and groups, but all record types have a set of motif icons. Custom object records use their tab style icon. All icons are available to unauthenticated users so that, for example, you can display the motif icons in an email. The motif can also contain the record type's base color.

 **Note:** The motif images are icons, not user uploaded images or photos. For example, every user has the same set of motif icons.

Custom object records use their tab style icon, for example, the following custom object uses the "boat" tab style:

```
"motif": {
  "color": "8C004C",
  "largeIconUrl": "/img/icon/custom51_100/boat64.png",
  "mediumIconUrl": "/img/icon/custom51_100/boat32.png",
  "smallIconUrl": "/img/icon/custom51_100/boat16.png",
  "svgIconUrl": null
},
```

Users use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/profile64.png",
  "mediumIconUrl": "/img/icon/profile32.png",
  "smallIconUrl": "/img/icon/profile16.png",
  "svgIconUrl": null
},
```

Groups use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/groups64.png",
  "mediumIconUrl": "/img/icon/groups32.png",
  "smallIconUrl": "/img/icon/groups16.png",
  "svgIconUrl": null
},
```

Files use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/content/content64.png",
  "mediumIconUrl": "/img/content/content32.png",
  "smallIconUrl": "/img/icon/files16.png",
  "svgIconUrl": null
},
```

 **Note:** To view the icons in the previous examples, preface the URL with `https://instance_name`. For example, `https://instance_name/img/icon/profile64.png`.

Name	Type	Description	Available Version
color	String	A hex value representing the base color of the record type, or <code>null</code> .	29.0
largeIconUrl	String	A large icon indicating the record type.	28.0
mediumIconUrl	String	A medium icon indicating the record type.	28.0
smallIconUrl	String	A small icon indicating the record type.	28.0
svgIconUrl	String	An icon in SVG format indicating the record type, or <code>null</code> if the icon doesn't exist.	34.0

## ConnectApi.MuteCapability

If a feed element has this capability, users can mute it. Muted feed elements are visible in the muted feed, and invisible in all other feeds that respect mute.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
isMutedByMe	Boolean	Indicates whether the context user muted the feed element.	35.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.MuteSummary

Summary of a mute.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#)

No additional properties.

## ConnectApi.NBARreaction (Pilot)

A reaction to a recommendation produced by a recommendation strategy

 **Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](#).

Property Name	Type	Description	Available Version
contextRecord	<a href="#">ConnectApi.Reference</a>	Reference to the context record.	43.0
createdBy	<a href="#">ConnectApi.Reference</a>	Reference to the reaction creator.	43.0
createdDate	<a href="#">Datetime</a>	Reaction creation date.	43.0
id	<a href="#">String</a>	Reaction record ID.	43.0
onBehalfOf	<a href="#">ConnectApi.Reference</a>	Reference to the user or record that is indirectly reacting to the recommendation.	43.0
reactionType	<a href="#">ConnectApi.NBARreactionType</a>	Type of reaction to a recommendation. Values are: <ul style="list-style-type: none"> <li>• Accepted</li> <li>• Rejected</li> </ul>	43.0
strategy	<a href="#">ConnectApi.RecordSnapshot</a>	Strategy that recommended the target record.	43.0
targetAction	<a href="#">ConnectApi.RecordSnapshot</a>	Target action that is recommended.	43.0
targetRecord	<a href="#">ConnectApi.Reference</a>	Reference to the target record.	43.0

## ConnectApi.NBARrecommendationProposition (Pilot)

A recommendation returned by a recommendation strategy.

 **Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any

particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](#).

Subclass of [ConnectApi.AbstractNBARecommendation \(Pilot\)](#).

No additional properties.

## ConnectApi.NBARecommendations (Pilot)

Recommendations returned by a recommendation strategy.

 **Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](#).

Property Name	Type	Description	Available Version
debug	<a href="#">String</a>	Runtime debug information recorded during recommendation strategy execution.	43.0
errors	<a href="#">String</a>	Runtime errors that occurred during recommendation strategy execution.	43.0
executionId	<a href="#">String</a>	ID of the recommendation strategy execution.	43.0
onBehalfOfId	<a href="#">String</a>	ID of the user or entity for which the recommendation strategy was executed.	43.0
recommendations	<a href="#">List&lt;ConnectApi.AbstractNBARecommendation&gt;</a>	List of recommendations returned by a recommendation strategy.	43.0

## ConnectApi.NewUserAudienceCriteria

The criteria for the new members type of recommendation audience.

Subclass of [ConnectApi.AudienceCriteria](#).

Property Name	Type	Description	Available Version
maxDaysInCommunity	<a href="#">Double</a>	The maximum number of days since a user became a community member.	36.0

## ConnectApi.NonEntityRecommendation Class

Represents a recommendation for a non-Salesforce entity, such as an application.

Subclass of [ConnectApi.AbstractRecommendation Class](#).

ConnectApi.NonEntityRecommendation Class isn't used in version 34.0 and later. In version 34.0 and later, [ConnectApi.EntityRecommendation Class](#) is used for all recommendations.

Property Name	Type	Description	Available Version
displayLabel	<a href="#">String</a>	Localized label of the non-entity object.	32.0
motif	<a href="#">ConnectApi.Motif</a>	Motif for the non-entity object.	32.0

### ConnectApi.OauthProviderInfo

Name	Type	Description	Available Version
authorizationUrl	<a href="#">String</a>	The URL used for authorization.	37.0
name	<a href="#">String</a>	The name of the OAuth service provider.	37.0

SEE ALSO:

[ConnectApi.UserOauthInfo](#)

### ConnectApi.OrganizationSettings Class

Name	Type	Description	Available Version
accessTimeout	<a href="#">Integer</a>	Amount of time after which the system prompts users who have been inactive to log out or continue working	28.0
features	<a href="#">ConnectApi.Features</a>	Information about features available in the organization	28.0
maintenanceInfo	<a href="#">List&lt;ConnectApi.MaintenanceInfo&gt;</a>	Information about a list of upcoming scheduled maintenances for the organization.	34.0
name	<a href="#">String</a>	Organization name	28.0
orgId	<a href="#">String</a>	18-character ID for the organization	28.0
userSettings	<a href="#">ConnectApi.UserSettings</a>	Information about the organization permissions for the user	28.0

### ConnectApi.OriginCapability

If a feed element has this capability, it was created by a feed action.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
actor	<a href="#">ConnectApi.User Summary Class</a>	The user who executed the feed action.	33.0

Property Name	Type	Description	Available Version
originRecord	<a href="#">ConnectApi.Reference Class</a>	A reference to the feed element containing the feed action.	33.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.OutOfOffice

User's out-of-office message.

Property Name	Type	Description	Available Version
message	<a href="#">String</a>	Out-of-office message for the user.	40.0

SEE ALSO:

[ConnectApi.User Class](#)

[ConnectApi.MentionCompletion Class](#)

## ConnectApi.PercentRecordField Class

Subclass of [ConnectApi.LabeledRecordField Class](#)

A record field containing a percentage value.

Name	Type	Description	Available Version
value	<a href="#">Double</a>	The value of the percentage.	29.0

## ConnectApi.PhoneNumber Class

A phone number.

Name	Type	Description	Available Version
label	<a href="#">String</a>	A localized string indicating the phone type	30.0
phoneNumber	<a href="#">String</a>	Phone number	28.0
phoneType	<a href="#">String</a>	Phone type. Values are: <ul style="list-style-type: none"> <li>• Fax</li> <li>• Mobile</li> <li>• Work</li> </ul> These values are not localized.	30.0

Name	Type	Description	Available Version
type	String	 <b>Note:</b> This property is not available after version 29.0. Use the <code>phoneType</code> property instead. Values are: <ul style="list-style-type: none"> <li>Fax</li> <li>Mobile</li> <li>Work</li> </ul> These values are not localized.	28.0–29.0

## SEE ALSO:

[ConnectApi.DatacloudCompany Class](#)

[ConnectApi.DatacloudContact](#)

[ConnectApi.UserDetail Class](#)

## ConnectApi.Photo Class

Name	Type	Description	Available Version
fullEmailPhotoUrl	String	A temporary URL to the large profile picture. The URL expires after 30 days and is available to unauthenticated users.	28.0
largePhotoUrl	String	URL to the large profile picture. The default width is 200 pixels, and the height is scaled so the original image proportions are maintained.  If a user hasn't uploaded a photo, this URL points to a default photo. If the user hasn't uploaded a photo and the request header included <code>X-Connect-Theme: Salesforce1</code> , this URL points to a default photo based on a theme that the admin selected for the org.	28.0
mediumPhotoUrl	String	URL to the medium profile picture. The default width is 160 pixels, and the height is scaled so the original image proportions are maintained.  If a user hasn't uploaded a photo, this URL points to a default photo. If the user hasn't uploaded a photo and the request header included <code>X-Connect-Theme: Salesforce1</code> , this URL points to a default photo based on a theme that the admin selected for the org.	37.0
photoVersionId	String	18-character ID to that version of the photo	28.0
smallPhotoUrl	String	URL to the small profile picture. The default size is 64x64 pixels.  If a user hasn't uploaded a photo, this URL points to a default photo. If the user hasn't uploaded a photo and the request header included	28.0

Name	Type	Description	Available Version
		<i>X-Connect-Theme: Salesforce1</i> , this URL points to a default photo based on a theme that the admin selected for the org.	
standardEmail PhotoUrl	String	A temporary URL to the small profile. The URL expires after 30 days and is available to unauthenticated users.	28.0
url	String	A resource that returns a Photo object: for example, <code>/services/data/v43.0/chatter/users/005D0000001LL80IAW/photo</code>	28.0

SEE ALSO:

[ConnectApi.ChatterGroup Class](#)

[ConnectApi.RecommendationDefinition](#)

[ConnectApi.User Class](#)

## ConnectApi.PicklistRecordField Class

Subclass of [ConnectApi.LabeledRecordField Class](#)

A record field containing an enumerated value.

## ConnectApi.PinCapability

If a feed element has this capability, users who have permission can pin it to a feed.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
isPinnableByMe	Boolean	Specifies whether the context user can pin or unpin the entity to the feed ( <code>true</code> ) or not ( <code>false</code> ).	41.0
isPinned	Boolean	Specifies whether the entity is pinned ( <code>true</code> ) or not pinned ( <code>false</code> ) to the feed.	41.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.PinnedFeedElements

List of pinned feed elements for a feed.

Property Name	Type	Description	Available Version
elements	List< <a href="#">ConnectApi.FeedElement</a> >	List of pinned feed elements.	41.0

## ConnectApi.PlatformAction Class

A platform action instance with state information for the context user.

Property Name	Type	Description	Available Version
actionUrl	String	For action links of subtype <code>Ui</code> or <code>Download</code> , direct the user to download or visit the UI from this link. Salesforce issues a Javascript redirect for the link in this format: <code>/action-link-redirect/<b>communityId</b>/<b>actionLinkId</b>?_bearer=<b>bearerToken</b></code> . For <code>Api</code> action links and for all platform actions, this value is <code>null</code> and Salesforce handles the call.	33.0
apiName	String	The API name. The value may be <code>null</code> .	33.0
confirmationMessage	String	If this action requires a confirmation and has a status of <code>NewStatus</code> , this is a default localized message that should be shown to an end user prior to invoking the action. Otherwise, this is <code>null</code> .	33.0
executingUser	ConnectApi.User Summary Class	The user who initiated execution of this platform action.	33.0
groupDefault	Boolean	<code>true</code> if this platform action is the default or primary platform action in the platform action group; <code>false</code> otherwise. There can be only one default platform action per platform action group.	33.0
iconUrl	String	The URL of the icon for the platform action. This value may be <code>null</code> .	33.0
id	String	The ID for the platform action. If the type is <code>QuickAction</code> and the subtype is <code>Create</code> , this value is <code>null</code> .	33.0
label	String	The localized label for this platform action.	33.0
modifiedDate	Datetime	An ISO 8601 format date string, for example, <code>2011-02-25T18:24:31.000Z</code> .	33.0
platformActionGroup	ConnectApi.Reference Class	A reference to the platform action group containing this platform action.	33.0
status	ConnectApi.PlatformAction Status	The execution status of the platform action. Values are: <ul style="list-style-type: none"> <li><code>FailedStatus</code>—The action link execution failed.</li> <li><code>NewStatus</code>—The action link is ready to be executed. Available for <code>Download</code> and <code>Ui</code> action links only.</li> </ul>	33.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>PendingStatus</code>—The action link is executing. Choosing this value triggers the API call for <code>Api</code> and <code>ApiAsync</code> action links.</li> <li><code>SuccessfulStatus</code>—The action link executed successfully.</li> </ul>	
<code>subtype</code>	<code>String</code>	<p>The subtype of a platform action or <code>null</code>.</p> <p>If the <code>type</code> property is <code>ActionLink</code>, possible values are:</p> <ul style="list-style-type: none"> <li><code>Api</code>—The action link calls a synchronous API at the action URL. Salesforce sets the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> based on the HTTP status code returned by your server.</li> <li><code>ApiAsync</code>—The action link calls an asynchronous API at the action URL. The action remains in a <code>PendingStatus</code> state until a third party makes a request to <code>/connect/action-links/<b>actionLinkId</b></code> to set the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> when the asynchronous operation is complete.</li> <li><code>Download</code>—The action link downloads a file from the action URL.</li> <li><code>Ui</code>—The action link takes the user to a web page at the action URL.</li> </ul> <p> <b>Note:</b> Invoking <code>ApiAsync</code> action links from an app requires a call to set the status. However, there isn't currently a way to set the status of an action link using Apex. To set the status, use Chatter REST API. See the Action Link resource in the <a href="#">Chatter REST API Developer Guide</a> for more information.</p>	33.0
<code>type</code>	<code>ConnectApi.PlatformActionType</code>	<p>The type of platform action. Values are:</p> <ul style="list-style-type: none"> <li><code>ActionLink</code>—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce UI.</li> <li><code>CustomButton</code>—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.</li> <li><code>ProductivityAction</code>—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send</li> </ul>	33.0

Property Name	Type	Description	Available Version
		Email, Call, Map, View Website, and Read News. Except for the Call action, you can't edit or delete productivity actions. <ul style="list-style-type: none"> <li><code>QuickAction</code>—A global or object-specific action.</li> <li><code>StandardButton</code>—A predefined Salesforce button such as New, Edit, or Delete.</li> </ul>	
<code>url</code>	<code>String</code>	The URL for this platform action.  If the <code>type</code> is <code>QuickAction</code> and the <code>subtype</code> is <code>Create</code> , this value is <code>null</code> .	33.0

SEE ALSO:

[ConnectApi.PlatformActionGroup Class](#)

## ConnectApi.PlatformActionGroup Class

A platform action group instance with state appropriate for the context user.

Action link groups are one type of platform action group and are therefore represented as `ConnectApi.PlatformActionGroup` output classes.

Property Name	Type	Description	Available Version
<code>category</code>	<code>ConnectApi.PlatformActionGroupCategory</code>	Indicates the priority and relative locations of platform actions. Values are: <ul style="list-style-type: none"> <li><code>Primary</code>—The action link group is displayed in the body of the feed element.</li> <li><code>Overflow</code>—The action link group is displayed in the overflow menu of the feed element.</li> </ul>	33.0
<code>id</code>	<code>String</code>	The 18-character ID or an opaque string ID of the platform action group.  If the <code>ConnectApi.PlatformAction</code> type is <code>QuickAction</code> and the <code>subtype</code> is <code>Create</code> , this value is <code>null</code> .	33.0
<code>modifiedDate</code>	<code>Datetime</code>	ISO 8601 date string, for example, 2014-02-25T18:24:31.000Z.	33.0
<code>platformActions</code>	<code>List&lt;ConnectApi.PlatformAction&gt;</code>	The platform action instances for this group.  Within an action link group, action links are displayed in the order listed in the <code>actionLinks</code> property of the <code>ConnectApi.ActionLinkGroupDefinitionInput</code> class. Within a feed item,	33.0

Property Name	Type	Description	Available Version
		action link groups are displayed in the order specified in the <code>actionLinkGroupIds</code> property of the <code>ConnectApi.AssociatedActionsCapabilityInput</code> class.	
<code>url</code>	<a href="#">String</a>	The URL for this platform action group.  If the <code>ConnectApi.PlatformAction</code> type is <code>QuickAction</code> and the <code>subtype</code> is <code>Create</code> , this value is <code>null</code> .	33.0

SEE ALSO:

[ConnectApi.AbstractRecommendation Class](#)

[ConnectApi.AssociatedActionsCapability Class](#)

## ConnectApi.PollCapability Class

If a feed element has this capability, it includes a poll.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
<code>choices</code>	<a href="#">List&lt;ConnectApi.FeedPollChoice&gt;</a>	Collection of poll choices that make up the poll.	32.0
<code>myChoiceId</code>	<a href="#">String</a>	18-character ID of the poll choice that the context user has voted for in this poll. Returns <code>null</code> if the context user has not voted.	32.0
<code>totalVoteCount</code>	<a href="#">Integer</a>	Total number of votes cast on the feed poll element.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.Proposition (Pilot)

A proposition.

**Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](#).

Property Name	Type	Description	Available Version
actionReference	<a href="#">String</a>	Reference to the action to perform, for example, to a flow to launch.	43.0
description	<a href="#">String</a>	Description of the proposition.	43.0
id	<a href="#">String</a>	ID of the proposition.	43.0
name	<a href="#">String</a>	Name of the proposition.	43.0
url	<a href="#">String</a>	URL to the proposition.	43.0

## ConnectApi.QuestionAndAnswersCapability Class

If a feed element has this capability, it has a question and comments on the feed element are answers to the question.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
bestAnswer	<a href="#">ConnectApi.Comment</a>	Comment selected as the best answer for the question.	32.0
bestAnswerSelectedBy	<a href="#">ConnectApi.UserSummary</a>	User who selected the best answer for the question.	32.0
canCurrentUserSelectOrRemoveBestAnswer	<a href="#">Boolean</a>	Indicates whether the context user can select or remove a best answer ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	32.0
candidateAnswers	<a href="#">ConnectApi.CandidateAnswersStatus</a>	Status of candidate answers for the question.	41.0
escalatedCase	<a href="#">ConnectApi.Reference</a>	If a question post is escalated, this is the case to which it was escalated.	33.0
questionTitle	<a href="#">String</a>	Title for the question.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.QuestionAndAnswersSuggestions Class

Question and answers suggestions.

Property Name	Type	Description	Available Version
articles	<a href="#">List&lt;ConnectApi.ArticleItem&gt;</a>	List of articles.	32.0

Property Name	Type	Description	Available Version
questions	<a href="#">List&lt;ConnectApi.FeedElement&gt;</a>	List of questions.	32.0

## ConnectApi.ReadBy

Information about who read the feed element and when.

Property Name	Type	Description	Available Version
lastReadDateByUser	<a href="#">Datetime</a>	When the user last read the feed element.	40.0
user	<a href="#">ConnectApi.UserSummary</a>	Information about the user who read the feed element.	40.0

SEE ALSO:

[ConnectApi.ReadByPage](#)

## ConnectApi.ReadByCapability

If a feed element has this capability, the context user can mark it as read.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
isReadByMe	<a href="#">Boolean</a>	Specifies whether the feed element has been read ( <code>true</code> ) or not ( <code>false</code> ) by the context user.	40.0
lastReadDateByMe	<a href="#">Datetime</a>	Last date when the feed element was marked read for the context user. Otherwise, <code>null</code> .	40.0
page	<a href="#">ConnectApi.ReadByPage</a>	First page of information about who read the feed element and when.	40.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.ReadByPage

A collection of information about who read the feed element and when.

Property Name	Type	Description	Available Version
currentPageToken	<a href="#">String</a>	Token identifying the current page.	40.0
currentPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the current page. The default is 25 items per page.	40.0

Property Name	Type	Description	Available Version
items	<a href="#">List&lt;ConnectApi.ReadBy&gt;</a>	Collection of read-by information, including users and when they last read the feed element.	40.0
nextPageToken	<a href="#">String</a>	Token identifying the next page, or <code>null</code> if there isn't a next page.	40.0
nextPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	40.0
previousPageToken	<a href="#">String</a>	Reserved for future use.	40.0
previousPageUrl	<a href="#">String</a>	Reserved for future use.	40.0
total	<a href="#">Integer</a>	Total number of users who read the feed element.	40.0

SEE ALSO:

[ConnectApi.ReadByCapability](#)

## ConnectApi.RecommendationAudience

A recommendation audience.

Property Name	Type	Description	Available Version
criteria	<a href="#">ConnectApi.AudienceCriteria</a>	The criteria for the recommendation audience type.	36.0
id	<a href="#">String</a>	18-character ID of the recommendation audience.	35.0
memberCount	<a href="#">Integer</a>	 <b>Important:</b> This property is available only in version 35.0. In version 36.0 and later, this property is available in <a href="#">ConnectApi.CustomListAudienceCriteria</a> . Number of members in the recommendation audience.	35.0 only
members	<a href="#">ConnectApi.UserReferencePage</a>	 <b>Important:</b> This property is available only in version 35.0. In version 36.0 and later, this property is available in <a href="#">ConnectApi.CustomListAudienceCriteria</a> . Members of the recommendation audience.	35.0 only
modifiedBy	<a href="#">ConnectApi.User</a>	User who last modified the recommendation audience.	36.0
modifiedDate	<a href="#">Datetime</a>	An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.	36.0
name	<a href="#">String</a>	Name of the recommendation audience.	35.0

Property Name	Type	Description	Available Version
url	<a href="#">String</a>	URL for the recommendation audience.	35.0

SEE ALSO:

[ConnectApi.RecommendationAudiencePage](#)

## ConnectApi.RecommendationAudiencePage

A list of recommendation audiences.

Property Name	Type	Description	Available Version
audienceCount	<a href="#">Integer</a>	The total number of recommendation audiences.	35.0
currentPageUrl	<a href="#">String</a>	URL to the current page.	35.0
nextPageUrl	<a href="#">String</a>	URL to the next page.	35.0
previousPageUrl	<a href="#">String</a>	URL to the previous page.	35.0
recommendationAudiences	<a href="#">List&lt;ConnectApi.RecommendationAudience&gt;</a>	A list of recommendation audiences.	35.0

## ConnectApi.RecommendationsCapability

If a feed element has this capability, it has a recommendation.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
items	<a href="#">List&lt;ConnectApi.AbstractRecommendation&gt;</a>	A list of recommendations.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.RecommendationCollection Class

A list of recommendations.

Property Name	Type	Description	Available Version
recommendations	<a href="#">List&lt;ConnectApi.AbstractRecommendation&gt;</a>	Collection of recommendations.	33.0

## ConnectApi.RecommendationDefinition

Represents a custom recommendation definition.

Property Name	Type	Description	Available Version
<code>actionUrl</code>	<a href="#">String</a>	The URL for acting on this recommendation.	35.0
<code>actionUrlName</code>	<a href="#">String</a>	The text label for the action URL in the user interface.	35.0
<code>explanation</code>	<a href="#">String</a>	Explanation of the recommendation definition.	35.0
<code>id</code>	<a href="#">String</a>	18-character ID of the recommendation definition.	35.0
<code>name</code>	<a href="#">String</a>	Name of the recommendation definition. The name is displayed in Setup.	35.0
<code>photo</code>	<a href="#">ConnectApi.Photo</a>	Photo of the recommendation definition.	35.0
<code>title</code>	<a href="#">String</a>	Title of the recommendation definition.	35.0
<code>url</code>	<a href="#">String</a>	URL to the Chatter REST API resource for the recommendation definition.	35.0

SEE ALSO:

[ConnectApi.RecommendationDefinitionPage](#)

[ConnectApi.ScheduledRecommendation](#)

## ConnectApi.RecommendationDefinitionPage

Represents a list of recommendation definitions.

Property Name	Type	Description	Available Version
<code>recommendationDefinitions</code>	<a href="#">List&lt;ConnectApi.RecommendationDefinition&gt;</a>	A list of recommendation definitions.	35.0
<code>url</code>	<a href="#">String</a>	URL to the Chatter REST API resource for the recommendation definition collection.	35.0

## ConnectApi.RecommendationExplanation Class

Explanation for a recommendation.

Subclass of [ConnectApi.AbstractRecommendationExplanation Class](#).

Property Name	Type	Description	Available Version
detailsUrl	<a href="#">String</a>	URL to explanation details or <code>null</code> if the recommendation doesn't have a detailed explanation.	32.0

SEE ALSO:

[ConnectApi.AbstractRecommendation Class](#)

## ConnectApi.RecommendedObject

A recommended object, such as a custom or static recommendation.

Subclass of [ConnectApi.Actor Class](#)

Property Name	Type	Description	Available Version
idOrEnum	<a href="#">String</a>	ID of a recommendation definition for a custom recommendation or the enum value <code>Today</code> for static recommendations that don't have an ID (version 35.0 and later).	34.0
motif	<a href="#">ConnectApi.Motif</a>	Motif of the recommended object.	34.0

## ConnectApi.RecordCapability

If a comment has this capability, it has a record attachment.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
recordId	<a href="#">String</a>	ID of the record.	42.0
url	<a href="#">String</a>	URL to the record.	42.0

## ConnectApi.RecordField Class

Subclass of [ConnectApi.LabeledRecordField Class](#)

A generic record field containing a label and text value.

SEE ALSO:

[ConnectApi.CompoundRecordField Class](#)

## ConnectApi.RecordSnapshot (Pilot)

A record snapshot.

**Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its

general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](#).

Property Name	Type	Description	Available Version
id	String	ID of the record.	43.0
nameAtSnapshot	String	Name of the record when the ID was recorded.	43.0

SEE ALSO:

[ConnectApi.NBAReaction \(Pilot\)](#)

## ConnectApi.RecordSnapshotAttachment Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.RecordSnapshotCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment Class](#)

The fields of a record at the point in time when the record was created.

Name	Type	Description	Available Version
recordView	<a href="#">ConnectApi.RecordView</a>	The representation of the record.	29.0–31.0

## ConnectApi.RecordSnapshotCapability

If a feed element has this capability, it contains all the snapshotted fields of a record for a single create record event.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
recordView	<a href="#">ConnectApi.RecordView</a>	A record representation that includes metadata and data so you can display the record easily.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.RecordSummary Class

Subclass of [ConnectApi.AbstractRecordView Class](#)

Property Name	Type	Description	Available Version
entityLabel	<a href="#">ConnectApi.EntityLabel</a>	Label of the record's entity.	40.0

SEE ALSO:

[ConnectApi.EmailAddress](#)

[ConnectApi.EmailAttachment](#)

[ConnectApi.ReferenceRecordField Class](#)

[ConnectApi.ReferenceWithDateRecordField Class](#)

## ConnectApi.RecordSummaryList Class

Summary information about a list of records in the organization including custom objects.

Name	Type	Description	Available Version
records	<a href="#">List&lt;ConnectApi.ActorWithId&gt;</a>	A list of records.	30.0
url	<a href="#">String</a>	The URL to this list of records.	30.0

## ConnectApi.RecordView Class

Subclass of [ConnectApi.AbstractRecordView Class](#)

A view of any record in the organization, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type. Contains data and metadata so you can render a record with one response.

Name	Type	Description	Available Version
sections	<a href="#">List&lt;ConnectApi.RecordViewSection&gt;</a>	A list of record view sections.	29.0

SEE ALSO:

[ConnectApi.RecordSnapshotCapability](#)

## ConnectApi.RecordViewSection Class

A section of record fields and values on a record detail.

Name	Type	Description	Available Version
columnCount	<a href="#">Integer</a>	The number of columns to use to lay out the fields in a record section.	29.0

Name	Type	Description	Available Version
columnOrder	ConnectApi. RecordColumnOrder Enum	The order of the fields to use in the <code>fields</code> property to lay out the fields in a record section. <ul style="list-style-type: none"> <li><code>LeftRight</code>—Fields are rendered from left to right.</li> <li><code>TopDown</code>—Fields are rendered from the top down.</li> </ul>	29.0
fields	ConnectApi. Abstract RecordField	The fields and values for the record contained in this section.	29.0
heading	String	A localized label to display when rendering this section of fields.	29.0
isCollapsible	Boolean	Indicates whether the section can be collapsed to hide all the fields ( <code>true</code> ) or not ( <code>false</code> ).	29.0

SEE ALSO:

[ConnectApi.RecordView Class](#)

## ConnectApi.Reference Class

Name	Type	Description	Available Version
id	String	The ID of the record being referenced, which could be an 18-character ID or some other string identifier.	28.0
url	String	The URL to the resource endpoint.	28.0

## ConnectApi.ReferenceRecordField Class

Subclass of [ConnectApi.LabeledRecordField Class](#)

A record field with a label and text value.

Name	Type	Description	Available Version
reference	ConnectApi. RecordSummary	The object referenced by the record field.	29.0

## ConnectApi.ReferenceWithDateRecordField Class

Subclass of [ConnectApi.LabeledRecordField Class](#)

A record field containing a referenced object that acted at a specific time, for example, "Created By...".

Name	Type	Description	Available Version
dateValue	Datetime	A time at which the referenced object acted.	29.0

Name	Type	Description	Available Version
reference	<a href="#">ConnectApi.RecordSummary</a>	The object referenced by the record field.	29.0

## ConnectApi.RelatedFeedPost

This class is abstract.

Subclass of: [ConnectApi.ActorWithId Class](#)

Superclass of: [ConnectApi.RelatedQuestion](#)

Property Name	Type	Description	Available Version
score	<a href="#">Double</a>	Score of the related feed post that indicates how closely related it is to the context feed post.	37.0
title	<a href="#">String</a>	Title of the related feed post.	37.0

SEE ALSO:

[ConnectApi.RelatedFeedPosts](#)

## ConnectApi.RelatedFeedPosts

A collection of related feed posts.

Property Name	Type	Description	Available Version
relatedFeedPosts	<a href="#">List&lt;ConnectApi.RelatedFeedPost&gt;</a>	Collection of related feed posts.	37.0

## ConnectApi.RelatedQuestion

A related question.

Subclass of: [ConnectApi.RelatedFeedPost](#)

Property Name	Type	Description	Available Version
hasBestAnswer	<a href="#">Boolean</a>	Indicates whether the question has a best answer.	37.0
interactions	<a href="#">ConnectApi.InteractionsCapability</a>	The number of individual views, likes, and comments on a question.	38.0

## ConnectApi.RepositoryFileDetail

A detailed description of a repository file.

Subclass of [ConnectApi.AbstractRepositoryFile](#)

No additional properties.

## ConnectApi.RepositoryFileSummary

A summary of a repository file.

Subclass of [ConnectApi.AbstractRepositoryFile](#)

No additional properties.

SEE ALSO:

[ConnectApi.RepositoryFolderItem](#)

## ConnectApi.RepositoryFolderDetail

A detailed description of a repository folder.

Subclass of [ConnectApi.AbstractRepositoryFolder](#)

No additional properties.

## ConnectApi.RepositoryFolderItem

A folder item.

Property Name	Type	Description	Available Version
file	<a href="#">ConnectApi.RepositoryFileSummary</a>	If the folder item is a file, the file summary. If the folder item is a folder, null.	39.0
folder	<a href="#">ConnectApi.RepositoryFolderSummary</a>	If the folder item is a folder, the folder summary. If the folder item is a file, null.	39.0
type	<a href="#">ConnectApi.FolderItemType</a>	Type of item in a folder. Values are: <ul style="list-style-type: none"> <li>• file</li> <li>• folder</li> </ul>	39.0

SEE ALSO:

[ConnectApi.RepositoryFolderItemsCollection](#)

## ConnectApi.RepositoryFolderItemsCollection

A collection of repository folder items.

Property Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	URL to the current page.	39.0

Property Name	Type	Description	Available Version
items	List<ConnectApi.RepositoryFolderItem>	Collection of items in a repository folder.	39.0
nextPageUrl	String	URL to the next page.	39.0
previousPageUrl	String	URL to the previous page.	39.0

## ConnectApi.RepositoryFolderSummary

A summary of a repository folder.

Subclass of [ConnectApi.AbstractRepositoryFolder](#)

No additional properties.

SEE ALSO:

[ConnectApi.RepositoryFolderItem](#)

## ConnectApi.RepositoryGroupSummary

A group summary.

Subclass of [ConnectApi.AbstractDirectoryEntrySummary](#)

Property Name	Type	Description	Available Version
groupType	ConnectApi.ContentHubGroupType	Type of group. Values are: <ul style="list-style-type: none"> <li>Everybody—Group is public to everybody.</li> <li>EverybodyInDomain—Group is public to everybody in the same domain.</li> <li>Unknown—Group type is unknown.</li> </ul>	39.0
name	String	Name of the group.	39.0

SEE ALSO:

[ConnectApi.ExternalFilePermissionInformation](#)

## ConnectApi.RepositoryUserSummary

A user summary.

Subclass of [ConnectApi.AbstractDirectoryEntrySummary](#)

Property Name	Type	Description	Available Version
firstName	String	First name of the user.	39.0
lastName	String	Last name of the user.	39.0

## ConnectApi.Reputation Class

Reputation for a user.

Property Name	Type	Description	Available Version
reputationLevel	<a href="#">ConnectApi.ReputationLevel</a>	User's reputation level.	32.0
reputationPoints	<a href="#">Double</a>	User's reputation points, which can be earned by performing different activities in the community.	32.0
url	<a href="#">String</a>	A Chatter REST API URL to the reputation.	32.0

SEE ALSO:

[ConnectApi.User Class](#)

## ConnectApi.ReputationLevel Class

Reputation level for a user.

Property Name	Type	Description	Available Version
levelImageUrl	<a href="#">String</a>	URL to the reputation level image.	32.0
levelName	<a href="#">String</a>	Name of the reputation level.	32.0
levelNumber	<a href="#">Integer</a>	Reputation level number, which is the numerical rank of the level, with the lowest level at 1. Administrators define the reputation level point ranges.	32.0

SEE ALSO:

[ConnectApi.Reputation Class](#)

## ConnectApi.RequestHeader Class

An HTTP request header name and value pair.

Property Name	Type	Description	Available Version
name	<a href="#">String</a>	The name of the request header.	33.0
value	<a href="#">String</a>	The value of the request header.	33.0

SEE ALSO:

[ConnectApi.ActionLinkDefinition Class](#)

## ConnectApi.ResourceLinkSegment Class

Name	Type	Description	Available Version
url	String	URL to a resource not otherwise identified by an ID field, for example, a link to a list of users.	28.0

## ConnectApi.ScheduledRecommendation

Represents a scheduled recommendation.

Property Name	Type	Description	Available Version
channel	ConnectApi.RecommendationChannel	<p>A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:</p> <ul style="list-style-type: none"> <li>• CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.</li> <li>• CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.</li> </ul>	36.0

Property Name	Type	Description	Available Version
enabled	Boolean	Indicates whether scheduling is enabled. If <code>true</code> , the recommendation is enabled and appears in communities. If <code>false</code> , recommendations in feeds in the Salesforce mobile web aren't removed, but no new recommendations appear. In Customer Service and Partner Central communities, disabled recommendations no longer appear.	35.0
id	String	18-character ID of the scheduled recommendation.	35.0
rank	Integer	The rank determining the order of this scheduled recommendation.	35.0
recommendation AudienceId	String	ID of the audience for the scheduled recommendation.	35.0
recommendation Definition Representation	ConnectApi. Recommendation Definition	Recommendation definition that this scheduled recommendation schedules.	35.0
url	String	URL to the Chatter REST API resource for the scheduled recommendation.	35.0

SEE ALSO:

[ConnectApi.ScheduledRecommendationPage](#)

## ConnectApi.ScheduledRecommendationPage

Represents a list of scheduled recommendations.

Property Name	Type	Description	Available Version
scheduled Recommendations	List<ConnectApi. Scheduled Recommendation>	A list of scheduled recommendations.	35.0
url	String	URL to the Chatter REST API resource for the scheduled recommendation collection.	35.0

## ConnectApi.SocialAccount

A social account on a social network.

Property Name	Type	Description	Available Version
externalSocial AccountId	String	ID of the external social account, if available.	38.0

Property Name	Type	Description	Available Version
handle	<a href="#">String</a>	Social handle, screen name, or alias that identifies this account.	36.0
name	<a href="#">String</a>	Name of the account as defined by the account's owner.	36.0
profileUrl	<a href="#">String</a>	URL to the account's profile.	36.0
socialPersonaId	<a href="#">String</a>	ID of the social persona account, if the external social account ID isn't available.	39.0

SEE ALSO:

[ConnectApi.SocialPostCapability](#)

## ConnectApi.SocialPostCapability

If a feed element has this capability, it can interact with a social post on a social network.

Subclass of [ConnectApi.FeedElementCapabilities Class](#).

Property Name	Type	Description	Available Version
author	<a href="#">ConnectApi.SocialAccount</a>	Social account that authored the social post.	36.0
content	<a href="#">String</a>	Content body of the social post.	36.0
deletedBy	<a href="#">ConnectApi.UserSummary Class</a>	User who deleted the social post.	38.0
hiddenBy	<a href="#">ConnectApi.UserSummary Class</a>	User who hid the social post.	41.0
icon	<a href="#">ConnectApi.Icon Class</a>	Icon of the social network.	36.0
id	<a href="#">String</a>	ID associated with the social post Salesforce record.	36.0
isOutbound	<a href="#">Boolean</a>	If <code>true</code> , the social post originated from the Salesforce application.	36.0
likedBy	<a href="#">String</a>	External social account who liked the social post.	40.0
messageType	<a href="#">ConnectApi.SocialPostMessageType</a>	Message type of the social post. Values are: <ul style="list-style-type: none"> <li>• Comment</li> <li>• Direct</li> <li>• Post</li> <li>• PrivateMessage</li> <li>• Reply</li> <li>• Retweet</li> </ul>	38.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>• Tweet</li> </ul>	
name	String	Title or heading of the social post.	36.0
postUrl	String	External URL to the social post on the social network.	36.0
provider	ConnectApi.SocialNetworkProvider	Social network that this social post belongs to. Values are: <ul style="list-style-type: none"> <li>• Facebook</li> <li>• GooglePlus</li> <li>• Instagram</li> <li>• InstagramBusiness</li> <li>• KakaoTalk</li> <li>• Kik</li> <li>• Klout</li> <li>• Line</li> <li>• LinkedIn</li> <li>• Messenger</li> <li>• Other</li> <li>• Pinterest</li> <li>• QQ</li> <li>• Rypple</li> <li>• SinaWeibo</li> <li>• SMS</li> <li>• Snapchat</li> <li>• Telegram</li> <li>• Twitter</li> <li>• VKontakte</li> <li>• WeChat</li> <li>• WhatsApp</li> <li>• YouTube</li> </ul>	36.0
recipient	ConnectApi.SocialAccount	Social account that is the recipient of the social post.	36.0
recipientId	String	ID of the recipient of the social post.	38.0
reviewScale	Double	Review scale of the social post.	40.0
reviewScore	Double	Review score of the social post.	40.0

Property Name	Type	Description	Available Version
status	<a href="#">ConnectApi.SocialPostStatus</a>	Status of the social post.	36.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.SocialPostStatus

The status of a social post.

Property Name	Type	Description	Available Version
message	<a href="#">String</a>	Status message.	36.0
type	<a href="#">ConnectApi.SocialPostStatusType</a>	Status type. Values are: <ul style="list-style-type: none"> <li>• <a href="#">ApprovalPending</a></li> <li>• <a href="#">ApprovalRecalled</a></li> <li>• <a href="#">ApprovalRejected</a></li> <li>• <a href="#">Deleted</a></li> <li>• <a href="#">Failed</a></li> <li>• <a href="#">Hidden</a></li> <li>• <a href="#">Pending</a></li> <li>• <a href="#">Sent</a></li> <li>• <a href="#">Unknown</a></li> </ul>	36.0

SEE ALSO:

[ConnectApi.SocialPostCapability](#)

## ConnectApi.Stamp

A user stamp.

Property Name	Type	Description	Available Version
description	<a href="#">String</a>	Description of the stamp.	39.0
id	<a href="#">String</a>	ID of the stamp.	39.0
imageUrl	<a href="#">String</a>	Image URL of the stamp.	39.0
label	<a href="#">String</a>	Label of the stamp.	39.0

SEE ALSO:

[ConnectApi.User Class](#)

## ConnectApi.StatusCapability

If a feed post or comment has this capability, it has a status that determines its visibility.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
<code>feedEntityStatus</code>	<a href="#">ConnectApi.FeedEntityStatus</a>	Status of the feed post or comment. Values are: <ul style="list-style-type: none"> <li><code>PendingReview</code>—The feed post or comment isn't approved yet and therefore isn't published or visible.</li> <li><code>Published</code>—The feed post or comment is approved and visible.</li> </ul>	37.0
<code>isApprovableByMe</code>	<a href="#">Boolean</a>	Specifies whether the context user can change the status of the feed post or comment.	37.0

SEE ALSO:

[ConnectApi.CommentCapabilities Class](#)

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.Subscription Class

Name	Type	Description	Available Version
<code>community</code>	<a href="#">ConnectApi.Reference</a>	Information about the community in which the subscription exists	28.0
<code>id</code>	<a href="#">String</a>	Subscription's 18-character ID	28.0
<code>subject</code>	<a href="#">ConnectApi.Actor</a>	Information about the parent, that is, the thing or person being followed	28.0
<code>subscriber</code>	<a href="#">ConnectApi.Actor</a>	Information about the subscriber, that is, the person following this item	28.0
<code>url</code>	<a href="#">String</a>	Chatter REST API URL to this specific subscription	28.0

SEE ALSO:

[ConnectApi.FollowerPage Class](#)

[ConnectApi.FollowingPage Class](#)

## ConnectApi.SupportedEmojis

A collection of supported emojis.

Property Name	Type	Description	Available Version
supportedEmojis	<a href="#">ConnectApi.EmojiCollection</a>	A collection of supported emojis.	39.0

## ConnectApi.TextSegment Class

Subclass of [ConnectApi.MessageSegment Class](#)

No additional properties.

## ConnectApi.TimeZone Class

The user's time zone as selected in the user's personal settings in Salesforce. This value does not reflect a device's current location.

Name	Type	Description	Available Version
gmtOffset	<a href="#">Double</a>	Signed offset, in hours, from GMT	30.0
name	<a href="#">String</a>	Display name of this time zone	30.0

SEE ALSO:

[ConnectApi.UserSettings Class](#)

## ConnectApi.Topic Class

Name	Type	Description	Available Version
createdDate	<a href="#">Datetime</a>	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z	29.0
description	<a href="#">String</a>	Description of the topic	29.0
id	<a href="#">String</a>	18-character ID	29.0
images	<a href="#">ConnectApi.TopicImages</a>	Images associated with the topic	32.0
isBeingDeleted	<a href="#">Boolean</a>	<code>true</code> if the topic is currently being deleted; <code>false</code> otherwise. After the topic is deleted, when attempting to retrieve the topic, the output is NOT_FOUND.	33.0
name	<a href="#">String</a>	Name of the topic	29.0
nonLocalizedName	<a href="#">String</a>	Non-localized name of the topic	36.0
talkingAbout	<a href="#">Integer</a>	Number of people talking about this topic over the last two months, based on factors such as topic additions and comments on posts with the topic	29.0

Name	Type	Description	Available Version
url	<a href="#">String</a>	URL to the topic detail page	29.0

SEE ALSO:

[ConnectApi.ManagedTopic Class](#)

[ConnectApi.TopicPage Class](#)

[ConnectApi.TopicEndorsement Class](#)

[ConnectApi.TopicEndorsementCollection Class](#)

[ConnectApi.TopicSuggestion Class](#)

[ConnectApi.TopicsCapability Class](#)

## ConnectApi.TopicEndorsement Class

Represents one user endorsing another user for a single topic.

Name	Type	Description	Available Version
endorsee	<a href="#">ConnectApi.User Summary</a>	User being endorsed	30.0
endorsementId	<a href="#">String</a>	18-character ID of the endorsement record	30.0
endorser	<a href="#">ConnectApi.User Summary</a>	User performing the endorsement	30.0
topic	<a href="#">ConnectApi.Topic</a>	Topic the user is being endorsed for	30.0
url	<a href="#">String</a>	URL to the resource for the endorsement record	30.0

## ConnectApi.TopicEndorsementCollection Class

A collection of topic endorsement response bodies.

Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the current page.	30.0
nextPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	30.0
previousPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	30.0
topicEndorsements	<a href="#">List&lt;ConnectApi.Topic&gt;</a>	List of topic endorsements	30.0

## ConnectApi.TopicEndorsementSummary

Topic endorsement summary.

Subclass of [ConnectApi.UserActivitySummary](#).

Property Name	Type	Description	Available Version
endorsementId	ID	ID of the topic endorsement.	42.0

## ConnectApi.TopicImages Class

Images associated with a topic.

Property Name	Type	Description	Available Version
coverImageUrl	String	URL to a topic's cover image, which appears on the topic page. Both topics and managed topics can have cover images.	32.0
featuredImageUrl	String	URL to a managed topic's featured image, which appears wherever you feature it, for example, on the communities home page.	32.0

SEE ALSO:

[ConnectApi.Topic Class](#)

## ConnectApi.TopicPage Class

Name	Type	Description	Available Version
currentPageUrl	String	Chatter REST API URL identifying the current page.	29.0
nextPageUrl	String	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0
topics	List<ConnectApi.Topic>	List of topics	29.0

## ConnectApi.TopicsCapability Class

If a feed element has this capability, the context user can add topics to it. Topics help users organize and discover conversations.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
canAssignTopics	Boolean	<code>true</code> if a topic can be assigned to the feed element, <code>false</code> otherwise.	32.0

Property Name	Type	Description	Available Version
items	<a href="#">List&lt;ConnectApi.Topic&gt;</a>	A collection of topics associated with this feed element.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.TopicSuggestion Class

Name	Type	Description	Available Version
existingTopic	<a href="#">ConnectApi.Topic</a>	Topic that already exists or null for a new topic	29.0
name	<a href="#">String</a>	Topic name	29.0

SEE ALSO:

[ConnectApi.TopicSuggestionPage Class](#)

## ConnectApi.TopicSuggestionPage Class

Name	Type	Description	Available Version
TopicSuggestions	<a href="#">List&lt;ConnectApi.TopicSuggestion&gt;</a>	List of topic suggestions	29.0

## ConnectApi.TrackedChangeAttachment Class

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.TrackedChangesCapability](#) is used.

Name	Type	Description	Available Version
changes	<a href="#">List&lt;ConnectApi.TrackedChangeItem&gt;</a>	A list of tracked changes.	28.0–31.0

## ConnectApi.TrackedChangeBundleCapability

If a feed element has this capability, it has a group of other feed elements aggregated into one feed element called a *bundle*. This type of bundle aggregates feed tracked changes.

Subclass of [ConnectApi.BundleCapability Class](#).

Property Name	Type	Description	Available Version
changes	<a href="#">List&lt;ConnectApi.TrackedChangeItem&gt;</a>	Collection of feed tracked changes.	31.0

## ConnectApi.TrackedChangeItem Class

Name	Type	Description	Available Version
fieldName	<a href="#">String</a>	The name of the field that was updated.	28.0
newValue	<a href="#">String</a>	The new value of the field or <code>null</code> if the field length is long.	28.0
oldValue	<a href="#">String</a>	The old value of the field or <code>null</code> if the field length is long.	28.0

SEE ALSO:

[ConnectApi.TrackedChangesCapability](#)

[ConnectApi.TrackedChangeBundleCapability](#)

## ConnectApi.TrackedChangesCapability

If a feed element has this capability, it contains all changes to a record for a single tracked change event.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
changes	<a href="#">List&lt;ConnectApi.TrackedChangeItem&gt;</a>	Collection of feed tracked changes.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.UnauthenticatedUser Class

Subclass of [ConnectApi.Actor Class](#)

No additional properties.

Instances of this class are used as the actor for feed items and comments posted by Chatter customers.

## ConnectApi.UnreadConversationCount Class

Name	Type	Description	Available Version
hasMore	<a href="#">Boolean</a>	Specifies if there are more than 50 unread messages ( <code>true</code> ) or not ( <code>false</code> )	29.0

Name	Type	Description	Available Version
unreadCount	Integer	The total number of unread messages	29.0

## ConnectApi.UpDownVoteCapability

If a feed post or comment has this capability, users can upvote or downvote it.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
downVoteCount	Long	Number of downvotes.	41.0
myVote	<a href="#">ConnectApi.UpDownVoteValue</a>	Specifies the context user's vote. Values are: <ul style="list-style-type: none"> <li>Down</li> <li>None</li> <li>Up</li> </ul>	41.0
upVoteCount	Long	Number of upvotes.	41.0

SEE ALSO:

[ConnectApi.CommentCapabilities Class](#)

[ConnectApi.FeedElementCapabilities Class](#)

## ConnectApi.UpVoteSummary

Summary of an upvote.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#)

No additional properties.

## ConnectApi.User Class

This class is abstract.

Subclass of [ConnectApi.ActorWithId Class](#)

Superclass of:

- [ConnectApi.UserDetail Class](#)
- [ConnectApi.UserSummary Class](#)

Name	Type	Description	Available Version
additionalLabel	String	An extra label for the user, for example, "Customer," "Partner," or "Acme Corporation." If the user doesn't have an extra label, the value is <code>null</code> .	30.0
communityNickname	String	User's nickname in the community.	32.0

Name	Type	Description	Available Version
companyName	String	Name of the company. If your community allows access without logging in, the value is <code>null</code> for guest users.	28.0
displayName	String	User's name that is displayed in the community. If nicknames are enabled, the nickname is displayed. If nicknames aren't enabled, the full name is displayed.	32.0
firstName	String	User's first name. In version 39.0 and later, if nicknames are enabled, <code>firstName</code> is <code>null</code> .	28.0
isChatterGuest	Boolean	<code>true</code> if user is a Chatter customer; <code>false</code> otherwise.	28.0
isInThisCommunity	Boolean	<code>true</code> if user is in the same community as the context user; <code>false</code> otherwise	28.0
lastName	String	User's last name. In version 39.0 and later, if nicknames are enabled, <code>lastName</code> is <code>null</code> .	28.0
outOfOffice	ConnectApi.OutOfOffice	Extra out-of-office message, if one exists, for the user.	40.0
photo	ConnectApi.Photo	Information about the user's photos.	28.0
reputation	ConnectApi.ReputationClass	Reputation of the user.	32.0
stamps	List<ConnectApi.Stamp>	Collection of the user's stamps.	39.0
title	String	User's title. If your community allows access without logging in, the value is <code>null</code> for guest users.	28.0

Name	Type	Description	Available Version
<code>userType</code>	<code>ConnectApi.UserType</code> Enum	Type of user. <ul style="list-style-type: none"> <li><code>ChatterGuest</code>—User is an external user in a private group.</li> <li><code>ChatterOnly</code>—User is a Chatter Free customer.</li> <li><code>Guest</code>—User is unauthenticated.</li> <li><code>Internal</code>—User is a standard organization member.</li> <li><code>Portal</code>—User is an external user in a customer portal, partner portal, or community.</li> <li><code>System</code>—User is Chatter Expert or a system user.</li> <li><code>Undefined</code>—User is a user type that is a custom object.</li> </ul>	28.0

SEE ALSO:

[ConnectApi.RecommendationAudience](#)

## ConnectApi.UserActivitiesJob

User activities job.

Property Name	Type	Description	Available Version
<code>jobToken</code>	<a href="#">String</a>	Token that identifies the user activities job.	42.0
<code>jobType</code>	<a href="#">String</a>	Type of user activities job. Value is <code>export</code> or <code>purge</code> .	42.0
<code>message</code>	<a href="#">String</a>	Message describing the status and expected outcome of the job.  When the job completes, you receive an email with information about the Salesforce file that contains <a href="#">ConnectApi.UserActivityCollection</a> .	42.0

## ConnectApi.UserActivityCollection

User activity collection.

Property Name	Type	Description	Available Version
<code>activityType</code>	<a href="#">String</a>	Type of user activity. Values are: <ul style="list-style-type: none"> <li><code>Bookmark</code>—User bookmarked a post.</li> </ul>	42.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>ChatterActivity</code>—Total counts of posts and comments made and likes and comments received for a user.</li> <li><code>ChatterLike</code>—User liked a post or comment.</li> <li><code>Comment</code>—User commented on a post.</li> <li><code>CompanyVerify</code>—User verified comment.</li> <li><code>DownVote</code>—User downvoted a post or comment.</li> <li><code>FeedEntityRead</code>—User read a post.</li> <li><code>FeedRead</code>—User read a feed.</li> <li><code>Mute</code>—User muted a post.</li> <li><code>Post</code>—User made a post.</li> <li><code>TopicEndorsement</code>—User endorsed another user on a topic or received endorsement on a topic.</li> <li><code>UpVote</code>—User upvoted a post or comment.</li> </ul>	
<code>userActivities</code>	<code>List&lt;ConnectApi.UserActivitySummary&gt;</code>	Collection of user activities.	42.0

## ConnectApi.UserActivitySummary

User activity summary.

This class is abstract.

Superclass of:

- [ConnectApi.CommentSummary](#)
- [ConnectApi.FeedPostSummary](#)
- [ConnectApi.FeedReadSummary](#)
- [ConnectApi.TopicEndorsementSummary](#)
- [ConnectApi.UserFeedEntityActivitySummary](#)

Property Name	Type	Description	Available Version
<code>activityDate</code>	<code>Datetime</code>	Date of the user activity.	42.0
<code>activityType</code>	<code>String</code>	Type of user activity. Values are: <ul style="list-style-type: none"> <li><code>Bookmark</code>—User bookmarked a post.</li> <li><code>ChatterActivity</code>—Total counts of posts and comments made and likes and comments received for a user.</li> <li><code>ChatterLike</code>—User liked a post or comment.</li> </ul>	42.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>Comment</code>—User commented on a post.</li> <li><code>CompanyVerify</code>—User verified comment.</li> <li><code>DownVote</code>—User downvoted a post or comment.</li> <li><code>FeedEntityRead</code>—User read a post.</li> <li><code>FeedRead</code>—User read a feed.</li> <li><code>Mute</code>—User muted a post.</li> <li><code>Post</code>—User made a post.</li> <li><code>TopicEndorsement</code>—User endorsed another user on a topic or received endorsement on a topic.</li> <li><code>UpVote</code>—User upvoted a post or comment.</li> </ul>	
<code>activityUrl</code>	<code>String</code>	URL of the user activity.	42.0
<code>community</code>	<code>ConnectApi.CommunitySummary</code>	Community in which the user performed the activity.	42.0

SEE ALSO:

[ConnectApi.UserActivityCollection](#)

## ConnectApi.UserCapabilities Class

The capabilities associated with a user profile.

Name	Type	Description	Available Version
<code>canChat</code>	<code>Boolean</code>	Specifies if the context user can use Chatter Messenger with the subject user ( <code>true</code> ) or not ( <code>false</code> )	29.0
<code>canDirectMessage</code>	<code>Boolean</code>	Specifies if the context user can direct message the subject user ( <code>true</code> ) or not ( <code>false</code> )	29.0
<code>canEdit</code>	<code>Boolean</code>	Specifies if the context user can edit the subject user's account ( <code>true</code> ) or not ( <code>false</code> )	29.0
<code>canFollow</code>	<code>Boolean</code>	Specifies if the context user can follow the subject user's feed ( <code>true</code> ) or not ( <code>false</code> )	29.0
<code>canViewFeed</code>	<code>Boolean</code>	Specifies if the context user can view the feed of the subject user ( <code>true</code> ) or not ( <code>false</code> )	29.0
<code>canViewFullProfile</code>	<code>Boolean</code>	Specifies if the context user can view the full profile of the subject user ( <code>true</code> ) or only the limited profile ( <code>false</code> )	29.0

Name	Type	Description	Available Version
<code>isModerator</code>	<a href="#">Boolean</a>	Specifies if the subject user is a Chatter moderator or admin ( <code>true</code> ) or not ( <code>false</code> )	29.0

SEE ALSO:

[ConnectApi.UserProfile Class](#)

## ConnectApi.UserChatterSettings Class

A user's global Chatter settings.

Name	Type	Description	Available Version
<code>defaultGroupEmailFrequency</code>	<a href="#">ConnectApi.GroupEmailFrequency Enum</a>	The default frequency with which a user receives email from a group when they join it.	28.0

## ConnectApi.UserDetail Class

Subclass of [ConnectApi.User Class](#)

Details about a user in an organization.

If the context user doesn't have permission to see a property, its value is set to `null`.

Name	Type	Description	Available Version
<code>aboutMe</code>	<a href="#">String</a>	Text from user's profile	28.0
<code>address</code>	<a href="#">ConnectApi.Address</a>	User's address	28.0
<code>bannerPhoto</code>	<a href="#">ConnectApi.BannerPhoto</a>	User's banner photo	36.0
<code>chatterActivity</code>	<a href="#">ConnectApi.ChatterActivity</a>	Chatter activity statistics	28.0
<code>chatterInfluence</code>	<a href="#">ConnectApi.GlobalInfluence</a>	User's influence rank	28.0
<code>email</code>	<a href="#">String</a>	User's email address	28.0
<code>followersCount</code>	<a href="#">Integer</a>	Number of users following this user	28.0
<code>followingCounts</code>	<a href="#">ConnectApi.FollowingCounts</a>	Information about items the user is following	28.0
<code>groupCount</code>	<a href="#">Integer</a>	Number of groups user is following	28.0
<code>hasChatter</code>	<a href="#">Boolean</a>	<code>true</code> if user has access to Chatter; <code>false</code> otherwise	31.0

Name	Type	Description	Available Version
<code>isActive</code>	<a href="#">Boolean</a>	<code>true</code> if user is active; <code>false</code> otherwise	28.0
<code>managerId</code>	<a href="#">String</a>	18-character ID of the user's manager	28.0
<code>managerName</code>	<a href="#">String</a>	Locale-based concatenation of manager's first and last names	28.0
<code>phoneNumbers</code>	<a href="#">List&lt;ConnectApi.PhoneNumber&gt;</a>	Collection of user's phone numbers	28.0
<code>thanksReceived</code>	<a href="#">Integer</a>	The number of times the user has been thanked.	29.0
<code>username</code>	<a href="#">String</a>	Username of the user, such as <i>Admin@mycompany.com</i> .	28.0

## SEE ALSO:

[ConnectApi.UserPage Class](#)

[ConnectApi.UserProfile Class](#)

## ConnectApi.UserFeedEntityActivitySummary

User feed entity activity summary.

This class is abstract.

Subclass of [ConnectApi.UserActivitySummary](#)

Superclass of:

- [ConnectApi.BookmarkSummary](#)
- [ConnectApi.ChatterActivitySummary](#)
- [ConnectApi.CompanyVerifySummary](#)
- [ConnectApi.DownVoteSummary](#)
- [ConnectApi.FeedEntityReadSummary](#)
- [ConnectApi.LikeSummary](#)
- [ConnectApi.MuteSummary](#)
- [ConnectApi.UpVoteSummary](#)

Property Name	Type	Description	Available Version
<code>feedEntityId</code>	<a href="#">String</a>	ID of the feed entity.	42.0

## ConnectApi.UserGroupPage Class

A paginated list of groups the context user is a member of.

Name	Type	Description	Available Version
currentPageUrl	String	Chatter REST API URL identifying the current page.	28.0
groups	List<ConnectApi.ChatterGroupSummary>	List of groups	28.0
nextPageUrl	String	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0
previousPageUrl	String	Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
total	Integer	Total number of groups across all pages	28.0

### ConnectApi.UserOauthInfo

Name	Type	Description	Available Version
availableExternalEmailService	Connect.OauthProviderInfo	The available OAuth service provider.	37.0
isAuthenticated	Boolean	Specifies whether the user is authenticated ( <code>true</code> ) or not ( <code>false</code> ).	37.0

### ConnectApi.UserPage Class

Name	Type	Description	Available Version
currentPageToken	Integer	Token identifying the current page.	28.0
currentPageUrl	String	Chatter REST API URL identifying the current page.	28.0
nextPageToken	Integer	Token identifying the next page, or <code>null</code> if there isn't a next page.	28.0
nextPageUrl	String	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0
previousPageToken	Integer	Token identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
previousPageUrl	String	Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
users	List<ConnectApi.UserDetail>	List of user detail information. If the context user doesn't have permission to see a property, the property is set to <code>null</code> .	28.0

## ConnectApi.UserProfile Class

Details necessary to render a view of a user profile.

Name	Type	Description	Available Version
capabilities	<a href="#">ConnectApi.UserCapabilities</a>	The context user's capabilities specific to the subject user's profile	29.0
id	<a href="#">String</a>	The ID of the user attached to the profile	29.0
tabs	<a href="#">List&lt;ConnectApi.UserProfileTab&gt;</a>	The tabs visible to the context user specific to the subject user's profile	29.0
url	<a href="#">String</a>	The URL of the user's profile	29.0
userDetail	<a href="#">ConnectApi.UserDetail</a>	The details about the user attached to the profile	29.0

## ConnectApi.UserProfileTab Class

Information about a profile tab.

Name	Type	Descriptio	Available Version
id	<a href="#">String</a>	The tab's unique identifier or 18-character ID	29.0
isDefault	<a href="#">Boolean</a>	Specifies if the tab appears first when clicking the user profile ( <a href="#">true</a> ) or not ( <a href="#">false</a> )	29.0
tabType	<a href="#">ConnectApi.UserProfileTabType Enum</a>	Specifies the type of tab <ul style="list-style-type: none"> <li>• <a href="#">CustomVisualForce</a>—Tab that displays data from a Visualforce page.</li> <li>• <a href="#">CustomWeb</a>—Tab that displays data from any external web-based application or web page.</li> <li>• <a href="#">Element</a>—Tab that displays generic content inline.</li> <li>• <a href="#">Feed</a>—Tab that displays the Chatter feed.</li> <li>• <a href="#">Overview</a>—Tab that displays user details.</li> </ul>	29.0
tabUrl	<a href="#">String</a>	The current tab's content URL (for non built-in tab types)	29.0

SEE ALSO:

[ConnectApi.UserProfile Class](#)

## ConnectApi.UserReferencePage

A list of user references.

Property Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	URL to the current page.	35.0
nextPageUrl	<a href="#">String</a>	URL to the next page.	35.0
previousPageUrl	<a href="#">String</a>	URL to the previous page.	35.0
userCount	<a href="#">Integer</a>	Number of users in the collection.	35.0
users	<a href="#">List&lt;ConnectApi.Reference&gt;</a>	A collection of user references.	35.0

SEE ALSO:

[ConnectApi.CustomListAudienceCriteria](#)

## ConnectApi.UserSettings Class

Settings specific to a user.

Property	Type	Description	Available Version
approvalPosts	<a href="#">Boolean</a>	User can approve workflows from Chatter posts.	28.0
canAccessPersonalStreams	<a href="#">Boolean</a>	User can access personal stream feeds.	40.0
canFollow	<a href="#">Boolean</a>	User can follow users and records.	28.0
canModifyAllData	<a href="#">Boolean</a>	User has Modify all Data permission.	28.0
canOwnGroups	<a href="#">Boolean</a>	User can own groups.	28.0
canViewAllData	<a href="#">Boolean</a>	User has View all Data permission.	28.0
canViewAllGroups	<a href="#">Boolean</a>	User has View all Groups permission.	28.0
canViewAllUsers	<a href="#">Boolean</a>	User has View all Users permission.	28.0
canViewCommunitySwitcher	<a href="#">Boolean</a>	User can see the community switcher menu.	34.0
canViewFullUserProfile	<a href="#">Boolean</a>	User can see other user's Chatter profile.	28.0
canViewPublicFiles	<a href="#">Boolean</a>	User can see all files that are public.	28.0
currencySymbol	<a href="#">String</a>	Currency symbol to use for displaying currency values. Applicable only when the <code>ConnectApi.Features.multiCurrency</code> property is <code>false</code> .	28.0

Property	Type	Description	Available Version
externalUser	Boolean	User is a Chatter customer.	28.0
fileSyncLimit	Integer	Maximum number of files user can sync.	32.0
fileSyncStorageLimit	Integer	Maximum storage for synced files, in megabytes (MB).	29.0
folderSyncLimit	Integer	Maximum number of folders user can sync.	32.0
hasAccessToInternalOrg	Boolean	User is a member of the internal org.	28.0
hasChatter	Boolean	User has access to Chatter.	31.0
hasFileSync	Boolean	User has Sync Files permission.	28.0
hasFieldServiceLocationTracking	Boolean	User has Field Service Lightning GPS tracking enabled.	41.0
hasFieldServiceMobileAccess	Boolean	User has access to the Field Service Lightning mobile app.	41.0
hasFileSyncManagedClientAutoUpdate	Boolean	Administrator for the user's org allows file sync clients to update automatically.	34.0
hasRestDataApiAccess	Boolean	User has access to REST API.	29.0
timeZone	ConnectApi.TimeZone	The user's time zone as selected in the user's personal settings in Salesforce. This value does not reflect a device's current location.	30.0
userDefaultCurrencyIsoCode	String	The ISO code for the default currency. Applicable only when the <code>ConnectApi.Features.multiCurrency</code> property is <code>true</code> .	28.0
userId	String	18-character ID of the user.	28.0
userLocale	String	Locale of user.	28.0

## ConnectApi.VerifiedCapability

If a comment has this capability, users with permission can mark it as verified or unverified.

Subclass of [ConnectApi.FeedElementCapability Class](#).

Property Name	Type	Description	Available Version
<code>isVerifiableByMe</code>	<a href="#">Boolean</a>	Specifies whether the context user has permission to mark comments as verified or unverified ( <code>true</code> ) or not ( <code>false</code> ).	41.0
<code>isVerified</code>	<a href="#">Boolean</a>	Specifies whether the comment is marked as verified ( <code>true</code> ) or not ( <code>false</code> ).	41.0
<code>isVerifiedByAnonymized</code>	<a href="#">Boolean</a>	Specifies whether the comment is marked as verified by an anonymous user ( <code>true</code> ) or not ( <code>false</code> ). If the comment has never been marked as verified or unverified, <code>null</code> . Also <code>null</code> if the context user	43.0

Property Name	Type	Description	Available Version
		doesn't have permission to mark comments as verified or unverified.	
lastVerifiedByUser	<a href="#">ConnectApi.UserSummary Class</a>	User who last marked the comment as verified or unverified, otherwise <code>null</code> . Also <code>null</code> if the context user doesn't have permission to mark comments as verified or unverified.	41.0
lastVerifiedDate	<a href="#">Datetime</a>	Date when the comment was last marked as verified or unverified, otherwise <code>null</code> . Also <code>null</code> if the context user doesn't have permission to mark comments as verified or unverified.	41.0

[ConnectApi.CommentCapabilities Class](#)

## ConnectApi.Vote

An upvote or downvote on a feed element or comment.

Property Name	Type	Description	Available Version
type	<a href="#">ConnectApi.UpDownVoteValue</a>	Type of vote for a feed element or comment. <ul style="list-style-type: none"> <li>Down</li> <li>Up</li> </ul>	42.0
user	<a href="#">ConnectApi.UserSummary</a>	User who voted on the feed element or comment.	42.0
votedItem	<a href="#">ConnectApi.Reference</a>	Reference to the feed element or comment that was voted on.	42.0

SEE ALSO:

[ConnectApi.VotePage](#)

## ConnectApi.VotePage

A page of upvotes or downvotes on a feed element or comment.

Property Name	Type	Description	Available Version
currentPageToken	<a href="#">Integer</a>	Token identifying the current page.	42.0
currentPageUrl	<a href="#">String</a>	Chatter REST API URL identifying the current page.	42.0

Property Name	Type	Description	Available Version
items	List<ConnectApi.Vote>	Collection of users and their upvotes or downvotes.  Upvotes include likes and upvotes. For example, if a post receives five likes and three upvotes, the number of upvotes is eight. For this reason, the collection of users and their upvotes also includes users who liked the post or comment. If a user both liked and upvoted a post, they appear only once in the collection.	42.0
nextPageToken	Integer	Token identifying the next page, or <code>null</code> if there isn't a next page.	42.0
nextPageUrl	String	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	42.0
previousPageToken	Integer	Token identifying the previous page, or <code>null</code> if there isn't a previous page.	42.0
previousPageUrl	String	Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	42.0
total	Long	Total number of upvotes or downvotes for the feed element or comment.  The number of upvotes includes the number of likes and upvotes. For example, if a post receives five likes and three upvotes, the total number of upvotes is eight. If a user both liked and upvoted a post, we count that as two upvotes.	42.0

## ConnectApi.Zone Class

Information about a Chatter Answers zone.

Name	Type	Description	Available Version
description	String	The description of the zone	29.0
id	String	The zone ID	29.0
isActive	Boolean	Indicates whether or not the zone is active	29.0
isChatterAnswers	Boolean	Indicates whether or not the zone is available for Chatter Answers	29.0
name	String	Name of the zone	29.0
url	String	The URL of the zone	30.0
visibility	ConnectApi.ZoneShowIn	Zone visibility type <ul style="list-style-type: none"> <li><code>Community</code>—Available in a community.</li> </ul>	29.0

Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>Internal</code>—Available internally only.</li> <li><code>Portal</code>—Available in a portal.</li> </ul>	
<code>visibilityId</code>	<a href="#">String</a>	If the zone is available in a portal or a community, this property contains the ID of the portal or community. If the zone is available to all portals, this property contains the value <code>All</code> .	29.0

SEE ALSO:

[ConnectApi.ZonePage Class](#)

## ConnectApi.ZonePage Class

Information about zone pages.

Name	Type	Description	Available Version
<code>zones</code>	<a href="#">List&lt;ConnectApi.Zone&gt;</a>	A list of one or more zones	29.0
<code>currentPageUrl</code>	<a href="#">String</a>	Chatter REST API URL identifying the current page.	29.0
<code>nextPageUrl</code>	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0

## ConnectApi.ZoneSearchPage Class

Information about the search results for zones.

Name	Type	Description	Available Version
<code>currentPageToken</code>	<a href="#">String</a>	Token identifying the current page.	29.0
<code>currentPageUrl</code>	<a href="#">String</a>	Chatter REST API URL identifying the current page.	29.0
<code>items</code>	<a href="#">List&lt;ConnectApi.ZoneSearchResult&gt;</a>	List of search results	29.0
<code>nextPageToken</code>	<a href="#">String</a>	Token identifying the next page, or <code>null</code> if there isn't a next page.	29.0
<code>nextPageUrl</code>	<a href="#">String</a>	Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0

## ConnectApi.ZoneSearchResult Class

Information about a specific zone search result.

Name	Type	Description	Available Version
hasBestAnswer	Boolean	Indicates if the search result has a best answer	29.0
id	String	ID of the search result. The search result can be a question or an article.	29.0
title	String	Title of the search result	29.0
type	ConnectApi.ZoneSearchResultType Enum	Specifies the zone search result type <ul style="list-style-type: none"> <li>• <code>Article</code>—Search results contain only articles.</li> <li>• <code>Question</code>—Search results contain only questions.</li> </ul>	29.0
voteCount	String	Number of votes given to the search result	29.0

## ConnectApi Enums

Enums specific to the `ConnectApi` namespace.

`ConnectApi` enums inherit all properties and methods of Apex enums.

Enums are not versioned. Enum values are returned in all API versions. Clients should handle values they don't understand gracefully.

Enum	Description
<code>ConnectApi.ActionLinkExecutionsAllowed</code>	Number of times an action link can be executed. <ul style="list-style-type: none"> <li>• <code>Once</code>—An action link can be executed only once across all users.</li> <li>• <code>OncePerUser</code>—An action link can be executed only once for each user.</li> <li>• <code>Unlimited</code>—An action link can be executed an unlimited number of times by each user. If the action link's <code>actionType</code> is <code>Api</code> or <code>ApiAsync</code>, you can't use this value.</li> </ul>
<code>ConnectApi.ActionLinkType</code>	Type of action link. <ul style="list-style-type: none"> <li>• <code>Api</code>—The action link calls a synchronous API at the action URL. Salesforce sets the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> based on the HTTP status code returned by your server.</li> <li>• <code>ApiAsync</code>—The action link calls an asynchronous API at the action URL. The action remains in a <code>PendingStatus</code> state until a third party makes a request to <code>/connect/action-links/<b>actionLinkId</b></code> to set the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> when the asynchronous operation is complete.</li> <li>• <code>Download</code>—The action link downloads a file from the action URL.</li> <li>• <code>Ui</code>—The action link takes the user to a web page at the action URL.</li> </ul>

Enum	Description
ConnectApi. ActivitySharingTypeEnum	Type of sharing operation. <ul style="list-style-type: none"> <li>• <code>Everyone</code>—The activity is shared with everyone.</li> <li>• <code>MyGroups</code>—The activity is shared only with a selection of the context user's groups.</li> <li>• <code>OnlyMe</code>—The activity is private.</li> </ul>
ConnectApi. ArticleTopicJobType	Type of operation to perform on articles and topics. <ul style="list-style-type: none"> <li>• <code>AssignTopicsToArticle</code>—Assign topics to articles in a data category.</li> <li>• <code>UnassignTopicsFromArticle</code>—Unassign topics from articles in a data category.</li> </ul>
ConnectApi. BannerStyle	Decorates a feed item with a color and set of icons. <ul style="list-style-type: none"> <li>• <code>Announcement</code>—An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.</li> </ul>
ConnectApi. BundleType	Type of bundle. <ul style="list-style-type: none"> <li>• <code>GenericBundle</code>—A bundle that contains no additional information and is just a collection of feed elements.</li> <li>• <code>TrackedChanges</code>—A bundle that represents a collection of feed tracked changes. The bundle includes summary information about the feed tracked changes that make up the bundle.</li> </ul>
ConnectApi. CaseActorType	Type of user who made the comment. <ul style="list-style-type: none"> <li>• <code>Customer</code>—if a Chatter customer made the comment</li> <li>• <code>CustomerService</code>—if a service representative made the comment</li> </ul>
ConnectApi. CaseComment EventType	Event type of a comment in Case Feed. <ul style="list-style-type: none"> <li>• <code>NewInternal</code>—A case comment that has newly been marked Internal Only.</li> <li>• <code>NewPublished</code>—A newly published case comment.</li> <li>• <code>NewPublishedByCustomer</code>—A case comment by a customer that was newly published.</li> <li>• <code>PublishExisting</code>—An existing case comment that was republished.</li> <li>• <code>PublishExistingByCustomer</code>—An existing case comment by a customer that was republished.</li> <li>• <code>UnpublishExistingByCustomer</code>—An existing case comment by a customer that was unpublished.</li> <li>• <code>UnpublishExisting</code>—An existing case comment that was unpublished.</li> </ul> <p> <b>Note:</b> Unfortunately, this typo is in the code, not the documentation. Use this spelling in your code.</p>
ConnectApi. CommentType	Type of comment. <ul style="list-style-type: none"> <li>• <code>ContentComment</code>—Comment holds a content capability.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>TextComment</code>—Comment contains only text.</li> </ul>
<code>ConnectApi.CommunityFlagReasonType</code>	Reason a post, comment, or file is flagged. <ul style="list-style-type: none"> <li>• <code>FlaggedByRule</code>—Moderation rule flagged the item.</li> <li>• <code>FlaggedBySystem</code>—Einstein flagged the item.</li> <li>• <code>FlaggedByUserAsInappropriate</code>—User flagged the item as inappropriate.</li> <li>• <code>FlaggedByUserAsSpam</code>—User flagged the item as spam.</li> </ul>
<code>ConnectApi.CommunityFlagType</code>	Type of moderation flag. <ul style="list-style-type: none"> <li>• <code>FlagAsInappropriate</code>—Flag for inappropriate content.</li> <li>• <code>FlagAsSpam</code>—Flag for spam.</li> </ul>
<code>ConnectApi.CommunityFlagVisibility</code>	Visibility behavior of a flag for various user types. <ul style="list-style-type: none"> <li>• <code>ModeratorsOnly</code>—The flag is visible only to users with moderation permissions on the flagged element or item.</li> <li>• <code>SelfAndModerators</code>—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.</li> </ul>
<code>ConnectApi.CommunityStatus</code>	Status of the community. <ul style="list-style-type: none"> <li>• <code>Live</code></li> <li>• <code>Inactive</code></li> <li>• <code>UnderConstruction</code></li> </ul>
<code>ConnectApi.ActivityType</code>	Type of activity. <ul style="list-style-type: none"> <li>• <code>All</code></li> <li>• <code>Event</code></li> <li>• <code>Task</code></li> </ul>
<code>ConnectApi.ContentHubAuthenticationProtocol</code>	Authentication protocol used for the repository. <ul style="list-style-type: none"> <li>• <code>NoAuthentication</code>—Repository doesn't require authentication.</li> <li>• <code>Oauth</code>—Repository uses OAuth authentication protocol.</li> <li>• <code>Password</code>—Repository uses user name and password authentication protocol.</li> </ul>
<code>ConnectApi.ContentHubDirectoryEntryType</code>	Type of directory entry. <ul style="list-style-type: none"> <li>• <code>GroupEntry</code></li> <li>• <code>UserEntry</code></li> </ul>
<code>ConnectApi.ContentHubExternalItemSharingType</code>	Sharing status for the external file. <ul style="list-style-type: none"> <li>• <code>DomainSharing</code>—File is shared with the domain.</li> <li>• <code>PrivateSharing</code>—File is private or shared only with individuals.</li> <li>• <code>PublicSharing</code>—File is publicly shared.</li> </ul>

Enum	Description
<code>ConnectApi.ContentHub.GroupType</code>	Type of group. <ul style="list-style-type: none"> <li>• <code>Everybody</code>—Group is public to everybody.</li> <li>• <code>EverybodyInDomain</code>—Group is public to everybody in the same domain.</li> <li>• <code>Unknown</code>—Group type is unknown.</li> </ul>
<code>ConnectApi.ContentHub.ItemType</code>	Item types. <ul style="list-style-type: none"> <li>• <code>Any</code>—Includes files and folders.</li> <li>• <code>FilesOnly</code>—Includes files only.</li> <li>• <code>FoldersOnly</code>—Includes folders only.</li> </ul>
<code>ConnectApi.ContentHub.StreamSupport</code>	Support for content streaming. <ul style="list-style-type: none"> <li>• <code>ContentStreamAllowed</code></li> <li>• <code>ContentStreamNotAllowed</code></li> <li>• <code>ContentStreamRequired</code></li> </ul>
<code>ConnectApi.ContentHub.VariableType</code>	Data type of the value of the field. <ul style="list-style-type: none"> <li>• <code>BooleanType</code></li> <li>• <code>DateTimeType</code></li> <li>• <code>DecimalType</code></li> <li>• <code>HtmlType</code></li> <li>• <code>IdType</code></li> <li>• <code>IntegerType</code></li> <li>• <code>StringType</code></li> <li>• <code>UriType</code></li> <li>• <code>XmlType</code></li> </ul>
<code>ConnectApi.DatacloudUserType</code>	Type of user. <ul style="list-style-type: none"> <li>• <code>Monthly</code>—A user type that's assigned monthly point limits for purchasing Data.com records. Only the assigned user can use monthly points. Points expire at the end of the month. Monthly is the default setting for <code>DatacloudUserType</code>.</li> <li>• <code>Listpool</code>—A user type that allows users to draw from a pool of points to purchase Data.com records.</li> </ul>
<code>ConnectApi.DatacloudImport.StatusTypeEnum</code>	Status of the import. <ul style="list-style-type: none"> <li>• <code>Success</code>—Indicates that selected records were added to the organization's CRM.</li> <li>• <code>Duplicate</code>—Marks a record that is already in the organization's CRM. The API determines whether an organization allows the addition of duplicate records in its CRM.</li> <li>• <code>Error</code>—Indicates that the selected records weren't added to the organization's CRM.</li> </ul>
<code>ConnectApi.DigestPeriod</code>	Period of time that is included in a Chatter email digest. <ul style="list-style-type: none"> <li>• <code>DailyDigest</code>—The email includes up to the 50 latest posts from the previous day.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li><code>WeeklyDigest</code>—The email includes up to the 50 latest posts from the previous week.</li> </ul>
<code>ConnectApi.EmailMessageDirection</code>	Direction of an email message on a case. <ul style="list-style-type: none"> <li><code>Inbound</code>—An inbound message (sent by a customer).</li> <li><code>Outbound</code>—An outbound message (sent to a customer by a support agent).</li> </ul>
<code>ConnectApi.ExtensionInformationType</code>	Information type of the extension. <ul style="list-style-type: none"> <li><code>Lightning</code></li> </ul>
<code>ConnectApi.FeedCommentSortOrder</code>	Order of comments. <ul style="list-style-type: none"> <li><code>CreatedDateLatestAsc</code>—Sorts by most recently created comments in ascending order.</li> <li><code>Relevance</code>—Sorts by most relevant content.</li> </ul>
<code>ConnectApi.FeedDensity</code>	Density of the feed. <ul style="list-style-type: none"> <li><code>AllUpdates</code>—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.</li> <li><code>FewerUpdates</code>—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.</li> </ul>
<code>ConnectApi.FeedElementCapabilityType</code>	Capabilities of a feed element in API versions 31.0 and later. If a capability exists on a feed element, the capability is available, even if the value doesn't exist or is <code>null</code> . If the capability doesn't exist, it isn't available. <ul style="list-style-type: none"> <li><code>AssociatedActions</code>—The feed element includes information about actions associated with it.</li> <li><code>Approval</code>—The feed element includes information about an approval.</li> <li><code>Banner</code>—The body of the feed element has an icon and border.</li> <li><code>Bookmarks</code>—The context user can bookmark the feed element. Bookmarked feed elements are visible in the bookmarks feed.</li> <li><code>Bundle</code>—The feed element has a group of other feed elements that display as a bundle in the feed. The <a href="#">bundle type</a> determines the additional data associated with the bundle.</li> <li><code>Canvas</code>—The feed element renders a canvas app.</li> <li><code>CaseComment</code>—The feed element has a case comment in the case feed.</li> <li><code>ChatterLikes</code>—The context user can like the feed element.</li> <li><code>Close</code>—The feed element can't be edited, commented on, or deleted. If the feed element is a poll, it can't be voted on.</li> <li><code>Comments</code>—The context user can add comments to the feed element.</li> <li><code>Content</code>—The feed element has a file.</li> <li><code>DashboardComponentSnapshot</code>—The feed element has a dashboard component snapshot.</li> <li><code>DirectMessage</code>—The feed element is a direct message.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>Edit</code>—Users who have permission can edit the feed element.</li> <li>• <code>EmailMessage</code>—The feed element has an email message from a case.</li> <li>• <code>EnhancedLink</code>—The feed element has a link that can contain supplemental information like an icon, a title, and a description.</li> <li>• <code>Extensions</code>—The feed element has one or more extension attachments.</li> <li>• <code>FeedEntityShare</code>—The feed element has a feed entity shared with it.</li> <li>• <code>Files</code>—The feed element has one or more file attachments.</li> <li>• <code>Interactions</code>—The feed element has information about user interactions.</li> <li>• <code>Link</code>—The feed element has a URL.</li> <li>• <code>MediaReferences</code>—The feed element has one or more media references.</li> <li>• <code>Moderation</code>—Users in a community can flag the feed element for moderation.</li> <li>• <code>Mute</code>—The context user can mute the feed element.</li> <li>• <code>Origin</code>—A feed action created the feed element.</li> <li>• <code>Pin</code>—Users who have permission can pin the feed element.</li> <li>• <code>Poll</code>—The feed element has poll voting.</li> <li>• <code>QuestionAndAnswers</code>—The feed element has a question, and users can add answers to the feed element instead of comments. Users can also select the best answer.</li> <li>• <code>ReadBy</code>—The context user can mark the feed element as read.</li> <li>• <code>Recommendations</code>—The feed element has a recommendation.</li> <li>• <code>Record</code>—The comment has a record attachment.</li> <li>• <code>RecordSnapshot</code>—The feed element has all the snapshot fields of a record for a single create record event.</li> <li>• <code>SocialPost</code>—The feed element can interact with a social post on a social network.</li> <li>• <code>Status</code>—The feed element has a status that determines its visibility.</li> <li>• <code>Topics</code>—The context user can add topics to the feed element.</li> <li>• <code>TrackedChanges</code>—The feed element has all changes to a record for a single tracked change event.</li> <li>• <code>UpDownVote</code>—Users can upvote or downvote the feed element.</li> <li>• <code>Verified</code>—Users who have permission can mark a comment as verified or unverified.</li> </ul>
<p><code>ConnectApi.FeedElement</code> Type</p>	<p>Feed elements are the top-level objects that a feed contains. The feed element type describes the characteristics of that feed element.</p> <ul style="list-style-type: none"> <li>• <code>Bundle</code>—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li>• <code>FeedItem</code>—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li>• <code>Recommendation</code>—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.</li> </ul>

Enum	Description
<code>ConnectApi.FeedEntityStatus</code>	<p>Status of the feed post or comment.</p> <ul style="list-style-type: none"> <li>• <code>PendingReview</code>—The feed post or comment isn't approved yet and therefore isn't published or visible.</li> <li>• <code>Published</code>—The feed post or comment is approved and visible.</li> </ul>
<code>ConnectApi.FeedFavoriteType</code>	<p>Origin of the feed favorite.</p> <ul style="list-style-type: none"> <li>• <code>ListView</code></li> <li>• <code>Search</code></li> <li>• <code>Topic</code></li> </ul>
<code>ConnectApi.FeedFilter</code>	<p>Filter value for a feed.</p> <ul style="list-style-type: none"> <li>• <code>AllQuestions</code>—Feed elements that are questions.</li> <li>• <code>AuthoredBy</code>—Feed elements authored by the user profile owner. This value is valid only for the <code>UserProfile</code> feed.</li> <li>• <code>CommunityScoped</code>—Feed elements that are scoped to communities. Currently, these feed elements have a <code>User</code> or a <code>Group</code> parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the <code>UserProfile</code> feed.</li> <li>• <code>QuestionsWithCandidateAnswers</code>—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the <code>Access Einstein-Generated Answers</code> permission.</li> <li>• <code>QuestionsWithCandidateAnswersReviewedPublished</code>—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the <code>Access Einstein-Generated Answers</code> permission.</li> <li>• <code>Read</code>—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the <code>Record</code> feed of a group.</li> <li>• <code>SolvedQuestions</code>—Feed elements that are questions and that have a best answer.</li> <li>• <code>UnansweredQuestions</code>—Feed elements that are questions and that don't have any answers.</li> <li>• <code>UnansweredQuestionsWithCandidateAnswers</code>—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the <code>Access Einstein-Generated Answers</code> permission.</li> <li>• <code>Unread</code>—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the <code>Record</code> feed of a group.</li> <li>• <code>UnsolvedQuestions</code>—Feed elements that are questions and that don't have a best answer.</li> </ul>
<code>ConnectApi.FeedItemAttachmentType</code>	<p>Attachment type for feed item output objects.</p> <ul style="list-style-type: none"> <li>• <code>Approval</code>—A feed item requiring approval.</li> <li>• <code>BasicTemplate</code>—A feed item with a generic rendering of an image, link, and title.</li> <li>• <code>Canvas</code>—A feed item that contains the metadata to render a link to a canvas app.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>CaseComment</code>—A feed item created from a comment to a case record.</li> <li>• <code>CaseComment</code>—A feed item created from a comment to a case record.</li> <li>• <code>Content</code>—A feed item with a file attached.</li> <li>• <code>DashboardComponent</code>—A feed item with a dashboard attached.</li> <li>• <code>EmailMessage</code>—An email attached to a case record in Case Feed.</li> <li>• <code>Link</code>—A feed item with a URL attached.</li> <li>• <code>Poll</code>—A feed item with a poll attached.</li> <li>• <code>Question</code>—A feed item with a question attached.</li> <li>• <code>RecordSnapshot</code>—The feed item attachment contains a view of a record at a single <code>ConnectApi.FeedItemType.CreateRecordEvent</code>.</li> <li>• <code>TrackedChange</code>—All changes to a record for a single <code>ConnectApi.FeedItemType.TrackedChange</code> event.</li> </ul>
<code>ConnectApi.FeedItemType</code>	<p>Type of feed item.</p> <ul style="list-style-type: none"> <li>• <code>ActivityEvent</code>—Feed item generated in Case Feed when an event or task associated with a parent record with a feed enabled is created or updated.</li> <li>• <code>AdvancedTextPost</code>—A feed item with advanced text formatting, such as a group announcement post.</li> <li>• <code>ApprovalPost</code>—Feed item with an approval capability. Approvers can act on the feed item parent.</li> <li>• <code>AttachArticleEvent</code>—Feed item generated when an article is attached to a case in Case Feed.</li> <li>• <code>BasicTemplateFeedItem</code>—Feed item with an enhanced link capability.</li> <li>• <code>CallLogPost</code>—Feed item generated when a call log is saved to a case in Case Feed.</li> <li>• <code>CanvasPost</code>—Feed item generated by a canvas app in the publisher or from Chatter REST API or Chatter in Apex. The post itself is a link to a canvas app.</li> <li>• <code>CaseCommentPost</code>—Feed item generated when a case comment is saved in Case Feed.</li> <li>• <code>ChangeStatusPost</code>—Feed item generated when the status of a case is changed in Case Feed.</li> <li>• <code>ChatTranscriptionPost</code>—Feed item generated in Case Feed when a Live Agent chat transcript is saved to a case.</li> <li>• <code>CollaborationGroupCreated</code>—Feed item generated when a new public group is created. Contains a link to the new group.</li> <li>• <code>CollaborationGroupUnarchived</code>—Deprecated. Feed item generated when an archived group is activated.</li> <li>• <code>ContentPost</code>—Feed item with a content capability.</li> <li>• <code>CreateRecordEvent</code>—Feed item that describes a record created in the publisher.</li> <li>• <code>DashboardComponentAlert</code>—Feed item with a dashboard alert.</li> <li>• <code>DashboardComponentSnapshot</code>—Feed item with a dashboard component snapshot capability.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>EmailMessageEvent</code>—Feed item generated when an email is sent from a case in Case Feed.</li> <li>• <code>FacebookPost</code>—Deprecated. Feed item generated when a Facebook post is created from a case in Case Feed.</li> <li>• <code>LinkPost</code>—Feed item with a link capability.</li> <li>• <code>MilestoneEvent</code>—Feed item generated when a case milestone is either completed or reaches a violation status. Contains a link to the case milestone.</li> <li>• <code>PollPost</code>—Feed item with a poll capability. Viewers of the feed item are allowed to vote on the options in the poll.</li> <li>• <code>ProfileSkillPost</code>—Feed item generated when a skill is added to a user's profile.</li> <li>• <code>QuestionPost</code>—Feed item generated when a question is asked. As of API version 33.0, a feed item of this type can have a content capability and a link capability.</li> <li>• <code>ReplyPost</code>—Feed item generated by a Chatter Answers reply.</li> <li>• <code>RypplePost</code>—Feed item generated when a user posts thanks.</li> <li>• <code>SocialPost</code>—Feed item generated when a social post is created from a case in Case Feed.</li> <li>• <code>TextPost</code>—Feed item containing text only.</li> <li>• <code>TrackedChange</code>—Feed item created when one or more fields on a record have been changed.</li> <li>• <code>UserStatus</code>—Deprecated. A user's post to their own profile.</li> </ul>
<code>ConnectApi.FeedItemVisibilityType</code>	Type of users who can see a feed item. <ul style="list-style-type: none"> <li>• <code>AllUsers</code>—Visibility is not limited to internal users.</li> <li>• <code>InternalUsers</code>—Visibility is limited to internal users.</li> </ul>
<code>ConnectApi.FeedSortOrder</code>	Order of feed items in the feed. <ul style="list-style-type: none"> <li>• <code>CreatedDateAsc</code>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li> <li>• <code>CreatedDateDesc</code>—Sorts by most recent creation date.</li> <li>• <code>LastModifiedDateDesc</code>—Sorts by most recent activity.</li> <li>• <code>MostViewed</code>—Sorts by most viewed content. This sort order is available only for Home feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li> <li>• <code>Relevance</code>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li> </ul>
<code>ConnectApi.FeedType</code>	Type of feed. <ul style="list-style-type: none"> <li>• <code>Bookmarks</code>—Contains all feed items saved as bookmarks by the context user.</li> <li>• <code>Company</code>—Contains all feed items except feed items of type <code>TrackedChange</code>. To see the feed item, the user must have sharing access to its parent.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>DirectMessageModeration</code>—Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Communities Chatter Messages permissions.</li> <li>• <code>DirectMessages</code>—Contains all feed items of the context user’s direct messages.</li> <li>• <code>Files</code>—Contains all feed items that contain files posted by people or groups that the context user follows.</li> <li>• <code>Filter</code>—Contains the news feed filtered to contain feed items whose parent is a specified object type.</li> <li>• <code>Groups</code>—Contains all feed items from all groups the context user either owns or is a member of.</li> <li>• <code>Home</code>—Contains all feed items associated with any managed topic in a community.</li> <li>• <code>Landing</code>—Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren’t many personalized feed items.</li> <li>• <code>Moderation</code>—Contains all feed items that are flagged for moderation, except direct messages. The Communities Moderation feed is available only to users with Moderate Community Feeds permissions.</li> <li>• <code>Mute</code>—Contains all feed items that the context user muted.</li> <li>• <code>News</code>—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user. Contains every feed item and comment that mentions the context user or that mentions a group the context user is a member of.</li> <li>• <code>PendingReview</code>—Contains all feed items and comments that are pending review.</li> <li>• <code>People</code>—Contains all feed items posted by all people the context user follows.</li> <li>• <code>Record</code>—Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user’s record feed.</li> <li>• <code>Streams</code>—Contains all feed items for any combination of up to 25 feed-enabled entities, such as people, groups, and records, that the context user subscribes to in a stream.</li> <li>• <code>To</code>—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.</li> <li>• <code>Topics</code>—Contains all feed items that include the specified topic.</li> <li>• <code>UserProfile</code>—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user’s user profile feed.</li> </ul>
<code>ConnectApi.FieldChange ValueType</code>	Value type of a field change. <ul style="list-style-type: none"> <li>• <code>NewValue</code>—A new value</li> <li>• <code>OldValue</code>—An old value</li> </ul>

Enum	Description
ConnectApi. FilePreviewFormat	Format of the file preview. <ul style="list-style-type: none"> <li>• Pdf—Preview format is PDF.</li> <li>• Svg—Preview format is compressed SVG.</li> <li>• Thumbnail—Preview format is 240 x 180 PNG.</li> <li>• ThumbnailBig—Preview format is 720 x 480 PNG.</li> <li>• ThumbnailTiny—Preview format is 120 x 90 PNG.</li> </ul>
ConnectApi. FilePreviewStatus	Availability status of the file preview. <ul style="list-style-type: none"> <li>• Available—Preview is available.</li> <li>• InProgress—Preview is being processed.</li> <li>• NotAvailable—Preview is unavailable.</li> <li>• NotScheduled—Generation of the preview isn't scheduled yet.</li> </ul>
ConnectApi. FilePublishStatus	Publish status of the file. <ul style="list-style-type: none"> <li>• PendingAccess—File is pending publishing.</li> <li>• PrivateAccess—File is private.</li> <li>• PublicAccess—File is public.</li> </ul>
ConnectApi. FileSharingOption	Sharing option of the file. <ul style="list-style-type: none"> <li>• Allowed—Resharing of the file is allowed.</li> <li>• Restricted—Resharing of the file is restricted.</li> </ul>
ConnectApi. FileSharingPrivacy	Sharing privacy of a file. <ul style="list-style-type: none"> <li>• None—File is visible to anyone with record access.</li> <li>• PrivateOnRecords—File is private on records.</li> </ul>
ConnectApi. FileSharingType	Sharing role of the file. <ul style="list-style-type: none"> <li>• Admin—Owner permission, but doesn't own the file.</li> <li>• Collaborator—Viewer permission, and can edit, change permissions, and upload a new version of a file.</li> <li>• Owner—Collaborator permission, and can make a file private, and delete a file.</li> <li>• Viewer—Can view, download, and share a file.</li> <li>• WorkspaceManaged—Permission controlled by the library.</li> </ul>
ConnectApi.FolderItem Type	Type of item in a folder. <ul style="list-style-type: none"> <li>• file</li> <li>• folder</li> </ul>
ConnectApi.GroupArchive Status	Set of groups based on whether the groups are archived or not. <ul style="list-style-type: none"> <li>• All—All groups, including groups that are archived and groups that are not archived.</li> <li>• Archived—Only groups that are archived.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>NotArchived</code>—Only groups that are not archived.</li> </ul>
<code>ConnectApi.GroupEmailFrequency</code>	<p>Frequency with which a user receives email.</p> <ul style="list-style-type: none"> <li>• <code>EachPost</code></li> <li>• <code>DailyDigest</code></li> <li>• <code>WeeklyDigest</code></li> <li>• <code>Never</code></li> <li>• <code>UseDefault</code></li> </ul>
<code>ConnectApi.GroupMembershipType</code>	<p>Type of membership the user has with the group.</p> <ul style="list-style-type: none"> <li>• <code>GroupOwner</code></li> <li>• <code>GroupManager</code></li> <li>• <code>NotAMember</code></li> <li>• <code>NotAMemberPrivateRequested</code></li> <li>• <code>StandardMember</code></li> </ul>
<code>ConnectApi.GroupMembershipRequestStatus</code>	<p>Status of a request to join a private group.</p> <ul style="list-style-type: none"> <li>• <code>Accepted</code></li> <li>• <code>Declined</code></li> <li>• <code>Pending</code></li> </ul>
<code>ConnectApi.GroupViralInvitationsStatus</code>	<p>Status of an invitation to join a group.</p> <ul style="list-style-type: none"> <li>• <code>ActedUponUser</code>—The user was added to the group. An email was sent asking the user to visit the group.</li> <li>• <code>Invited</code>—An email was sent asking the user to sign up for the org.</li> <li>• <code>MaxedOutUsers</code>—The group has the maximum allowed members.</li> <li>• <code>MultipleError</code>—The user wasn't invited due to multiple errors.</li> <li>• <code>NoActionNeededUser</code>—The user is already a member of the group.</li> <li>• <code>NotVisibleToExternalInviter</code>—The user is not accessible to the user sending the invitation.</li> <li>• <code>Unhandled</code>—The user couldn't be added to the group for an unknown reason.</li> </ul>
<code>ConnectApi.GroupVisibilityType</code>	<p>Group visibility type.</p> <ul style="list-style-type: none"> <li>• <code>PrivateAccess</code>—Only members of the group can see posts to this group.</li> <li>• <code>PublicAccess</code>—All users within the community can see posts to this group.</li> <li>• <code>Unlisted</code>—Reserved for future use.</li> </ul>
<code>ConnectApi.HttpRequestMethod</code>	<p>HTTP method.</p> <ul style="list-style-type: none"> <li>• <code>HttpDelete</code>—Returns HTTP 204 on success. Response body or output class is empty.</li> <li>• <code>HttpGet</code>—Returns HTTP 200 on success.</li> <li>• <code>HttpHead</code>—Returns HTTP 200 on success. Response body or output class is empty.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li><code>HttpPatch</code>—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> <li><code>HttpPost</code>—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.</li> <li><code>HttpPut</code>—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> </ul>
<code>ConnectApi.LinkMetadataSource</code>	<p>Source of the link metadata.</p> <ul style="list-style-type: none"> <li><code>None</code>—Link metadata wasn't retrieved.</li> <li><code>Sfdc</code>—Salesforce is the source.</li> </ul>
<code>ConnectApi.LinkMetadataType</code>	<p>Type of link that the metadata represents.</p> <ul style="list-style-type: none"> <li><code>Error</code>—Link metadata couldn't be retrieved.</li> <li><code>Link</code>—Represents a link.</li> <li><code>None</code>—Link metadata wasn't retrieved because the link isn't a whitelisted domain.</li> <li><code>Photo</code>—Represents a photo.</li> <li><code>Rich</code>—Represents rich content, typically HTML content.</li> <li><code>Unknown</code>—Link metadata was retrieved, but the type is unknown.</li> <li><code>Video</code>—Represents a video.</li> </ul>
<code>ConnectApi.MaintenanceType</code>	<p>Type of maintenance.</p> <ul style="list-style-type: none"> <li><code>Downtime</code>—Downtime maintenance.</li> <li><code>GenerallyAvailable</code>—Maintenance with generally available mode.</li> <li><code>MaintenanceWithDowntime</code>—Scheduled maintenance with downtime.</li> <li><code>ReadOnly</code>—Maintenance with read-only mode.</li> </ul>
<code>ConnectApi.ManagedTopicType</code>	<p>Type of managed topic.</p> <ul style="list-style-type: none"> <li><code>Featured</code>—Topics that are featured, for example, on the community home page, but don't provide overall navigation.</li> <li><code>Navigational</code>—Topics that display in a navigational menu in the community.</li> </ul>
<code>ConnectApi.MarkupType</code>	<p>Type of rich text markup.</p> <ul style="list-style-type: none"> <li><code>Bold</code>—Bold tag.</li> <li><code>Code</code>—Code tag.</li> <li><code>Italic</code>—Italic tag.</li> <li><code>ListItem</code>—List item tag.</li> <li><code>OrderedList</code>—Ordered list tag.</li> <li><code>Paragraph</code>—Paragraph tag.</li> <li><code>Strikethrough</code>—Strikethrough tag.</li> <li><code>Underline</code>—Underline tag.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>UnorderedList</code>—Unordered list tag.</li> </ul>
<code>ConnectApi.MentionCompletionType</code>	<p>Type of mention completion.</p> <ul style="list-style-type: none"> <li>• <code>All</code>—All mention completions, regardless of the type of record to which the mention refers.</li> <li>• <code>Group</code>—Mention completions for groups.</li> <li>• <code>User</code>—Mention completions for users.</li> </ul>
<code>ConnectApi.MentionValidationStatus</code>	<p>Type of validation error for a proposed mention, if any.</p> <ul style="list-style-type: none"> <li>• <code>Disallowed</code>—The proposed mention is invalid and is rejected because the context user is trying to mention something that is not allowed. For example, a user who is not a member of a private group is trying to mention the private group.</li> <li>• <code>Inaccessible</code>—The proposed mention is allowed but the user or record being mentioned isn't notified because they don't have access to the parent record being discussed.</li> <li>• <code>Ok</code>—There is no validation error for this proposed mention.</li> </ul>
<code>ConnectApi.MessageSegmentType</code>	<p>Type of message segment, such as text, link, field change name, or field change value.</p> <ul style="list-style-type: none"> <li>• <code>EntityLink</code></li> <li>• <code>FieldChange</code></li> <li>• <code>FieldChangeName</code></li> <li>• <code>FieldChangeValue</code></li> <li>• <code>Hashtag</code></li> <li>• <code>InlineImage</code></li> <li>• <code>Link</code></li> <li>• <code>MarkupBegin</code></li> <li>• <code>MarkupEnd</code></li> <li>• <code>Mention</code></li> <li>• <code>MoreChanges</code></li> <li>• <code>ResourceLink</code></li> <li>• <code>Text</code></li> </ul>
<code>ConnectApi.NBAReactionType (Pilot)</code>	<p>Type of reaction to a recommendation.</p> <ul style="list-style-type: none"> <li>• <code>Accepted</code></li> <li>• <code>Rejected</code></li> </ul>
<code>ConnectApi.OperationType</code>	<p>Operation to carry out on the file.</p> <ul style="list-style-type: none"> <li>• <code>Add</code>—Adds the file to the feed element.</li> <li>• <code>Remove</code>—Removes the file from the feed element.</li> </ul>
<code>ConnectApi.PlatformActionGroupCategory</code>	<p>Location of an action link group on an associated feed element.</p> <ul style="list-style-type: none"> <li>• <code>Primary</code>—The action link group is displayed in the body of the feed element.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li><code>Overflow</code>—The action link group is displayed in the overflow menu of the feed element.</li> </ul>
<code>ConnectApi.PlatformActionStatus</code>	<p>Status of the action.</p> <ul style="list-style-type: none"> <li><code>FailedStatus</code>—The action link execution failed.</li> <li><code>NewStatus</code>—The action link is ready to be executed. Available for <code>Download</code> and <code>Ui</code> action links only.</li> <li><code>PendingStatus</code>—The action link is executing. Choosing this value triggers the API call for <code>Api</code> and <code>ApiAsync</code> action links.</li> <li><code>SuccessfulStatus</code>—The action link executed successfully.</li> </ul>
<code>ConnectApi.PlatformActionType</code>	<p>Type of platform action.</p> <ul style="list-style-type: none"> <li><code>ActionLink</code>—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce UI.</li> <li><code>CustomButton</code>—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.</li> <li><code>ProductivityAction</code>—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can't edit or delete productivity actions.</li> <li><code>QuickAction</code>—A global or object-specific action.</li> <li><code>StandardButton</code>—A predefined Salesforce button such as New, Edit, or Delete.</li> </ul>
<code>ConnectApi.RecommendationActionType</code>	<p>Action to take on a recommendation.</p> <ul style="list-style-type: none"> <li><code>follow</code>—Follow a file, record, topic, or user.</li> <li><code>join</code>—Join a group.</li> <li><code>view</code>—View a file, group, article, record, user, custom, or static recommendation.</li> </ul>
<code>ConnectApi.RecommendationAudienceCriteriaType</code>	<p>Recommendation audience criteria type.</p> <ul style="list-style-type: none"> <li><code>CustomList</code>—A custom list of users makes up the audience.</li> <li><code>MaxDaysInCommunity</code>—New community members make up the audience.</li> </ul>
<code>ConnectApi.RecommendationAudienceMemberOperationType</code>	<p>Operation to carry out on the audience members.</p> <ul style="list-style-type: none"> <li><code>Add</code>—Adds specified members to the audience.</li> <li><code>Remove</code>—Removes specified members from the audience.</li> </ul>
<code>ConnectApi.RecommendationChannel</code>	<p>A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations.</p> <ul style="list-style-type: none"> <li><code>CustomChannel1</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.</li> <li><code>CustomChannel2</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>CustomChannel13</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• <code>CustomChannel14</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• <code>CustomChannel15</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• <code>DefaultChannel1</code>—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.</li> </ul>
<code>ConnectApi.RecommendationExplanationType</code>	<p>Reason for a recommendation.</p> <ul style="list-style-type: none"> <li>• <code>ArticleHasRelatedContent</code>—Articles with related content to a context article.</li> <li>• <code>ArticleViewedTogether</code>—Articles often viewed together with the article that the context user just viewed.</li> <li>• <code>ArticleViewedTogetherWithViewers</code>—Articles often viewed together with other records that the context user views.</li> <li>• <code>Custom</code>—Custom recommendations.</li> <li>• <code>FilePopular</code>—Files with many followers or views.</li> <li>• <code>FileViewedTogether</code>—Files often viewed at the same time as other files that the context user views.</li> <li>• <code>FollowedTogetherWithFollowees</code>—Users often followed together with other records that the context user follows.</li> <li>• <code>GroupMembersFollowed</code>—Groups with members that the context user follows.</li> <li>• <code>GroupNew</code>—Recently created groups.</li> <li>• <code>GroupPopular</code>—Groups with many active members.</li> <li>• <code>ItemViewedTogether</code>—Records often viewed at the same time as other records that the context user views.</li> <li>• <code>PopularApp</code>—Applications that are popular.</li> <li>• <code>RecordOwned</code>—Records that the context user owns.</li> <li>• <code>RecordParentOfFollowed</code>—Parent records of records that the context user follows.</li> <li>• <code>RecordViewed</code>—Records that the context user recently viewed.</li> <li>• <code>TopicFollowedTogether</code>—Topics often followed together with the record that the context user just followed.</li> <li>• <code>TopicFollowedTogetherWithFollowees</code>—Topics often followed together with other records that the context user follows.</li> <li>• <code>TopicPopularFollowed</code>—Topics with many followers.</li> <li>• <code>TopicPopularLiked</code>—Topics on posts that have many likes.</li> <li>• <code>UserDirectReport</code>—Users who report to the context user.</li> <li>• <code>UserFollowedTogether</code>—Users often followed together with the record that the context user just followed.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>UserFollowsSameUsers</code>—Users who follow the same users as the context user.</li> <li>• <code>UserManager</code>—The context user’s manager.</li> <li>• <code>UserNew</code>—Recently created users.</li> <li>• <code>UserPeer</code>—Users who report to the same manager as the context user.</li> <li>• <code>UserPopular</code>—Users with many followers.</li> <li>• <code>UserViewingSameRecords</code>—Users who view the same records as the context user.</li> </ul>
<code>ConnectApi.RecommendationType</code>	<p>Type of record being recommended.</p> <ul style="list-style-type: none"> <li>• <code>apps</code></li> <li>• <code>articles</code></li> <li>• <code>files</code></li> <li>• <code>groups</code></li> <li>• <code>records</code></li> <li>• <code>topics</code></li> <li>• <code>users</code></li> </ul>
<code>ConnectApi.RecommendedObjectType</code>	<p>Type of object being recommended.</p> <ul style="list-style-type: none"> <li>• <code>Today</code>—Static recommendations that don’t have an ID, for example, the Today app recommendation.</li> </ul>
<code>ConnectApi.RecordColumnOrder</code>	<p>Order in which fields are rendered in a grid.</p> <ul style="list-style-type: none"> <li>• <code>LeftRight</code>—Fields are rendered from left to right.</li> <li>• <code>TopDown</code>—Fields are rendered from the top down.</li> </ul>
<code>ConnectApi.RecordFieldType</code>	<p>Data type of a record field.</p> <ul style="list-style-type: none"> <li>• <code>Address</code></li> <li>• <code>Blank</code></li> <li>• <code>Boolean</code></li> <li>• <code>Compound</code></li> <li>• <code>CreatedBy</code></li> <li>• <code>Date</code></li> <li>• <code>DateTime</code></li> <li>• <code>Email</code></li> <li>• <code>LastModifiedBy</code></li> <li>• <code>Location</code></li> <li>• <code>Name</code></li> <li>• <code>Number</code></li> <li>• <code>Percent</code></li> <li>• <code>Phone</code></li> <li>• <code>Picklist</code></li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• Reference</li> <li>• Text</li> <li>• Time</li> </ul>
ConnectApi. RelatedFeedPostType	<p>Type of related feed post.</p> <ul style="list-style-type: none"> <li>• Answered—Related questions that have at least one answer.</li> <li>• BestAnswer—Related questions that have a best answer.</li> <li>• Generic—All types of related questions, including answered, with a best answer, and unanswered.</li> <li>• Unanswered—Related questions that don't have answers.</li> </ul>
ConnectApi. SocialNetworkProvider	<p>Social network provider.</p> <ul style="list-style-type: none"> <li>• Facebook</li> <li>• GooglePlus</li> <li>• Instagram</li> <li>• InstagramBusiness</li> <li>• KakaoTalk</li> <li>• Kik</li> <li>• Klout</li> <li>• Line</li> <li>• LinkedIn</li> <li>• Messenger</li> <li>• Other</li> <li>• Pinterest</li> <li>• QQ</li> <li>• Rypple</li> <li>• SinaWeibo</li> <li>• SMS</li> <li>• Snapchat</li> <li>• Telegram</li> <li>• Twitter</li> <li>• VKontakte</li> <li>• WeChat</li> <li>• WhatsApp</li> <li>• YouTube</li> </ul>
ConnectApi.SocialPost MessageType	<p>Message type of the social post.</p> <ul style="list-style-type: none"> <li>• Comment</li> <li>• Direct</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• Post</li> <li>• PrivateMessage</li> <li>• Reply</li> <li>• Retweet</li> <li>• Tweet</li> </ul>
ConnectApi.SocialPostStatusType	<p>State of the social post.</p> <ul style="list-style-type: none"> <li>• ApprovalPending</li> <li>• ApprovalRecalled</li> <li>• ApprovalRejected</li> <li>• Deleted</li> <li>• Failed</li> <li>• Hidden</li> <li>• Pending</li> <li>• Sent</li> <li>• Unknown</li> </ul>
ConnectApi.SortOrder	<p>Order for sorting.</p> <ul style="list-style-type: none"> <li>• Ascending—Items are in ascending alphabetical order (A-Z).</li> <li>• Descending—Items are in descending alphabetical order (Z-A).</li> <li>• MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.</li> </ul>
ConnectApi.TopicSort	<p>Order returned by the sort.</p> <ul style="list-style-type: none"> <li>• popularDesc—Sorts topics by popularity with the most popular first. This value is the default.</li> <li>• alphaAsc—Sorts topics alphabetically.</li> </ul>
ConnectApi.UpDownVoteValue	<p>Type of vote for a feed element or comment.</p> <ul style="list-style-type: none"> <li>• Down</li> <li>• None</li> <li>• Up</li> </ul>
ConnectApi.UserActivityType	<p>Type of user activity.</p> <ul style="list-style-type: none"> <li>• Bookmark—User bookmarked a post.</li> <li>• ChatterActivity—Total counts of posts and comments made and likes and comments received for a user.</li> <li>• ChatterLike—User liked a post or comment.</li> <li>• Comment—User commented on a post.</li> <li>• CompanyVerify—User verified comment.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>DownVote</code>—User downvoted a post or comment.</li> <li>• <code>FeedEntityRead</code>—User read a post.</li> <li>• <code>FeedRead</code>—User read a feed.</li> <li>• <code>Mute</code>—User muted a post.</li> <li>• <code>Post</code>—User made a post.</li> <li>• <code>TopicEndorsement</code>—User endorsed another user on a topic or received endorsement on a topic.</li> <li>• <code>UpVote</code>—User upvoted a post or comment.</li> </ul>
<code>ConnectApi.UserProfileTabType</code>	Type of user profile tab. <ul style="list-style-type: none"> <li>• <code>CustomVisualForce</code>—Tab that displays data from a Visualforce page.</li> <li>• <code>CustomWeb</code>—Tab that displays data from any external web-based application or web page.</li> <li>• <code>Element</code>—Tab that displays generic content inline.</li> <li>• <code>Feed</code>—Tab that displays the Chatter feed.</li> <li>• <code>Overview</code>—Tab that displays user details.</li> </ul>
<code>ConnectApi.UserType</code>	Type of user. <ul style="list-style-type: none"> <li>• <code>ChatterGuest</code>—User is an external user in a private group.</li> <li>• <code>ChatterOnly</code>—User is a Chatter Free customer.</li> <li>• <code>Guest</code>—User is unauthenticated.</li> <li>• <code>Internal</code>—User is a standard organization member.</li> <li>• <code>Portal</code>—User is an external user in a customer portal, partner portal, or community.</li> <li>• <code>System</code>—User is Chatter Expert or a system user.</li> <li>• <code>Undefined</code>—User is a user type that is a custom object.</li> </ul>
<code>ConnectApi.WorkflowProcessStatus</code>	Status of a workflow process. <ul style="list-style-type: none"> <li>• <code>Approved</code></li> <li>• <code>Fault</code></li> <li>• <code>Held</code></li> <li>• <code>NoResponse</code></li> <li>• <code>Pending</code></li> <li>• <code>Reassigned</code></li> <li>• <code>Rejected</code></li> <li>• <code>Removed</code></li> <li>• <code>Started</code></li> </ul>
<code>ConnectApi.ZoneSearchResultType</code>	Zone search result type. <ul style="list-style-type: none"> <li>• <code>Article</code>—Search results contain only articles.</li> <li>• <code>Question</code>—Search results contain only questions.</li> </ul>

Enum	Description
<code>ConnectApi.ZoneShowIn</code>	Zone search result location. <ul style="list-style-type: none"> <li>• <code>Community</code>—Available in a community.</li> <li>• <code>Internal</code>—Available internally only.</li> <li>• <code>Portal</code>—Available in a portal.</li> </ul>

## ConnectApi Exceptions

The `ConnectApi` namespace contains exception classes.

All exceptions classes support built-in methods for returning the error message and exception type. See [Exception Class and Built-In Exceptions](#) on page 2583.

The `ConnectApi` namespace contains these exceptions:

Exception	Description
<code>ConnectApi.ConnectApiException</code>	Any logic error in the way your application is utilizing <code>ConnectApi</code> code. This is equivalent to receiving a 400 error from Chatter REST API.
<code>ConnectApi.NotFoundException</code>	Any issues with the specified resource being found. This is equivalent to receiving a 404 error from Chatter REST API.
<code>ConnectApi.RateLimitException</code>	When you exceed the rate limit. This is equivalent to receiving a 503 Service Unavailable error from Chatter REST API.

## Database Namespace

The `Database` namespace provides classes used with DML operations.

The following are the classes in the `Database` namespace.

### IN THIS SECTION:

#### [Batchable Interface](#)

The class that implements this interface can be executed as a batch Apex job.

#### [BatchableContext Interface](#)

Represents the parameter type of a batch job method and contains the batch job ID. This interface is implemented internally by Apex.

#### [DeletedRecord Class](#)

Contains information about a deleted record.

#### [DeleteResult Class](#)

Represents the result of a delete DML operation returned by the `Database.delete` method.

#### [DMLOptions Class](#)

Enables you to set options related to DML operations.

[DmlOptions.AssignmentRuleHeader Class](#)

Enables setting assignment rule options.

[DmlOptions.DuplicateRuleHeader Class](#)

Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

[DmlOptions.EmailHeader Class](#)

Enables setting email options.

[DuplicateError Class](#)

Contains information about an error that occurred when an attempt was made to save a duplicate record. Use if your organization has set up duplicate rules, which are part of the Duplicate Management feature.

[EmptyRecycleBinResult Class](#)

The result of the emptyRecycleBin DML operation returned by the `Database.emptyRecycleBin` method.

[Error Class](#)

Represents information about an error that occurred during a DML operation when using a Database method.

[GetDeletedResult Class](#)

Contains the deleted records retrieved for a specific sObject type and time window.

[GetUpdatedResult Class](#)

Contains the result for the `Database.getUpdated` method call.

[LeadConvert Class](#)

Contains information used for lead conversion.

[LeadConvertResult Class](#)

The result of a lead conversion.

[MergeResult Class](#)

Contains the result of a merge Database method operation.

[QueryLocator Class](#)

Represents the record set returned by `Database.getQueryLocator` and used with Batch Apex.

[QueryLocatorIterator Class](#)

Represents an iterator over a query locator record set.

[SaveResult Class](#)

The result of an insert or update DML operation returned by a Database method.

[UndeleteResult Class](#)

The result of an undelete DML operation returned by the `Database.undelete` method.

[UpsertResult Class](#)

The result of an upsert DML operation returned by the `Database.upsert` method.

## Batchable Interface

The class that implements this interface can be executed as a batch Apex job.

## Namespace

[Database](#)

SEE ALSO:

[Using Batch Apex](#)

## Batchable Methods

The following are methods for `Batchable`.

IN THIS SECTION:

[execute\(jobId, recordList\)](#)

Gets invoked when the batch job executes and operates on one batch of records. Contains or calls the main execution logic for the batch job.

[finish\(jobId\)](#)

Gets invoked when the batch job finishes. Place any clean up code in this method.

[start\(jobId\)](#)

Gets invoked when the batch job starts. Returns the record set as an iterable that will be batched for execution.

[start\(jobId\)](#)

Gets invoked when the batch job starts. Returns the record set as a `QueryLocator` object that will be batched for execution.

### **execute(jobId, recordList)**

Gets invoked when the batch job executes and operates on one batch of records. Contains or calls the main execution logic for the batch job.

Signature

