  If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.
**pageParam**  
Type: String  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**  
Type: Integer  
The number of feed elements per page.

**sortParam**  
Type: ConnectApi.FeedSortOrder  
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**Return Value**  
Type: ConnectApi.FeedElementPage

**Usage**  
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, 
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, 
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, 
ConnectApi.FeedSortOrder sortParam)
```

Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

**feedType**
- Type: ConnectApi.FeedType
- The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
- Type: String
- If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

**recentCommentCount**
- Type: Integer
- Maximum number of comments to return with each feed element. The default value is 3.

**density**
- Type: ConnectApi.FeedDensity
- Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- Type: String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**

Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  - Type: `String`
  - Any record ID, including a group ID.

- **recentCommentCount**
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **Sorts by most recent creation date.**
- **Sorts by most recent activity.**
- **Sorts by most viewed content.** This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Sorts by most relevant content.** This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreateDateDesc` is used.

### showInternalOnly

**Type:** Boolean

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

### Return Value

**Type:** `ConnectApi.FeedElementPage`

### Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

35.0

### Requires Chatter

Yes

### Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
```

954
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.
filter
   Type: ConnectApi.FeedFilter
   Value must be ConnectApi.FeedFilter.CommunityScoped or ConnectApi.FeedFilter.AuthoredBy.

Return Value
   Type: ConnectApi.FeedElementPage

Usage
   To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
   This example gets only community-specific feed elements.

   ```java
   ConnectApi.FeedElementPage fep =
   ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
   ConnectApi.FeedType.UserProfile, 'me', 3, ConnectApi.FeedDensity.FewerUpdates, null, null,
   ConnectApi.FeedSortOrder.LastModifiedDateDesc, ConnectApi.FeedFilter.CommunityScoped);
   ```

SEE ALSO:
   setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)
   Testing ConnectApi Code

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)

Get the specified page of feed elements in a threaded style for the UserProfile feed.

API Version

Signature
   public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
   ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
   ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

**subjectId**
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreateDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreateDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.
Filter
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped` or `ConnectApi.FeedFilter.AuthoredBy`.

ThreadedCommentsCollapsed
Type: `Boolean`
Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

`subjectId`
Type: `String`
The ID of a case.

`recentCommentCount`
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`customFilter`
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.
- `feedType`
  Type: `ConnectApi.FeedType`
Value must be ConnectApi.FeedType.Record.

**subjectId**
- Type: String
  - Any record ID, including a group ID.

**recentCommentCount**
- Type: Integer
  - The maximum number of comments to return with each feed item. The default value is 3.

**elementsPerBundle**
- Type: Integer
  - Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
- Type: ConnectApi.FeedDensity
  - Specify the amount of content in a feed.
    - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageTitle**
- Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: `String`
Any record ID, including a group ID.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**elementsPerBundle**
Type: `Integer`
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**filter**
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**Return Value**

Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- Get Feed Elements From Another User’s Feed

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

`showInternalOnly`
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

`filter`
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.
- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don’t have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Unread`—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter)

Parameters
communityId
Type: String
Use either the ID for a community, *internal*, or *null*.

**feedType**
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: `String`
The ID of a case.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**elementsPerBundle**
Type: `Integer`
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in *null*, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in *null*, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in *null*, the default value `CreatedDateDesc` is used.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

customFilter
Type: String

Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, threadedCommentsCollapsed)

Get the filtered feed elements in a threaded style on the specified page for the case feed in the specified order.

class static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, Boolean threadedCommentsCollapsed)
Parameters

*communityId*
  Type: `String`
  Use either the ID for a community, internal, or `null`.

*feedType*
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

*subjectId*
  Type: `String`
  The ID of a case.

*recentCommentCount*
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.

*elementsPerBundle*
  Type: `Integer`
  Maximum number of feed elements per bundle. The default and maximum value is 10.

*density*
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*
  Type: `Integer`
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*
  Type: `ConnectApi.FeedSortOrder`
  Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
  - MostViewed—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - Relevance—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in null, the default value CreatedDateDesc is used.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

**customFilter**
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

**threadedCommentsCollapsed**
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

**getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)**
Returns the first page of feed elements for the specified user and the specified key prefix.

API Version
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix)
```
Parameters

`communityId`
- Type: `String`
- Use either the ID for a community, `internal`, or `null`.

`subjectId`
- Type: `String`
- The ID of the context user or the alias `me`.

`keyPrefix`
- Type: `String`
- A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, result)`
- Testing ConnectApi Code

`getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)`

Returns the specified page of feed elements for the specified user and the specified key prefix, in the specified order.

API Version

31.0

Requires Chatter

Yes

Signature

`public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)`
Parameters

**communityId**
- Type: String
  - Use either the ID for a community, internal, or null.

**subjectId**
- Type: String
  - The ID of the context user or the alias me.

**keyPrefix**
- Type: String
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**pageParam**
- Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- Type: ConnectApi.FeedSortOrder
  - Values are:
    - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - **CreatedDateDesc**—Sorts by most recent creation date.
    - **LastModifiedDateDesc**—Sorts by most recent activity.
    - **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
    - **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  - If you pass in null, the default value CreatedDateDesc is used.

Return Value
- Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam)

Returns the specified page of feed elements for the specified user and the specified key prefix, in the specified order. Each feed element contains no more than the specified number of comments.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
subjectId
  Type: String
  The ID of the context user or the alias me.
keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.
elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.
density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.
pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Testing ConnectApi Code

getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)
Returns the specified page of feed elements for the specified user and the specified key prefix. Includes only feed elements that have been updated since the time specified in the updatedSince parameter.

API Version
31.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **subjectId**
  Type: String
  The ID of the context user or the alias me.

- **keyPrefix**
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- **recentCommentCount**
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

- **elementsPerBundle**
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

- **density**
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)
Testing ConnectApi Code

getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
Returns the specified page of feed elements for the Company, DirectMessageModeration, Home, and Moderation feed types. Includes only feed elements that have been updated since the time specified in the updatedSince parameter. Each feed element contains no more than the specified number of comments.

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`  
The type of feed. Valid values are Company, DirectMessageModeration, Home, and Moderation.

**recentCommentCount**
Type: `Integer`  
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`  
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: `Integer`  
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: `String`  
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body. The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

**Return Value**
Type: `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, result)`
- Testing ConnectApi Code
getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter)

Returns the specified page of feed elements for the Home feed type with the specified feed filter. Includes only feed elements that have been updated since the time specified in the updatedSince parameter. Each feed element contains no more than the specified number of comments.

API Version

Signature

public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.
The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**filter**
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**Return Value**
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Signature

public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
One of these values:
- Files
- Groups
- News
- People
• Record

**subjectId**
Type: String

If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

**recentCommentCount**
Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: String

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Signature
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.
pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter)

Returns the specified page of feed elements for the UserProfile feed. Includes only feed elements that have been updated since the time specified in the updatedSince parameter. Use this method to filter the UserProfile feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or null.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.UserProfile`.

- **subjectId**
  - Type: `String`
  - The ID of any user. To specify the context user, use the user ID or the alias `me`.

- **recentCommentCount**
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

- **elementsPerBundle**
  - Type: `Integer`
  - Maximum number of feed elements per bundle. The default and maximum value is 10.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

- **pageSize**
  - Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`updatedSince`
Type: `String`
An opaque token defining the modification time stamp of the feed and the sort order.
The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

`filter`
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, String customFilter)

Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

**feedType**
- Type: ConnectApi.FeedType
- Value must be ConnectApi.FeedType.Record.

**subjectId**
- Type: String
- The ID of a case.

**recentCommentCount**
- Type: Integer
- Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
- Type: Integer
- Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
- Type: ConnectApi.FeedDensity
- Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- Type: String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- Type: Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
- Type: String
- An opaque token defining the modification time stamp of the feed and the sort order.
- The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

**customFilter**
- Type: String
- Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.
Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly)

Returns the specified page of feed elements for the Record feed type. Includes only feed elements that have been updated since the time specified in the updatedSince parameter. Specify whether to return feed elements posted by internal (non-community) users only. Specify the maximum number of feed elements in a bundle.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.
subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

Return Value
Type: ConnectApi.FeedElementPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```

```

Parameters

`communityId`
 Type: `String`
 Use either the ID for a community, `internal`, or `null`.

`feedType`
 Type: `ConnectApi.FeedType`
 Value must be `ConnectApi.FeedType.Record`.

`subjectId`
 Type: `String`
 Any record ID, including a group ID.
recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

updatedSince
  Type: String
  An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.
  The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

filter
  Type: `ConnectApi.FeedFilter`
  Specifies the feed filters.
  - **AllQuestions**—Feed elements that are questions.
  - **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
  - **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
  - **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**Return Value**

Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  The ID of a case.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter, result)

Testing ConnectApi Code

getFeedItem(communityId, feedItemId)
Returns a rich description of the specified feed item.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use getFeedElement(communityId, feedElementId).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItem getFeedItem(String communityId, String feedItemId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

**feedItemId**

Type: String

The ID for a feed item.

Return Value

Type: `ConnectApi.FeedItem`

Note: Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

### getFeedItemBatch(communityId, feedItemIds)

Returns information about the specified list of feed items. Returns a list of `BatchResult` objects containing `ConnectApi.FeedItem` objects. Errors for feed items that can't be loaded are returned in the results.

**API Version**

31.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementBatch(communityId, feedElementIds)`.

Requires Chatter

Yes

**Signature**

```java
public static ConnectApi.BatchResult[] getFeedItemBatch(String communityId, List<String> feedItemIds)
```

**Parameters**

- **communityId**
  
  Type: String
  
  Use either the ID for a community, internal, or null.

- **feedItemIds**
  
  Type: List<String>
  
  A list of up to 500 feed item IDs.

**Return Value**

Type: `ConnectApi.BatchResult[]`

Example

```java
// Create a list of feed items.
ConnectApi.FeedItemPage feedItemPage = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(null,
ConnectApi.FeedType.Company);
System.debug(feedItemPage);

// Create a list of feed item IDs.
List<String> feedItemIds = new List<String>();
for (ConnectApi.FeedItem aFeedItem : feedItemPage.items){
    feedItemIds.add(aFeedItem.id);
}

// Get info about the feed items in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterFeeds.getFeedItemBatch(null,
feedItemIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the header for each feed item.
        ConnectApi.FeedItem aFeedItem;
        if(batchResult.getResult() instanceof ConnectApi.FeedItem) {
            aFeedItem = (ConnectApi.FeedItem) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aFeedItem.header.text);
    }
    else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

`getFeedItemsFromFeed(communityId, feedType)`

Returns the first page of feed items for the Company, Home, and Moderation feed types. The page contains the default number of items.

API Version

28.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes
Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

Return Value

- Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedItemsFromFeed(communityId, feedType, result)`

### getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)

Returns the feed items for the specified page for the `Company`, `Home`, and `Moderation` feed types, in the specified order.

API Version

28.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes
Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, 
ConnectApi.FeedType feedType, String pageParam, Integer pageSize, 
ConnectApi.FeedSortOrder sortParam)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `ModifiedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: `ConnectApi.FeedItemPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)
Testing ConnectApi Code

getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Returns the feed items for the specified page for the Company, Home, and Moderation feed types, in the specified order. Each feed item contains no more than the specified number of comments.

API Version
29.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestGetFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)

getFeedItemsFromFeed(communityId, feedType, subjectId)
Returns the first page of feed items for the specified feed type, for the specified user or record. The page contains the default number of items.
API Version
28.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFeed(communityId, feedType, subjectId).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

getFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)

Returns the feed items on the specified page for the specified user or record, for the specified feed type in the specified order.

API Version
28.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

**subjectId**
Type: `String`
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**

Type: `ConnectApi.FeedItemPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

**getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)**

Returns the feed items on the specified page for the specified user or record, for the specified feed type in the specified order. Each feed item includes no more than the specified number of comments.

**API Version**

29.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)`. 

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• **CreatedDateDesc**—Sorts by most recent creation date.
• **LastModifiedDateDesc**—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value CreatedDateDesc is used.

**Return Value**

Type: `ConnectApi.FeedItemPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

  Testing ConnectApi Code

**getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)**

Returns the feed items on the specified page for the specified user or record, for the Record feed type in the specified order. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

**API Version**

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)`.

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
```
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**showInternalOnly**
- **Type:** Boolean
- Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

**Return Value**
- **Type:** ConnectApi.FeedItemPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

---

**getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)**

Returns the first page of feed items for the specified user and the specified key prefix. The page contains the default number of items.

**API Version**
28.0–31.0

**Important:** In version 32.0 and later, use getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix).

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix)
```

**Parameters**

- **communityId**
  - **Type:** String
  - Use either the ID for a community, internal, or null.

- **subjectId**
  - **Type:** String
  - The ID of the context user or the alias me.
keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)
Testing ConnectApi Code

getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)
Returns the specified page of feed items for the specified user and the specified key prefix, in the specified order.

API Version
28.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.
**keyPrefix**
Type: String

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**pageParam**
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder

Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**Return Value**
Type: ConnectApi.FeedItemPage

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature

public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

subjectId

Type: String

The ID of the context user or the alias me.

keyPrefix

Type: String

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount

Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

density

Type: ConnectApi.FeedDensity

Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam

Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize

Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
Type: ConnectApi.FeedSortOrder
Values are:

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)

Returns the specified page of feed items for the specified user and the specified key prefix. Includes only feed items that have been updated since the time specified in the updatedSince parameter.

API Version
30.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince).

Requires Chatter
Yes
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**subjectId**
Type: String
The ID of the context user or the alias me.

**keyPrefix**
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call getFeedItemsFromFilterFeed and take the value from the updatesToken property of the ConnectApi.FeedItemPage response body.

Return Value
Type: ConnectApi.FeedItemPage
A paged collection of `ConnectApi.FeedItem` objects.

**Usage**

This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)`
- **Testing ConnectApi Code**

```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

Returns the specified page of feed items for the Company, Home, and Moderation feed types. Includes only feed items that have been updated since the time specified in the `updatedSince` parameter. Each feed item contains no more than the specified number of comments.

**API Version**

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)`.

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.

Return Value
Type: ConnectApi.FeedItemPage
A paged collection of ConnectApi.FeedItem objects.