```
public Void execute(Database.BatchableContext jobId, List<sObject> recordList)
```

Parameters

*jobId*

Type: [Database.BatchableContext](#)

Contains the job ID.

*recordList*

Type: [List<sObject>](#)

Contains the batch of records to process.

Return Value

Type: Void

### **finish(jobId)**

Gets invoked when the batch job finishes. Place any clean up code in this method.

Signature

```
public Void finish(Database.BatchableContext jobId)
```

Parameters

*jobId*

Type: [Database.BatchableContext](#)

Contains the job ID.

Return Value

Type: Void

### **start (jobId)**

Gets invoked when the batch job starts. Returns the record set as an iterable that will be batched for execution.

Signature

```
public System.Iterable start(Database.BatchableContext jobId)
```

Parameters

*jobId*

Type: [Database.BatchableContext](#)

Contains the job ID.

Return Value

Type: System.Iterable

### **start (jobId)**

Gets invoked when the batch job starts. Returns the record set as a QueryLocator object that will be batched for execution.

Signature

```
public Database.QueryLocator start(Database.BatchableContext jobId)
```

Parameters

*jobId*

Type: [Database.BatchableContext](#)

Contains the job ID.

Return Value

Type: [Database.QueryLocator](#)

## BatchableContext Interface

Represents the parameter type of a batch job method and contains the batch job ID. This interface is implemented internally by Apex.

### Namespace

[Database](#)

SEE ALSO:

[Batchable Interface](#)

### BatchableContext Methods

The following are methods for `BatchableContext`.

IN THIS SECTION:

[getChildJobId\(\)](#)

Returns the ID of the current batch job chunk that is being processed.

[getJobId\(\)](#)

Returns the batch job ID.

#### **getChildJobId()**

Returns the ID of the current batch job chunk that is being processed.

Signature

```
public Id getChildJobId()
```

Return Value

Type: [ID](#)

#### **getJobId()**

Returns the batch job ID.

Signature

```
public Id getJobId()
```

Return Value

Type: [ID](#)

## DeletedRecord Class

Contains information about a deleted record.

## Namespace

[Database](#)

## Usage

The `getDeletedRecords` method of the `Database.GetDeletedResult` class returns a list of `Database.DeletedRecord` objects. Use the methods in the `Database.DeletedRecord` class to retrieve details about each deleted record.

## DeletedRecord Methods

The following are methods for `DeletedRecord`. All are instance methods.

IN THIS SECTION:

[getDeletedDate\(\)](#)

Returns the deleted date of this record.

[getId\(\)](#)

Returns the ID of a record deleted within the time window specified in the `Database.getDeleted` method.

### **getDeletedDate ()**

Returns the deleted date of this record.

Signature

```
public Date getDeletedDate ()
```

Return Value

Type: [Date](#)

### **getId ()**

Returns the ID of a record deleted within the time window specified in the `Database.getDeleted` method.

Signature

```
public Id getId ()
```

Return Value

Type: [ID](#)

## DeleteResult Class

Represents the result of a delete DML operation returned by the `Database.delete` method.

## Namespace

[Database](#)

## Usage

An array of `Database.DeleteResult` objects is returned with the `delete` database method. Each element in the `DeleteResult` array corresponds to the `sObject` array passed as the `sObject[]` parameter in the `delete` Database method; that is, the first element in the `DeleteResult` array matches the first element passed in the `sObject` array, the second element corresponds with the second element, and so on. If only one `sObject` is passed in, the `DeleteResult` array contains a single element.

## Example

The following example shows how to obtain and iterate through the returned `Database.DeleteResult` objects. It deletes some queried accounts using `Database.delete` with a false second parameter to allow partial processing of records on failure. Next, it iterates through the results to determine whether the operation was successful or not for each record. It writes the ID of every record that was processed successfully to the debug log, or error messages and fields of the failed records.

```
// Query the accounts to delete
Account[] accts = [SELECT Id from Account WHERE Name LIKE 'Acme%'];
// Delete the accounts
Database.DeleteResult[] drList = Database.delete(accts, false);

// Iterate through each returned result
for(Database.DeleteResult dr : drList) {
    if (dr.isSuccess()) {
        // Operation was successful, so get the ID of the record that was processed
        System.debug('Successfully deleted account with ID: ' + dr.getId());
    }
    else {
        // Operation failed, so get all errors
        for(Database.Error err : dr.getErrors()) {
            System.debug('The following error has occurred.');
```

## DeleteResult Methods

The following are methods for `DeleteResult`. All are instance methods.

### IN THIS SECTION:

#### [getErrors\(\)](#)

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

#### [getId\(\)](#)

Returns the ID of the `sObject` you were trying to delete.

**isSuccess()**

A Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

**getErrors ()**

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

Signature

```
public Database.Error[] getErrors()
```

Return Value

Type: [Database.Error\[\]](#)

**getId ()**

Returns the ID of the sObject you were trying to delete.

Signature

```
public ID getId()
```

Return Value

Type: [ID](#)

Usage

If this field contains a value, the object was successfully deleted. If this field is empty, the operation was not successful for that object.

**isSuccess ()**

A Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

Signature

```
public Boolean isSuccess()
```

Return Value

Type: [Boolean](#)

## DMLOptions Class

Enables you to set options related to DML operations.

### Namespace

[Database](#)

## Usage

`Database.DMLOptions` is only available for Apex saved against API versions 15.0 and higher. `DMLOptions` settings take effect only for record operations performed using Apex DML and not through the Salesforce user interface. The `DMLOptions` class has three child options.

### DML Child Options

`DmLOptions.AssignmentRuleHeader`—Enables setting assignment rule options.

`DmLOptions.DuplicateRuleHeader`—Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

`DmLOptions.EmailHeader`—Enables setting email options.

## DmLOptions Properties

The following are properties for `DmLOptions`.

### IN THIS SECTION:

#### `allowFieldTruncation`

Specifies the truncation behavior of large strings.

#### `assignmentRuleHeader`

Specifies the assignment rule to be used when creating a case or lead.

#### `emailHeader`

Specifies additional information regarding the automatic email that gets sent when an events occurs.

#### `localeOptions`

Specifies the language of any labels that are returned by Apex.

#### `optAllOrNone`

Specifies whether the operation allows for partial success.

### **`allowFieldTruncation`**

Specifies the truncation behavior of large strings.

Signature

```
public Boolean allowFieldTruncation {get; set;}
```

Property Value

Type: `Boolean`

Usage

In Apex saved against API versions previous to 15.0, if you specify a value for a string and that value is too large, the value is truncated. For API version 15.0 and later, if a value is specified that is too large, the operation fails and an error message is returned. The `allowFieldTruncation` property allows you to specify that the previous behavior, truncation, be used instead of the new behavior in Apex saved against API versions 15.0 and later.

**assignmentRuleHeader**

Specifies the assignment rule to be used when creating a case or lead.

Signature

```
public Database.DmlOptions.AssignmentRuleHeader assignmentRuleHeader {get; set;}
```

Property Value

Type: [Database.DMLOptions.AssignmentRuleHeader](#)

Usage

 **Note:** The `Database.DMLOptions` object supports assignment rules for cases and leads, but not for accounts or territory management.

**emailHeader**

Specifies additional information regarding the automatic email that gets sent when an events occurs.

Signature

```
public Database.DmlOptions.EmailHeader emailHeader {get; set;}
```

Property Value

Type: [Database.DMLOptions.EmailHeader](#)

Usage

The Salesforce user interface allows you to specify whether or not to send an email when the following events occur.

- Creation of a new case or task
- Conversion of a case email to a contact
- New user email notification
- Lead queue email notification
- Password reset

In Apex saved against API version 15.0 or later, the `Database.DMLOptions emailHeader` property enables you to specify additional information regarding the email that gets sent when one of the events occurs because of the code's execution.

**localeOptions**

Specifies the language of any labels that are returned by Apex.

Signature

```
public Database.DmlOptions.LocaleOptions localeOptions {get; set;}
```

### Property Value

Type: [Database.DMLOptions.LocaleOptions](#)

### Usage

The value must be a valid user locale (language and country), such as de\_DE or en\_GB. The value is a String, 2-5 characters long. The first two characters are always an ISO language code, for example 'fr' or 'en.' If the value is further qualified by a country, then the string also has an underscore (\_) and another ISO country code, for example 'US' or 'UK.' For example, the string for the United States is 'en\_US', and the string for French Canadian is 'fr\_CA.'

For a list of the languages that Salesforce supports, see [Supported Languages](#) in the Salesforce online help.

### **optAllOrNone**

Specifies whether the operation allows for partial success.

### Signature

```
public Boolean optAllOrNone {get; set;}
```

### Property Value

Type: [Boolean](#)

### Usage

If `optAllOrNone` is set to `true`, all changes are rolled back if any record causes errors. The default for this property is `false` and successfully processed records are committed while records with errors aren't.

This property is available in Apex saved against Salesforce API version 20.0 and later.

## DmlOptions.AssignmentRuleHeader Class

Enables setting assignment rule options.

### Namespace

[Database](#)

### Example

The following example uses the `useDefaultRule` option:

```
Database.DMLOptions dmo = new Database.DMLOptions();
dmo.assignmentRuleHeader.useDefaultRule= true;

Lead l = new Lead(company='ABC', lastname='Smith');
l.setOptions(dmo);
insert l;
```

The following example uses the `assignmentRuleID` option:

```
Database.DMLOptions dmo = new Database.DMLOptions();
dmo.assignmentRuleHeader.assignmentRuleId= '01QD000000EqAn';

Lead l = new Lead(company='ABC', lastname='Smith');
l.setOptions(dmo);
insert l;
```

## DmlOptions.AssignmentRuleHeader Properties

The following are properties for `DmlOptions.AssignmentRuleHeader`.

### IN THIS SECTION:

#### [assignmentRuleID](#)

Specifies the ID of a specific assignment rule to run for the case or lead. The assignment rule can be active or inactive.

#### [useDefaultRule](#)

If specified as `true` for a case or lead, the system uses the default (active) assignment rule for the case or lead. If specified, do not specify an `assignmentRuleId`.

### **assignmentRuleID**

Specifies the ID of a specific assignment rule to run for the case or lead. The assignment rule can be active or inactive.

#### Signature

```
public Id assignmentRuleID {get; set;}
```

#### Property Value

Type: [ID](#)

#### Usage

The ID can be retrieved by querying the `AssignmentRule` sObject. If specified, do not specify `useDefaultRule`.

If the value is not in the correct ID format (15-character or 18-character Salesforce ID), the call fails and an exception is returned.

### **useDefaultRule**

If specified as `true` for a case or lead, the system uses the default (active) assignment rule for the case or lead. If specified, do not specify an `assignmentRuleId`.

#### Signature

```
public Boolean useDefaultRule {get; set;}
```

#### Property Value

Type: [Boolean](#)

## Usage

If there are no assignment rules in the organization, in API version 29.0 and earlier, creating a case or lead with `useDefaultRule` set to `true` results in the case or lead being assigned to the predefined default owner. In API version 30.0 and later, the case or lead is unassigned and doesn't get assigned to the default owner.

## DMLOptions.DuplicateRuleHeader Class

Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

## Namespace

[Database](#)

## Example

The following example shows how to save an account record that's been identified as a duplicate. To learn how to iterate through duplicate errors, see [DuplicateError Class](#)

```
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

### IN THIS SECTION:

[DMLOptions.DuplicateRuleHeader Properties](#)

## DMLOptions.DuplicateRuleHeader Properties

The following are properties for `DMLOptions.DuplicateRuleHeader`.

### IN THIS SECTION:

#### [allowSave](#)

For a duplicate rule, when the Alert option is enabled, bypass alerts and save duplicate records by setting this property to `true`. Prevent duplicate records from being saved by setting this property to `false`.

#### [runAsCurrentUser](#)

Make sure that sharing rules for the current user are enforced when duplicate rules run by setting this property to `true`. Use the sharing rules specified in the class for the request by setting this property to `false`. If no sharing rules are specified, Apex code runs in system context and sharing rules for the current user are not enforced.

#### **allowSave**

For a duplicate rule, when the Alert option is enabled, bypass alerts and save duplicate records by setting this property to `true`. Prevent duplicate records from being saved by setting this property to `false`.

## Signature

```
public Boolean allowSave {get; set;}
```

## Property Value

Type: [Boolean](#)

## Example

This example shows how to save an account record that's been identified as a duplicate.

`dml.DuplicateRuleHeader.allowSave = true` means the user should be allowed to save the duplicate. To learn how to iterate through duplicate errors, see [DuplicateError Class](#).

```
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

**runAsCurrentUser**

Make sure that sharing rules for the current user are enforced when duplicate rules run by setting this property to `true`. Use the sharing rules specified in the class for the request by setting this property to `false`. If no sharing rules are specified, Apex code runs in system context and sharing rules for the current user are not enforced.

## Signature

```
public Boolean runAsCurrentUser {get; set;}
```

## Property Value

Type: [Boolean](#)

## Usage

If specified as `true`, duplicate rules run for the current user, which ensures users can't view duplicate records that aren't available to them.

Use `runAsCurrentUser = true` to detect duplicates when converting leads to contacts. Typically, lead conversion Apex code runs in a system context and does not enforce sharing rules for the current user.

## Example

This example shows how to set options so that duplicate rules run for the current user when saving a new account.

```
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
```

```
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

## DmlOptions.EmailHeader Class

Enables setting email options.

### Namespace

[Database](#)

### Usage

Even though auto-sent emails can be triggered by actions in the Salesforce user interface, the DMLOptions settings for `emailHeader` take effect only for DML operations carried out in Apex code.

### Example

In the following example, the `triggerAutoResponseEmail` option is specified:

```
Account a = new Account(name='Acme Plumbing');

insert a;

Contact c = new Contact(email='jplumber@salesforce.com', firstname='Joe', lastname='Plumber',
    accountid=a.id);

insert c;

Database.DMLOptions dlo = new Database.DMLOptions();

dlo.EmailHeader.triggerAutoResponseEmail = true;

Case ca = new Case(subject='Plumbing Problems', contactid=c.id);

database.insert(ca, dlo);
```

## DmlOptions.EmailHeader Properties

The following are properties for `DmlOptions.EmailHeader`.

### IN THIS SECTION:

#### [triggerAutoResponseEmail](#)

Indicates whether to trigger auto-response rules (`true`) or not (`false`), for leads and cases.

#### [triggerOtherEmail](#)

Indicates whether to trigger email outside the organization (`true`) or not (`false`).

### `triggerUserEmail`

Indicates whether to trigger email that is sent to users in the organization (`true`) or not (`false`).

### **`triggerAutoResponseEmail`**

Indicates whether to trigger auto-response rules (`true`) or not (`false`), for leads and cases.

Signature

```
public Boolean triggerAutoResponseEmail {get; set;}
```

Property Value

Type: [Boolean](#)

Usage

This email can be automatically triggered by a number of events, for example creating a case or resetting a user password. If this value is set to `true`, when a case is created, if there is an email address for the contact specified in `ContactID`, the email is sent to that address. If not, the email is sent to the address specified in `SuppliedEmail`

### **`triggerOtherEmail`**

Indicates whether to trigger email outside the organization (`true`) or not (`false`).

Signature

```
public Boolean triggerOtherEmail {get; set;}
```

Property Value

Type: [Boolean](#)

Usage

This email can be automatically triggered by creating, editing, or deleting a contact for a case.

 **Note:** Email sent through Apex because of a group event includes additional behaviors. A *group event* is an event for which `IsGroupEvent` is true. The `EventAttendee` object tracks the users, leads, or contacts that are invited to a group event. Note the following behaviors for group event email sent through Apex:

- Sending a group event invitation to a lead or contact respects the `triggerOtherEmail` option
- Email sent when updating or deleting a group event also respects the `triggerUserEmail` and `triggerOtherEmail` options, as appropriate

### **`triggerUserEmail`**

Indicates whether to trigger email that is sent to users in the organization (`true`) or not (`false`).

Signature

```
public Boolean triggerUserEmail {get; set;}
```

Property Value

Type: [Boolean](#)

Usage

This email can be automatically triggered by a number of events; resetting a password, creating a new user, or creating or modifying a task.

-  **Note:** Adding comments to a case in Apex doesn't trigger email to users in the organization even if `triggerUserEmail` is set to `true`.
-  **Note:** Email sent through Apex because of a group event includes additional behaviors. A *group event* is an event for which `IsGroupEvent` is true. The `EventAttendee` object tracks the users, leads, or contacts that are invited to a group event. Note the following behaviors for group event email sent through Apex:
  - Sending a group event invitation to a user respects the `triggerUserEmail` option
  - Email sent when updating or deleting a group event also respects the `triggerUserEmail` and `triggerOtherEmail` options, as appropriate

## DuplicateError Class

Contains information about an error that occurred when an attempt was made to save a duplicate record. Use if your organization has set up duplicate rules, which are part of the Duplicate Management feature.

### Namespace

[Database](#)

### Example

When you try to save a record that's identified as a duplicate record by a duplicate rule, you'll receive a duplicate error. If the duplicate rule contains the Allow action, an attempt will be made to bypass the error.

```
// Try to save a duplicate account
Account duplicateAccount = new Account(Name='Acme', BillingCity='San Francisco');
Database.SaveResult sr = Database.insert(duplicateAccount, false);
if (!sr.isSuccess()) {

    // Insertion failed due to duplicate detected
    for(Database.Error duplicateError : sr.getErrors()){
        Datacloud.DuplicateResult duplicateResult =
            ((Database.DuplicateError) duplicateError).getDuplicateResult();
        System.debug('Duplicate records have been detected by ' +
            duplicateResult.getDuplicateRule());
        System.debug(duplicateResult.getErrorMessage());
    }

    // If the duplicate rule is an alert rule, we can try to bypass it
```

```
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.AllowSave = true;
Database.SaveResult sr2 = Database.insert(duplicateAccount, dml);
if (sr2.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
}
```

#### IN THIS SECTION:

[DuplicateError Methods](#)

#### SEE ALSO:

[SaveResult Class](#)

[DuplicateResult Class](#)

[Error Class](#)

## DuplicateError Methods

The following are methods for `DuplicateError`.

#### IN THIS SECTION:

[getDuplicateResult\(\)](#)

Returns the details of a duplicate rule and duplicate records found by the duplicate rule.

[getFields\(\)](#)

Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

[getMessage\(\)](#)

Returns the error message text.

[getStatusCode\(\)](#)

Returns a code that characterizes the error.

### **getDuplicateResult()**

Returns the details of a duplicate rule and duplicate records found by the duplicate rule.

Signature

```
public Datacloud.DuplicateResult getDuplicateResult()
```

Return Value

Type: [Datacloud.DuplicateResult](#)

### Example

This example shows the code used to get the possible duplicates and related match information after saving a new contact. This code is part of a custom application that implements duplicate management when users add a contact. See [DuplicateResult Class](#) on page 1889 to check out the entire sample applicaton.

```
Datacloud.DuplicateResult duplicateResult =
    duplicateError.getDuplicateResult();
```

### **getFields ()**

Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

#### Signature

```
public List<String> getFields ()
```

#### Return Value

Type: [List<String>](#)

### **getMessage ()**

Returns the error message text.

#### Signature

```
public String getMessage ()
```

#### Return Value

Type: [String](#)

### **getStatusCode ()**

Returns a code that characterizes the error.

#### Signature

```
public StatusCode getStatusCode ()
```

#### Return Value

Type: [StatusCode](#)

## EmptyRecycleBinResult Class

The result of the emptyRecycleBin DML operation returned by the `Database.emptyRecycleBin` method.

### Namespace

[Database](#)

## Usage

A list of `Database.EmptyRecycleBinResult` objects is returned by the `Database.emptyRecycleBin` method. Each object in the list corresponds to either a record ID or an sObject passed as the parameter in the `Database.emptyRecycleBin` method. The first index in the `EmptyRecycleBinResult` list matches the first record or sObject specified in the list, the second with the second, and so on.

## EmptyRecycleBinResult Methods

The following are methods for `EmptyRecycleBinResult`. All are instance methods.

### IN THIS SECTION:

#### `getErrors()`

If an error occurred during the delete for this record or sObject, returns a list of one or more `Database.Error` objects. If no errors occurred, the returned list is empty.

#### `getId()`

Returns the ID of the record or sObject you attempted to delete.

#### `isSuccess()`

Returns `true` if the record or sObject was successfully removed from the Recycle Bin; otherwise `false`.

### **`getErrors()`**

If an error occurred during the delete for this record or sObject, returns a list of one or more `Database.Error` objects. If no errors occurred, the returned list is empty.

#### Signature

```
public Database.Errors[] getErrors()
```

#### Return Value

Type: `Database.Errors []`

### **`getId()`**

Returns the ID of the record or sObject you attempted to delete.

#### Signature

```
public ID getId()
```

#### Return Value

Type: `ID`

### **`isSuccess()`**

Returns `true` if the record or sObject was successfully removed from the Recycle Bin; otherwise `false`.

Signature

```
public Boolean isSuccess()
```

Return Value

Type: [Boolean](#)

## Error Class

Represents information about an error that occurred during a DML operation when using a Database method.

## Namespace

[Database](#)

## Usage

`Error` class is part of `SaveResult`, which is generated when a user attempts to save a Salesforce record.

SEE ALSO:

[SaveResult Class](#)

[DuplicateError Class](#)

## Error Methods

The following are methods for `Error`. All are instance methods.

IN THIS SECTION:

[getFields\(\)](#)

Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

[getMessage\(\)](#)

Returns the error message text.

[getStatusCode\(\)](#)

Returns a code that characterizes the error.

### **getFields ()**

Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

Signature

```
public String[] getFields()
```

Return Value

Type: [String\[\]](#)

**getMessage ()**

Returns the error message text.

Signature

```
public String getMessage ()
```

Return Value

Type: [String](#)

**getStatusCode ()**

Returns a code that characterizes the error.

Signature

```
public StatusCode getStatusCode ()
```

Return Value

Type: [StatusCode](#)

Usage

The full list of status codes is available in the WSDL file for your organization (see [Downloading Salesforce WSDLs and Client Authentication Certificates in the Salesforce online help.](#))

## GetDeletedResult Class

Contains the deleted records retrieved for a specific sObject type and time window.

### Namespace

[Database](#)

### Usage

The `Database.getDeleted` method returns the deleted record information as a `Database.GetDeletedResult` object.

### GetDeletedResult Methods

The following are methods for `GetDeletedResult`. All are instance methods.

IN THIS SECTION:

[getDeletedRecords\(\)](#)

Returns a list of deleted records for the time window specified in the `Database.getDeleted` method call.

[getEarliestDateAvailable\(\)](#)

Returns the date in Coordinated Universal Time (UTC) of the earliest physically deleted object for the sObject type specified in `Database.getDeleted`.

[getLatestDateCovered\(\)](#)

Returns the date in Coordinated Universal Time (UTC) of the last date covered in the `Database.getDeleted` call.

**getDeletedRecords ()**

Returns a list of deleted records for the time window specified in the `Database.getDeleted` method call.

Signature

```
public List<Database.DeletedRecord> getDeletedRecords ()
```

Return Value

Type: [List<Database.DeletedRecord>](#)

**getEarliestDateAvailable ()**

Returns the date in Coordinated Universal Time (UTC) of the earliest physically deleted object for the sObject type specified in `Database.getDeleted`.

Signature

```
public Date getEarliestDateAvailable ()
```

Return Value

Type: [Date](#)

**getLatestDateCovered ()**

Returns the date in Coordinated Universal Time (UTC) of the last date covered in the `Database.getDeleted` call.

Signature

```
public Date getLatestDateCovered ()
```

Return Value

Type: [Date](#)

Usage

If there is a value, it is less than or equal to the `endDate` argument of `Database.getDeleted`. A value here indicates that, for safety, you should use this value for the `startDate` of your next call to capture the changes that started after this date but didn't complete before `endDate` and were, therefore, not returned in the previous call.

## GetUpdatedResult Class

Contains the result for the `Database.getUpdated` method call.

### Namespace

[Database](#)

### Usage

Use the methods in this class to obtain detailed information about the updated records returned by `Database.getUpdated` for a specific time window.

### GetUpdatedResult Methods

The following are methods for `GetUpdatedResult`. All are instance methods.

#### IN THIS SECTION:

[getIds\(\)](#)

Returns the IDs of records updated within the time window specified in the `Database.getUpdated` method.

[getLatestDateCovered\(\)](#)

Returns the date in Coordinated Universal Time (UTC) of the last date covered in the `Database.getUpdated` call.

#### **getIds ()**

Returns the IDs of records updated within the time window specified in the `Database.getUpdated` method.

Signature

```
public List<Id> getIds ()
```

Return Value

Type: [List<ID>](#)

#### **getLatestDateCovered ()**

Returns the date in Coordinated Universal Time (UTC) of the last date covered in the `Database.getUpdated` call.

Signature

```
public Date getLatestDateCovered ()
```

Return Value

Type: [Date](#)

## LeadConvert Class

Contains information used for lead conversion.

### Namespace

[Database](#)

### Usage

The `convertLead` Database method converts a lead into an account and contact, as well as (optionally) an opportunity. The `convertLead` takes an instance of the `Database.LeadConvert` class as a parameter. Create an instance of this class and set the information required for conversion, such as setting the lead, and destination account and contact.

 **Note:** The `Database.convertLead()` method can take one `LeadConvert` object or a list of `LeadConvert` objects.

### Example

This example shows how to use the `Database.convertLead` method to convert a lead. It inserts a new lead, creates a `LeadConvert` object, sets its status to converted, then passes it to the `Database.convertLead` method. Finally, it verifies that the conversion was successful.

```
Lead myLead = new Lead(LastName = 'Fry', Company='Fry And Sons');
insert myLead;

Database.LeadConvert lc = new Database.LeadConvert();
lc.setLeadId(myLead.id);

LeadStatus convertStatus = [SELECT Id, MasterLabel FROM LeadStatus WHERE IsConverted=true
LIMIT 1];
lc.setConvertedStatus(convertStatus.MasterLabel);

Database.LeadConvertResult lcr = Database.convertLead(lc);
System.assert(lcr.isSuccess());
```

#### IN THIS SECTION:

[LeadConvert Constructors](#)

[LeadConvert Methods](#)

### LeadConvert Constructors

The following are constructors for `LeadConvert`.

#### IN THIS SECTION:

[LeadConvert\(\)](#)

Creates a new instance of the `Database.LeadConvert` class.

## LeadConvert ()

Creates a new instance of the `Database.LeadConvert` class.

Signature

```
public LeadConvert ()
```

## LeadConvert Methods

The following are methods for `LeadConvert`. All are instance methods.

### IN THIS SECTION:

#### [getAccountId\(\)](#)

Gets the ID of the account into which the lead will be merged.

#### [getContactId\(\)](#)

Gets the ID of the contact into which the lead will be merged.

#### [getConvertedStatus\(\)](#)

Gets the lead status value for a converted lead.

#### [getLeadID\(\)](#)

Gets the ID of the lead to convert.

#### [getOpportunityName\(\)](#)

Gets the name of the opportunity to create.

#### [getOwnerId\(\)](#)

Gets the ID of the person to own any newly created account, contact, and opportunity.

#### [isDoNotCreateOpportunity\(\)](#)

Indicates whether an Opportunity is created during lead conversion (`false`, the default) or not (`true`).

#### [isOverWriteLeadSource\(\)](#)

Indicates whether the `LeadSource` field on the target Contact object is overwritten with the contents of the `LeadSource` field in the source Lead object (`true`), or not (`false`, the default).

#### [isSendNotificationEmail\(\)](#)

Indicates whether a notification email is sent to the owner specified by `setOwnerId` (`true`) or not (`false`, the default).

#### [setAccountId\(accountId\)](#)

Sets the ID of the account into which the lead is merged. This value is required only when updating an existing account, including person accounts.

#### [setContactId\(contactId\)](#)

Sets the ID of the contact into which the lead will be merged (this contact must be associated with the account specified with `setAccountId`, and `setAccountId` must be specified). This value is required only when updating an existing contact.

#### [setConvertedStatus\(status\)](#)

Sets the lead status value for a converted lead. This field is required.

#### [setDoNotCreateOpportunity\(createOpportunity\)](#)

Specifies whether to create an opportunity during lead conversion. The default value is `false`: opportunities are created by default. Set this flag to `true` only if you do not want to create an opportunity from the lead.

[setLeadId\(leadId\)](#)

Sets the ID of the lead to convert. This field is required.

[setOpportunityId\(opportunityId\)](#)

Sets the ID of the opportunity into which the lead is merged. This value is required only when updating an existing opportunity.

[setOpportunityName\(opportunityName\)](#)

Sets the name of the opportunity to create. If no name is specified, this value defaults to the company name of the lead.

[setOverwriteLeadSource\(overwriteLeadSource\)](#)

Specifies whether to overwrite the `LeadSource` field on the target contact object with the contents of the `LeadSource` field in the source lead object. The default value is `false`, to not overwrite the field. If you specify this as `true`, you must also specify `setContactId` for the target contact.

[setOwnerId\(ownerId\)](#)

Specifies the ID of the person to own any newly created account, contact, and opportunity. If the application does not specify this value, the owner of the new object will be the owner of the lead.

[setSendNotificationEmail\(sendEmail\)](#)

Specifies whether to send a notification email to the owner specified by `setOwnerId`. The default value is `false`, that is, to not send email.

**getAccountId()**

Gets the ID of the account into which the lead will be merged.

Signature

```
public ID getAccountId()
```

Return Value

Type: ID

**getContactId()**

Gets the ID of the contact into which the lead will be merged.

Signature

```
public ID getContactId()
```

Return Value

Type: ID

**getConvertedStatus()**

Gets the lead status value for a converted lead.

Signature

```
public String getConvertedStatus()
```

Return Value

Type: [String](#)

### **getLeadID ()**

Gets the ID of the lead to convert.

Signature

```
public ID getLeadID ()
```

Return Value

Type: [ID](#)

### **getOpportunityName ()**

Gets the name of the opportunity to create.

Signature

```
public String getOpportunityName ()
```

Return Value

Type: [String](#)

### **getOwnerID ()**

Gets the ID of the person to own any newly created account, contact, and opportunity.

Signature

```
public ID getOwnerID ()
```

Return Value

Type: [ID](#)

### **isDoNotCreateOpportunity ()**

Indicates whether an Opportunity is created during lead conversion ([false](#), the default) or not ([true](#)).

Signature

```
public Boolean isDoNotCreateOpportunity ()
```

Return Value

Type: [Boolean](#)

**isOverWriteLeadSource ()**

Indicates whether the `LeadSource` field on the target Contact object is overwritten with the contents of the `LeadSource` field in the source Lead object (`true`), or not (`false`, the default).

Signature

```
public Boolean isOverWriteLeadSource ()
```

Return Value

Type: [Boolean](#)

**isSendNotificationEmail ()**

Indicates whether a notification email is sent to the owner specified by `setOwnerId` (`true`) or not (`false`, the default).

Signature

```
public Boolean isSendNotificationEmail ()
```

Return Value

Type: [Boolean](#)

**setAccountId (accountId)**

Sets the ID of the account into which the lead is merged. This value is required only when updating an existing account, including person accounts.

Signature

```
public Void setAccountId (ID accountId)
```

Parameters

*accountId*  
Type: [ID](#)

Return Value

Type: [Void](#)

**setContactId (contactId)**

Sets the ID of the contact into which the lead will be merged (this contact must be associated with the account specified with `setAccountId`, and `setAccountId` must be specified). This value is required only when updating an existing contact.

Signature

```
public Void setContactId (ID contactId)
```

## Parameters

*contactId*  
Type: [ID](#)

## Return Value

Type: Void

## Usage

If `setContactId` is specified, then the application creates a new contact that is implicitly associated with the account. The contact name and other existing data are not overwritten (unless `setOverwriteLeadSource` is set to true, in which case only the `LeadSource` field is overwritten).

 **Important:** If you are converting a lead into a person account, do not specify `setContactId` or an error will result. Specify only `setAccountId` of the person account.

**setConvertedStatus (status)**

Sets the lead status value for a converted lead. This field is required.

## Signature

```
public Void setConvertedStatus(String status)
```

## Parameters

*status*  
Type: [String](#)

## Return Value

Type: Void

**setDoNotCreateOpportunity (createOpportunity)**

Specifies whether to create an opportunity during lead conversion. The default value is `false`: opportunities are created by default. Set this flag to `true` only if you do not want to create an opportunity from the lead.

## Signature

```
public Void setDoNotCreateOpportunity(Boolean createOpportunity)
```

## Parameters

*createOpportunity*  
Type: [Boolean](#)

## Return Value

Type: Void

**setLeadId(leadId)**

Sets the ID of the lead to convert. This field is required.

Signature

```
public Void setLeadId(ID leadId)
```

Parameters

*leadId*  
Type: ID

Return Value

Type: Void

**setOpportunityId(opportunityId)**

Sets the ID of the opportunity into which the lead is merged. This value is required only when updating an existing opportunity.

Signature

```
public Void setOpportunityId(ID opportunityId)
```

Parameters

*opportunityId*  
Type: ID

Return Value

Type: Void

**setOpportunityName(opportunityName)**

Sets the name of the opportunity to create. If no name is specified, this value defaults to the company name of the lead.

Signature

```
public Void setOpportunityName(String opportunityName)
```

Parameters

*opportunityName*  
Type: String

Return Value

Type: Void

## Usage

The maximum length of this field is 80 characters.

If `setDoNotCreateOpportunity` is true, no Opportunity is created and this field must be left blank; otherwise, an error is returned.

### **setOverwriteLeadSource (overwriteLeadSource)**

Specifies whether to overwrite the `LeadSource` field on the target contact object with the contents of the `LeadSource` field in the source lead object. The default value is `false`, to not overwrite the field. If you specify this as `true`, you must also specify `setContactId` for the target contact.

## Signature

```
public Void setOverwriteLeadSource(Boolean overwriteLeadSource)
```

## Parameters

*overwriteLeadSource*  
Type: [Boolean](#)

## Return Value

Type: Void

### **setOwnerId (ownerId)**

Specifies the ID of the person to own any newly created account, contact, and opportunity. If the application does not specify this value, the owner of the new object will be the owner of the lead.

## Signature

```
public Void setOwnerId(ID ownerId)
```

## Parameters

*ownerId*  
Type: [ID](#)

## Return Value

Type: Void

## Usage

This method is not applicable when merging with existing objects—if `setOwnerId` is specified, the `ownerId` field is not overwritten in an existing account or contact.

**setSendNotificationEmail (sendEmail)**

Specifies whether to send a notification email to the owner specified by `setOwnerId`. The default value is `false`, that is, to not send email.

Signature

```
public void setSendNotificationEmail(Boolean sendEmail)
```

Parameters

*sendEmail*  
Type: [Boolean](#)

Return Value

Type: `void`

## LeadConvertResult Class

The result of a lead conversion.

### Namespace

[Database](#)

### Usage

An array of `LeadConvertResult` objects is returned with the `convertLead` Database method. Each element in the `LeadConvertResult` array corresponds to the `sObject` array passed as the `sObject []` parameter in the `convertLead` Database method, that is, the first element in the `LeadConvertResult` array matches the first element passed in the `sObject` array, the second element corresponds to the second element, and so on. If only one `sObject` is passed in, the `LeadConvertResult` array contains a single element.

### LeadConvertResult Methods

The following are methods for `LeadConvertResult`. All are instance methods.

IN THIS SECTION:

[getAccountId\(\)](#)

The ID of the new account (if a new account was specified) or the ID of the account specified when `convertLead` was invoked.

[getContactId\(\)](#)

The ID of the new contact (if a new contact was specified) or the ID of the contact specified when `convertLead` was invoked.

[getErrors\(\)](#)

If an error occurred, an array of one or more database error objects providing the error code and description.

[getLeadId\(\)](#)

The ID of the converted lead.

[getOpportunityId\(\)](#)

The ID of the new opportunity, if one was created when `convertLead` was invoked.

`isSuccess()`

A Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise

### **`getAccountId()`**

The ID of the new account (if a new account was specified) or the ID of the account specified when `convertLead` was invoked.

Signature

```
public ID getAccountId()
```

Return Value

Type: [ID](#)

### **`getContactId()`**

The ID of the new contact (if a new contact was specified) or the ID of the contact specified when `convertLead` was invoked.

Signature

```
public ID getContactId()
```

Return Value

Type: [ID](#)

### **`getErrors()`**

If an error occurred, an array of one or more database error objects providing the error code and description.

Signature

```
public Database.Error[] getErrors()
```

Return Value

Type: [Database.Error\[\]](#)

### **`getLeadId()`**

The ID of the converted lead.

Signature

```
public ID getLeadId()
```

Return Value

Type: [ID](#)

**getOpportunityId()**

The ID of the new opportunity, if one was created when `convertLead` was invoked.

Signature

```
public ID getOpportunityId()
```

Return Value

Type: [ID](#)

**isSuccess()**

A Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise

Signature

```
public Boolean isSuccess()
```

Return Value

Type: [Boolean](#)

## MergeResult Class

Contains the result of a merge Database method operation.

### Namespace

[Database](#)

### Usage

The `Database.merge` method returns a `Database.MergeResult` object for each merged record.

### MergeResult Methods

The following are methods for `MergeResult`. All are instance methods.

IN THIS SECTION:

[getErrors\(\)](#)

Returns a list of `Database.Error` objects representing the errors encountered, if any, during a merge operation using the `Database.merge` method. If no error occurred, returns null.

[getId\(\)](#)

Returns the ID of the master record into which other records were merged.

[getMergedRecordIds\(\)](#)

Returns the IDs of the records merged into the master record.

[getUpdatedRelatedIds\(\)](#)

Returns the IDs of all related records that were reparented as a result of the merge that are viewable by the user sending the merge call.

[isSuccess\(\)](#)

Indicates whether the merge was successful (`true`) or not (`false`).

**getErrors ()**

Returns a list of `Database.Error` objects representing the errors encountered, if any, during a merge operation using the `Database.merge` method. If no error occurred, returns null.

Signature

```
public List<Database.Error> getErrors ()
```

Return Value

Type: [List<Database.Error>](#)

**getId ()**

Returns the ID of the master record into which other records were merged.

Signature

```
public Id getId ()
```

Return Value

Type: [ID](#)

**getMergedRecordIds ()**

Returns the IDs of the records merged into the master record.

Signature

```
public List<String> getMergedRecordIds ()
```

Return Value

Type: [List<String>](#)

**getUpdatedRelatedIds ()**

Returns the IDs of all related records that were reparented as a result of the merge that are viewable by the user sending the merge call.

Signature

```
public List<String> getUpdatedRelatedIds ()
```

Return Value

Type: [List<String>](#)

### **isSuccess ()**

Indicates whether the merge was successful ([true](#)) or not ([false](#)).

Signature

```
public Boolean isSuccess ()
```

Return Value

Type: [Boolean](#)

## QueryLocator Class

Represents the record set returned by `Database.getQueryLocator` and used with Batch Apex.

### Namespace

[Database](#)

### QueryLocator Methods

The following are methods for `QueryLocator`. All are instance methods.

IN THIS SECTION:

[getQuery\(\)](#)

Returns the query used to instantiate the `Database.QueryLocator` object. This is useful when testing the `start` method.

[iterator\(\)](#)

Returns a new instance of a query locator iterator.

### **getQuery ()**

Returns the query used to instantiate the `Database.QueryLocator` object. This is useful when testing the `start` method.

Signature

```
public String getQuery ()
```

Return Value

Type: [String](#)

Usage

You cannot use the [FOR UPDATE keywords](#) with a `getQueryLocator` query to lock a set of records. The `start` method automatically locks the set of records in the batch.

## Example

```
System.assertEquals(QLReturnedFromStart.
getQuery(),
Database.getQueryLocator([SELECT Id
FROM Account]).getQuery());
```

**iterator()**

Returns a new instance of a query locator iterator.

## Signature

```
public Database.QueryLocatorIterator iterator()
```

## Return Value

Type: [Database.QueryLocatorIterator](#)

## Usage

 **Warning:** To iterate over a query locator, save the iterator instance that this method returns in a variable and then use this variable to iterate over the collection. Calling `iterator` every time you want to perform an iteration can result in incorrect behavior because each call returns a new iterator instance.

For an example, see [QueryLocatorIterator Class](#).

## QueryLocatorIterator Class

Represents an iterator over a query locator record set.

### Namespace

[Database](#)

### Example

This sample shows how to obtain an iterator for a query locator, which contains five accounts. This sample calls `hasNext` and `next` to get each record in the collection.

```
// Get a query locator
Database.QueryLocator q = Database.getQueryLocator(
    [SELECT Name FROM Account LIMIT 5]);
// Get an iterator
Database.QueryLocatorIterator it = q.iterator();

// Iterate over the records
while (it.hasNext())
{
    Account a = (Account)it.next();
    System.debug(a);
}
```

## QueryLocatorIterator Methods

The following are methods for `QueryLocatorIterator`. All are instance methods.

IN THIS SECTION:

`hasNext()`

Returns `true` if there are one or more records remaining in the collection; otherwise, returns `false`.

`next()`

Advances the iterator to the next `sObject` record and returns the `sObject`.

### **hasNext ()**

Returns `true` if there are one or more records remaining in the collection; otherwise, returns `false`.

Signature

```
public Boolean hasNext ()
```

Return Value

Type: `Boolean`

### **next ()**

Advances the iterator to the next `sObject` record and returns the `sObject`.

Signature

```
public sObject next ()
```

Return Value

Type: `sObject`

Usage

Because the return value is the generic `sObject` type, you must cast it if using a more specific type. For example:

```
Account a = (Account)myIterator.next ();
```

Example

```
Account a = (Account)myIterator.next ();
```

## SaveResult Class

The result of an insert or update DML operation returned by a Database method.

## Namespace

[Database](#)

## Usage

An array of `SaveResult` objects is returned with the `insert` and `update` database methods. Each element in the `SaveResult` array corresponds to the `sObject` array passed as the `sObject []` parameter in the Database method, that is, the first element in the `SaveResult` array matches the first element passed in the `sObject` array, the second element corresponds with the second element, and so on. If only one `sObject` is passed in, the `SaveResult` array contains a single element.

A `SaveResult` object is generated when a new or existing Salesforce record is saved.

## Example

The following example shows how to obtain and iterate through the returned `Database.SaveResult` objects. It inserts two accounts using `Database.insert` with a false second parameter to allow partial processing of records on failure. One of the accounts is missing the Name required field, which causes a failure. Next, it iterates through the results to determine whether the operation was successful or not for each record. It writes the ID of every record that was processed successfully to the debug log, or error messages and fields of the failed records. This example generates one successful operation and one failure.

```
// Create two accounts, one of which is missing a required field
Account[] accts = new List<Account>{
    new Account (Name='Account1'),
    new Account ();
}
Database.SaveResult[] srList = Database.insert(accts, false);

// Iterate through each returned result
for (Database.SaveResult sr : srList) {
    if (sr.isSuccess()) {
        // Operation was successful, so get the ID of the record that was processed
        System.debug('Successfully inserted account. Account ID: ' + sr.getId());
    }
    else {
        // Operation failed, so get all errors
        for(Database.Error err : sr.getErrors()) {
            System.debug('The following error has occurred.');
```

```
            System.debug(err.getStatusCode() + ': ' + err.getMessage());
            System.debug('Account fields that affected this error: ' + err.getFields());
        }
    }
}
```

[Error Class](#)

[DuplicateError Class](#)

## SaveResult Methods

The following are methods for `SaveResult`. All are instance methods.

## IN THIS SECTION:

[getErrors\(\)](#)

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

[getId\(\)](#)

Returns the ID of the sObject you were trying to insert or update.

[isSuccess\(\)](#)

Returns a Boolean that is set to `true` if the DML operation was successful for this object, `false` otherwise.

**getErrors ()**

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

## Signature

```
public Database.Error[] getErrors()
```

## Return Value

Type: [Database.Error\[\]](#)

**getId ()**

Returns the ID of the sObject you were trying to insert or update.

## Signature

```
public ID getId()
```

## Return Value

Type: [ID](#)

## Usage

If this field contains a value, the object was successfully inserted or updated. If this field is empty, the operation was not successful for that object.

**isSuccess ()**

Returns a Boolean that is set to `true` if the DML operation was successful for this object, `false` otherwise.

## Signature

```
public Boolean isSuccess()
```

Return Value

Type: [Boolean](#)

Example

This example shows the code used to process duplicate records, which are detected when there is an unsuccessful save due to an error. This code is part of a custom application that implements duplicate management when users add a contact. See [DuplicateResult Class](#) on page 1889 to check out the entire sample applicaton.

```
if (!saveResult.isSuccess()) { ... }
```

## UndeleteResult Class

The result of an undelete DML operation returned by the `Database.undelete` method.

### Namespace

[Database](#)

### Usage

An array of `Database.UndeleteResult` objects is returned with the `undelete` database method. Each element in the `UndeleteResult` array corresponds to the `sObject` array passed as the `sObject[]` parameter in the `undelete` Database method; that is, the first element in the `UndeleteResult` array matches the first element passed in the `sObject` array, the second element corresponds with the second element, and so on. If only one `sObject` is passed in, the `UndeleteResults` array contains a single element.

### UndeleteResult Methods

The following are methods for `UndeleteResult`. All are instance methods.

IN THIS SECTION:

[getErrors\(\)](#)

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns null.

[getId\(\)](#)

Returns the ID of the `sObject` you were trying to undelete.

[isSuccess\(\)](#)

Returns a Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

#### **getErrors()**

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns null.

Signature

```
public Database.Error[] getErrors()
```

Return Value

Type: [Database.Error\[\]](#)

### **getId()**

Returns the ID of the sObject you were trying to undelete.

Signature

```
public ID getId()
```

Return Value

Type: [ID](#)

Usage

If this field contains a value, the object was successfully undeleted. If this field is empty, the operation was not successful for that object.

### **isSuccess()**

Returns a Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

Signature

```
public Boolean isSuccess()
```

Return Value

Type: [Boolean](#)

## UpsertResult Class

The result of an upsert DML operation returned by the `Database.upsert` method.

### Namespace

[Database](#)

### Usage

An array of `Database.UpsertResult` objects is returned with the `upsert` database method. Each element in the `UpsertResult` array corresponds to the sObject array passed as the `sObject[]` parameter in the `upsert` Database method; that is, the first element in the `UpsertResult` array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the `UpsertResults` array contains a single element.

### UpsertResult Methods

The following are methods for `UpsertResult`. All are instance methods.

## IN THIS SECTION:

[getErrors\(\)](#)

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

[getId\(\)](#)

Returns the ID of the sObject you were trying to update or insert.

[isCreated\(\)](#)

A Boolean value that is set to `true` if the record was created, `false` if the record was updated.

[isSuccess\(\)](#)

Returns a Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

**getErrors ()**

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

## Signature

```
public Database.Error[] getErrors()
```

## Return Value

Type: [Database.Error \[\]](#)

**getId ()**

Returns the ID of the sObject you were trying to update or insert.

## Signature

```
public ID getId()
```

## Return Value

Type: [ID](#)

## Usage

If this field contains a value, the object was successfully updated or inserted. If this field is empty, the operation was not successful for that object.

**isCreated ()**

A Boolean value that is set to `true` if the record was created, `false` if the record was updated.

## Signature

```
public Boolean isCreated()
```

Return Value

Type: [Boolean](#)

### **isSuccess ()**

Returns a Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

Signature

```
public Boolean isSuccess ()
```

Return Value

Type: [Boolean](#)

## Datacloud Namespace

The `Datacloud` namespace provides classes and methods for retrieving information about duplicate rules. Duplicate rules let you control whether and when users can save duplicate records within Salesforce.

The following are the classes in the `Datacloud` namespace.

### IN THIS SECTION:

#### [AdditionalInformationMap Class](#)

Represents other information, if any, about matched records.

#### [DuplicateResult Class](#)

Represents the details of a duplicate rule that detected duplicate records and information about those duplicate records.

#### [FieldDiff Class](#)

Represents the name of a matching rule field and how the values of the field compare for the duplicate and its matching record.

#### [FindDuplicates Class](#)

Performs rule-based searches for duplicate records. The input is an array of `sObjects`. Each `sObject` represents a record you want to find duplicates of. The output identifies the detected duplicates for each input `sObject` based on active duplicate rules for the given object.

#### [FindDuplicatesByIds Class](#)

Performs rule-based searches for duplicate records. The input is an array of IDs. Each ID specifies records to search for duplicates among. The duplicates are detected based on the active duplicate rules applicable to the object type corresponding to the input IDs.

#### [FindDuplicatesResult Class](#)

Output for rule-based searches for duplicate records. `FindDuplicatesResult` contains results of detecting duplicates using instances of `FindDuplicates` or `FindDuplicatesByIds` classes.

#### [MatchRecord Class](#)

Represents a duplicate record detected by a matching rule.

#### [MatchResult Class](#)

Represents the duplicate results for a matching rule.

## AdditionalInformationMap Class

Represents other information, if any, about matched records.

### Namespace

[Datacloud](#)

IN THIS SECTION:

[AdditionalInformationMap Methods](#)

### AdditionalInformationMap Methods

The following are methods for `AdditionalInformationMap`.

IN THIS SECTION:

[getName\(\)](#)

Returns the element name.

[getValue\(\)](#)

Returns the value of the element.

#### **getName ()**

Returns the element name.

Signature

```
public String getName ()
```

Return Value

Type: [String](#)

#### **getValue ()**

Returns the value of the element.

Signature

```
public String getValue ()
```

Return Value

Type: [String](#)

## DuplicateResult Class

Represents the details of a duplicate rule that detected duplicate records and information about those duplicate records.

## Namespace

[Datacloud](#)

## Usage

The `DuplicateResult` class and its methods are available to organizations that use duplicate rules.

`DuplicateResult` is contained within `DuplicateError`, which is part of `SaveResult`. `SaveResult` is generated when a user attempts to save a record in Salesforce.

## Example

This example shows a custom application that lets users add a contact. When a contact is saved, an alert displays if there are duplicate records.

The sample application consists of a Visualforce page and an Apex controller. The Visualforce page is listed first so that you can see how the page makes use of the Apex controller. Save the Apex class first before saving the Visualforce page.

```
<apex:page controller="ContactDedupeController">
  <apex:form >
    <apex:pageBlock title="Duplicate Records" rendered="{!hasDuplicateResult}">
      <apex:pageMessages />
      <apex:pageBlockTable value="{!duplicateRecords}" var="item">
        <apex:column >
          <apex:facet name="header">Name</apex:facet>
          <apex:outputLink value="/{!item['Id']}">{!item['Name']}</apex:outputLink>
        </apex:column>
        <apex:column >
          <apex:facet name="header">Owner</apex:facet>
          <apex:outputField value="{!item['OwnerId']}" />
        </apex:column>
        <apex:column >
          <apex:facet name="header">Last Modified Date</apex:facet>
          <apex:outputField value="{!item['LastModifiedDate']}" />
        </apex:column>
      </apex:pageBlockTable>
    </apex:pageBlock>

    <apex:pageBlock title="Contact" mode="edit">
      <apex:pageBlockButtons >
        <apex:commandButton value="Save" action="{!save}" />
      </apex:pageBlockButtons>

      <apex:pageBlockSection >
        <apex:inputField value="{!Contact.FirstName}" />
        <apex:inputField value="{!Contact.LastName}" />
        <apex:inputField value="{!Contact.Email}" />
        <apex:inputField value="{!Contact.Phone}" />
        <apex:inputField value="{!Contact.AccountId}" />
      </apex:pageBlockSection>
    </apex:pageBlock>
  </apex:form>
</apex:page>
```

This sample is the Apex controller for the page. This controller contains the action method for the Save button. The `save` method inserts the new contact. If errors are returned, this method iterates through each error, checks if it's a duplicate error, adds the error message to the page, and returns information about the duplicate records to be displayed on the page.

```
public class ContactDedupeController {

    // Initialize a variable to hold the contact record you're processing
    private final Contact contact;

    // Initialize a list to hold any duplicate records
    private List<sObject> duplicateRecords;

    // Define variable that's true if there are duplicate records
    public boolean hasDuplicateResult{get;set;}

    // Define the constructor
    public ContactDedupeController() {

        // Define the values for the contact you're processing based on its ID
        Id id = ApexPages.currentPage().getParameters().get('id');
        this.contact = (id == null) ? new Contact() :
            [SELECT Id, FirstName, LastName, Email, Phone, AccountId
            FROM Contact WHERE Id = :id];

        // Initialize empty list of potential duplicate records
        this.duplicateRecords = new List<sObject>();
        this.hasDuplicateResult = false;
    }

    // Return contact and its values to the Visualforce page for display
    public Contact getContact() {
        return this.contact;
    }

    // Return duplicate records to the Visualforce page for display
    public List<sObject> getDuplicateRecords() {
        return this.duplicateRecords;
    }

    // Process the saved record and handle any duplicates
    public PageReference save() {

        // Optionally, set DML options here, use "DML" instead of "false"
        // in the insert()
        // Database.DMLOptions dml = new Database.DMLOptions();
        // dml.DuplicateRuleHeader.allowSave = true;
        // dml.DuplicateRuleHeader.runAsCurrentUser = true;
        Database.SaveResult saveResult = Database.insert(contact, false);

        if (!saveResult.isSuccess()) {
            for (Database.Error error : saveResult.getErrors()) {
                // If there are duplicates, an error occurs
                // Process only duplicates and not other errors
                // (e.g., validation errors)
                if (error instanceof Database.DuplicateError) {
```

```
// Handle the duplicate error by first casting it as a
// DuplicateError class
// This lets you use methods of that class
// (e.g., getDuplicateResult())
Database.DuplicateError duplicateError =
    (Database.DuplicateError)error;
Datacloud.DuplicateResult duplicateResult =
    duplicateError.getDuplicateResult();

// Display duplicate error message as defined in the duplicate rule
ApexPages.Message errorMessage = new ApexPages.Message(
    ApexPages.Severity.ERROR, 'Duplicate Error: ' +
    duplicateResult.getErrorMessage());
ApexPages.addMessage(errorMessage);

// Get duplicate records
this.duplicateRecords = new List<SObject>();

// Return only match results of matching rules that
// find duplicate records
Datacloud.MatchResult[] matchResults =
    duplicateResult.getMatchResults();

// Just grab first match result (which contains the
// duplicate record found and other match info)
Datacloud.MatchResult matchResult = matchResults[0];

Datacloud.MatchRecord[] matchRecords = matchResult.getMatchRecords();

// Add matched record to the duplicate records variable
for (Datacloud.MatchRecord matchRecord : matchRecords) {
    System.debug('MatchRecord: ' + matchRecord.getRecord());
    this.duplicateRecords.add(matchRecord.getRecord());
}
this.hasDuplicateResult = !this.duplicateRecords.isEmpty();
}

//If there's a duplicate record, stay on the page
return null;
}

// After save, navigate to the view page:
return (new ApexPages.StandardController(contact)).view();
}
}
```

## IN THIS SECTION:

[DuplicateResult Methods](#)

## SEE ALSO:

[SaveResult Class](#)[DuplicateError Class](#)

## DuplicateResult Methods

The following are methods for `DuplicateResult`.

## IN THIS SECTION:

[getDuplicateRule\(\)](#)

Returns the developer name of the executed duplicate rule that returned duplicate records.

[getErrorMessage\(\)](#)

Returns the error message configured by the administrator to warn users they may be creating duplicate records. This message is associated with a duplicate rule.

[getMatchResults\(\)](#)

Returns the duplicate records and match information.

[isAllowSave\(\)](#)

Indicates whether the duplicate rule will allow a record that's identified as a duplicate to be saved. Set to `true` if duplicate rule should allow save; otherwise, `false`.

### **getDuplicateRule ()**

Returns the developer name of the executed duplicate rule that returned duplicate records.

Signature

```
public String getDuplicateRule ()
```

Return Value

Type: [String](#)

### **getErrorMessage ()**

Returns the error message configured by the administrator to warn users they may be creating duplicate records. This message is associated with a duplicate rule.

Signature

```
public String getErrorMessage ()
```

Return Value

Type: [String](#)

### Example

This example shows the code used to display the error message when duplicates are found while saving a new contact. This code is part of a custom application that lets users add a contact. When a contact is saved, an alert displays if there are duplicate records. Review [DuplicateResult Class](#) on page 1889 to check out the entire sample applicaton.

```
ApexPages.Message errorMessage = new ApexPages.Message (
    ApexPages.Severity.ERROR, 'Duplicate Error: ' +
    duplicateResult.getErrorMessage());
ApexPages.addMessage(errorMessage);
```

### **getMatchResults()**

Returns the duplicate records and match information.

### Signature

```
public List<Datacloud.MatchResult> getMatchResults()
```

### Return Value

Type: List<Datacloud.MatchResult>

### Example

This example shows the code used to return duplicate record and match information and assign it to the `matchResults` variable. This code is part of a custom application that implements duplicate management when users add a contact. See [DuplicateResult Class](#) on page 1889 to check out the entire sample applicaton.

```
Datacloud.MatchResult[] matchResults =
    duplicateResult.getMatchResults();
```

### **isAllowSave()**

Indicates whether the duplicate rule will allow a record that's identified as a duplicate to be saved. Set to `true` if duplicate rule should allow save; otherwise, `false`.

### Signature

```
public Boolean isAllowSave()
```

### Return Value

Type: [Boolean](#)

## FieldDiff Class

Represents the name of a matching rule field and how the values of the field compare for the duplicate and its matching record.

## Namespace

[Datacloud](#)

IN THIS SECTION:

[FieldDiff Methods](#)

## FieldDiff Methods

The following are methods for `FieldDiff`.

IN THIS SECTION:

[getDifference\(\)](#)

Returns how the field values compare for the duplicate and its matching record.

[getName\(\)](#)

Returns the name of a field on a matching rule that detected duplicates.

### **getDifference ()**

Returns how the field values compare for the duplicate and its matching record.

Signature

```
public String getDifference ()
```

Return Value

Type: [String](#)

Possible values include:

- `SAME`: Indicates the field values match exactly.
- `DIFFERENT`: Indicates that the field values do not match.
- `NULL`: Indicates that the field values are a match because both values are blank.

### **getName ()**

Returns the name of a field on a matching rule that detected duplicates.

Signature

```
public String getName ()
```

Return Value

Type: [String](#)

## FindDuplicates Class

Performs rule-based searches for duplicate records. The input is an array of `sObjects`. Each `sObject` represents a record you want to find duplicates of. The output identifies the detected duplicates for each input `sObject` based on active duplicate rules for the given object.

## Namespace

[Datacloud](#)

IN THIS SECTION:

[FindDuplicates Methods](#)

## FindDuplicates Methods

The following are methods for `FindDuplicates`.

IN THIS SECTION:

[findDuplicates\(sObjects\)](#)

Identifies duplicates for `sObjects` provided and returns a list of `FindDuplicatesResult` objects.

### **findDuplicates (sObjects)**

Identifies duplicates for `sObjects` provided and returns a list of `FindDuplicatesResult` objects.

#### Usage

Use `FindDuplicates` to apply active duplicate rules associated with an object to records represented by input `sObjects`.

`FindDuplicates` uses the duplicate rules for the object that has the same type as the input `sObjects`.

#### Input

- All `sObjects` in the input array must be of the same object type, and that type must correspond to an object type that supports duplicate rules.
- The input array is limited to 50 elements. If you exceed this limit, an exception is thrown with the following message:  
`Configuration error: The number of records to check is greater than the permitted batch size.`

#### Output

- The output of `FindDuplicates` is an array of objects with the same number of elements as the input array, and in the same order. The output objects encapsulate record IDs for duplicate records. The output objects also contain values from the duplicate records.
- Each element contains an array of `DuplicateResult` objects. If `FindDuplicates` doesn't find any duplicates, the `duplicateRule` field in `DuplicateResult` contains the name of the duplicate rule that `FindDuplicates` applied, but the `matchResults` array is empty.

#### Example

```
Account acct = new Account();
acct.Name = 'Acme';
acct.BillingStreet = '123 Fake St';
acct.BillingCity = 'Springfield';
acct.BillingState = 'VT';
acct.BillingCountry = 'US';

List<Account> acctList = new List<Account>();
```

```
acctList.add(acct);

if (Datacloud.FindDuplicates.findDuplicates(acctList).size() == 0) {
// If the new account doesn't have duplicates, insert it.
    insert(acct);
}
```

### Signature

```
public static List<Datacloud.FindDuplicatesResult> findDuplicates(List<SObject> sObjects)
```

### Parameters

*sObjects*

Type: [List<SObject>](#)

An array of sObjects for which you want to find duplicates.

### Return Value

Type: [List<FindDuplicatesResult>](#)

## FindDuplicatesByIds Class

Performs rule-based searches for duplicate records. The input is an array of IDs. Each ID specifies records to search for duplicates among. The duplicates are detected based on the active duplicate rules applicable to the object type corresponding to the input IDs.

## Namespace

[Datacloud](#)

### IN THIS SECTION:

[FindDuplicatesByIds Methods](#)

## FindDuplicatesByIds Methods

The following are methods for `FindDuplicatesByIds`.

### IN THIS SECTION:

[findDuplicatesByIds\(ids\)](#)

Identifies duplicates of sObjects provided and returns a list of `FindDuplicatesResult` objects.

### **findDuplicatesByIds (ids)**

Identifies duplicates of sObjects provided and returns a list of `FindDuplicatesResult` objects.

### Usage

Use `FindDuplicatesByIds` to apply active duplicate rules associated with an object to records represented by the record IDs.

`FindDuplicatesByIds` uses the duplicate rules for the object that has the same type as the input record IDs. For example, if the record ID represents an Account, `FindDuplicatesByIds` uses the duplicate rules associated with the Account object.

### Input

- All record IDs in the input array must be of the same object type, and that type must correspond to an object type that supports duplicate rules.
- The input array is limited to 50 elements. If you exceed this limit, an exception is thrown with the following message:  
Configuration error: The number of records to check is greater than the permitted batch size.

### Output

- The output of `FindDuplicatesByIds` is an array of objects with the same number of elements as the input array, and in the same order. The output objects encapsulate record IDs for duplicate records. The output objects also contain values from the duplicate records.
- Each element contains an array of `DuplicateResult` objects. If `FindDuplicatesByIds` doesn't find any duplicates, the `duplicateRule` field in `DuplicateResult` contains the name of the duplicate rule that `FindDuplicatesByIds` applied, but the `matchResults` array is empty.

### Example

```
Account acct = new Account(name='Salesforce');
insert acct;

List<Id> idList = new List<Id>();
idList.add(acct.id);

if (Datacloud.FindDuplicatesByIds.findDuplicatesByIds(idList).size() > 0) {
    System.debug('Found duplicates');
}
```

### Signature

```
public static List<Datacloud.FindDuplicatesResult> findDuplicatesByIds(List<Id> ids)
```

### Parameters

*ids*

Type: [List<ID>](#)

A list of IDs for which you want to find duplicates.

### Return Value

Type: [List<FindDuplicatesResult>](#)

## FindDuplicatesResult Class

Output for rule-based searches for duplicate records. `FindDuplicatesResult` contains results of detecting duplicates using instances of `FindDuplicates` or `FindDuplicatesByIds` classes.

## Namespace

[Datacloud](#)

IN THIS SECTION:

[FindDuplicatesResult Properties](#)

[FindDuplicatesResult Methods](#)

### FindDuplicatesResult Properties

The following are properties for `FindDuplicatesResult`.

IN THIS SECTION:

[duplicateresults](#)

A list of `DuplicateResult` objects representing the results of calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`. Elements in the list correspond to `sObjects` or IDs in the input list.

[errors](#)

A list of `Database.Error` objects holding errors resulting from calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`.

[success](#)

Boolean signifying whether the call to `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)` was successful.

#### **duplicateresults**

A list of `DuplicateResult` objects representing the results of calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`. Elements in the list correspond to `sObjects` or IDs in the input list.

Signature

```
public List<Datacloud.DuplicateResult> duplicateresults
```

Property Value

Type: [List<DuplicateResult>](#)

#### **errors**

A list of `Database.Error` objects holding errors resulting from calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`.

Signature

```
public List<Database.Error> errors {get; set;}
```

Property Value

Type: [List<Database.Error>](#)

#### **success**

Boolean signifying whether the call to `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)` was successful.

Signature

```
public Boolean success {get; set;}
```

Property Value

Type: [Boolean](#)

## FindDuplicatesResult Methods

The following are methods for `FindDuplicatesResult`.

### IN THIS SECTION:

#### [getDuplicateResults\(\)](#)

Returns a list of `DuplicateResult` objects representing the results of calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`. Elements in the list correspond to `sObjects` or IDs in the input list.

#### [getErrors\(\)](#)

Returns a list of `DatabaseError` objects containing errors resulting from calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`, if errors were encountered.

#### [isSuccess\(\)](#)

Returns a Boolean signifying whether the call to `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)` was successful.

#### **getDuplicateResults()**

Returns a list of `DuplicateResult` objects representing the results of calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`. Elements in the list correspond to `sObjects` or IDs in the input list.

### Example

```
Account acct = new Account(name='Salesforce');
List<Account> acctList = new List<Account>();
acctList.add(acct);

Datacloud.FindDuplicatesResult[] results = Datacloud.FindDuplicates.findDuplicates(acctList);
for (Datacloud.FindDuplicatesResult findDupeResult : results) {
    for (Datacloud.DuplicateResult dupeResult : findDupeResult.getDuplicateResults()) {
```

```
for (Datacloud.MatchResult matchResult : dupeResult.getMatchResults()) {
    for (Datacloud.MatchRecord matchRecord : matchResult.getMatchRecords()) {
        System.debug('Duplicate Record: ' + matchRecord.getRecord());
    }
}
}
```

Signature

```
public List<Datacloud.DuplicateResult> getDuplicateResults()
```

Return Value

Type: [List<DuplicateResult](#) on page 1889>

### **getErrors ()**

Returns a list of DatabaseError objects containing errors resulting from calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids), if errors were encountered.

Signature

```
public List<Database.Error> getErrors()
```

Return Value

Type: [List<Database.Error>](#)

### **isSuccess ()**

Returns a Boolean signifying whether the call to FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids) was successful.

Signature

```
public Boolean isSuccess()
```

Return Value

Type: [Boolean](#)

## MatchRecord Class

Represents a duplicate record detected by a matching rule.

### Namespace

[Datacloud](#)

IN THIS SECTION:

[MatchRecord Methods](#)

## MatchRecord Methods

The following are methods for `MatchRecord`.

IN THIS SECTION:

[getAdditionalInformation\(\)](#)

Returns other information about a matched record. For example, a `matchGrade` represents the quality of the data for the D&B fields in the matched record.

[getFieldDiffs\(\)](#)

Returns all matching rule fields and how each field value compares for the duplicate and its matching record.

[getMatchConfidence\(\)](#)

Returns the ranking of how similar a matched record's data is to the data in your request. Must be equal to or greater than the value of the `minMatchConfidence` specified in your request. Returns -1 if unused.

[getRecord\(\)](#)

Returns the fields and field values for the duplicate.

### **getAdditionalInformation()**

Returns other information about a matched record. For example, a `matchGrade` represents the quality of the data for the D&B fields in the matched record.

Signature

```
public List<Datacloud.AdditionalInformationMap> getAdditionalInformation()
```

Return Value

Type: [List<Datacloud.AdditionalInformationMap>](#)

### **getFieldDiffs()**

Returns all matching rule fields and how each field value compares for the duplicate and its matching record.

Signature

```
public List<Datacloud.FieldDiff> getFieldDiffs()
```

Return Value

Type: [List<Datacloud.FieldDiff>](#)

### **getMatchConfidence()**

Returns the ranking of how similar a matched record's data is to the data in your request. Must be equal to or greater than the value of the `minMatchConfidence` specified in your request. Returns -1 if unused.

Signature

```
public Double getMatchConfidence()
```

Return Value

Type: [Double](#)

### **getRecord()**

Returns the fields and field values for the duplicate.

Signature

```
public SObject getRecord()
```

Return Value

Type: [SObject](#)

## MatchResult Class

Represents the duplicate results for a matching rule.

## Namespace

[Datacloud](#)

IN THIS SECTION:

[MatchResult Methods](#)

## MatchResult Methods

The following are methods for `MatchResult`.

IN THIS SECTION:

[getEntityType\(\)](#)

Returns the entity type of the matching rule.

[getErrors\(\)](#)

Returns errors that occurred during matching for the matching rule.

[getMatchEngine\(\)](#)

Returns the match engine for the matching rule.

[getMatchRecords\(\)](#)

Returns information about the duplicates for the matching rule.

[getRule\(\)](#)

Returns the developer name of the matching rule.

**getSize()**

Returns the number of duplicates detected by the matching rule.

**isSuccess()**

Returns `false` if there's an error with the matching rule, and `true` if the matching rule successfully ran.

**getEntityType()**

Returns the entity type of the matching rule.

Signature

```
public String getEntityType()
```

Return Value

Type: `String`

**getErrors()**

Returns errors that occurred during matching for the matching rule.

Signature

```
public List<Database.Error> getErrors()
```

Return Value

Type: `List<Database.Error>`

**getMatchEngine()**

Returns the match engine for the matching rule.

Signature

```
public String getMatchEngine()
```

Return Value

Type: `String`

**getMatchRecords()**

Returns information about the duplicates for the matching rule.

Signature

```
public List<Datacloud.MatchRecord> getMatchRecords()
```

Return Value

Type: `List<Datacloud.MatchRecord>`

### **getRule ()**

Returns the developer name of the matching rule.

Signature

```
public String getRule ()
```

Return Value

Type: `String`

### **getSize ()**

Returns the number of duplicates detected by the matching rule.

Signature

```
public Integer getSize ()
```

Return Value

Type: `Integer`

### **isSuccess ()**

Returns `false` if there's an error with the matching rule, and `true` if the matching rule successfully ran.

Signature

```
public Boolean isSuccess ()
```

Return Value

Type: `Boolean`

## DataSource Namespace

The `DataSource` namespace provides the classes for the Apex Connector Framework. Use the Apex Connector Framework to develop a custom adapter for Salesforce Connect. Then connect your Salesforce organization to any data anywhere via the Salesforce Connect custom adapter.

The following are the classes in the `DataSource` namespace.

## IN THIS SECTION:

[AsyncDeleteCallback Class](#)

A callback class that the `Database.deleteAsync` method references. Salesforce calls this class after the remote `deleteAsync` operation is completed. This class provides the compensating transaction in the completion context of the delete operation. Extend this class to define the actions to execute after the remote delete operation finishes execution.

[AsyncSaveCallback Class](#)

A callback class that the `Database.insertAsync` or `Database.updateAsync` method references. Salesforce calls this class after the remote operation is completed. This class provides the compensating transaction in the completion context of the insert or update operation. Extend this class to define the actions to execute after the remote insert or update operation finishes execution.

[AuthenticationCapability Enum](#)

Specifies the types of authentication that can be used to access the external system.

[AuthenticationProtocol Enum](#)

Determines what type of credentials are used to authenticate to the external system.

[Capability Enum](#)

Declares which functional operations the external system supports. Also specifies required endpoint settings for the external data source definition.

[Column Class](#)

Describes a column on a `DataSource.Table`. This class extends the `DataSourceUtil` class and inherits its methods.

[ColumnSelection Class](#)

Identifies the list of columns to return during a query or search.

[Connection Class](#)

Extend this class to enable your Salesforce org to sync the external system's schema and to handle queries, searches, and write operations (upsert and delete) of the external data. This class extends the `DataSourceUtil` class and inherits its methods.

[ConnectionParams Class](#)

Contains the credentials for authenticating to the external system.

[DataSourceUtil Class](#)

Parent class for the `DataSource.Provider`, `DataSource.Connection`, `DataSource.Table`, and `DataSource.Column` classes.

[DataType Enum](#)

Specifies the data types that are supported by the Apex Connector Framework.

[DeleteContext Class](#)

An instance of `DeleteContext` is passed to the `deleteRows()` method on your `Database.Connection` class. The class provides context information about the delete request to the implementor of `deleteRows()`.

[DeleteResult Class](#)

Represents the result of a delete operation on an sObject record. The result is returned by the `DataSource.deleteRows` method of the `DataSource.Connection` class.

[Filter Class](#)

Represents a `WHERE` clause in a SOSL or SOQL query.

[FilterType Enum](#)

Referenced by the `type` property on a `DataSource.Filter`.

### IdentityType Enum

Determines which set of credentials is used to authenticate to the external system.

### Order Class

Contains details about how to sort the rows in the result set. Equivalent to an `ORDER BY` statement in a SOQL query.

### OrderDirection Enum

Specifies the direction for sorting rows based on column values.

### Provider Class

Extend this base class to create a custom adapter for Salesforce Connect. The class informs Salesforce of the functional and authentication capabilities that are supported by or required to connect to the external system. This class extends the `DataSourceUtil` class and inherits its methods.

### QueryAggregation Enum

Specifies how to aggregate a column in a query.

### QueryContext Class

An instance of `QueryContext` is provided to the `query` method on your `DataSource.Connection` class. The instance corresponds to a SOQL request.

### QueryUtils Class

Contains helper methods to locally filter, sort, and apply limit and offset clauses to data rows. This helper class is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

### ReadContext Class

Abstract base class for the `QueryContext` and `SearchContext` classes.

### SearchContext Class

An instance of `SearchContext` is provided to the `search` method on your `DataSource.Connection` class. The instance corresponds to a search or SOSL request.

### SearchUtils Class

Helper class for implementing search on a custom adapter for Salesforce Connect.

### Table Class

Describes a table on an external system that the Salesforce Connect custom adapter connects to. This class extends the `DataSourceUtil` class and inherits its methods.

### TableResult Class

Contains the results of a search or query.

### TableSelection Class

Contains a breakdown of the SOQL or SOSL query. Its properties represent the FROM, ORDER BY, SELECT, and WHERE clauses in the query.

### UpsertContext Class

An instance of `UpsertContext` is passed to the `upsertRows()` method on your `DataSource.Connection` class. This class provides context information about the upsert request to the implementor of `upsertRows()`.

### UpsertResult Class

Represents the result of an upsert operation on an external object record. The result is returned by the `upsertRows` method of the `DataSource.Connection` class.

### DataSource Exceptions

The `DataSource` namespace contains exception classes.

## AsyncDeleteCallback Class

A callback class that the `Database.deleteAsync` method references. Salesforce calls this class after the remote `deleteAsync` operation is completed. This class provides the compensating transaction in the completion context of the delete operation. Extend this class to define the actions to execute after the remote delete operation finishes execution.

### Namespace

[DataSource](#)

#### IN THIS SECTION:

[AsyncDeleteCallback Methods](#)

### AsyncDeleteCallback Methods

The following are methods for `AsyncDeleteCallback`.

#### IN THIS SECTION:

[processDelete\(deleteResult\)](#)

Override this method to define actions that Salesforce executes after a remote `Database.deleteAsync` operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that's stored in the Salesforce org..

#### **processDelete (deleteResult)**

Override this method to define actions that Salesforce executes after a remote `Database.deleteAsync` operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that's stored in the Salesforce org..

#### Signature

```
public void processDelete(Database.DeleteResult deleteResult)
```

#### Parameters

*deleteResult*

Type: [Database.DeleteResult](#)

The result of the asynchronous delete operation.

#### Return Value

Type: void

## AsyncSaveCallback Class

A callback class that the `Database.insertAsync` or `Database.updateAsync` method references. Salesforce calls this class after the remote operation is completed. This class provides the compensating transaction in the completion context of the insert or update operation. Extend this class to define the actions to execute after the remote insert or update operation finishes execution.

## Namespace

[DataSource](#)

IN THIS SECTION:

[AsyncSaveCallback Methods](#)

## AsyncSaveCallback Methods

The following are methods for `AsyncSaveCallback`.

IN THIS SECTION:

[processSave\(saveResult\)](#)

Override this method to define actions that Salesforce executes after the remote `Database.insertAsync` or `Database.updateAsync` operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that's stored in the Salesforce org.

### **processSave (saveResult)**

Override this method to define actions that Salesforce executes after the remote `Database.insertAsync` or `Database.updateAsync` operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that's stored in the Salesforce org.

Signature

```
public void processSave(Database.SaveResult saveResult)
```

Parameters

*saveResult*

Type: [Database.SaveResult](#)

The result of the asynchronous insert or update operation.

Return Value

Type: void

## AuthenticationCapability Enum

Specifies the types of authentication that can be used to access the external system.

## Usage

The `DataSource.Provider` class returns `DataSource.AuthenticationCapability` enum values. The returned values determine which authentication settings are available on the external data source definition in Salesforce.

If you set up callouts in your `DataSource.Connection` class, you can specify the callout endpoints as named credentials instead of URLs. If you do so for all callouts, return `ANONYMOUS` as the sole entry in the list of data source authentication capabilities. That way,

the external data source definition doesn't require authentication settings. Salesforce manages all authentication for Apex callouts that specify a named credential as the callout endpoint so that your code doesn't have to.

## Enum Values

The following are the values of the `DataSource.AuthenticationCapability` enum.

Value	Description
ANONYMOUS	No credentials are required to authenticate to the external system.
BASIC	A username and password can be used to authenticate to the external system.
CERTIFICATE	A security certificate can be supplied when establishing each connection to the external system.
OAUTH	OAuth can be used to authenticate to the external system.

## AuthenticationProtocol Enum

Determines what type of credentials are used to authenticate to the external system.

### Enum Values

The following are the values of the `DataSource.AuthenticationProtocol` enum.

Value	Description
NONE	No credentials are used to authenticate to the external system.
OAUTH	OAuth 2.0 is used to authenticate to the external system.
PASSWORD	A username and password are used to authenticate to the external system.

## Capability Enum

Declares which functional operations the external system supports. Also specifies required endpoint settings for the external data source definition.

### Usage

The `DataSource.Provider` class returns `DataSource.Capability` enum values, which:

- Specify the functional capabilities of the external system.
- Determine which endpoint settings are available on the external data source definition in Salesforce.

### Enum Values

The following are the values of the `DataSource.Capability` enum.

Value	Description
QUERY_PAGINATION_SERVER_DRIVEN	<p>With server-driven paging, the external system determines the page sizes and batch boundaries. The external system's paging settings can optimize the external system's performance and improve the load times for external objects in your org. Also, the external data set can change while your users or the Lightning platform are paging through the result set. Typically, server-driven paging adjusts batch boundaries to accommodate changing data sets more effectively than client-driven paging.</p> <p>If you enable server-driven paging on an external data source, Salesforce ignores the requested page sizes, including the default <code>queryMore()</code> batch size of 500 rows. The pages returned by the external system determine the batches, but each page can't exceed 2,000 rows. Also, the Apex code must generate a query token and use it to determine and fetch the next batch of results.</p>
QUERY_TOTAL_SIZE	The external system can provide the total number of rows that meet the query criteria, even when requested to return a smaller batch size. This capability enables you to simplify how you paginate results by using <code>queryMore()</code> .
REQUIRE_ENDPOINT	Requires the administrator to specify the endpoint in the URL field in the external data source definition.
REQUIRE_HTTPS	Requires the endpoint URL to use secure HTTP. If <code>REQUIRE_ENDPOINT</code> isn't declared, <code>REQUIRE_HTTPS</code> is ignored.
ROW_CREATE	Allows creating of external data.
ROW_DELETE	Allows deleting external data.
ROW_QUERY	Allows API and SOQL queries of the external data. Also allows reports on the external objects.
ROW_UPDATE	Allows updating external data.
SEARCH	<p>Allows SOSL and Salesforce searches of the external data.</p> <p>When the custom adapter declares the <code>SEARCH</code> capability, you can control which external objects are searchable by selecting or deselecting <b>Allow Search</b> on each external object. However, syncing always overwrites the external object's search status to match the search status of the external data source.</p> <p>Only text, text area, and long text area fields on external objects can be searched. If an external object has no searchable fields, searches on that object return no records.</p>

## SEE ALSO:

[Salesforce Help: Validate and Sync an External Data Source](#)

## Column Class

Describes a column on a `DataSource.Table`. This class extends the `DataSourceUtil` class and inherits its methods.

## Namespace

[DataSource](#)

## Usage

A list of column metadata is provided by the `DataSource.Connection` class when the `sync()` method is invoked. Each column can become a field on an external object.

The metadata is stored in Salesforce. Updating the Apex code to return new or updated values for the column metadata doesn't automatically update the stored metadata in Salesforce.

### IN THIS SECTION:

[Column Properties](#)

[Column Methods](#)

## Column Properties

The following are properties for `Column`.

### IN THIS SECTION:

[decimalPlaces](#)

If the data type is numeric, the number of decimal places to the right of the decimal point.

[description](#)

Description of what the column represents.

[filterable](#)

Whether a result set can be filtered based on the values of the column.

[label](#)

User-friendly name for the column that appears in the Salesforce user interface.

[length](#)

If the column is a string data type, the number of characters in the column. If the column is a numeric data type, the total number of digits on both sides of the decimal point, but excluding the decimal point.

[name](#)

Name of the column in the external system.

[referenceTargetField](#)

API name of the custom field on the parent object whose values are compared against this column's values. Matching values identify related records in an indirect lookup relationship. Applies only when the column's data type is `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.

[referenceTo](#)

API name of the parent object in the relationship that's represented by this column. Applies only when the column's data type is `LOOKUP_TYPE`, `EXTERNAL_LOOKUP_TYPE`, or `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.

[sortable](#)

Whether a result set can be sorted based on the values of the column via an `ORDER BY` clause.

**type**

Data type of the column.

**decimalPlaces**

If the data type is numeric, the number of decimal places to the right of the decimal point.

Signature

```
public Integer decimalPlaces {get; set;}
```

Property Value

Type: [Integer](#)

**description**

Description of what the column represents.

Signature

```
public String description {get; set;}
```

Property Value

Type: [String](#)

**filterable**

Whether a result set can be filtered based on the values of the column.

Signature

```
public Boolean filterable {get; set;}
```

Property Value

Type: [Boolean](#)

**label**

User-friendly name for the column that appears in the Salesforce user interface.

Signature

```
public String label {get; set;}
```

Property Value

Type: [String](#)

**length**

If the column is a string data type, the number of characters in the column. If the column is a numeric data type, the total number of digits on both sides of the decimal point, but excluding the decimal point.

Signature

```
public Integer length {get; set;}
```

Property Value

Type: [Integer](#)

**name**

Name of the column in the external system.

Signature

```
public String name {get; set;}
```

Property Value

Type: [String](#)

**referenceTargetField**

API name of the custom field on the parent object whose values are compared against this column's values. Matching values identify related records in an indirect lookup relationship. Applies only when the column's data type is `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.

Signature

```
public String referenceTargetField {get; set;}
```

Property Value

Type: [String](#)

**referenceTo**

API name of the parent object in the relationship that's represented by this column. Applies only when the column's data type is `LOOKUP_TYPE`, `EXTERNAL_LOOKUP_TYPE`, or `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.

Signature

```
public String referenceTo {get; set;}
```

Property Value

Type: [String](#)

**sortable**

Whether a result set can be sorted based on the values of the column via an `ORDER BY` clause.

Signature

```
public Boolean sortable {get; set;}
```

Property Value

Type: [Boolean](#)

**type**

Data type of the column.

Signature

```
public DataSource.DataType type {get; set;}
```

Property Value

Type: [DataSource.DataType](#)

**Column Methods**

The following are methods for `Column`.

**IN THIS SECTION:**

[boolean\(name\)](#)

Returns a new column of data type `BOOLEAN_TYPE`.

[externalLookup\(name, domain\)](#)

Returns a new column of data type `EXTERNAL_LOOKUP_TYPE`.

[get\(name, label, description, isSortable, isFilterable, type, length, decimalPlaces, referenceTo, referenceTargetField\)](#)

Returns a new column with the ten specified `Column` property values.

[get\(name, label, description, isSortable, isFilterable, type, length, decimalPlaces\)](#)

Returns a new column with the eight specified `Column` property values.

[get\(name, label, description, isSortable, isFilterable, type, length\)](#)

Returns a new column with the seven specified `Column` property values.

[indirectLookup\(name, domain, targetField\)](#)

Returns a new column of data type `INDIRECT_LOOKUP_TYPE`.

[integer\(name, length\)](#)

Returns a new numeric column with no decimal places using the specified name and length.

[lookup\(name, domain\)](#)

Returns a new column of data type `LOOKUP_TYPE`.

[number\(name, length, decimalPlaces\)](#)

Returns a new column of data type `NUMBER_TYPE`.

[text\(name, label, length\)](#)

Returns a new column of data type `STRING_SHORT_TYPE` or `STRING_LONG_TYPE`, with the specified name, label, and length.

[text\(name, length\)](#)

Returns a new column of data type `STRING_SHORT_TYPE` or `STRING_LONG_TYPE`, with the specified name and length.

[text\(name\)](#)

Returns a new column of data type `STRING_SHORT_TYPE` with the specified name and the length of 255 characters.

[textarea\(name\)](#)

Returns a new column of data type `STRING_LONG_TYPE` with the specified name and the length of 32,000 characters.

[url\(name, length\)](#)

Returns a new column of data type `URL_TYPE` with the specified name and length.

[url\(name\)](#)

Returns a new column of data type `URL_TYPE` with the specified name and the length of 1,000 characters.

### **boolean (name)**

Returns a new column of data type `BOOLEAN_TYPE`.

Signature

```
public static DataSource.Column boolean(String name)
```

Parameters

*name*

Type: [String](#)

Name of the column.

Return Value

Type: [DataSource.Column](#)

### **externalLookup (name, domain)**

Returns a new column of data type `EXTERNAL_LOOKUP_TYPE`.

Signature

```
public static DataSource.Column externalLookup(String name, String domain)
```

Parameters

*name*

Type: [String](#)

Name of the column.

*domain*

Type: [String](#)

API name of the parent object in the external lookup relationship.

Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.EXTERNAL_LOOKUP_TYPE
length	255
decimalPlaces	0
referenceTo	<i>domain</i>
referenceTargetField	null

**get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces, referenceTo, referenceTargetField)**

Returns a new column with the ten specified Column property values.

Signature

```
public static DataSource.Column get(String name, String label, String description,
Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length,
Integer decimalPlaces, String referenceTo, String referenceTargetField)
```

Parameters

See [Column Properties](#) on page 1912 for information about each parameter.

*name*

Type: [String](#)

*label*

Type: [String](#)

*description*

Type: [String](#)

*isSortable*  
Type: [Boolean](#)

*isFilterable*  
Type: [Boolean](#)

*type*  
Type: [DataSource.DataType](#)

*length*  
Type: [Integer](#)

*decimalPlaces*  
Type: [Integer](#)

*referenceTo*  
Type: [String](#)

*referenceTargetField*  
Type: [String](#)

Return Value

Type: [DataSource.Column](#)

**get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces)**

Returns a new column with the eight specified `Column` property values.

Signature

```
public static DataSource.Column get(String name, String label, String description,  
Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length,  
Integer decimalPlaces)
```

Parameters

See [Column Properties](#) on page 1912 for information about each parameter.

*name*  
Type: [String](#)

*label*  
Type: [String](#)

*description*  
Type: [String](#)

*isSortable*  
Type: [Boolean](#)

*isFilterable*  
Type: [Boolean](#)

*type*  
Type: [DataSource.DataType](#)

*length*

Type: [Integer](#)

*decimalPlaces*

Type: [Integer](#)

Return Value

Type: [DataSource.Column](#)

**get(name, label, description, isSortable, isFilterable, type, length)**

Returns a new column with the seven specified `Column` property values.

Signature

```
public static DataSource.Column get(String name, String label, String description,  
Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length)
```

Parameters

See [Column Properties](#) on page 1912 for information about each parameter.

*name*

Type: [String](#)

*label*

Type: [String](#)

*description*

Type: [String](#)

*isSortable*

Type: [Boolean](#)

*isFilterable*

Type: [Boolean](#)

*type*

Type: [DataSource.DataType](#)

*length*

Type: [Integer](#)

Return Value

Type: [DataSource.Column](#)

**indirectLookup(name, domain, targetField)**

Returns a new column of data type `INDIRECT_LOOKUP_TYPE`.

## Signature

```
public static DataSource.Column indirectLookup(String name, String domain, String targetField)
```

## Parameters

*name*Type: [String](#)

Name of the column.

*domain*Type: [String](#)

API name of the parent object in the indirect lookup relationship.

*targetField*Type: [String](#)

API name of the custom field on the parent object whose values are compared against this column's values. Matching values identify related records in an indirect lookup relationship.

## Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.INDIRECT_LOOKUP_TYPE
length	255
decimalPlaces	0
referenceTo	<i>domain</i>
referenceTargetField	<i>targetField</i>

**integer (name, length)**

Returns a new numeric column with no decimal places using the specified name and length.

## Signature

```
public static DataSource.Column integer(String name, Integer length)
```

## Parameters

*name*Type: [String](#)

The column name.

*length*Type: [Integer](#)

The column length.

## Return Value

Type: [DataSource.Column](#)**lookup(name, domain)**

Returns a new column of data type LOOKUP\_TYPE.

## Signature

```
public static DataSource.Column lookup(String name, String domain)
```

## Parameters

*name*Type: [String](#)

Name of the column.

*domain*Type: [String](#)

API name of the parent object in the lookup relationship.

## Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.LOOKUP_TYPE
length	255

Property	Value
decimalPlaces	0
referenceTo	<i>domain</i>
referenceTargetField	null

### **number(name, length, decimalPlaces)**

Returns a new column of data type NUMBER\_TYPE.

#### Signature

```
public static DataSource.Column number(String name, Integer length, Integer decimalPlaces)
```

#### Parameters

See [Column Properties](#) on page 1912 for information about each parameter.

*name*

Type: [String](#)

*length*

Type: [Integer](#)

*decimalPlaces*

Type: [Integer](#)

#### Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.NUMBER_TYPE
length	<i>length</i>
decimalPlaces	<i>decimalPlaces</i>

**text (name, label, length)**

Returns a new column of data type `STRING_SHORT_TYPE` or `STRING_LONG_TYPE`, with the specified name, label, and length.

Signature

```
public static DataSource.Column text(String name, String label, Integer length)
```

Parameters

*name*

Type: [String](#)

Name of the column.

*label*

Type: [String](#)

User-friendly name for the column that appears in the Salesforce user interface.

*length*

Type: [Integer](#)

Number of characters allowed in the column.

Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>label</i>
description	<i>label</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.STRING_SHORT_TYPE if <i>length</i> is 255 or less DataSource.DataType.STRING_LONG_TYPE if <i>length</i> is greater than 255
length	<i>length</i>
decimalPlaces	0

**text (name, length)**

Returns a new column of data type `STRING_SHORT_TYPE` or `STRING_LONG_TYPE`, with the specified name and length.

Signature

```
public static DataSource.Column text(String name, Integer length)
```

## Parameters

*name*Type: [String](#)

Name of the column.

*length*Type: [Integer](#)

Number of characters allowed in the column.

## Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.STRING_SHORT_TYPE if <i>length</i> is 255 or less DataSource.DataType.STRING_LONG_TYPE if <i>length</i> is greater than 255
length	<i>length</i>
decimalPlaces	0

**text (name)**Returns a new column of data type `STRING_SHORT_TYPE` with the specified name and the length of 255 characters.

## Signature

```
public static DataSource.Column text(String name)
```

## Parameters

*name*Type: [String](#)

Name of the column.

Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.STRING_SHORT_TYPE
length	255
decimalPlaces	0

### **textarea (name)**

Returns a new column of data type `STRING_LONG_TYPE` with the specified name and the length of 32,000 characters.

Signature

```
public static DataSource.Column textarea(String name)
```

Parameters

*name*

Type: [String](#)

Name of the column.

Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.STRING_LONG_TYPE

Property	Value
length	32000
decimalPlaces	0

**url (name, length)**

Returns a new column of data type `URL_TYPE` with the specified name and length.

Signature

```
public static DataSource.Column url(String name, Integer length)
```

Parameters

*name*

Type: [String](#)

Name of the column.

*length*

Type: [Integer](#)

Number of characters allowed in the column.

Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	<code>DataSource.DataType.URL_TYPE</code>
length	<i>length</i>
decimalPlaces	0

**url (name)**

Returns a new column of data type `URL_TYPE` with the specified name and the length of 1,000 characters.

Signature

```
public static DataSource.Column url(String name)
```

Parameters

*name*

Type: [String](#)

Name of the column.

Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.URL_TYPE
length	1000
decimalPlaces	0

## ColumnSelection Class

Identifies the list of columns to return during a query or search.

### Namespace

[DataSource Namespace](#)

### Usage

This class is associated with the `SELECT` clause for a SOQL query, or the `RETURNING` clause for a SOSL query.

IN THIS SECTION:

[ColumnSelection Properties](#)

## ColumnSelection Properties

The following are properties for `ColumnSelection`.

## IN THIS SECTION:

[aggregation](#)

How to aggregate the column's data.

[columnName](#)

Name of the selected column.

[tableName](#)

Name of the column's table.

**aggregation**

How to aggregate the column's data.

Signature

```
public DataSource.QueryAggregation aggregation {get; set;}
```

Property Value

Type: [DataSource.QueryAggregation](#)

**columnName**

Name of the selected column.

Signature

```
public String columnName {get; set;}
```

Property Value

Type: [String](#)

**tableName**

Name of the column's table.

Signature

```
public String tableName {get; set;}
```

Property Value

Type: [String](#)

## Connection Class

Extend this class to enable your Salesforce org to sync the external system's schema and to handle queries, searches, and write operations (upsert and delete) of the external data. This class extends the `DataSourceUtil` class and inherits its methods.

## Namespace

[DataSource](#)

## Usage

Your `DataSource.Connection` and `DataSource.Provider` classes compose a custom adapter for Salesforce Connect. Changing the `sync` method on the `DataSource.Connection` class doesn't automatically resync any external objects.

## Example

```
global class SampleDataSourceConnection extends DataSource.Connection {
    global SampleDataSourceConnection(DataSource.ConnectionParams connectionParams) {
    }

    override global List<DataSource.Table> sync() {
        List<DataSource.Table> tables = new List<DataSource.Table>();
        List<DataSource.Column> columns;
        columns = new List<DataSource.Column>();
        columns.add(DataSource.Column.text('Name', 255));
        columns.add(DataSource.Column.text('ExternalId', 255));
        columns.add(DataSource.Column.url('DisplayUrl'));
        tables.add(DataSource.Table.get('Sample', 'Title', columns));
        return tables;
    }

    override global DataSource.TableResult query(DataSource.QueryContext c) {
        return DataSource.TableResult.get(c, DataSource.QueryUtils.process(c, getRows()));
    }

    override global List<DataSource.TableResult> search(DataSource.SearchContext c) {

        List<DataSource.TableResult> results = new List<DataSource.TableResult>();
        for (DataSource.TableSelection tableSelection : c.tableSelections) {
            results.add(DataSource.TableResult.get(tableSelection, getRows()));
        }
        return results;
    }

    // Helper method to get record values from the external system for the Sample table.
    private List<Map<String, Object>> getRows () {
        // Get row field values for the Sample table from the external system via a callout.

        HttpResponse response = makeGetCallout();
        // Parse the JSON response and populate the rows.
        Map<String, Object> m = (Map<String, Object>)JSON.deserializeUntyped(
            response.getBody());
        Map<String, Object> error = (Map<String, Object>)m.get('error');
        if (error != null) {
            throwException(string.valueOf(error.get('message')));
        }
        List<Map<String, Object>> rows = new List<Map<String, Object>>();
    }
}
```

```

List<Object> jsonRows = (List<Object>)m.get('value');
if (jsonRows == null) {
    rows.add(foundRow(m));
} else {
    for (Object jsonRow : jsonRows) {
        Map<String, Object> row = (Map<String, Object>)jsonRow;
        rows.add(foundRow(row));
    }
}
return rows;
}

global override List<DataSource.UpsertResult> upsertRows (DataSource.UpsertContext
    context) {
    if (context.tableSelected == 'Sample') {
        List<DataSource.UpsertResult> results = new List<DataSource.UpsertResult>();
        List<Map<String, Object>> rows = context.rows;

        for (Map<String, Object> row : rows){
            // Make a callout to insert or update records in the external system.
            HttpResponse response;
            // Determine whether to insert or update a record.
            if (row.get('ExternalId') == null){
                // Send a POST HTTP request to insert new external record.
                // Make an Apex callout and get HttpResponse.
                response = makePostCallout(
                    '{"name":"' + row.get('Name') + '", "ExternalId":"' +
                    row.get('ExternalId') + '"}');
            }
            else {
                // Send a PUT HTTP request to update an existing external record.
                // Make an Apex callout and get HttpResponse.
                response = makePutCallout(
                    '{"name":"' + row.get('Name') + '", "ExternalId":"' +
                    row.get('ExternalId') + '"',
                    String.valueOf(row.get('ExternalId')));
            }

            // Check the returned response.
            // First, deserialize it.
            Map<String, Object> m = (Map<String, Object>)JSON.deserializeUntyped(
                response.getBody());
            if (response.getStatusCode() == 200){
                results.add(DataSource.UpsertResult.success(
                    String.valueOf(m.get('id'))));
            }
            else {
                results.add(DataSource.UpsertResult.failure(
                    String.valueOf(m.get('id')),
                    'The callout resulted in an error: ' +
                    response.getStatusCode()));
            }
        }
        return results;
    }
}

```

```

    }
    return null;
}

global override List<DataSource.DeleteResult> deleteRows(DataSource.DeleteContext
    context) {
    if (context.tableSelected == 'Sample'){
        List<DataSource.DeleteResult> results = new List<DataSource.DeleteResult>();
        for (String externalId : context.externalIds){
            HttpResponse response = makeDeleteCallout(externalId);
            if (response.getStatusCode() == 200){
                results.add(DataSource.DeleteResult.success(externalId));
            }
            else {
                results.add(DataSource.DeleteResult.failure(externalId,
                    'Callout delete error:'
                    + response.getBody()));
            }
        }
        return results;
    }
    return null;
}

// Helper methods

// Make a GET callout

        return response;
    }
}

```

IN THIS SECTION:

[Connection Methods](#)

## Connection Methods

The following are methods for `Connection`.

IN THIS SECTION:

[deleteRows\(deleteContext\)](#)

Invoked when external object records are deleted via the Salesforce user interface, APIs, or Apex.

[query\(queryContext\)](#)

Invoked by a SOQL query of an external object. A SOQL query is generated and executed when a user visits an external object's list view or record detail page in Salesforce. Returns the results of the query.

[search\(searchContext\)](#)

Invoked by a SOSL query of an external object or when a user performs a Salesforce global search that also searches external objects. Returns the results of the query.

[sync\(\)](#)

Invoked when an administrator clicks **Validate and Sync** on the external data source detail page. Returns a list of tables that describe the external system's schema.

[upsertRows\(upsertContext\)](#)

Invoked when external object records are created or updated via the Salesforce user interface, APIs, or Apex.

### **deleteRows (deleteContext)**

Invoked when external object records are deleted via the Salesforce user interface, APIs, or Apex.

Signature

```
public List<DataSource.DeleteResult> deleteRows (DataSource.DeleteContext deleteContext)
```

## Parameters

*deleteContext*Type: [DataSource.DeleteContext](#)

Contains context information about the delete request.

## Return Value

Type: List<[DataSource.DeleteResult](#)>

The results of the delete operation.

**query (queryContext)**

Invoked by a SOQL query of an external object. A SOQL query is generated and executed when a user visits an external object's list view or record detail page in Salesforce. Returns the results of the query.

## Signature

```
public DataSource.TableResult query(DataSource.QueryContext queryContext)
```

## Parameters

*queryContext*Type: [DataSource.QueryContext](#)

Represents the query to run against a data table.