Usage
This method returns only feed items that have been updated since the time specified in the updatedSince argument. A feed item is considered to be updated if it was created since the last feed request, or if sort=LastModifiedDateDesc and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.
Example

This example gets the feed items in the company feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the company feed and return the updatesToken
String communityId = null;

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId, ConnectApi.FeedType.Company);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems = ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
    (communityId, ConnectApi.FeedType.Company, 1, ConnectApi.FeedDensity.AllUpdates, null, 1, page.updatesToken);
```

SEE ALSO:

`setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, ConnectApi.FeedItemPage, results)`

Testing ConnectApi Code

`getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)`

Returns the specified page of feed items for the Files, Groups, News, People, and Record feed types. Includes only feed items that have been updated since the time specified in the `updatedSince` parameter. Each feed item contains no more than the specified number of comments.

API Version

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)`. Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
One of these values:
- Files
- Groups
- News
- People
- Record

subjectId
Type: String
If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.

Return Value
Type: ConnectApi.FeedItemPage
A paged collection of ConnectApi.FeedItem objects.

Usage
This method returns only feed items that have been updated since the time specified in the updatedSince argument. A feed item is considered to be updated if it was created since the last feed request, or if sort=LastModifiedDateDesc and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets the feed items in the news feed and grabs the updatesToken property from the returned object. It then passes the value of updatesToken to the getFeedItemsUpdatedSince method to get the feed items updated since the first call:

```java
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId,
ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
(communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates,
null, 1, page.updatesToken);
```

SEE ALSO:

- setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
  updatedSince, result)
- Testing ConnectApi Code

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount,
density, pageParam, pageSize, updatedSince, showInternalOnly)

Returns the specified page of feed items for the Record feed type. Includes only feed items that have been updated since the time specified in the updatedSince parameter. Specify whether to return feed items posted by internal (non-community) users only.

API Version
30.0–31.0

**Important:** In version 32.0 and later, use getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount,

Available to Guest Users
31.0 only
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
Boolean showInternalOnly)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

**subjectId**
Type: String
Any record ID, including a group ID.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.
**showInternalOnly**
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

**Return Value**
Type: **ConnectApi.FeedItemPage**
A paged collection of **ConnectApi.FeedItem** objects.

**Usage**
This method returns only feed items that have been updated since the time specified in the updatedSince argument. A feed item is considered to be updated if it was created since the last feed request, or if sort=LastModifiedDateDesc and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

If showInternalOnly is true and Salesforce Communities is enabled, feed items from communities are included. Otherwise, only feed items from the internal community are included.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**Example**
This example gets the feed items in the news feed and grabs the updatesToken property from the returned object. It then passes the value of updatesToken to the getFeedItemsUpdatedSince method to get the feed items updated since the first call:

```java
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId, ConnectApi.FeedType.News, subjectId);
// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems = ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince(communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates, null, 1, page.updatesToken, true);
```

**SEE ALSO:**
- setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)
- Testing ConnectApi Code

**getFeedPoll(communityId, feedItemId)**
Returns the poll associated with the feed item.
**getFeedPoll** *(communityId, feedItemId)*

*Signature*

```java
public static ConnectApi.FeedPoll getFeedPoll(String communityId, String feedItemId)
```

*Parameters*

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedItemId**
  - Type: String
  - The ID for a feed item.

*Return Value*

Type: `ConnectApi.FeedPoll`

*Important*: In version 32.0 and later, use `getFeedElementPoll(communityId, feedElementId)`.

---

**getFeedWithFeedElements** *(communityId, feedType, pageSize)*

*Signature*

```java
public static ConnectApi.Feed getFeedWithFeedElements(String communityId, ConnectApi.FeedType feedType, Integer pageSize)
```

*Get information about the feed and a page of feed elements for the feed type.*

---

**Note**: Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Landing, Moderation, and PendingReview. Landing is valid only when communityId is internal.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren’t returned with the feed.

Return Value
Type: ConnectApi.Feed

getFeedWithFeedElements(communityId, feedType, pageSize, recentCommentCount)
Get a page of information about the feed and the feed elements with the specified number of comments per feed element for the feed type.

API Version
40.0

Available to Guest Users
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFeedWithFeedElements(String communityId, ConnectApi.FeedType feedType, Integer pageSize, Integer recentCommentCount)
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Landing, Moderation, and PendingReview. Landing is valid only when communityId is internal.

`pageSize`
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren’t returned with the feed.

`recentCommentCount`
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

Return Value
Type: `ConnectApi.Feed`

`getFilterFeed(communityId, subjectId, keyPrefix)`
Returns the first page of a feed for the specified user and the given key prefix.

API Version
28.0

Requires Chatter
Yes

Signature
`public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix)`

Parameters
`communityId`
Type: String
Use either the ID for a community, internal, or null.

`subjectId`
Type: String
The ID of the context user or the alias me.

`keyPrefix`
Type: String
A key prefix is the first three characters of a record ID, which specifies the entity type.

Return Value
Type: `ConnectApi.Feed`
getFilterFeed(communityId, subjectId, keyPrefix, sortParam)

Returns the first page of a feed in the specified order for the specified user and the given key prefix.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedType sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

sortParam
Type: ConnectApi.FeedType
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.Feed
getFilterFeedDirectory(communityId, subjectId)

Gets a feed directory object that contains a list of filter feeds available to the context user. A filter feed is the news feed filtered to include feed items whose parent is a specific entity type.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedDirectory getFilterFeedDirectory(String communityId, String subjectId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

Return Value
Type: ConnectApi.FeedDirectory
A directory containing a list of filter feeds.

Usage
Call this method to return a directory containing a list of ConnectApi.FeedDirectoryItem objects. Each object contains a key prefix associated with an entity type the context user is following. A key prefix is the first three characters of a record ID, which specifies the entity type.

Use the key prefixes to filter the news feed so that it contains only feed items whose parent is the entity type associated with the key prefix, for example, get all the feed items whose parent is an Account. To get the feed items, pass a key prefix to the ConnectApi.getFeedItemsFromFilterFeed method.

The information about filter feeds never contains the key prefixes for the User (005) or Group (0F9) entity types, but all users can use those key prefixes as filters.

The ConnectApi.FeedDirectory.favorites property is always empty when returned by a call to getFilterFeedDirectory because you can’t filter a news feed by favorites.
Example

This example calls `getFilterFeedDirectory` and loops through the returned `FeedDirectoryItem` objects to find the key prefixes the context user can use to filter their news feed. It then copies each `keyPrefix` value to a list. Finally, it passes one of the key prefixes from the list to the `getFeedItemsFromFilterFeed` method. The returned feed items include every feed item from the news feed whose parent is the entity type specified by the passed key prefix.

```java
String communityId = null;
String subjectId = 'me';

// Create a list to populate with key prefixes.
List<String> keyPrefixList = new List<String>();

// Prepopulate with User and Group record types
// which are available to all users.
keyPrefixList.add('005');
keyPrefixList.add('0F9');

System.debug(keyPrefixList);

// Get the key prefixes available to the context user.
ConnectApi.FeedDirectory myFeedDirectory =
    ConnectApi.ChatterFeeds.getFilterFeedDirectory(null, 'me');

// Loop through the returned feeds list.
for (ConnectApi.FeedDirectoryItem i : myFeedDirectory.feeds) {
    // Grab each key prefix and add it to the list.
    keyPrefixList.add(i.keyPrefix);
}
System.debug(keyPrefixList);

// Use a key prefix from the list to filter the feed items in the news feed.
ConnectApi.FeedItemPage myFeedItemPage =
    ConnectApi.ChatterFeeds.getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefixList[0]);
System.debug(myFeedItemPage);
```

**getLike(communityId, likeId)**

Returns the specified like.

**API Version**

28.0

**Available to Guest Users**

32.0

**Requires Chatter**

Yes
Signature

```
public static ConnectApi.ChatterLike getLike(String communityId, String likeId)
```

Parameters

**communityId**

Type: `String`

Use either the ID for a community, *internal*, or `null`.

**likeId**

Type: `String`

The ID for a like.

Return Value

Type: `ConnectApi.ChatterLike`

`getLikesForComment(communityId, commentId)`

Returns the first page of likes for the specified comment. The page contains the default number of items.

API Version

28.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterLikePage getLikesForComment(String communityId, String commentId)
```

Parameters

**communityId**

Type: `String`

Use either the ID for a community, *internal*, or `null`.

**commentId**

Type: `String`

The ID for a comment.
Return Value
Type: `ConnectApi.ChatterLikePage`

`getLikesForComment(communityId, commentId, pageParam, pageSize)`

Returns the specified page of likes for the specified comment.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```
public static ConnectApi.ChatterLikePage getLikesForComment(String communityId, String commentId, Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`commentId`
Type: `String`
The ID for a comment.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.ChatterLikePage`

`getLikesForFeedElement(communityId, feedElementId)`

Get the first page of likes for a feed element.
API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId,
    String feedElementId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element.

Return Value

Type: `ConnectApi.ChatterLikePage Class`

If the feed element doesn’t support the ChatterLikes capability, the return value is `ConnectApi.NotFoundException`.

```java
getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)
```

Returns the specified page of likes for a feed element.
public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId, String feedElementId, Integer pageParam, Integer pageSize)

### Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

### Return Value

- Type: ConnectApi.ChatterLikePage Class
- If the feed element doesn't support the ChatterLikes capability, the return value is ConnectApi.NotFoundException.

### getLikesForFeedItem(communityId, feedItemId)

Returns the first page of likes for the specified feed item. The page contains the default number of items.

### API Version

28.0–31.0

**Important:** In version 32.0 and later, use getLikesForFeedElement(communityId, feedElementId).

### Available to Guest Users

31.0 only

### Requires Chatter

Yes

### Signature

public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String feedItemId)
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedItemId
  Type: String
  The ID for a feed item.

Return Value

Type: ConnectApi.ChatterLikePage

getLikesForFeedItem(communityId, feedItemId, pageParam, pageSize)

Returns the specified page of likes for the specified feed item.

API Version

28.0–31.0

⚠️ Important: In version 32.0 and later, use getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize).

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String feedItemId, Integer pageParam, Integer pageSize)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedItemId
  Type: String
  The ID for a feed item.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.
**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterLikePage

**getLinkMetadata(communityId, urls)**
Get link metadata for URLs.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
No

Signature
public static ConnectApi.LinkMetadataCollection getLinkMetadata(String communityId, String urls)

Parameters
**communityId**
Type: String
Use either the ID for a community, internal, or null.

**urls**
Type: String
Comma-separated list of URL-encoded URLs.

Return Value
Type: ConnectApi.LinkMetadataCollection

**getPinnedFeedElementsFromFeed(communityId, feedType, subjectId)**
Get pinned feed elements from a group or topic feed.

API Version
41.0
public static ConnectApi.PinnedFeedElements getPinnedFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values are Record and Topics.

subjectId
  Type: String
  If feedType is Record, subjectId must be a group ID. If feedType is Topics, subjectId must be a topic ID.

Return Value

Type: ConnectApi.PinnedFeedElements
If the feed doesn’t support this capability, the return value is ConnectApi.NotFoundException.

getReadByForFeedElement(communityId, feedElementId)
Get information about who read a feed element and when.

public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId)
getReadByForFeedElement(communityId, feedElementId, pageParam, pageSize)

Get a page of information about who read a feed element and when.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: `ConnectApi.ReadByPage`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`getRelatedPosts(communityId, feedElementId, filter, maxResults)`
Get posts related to the context feed element.

API Version
37.0

Available to Guest Users
37.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.RelatedFeedPosts getRelatedPosts(String communityId, String feedElementId, ConnectApi.RelatedFeedPostType filter, Integer maxResults)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedElementId`
Type: `String`
ID of the feed element. The feed element must be a question.

`filter`
Type: `ConnectApi.RelatedFeedPostType`
Specifies the type of related post. Values are:
- `Answered`—Related questions that have at least one answer.
- `BestAnswer`—Related questions that have a best answer.
- `Generic`—All types of related questions, including answered, with a best answer, and unanswered.
- `Unanswered`—Related questions that don’t have answers.

`Generic` is the default value.

`maxResults`
Type: `Integer`
The maximum number of results to return. You can return up to 25 results; 5 is the default.
Return Value

Type: `ConnectApi.RelatedFeedPosts`

In version 37.0 and later, related feed posts are questions.

Each related feed post has a score indicating how closely it’s related to the context feed post. We return related feed posts sorted by score, with the highest score first.

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

`getStream(communityId, streamId)`

Get information about a Chatter feed stream.

API Version

39.0

Requires Chatter

Yes

Signature

`public static ConnectApi.ChatterStream getStream(String communityId, String streamId)`

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`streamId`

Type: `String`

ID of the Chatter feed stream.

Return Value

Type: `ConnectApi.ChatterStream`

`getStream(communityId, streamId, globalScope)`

Get information about a Chatter feed stream, regardless of community.

API Version

41.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStream getStream(String communityId, String streamId, Boolean globalScope)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

streamId
Type: String
ID of the Chatter feed stream.

globalScope
Type: Boolean
Specifies whether to get streams from all the context user’s communities, regardless of the communityId value.

Tip: If you know the community ID for the stream, we recommend setting globalScope to false.

Return Value
Type: ConnectApi.ChatterStream

getStreams(communityId)
Get the Chatter feed streams for the context user.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage getStreams(String communityId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.
Return Value
Type: `ConnectApi.ChatterStreamPage`

**getStreams(communityId, sortParam)**
Get and sort the Chatter feed streams for the context user.

API Version
40.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId,
ConnectApi.SortOrder sortParam)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- **sortParam**
  Type: `ConnectApi.SortOrder`
  Specifies the sort order. Values are:
  - `Ascending`—Items are in ascending alphabetical order (A-Z).
  - `Descending`—Items are in descending alphabetical order (Z-A).
  - `MostRecentlyViewed`—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

  If not specified, default value is `Ascending`.

Return Value
Type: `ConnectApi.ChatterStreamPage`

**getStreams(communityId, pageParam, pageSize)**
Get a page of Chatter feed streams for the context user.

API Version
39.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `pageParam`
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

Return Value

Type: `ConnectApi.ChatterStreamPage`

```java
getStreams(communityId, pageParam, pageSize, sortParam)
```

Get a sorted page of Chatter feed streams for the context user.

API Version

40.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `pageParam`
  - Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

`sortParam`
Type: `ConnectApi.SortOrder`

Specifies the sort order. Values are:
- `Ascending`—Items are in ascending alphabetical order (A-Z).
- `Descending`—Items are in descending alphabetical order (Z-A).
- `MostRecentlyViewed`—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is `Ascending`.

Return Value
Type: `ConnectApi.ChatterStreamPage`

`getStreams(communityId, pageParam, pageSize, sortParam, globalScope)`
Get a sorted page of Chatter feed streams from all communities for the context user.

API Version
41.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal` or `null`.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.
sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:

- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

globalScope
Type: Boolean
Specifies whether to get streams from all the context user’s communities, regardless of the communityId value.

Tip: If you know the community ID for the streams, we recommend setting globalScope to false.

Return Value
Type: ConnectApi.ChatterStreamPage

getSupportedEmojis()
Get supported emojis for the org.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.SupportedEmojis getSupportedEmojis()

Return Value
Type: ConnectApi.SupportedEmojis

Usage
To get the list, emojis must be enabled in your org.

getThreadsForFeedComment(communityId, commentId)
Get threaded comments for a comment.
API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getThreadsForFeedComment(String communityId, String commentId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment.

Return Value
Type: ConnectApi.CommentPage
If the comment doesn't support the comments capability, the return value is ConnectApi.NotFoundException.

getThreadsForFeedComment(communityId, commentId, pageParam, pageSize)
Get a page of threaded comments for a comment.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes
public static ConnectApi.CommentPage getThreadsForFeedComment(String communityId, String commentId, String pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.CommentPage
If the comment doesn't support the comments capability, the return value is ConnectApi.NotFoundException.

getThreadsForFeedComment(communityId, commentId, threadedCommentsCollapsed)
Access the comments capability for a comment.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature

public static ConnectApi.CommentsCapability getThreadsForFeedComment(String communityId, String commentId, Boolean threadedCommentsCollapsed)
Parameters

* `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

* `commentId`
  Type: `String`
  ID of the comment.

* `threadedCommentsCollapsed`
  Type: `Boolean`
  Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

Return Value

Type: `ConnectApi.CommentsCapability`
If the comment doesn’t support the `comments` capability, the return value is `ConnectApi.NotFoundException`.

**getTopUnansweredQuestions(communityId) (Pilot)**
Get top unanswered questions for the context user in a community.

**Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version
42.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId)
```

Parameters

* `communityId`
  Type: `String`
  ID of the community.
Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTopUnansweredQuestions(communityId, result)` (Pilot)
- Testing ConnectApi Code

### getTopUnansweredQuestions(communityId, filter) (Pilot)
Get filtered top unanswered questions for the context user in a community.

**Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Top five unanswered questions isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version
42.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId,
                        ConnectApi.TopUnansweredQuestionsFilterType filter)
```

Parameters
- `communityId`
  Type: `String`
  ID of the community.

- `filter`
  Type: `ConnectApi.FeedFilter`
  Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.

Return Value
Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTopUnansweredQuestions(communityId, filter, result) (Pilot)`
- Testing ConnectApi Code

`getTopUnansweredQuestions(communityId, pageSize) (Pilot)`
Get a page of top unanswered questions for the context user in a community.

⚠️ **Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. API Version
42.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, Integer pageSize)
```

Parameters
- `communityId`
  - Type: `String`
  - ID of the community.
- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.

Return Value
- Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTopUnansweredQuestions(communityId, pageSize, result)` (Pilot)
- Testing ConnectApi Code

`getTopUnansweredQuestions(communityId, filter, pageSize)` (Pilot)
Get a page of filtered top unanswered questions for the context user in a community.

Note: We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version
42.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId,
ConnectApi.FeedFilter filter, Integer pageSize)
```

Parameters
- `communityId`
  Type: `String`
  ID of the community.
- `filter`
  Type: `ConnectApi.FeedFilter`
  Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.
- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.

Return Value
Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTopUnansweredQuestions(communityId, filter, pageSize, result)` (Pilot)
- Testing ConnectApi Code

`getVotesForComment(communityId, commentId, vote)`
Get the first page of users who upvoted or downvoted a comment.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `commentId`
  Type: `String`
  ID of the comment.
- `vote`
  Type: `ConnectApi.UpDownVoteValue`
  Specifies the value of the vote for the feed element. Values are:
  - `Down`
  - `Up`
  You can’t specify `None`. 
Return Value
Type: `ConnectApi.VotePage`
If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

```java
public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)
```

Get a page of users who upvoted or downvoted a comment.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`commentId`
Type: `String`
ID of the comment.

`vote`
Type: `ConnectApi.UpDownVoteValue`
Specifies the value of the vote for the feed element. Values are:
- Down
- Up
You can’t specify None.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.VotePage`
If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`getVotesForFeedElement(communityId, feedElementId, vote)`
Get the first page of users who upvoted or downvoted a feed element.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote)
```

Parameters
- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.
- `feedElementId`  
  Type: `String`  
  ID of the feed element.
- `vote`  
  Type: `ConnectApi.UpDownVoteValue`  
  Specifies the value of the vote for the feed element. Values are:
  - `Down`
  - `Up`
  You can’t specify `None`.

Return Value
Type: `ConnectApi.VotePage`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.
getVotesForFeedElement(communityId, feedElementId, vote, pageParam, pageSize)

Get a page of users who upvoted or downvoted a feed element.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

vote
Type: ConnectApi.UpDownVoteValue
Specifies the value of the vote for the feed element. Values are:

- Down
- Up

You can’t specify None.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.VotePage
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.
**isCommentEditableByMe(communityId, commentId)**

Indicates whether the context user can edit a comment.

**API Version**

34.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedEntityIsEditable isCommentEditableByMe(String communityId, String commentId)
```

**Parameters**

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **commentId**
  - Type: String
  - ID of the comment.

**Return Value**

Type: `ConnectApi.FeedEntityIsEditable`

If the comment doesn't support the `edit` capability, the return value is `ConnectApi.NotFoundException`.

**SEE ALSO:**

- [Edit a Comment](#)

**isFeedElementEditableByMe(communityId, feedElementId)**

Indicates whether the context user can edit a feed element. Feed items are the only type of feed element that can be edited.

**API Version**

34.0

**Requires Chatter**

Yes
Signature

```java
public static ConnectApi.FeedEntityIsEditable isFeedElementEditableByMe(String communityId, String feedElementId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element. Feed items are the only type of feed element that can be edited.

Return Value

Type: `ConnectApi.FeedEntityIsEditable`

If the feed element doesn’t support the edit capability, the return value is `ConnectApi.NotFoundException`.

SEE ALSO:

- Edit a Feed Element
- Edit a Question Title and Post

`isModified(communityId, feedType, subjectId, since)`

Returns information about whether a news feed has been updated or changed. Use this method to poll a news feed for updates.

⚠️ **Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

API Version

28.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedModifiedInfo isModified(String communityId, ConnectApi.FeedType feedType, String subjectId, String since)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.
**feedType**
Type: `ConnectApi.FeedType`
Specifies the type of feed. The only supported type is `News`.

**subjectId**
Type: `String`
The ID of the context user or the alias `me`.

**since**
Type: `String`
An opaque token containing information about the last modified date of the feed. Retrieve this token from the `FeedElementPage.isModifiedToken` property.

---

**likeComment(communityId, commentId)**
Adds a like to the specified comment for the context user. If the user has already liked this comment, this is a non-operation and returns the existing like.

**API Version**
28.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.ChatterLike likeComment(String communityId, String commentId)
```

**Parameters**

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **commentId**
  Type: `String`
  The ID for a comment.

**Return Value**
Type: `ConnectApi.ChatterLike`
likeFeedElement(communityId, feedElementId)
Like a feed element.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLike likeFeedElement(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.ChatterLike
If the feed element doesn’t support the ChatterLikes capability, the return value is ConnectApi.NotFoundException.

Example
ConnectApi.ChatterLike chatterLike = ConnectApi.ChatterFeeds.likeFeedElement(null, '0D5D0000000KuGh');

likeFeedItem(communityId, feedItemld)
Adds a like to the specified feed item for the context user. If the user has already liked this feed item, this is a non-operation and returns the existing like.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use likeFeedElement(communityId, feedElementId).

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterLike likeFeedItem(String communityId, String feedItemId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedItemId`
  - Type: `String`
  - The ID for a feed item.

Return Value

- Type: `ConnectApi.ChatterLike`

```java
postComment(communityId, feedItemId, text)
```

Adds the specified text as a comment to the feed item, for the context user.

API Version

- 28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `postCommentToFeedElement(communityId, feedElementId, text)`.

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.Comment postComment(String communityId, String feedItemId, String text)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedItemId`
  - Type: `String`
  - The ID for a feed item.

- `text`
  - Type: `String`
The text of the comment. Mentions are downgraded to plain text. To include a mention that links to a user, call
postComment(communityId, feedItemId, comment, feedItemFileUpload) and pass the mention in a
ConnectApi.CommentInput object.

Return Value
Type: ConnectApi.Comment

Usage
If hashtags or links are detected in text, they are included in the comment as hashtag and link segments. Mentions are not detected in text and are not separated out of the text.
Feed items and comments can contain up to 10,000 characters.

postComment(communityId, feedItemId, comment, feedItemFileUpload)
Adds a comment to the feed item from the context user. Use this method to use rich text, including mentions, and to attach a file to a comment.

API Version
28.0–31.0

Important: In version 32.0 and later, use postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload).

Requires Chatter
Yes

Signature
public static ConnectApi.Comment postComment(String communityId, String feedItemId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedItemFileUpload)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedItemId
Type: String
The ID for a feed item.

comment
Type: ConnectApi.CommentInput
In the CommentInput object, specify rich text, including @mentions. Optionally, in the CommentInput.attachment property, specify an existing file or a new file
**feedItemFileUpload**

*Type:* `ConnectApi.BinaryInput`

If you specify a `NewFileAttachmentInput` object in the `CommentInput.attachment` property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

**Return Value**

*Type:* `ConnectApi.Comment`

**Usage**

Feed items and comments can contain up to 10,000 characters.

**Sample: Posting a Comment with a New File Attachment**

To post a comment and upload and attach a new file to the comment, create a `ConnectApi.CommentInput` object and a `ConnectApi.BinaryInput` object to pass to the `ConnectApi.ChatterFeeds.postComment` method.

```java
String communityId = null;
String feedItemId = '0D5D0000000Kcd1';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Comment Text Body';
messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageInput.messageSegments.add(textSegment);

input.body = messageInput;

ConnectApi.NewFileAttachmentInput attachmentInput = new ConnectApi.NewFileAttachmentInput();
attachmentInput.description = 'The description of the file';
attachmentInput.title = 'contentFile.txt';
input.attachment = attachmentInput;

String fileContents = 'This is the content of the file.';
Blob fileBlob = Blob.valueOf(fileContents);
'contentFile.txt');

ConnectApi.Comment commentRep = ConnectApi.ChatterFeeds.postComment(communityId, feedItemId,
input, binaryInput);
```

```java
postCommentToFeedElement(communityId, feedElementId, text)
```

Post a plain text comment to a feed element.
API Version
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String feedElementId, String text)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element.

- **text**
  - Type: String
  - Text of the comment. A comment can contain up to 10,000 characters.

Return Value

- **Type**: ConnectApi.Comment

If the feed element doesn’t support the Comments capability, the return value is `ConnectApi.NotFoundException`.

Example

```java
ConnectApi.Comment comment = ConnectApi.ChatterFeeds.postCommentToFeedElement(null, '0D5D0000000KuGh', 'I agree with the proposal. ');
```

**postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)**

Post a comment to a feed element. Use this method to post rich text, including mentions, and to attach a file. A comment can contain up to 10,000 characters.
Signature

```java
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String feedElementId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedElementFileUpload)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element.

- **comment**
  - Type: ConnectApi.CommentInput
  - The comment body, including text and mentions, and capabilities, such as information about an attached file.

- **feedElementFileUpload**
  - Type: ConnectApi.BinaryInput
  - A new binary file to attach to the comment, or null. If you specify a binary file, specify the title and description of the file in the `comment` parameter.

Return Value

- Type: ConnectApi.Comment
  - If the feed element doesn’t support the Comments capability, the return value is `ConnectApi.NotFoundException`.

Example for Posting a Comment with Mentions

You can post comments with mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example.

```java
String communityId = null;
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
textSegmentInput.text = 'Does anyone in this group have an idea? ';
messageBodyInput.messageSegments.add(textSegmentInput);
mentionSegmentInput.id = '005D00000000oOT';
messageBodyInput.messageSegments.add(mentionSegmentInput);
commentInput.body = messageBodyInput;
```
Example for Posting a Comment with an Existing File

```java
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

textSegmentInput.text = 'I attached this file from Salesforce Files.';
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
commentInput.body = messageBodyInput;

ConnectApi.CommentCapabilitiesInput commentCapabilitiesInput = new
ConnectApi.CommentCapabilitiesInput();
ConnectApi.ContentCapabilityInput contentCapabilityInput = new
ConnectApi.ContentCapabilityInput();

commentCapabilitiesInput.content = contentCapabilityInput;
contentCapabilityInput.contentDocumentId = '069D00000001rNJ';

commentInput.capabilities = commentCapabilitiesInput;

ConnectApi.Comment commentRep =
ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId, commentInput, null);
```

Example for Posting a Comment with a New File

```java
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

textSegmentInput.text = 'Enjoy this new file.';
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
commentInput.body = messageBodyInput;

ConnectApi.CommentCapabilitiesInput commentCapabilitiesInput = new
ConnectApi.CommentCapabilitiesInput();
ConnectApi.ContentCapabilityInput contentCapabilityInput = new
ConnectApi.ContentCapabilityInput();

commentCapabilitiesInput.content = contentCapabilityInput;
contentCapabilityInput.contentDocumentId = '069D00000001rNJ';

commentInput.capabilities = commentCapabilitiesInput;

ConnectApi.Comment commentRep =
ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId, commentInput, null);
```
Example for Posting a Rich-Text Comment with an Inline Image

You can post rich-text comments with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce.

```java
String communityId = null;
String feedElementId = '0D5R0000000SBEr';
String imageId = '069R00000000IgQ';
String mentionedUserId = '005R0000000DiMz';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApiMarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>{};

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hello ';
messageInput.messageSegments.add(textSegment);

mentionSegment = new ConnectApi.MentionSegmentInput();
mentionSegment.id = mentionedUserId;
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '!';
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApiMarkupEndSegmentInput();
```
Example for Posting a Rich-Text Comment with a Code Block

String communityId = null;
String feedElementId = '0D5R0000000SBEr';
String codeSnippet = '<html>
	<body>
		Hello, world!
	</body>
</html>';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = codeSnippet;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupEndSegment);

input.body = messageInput;
ConnectApi.ChatterFeeds.postCommentToFeedElement(communityId, feedElementId, input, null);

postFeedElement(communityId, subjectId, feedElementType, text)

Posts a feed element with plain text from the context user.

API Version
31.0

Requires Chatter
Yes
public static ConnectApi.FeedElement postFeedElement(String communityId, String subjectId, ConnectApi.FeedElementType feedElementType, String text)

**Parameters**

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**subjectId**
Type: String
The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string me to indicate the context user.

**feedElementType**
Type: ConnectApi.FeedElementType
The only possible value is FeedItem.

**text**
Type: String
The text of the feed element. A feed element can contain up to 10,000 characters.

**Return Value**
Type: ConnectApi.FeedElement

**Example**

ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), '0F9d0000000TreH',
ConnectApi.FeedElementType.FeedItem, 'On vacation this week.');

**postFeedElement(communityId, feedElement, feedElementFileUpload)**

Posts a feed element from the context user. Use this method to post rich text, including mentions and hashtag topics, to attach a file to a feed element, and to associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

**API Version**
31.0–35.0

**Important:** In version 36.0 and later, this method is no longer available because you can’t create a feed post and upload a binary file in the same call. Upload files to Salesforce first, and then use postFeedElement(communityId, feedElement) to create the feed post and attach the files.

**Requires Chatter**
Yes
Signature

```java
public static ConnectApi.FeedElement postFeedElement(String communityId,
ConnectApi.FeedElementInput feedElement, ConnectApi.BinaryInput feedElementFileUpload)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedElement**
  - Type: `ConnectApi.FeedElementInput`
  - Specify rich text, including mentions. Optionally, specify a link, a poll, an existing file, or a new file.

- **feedElementFileUpload**
  - Type: `ConnectApi.BinaryInput`
  - Specify the new binary file to attach to the post only if you also specify a `NewFileAttachmentInput` object in the `feedElement` parameter. Otherwise, pass null.

Return Value

- Type: `ConnectApi.FeedElement`

Example for Posting a Feed Element with a New (Binary) File

```java
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = 'me';

ConnectApi.ContentCapabilityInput contentInput = new ConnectApi.ContentCapabilityInput();
contentInput.title = 'Title';

ConnectApi.FeedElementCapabilitiesInput capabilities = new
ConnectApi.FeedElementCapabilitiesInput();
capabilities.content = contentInput;
input.capabilities = capabilities;

String text = 'These are the contents of the new file.';
Blob myBlob = Blob.valueOf(text);
ConnectApi.BinaryInput binInput = new ConnectApi.BinaryInput(myBlob, 'text/plain',
'fileName');

ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), input, binInput);
```

```java
postFeedElement(communityId, feedElement)
```

Posts a feed element from the context user. Use this method to post rich text, including mentions and hashtag topics, to attach already uploaded files to a feed element, and to associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.
API Version
36.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedElement postFeedElement(String communityId,
ConnectApi.FeedElementInput feedElement)
```

Parameters
```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedElement
  Type: ConnectApi.FeedElementInput
  Specify rich text, including mentions. Optionally, specify a link, a poll, or up to 10 existing files.
```

Return Value
```
Type: ConnectApi.FeedElement
```

Example for Posting a Feed Element with a Mention
You can post feed elements with mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example.