## Return Value

Type: [DataSource.TableResult](#)**search (searchContext)**

Invoked by a SOSL query of an external object or when a user performs a Salesforce global search that also searches external objects. Returns the results of the query.

## Signature

```
public List<DataSource.TableResult> search(DataSource.SearchContext searchContext)
```

## Parameters

*searchContext*Type: [DataSource.SearchContext](#)

Represents the query to run against an external data table.

## Return Value

Type: List<[DataSource.TableResult](#)>

**sync ()**

Invoked when an administrator clicks **Validate and Sync** on the external data source detail page. Returns a list of tables that describe the external system's schema.

Signature

```
public List<DataSource.Table> sync()
```

Return Value

Type: List<DataSource.Table>

Each returned table can be used to create an external object in Salesforce. On the Validate External Data Source page, the administrator views the list of returned tables and selects which tables to sync. When the administrator clicks **Sync**, an external object is created for each selected table. Each column within the selected tables also becomes a field in the external object.

**upsertRows (upsertContext)**

Invoked when external object records are created or updated via the Salesforce user interface, APIs, or Apex.

Signature

```
public List<DataSource.UpsertResult> upsertRows (DataSource.UpsertContext upsertContext)
```

Parameters

*upsertContext*

Type: DataSource.UpsertContext

Contains context information about the upsert request.

Return Value

Type: List<DataSource.UpsertResult>

The results of the upsert operation.

## ConnectionParams Class

Contains the credentials for authenticating to the external system.

### Namespace

[DataSource](#)

### Usage

If your extension of the [DataSource.Provider](#) class returns [DataSource.AuthenticationCapability](#) values that indicate support for authentication, the [DataSource.Connection](#) class is instantiated with a [DataSource.ConnectionParams](#) instance in the constructor.

The authentication credentials in the `DataSource.ConnectionParams` instance depend on the `Identity Type` field of the external data source definition in Salesforce.

- If `Identity Type` is set to `Named Principal`, the credentials come from the external data source definition.
- If `Identity Type` is set to `Per User`:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user's authentication settings for the external system.
  - For administrative connections, such as syncing the external system's schema, the credentials come from the external data source definition.

The values in this class can appear in debug logs and can be accessed by users who have the "Author Apex" permission. If you require better security, we recommend that you specify named credentials instead of URLs as your Apex callout endpoints. Salesforce manages all authentication for Apex callouts that specify a named credential as the callout endpoint so that your code doesn't have to.

#### IN THIS SECTION:

[ConnectionParams Properties](#)

## ConnectionParams Properties

The following are properties for `ConnectionParams`.

#### IN THIS SECTION:

[certificateName](#)

The name of the certificate for establishing each connection to the external system.

[endpoint](#)

The URL of the external system.

[oauthToken](#)

The OAuth token that's issued by the external system.

[password](#)

The password for authenticating to the external system.

[principalType](#)

An instance of `DataSource.IdentityType`, which determines which set of credentials to use to access the external system.

[protocol](#)

The type of protocol that's used to authenticate to the external system.

[repository](#)

Reserved for future use.

[username](#)

The username for authenticating to the external system.

### **certificateName**

The name of the certificate for establishing each connection to the external system.

Signature

```
public String certificateName {get; set;}
```

Property Value

Type: [String](#)

The value comes from the external data source definition in Salesforce.

### **endpoint**

The URL of the external system.

Signature

```
public String endpoint {get; set;}
```

Property Value

Type: [String](#)

The value comes from the external data source definition in Salesforce.

### **oauthToken**

The OAuth token that's issued by the external system.

Signature

```
public String oauthToken {get; set;}
```

Property Value

Type: [String](#)

### **password**

The password for authenticating to the external system.

Signature

```
public String password {get; set;}
```

Property Value

Type: [String](#)

The value depends on the `Identity Type` field of the external data source definition in Salesforce.

- If `Identity Type` is set to `Named Principal`, the credentials come from the external data source definition.
- If `Identity Type` is set to `Per User`:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user's authentication settings for the external system.

- For administrative connections, such as syncing the external system’s schema, the credentials come from the external data source definition.

**principalType**

An instance of [DataSource.IdentityType](#), which determines which set of credentials to use to access the external system.

Signature

```
public DataSource.IdentityType principalType {get; set;}
```

Property Value

Type: [DataSource.IdentityType](#)

**protocol**

The type of protocol that’s used to authenticate to the external system.

Signature

```
public DataSource.AuthenticationProtocol protocol {get; set;}
```

Property Value

Type: [DataSource.AuthenticationProtocol](#)

**repository**

Reserved for future use.

Signature

```
public String repository {get; set;}
```

Property Value

Type: [String](#)

Reserved for future use.

**username**

The username for authenticating to the external system.

Signature

```
public String username {get; set;}
```

Property Value

Type: [String](#)

The value depends on the `Identity Type` field of the external data source definition in Salesforce.

- If `Identity Type` is set to `Named Principal`, the credentials come from the external data source definition.
- If `Identity Type` is set to `Per User`:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user's authentication settings for the external system.
  - For administrative connections, such as syncing the external system's schema, the credentials come from the external data source definition.

## DataSourceUtil Class

Parent class for the `DataSource.Provider`, `DataSource.Connection`, `DataSource.Table`, and `DataSource.Column` classes.

### Namespace

[DataSource](#)

IN THIS SECTION:

[DataSourceUtil Methods](#)

### DataSourceUtil Methods

The following are methods for `DataSourceUtil`.

IN THIS SECTION:

[logWarning\(message\)](#)

Logs the error message in the debug log.

[throwException\(message\)](#)

Throws a `DataSourceException` and displays the provided message to the user.

#### **logWarning (message)**

Logs the error message in the debug log.

Signature

```
public void logWarning (String message)
```

Parameters

*message*

Type: [String](#)

The error message.

Return Value

Type: void

### **throwException(message)**

Throws a `DataSourceException` and displays the provided message to the user.

Signature

```
public void throwException(String message)
```

Parameters

*message*

Type: [String](#)

Error message to display to the user.

Return Value

Type: void

## Data Type Enum

Specifies the data types that are supported by the Apex Connector Framework.

### Usage

The `DataSource.DataType` enum is referenced by the `type` property on the `DataSource.Column` class.

### Enum Values

The following are the values of the `DataSource.DataType` enum.

Value	Description
<code>BOOLEAN_TYPE</code>	Boolean
<code>DATETIME_TYPE</code>	Date/time
<code>EXTERNAL_LOOKUP_TYPE</code>	External lookup relationship
<code>INDIRECT_LOOKUP_TYPE</code>	Indirect lookup relationship
<code>LOOKUP_TYPE</code>	Lookup relationship
<code>NUMBER_TYPE</code>	Number
<code>STRING_LONG_TYPE</code>	Long text area
<code>STRING_SHORT_TYPE</code>	Text area
<code>URL_TYPE</code>	URL

## DeleteContext Class

An instance of `DeleteContext` is passed to the `deleteRows()` method on your `Database.Connection` class. The class provides context information about the delete request to the implementor of `deleteRows()`.

### Namespace

[DataSource](#)

### Usage

The Apex Connector Framework creates context for operations. Context is comprised of parameters about the operations, which other methods can use. An instance of the `DeleteContext` class packages these parameters into an object that can be used when a `deleteRows()` operation is initiated.

IN THIS SECTION:

[DeleteContext Properties](#)

### DeleteContext Properties

The following are properties for `DeleteContext`.

IN THIS SECTION:

[externalIds](#)

The external IDs of the rows representing external object records to delete.

[tableSelected](#)

The name of the table to delete rows from.

#### **externalIds**

The external IDs of the rows representing external object records to delete.

Signature

```
public List<String> externalIds {get; set;}
```

Property Value

Type: List<String>

#### **tableSelected**

The name of the table to delete rows from.

Signature

```
public String tableSelected {get; set;}
```

Property Value

Type: [String](#)

## DeleteResult Class

Represents the result of a delete operation on an sObject record. The result is returned by the `DataSource.deleteRows` method of the `DataSource.Connection` class.

## Namespace

[DataSource](#)

## Usage

A delete operation on external object records generates an array of objects of type `DataSource.DeleteResult`. Its methods create result records that indicate whether the delete operation succeeded or failed.

### IN THIS SECTION:

[DeleteResult Properties](#)

[DeleteResult Methods](#)

## DeleteResult Properties

The following are properties for `DeleteResult`.

### IN THIS SECTION:

[errorMessage](#)

The error message that's generated by a failed delete operation. Recorded with a result of type `DataSource.DeleteResult`.

[externalId](#)

The unique identifier of a row that represents an external object record to delete.

[success](#)

Indicates whether a delete operation succeeded or failed.

### **errorMessage**

The error message that's generated by a failed delete operation. Recorded with a result of type `DataSource.DeleteResult`.

Signature

```
public String errorMessage {get; set;}
```

Property Value

Type: [String](#)

**externalId**

The unique identifier of a row that represents an external object record to delete.

Signature

```
public String externalId {get; set;}
```

Property Value

Type: [String](#)

**success**

Indicates whether a delete operation succeeded or failed.

Signature

```
public Boolean success {get; set;}
```

Property Value

Type: [Boolean](#)

## DeleteResult Methods

The following are methods for `DeleteResult`.

### IN THIS SECTION:

[equals\(obj\)](#)

Maintains the integrity of lists of type `DeleteResult` by determining the equality of external objects in a list. This method is dynamic and is based on the `equals` method in Java.

[failure\(externalId, errorMessage\)](#)

Creates a delete result indicating the failure of a delete request for a given external ID.

[hashCode\(\)](#)

Maintains the integrity of lists of type `DeleteResult` by determining the uniqueness of the external object records in a list.

[success\(externalId\)](#)

Creates a delete result indicating the successful completion of a delete request for a given external ID.

**equals (obj)**

Maintains the integrity of lists of type `DeleteResult` by determining the equality of external objects in a list. This method is dynamic and is based on the `equals` method in Java.

Signature

```
public Boolean equals(Object obj)
```

## Parameters

*obj*Type: [Object](#)

External object whose key is to be validated.

For information about the `equals` method, see [Using Custom Types in Map Keys and Sets](#) on page 109.

## Return Value

Type: [Boolean](#)**failure (externalId, errorMessage)**

Creates a delete result indicating the failure of a delete request for a given external ID.

## Signature

```
public static DataSource.DeleteResult failure(String externalId, String errorMessage)
```

## Parameters

*externalId*Type: [String](#)

The unique identifier of the sObject record to delete.

*errorMessage*Type: [String](#)

The reason the delete operation failed.

## Return Value

Type: [DataSource.DeleteResult](#)

Status result of the delete operation.

**hashCode ()**Maintains the integrity of lists of type `DeleteResult` by determining the uniqueness of the external object records in a list.

## Signature

```
public Integer hashCode ()
```

## Return Value

Type: [Integer](#)**success (externalId)**

Creates a delete result indicating the successful completion of a delete request for a given external ID.

Signature

```
public static DataSource.DeleteResult success(String externalId)
```

Parameters

*externalId*

Type: [String](#)

The unique identifier of the sObject record to delete.

Return Value

Type: [DataSource.DeleteResult](#)

Status result of the delete operation for the sObject with the given external ID.

## Filter Class

Represents a `WHERE` clause in a SOSL or SOQL query.

## Namespace

[DataSource](#)

## Usage

Compound types require child filters. Specifically, the `subfilters` property can't be null if the `type` property is `NOT_`, `AND_`, or `OR_`.

IN THIS SECTION:

[Filter Properties](#)

## Filter Properties

The following are properties for `Filter`.

IN THIS SECTION:

[columnName](#)

Name of the column that's being evaluated in a simple comparative type of filter.

[columnValue](#)

Value that the filter compares records against in a simple comparative type of filter.

[subfilters](#)

List of subfilters for compound filter types, such as `NOT_`, `AND_`, and `OR_`.

[tableName](#)

Name of the table whose column is being evaluated in a simple comparative type of filter.

[type](#)

Type of filter operation that limits the returned data.

**columnName**

Name of the column that's being evaluated in a simple comparative type of filter.

Signature

```
public String columnName {get; set;}
```

Property Value

Type: [String](#)

**columnValue**

Value that the filter compares records against in a simple comparative type of filter.

Signature

```
public Object columnValue {get; set;}
```

Property Value

Type: Object

**subfilters**

List of subfilters for compound filter types, such as NOT\_, AND\_, and OR\_.

Signature

```
public List<DataSource.Filter> subfilters {get; set;}
```

Property Value

Type: [List<DataSource.Filter>](#)

**tableName**

Name of the table whose column is being evaluated in a simple comparative type of filter.

Signature

```
public String tableName {get; set;}
```

Property Value

Type: [String](#)

**type**

Type of filter operation that limits the returned data.

Signature

```
public DataSource.FilterType type {get; set;}
```

Property Value

Type: [DataSource.FilterType](#)

## FilterType Enum

Referenced by the `type` property on a `DataSource.Filter`.

### Usage

Determines how to limit the returned data.

### Enum Values

The following are the values of the `DataSource.FilterType` enum.

Value	Description
AND_	This compound filter type returns all rows that match all the subfilters.
CONTAINS	Simple comparative filter type.
ENDS_WITH	Simple comparative filter type.
EQUALS	Simple comparative filter type.
GREATER_THAN	Simple comparative filter type.
GREATER_THAN_OR_EQUAL_TO	Simple comparative filter type.
LESS_THAN	Simple comparative filter type.
LESS_THAN_OR_EQUAL_TO	Simple comparative filter type.
LIKE_	Simple comparative filter type.
NOT_	This compound filter type returns the rows that don't match the subfilter.
NOT_EQUALS	Simple comparative filter type.
OR_	This compound filter type returns all rows that match any of the subfilters.
STARTS_WITH	Simple comparative filter type.

## IdentityType Enum

Determines which set of credentials is used to authenticate to the external system.

### Usage

The relevant credentials are passed to your [DataSource.Connection](#) class.

## Enum Values

The following are the values of the `DataSource.IdentityType` enum.

Value	Description
<code>ANONYMOUS</code>	No credentials are used to authenticate to the external system.
<code>NAMED_USER</code>	The credentials in the external data source definition are used to authenticate to the external system, regardless of which user is accessing the external data from your organization.
<code>PER_USER</code>	For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user's authentication settings for the external system.  For administrative connections, such as syncing the external system's schema, the credentials come from the external data source definition.

## Order Class

Contains details about how to sort the rows in the result set. Equivalent to an `ORDER BY` statement in a SOQL query.

## Namespace

[DataSource](#)

## Usage

Used in the `order` property on the `DataSource.TableSelection` class.

IN THIS SECTION:

[Order Properties](#)

[Order Methods](#)

## Order Properties

The following are properties for `Order`.

IN THIS SECTION:

[columnName](#)

Name of the column whose values are used to sort the rows in the result set.

[direction](#)

Direction for sorting rows based on column values.

[tableName](#)

Name of the table whose column values are used to sort the rows in the result set.

**columnName**

Name of the column whose values are used to sort the rows in the result set.

Signature

```
public String columnName {get; set;}
```

Property Value

Type: [String](#)

**direction**

Direction for sorting rows based on column values.

Signature

```
public DataSource.OrderDirection direction {get; set;}
```

Property Value

Type: [DataSource.OrderDirection](#)

**tableName**

Name of the table whose column values are used to sort the rows in the result set.

Signature

```
public String tableName {get; set;}
```

Property Value

Type: [String](#)

## Order Methods

The following are methods for `Order`.

IN THIS SECTION:

[get\(tableName, columnName, direction\)](#)

Creates an instance of the [DataSource.Order](#) class.

**`get(tableName, columnName, direction)`**

Creates an instance of the [DataSource.Order](#) class.

### Signature

```
public static DataSource.Order get(String tableName, String columnName,
DataSource.OrderDirection direction)
```

### Parameters

**tableName**Type: [String](#)

Name of the table whose column values are used to sort the rows in the result set.

**columnName**Type: [String](#)

Name of the column whose values are used to sort the rows in the result set.

**direction**Type: [DataSource.OrderDirection](#)

Direction for sorting rows based on column values.

### Return Value

Type: [DataSource.Order](#)

## OrderDirection Enum

Specifies the direction for sorting rows based on column values.

### Usage

Used by the [direction](#) property on the [DataSource.Order](#) class.

### Enum Values

The following are the values of the `DataSource.OrderDirection` enum.

Value	Description
ASCENDING	Sort rows in ascending order (A–Z).
DESCENDING	Sort rows in descending order (Z–A).

## Provider Class

Extend this base class to create a custom adapter for Salesforce Connect. The class informs Salesforce of the functional and authentication capabilities that are supported by or required to connect to the external system. This class extends the `DataSourceUtil` class and inherits its methods.

### Namespace

[DataSource](#)

## Usage

Create an Apex class that extends `DataSource.Provider` to specify the following.

- The types of authentication that can be used to access the external system
- The features that are supported for the connection to the external system
- The Apex class that extends `DataSource.Connection` to sync the external system's schema and to handle the queries and searches of the external data

The values that are returned by the `DataSource.Provider` class determine which settings are available in the external data source definition in Salesforce. To access the external data source definition from Setup, enter *External Data Sources* in the `Quick Find` box, then select **External Data Sources**.

IN THIS SECTION:

[Provider Methods](#)

## Provider Methods

The following are methods for `Provider`.

IN THIS SECTION:

[getAuthenticationCapabilities\(\)](#)

Returns the types of authentication that can be used to access the external system.

[getCapabilities\(\)](#)

Returns the functional operations that the external system supports and the required endpoint settings for the external data source definition in Salesforce.

[getConnection\(connectionParams\)](#)

Returns a connection that points to an instance of the external data source.

### **getAuthenticationCapabilities()**

Returns the types of authentication that can be used to access the external system.

Signature

```
public List<DataSource.AuthenticationCapability> getAuthenticationCapabilities()
```

Return Value

Type: [List<DataSource.AuthenticationCapability>](#)

### **getCapabilities()**

Returns the functional operations that the external system supports and the required endpoint settings for the external data source definition in Salesforce.

Signature

```
public List<DataSource.Capability> getCapabilities()
```

Return Value

Type: [List<DataSource.Capability>](#)

### **getConnection(connectionParams)**

Returns a connection that points to an instance of the external data source.

Signature

```
public DataSource.Connection getConnection(DataSource.ConnectionParams connectionParams)
```

Parameters

*connectionParams*

Type: [DataSource.ConnectionParams](#)

Credentials for authenticating to the external system.

Return Value

Type: [DataSource.Connection](#)

## QueryAggregation Enum

Specifies how to aggregate a column in a query.

### Usage

Used by the [aggregation](#) property on the [DataSource.ColumnSelection](#) class.

### Enum Values

The following are the values of the `DataSource.QueryAggregation` enum.

Value	Description
AVG	Reserved for future use.
COUNT	Returns the number of rows that meet the query criteria.
MAX	Reserved for future use.
MIN	Reserved for future use.
NONE	No aggregation.
SUM	Reserved for future use.

## QueryContext Class

An instance of `QueryContext` is provided to the [query](#) method on your [DataSource.Connection](#) class. The instance corresponds to a SOQL request.

## Namespace

[DataSource](#)

IN THIS SECTION:

[QueryContext Properties](#)

[QueryContext Methods](#)

## QueryContext Properties

The following are properties for `QueryContext`.

IN THIS SECTION:

[queryMoreToken](#)

Query token that's used for server-driven paging to determine and fetch the subsequent batch of results.

[tableSelection](#)

Query details that represent the `FROM`, `ORDER BY`, `SELECT`, and `WHERE` clauses in a SOQL or SOSL query.

### **queryMoreToken**

Query token that's used for server-driven paging to determine and fetch the subsequent batch of results.

Signature

```
public String queryMoreToken {get; set;}
```

Property Value

Type: [String](#)

### **tableSelection**

Query details that represent the `FROM`, `ORDER BY`, `SELECT`, and `WHERE` clauses in a SOQL or SOSL query.

Signature

```
public DataSource.TableSelection tableSelection {get; set;}
```

Property Value

Type: [DataSource.TableSelection](#)

## QueryContext Methods

The following are methods for `QueryContext`.

## IN THIS SECTION:

[get\(metadata, offset, maxResults, tableSelection\)](#)

Creates an instance of the [QueryContext](#) class.

**get(metadata, offset, maxResults, tableSelection)**

Creates an instance of the [QueryContext](#) class.

## Signature

```
public static DataSource.QueryContext get(List<DataSource.Table> metadata, Integer offset, Integer maxResults, DataSource.TableSelection tableSelection)
```

## Parameters

*metadata*

Type: [List<DataSource.Table>](#)

List of table metadata that describes the external system's tables to query.

*offset*

Type: [Integer](#)

Used for client-driven paging. Specifies the starting row offset into the query's result set.

*maxResults*

Type: [Integer](#)

Used for client-driven paging. Specifies the maximum number of rows to return in each batch.

*tableSelection*

Type: [DataSource.TableSelection](#)

Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.

## Return Value

Type: [DataSource.QueryContext](#)

## QueryUtils Class

Contains helper methods to locally filter, sort, and apply limit and offset clauses to data rows. This helper class is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

## Namespace

[DataSource](#)

## Usage

The `DataSource.QueryUtils` class and its helper methods can process query results locally within your Salesforce org. This class is provided for your convenience to simplify the development of your Salesforce Connect custom adapter for initial tests. However, the `DataSource.QueryUtils` class and its methods aren't supported for use in production environments that use callouts to retrieve data from external systems. Complete the filtering and sorting on the external system before sending the query results to Salesforce.

When possible, use server-driven paging or another technique to have the external system determine the appropriate data subsets according to the limit and offset clauses in the query.

#### IN THIS SECTION:

[QueryUtils Methods](#)

## QueryUtils Methods

The following are methods for `QueryUtils`.

#### IN THIS SECTION:

[applyLimitAndOffset\(queryContext, rows\)](#)

Returns a subset of data rows after locally applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

[filter\(queryContext, rows\)](#)

Returns a subset of data rows after locally ordering and applying filters from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

[process\(queryContext, rows\)](#)

Returns data rows after locally filtering, sorting, ordering, and applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

[sort\(queryContext, rows\)](#)

Returns data rows after locally sorting and applying the order from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

### **applyLimitAndOffset(queryContext, rows)**

Returns a subset of data rows after locally applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

#### Signature

```
public static List<Map<String, Object>> applyLimitAndOffset (DataSource.QueryContext
queryContext, List<Map<String, Object>> rows)
```

#### Parameters

*queryContext*

Type: [DataSource.QueryContext](#)

Represents the query to run against a data table.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

#### Return Value

Type: [List<Map<String, Object>>](#)

**filter(queryContext, rows)**

Returns a subset of data rows after locally ordering and applying filters from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

## Signature

```
public static List<Map<String, Object>> filter(DataSource.QueryContext queryContext,  
List<Map<String, Object>> rows)
```

## Parameters

*queryContext*

Type: [DataSource.QueryContext](#)

Represents the query to run against a data table.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

## Return Value

Type: [List<Map<String, Object>>](#)

**process(queryContext, rows)**

Returns data rows after locally filtering, sorting, ordering, and applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

## Signature

```
public static List<Map<String, Object>> process(DataSource.QueryContext queryContext,  
List<Map<String, Object>> rows)
```

## Parameters

*queryContext*

Type: [DataSource.QueryContext](#)

Represents the query to run against a data table.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

## Return Value

Type: [List<Map<String, Object>>](#)

**sort(queryContext, rows)**

Returns data rows after locally sorting and applying the order from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

Signature

```
public static List<Map<String, Object>> sort(DataSource.QueryContext queryContext,  
List<Map<String, Object>> rows)
```

Parameters

*queryContext*

Type: [DataSource.QueryContext](#)

Represents the query to run against a data table.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

Return Value

Type: [List<Map<String, Object>>](#)

## ReadContext Class

Abstract base class for the `QueryContext` and `SearchContext` classes.

## Namespace

[DataSource](#)

IN THIS SECTION:

[ReadContext Properties](#)

## ReadContext Properties

The following are properties for `ReadContext`.

IN THIS SECTION:

[maxResults](#)

Maximum number of rows that the query can return.

[metadata](#)

Describes the external system's tables to query.

[offset](#)

The starting row offset into the query's result set. Used for client-driven paging.

**maxResults**

Maximum number of rows that the query can return.

Signature

```
public Integer maxResults {get; set;}
```

Property Value

Type: [Integer](#)

**metadata**

Describes the external system's tables to query.

Signature

```
public List<DataSource.Table> metadata {get; set;}
```

Property Value

Type: List<[DataSource.Table](#)>

**offset**

The starting row offset into the query's result set. Used for client-driven paging.

Signature

```
public Integer offset {get; set;}
```

Property Value

Type: [Integer](#)

## SearchContext Class

An instance of `SearchContext` is provided to the `search` method on your `DataSource.Connection` class. The instance corresponds to a search or SOSL request.

## Namespace

[DataSource](#)

IN THIS SECTION:

[SearchContext Constructors](#)

[SearchContext Properties](#)

## SearchContext Constructors

The following are constructors for `SearchContext`.

### IN THIS SECTION:

[SearchContext\(metadata, offset, maxResults, tableSelections, searchPhrase\)](#)

Creates an instance of the `SearchContext` class with the specified parameter values.

[SearchContext\(\)](#)

Creates an instance of the `SearchContext` class.

### **SearchContext(metadata, offset, maxResults, tableSelections, searchPhrase)**

Creates an instance of the `SearchContext` class with the specified parameter values.

#### Signature

```
public SearchContext(List<DataSource.Table> metadata, Integer offset, Integer maxResults,
List<DataSource.TableSelection> tableSelections, String searchPhrase)
```

#### Parameters

##### *metadata*

Type: `List<DataSource.Table>`

List of table metadata that describes the external system's tables to query.

##### *offset*

Type: `Integer`

Specifies the starting row offset into the query's result set.

##### *maxResults*

Type: `Integer`

Specifies the maximum number of rows to return in each batch.

##### *tableSelections*

Type: `List<DataSource.TableSelection>`

List of queries and their details. The details represent the `FROM`, `ORDER BY`, `SELECT`, and `WHERE` clauses in each SOQL or SOSL query.

##### *searchPhrase*

Type: `String`

The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

### **SearchContext ()**

Creates an instance of the `SearchContext` class.

#### Signature

```
public SearchContext ()
```

## SearchContext Properties

The following are properties for `SearchContext`.

### IN THIS SECTION:

#### [searchPhrase](#)

The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

#### [tableSelections](#)

List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

### **searchPhrase**

The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

Signature

```
public String searchPhrase {get; set;}
```

Property Value

Type: [String](#)

### **tableSelections**

List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

Signature

```
public List<DataSource.TableSelection> tableSelections {get; set;}
```

Property Value

Type: [List<DataSource.TableSelection>](#)

## SearchUtils Class

Helper class for implementing search on a custom adapter for Salesforce Connect.

### Namespace

[DataSource](#)

### Usage

We recommend that you develop your own search implementation that can search columns in addition to the designated name field.

### IN THIS SECTION:

#### [SearchUtils Methods](#)

## SearchUtils Methods

The following are methods for `SearchUtils`.

### IN THIS SECTION:

[searchByName\(searchDetails, connection\)](#)

Queries all the tables and returns each row whose designated name field contains the search phrase.

### **searchByName (searchDetails, connection)**

Queries all the tables and returns each row whose designated name field contains the search phrase.

### Signature

```
public static List<DataSource.TableResult> searchByName (DataSource.SearchContext
searchDetails, DataSource.Connection connection)
```

### Parameters

*searchDetails*

Type: [DataSource.SearchContext](#)

The `SearchContext` class that specifies which data to search and what to search for.

*connection*

Type: [DataSource.Connection](#)

The `DataSource.Connection` class that connects to the external system.

### Return Value

Type: [List<DataSource.TableResult>](#)

## Table Class

Describes a table on an external system that the Salesforce Connect custom adapter connects to. This class extends the `DataSourceUtil` class and inherits its methods.

## Namespace

[DataSource](#)

## Usage

A list of table metadata is provided by the `DataSource.Connection` class when the `sync()` method is invoked. Each table can become an external object in Salesforce.

The metadata is stored in Salesforce. Updating the Apex code to return new or updated values for the table metadata doesn't automatically update the stored metadata in Salesforce.

## IN THIS SECTION:

[Table Properties](#)[Table Methods](#)

## Table Properties

The following are properties for `Table`.

## IN THIS SECTION:

[columns](#)

List of table columns.

[description](#)

Description of what the table represents.

[labelPlural](#)

Plural form of the user-friendly name for the table. The `labelPlural` becomes the object's plural label in the Salesforce user interface.

[labelSingular](#)

Singular form of the user-friendly name for the table. The `labelSingular` becomes the object label in the Salesforce user interface. We recommend that you make object labels unique across all standard, custom, and external objects in the org.

[name](#)

Name of the table on the external system.

[nameColumn](#)

Name of the table column that becomes the name field of the external object when the administrator syncs the table.

### **columns**

List of table columns.

Signature

```
public List<DataSource.Column> columns {get; set;}
```

Property Value

Type: [List<DataSource.Column>](#)

### **description**

Description of what the table represents.

Signature

```
public String description {get; set;}
```

Property Value

Type: [String](#)

### **labelPlural**

Plural form of the user-friendly name for the table. The `labelPlural` becomes the object's plural label in the Salesforce user interface.

Signature

```
public String labelPlural {get; set;}
```

Property Value

Type: [String](#)

### **labelSingular**

Singular form of the user-friendly name for the table. The `labelSingular` becomes the object label in the Salesforce user interface. We recommend that you make object labels unique across all standard, custom, and external objects in the org.

Signature

```
public String labelSingular {get; set;}
```

Property Value

Type: [String](#)

### **name**

Name of the table on the external system.

Signature

```
public String name {get; set;}
```

Property Value

Type: [String](#)

### **nameColumn**

Name of the table column that becomes the name field of the external object when the administrator syncs the table.

Signature

```
public String nameColumn {get; set;}
```

Property Value

Type: [String](#)

## Table Methods

The following are methods for `Table`.

### IN THIS SECTION:

[get\(name, labelSingular, labelPlural, description, nameColumn, columns\)](#)

Returns the table metadata with the specified parameter values.

[get\(name, nameColumn, columns\)](#)

Returns the table metadata with the specified parameter values, using the name for the labels and description.

### **get(name, labelSingular, labelPlural, description, nameColumn, columns)**

Returns the table metadata with the specified parameter values.

#### Signature

```
public static DataSource.Table get(String name, String labelSingular, String labelPlural, String description, String nameColumn, List<DataSource.Column> columns)
```

#### Parameters

##### *name*

Type: [String](#)

Name of the external table.

##### *labelSingular*

Type: [String](#)

Singular form of the user-friendly name for the table. The `labelSingular` becomes the object label in the Salesforce user interface.

##### *labelPlural*

Type: [String](#)

Plural form of the user-friendly name for the table. The `labelPlural` becomes the object's plural label in the Salesforce user interface.

##### *description*

Type: [String](#)

Description of the external table.

##### *nameColumn*

Type: [String](#)

Name of the table column that becomes the name field of the external object when the administrator syncs the table.

##### *columns*

Type: [List<DataSource.Column>](#)

List of table columns.

#### Return Value

Type: [DataSource.Table](#)

**get(name, nameColumn, columns)**

Returns the table metadata with the specified parameter values, using the name for the labels and description.

Signature

```
public static DataSource.Table get(String name, String nameColumn,
List<DataSource.Column> columns)
```

Parameters

*name*

Type: [String](#)

Name of the external table.

*nameColumn*

Type: [String](#)

Name of the table column that becomes the name field of the external object when the administrator syncs the table.

*columns*

Type: List<[DataSource.Column](#)>

List of table columns.

Return Value

Type: [DataSource.Table](#)

The returned table metadata has these property values.

Property	Value
name	<i>name</i>
labelSingular	<i>name</i>
labelPlural	<i>name</i>
description	<i>name</i>
nameColumn	<i>nameColumn</i>
columns	<i>columns</i>

## TableResult Class

Contains the results of a search or query.

## Namespace

[DataSource](#)

## IN THIS SECTION:

[TableResult Properties](#)[TableResult Methods](#)

## TableResult Properties

The following are properties for `TableResult`.

## IN THIS SECTION:

[errorMessage](#)

Error message to display to the user.

[queryMoreToken](#)

Query token that's used for server-driven paging to determine and fetch the subsequent batch of results. This token is passed back to the Apex data source on subsequent queries in the `queryMoreToken` property on the `QueryContext`.

[rows](#)

Rows of data.

[success](#)

Whether the search or query was successful.

[tableName](#)

Name of the table that was queried.

[totalSize](#)

The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

### **errorMessage**

Error message to display to the user.

Signature

```
public String errorMessage {get; set;}
```

Property Value

Type: [String](#)

### **queryMoreToken**

Query token that's used for server-driven paging to determine and fetch the subsequent batch of results. This token is passed back to the Apex data source on subsequent queries in the `queryMoreToken` property on the `QueryContext`.

Signature

```
public String queryMoreToken {get; set;}
```

Property Value

Type: [String](#)

#### **rows**

Rows of data.

Signature

```
public List<Map<String, Object>> rows {get; set;}
```

Property Value

Type: [List<Map<String, Object>>](#)

#### **success**

Whether the search or query was successful.

Signature

```
public Boolean success {get; set;}
```

Property Value

Type: [Boolean](#)

#### **tableName**

Name of the table that was queried.

Signature

```
public String tableName {get; set;}
```

Property Value

Type: [String](#)

#### **totalSize**

The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

Signature

```
public Integer totalSize {get; set;}
```

Property Value

Type: [Integer](#)

## TableResult Methods

The following are methods for `TableResult`.

### IN THIS SECTION:

[error\(errorMessage\)](#)

Returns failed search or query results with the provided error message.

[get\(success, errorMessage, tableName, rows, totalSize\)](#)

Returns a subset of data rows in a `TableResult` with the provided property values.

[get\(success, errorMessage, tableName, rows\)](#)

Returns a subset of data rows in a `TableResult` with the provided property values and the number of rows in the table.

[get\(queryContext, rows\)](#)

Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a `TableResult`.

[get\(tableSelection, rows\)](#)

Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a `TableResult`.

### **error(errorMessage)**

Returns failed search or query results with the provided error message.

#### Signature

```
public static DataSource.TableResult error(String errorMessage)
```

#### Parameters

*errorMessage*

Type: [String](#)

Error message to display to the user.

#### Return Value

Type: [DataSource.TableResult](#)

The returned `TableResult` has these property values.

Property	Value
success	false
errorMessage	<i>errorMessage</i>
tableName	null
rows	null
rows.size()	0

**get(success, errorMessage, tableName, rows, totalSize)**

Returns a subset of data rows in a `TableResult` with the provided property values.

## Signature

```
public static DataSource.TableResult get(Boolean success, String errorMessage, String
tableName, List<Map<String, Object>> rows, Integer totalSize)
```

## Parameters

*success*

Type: [Boolean](#)

Whether the search or query was successful.

*errorMessage*

Type: [String](#)

Error message to display to the user.

*tableName*

Type: [String](#)

Name of the table that was queried.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

*totalSize*

Type: [Integer](#)

The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

## Return Value

Type: [DataSource.TableResult](#)

**get(success, errorMessage, tableName, rows)**

Returns a subset of data rows in a `TableResult` with the provided property values and the number of rows in the table.

## Signature

```
public static DataSource.TableResult get(Boolean success, String errorMessage, String
tableName, List<Map<String, Object>> rows)
```

## Parameters

*success*

Type: [Boolean](#)

Whether the search or query was successful.

*errorMessage*

Type: [String](#)

Error message to display to the user.

*tableName*

Type: [String](#)

Name of the table that was queried.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

Return Value

Type: [DataSource.TableResult](#)

### **get(queryContext, rows)**

Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a [TableResult](#).

Signature

```
public static DataSource.TableResult get(DataSource.QueryContext queryContext,  
List<Map<String, Object>> rows)
```

Parameters

*queryContext*

Type: [DataSource.QueryContext](#)

Represents the query to run against a data table.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

Return Value

Type: [DataSource.TableResult](#)

### **get(tableSelection, rows)**

Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a [TableResult](#).

Signature

```
public static DataSource.TableResult get(DataSource.TableSelection tableSelection,  
List<Map<String, Object>> rows)
```

Parameters

*tableSelection*

Type: [DataSource.TableSelection](#)

Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.

`rows`

Type: `List<Map<String, Object>>`

Rows of data.

Return Value

Type: `DataSource.TableResult`

## TableSelection Class

Contains a breakdown of the SOQL or SOSL query. Its properties represent the FROM, ORDER BY, SELECT, and WHERE clauses in the query.

### Namespace

`DataSource`

IN THIS SECTION:

[TableSelection Properties](#)

### TableSelection Properties

The following are properties for `TableSelection`.

IN THIS SECTION:

[columnsSelected](#)

List of columns to query. Corresponds to the `SELECT` clause in a SOQL or SOSL query.

[filter](#)

Identifies the query filter, which can be a compound filter that has a list of subfilters. The filter corresponds to the `WHERE` clause in a SOQL or SOSL query.

[order](#)

Identifies the order for sorting the query results. Corresponds to the `ORDER BY` clause in a SOQL or SOSL query.

[tableSelected](#)

Name of the table to query. Corresponds to the `FROM` clause in a SOQL or SOSL query.

#### **columnsSelected**

List of columns to query. Corresponds to the `SELECT` clause in a SOQL or SOSL query.

Signature

```
public List<DataSource.ColumnSelection> columnsSelected {get; set;}
```

Property Value

Type: `List<DataSource.ColumnSelection>`

**filter**

Identifies the query filter, which can be a compound filter that has a list of subfilters. The filter corresponds to the `WHERE` clause in a SOQL or SOSL query.

Signature

```
public DataSource.Filter filter {get; set;}
```

Property Value

Type: [DataSource.Filter](#)

**order**

Identifies the order for sorting the query results. Corresponds to the `ORDER BY` clause in a SOQL or SOSL query.

Signature

```
public List<DataSource.Order> order {get; set;}
```

Property Value

Type: [List<DataSource.Order>](#)

**tableSelected**

Name of the table to query. Corresponds to the `FROM` clause in a SOQL or SOSL query.

Signature

```
public String tableSelected {get; set;}
```

Property Value

Type: [String](#)

## UpsertContext Class

An instance of `UpsertContext` is passed to the `upsertRows()` method on your `DataSource.Connection` class. This class provides context information about the upsert request to the implementor of `upsertRows()`.

### Namespace

[DataSource](#)

### Usage

The Apex Connector Framework creates the context for operations. Context is comprised of parameters about the operations, which other methods can use. An instance of the `UpsertContext` class packages these parameters into an object that can be used when an `upsertRows()` operation is initiated.

IN THIS SECTION:

[UpsertContext Properties](#)

## UpsertContext Properties

The following are properties for `UpsertContext`.

IN THIS SECTION:

[rows](#)

List of rows corresponding to the external object records to upsert.

[tableSelected](#)

The name of the table to upsert rows in.

### **rows**

List of rows corresponding to the external object records to upsert.

Signature

```
public List<Map<String,ANY>> rows {get; set;}
```

Property Value

Type: `List<Map<String,Object>>`

### **tableSelected**

The name of the table to upsert rows in.

Signature

```
public String tableSelected {get; set;}
```

Property Value

Type: `String`

## UpsertResult Class

Represents the result of an upsert operation on an external object record. The result is returned by the `upsertRows` method of the `DataSource.Connection` class.

## Namespace

[DataSource](#)

## Usage

An upsert operation on external object records generates an array of objects of type `DataSource.UpsertResult`. Its methods create result records that indicate whether the upsert operation succeeded or failed.

### IN THIS SECTION:

[UpsertResult Properties](#)

[UpsertResult Methods](#)

## UpsertResult Properties

The following are properties for `UpsertResult`.

### IN THIS SECTION:

[errorMessage](#)

The error message that's generated by a failed upsert operation.

[externalId](#)

The unique identifier of a row that represents an external object record to upsert.

[success](#)

Indicates whether a delete operation succeeded or failed.

### **errorMessage**

The error message that's generated by a failed upsert operation.

Signature

```
public String errorMessage {get; set;}
```

Property Value

Type: [String](#)

### **externalId**

The unique identifier of a row that represents an external object record to upsert.

Signature

```
public String externalId {get; set;}
```

Property Value

Type: [String](#)

### **success**

Indicates whether a delete operation succeeded or failed.

Signature

```
public Boolean success {get; set;}
```

Property Value

Type: [Boolean](#)

## UpsertResult Methods

The following are methods for `UpsertResult`.

IN THIS SECTION:

[equals\(obj\)](#)

Maintains the integrity of lists of type `UpsertResult` by determining the equality of external object records in a list. This method is dynamic and is based on the `equals` method in Java.

[failure\(externalId, errorMessage\)](#)

Creates an upsert result that indicates the failure of a delete request for a given external ID.

[hashCode\(\)](#)

Maintains the integrity of lists of type `UpsertResult` by determining the uniqueness of the external object records in a list.

[success\(externalId\)](#)

Creates a delete result that indicates the successful completion of an upsert request for a given external ID.

### **equals (obj)**

Maintains the integrity of lists of type `UpsertResult` by determining the equality of external object records in a list. This method is dynamic and is based on the `equals` method in Java.

Signature

```
public Boolean equals(Object obj)
```

Parameters

*obj*

Type: `Object`

External object whose key is to be validated.

Return Value

Type: [Boolean](#)

### **failure (externalId, errorMessage)**

Creates an upsert result that indicates the failure of a delete request for a given external ID.

Signature

```
public static DataSource.UpsertResult failure(String externalId, String errorMessage)
```

Parameters

*externalId*

Type: [String](#)

The unique identifier of the external object record to upsert.

*errorMessage*

Type: [String](#)

The reason the upsert operation failed.

Return Value

Type: [DataSource.UpsertResult](#)

Status result for the upsert operation.

### **hashCode ()**

Maintains the integrity of lists of type `UpsertResult` by determining the uniqueness of the external object records in a list.

Signature

```
public Integer hashCode ()
```

Return Value

Type: [Integer](#)

### **success (externalId)**

Creates a delete result that indicates the successful completion of an upsert request for a given external ID.

Signature

```
public static DataSource.UpsertResult success(String externalId)
```

Parameters

*externalId*

Type: [String](#)

The unique identifier of the external object record to upsert.

Return Value

Type: [DataSource.UpsertResult](#)

Status result of the upsert operation for the external object record with the given external ID.

## DataSource Exceptions

The `DataSource` namespace contains exception classes.

All exception classes support built-in methods for returning the error message and exception type. See [Exception Class and Built-In Exceptions](#).

The `DataSource` namespace contains these exceptions.

Exception	Description	Methods
<code>DataSource.DataSourceException</code>	Throw this exception to indicate that an error occurred while communicating with an external data source.	To get the error message and write it to debug log, use the <code>String getMessage()</code> .
<code>DataSource.OAuthTokenExpiredException</code>	Throw this exception to indicate that an OAuth token has expired. The system then attempts to refresh the token automatically and restart the query, search, or sync operation.	To get the error message and write it to debug log, use the <code>String getMessage()</code> .

## Dom Namespace

The `Dom` namespace provides classes and methods for parsing and creating XML content.

The following are the classes in the `Dom` namespace.

### IN THIS SECTION:

#### [Document Class](#)

Use the `Document` class to process XML content. You can parse nested XML content that's up to 50 nodes deep.

#### [XmlNode Class](#)

Use the `XmlNode` class to work with a node in an XML document.

## Document Class

Use the `Document` class to process XML content. You can parse nested XML content that's up to 50 nodes deep.

## Namespace

[Dom](#)

## Usage

One common application is to use it to create the body of a request for [HttpRequest](#) or to parse a response accessed by [HttpResponse](#).

### IN THIS SECTION:

#### [Document Constructors](#)

[Document Methods](#)

SEE ALSO:

[Reading and Writing XML Using the DOM](#)

## Document Constructors

The following are constructors for `Document`.

IN THIS SECTION:

[Document\(\)](#)

Creates a new instance of the `Dom.Document` class.

### **Document ()**

Creates a new instance of the `Dom.Document` class.

Signature

```
public Document ()
```

## Document Methods

The following are methods for `Document`. All are instance methods.

IN THIS SECTION:

[createElement\(name, namespace, prefix\)](#)

Creates the top-level root element for a document.

[getRootElement\(\)](#)

Returns the top-level root element node in the document. If this method returns `null`, the root element has not been created yet.

[load\(xml\)](#)

Parse the XML representation of the document specified in the `xml` argument and load it into a document.

[toXmlString\(\)](#)

Returns the XML representation of the document as a `String`.

### **createElement(name, namespace, prefix)**

Creates the top-level root element for a document.

Signature

```
public Dom.XmlNode createElement(String name, String namespace, String prefix)
```

## Parameters

*name*Type: [String](#)*namespace*Type: [String](#)*prefix*Type: [String](#)

## Return Value

Type: [Dom.XmlNode](#)

## Usage

For more information about namespaces, see [XML Namespaces](#).

Calling this method more than once on a document generates an error as a document can have only one root element.

**getRootElement ()**

Returns the top-level root element node in the document. If this method returns `null`, the root element has not been created yet.

## Signature

```
public Dom.XmlNode getRootElement ()
```

## Return Value

Type: [Dom.XmlNode](#)**load (xml)**

Parse the XML representation of the document specified in the `xml` argument and load it into a document.

## Signature

```
public Void load (String xml)
```

## Parameters

*xml*Type: [String](#)

## Return Value

Type: `Void`

## Example

```
Dom.Document doc = new Dom.Document();  
doc.load(xml);
```

**toXmlString()**

Returns the XML representation of the document as a String.

## Signature

```
public String toXmlString()
```

## Return Value

Type: [String](#)

## XmlNode Class

Use the `XmlNode` class to work with a node in an XML document.

## Namespace

[Dom](#)

## XmlNode Methods

The following are methods for `XmlNode`. All are instance methods.

## IN THIS SECTION:

[addChildElement\(name, namespace, prefix\)](#)

Creates a child element node for this node.

[addCommentNode\(text\)](#)

Creates a child comment node for this node.

[addTextNode\(text\)](#)

Creates a child text node for this node.

[getAttribute\(key, keyNamespace\)](#)

Returns `namespacePrefix:attributeValue` for the given key and key namespace.

[getAttributeCount\(\)](#)

Returns the number of attributes for this node.

[getAttributeKeyAt\(index\)](#)

Returns the attribute key for the given index. Index values start at 0.

[getAttributeKeyNsAt\(index\)](#)

Returns the attribute key namespace for the given index.

[getAttributeValue\(key, keyNamespace\)](#)

Returns the attribute value for the given key and key namespace.

[getAttributeValueNs\(key, keyNamespace\)](#)

Returns the attribute value namespace for the given key and key namespace.

[getChildElement\(name, namespace\)](#)

Returns the child element node for the node with the given name and namespace.

[getChildElements\(\)](#)

Returns the child element nodes for this node. This doesn't include child text or comment nodes.

[getChildren\(\)](#)

Returns the child nodes for this node. This includes all node types.

[getName\(\)](#)

Returns the element name.

[getNamespace\(\)](#)

Returns the namespace of the element.

[getNamespaceFor\(prefix\)](#)

Returns the namespace of the element for the given prefix.

[getNodeType\(\)](#)

Returns the node type.

[getParent\(\)](#)

Returns the parent of this element.

[getPrefixFor\(namespace\)](#)

Returns the prefix of the given namespace.

[getText\(\)](#)

Returns the text for this node.

[insertBefore\(newChild, refChild\)](#)

Inserts a new child node before the specified node.

[removeAttribute\(key, keyNamespace\)](#)

Removes the attribute with the given key and key namespace. Returns `true` if successful, `false` otherwise.

[removeChild\(childNode\)](#)

Removes the given child node.

[setAttribute\(key, value\)](#)

Sets the key attribute value.

[setAttributeNs\(key, value, keyNamespace, valueNamespace\)](#)

Sets the key attribute value.

[setNamespace\(prefix, namespace\)](#)

Sets the namespace for the given prefix.

**addChildElement(name, namespace, prefix)**

Creates a child element node for this node.

Signature

```
public Dom.XmlNode addChildElement(String name, String namespace, String prefix)
```

## Parameters

*name*Type: [String](#)The *name* argument can't have a `null` value.*namespace*Type: [String](#)*prefix*Type: [String](#)

## Return Value

Type: [Dom.XmlNode](#)

## Usage

- If the *namespace* argument has a non-`null` value and the *prefix* argument is `null`, the namespace is set as the default namespace.
- If the *prefix* argument is `null`, Salesforce automatically assigns a prefix for the element. The format of the automatic prefix is `nsi`, where *i* is a number. If the *prefix* argument is `' '`, the namespace is set as the default namespace.

**addCommentNode (text)**

Creates a child comment node for this node.

## Signature

```
public Dom.XmlNode addCommentNode(String text)
```

## Parameters

*text*Type: [String](#)The *text* argument can't have a `null` value.

## Return Value

Type: [Dom.XmlNode](#)**addTextNode (text)**

Creates a child text node for this node.

## Signature

```
public Dom.XmlNode addTextNode(String text)
```

## Parameters

*text*

Type: [String](#)

The *text* argument can't have a `null` value.

## Return Value

Type: [Dom.XmlNode](#)

**getAttribute(key, keyNamespace)**

Returns *namespacePrefix:attributeValue* for the given key and key namespace.

## Signature

```
public String getAttribute(String key, String keyNamespace)
```

## Parameters

*key*

Type: [String](#)

*keyNamespace*

Type: [String](#)

## Return Value

Type: [String](#)

## Example

For example, for the `<xyz a:b="c:d" />` element:

- `getAttribute` returns `c:d`
- `getAttributeValue` returns `d`

**getAttributeCount()**

Returns the number of attributes for this node.

## Signature

```
public Integer getAttributeCount()
```

## Return Value

Type: [Integer](#)

**getAttributeKeyAt(index)**

Returns the attribute key for the given index. Index values start at 0.

Signature

```
public String getAttributeKeyAt(Integer index)
```

Parameters

*index*

Type: [Integer](#)

Return Value

Type: [String](#)

### **getAttributeKeyNsAt(index)**

Returns the attribute key namespace for the given index.

Signature

```
public String getAttributeKeyNsAt(Integer index)
```

Parameters

*index*

Type: [Integer](#)

Return Value

Type: [String](#)

### **getAttributeValue(key, keyNamespace)**

Returns the attribute value for the given key and key namespace.

Signature

```
public String getAttributeValue(String key, String keyNamespace)
```

Parameters

*key*

Type: [String](#)

*keyNamespace*

Type: [String](#)

Return Value

Type: [String](#)

## Example

For example, for the `<xyz a:b="c:d" />` element:

- `getAttribute` returns `c:d`
- `getAttributeValue` returns `d`

**getAttributeValueNs(key, keyNamespace)**

Returns the attribute value namespace for the given key and key namespace.

## Signature

```
public String getAttributeValueNs(String key, String keyNamespace)
```

## Parameters

*key*

Type: [String](#)

*keyNamespace*

Type: [String](#)

## Return Value

Type: [String](#)

**getChildElement(name, namespace)**

Returns the child element node for the node with the given name and namespace.

## Signature

```
public Dom.XmlNode getChildElement(String name, String namespace)
```

## Parameters

*name*

Type: [String](#)

*namespace*

Type: [String](#)

## Return Value

Type: [Dom.XmlNode](#)

**getChildElements()**

Returns the child element nodes for this node. This doesn't include child text or comment nodes.

Signature

```
public Dom.XmlNode[] getChildElements()
```

Return Value

Type: [Dom.XmlNode\[\]](#)

### **getChildren()**

Returns the child nodes for this node. This includes all node types.

Signature

```
public Dom.XmlNode[] getChildren()
```

Return Value

Type: [Dom.XmlNode\[\]](#)

### **getName()**

Returns the element name.

Signature

```
public String getName()
```

Return Value

Type: [String](#)

### **getNamespace()**

Returns the namespace of the element.

Signature

```
public String getNamespace()
```

Return Value

Type: [String](#)

### **getNamespaceFor(prefix)**

Returns the namespace of the element for the given prefix.

Signature

```
public String getNamespaceFor(String prefix)
```

Parameters

*prefix*

Type: [String](#)

Return Value

Type: [String](#)

### **getNodeTypes ()**

Returns the node type.

Signature

```
public Dom.XmlNodeType getNodeTypes ()
```

Return Value

Type: [Dom.XmlNodeType](#)

### **getParent ()**

Returns the parent of this element.

Signature

```
public Dom.XmlNode getParent ()
```

Return Value

Type: [Dom.XmlNode](#)

### **getPrefixFor (namespace)**

Returns the prefix of the given namespace.

Signature

```
public String getPrefixFor (String namespace)
```

Parameters

*namespace*

Type: [String](#)

The *namespace* argument can't have a `null` value.

Return Value

Type: [String](#)

**getText ()**

Returns the text for this node.

Signature

```
public String getText ()
```

Return Value

Type: [String](#)

**insertBefore (newChild, refChild)**

Inserts a new child node before the specified node.

Signature

```
public Dom.XmlNode insertBefore(Dom.XmlNode newChild, Dom.XmlNode refChild)
```

Parameters

*newChild*

Type: [Dom.XmlNode](#)

The node to insert.

*refChild*

Type: [Dom.XmlNode](#)

The node before the new node.

Return Value

Type: [Dom.XmlNode](#)

Usage

- If *refChild* is `null`, *newChild* is inserted at the end of the list.
- If *refChild* doesn't exist, an exception is thrown.

**removeAttribute (key, keyNamespace)**

Removes the attribute with the given key and key namespace. Returns `true` if successful, `false` otherwise.

Signature

```
public Boolean removeAttribute(String key, String keyNamespace)
```

Parameters

*key*

Type: [String](#)

*keyNamespace*

Type: [String](#)

Return Value

Type: [Boolean](#)

### **removeChild(childNode)**

Removes the given child node.

Signature

```
public Boolean removeChild(Dom.XmlNode childNode)
```

Parameters

*childNode*

Type: [Dom.XmlNode](#)

Return Value

Type: [Boolean](#)

### **setAttribute(key, value)**

Sets the key attribute value.

Signature

```
public Void setAttribute(String key, String value)
```

Parameters

*key*

Type: [String](#)

*value*

Type: [String](#)

Return Value

Type: [Void](#)

### **setAttributeNs(key, value, keyNamespace, valueNamespace)**

Sets the key attribute value.

## Signature

```
public Void setAttributeNs(String key, String value, String keyNamespace, String valueNamespace)
```

## Parameters

*key*

Type: [String](#)

*value*

Type: [String](#)

*keyNamespace*

Type: [String](#)

*valueNamespace*

Type: [String](#)

## Return Value

Type: Void

**setNamespace(prefix, namespace)**

Sets the namespace for the given prefix.

## Signature

```
public Void setNamespace(String prefix, String namespace)
```

## Parameters

*prefix*

Type: [String](#)

*namespace*

Type: [String](#)

## Return Value

Type: Void

## EventBus Namespace

The `EventBus` namespace provides classes and methods for platform events.

The following are the classes in the `EventBus` namespace.

## IN THIS SECTION:

[TestBroker Class](#)

Contains a method that delivers platform event messages in an Apex test.

### [TriggerContext Class](#)

Provides information about the platform event trigger that's currently executing, such as how many times the trigger was retried due to the `EventBus.RetryableException`.

SEE ALSO:

[Platform Events Developer Guide](#)

## TestBroker Class

Contains a method that delivers platform event messages in an Apex test.

## Namespace

[EventBus](#)

IN THIS SECTION:

[TestBroker Methods](#)

## TestBroker Methods

The following are methods for `TestBroker`.

IN THIS SECTION:

[deliver\(\)](#)

Delivers platform event messages to the test event bus. Use this method to deliver test event messages multiple times and verify that event subscribers have processed the test events each step of the way.

### **deliver()**

Delivers platform event messages to the test event bus. Use this method to deliver test event messages multiple times and verify that event subscribers have processed the test events each step of the way.

Signature

```
public void deliver()
```

Return Value

Type: void

Usage

Enclose `Test.getEventBus().deliver()` within the `Test.startTest()` and `Test.stopTest()` statement block.

```
Test.startTest();  
// Create test events  
// ...  
// Publish test events with EventBus.publish()
```

```
// ...
// Deliver test events
Test.getEventBus().deliver();
// Perform validation
// ...
Test.stopTest();
```

SEE ALSO:

[Platform Events Developer Guide](#)

## TriggerContext Class

Provides information about the platform event trigger that's currently executing, such as how many times the trigger was retried due to the `EventBus.RetryableException`.

### Namespace

[EventBus](#)

IN THIS SECTION:

[TriggerContext Properties](#)

[TriggerContext Methods](#)

### TriggerContext Properties

The following are properties for `TriggerContext`.

IN THIS SECTION:

[lastError](#)

Read-only. The error message that the last thrown `EventBus.RetryableException` contains.

[retries](#)

Read-only. The number of times the trigger was retried due to throwing the `EventBus.RetryableException`.

#### **lastError**

Read-only. The error message that the last thrown `EventBus.RetryableException` contains.

Signature

```
public String lastError {get;}
```

Property Value

Type: [String](#)

### Usage

The error message that this property returns is the message that was passed in when creating the `EventBus.RetryableException` exception, as follows.

```
throw new EventBus.RetryableException(  
    'Condition is not met, so retrying the trigger again.');
```

### retries

Read-only. The number of times the trigger was retried due to throwing the `EventBus.RetryableException`.

### Signature

```
public Integer retries {get;}
```

### Property Value

Type: [Integer](#)

## TriggerContext Methods

The following are methods for `TriggerContext`.

### IN THIS SECTION:

#### [currentContext\(\)](#)

Returns an instance of the `EventBus.TriggerContext` class containing information about the currently executing trigger.

### **currentContext ()**

Returns an instance of the `EventBus.TriggerContext` class containing information about the currently executing trigger.

### Signature

```
public static EventBus.TriggerContext currentContext ()
```

### Return Value

Type: [EventBus.TriggerContext](#)

Information about the currently executing trigger.

## Flow Namespace

The `Flow` namespace provides a class for advanced Visualforce controller access to flows.

The following is the class in the `Flow` namespace.

## IN THIS SECTION:

[Interview Class](#)

The `Flow.Interview` class provides advanced controller access to flows and the ability to start a flow.

## Interview Class

The `Flow.Interview` class provides advanced controller access to flows and the ability to start a flow.

## Namespace

[Flow](#)

## Usage

SOQL and DML limits apply during flow execution. See [Apex Governor Limits that Affect Flows](#) in the *Cloud Flow Designer Guide*.

To create an Interview object, you have two options.

- Create the object directly in your class by using:
  - No namespace: `Flow.Interview.flowName`
  - Namespace: `Flow.Interview.namespace.flowName`
- Create the object dynamically by using `createInterview()`

 **Note:** We recommend only using `createInterview()` if you need to reuse your method or class. Using `createInterview()` has these drawbacks.

- If you package a class that uses `createInterview()`, you have to add the associated flow manually.
- If you delete a flow, Salesforce doesn't check if it's referenced with `createInterview()`.

## Examples: Starting Flow Interviews

The following examples are all sample controllers that start an interview for the flow from the [Build a Discount Calculator](#) project on Trailhead. Each shows a different permutation, based on:

- Whether the interview is created statically, with `Flow.Interview.myFlow`, or dynamically, with `createInterview()`.
- Whether the flow is managed or local.

### Interview Created Statically for a Local Flow

```
{
  Map<String, Object> inputs = new Map<String, Object>();
  inputs.put('AccountID', myAccount);
  inputs.put('OpportunityID', myOppty);

  Flow.Interview.Calculate_discounts myFlow =
    new Flow.Interview.Calculate_discounts(inputs);
  myFlow.start();
}
```

### Interview Created Dynamically for a Local Flow

```
public void callFlow(String flowName, Map <String, Object> inputs) {
    Flow.Interview myFlow = Flow.Interview.createInterview(flowName, inputs);
    myFlow.start();
}
```

### Interview Created Statically for a Managed Flow

```
{
    Map<String, Object> inputs = new Map<String, Object>();
    inputs.put('AccountID', myAccount);
    inputs.put('OpportunityID', myOppty);

    Flow.Interview.myNamespace.Calculate_discounts myFlow =
        new Flow.Interview.myNamespace.Calculate_discounts(inputs);
    myFlow.start();
}
```

### Interview Created Dynamically for a Managed Flow

```
public void callFlow(String namespace, String flowName, Map <String, Object> inputs) {
    Flow.Interview myFlow = Flow.Interview.createInterview(namespace, flowName, inputs);
    myFlow.start();
}
```

## Example: Getting Variable Values

This sample uses the `getVariableValue` method to obtain breadcrumb (navigation) information from a flow. If that flow contains subflow elements, and each of the referenced flows also contains a `vaBreadcrumb` variable, you can provide users with breadcrumbs regardless of which flow the interview is running.

```
public class SampleController {

    //Instance of the flow
    public Flow.Interview.Flow_Template_Gallery myFlow {get; set;}

    public String getBreadcrumb() {
        String aBreadcrumb;
        if (myFlow==null) { return 'Home';}
        else aBreadcrumb = (String) myFlow.getVariableValue('vaBreadcrumb');

        return(aBreadcrumb==null ? 'Home': aBreadcrumb);
    }
}
```

## Interview Methods

The following are instance methods for `Interview`.

### **createInterview(namespace, flowName, inputVariables)**

Creates an interview for a namespaced flow.

## Signature

```
public static Flow.Interview createInterview(String namespace, String flowName,
Map<String,ANY> inputVariables)
```

## Parameters

*namespace*

Type: [String](#)

The flow's namespace.

*flowName*

Type: [String](#)

The flow's unique name.

*inputVariables*

Type: [Map<String, Object>](#)

Initial values for the flow's input variables.

## Return Value

Type: [Flow.Interview](#)

## Usage

Use this method to dynamically create a [Flow.Interview](#) object for the `start()` method.

How you get output variable values from an interview depends on the type of the Apex variable where you're storing the interview.

- If the variable is cast to a specific flow, you can use ***myFlow.myVar*** to access a variable, where ***myVar*** is the name of the variable.

```
system.debug('My Output Variable: ' + myFlow.varName);
```

- If the variable is of type [Flow.Interview](#) but not cast to a specific flow, you must use `getVariableValue()` to access the flow's variables.

```
system.debug('My Output Variable: ' + myFlow.getVariableValue('varName'));
```

If the flow doesn't exist in the current org, a [TypeException](#) is thrown.

**createInterview(flowName, inputVariables)**

Creates an interview for a flow.

## Signature

```
public static Flow.Interview createInterview(String flowName, Map<String, Object>
inputVariables)
```

## Parameters

*flowName*

Type: [String](#)

The flow's unique name.

*inputVariables*

Type: Map&lt;String,Object&gt;

Initial values for the flow's input variables.

## Return Value

Type: Flow.Interview

## Usage

Use this method to dynamically create a Flow.Interview object for the `start()` method.

How you get output variable values from an interview depends on the type of the Apex variable where you're storing the interview.

- If the variable is cast to a specific flow, you can use ***myFlow.myVar*** to access a variable, where ***myVar*** is the name of the variable.

```
system.debug('My Output Variable: ' + myFlow.varName);
```

- If the variable is of type Flow.Interview but not cast to a specific flow, you must use `getVariableValue()` to access the flow's variables.

```
system.debug('My Output Variable: ' + myFlow.getVariableValue('varName'));
```

If the flow doesn't exist in the current org, a `TypeException` is thrown.

**getVariableValue(variableName)**

Returns the value of the specified flow variable. The flow variable can be in the flow embedded in the Visualforce page, or in a separate flow that is called by a subflow element.

## Signature

```
public Object getVariableValue(String variableName)
```

## Parameters

*variableName*

Type: String

Specifies the unique name of the flow variable.

## Return Value

Type: Object

## Usage

The returned variable value comes from whichever flow the interview is running. If the specified variable can't be found in that flow, the method returns `null`.

This method checks for the existence of the variable at run time only, not at compile time.

**start()**

Starts an instance (interview) for an autolaunched or user provisioning flow.

Signature

```
public void start()
```

Return Value

Type: Void

Usage

This method can be used only with flows that have one of these types.

- Autolaunched Flow
- User Provisioning Flow

For details, see “[Flow Types](#)” in the *Cloud Flow Designer Guide*.

When a flow user invokes an autolaunched flow, the active flow version is run. If there’s no active version, the latest version is run. When a flow admin invokes a flow, the latest version is always run.

## KbManagement Namespace

The `KbManagement` namespace provides a class for managing knowledge articles.

The following is the class in the `KbManagement` namespace.

IN THIS SECTION:

[PublishingService Class](#)

Use the methods in the `KbManagement.PublishingService` class to manage the lifecycle of an article and its translations.

## PublishingService Class

Use the methods in the `KbManagement.PublishingService` class to manage the lifecycle of an article and its translations.

### Namespace

[KbManagement](#)

### Usage

Use the methods in the `KbManagement.PublishingService` class to manage the following parts of the lifecycle of an article and its translations:

- Publishing
- Updating
- Retrieving
- Deleting
- Submitting for translation
- Setting a translation to complete or incomplete status
- Archiving

- Assigning review tasks for draft articles or translations

 **Note:** Date values are based on GMT.

To use the methods in this class, you must enable Salesforce Knowledge. See [Salesforce Knowledge Implementation Guide](#) for more information on setting up Salesforce Knowledge.

## PublishingService Methods

The following are methods for `PublishingService`. All methods are static.

### IN THIS SECTION:

[archiveOnlineArticle\(articleId, scheduledDate\)](#)

Archives an online version of an article. If the specified `scheduledDate` is null, the article is archived immediately. Otherwise, it archives the article on the scheduled date.

[assignDraftArticleTask\(articleId, assigneeId, instructions, dueDate, sendEmailNotification\)](#)

Assigns a review task related to a draft article.

[assignDraftTranslationTask\(articleVersionId, assigneeId, instructions, dueDate, sendEmailNotification\)](#)

Assigns a review task related to a draft translation.

[cancelScheduledArchivingOfArticle\(articleId\)](#)

Cancels the scheduled archiving of an online article.

[cancelScheduledPublicationOfArticle\(articleId\)](#)

Cancels the scheduled publication of a draft article.

[completeTranslation\(articleVersionId\)](#)

Puts a translation in a completed state that is ready to publish.

[deleteArchivedArticle\(articleId\)](#)

Deletes an archived article.

[deleteArchivedArticleVersion\(articleId, versionNumber\)](#)

Deletes a specific version of an archived article.

[deleteDraftArticle\(articleId\)](#)

Deletes a draft article.

[deleteDraftTranslation\(articleVersionId\)](#)

Deletes a draft translation.

[editArchivedArticle\(articleId\)](#)

Creates a draft article from the archived master version and returns the new draft master version ID of the article.

[editOnlineArticle\(articleId, unpublish\)](#)

Creates a draft article from the online version and returns the new draft master version ID of the article. Also, unpublishes the online article, if `unpublish` is set to `true`.

[editPublishedTranslation\(articleId, language, unpublish\)](#)

Creates a draft version of the online translation for a specific language and returns the new draft master version ID of the article. Also, unpublishes the article, if set to `true`.

[publishArticle\(articleId, flagAsNew\)](#)

Publishes an article. If `flagAsNew` is set to `true`, the article is published as a major version.

[restoreOldVersion\(articleId, versionNumber\)](#)

Creates a draft article from an existing online article based on the specified archived version of the article and returns the article version ID.

[scheduleForPublication\(articleId, scheduledDate\)](#)

Schedules the article for publication as a major version. If the specified date is null, the article is published immediately.

[setTranslationToIncomplete\(articleVersionId\)](#)

Sets a draft translation that is ready for publication back to “in progress” status.

[submitForTranslation\(articleId, language, assigneeId, dueDate\)](#)

Submits an article for translation to the specified language. Also assigns the specified user and due date to the submittal and returns new ID of the draft translation.

**archiveOnlineArticle(articleId, scheduledDate)**

Archives an online version of an article. If the specified scheduledDate is null, the article is archived immediately. Otherwise, it archives the article on the scheduled date.

Signature

```
public static Void archiveOnlineArticle(String articleId, Datetime scheduledDate)
```

Parameters

*articleId*

Type: [String](#)

*scheduledDate*

Type: [Datetime](#)

Return Value

Type: Void

Example

```
String articleId = 'Insert article ID';
Datetime scheduledDate = Datetime.newInstanceGmt(2012, 12, 1, 13, 30, 0);
KbManagement.PublishingService.archiveOnlineArticle(articleId, scheduledDate);
```

**assignDraftArticleTask(articleId, assigneeId, instructions, dueDate, sendEmailNotification)**

Assigns a review task related to a draft article.

Signature

```
public static Void assignDraftArticleTask(String articleId, String assigneeId, String
instructions, Datetime dueDate, Boolean sendEmailNotification)
```

## Parameters

*articleId*

Type: [String](#)

*assigneeId*

Type: [String](#)

*instructions*

Type: [String](#)

*dueDate*

Type: [Datetime](#)

*sendEmailNotification*

Type: [Boolean](#)

## Return Value

Type: [Void](#)

## Example

```
String articleId = 'Insert article ID';
String assigneeId = '';
String instructions = 'Please review this draft.';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12, 1);
KbManagement.PublishingService.assignDraftArticleTask(articleId, assigneeId, instructions,
dueDate, true);
```

**assignDraftTranslationTask(articleVersionId, assigneeId, instructions, dueDate, sendEmailNotification)**

Assigns a review task related to a draft translation.

## Signature

```
public static Void assignDraftTranslationTask(String articleVersionId, String assigneeId,
String instructions, Datetime dueDate, Boolean sendEmailNotification)
```

## Parameters

*articleVersionId*

Type: [String](#)

*assigneeId*

Type: [String](#)

*instructions*

Type: [String](#)

*dueDate*

Type: [Datetime](#)

*sendEmailNotification*

Type: [Boolean](#)

Return Value

Type: Void

Example

```
String articleId = 'Insert article ID';
String assigneeId = 'Insert assignee ID';
String instructions = 'Please review this draft.';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12, 1);
KbManagement.PublishingService.assignDraftTranslationTask(articleId, assigneeId,
instructions, dueDate, true);
```

### **cancelScheduledArchivingOfArticle (articleId)**

Cancels the scheduled archiving of an online article.

Signature

```
public static Void cancelScheduledArchivingOfArticle(String articleId)
```

Parameters

*articleId*  
Type: [String](#)

Return Value

Type: Void

Example

```
String articleId = 'Insert article ID';
KbManagement.PublishingService.cancelScheduledArchivingOfArticle (articleId);
```

### **cancelScheduledPublicationOfArticle (articleId)**

Cancels the scheduled publication of a draft article.

Signature

```
public static Void cancelScheduledPublicationOfArticle(String articleId)
```

Parameters

*articleId*  
Type: [String](#)

Return Value

Type: Void

## Example

```
String articleId = 'Insert article ID';
KbManagement.PublishingService.cancelScheduledPublicationOfArticle (articleId);
```

**completeTranslation(articleVersionId)**

Puts a translation in a completed state that is ready to publish.

## Signature

```
public static Void completeTranslation(String articleVersionId)
```

## Parameters

*articleVersionId*  
Type: [String](#)

## Return Value

Type: Void

## Example

```
String articleVersionId = 'Insert article ID';
KbManagement.PublishingService.completeTranslation(articleVersionId);
```

**deleteArchivedArticle(articleId)**

Deletes an archived article.

## Signature

```
public static Void deleteArchivedArticle(String articleId)
```

## Parameters

*articleId*  
Type: [String](#)

## Return Value

Type: Void

## Example

```
String articleId = 'Insert article ID';
KbManagement.PublishingService.deleteArchivedArticle(articleId);
```

**deleteArchivedArticleVersion(articleId, versionNumber)**

Deletes a specific version of an archived article.

Signature

```
public static Void deleteArchivedArticleVersion(String articleId, Integer versionNumber)
```

Parameters

*articleId*

Type: [String](#)

*versionNumber*

Type: [Integer](#)

Return Value

Type: Void

Example

```
String articleId = 'Insert article ID';
Integer versionNumber = 1;
KbManagement.PublishingService.deleteArchivedArticleVersion(articleId, versionNumber);
```

**deleteDraftArticle(articleId)**

Deletes a draft article.

Signature

```
public static Void deleteDraftArticle(String articleId)
```

Parameters

*articleId*

Type: [String](#)

Return Value

Type: Void

Example

```
String articleId = 'Insert article ID';
KbManagement.PublishingService.deleteDraftArticle(articleId);
```

**deleteDraftTranslation(articleVersionId)**

Deletes a draft translation.

Signature

```
public static Void deleteDraftTranslation(String articleVersionId)
```

Parameters

*articleVersionId*  
Type: [String](#)

Return Value

Type: Void

Example

```
String articleVersionId = 'Insert article ID';  
KbManagement.PublishingService.deleteDraftTranslation (articleVersionId);
```

### **editArchivedArticle(articleId)**

Creates a draft article from the archived master version and returns the new draft master version ID of the article.

Signature

```
public static String editArchivedArticle(String articleId)
```

Parameters

*articleId*  
Type: [String](#)

Return Value

Type: [String](#)

Example

```
String articleId = 'Insert article ID';  
String id = KbManagement.PublishingService.editArchivedArticle(articleId);
```

### **editOnlineArticle(articleId, unpublish)**

Creates a draft article from the online version and returns the new draft master version ID of the article. Also, unpublishes the online article, if *unpublish* is set to `true`.

Signature

```
public static String editOnlineArticle(String articleId, Boolean unpublish)
```

## Parameters

*articleId*

Type: [String](#)

*unpublish*

Type: [Boolean](#)

## Return Value

Type: [String](#)

## Example

```
String articleId = 'Insert article ID';
String id = KbManagement.PublishingService.editOnlineArticle (articleId, true);
```

**editPublishedTranslation(articleId, language, unpublish)**

Creates a draft version of the online translation for a specific language and returns the new draft master version ID of the article. Also, unpublishes the article, if set to `true`.

## Signature

```
public static String editPublishedTranslation(String articleId, String language, Boolean unpublish)
```

## Parameters

*articleId*

Type: [String](#)

*language*

Type: [String](#)

*unpublish*

Type: [Boolean](#)

## Return Value

Type: [String](#)

## Example

```
String articleId = 'Insert article ID';
String language = 'fr';
String id = KbManagement.PublishingService.editPublishedTranslation(articleId, language, true);
```

**publishArticle(articleId, flagAsNew)**

Publishes an article. If *flagAsNew* is set to `true`, the article is published as a major version.

Signature

```
public static Void publishArticle(String articleId, Boolean flagAsNew)
```

Parameters

*articleId*

Type: [String](#)

*flagAsNew*

Type: [Boolean](#)

Return Value

Type: [Void](#)

Example

```
String articleId = 'Insert article ID';  
KbManagement.PublishingService.publishArticle(articleId, true);
```

### **restoreOldVersion(articleId, versionNumber)**

Creates a draft article from an existing online article based on the specified archived version of the article and returns the article version ID.

Signature

```
public static String restoreOldVersion(String articleId, Integer versionNumber)
```

Parameters

*articleId*

Type: [String](#)

*versionNumber*

Type: [Integer](#)

Return Value

Type: [String](#)

Example

```
String articleId = 'Insert article ID';  
String id = KbManagement.PublishingService.restoreOldVersion (articleId, 1);
```

### **scheduleForPublication(articleId, scheduledDate)**

Schedules the article for publication as a major version. If the specified date is null, the article is published immediately.

Signature

```
public static Void scheduleForPublication(String articleId, Datetime scheduledDate)
```

Parameters

*articleId*

Type: [String](#)

*scheduledDate*

Type: [Datetime](#)

Return Value

Type: Void

Example

```
String articleId = 'Insert article ID';
Datetime scheduledDate = Datetime.newInstanceGmt(2012, 12, 1, 13, 30, 0);
KbManagement.PublishingService.scheduleForPublication(articleId, scheduledDate);
```

### **setTranslationToIncomplete(articleVersionId)**

Sets a draft translation that is ready for publication back to “in progress” status.

Signature

```
public static Void setTranslationToIncomplete(String articleVersionId)
```

Parameters

*articleVersionId*

Type: [String](#)

Return Value

Type: Void

Example

```
String articleVersionId = 'Insert article ID';
KbManagement.PublishingService.setTranslationToIncomplete(articleVersionId);
```

### **submitForTranslation(articleId, language, assigneeId, dueDate)**

Submits an article for translation to the specified language. Also assigns the specified user and due date to the submittal and returns new ID of the draft translation.

## Signature

```
public static String submitForTranslation(String articleId, String language, String assigneeId, Datetime dueDate)
```

## Parameters

*articleId*

Type: [String](#)

*language*

Type: [String](#)

*assigneeId*

Type: [String](#)

*dueDate*

Type: [Datetime](#)

## Return Value

Type: [String](#)

## Example

```
String articleId = 'Insert article ID';
String language = 'fr';
String assigneeId = 'Insert assignee ID';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12, 1);
String id = KbManagement.PublishingService.submitForTranslation(articleId, language,
assigneeId, dueDate);
```

## Messaging Namespace

The `Messaging` namespace provides classes and methods for Salesforce outbound and inbound email functionality.

The following are the classes in the `Messaging` namespace.

### IN THIS SECTION:

#### [AttachmentRetrievalOption Enum](#)

Provides options for including attachment metadata only, attachment metadata and content, or excluding attachments.

#### [Email Class \(Base Email Methods\)](#)

Contains base email methods common to both single and mass email.

#### [EmailFileAttachment Class](#)

`EmailFileAttachment` is used in `SingleEmailMessage` to specify attachments passed in as part of the request, as opposed to existing documents in Salesforce.

#### [InboundEmail Class](#)

Represents an inbound email object.

#### [InboundEmail.BinaryAttachment Class](#)

An `InboundEmail` object stores binary attachments in an `InboundEmail.BinaryAttachment` object.

#### [InboundEmail.TextAttachment Class](#)

An InboundEmail object stores text attachments in an InboundEmail.TextAttachment object.

#### [InboundEmailResult Class](#)

The InboundEmailResult object is used to return the result of the email service. If this object is null, the result is assumed to be successful.

#### [InboundEnvelope Class](#)

The InboundEnvelope object stores the envelope information associated with the inbound email, and has the following fields.

#### [MassEmailMessage Class](#)

Contains methods for sending mass email.

#### [InboundEmail.Header Class](#)

An InboundEmail object stores RFC 2822 email header information in an InboundEmail.Header object with the following properties.

#### [PushNotification Class](#)

`PushNotification` is used to configure push notifications and send them from an Apex trigger.

#### [PushNotificationPayload Class](#)

Contains methods to create the notification message payload for an Apple device.

#### [RenderEmailTemplateBodyResult Class](#)

Contains the results for rendering email templates.

#### [RenderEmailTemplateError Class](#)

Represents an error that the `RenderEmailTemplateBodyResult` object can contain.

#### [SendEmailError Class](#)

Represents an error that the `SendEmailResult` object may contain.

#### [SendEmailResult Class](#)

Contains the result of sending an email message.

#### [SingleEmailMessage Methods](#)

Contains methods for sending single email messages.

## AttachmentRetrievalOption Enum

Provides options for including attachment metadata only, attachment metadata and content, or excluding attachments.

### Namespace

[Messaging](#)

### Usage

Use these enum values with the `renderStoredEmailTemplate(templateId, whold, whatId, attachmentRetrievalOption)` method.

### Enum Values

The following are the values of the `Messaging.AttachmentRetrievalOption` enum.

Value	Description
METADATA_ONLY	Includes only the file name, content type, and the object ID in the <code>fileAttachments</code> property of <code>Messaging.SingleEmailMessage</code> .   <b>Note:</b> When the template is rendered from a Visualforce template (and not from a static file attached to the template), the object ID is not available.
METADATA_WITH_BODY	Includes the attachment content, in addition to the file name, content type, and the object ID in the <code>fileAttachments</code> property of <code>Messaging.SingleEmailMessage</code> .
NONE	Doesn't include any attachments in <code>Messaging.SingleEmailMessage</code> .

## Email Class (Base Email Methods)

Contains base email methods common to both single and mass email.

### Namespace

[Messaging](#)

### Usage

 **Note:** If templates are not being used, all email content must be in plain text, HTML, or both. Visualforce email templates cannot be used for mass email.

### Email Methods

The following are methods for `Email`. All are instance methods.

#### IN THIS SECTION:

##### [setBccSender\(bcc\)](#)

Indicates whether the email sender receives a copy of the email that is sent. For a mass mail, the sender is only copied on the first email sent.

##### [setReplyTo\(replyAddress\)](#)

Optional. The email address that receives the message when a recipient replies.

##### [setTemplateID\(templateId\)](#)

The ID of the template to be merged to create this email. You must specify a value for `setTemplateId`, `setHtmlBody`, or `setPlainTextBody`. Or, you can define both `setHtmlBody` and `setPlainTextBody`.

##### [setSaveAsActivity\(saveAsActivity\)](#)

Optional. The default value is `true`, meaning the email is saved as an activity. This argument only applies if the recipient list is based on `targetObjectId` or `targetObjectIds`. If HTML email tracking is enabled for the organization, you will be able to track open rates.

##### [setSenderDisplayName\(displayName\)](#)

Optional. The name that appears on the From line of the email. This cannot be set if the object associated with a `setOrgWideEmailAddressId` for a `SingleEmailMessage` has defined its `DisplayName` field.

`setUseSignature(useSignature)`

Indicates whether the email includes an email signature if the user has one configured. The default is `true`, meaning if the user has a signature it is included in the email unless you specify `false`.

**setBccSender (bcc)**

Indicates whether the email sender receives a copy of the email that is sent. For a mass mail, the sender is only copied on the first email sent.

Signature

```
public Void setBccSender(Boolean bcc)
```

Parameters

*bcc*

Type: `Boolean`

Return Value

Type: `Void`

Usage

**Note:** If the BCC compliance option is set at the organization level, the user cannot add BCC addresses on standard messages. The following error code is returned: `BCC_NOT_ALLOWED_IF_BCC_COMPLIANCE_ENABLED`. Contact your Salesforce representative for information on BCC compliance.

**setReplyTo (replyAddress)**

Optional. The email address that receives the message when a recipient replies.

Signature

```
public Void setReplyTo(String replyAddress)
```

Parameters

*replyAddress*

Type: `String`

Return Value

Type: `Void`

**setTemplateID (templateId)**

The ID of the template to be merged to create this email. You must specify a value for `setTemplateId`, `setHtmlBody`, or `setPlainTextBody`. Or, you can define both `setHtmlBody` and `setPlainTextBody`.

Signature

```
public Void setTemplateID(ID templateId)
```

Parameters

*templateId*  
Type: [ID](#)

Return Value

Type: Void

Usage

**Note:** `setHtmlBody` and `setPlainTextBody` apply only to single email methods, not to mass email methods.

#### **setSaveAsActivity (saveAsActivity)**

Optional. The default value is `true`, meaning the email is saved as an activity. This argument only applies if the recipient list is based on `targetObjectId` or `targetObjectIds`. If HTML email tracking is enabled for the organization, you will be able to track open rates.

Signature

```
public Void setSaveAsActivity(Boolean saveAsActivity)
```

Parameters

*saveAsActivity*  
Type: [Boolean](#)

Return Value

Type: Void

#### **setSenderDisplayName (displayName)**

Optional. The name that appears on the From line of the email. This cannot be set if the object associated with a `setOrgWideEmailAddressId` for a `SingleEmailMessage` has defined its `DisplayName` field.

Signature

```
public Void setSenderDisplayName(String displayName)
```

Parameters

*displayName*  
Type: [String](#)

Return Value

Type: Void

### **setUseSignature (useSignature)**

Indicates whether the email includes an email signature if the user has one configured. The default is `true`, meaning if the user has a signature it is included in the email unless you specify `false`.

Signature

```
public Void setUseSignature(Boolean useSignature)
```

Parameters

*useSignature*

Type: Boolean

Return Value

Type: Void

## EmailFileAttachment Class

EmailFileAttachment is used in SingleEmailMessage to specify attachments passed in as part of the request, as opposed to existing documents in Salesforce.

## Namespace

[Messaging](#)

IN THIS SECTION:

[EmailFileAttachment Constructors](#)

[EmailFileAttachment Properties](#)

## EmailFileAttachment Constructors

The following are constructors for EmailFileAttachment.

IN THIS SECTION:

[EmailFileAttachment\(\)](#)

Creates a new instance of the Messaging.EmailFileAttachment class.

### **EmailFileAttachment ()**

Creates a new instance of the Messaging.EmailFileAttachment class.

Signature

```
public EmailFileAttachment()
```

## EmailFileAttachment Properties

The following are properties for `EmailFileAttachment`.

### IN THIS SECTION:

[body](#)

Gets or sets the attachment itself.

[contenttype](#)

Gets or sets the attachment's Content-Type.

[filename](#)

Gets or sets the name of the file to attach.

[id](#)

Read-Only. Gets the attachment ID.

[inline](#)

Specifies a Content-Disposition of inline (`true`) or attachment (`false`).

### **body**

Gets or sets the attachment itself.

Signature

```
public Blob body {get; set;}
```

Property Value

Type: [Blob](#)

### **contenttype**

Gets or sets the attachment's Content-Type.

Signature

```
public String contenttype {get; set;}
```

Property Value

Type: [String](#)

### **filename**

Gets or sets the name of the file to attach.

Signature

```
public String filename {get; set;}
```

Property Value

Type: [String](#)

#### **id**

Read-Only. Gets the attachment ID.

Signature

```
public Id id {get;}
```

Property Value

Type: [Id](#)

#### **inline**

Specifies a Content-Disposition of inline ([true](#)) or attachment ([false](#)).

Signature

```
public Boolean inline {get; set;}
```

Property Value

Type: [Boolean](#)

## InboundEmail Class

Represents an inbound email object.

## Namespace

[Messaging](#)

IN THIS SECTION:

[InboundEmail Constructors](#)

[InboundEmail Properties](#)

## InboundEmail Constructors

The following are constructors for `InboundEmail`.

## IN THIS SECTION:

[InboundEmail\(\)](#)

Creates a new instance of the `Messaging.InboundEmail` class.

**InboundEmail ()**

Creates a new instance of the `Messaging.InboundEmail` class.

Signature

```
public InboundEmail ()
```

## InboundEmail Properties

The following are properties for `InboundEmail`.

## IN THIS SECTION:

[binaryAttachments](#)

A list of binary attachments received with the email, if any.

[ccAddresses](#)

A list of carbon copy (CC) addresses, if any.

[fromAddress](#)

The email address that appears in the From field.

[fromName](#)

The name that appears in the From field, if any.

[headers](#)

A list of the RFC 2822 headers in the email.

[htmlBody](#)

The HTML version of the email, if specified by the sender.

[htmlBodyIsTruncated](#)

Indicates whether the HTML body text is truncated (`true`) or not (`false`.)

[inReplyTo](#)

The In-Reply-To field of the incoming email. Identifies the email or emails to which this one is a reply (parent emails). Contains the parent email or emails' message-IDs.

[messageId](#)

The Message-ID—the incoming email's unique identifier.

[plainTextBody](#)

The plain text version of the email, if specified by the sender.

[plainTextBodyIsTruncated](#)

Indicates whether the plain body text is truncated (`true`) or not (`false`.)

[references](#)

The References field of the incoming email. Identifies an email thread. Contains a list of the parent emails' References and message IDs, and possibly the In-Reply-To fields.

[replyTo](#)

The email address that appears in the reply-to header.

[subject](#)

The subject line of the email, if any.

[textAttachments](#)

A list of text attachments received with the email, if any.

[toAddresses](#)

The email address that appears in the To field.

**binaryAttachments**

A list of binary attachments received with the email, if any.

Signature

```
public InboundEmail.BinaryAttachment[] binaryAttachments {get; set;}
```

Property Value

Type: [InboundEmail.BinaryAttachment\[\]](#)

Usage

Examples of binary attachments include image, audio, application, and video files.

**ccAddresses**

A list of carbon copy (CC) addresses, if any.

Signature

```
public String[] ccAddresses {get; set;}
```

Property Value

Type: [String\[\]](#)

**fromAddress**

The email address that appears in the From field.

Signature

```
public String fromAddress {get; set;}
```

Property Value

Type: [String](#)

**fromName**

The name that appears in the From field, if any.

Signature

```
public String fromName {get; set;}
```

Property Value

Type: [String](#)

**headers**

A list of the RFC 2822 headers in the email.

Signature

```
public InboundEmail.Header[] headers {get; set;}
```

Property Value

Type: [InboundEmail.Header\[\]](#)

Usage

The list of the RFC 2822 headers includes:

- Recieved from
- Custom headers
- Message-ID
- Date

**htmlBody**

The HTML version of the email, if specified by the sender.

Signature

```
public String htmlBody {get; set;}
```

Property Value

Type: [String](#)

**htmlBodyIsTruncated**

Indicates whether the HTML body text is truncated ([true](#)) or not ([false](#).)

Signature

```
public Boolean htmlBodyIsTruncated {get; set;}
```

Property Value

Type: [Boolean](#)

### **inReplyTo**

The In-Reply-To field of the incoming email. Identifies the email or emails to which this one is a reply (parent emails). Contains the parent email or emails' message-IDs.

Signature

```
public String inReplyTo {get; set;}
```

Property Value

Type: [String](#)

### **messageId**

The Message-ID—the incoming email's unique identifier.

Signature

```
public String messageId {get; set;}
```

Property Value

Type: [String](#)

### **plainTextBody**

The plain text version of the email, if specified by the sender.

Signature

```
public String plainTextBody {get; set;}
```

Property Value

Type: [String](#)

### **plainTextBodyIsTruncated**

Indicates whether the plain body text is truncated ([true](#)) or not ([false](#).)

Signature

```
public Boolean plainTextBodyIsTruncated {get; set;}
```

Property Value

Type: [Boolean](#)

**references**

The References field of the incoming email. Identifies an email thread. Contains a list of the parent emails' References and message IDs, and possibly the In-Reply-To fields.

Signature

```
public String[] references {get; set;}
```

Property Value

Type: [String](#)[]

**replyTo**

The email address that appears in the reply-to header.

Signature

```
public String replyTo {get; set;}
```

Property Value

Type: [String](#)

Usage

If there is no reply-to header, this field is identical to the `fromAddress` field.

**subject**

The subject line of the email, if any.

Signature

```
public String subject {get; set;}
```

Property Value

Type: [String](#)

**textAttachments**

A list of text attachments received with the email, if any.

Signature

```
public InboundEmail.TextAttachment[] textAttachments {get; set;}
```

Property Value

Type: [InboundEmail.TextAttachment](#)[]

## Usage

The text attachments can be any of the following:

- Attachments with a Multipurpose Internet Mail Extension (MIME) type of `text`
- Attachments with a MIME type of `application/octet-stream` and a file name that ends with either a `.vcf` or `.vcs` extension. These are saved as `text/x-vcard` and `text/calendar` MIME types, respectively.

### **toAddresses**

The email address that appears in the `To` field.

## Signature

```
public String[] toAddresses {get; set;}
```

## Property Value

Type: [String\[\]](#)

## InboundEmail.BinaryAttachment Class

An `InboundEmail` object stores binary attachments in an `InboundEmail.BinaryAttachment` object.

## Namespace

[Messaging](#)

## Usage

Examples of binary attachments include image, audio, application, and video files.

### IN THIS SECTION:

[InboundEmail.BinaryAttachment Constructors](#)

[InboundEmail.BinaryAttachment Properties](#)

## InboundEmail.BinaryAttachment Constructors

The following are constructors for `InboundEmail.BinaryAttachment`.

### IN THIS SECTION:

[InboundEmail.BinaryAttachment\(\)](#)

Creates a new instance of the `Messaging.InboundEmail.BinaryAttachment` class.

### **InboundEmail.BinaryAttachment()**

Creates a new instance of the `Messaging.InboundEmail.BinaryAttachment` class.

Signature

```
public InboundEmail.BinaryAttachment()
```

## InboundEmail.BinaryAttachment Properties

The following are properties for `InboundEmail.BinaryAttachment`.

### IN THIS SECTION:

#### [body](#)

The body of the attachment.

#### [fileName](#)

The name of the attached file.

#### [headers](#)

Any header values associated with the attachment. Examples of header names include `Content-Type`, `Content-Transfer-Encoding`, and `Content-ID`.

#### [mimeTypeSubType](#)

The primary and sub MIME-type.

### **body**

The body of the attachment.

Signature

```
public Blob body {get; set;}
```

Property Value

Type: [Blob](#)

### **fileName**

The name of the attached file.

Signature

```
public String fileName {get; set;}
```

Property Value

Type: [String](#)

### **headers**

Any header values associated with the attachment. Examples of header names include `Content-Type`, `Content-Transfer-Encoding`, and `Content-ID`.

Signature

```
public List<Messaging.InboundEmail.Header> headers {get; set;}
```

Property Value

Type: [List<Messaging.InboundEmail.Header>](#)

### **contentTypeSubType**

The primary and sub MIME-type.

Signature

```
public String contentTypeSubType {get; set;}
```

Property Value

Type: [String](#)

## InboundEmail.TextAttachment Class

An `InboundEmail` object stores text attachments in an `InboundEmail.TextAttachment` object.

### Namespace

[Messaging](#)

### Usage

The text attachments can be any of the following:

- Attachments with a Multipurpose Internet Mail Extension (MIME) type of `text`
- Attachments with a MIME type of `application/octet-stream` and a file name that ends with either a `.vcf` or `.vcs` extension. These are saved as `text/x-vcard` and `text/calendar` MIME types, respectively.

IN THIS SECTION:

[InboundEmail.TextAttachment Constructors](#)

[InboundEmail.TextAttachment Properties](#)

### InboundEmail.TextAttachment Constructors

The following are constructors for `InboundEmail.TextAttachment`.

IN THIS SECTION:

[InboundEmail.TextAttachment\(\)](#)

Creates a new instance of the `Messaging.InboundEmail.TextAttachment` class.

### **InboundEmail.TextAttachment()**

Creates a new instance of the `Messaging.InboundEmail.TextAttachment` class.

Signature

```
public InboundEmail.TextAttachment()
```

### **InboundEmail.TextAttachment Properties**

The following are properties for `InboundEmail.TextAttachment`.

#### IN THIS SECTION:

##### [body](#)

The body of the attachment.

##### [bodyIsTruncated](#)

Indicates whether the attachment body text is truncated (`true`) or not (`false`.)

##### [charset](#)

The original character set of the body field. The body is re-encoded as UTF-8 as input to the Apex method.

##### [fileName](#)

The name of the attached file.

##### [headers](#)

Any header values associated with the attachment. Examples of header names include `Content-Type`, `Content-Transfer-Encoding`, and `Content-ID`.

##### [mimeTypeSubType](#)

The primary and sub MIME-type.

#### **body**

The body of the attachment.

Signature

```
public String body {get; set;}
```

Property Value

Type: [String](#)

#### **bodyIsTruncated**

Indicates whether the attachment body text is truncated (`true`) or not (`false`.)

Signature

```
public Boolean bodyIsTruncated {get; set;}
```

Property Value

Type: [Boolean](#)

### **charset**

The original character set of the body field. The body is re-encoded as UTF-8 as input to the Apex method.

Signature

```
public String charset {get; set;}
```

Property Value

Type: [String](#)

### **fileName**

The name of the attached file.

Signature

```
public String fileName {get; set;}
```

Property Value

Type: [String](#)

### **headers**

Any header values associated with the attachment. Examples of header names include `Content-Type`, `Content-Transfer-Encoding`, and `Content-ID`.

Signature

```
public List<Messaging.InboundEmail.Header> headers {get; set;}
```

Property Value

Type: [List<Messaging.InboundEmail.Header>](#)

### **mimeTypeSubType**

The primary and sub MIME-type.

Signature

```
public String mimeTypeSubType {get; set;}
```

Property Value

Type: [String](#)

## InboundEmailResult Class

The `InboundEmailResult` object is used to return the result of the email service. If this object is null, the result is assumed to be successful.

### Namespace

[Messaging](#)

### InboundEmailResult Properties

The following are properties for `InboundEmailResult`.

#### IN THIS SECTION:

##### [message](#)

A message that Salesforce returns in the body of a reply email. This field can be populated with text irrespective of the value returned by the `Success` field.

##### [success](#)

A value that indicates whether the email was successfully processed.

#### **message**

A message that Salesforce returns in the body of a reply email. This field can be populated with text irrespective of the value returned by the `Success` field.

Signature

```
public String message {get; set;}
```

Property Value

Type: [String](#)

#### **success**

A value that indicates whether the email was successfully processed.

Signature

```
public Boolean success {get; set;}
```

Property Value

Type: [Boolean](#)

Usage

If `false`, Salesforce rejects the inbound email and sends a reply email to the original sender containing the message specified in the `Message` field.

## InboundEnvelope Class

The InboundEnvelope object stores the envelope information associated with the inbound email, and has the following fields.

### Namespace

[Messaging](#)

### InboundEnvelope Properties

The following are properties for InboundEnvelope.

#### IN THIS SECTION:

[fromAddress](#)

The name that appears in the From field of the envelope, if any.

[toAddress](#)

The name that appears in the To field of the envelope, if any.

#### **fromAddress**

The name that appears in the From field of the envelope, if any.

Signature

```
public String fromAddress {get; set;}
```

Property Value

Type: [String](#)

#### **toAddress**

The name that appears in the To field of the envelope, if any.

Signature

```
public String toAddress {get; set;}
```

Property Value

Type: [String](#)

## MassEmailMessage Class

Contains methods for sending mass email.

### Namespace

[Messaging](#)

## Usage

MassEmailMessage extends Email and inherits all of its methods. All base email (`Email` class) methods are also available to the `MassEmailMessage` objects.

### IN THIS SECTION:

[MassEmailMessage Constructors](#)

[MassEmailMessage Methods](#)

### SEE ALSO:

[Email Class \(Base Email Methods\)](#)

## MassEmailMessage Constructors

The following are constructors for `MassEmailMessage`.

### IN THIS SECTION:

[MassEmailMessage\(\)](#)

Creates a new instance of the `Messaging.MassEmailMessage` class.

### **MassEmailMessage ()**

Creates a new instance of the `Messaging.MassEmailMessage` class.

### Signature

```
public MassEmailMessage ()
```

## MassEmailMessage Methods

The following are methods for `MassEmailMessage`. All are instance methods. All base email (`Email` class) methods are also available to the `MassEmailMessage` objects. These methods are described in [Email Class \(Base Email Methods\)](#).

### IN THIS SECTION:

[setDescription\(description\)](#)

The description of the email.

[setTargetObjectIds\(targetObjectIds\)](#)

A list of IDs of the contacts, leads, or users to which the email will be sent. The IDs you specify set the context and ensure that merge fields in the template contain the correct data. The objects must be of the same type (all contacts, all leads, or all users).

[setWhatIds\(whatIds\)](#)

Optional. If you specify a list of contacts for the `targetObjectIds` field, you can specify a list of `whatIds` as well. This helps to further ensure that merge fields in the template contain the correct data.

### **setDescription (description)**

The description of the email.

Signature

```
public Void setDescription(String description)
```

Parameters

*description*

Type: [String](#)

Return Value

Type: Void

### **setTargetObjectIds (targetObjectIds)**

A list of IDs of the contacts, leads, or users to which the email will be sent. The IDs you specify set the context and ensure that merge fields in the template contain the correct data. The objects must be of the same type (all contacts, all leads, or all users).

Signature

```
public Void setTargetObjectIds(ID[] targetObjectIds)
```

Parameters

*targetObjectIds*

Type: [ID\[\]](#)

Return Value

Type: Void

Usage

You can list up to 250 IDs per email. If you specify a value for the `targetObjectIds` field, optionally specify a `whatId` as well to set the email context to a user, contact, or lead. This ensures that merge fields in the template contain the correct data.

Do not specify the IDs of records that have the `Email Opt Out` option selected.

All emails must have a recipient value in at least one of the following fields:

- `toAddresses`
- `ccAddresses`
- `bccAddresses`
- `targetObjectId`

### **setWhatIds (whatIds)**

Optional. If you specify a list of contacts for the `targetObjectIds` field, you can specify a list of `whatIds` as well. This helps to further ensure that merge fields in the template contain the correct data.

Signature

```
public Void setWhatIds(ID[] whatIds)
```

Parameters

*whatIds*

Type: [ID\[\]](#)

Return Value

Type: Void

Usage

The values must be one of the following types:

- Contract
- Case
- Opportunity
- Product

 **Note:** If you specify *whatIds*, specify one for each *targetObjectId*; otherwise, you will receive an `INVALID_ID_FIELD` error.

## InboundEmail.Header Class

An `InboundEmail` object stores RFC 2822 email header information in an `InboundEmail.Header` object with the following properties.

### Namespace

[Messaging](#)

### InboundEmail.Header Properties

The following are properties for `InboundEmail.Header`.

IN THIS SECTION:

[name](#)

The name of the header parameter, such as `Date` or `Message-ID`.

[value](#)

The value of the header.

#### **name**

The name of the header parameter, such as `Date` or `Message-ID`.

Signature

```
public String name {get; set;}
```

Property Value

Type: [String](#)

**value**

The value of the header.

Signature

```
public String value {get; set;}
```

Property Value

Type: [String](#)

## PushNotification Class

`PushNotification` is used to configure push notifications and send them from an Apex trigger.

## Namespace

[Messaging](#)

## Example

This sample Apex trigger sends push notifications to the connected app named `Test_App`, which corresponds to a mobile app on iOS mobile clients. The trigger fires after cases have been updated and sends the push notification to two users: the case owner and the user who last modified the case.

```
trigger caseAlert on Case (after update) {

    for(Case cs : Trigger.New)
    {
        // Instantiating a notification
        Messaging.PushNotification msg =
            new Messaging.PushNotification();

        // Assembling the necessary payload parameters for Apple.
        // Apple params are:
        // (<alert text>,<alert sound>,<badge count>,
        // <free-form data>)
        // This example doesn't use badge count or free-form data.
        // The number of notifications that haven't been acted
        // upon by the intended recipient is best calculated
        // at the time of the push. This timing helps
        // ensure accuracy across multiple target devices.
        Map<String, Object> payload =
            Messaging.PushNotificationPayload.apple(
                'Case ' + cs.CaseNumber + ' status changed to: '
                + cs.Status, '', null, null);

        // Adding the assembled payload to the notification
        msg.setPayload(payload);

        // Getting recipient users
        String userId1 = cs.OwnerId;
```

```
String userId2 = cs.LastModifiedById;

// Adding recipient users to list
Set<String> users = new Set<String>();
users.add(userId1);
users.add(userId2);

// Sending the notification to the specified app and users.
// Here we specify the API name of the connected app.
msg.send('Test_App', users);
}
}
```

#### IN THIS SECTION:

[PushNotification Constructors](#)

[PushNotification Methods](#)

## PushNotification Constructors

The following are the constructors for `PushNotification`.

#### IN THIS SECTION:

[PushNotification\(\)](#)

Creates a new instance of the `Messaging.PushNotification` class.

[PushNotification\(payload\)](#)

Creates a new instance of the `Messaging.PushNotification` class using the specified payload parameters as key-value pairs. When you use this constructor, you don't need to call `setPayload` to set the payload.

### **PushNotification()**

Creates a new instance of the `Messaging.PushNotification` class.

Signature

```
public PushNotification()
```

### **PushNotification(payload)**

Creates a new instance of the `Messaging.PushNotification` class using the specified payload parameters as key-value pairs. When you use this constructor, you don't need to call `setPayload` to set the payload.

Signature

```
public PushNotification(Map<String, Object> payload)
```

Parameters

*payload*

Type: [Map<String, Object>](#)

The payload, expressed as a map of key-value pairs.

## PushNotification Methods

The following are the methods for `PushNotification`. All are global methods.

IN THIS SECTION:

[send\(application, users\)](#)

Sends a push notification message to the specified users.

[setPayload\(payload\)](#)

Sets the payload of the push notification message.

[setTtl\(ttl\)](#)

Reserved for future use.

### **send(application, users)**

Sends a push notification message to the specified users.

Signature

```
public void send(String application, Set<String> users)
```

Parameters

*application*

Type: [String](#)

The connected app API name. This corresponds to the mobile client app the notification should be sent to.

*users*

Type: [Set](#)

A set of user IDs that correspond to the users the notification should be sent to.

Example

See the [Push Notification Example](#).

### **setPayload(payload)**

Sets the payload of the push notification message.

Signature

```
public void setPayload(Map<String, Object> payload)
```

## Parameters

### *payload*

Type: [Map<String, Object>](#)

The payload, expressed as a map of key-value pairs.

Payload parameters can be different for each mobile OS vendor. For more information on Apple's payload parameters, search for "Apple Push Notification Service" at <https://developer.apple.com/library/mac/documentation/>.

To create the payload for an Apple device, see the [PushNotificationPayload Class](#).

## Example

See the [Push Notification Example](#).

### **setTtl (ttl)**

Reserved for future use.

## Signature

```
public void setTtl(Integer ttl)
```

## Parameters

### *ttl*

Type: [Integer](#)

Reserved for future use.

## **PushNotificationPayload Class**

Contains methods to create the notification message payload for an Apple device.

## Namespace

[Messaging](#)

## Usage

Apple has specific requirements for the notification payload, and this class has helper methods to create the payload. For more information on Apple's payload parameters, search for "Apple Push Notification Service" at <https://developer.apple.com/library/mac/documentation/>.

## Example

See the [Push Notification Example](#).

## IN THIS SECTION:

[PushNotificationPayload Methods](#)

## PushNotificationPayload Methods

The following are the methods for `PushNotificationPayload`. All are global static methods.

### IN THIS SECTION:

[apple\(alert, sound, badgeCount, userData\)](#)

Helper method that creates a valid Apple payload from the specified arguments.

[apple\(alertBody, actionLocKey, locKey, locArgs, launchImage, sound, badgeCount, userData\)](#)

Helper method that creates a valid Apple payload from the specified arguments.

### **apple(alert, sound, badgeCount, userData)**

Helper method that creates a valid Apple payload from the specified arguments.

#### Signature

```
public static Map<String, Object> apple(String alert, String sound, Integer badgeCount,
Map<String, Object> userData)
```

#### Parameters

##### *alert*

Type: [String](#)

Notification message to be sent to the mobile client.

##### *sound*

Type: [String](#)

Name of a sound file to be played as an alert. This sound file should be in the mobile application bundle.

##### *badgeCount*

Type: [Integer](#)

Number to display as the badge of the application icon.

##### *userData*

Type: [Map<String, Object>](#)

Map of key-value pairs that contains any additional data used to provide context for the notification. For example, it can contain IDs of the records that caused the notification to be sent. The mobile client app can use these IDs to display these records.

#### Return Value

Type: [Map<String, Object>](#)

Returns a formatted payload that includes all of the specified arguments.

#### Usage

To generate a valid payload, you must provide a value for at least one of the following parameters: `alert`, `sound`, `badgeCount`.

#### Example

See the [Push Notification Example](#).

```
apple(alertBody, actionLocKey, locKey, locArgs, launchImage, sound, badgeCount,
userData)
```

Helper method that creates a valid Apple payload from the specified arguments.

Signature

```
public static Map<String, Object> apple(String alertBody, String actionLocKey, String
locKey, String[] locArgs, String launchImage, String sound, Integer badgeCount,
Map<String, Object> userData)
```

Parameters

*alertBody*

Type: [String](#)

Text of the alert message.

*actionLocKey*

Type: [String](#)

If a value is specified for the *actionLocKey* argument, an alert with two buttons is displayed. The value is a key to get a localized string in a `Localizable.strings` file to use for the right button's title.

*locKey*

Type: [String](#)

Key to an alert-message string in a `Localizable.strings` file for the current localization.

*locArgs*

Type: [List<String>](#)

Variable string values to appear in place of the format specifiers in *locKey*.

*launchImage*

Type: [String](#)

File name of an image file in the application bundle.

*sound*

Type: [String](#)

Name of a sound file to be played as an alert. This sound file should be in the mobile application bundle.

*badgeCount*

Type: [Integer](#)

Number to display as the badge of the application icon.

*userData*

Type: [Map<String, Object>](#)

Map of key-value pairs that contains any additional data used to provide context for the notification. For example, it can contain IDs of the records that caused the notification to be sent. The mobile client app can use these IDs to display these records.

Return Value

Type: [Map<String, Object>](#)

Returns a formatted payload that includes all of the specified arguments.

## Usage

To generate a valid payload, you must provide a value for at least one of the following parameters: `alert`, `sound`, `badgeCount`.

## RenderEmailTemplateBodyResult Class

Contains the results for rendering email templates.

## Namespace

[Messaging](#)

### IN THIS SECTION:

[RenderEmailTemplateBodyResult Methods](#)

## RenderEmailTemplateBodyResult Methods

The following are methods for `RenderEmailTemplateBodyResult`.

### IN THIS SECTION:

[getErrors\(\)](#)

If an error occurred during the `renderEmailTemplate` method, a `RenderEmailTemplateError` object is returned.

[getMergedBody\(\)](#)

Returns the rendered body text with merge field references replaced with the corresponding record data.

[getSuccess\(\)](#)

Indicates whether the operation was successful.

### **getErrors ()**

If an error occurred during the `renderEmailTemplate` method, a `RenderEmailTemplateError` object is returned.

### Signature

```
public List<Messaging.RenderEmailTemplateError> getErrors ()
```

### Return Value

Type: `List<Messaging.RenderEmailTemplateError>`

### **getMergedBody ()**

Returns the rendered body text with merge field references replaced with the corresponding record data.

### Signature

```
public String getMergedBody ()
```

Return Value

Type: [String](#)

### **getSuccess ()**

Indicates whether the operation was successful.

Signature

```
public Boolean getSuccess ()
```

Return Value

Type: [Boolean](#)

## RenderEmailTemplateError Class

Represents an error that the `RenderEmailTemplateBodyResult` object can contain.

### Namespace

[Messaging](#)

IN THIS SECTION:

[RenderEmailTemplateError Methods](#)

### RenderEmailTemplateError Methods

The following are methods for `RenderEmailTemplateError`.

IN THIS SECTION:

[getFieldName\(\)](#)

Returns the name of the merge field in the error.

[getMessage\(\)](#)

Returns a message describing the error.

[getOffset\(\)](#)

Returns the offset within the supplied body text where the error was discovered. If the offset cannot be determined, -1 is returned.

[getStatusCode\(\)](#)

Returns a Salesforce API status code.

### **getFieldName ()**

Returns the name of the merge field in the error.

Signature

```
public String getFieldName ()
```

Return Value

Type: [String](#)

#### **getMessage ()**

Returns a message describing the error.

Signature

```
public String getMessage ()
```

Return Value

Type: [String](#)

#### **getOffset ()**

Returns the offset within the supplied body text where the error was discovered. If the offset cannot be determined, -1 is returned.

Signature

```
public Integer getOffset ()
```

Return Value

Type: [Integer](#)

#### **getStatusCode ()**

Returns a Salesforce API status code.

Signature

```
public System.StatusCode getStatusCode ()
```

Return Value

Type: `System.StatusCode`

## SendEmailError Class

Represents an error that the `SendEmailResult` object may contain.

### Namespace

[Messaging](#)

### SendEmailError Methods

The following are methods for `SendEmailError`. All are instance methods.

## IN THIS SECTION:

[getFields\(\)](#)

A list of one or more field names. Identifies which fields in the object, if any, affected the error condition.

[getMessage\(\)](#)

The text of the error message.

[getStatusCode\(\)](#)

Returns a code that characterizes the error.

[getTargetObjectId\(\)](#)

The ID of the target record for which the error occurred.

**getFields ()**

A list of one or more field names. Identifies which fields in the object, if any, affected the error condition.

Signature

```
public String[] getFields ()
```

Return Value

Type: [String](#)[]

**getMessage ()**

The text of the error message.

Signature

```
public String getMessage ()
```

Return Value

Type: [String](#)

**getStatusCode ()**

Returns a code that characterizes the error.

Signature

```
public System.StatusCode getStatusCode ()
```

Return Value

Type: [System.StatusCode](#)

## Usage

The full list of status codes is available in the WSDL file for your organization. For more information about accessing the WSDL file for your organization, see “Downloading Salesforce WSDLs and Client Authentication Certificates” in the Salesforce online help.

### **getTargetObjectId()**

The ID of the target record for which the error occurred.

## Signature

```
public String getTargetObjectId()
```

## Return Value

Type: [String](#)

## SendEmailResult Class

Contains the result of sending an email message.

## Namespace

[Messaging](#)

## SendEmailResult Methods

The following are methods for `SendEmailResult`. All are instance methods.

### IN THIS SECTION:

#### [getErrors\(\)](#)

If an error occurred during the `sendEmail` method, a `SendEmailError` object is returned.

#### [isSuccess\(\)](#)

Indicates whether the email was successfully submitted for delivery (`true`) or not (`false`). Even if `isSuccess` is true, it does not mean the intended recipients received the email, as there could have been a problem with the email address or it could have bounced or been blocked by a spam blocker.

### **getErrors()**

If an error occurred during the `sendEmail` method, a `SendEmailError` object is returned.

## Signature

```
public SendEmailError[] getErrors()
```

## Return Value

Type: [Messaging.SendEmailError\[\]](#)

### **isSuccess ()**

Indicates whether the email was successfully submitted for delivery (**true**) or not (**false**). Even if `isSuccess` is true, it does not mean the intended recipients received the email, as there could have been a problem with the email address or it could have bounced or been blocked by a spam blocker.

Signature

```
public Boolean isSuccess ()
```

Return Value

Type: [Boolean](#)

## SingleEmailMessage Methods

Contains methods for sending single email messages.

### Namespace

[Messaging](#)

### Usage

`SingleEmailMessage` extends `Email` and inherits all of its methods. All base email (`Email` class) methods are also available to the `SingleEmailMessage` objects.

Email properties are readable and writable. Each property has corresponding setter and getter methods. For example, the `toAddresses ()` property is equivalent to the `setToAddresses ()` and `getToAddresses ()` methods. Only the setter methods are documented. However, the `getTemplateName ()` method doesn't have an equivalent setter method; use `setTemplateId ()` to specify a template name.

#### IN THIS SECTION:

[SingleEmailMessage Constructors](#)

[SingleEmailMessage Methods](#)

#### SEE ALSO:

[Email Class \(Base Email Methods\)](#)

## SingleEmailMessage Constructors

The following are constructors for `SingleEmailMessage`.

#### IN THIS SECTION:

[SingleEmailMessage\(\)](#)

Creates a new instance of the `Messaging.SingleEmailMessage` class.

## SingleEmailMessage ()

Creates a new instance of the `Messaging.SingleEmailMessage` class.

Signature

```
public SingleEmailMessage ()
```

## SingleEmailMessage Methods

The following are methods for `SingleEmailMessage`. All are instance methods. All base email (`Email` class) methods are also available to the `SingleEmailMessage` objects. These methods are described in [Email Class \(Base Email Methods\)](#).

### IN THIS SECTION:

#### [getTemplateName\(\)](#)

The name of the template used to create the email.

#### [setBccAddresses\(bccAddresses\)](#)

Optional. A list of blind carbon copy (BCC) addresses or object IDs of the contacts, leads, and users you're sending the email to. The maximum allowed is 25.

#### [setCcAddresses\(ccAddresses\)](#)

Optional. A list of carbon copy (CC) addresses or object IDs of the contacts, leads, and users you're sending the email to. The maximum allowed is 25.

#### [setCharset\(characterSet\)](#)

Optional. The character set for the email. If this value is null, the user's default value is used.

#### [setDocumentAttachments\(documentIds\)](#)

**(Deprecated. Use `setEntityAttachments()` instead.)** Optional. A list containing the ID of each document object you want to attach to the email.

#### [setEntityAttachments\(ids\)](#)

Optional. Array of IDs of Document, ContentVersion, or Attachment items to attach to the email.

#### [setFileAttachments\(fileName\)](#)

Optional. A list containing the file names of the binary and text files you want to attach to the email.

#### [setHtmlBody\(htmlBody\)](#)

Optional. The HTML version of the email, specified by the sender. The value is encoded according to the specification associated with the organization. You must specify a value for `setTemplateId`, `setHtmlBody`, or `setPlainTextBody`. Or, you can define both `setHtmlBody` and `setPlainTextBody`.

#### [setInReplyTo\(parentMessageIds\)](#)

Sets the optional In-Reply-To field of the outgoing email. This field identifies the email or emails to which this email is a reply (parent emails).

#### [setOptOutPolicy\(emailOptOutPolicy\)](#)

Optional. If you added recipients by ID instead of email address and the `Email Opt Out` option is set, this method determines the behavior of the `sendEmail()` call. If you add recipients by their email addresses, the opt-out settings for those recipients aren't checked and those recipients always receive the email.

#### [setPlainTextBody\(plainTextBody\)](#)

Optional. The text version of the email, specified by the sender. You must specify a value for `setTemplateId`, `setHtmlBody`, or `setPlainTextBody`. Or, you can define both `setHtmlBody` and `setPlainTextBody`.

[setOrgWideEmailAddressId\(emailAddressId\)](#)

Optional. The ID of the organization-wide email address associated with the outgoing email. The object's `DisplayName` field cannot be set if the `setSenderDisplayName` field is already set.

[setReferences\(references\)](#)

Optional. The References field of the outgoing email. Identifies an email thread. Contains the parent emails' References and message IDs, and possibly the In-Reply-To fields.

[setSubject\(subject\)](#)

Optional. The email subject line. If you are using an email template, the subject line of the template overrides this value.

[setTargetObjectId\(targetObjectId\)](#)

Required if using a template, optional otherwise. The ID of the contact, lead, or user to which the email will be sent. The ID you specify sets the context and ensures that merge fields in the template contain the correct data.

[setTemplateId\(templateId\)](#)

Required if using a template, optional otherwise. The ID of the template used to create the email.

[setToAddresses\(toAddresses\)](#)

Optional. A list of email addresses or object IDs of the contacts, leads, and users you're sending the email to. The maximum number of email addresses allowed is 100.

[setTreatBodiesAsTemplate\(treatAsTemplate\)](#)

Optional. If set to `true`, the subject, plain text, and HTML text bodies of the email are treated as template data. The merge fields are resolved using the `renderEmailTemplate` method. Default is `false`.

[setTreatTargetObjectAsRecipient\(treatAsRecipient\)](#)

Optional. If set to `true`, the `targetObjectId` (a contact, lead, or user) is the recipient of the email. If set to `false`, the `targetObjectId` is supplied as the `whoId` field for template rendering but isn't a recipient of the email. The default is `true`.

[setWhatId\(whatId\)](#)

If you specify a contact for the `targetObjectId` field, you can specify an optional `whatId` as well. This helps to further ensure that merge fields in the template contain the correct data.

**getTemplateName ()**

The name of the template used to create the email.

Signature

```
public STRING getTemplateName ()
```

Return Value

Type: [String](#)

Usage

There is no equivalent setter method for `getTemplateName ()`. If the email didn't use a template, `getTemplateName ()` returns nothing. If you use `setTemplateId ()`, and then call `getTemplateName ()`, the template name associated to the template ID is returned.

**setBccAddresses (bccAddresses)**

Optional. A list of blind carbon copy (BCC) addresses or object IDs of the contacts, leads, and users you're sending the email to. The maximum allowed is 25.

Signature

```
public Void setBccAddresses(String[] bccAddresses)
```

Parameters

*bccAddresses*  
Type: [String\[\]](#)

Return Value

Type: Void

Usage

All emails must have a recipient value in at least one of the following fields:

- `toAddresses`
- `ccAddresses`
- `bccAddresses`
- `targetObjectId`

If the BCC compliance option is set at the organization level, the user cannot add BCC addresses on standard messages. The following error code is returned: `BCC_NOT_ALLOWED_IF_BCC_COMPLIANCE_ENABLED`. Contact your Salesforce representative for information on BCC compliance.

**setCcAddresses (ccAddresses)**

Optional. A list of carbon copy (CC) addresses or object IDs of the contacts, leads, and users you're sending the email to. The maximum allowed is 25.

Signature

```
public Void setCcAddresses(String[] ccAddresses)
```

Parameters

*ccAddresses*  
Type: [String\[\]](#)

Return Value

Type: Void

Usage

All emails must have a recipient value in at least one of the following fields:

- `toAddresses`
- `ccAddresses`
- `bccAddresses`
- `targetObjectId`

**setCharset (characterSet)**

Optional. The character set for the email. If this value is null, the user's default value is used.

Signature

```
public Void setCharset(String characterSet)
```

Parameters

*characterSet*  
Type: [String](#)

Return Value

Type: Void

**setDocumentAttachments (documentIds)**

**(Deprecated. Use `setEntityAttachments ()` instead.)** Optional. A list containing the ID of each document object you want to attach to the email.

Signature

```
public Void setDocumentAttachments(ID[] documentIds)
```

Parameters

*documentIds*  
Type: [ID\[\]](#)

Return Value

Type: Void

Usage

You can attach multiple documents as long as the total size of all attachments does not exceed 10 MB.

**setEntityAttachments (ids)**

Optional. Array of IDs of Document, ContentVersion, or Attachment items to attach to the email.

Signature

```
public void setEntityAttachments(List<String> ids)
```

Parameters

*ids*

Type: [List<String>](#)

Return Value

Type: void

### **setFileAttachments (fileNames)**

Optional. A list containing the file names of the binary and text files you want to attach to the email.

Signature

```
public Void setFileAttachments(EmailFileAttachment[] fileNames)
```

Parameters

*fileNames*

Type: [Messaging.EmailFileAttachment\[\]](#)

Return Value

Type: Void

Usage

You can attach multiple files as long as the total size of all attachments does not exceed 10 MB.

### **setHtmlBody (htmlBody)**

Optional. The HTML version of the email, specified by the sender. The value is encoded according to the specification associated with the organization. You must specify a value for `setTemplateId`, `setHtmlBody`, or `setPlainTextBody`. Or, you can define both `setHtmlBody` and `setPlainTextBody`.

Signature

```
public Void setHtmlBody(String htmlBody)
```

Parameters

*htmlBody*

Type: [String](#)

Return Value

Type: Void

**setInReplyTo (parentMessageIds)**

Sets the optional In-Reply-To field of the outgoing email. This field identifies the email or emails to which this email is a reply (parent emails).

Signature

```
public Void setInReplyTo(String parentMessageIds)
```

Parameters

*parentMessageIds*

Type: [String](#)

Contains one or more parent email message IDs.

Return Value

Type: Void

**setOptOutPolicy (emailOptOutPolicy)**

Optional. If you added recipients by ID instead of email address and the `Email Opt Out` option is set, this method determines the behavior of the `sendEmail()` call. If you add recipients by their email addresses, the opt-out settings for those recipients aren't checked and those recipients always receive the email.

Signature

```
public void setOptOutPolicy(String emailOptOutPolicy)
```

Parameters

*emailOptOutPolicy*

Type: [String](#)

Possible values of the *emailOptOutPolicy* parameter are:

- `SEND` (default)—The email is sent to all recipients and the `Email Opt Out` option of the recipients is ignored.
- `FILTER`—No email is sent to the recipients that have the `Email Opt Out` option set and emails are sent to the other recipients.
- `REJECT`—If any of the recipients have the `Email Opt Out` option set, `sendEmail()` throws an error and no email is sent.

Return Value

Type: void

## Example

This example shows how to send an email with the opt-out setting enforced. Recipients are specified by their IDs. The `FILTER` option causes the email to be sent only to recipients that haven't opted out from email. This example uses dot notation of the email properties, which is equivalent to using the set methods.

```
Messaging.SingleEmailMessage message = new Messaging.SingleEmailMessage();
// Set recipients to two contact IDs.
// Replace IDs with valid record IDs in your org.
message.toAddresses = new String[] { '003D000000QDexS', '003D000000QDfw5' };
message.optOutPolicy = 'FILTER';
message.subject = 'Opt Out Test Message';
message.plainTextBody = 'This is the message body.';
Messaging.SingleEmailMessage[] messages =
    new List<Messaging.SingleEmailMessage> {message};
Messaging.SendEmailResult[] results = Messaging.sendEmail(messages);
if (results[0].success) {
    System.debug('The email was sent successfully.');
```

**setPlainTextBody(plainTextBody)**

Optional. The text version of the email, specified by the sender. You must specify a value for `setTemplateId`, `setHtmlBody`, or `setPlainTextBody`. Or, you can define both `setHtmlBody` and `setPlainTextBody`.

## Signature

```
public Void setPlainTextBody(String plainTextBody)
```

## Parameters

*plainTextBody*  
Type: [String](#)

## Return Value

Type: Void

**setOrgWideEmailAddressId(emailAddressId)**

Optional. The ID of the organization-wide email address associated with the outgoing email. The object's `DisplayName` field cannot be set if the `setSenderDisplayName` field is already set.

## Signature

```
public Void setOrgWideEmailAddressId(ID emailAddressId)
```

## Parameters

*emailAddressId*Type: [ID](#)

## Return Value

Type: Void

**setReferences (references)**

Optional. The References field of the outgoing email. Identifies an email thread. Contains the parent emails' References and message IDs, and possibly the In-Reply-To fields.

## Signature

```
public Void setReferences(String references)
```

## Parameters

*references*Type: [String](#)

## Return Value

Type: Void

**setSubject (subject)**

Optional. The email subject line. If you are using an email template, the subject line of the template overrides this value.

## Signature

```
public Void setSubject(String subject)
```

## Parameters

*subject*Type: [String](#)

## Return Value

Type: Void

**setTargetObjectId (targetObjectId)**

Required if using a template, optional otherwise. The ID of the contact, lead, or user to which the email will be sent. The ID you specify sets the context and ensures that merge fields in the template contain the correct data.

## Signature

```
public Void setTargetObjectId(ID targetObjectId)
```

## Parameters

*targetObjectId*  
Type: ID

## Return Value

Type: Void

## Usage

Do not specify the IDs of records that have the `Email Opt Out` option selected.

All emails must have a recipient value in at least one of the following fields:

- `toAddresses`
- `ccAddresses`
- `bccAddresses`
- `targetObjectId`

**setTemplateId(templateId)**

Required if using a template, optional otherwise. The ID of the template used to create the email.

## Signature

```
public Void setTemplateId(ID templateId)
```

## Parameters

*templateId*  
Type: ID

## Return Value

Type: Void

**setToAddresses(toAddresses)**

Optional. A list of email addresses or object IDs of the contacts, leads, and users you're sending the email to. The maximum number of email addresses allowed is 100.

## Signature

```
public Void setToAddresses(String[] toAddresses)
```

## Parameters

*toAddresses*  
Type: `String[]`

Return Value

Type: Void

Usage

All emails must have a recipient value in at least one of the following fields:

- `toAddresses`
- `ccAddresses`
- `bccAddresses`
- `targetObjectId`

#### **`setTreatBodiesAsTemplate (treatAsTemplate)`**

Optional. If set to `true`, the subject, plain text, and HTML text bodies of the email are treated as template data. The merge fields are resolved using the `renderEmailTemplate` method. Default is `false`.

Signature

```
public void setTreatBodiesAsTemplate(Boolean treatAsTemplate)
```

Parameters

*treatAsTemplate*

Type: [Boolean](#)

Return Value

Type: void

#### **`setTreatTargetObjectAsRecipient (treatAsRecipient)`**

Optional. If set to `true`, the `targetObjectId` (a contact, lead, or user) is the recipient of the email. If set to `false`, the `targetObjectId` is supplied as the `whoId` field for template rendering but isn't a recipient of the email. The default is `true`.

Signature

```
public void setTreatTargetObjectAsRecipient(Boolean treatAsRecipient)
```

Parameters

*treatAsRecipient*

Type: [Boolean](#)

Return Value

Type: void

## Usage

 **Note:** You can set TO, CC, and BCC addresses using the email messaging methods regardless of whether a template is used for the email or the target object is a recipient.

**setWhatId(whatId)**

If you specify a contact for the `targetObjectId` field, you can specify an optional `whatId` as well. This helps to further ensure that merge fields in the template contain the correct data.

## Signature

```
public Void setWhatId(ID whatId)
```

## Parameters

*whatId*  
Type: ID

## Return Value

Type: Void

## Usage

The value must be one of the following types:

- Account
- Asset
- Campaign
- Case
- Contract
- Opportunity
- Order
- Product
- Solution
- Custom

## Metadata Namespace

The `Metadata` namespace provides classes and methods for working with custom metadata in Salesforce.

Salesforce uses metadata types and components to represent org configuration and customization. Metadata is used for org settings that admins control or configuration information applied by installed apps and packages. Use the classes in the `Metadata` namespace to access metadata from within Apex code.

Metadata access in Apex is available for Apex classes using API version 40.0 and later.

For more information, see [Metadata](#).

The following are the classes in the `Metadata` namespace.

## IN THIS SECTION:

[AnalyticsCloudComponentLayoutItem Class](#)

Represents the settings for a Wave Analytics dashboard on a standard or custom page.

[ConsoleComponent Class](#)

Represents a custom console component on a section of a page layout.

[Container Class](#)

Represents a location and style in which to display more than one custom console component in the sidebars of the console.

[CustomConsoleComponents Class](#)

Represents custom console components (Visualforce pages, lookup fields, or related lists) on a page layout.

[CustomMetadata Class](#)

Represents records of custom metadata types.

[CustomMetadataValue Class](#)

Represents custom metadata values for a custom metadata component.

[DeployCallback Interface](#)

An interface for metadata deployment callback classes.

[DeployCallbackContext Class](#)

Represents context information for a deployment job.

[DeployContainer Class](#)

Represents a container for custom metadata components to be deployed.

[DeployDetails Class](#)

Contains detailed information on deployed components.

[DeployMessage Class](#)

Represents result information for the deployment of a metadata component.

[DeployProblemType Enum](#)

Describes the problem type for an unsuccessful component deploy.

[DeployResult Class](#)

Represents the results of a metadata deployment.

[DeployStatus Enum](#)

The result status of a deployment.

[FeedItemTypeEnum Enum](#)

The type of feed item in a feed-based page layout.

[FeedLayout Class](#)

Represents the values that define the feed view of a feed-based page layout. Feed-based layouts are available on Account, Case, Contact, Lead, Opportunity, custom, and external objects. They include a feed view and a detail view.

[FeedLayoutComponent Class](#)

Represents a component in the feed view of a feed-based page layout.

[FeedLayoutComponentType Enum](#)

Indicates the type of feed layout component.

[FeedLayoutFilter Class](#)

Represents a feed filter option in the feed view of a feed-based page layout. A filter can have only `standardFilter` or `feedItemType` set.

[FeedLayoutFilterPosition Enum](#)

Describes where the feed filters list is included in the layout.

[FeedLayoutFilterType Enum](#)

The type of feed layout filter.

[Layout Class](#)

Represents the metadata associated with a page layout.

[LayoutColumn Class](#)

Represents the items in a column within a layout section.

[LayoutHeader Enum](#)

Represents tagging types used for `Metadata . Layout . headers`

[LayoutItem Class](#)

Represents the valid values that define a layout item.

[LayoutSection Class](#)

Represents a section of a page layout, such as the Custom Links section.

[LayoutSectionStyle Enum](#)

Describes the possible styles for a layout section.

[Metadata Class](#)

An abstract base class that represents a custom metadata component.

[MetadataType Enum](#)

Represents the custom metadata components available in Apex.

[MetadataValue Class](#)

An abstract base class that represents a custom metadata component field.

[MiniLayout Class](#)

Represents a mini view of a record in the Console tab, hover details, and event overlays.

[Operations Class](#)

Represents a class to execute metadata operations, such as retrieving or deploying custom metadata.

[PlatformActionList Class](#)

Represents the list of actions, and their order, that display in the Salesforce mobile action bar for the layout.

[PlatformActionListContextEnum Enum](#)

Describes the different contexts of action lists.

[PlatformActionListItem Class](#)

Represents an action in the platform action list for a layout.

[PlatformActionTypeEnum Enum](#)

The type of action for a `PlatformActionListItem`.

[PrimaryTabComponents Class](#)

Represents custom console components on primary tabs in the Salesforce console.

[QuickActionList Class](#)

Represents the list of actions associated with the page layout.

[QuickActionListItem Class](#)

Represents an action in the `QuickActionList`.

[RelatedContent Class](#)

Represents the Mobile Cards section of the page layout.

[RelatedContentItem Class](#)

Represents an individual item in the `RelatedContent` list.

[RelatedList Class](#)

Represents related list custom components on the sidebars of the Salesforce console.

[RelatedListItem Class](#)

Represents an item in the related list in a page layout.

[ReportChartComponentLayoutItem Class](#)

Represents the settings for a report chart on a standard or custom page.

[ReportChartComponentSize Enum](#)

Describes the size of the displayed report chart component.

[SidebarComponent Class](#)

Represents a specific custom console component to display in a container that hosts multiple components in one of the sidebars of the Salesforce console.

[SortOrder Enum](#)

Describes the sort order of a related list.

[SubtabComponents Class](#)

Represents custom console components on subtabs in the Salesforce console.

[SummaryLayoutStyleEnum Enum](#)

Describes the highlights panel style for a `SummaryLayout`.

[SummaryLayout Class](#)

Controls the appearance of the highlights panel, which summarizes key fields in a grid at the top of a page layout, when Case Feed is enabled.

[SummaryLayoutItem Class](#)

Controls the appearance of an individual field and its column and row position within the highlights panel grid, when Case Feed is enabled. You can have two fields per each grid in a highlights panel.

[UIBehavior Enum](#)

Describes the behavior for a layout item on a layout page.

## **AnalyticsCloudComponentLayoutItem Class**

Represents the settings for a Wave Analytics dashboard on a standard or custom page.

### **Namespace**

[Metadata](#)

### **Usage**

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “AnalyticsCloudComponentLayoutItem” in the [Metadata API Developer Guide](#).

## IN THIS SECTION:

[AnalyticsCloudComponentLayoutItem Properties](#)[AnalyticsCloudComponentLayoutItem Methods](#)

## AnalyticsCloudComponentLayoutItem Properties

The following are properties for `AnalyticsCloudComponentLayoutItem`.

## IN THIS SECTION:

[assetType](#)

Specifies the type of Wave Analytics asset.

[devName](#)

Unique development name of the dashboard to add.

[error](#)

An error string that is populated only when an error occurred in the underlying dashboard.

[filter](#)

Dashboard filters for mapping data fields in the dashboard to the object's fields.

[height](#)

Specifies the height of the dashboard, in pixels.

[hideOnError](#)

Controls whether users see a dashboard that has an error.

[showHeader](#)

If `true`, includes the dashboard's header bar. If `false`, the dashboard appears without a header bar.

[showSharing](#)

If set to true, and the dashboard is shareable the dashboard shows the Share icon. If set to false, the dashboard doesn't show the Share icon.

[showTitle](#)

If true, includes the dashboard's title above the dashboard. If false, the dashboard appears without a title.

[width](#)

Specifies the width of the dashboard, in pixels or percentage.

### **assetType**

Specifies the type of Wave Analytics asset.

Signature

```
public String assetType {get; set;}
```

Property Value

Type: [String](#)

**devName**

Unique development name of the dashboard to add.

Signature

```
public String devName {get; set;}
```

Property Value

Type: [String](#)

**error**

An error string that is populated only when an error occurred in the underlying dashboard.

Signature

```
public String error {get; set;}
```

Property Value

Type: [String](#)

**filter**

Dashboard filters for mapping data fields in the dashboard to the object's fields.

Signature

```
public String filter {get; set;}
```

Property Value

Type: [String](#)

**height**

Specifies the height of the dashboard, in pixels.

Signature

```
public Integer height {get; set;}
```

Property Value

Type: [Integer](#)

**hideOnError**

Controls whether users see a dashboard that has an error.

Signature

```
public Boolean hideOnError {get; set;}
```

Property Value

Type: [Boolean](#)

### **showHeader**

If `true`, includes the dashboard's header bar. If `false`, the dashboard appears without a header bar.

Signature

```
public Boolean showHeader {get; set;}
```

Property Value

Type: [Boolean](#)

### **showSharing**

If set to true, and the dashboard is shareable the dashboard shows the Share icon. If set to false, the dashboard doesn't show the Share icon.

Signature

```
public Boolean showSharing {get; set;}
```

Property Value

Type: [Boolean](#)

### **showTitle**

If true, includes the dashboard's title above the dashboard. If false, the dashboard appears without a title.

Signature

```
public Boolean showTitle {get; set;}
```

Property Value

Type: [Boolean](#)

### **width**

Specifies the width of the dashboard, in pixels or percentage.

Signature

```
public String width {get; set;}
```

Property Value

Type: [String](#)

## AnalyticsCloudComponentLayoutItem Methods

The following are methods for `AnalyticsCloudComponentLayoutItem`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.AnalyticsCloudComponentLayoutItem`.

### **clone ()**

Makes a duplicate copy of the `Metadata.AnalyticsCloudComponentLayoutItem`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

## ConsoleComponent Class

Represents a custom console component on a section of a page layout.

### Namespace

[Metadata](#)

### Usage

Use this class when accessing [Metadata.Layout](#) metadata components. For more information, see “ConsoleComponent” in the [Metadata API Developer Guide](#).

IN THIS SECTION:

[ConsoleComponent Properties](#)

[ConsoleComponent Methods](#)

### ConsoleComponent Properties

The following are properties for `ConsoleComponent`.

## IN THIS SECTION:

[height](#)

The height of the custom console component in pixels.

[location](#)

The location of the custom console component on the page layout. Valid values are right, left, top, and bottom.

[visualforcePage](#)

The unique name of the custom console component.

[width](#)

The width of the custom console component in pixels.

**height**

The height of the custom console component in pixels.

Signature

```
public Integer height {get; set;}
```

Property Value

Type: [Integer](#)

**location**

The location of the custom console component on the page layout. Valid values are right, left, top, and bottom.

Signature

```
public String location {get; set;}
```

Property Value

Type: [String](#)

**visualforcePage**

The unique name of the custom console component.

Signature

```
public String visualforcePage {get; set;}
```

Property Value

Type: [String](#)

**width**

The width of the custom console component in pixels.

Signature

```
public Integer width {get; set;}
```

Property Value

Type: [Integer](#)

## ConsoleComponent Methods

The following are methods for `ConsoleComponent`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.ConsoleComponent`.

### **clone ()**

Makes a duplicate copy of the `Metadata.ConsoleComponent`.

Signature

```
public Object clone ()
```

Return Value

Type: `Object`

## Container Class

Represents a location and style in which to display more than one custom console component in the sidebars of the console.

## Namespace

[Metadata](#)

## Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “Container” in the [Metadata API Developer Guide](#).

IN THIS SECTION:

[Container Properties](#)

[Container Methods](#)

## Container Properties

The following are properties for `Container`.

## IN THIS SECTION:

[height](#)

The height of the component's container. The `unit` property determines the unit of measurement, in pixels or percent.

[isContainerAutoSizeEnabled](#)

If set to true, stacked console components in the sidebars autosize vertically.

[region](#)

The location of the component's container (right, left, bottom, top).

[sidebarComponents](#)

Represents a specific custom console component to display in the components' container.

[style](#)

The style of the container in which to display multiple components (stack, tab, accordion).

[unit](#)

The unit of measurement, in pixels or percent, for the height or width of the components' container.

[width](#)

The width of the component's container. The `unit` property determines the unit of measurement, in pixels or percent.

**height**

The height of the component's container. The `unit` property determines the unit of measurement, in pixels or percent.

Signature

```
public Integer height {get; set;}
```

Property Value

Type: [Integer](#)

**isContainerAutoSizeEnabled**

If set to true, stacked console components in the sidebars autosize vertically.

Signature

```
public Boolean isContainerAutoSizeEnabled {get; set;}
```

Property Value

Type: [Boolean](#)

**region**

The location of the component's container (right, left, bottom, top).

Signature

```
public String region {get; set;}
```

Property Value

Type: [String](#)

### **sidebarComponents**

Represents a specific custom console component to display in the components' container.

Signature

```
public List<Metadata.SidebarComponent> sidebarComponents {get; set;}
```

Property Value

Type: [List<Metadata.SidebarComponent>](#)

### **style**

The style of the container in which to display multiple components (stack, tab, accordion).

Signature

```
public String style {get; set;}
```

Property Value

Type: [String](#)

### **unit**

The unit of measurement, in pixels or percent, for the height or width of the components' container.

Signature

```
public String unit {get; set;}
```

Property Value

Type: [String](#)

### **width**

The width of the component's container. The `unit` property determines the unit of measurement, in pixels or percent.

Signature

```
public Integer width {get; set;}
```

Property Value

Type: [Integer](#)

## Container Methods

The following are methods for `Container`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.Container`.

### **clone ()**

Makes a duplicate copy of the `Metadata.Container`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

## CustomConsoleComponents Class

Represents custom console components (Visualforce pages, lookup fields, or related lists) on a page layout.

## Namespace

[Metadata](#)

## Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “CustomConsoleComponents” in the [Metadata API Developer Guide](#).

IN THIS SECTION:

[CustomConsoleComponents Properties](#)

[CustomConsoleComponents Methods](#)

## CustomConsoleComponents Properties

The following are properties for `CustomConsoleComponents`.

IN THIS SECTION:

[primaryTabComponents](#)

Represents custom console components on primary tabs in the Salesforce console.

[subtabComponents](#)

Represents custom console components on subtabs in the Salesforce console.

**primaryTabComponents**

Represents custom console components on primary tabs in the Salesforce console.

Signature

```
public Metadata.PrimaryTabComponents primaryTabComponents {get; set;}
```

Property Value

Type: [Metadata.PrimaryTabComponents](#)

**subtabComponents**

Represents custom console components on subtabs in the Salesforce console.

Signature

```
public Metadata.SubtabComponents subtabComponents {get; set;}
```

Property Value

Type: [Metadata.SubtabComponents](#)

**CustomConsoleComponents Methods**

The following are methods for `CustomConsoleComponents`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.CustomConsoleComponents`.

**clone ()**

Makes a duplicate copy of the `Metadata.CustomConsoleComponents`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

**CustomMetadata Class**

Represents records of custom metadata types.

## Namespace

[Metadata](#)

## Usage

Use `Metadata.CustomMetadata` to represent records of custom metadata types in Apex. For more information, see [Custom Metadata Types](#) in the *Metadata API Developer Guide*.

## Example

```
// Set up custom metadata to be created in the subscriber org.
Metadata.CustomMetadata customMetadata = new Metadata.CustomMetadata();
customMetadata.fullName = 'ISVNamespace__MetadataTypeName.MetadataRecordName';

Metadata.CustomMetadataValue customField = new Metadata.CustomMetadataValue();
customField.field = 'customField_c';
customField.value = 'New value';

customMetadata.values.add(customField);
```

**Note:** When you assign namespaces to records, provide full, qualified record names to the app. If both the type and the record are in *Namespace*, use something like: `customMetadata.fullName =`

```
'Namespace__MetadataTypeName.Namespace__MetadataRecordName'
```

### IN THIS SECTION:

[CustomMetadata Properties](#)

[CustomMetadata Methods](#)

## CustomMetadata Properties

The following are properties for `CustomMetadata`.

### IN THIS SECTION:

[description](#)

The description of the custom metadata.

[label](#)

The label of the custom metadata record.

[protected\\_x](#)

Property that describes whether the custom metadata record is a protected component.

[values](#)

A list of custom metadata values, such as custom fields, for the custom metadata record.

### **description**

The description of the custom metadata.

Signature

```
public String description {get; set;}
```

Property Value

Type: [String](#)

### **label**

The label of the custom metadata record.

Signature

```
public String label {get; set;}
```

Property Value

Type: [String](#)

### **protected\_x**

Property that describes whether the custom metadata record is a protected component.

Signature

```
public Boolean protected_x {get; set;}
```

Property Value

Type: [Boolean](#)

### **values**

A list of custom metadata values, such as custom fields, for the custom metadata record.

Signature

```
public List<Metadata.CustomMetadataValue> values {get; set;}
```

Property Value

Type: [List<Metadata.CustomMetadataValue>](#)

## CustomMetadata Methods

The following are methods for `CustomMetadata`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.CustomMetadata`.

**clone ()**

Makes a duplicate copy of the `Metadata.CustomMetadata`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

## CustomMetadataValue Class

Represents custom metadata values for a custom metadata component.

## Namespace

[Metadata](#)

## Usage

Use `Metadata.CustomMetadataValue` to access values for custom fields of custom metadata records.

Supported Apex primitive types are:

- Boolean
- Date
- DateTime
- Decimal
- Double
- Integer
- Long
- String

## Example

```
// Set a custom field value for a custom metadata record
Metadata.CustomMetadataValue customField = new Metadata.CustomMetadataValue ();
customField.field = 'CustomField1__c';
customField.value = 'New Value';
customMetadata.values.add (customField);
```

IN THIS SECTION:

[CustomMetadataValue Properties](#)

[CustomMetadataValue Methods](#)

## CustomMetadataValue Properties

The following are properties for `CustomMetadataValue`.

IN THIS SECTION:

[field](#)

The field name for the custom metadata value.

[value](#)

The field value for the custom metadata value.

### **field**

The field name for the custom metadata value.

Signature

```
public String field {get; set;}
```

Property Value

Type: [String](#)

### **value**

The field value for the custom metadata value.

Signature

```
public Object value {get; set;}
```

Property Value

Type: [Object](#)

Supported Apex primitive types are:

- [Boolean](#)
- [Date](#)
- [DateTime](#)
- [Decimal](#)
- [Double](#)
- [Integer](#)
- [Long](#)
- [String](#)

When setting the value for relationship fields, use the qualified API name of the related metadata, not the ID.

For more information, see [Primitive Data Types](#).