```
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
mentionSegmentInput.id = '005RR000000Dme9';
messageBodyInput.messageSegments.add(mentionSegmentInput);
textSegmentInput.text = 'Could you take a look?';
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;
feedItemInput.feedElementType = ConnectApi.FeedElementType.FeedItem;
feedItemInput.subjectId = '0F9RR0000004CFw';

ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput, null);
```
Example for Posting a Feed Element with Existing Content

```java
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Would you please review these docs?';

// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define a files capability to hold the file(s).
List<String> fileIds = new List<String>();
fileIds.add('069D00000001INA');
fileIds.add('069D00000001Qn');
fileIds.add('069D00000001Qd');

ConnectApi.FilesCapabilityInput filesInput = new ConnectApi.FilesCapabilityInput();
filesInput.items = new List<ConnectApi.FileIdInput>();
for (String fileId : fileIds) {
    ConnectApi.FileIdInput idInput = new ConnectApi.FileIdInput();
    idInput.id = fileId;
    filesInput.items.add(idInput);
}

ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.files = filesInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
```

Example for Posting a Rich-Text Feed Element with an Inline Image

You can post rich-text feed elements with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce. The post also includes text and a mention.

```java
String communityId = null;
String imageId = '069D00000001INA';
String mentionedUserId = '005D0000001QnPr';
String targetUserOrGroupOrRecordId = '005D0000001Gif0';
```
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;

ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hello ';
messageInput.messageSegments.add(textSegment);

mentionSegment = new ConnectApi.MentionSegmentInput();
mentionSegment.id = mentionedUserId;
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '!' ;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupEndSegment);

inlineImageSegment = new ConnectApi.InlineImageSegmentInput();
inlineImageSegment.altText = 'image one';
inlineImageSegment.fileId = imageId;
messageInput.messageSegments.add(inlineImageSegment);

input.body = messageInput;
ConnectApi.ChatterFeeds.postFeedElement(communityId, input, null);

Example for Posting a Rich-Text Feed Element with a Code Block

String communityId = null;
String targetUserOrGroupOrRecordId = 'me';
String codeSnippet = '<html>
	<body>
		Hello, world!
	</body>
</html>'; 
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;

ConnectApi.TextSegmentInput textSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = codeSnippet;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupEndSegment);

input.body = messageInput;
ConnectApi.ChatterFeeds.postFeedElement(communityId, input);

Example for Sharing a Feed Element (in Version 39.0 and Later)

// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Look at this post I'm sharing.';

// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);

feedItemInput.body = messageBodyInput;

ConnectApi.FeedEntityShareCapabilityInput shareInput = new ConnectApi.FeedEntityShareCapabilityInput();
shareInput.feedEntityId = '0D5R0000000SEbc';
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.feedEntityShare = shareInput;

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

Example for Sending a Direct Message

// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Thanks for attending my presentation test run this morning. Send me any feedback.';
// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define a direct message capability to hold the member(s) and the
// subject.
List<String> memberIds = new List<String>();
memberIds.add('005B00000016OUQ');
memberIds.add('005B0000001rIN6');

ConnectApi.DirectMessageCapabilityInput dmInput = new
ConnectApi.DirectMessageCapabilityInput();
dmInput.subject = 'Thank you!';
dmInput.membersToAdd = memberIds;

ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.directMessage = dmInput;

feedItemInput.capabilities = feedElementCapabilitiesInput;

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

SEE ALSO:
Define an Action Link and Post with a Feed Element
Define an Action Link in a Template and Post with a Feed Element

postFeedElementBatch(communityId, feedElements)
Posts a batch of up to 500 feed elements for the cost of one DML statement.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] postFeedElementBatch(String communityId,
List<ConnectApi.BatchInput> feedElements)
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedElements`
Type: `List<ConnectApi.BatchInput Class>`
The list can contain up to 500 `ConnectApi.BatchInput` objects. In the `ConnectApi.BatchInput` constructor, the input object must be a concrete instance of the abstract `ConnectApi.FeedElementInput` class.

Return Value

Type: `ConnectApi.BatchResult[]`
The returned objects correspond to each of the input objects and are returned in the same order as the input objects.
The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the `ConnectApi.BatchResult` list.

Usage

Use this method to post a list of feed elements efficiently. Create a list containing up to 500 objects and insert them all for the cost of one DML statement.

The `ConnectApi.BatchInput Class` has three constructors, but the `postFeedElementBatch` method only supports the two listed here. It doesn’t support multiple binary inputs.

In each constructor, the input object must be an instance of `ConnectApi.FeedElementInput`. Pick a constructor based on whether or not you want to pass a binary input.

- `ConnectApi.BatchInput(Object input)`—No binary input
- `ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)`—One binary input

Example

This trigger bulk posts to the feeds of newly inserted accounts.

```java
trigger postFeedItemToAccount on Account (after insert) {
    Account[] accounts = Trigger.new;

    // Bulk post to the account feeds.
    List<ConnectApi.BatchInput> batchInputs = new List<ConnectApi.BatchInput>();

    for (Account a : accounts) {
        ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
        input.subjectId = a.id;

        body.messageSegments = new List<ConnectApi.MessageSegmentInput>();

        ConnectApi.TextSegmentInput textSegment = new ConnectApi.TextSegmentInput();
```
textSegment.text = 'Let\'s win the ' + a.name + ' account.\';

  body.messageSegments.add(textSegment);
  input.body = body;

  ConnectApi.BatchInput batchInput = new ConnectApi.BatchInput(input);
  batchInputs.add(batchInput);
}

ConnectApi.ChatterFeeds.postFeedElementBatch(Network.getNetworkId(), batchInputs);

postFeedItem(communityId, feedType, subjectId, text)

Posts a feed item with plain text from the context user.

API Version
28.0–31.0

Important: In version 32.0 and later, use postFeedElement(communityId, subjectId, feedElementType, text).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, String text)

Parameters

  communityId
  Type: String
  Use either the ID for a community, internal, or null.

  feedType
  Type: ConnectApi.FeedType
  One of the following:
  • News
  • Record
  • UserProfile
  Use Record to post to a group.

  subjectId
  Type: String
  The value depends on the feedType:
  • News—subjectId must be the ID of the context user or the keyword me.
• Record—The ID of any record with a feed, including groups.
• UserProfile—The ID of any user.

text
  Type: String
  The text of the feed item. Mentions are downgraded to plain text. To include a mention that links to the user, call the `postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)` method and pass the mention in a `ConnectApi.FeedItemInput` object.

Return Value
  Type: `ConnectApi.FeedItem`

  **Note:** Triggers on `FeedItem` objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

Usage
  Feed items and comments can contain up to 10,000 characters.

  Posts to `ConnectApi.FeedType.UserProfile` in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.

  `postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)`
  Posts a feed item to the specified feed from the context user. Use this method to post rich text, including mentions and hashtag topics, and to attach a file to a feed item. You can also use this method to share a feed item and add a comment.

API Version
  28.0–31.0

  **Important:** In version 32.0 and later, use `postFeedElement(communityId, feedElement, feedElementFileUpload)`.

Requires Chatter
  Yes

Signature
  ```java
  public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedItemInput feedItemInput,
  ConnectApi.BinaryInput feedItemFileUpload)
  ```

Parameters

  `communityId`
  Type: String
  Use either the ID for a community, `internal`, or `null`. 

  `feedType`
  Type: `ConnectApi.FeedType`

  `subjectId`
  Type: String

  `feedItemInput`
  Type: `ConnectApi.FeedItemInput`

  `feedItemFileUpload`
  Type: `ConnectApi.BinaryInput`
**feedType**

Type: `ConnectApi.FeedType`

One of the following:

- News
- Record
- UserProfile

To post a feed item to a group, use Record and use a group ID as the `subjectId`.

**subjectId**

Type: `String`

If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**feedItemInput**

Type: `ConnectApi.FeedItemInput`

In the `FeedItemInput` object, specify rich text. Optionally, in the `FeedItemInput.attachment` property, specify a link, a poll, an existing file, or a new file.

**feedItemFileUpload**

Type: `ConnectApi.BinaryInput`

If you specify a `NewFileAttachmentInput` object in the `FeedItemInput.attachment` property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

**Return Value**

Type: `ConnectApi.FeedItem`

- **Note**: Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

**Usage**

Feed items and comments can contain up to 10,000 characters. Posts to `ConnectApi.FeedType.UserProfile` in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.

**Example for Sharing a Feed Item and Adding a Comment**

To share a feed item and add a comment, create a `ConnectApi.FeedItemInput` object containing the comment and the feed item to share, and pass the object to `ConnectApi.ChatterFeeds.postFeeditem` in the `feedItemInput` argument. The message segments in the message body input are used as the comment.

```java
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.originalFeedItemId = '0D5D0000000JuAG';

List<ConnectApi.MessageSegmentInput> segmentList = new List<ConnectApi.MessageSegmentInput>();
List<ConnectApi.MessageSegmentInput> segmentList = new List<ConnectApi.MessageSegmentInput>();
```
Example for Posting a Mention to a User Profile Feed

To post to a user profile feed and include an @mention, call the `ConnectApi.ChatterFeeds.postFeedItem` method.

```java
String communityId = null;
ConnectApi.FeedType feedType = ConnectApi.FeedType.UserProfile;

ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment = new ConnectApi.MentionSegmentInput();

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hey there ';
messageInput.messageSegments.add(textSegment);

mentionSegment.id = '005D0000001LLO1';
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '. How are you?';
messageInput.messageSegments.add(textSegment);

input.body = messageInput;

ConnectApi.FeedItem feedItemRep = ConnectApi.ChatterFeeds.postFeedItem(communityId, feedType, 'me', input, null);
```

**publishDraftFeedElement** *(communityId, feedElementId, feedElement)*

Publish a draft feed element.

**API Version**

44.0

**Requires Chatter**

Yes
Signature

```java
public static ConnectApi.FeedElement publishDraftFeedElement(String communityId, String feedElementId, ConnectApi.FeedElementInput feedElement)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: String
  - ID of the feed element to publish.

- `feedElement`
  - Type: `ConnectApi.FeedElementInput`
  - Use this optional parameter to edit your draft before publishing.

Return Value

- Type: `ConnectApi.FeedElement`
  - The published feed element has a new ID.

`searchFeedElements(communityId, q)`

Returns the first page of all the feed elements that match the specified search criteria.

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.
q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedElements(communityId, q, result)
Testing ConnectApi Code

searchFeedElements(communityId, q, sortParam)
Returns the first page of all the feed elements that match the specified search criteria in the specified order.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestSearchFeedElements(communityId, q, sortParam, result)
  Testing ConnectApi Code

searchFeedElements(communityId, q, threadedCommentsCollapsed)
Get the feed elements and comments that match the search criteria.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, Boolean threadedCommentsCollapsed)
Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

**q**
- Type: String
- Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**threadedCommentsCollapsed**
- Type: Boolean
- Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
- Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)
- Testing ConnectApi Code

**searchFeedElements(communityId, q, pageParam, pageSize)**
Searches feed elements and returns a specified page and page size of search results.

API Version
- 31.0

Available to Guest Users
- 31.0

Requires Chatter
- Yes

Signature
- public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize)
Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`q`
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedElements(communityId, q, pageParam, pageSize, result)`
- Testing `ConnectApi` Code

`searchFeedElements(communityId, q, pageParam, pageSize, sortParam)`
Searches feed elements and returns a specified page and page size in a specified order.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
    - `CreatedDateDesc`—Sorts by most recent creation date.
    - `LastModifiedDateDesc`—Sorts by most recent activity.
    - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
    - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
  - If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

- Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Testing ConnectApi Code

searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Searches feed elements and returns a specified page and page size in a specified order. Each feed element includes no more than the specified number of comments.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)`
  Testing ConnectApi Code

`searchFeedElementsInFeed(communityId, feedType, q)`
Searches the feed elements for the `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview` feed types.
Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String q)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or null.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

- `q`
  - Type: `String`
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

- Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java

```

Testing ConnectApi Code

`searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)`

Searches the feed elements for the Company, DirectMessageModeration, Home, Moderation, and PendingReview feed types and returns a specified page and page size in a specified sort order.

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**Signature**

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

**Parameters**

- **communityId**
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  
  Type: `ConnectApi.FeedType`
  
  The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

- **recentCommentCount**
  
  Type: `Integer`
  
  Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  
  Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: **String**
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**Return Value**
Type: **ConnectApi.FeedElementPage**

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Signature
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
When the `sortParam` is `MostViewed`, you must pass in `null` for the `pageParam`.

**pageSize**

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

When the `sortParam` is `MostViewed`, the `pageSize` must be a value from 1 to 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreateDateDesc` is used.

**q**

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

**filter**

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don’t have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Unread`—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature
```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, String q)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.
- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.
- `subjectId`
  Type: `String`
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

`q`
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

- `communityId`
  Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**
Type: `String`
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Order of feed items in the feed.

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`
Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

**Return Value**
Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
  Type: String
  If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```

**Parameters**

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.UserProfile`.

- **subjectId**
  Type: `String`
  The ID of any user. To specify the context user, use the user ID or the alias `me`.

- **recentCommentCount**
  Type: `Integer`
  The number of most recent comments to return.

- **density**
  Type: `ConnectApi.FeedDensity`
  The density of the feed elements to return.

- **pageParam**
  Type: `String`
  The page parameter to use for pagination.

- **pageSize**
  Type: `Integer`
  The number of feed elements to return per page.

- **sortParam**
  Type: `ConnectApi.FeedSortOrder`
  The sort order for the feed elements.

- **q**
  Type: `String`
  The search query for the feed elements.

- **filter**
  Type: `ConnectApi.FeedFilter`
  The feed filter to apply to the feed elements.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- All Updates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- Fewer Updates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

Return Value
Type: ConnectApi.FeedElementPage
Usage

```

Parameters

- **communityId**
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  
  Type: `ConnectApi.FeedType`
  
  Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  
  Type: `String`
  
  The ID of a case.

- **recentCommentCount**
  
  Type: `Integer`
  

Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

```

Parameters

* `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

* `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

* `subjectId`
  Type: `String`
  Any record ID, including a group ID.
**recentCommentCount**
Type: Integer

Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: ConnectApi.FeedDensity

Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageSize**
Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder

Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**
Type: Boolean

Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
• CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
• SolvedQuestions—Feed elements that are questions and that have a best answer.
• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Testing ConnectApi Code

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter)

Searches the filtered feed elements in a case feed, and returns a specified page and page size in a specified sort order.

API Version
40.0

Available to Guest Users
40.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
    ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly,
    String customFilter)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, `internal`, or `null`.

**feedType**
Type: ConnectApi.FeedType
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: String
The ID of a case.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
    Type: String
    Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
    Type: Boolean
    Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

filter
    Type: String
    Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
    Type: ConnectApi.FeedElementPage

Usage
    To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

    Testing ConnectApi Code

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)
    Searches the feed elements of a feed filtered by key prefix.

API Version
    31.0

Requires Chatter
    Yes
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Yes
Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

- `communityId`<br>  
  Type: `String`<br>  
  Use either the ID for a community, `internal`, or `null`.

- `subjectId`<br>  
  Type: `String`<br>  
  The ID of the context user or the alias `me`.

- `keyPrefix`<br>  
  Type: `String`<br>  
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- `pageParam`<br>  
  Type: `String`<br>  
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`<br>  
  Type: `Integer`<br>  
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`<br>  
  Type: `ConnectApi.FeedSortOrder`<br>  
  Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
  If you pass in `null`, the default value `CreatedDateDesc` is used.