## CustomMetadataValue Methods

The following are methods for `CustomMetadataValue`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.CustomMetadataValue`.

### **clone()**

Makes a duplicate copy of the `Metadata.CustomMetadataValue`.

Signature

```
public Object clone()
```

Return Value

Type: Object

## DeployCallback Interface

An interface for metadata deployment callback classes.

### Namespace

[Metadata](#)

### Usage

You must provide a callback class for the asynchronous deployment of custom metadata through Apex. This class must implement the `Metadata.DeployCallback` interface.

Salesforce calls your `DeployCallback.handleResult()` method asynchronously once the queued deployment completes. Because the callback is called as asynchronous Apex after deployment, there may be a brief period where the deploy has completed, but your callback has not been called yet.

IN THIS SECTION:

[DeployCallback Methods](#)

[DeployCallback Example Implementation](#)

### DeployCallback Methods

The following are methods for `DeployCallback`.

IN THIS SECTION:

[handleResult\(var1, var2\)](#)

Method that is called when the asynchronous deployment of custom metadata completes.

**handleResult(var1, var2)**

Method that is called when the asynchronous deployment of custom metadata completes.

Signature

```
public void handleResult(Metadata.DeployResult var1, Metadata.DeployCallbackContext var2)
```

Parameters

*var1*

Type: [Metadata.DeployResult](#)

The results of the asynchronous deployment.

*var2*

Type: [Metadata.DeployCallbackContext](#)

The context for the queued asynchronous deployment job.

Return Value

Type: void

## DeployCallback Example Implementation

This is an example implementation of the `Metadata.DeployCallback` interface.

```
public class MyCallback implements Metadata.DeployCallback {
    public void handleResult(Metadata.DeployResult result,
        Metadata.DeployCallbackContext context) {
        if (result.status == Metadata.DeployStatus.Succeeded) {
            // Deployment was successful
        } else {
            // Deployment was not successful
        }
    }
}
```

The following example uses this implementation for a deployment.

```
// Setup callback and deploy
MyCallback callback = new MyCallback();
Metadata.Operations.enqueueDeployment(mdContainer, callback);
```

## DeployCallbackContext Class

Represents context information for a deployment job.

## Namespace

[Metadata](#)

## Usage

After an asynchronous metadata deployment finishes, Salesforce provides an instance of `Metadata.DeployCallbackContext` in an asynchronous call to your implementation of `handleResult()` in your `Metadata.DeployCallback` class.

## Example

```
public void handleResult(Metadata.DeployResult result,
                        Metadata.DeployCallbackContext context) {
    // Check the callback job ID for the deployment
    Id jobId = context.getCallbackJobId();
    // ...process the results...
}
```

### IN THIS SECTION:

[DeployCallbackContext Methods](#)

## DeployCallbackContext Methods

The following are methods for `DeployCallbackContext`.

### IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.DeployCallbackContext`.

[getCallbackJobId\(\)](#)

Gets the asynchronous Apex job ID for the callback job.

### **clone()**

Makes a duplicate copy of the `Metadata.DeployCallbackContext`.

Signature

```
public Object clone()
```

Return Value

Type: Object

### **getCallbackJobId()**

Gets the asynchronous Apex job ID for the callback job.

Signature

```
public Id getCallbackJobId()
```

Return Value

Type: [Id](#)

## DeployContainer Class

Represents a container for custom metadata components to be deployed.

### Namespace

[Metadata](#)

### Usage

Use `Metadata.DeployContainer` to manage custom metadata components for deployment. A container must have one or more components before being deployed.

### Example

```
// Use DeployContainer for deployment
Metadata.DeployContainer mdContainer = new Metadata.DeployContainer();
mdContainer.addMetadata(customMetadata);

...

// Enqueue deploy
Metadata.Operations.enqueueDeployment(mdContainer, callback);
```

IN THIS SECTION:

[DeployContainer Methods](#)

## DeployContainer Methods

The following are methods for `DeployContainer`.

IN THIS SECTION:

[addMetadata\(md\)](#)

Add a custom metadata component to the container.

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.DeployContainer`.

[getMetadata\(\)](#)

Retrieves a list of custom metadata components from the container.

[removeMetadata\(md\)](#)

Removes a metadata component from the container.

[removeMetadataByFullName\(fullName\)](#)

Removes a metadata component from the container using the component's full name.

**addMetadata (md)**

Add a custom metadata component to the container.

Signature

```
public void addMetadata (Metadata.Metadata md)
```

Parameters

*md*

Type: [Metadata.Metadata](#)

A custom metadata component class that derives from `Metadata.Metadata`. Avoid adding components to a `Metadata.DeployContainer` that have the same `Metadata.Metadata.fullName` because it causes deployment errors.

Return Value

Type: void

**clone ()**

Makes a duplicate copy of the `Metadata.DeployContainer`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

**getMetadata ()**

Retrieves a list of custom metadata components from the container.

Signature

```
public List<Metadata.Metadata> getMetadata ()
```

Return Value

Type: [List<Metadata.Metadata>](#)

**removeMetadata (md)**

Removes a metadata component from the container.

Signature

```
public Boolean removeMetadata (Metadata.Metadata md)
```

### Parameters

*md*

Type: [Metadata.Metadata](#)

Metadata component to remove.

### Return Value

Type: [Boolean](#)

Returns `true` if the container changed as a result of the call.

### **removeMetadataByFullName (fullName)**

Removes a metadata component from the container using the component's full name.

### Signature

```
public Boolean removeMetadataByFullName (String fullName)
```

### Parameters

*fullName*

Type: [String](#)

Full name of the component to remove.

### Return Value

Type: [Boolean](#)

Returns `true` if the container changed as a result of the call.

## DeployDetails Class

Contains detailed information on deployed components.

### Namespace

[Metadata](#)

### Usage

Use this class to obtain a list of the successfully and unsuccessfully deployed components after a completed deployment by Salesforce in your `Metadata.DeployCallback` results.

### IN THIS SECTION:

[DeployDetails Properties](#)

[DeployDetails Methods](#)

## DeployDetails Properties

The following are properties for `DeployDetails`.

### IN THIS SECTION:

#### [componentFailures](#)

Contains a list of information about components that failed to deploy.

#### [componentSuccesses](#)

Contains a list of information about components that deployed successfully.

### **componentFailures**

Contains a list of information about components that failed to deploy.

Signature

```
public List<Metadata.DeployMessage> componentFailures {get; set;}
```

Property Value

Type: [List<Metadata.DeployMessage>](#)

### **componentSuccesses**

Contains a list of information about components that deployed successfully.

Signature

```
public List<Metadata.DeployMessage> componentSuccesses {get; set;}
```

Property Value

Type: [List<Metadata.DeployMessage>](#)

## DeployDetails Methods

The following are methods for `DeployDetails`.

### IN THIS SECTION:

#### [clone\(\)](#)

Makes a duplicate copy of the `Metadata.DeployDetails`.

### **clone ()**

Makes a duplicate copy of the `Metadata.DeployDetails`.

Signature

```
public Object clone()
```

Return Value

Type: Object

## DeployMessage Class

Represents result information for the deployment of a metadata component.

### Namespace

[Metadata](#)

### Usage

Use `DeployMessage` to access detailed information about component deployments. Salesforce provides a list of `DeployMessages` for a completed deployment via the `DeployDetails` and `DeployResults` instances sent in the `DeployCallback.handleResult()` callback.

#### IN THIS SECTION:

[DeployMessage Properties](#)

[DeployMessage Methods](#)

## DeployMessage Properties

The following are properties for `DeployMessage`.

#### IN THIS SECTION:

[changed](#)

Determines whether the component was changed after deployment. If true, the component was changed as a result of the deployment. If false, the deployed component was the same as the corresponding component already in the org.

[columnNumber](#)

Each component is represented by a text file. If an error occurs during deployment, this property represents the column of the text file where the error occurred.

[componentType](#)

The metadata type of the component in the deployment.

[created](#)

If true, the component was created as a result of the deployment. If false, the component was modified as a result of the deployment.

[createdDate](#)

The date and time when the component was created as a result of the deployment.

[deleted](#)

If true, the component was deleted as a result of the deployment. If false, the component was either new or modified as result of the deployment.

[fileName](#)

The name of the file in the metadata archive used to deploy the component.

**fullName**

Full name for the custom metadata component.

**id**

ID of the component that was deployed.

**lineNumber**

Each component is represented by a text file. If an error occurs during deployment, this field represents the line number of the text file where the error occurred.

**problem**

If an error or warning occurred, this field contains a description of the problem that caused the deployment to fail.

**problemType**

Indicates the problem type, for example, an error or warning.

**success**

Indicates whether the component was successfully deployed (true) or not (false).

**changed**

Determines whether the component was changed after deployment. If true, the component was changed as a result of the deployment. If false, the deployed component was the same as the corresponding component already in the org.

Signature

```
public Boolean changed {get; set;}
```

Property Value

Type: [Boolean](#)

**columnNumber**

Each component is represented by a text file. If an error occurs during deployment, this property represents the column of the text file where the error occurred.

Signature

```
public Integer columnNumber {get; set;}
```

Property Value

Type: [Integer](#)

**componentType**

The metadata type of the component in the deployment.

Signature

```
public String componentType {get; set;}
```

Property Value

Type: [String](#)

### **created**

If true, the component was created as a result of the deployment. If false, the component was modified as a result of the deployment.

Signature

```
public Boolean created {get; set;}
```

Property Value

Type: [Boolean](#)

### **createdDate**

The date and time when the component was created as a result of the deployment.

Signature

```
public Datetime createdDate {get; set;}
```

Property Value

Type: [Datetime](#)

### **deleted**

If true, the component was deleted as a result of the deployment. If false, the component was either new or modified as result of the deployment.

Signature

```
public Boolean deleted {get; set;}
```

Property Value

Type: [Boolean](#)

### **fileName**

The name of the file in the metadata archive used to deploy the component.

Signature

```
public String fileName {get; set;}
```

Property Value

Type: [String](#)

**fullName**

Full name for the custom metadata component.

Signature

```
public String fullName {get; set;}
```

Property Value

Type: [String](#)

**id**

ID of the component that was deployed.

Signature

```
public Id id {get; set;}
```

Property Value

Type: [Id](#)

**lineNumber**

Each component is represented by a text file. If an error occurs during deployment, this field represents the line number of the text file where the error occurred.

Signature

```
public Integer lineNumber {get; set;}
```

Property Value

Type: [Integer](#)

**problem**

If an error or warning occurred, this field contains a description of the problem that caused the deployment to fail.

Signature

```
public String problem {get; set;}
```

Property Value

Type: [String](#)

**problemType**

Indicates the problem type, for example, an error or warning.

Signature

```
public Metadata.DeployProblemType problemType {get; set;}
```

Property Value

Type: [Metadata.DeployProblemType](#)

#### **success**

Indicates whether the component was successfully deployed (true) or not (false).

Signature

```
public Boolean success {get; set;}
```

Property Value

Type: [Boolean](#)

## DeployMessage Methods

The following are methods for `DeployMessage`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.DeployMessage`.

#### **clone ()**

Makes a duplicate copy of the `Metadata.DeployMessage`.

Signature

```
public Object clone ()
```

Return Value

Type: `Object`

## DeployProblemType Enum

Describes the problem type for an unsuccessful component deploy.

### Enum Values

The following are the values of the `Metadata.DeployProblemType` enum.

Value	Description
Error	The deploy problem is an error.
Warning	The deploy problem is a warning.

## DeployResult Class

Represents the results of a metadata deployment.

### Namespace

[Metadata](#)

### Usage

After an asynchronous metadata deployment finishes, Salesforce provides an instance of `Metadata.DeployResult` in a call to your implementation of `handleResult()` in your `Metadata.DeployCallback` class.

### Example

```
public void handleResult(Metadata.DeployResult result,
                        Metadata.DeployCallbackContext context) {
    if (result.status == Metadata.DeployStatus.Succeeded) {
        // Deployment was successful
    } else {
        // Deployment was not successful
    }
}
```

#### IN THIS SECTION:

[DeployResult Properties](#)

[DeployResult Methods](#)

## DeployResult Properties

The following are properties for `DeployResult`.

#### IN THIS SECTION:

[canceledBy](#)

ID of the user who canceled the queued deployment.

[canceledByName](#)

Full name of the user who canceled the queued deployment.

[checkOnly](#)

Indicates whether the deployment checked only the validity of the deployed files without making changes in the org. A check-only deployment does not deploy components or change the org in any way.

[completedDate](#)

Date and time for when the deployment process ended.

[createdBy](#)

ID of the user who created the deployment job.

[createdByName](#)

Full name of the user who created the deployment job.

[createdDate](#)

Date and time the deployment job was first queued.

[details](#)

Provides the details for components in a completed deployment.

[done](#)

Indicates whether Salesforce finished processing the deployment.

[errorMessage](#)

Message corresponding to the values in the `errorStatusCode` property, if any.

[errorStatusCode](#)

If an error occurs during deployment, a status code is returned. The message corresponding to the status code is returned in the `errorMessageField` property.

[id](#)

ID of the deployment job.

[ignoreWarnings](#)

Specifies whether a deployment continues, even if the deployment generates warnings.

[lastModifiedDate](#)

Date and time of the last update for the deployment process.

[messages](#)

A list of all the detail messages for a deployment.

[numberComponentErrors](#)

The number of components that generated errors during the deployment.

[numberComponentsDeployed](#)

The number of components deployed in the deployment process. Use this value with the `numberComponentsTotal` property to get an estimate of the deployment's progress.

[numberComponentsTotal](#)

The total number of components in the deployment. Use this value with the `numberComponentsDeployed` property to get an estimate of the deployment's progress.

[rollbackOnError](#)

Indicates whether any failure causes a complete rollback (true) or not (false) of the deployment.

[startDate](#)

Date and time the deployment process began.

[stateDetail](#)

Indicates which component is being deployed.

[status](#)

Indicates the current state of the deployment.

**success**

Indicates whether the deployment was successful (true) or not (false).

**canceledBy**

ID of the user who canceled the queued deployment.

Signature

```
public String canceledBy {get; set;}
```

Property Value

Type: [String](#)

**canceledByName**

Full name of the user who canceled the queued deployment.

Signature

```
public String canceledByName {get; set;}
```

Property Value

Type: [String](#)

**checkOnly**

Indicates whether the deployment checked only the validity of the deployed files without making changes in the org. A check-only deployment does not deploy components or change the org in any way.

Signature

```
public Boolean checkOnly {get; set;}
```

Property Value

Type: [Boolean](#)

**completedDate**

Date and time for when the deployment process ended.

Signature

```
public Datetime completedDate {get; set;}
```

Property Value

Type: [Datetime](#)

**createdBy**

ID of the user who created the deployment job.

Signature

```
public String createdBy {get; set;}
```

Property Value

Type: [String](#)

**createdByName**

Full name of the user who created the deployment job.

Signature

```
public String createdByName {get; set;}
```

Property Value

Type: [String](#)

**createdDate**

Date and time the deployment job was first queued.

Signature

```
public Datetime createdDate {get; set;}
```

Property Value

Type: [Datetime](#)

**details**

Provides the details for components in a completed deployment.

Signature

```
public Metadata.DeployDetails details {get; set;}
```

Property Value

Type: [Metadata.DeployDetails](#)

**done**

Indicates whether Salesforce finished processing the deployment.

Signature

```
public Boolean done {get; set;}
```

Property Value

Type: [Boolean](#)

### **errorMessage**

Message corresponding to the values in the `errorStatusCode` property, if any.

Signature

```
public String errorMessage {get; set;}
```

Property Value

Type: [String](#)

### **errorStatusCode**

If an error occurs during deployment, a status code is returned. The message corresponding to the status code is returned in the `errorMessage` field property.

Signature

```
public String errorStatusCode {get; set;}
```

Property Value

Type: [String](#)

For a description of each status code value, see “[StatusCode](#)” under “[Core Data Types Used in API Calls](#)” in the [SOAP API Developer Guide](#).

### **id**

ID of the deployment job.

Signature

```
public Id id {get; set;}
```

Property Value

Type: [Id](#)

### **ignoreWarnings**

Specifies whether a deployment continues, even if the deployment generates warnings.

Signature

```
public Boolean ignoreWarnings {get; set;}
```

Property Value

Type: [Boolean](#)

### **lastModifiedDate**

Date and time of the last update for the deployment process.

Signature

```
public Datetime lastModifiedDate {get; set;}
```

Property Value

Type: [Datetime](#)

### **messages**

A list of all the detail messages for a deployment.

Signature

```
public List<Metadata.DeployMessage> messages {get; set;}
```

Property Value

Type: [List<Metadata.DeployMessage>](#)

### **numberComponentErrors**

The number of components that generated errors during the deployment.

Signature

```
public Integer numberComponentErrors {get; set;}
```

Property Value

Type: [Integer](#)

### **numberComponentsDeployed**

The number of components deployed in the deployment process. Use this value with the `numberComponentsTotal` property to get an estimate of the deployment's progress.

Signature

```
public Integer numberComponentsDeployed {get; set;}
```

Property Value

Type: [Integer](#)

### **numberComponentsTotal**

The total number of components in the deployment. Use this value with the `numberComponentsDeployed` property to get an estimate of the deployment's progress.

Signature

```
public Integer numberComponentsTotal {get; set;}
```

Property Value

Type: [Integer](#)

### **rollbackOnError**

Indicates whether any failure causes a complete rollback (true) or not (false) of the deployment.

Signature

```
public Boolean rollbackOnError {get; set;}
```

Property Value

Type: [Boolean](#)

### **startDate**

Date and time the deployment process began.

Signature

```
public Datetime startDate {get; set;}
```

Property Value

Type: [Datetime](#)

### **stateDetail**

Indicates which component is being deployed.

Signature

```
public String stateDetail {get; set;}
```

Property Value

Type: [String](#)

**status**

Indicates the current state of the deployment.

Signature

```
public Metadata.DeployStatus status {get; set;}
```

Property Value

Type: [Metadata.DeployStatus](#)

**success**

Indicates whether the deployment was successful (true) or not (false).

Signature

```
public Boolean success {get; set;}
```

Property Value

Type: [Boolean](#)

## DeployResult Methods

The following are methods for `DeployResult`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.DeployResult`.

**clone ()**

Makes a duplicate copy of the `Metadata.DeployResult`.

Signature

```
public Object clone ()
```

Return Value

Type: `Object`

## DeployStatus Enum

The result status of a deployment.

## Usage

`Metadata.DeployResult.status` uses this enum to describe the results of the deployment.

## Enum Values

The following are the values of the `Metadata.DeployStatus` enum.

Value	Description
<code>Canceled</code>	The queued deployment was canceled.
<code>Canceling</code>	The queued deployment is being canceled.
<code>Failed</code>	The deployment failed.
<code>InProgress</code>	The deployment has been started and is in progress.
<code>Pending</code>	The deployment has been queued but not started.
<code>Succeeded</code>	The deployment succeeded.
<code>SucceededPartial</code>	The deployment succeeded, but some components might not have been successfully deployed. Check <code>Metadata.DeployResult</code> for more details.

## FeedItemTypeEnum Enum

The type of feed item in a feed-based page layout.

## Enum Values

The following are the values of the `Metadata.FeedItemTypeEnum` enum.

Value	Description
<code>ActivityEvent</code>	Activity on tasks and events associated with a case. Available only on Case layouts.
<code>AdvancedTextPost</code>	Group announcements posted on a feed.
<code>AnnouncementPost</code>	Not used.
<code>ApprovalPost</code>	Approvals submitted on a feed.
<code>AttachArticleEvent</code>	Activity related to attaching articles to cases.
<code>BasicTemplateFeedItem</code>	Activity from the Log a Call action. Available only on layouts for objects that support Activities (tasks and events).
<code>CallLogPost</code>	Activity from the Log a Call action. Available only on layouts for objects that support Activities (tasks and events).
<code>CanvasPost</code>	Posts a canvas app makes on a feed.
<code>CaseCommentPost</code>	Activity from the Case Note action. Available only on Case layouts.
<code>ChangeStatusPost</code>	Activity from the Change Status action. Available only on Case layouts.

Value	Description
ChatTranscriptPost	Activity related to attaching Live Agent chat transcripts to cases. Available only on Case layouts.
CollaborationGroupCreated	Creating a public group.
CollaborationGroupUnarchived	Not used.
ContentPost	Attaching a file to a post.
CreateRecordEvent	Creating a record from the publisher.
DashboardComponentAlert	Not used.
DashboardComponentSnapshot	Posting a dashboard snapshot on a feed.
EmailMessageEvent	Activity from the Email action. Available only on Case layouts.
FacebookPost	Not used.
LinkPost	Attaching a URL to a post.
MilestoneEvent	Changing the milestone status on a case. Available only on Case layouts.
PollPost	Posting a poll on a feed.
ProfileSkillPost	Adding skills to a user's Chatter profile.
QuestionPost	Posting a question on a feed.
ReplyPost	Activity from the Portal action. Available only on Case layouts.
RypplePost	Creating a Thanks badge in Work.com.
SocialPost	Activity on Twitter from the Social Post action.
TestItem	Creating a text post from the publisher.
TextPost	Making a change or group of changes to a tracked field.
TrackedChange	Not used.
Undefined	Undefined feed item.
UserStatus	Not used.

## FeedLayout Class

Represents the values that define the feed view of a feed-based page layout. Feed-based layouts are available on Account, Case, Contact, Lead, Opportunity, custom, and external objects. They include a feed view and a detail view.

## Namespace

[Metadata](#)

## Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “FeedLayout” in the *Metadata API Developer Guide*.

### IN THIS SECTION:

[FeedLayout Properties](#)

[FeedLayout Methods](#)

## FeedLayout Properties

The following are properties for `FeedLayout`.

### IN THIS SECTION:

[autocollapsePublisher](#)

Specifies whether the publisher is collapsed when the page loads (`true`) or not (`false`).

[compactFeed](#)

Specifies whether the feed-based page layout uses a compact feed (`true`) or not (`false`). If set to `true`, feed items on the page are collapsed by default, and the feed view has an updated design.

[feedFilterPosition](#)

Indicates where the feed filters list is included in the layout.

[feedFilters](#)

The individual filters displayed in the feed filters list.

[fullWidthFeed](#)

Specifies whether the feed expands horizontally to take up all available space on the page (`true`) or not (`false`).

[hideSidebar](#)

Specifies whether the sidebar is hidden (`true`) or not (`false`).

[highlightExternalFeedItems](#)

Controls whether to highlight external feed items (`true`) or not (`false`).

[leftComponents](#)

The individual components displayed in the left column of the feed view.

[rightComponents](#)

Lists the individual components displayed in the right column of the feed view.

[useInlineFiltersInConsole](#)

Indicates whether to use inline filters in the Salesforce console.

### **autocollapsePublisher**

Specifies whether the publisher is collapsed when the page loads (`true`) or not (`false`).

Signature

```
public Boolean autocollapsePublisher {get; set;}
```

Property Value

Type: [Boolean](#)

### **compactFeed**

Specifies whether the feed-based page layout uses a compact feed (`true`) or not (`false`). If set to `true`, feed items on the page are collapsed by default, and the feed view has an updated design.

Signature

```
public Boolean compactFeed {get; set;}
```

Property Value

Type: [Boolean](#)

### **feedFilterPosition**

Indicates where the feed filters list is included in the layout.

Signature

```
public Metadata.FeedLayoutFilterPosition feedFilterPosition {get; set;}
```

Property Value

Type: [FeedLayoutFilterPosition Enum](#)

### **feedFilters**

The individual filters displayed in the feed filters list.

Signature

```
public List<Metadata.FeedLayoutFilter> feedFilters {get; set;}
```

Property Value

Type: [List<FeedLayoutFilter Class>](#).

### **fullWidthFeed**

Specifies whether the feed expands horizontally to take up all available space on the page (`true`) or not (`false`).

Signature

```
public Boolean fullWidthFeed {get; set;}
```

Property Value

Type: [Boolean](#)

**hideSidebar**

Specifies whether the sidebar is hidden (`true`) or not (`false`).

Signature

```
public Boolean hideSidebar {get; set;}
```

Property Value

Type: [Boolean](#)

**highlightExternalFeedItems**

Controls whether to highlight external feed items (`true`) or not (`false`).

Signature

```
public Boolean highlightExternalFeedItems {get; set;}
```

Property Value

Type: [Boolean](#)

**leftComponents**

The individual components displayed in the left column of the feed view.

Signature

```
public List<Metadata.FeedLayoutComponent> leftComponents {get; set;}
```

Property Value

Type: [List<FeedLayoutComponent Class>](#)

**rightComponents**

Lists the individual components displayed in the right column of the feed view.

Signature

```
public List<Metadata.FeedLayoutComponent> rightComponents {get; set;}
```

Property Value

Type: [List<FeedLayoutComponent Class>](#)

**useInlineFiltersInConsole**

Indicates whether to use inline filters in the Salesforce console.

Signature

```
public Boolean useInlineFiltersInConsole {get; set;}
```

Property Value

Type: [Boolean](#)

## FeedLayout Methods

The following are methods for `FeedLayout`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.FeedLayout`.

### **clone ()**

Makes a duplicate copy of the `Metadata.FeedLayout`.

Signature

```
public Object clone ()
```

Return Value

Type: `Object`

## FeedLayoutComponent Class

Represents a component in the feed view of a feed-based page layout.

## Namespace

[Metadata](#)

## Usage

Use this class when accessing [Metadata.Layout](#) metadata components. For more information, see “FeedLayoutComponent” in the [Metadata API Developer Guide](#).

IN THIS SECTION:

[FeedLayoutComponent Properties](#)

[FeedLayoutComponent Methods](#)

## FeedLayoutComponent Properties

The following are properties for `FeedLayoutComponent`.

See `FeedLayoutComponent` in the [Metadata API Developer Guide](#)

#### IN THIS SECTION:

##### [componentType](#)

Represents a component in the feed view of a feed-based page layout. The type of component is required.

##### [height](#)

The height, in pixels, of the component. Doesn't apply to `standardComponents`

##### [page\\_x](#)

The name of the Visualforce page used as a custom component.

#### **componentType**

Represents a component in the feed view of a feed-based page layout. The type of component is required.

Signature

```
public Metadata.FeedLayoutComponentType componentType {get; set;}
```

Property Value

Type: [Metadata.FeedLayoutComponentType](#) on page 2098

#### **height**

The height, in pixels, of the component. Doesn't apply to `standardComponents`

Signature

```
public Integer height {get; set;}
```

Property Value

Type: [Integer](#)

#### **page\_x**

The name of the Visualforce page used as a custom component.

Signature

```
public String page_x {get; set;}
```

Property Value

Type: [String](#)

## FeedLayoutComponent Methods

The following are methods for `FeedLayoutComponent`.

## IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.FeedLayoutComponent`.

**clone ()**

Makes a duplicate copy of the `Metadata.FeedLayoutComponent`.

Signature

```
public Object clone()
```

Return Value

Type: Object

## FeedLayoutComponentType Enum

Indicates the type of feed layout component.

### Enum Values

The following are the values of the `Metadata.FeedLayoutComponentType` enum.

Value	Description
<code>CaseExperts</code>	List of case experts.
<code>CaseUnifiedFiles</code>	List of all files attached to the case.
<code>CustomButtons</code>	Custom button.
<code>CustomLinks</code>	Custom link.
<code>Followers</code>	List of followers.
<code>Following</code>	Icon that toggles between a Follow button (if the user viewing a record doesn't already follow it) and a Following indicator (if the user viewing a record does follow it).
<code>HelpAndToolLinks</code>	Icons that link to the help topic for the page, the page layout, and, the printable view of the page. Available only on Case layouts.
<code>Milestones</code>	Milestone tracker, which lets users see the status of a milestone on a case. Available only on Case layouts.
<code>SimilarCases</code>	List of similar cases.
<code>Topics</code>	List of topics related to the record.
<code>Visualforce</code>	Custom Visualforce component.

## FeedLayoutFilter Class

Represents a feed filter option in the feed view of a feed-based page layout. A filter can have only `standardFilter` or `feedItemType` set.

### Namespace

[Metadata](#)

### Usage

Use this class when accessing [Metadata .Layout](#) metadata components. For more information, see “FeedLayoutFilter” in the [Metadata API Developer Guide](#).

#### IN THIS SECTION:

[FeedLayoutFilter Properties](#)

[FeedLayoutFilter Methods](#)

### FeedLayoutFilter Properties

The following are properties for `FeedLayoutFilter`.

#### IN THIS SECTION:

[feedFilterName](#)

The name of a `CustomFeedFilter` component. Names are prefixed with the name of the parent object. For example, `Case.MyCustomFeedFilter`.

[feedFilterType](#)

The type of filter.

[feedItemType](#)

The type of feed item to display.

#### **feedFilterName**

The name of a `CustomFeedFilter` component. Names are prefixed with the name of the parent object. For example, `Case.MyCustomFeedFilter`.

Signature

```
public String feedFilterName {get; set;}
```

Property Value

Type: [String](#)

#### **feedFilterType**

The type of filter.

Signature

```
public Metadata.FeedLayoutFilterType feedFilterType {get; set;}
```

Property Value

Type: [FeedLayoutFilterType Enum](#)

### **feedItemType**

The type of feed item to display.

Signature

```
public Metadata.FeedItemTypeEnum feedItemType {get; set;}
```

Property Value

Type: [FeedItemTypeEnum Enum](#)

## FeedLayoutFilter Methods

The following are methods for `FeedLayoutFilter`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.FeedLayoutFilter`.

### **clone ()**

Makes a duplicate copy of the `Metadata.FeedLayoutFilter`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

## FeedLayoutFilterPosition Enum

Describes where the feed filters list is included in the layout.

### Enum Values

The following are the values of the `Metadata.FeedLayoutFilterPosition` enum.

Value	Description
CenterDropDown	As a drop-down list in the center column.
LeftFixed	As a fixed list in the left column.
LeftFloat	As a floating list in the left column.

## FeedLayoutFilterType Enum

The type of feed layout filter.

### Enum Values

The following are the values of the `Metadata.FeedLayoutFilterType` enum.

Value	Description
AllUpdates	Shows all feed items on a record.
Custom	Shows custom feed items.
FeedItemType	Shows feed items only for a particular type of activity on the record.

## Layout Class

Represents the metadata associated with a page layout.

### Namespace

[Metadata](#)

### Usage

Use this class to access layout metadata components. For more information, see [Layout](#) in the *Metadata API Developer Guide*.

#### IN THIS SECTION:

[Layout Properties](#)

[Layout Methods](#)

### Layout Properties

The following are properties for `Layout`.

#### IN THIS SECTION:

[customButtons](#)

The custom buttons for this layout.

[customConsoleComponents](#)

Represents custom console components (Visualforce pages, lookup fields, or related lists) on a page layout.

[emailDefault](#)

Default value for the email checkbox. Only relevant if the `showEmailCheckbox` property is set.

[excludeButtons](#)

List of standard buttons to exclude from this layout.

[feedLayout](#)

Represents the values that define the feed view of a feed-based page layout.

[headers](#)

Represents the layout headers used for tagging.

[layoutSections](#)

The main sections of the layout containing fields, s-controls, and custom links. The order here determines the layout order.

[miniLayout](#)

Represents a minilayout, which is used in the mini view of a record in the Console tab, hover details, and event overlays.

[multilineLayoutFields](#)

Fields for special multiline layout fields which appear in OpportunityProduct layouts.

[platformActionList](#)

The list of actions, and their order, that display in the Salesforce mobile action bar for the layout.

[quickActionList](#)

The list of quick actions that display in the full Salesforce site for the page layout.

[relatedContent](#)

The Related Content section of the page layout.

[relatedLists](#)

The related lists for the layout, listed in the order they appear in the user interface.

[relatedObjects](#)

The list of related objects that appears in the mini view of the console.

[runAssignmentRulesDefault](#)

Default value for the "run assignment rules" checkbox. Only relevant if the `showRunAssignmentRulesCheckbox` property is set.

[showEmailCheckbox](#)

Controls whether to show the email checkbox. Only allowed on Case, CaseClose, and Task layouts. The default state of checkbox is controlled by the `emailDefault` property.

[showHighlightsPanel](#)

If set, the highlights panel displays on pages in the Salesforce console.

[showInteractionLogPanel](#)

If set, the interaction log displays on pages in the Salesforce console.

[showKnowledgeComponent](#)

Only allowed on Case layouts. If set, the Knowledge sidebar displays on cases in the Salesforce console.

[showRunAssignmentRulesCheckbox](#)

Controls whether to show the Run Assignment Rules checkbox. Only allowed on Lead and Case layouts. The default state of checkbox is controlled by the `runAssignmentRulesDefault` property.

[showSolutionSection](#)

Only allowed on CaseClose layout. If set, the built-in solution information section shows up on the page.

[showSubmitAndAttachButton](#)

For Cast layouts only. If set, the Submit & Add Attachment button displays on case edit pages to portal users in the Customer Portal.

[summaryLayout](#)

The summary layout for this layout.

**customButtons**

The custom buttons for this layout.

Signature

```
public List<String> customButtons {get; set;}
```

Property Value

Type: [List<String>](#)

**customConsoleComponents**

Represents custom console components (Visualforce pages, lookup fields, or related lists) on a page layout.

Signature

```
public Metadata.CustomConsoleComponents customConsoleComponents {get; set;}
```

Property Value

Type: [CustomConsoleComponents Class](#)

**emailDefault**

Default value for the email checkbox. Only relevant if the `showEmailCheckbox` property is set.

Signature

```
public Boolean emailDefault {get; set;}
```

Property Value

Type: [Boolean](#)

**excludeButtons**

List of standard buttons to exclude from this layout.

Signature

```
public List<String> excludeButtons {get; set;}
```

Property Value

Type: [List<String>](#)

### **feedLayout**

Represents the values that define the feed view of a feed-based page layout.

Signature

```
public Metadata.FeedLayout feedLayout {get; set;}
```

Property Value

Type: [Metadata.FeedLayout](#)

### **headers**

Represents the layout headers used for tagging.

Signature

```
public List<Metadata.LayoutHeader> headers {get; set;}
```

Property Value

Type: [List<Metadata.LayoutHeader>](#)

### **layoutSections**

The main sections of the layout containing fields, s-controls, and custom links. The order here determines the layout order.

Signature

```
public List<Metadata.LayoutSection> layoutSections {get; set;}
```

Property Value

Type: [List<Metadata.LayoutSection>](#)

### **miniLayout**

Represents a minilayout, which is used in the mini view of a record in the Console tab, hover details, and event overlays.

Signature

```
public Metadata.MiniLayout miniLayout {get; set;}
```

Property Value

Type: [Metadata.MiniLayout](#)

**multilineLayoutFields**

Fields for special multiline layout fields which appear in OpportunityProduct layouts.

Signature

```
public List<String> multilineLayoutFields {get; set;}
```

Property Value

Type: [List<String>](#)

**platformActionList**

The list of actions, and their order, that display in the Salesforce mobile action bar for the layout.

Signature

```
public Metadata.PlatformActionList platformActionList {get; set;}
```

Property Value

Type: [Metadata.PlatformActionList](#)

**quickActionList**

The list of quick actions that display in the full Salesforce site for the page layout.

Signature

```
public Metadata.QuickActionList quickActionList {get; set;}
```

Property Value

Type: [Metadata.QuickActionL](#)

**relatedContent**

The Related Content section of the page layout.

Signature

```
public Metadata.RelatedContent relatedContent {get; set;}
```

Property Value

Type: [Metadata.RelatedContent](#)

**relatedLists**

The related lists for the layout, listed in the order they appear in the user interface.

Signature

```
public List<Metadata.RelatedListItem> relatedLists {get; set;}
```

Property Value

Type: [List<Metadata.RelatedListItem>](#)

### **relatedObjects**

The list of related objects that appears in the mini view of the console.

Signature

```
public List<String> relatedObjects {get; set;}
```

Property Value

Type: [List<String>](#)

### **runAssignmentRulesDefault**

Default value for the “run assignment rules” checkbox. Only relevant if the `showRunAssignmentRulesCheckbox` property is set.

Signature

```
public Boolean runAssignmentRulesDefault {get; set;}
```

Property Value

Type: [Boolean](#)

### **showEmailCheckbox**

Controls whether to show the email checkbox. Only allowed on Case, CaseClose, and Task layouts. The default state of checkbox is controlled by the `emailDefault` property.

Signature

```
public Boolean showEmailCheckbox {get; set;}
```

Property Value

Type: [Boolean](#)

### **showHighlightsPanel**

If set, the highlights panel displays on pages in the Salesforce console.

Signature

```
public Boolean showHighlightsPanel {get; set;}
```

Property Value

Type: [Boolean](#)

### **showInteractionLogPanel**

If set, the interaction log displays on pages in the Salesforce console.

Signature

```
public Boolean showInteractionLogPanel {get; set;}
```

Property Value

Type: [Boolean](#)

### **showKnowledgeComponent**

Only allowed on Case layouts. If set, the Knowledge sidebar displays on cases in the Salesforce console.

Signature

```
public Boolean showKnowledgeComponent {get; set;}
```

Property Value

Type: [Boolean](#)

### **showRunAssignmentRulesCheckbox**

Controls whether to show the Run Assignment Rules checkbox. Only allowed on Lead and Case layouts. The default state of checkbox is controlled by the `runAssignmentRulesDefault` property.

Signature

```
public Boolean showRunAssignmentRulesCheckbox {get; set;}
```

Property Value

Type: [Boolean](#)

### **showSolutionSection**

Only allowed on CaseClose layout. If set, the built-in solution information section shows up on the page.

Signature

```
public Boolean showSolutionSection {get; set;}
```

Property Value

Type: [Boolean](#)

### **showSubmitAndAttachButton**

For Cast layouts only. If set, the Submit & Add Attachment button displays on case edit pages to portal users in the Customer Portal.

Signature

```
public Boolean showSubmitAndAttachButton {get; set;}
```

Property Value

Type: [Boolean](#)

### **summaryLayout**

The summary layout for this layout.

Signature

```
public Metadata.SummaryLayout summaryLayout {get; set;}
```

Property Value

Type: [Metadata.SummaryLayout](#)

## Layout Methods

The following are methods for `Layout`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.Layout`.

### **clone ()**

Makes a duplicate copy of the `Metadata.Layout`.

Signature

```
public Object clone ()
```

Return Value

Type: `Object`

## LayoutColumn Class

Represents the items in a column within a layout section.

### Namespace

[Metadata](#)

### Usage

Use this class when accessing [Metadata . Layout](#) metadata components. For more information, see “LayoutColumn” in the [Metadata API Developer Guide](#).

#### IN THIS SECTION:

[LayoutColumn Properties](#)

[LayoutColumn Methods](#)

## LayoutColumn Properties

The following are properties for `LayoutColumn`.

#### IN THIS SECTION:

[layoutItems](#)

The individual items within a column (ordered from top to bottom).

[reserved](#)

This field is reserved for Salesforce.

### **layoutItems**

The individual items within a column (ordered from top to bottom).

Signature

```
public List<Metadata.LayoutItem> layoutItems {get; set;}
```

Property Value

Type: [List<Metadata.LayoutItem>](#)

### **reserved**

This field is reserved for Salesforce.

Signature

```
public String reserved {get; set;}
```

Property Value

Type: [String](#)

## LayoutColumn Methods

The following are methods for `LayoutColumn`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.LayoutColumn`.

### **clone ()**

Makes a duplicate copy of the `Metadata.LayoutColumn`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

## LayoutHeader Enum

Represents tagging types used for `Metadata.Layout.headers`

### Enum Values

The following are the values of the `Metadata.LayoutHeader` enum.

Value	Description
<code>PersonalTagging</code>	Tag is set to private user.
<code>PublicTagging</code>	Tag is viewable to any user who can access the record.

## LayoutItem Class

Represents the valid values that define a layout item.

### Namespace

[Metadata](#)

### Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “LayoutItem” in the [Metadata API Developer Guide](#).

## IN THIS SECTION:

[LayoutItem Properties](#)[LayoutItem Methods](#)

## LayoutItem Properties

The following are properties for `LayoutItem`.

## IN THIS SECTION:

[analyticsCloudComponent](#)

A Wave Analytics dashboard component on a page.

[behavior](#)

Determines the field behavior.

[canvas](#)

References a canvas app.

[component](#)

References a component.

[customLink](#)

The custom link reference.

[emptySpace](#)

Controls if this layout item is a blank space.

[field](#)

The field name reference, relative to the layout, for example "Description" or "MyField\_\_c".

[height](#)

For s-controls and pages only, the height in pixels.

[page\\_x](#)

Reference to a Visualforce page.

[reportChartComponent](#)

Refers to a report chart that you can add to a standard or custom object page.

[scontrol](#)

Reference to an s-control.

[showLabel](#)

For s-control and pages only, whether to show the label.

[showScrollbars](#)

For s-control and pages only, whether to show scrollbars.

[width](#)

For s-control and pages only, the width in pixels or percent. Pixel values are simply the number of pixels, for example, 500. Percentage values must include the percent sign, for example, 20%.

### **analyticsCloudComponent**

A Wave Analytics dashboard component on a page.

Signature

```
public Metadata.AnalyticsCloudComponentLayoutItem analyticsCloudComponent {get; set;}
```

Property Value

Type: [Metadata.AnalyticsCloudComponentLayoutItem](#)

### **behavior**

Determines the field behavior.

Signature

```
public Metadata.UiBehavior behavior {get; set;}
```

Property Value

Type: [Metadata.UiBehavior](#)

### **canvas**

References a canvas app.

Signature

```
public String canvas {get; set;}
```

Property Value

Type: [String](#)

### **component**

References a component.

Signature

```
public String component {get; set;}
```

Property Value

Type: [String](#)

### **customLink**

The custom link reference.

Signature

```
public String customLink {get; set;}
```

Property Value

Type: [String](#)

### **emptySpace**

Controls if this layout item is a blank space.

Signature

```
public Boolean emptySpace {get; set;}
```

Property Value

Type: [Boolean](#)

### **field**

The field name reference, relative to the layout, for example "Description" or "MyField\_\_c".

Signature

```
public String field {get; set;}
```

Property Value

Type: [String](#)

### **height**

For s-controls and pages only, the height in pixels.

Signature

```
public Integer height {get; set;}
```

Property Value

Type: [Integer](#)

### **page\_x**

Reference to a Visualforce page.

Signature

```
public String page_x {get; set;}
```

Property Value

Type: [String](#)

**reportChartComponent**

Refers to a report chart that you can add to a standard or custom object page.

Signature

```
public Metadata.ReportChartComponentLayoutItem reportChartComponent {get; set;}
```

Property Value

Type: [Metadata.ReportChartComponentLayoutItem](#)

**scontrol**

Reference to an s-control.

Signature

```
public String scontrol {get; set;}
```

Property Value

Type: [String](#)

**showLabel**

For s-control and pages only, whether to show the label.

Signature

```
public Boolean showLabel {get; set;}
```

Property Value

Type: [Boolean](#)

**showScrollbars**

For s-control and pages only, whether to show scrollbars.

Signature

```
public Boolean showScrollbars {get; set;}
```

Property Value

Type: [Boolean](#)

**width**

For s-control and pages only, the width in pixels or percent. Pixel values are simply the number of pixels, for example, 500. Percentage values must include the percent sign, for example, 20%.

Signature

```
public String width {get; set;}
```

Property Value

Type: [String](#)

## LayoutItem Methods

The following are methods for `LayoutItem`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.LayoutItem`.

### **clone ()**

Makes a duplicate copy of the `Metadata.LayoutItem`.

Signature

```
public Object clone ()
```

Return Value

Type: `Object`

## LayoutSection Class

Represents a section of a page layout, such as the Custom Links section.

## Namespace

[Metadata](#)

## Usage

Use this class when accessing [Metadata.Layout](#) metadata components. For more information, see “LayoutSection” in the [Metadata API Developer Guide](#).

IN THIS SECTION:

[LayoutSection Properties](#)

[LayoutSection Methods](#)

## LayoutSection Properties

The following are properties for `LayoutSection`.

## IN THIS SECTION:

[customLabel](#)

Indicates if this section's label is custom or standard (built-in).

[detailHeading](#)

Controls if this section appears in the detail page.

[editHeading](#)

Controls if this section appears in the edit page.

[label](#)

The label; either standard or custom, based on the customLabel property.

[layoutColumns](#)

Lists the layout columns. You can have one, two, or three columns, ordered left to right, are possible.

[style](#)

The style of the layout for this section.

**customLabel**

Indicates if this section's label is custom or standard (built-in).

Signature

```
public Boolean customLabel {get; set;}
```

Property Value

Type: [Boolean](#)

**detailHeading**

Controls if this section appears in the detail page.

Signature

```
public Boolean detailHeading {get; set;}
```

Property Value

Type: [Boolean](#)

**editHeading**

Controls if this section appears in the edit page.

Signature

```
public Boolean editHeading {get; set;}
```

Property Value

Type: [Boolean](#)

### **label**

The label; either standard or custom, based on the customLabel property.

Signature

```
public String label {get; set;}
```

Property Value

Type: [String](#)

### **layoutColumns**

Lists the layout columns. You can have one, two, or three columns, ordered left to right, are possible.

Signature

```
public List<Metadata.LayoutColumn> layoutColumns {get; set;}
```

Property Value

Type: [List<Metadata.LayoutColumn>](#)

### **style**

The style of the layout for this section.

Signature

```
public Metadata.LayoutSectionStyle style {get; set;}
```

Property Value

Type: [Metadata.LayoutSectionStyle](#)

## **LayoutSection Methods**

The following are methods for `LayoutSection`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.LayoutSection`.

### **clone()**

Makes a duplicate copy of the `Metadata.LayoutSection`.

Signature

```
public Object clone()
```

Return Value

Type: Object

## LayoutSectionStyle Enum

Describes the possible styles for a layout section.

### Enum Values

The following are the values of the `Metadata.LayoutSectionStyle` enum.

Value	Description
<code>CustomLinks</code>	Contains custom links only
<code>OneColumn</code>	One column
<code>TwoColumnsLeftToRight</code>	Two columns, tab goes left to right
<code>TwoColumnsTopToBottom</code>	Two columns, tab goes top to bottom

## Metadata Class

An abstract base class that represents a custom metadata component.

### Namespace

[Metadata](#)

### Usage

You can't create instances of this abstract class. Instead, create an instance of a specific custom metadata component class that derives from `Metadata.Metadata`, such as `Metadata.CustomMetadata`. For more information, see [Metadata](#) in the *Metadata API Developer Guide*.

IN THIS SECTION:

[Metadata Properties](#)

[Metadata Methods](#)

### Metadata Properties

The following are properties for `Metadata`.

**IN THIS SECTION:****fullName**

The full name of the custom metadata, which can include the namespace, type, and component name.

**fullName**

The full name of the custom metadata, which can include the namespace, type, and component name.

Signature

```
public String fullName {get; set;}
```

Property Value

Type: [String](#)

The format of the full name can include the namespace, metadata type, and metadata component name. If you're updating components in a namespace, you also need to qualify the namespace for the component in the full name. For example, the full name for a custom metadata "MDType1\_\_mdt" component named "Component1" that is contained in the "myPackage" namespace is "myPackage\_\_MDType1\_\_mdt.myPackage\_\_Component1". For more information on full name formats for different metadata types, see reference documentation on the metadata types in the [Metadata API Developer Guide](#).

## Metadata Methods

The following are methods for `Metadata`.

**IN THIS SECTION:****clone()**

Makes a duplicate copy of the `Metadata.Metadata`.

**clone ()**

Makes a duplicate copy of the `Metadata.Metadata`.

Signature

```
public Object clone ()
```

Return Value

Type: `Object`

## MetadataType Enum

Represents the custom metadata components available in Apex.

### Enum Values

The following are the values of the `Metadata.MetadataType` enum.

Value	Description
CustomMetadata	Records of custom metadata types
Layout	Layouts

## MetadataValue Class

An abstract base class that represents a custom metadata component field.

### Namespace

[Metadata](#)

### Usage

You can't create instances of this abstract class. Instead, create an instance of a specific custom metadata component value class that derives from `Metadata.MetadataValue`, such as [Metadata.CustomMetadataValue](#).

IN THIS SECTION:

[MetadataValue Methods](#)

## MetadataValue Methods

The following are methods for `MetadataValue`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.MetadataValue`.

### **clone ()**

Makes a duplicate copy of the `Metadata.MetadataValue`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

## MiniLayout Class

Represents a mini view of a record in the Console tab, hover details, and event overlays.

## Namespace

[Metadata](#)

## Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “MiniLayout” in the [Metadata API Developer Guide](#).

### IN THIS SECTION:

[MiniLayout Properties](#)

[MiniLayout Methods](#)

## MiniLayout Properties

The following are properties for `MiniLayout`.

### IN THIS SECTION:

[fields](#)

The fields for the mini-layout, listed in the order they appear in the UI. Fields that appear in the mini-layout must appear in the main layout.

[relatedLists](#)

The mini related lists, listed in the order they appear in the UI. You cannot set sorting on mini related lists. Fields that appear in the mini related lists must appear in the main layout.

### **fields**

The fields for the mini-layout, listed in the order they appear in the UI. Fields that appear in the mini-layout must appear in the main layout.

Signature

```
public List<String> fields {get; set;}
```

Property Value

Type: [List<String>](#)

### **relatedLists**

The mini related lists, listed in the order they appear in the UI. You cannot set sorting on mini related lists. Fields that appear in the mini related lists must appear in the main layout.

Signature

```
public List<Metadata.RelatedListItem> relatedLists {get; set;}
```

Property Value

Type: [List<Metadata.RelatedListItem>](#)

## MiniLayout Methods

The following are methods for `MiniLayout`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.MiniLayout`.

### **clone ()**

Makes a duplicate copy of the `Metadata.MiniLayout`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

## Operations Class

Represents a class to execute metadata operations, such as retrieving or deploying custom metadata.

## Namespace

[Metadata](#)

## Usage

Use the `Metadata.Operations` class to execute metadata operations. For more information on use cases and restrictions of metadata operations in Apex, see [Metadata](#).

## Example: Retrieve Metadata

The following example retrieves the “MyTestCustomMDType” custom metadata record from the subscriber org, and inspects the custom fields.

```
public class ReadMetadata {
    public void retrieveMetadata () {
        // List fullnames of components we want to retrieve
        List<String> componentNameList =
new List<String>{ 'ISVNamespace__TestCustomMDType.MyTestCustomMDType' };

        // Retrieve components that are records of custom metadata types
        // based on name
        List<Metadata.Metadata> components = Metadata.Operations.retrieve(
```

```

Metadata.MetadataType.CustomMetadata, componentNameList);
    Metadata.CustomMetadata customMetadataRecord = (Metadata.CustomMetadata)
components.get(0);

    // Check fields of retrieved component
List<Metadata.CustomMetadataValue> values = customMetadataRecord.values;
for (integer i = 0; i < values.size(); i++) {
    if (values.get(i).field == 'testField__c' &&
        values.get(i).value == 'desired value') {
        // ...process accordingly...
    }
}
}
}
}

```

### Example: Deploy Metadata

The following example uses the Metadata API in Apex to update the customField custom field value of the MetadataRecordName custom metadata record and deploy this change into the subscriber org. Because the deployment is asynchronous, you must provide a callback class that implements the `Metadata.DeployCallback` interface, which is then used when the queued deployment completes.

```

public class CreateMetadata{
    public void updateAndDeployMetadata() {
        // Setup custom metadata to be created in the subscriber org.
        Metadata.CustomMetadata customMetadata = new Metadata.CustomMetadata();
        customMetadata.fullName = 'ISVNamespace__MetadataTypeName.MetadataRecordName';

        Metadata.CustomMetadataValue customField = new Metadata.CustomMetadataValue();
        customField.field = 'customField__c';
        customField.value = 'New value';

        customMetadata.values.add(customField);

        Metadata.DeployContainer mdContainer = new Metadata.DeployContainer();
        mdContainer.addMetadata(customMetadata);

        // Setup deploy callback, MyDeployCallback implements
        // the Metadata.DeployCallback interface (code for
        // this class not shown in this example)
        MyDeployCallback callback = new MyDeployCallback();

        // Enqueue custom metadata deployment
        Id jobId = Metadata.Operations.enqueueDeployment(mdContainer, callback);
    }
}

```

### Example: Create Two Metadata Records Synchronously

Create a metadata record along with another one that references it in the same transaction. If the parent record was installed with a namespace, prefix the developer name with `recordNs__`.

 **Note:** No custom metadata relationship can relate records of the same type to each other.

```
public class CreateMetadata {

    public Id doCreate(
        String parentRecDevName,
        String parentRecLabel,
        String childRecDevName,
        String childRecLabel) {

        Metadata.DeployContainer mdContainer = new Metadata.DeployContainer();

        Metadata.CustomMetadata parentRecord = new Metadata.CustomMetadata();
        parentRecord.fullName = 'ParentType.' + parentRecDevName;
        parentRecord.label = parentRecLabel;
        mdContainer.addMetadata(parentRecord);

        Metadata.CustomMetadata childRecord = new Metadata.CustomMetadata();
        childRecord.fullName = 'ChildType.' + childRecDevName;
        childRecord.label = childRecLabel;
        Metadata.CustomMetadataValue relValue = new Metadata.CustomMetadataValue();
        relValue.field = 'Parent__c';
        relValue.value = parentRecDevName;
        childRecord.values.add(relValue);
        mdContainer.addMetadata(childRecord);

        Id jobId = Metadata.Operations.enqueueDeployment(mdContainer, null);
        return jobId;
    }
}
```

#### IN THIS SECTION:

[Operations Methods](#)

## Operations Methods

The following are methods for `Operations`.

#### IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.Operations`.

[enqueueDeployment\(container, callback\)](#)

Deploys custom metadata components asynchronously.

[retrieve\(type, fullNames\)](#)

Retrieves a list of custom metadata components.

**clone ()**

Makes a duplicate copy of the `Metadata.Operations`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

**enqueueDeployment (container, callback)**

Deploys custom metadata components asynchronously.

Signature

```
public static Id enqueueDeployment (Metadata.DeployContainer container,  
Metadata.DeployCallback callback)
```

Parameters

*container*

Type: [Metadata.DeployContainer](#)

Container that contains the set of metadata components to deploy.

*callback*

Type: [Metadata.DeployCallback](#)

A class that implements the `Metadata.DeployCallback` interface. Used by Salesforce to return information about the deployment results.

Return Value

Type: [Id](#)

ID of deployment request.

**retrieve (type, fullNames)**

Retrieves a list of custom metadata components.

Signature

```
public static List<Metadata.Metadata> retrieve (Metadata.MetadataType type, List<String>  
fullNames)
```

Parameters

*type*

Type: [Metadata.MetadataType](#)

The metadata component type.

*fullNames*

Type: [List<String>](#)

A list of component names to retrieve. For information on component name formats, see [Metadata.fullName\(\)](#).

Return Value

Type: [List<Metadata.Metadata>](#)

## PlatformActionList Class

Represents the list of actions, and their order, that display in the Salesforce mobile action bar for the layout.

### Namespace

[Metadata](#)

### Usage

Use this class when accessing [Metadata.Layout](#) metadata components. For more information, see “PlatformActionList” in the [Metadata API Developer Guide](#).

IN THIS SECTION:

[PlatformActionList Properties](#)

[PlatformActionList Methods](#)

### PlatformActionList Properties

The following are properties for `PlatformActionList`.

IN THIS SECTION:

[actionListContext](#)

The context of the action list.

[platformActionListItems](#)

The actions in the platform action list.

[relatedSourceEntity](#)

When the `actionListContext` property is “RelatedList” or “RelatedListRecord”, this field represents the API name of the related list to which the action belongs.

#### **actionListContext**

The context of the action list.

Signature

```
public Metadata.PlatformActionListContextEnum actionListContext {get; set;}
```

Property Value

Type: [Metadata.PlatformActionListContextEnum](#)

### **platformActionListItems**

The actions in the platform action list.

Signature

```
public List<Metadata.PlatformActionListItem> platformActionListItems {get; set;}
```

Property Value

Type: [List<Metadata.PlatformActionListItem>](#)

### **relatedSourceEntity**

When the `actionListContext` property is "RelatedList" or "RelatedListRecord", this field represents the API name of the related list to which the action belongs.

Signature

```
public String relatedSourceEntity {get; set;}
```

Property Value

Type: [String](#)

## PlatformActionList Methods

The following are methods for `PlatformActionList`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.PlatformActionList`.

### **clone ()**

Makes a duplicate copy of the `Metadata.PlatformActionList`.

Signature

```
public Object clone()
```

Return Value

Type: `Object`

## PlatformActionListContextEnum Enum

Describes the different contexts of action lists.

### Enum Values

The following are the values of the `Metadata.PlatformActionListContextEnum` enum.

Value	Description
Assistant	Assistant context.
BannerPhoto	Banner photo context.
Chatter	Chatter context.
Dockable	Dockable context.
FeedElement	Feed element context.
Flexipage	Flexipage context.
Global_x	Global context.
ListView	Listview context.
ListViewDefinition	Listview definition context.
ListViewRecord	Listview record context.
Lookup	Lookup context.
MruList	MRU list context.
MruRow	MRU row context.
ObjectHomeChart	Object home chart context.
Photo	Photo context
Record	Record context.
RecordEdit	Record edit context
RelatedList	Related list context.
RelatedListRecord	Related list record context.

## PlatformActionListItem Class

Represents an action in the platform action list for a layout.

### Namespace

[Metadata](#)

## Usage

Use this class when accessing [Metadata.Layout](#) metadata components. For more information, see “PlatformActionListItem” in the [Metadata API Developer Guide](#).

### IN THIS SECTION:

[PlatformActionListItem Properties](#)

[PlatformActionListItem Methods](#)

## PlatformActionListItem Properties

The following are properties for `PlatformActionListItem`.

### IN THIS SECTION:

[actionName](#)

The API name for the action in the list.

[actionType](#)

The type of action.

[sortOrder](#)

The placement of the action in the list.

[subtype](#)

The subtype of the action.

### **actionName**

The API name for the action in the list.

Signature

```
public String actionName {get; set;}
```

Property Value

Type: [String](#)

### **actionType**

The type of action.

Signature

```
public Metadata.PlatformActionTypeEnum actionType {get; set;}
```

Property Value

Type: [Metadata.PlatformActionTypeEnum](#)

**sortOrder**

The placement of the action in the list.

Signature

```
public Integer sortOrder {get; set;}
```

Property Value

Type: [Integer](#)

**subtype**

The subtype of the action.

Signature

```
public String subtype {get; set;}
```

Property Value

Type: [String](#)

## PlatformActionListItem Methods

The following are methods for `PlatformActionListItem`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.PlatformActionListItem`.

**clone ()**

Makes a duplicate copy of the `Metadata.PlatformActionListItem`.

Signature

```
public Object clone ()
```

Return Value

Type: `Object`

## PlatformActionTypeEnum Enum

The type of action for a `PlatformActionListItem`.

## Enum Values

The following are the values of the `Metadata.PlatformActionTypeEnum` enum.

Value	Description
<code>ActionLink</code>	An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce Chatter feed UI.
<code>CustomButton</code>	When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.
<code>InvocableAction</code>	An invocable action such as posting to Chatter.
<code>ProductivityAction</code>	Productivity actions are predefined by Salesforce and are attached to a limited set of objects. You can't edit or delete productivity actions.
<code>QuickAction</code>	A global or object-specific action.
<code>StandardButton</code>	A predefined Salesforce button such as New, Edit, and Delete.

## PrimaryTabComponents Class

Represents custom console components on primary tabs in the Salesforce console.

### Namespace

[Metadata](#)

### Usage

Use this class when accessing [Metadata.Layout](#) metadata components. For more information, see "PrimaryTabComponents" in the [Metadata API Developer Guide](#).

#### IN THIS SECTION:

[PrimaryTabComponents Properties](#)

[PrimaryTabComponents Methods](#)

## PrimaryTabComponents Properties

The following are properties for `PrimaryTabComponents`.

#### IN THIS SECTION:

[component](#)

Represents a custom console component (Visualforce page, lookup field, or related lists) on a section of a page layout.

[containers](#)

Represents a location and style in which to display more than one custom console component on the sidebars of the Salesforce console.

**component**

Represents a custom console component (Visualforce page, lookup field, or related lists) on a section of a page layout.

Signature

```
public List<Metadata.ConsoleComponent> component {get; set;}
```

Property Value

Type: [List<Metadata.ConsoleComponent>](#)

**containers**

Represents a location and style in which to display more than one custom console component on the sidebars of the Salesforce console.

Signature

```
public List<Metadata.Container> containers {get; set;}
```

Property Value

Type: [List<Metadata.Container>](#)

## PrimaryTabComponents Methods

The following are methods for `PrimaryTabComponents`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.PrimaryTabComponents`.

**clone ()**

Makes a duplicate copy of the `Metadata.PrimaryTabComponents`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

## QuickActionList Class

Represents the list of actions associated with the page layout.

## Namespace

[Metadata](#)

## Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “QuickActionList” in the [Metadata API Developer Guide](#).

### IN THIS SECTION:

[QuickActionList Properties](#)

[QuickActionList Methods](#)

## QuickActionList Properties

The following are properties for `QuickActionList`.

### IN THIS SECTION:

[quickActionListItems](#)

List of `QuickActionList` objects.

### **quickActionListItems**

List of `QuickActionList` objects.

### Signature

```
public List<Metadata.QuickActionListItem> quickActionListItems {get; set;}
```

### Property Value

Type: [List<Metadata.QuickActionListItem>](#)

## QuickActionList Methods

The following are methods for `QuickActionList`.

### IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.QuickActionList`.

### **clone ()**

Makes a duplicate copy of the `Metadata.QuickActionList`.

### Signature

```
public Object clone ()
```

Return Value

Type: Object

## QuickActionListItem Class

Represents an action in the `QuickActionList`.

### Namespace

[Metadata](#)

### Usage

Use this class when accessing [Metadata .Layout](#) metadata components. For more information, see “QuickActionListItem” in the [Metadata API Developer Guide](#).

IN THIS SECTION:

[QuickActionListItem Properties](#)

[QuickActionListItem Methods](#)

### QuickActionListItem Properties

The following are properties for `QuickActionListItem`.

IN THIS SECTION:

[quickActionName](#)

The API name of the action.

#### **quickActionName**

The API name of the action.

Signature

```
public String quickActionName {get; set;}
```

Property Value

Type: [String](#)

### QuickActionListItem Methods

The following are methods for `QuickActionListItem`.

## IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.QuickActionListItem`.

**clone ()**

Makes a duplicate copy of the `Metadata.QuickActionListItem`.

Signature

```
public Object clone()
```

Return Value

Type: Object

## RelatedContent Class

Represents the Mobile Cards section of the page layout.

## Namespace

[Metadata](#)

## Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see "RelatedContent" in the [Metadata API Developer Guide](#).

## IN THIS SECTION:

[RelatedContent Properties](#)

[RelatedContent Methods](#)

## RelatedContent Properties

The following are properties for `RelatedContent`.

## IN THIS SECTION:

[relatedContentItems](#)

A list of layout items in the Mobile Cards section of the page layout.

**relatedContentItems**

A list of layout items in the Mobile Cards section of the page layout.

Signature

```
public List<Metadata.RelatedContentItem> relatedContentItems {get; set;}
```

Property Value

Type: [List<Metadata.RelatedContentItem>](#)

## RelatedContent Methods

The following are methods for `RelatedContent`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.RelatedContent`.

### **clone ()**

Makes a duplicate copy of the `Metadata.RelatedContent`.

Signature

```
public Object clone ()
```

Return Value

Type: `Object`

## RelatedContentItem Class

Represents an individual item in the `RelatedContent` list.

## Namespace

[Metadata](#)

## Usage

Use this class when accessing [Metadata.Layout](#) metadata components. For more information, see “[RelatedContentItem](#)” in the [Metadata API Developer Guide](#).

IN THIS SECTION:

[RelatedContentItem Properties](#)

[RelatedContentItem Methods](#)

## RelatedContentItem Properties

The following are properties for `RelatedContentItem`.

## IN THIS SECTION:

[layoutItem](#)

An individual layout item in the Mobile Cards section.

**layoutItem**

An individual layout item in the Mobile Cards section.

Signature

```
public Metadata.LayoutItem layoutItem {get; set;}
```

Property Value

Type: [Metadata.LayoutItem](#)

**RelatedContentItem Methods**

The following are methods for `RelatedContentItem`.

## IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.RelatedContentItem`.

**clone ()**

Makes a duplicate copy of the `Metadata.RelatedContentItem`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

**RelatedList Class**

Represents related list custom components on the sidebars of the Salesforce console.

**Namespace**

[Metadata](#)

**Usage**

Use this class when accessing `Metadata.Layout` metadata components. For more information, see "RelatedList" in the [Metadata API Developer Guide](#).

## IN THIS SECTION:

[RelatedList Properties](#)[RelatedList Methods](#)

## RelatedList Properties

The following are properties for `RelatedList`.

## IN THIS SECTION:

[hideOnDetail](#)

When set to true, the related list is hidden from detail pages where it appears as a component to prevent duplicate information from showing.

[name](#)

The name of the component as it appears to console users.

### **hideOnDetail**

When set to true, the related list is hidden from detail pages where it appears as a component to prevent duplicate information from showing.

Signature

```
public Boolean hideOnDetail {get; set;}
```

Property Value

Type: [Boolean](#)

### **name**

The name of the component as it appears to console users.

Signature

```
public String name {get; set;}
```

Property Value

Type: [String](#)

## RelatedList Methods

The following are methods for `RelatedList`.

## IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.RelatedList`.

**clone ()**

Makes a duplicate copy of the `Metadata.RelatedList`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

## RelatedListItem Class

Represents an item in the related list in a page layout.

## Namespace

[Metadata](#)

## Usage

Use this class when accessing [Metadata.Layout](#) metadata components. For more information, see “RelatedListItem” in the [Metadata API Developer Guide](#).

### IN THIS SECTION:

[RelatedListItem Properties](#)

[RelatedListItem Methods](#)

## RelatedListItem Properties

The following are properties for `RelatedListItem`.

### IN THIS SECTION:

[customButtons](#)

A list of custom buttons used in the related list.

[excludeButtons](#)

A list of excluded related-list buttons.

[fields](#)

A list of fields displayed in the related list. Uses aliases instead of field or API names.

[relatedList](#)

The name of the related list.

[sortField](#)

The name of the field used for sorting.

[sortOrder](#)

When `sortField` is set, the `sortOrder` property determines the sort order.

**customButtons**

A list of custom buttons used in the related list.

Signature

```
public List<String> customButtons {get; set;}
```

Property Value

Type: [List<String>](#)

For more information, see “Define Custom Buttons and Links” in the Salesforce online help.

**excludeButtons**

A list of excluded related-list buttons.

Signature

```
public List<String> excludeButtons {get; set;}
```

Property Value

Type: [List<String>](#)

**fields**

A list of fields displayed in the related list. Uses aliases instead of field or API names.

Signature

```
public List<String> fields {get; set;}
```

Property Value

Type: [List<String>](#)

**relatedList**

The name of the related list.

Signature

```
public String relatedList {get; set;}
```

Property Value

Type: [String](#)

**sortField**

The name of the field used for sorting.

Signature

```
public String sortField {get; set;}
```

Property Value

Type: [String](#)

**sortOrder**

When `sortField` is set, the `sortOrder` property determines the sort order.

Signature

```
public Metadata.SortOrder sortOrder {get; set;}
```

Property Value

Type: [Metadata.SortOrder](#)

**RelatedListItem Methods**

The following are methods for `RelatedListItem`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.RelatedListItem`.

**clone ()**

Makes a duplicate copy of the `Metadata.RelatedListItem`.

Signature

```
public Object clone ()
```

Return Value

Type: `Object`

**ReportChartComponentLayoutItem Class**

Represents the settings for a report chart on a standard or custom page.

## Namespace

[Metadata](#)

## Usage

Use this class when accessing [Metadata.Layout](#) metadata components. For more information, see “ReportChartComponentLayoutItem” in the [Metadata API Developer Guide](#).

### IN THIS SECTION:

[ReportChartComponentLayoutItem Properties](#)

[ReportChartComponentLayoutItem Methods](#)

## ReportChartComponentLayoutItem Properties

The following are properties for `ReportChartComponentLayoutItem`.

### IN THIS SECTION:

[cacheData](#)

Indicates whether to use cached data when displaying the chart. When the attribute is set to true, data is cached for 24 hours. When the attribute is set to false, the report is run every time the page is refreshed.

[contextFilterableField](#)

Unique development name of the field by which a report chart is filtered to return data relevant to the page. If set, the ID field for the parent object of the page or report type is the chart data filter. The parent object for the report type and the page must match for a chart to return relevant data.

[error](#)

Error string that is populated only when an error occurs in the underlying report.

[hideOnError](#)

Controls whether users see a chart that has an error. When an error occurs and this attribute is not set, the chart doesn't show any data except the error. Set the attribute to true to hide the chart from a page on error.

[includeContext](#)

If true, filters the report chart to return data that's relevant to the page.

[reportName](#)

Unique development name of a report that includes a chart.

[showTitle](#)

If true, applies the title from the report to the chart.

[size](#)

Size of the displayed chart. The default is medium.

### **cacheData**

Indicates whether to use cached data when displaying the chart. When the attribute is set to true, data is cached for 24 hours. When the attribute is set to false, the report is run every time the page is refreshed.

Signature

```
public Boolean cacheData {get; set;}
```

Property Value

Type: [Boolean](#)

### **contextFilterableField**

Unique development name of the field by which a report chart is filtered to return data relevant to the page. If set, the ID field for the parent object of the page or report type is the chart data filter. The parent object for the report type and the page must match for a chart to return relevant data.

Signature

```
public String contextFilterableField {get; set;}
```

Property Value

Type: [String](#)

### **error**

Error string that is populated only when an error occurs in the underlying report.

Signature

```
public String error {get; set;}
```

Property Value

Type: [String](#)

### **hideOnError**

Controls whether users see a chart that has an error. When an error occurs and this attribute is not set, the chart doesn't show any data except the error. Set the attribute to true to hide the chart from a page on error.

Signature

```
public Boolean hideOnError {get; set;}
```

Property Value

Type: [Boolean](#)

### **includeContext**

If true, filters the report chart to return data that's relevant to the page.

Signature

```
public Boolean includeContext {get; set;}
```

Property Value

Type: [Boolean](#)

### **reportName**

Unique development name of a report that includes a chart.

Signature

```
public String reportName {get; set;}
```

Property Value

Type: [String](#)

### **showTitle**

If true, applies the title from the report to the chart.

Signature

```
public Boolean showTitle {get; set;}
```

Property Value

Type: [Boolean](#)

### **size**

Size of the displayed chart. The default is medium.

Signature

```
public Metadata.ReportChartComponentSize size {get; set;}
```

Property Value

Type: [Metadata.ReportChartComponentSize](#)

## ReportChartComponentLayoutItem Methods

The following are methods for `ReportChartComponentLayoutItem`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.ReportChartComponentLayoutItem`.

**clone ()**

Makes a duplicate copy of the `Metadata.ReportChartComponentLayoutItem`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

## ReportChartComponentSize Enum

Describes the size of the displayed report chart component.

### Enum Values

The following are the values of the `Metadata.ReportChartComponentSize` enum.

Value	Description
LARGE	Large chart size.
MEDIUM	Medium chart size.
SMALL	Small chart size.

## SidebarComponent Class

Represents a specific custom console component to display in a container that hosts multiple components in one of the sidebars of the Salesforce console.

### Namespace

[Metadata](#)

### Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “SidebarComponent” in the [Metadata API Developer Guide](#).

IN THIS SECTION:

[SidebarComponent Properties](#)

[SidebarComponent Methods](#)

### SidebarComponent Properties

The following are properties for `SidebarComponent`.

## IN THIS SECTION:

[componentType](#)

Specifies the component type. Valid values are "KnowledgeOne", "Lookup", "Milestones", "RelatedList", "Topics", "Files", and "CaseExperts".

[createAction](#)

If the component is a lookup field, the name of the quick action used to create a record.

[enableLinking](#)

If the component is a lookup field, lets users associate a record with this field.

[height](#)

The height of the component in the container. The `unit` property determines the unit of measurement, in pixels or percent.

[knowledgeOneEnable](#)

Indicates if the component is enabled for Knowledge One.

[label](#)

The name of the component as it displays to console users. Available for components in a container with the style of tabs or accordion.

[lookup](#)

If the component is a lookup field, the name of the field.

[page\\_x](#)

If the component is a Visualforce page, the name of the Visualforce page.

[relatedLists](#)

If the component is a related list component, the list of related list names.

[unit](#)

The unit of measurement (pixels or percent) for the height and width of the component in the container.

[updateAction](#)

If the component is a lookup field, the name of the quick action used to update a record.

[width](#)

The width of the component in the container. The `unit` property determines the unit of measurement, in pixels or percent.

**componentType**

Specifies the component type. Valid values are "KnowledgeOne", "Lookup", "Milestones", "RelatedList", "Topics", "Files", and "CaseExperts".

Signature

```
public String componentType {get; set;}
```

Property Value

Type: [String](#)

**createAction**

If the component is a lookup field, the name of the quick action used to create a record.

Signature

```
public String createAction {get; set;}
```

Property Value

Type: [String](#)

### **enableLinking**

If the component is a lookup field, lets users associate a record with this field.

Signature

```
public Boolean enableLinking {get; set;}
```

Property Value

Type: [Boolean](#)

### **height**

The height of the component in the container. The `unit` property determines the unit of measurement, in pixels or percent.

Signature

```
public Integer height {get; set;}
```

Property Value

Type: [Integer](#)

### **knowledgeOneEnable**

Indicates if the component is enabled for Knowledge One.

Signature

```
public Boolean knowledgeOneEnable {get; set;}
```

Property Value

Type: [Boolean](#)

### **label**

The name of the component as it displays to console users. Available for components in a container with the style of tabs or accordion.

Signature

```
public String label {get; set;}
```

Property Value

Type: [String](#)

### **lookup**

If the component is a lookup field, the name of the field.

Signature

```
public String lookup {get; set;}
```

Property Value

Type: [String](#)

### **page\_x**

If the component is a Visualforce page, the name of the Visualforce page.

Signature

```
public String page_x {get; set;}
```

Property Value

Type: [String](#)

### **relatedLists**

If the component is a related list component, the list of related list names.

Signature

```
public List<Metadata.RelatedList> relatedLists {get; set;}
```

Property Value

Type: [List<Metadata.RelatedList>](#)

### **unit**

The unit of measurement (pixels or percent) for the height and width of the component in the container.

Signature

```
public String unit {get; set;}
```

Property Value

Type: [String](#)

**updateAction**

If the component is a lookup field, the name of the quick action used to update a record.

Signature

```
public String updateAction {get; set;}
```

Property Value

Type: [String](#)

**width**

The width of the component in the container. The `unit` property determines the unit of measurement, in pixels or percent.

Signature

```
public Integer width {get; set;}
```

Property Value

Type: [Integer](#)

## SidebarComponent Methods

The following are methods for `SidebarComponent`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.SidebarComponent`.

**clone ()**

Makes a duplicate copy of the `Metadata.SidebarComponent`.

Signature

```
public Object clone ()
```

Return Value

Type: `Object`

## SortOrder Enum

Describes the sort order of a related list.

## Enum Values

The following are the values of the `Metadata.SortOrder` enum.

Value	Description
<code>Asc_x</code>	Sort in ascending order.
<code>Desc_x</code>	Sort in descending order.

## SubtabComponents Class

Represents custom console components on subtabs in the Salesforce console.

### Namespace

[Metadata](#)

### Usage

Use this class when accessing [Metadata.Layout](#) metadata components. For more information, see “SubtabComponents” in the [Metadata API Developer Guide](#).

#### IN THIS SECTION:

[SubtabComponents Properties](#)

[SubtabComponents Methods](#)

## SubtabComponents Properties

The following are properties for `SubtabComponents`.

#### IN THIS SECTION:

[component](#)

Represents a custom console component (Visualforce page, lookup field, or related lists) on a section of a page layout.

[containers](#)

Represents a location and style in which to display more than one custom console component on the sidebars of the Salesforce console.

### **component**

Represents a custom console component (Visualforce page, lookup field, or related lists) on a section of a page layout.

Signature

```
public List<Metadata.ConsoleComponent> component {get; set;}
```

Property Value

Type: [List<Metadata.ConsoleComponent>](#)

### containers

Represents a location and style in which to display more than one custom console component on the sidebars of the Salesforce console.

Signature

```
public List<Metadata.Container> containers {get; set;}
```

Property Value

Type: [List<Metadata.Container>](#)

## SubtabComponents Methods

The following are methods for `SubtabComponents`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.SubtabComponents`.

### clone ()

Makes a duplicate copy of the `Metadata.SubtabComponents`.

Signature

```
public Object clone ()
```

Return Value

Type: Object

## SummaryLayoutStyleEnum Enum

Describes the highlights panel style for a `SummaryLayout`.

### Enum Values

The following are the values of the `Metadata.SummaryLayoutStyleEnum` enum.

Value	Description
<code>CaseInteraction</code>	Case interaction style.
<code>ChildServiceReportTemplateStyle</code>	Child service report template style.
<code>DefaultQuoteTemplate</code>	Default quote template style.

Value	Description
DefaultServiceReportTemplate	Default service report style
Default_x	Default style.
PathAssistant	Path assistant style.
QuickActionLayoutLeftRight	Quick action left-right layout style.
QuickActionLayoutTopDown	Quick action top-down layout style.
QuoteTemplate	Quote template style.
ServiceReportTemplate	Service report style.

## SummaryLayout Class

Controls the appearance of the highlights panel, which summarizes key fields in a grid at the top of a page layout, when Case Feed is enabled.

### Namespace

[Metadata](#)

### Usage

Use this class when accessing [Metadata.Layout](#) metadata components. For more information, see “SummaryLayout” in the [Metadata API Developer Guide](#).

#### IN THIS SECTION:

[SummaryLayout Properties](#)

[SummaryLayout Methods](#)

### SummaryLayout Properties

The following are properties for `SummaryLayout`.

#### IN THIS SECTION:

[masterLabel](#)

The name of the layout label.

[sizeX](#)

Number of columns in the highlights pane, between 1 and 4 (inclusive).

[sizeY](#)

Number of rows in each column, either 1 or 2.

[sizeZ](#)

If provided, the setting is not visible to users.

[summaryLayoutItems](#)

Controls the appearance of an individual field and its column and row position within the highlights panel grid, when Case Feed is enabled. At least one is required.

[summaryLayoutStyle](#)

Specifies the panel style.

**masterLabel**

The name of the layout label.

Signature

```
public String masterLabel {get; set;}
```

Property Value

Type: [String](#)

**sizeX**

Number of columns in the highlights pane, between 1 and 4 (inclusive).

Signature

```
public Integer sizeX {get; set;}
```

Property Value

Type: [Integer](#)

**sizeY**

Number of rows in each column, either 1 or 2.

Signature

```
public Integer sizeY {get; set;}
```

Property Value

Type: [Integer](#)

**sizeZ**

If provided, the setting is not visible to users.

Signature

```
public Integer sizeZ {get; set;}
```

Property Value

Type: [Integer](#)

### **summaryLayoutItems**

Controls the appearance of an individual field and its column and row position within the highlights panel grid, when Case Feed is enabled. At least one is required.

Signature

```
public List<Metadata.SummaryLayoutItem> summaryLayoutItems {get; set;}
```

Property Value

Type: [List<Metadata.SummaryLayoutItem>](#)

### **summaryLayoutStyle**

Specifies the panel style.

Signature

```
public Metadata.SummaryLayoutStyleEnum summaryLayoutStyle {get; set;}
```

Property Value

Type: [Metadata.SummaryLayoutStyleEnum](#)

## SummaryLayout Methods

The following are methods for `SummaryLayout`.

IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.SummaryLayout`.

### **clone ()**

Makes a duplicate copy of the `Metadata.SummaryLayout`.

Signature

```
public Object clone()
```

Return Value

Type: `Object`

## SummaryLayoutItem Class

Controls the appearance of an individual field and its column and row position within the highlights panel grid, when Case Feed is enabled. You can have two fields per each grid in a highlights panel.

### Namespace

[Metadata](#)

### Usage

Use this class when accessing [Metadata.Layout](#) metadata components. For more information, see “SummaryLayoutItem” in the [Metadata API Developer Guide](#).

#### IN THIS SECTION:

[SummaryLayoutItem Properties](#)

[SummaryLayoutItem Methods](#)

## SummaryLayoutItem Properties

The following are properties for `SummaryLayoutItem`.

#### IN THIS SECTION:

[customLink](#)

The custom link reference.

[field](#)

The field name reference, relative to the page layout. Must be a standard or custom field that also exists on the detail page.

[posX](#)

The item's column position in the highlights panel grid. Must be within the range of `sizeX`.

[posY](#)

The item's row position in the highlights panel grid. Must be within the range of `sizeY`.

[posZ](#)

Reserved for future use. If provided, the setting is not visible to users.

### **customLink**

The custom link reference.

Signature

```
public String customLink {get; set;}
```

Property Value

Type: [String](#)

**field**

The field name reference, relative to the page layout. Must be a standard or custom field that also exists on the detail page.

Signature

```
public String field {get; set;}
```

Property Value

Type: [String](#)

**posX**

The item's column position in the highlights panel grid. Must be within the range of `sizeX`.

Signature

```
public Integer posX {get; set;}
```

Property Value

Type: [Integer](#)

**posY**

The item's row position in the highlights panel grid. Must be within the range of `sizeY`.

Signature

```
public Integer posY {get; set;}
```

Property Value

Type: [Integer](#)

**posZ**

Reserved for future use. If provided, the setting is not visible to users.

Signature

```
public Integer posZ {get; set;}
```

Property Value

Type: [Integer](#)

## SummaryLayoutItem Methods

The following are methods for `SummaryLayoutItem`.

## IN THIS SECTION:

[clone\(\)](#)

Makes a duplicate copy of the `Metadata.SummaryLayoutItem`.

**clone()**

Makes a duplicate copy of the `Metadata.SummaryLayoutItem`.

Signature

```
public Object clone()
```

Return Value

Type: Object

## UiBehavior Enum

Describes the behavior for a layout item on a layout page.

### Enum Values

The following are the values of the `Metadata.UiBehavior` enum.

Value	Description
<code>Edit</code>	The layout field can be edited but is not required.
<code>ReadOnly</code>	The layout field is read-only.
<code>Required</code>	The layout field can be edited and is required.

## Process Namespace

The `Process` namespace provides an interface and classes for passing data between your organization and a flow.

The following are the interfaces and classes in the `Process` namespace.

## IN THIS SECTION:

[Plugin Interface](#)

Allows you to pass data between your organization and a specified flow.

[PluginDescribeResult Class](#)

Describes the input and output parameters for `Process.PluginResult`.

[PluginDescribeResult.InputParameter Class](#)

Describes the input parameter for `Process.PluginResult`.

[PluginDescribeResult.OutputParameter Class](#)

Describes the output parameter for `Process.PluginResult`.

[PluginRequest Class](#)

Passes input parameters from the class that implements the `Process.Plugin` interface to the flow.

[PluginResult Class](#)

Returns output parameters from the class that implements the `Process.Plugin` interface to the flow.

## Plugin Interface

Allows you to pass data between your organization and a specified flow.

**Tip:** We recommend using the `@InvocableMethod` annotation instead of the `Process.Plugin` interface.

- The interface doesn't support `Blob`, `Collection`, `sObject`, and `Time` data types, and it doesn't support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

## Namespace

[Process](#)

### IN THIS SECTION:

[Plugin Methods](#)[Plugin Example Implementation](#)

## Plugin Methods

The following are instance methods for `Plugin`.

### IN THIS SECTION:

[describe\(\)](#)

Returns a `Process.PluginDescribeResult` object that describes this method call.

[invoke\(request\)](#)

Primary method that the system invokes when the class that implements the interface is instantiated.

### **describe ()**

Returns a `Process.PluginDescribeResult` object that describes this method call.

#### Signature

```
public Process.PluginDescribeResult describe ()
```

#### Return Value

Type: [Process.PluginDescribeResult](#)

**invoke (request)**

Primary method that the system invokes when the class that implements the interface is instantiated.

Signature

```
public Process.PluginResult invoke(Process.PluginRequest request)
```

Parameters

*request*

Type: [Process.PluginRequest](#)

Return Value

Type: [Process.PluginResult](#)

**Plugin Example Implementation**

```
global class flowChat implements Process.Plugin {

// The main method to be implemented. The Flow calls this at run time.
global Process.PluginResult invoke(Process.PluginRequest request) {
    // Get the subject of the Chatter post from the flow
    String subject = (String) request.inputParameters.get('subject');

    // Use the Chatter APIs to post it to the current user's feed
    FeedItem fItem = new FeedItem();
    fItem.ParentId = UserInfo.getUserId();
    fItem.Body = 'Flow Update: ' + subject;
    insert fItem;

    // return to Flow
    Map<String, Object> result = new Map<String, Object>();
    return new Process.PluginResult(result);
}

// Returns the describe information for the interface
global Process.PluginDescribeResult describe() {
    Process.PluginDescribeResult result = new Process.PluginDescribeResult();
    result.Name = 'flowchatplugin';
    result.Tag = 'chat';
    result.inputParameters = new
        List<Process.PluginDescribeResult.InputParameter>{
            new Process.PluginDescribeResult.InputParameter('subject',
                Process.PluginDescribeResult.ParameterType.STRING, true)
        };
    result.outputParameters = new
        List<Process.PluginDescribeResult.OutputParameter>{ };
    return result;
}
}
```

## Test Class

The following is a test class for the above class.

```
@isTest
private class flowChatTest {

    static testmethod void flowChatTests() {

        flowChat plugin = new flowChat();
        Map<String, Object> inputParams = new Map<String, Object>();

        string feedSubject = 'Flow is alive';
        InputParams.put('subject', feedSubject);

        Process.PluginRequest request = new Process.PluginRequest(inputParams);

        plugin.invoke(request);
    }
}
```

## PluginDescribeResult Class

Describes the input and output parameters for `Process.PluginResult`.

**Tip:** We recommend using the `@InvocableMethod` annotation instead of the `Process.Plugin` interface.

- The interface doesn't support Blob, Collection, sObject, and Time data types, and it doesn't support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

## Namespace

[Process](#)

IN THIS SECTION:

[PluginDescribeResult Constructors](#)

[PluginDescribeResult Properties](#)

## PluginDescribeResult Constructors

The following are constructors for `PluginDescribeResult`.

IN THIS SECTION:

[PluginDescribeResult\(\)](#)

Creates a new instance of the `Process.PluginDescribeResult` class.

## **PluginDescribeResult ()**

Creates a new instance of the `Process.PluginDescribeResult` class.

Signature

```
public PluginDescribeResult ()
```

## **PluginDescribeResult Properties**

The following are properties for `PluginDescribeResult`.

### IN THIS SECTION:

#### [description](#)

This optional field describes the purpose of the plug-in.

#### [inputParameters](#)

The input parameters passed by the `Process.PluginRequest` class from a flow to the class that implements the `Process.Plugin` interface.

#### [name](#)

Unique name of the plug-in.

#### [outputParameters](#)

The output parameters passed by the `Process.PluginResult` class from the class that implements the `Process.Plugin` interface to the flow.

#### [tag](#)

With this optional field, you can group plug-ins by tag name so they appear together in the Apex plug-in section of the Palette within the Flow Designer. This is helpful if you have multiple plug-ins in your flow.

### **description**

This optional field describes the purpose of the plug-in.

Signature

```
public String description {get; set;}
```

Property Value

Type: [String](#)

Usage

Size limit: 255 characters.

### **inputParameters**

The input parameters passed by the `Process.PluginRequest` class from a flow to the class that implements the `Process.Plugin` interface.

Signature

```
public List<Process.PluginDescribeResult.InputParameter> inputParameters {get; set;}
```

Property Value

Type: [List<Process.PluginDescribeResult.InputParameter>](#)

#### **name**

Unique name of the plug-in.

Signature

```
public String name {get; set;}
```

Property Value

Type: [String](#)

Usage

Size limit: 40 characters.

#### **outputParameters**

The output parameters passed by the `Process.PluginResult` class from the class that implements the `Process.Plugin` interface to the flow.

Signature

```
public List<Process.PluginDescribeResult.OutputParameter> outputParameters {get; set;}
```

Property Value

Type: [List<Process.PluginDescribeResult.OutputParameter>](#)

#### **tag**

With this optional field, you can group plug-ins by tag name so they appear together in the Apex plug-in section of the Palette within the Flow Designer. This is helpful if you have multiple plug-ins in your flow.

Signature

```
public String tag {get; set;}
```

Property Value

Type: [String](#)

Usage

Size limit: 40 characters.

## PluginDescribeResult.InputParameter Class

Describes the input parameter for `Process.PluginResult`.

 **Tip:** We recommend using the `@InvocableMethod` annotation instead of the `Process.Plugin` interface.

- The interface doesn't support `Blob`, `Collection`, `sObject`, and `Time` data types, and it doesn't support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

## Namespace

[Process](#)

IN THIS SECTION:

[PluginDescribeResult.InputParameter Constructors](#)

[PluginDescribeResult.InputParameter Properties](#)

## PluginDescribeResult.InputParameter Constructors

The following are constructors for `PluginDescribeResult.InputParameter`.

IN THIS SECTION:

[PluginDescribeResult.InputParameter\(name, description, parameterType, required\)](#)

Creates a new instance of the `Process.PluginDescribeResult.InputParameter` class using the specified name, description, parameter type, and required option.

[PluginDescribeResult.InputParameter\(name, parameterType, required\)](#)

Creates a new instance of the `Process.PluginDescribeResult.InputParameter` class using the specified name, parameter type, and required option.

### **PluginDescribeResult.InputParameter(name, description, parameterType, required)**

Creates a new instance of the `Process.PluginDescribeResult.InputParameter` class using the specified name, description, parameter type, and required option.

Signature

```
public PluginDescribeResult.InputParameter(String name, String description,
Process.PluginDescribeResult.ParameterType parameterType, Boolean required)
```

## Parameters

*name*Type: [String](#)

Unique name of the plug-in.

*description*Type: [String](#)

Describes the purpose of the plug-in.

*parameterType*Type: `Process.PluginDescribeResult.ParameterType`

The data type of the input parameter.

*required*Type: [Boolean](#)Set to `true` for required and `false` otherwise.**PluginDescribeResult.InputParameter(name, parameterType, required)**

Creates a new instance of the `Process.PluginDescribeResult.InputParameter` class using the specified name, parameter type, and required option.

## Signature

```
public PluginDescribeResult.InputParameter(String name,
Process.PluginDescribeResult.ParameterType parameterType, Boolean required)
```

## Parameters

*name*Type: [String](#)

Unique name of the plug-in.

*parameterType*Type: `Process.PluginDescribeResult.ParameterType`

The data type of the input parameter.

*required*Type: [Boolean](#)Set to `true` for required and `false` otherwise.**PluginDescribeResult.InputParameter Properties**

The following are properties for `PluginDescribeResult.InputParameter`.

## IN THIS SECTION:

[Description](#)

This optional field describes the purpose of the plug-in.

**Name**

Unique name of the plug-in.

**ParameterType**

The data type of the input parameter.

**Required**

Set to `true` for required and `false` otherwise.

**Description**

This optional field describes the purpose of the plug-in.

Signature

```
public String Description {get; set;}
```

Property Value

Type: `String`

Usage

Size limit: 255 characters.

**Name**

Unique name of the plug-in.

Signature

```
public String Name {get; set;}
```

Property Value

Type: `String`

Usage

Size limit: 40 characters.

**ParameterType**

The data type of the input parameter.

Signature

```
public Process.PluginDescribeResult.ParameterType ParameterType {get; set;}
```

Property Value

Type: `Process.PluginDescribeResult.ParameterType`

**Required**

Set to `true` for required and `false` otherwise.

Signature

```
public Boolean Required {get; set;}
```

Property Value

Type: [Boolean](#)

## PluginDescribeResult.OutputParameter Class

Describes the output parameter for `Process.PluginResult`.

 **Tip:** We recommend using the `@InvocableMethod` annotation instead of the `Process.Plugin` interface.

- The interface doesn't support `Blob`, `Collection`, `sObject`, and `Time` data types, and it doesn't support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

## Namespace

[Process](#)

IN THIS SECTION:

[PluginDescribeResult.OutputParameter Constructors](#)

[PluginDescribeResult.OutputParameter Properties](#)

## PluginDescribeResult.OutputParameter Constructors

The following are constructors for `PluginDescribeResult.OutputParameter`.

IN THIS SECTION:

[PluginDescribeResult.OutputParameter\(name, description, parameterType\)](#)

Creates a new instance of the `Process.PluginDescribeResult.OutputParameter` class using the specified name, description, and parameter type.

[PluginDescribeResult.OutputParameter\(name, parameterType\)](#)

Creates a new instance of the `Process.PluginDescribeResult.OutputParameter` class using the specified name, description, and parameter type.

### **PluginDescribeResult.OutputParameter(name, description, parameterType)**

Creates a new instance of the `Process.PluginDescribeResult.OutputParameter` class using the specified name, description, and parameter type.

Signature

```
public PluginDescribeResult.OutputParameter(String name, String description,  
Process.PluginDescribeResult.ParameterType parameterType)
```

Parameters

*name*

Type: [String](#)

Unique name of the plug-in.

*description*

Type: [String](#)

Describes the purpose of the plug-in.

*parameterType*

Type: `Process.PluginDescribeResult.ParameterType`

The data type of the input parameter.

### **PluginDescribeResult.OutputParameter(name, parameterType)**

Creates a new instance of the `Process.PluginDescribeResult.OutputParameter` class using the specified name, description, and parameter type.

Signature

```
public PluginDescribeResult.OutputParameter(String name,  
Process.PluginDescribeResult.ParameterType parameterType)
```

Parameters

*name*

Type: [String](#)

Unique name of the plug-in.

*parameterType*

Type: `Process.PluginDescribeResult.ParameterType`

The data type of the input parameter.

## **PluginDescribeResult.OutputParameter Properties**

The following are properties for `PluginDescribeResult.OutputParameter`.

IN THIS SECTION:

[Description](#)

This optional field describes the purpose of the plug-in.

[Name](#)

Unique name of the plug-in.

[ParameterType](#)

The data type of the input parameter.

**Description**

This optional field describes the purpose of the plug-in.

Signature

```
public String Description {get; set;}
```

Property Value

Type: [String](#)

Usage

Size limit: 255 characters.

**Name**

Unique name of the plug-in.

Signature

```
public String Name {get; set;}
```

Property Value

Type: [String](#)

Usage

Size limit: 40 characters.

**ParameterType**

The data type of the input parameter.

Signature

```
public Process.PluginDescribeResult.ParameterType ParameterType {get; set;}
```

Property Value

Type: [Process.PluginDescribeResult.ParameterType](#)

**PluginRequest Class**

Passes input parameters from the class that implements the `Process.Plugin` interface to the flow.

 **Tip:** We recommend using the `@InvocableMethod` annotation instead of the `Process.Plugin` interface.

- The interface doesn't support Blob, Collection, sObject, and Time data types, and it doesn't support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

## Namespace

[Process](#)

## PluginRequest Properties

The following are properties for `PluginRequest`.

IN THIS SECTION:

[inputParameters](#)

Input parameters that are passed from the class that implements the `Process.Plugin` interface to the flow.

### **inputParameters**

Input parameters that are passed from the class that implements the `Process.Plugin` interface to the flow.

Signature

```
public MAP<String, ANY> inputParameters {get; set;}
```

Property Value

Type: [Map<String, Object>](#)

## PluginResult Class

Returns output parameters from the class that implements the `Process.Plugin` interface to the flow.

 **Tip:** We recommend using the `@InvocableMethod` annotation instead of the `Process.Plugin` interface.

- The interface doesn't support Blob, Collection, sObject, and Time data types, and it doesn't support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

## Namespace

[Process](#)

## PluginResult Properties

The following are properties for `PluginResult`.

## IN THIS SECTION:

[outputParameters](#)

Output parameters returned from the class that implements the interface to the flow.

**outputParameters**

Output parameters returned from the class that implements the interface to the flow.

Signature

```
public MAP<String, ANY> outputParameters {get; set;}
```

Property Value

Type: [Map<String, Object>](#)

## QuickAction Namespace

The `QuickAction` namespace provides classes and methods for quick actions.

The following are the classes in the `QuickAction` namespace.

## IN THIS SECTION:

[DescribeAvailableQuickActionResult Class](#)

Contains describe metadata information for a quick action that is available for a specified parent.

[DescribeLayoutComponent Class](#)

Represents the smallest unit in a layout—a field or a separator.

[DescribeLayoutItem Class](#)

Represents an individual item in a `QuickAction.DescribeLayoutRow`.

[DescribeLayoutRow Class](#)

Represents a row in a `QuickAction.DescribeLayoutSection`.

[DescribeLayoutSection Class](#)

Represents a section of a layout and consists of one or more columns and one or more rows (an array of `QuickAction.DescribeLayoutRow`).

[DescribeQuickActionDefaultValue Class](#)

Returns a default value for a quick action.

[DescribeQuickActionResult Class](#)

Contains describe metadata information for a quick action.

[QuickActionDefaults Class](#)

Represents an abstract Apex class that provides the context for running the standard Email Action on Case Feed and the container of the Email Message fields for the action payload. You can override the target fields before the standard Email Action is rendered.

### [QuickActionDefaultsHandler Interface](#)

The `QuickAction.DefaultsHandler` interface lets you specify the default values for the standard Email and Send Email actions in the case feed. You can use this interface to specify the From address, CC address, BCC address, subject, and email body for the Email action in the case feed. You can use the interface to pre-populate these fields based on the context where the action is displayed, such as the case origin (for example, country) and subject.

### [QuickActionRequest Class](#)

Use the `QuickAction.Request` class for providing action information for quick actions to be performed by `QuickAction` class methods. Action information includes the action name, context record ID, and record.

### [QuickActionResult Class](#)

After you initiate a quick action with the `QuickAction` class, use the `QuickActionResult` class for processing action results.

### [SendEmailQuickActionDefaults Class](#)

Represents an Apex class that provides: the From address list; the original email's email message ID, provided that the reply action was invoked on the email message feed item; and methods to specify related settings on templates. You can override these fields before the standard Email Action is rendered.

## DescribeAvailableQuickActionResult Class

Contains describe metadata information for a quick action that is available for a specified parent.

## Namespace

[QuickAction](#)

## Usage

The `QuickAction.describeAvailableQuickActions` method returns an array of available quick action describe result objects (`QuickAction.DescribeAvailableQuickActionResult`).

## DescribeAvailableQuickActionResult Methods

The following are methods for `DescribeAvailableQuickActionResult`. All are instance methods.

IN THIS SECTION:

### [getActionEnumOrId\(\)](#)

Returns the unique ID for the action. If the action doesn't have an ID, its API name is used.

### [getLabel\(\)](#)

The quick action label.

### [getName\(\)](#)

The quick action name.

### [getType\(\)](#)

The quick action type.

### **getActionEnumOrId()**

Returns the unique ID for the action. If the action doesn't have an ID, its API name is used.

Signature

```
public String getActionEnumOrId()
```

Return Value

Type: [String](#)

#### **getLabel ()**

The quick action label.

Signature

```
public String getLabel ()
```

Return Value

Type: [String](#)

#### **getName ()**

The quick action name.

Signature

```
public String getName ()
```

Return Value

Type: [String](#)

#### **getType ()**

The quick action type.

Signature

```
public String getType ()
```

Return Value

Type: [String](#)

## DescribeLayoutComponent Class

Represents the smallest unit in a layout—a field or a separator.

### Namespace

[QuickAction](#)

## DescribeLayoutComponent Methods

The following are methods for `DescribeLayoutComponent`. All are instance methods.

### IN THIS SECTION:

#### [getDisplayLines\(\)](#)

Returns the vertical lines displayed for a field. Applies to `textarea` and multi-select picklist fields.

#### [getTabOrder\(\)](#)

Returns the tab order for the item in the row.

#### [getType\(\)](#)

Returns the name of the `QuickAction.DescribeLayoutComponent` type for this component.

#### [getValue\(\)](#)

Returns the name of the field if the type for `QuickAction.DescribeLayoutComponent` is `textarea`.

### **getDisplayLines ()**

Returns the vertical lines displayed for a field. Applies to `textarea` and multi-select picklist fields.

Signature

```
public Integer getDisplayLines ()
```

Return Value

Type: [Integer](#)

### **getTabOrder ()**

Returns the tab order for the item in the row.

Signature

```
public Integer getTabOrder ()
```

Return Value

Type: [Integer](#)

### **getType ()**

Returns the name of the `QuickAction.DescribeLayoutComponent` type for this component.

Signature

```
public String getType ()
```

Return Value

Type: [String](#)

**getValue ()**

Returns the name of the field if the type for `QuickAction.DescribeLayoutComponent` is `textarea`.

Signature

```
public String getValue ()
```

Return Value

Type: [String](#)

## DescribeLayoutItem Class

Represents an individual item in a `QuickAction.DescribeLayoutRow`.

### Namespace

[QuickAction](#)

### Usage

For most fields on a layout, there is only one component per layout item. However, in a display-only view, the `QuickAction.DescribeLayoutItem` might be a composite of the individual fields (for example, an address can consist of street, city, state, country, and postal code data). On the corresponding edit view, each component of the address field would be split up into separate `QuickAction.DescribeLayoutItems`.

### DescribeLayoutItem Methods

The following are methods for `DescribeLayoutItem`. All are instance methods.

IN THIS SECTION:

[getLabel\(\)](#)

Returns the label text for this item.

[getLayoutComponents\(\)](#)

Returns a list of `QuickAction.DescribeLayoutComponents` for this item.

[isEditable\(\)](#)

Indicates whether this item can be edited (`true`) or not (`false`).

[isPlaceholder\(\)](#)

Indicates whether this item is a placeholder (`true`) or not (`false`). If `true`, then this item is blank.

[isRequired\(\)](#)

Indicates whether this item is required (`true`) or not (`false`).

**getLabel ()**

Returns the label text for this item.

Signature

```
public String getLabel()
```

Return Value

Type: [String](#)

### **getLayoutComponents()**

Returns a list of `QuickAction.DescribeLayoutComponents` for this item.

Signature

```
public List<QuickAction.DescribeLayoutComponent> getLayoutComponents()
```

Return Value

Type: [List<QuickAction.DescribeLayoutComponent>](#)

### **isEditable()**

Indicates whether this item can be edited (`true`) or not (`false`).

Signature

```
public Boolean isEditable()
```

Return Value

Type: [Boolean](#)

### **isPlaceholder()**

Indicates whether this item is a placeholder (`true`) or not (`false`). If `true`, then this item is blank.

Signature

```
public Boolean isPlaceholder()
```

Return Value

Type: [Boolean](#)

### **isRequired()**

Indicates whether this item is required (`true`) or not (`false`).

Signature

```
public Boolean isRequired()
```

Return Value

Type: [Boolean](#)

Usage

This is useful if, for example, you want to render required fields in a contrasting color.

## DescribeLayoutRow Class

Represents a row in a `QuickAction.DescribeLayoutSection`.

### Namespace

[QuickAction](#)

### Usage

A `QuickAction.DescribeLayoutRow` consists of one or more `QuickAction.DescribeLayoutItem` objects. For each `QuickAction.DescribeLayoutRow`, a `QuickAction.DescribeLayoutItem` refers either to a specific field or to an “empty” `QuickAction.DescribeLayoutItem` (one that contains no `QuickAction.DescribeLayoutComponent` objects). An empty `QuickAction.DescribeLayoutItem` can be returned when a given `QuickAction.DescribeLayoutRow` is sparse (for example, containing more fields on the right column than on the left column).

### DescribeLayoutRow Methods

The following are methods for `DescribeLayoutRow`. All are instance methods.

IN THIS SECTION:

[getLayoutItems\(\)](#)

Returns either a specific field or an empty `QuickAction.DescribeLayoutItem` (one that contains no `QuickAction.DescribeLayoutComponent` objects).

[getNumItems\(\)](#)

Returns the number of `QuickAction.DescribeLayoutItem`.

#### **getLayoutItems ()**

Returns either a specific field or an empty `QuickAction.DescribeLayoutItem` (one that contains no `QuickAction.DescribeLayoutComponent` objects).

Signature

```
public List<QuickAction.DescribeLayoutItem> getLayoutItems ()
```

Return Value

Type: [List<QuickAction.DescribeLayoutItem>](#)

**getNumItems ()**

Returns the number of `QuickAction.DescribeLayoutItem`.

Signature

```
public Integer getNumItems ()
```

Return Value

Type: [Integer](#)

## DescribeLayoutSection Class

Represents a section of a layout and consists of one or more columns and one or more rows (an array of `QuickAction.DescribeLayoutRow`).

## Namespace

[QuickAction](#)

## DescribeLayoutSection Properties

The following are properties for `DescribeLayoutSection`.

**collapsed**

The current view of the record details section: collapsed (`true`) or expanded (`false`).

Signature

```
public Boolean collapsed {get; set;}
```

Property Value

Type: [Boolean](#)

**layoutsectionid**

The unique ID of the record details section in the layout.

Signature

```
public Id layoutsectionid {get; set;}
```

Property Value

Type: [Id](#)

## DescribeLayoutSection Methods

The following are methods for `DescribeLayoutSection`.

### IN THIS SECTION:

#### `getColumns()`

Returns the number of columns in the `QuickAction.DescribeLayoutSection`.

#### `getHeading()`

The heading text (label) for the `QuickAction.DescribeLayoutSection`.

#### `getLayoutRows()`

Returns an array of one or more `QuickAction.DescribeLayoutRow` objects.

#### `getLayoutSectionId()`

Returns the ID of the record details section in the layout.

#### `getParentLayoutId()`

Returns the ID of the layout upon which this `DescribeLayoutSection` resides.

#### `getRows()`

Returns the number of rows in the `QuickAction.DescribeLayoutSection`.

#### `isCollapsed()`

Indicates whether the record details section is collapsed (`true`) or expanded (`false`). If you build your own app, you can use this method to see whether the current user collapsed a section, and respect that preference in your own UI.

#### `isUseCollapsibleSection()`

Indicates whether the `QuickAction.DescribeLayoutSection` is a collapsible section (`true`) or not (`false`).

#### `isUseHeading()`

Indicates whether to use the heading (`true`) or not (`false`).

### **`getColumns ()`**

Returns the number of columns in the `QuickAction.DescribeLayoutSection`.

Signature

```
public Integer getColumns ()
```

Return Value

Type: [Integer](#)

### **`getHeading ()`**

The heading text (label) for the `QuickAction.DescribeLayoutSection`.

Signature

```
public String getHeading ()
```

Return Value

Type: [String](#)

### **getLayoutRows ()**

Returns an array of one or more `QuickAction.DescribeLayoutRow` objects.

Signature

```
public List<QuickAction.DescribeLayoutRow> getLayoutRows ()
```

Return Value

Type: [List<QuickAction.DescribeLayoutRow>](#)

### **getLayoutSectionId ()**

Returns the ID of the record details section in the layout.

Signature

```
public Id getLayoutSectionId ()
```

Return Value

Type: [Id](#)

### **getParentLayoutId ()**

Returns the ID of the layout upon which this `DescribeLayoutSection` resides.

Signature

```
public Id getParentLayoutId ()
```

Return Value

Type: [Id](#)

### **getRows ()**

Returns the number of rows in the `QuickAction.DescribeLayoutSection`.

Signature

```
public Integer getRows ()
```

Return Value

Type: [Integer](#)

**isCollapsed()**

Indicates whether the record details section is collapsed (`true`) or expanded (`false`). If you build your own app, you can use this method to see whether the current user collapsed a section, and respect that preference in your own UI.

Signature

```
public Boolean isCollapsed()
```

Return Value

Type: [Boolean](#)

**isUseCollapsibleSection()**

Indicates whether the `QuickAction.DescribeLayoutSection` is a collapsible section (`true`) or not (`false`).

Signature

```
public Boolean isUseCollapsibleSection()
```

Return Value

Type: [Boolean](#)

**isUseHeading()**

Indicates whether to use the heading (`true`) or not (`false`).

Signature

```
public Boolean isUseHeading()
```

Return Value

Type: [Boolean](#)

## DescribeQuickActionDefaultValue Class

Returns a default value for a quick action.

### Namespace

[QuickAction](#)

### Usage

Represents the default values of fields to use in default layouts.

## DescribeQuickActionDefaultValue Methods

The following are methods for `DescribeQuickActionDefaultValue`. All are instance methods.

### IN THIS SECTION:

[getDefaultValue\(\)](#)

Returns the default value of the quick action.

[getField\(\)](#)

Returns the field name of the action.

### **getDefaultValue ()**

Returns the default value of the quick action.

Signature

```
public String getDefaultValue()
```

Return Value

Type: [String](#)

### **getField ()**

Returns the field name of the action.

Signature

```
public String getField()
```

Return Value

Type: [String](#)

## DescribeQuickActionResult Class

Contains describe metadata information for a quick action.

### Namespace

[QuickAction](#)

### Usage

The `QuickAction` `describeQuickActions` method returns an array of quick action describe result objects (`QuickAction.DescribeQuickActionResult`).

### IN THIS SECTION:

[DescribeQuickActionResult Properties](#)

[DescribeQuickActionResult Methods](#)

## DescribeQuickActionResult Properties

The following are properties for `DescribeQuickActionResult`.

### IN THIS SECTION:

[canvasapplicationname](#)

The name of the Canvas application invoked by the custom action.

[colors](#)

Array of color information. Each color is associated with a theme.

[contextsubjecttype](#)

The object used for the action. Was `getSourceSubjectType()` in API version 29.0 and earlier.

[defaultvalues](#)

The action's default values.

[flowdevname](#)

If the custom action invokes a flow, the fully qualified name of the flow.

[flowrecordidvar](#)

If the custom action invokes a flow, the input variable that the custom action passes the record's ID to.

[height](#)

The height in pixels of the action pane.

[iconname](#)

The name of the icon used for the action. If a custom icon is not used, this value isn't set.

[icons](#)

Array of icons. Each icon is associated with a theme.

[iconurl](#)

The URL of the icon used for the action. This icon URL corresponds to the 32x32 icon used for the current Salesforce theme, introduced in Spring '10, or the custom icon, if there is one.

[layout](#)

The section of the layout where the action resides.

[lightningcomponentbundleid](#)

If the custom action invokes a Lightning component, the ID of the Lightning component bundle to which the component belongs.

[lightningcomponentbundlename](#)

If the custom action invokes a Lightning component, the name of the Lightning component bundle to which the component belongs.

[lightningcomponentqualifiedname](#)

The fully qualified name of the Lightning component invoked by the custom action.

[miniiconurl](#)

The icon's URL. This icon URL corresponds to the 16x16 icon used for the current Salesforce theme, introduced in Spring '10, or the custom icon, if there is one.

[showquickactionlcheader](#)

Indicates whether the Lightning component quick action header and footer are shown. If `false`, then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren't displayed.

[showquickactionvfheader](#)

Indicates whether the Visualforce quick action header and footer should be shown. If `false`, then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren't displayed.

[targetparentfield](#)

The parent object type of the action. Links the target object to the parent object. For example, the value is Account if the target object is Contact and the parent object is Account.

[targetrecordtypeid](#)

The record type of the target record.

[targetobjecttype](#)

The action's target object type.

[visualforcepagename](#)

The name of the Visualforce page associated with the custom action.

[visualforcepageurl](#)

The URL of the Visualforce page associated with the action.

[width](#)

The width in pixels of the action pane, for custom actions that call Visualforce pages, Canvas apps, or Lightning components.

**canvasapplicationname**

The name of the Canvas application invoked by the custom action.

Signature

```
public String canvasapplicationname {get; set;}
```

Property Value

Type: [String](#)

**colors**

Array of color information. Each color is associated with a theme.

Signature

```
public List<Schema.DescribeColorResult> colors {get; set;}
```

Property Value

Type: [List<Schema.DescribeColorResult>](#) on page 2335

**contextsobjecttype**

The object used for the action. Was `getSourceObjectType()` in API version 29.0 and earlier.

Signature

```
public String contextsubjecttype {get; set;}
```

Property Value

Type: [String](#)

### **defaultvalues**

The action's default values.

Signature

```
public List<QuickAction.DescribeQuickActionDefaultValue> defaultvalues {get; set;}
```

Property Value

Type: [List<QuickAction.DescribeQuickActionDefaultValue>](#)

### **flowdevname**

If the custom action invokes a flow, the fully qualified name of the flow.

Signature

```
public String flowdevname {get; set;}
```

Property Value

Type: [String](#)

### **flowrecordidvar**

If the custom action invokes a flow, the input variable that the custom action passes the record's ID to.

Signature

```
public String flowrecordidvar {get; set;}
```

Property Value

Type: [String](#)

Valid values are *null* or *recordId*.

### **height**

The height in pixels of the action pane.

Signature

```
public Integer height {get; set;}
```

Property Value

Type: [Integer](#)

#### **iconname**

The name of the icon used for the action. If a custom icon is not used, this value isn't set.

Signature

```
public String iconname {get; set;}
```

Property Value

Type: [String](#)

#### **icons**

Array of icons. Each icon is associated with a theme.

Signature

```
public List<Schema.DescribeIconResult> icons {get; set;}
```

Property Value

Type: [List<Schema.DescribeIconResult on page 2357>](#)

If no custom icon was associated with the quick action and the quick action creates a specific object, the icons will correspond to the icons used for the created object. For example, if the quick action creates an Account, the icon array will contain the icons used for Account.

If a custom icon was associated with the quick action, the array will contain that custom icon.

#### **iconurl**

The URL of the icon used for the action. This icon URL corresponds to the 32x32 icon used for the current Salesforce theme, introduced in Spring '10, or the custom icon, if there is one.

Signature

```
public String iconurl {get; set;}
```

Property Value

Type: [String](#)

**layout**

The section of the layout where the action resides.

Signature

```
public QuickAction.DescribeLayoutSection layout {get; set;}
```

Property Value

Type: [QuickAction.DescribeLayoutSection](#) on page 2177

**lightningcomponentbundleid**

If the custom action invokes a Lightning component, the ID of the Lightning component bundle to which the component belongs.

Signature

```
public String lightningcomponentbundleid {get; set;}
```

Property Value

Type: [String](#)

**lightningcomponentbundlename**

If the custom action invokes a Lightning component, the name of the Lightning component bundle to which the component belongs.

Signature

```
public String lightningcomponentbundlename {get; set;}
```

Property Value

Type: [String](#)

**lightningcomponentqualifiedname**

The fully qualified name of the Lightning component invoked by the custom action.

Signature

```
public String lightningcomponentqualifiedname {get; set;}
```

Property Value

Type: [String](#)

**miniiconurl**

The icon's URL. This icon URL corresponds to the 16x16 icon used for the current Salesforce theme, introduced in Spring '10, or the custom icon, if there is one.

Signature

```
public String miniiconurl {get; set;}
```

Property Value

Type: [String](#)

### **showquickactionlheader**

Indicates whether the Lightning component quick action header and footer are shown. If `false`, then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren't displayed.

Signature

```
public Boolean showquickactionlheader {get; set;}
```

Property Value

Type: [Boolean](#)

### **showquickactionvfheader**

Indicates whether the Visualforce quick action header and footer should be shown. If `false`, then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren't displayed.

Signature

```
public Boolean showquickactionvfheader {get; set;}
```

Property Value

Type: [Boolean](#)

### **targetparentfield**

The parent object type of the action. Links the target object to the parent object. For example, the value is `Account` if the target object is `Contact` and the parent object is `Account`.

Signature

```
public String targetparentfield {get; set;}
```

Property Value

Type: [String](#)

### **targetrecordtypeid**

The record type of the target record.

Signature

```
public String targetrecordtypeid {get; set;}
```

Property Value

Type: [String](#)

### **targetobjecttype**

The action's target object type.

Signature

```
public String targetobjecttype {get; set;}
```

Property Value

Type: [String](#)

### **visualforcepagename**

The name of the Visualforce page associated with the custom action.

Signature

```
public String visualforcepagename {get; set;}
```

Property Value

Type: [String](#)

### **visualforcepageurl**

The URL of the Visualforce page associated with the action.

Signature

```
public String visualforcepageurl {get; set;}
```

Property Value

Type: [String](#)

### **width**

The width in pixels of the action pane, for custom actions that call Visualforce pages, Canvas apps, or Lightning components.

Signature

```
public Integer width {get; set;}
```

Property Value

Type: [Integer](#)

## DescribeQuickActionResult Methods

The following are methods for `DescribeQuickActionResult`. All are instance methods.

### IN THIS SECTION:

#### [getActionEnumOrId\(\)](#)

Returns the unique ID for the action. If the action doesn't have an ID, its API name is used.

#### [getCanvasApplicationName\(\)](#)

Returns the name of the Canvas application, if used.

#### [getColors\(\)](#)

Returns an array of color information. Each color is associated with a theme.

#### [getContextSubjectType\(\)](#)

Returns the object used for the action. Replaces `getSourceSubjectType()` in API version 30.0 and later.

#### [getDefaultValues\(\)](#)

Returns the default values for an action.

#### [getFlowDevName\(\)](#)

If the custom action invokes a flow, returns the fully qualified name of the flow invoked by the custom action.

#### [getFlowRecordIdVar\(\)](#)

If the custom action invokes a flow, returns the input variable that the custom action passes the record's ID to.

#### [getHeight\(\)](#)

Returns the height in pixels of the action pane.

#### [getIconName\(\)](#)

Returns the actions' icon name.

#### [getIconUrl\(\)](#)

Returns the URL of the 32x32 icon used for the action.

#### [getIcons\(\)](#)

Returns a list of `Schema.DescribeIconResult` objects that describe colors used in a tab.

#### [getLabel\(\)](#)

Returns the action label.

#### [getLayout\(\)](#)

Returns the layout sections that comprise an action.

#### [getLightningComponentBundleId\(\)](#)

If the custom action invokes a Lightning component, returns the ID of the Lightning component bundle to which the component belongs.

#### [getLightningComponentBundleName\(\)](#)

If the custom action invokes a Lightning component, returns the name of the Lightning component bundle to which the component belongs.

[getLightningComponentQualifiedName\(\)](#)

If the custom action invokes a Lightning component, returns the fully qualified name of the Lightning component invoked by the custom action.

[getMinIconUrl\(\)](#)

Returns the 16x16 icon URL.

[getName\(\)](#)

Returns the action name.

[getShowQuickActionLcHeader\(\)](#)

Returns an indication of whether the Lightning component quick action header and footer are shown.

[getShowQuickActionVfHeader\(\)](#)

Returns an indication of whether the Visualforce quick action header and footer should be shown.

[getSourceObjectType\(\)](#)

Returns the object type used for the action.

[getTargetParentField\(\)](#)

Returns the parent object's type for the action.

[getTargetRecordTypeId\(\)](#)

Returns the record type of the targeted record.

[getTargetObjectType\(\)](#)

Returns the action's target object type.

[getType\(\)](#)

Returns a create or custom Visualforce action.

[getVisualforcePageName\(\)](#)

If Visualforce is used, returns the name of the associated page for the action.

[getVisualforcePageUrl\(\)](#)

Returns the URL of the Visualforce page associated with the action.

[getWidth\(\)](#)

If a custom action is created, returns the width in pixels of the action pane.

**getActionEnumOrId()**

Returns the unique ID for the action. If the action doesn't have an ID, its API name is used.

Signature

```
public String getActionEnumOrId()
```

Return Value

Type: [String](#)

**getCanvasApplicationName()**

Returns the name of the Canvas application, if used.

Syntax

```
public String getCanvasApplicationName ()
```

Return Value

Type: [String](#)

### **getColors ()**

Returns an array of color information. Each color is associated with a theme.

Signature

```
public List<Schema.DescribeColorResult> getColors ()
```

Return Value

Type: [List <Schema.DescribeColorResult>](#)

### **getContextObjectType ()**

Returns the object used for the action. Replaces `getSourceObjectType ()` in API version 30.0 and later.

Signature

```
public String getContextObjectType ()
```

Return Value

Type: [String](#)

### **getDefaultValues ()**

Returns the default values for a action.

Signature

```
public List<QuickAction.DescribeQuickActionDefaultValue> getDefaultValues ()
```

Return Value

Type: [List<QuickAction.DescribeQuickActionDefaultValue>](#)

### **getFlowDevName ()**

If the custom action invokes a flow, returns the fully qualified name of the flow invoked by the custom action.

Signature

```
public String getFlowDevName ()
```

Return Value

Type: [String](#)

### **getFlowRecordIdVar ()**

If the custom action invokes a flow, returns the input variable that the custom action passes the record's ID to.

Signature

```
public String getFlowRecordIdVar ()
```

Return Value

Type: [String](#)

### **getHeight ()**

Returns the height in pixels of the action pane.

Signature

```
public Integer getHeight ()
```

Return Value

Type: [Integer](#)

### **getIconName ()**

Returns the actions' icon name.

Signature

```
public String getIconName ()
```

Return Value

Type: [String](#)

### **getIconUrl ()**

Returns the URL of the 32x32 icon used for the action.

Signature

```
public String getIconUrl ()
```

Return Value

Type: [String](#)

**getIcons ()**

Returns a list of `Schema.DescribeIconResult` objects that describe colors used in a tab.

Signature

```
public List<Schema.DescribeIconResult> getIcons ()
```

Return Value

Type: [List<Schema.DescribeIconResult>](#)

**getLabel ()**

Returns the action label.

Signature

```
public String getLabel ()
```

Return Value

Type: [String](#)

**getLayout ()**

Returns the layout sections that comprise an action.

Signature

```
public QuickAction.DescribeLayoutSection getLayout ()
```

Return Value

Type: [QuickAction.DescribeLayoutSection](#)

**getLightningComponentBundleId ()**

If the custom action invokes a Lightning component, returns the ID of the Lightning component bundle to which the component belongs.

Signature

```
public String getLightningComponentBundleId ()
```

Return Value

Type: [String](#)

**getLightningComponentBundleName ()**

If the custom action invokes a Lightning component, returns the name of the Lightning component bundle to which the component belongs.

Signature

```
public String getLightningComponentBundleName ()
```

Return Value

Type: [String](#)

**getLightningComponentQualifiedName ()**

If the custom action invokes a Lightning component, returns the fully qualified name of the Lightning component invoked by the custom action.

Signature

```
public String getLightningComponentQualifiedName ()
```

Return Value

Type: [String](#)

**getMiniIconUrl ()**

Returns the 16x16 icon URL.

Signature

```
public String getMiniIconUrl ()
```

Return Value

Type: [String](#)

**getName ()**

Returns the action name.

Signature

```
public String getName ()
```

Return Value

Type: [String](#)

**getShowQuickActionLcHeader ()**

Returns an indication of whether the Lightning component quick action header and footer are shown.

Signature

```
public Boolean getShowQuickActionLcHeader ()
```

Return Value

Type: [Boolean](#)

If `false`, then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren't displayed.

**getShowQuickActionVfHeader ()**

Returns an indication of whether the Visualforce quick action header and footer should be shown.

Signature

```
public Boolean getShowQuickActionVfHeader ()
```

Return Value

Type: [Boolean](#)

If `false`, then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren't displayed.

**getSourceObjectType ()**

Returns the object type used for the action.

Signature

```
public String getSourceObjectType ()
```

Return Value

Type: [String](#)

**getTargetParentField ()**

Returns the parent object's type for the action.

Signature

```
public String getTargetParentField ()
```

Return Value

Type: [String](#)

**getTargetRecordTypeId ()**

Returns the record type of the targeted record.

Signature

```
public String getTargetRecordTypeId ()
```

Return Value

Type: [String](#)

**getTargetObjectType ()**

Returns the action's target object type.

Signature

```
public String getTargetObjectType ()
```

Return Value

Type: [String](#)

**getType ()**

Returns a create or custom Visualforce action.

Signature

```
public String getType ()
```

Return Value

Type: [String](#)

**getVisualforcePageName ()**

If Visualforce is used, returns the name of the associated page for the action.

Signature

```
public String getVisualforcePageName ()
```

Return Value

Type: [String](#)

**getVisualforcePageUrl ()**

Returns the URL of the Visualforce page associated with the action.

Signature

```
public String getVisualforcePageUrl ()
```

Return Value

Type: [String](#)

### **getWidth ()**

If a custom action is created, returns the width in pixels of the action pane.

Signature

```
public Integer getWidth ()
```

Return Value

Type: [Integer](#)

## QuickActionDefaults Class

Represents an abstract Apex class that provides the context for running the standard Email Action on Case Feed and the container of the Email Message fields for the action payload. You can override the target fields before the standard Email Action is rendered.

## Namespace

[QuickAction](#)

## Usage

**Note:** You cannot extend this abstract class. You can use the getter methods when using it in the context of `QuickAction.QuickActionDefaultsHandler`. Salesforce provides a class that extends this class (See `QuickAction.SendEmailQuickActionDefaults`.)

IN THIS SECTION:

[QuickActionDefaults Methods](#)

## QuickActionDefaults Methods

The following are methods for `QuickActionDefaults`.

IN THIS SECTION:

[getActionName\(\)](#)

Returns the name of the standard Email Action on Case Feed (Case.Email).

[getActionType\(\)](#)

Returns the type of the standard Email Action on Case Feed (Email).

[getContextId\(\)](#)

The ID of the context related to the standard Email Action on Case Feed (Case ID).

[getTargetSObject\(\)](#)

The target object of the standard Email Action on Case Feed (EmailMessage).

**getActionName ()**

Returns the name of the standard Email Action on Case Feed (Case.Email).

Signature

```
public String getActionName ()
```

Return Value

Type: [String](#)

**getActionType ()**

Returns the type of the standard Email Action on Case Feed (Email).

Signature

```
public String getActionType ()
```

Return Value

Type: [String](#)

**getContextId ()**

The ID of the context related to the standard Email Action on Case Feed (Case ID).

Signature

```
public Id getContextId ()
```

Return Value

Type: [Id](#)

**getTargetSObject ()**

The target object of the standard Email Action on Case Feed (EmailMessage).

Signature

```
public SObject getTargetSObject ()
```

Return Value

Type: [SObject](#)

## QuickActionDefaultsHandler Interface

The `QuickAction.QuickActionDefaultsHandler` interface lets you specify the default values for the standard Email and Send Email actions in the case feed. You can use this interface to specify the From address, CC address, BCC address, subject, and email body for the Email action in the case feed. You can use the interface to pre-populate these fields based on the context where the action is displayed, such as the case origin (for example, country) and subject.

## Namespace

[QuickAction](#)

## Usage

To specify default values for the standard Email action in the case feed, create a class that implements `QuickAction.QuickActionDefaultsHandler`.

The `QuickAction.QuickActionDefaultsHandler` interface works in Salesforce Classic and Lightning Experience.

When working in Lightning Experience, keep the following things in mind:

- The interface overrides email values set up with predefined IDs.
- The interface works with the out-of-the-box Email action provided on cases. You can also use the interface with custom Email actions for the case object.
- The interface in Lightning Experience doesn't support:
  - Email attachments
  - Custom email fields
  - Visualforce email templates, which are a type of email template available in Salesforce Classic
- The From Address picklist isn't customizable in Send Email action types via the QuickActionDefaultsHandler Interface.
- If your Apex interface adds content to the email body, merge fields display as unresolved. During preview and send, the merge fields resolve.

When you implement this interface, provide an empty parameterless constructor.

IN THIS SECTION:

[QuickActionDefaultsHandler Methods](#)

[QuickActionDefaultsHandler Example Implementations](#)

## QuickActionDefaultsHandler Methods

The following are methods for `QuickActionDefaultsHandler`.

IN THIS SECTION:

[onInitDefaults\(actionDefaults\)](#)

Implement this method to provide default values for the standard Email action in the case feed.

**onInitDefaults (actionDefaults)**

Implement this method to provide default values for the standard Email action in the case feed.

Signature

```
public void onInitDefaults(QuickAction.QuickActionDefaults[] actionDefaults)
```

Parameters

*actionDefaults*

Type: [QuickAction.QuickActionDefaults\[\]](#)

This array contains only one item of type `QuickAction.SendEmailQuickActionDefaults`.

Return Value

Type: void

**QuickActionDefaultsHandler Example Implementations**

These examples are implementations of the `QuickAction.QuickActionDefaultsHandler` interface.

In this example, the `onInitDefaults` method checks whether the element passed in the array is for the standard Email action in the case feed. Then, it performs a query to retrieve the case that corresponds to the context ID. Next, it sets the value of the BCC address of the corresponding email message to a default value. The default value is based on the case reason. Finally, it sets the default values of the email template properties. The `onInitDefaults` method determines the default values based on two criteria: first, whether a reply action on an email message initiated the call to the method, and second, whether any previous emails attached to the case are associated with the call.

```
global class EmailPublisherLoader implements QuickAction.QuickActionDefaultsHandler {
    // Empty constructor
    global EmailPublisherLoader() {
    }

    // The main interface method
    global void onInitDefaults(QuickAction.QuickActionDefaults[] defaults) {
        QuickAction.SendEmailQuickActionDefaults sendEmailDefaults = null;

        // Check if the quick action is the standard case feed Send Email action
        for (Integer j = 0; j < defaults.size(); j++) {
            if (defaults.get(j) instanceof QuickAction.SendEmailQuickActionDefaults &&
                defaults.get(j).getTargetSObject().getSObjectType() ==
                    ErrorMessage.sObjectType &&
                defaults.get(j).getActionName().equals('Case.Email') &&
                defaults.get(j).getActionType().equals('Email')) {
                sendEmailDefaults =
                    (QuickAction.SendEmailQuickActionDefaults) defaults.get(j);
                break;
            }
        }

        if (sendEmailDefaults != null) {
```

```

        Case c = [SELECT Status, Reason FROM Case
                  WHERE Id=:sendEmailDefaults.getContextId()];

    EmailMessage emailMessage = (EmailMessage)sendEmailDefaults.getTargetSObject();

    // Set BCC address to make sure each email goes for audit
    emailMessage.BccAddress = getBccAddress(c.Reason);

    /*
    Set Template related fields
    when the In Reply To Id field is null we know the interface
    is called on page load. Here we check if
    there are any previous emails attached to the case and load
    the 'New_Case_Created' or 'Automatic_Response' template.
    When the In Reply To Id field is not null we know that
    the interface is called on click of reply/reply all
    of an email and we load the 'Default_reply_template' template
    */
    if (sendEmailDefaults.getInReplyToId() == null) {
        Integer emailCount = [SELECT count() FROM EmailMessage
                              WHERE ParentId=:sendEmailDefaults.getContextId()];
        if (emailCount != null && emailCount > 0) {
            sendEmailDefaults.setTemplateId(
                getTemplateIdHelper('Automatic_Response'));
        } else {
            sendEmailDefaults.setTemplateId(
                getTemplateIdHelper('New_Case_Created'));
        }
        sendEmailDefaults.setInsertTemplateBody(false);
        sendEmailDefaults.setIgnoreTemplateSubject(false);
    } else {
        sendEmailDefaults.setTemplateId(
            getTemplateIdHelper('Default_reply_template'));
        sendEmailDefaults.setInsertTemplateBody(false);
        sendEmailDefaults.setIgnoreTemplateSubject(true);
    }
}

private Id getTemplateIdHelper(String templateApiName) {
    Id templateId = null;
    try {
        templateId = [select id, name from EmailTemplate
                     where developername = : templateApiName].id;
    } catch (Exception e) {
        system.debug('Unable to locate EmailTemplate using name: ' +
            templateApiName + ' refer to Setup | Communications Templates '
            + templateApiName);
    }
    return templateId;
}

private String getBccAddress(String reason) {
    if (reason != null && reason.equals('Technical'))
        { return 'support_technical@mycompany.com'; }
}

```

```

        else if (reason != null && reason.equals('Billing'))
            { return 'support_billing@mycompany.com'; }
        else { return 'support@mycompany.com'; }
    }
}

```

In this example, the `onInitDefaults` method checks whether the element passed in the array is for the standard Email action in the case feed. Then it performs a query to determine if the case Priority is set to *High*. If the Priority is set to *High*, the email address `managers@acme.com` is appended to the BCC field.

```

global class EmailPublisherForHighPriorityCases implements
QuickAction.QuickActionDefaultsHandler {
    // Empty constructor
    global EmailPublisherForHighPriorityCases() {
    }

    // The main interface method
    global void onInitDefaults(QuickAction.QuickActionDefaults[] defaults) {
        QuickAction.SendEmailQuickActionDefaults sendEmailDefaults =
(QuickAction.SendEmailQuickActionDefaults)defaults.get(0);
        EmailMessage emailMessage = (EmailMessage)sendEmailDefaults.getTargetSObject();

        Case c = [SELECT CaseNumber, Priority FROM Case WHERE
Id=:sendEmailDefaults.getContextId()];

        // If case severity is "High," append "managers@acme.com" to the existing (and
possibly blank) BCC field
        if (c.Priority != null && c.Priority.equals('High')) { // Priority is 'High'
            emailMessage.BccAddress = 'managers@acme.com';
        }
    }
}

```

In this example, the `onInitDefaults` method checks whether the element passed in the array is for the standard Email action in the case feed. Then it performs a query to determine if the case Type is set to *Problem*. If the type is set to *Problem*, the *First Response* email template is inserted into the body of the email.

```

global class EmailPublisherForCaseType implements QuickAction.QuickActionDefaultsHandler
{
    // Empty constructor
    global EmailPublisherForCaseType() {
    }

    // The main interface method
    global void onInitDefaults(QuickAction.QuickActionDefaults[] defaults) {
        QuickAction.SendEmailQuickActionDefaults sendEmailDefaults =
(QuickAction.SendEmailQuickActionDefaults)defaults.get(0);
        EmailMessage emailMessage = (EmailMessage)sendEmailDefaults.getTargetSObject();

        Case c = [SELECT CaseNumber, Type FROM Case WHERE Id=:sendEmailDefaults.getContextId()];

        // If case type is "Problem," insert the "First Response" email template

```

```

    if (c.CaseNumber != null && c.Type.equals('Problem')) {
        sendEmailDefaults.setTemplateId('Insert Email Template ID Here'); // Set the
template Id corresponding to First Response
        sendEmailDefaults.setInsertTemplateBody(true);
        sendEmailDefaults.setIgnoreTemplateSubject(false);
    }
}

```

In this example, the `onInitDefaults` method checks whether the element passed in the array is for the standard Email action in the case feed. Then it performs a query to determine if the email is a Reply or Reply All email. If email is a Reply or Reply All email, the corresponding email templates for these emails are inserted into the body of the email.

```

global class EmailPublisherForReplyAndReplyAll implements
QuickAction.QuickActionDefaultsHandler {

    // Empty constructor
    global EmailPublisherForReplyAndReplyAll() {

    }

    // The main interface method
    global void onInitDefaults(QuickAction.QuickActionDefaults[] defaults) {

        QuickAction.SendEmailQuickActionDefaults sendEmailDefaults =
(QuickAction.SendEmailQuickActionDefaults)defaults.get(0);
        EmailMessage emailMessage = (EmailMessage)sendEmailDefaults.getTargetSObject();

        // If the email is a "Reply" email, insert the "Reply Email Template" to the email
body
        if (sendEmailDefaults.getActionName().equals('EmailMessage_Reply')) {
            sendEmailDefaults.setTemplateId('Insert Reply Email Template ID Here');

            sendEmailDefaults.setInsertTemplateBody(true);
            sendEmailDefaults.setIgnoreTemplateSubject(false);

        }

        // If the email is a "Reply All" email, insert the "Reply All Email Template" to the
email body
        } else if (sendEmailDefaults.getActionName().equals('EmailMessage_ReplyAll')) {
            sendEmailDefaults.setTemplateId('Insert Reply All Email Template ID Here');

            sendEmailDefaults.setInsertTemplateBody(true);
            sendEmailDefaults.setIgnoreTemplateSubject(false);

        }
    }
}

```

## QuickActionRequest Class

Use the `QuickAction.QuickActionRequest` class for providing action information for quick actions to be performed by `QuickAction` class methods. Action information includes the action name, context record ID, and record.

## Namespace

[QuickAction](#)

## Usage

For Apex saved using Salesforce API version 28.0, a parent ID is associated with the `QuickActionRequest` instead of the context ID.

The constructor of this class takes no arguments:

```
QuickAction.QuickActionRequest qar = new QuickAction.QuickActionRequest();
```

## Example

In this sample, a new quick action is created to create a contact and assign a record to it.

```
QuickAction.QuickActionRequest req = new QuickAction.QuickActionRequest();
// Some quick action name
req.quickActionName = Schema.Account.QuickAction.AccountCreateContact;

// Define a record for the quick action to create
Contact c = new Contact();
c.lastname = 'last name';
req.record = c;

// Provide the context ID (or parent ID). In this case, it is an Account record.
req.contextid = '001xx000003DGcO';

QuickAction.QuickActionResult res = QuickAction.performQuickAction(req);
```

### IN THIS SECTION:

[QuickActionRequest Constructors](#)

[QuickActionRequest Methods](#)

### SEE ALSO:

[QuickAction Class](#)

## QuickActionRequest Constructors

The following are constructors for `QuickActionRequest`.

### IN THIS SECTION:

[QuickActionRequest\(\)](#)

Creates a new instance of the `QuickAction.QuickActionRequest` class.

#### **QuickActionRequest()**

Creates a new instance of the `QuickAction.QuickActionRequest` class.

#### Signature

```
public QuickActionRequest()
```

## QuickActionRequest Methods

The following are methods for `QuickActionRequest`. All are instance methods.

### IN THIS SECTION:

#### [getContextId\(\)](#)

Returns this QuickAction's context record ID.

#### [getQuickActionName\(\)](#)

Returns this QuickAction's name.

#### [getRecord\(\)](#)

Returns the QuickAction's associated record.

#### [setContextId\(contextId\)](#)

Sets this QuickAction's context ID. Returned by `getContextId`.

#### [setQuickActionName\(name\)](#)

Sets this QuickAction's name. Returned by `getQuickActionName`.

#### [setRecord\(record\)](#)

Sets a record for this QuickAction. Returned by `getRecord`.

### **getContextId ()**

Returns this QuickAction's context record ID.

Signature

```
public Id getContextId ()
```

Return Value

Type: [ID](#)

### **getQuickActionName ()**

Returns this QuickAction's name.

Signature

```
public String getQuickActionName ()
```

Return Value

Type: [String](#)

### **getRecord ()**

Returns the QuickAction's associated record.

Signature

```
public SObject getRecord()
```

Return Value

Type: [SObject](#)

#### **setContextId (contextId)**

Sets this QuickAction's context ID. Returned by `getContextId`.

Signature

```
public Void setContextId(Id contextId)
```

Parameters

*contextId*

Type: [ID](#)

Return Value

Type: Void

Usage

For Apex saved using Salesforce API version 28.0, sets this QuickAction's parent ID and is returned by `getParentId`.

#### **setQuickActionName (name)**

Sets this QuickAction's name. Returned by `getQuickActionName`.

Signature

```
public Void setQuickActionName(String name)
```

Parameters

*name*

Type: [String](#)

Return Value

Type: Void

#### **setRecord (record)**

Sets a record for this QuickAction. Returned by `getRecord`.

Signature

```
public void setRecord(SObject record)
```

Parameters

*record*  
Type: [SObject](#)

Return Value

Type: Void

## QuickActionResult Class

After you initiate a quick action with the `QuickAction` class, use the `QuickActionResult` class for processing action results.

## Namespace

[QuickAction](#)

SEE ALSO:

[QuickAction Class](#)

## QuickActionResult Methods

The following are methods for `QuickActionResult`. All are instance methods.

IN THIS SECTION:

[getErrors\(\)](#)

If an error occurs, an array of one or more database error objects, along with error codes and descriptions, is returned.

[getIds\(\)](#)

The IDs of the QuickActions being processed.

[getSuccessMessage\(\)](#)

Returns the success message associated with the quick action.

[isCreated\(\)](#)

Returns `true` if the action is created; otherwise, `false`.

[isSuccess\(\)](#)

Returns `true` if the action completes successfully; otherwise, `false`.

### **getErrors ()**

If an error occurs, an array of one or more database error objects, along with error codes and descriptions, is returned.

Signature

```
public List<Database.Error> getErrors ()
```

Return Value

Type: [List<Database.Error>](#)

### **getIds ()**

The IDs of the QuickActions being processed.

Signature

```
public List<Id> getIds ()
```

Return Value

Type: [List<Id>](#)

### **getSuccessMessage ()**

Returns the success message associated with the quick action.

Signature

```
public String getSuccessMessage ()
```

Return Value

Type: [String](#)

### **isCreated ()**

Returns `true` if the action is created; otherwise, `false`.

Signature

```
public Boolean isCreated ()
```

Return Value

Type: [Boolean](#)

### **isSuccess ()**

Returns `true` if the action completes successfully; otherwise, `false`.

Signature

```
public Boolean isSuccess ()
```

Return Value

Type: [Boolean](#)

## SendEmailQuickActionDefaults Class

Represents an Apex class that provides: the From address list; the original email's email message ID, provided that the reply action was invoked on the email message feed item; and methods to specify related settings on templates. You can override these fields before the standard Email Action is rendered.

### Namespace

[QuickAction](#)

### Usage

 **Note:** You cannot instantiate this class. One can use the getters/setters when using it in the context of `QuickAction.QuickActionDefaultsHandler`.

#### IN THIS SECTION:

[SendEmailQuickActionDefaults Methods](#)

## SendEmailQuickActionDefaults Methods

The following are methods for `SendEmailQuickActionDefaults`.

#### IN THIS SECTION:

[getFromAddressList\(\)](#)

Returns a list of email addresses that are available in the From: address drop-down menu for the standard Email Action.

[getInReplyToId\(\)](#)

Returns the email message ID of the email to which the reply/reply all action has been invoked.

[setIgnoreTemplateSubject\(useOriginalSubject\)](#)

Specifies whether the template subject should be ignored (true), thus using the original subject, or whether the template subject should replace the original subject (false).

[setInsertTemplateBody\(keepOriginalBodyContent\)](#)

Specifies whether the template body should be inserted above the original body content (true) or whether it should replace the entire content with the template body (false).

[setTemplateId\(templateId\)](#)

Sets the email template ID to load into the email body.

### **getFromAddressList ()**

Returns a list of email addresses that are available in the From: address drop-down menu for the standard Email Action.

Signature

```
public List<String> getFromAddressList ()
```

Return Value

Type: List<String>

### **getInReplyToId()**

Returns the email message ID of the email to which the reply/reply all action has been invoked.

Signature

```
public Id getInReplyToId()
```

Return Value

Type: Id

### **setIgnoreTemplateSubject (useOriginalSubject)**

Specifies whether the template subject should be ignored (true), thus using the original subject, or whether the template subject should replace the original subject (false).

Signature

```
public void setIgnoreTemplateSubject (Boolean useOriginalSubject)
```

Parameters

*useOriginalSubject*

Type: Boolean

Return Value

Type: void

### **setInsertTemplateBody (keepOriginalBodyContent)**

Specifies whether the template body should be inserted above the original body content (true) or whether it should replace the entire content with the template body (false).

Signature

```
public void setInsertTemplateBody (Boolean keepOriginalBodyContent)
```

Parameters

*keepOriginalBodyContent*

Type: Boolean

Return Value

Type: void

**setTemplateId(templateId)**

Sets the email template ID to load into the email body.

Signature

```
public void setTemplateId(Id templateId)
```

Parameters

*templateId*  
Type: [Id](#)  
The template ID.

Return Value

Type: void

## Reports Namespace

The `Reports` namespace provides classes for accessing the same data as is available in the Salesforce Reports and Dashboards REST API.

The following are the classes in the `Reports` namespace.

### IN THIS SECTION:

#### [AggregateColumn Class](#)

Contains methods for describing summary fields such as Record Count, Sum, Average, Max, Min, and custom summary formulas. Includes name, label, data type, and grouping context.

#### [BucketField Class](#)

Contains methods and constructors to work with information about a bucket field, including bucket type, name, and bucketed values.

#### [BucketFieldValue Class](#)

Contains information about the report values included in a bucket field.

#### [BucketType Enum](#)

The types of values included in a bucket.

#### [ColumnDataType Enum](#)

The `Reports.ColumnDataType` enum describes the type of data in a column. It is returned by the `getDataType` method.

#### [ColumnSortOrder Enum](#)

The `Reports.ColumnSortOrder` enum describes the order that the grouping column uses to sort data.

#### [CrossFilter Class](#)

Contains methods and constructors used to work with information about a cross filter.

#### [CsfGroupType Enum](#)

The group level at which the custom summary format aggregate is displayed in a report.

#### [DateGranularity Enum](#)

The `Reports.DateGranularity` enum describes the date interval that is used for grouping.

[DetailColumn Class](#)

Contains methods for describing fields that contain detailed data. Detailed data fields are also listed in the report metadata.

[Dimension Class](#)

Contains information for each row or column grouping.

[EvaluatedCondition Class](#)

Contains the individual components of an evaluated condition for a report notification, such as the aggregate name and label, the operator, and the value that the aggregate is compared to.

[EvaluatedConditionOperator Enum](#)

The `Reports.EvaluatedConditionOperator` enum describes the type of operator used to compare an aggregate to a value. It is returned by the `getOperator` method.

[FilterOperator Class](#)

Contains information about a filter operator, such as display name and API name.

[FilterValue Class](#)

Contains information about a filter value, such as the display name and API name.

[FormulaType Enum](#)

The format of the numbers in a custom summary formula.

[GroupingColumn Class](#)

Contains methods for describing fields that are used for column grouping.

[GroupingInfo Class](#)

Contains methods for describing fields that are used for grouping.

[GroupingValue Class](#)

Contains grouping values for a row or column, including the key, label, and value.