- `q`<br>  
  Type: `String`<br>  
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value

Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Testing ConnectApi Code

`searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)`

Searches the feed elements of a feed filtered by key prefix, and returns a specified page and page size in a specified sort order. Each feed element includes no more than the specified number of comments.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`subjectId`

Type: `String`

The ID of the context user or the alias `me`.

`keyPrefix`

Type: `String`

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

`recentCommentCount`

Type: `Integer`

Maximum number of comments to return with each feed element. The default value is 3.

`density`

Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**

Type: String

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See *Wildcards*.

Return Value

Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- Testing ConnectApi Code
searchFeedItems(communityId, q)

Returns the first page of all the feed items that match the specified search criteria. The page contains the default number of items.

API Version
28.0–31.0

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`feedType`
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

`recentCommentCount`
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

`density`
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
-
Type: ConnectApi.FeedSortOrder

Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**
-
Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**Return Value**
-
Type: ConnectApi.FeedItemPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

```

**searchFeedItemsInFeed(communityId, feedType, subjectId, q)**

Searches the feed items for a specified feed type.

**API Version**
28.0–31.0

**Important:** In version 32.0 and later, use searchFeedElementsInFeed(communityId, feedType, subjectId, q).

**Available to Guest Users**
31.0 only
Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String q)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is UserProfile, subjectId can be any user ID. If feedType is any other value, subjectId must be the ID of the context user or the alias me.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, q, result)
Testing ConnectApi Code

searchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize,
sortParam, q)
Searches the feed items for a specified feed type and user or record, and returns a specified page and page size in a specified sort order.
API Version
28.0–31.0

Important: In version 32.0 and later, use searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Order of feed items in the feed.

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• **CreatedDateDesc**—Sorts by most recent creation date.
• **LastModifiedDateDesc**—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**

Type: `String`

Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)`

Testing ConnectApi Code

```java
searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
```

Searches the feed items for a specified feed type and returns a specified page and page size in a specified sort order. Each feed item includes no more than the specified number of comments.

API Version

29.0–31.0

**Important:** In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes
Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

feedType

Type: ConnectApi.FeedType

The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId

Type: String

If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount

Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

density

Type: ConnectApi.FeedDensity

Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam

Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize

Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam

Type: ConnectApi.FeedSortOrder

Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Testing ConnectApi Code

searchFeedItemsInFeed(String, ConnectApi.FeedType, String, Integer, ConnectApi.FeedDensity, String, Integer, ConnectApi.FeedSortOrder, String, Boolean)

Searches the feed items for a specified feed type and user or record, and returns a specified page and page size in a specified sort order. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

API Version
30.0–31.0

Important: In version 32.0 and later, use searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly).

Available to Guest Users
31.0 only

Requires Chatter
Yes
Signature

public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)

Parameters

**communityId**
- Type: **String**
- Use either the ID for a community, internal, or null.

**feedType**
- Type: **ConnectApi.FeedType**
- Value must be ConnectApi.FeedType.Record.

**subjectId**
- Type: **String**
- Any record ID, including a group ID.

**recentCommentCount**
- Type: **Integer**
- The maximum number of comments to return with each feed item. The default value is 3.

**density**
- Type: **ConnectApi.FeedDensity**
- Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- Type: **String**
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- Type: **Integer**
- Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- Type: **ConnectApi.FeedSortOrder**
- Values are:
  - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - **CreatedDateDesc**—Sorts by most recent creation date.
  - **LastModifiedDateDesc**—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

Return Value
  Type: ConnectApi.FeedItemPage

Usage
  To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)

Testing ConnectApi Code

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)
  Searches the feed items of a feed filtered by key prefix.

API Version
  28.0–31.0

⚠️ Important: In version 32.0 and later, use searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q).

Requires Chatter
  Yes

Signature
  public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)
Parameters

**communityId**
- **Type:** String
- Use either the ID for a community, internal, or null.

**subjectId**
- **Type:** String
- The ID of the context user or the alias me.

**keyPrefix**
- **Type:** String
- A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**q**
- **Type:** String
- Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

**Type:** ConnectApi.FeedItemPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)
- Testing ConnectApi Code

**searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)**

Searches the feed items of a feed filtered by key prefix, and returns a specified page and page size in a specified sort order.

API Version

28.0–31.0

**Important:** In version 32.0 and later, use searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q).

Requires Chatter

Yes
Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId,
String subjectId, String keyPrefix, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**subjectId**
Type: String
The ID of the context user or the alias me.

**keyPrefix**
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)
Testing ConnectApi Code

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Searches the feed items of a feed filtered by key prefix, and returns a specified page and page size in a specified sort order. Each feed item includes no more than the specified number of comments.

API Version
29.0–31.0

⚠️ Important: In version 32.0 and later, use searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**recentCommentCount**

Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

**density**

Type: ConnectApi.FeedDensity

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

**pageSize**

Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: ConnectApi.FeedSortOrder

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value CreatedDateDesc is used.

**q**

Type: String

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**Return Value**

Type: ConnectApi.FeedItemPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- Testing ConnectApi Code

**searchStreams(communityId, q)**
Search the Chatter feed streams for the context user.

API Version
40.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.ChatterStreamPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchStreams(communityId, q, result)`
- Testing ConnectApi Code
searchStreams(communityId, q, sortParam)
Search and sort the Chatter feed streams for the context user.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, ConnectApi.SortOrder sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
• Ascending—Items are in ascending alphabetical order (A-Z).
• Descending—Items are in descending alphabetical order (Z-A).
• MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
If not specified, default value is Ascending.

Return Value
Type: ConnectApi.ChatterStreamPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchStreams(communityId, q, sortParam, result)
Testing ConnectApi Code
searchStreams(communityId, q, pageParam, pageSize)
Search the Chatter feed streams for the context user and return a page of results.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q,
Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

Return Value
Type: ConnectApi.ChatterStreamPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchStreams(communityId, q, pageParam, pageSize, result)
Testing ConnectApi Code
searchStreams(communityId, q, pageParam, pageSize, sortParam)
Search the Chatter feed streams for the context user and return a sorted page of results.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  If not specified, default value is Ascending.

Return Value
Type: ConnectApi.ChatterStreamPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)
```

Testing ConnectApi Code

```
searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)
```

Search the Chatter feed streams from all communities for the context user and return a sorted page of results.

API Version

41.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q,
Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)
```

Parameters

- **communityId**
  
  Type: String
  
  Use either the ID for a community, `internal`, or `null`.

- **q**
  
  Type: String
  
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

- **pageParam**
  
  Type: Integer
  
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  
  Type: Integer
  
  Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

- **sortParam**
  
  Type: `ConnectApi.SortOrder`
  
  Specifies the sort order. Values are:
  
  - Ascending—Items are in ascending alphabetical order (A-Z).
  - Descending—Items are in descending alphabetical order (Z-A).
Most Recently Viewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
If not specified, default value is Ascending.

**globalScope**
- **Type:** Boolean
- Specifies whether to get streams from all the context user’s communities, regardless of the `communityId` value.

**Tip:** If you know the community ID for the streams, we recommend setting `globalScope` to `false`.

**Return Value**
- **Type:** `ConnectApi.ChatterStreamPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```java
setCommentIsVerified(String communityId, String commentId, Boolean isVerified)
```
Mark a comment as verified or unverified.

**API Version**
41.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.VerifiedCapability setCommentIsVerified(String communityId, String commentId, Boolean isVerified)
```

**Parameters**
- `communityId`
  - **Type:** String
  - Use either the ID for a community, `internal`, or `null`.

- `commentId`
  - **Type:** String
  - ID of the comment on a question post. Only one comment on a question post can be marked as verified.

- `isVerified`
  - **Type:** Boolean
  - Specifies whether to mark the comment as verified (`true`) or unverified (`false`).
  - Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.
Return Value
Type: `ConnectApi.VerifiedCapability`
If the comment doesn't support this capability, the return value is `ConnectApi.NotFoundException`.

```java
setCommentIsVerifiedByAnonymized(communityId, commentId, isVerified, isVerifiedByAnonymized)
```
Mark a comment as verified by an anonymous user.

API Version
43.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.VerifiedCapability setCommentIsVerifiedByAnonymized(String communityId, String commentId, Boolean isVerified, Boolean isVerifiedByAnonymized)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `commentId`
  Type: `String`
  ID of the comment on a question post. Only one comment on a question post can be marked as verified.

- `isVerified`
  Type: `Boolean`
  Specifies whether to mark the comment as verified (`true`) or unverified (`false`).
  Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.

- `isVerifiedByAnonymized`
  Type: `Boolean`
  Specifies whether to mark the comment as verified by an anonymous user (`true`).
  If a user previously verified a comment and then requested the activity to be deleted, use `isVerifiedByAnonymized` to maintain the verification and anonymize the value of `lastVerifiedByUser`.
  You can't set `isVerified` and `isVerifiedByAnonymized` to `true` at the same time. `isVerifiedByAnonymized` can be set to `true` only if `isVerified` is already set to `true`.
  You can't set `isVerifiedByAnonymized` to `false`. After `isVerifiedByAnonymized` is set to `true`, it can be undone only when another user marks the comment as unverified and then reverifies the comment.
Return Value

Type: `ConnectApi.VerifiedCapability`

If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`setCommentVote(communityId, commentId, upDownVote)`

Upvote or downvote a comment.

API Version

41.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UpDownVoteCapability setCommentVote(String communityId, String commentId, ConnectApi.UpDownVoteCapabilityInput upDownVote)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`commentId`
Type: `String`
ID of the comment.

`upDownVote`
Type: `ConnectApi.UpDownVoteCapabilityInput`
A `ConnectApi.UpDownVoteCapabilityInput` object that includes your vote.

Return Value

Type: `ConnectApi.UpDownVoteCapability`

If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`setFeedCommentStatus(communityId, commentId, status)`

Set the status of a comment.

API Version

38.0
Requires Chatter
Yes

Signature

public static ConnectApi.StatusCapability setFeedCommentStatus(String communityId, String commentId, ConnectApi.StatusCapabilityInput status)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment.

status
Type: ConnectApi.StatusCapabilityInput
A ConnectApi.StatusCapabilityInput object that includes the status you want to set.

Return Value
Type: ConnectApi.StatusCapability
If the comment doesn’t support this capability, the return value is ConnectApiNotFoundException.

Usage
Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.

setFeedElementIsClosed(communityId, feedElementId, isClosed)
Set a feed element to closed.

Users can’t edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can’t vote on it. Users can’t edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

API Version
43.0

Requires Chatter
Yes
Signature

public static ConnectApi.CloseCapability setFeedElementIsClosed(String communityId, String feedElementId, Boolean isClosed)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

isClosed
Type: Boolean
Specifies whether to set the feed element to closed (true) or not (false).

Return Value

Type: ConnectApi.CloseCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

setFeedElementVote(communityId, feedElementId, upDownVote)
Upvote or downvote a feed element.

API Version

41.0

Requires Chatter

Yes

Signature

public static ConnectApi.UpDownVoteCapability setFeedElementVote(String communityId, String feedElementId, ConnectApi.UpDownVoteCapabilityInput upDownVote)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.
upDownVote
Type: ConnectApi.UpDownVoteCapabilityInput
A ConnectApi.UpDownVoteCapabilityInput object that includes the your vote.

Return Value
Type: ConnectApi.UpDownVoteCapability
If the feed element doesn't support this capability, the return value is ConnectApi.NotFoundException.

setFeedEntityStatus(communityId, feedElementId, status)
Set the status of a feed post.

API Version
37.0

Requires Chatter
Yes

Signature
public static ConnectApi.StatusCapability setFeedEntityStatus(String communityId, String feedElementId, ConnectApi.StatusCapabilityInput status)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

status
Type: ConnectApi.StatusCapabilityInput
A ConnectApi.StatusCapabilityInput object that includes the status you want to set.

Return Value
Type: ConnectApi.StatusCapability
If the feed element doesn't support this capability, the return value is ConnectApi.NotFoundException.

Usage
Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.
setIsMutedByMe(communityId, feedElementId, isMutedByMe)
Mute or unmute a feed element.

API Version
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.MuteCapability setIsMutedByMe(String communityId, String feedElementId, Boolean isMutedByMe)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

isMutedByMe
Type: Boolean
Indicates whether the feed element is muted for the context user. Default value is false.

Return Value
Type: ConnectApi.MuteCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

setIsReadByMe(communityId, feedElementId, readBy)
Mark a feed element as read for the context user using an input body.

API Version
40.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, ConnectApi.ReadByCapabilityInput readBy)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element to mark as read.

- `readBy`
  - Type: `ConnectApi.ReadByCapabilityInput`
  - A `ConnectApi.ReadByCapabilityInput` body indicating to mark the feed elements as read.

Return Value

- Type: `ConnectApi.ReadByCapability`

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**setIsReadByMe(communityId, feedElementId, isReadByMe)**

Mark a feed element as read for the context user.

API Version

- 40.0

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, Boolean isReadByMe)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element to mark as read.
**isReadByMe**

Type: **Boolean**

Specifies to mark the feed element as read (true) for the context user.

**Return Value**

Type: **ConnectApi.ReadByCapability**

If the feed element doesn’t support this capability, the return value is **ConnectApi.NotFoundException**.

**shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)**

Share the *originalFeedElementId* as the context user.

**API Version**

31.0–38.0

**Important:** In version 39.0 and later, use **postFeedElement(communityId, feedElement)** or **updateFeedElement(communityId, feedElementId, feedElement)** with the **ConnectApi.FeedEntityShareCapabilityInput** to share a feed entity with a feed element.

**Requires Chatter**

Yes

**Signature**

public static ConnectApi.FeedElement shareFeedElement(String communityId, String subjectId, ConnectApi.FeedElementType feedElementType, String originalFeedElementId)

**Parameters**

*communityId*

Type: **String**

Use either the ID for a community, internal, or null.

*subjectId*

Type: **String**

The ID of the user or group with whom to share the feed element.

*feedElementType*

Type: **ConnectApi.FeedElementType**

Values are:

- **Bundle**—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
- **FeedItem**—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
• Recommendation—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

originalFeedElementId
Type: String
The ID of the feed element to share.

Return Value
Type: ConnectApi.FeedElement

Example
ConnectApi.ChatterFeeds.shareFeedElement(null, '0F9RR0000004CPw', ConnectApi.FeedElementType.FeedItem, '0D5RR0000004Gxc');

shareFeedItem(communityId, feedType, subjectId, originalFeedItemId)
Share the originalFeedItemId to the feed specified by the feedType.

API Version
28.0–31.0

⚠️ Important:
• In version 32.0–38.0, use shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId).
• In version 39.0 and later, use postFeedElement(communityId, feedElement) or updateFeedElement(communityId, feedElementId, feedElement) with the ConnectApi.FeedEntityShareCapabilityInput.

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItem shareFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, String originalFeedItemId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
One of the following:
To share a feed item with a group, use `Record` and use a group ID as the `subjectId`.

**subjectId**
Type: `String`
The value depends on the value of `feedType`:
- **News**—`subjectId` must be the ID of the context user or the keyword `me`.
- **Record**—`subjectId` can be a group ID or the ID of the context user (or `me`).
- **UserProfile**—`subjectId` can be any user ID.

**originalFeedItemId**
Type: `String`
The ID of the feed item to share.

Return Value
Type: `ConnectApi.FeedItem`

Example
To share a feed item with a group, pass in to this method the community ID (or `null`), the feed type `Record`, the group ID, and the ID of the feed item to share.

```java
ConnectApi.ChatterFeeds.shareFeedItem(null, ConnectApi.FeedType.Record, '0F9D00000000izf', '0D5D0000000JuAG');
```

**updateBookmark(communityId, feedItemId, isBookmarkedByCurrentUser)**

Bookmarks the specified feed item or removes a bookmark from the specified feed item.

**API Version**
28.0–31.0

**Important:** In version 32.0 and later, use `updateFeedElementBookmarks(communityId, feedElementId, bookmarks)`, `updateFeedElementBookmarks(communityId, feedElementId, bookmarks)`, or `updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)`. 

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.FeedItem updateBookmark(String communityId, String feedItemId, Boolean isBookmarkedByCurrentUser)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedItemId
  Type: String
  The ID for a feed item.

isBookmarkedByCurrentUser
  Type: Boolean
  —Specifying true adds the feed item to the list of bookmarks for the context user. Specify false to remove a bookmark.

Return Value
Type: ConnectApi.FeedItem

updateComment(communityId, commentId, comment)
Edits a comment.

API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.Comment updateComment(String communityId, String commentId, ConnectApi.CommentInput comment)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

commentId
  Type: String
  ID of the comment to be edited.

comment
  Type: ConnectApi.CommentInput
  Information about the comment to be edited.
Return Value

Type: `ConnectApi.Comment`

If the comment doesn’t support the edit capability, the return value is `ConnectApi.NotFoundException`.

Example

```java
String commentId;
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId() ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.CommentPage commentPage = ConnectApi.ChatterFeeds.getCommentsForFeedElement(communityId, feedElementId);
if (commentPage.items.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
commentId = commentPage.items[0].id;

ConnectApi.FeedEntityIsEditable isEditable = ConnectApi.ChatterFeeds.isCommentEditableByMe(communityId, commentId);
if (isEditable.isEditableByMe == true){
    ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
    textSegmentInput.text = 'This is my edited comment.';
    messageBodyInput.messageSegments.add(textSegmentInput);

    commentInput.body = messageBodyInput;

    ConnectApi.Comment editedComment = ConnectApi.ChatterFeeds.updateComment(communityId, commentId, commentInput);
}
```

`updateDirectMessage(communityId, feedElementId, directMessage)`

Update the members of a direct message.

API Version

40.0
Requires Chatter
Yes

Signature

```
public static ConnectApi.DirectMessageCapability updateDirectMessage(String communityId,
String feedElementId, ConnectApi.DirectMessageCapabilityInput directMessage)
```

Parameters

- `communityId`
  Type: String  
  Use either the ID for a community, internal, or null.
- `feedElementId`
  Type: String  
  ID of the feed element.
- `directMessage`
  Type: ConnectApi.DirectMessageCapabilityInput  
  A ConnectApi.DirectMessageCapabilityInput body that includes the members to add and remove.

Return Value

Type: ConnectApi.DirectMessageCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

`updateFeedElement(communityId, feedElementId, feedElement)`
Edits a feed element. Feed items are the only type of feed element that can be edited.

API Version
34.0

Requires Chatter
Yes

Signature

```
public static ConnectApi.FeedElement updateFeedElement(String communityId, String
feedElementId, ConnectApi.FeedElementInput feedElement)
```

Parameters

- `communityId`
  Type: String  
  Use either the ID for a community, internal, or null.
**feedElementId**
- **Type:** String
  - ID of the feed element to be edited. Feed items are the only type of feed element that can be edited.

**feedElement**
- **Type:** ConnectApi.FeedElementInput
  - Information about the feed element to be edited. Feed items are the only type of feed element that can be edited.

**Return Value**
- **Type:** ConnectApi.FeedElement
  - If the feed element doesn't support the edit capability, the return value is ConnectApi.NotFoundException.

**Example for Editing a Feed Post**

```java
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
  ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
  // Return null within anonymous apex.
  return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
  ConnectApi.ChatterFeeds.isFeedElementEditableByMe(communityId, feedElementId);
if (isEditable.isEditableByMe == true){
  ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
  ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

  messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
  textSegmentInput.text = 'This is my edited post.';
  messageBodyInput.messageSegments.add(textSegmentInput);

  feedItemInput.body = messageBodyInput;

  ConnectApi.FeedElement editedFeedElement =
    ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}
```

**Example for Editing a Question Title and Post**

```java
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
  ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
  // Return null within anonymous apex.
  return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
  ConnectApi.ChatterFeeds.isFeedElementEditableByMe(communityId, feedElementId);
if (isEditable.isEditableByMe == true){
  ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
  ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

  messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
  textSegmentInput.text = 'This is my edited post.';
  messageBodyInput.messageSegments.add(textSegmentInput);

  feedItemInput.body = messageBodyInput;

  ConnectApi.FeedElement editedFeedElement =
    ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}
```
```java
ORDER BY CreatedDate DESC;
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
    ConnectApi.ChatterFeeds.isFeedElementEditableByMe(communityId, feedElementId);
if (isEditable.isEditableByMe == true){
    ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
    ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new ConnectApi.FeedElementCapabilitiesInput();
    ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapabilityInput = new ConnectApi.QuestionAndAnswersCapabilityInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
    textSegmentInput.text = 'This is my edited question.';
    messageBodyInput.messageSegments.add(textSegmentInput);
    feedItemInput.body = messageBodyInput;
    feedItemInput.capabilities = feedElementCapabilitiesInput;
    feedElementCapabilitiesInput.questionAndAnswers = questionAndAnswersCapabilityInput;
    questionAndAnswersCapabilityInput.questionTitle = 'Where is my edited question?';
    ConnectApi.FeedElement editedFeedElement =
        ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}
```

`updateFeedElementBookmarks(communityId, feedElementId, bookmarks)`

Bookmark or unbookmark a feed element by passing a `ConnectApi.BookmarksCapabilityInput` object.

**API Version**
32.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String
    communityId, String feedElementId, ConnectApi.BookmarksCapabilityInput bookmarks)
```
Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**feedElementId**
Type: `String`
ID of the feed element.

**bookmarks**
Type: `ConnectApi.BookmarksCapabilityInput`
Information about a bookmark.

Return Value
Type: `ConnectApi.BookmarksCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

```java
updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)
```
Bookmark or unbookmark a feed element by passing a boolean value.

API Version
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String communityId, String feedElementId, Boolean isBookmarkedByCurrentUser)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**feedElementId**
Type: `String`
ID of the feed element.

**isBookmarkedByCurrentUser**
Type: `Boolean`
Specify whether to bookmark the feed element (`true`) or not (`false`).
Return Value
Type: `ConnectApi.BookmarksCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Example
```
ConnectApi.BookmarksCapability bookmark =
ConnectApi.ChatterFeeds.updateFeedElementBookmarks(null, '0D5D0000000KuGh', true);
```

`updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, readBy)`
Mark multiple feed elements as read by the context user at the same time using an input body.

API Version
40.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, ConnectApi.ReadByCapabilityInput readBy)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedElementIds`
  Type: `String`
  Up to 500 feed element IDs to mark as read.
- `readBy`
  Type: `ConnectApi.ReadByCapabilityInput`
  A `ConnectApi.ReadByCapabilityInput` body indicating to mark the feed elements as read.

Return Value
Type: `ConnectApi.BatchResult[]`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.
The returned objects correspond to each of the input objects and are returned in the same order as the input objects.
The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the `ConnectApi.BatchResult` list.
updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, isReadByMe)
Mark multiple feed elements as read by the context user at the same time.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, Boolean isReadByMe)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementIds
Type: String
Up to 500 feed element IDs to mark as read.

isReadByMe
Type: Boolean
Specifies to mark the feed element as read (true) for the context user.

Return Value
Type: ConnectApi.BatchResult[]
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

updateLikeForComment(communityId, commentId, isLikedByCurrentUser)
Like or unlike a comment.

API Version
39.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterLikePage updateLikeForComment(String communityId, String commentId, Boolean isLikedByCurrentUser)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **commentId**
  - Type: String
  - ID of the comment.

- **isLikedByCurrentUser**
  - Type: Boolean
  - Specifies if the context user likes (true) or unlikes (false) the comment.

Return Value

Type: `ConnectApi.ChatterLikePage`

```java
updateLikeForFeedElement(communityId, feedElementId, isLikedByCurrentUser)
```

Like or unlike a feed element.

API Version

39.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterLikePage updateLikeForFeedElement(String communityId, String feedElementId, Boolean isLikedByCurrentUser)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element.

- **isLikedByCurrentUser**
  - Type: Boolean
Specifies if the context user likes (true) or unlikes (false) the feed element.

Return Value
Type: ConnectApi.ChatterLikePage
If the feed element doesn't support the ChatterLikes capability, the return value is ConnectApi.NotFoundException.

updatePinnedFeedElements(communityId, feedType, subjectId, pin)
Pin or unpin feed elements to a group or topic feed.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.PinCapability updatePinnedFeedElements(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.PinCapabilityInput pin)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Record and Topics.

subjectId
Type: String
If feedType is Record, subjectId must be a group ID. If feedType is Topics, subjectId must be a topic ID.

pin
Type: ConnectApi.PinCapabilityInput
A ConnectApi.PinCapabilityInput object indicating the feed element to pin or unpin.

Return Value
Type: ConnectApi.PinCapability
If the feed doesn't support this capability, the return value is ConnectApi.NotFoundException.
updateStream(communityId, streamId, streamInput)
Update a Chatter feed stream.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStream updateStream(String communityId, String streamId, ConnectApi.ChatterStreamInput streamInput)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

streamId
Type: String
ID of the Chatter feed stream.

streamInput
Type: ConnectApi.ChatterStreamInput

Return Value
Type: ConnectApi.ChatterStream

voteOnFeedElementPoll(communityId, feedElementId, myChoiceId)
Vote on a poll or change your vote on a poll.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.PollCapability voteOnFeedElementPoll(String communityId, String feedElementId, String myChoiceId)
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedElementId`
Type: `String`
ID of the feed element.

`myChoiceId`
Type: `String`
The ID of the poll item to vote for. The key prefix for poll items is 09A.

Return Value
Type: `ConnectApi.PollCapability Class`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Example

```java
ConnectApi.PollCapability poll = ConnectApi.ChatterFeeds.voteOnFeedElementPoll(null, '0D5D0000000XZaUKAW', '09AD000000000TKMAY');
```

`voteOnFeedPoll(communityId, feedItemId, myChoiceId)`
Used to vote or to change your vote on an existing feed poll.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use `voteOnFeedElementPoll(communityId, feedElementId, myChoiceId)`.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedPoll voteOnFeedPoll(String communityId, String feedItemId, String myChoiceId)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedItemId`
Type: `String`
Specify the feed item that is associated with the poll.

myChoiceId
Type: String
Specify the ID of the item in the poll to vote for.

Return Value
Type: ConnectApi.FeedPoll

ChatterFeeds Test Methods
The following are the test methods for ChatterFeeds. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestGetFeedElementsFromFeed(communityId, feedType, result)
Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType)

Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)

Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The only valid value for this parameter is Company.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, page Param, pageSize, sortParam, result)
Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters
  communityId
   Type: String
   Use either the ID for a community, internal, or null.

  feedType
   Type: ConnectApi.FeedType
   The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

  recentCommentCount
   Type: Integer
   Maximum number of comments to return with each feed element. The default value is 3.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)
Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
API Version
32.0

Signature

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- **recentCommentCount**
  Type: `Integer`
  Maximum number of comments to return with each feed element. The default value is `3`.

- **density**
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of feed elements per page. Valid values are from `1` through `100`. If you pass in `null`, the default size is `25`.

- **sortParam**
  Type: `ConnectApi.FeedSortOrder`
  Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**filter**

Type: ConnectApi.FeedFilter

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don't have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don't have a best answer.

**result**

Type: ConnectApi.FeedElementPage

The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)

Testing ConnectApi Code
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)

Registers a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**filter**

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**threadedCommentsCollapsed**

Type: `Boolean`

Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.
Return Value
Type: Void

SEE ALSO:
   Testing ConnectApi Code
   getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)

`setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)`

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedElementPage result)
```

Parameters
`communityId`
Type: String
   Use either the ID for a community, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
   The feed type.

`subjectId`
Type: String
   The ID of the context user or the alias `me`.

`result`
Type: `ConnectApi.FeedElementPage`
   The object containing test data.

Return Value
Type: Void

SEE ALSO:

   Testing ConnectApi Code
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)

Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateTimeDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage

The object containing test data.

Return Value

Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
 Type: String
 Use either the ID for a community, internal, or null.

feedType
 Type: ConnectApi.FeedType
 The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
 Type: String
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

`recentCommentCount`
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

`result`
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:

- Testing `ConnectApi` Code
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)

Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
   Type: ConnectApi.FeedSortOrder
   Values are:
   • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
   • CreatedDateDesc—Sorts by most recent creation date.
   • LastModifiedDateDesc—Sorts by most recent activity.
   • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
   • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
   If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
   Type: Boolean
   Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

result
   Type: ConnectApi.FeedElementPage
   The object containing test data.

Return Value
   Type: Void

SEE ALSO:
   getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
   Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)

Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
   35.0

Signature
   public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
Parameters

**communityId**
- **Type:** String
- Use either the ID for a community, internal, or **null**.

**feedType**
- **Type:** `ConnectApi.FeedType`
- Value must be `ConnectApi.FeedType.UserProfile`.

**subjectId**
- **Type:** String
- The ID of any user. To specify the context user, use the user ID or the alias **me**.

**recentCommentCount**
- **Type:** Integer
- Maximum number of comments to return with each feed element. The default value is 3.

**density**
- **Type:** `ConnectApi.FeedDensity`
- Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- **Type:** String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in **null**, the first page is returned.

**pageSize**
- **Type:** Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**sortParam**
- **Type:** `ConnectApi.FeedSortOrder`
- Values are:
  - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - **CreatedDateDesc**—Sorts by most recent creation date.
  - **LastModifiedDateDesc**—Sorts by most recent activity.
  - **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
- If you pass in **null**, the default value **CreatedDateDesc** is used.

**filter**
- **Type:** `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

result

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: Void

`getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)`

Testing ConnectApi Code

`setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)`

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getFeedElementsFromFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

44.0

Signature

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`feedType`

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.UserProfile`.

`subjectId`

Type: `String`

The ID of any user. To specify the context user, use the user ID or the alias `me`.

1175
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
   Testing ConnectApi Code
   getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter, result)

Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
40.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String customFilter, ConnectApi.FeedElementPage result)

Parameters

communityId
   Type: String
   Use either the ID for a community, internal, or null.

feedType
   Type: ConnectApi.FeedType
   Value must be ConnectApi.FeedType.Record.

subjectId
   Type: String
   The ID of a case.

recentCommentCount
   Type: Integer
   Maximum number of comments to return with each feed element. The default value is 3.

density
   Type: ConnectApi.FeedDensity
   Specify the amount of content in a feed.
   • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- Relevance—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**customFilter**
Type: String
Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter)`
- Testing ConnectApi Code

`setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, result)`
Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedElementPage result)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

**subjectId**
Type: String
Any record ID, including a group ID.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**elementsPerBundle**
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
  Type: Void

  Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, result)
  Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
  32.0

Signature
  @public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

**showInternalOnly**

Type: Boolean

Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

**filter**

Type: ConnectApi.FeedFilter

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don't have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don't have a best answer.

**result**

Type: ConnectApi.FeedElementPage

The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

API Version

44.0

Signature

public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

**filter**
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- SolvedQuestions—Feed elements that are questions and that have a best answer.
- UnanswerededQuestions—Feed elements that are questions and that don’t have any answers.
- UnanswerededQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**threadedCommentsCollapsed**

Type: `Boolean`

Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

`getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, threadedCommentsCollapsed)`

**Testing ConnectApi Code**

`setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, result)`

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  
  Type: `String`

  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  
  Type: `ConnectApi.FeedType`

  Value must be `ConnectApi.FeedType.Record`. 
subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.
result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, threadedCommentsCollapsed, result)
Registers a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

```elementsPerBundle```
Type: `Integer`
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

```pageParam```
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

```pageSize```
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

```sortParam```
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

```showInternalOnly```
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

```customFilter```
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the `Metadata API Developer Guide` for supported values.