[NotificationAction Interface](#)

Implement this interface to trigger a custom Apex class when the conditions for a report notification are met.

[NotificationActionContext Class](#)

Contains information about the report instance and condition threshold for a report notification.

[ReportCsf Class](#)

Contains methods and constructors for working with information about a custom summary formula (CSF).

[ReportCurrency Class](#)

Contains information about a currency value, including the amount and currency code.

[ReportDataCell Class](#)

Contains the data for a cell in the report, including the display label and value.

[ReportDescribeResult Class](#)

Contains report, report type, and extended metadata for a tabular, summary, or matrix report.

[ReportDetailRow Class](#)

Contains data cells for a detail row of a report.

[ReportDivisionInfo Class](#)

Contains information about the divisions that can be used to filter a report.

[ReportExtendedMetadata Class](#)

Contains report extended metadata for a tabular, summary, or matrix report.

[ReportFact Class](#)

Contains the fact map for the report, which represents the report's data values.

[ReportFactWithDetails Class](#)

Contains the detailed fact map for the report, which represents the report's data values.

[ReportFactWithSummaries Class](#)

Contains the fact map for the report, which represents the report's data values, and includes summarized fields.

[ReportFilter Class](#)

Contains information about a report filter, including column, operator, and value.

[ReportFormat Enum](#)

Contains the possible report format types.

[ReportInstance Class](#)

Returns an instance of a report that was run asynchronously. Retrieves the results for that instance.

[ReportManager Class](#)

Runs a report synchronously or asynchronously and with or without details.

[ReportMetadata Class](#)

Contains report metadata for a tabular, summary, or matrix report.

[ReportResults Class](#)

Contains the results of running a report.

[ReportScopeInfo Class](#)

Contains information about possible scope values that you can choose. Scope values depend on the report type. For example, you can set the scope for opportunity reports to `All opportunities`, `My team's opportunities`, or `My opportunities`.

[ReportScopeValue Class](#)

Contains information about a possible scope value. Scope values depend on the report type. For example, you can set the scope for opportunity reports to `All opportunities`, `My team's opportunities`, or `My opportunities`.

[ReportType Class](#)

Contains the unique API name and display name for the report type.

[ReportTypeColumn Class](#)

Contains detailed report type metadata about a field, including data type, display name, and filter values.

[ReportTypeColumnCategory Class](#)

Information about categories of fields in a report type.

[ReportTypeMetadata Class](#)

Contains report type metadata, which gives you information about the fields that are available in each section of the report type, plus filter information for those fields.

[SortColumn Class](#)

Contains information about the sort column used in the report.

[StandardDateFilter Class](#)

Contains information about standard date filter available in the report—for example, the API name, start date, and end date of the standard date filter duration as well as the API name of the date field on which the filter is placed.

### [StandardDateFilterDuration Class](#)

Contains information about each standard date filter—also referred to as a relative date filter. It contains the API name and display label of the standard date filter duration as well as the start and end dates.

### [StandardDateFilterDurationGroup Class](#)

Contains information about the standard date filter groupings, such as the grouping display label and all standard date filters that fall under the grouping. Groupings include `Calendar Year`, `Calendar Quarter`, `Calendar Month`, `Calendar Week`, `Fiscal Year`, `Fiscal Quarter`, `Day`, and custom values based on user-defined date ranges.

### [StandardFilter Class](#)

Contains information about the standard filter defined in the report, such as the filter field API name and filter value.

### [StandardFilterInfo Class](#)

Is an abstract base class for an object that provides standard filter information.

### [StandardFilterInfoPicklist Class](#)

Contains information about the standard filter picklist, such as the display name and type of the filter field, the default picklist value, and a list of all possible picklist values.

### [StandardFilterType Enum](#)

The `StandardFilterType` enum describes the type of standard filters in a report. The `getType()` method returns a `Reports.StandardFilterType` enum value.

### [SummaryValue Class](#)

Contains summary data for a cell of the report.

### [ThresholdInformation Class](#)

Contains a list of evaluated conditions for a report notification.

### [TopRows Class](#)

Contains methods and constructors for working with information about a row limit filter.

### [Reports Exceptions](#)

The `Reports` namespace contains exception classes.

## AggregateColumn Class

Contains methods for describing summary fields such as Record Count, Sum, Average, Max, Min, and custom summary formulas. Includes name, label, data type, and grouping context.

## Namespace

### [Reports](#)

## AggregateColumn Methods

The following are methods for `AggregateColumn`. All are instance methods.

### IN THIS SECTION:

#### [getName\(\)](#)

Returns the unique API name of the summary field.

#### [getLabel\(\)](#)

Returns the localized display name for the summarized or custom summary formula field.

[getDataType\(\)](#)

Returns the data type of the summarized or custom summary formula field.

[getAcrossGroupingContext\(\)](#)

Returns the column grouping in the report where the summary field is displayed.

[getDownGroupingContext\(\)](#)

Returns the row grouping in the report where the summary field is displayed.

**getName ()**

Returns the unique API name of the summary field.

Syntax

```
public String getName ()
```

Return Value

Type: [String](#)

**getLabel ()**

Returns the localized display name for the summarized or custom summary formula field.

Syntax

```
public String getLabel ()
```

Return Value

Type: [String](#)

**getDataType ()**

Returns the data type of the summarized or custom summary formula field.

Syntax

```
public Reports.ColumnDataType getDataType ()
```

Return Value

Type: [Reports.ColumnDataType](#)

**getAcrossGroupingContext ()**

Returns the column grouping in the report where the summary field is displayed.

Syntax

```
public String getAcrossGroupingContext ()
```

Return Value

Type: [String](#)

### **getDownGroupingContext ()**

Returns the row grouping in the report where the summary field is displayed.

Syntax

```
public String getDownGroupingContext ()
```

Return Value

Type: [String](#)

## BucketField Class

Contains methods and constructors to work with information about a bucket field, including bucket type, name, and bucketed values.

### Namespace

[Reports](#)

IN THIS SECTION:

[BucketField Constructors](#)

[BucketField Methods](#)

### BucketField Constructors

The following are constructors for `BucketField`.

IN THIS SECTION:

[BucketField\(bucketType, developerName, label, nullTreatedAsZero, otherBucketLabel, sourceColumnName, values\)](#)

Creates an instance of the `Reports.BucketField` class using the specified parameters.

[BucketField\(\)](#)

Creates an instance of the `Reports.BucketField` class. You can then set values by using the class's `set` methods.

```
BucketField(bucketType, developerName, label, nullTreatedAsZero, otherBucketLabel,  
sourceColumnName, values)
```

Creates an instance of the `Reports.BucketField` class using the specified parameters.

Signature

```
public BucketField(Reports.BucketType bucketType, String developerName, String label,  
Boolean nullTreatedAsZero, String otherBucketLabel, String sourceColumnName,  
List<Reports.BucketFieldValue> values)
```

## Parameters

### *bucketType*

Type: [Reports.BucketType](#)

The type of bucket.

### *developerName*

Type: [String](#)

API name of the bucket.

### *label*

Type: [String](#)

User-facing name of the bucket.

### *nullTreatedAsZero*

Type: [Boolean](#)

Specifies whether null values are converted to zero (`true`) or not (`false`).

### *otherBucketLabel*

Type: [String](#)

Name of the fields grouped as `Other` (in buckets of `BucketType PICKLIST`).

### *sourceColumnName*

Type: [String](#)

Name of the bucketed field.

### *values*

Type: `List<Reports.BucketType>`

Types of the values included in the bucket.

## **BucketField()**

Creates an instance of the `Reports.BucketField` class. You can then set values by using the class's `set` methods.

## Signature

```
public BucketField()
```

## BucketField Methods

The following are methods for `BucketField`.

### IN THIS SECTION:

#### [getBucketType\(\)](#)

Returns the bucket type.

#### [getDeveloperName\(\)](#)

Returns the bucket's API name.

#### [getLabel\(\)](#)

Returns the user-facing name of the bucket.

[getNullTreatedAsZero\(\)](#)

Returns `true` if null values are converted to the number zero, otherwise returns `false`.

[getOtherBucketLabel\(\)](#)

Returns the name of fields grouped as `Other` in buckets of type `PICKLIST`.

[getSourceColumnName\(\)](#)

Returns the API name of the bucketed field.

[getValues\(\)](#)

Returns the report values grouped by the bucket field.

[setBucketType\(value\)](#)

Sets the `BucketType` of the bucket.

[setBucketType\(bucketType\)](#)

Sets the `BucketType` of the bucket.

[setDeveloperName\(developerName\)](#)

Sets the API name of the bucket.

[setLabel\(label\)](#)

Sets the user-facing name of the bucket.

[setNullTreatedAsZero\(nullTreatedAsZero\)](#)

Specifies whether null values in the bucket are converted to zero (`true`) or not (`false`).

[setOtherBucketLabel\(otherBucketLabel\)](#)

Sets the name of the fields grouped as `Other` (in buckets of `BucketType PICKLIST`).

[setSourceColumnName\(sourceColumnName\)](#)

Specifies the name of the bucketed field.

[setValues\(values\)](#)

Specifies which type of values are included in the bucket.

[toString\(\)](#)

Returns a string.

**getBucketType ()**

Returns the bucket type.

Signature

```
public Reports.BucketType getBucketType ()
```

Return Value

Type: [Reports.BucketType](#)

**getDeveloperName ()**

Returns the bucket's API name.

Signature

```
public String getDeveloperName()
```

Return Value

Type: [String](#)

#### **getLabel ()**

Returns the user-facing name of the bucket.

Signature

```
public String getLabel()
```

Return Value

Type: [String](#)

#### **getNullTreatedAsZero ()**

Returns `true` if null values are converted to the number zero, otherwise returns `false`.

Signature

```
public Boolean getNullTreatedAsZero()
```

Return Value

Type: [Boolean](#)

#### **getOtherBucketLabel ()**

Returns the name of fields grouped as `Other` in buckets of type `PICKLIST`.

Signature

```
public String getOtherBucketLabel()
```

Return Value

Type: [String](#)

#### **getSourceColumnName ()**

Returns the API name of the bucketed field.

Signature

```
public String getSourceColumnName()
```

Return Value

Type: [String](#)

### **getValues ()**

Returns the report values grouped by the bucket field.

Signature

```
public List<Reports.BucketFieldValue> getValues ()
```

Return Value

Type: [List](#) on page 2673<[Reports.BucketFieldValue](#)>

### **setBucketType (value)**

Sets the `BucketType` of the bucket.

Signature

```
public void setBucketType (String value)
```

Parameters

*value*

Type: [String](#)

See the [Reports.BucketType](#) enum for valid values.

Return Value

Type: void

### **setBucketType (bucketType)**

Sets the `BucketType` of the bucket.

Signature

```
public void setBucketType (Reports.BucketType bucketType)
```

Parameters

*bucketType*

Type: [Reports.BucketType](#)

Return Value

Type: void

**setDeveloperName (developerName)**

Sets the API name of the bucket.

Signature

```
public void setDeveloperName (String developerName)
```

Parameters

*developerName*

Type: [String](#)

The API name to assign to the bucket.

Return Value

Type: void

**setLabel (label)**

Sets the user-facing name of the bucket.

Signature

```
public void setLabel (String label)
```

Parameters

*label*

Type: [String](#)

Return Value

Type: void

**setNullTreatedAsZero (nullTreatedAsZero)**

Specifies whether null values in the bucket are converted to zero (`true`) or not (`false`).

Signature

```
public void setNullTreatedAsZero (Boolean nullTreatedAsZero)
```

Parameters

*nullTreatedAsZero*

Type: [Boolean](#)

Return Value

Type: void

**setOtherBucketLabel (otherBucketLabel)**

Sets the name of the fields grouped as Other (in buckets of BucketType PICKLIST).

Signature

```
public void setOtherBucketLabel(String otherBucketLabel)
```

Parameters

*otherBucketLabel*  
Type: [String](#)

Return Value

Type: void

**setSourceColumnName (sourceColumnName)**

Specifies the name of the bucketed field.

Signature

```
public void setSourceColumnName(String sourceColumnName)
```

Parameters

*sourceColumnName*  
Type: [String](#)

Return Value

Type: void

**setValues (values)**

Specifies which type of values are included in the bucket.

Signature

```
public void setValues(List<Reports.BucketFieldValue> values)
```

Parameters

*values*  
Type: [List](#) on page 2673<[Reports.BucketFieldValue](#)>

Return Value

Type: void

**toString()**

Returns a string.

Signature

```
public String toString()
```

Return Value

Type: [String](#)

## BucketFieldValue Class

Contains information about the report values included in a bucket field.

### Namespace

[Reports](#)

IN THIS SECTION:

[BucketFieldValue Constructors](#)

[BucketFieldValue Methods](#)

### BucketFieldValue Constructors

The following are constructors for `BucketFieldValue`.

IN THIS SECTION:

[BucketFieldValue\(label, sourceDimensionValues, rangeUpperBound\)](#)

Creates an instance of the `Reports.BucketFieldValue` class using the specified parameters.

[BucketFieldValue\(\)](#)

Creates an instance of the `Reports.BucketFieldValue` class. You can then set values by using the class's `set` methods.

**BucketFieldValue(label, sourceDimensionValues, rangeUpperBound)**

Creates an instance of the `Reports.BucketFieldValue` class using the specified parameters.

Signature

```
public BucketFieldValue(String label, List<String> sourceDimensionValues, Double rangeUpperBound)
```

Parameters

*label*

Type: [String](#)

The user-facing name of the bucket.

*sourceDimensionValues*

Type: [List](#) on page 2673<[String](#)>

A list of the values from the source field included in this bucket category (in buckets of type PICKLIST and buckets of type TEXT).

*rangeUpperBound*

Type: [Double](#)

The greatest range limit under which values are included in this bucket category (in buckets of type NUMBER).

### **BucketFieldValue ()**

Creates an instance of the `Reports.BucketFieldValue` class. You can then set values by using the class's `set` methods.

Signature

```
public BucketFieldValue ()
```

### **BucketFieldValue Methods**

The following are methods for `BucketFieldValue`.

IN THIS SECTION:

[getLabel\(\)](#)

Returns the user-facing name of the bucket category.

[getRangeUpperBound\(\)](#)

Returns the greatest range limit under which values are included in this bucket category (in buckets of type NUMBER).

[getSourceDimensionValues\(\)](#)

Returns a list of the values from the source field included in this bucket category (in buckets of type PICKLIST and buckets of type TEXT).

[setLabel\(label\)](#)

Set the user-facing name of the bucket category.

[setRangeUpperBound\(rangeUpperBound\)](#)

Sets the greatest limit of a range under which values are included in this bucket category (in buckets of type NUMBER).

[setSourceDimensionValues\(sourceDimensionValues\)](#)

Specifies the values from the source field included in this bucket category (in buckets of type PICKLIST and buckets of type TEXT).

[toString\(\)](#)

Returns a string.

### **getLabel ()**

Returns the user-facing name of the bucket category.

Signature

```
public String getLabel ()
```

Return Value

Type: [String](#)

### **getRangeUpperBound ()**

Returns the greatest range limit under which values are included in this bucket category (in buckets of type `NUMBER`).

Signature

```
public Double getRangeUpperBound ()
```

Return Value

Type: [Double](#)

### **getSourceDimensionValues ()**

Returns a list of the values from the source field included in this bucket category (in buckets of type `PICKLIST` and buckets of type `TEXT`).

Signature

```
public List<String> getSourceDimensionValues ()
```

Return Value

Type: [List<String>](#)

### **setLabel (label)**

Set the user-facing name of the bucket category.

Signature

```
public void setLabel (String label)
```

Parameters

*label*

Type: [String](#)

Return Value

Type: void

### **setRangeUpperBound (rangeUpperBound)**

Sets the greatest limit of a range under which values are included in this bucket category (in buckets of type `NUMBER`).

Signature

```
public void setRangeUpperBound(Double rangeUpperBound)
```

Parameters

*rangeUpperBound*  
Type: [Double](#)

Return Value

Type: void

### **setSourceDimensionValues (sourceDimensionValues)**

Specifies the values from the source field included in this bucket category (in buckets of type PICKLIST and buckets of type TEXT).

Signature

```
public void setSourceDimensionValues(List<String> sourceDimensionValues)
```

Parameters

*sourceDimensionValues*  
Type: [List<String>](#)

Return Value

Type: void

### **toString ()**

Returns a string.

Signature

```
public String toString()
```

Return Value

Type: [String](#)

## BucketType Enum

The types of values included in a bucket.

### Enum Values

The following are the values of the `Reports.BucketType` enum.

Value	Description
NUMBER	Numeric values
PICKLIST	Picklist values
TEXT	String values

## ColumnDataType Enum

The `Reports.ColumnDataType` enum describes the type of data in a column. It is returned by the `getDataType` method.

### Namespace

[Reports](#)

### Enum Values

The following are the values of the `Reports.ColumnDataType` enum.

Value	Description
BOOLEAN_DATA	Boolean ( <code>true</code> or <code>false</code> ) values
COMBOBOX_DATA	Comboboxes, which provide a set of enumerated values and enable the user to specify a value that is not in the list
CURRENCY_DATA	Currency values
DATETIME_DATA	DateTime values
DATE_DATA	Date values
DOUBLE_DATA	Double values
EMAIL_DATA	Email addresses
ID_DATA	An object's Salesforce ID
INT_DATA	Integer values
MULTIPICKLIST_DATA	Multi-select picklists, which provide a set of enumerated values from which multiple values can be selected
PERCENT_DATA	Percent values
PHONE_DATA	Phone numbers. Values can include alphabetic characters. Client applications are responsible for phone number formatting.
PICKLIST_DATA	Single-select picklists, which provide a set of enumerated values from which only one value can be selected
REFERENCE_DATA	Cross-references to another object, analogous to a foreign key field
STRING_DATA	String values

Value	Description
TEXTAREA_DATA	String values that are displayed as multiline text fields
TIME_DATA	Time values
URL_DATA	URL values that are displayed as hyperlinks

## ColumnSortOrder Enum

The `Reports.ColumnSortOrder` enum describes the order that the grouping column uses to sort data.

### Namespace

[Reports](#)

### Usage

The `GroupingInfo.getColumnSortOrder()` method returns a `Reports.ColumnSortOrder` enum value. The `GroupingInfo.setColumnSortOrder()` method takes the enum value as an argument.

### Enum Values

The following are the values of the `Reports.ColumnSortOrder` enum.

Value	Description
ASCENDING	Sort data in ascending order (A–Z)
DESCENDING	Sort data in descending order (Z–A)

## CrossFilter Class

Contains methods and constructors used to work with information about a cross filter.

### Namespace

[Reports](#)

IN THIS SECTION:

[CrossFilter Constructors](#)

[CrossFilter Methods](#)

### CrossFilter Constructors

The following are constructors for `CrossFilter`.

## IN THIS SECTION:

[CrossFilter\(criteria, includesObject, primaryEntityField, relatedEntity, relatedEntityJoinField\)](#)

Creates an instance of the `Reports.CrossFilter` class using the specified parameters.

[CrossFilter\(\)](#)

Creates an instance of the `Reports.CrossFilter` class. You can then set values by using the class's `set` methods.

### **CrossFilter(criteria, includesObject, primaryEntityField, relatedEntity, relatedEntityJoinField)**

Creates an instance of the `Reports.CrossFilter` class using the specified parameters.

#### Signature

```
public CrossFilter(List<Reports.ReportFilter> criteria, Boolean includesObject, String primaryEntityField, String relatedEntity, String relatedEntityJoinField)
```

#### Parameters

*criteria*

Type: [List<Reports.ReportFilter>](#)

Information about how to filter the `relatedEntity`. Relates the primary entity with a subset of the `relatedEntity`.

*includesObject*

Type: [Boolean](#)

Specifies whether objects returned have a relationship with the `relatedEntity` (`true`) or not (`false`).

*primaryEntityField*

Type: [String](#)

The name of the object on which the cross filter is evaluated.

*relatedEntity*

Type: [String](#)

The name of the object that the `primaryEntityField` is evaluated against—the right-hand side of the cross filter.

*relatedEntityJoinField*

Type: [String](#)

The name of the field used to join the `primaryEntityField` and `relatedEntity`.

### **CrossFilter()**

Creates an instance of the `Reports.CrossFilter` class. You can then set values by using the class's `set` methods.

#### Signature

```
public CrossFilter()
```

## CrossFilter Methods

The following are methods for `CrossFilter`.

## IN THIS SECTION:

[getCriteria\(\)](#)

Returns information about how to filter the `relatedEntity`. Describes the subset of the `relatedEntity` which the primary entity is evaluated against.

[getIncludesObject\(\)](#)

Returns `true` if primary object has a relationship with the `relatedEntity`, otherwise returns `false`.

[getPrimaryEntityField\(\)](#)

Returns the name of the object on which the cross filter is evaluated.

[getRelatedEntity\(\)](#)

Returns name of the object that the `primaryEntityField` is evaluated against—the right-hand side of the cross filter.

[getRelatedEntityJoinField\(\)](#)

Returns the name of the field used to join the `primaryEntityField` and `relatedEntity`.

[setCriteria\(criteria\)](#)

Specifies how to filter the `relatedEntity`. Relates the primary entity with a subset of the `relatedEntity`.

[setIncludesObject\(includesObject\)](#)

Specifies whether objects returned have a relationship with the `relatedEntity` (`true`) or not (`false`).

[setPrimaryEntityField\(primaryEntityField\)](#)

Specifies the name of the object on which the cross filter is evaluated.

[setRelatedEntity\(relatedEntity\)](#)

Specifies the name of the object that the `primaryEntityField` is evaluated against—the right-hand side of the cross filter.

[setRelatedEntityJoinField\(relatedEntityJoinField\)](#)

Specifies the name of the field used to join the `primaryEntityField` and `relatedEntity`.

[toString\(\)](#)

Returns a string.

**getCriteria()**

Returns information about how to filter the `relatedEntity`. Describes the subset of the `relatedEntity` which the primary entity is evaluated against.

Signature

```
public List<Reports.ReportFilter> getCriteria()
```

Return Value

Type: [List<Reports.ReportFilter>](#)

**getIncludesObject()**

Returns `true` if primary object has a relationship with the `relatedEntity`, otherwise returns `false`.

Signature

```
public Boolean getIncludesObject()
```

Return Value

Type: [Boolean](#)

### **getPrimaryEntityField()**

Returns the name of the object on which the cross filter is evaluated.

Signature

```
public String getPrimaryEntityField()
```

Return Value

Type: [String](#)

### **getRelatedEntity()**

Returns name of the object that the `primaryEntityField` is evaluated against—the right-hand side of the cross filter.

Signature

```
public String getRelatedEntity()
```

Return Value

Type: [String](#)

### **getRelatedEntityJoinField()**

Returns the name of the field used to join the `primaryEntityField` and `relatedEntity`.

Signature

```
public String getRelatedEntityJoinField()
```

Return Value

Type: [String](#)

### **setCriteria(criteria)**

Specifies how to filter the `relatedEntity`. Relates the primary entity with a subset of the `relatedEntity`.

Signature

```
public void setCriteria(List<Reports.ReportFilter> criteria)
```

Parameters

*criteria*

Type: [List<Reports.ReportFilter>](#)

Return Value

Type: void

**setIncludesObject (includesObject)**

Specifies whether objects returned have a relationship with the `relatedEntity` (`true`) or not (`false`).

Signature

```
public void setIncludesObject(Boolean includesObject)
```

Parameters

*includesObject*  
Type: Boolean

Return Value

Type: void

**setPrimaryEntityField(primaryEntityField)**

Specifies the name of the object on which the cross filter is evaluated.

Signature

```
public void setPrimaryEntityField(String primaryEntityField)
```

Parameters

*primaryEntityField*  
Type: String

Return Value

Type: void

**setRelatedEntity(relatedEntity)**

Specifies the name of the object that the `primaryEntityField` is evaluated against—the right-hand side of the cross filter.

Signature

```
public void setRelatedEntity(String relatedEntity)
```

Parameters

*relatedEntity*  
Type: String

Return Value

Type: void

### **setRelatedEntityJoinField(relatedEntityJoinField)**

Specifies the name of the field used to join the `primaryEntityField` and `relatedEntity`.

Signature

```
public void setRelatedEntityJoinField(String relatedEntityJoinField)
```

Parameters

*relatedEntityJoinField*  
Type: [String](#)

Return Value

Type: void

### **toString()**

Returns a string.

Signature

```
public String toString()
```

Return Value

Type: [String](#)

## CsfGroupType Enum

The group level at which the custom summary format aggregate is displayed in a report.

### Enum Values

The following are the values of the `Reports.CsfGroupType` enum.

Value	Description
ALL	The aggregate is displayed at the end of every summary row.
CUSTOM	The aggregate is displayed at specified grouping levels.
GRAND_TOTAL	The aggregate is displayed only at the grand total level.

## DateGranularity Enum

The `Reports.DateGranularity` enum describes the date interval that is used for grouping.

### Namespace

[Reports](#)

### Usage

The `GroupingInfo.getDateGranularity` method returns a `Reports.DateGranularity` enum value. The `GroupingInfo.setDateGranularity` method takes the enum value as an argument.

### Enum Values

The following are the values of the `Reports.DateGranularity` enum.

Value	Description
DAY	The day of the week (Monday–Sunday)
DAY_IN_MONTH	The day of the month (1–31)
FISCAL_PERIOD	The fiscal period
FISCAL_QUARTER	The fiscal quarter
FISCAL_WEEK	The fiscal week
FISCAL_YEAR	The fiscal year
MONTH	The month (January–December)
MONTH_IN_YEAR	The month number (1–12)
NONE	No date grouping
QUARTER	The quarter number (1–4)
WEEK	The week number (1–52)
YEAR	The year number (####)

## DetailColumn Class

Contains methods for describing fields that contain detailed data. Detailed data fields are also listed in the report metadata.

### Namespace

[Reports](#)

### DetailColumn Instance Methods

The following are instance methods for `DetailColumn`. All are instance methods.

## IN THIS SECTION:

[getName\(\)](#)

Returns the unique API name of the detail column field.

[getLabel\(\)](#)

Returns the localized display name of a standard field, the ID of a custom field, or the API name of a bucket field that has detailed data.

[getDataType\(\)](#)

Returns the data type of a detail column field.

**getName ()**

Returns the unique API name of the detail column field.

Syntax

```
public String getName ()
```

Return Value

Type: [String](#)

**getLabel ()**

Returns the localized display name of a standard field, the ID of a custom field, or the API name of a bucket field that has detailed data.

Syntax

```
public String getLabel ()
```

Return Value

Type: [String](#)

**getDataType ()**

Returns the data type of a detail column field.

Syntax

```
public Reports.ColumnDataType getDataType ()
```

Return Value

Type: [Reports.ColumnDataType](#)

## Dimension Class

Contains information for each row or column grouping.

## Namespace

[Reports](#)

## Dimension Methods

The following are methods for `Dimension`. All are instance methods.

### IN THIS SECTION:

[getGroupings\(\)](#)

Returns information for each row or column grouping as a list.

### **getGroupings ()**

Returns information for each row or column grouping as a list.

### Syntax

```
public List<Reports.GroupingValue> getGroupings ()
```

### Return Value

Type: [List<Reports.GroupingValue>](#)

## EvaluatedCondition Class

Contains the individual components of an evaluated condition for a report notification, such as the aggregate name and label, the operator, and the value that the aggregate is compared to.

## Namespace

[Reports](#)

### IN THIS SECTION:

[EvaluatedCondition Constructors](#)

[EvaluatedCondition Methods](#)

## EvaluatedCondition Constructors

The following are constructors for `EvaluatedCondition`.

### IN THIS SECTION:

[EvaluatedCondition\(aggregateName, aggregateLabel, compareToValue, aggregateValue, displayCompareTo, displayValue, operator\)](#)

Creates a new instance of the `Reports.EvaluatedConditions` class using the specified parameters.

**EvaluatedCondition(aggregateName, aggregateLabel, compareToValue, aggregateValue, displayCompareTo, displayValue, operator)**

Creates a new instance of the `Reports.EvaluatedConditions` class using the specified parameters.

Signature

```
public EvaluatedCondition(String aggregateName, String aggregateLabel, Double
compareToValue, Double aggregateValue, String displayCompareTo, String displayValue,
Reports.EvaluatedConditionOperator operator)
```

Parameters

*aggregateName*

Type: [String](#)

The unique API name of the aggregate.

*aggregateLabel*

Type: [String](#)

The localized display name of the aggregate.

*compareToValue*

Type: [Double](#)

The value that the aggregate is compared to in the condition.

*aggregateValue*

Type: [Double](#)

The actual value of the aggregate when the report is run.

*displayCompareTo*

Type: [String](#)

The value that the aggregate is compared to in the condition, formatted for display. For example, a display value for a currency is \$20.00 or USD20.00 instead of 20.00.

*displayValue*

Type: [String](#)

The value of the aggregate when the report is run, formatted for display. For example, a display value for a currency is \$20.00 or USD20.00 instead of 20.00.

*operator*

Type: [Reports.EvaluatedConditionOperator](#)

The operator used in the condition.

## EvaluatedCondition Methods

The following are methods for `EvaluatedCondition`.

IN THIS SECTION:

[getAggregateLabel\(\)](#)

Returns the localized display name of the aggregate.

[getAggregateName\(\)](#)

Returns the unique API name of the aggregate.

[getCompareTo\(\)](#)

Returns the value that the aggregate is compared to in the condition.

[getDisplayCompareTo\(\)](#)

Returns the value that the aggregate is compared to in the condition, formatted for display. For example, a display value for a currency is \$20.00 or USD20.00 instead of 20.00.

[getDisplayValue\(\)](#)

Returns the value of the aggregate when the report is run, formatted for display. For example, a display value for a currency is \$20.00 or USD20.00 instead of 20.00.

[getOperator\(\)](#)

Returns the operator used in the condition.

[getValue\(\)](#)

Returns the actual value of the aggregate when the report is run.

**getAggregateLabel ()**

Returns the localized display name of the aggregate.

Signature

```
public String getAggregateLabel ()
```

Return Value

Type: [String](#)

**getAggregateName ()**

Returns the unique API name of the aggregate.

Signature

```
public String getAggregateName ()
```

Return Value

Type: [String](#)

**getCompareTo ()**

Returns the value that the aggregate is compared to in the condition.

Signature

```
public Double getCompareTo ()
```

Return Value

Type: [Double](#)

#### **getDisplayCompareTo ()**

Returns the value that the aggregate is compared to in the condition, formatted for display. For example, a display value for a currency is \$20.00 or USD20.00 instead of 20.00.

Signature

```
public String getDisplayCompareTo ()
```

Return Value

Type: [String](#)

#### **getDisplayValue ()**

Returns the value of the aggregate when the report is run, formatted for display. For example, a display value for a currency is \$20.00 or USD20.00 instead of 20.00.

Signature

```
public String getDisplayValue ()
```

Return Value

Type: [String](#)

#### **getOperator ()**

Returns the operator used in the condition.

Signature

```
public Reports.EvaluatedConditionOperator getOperator ()
```

Return Value

Type: [Reports.EvaluatedConditionOperator](#)

#### **getValue ()**

Returns the actual value of the aggregate when the report is run.

Signature

```
public Double getValue ()
```

Return Value

Type: [Double](#)

## EvaluatedConditionOperator Enum

The `Reports.EvaluatedConditionOperator` enum describes the type of operator used to compare an aggregate to a value. It is returned by the `getOperator` method.

### Namespace

[Reports](#)

### Enum Values

The following are the values of the `Reports.EvaluatedConditionOperator` enum.

Value	Description
<code>EQUAL</code>	Equality operator.
<code>GREATER_THAN</code>	Greater than operator.
<code>GREATER_THAN_EQUAL</code>	Greater than or equal to operator.
<code>LESS_THAN</code>	Less than operator.
<code>LESS_THAN_EQUAL</code>	Less than or equal to operator.
<code>NOT_EQUAL</code>	Inequality operator.

## FilterOperator Class

Contains information about a filter operator, such as display name and API name.

### Namespace

[Reports](#)

### FilterOperator Methods

The following are methods for `FilterOperator`. All are instance methods.

#### IN THIS SECTION:

[getLabel\(\)](#)

Returns the localized display name of the filter operator. Possible values for this name are restricted based on the data type of the column being filtered.

### [getName\(\)](#)

Returns the unique API name of the filter operator. Possible values for this name are restricted based on the data type of the column being filtered. For example `multipicklist` fields can use the following filter operators: "equals," "not equal to," "includes," and "excludes." Bucket fields are considered to be of the `String` type.

### **getLabel ()**

Returns the localized display name of the filter operator. Possible values for this name are restricted based on the data type of the column being filtered.

Syntax

```
public String getLabel ()
```

Return Value

Type: [String](#)

### **getName ()**

Returns the unique API name of the filter operator. Possible values for this name are restricted based on the data type of the column being filtered. For example `multipicklist` fields can use the following filter operators: "equals," "not equal to," "includes," and "excludes." Bucket fields are considered to be of the `String` type.

Syntax

```
public String getName ()
```

Return Value

Type: [String](#)

## FilterValue Class

Contains information about a filter value, such as the display name and API name.

## Namespace

[Reports](#)

## FilterValue Methods

The following are methods for `FilterValue`. All are instance methods.

IN THIS SECTION:

### [getLabel\(\)](#)

Returns the localized display name of the filter value. Possible values for this name are restricted based on the data type of the column being filtered.

### `getName()`

Returns the unique API name of the filter value. Possible values for this name are restricted based on the data type of the column being filtered.

### `getLabel ()`

Returns the localized display name of the filter value. Possible values for this name are restricted based on the data type of the column being filtered.

Syntax

```
public String getLabel ()
```

Return Value

Type: [String](#)

### `getName ()`

Returns the unique API name of the filter value. Possible values for this name are restricted based on the data type of the column being filtered.

Syntax

```
public String getName ()
```

Return Value

Type: [String](#)

## FormulaType Enum

The format of the numbers in a custom summary formula.

### Enum Values

The following are the values of the `Reports.FormulaType` enum.

Value	Description
CURRENCY	Formatted as currency. For example, \$100.00.
NUMBER	Formatted as numbers. For example, 100.
PERCENT	Formatted as percentages. For example, 100%.

## GroupingColumn Class

Contains methods for describing fields that are used for column grouping.

## Namespace

### Reports

The `GroupingColumn` class provides basic information about column grouping fields. The `GroupingInfo` class includes additional methods for describing and updating grouping fields.

## GroupingColumn Methods

The following are methods for `GroupingColumn`. All are instance methods.

### IN THIS SECTION:

#### [getName\(\)](#)

Returns the unique API name of the field or bucket field that is used for column grouping.

#### [getLabel\(\)](#)

Returns the localized display name of the field that is used for column grouping.

#### [getDataType\(\)](#)

Returns the data type of the field that is used for column grouping.

#### [getGroupingLevel\(\)](#)

Returns the level of grouping for the column.

### **getName ()**

Returns the unique API name of the field or bucket field that is used for column grouping.

Syntax

```
public String getName ()
```

Return Value

Type: [String](#)

### **getLabel ()**

Returns the localized display name of the field that is used for column grouping.

Syntax

```
public String getLabel ()
```

Return Value

Type: [String](#)

### **getDataType ()**

Returns the data type of the field that is used for column grouping.

Syntax

```
public Reports.ColumnDataType getDataType ()
```

Return Value

Type: [Reports.ColumnDataType](#)

### **getGroupingLevel ()**

Returns the level of grouping for the column.

Syntax

```
public Integer getGroupingLevel ()
```

Return Value

Type: [Integer](#)

Usage

- In a summary report, 0, 1, or 2 indicates grouping at the first, second, or third row level.
- In a matrix report, 0 or 1 indicates grouping at the first or second row or column level.

## GroupingInfo Class

Contains methods for describing fields that are used for grouping.

### Namespace

[Reports](#)

### GroupingInfo Methods

The following are methods for `GroupingInfo`. All are instance methods.

IN THIS SECTION:

[getName\(\)](#)

Returns the unique API name of the field or bucket field that is used for row or column grouping.

[getSortOrder\(\)](#)

Returns the order that is used to sort data in a row or column grouping (`ASCENDING` or `DESCENDING`).

[getDateGranularity\(\)](#)

Returns the date interval that is used for row or column grouping.

[getSortAggregate\(\)](#)

Returns the summary field that is used to sort data within a grouping in a summary report. The value is null when data within a grouping is not sorted by a summary field.

**getName ()**

Returns the unique API name of the field or bucket field that is used for row or column grouping.

Syntax

```
public String getName ()
```

Return Value

Type: [String](#)

**getSortOrder ()**

Returns the order that is used to sort data in a row or column grouping (ASCENDING or DESCENDING).

Syntax

```
public Reports.ColumnSortOrder getSortOrder ()
```

Return Value

Type: [Reports.ColumnSortOrder](#)

**getDateGranularity ()**

Returns the date interval that is used for row or column grouping.

Syntax

```
public Reports.DateGranularity getDateGranularity ()
```

Return Value

Type: [Reports.DateGranularity](#)

**getSortAggregate ()**

Returns the summary field that is used to sort data within a grouping in a summary report. The value is null when data within a grouping is not sorted by a summary field.

Syntax

```
public String getSortAggregate ()
```

Return Value

Type: [String](#)

## GroupingValue Class

Contains grouping values for a row or column, including the key, label, and value.

## Namespace

[Reports](#)

### GroupingValue Methods

The following are methods for `GroupingValue`. All are instance methods.

#### IN THIS SECTION:

[getGroupings\(\)](#)

Returns a list of second- or third-level row or column groupings. If there are none, the value is an empty array.

[getKey\(\)](#)

Returns the unique identifier for a row or column grouping. The identifier is used by the fact map to specify data values within each grouping.

[getLabel\(\)](#)

Returns the localized display name of a row or column grouping. For date and time fields, the label is the localized date or time.

[getValue\(\)](#)

Returns the value of the field that is used as a row or column grouping.

#### **getGroupings ()**

Returns a list of second- or third-level row or column groupings. If there are none, the value is an empty array.

Syntax

```
public List<Reports.GroupingValue> getGroupings ()
```

Return Value

Type: [List<Reports.GroupingValue>](#)

#### **getKey ()**

Returns the unique identifier for a row or column grouping. The identifier is used by the fact map to specify data values within each grouping.

Syntax

```
public String getKey ()
```

Return Value

Type: [String](#)

#### **getLabel ()**

Returns the localized display name of a row or column grouping. For date and time fields, the label is the localized date or time.

Syntax

```
public String getLabel ()
```

Return Value

Type: [String](#)

### **getValue ()**

Returns the value of the field that is used as a row or column grouping.

Syntax

```
public Object getValue ()
```

Return Value

Type: Object

Usage

The value depends on the field's data type.

- Currency fields:
  - `amount`: Of type currency. A data cell's value.
  - `currency`: Of type picklist. The ISO 4217 currency code, if available; for example, USD for US dollars or CNY for Chinese yuan. (If the grouping is on the converted currency, this value is the currency code for the report and not for the record.)
- Picklist fields: API name. For example, a custom picklist field—`Type of Business` with values 1, 2, and 3 for Consulting, Services, and Add-On Business respectively—has 1, 2, or 3 as the grouping value.
- ID fields: API name.
- Record type fields: API name.
- Date and time fields: Date or time in ISO-8601 format.
- Lookup fields: Unique API name. For example, for the `Opportunity Owner` lookup field, the ID of each opportunity owner's Chatter profile page can be a grouping value.

## NotificationAction Interface

Implement this interface to trigger a custom Apex class when the conditions for a report notification are met.

### Namespace

[Reports](#)

### Usage

Report notifications for reports that users have subscribed to can trigger a custom Apex class, which must implement the `Reports.NotificationAction` interface. The `execute` method in this interface receives a

`NotificationActionContext` object as a parameter, which contains information about the report instance and the conditions that must be met for a notification to be triggered.

#### IN THIS SECTION:

[NotificationAction Methods](#)

[NotificationAction Example Implementation](#)

## NotificationAction Methods

The following are methods for `NotificationAction`.

#### IN THIS SECTION:

[execute\(context\)](#)

Executes the custom Apex action specified in the `context` parameter of the context object, `NotificationActionContext`. The object contains information about the report instance and the conditions that must be met for a notification to be triggered. The method executes whenever the specified conditions are met.

#### **execute (context)**

Executes the custom Apex action specified in the `context` parameter of the context object, `NotificationActionContext`. The object contains information about the report instance and the conditions that must be met for a notification to be triggered. The method executes whenever the specified conditions are met.

#### Signature

```
public void execute(Reports.NotificationActionContext context)
```

#### Parameters

*context*

Type: [Reports.NotificationActionContext](#)

#### Return Value

Type: Void

## NotificationAction Example Implementation

This is an example implementation of the `Reports.NotificationAction` interface.

```
public class AlertOwners implements Reports.NotificationAction {  
  
    public void execute(Reports.NotificationActionContext context) {  
        Reports.ReportResults results = context.getReportInstance().getReportResults();  
        for(Reports.GroupingValue g: results.getGroupingsDown().getGroupings()) {  
            FeedItem t = new FeedItem();  
            t.ParentId = (Id)g.getValue();  
            t.Body = 'This record needs attention. Please view the report.';  
            t.Title = 'Needs Attention: '+ results.getReportMetadata().getName();  
        }  
    }  
}
```

```
        t.LinkUrl = '/' + results.getReportMetadata().getId();
        insert t;
    }
}
```

## NotificationActionContext Class

Contains information about the report instance and condition threshold for a report notification.

### Namespace

[Reports](#)

#### IN THIS SECTION:

[NotificationActionContext Constructors](#)

[NotificationActionContext Methods](#)

## NotificationActionContext Constructors

The following are constructors for `NotificationActionContext`.

#### IN THIS SECTION:

[NotificationActionContext\(reportInstance, thresholdInformation\)](#)

Creates a new instance of the `Reports.NotificationActionContext` class using the specified parameters.

### **NotificationActionContext(reportInstance, thresholdInformation)**

Creates a new instance of the `Reports.NotificationActionContext` class using the specified parameters.

#### Signature

```
public NotificationActionContext(Reports.ReportInstance reportInstance,
Reports.ThresholdInformation thresholdInformation)
```

#### Parameters

*reportInstance*

Type: [Reports.ReportInstance](#)

An instance of a report.

*thresholdInformation*

Type: [Reports.ThresholdInformation](#)

The evaluated conditions for the notification.

## NotificationActionContext Methods

The following are methods for `NotificationActionContext`.

## IN THIS SECTION:

[getReportInstance\(\)](#)

Returns the report instance associated with the notification.

[getThresholdInformation\(\)](#)

Returns the threshold information associated with the notification.

**getReportInstance ()**

Returns the report instance associated with the notification.

Signature

```
public Reports.ReportInstance getReportInstance ()
```

Return Value

Type: [Reports.ReportInstance](#)

**getThresholdInformation ()**

Returns the threshold information associated with the notification.

Signature

```
public Reports.ThresholdInformation getThresholdInformation ()
```

Return Value

Type: [Reports.ThresholdInformation](#)

## ReportCsf Class

Contains methods and constructors for working with information about a custom summary formula (CSF).

### Namespace

[Reports](#)

## IN THIS SECTION:

[ReportCsf Constructors](#)[ReportCsf Methods](#)

### ReportCsf Constructors

The following are constructors for `ReportCsf`.

## IN THIS SECTION:

[ReportCsf\(label, description, formulaType, decimalPlaces, downGroup, downGroupType, acrossGroup, acrossGroupType, formula\)](#)

Creates an instance of the `Reports.ReportCsf` class using the specified parameters.

[ReportCsf\(\)](#)

Creates an instance of the `Reports.ReportCsf` class. You can then set values by using the class's `set` methods.

**`ReportCsf(label, description, formulaType, decimalPlaces, downGroup, downGroupType, acrossGroup, acrossGroupType, formula)`**

Creates an instance of the `Reports.ReportCsf` class using the specified parameters.

## Signature

```
public ReportCsf(String label, String description, Reports.FormulaType formulaType,
Integer decimalPlaces, String downGroup, Reports.CsfGroupType downGroupType, String
acrossGroup, Reports.CsfGroupType acrossGroupType, String formula)
```

## Parameters

*label*

Type: [String](#)

The user-facing name of the custom summary formula.

*description*

Type: [String](#)

The user-facing description of the custom summary formula.

*formulaType*

Type: [Reports.FormulaType](#)

The format of the numbers in the custom summary formula.

*decimalPlaces*

Type: [Integer](#)

The number of decimal places to include in numbers.

*downGroup*

Type: [String](#)

The name of a row grouping when the `downGroupType` is `CUSTOM`; `null` otherwise.

*downGroupType*

Type: [Reports.CsfGroupType](#)

Where to display the aggregate of the custom summary formula.

*acrossGroup*

Type: [String](#)

The name of a column grouping when the `acrossGroupType` is `CUSTOM`; `null` otherwise.

*acrossGroupType*

Type: [Reports.CsfGroupType](#)

Where to display the aggregate of the custom summary formula.

*formula*

Type: [String](#)

The operations performed on values in the custom summary formula.

## **ReportCsf ()**

Creates an instance of the `Reports.ReportCsf` class. You can then set values by using the class's `set` methods.

Signature

```
public ReportCsf ()
```

## **ReportCsf Methods**

The following are methods for `ReportCsf`.

IN THIS SECTION:

[getAcrossGroup\(\)](#)

Returns the name of a column grouping when the `acrossGroupType` is `CUSTOM`. Otherwise, returns `null`.

[getAcrossGroupType\(\)](#)

Returns where to display the aggregate.

[getDecimalPlaces\(\)](#)

Returns the number of decimal places that numbers in the custom summary formula have.

[getDescription\(\)](#)

Returns the user-facing description of a custom summary formula.

[getDownGroup\(\)](#)

Returns the name of a row grouping when the `downGroupType` is `CUSTOM`. Otherwise, returns `null`.

[getDownGroupType\(\)](#)

Returns where to display the aggregate of the custom summary formula.

[getFormula\(\)](#)

Returns the operations performed on values in the custom summary formula.

[getFormulaType\(\)](#)

Returns the formula type.

[getLabel\(\)](#)

Returns the user-facing name of the custom summary formula.

[setAcrossGroup\(acrossGroup\)](#)

Specifies the column for the across grouping.

[setAcrossGroupType\(value\)](#)

Sets where to display the aggregate.

[setAcrossGroupType\(acrossGroupType\)](#)

Sets where to display the aggregate.

[setDecimalPlaces\(decimalPlaces\)](#)

Sets the number of decimal places in numbers.

[setDescription\(description\)](#)

Sets the user-facing description of the custom summary formula.

[setDownGroup\(downGroup\)](#)

Sets the name of a row grouping when the `downGroupType` is `CUSTOM`.

[setDownGroupType\(value\)](#)

Sets where to display the aggregate.

[setDownGroupType\(downGroupType\)](#)

Sets where to display the aggregate.

[setFormula\(formula\)](#)

Sets the operations to perform on values in the custom summary formula.

[setFormulaType\(value\)](#)

Sets the format of the numbers in the custom summary formula.

[setFormulaType\(formulaType\)](#)

Sets the format of numbers used in the custom summary formula.

[setLabel\(label\)](#)

Sets the user-facing name of the custom summary formula.

[toString\(\)](#)

Returns a string.

**getAcrossGroup ()**

Returns the name of a column grouping when the `acrossGroupType` is `CUSTOM`. Otherwise, returns `null`.

Signature

```
public String getAcrossGroup ()
```

Return Value

Type: [String](#)

**getAcrossGroupType ()**

Returns where to display the aggregate.

Signature

```
public Reports.CsfGroupType getAcrossGroupType ()
```

Return Value

Type: [Reports.CsfGroupType](#)

**getDecimalPlaces ()**

Returns the number of decimal places that numbers in the custom summary formula have.

Signature

```
public Integer getDecimalPlaces()
```

Return Value

Type: [Integer](#)

### **getDescription()**

Returns the user-facing description of a custom summary formula.

Signature

```
public String getDescription()
```

Return Value

Type: [String](#)

### **getDownGroup()**

Returns the name of a row grouping when the `downGroupType` is `CUSTOM`. Otherwise, returns `null`.

Signature

```
public String getDownGroup()
```

Return Value

Type: [String](#)

### **getDownGroupType()**

Returns where to display the aggregate of the custom summary formula.

Signature

```
public Reports.CsfGroupType getDownGroupType()
```

Return Value

Type: [Reports.CsfGroupType](#)

### **getFormula()**

Returns the operations performed on values in the custom summary formula.

Signature

```
public String getFormula()
```

Return Value

Type: [String](#)

### **getFormulaType ()**

Returns the formula type.

Signature

```
public Reports.FormulaType getFormulaType ()
```

Return Value

Type: [Reports.FormulaType](#)

### **getLabel ()**

Returns the user-facing name of the custom summary formula.

Signature

```
public String getLabel ()
```

Return Value

Type: [String](#)

### **setAcrossGroup (acrossGroup)**

Specifies the column for the across grouping.

Signature

```
public void setAcrossGroup (String acrossGroup)
```

Parameters

*acrossGroup*

Type: [String](#)

Return Value

Type: void

### **setAcrossGroupType (value)**

Sets where to display the aggregate.

Signature

```
public void setAcrossGroupType (String value)
```

## Parameters

*value*

Type: [String](#)

For possible values, see [Reports.CsfGroupType](#).

## Return Value

Type: void

**setAcrossGroupType (acrossGroupType)**

Sets where to display the aggregate.

## Signature

```
public void setAcrossGroupType(Reports.CsfGroupType acrossGroupType)
```

## Parameters

*acrossGroupType*

Type: [Reports.CsfGroupType](#)

## Return Value

Type: void

**setDecimalPlaces (decimalPlaces)**

Sets the number of decimal places in numbers.

## Signature

```
public void setDecimalPlaces(Integer decimalPlaces)
```

## Parameters

*decimalPlaces*

Type: [Integer](#)

## Return Value

Type: void

**setDescription (description)**

Sets the user-facing description of the custom summary formula.

## Signature

```
public void setDescription(String description)
```

Parameters

*description*  
Type: [String](#)

Return Value

Type: void

### **setDownGroup (downGroup)**

Sets the name of a row grouping when the `downGroupType` is `CUSTOM`.

Signature

```
public void setDownGroup(String downGroup)
```

Parameters

*downGroup*  
Type: [String](#)

Return Value

Type: void

### **setDownGroupType (value)**

Sets where to display the aggregate.

Signature

```
public void setDownGroupType(String value)
```

Parameters

*value*  
Type: [String](#)

For valid values, see [Reports.CsfGroupType](#).

Return Value

Type: void

### **setDownGroupType (downGroupType)**

Sets where to display the aggregate.

Signature

```
public void setDownGroupType(Reports.CsfGroupType downGroupType)
```

Parameters

*downGroupType*

Type: [Reports.CsfGroupType](#)

Return Value

Type: void

### **setFormula (formula)**

Sets the operations to perform on values in the custom summary formula.

Signature

```
public void setFormula(String formula)
```

Parameters

*formula*

Type: [String](#)

Return Value

Type: void

### **setFormulaType (value)**

Sets the format of the numbers in the custom summary formula.

Signature

```
public void setFormulaType(String value)
```

Parameters

*value*

Type: [String](#)

For valid values, see [Reports.FormulaType](#).

Return Value

Type: void

### **setFormulaType (formulaType)**

Sets the format of numbers used in the custom summary formula.

Signature

```
public void setFormulaType(Reports.FormulaType formulaType)
```

Parameters

*formulaType*

Type: [Reports.FormulaType](#)

Return Value

Type: void

### **setLabel (label)**

Sets the user-facing name of the custom summary formula.

Signature

```
public void setLabel(String label)
```

Parameters

*label*

Type: [String](#)

Return Value

Type: void

### **toString ()**

Returns a string.

Signature

```
public String toString()
```

Return Value

Type: [String](#)

## ReportCurrency Class

Contains information about a currency value, including the amount and currency code.

### Namespace

[Reports](#)

### ReportCurrency Methods

The following are methods for `ReportCurrency`. All are instance methods.

## IN THIS SECTION:

[getAmount\(\)](#)

Returns the amount of the currency value.

[getCurrencyCode\(\)](#)

Returns the report currency code, such as USD, EUR, or GBP, for an organization that has multicurrency enabled. The value is `null` if the organization does not have multicurrency enabled.

**getAmount ()**

Returns the amount of the currency value.

## Syntax

```
public Decimal getAmount ()
```

## Return Value

Type: [Decimal](#)

**getCurrencyCode ()**

Returns the report currency code, such as USD, EUR, or GBP, for an organization that has multicurrency enabled. The value is `null` if the organization does not have multicurrency enabled.

## Syntax

```
public String getCurrencyCode ()
```

## Return Value

Type: [String](#)

## ReportDataCell Class

Contains the data for a cell in the report, including the display label and value.

### Namespace

[Reports](#)

### ReportDataCell Methods

The following are methods for `ReportDataCell`. All are instance methods.

## IN THIS SECTION:

[getLabel\(\)](#)

Returns the localized display name of the value of a specified cell in the report.

[getValue\(\)](#)

Returns the value of a specified cell of a detail row of a report.

### **getLabel ()**

Returns the localized display name of the value of a specified cell in the report.

Syntax

```
public String getLabel ()
```

Return Value

Type: [String](#)

### **getValue ()**

Returns the value of a specified cell of a detail row of a report.

Syntax

```
public Object getValue ()
```

Return Value

Type: Object

## ReportDescribeResult Class

Contains report, report type, and extended metadata for a tabular, summary, or matrix report.

## Namespace

[Reports](#)

## ReportDescribeResult Methods

The following are methods for `ReportDescribeResult`. All are instance methods.

IN THIS SECTION:

[getReportExtendedMetadata\(\)](#)

Returns additional information about grouping and summaries.

[getReportMetadata\(\)](#)

Returns unique identifiers for groupings and summaries.

[getReportTypeMetadata\(\)](#)

Returns the fields in each section of a report type, plus filtering information for those fields.

**getReportExtendedMetadata ()**

Returns additional information about grouping and summaries.

Syntax

```
public Reports.ReportExtendedMetadata getReportExtendedMetadata ()
```

Return Value

Type: [Reports.ReportExtendedMetadata](#)

**getReportMetadata ()**

Returns unique identifiers for groupings and summaries.

Syntax

```
public Reports.ReportMetadata getReportMetadata ()
```

Return Value

Type: [Reports.ReportMetadata](#)

**getReportTypeMetadata ()**

Returns the fields in each section of a report type, plus filtering information for those fields.

Syntax

```
public Reports.ReportTypeMetadata getReportTypeMetadata ()
```

Return Value

Type: [Reports.ReportTypeMetadata](#)

## ReportDetailRow Class

Contains data cells for a detail row of a report.

### Namespace

[Reports](#)

### ReportDetailRow Methods

The following are methods for `ReportDetailRow`. All are instance methods.

**IN THIS SECTION:**[getDataCells\(\)](#)

Returns a list of data cells for a detail row.

**getDataCells ()**

Returns a list of data cells for a detail row.

## Syntax

```
public List<Reports.ReportDataCell> getDataCells ()
```

## Return Value

Type: [List<Reports.ReportDataCell>](#)

## ReportDivisionInfo Class

Contains information about the divisions that can be used to filter a report.

Available only if your organization uses divisions to segment data and you have the “Affected by Divisions” permission. If you do not have the “Affected by Divisions” permission, your reports include records in all divisions.

## Namespace

[Reports](#)

## Usage

Use to filter records in the report based on a division, like West Coast and East Coast.

## ReportDivisionInfo Methods

The following are methods for `ReportDivisionInfo`.

**getDefaultValue ()**

Returns the default division for the report.

## Signature

```
public String getDefaultValue ()
```

## Return Value

Type: [String](#)

**getValues ()**

Returns a list of all possible divisions for the report.

Signature

```
public List<Reports.FilterValue> getValues ()
```

Return Value

Type: [List<Reports.FilterValue>](#)

## ReportExtendedMetadata Class

Contains report extended metadata for a tabular, summary, or matrix report.

### Namespace

[Reports](#)

Report extended metadata provides additional, detailed metadata about summary and grouping fields, including data type and label information.

### ReportExtendedMetadata Methods

The following are methods for `ReportExtendedMetadata`. All are instance methods.

#### IN THIS SECTION:

[getAggregateColumnInfo\(\)](#)

Returns all report summaries such as `Record Count`, `Sum`, `Average`, `Max`, `Min`, and custom summary formulas. Contains values for each summary that is listed in the report metadata.

[getDetailColumnInfo\(\)](#)

Returns a map of two properties for each field that has detailed data identified by its unique API name. The detailed data fields are also listed in the report metadata.

[getGroupingColumnInfo\(\)](#)

Returns a map of each row or column grouping to its metadata. Contains values for each grouping that is identified in the `groupingsDown` and `groupingsAcross` lists.

#### **getAggregateColumnInfo ()**

Returns all report summaries such as `Record Count`, `Sum`, `Average`, `Max`, `Min`, and custom summary formulas. Contains values for each summary that is listed in the report metadata.

Syntax

```
public MAP<String,Reports.AggregateColumn> getAggregateColumnInfo ()
```

Return Value

Type: [Map<String,Reports.AggregateColumn>](#)

**getDetailColumnInfo ()**

Returns a map of two properties for each field that has detailed data identified by its unique API name. The detailed data fields are also listed in the report metadata.

Syntax

```
public MAP<String, Reports.DetailColumn> getDetailColumnInfo ()
```

Return Value

Type: [Map<String, Reports.DetailColumn>](#)

**getGroupingColumnInfo ()**

Returns a map of each row or column grouping to its metadata. Contains values for each grouping that is identified in the groupingsDown and groupingsAcross lists.

Syntax

```
public MAP<String, Reports.GroupingColumn> getGroupingColumnInfo ()
```

Return Value

Type: [Map<String, Reports.GroupingColumn>](#)

## ReportFact Class

Contains the fact map for the report, which represents the report's data values.

### Namespace

[Reports](#)

### Usage

`ReportFact` is the parent class of `ReportFactWithDetails` and `ReportFactWithSummaries`. If `includeDetails` is `true` when the report is run, the fact map is a `ReportFactWithDetails` object. If `includeDetails` is `false` when the report is run, the fact map is a `ReportFactWithSummaries` object.

### ReportFact Methods

The following are methods for `ReportFact`. All are instance methods.

IN THIS SECTION:

[getAggregates\(\)](#)

Returns summary-level data for a report, including the record count.

### [getKey\(\)](#)

Returns the unique identifier for a row or column grouping. This identifier can be used to index specific data values within each grouping.

### **getAggregates ()**

Returns summary-level data for a report, including the record count.

Syntax

```
public List<Reports.SummaryValue> getAggregates ()
```

Return Value

Type: [List<Reports.SummaryValue>](#)

### **getKey ()**

Returns the unique identifier for a row or column grouping. This identifier can be used to index specific data values within each grouping.

Syntax

```
public String getKey ()
```

Return Value

Type: [String](#)

## ReportFactWithDetails Class

Contains the detailed fact map for the report, which represents the report's data values.

## Namespace

[Reports](#)

## Usage

The `ReportFactWithDetails` class extends the `ReportFact` class. A `ReportFactWithDetails` object is returned if `includeDetails` is set to `true` when the report is run. To access the detail values, you'll need to cast the return value of the `ReportResults.getFactMap` method to a `ReportFactWithDetails` object.

## ReportFactWithDetails Methods

The following are methods for `ReportFactWithDetails`. All are instance methods.

IN THIS SECTION:

### [getAggregates\(\)](#)

Returns summary-level data for a report, including the record count.

[getKey\(\)](#)

Returns the unique identifier for a row or column grouping. This identifier can be used to index specific data values within each grouping.

[getRows\(\)](#)

Returns a list of detailed report data in the order of the detail columns that are provided by the report metadata.

**getAggregates ()**

Returns summary-level data for a report, including the record count.

Syntax

```
public LIST<Reports.SummaryValue> getAggregates ()
```

Return Value

Type: [List<Reports.SummaryValue>](#)

**getKey ()**

Returns the unique identifier for a row or column grouping. This identifier can be used to index specific data values within each grouping.

Syntax

```
public String getKey ()
```

Return Value

Type: [String](#)

**getRows ()**

Returns a list of detailed report data in the order of the detail columns that are provided by the report metadata.

Syntax

```
public LIST<Reports.ReportDetailRow> getRows ()
```

Return Value

Type: [List<Reports.ReportDetailRow>](#)

## ReportFactWithSummaries Class

Contains the fact map for the report, which represents the report's data values, and includes summarized fields.

### Namespace

[Reports](#)

## Usage

The `ReportFactWithSummaries` class extends the `ReportFact` class. A `ReportFactWithSummaries` object is returned if `includeDetails` is set to `false` when the report is run.

## ReportFactWithSummaries Methods

The following are methods for `ReportFactWithSummaries`. All are instance methods.

### IN THIS SECTION:

#### [getAggregates\(\)](#)

Returns summary-level data for a report, including the record count.

#### [getKey\(\)](#)

Returns the unique identifier for a row or column grouping. This identifier can be used to index specific data values within each grouping.

#### [toString\(\)](#)

Returns a string.

### **getAggregates ()**

Returns summary-level data for a report, including the record count.

#### Syntax

```
public List<Reports.SummaryValue> getAggregates ()
```

#### Return Value

Type: [List<Reports.SummaryValue>](#)

### **getKey ()**

Returns the unique identifier for a row or column grouping. This identifier can be used to index specific data values within each grouping.

#### Syntax

```
public String getKey ()
```

#### Return Value

Type: [String](#)

### **toString ()**

Returns a string.

#### Signature

```
public String toString ()
```

Return Value

Type: [String](#)

## ReportFilter Class

Contains information about a report filter, including column, operator, and value.

### Namespace

[Reports](#)

IN THIS SECTION:

[ReportFilter Constructors](#)

[ReportFilter Methods](#)

### ReportFilter Constructors

The following are constructors for `ReportFilter`.

IN THIS SECTION:

[ReportFilter\(\)](#)

Creates a new instance of the `Reports.ReportFilter` class. You can then set values by using the “set” methods.

[ReportFilter\(column, operator, value\)](#)

Creates a new instance of the `Reports.ReportFilter` class by using the specified parameters.

#### **ReportFilter ()**

Creates a new instance of the `Reports.ReportFilter` class. You can then set values by using the “set” methods.

Signature

```
public ReportFilter ()
```

#### **ReportFilter(column, operator, value)**

Creates a new instance of the `Reports.ReportFilter` class by using the specified parameters.

Signature

```
public ReportFilter(String column, String operator, String value)
```

Parameters

*column*

Type: [String](#)

*operator*

Type: [String](#)

*value*

Type: [String](#)

## ReportFilter Methods

The following are methods for `ReportFilter`. All are instance methods.

### IN THIS SECTION:

[getColumn\(\)](#)

Returns the unique API name for the field that's being filtered.

[getOperator\(\)](#)

Returns the unique API name for the condition that is used to filter a field, such as "greater than" or "not equal to." Filter conditions depend on the data type of the field.

[getValue\(\)](#)

Returns the value by which a field can be filtered. For example, the field `Age` can be filtered by a numeric value.

[setColumn\(column\)](#)

Sets the unique API name for the field that's being filtered.

[setOperator\(operator\)](#)

Sets the unique API name for the condition that is used to filter a field, such as "greater than" or "not equal to." Filter conditions depend on the data type of the field.

[setValue\(value\)](#)

Sets the value by which a field can be filtered. For example, the field `Age` can be filtered by a numeric value.

### **getColumn()**

Returns the unique API name for the field that's being filtered.

Syntax

```
public String getColumn()
```

Return Value

Type: [String](#)

### **getOperator()**

Returns the unique API name for the condition that is used to filter a field, such as "greater than" or "not equal to." Filter conditions depend on the data type of the field.

Syntax

```
public String getOperator()
```

Return Value

Type: [String](#)

**getValue ()**

Returns the value by which a field can be filtered. For example, the field `Age` can be filtered by a numeric value.

Syntax

```
public String getValue ()
```

Return Value

Type: [String](#)

**setColumn (column)**

Sets the unique API name for the field that's being filtered.

Syntax

```
public Void setColumn(String column)
```

Parameters

*column*

Type: [String](#)

Return Value

Type: Void

**setOperator (operator)**

Sets the unique API name for the condition that is used to filter a field, such as "greater than" or "not equal to." Filter conditions depend on the data type of the field.

Syntax

```
public Void setOperator(String operator)
```

Parameters

*operator*

Type: [String](#)

Return Value

Type: Void

**setValue (value)**

Sets the value by which a field can be filtered. For example, the field `Age` can be filtered by a numeric value.

Syntax

```
public Void setValue(String value)
```

Parameters

*value*

Type: [String](#)

Return Value

Type: Void

## ReportFormat Enum

Contains the possible report format types.

### Namespace

[Reports](#)

### Enum Values

The following are the values of the `Reports.ReportFormat` enum.

Value	Description
MATRIX	Matrix report format
SUMMARY	Summary report format
TABULAR	Tabular report format

## ReportInstance Class

Returns an instance of a report that was run asynchronously. Retrieves the results for that instance.

### Namespace

[Reports](#)

### ReportInstance Methods

The following are methods for `ReportInstance`. All are instance methods.

IN THIS SECTION:

[getCompletionDate\(\)](#)

Returns the date and time when the instance of the report finished running. The completion date is available only if the report instance ran successfully or couldn't be run because of an error. Date and time information is in ISO-8601 format.

[getId\(\)](#)

Returns the unique ID for an instance of a report that was run asynchronously.

[getOwnerId\(\)](#)

Returns the ID of the user who created the report instance.

[getReportId\(\)](#)

Returns the unique ID of the report this instance is based on.

[getReportResults\(\)](#)

Retrieves results for an instance of an asynchronous report. When you request your report, you can specify whether to summarize data or include details.

[getRequestDate\(\)](#)

Returns the date and time when an instance of the report was run. Date and time information is in ISO-8601 format.

[getStatus\(\)](#)

Returns the status of a report.

**getCompletionDate()**

Returns the date and time when the instance of the report finished running. The completion date is available only if the report instance ran successfully or couldn't be run because of an error. Date and time information is in ISO-8601 format.

Syntax

```
public Datetime getCompletionDate()
```

Return Value

Type: [Datetime](#)

**getId()**

Returns the unique ID for an instance of a report that was run asynchronously.

Syntax

```
public Id getId()
```

Return Value

Type: [Id](#)

**getOwnerId()**

Returns the ID of the user who created the report instance.

Syntax

```
public Id getOwnerId()
```

Return Value

Type: [Id](#)

### **getReportId()**

Returns the unique ID of the report this instance is based on.

Syntax

```
public Id getReportId()
```

Return Value

Type: [Id](#)

### **getReportResults()**

Retrieves results for an instance of an asynchronous report. When you request your report, you can specify whether to summarize data or include details.

Syntax

```
public Reports.ReportResults getReportResults()
```

Return Value

Type: [Reports.ReportResults](#)

### **getRequestDate()**

Returns the date and time when an instance of the report was run. Date and time information is in ISO-8601 format.

Syntax

```
public Datetime getRequestDate()
```

Return Value

Type: [Datetime](#)

### **getStatus()**

Returns the status of a report.

Syntax

```
public String getStatus()
```

Return Value

Type: [String](#)

### Usage

- `New` if the report run was recently triggered through a request.
- `Success` if the report ran.
- `Running` if the report is being run.
- `Error` if the report run failed. The instance of a report run can return an error if, for example, your permission to access the report was removed after you requested the run.

## ReportManager Class

Runs a report synchronously or asynchronously and with or without details.

### Namespace

[Reports](#)

### Usage

Gets instances of reports and describes the metadata of Reports.

### ReportManager Methods

The following are methods for `ReportManager`. All methods are static.

#### IN THIS SECTION:

##### [describeReport\(reportId\)](#)

Retrieves report, report type, and extended metadata for a tabular, summary, or matrix report.

##### [getDatatypeFilterOperatorMap\(\)](#)

Lists the field data types that you can use to filter the report.

##### [getReportInstance\(instanceId\)](#)

Retrieves results for an instance of a report that has been run asynchronously. The settings you use when you run your asynchronous report determine whether you can retrieve summary data or detailed data.

##### [getReportInstances\(reportId\)](#)

Returns a list of instances for a report that was run asynchronously. Each item in the list represents a separate instance of the report, with metadata for the time at which the report was run.

##### [runAsyncReport\(reportId, reportMetadata, includeDetails\)](#)

Runs a report asynchronously with the report ID. Includes details if `includeDetails` is set to `true`. Filters the report based on the report metadata in `reportMetadata`.

##### [runAsyncReport\(reportId, includeDetails\)](#)

Runs a report asynchronously with the report ID. Includes details if `includeDetails` is set to `true`.

##### [runAsyncReport\(reportId, reportMetadata\)](#)

Runs a report asynchronously with the report ID. Filters the results based on the report metadata in `reportMetadata`.

##### [runAsyncReport\(reportId\)](#)

Runs a report asynchronously with the report ID.

[runReport\(reportId, reportMetadata, includeDetails\)](#)

Runs a report immediately with the report ID. Includes details if *includeDetails* is set to `true`. Filters the results based on the report metadata in *reportMetadata*.

[runReport\(reportId, includeDetails\)](#)

Runs a report immediately with the report ID. Includes details if *includeDetails* is set to `true`.

[runReport\(reportId, reportMetadata\)](#)

Runs a report immediately with the report ID. Filters the results based on the report metadata in *rmData*.

[runReport\(reportId\)](#)

Runs a report immediately with the report ID.

**describeReport (reportId)**

Retrieves report, report type, and extended metadata for a tabular, summary, or matrix report.

Syntax

```
public static Reports.ReportDescribeResult describeReport(Id reportId)
```

Parameters

*reportId*

Type: [Id](#)

Return Value

Type: [Reports.ReportDescribeResult](#)

**getDatatypeFilterOperatorMap ()**

Lists the field data types that you can use to filter the report.

Syntax

```
public static MAP<String, LIST<Reports.FilterOperator>> getDatatypeFilterOperatorMap()
```

Return Value

Type: [Map<String, List<Reports.FilterOperator>>](#)

**getReportInstance (instanceId)**

Retrieves results for an instance of a report that has been run asynchronously. The settings you use when you run your asynchronous report determine whether you can retrieve summary data or detailed data.

Syntax

```
public static Reports.ReportInstance getReportInstance(Id instanceId)
```

Parameters

*instanceId*  
Type: [Id](#)

Return Value

Type: [Reports.ReportInstance](#)

### **getReportInstances (reportId)**

Returns a list of instances for a report that was run asynchronously. Each item in the list represents a separate instance of the report, with metadata for the time at which the report was run.

Syntax

```
public static LIST<Reports.ReportInstance> getReportInstances(Id reportId)
```

Parameters

*reportId*  
Type: [Id](#)

Return Value

Type: [List<Reports.ReportInstance>](#)

### **runAsyncReport (reportId, reportMetadata, includeDetails)**

Runs a report asynchronously with the report ID. Includes details if *includeDetails* is set to `true`. Filters the report based on the report metadata in *reportMetadata*.

Syntax

```
public static Reports.ReportInstance runAsyncReport(Id reportId, Reports.ReportMetadata reportMetadata, Boolean includeDetails)
```

Parameters

*reportId*  
Type: [Id](#)

*reportMetadata*  
Type: [Reports.ReportMetadata](#)

*includeDetails*  
Type: [Boolean](#)

Return Value

Type: [Reports.ReportInstance](#)

**runAsyncReport (reportId, includeDetails)**

Runs a report asynchronously with the report ID. Includes details if *includeDetails* is set to `true`.

Syntax

```
public static Reports.ReportInstance runAsyncReport(Id reportId, Boolean includeDetails)
```

Parameters

*reportId*

Type: `Id`

*includeDetails*

Type: `Boolean`

Return Value

Type: `Reports.ReportInstance`

**runAsyncReport (reportId, reportMetadata)**

Runs a report asynchronously with the report ID. Filters the results based on the report metadata in *reportMetadata*.

Syntax

```
public static Reports.ReportInstance runAsyncReport(Id reportId, Reports.ReportMetadata reportMetadata)
```

Parameters

*reportId*

Type: `Id`

*reportMetadata*

Type: `Reports.ReportMetadata`

Return Value

Type: `Reports.ReportInstance`

**runAsyncReport (reportId)**

Runs a report asynchronously with the report ID.

Syntax

```
public static Reports.ReportInstance runAsyncReport(Id reportId)
```

Parameters

*reportId*

Type: `Id`

Return Value

Type: [Reports.ReportInstance](#)

### **runReport(reportId, reportMetadata, includeDetails)**

Runs a report immediately with the report ID. Includes details if *includeDetails* is set to `true`. Filters the results based on the report metadata in *reportMetadata*.

Syntax

```
public static Reports.ReportResults runReport(Id reportId, Reports.ReportMetadata reportMetadata, Boolean includeDetails)
```

Parameters

*reportId*

Type: [Id](#)

*reportMetadata*

Type: [Reports.ReportMetadata](#)

*includeDetails*