```threadedCommentsCollapsed```
Type: `Boolean`
Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`. 
**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

**Return Value**
Type: Void

Parameters
- communityId
  - Type: String
  - Use either the ID for a community, internal, or null.

- subjectId
  - Type: String
  - The ID of the context user or the alias me.
keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Testing ConnectApi Code

setTestGetFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)

Registers a ConnectApi.FeedElementPage object to be returned when the getFeedElementsFromFilterFeedUpdatedSince method is called in a test context.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)

Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter, result)

Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called
with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
32.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays
  custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also
displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`updatedSince`
Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

`filter`
Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don’t have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Unread`—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don’t have a best answer.

`result`
Type: `ConnectApi.FeedElementPage`

The object containing test data.
Return Value
Type: Void

SEE ALSO:
- getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter)
- Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
One of these values:
- Files
- Groups
- News
- People
- Record

**subjectId**
Type: String
If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the context user or the alias me.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)
- Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)
Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0
Signature

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```

Parameters

- `communityId`
  Type: String
  Use either the ID for a community, internal, or null.

- `feedType`
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

- `subjectId`
  Type: String
  Any record ID, including a group ID.

- `recentCommentCount`
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

- `density`
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- `pageParam`
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- `pageSize`
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- `updatedSince`
  Type: String
  An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.
  The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

- `showInternalOnly`
  Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)
Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter, result)
Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter)
Testing ConnectApi Code
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter, result)

Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
40.0

Signature

public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, String customFilter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**customFilter**
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter)`
- Testing ConnectApi Code

```
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, result)
```

Registers a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
31.0

**Signature**

```
Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or `null`.

`feedType`
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

`subjectId`
Type: String
Any record ID, including a group ID.

`recentCommentCount`
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

`elementsPerBundle`
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

`density`
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`updatedSince`
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

`showInternalOnly`
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

`result`
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter, result)

Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
32.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- SolvedQuestions—Feed elements that are questions and that have a best answer.
- UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

Registers a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
40.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.
subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

**setTestGetFeedItemsFromFeed(communityId, feedType, result)**

Registers a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFeed(communityId, feedType)
Testing ConnectApi Code
setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)

Registers a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastPublishedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.
result
  Type: `ConnectApi.FeedItemPage`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:

  - Testing ConnectApi Code

`setTestGetFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)`

Registers a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature
```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters
```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
`getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)`

public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedItemPage result)
```

Parameters

**communityId**
- Type: `String`
- Use either the ID for a community, `internal`, or `null`.

**feedType**
- Type: `ConnectApi.FeedType`
- The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

**subjectId**
- Type: `String`
- If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**result**
- Type: `ConnectApi.FeedItemPage`
- The object containing test data.

Return Value

- Type: `Void`

SEE ALSO:

- `getFeedItemsFromFeed(communityId, feedType, subjectId)`
- Testing ConnectApi Code

**setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)**

Registers a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version

- 28.0–31.0

Signature

```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
Type: String
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: `ConnectApi.FeedItemPage`
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
Testing ConnectApi Code

**setTestGetFeedItemsFromFeed**

```
setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)
```

Registers a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature
```
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

**subjectId**
Type: `String`
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:
- **CreatedByAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedByDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedByDesc` is used.

**result**
Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)`
- `setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)`

Registers a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

**API Version**

30.0–31.0
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedItemPage result)

Parameters

**communityId**
Type: String
Use either the ID for a community, _internal_, or _null_.

**feedType**
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
Type: String
If _feedType_ is _Record_, _subjectId_ can be any record ID, including a group ID. If _feedType_ is _Streams_, _subjectId_ must be a stream ID. If _feedType_ is _Topics_, _subjectId_ must be a topic ID. If _feedType_ is _UserProfile_, _subjectId_ can be any user ID. If the _feedType_ is any other value, _subjectId_ must be the ID of the context user or the alias _me_.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, _currentPageToken_ or _nextPageToken_. If you pass in _null_, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in _null_, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
Testing ConnectApi Code

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)
Registers a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.
keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)
Testing ConnectApi Code

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)
Registers a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

- Testing ConnectApi Code

**setTestGetFeedItemsFromFilterFeed**
(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Registers a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
29.0–31.0

**Signature**
```java
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```
Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**subjectId**
Type: `String`
The ID of the context user or the alias `me`.

**keyPrefix**
Type: `String`
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is `3`.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from `1` through `100`. If you pass in `null`, the default size is `25`.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.
result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)

setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)

Registers a ConnectApi.FeedItemPage object to be returned when the getFeedItemsFromFilterFeedUpdatedSince method is called in a test context.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String updatedSince, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**updatedSince**
Type: **String**

An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call `getFeedItemsFromFilterFeed` and take the value from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**result**
Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value
Type: **Void**

SEE ALSO:

- `getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)`
- Testing ConnectApi Code
setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, ConnectApi.FeedItemPage, results)

Registers a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedItemPage results)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**result**
- **Type:** `ConnectApi.FeedItemPage`
  - The object containing test data.

**Return Value**
- **Type:** Void

**SEE ALSO:**
- `getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)`
- `Testing ConnectApi Code`

**setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)**

Registers a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
- 30.0–31.0

**Signature**

```java
public static Void setTestGetFeedItemsUpdatedSince(String communityId,
                                                ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
                                                ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
                                                ConnectApi.FeedItemPage result)
```

**Parameters**

- **communityId**
  - **Type:** String
  - Use either the ID for a community, internal, or null.

- **feedType**
  - **Type:** `ConnectApi.FeedType`
  - One of these values:
    - Files
    - Groups
    - News
    - People
    - Record

- **subjectId**
  - **Type:** String
If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

`recentCommentCount`  
Type: `Integer`  
The maximum number of comments to return with each feed item. The default value is 3.

`density`  
Type: `ConnectApi.FeedDensity`  
Specify the amount of content in a feed.  
- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.  
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`  
Type: `String`  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`  
Type: `Integer`  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`updatedSince`  
Type: `String`  
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

`result`  
Type: `ConnectApi.FeedItemPage`  
The object containing test data.

Return Value  
Type: `Void`  

SEE ALSO:  
- `getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)`
- `setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)`

API Version  
30.0–31.0
Signature

```java
public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedItemPage result)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, *internal*, or *null*.

**feedType**
Type: `ConnectApi.FeedType`
One of these values:
- Files
- Groups
- News
- People
- Record

**subjectId**
Type: `String`
If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias *me*.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in *null*, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in *null*, the default size is 25.

**updatedSince**
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the `ConnectApi.FeedItemPage` response body.

`showInternalOnly`
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

`result`
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`
- Testing ConnectApi Code

`setTestGetRelatedPosts(communityId, feedElementId, filter, maxResults, result)`
Registers a `ConnectApi.RelatedFeedPosts` object to be returned when the matching `ConnectApi.getRelatedPosts(communityId, feedElementId, filter, maxResults)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
37.0

Signature
```
public static Void setTestGetRelatedPosts(String communityId, String feedElementId,
ConnectApi.RelatedFeedPostType filter, Integer maxResults, ConnectApi.RelatedFeedPosts
result)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedElementId`
Type: `String`
ID of the feed element. The feed element must be a question.

`filter`
Type: `ConnectApi.RelatedFeedPostType`
Specifies the type of related feed post. Values are:
• Answered—Related questions that have at least one answer.
• BestAnswer—Related questions that have a best answer.
• Generic—All types of related questions, including answered, with a best answer, and unanswered.
• Unanswered—Related questions that don’t have answers.

_GENERIC is the default value._

**maxResults**
Type: Integer

The maximum number of results to return. You can return up to 25 results; 5 is the default.

**result**
Type: ConnectApi.RelatedFeedPosts

The object containing test data.

In version 37.0 and later, related feed posts are questions.

Return Value
Type: Void

**setTestGetTopUnansweredQuestions(communityId, result) (Pilot)**

Registers a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters or you receive an exception.

Note: We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version
42.0

Signature
`public static Void setTestGetTopUnansweredQuestions(String communityId, ConnectApi.FeedElementPage result)`

Parameters

**communityId**
Type: String

ID of the community.

**result**
Type: ConnectApi.FeedElementPage

The object containing test data.
Return Value
Type: Void

SEE ALSO:
- `getTopUnansweredQuestions(communityId)` (Pilot)

**setTestGetTopUnansweredQuestions(communityId, filter, result)** (Pilot)

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getTopUnansweredQuestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

⚠️ **Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version
42.0

Signature
```java
public static Void setTestGetTopUnansweredQuestions(String communityId, 
ConnectApi.TopUnansweredQuestionsFilterType filter, ConnectApi.FeedElementPage result)
```

Parameters
- **communityId**
  Type: String
  ID of the community.
- **filter**
  Type: `ConnectApi.FeedFilter`
  Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.
- **result**
  Type: `ConnectApi.FeedElementPage`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
- getTopUnansweredQuestions(communityId, filter) (Pilot)
- Testing ConnectApi Code

**setTestGetTopUnansweredQuestions(communityId, pageSize, result) (Pilot)**

Registers a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters or you receive an exception.

⚠️ **Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. API Version
42.0

Signature
```java
public static Void setTestGetTopUnansweredQuestions(String communityId,
    ConnectApi.FeedFilter filter, Integer pageSize, ConnectApi.FeedElementPage result)
```

Parameters
- **communityId**
  Type: `String`
  ID of the community.
- **filter**
  Type: `ConnectApi.FeedFilter`
  Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.
- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.
- **result**
  Type: `ConnectApi.FeedElementPage`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

setTestSearchFeedElements(communityId, q, result)
Registers a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElements(String communityId, String q, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedElements(communityId, q)

Testing ConnectApi Code
**setTestSearchFeedElements(communityId, q, sortParam, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

31.0

**Signature**

```java
public static Void setTestSearchFeedElements(String communityId, String q,
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **q**
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

- **sortParam**
  Type: `ConnectApi.FeedSortOrder`
  Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
  If you pass in `null`, the default value `CreatedDateDesc` is used.

- **result**
  Type: `ConnectApi.FeedElementPage`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedElements(communityId, q, sortParam)

**setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)**

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature
```java
public static Void setTestSearchFeedElements(String communityId, String q, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- **q**
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **threadedCommentsCollapsed**
  Type: `Boolean`
  Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

- **result**
  Type: `ConnectApi.FeedElementPage`
  The object containing test data.
Return Value
Type: Void

setTestSearchFeedElements(communityId, q, pageParam, pageSize, result)
Registers a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElements(String communityId, String q, String
pageParam, Integer pageSize, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.D

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including
wildcards. See Wildcards.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken
or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
```java
public static Void setTestSearchFeedElements(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage

setTestSearchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)

Registers a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElements(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

### recentCommentCount

**Type:** Integer

Maximum number of comments to return with each feed element. The default value is 3.

### pageParam

**Type:** String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

### pageSize

**Type:** Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

### sortParam

**Type:** `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

### result

**Type:** `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

**Type:** Void

SEE ALSO:

- `searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)`
- **Testing ConnectApi Code**

### setTestSearchFeedElementsInFeed(communityId, feedType, q, result)

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

31.0
Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String q, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedType**
  - Type: ConnectApi.FeedType
  - The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

- **q**
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **result**
  - Type: ConnectApi.FeedElementPage
  - The object containing test data.

Return Value

- Type: Void

SEE ALSO:

- `searchFeedElementsInFeed(communityId, feedType, q)`
- Testing ConnectApi Code

```java
setTestSearchFeedElementsInFeed(communityId, feedType, pageParam, pageSize,
sortParam, q, result)
```

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

31.0

Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```
Parameters

**communityId**
  Type: String
  Use either the ID for a community, internal, or null.

**feedType**
  Type: ConnectApi.FeedType
  The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

**pageParam**
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
  Type: ConnectApi.FeedSortOrder
  Values are:
  - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - **CreatedDateDesc**—Sorts by most recent creation date.
  - **LastModifiedDateDesc**—Sorts by most recent activity.
  - **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  - **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

**q**
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
  Type: Void

SEE ALSO:
  - searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
  - Testing ConnectApi Code
setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Registers a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

`q`

- **Type**: String
- Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`result`

- **Type**: ConnectApi.FeedElementPage
- The object containing test data.

Return Value

- **Type**: Void

SEE ALSO:

```
searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
```

**Testing ConnectApi Code**

```
setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)
```

Registers a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

32.0

**Signature**

```
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
filter
Type: ConnectApi.FeedFilter

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don't have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don't have a best answer.

result
Type: ConnectApi.FeedElementPage

The object containing test data.

Return Value
Type: Void

SEE ALSO:

- searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)
- Testing ConnectApi Code

**setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)**

Registers a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0
Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
        ConnectApi.FeedType feedType, String subjectId, String q,
        ConnectApi.FeedElementPage result)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

- `subjectId`
  - Type: String
  - If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

- `q`
  - Type: String
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

- `result`
  - Type: `ConnectApi.FeedElementPage`
  - The object containing test data.

Return Value

- Type: Void

SEE ALSO:

- `searchFeedElementsInFeed(communityId, feedType, subjectId, q)`
- Testing `ConnectApi` Code

```java
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam,
        pageSize, sortParam, q, result)
```

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

31.0
Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
- Type: String
  - Use either the ID for a community, internal, or null.

**feedType**
- Type: ConnectApi.FeedType
  - The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**
- Type: String
  - If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**pageParam**
- Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- Type: ConnectApi.FeedSortOrder
  - Order of feed items in the feed.
    - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - **CreatedDateDesc**—Sorts by most recent creation date.
    - **LastModifiedDateDesc**—Sorts by most recent activity.
    - **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
    - **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  - If you pass in null, the default value CreatedDateDesc is used.

**q**
- Type: String
  - Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.
result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)

Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Registers a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)`
- Testing ConnectApi Code
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)

Registers a ConnectApi.FeedElementPage object to be returned when searchFeedElementsInFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.UserProfile.

subjectId
  Type: String
  The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  The amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

**filter**
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)`
- **Testing ConnectApi Code**

`setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter, result)`

Registers a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
4.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, String customFilter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
The amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• **CreatedDateDesc**—Sorts by most recent creation date.
• **LastModifiedDateDesc**—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in **null**, the default value **CreatedDateDesc** is used.

**q**

Type: **String**

One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See [Wildcards](#).

**customFilter**

Type: **String**

Custom filter that applies only to the case feed. See [customFeedFilter](#) in the Metadata API Developer Guide for supported values.

**result**

Type: **ConnectApi.FeedElementPage**

The object containing test data.

**Return Value**

Type: Void

- [Testing ConnectApi Code](#)

**setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)**

Registers a **ConnectApi.FeedElementPage** object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

31.0

**Signature**

```java
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
```
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
 Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.
q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
showInternalOnly
  Type: Boolean
  Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.
result
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)

Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter, result)

Registers a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
32.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
**feedType**  
Type: ConnectApi.FeedType  
Value must be ConnectApi.FeedType.Record.

**subjectId**  
Type: String  
Any record ID, including a group ID.

**recentCommentCount**  
Type: Integer  
Maximum number of comments to return with each feed element. The default value is 3.

**density**  
Type: ConnectApi.FeedDensity  
Specify the amount of content in a feed.  
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.  
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**  
Type: String  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**  
Type: Integer  
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**  
Type: ConnectApi.FeedSortOrder  
Values are:  
- **CreateDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.  
- **CreateDateDesc**—Sorts by most recent creation date.  
- **LastModifiedDateDesc**—Sorts by most recent activity.  
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.  
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.  
If you pass in null, the default value CreatedDateDesc is used.

**q**  
Type: String  
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**  
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

**filter**
Type: ConnectApi.FeedFilter

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**result**
Type: ConnectApi.FeedElementPage

The object containing test data.

Return Value
Type: Void

API Version
40.0

Signature

public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)

Registers a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0
Signature

```java
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  
  Type: String
  
  Use either the ID for a community, internal, or null.

- **subjectId**
  
  Type: String
  
  The ID of the context user or the alias me.

- **keyPrefix**
  
  Type: String
  
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- **pageParam**
  
  Type: String
  
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  
  Type: Integer
  
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **sortParam**
  
  Type: ConnectApi.FeedSortOrder
  
  Values are:
  
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
  - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

  If you pass in null, the default value CreatedDateDesc is used.

- **q**
  
  Type: String
  
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **result**
  
  Type: ConnectApi.FeedElementPage
  
  The object containing test data.
Return Value
Type: Void

Testing ConnectApi Code

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Registers a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same
parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
 Type: String
 Use either the ID for a community, internal, or null.

subjectId
 Type: String
 The ID of the context user or the alias me.

keyPrefix
 Type: String
 A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
 Type: Integer
 Maximum number of comments to return with each feed element. The default value is 3.

density
 Type: ConnectApi.FeedDensity
 Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also
displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken
or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration,
  Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the
  ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including
wildcards. See Wildcards.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

- Testing ConnectApi Code

setTestSearchFeedItems(communityId, q, sortParam, result)

Registers a test feed item page to be returned when searchFeedItems(String, String, ConnectApi.FeedSortOrder) is called during a test.

API Version
28.0–31.0

Signature

public static Void setTestSearchFeedItems(String communityId, String q, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
Type: `ConnectApi.FeedItemPage`
The feed item test page.

Return Value
Type: Void

SEE ALSO:
- `searchFeedItems(communityId, q, sortParam)`
- Testing ConnectApi Code

**setTestSearchFeedItems(communityId, q, pageParam, pageSize, result)**
Registers a test feed item page to be returned when `searchFeedItems(String, String, String, Integer)` is called during a test.

API Version
28.0–31.0

Signature
```
public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedItemPage result)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`. 
Search Feed Items

```
public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Registers a test feed item page to be returned when `searchFeedItems(String, String, String, Integer, ConnectApi.FeedSortOrder)` is called during a test.

**Parameters**

- `communityId`
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- `q`
  Type: String
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `pageParam`
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  Type: Integer
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `result`
  Type: `ConnectApi.FeedItemPage`
  The test feed item page.

**Return Value**

Type: Void

**SEE ALSO:**

- `searchFeedItems(communityId, q, pageParam, pageSize)`
- Testing ConnectApi Code
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See *Wildcards*.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
Type: `ConnectApi.FeedItemPage`
The test feed item page.

Return Value
Type: `Void`

SEE ALSO:
- `searchFeedItems(communityId, q, pageParam, pageSize, sortParam)`
- `Testing ConnectApi Code`

**setTestSearchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)**
 Registers a test feed item page to be returned when `searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)` is called during a test.

**API Version**
29.0–31.0
Signature

```java
public static Void setTestSearchFeedItems(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
Type: `ConnectApi.FeedItemPage`
The test feed item page.
Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, q, result)
Registers a ConnectApi.FeedItemPage object to be returned when the matching
ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you
receive an exception.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType
feedType, String q, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation,
and PendingReview.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including
wildcards. See Wildcards.

result
Type: ConnectApi.FeedItemPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:

setTestSearchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)

Registers a ConnectApi.FeedItemPage object to be returned when the matching
ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
**Sorts by most recent creation date.**

**Sorts by most recent activity.**

**Sorts by most viewed content.** This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.

**Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value `CreateDateDesc` is used.**

**q**  
Type: `String`  
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

**result**  
Type: `ConnectApi.FeedItemPage`  
The object containing test data.

Return Value  
Type: `Void`

SEE ALSO:  
`searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)`

### setTestSearchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Registers a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version  
29.0–31.0

Signature  
```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```

Parameters  
**communityId**  
Type: `String`  
Use either the ID for a community, internal, or `null`.
**feedType**

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

**recentCommentCount**

Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

**density**

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreateDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreateDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreateDateDesc` is used.

**q**

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

**result**

Type: `ConnectApi.FeedItemPage`

The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, q, result)

Registers a ConnectApi.FeedItemPage object to be returned when the matching
ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType
feedType, String subjectId, String q, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedItemPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:

```
Parameters

**communityId**
- **Type:** String
  - Use either the ID for a community, internal, or `null`.

**feedType**
- **Type:** ConnectApi.FeedType
  - The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**
- **Type:** String
  - If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**recentCommentCount**
- **Type:** Integer
  - The maximum number of comments to return with each feed item. The default value is 3.

**density**
- **Type:** ConnectApi.FeedDensity
  - Specify the amount of content in a feed.
    - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- **Type:** String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- **Type:** Integer
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
- **Type:** ConnectApi.FeedSortOrder
  - Values are:
    - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - **CreatedDateDesc**—Sorts by most recent creation date.
    - **LastModifiedDateDesc**—Sorts by most recent activity.
    - **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
    - **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
- Type: `String`
- Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

`result`
- Type: `ConnectApi.FeedItemPage`
- The object containing test data.

Return Value
- Type: `Void`

SEE ALSO:
- `searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)`
- Testing ConnectApi Code

```
setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)
```

Registers a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
- 29.0–31.0

Signature
```
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedItemPage result)
```

Parameters
- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`. 
**subjectId**
Type: String

If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**recentCommentCount**
Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: ConnectApi.FeedDensity

Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

**pageSize**
Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder

Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)

Registers a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q, ConnectApi.FeedItemPage result)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**subjectId**
Type: String
The ID of the context user or the alias me.

**keyPrefix**
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
result
  Type: ConnectApi.FeedItemPage
  Specify the test feed item page.

Return Value
Type: Void

  searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)

Testing ConnectApi Code

setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)

Registers a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: `ConnectApi.FeedItemPage`
Specify the test feed item page.

**Return Value**
Type: Void

- Testing ConnectApi Code

**setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)**

Registers a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
29.0–31.0

Signature
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters

```java
communityId
Type: String
Use either the ID for a community, internal, or null.
```

```java
feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.
```

```java
subjectId
Type: String
The ID of the context user or the alias me.
```

```java
keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
```

```java
recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.
```

```java
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
```

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

```java
pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
```

```java
pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
```
sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedItemPage
Specify the test feed item page.

Return Value
Type: Void

SEE ALSO:
searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Testing ConnectApi Code

setTestSearchStreams(communityId, q, result)
Registers a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStream(communityId, q) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestSearchStreams(String communityId, String q, ConnectApi.ChatterStreamPage result)
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.ChatterStreamPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchStreams(communityId, q)
Testing ConnectApi Code

setTestSearchStreams(communityId, q, sortParam, result)
Registers a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStream(communityId, q, sortParam) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
code
public static Void setTestSearchStreams(String communityId, String q, ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:

- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is **Ascending**.

**result**

Type: `ConnectApi.ChatterStreamPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

### setTestSearchStreams(communityId, q, pageParam, pageSize, result)

Registers a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStreams(communityId, q, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterStreamPage result)
```

Parameters

**communityId**

Type: `String`

Use either the ID for a community, `internal`, or `null`.

**q**

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**

Type: `Integer`

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

result
Type: ConnectApi.ChatterStreamPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)
Registers a ConnectApi.ChatterStreamPage object to be returned when the matching
ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam) method is called in
a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam,
Integer pageSize, ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.
sortParam
Type: `ConnectApi.SortOrder`
Specifies the sort order. Values are:
- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is **Ascending**.

result
Type: `ConnectApi.ChatterStreamPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchStreams(communityId, q, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

**setTestSearchStreams** *(communityId, q, pageParam, pageSize, sortParam, globalScope, result)*

Registers a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStreams*(communityId, q, pageParam, pageSize, sortParam, globalScope)*` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
41.0

Signature

```java
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam,
Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope,
ConnectApi.ChatterStreamPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **q**
  Type: `String`
Required and cannot be **null**. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

**pageParam**
- **Type:** Integer
- Specifies the number of the page you want returned. Starts at 0. If you pass in **null** or 0, the first page is returned.

**pageSize**
- **Type:** Integer
- Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

**sortParam**
- **Type:** `ConnectApi.SortOrder`
- Specifies the sort order. Values are:
  - **Ascending**—Items are in ascending alphabetical order (A-Z).
  - **Descending**—Items are in descending alphabetical order (Z-A).
  - **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  
  If not specified, default value is **Ascending**.

**globalScope**
- **Type:** Boolean
- Specifies whether to get streams from all the context user's communities, regardless of the `communityId` value.

**result**
- **Type:** `ConnectApi.ChatterStreamPage`
- The object containing test data.

**Return Value**
- **Type:** Void

### ChatterGroups Class

Information about groups, such as the group's members, photo, and the groups the specified user is a member of. Add members to a group, remove members, and change the group photo.

**Namespace**
- ConnectApi

**ChatterGroups Methods**

The following are methods for ChatterGroups. All methods are static.

**IN THIS SECTION:**
- **addMember(communityId, groupId, userId)**
  Adds the specified user to the specified group in the specified community as a standard member. To execute this method, the context user must be the group owner or moderator.
addMemberWithRole(communityId, groupId, userId, role)
Adds the specified user with the specified role to the specified group in the specified community. To execute this method, the context user must be the group owner or moderator.

addRecord(communityId, groupId, recordId)
Associates a record with a group.

createGroup(communityId, groupInput)
Creates a group.

deleteBannerPhoto(communityId, groupId)
Delete a group banner photo.

deleteGroup(communityId, groupId)
Delete a group.

deleteMember(communityId, membershipId)
Deletes the specified group membership.

deletePhoto(communityId, groupId)
Deletes the photo of the specified group.

getAnnouncements(communityId, groupId)
Gets the first page of announcements in a group.

getAnnouncements(communityId, groupId, pageParam, pageSize)
Gets the specified page of announcements in a group. You can also specify the page size.

getBannerPhoto(communityId, groupId)
Get a group banner photo.

getGroup(communityId, groupId)
Returns information about the specified group.

getGroupBatch(communityId, groupIds)
Gets information about the specified list of groups. Returns a list of BatchResult objects containing ConnectApi.ChatterGroup objects. Returns errors embedded in the results for groups that couldn't be loaded.

getGroupMembershipRequest(communityId, requestId)
Returns information about the specified request to join a private group.

getGroupMembershipRequests(communityId, groupId)
Returns information about every request to join the specified private group.

getGroupMembershipRequests(communityId, groupId, status)
Returns information about every request to join the specified private group that has a specified status.

groups(communityId)
Returns the first page of all the groups. The page contains the default number of items.

groups(communityId, pageParam, pageSize)
Returns the specified page of information about all groups.

groups(communityId, pageParam, pageSize, archiveStatus)
Returns the specified page of information about a set of groups with a specified group archive status.

getMember(communityId, membershipId)
Returns information about the specified group member.
getMembers(communityId, groupId)
Get the first page of information about members of a group. The page contains the default number of items.

getMembers(communityId, groupId, pageParam, pageSize)
Get the specified page of information about members of a group.

getMembershipBatch(communityId, membershipIds)
Gets information about the specified list of group memberships. Returns a list of BatchResult objects containing ConnectApi.GroupMember objects. Returns errors embedded in the results for group memberships that couldn’t be accessed.

getMyChatterSettings(communityId, groupId)
Returns the context user’s Chatter settings for the specified group.

getPhoto(communityId, groupId)
Returns information about the photo for the specified group.

getRecord(communityId, groupRecordId)
Returns information about a record associated with a group.

getRecords(communityId, groupId)
Returns the first page of records associated with the specified group. The page contains the default number of items.

getRecords(communityId, groupId, pageParam, pageSize)
Returns the specified page from the list of records associated with a group.

inviteUsers(groupId, invite)
Invite internal and external users to join a group.

postAnnouncement(communityId, groupId, announcement)
Posts an announcement to the group.

removeRecord(communityId, groupRecordId)
Removes the association of a record with a group.

requestGroupMembership(communityId, groupId)
Requests membership in a private group for the context user.

searchGroups(communityId, q)
Returns the first page of groups that match the specified search criteria. The page contains the default number of items.

searchGroups(communityId, q, pageParam, pageSize)
Returns the specified page of groups that match the specified search criteria.

searchGroups(communityId, q, archiveStatus, pageParam, pageSize)
Returns the specified page of groups that match the specified search criteria and that have the specified archive status.

setBannerPhoto(communityId, groupId, fileId, versionNumber)
Sets the group banner photo to an already uploaded file.

setBannerPhoto(communityId, groupId, fileUpload)
Sets the group banner photo to a file that hasn’t been uploaded.

setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto)
Sets and crops an already uploaded file as the group banner photo.

setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)
Sets the group banner photo to a file that hasn’t been uploaded and requires cropping.

setPhoto(communityId, groupId, fileId, versionNumber)
Sets the group photo to an already uploaded file.
addMember(communityId, groupId, userId)
Adds the specified user to the specified group in the specified community as a standard member. To execute this method, the context user must be the group owner or moderator.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMember addMember(String communityId, String groupId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.
`userId`
Type: `String`
The ID for a user.

Return Value
Type: `ConnectApi.GroupMember`

`addMemberWithRole(communityId, groupId, userId, role)`
Adds the specified user with the specified role to the specified group in the specified community. To execute this method, the context user must be the group owner or moderator.

API Version
29.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.GroupMember addMemberWithRole(String communityId, String groupId, String userId, ConnectApi.GroupMembershipType role)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`groupId`
Type: `String`
The ID for a group.

`userId`
Type: `String`
The ID for a user.

`role`
Type: `ConnectApi.GroupMembershipType`
The group membership type. One of these values:
- GroupManager
- StandardMember

Return Value
Type: `ConnectApi.GroupMember`
addRecord(communityId, groupId, recordId)
Associates a record with a group.

API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupRecord addRecord(String communityId, String groupId, String recordId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  ID of the group with which to associate the record.

recordId
  Type: String
  ID of the record to associate with the group.

Return Value
Type: ConnectApi.GroupRecord

createGroup(communityId, groupInput)
Creates a group.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupDetail createGroup(String, communityId, ConnectApi.ChatterGroupInput groupInput)
Parameters

**communityId**
- Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

**groupInput**
- Type: `ConnectApi.ChatterGroupInput`
  - The properties of the group.

Return Value
- Type: `ConnectApi.ChatterGroupDetail`

**deleteBannerPhoto(communityId, groupId)**
Delete a group banner photo.

API Version
- 36.0

Requires Chatter
- Yes

Signature
- `public static Void deleteBannerPhoto(String communityId, String groupId)`

Parameters

**communityId**
- Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

**groupId**
- Type: `String`
  - ID of the group.

Return Value
- Type: `Void`

Usage
- This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**deleteGroup(communityId, groupId)**
Delete a group.
API Version
29.0

Requires Chatter
Yes

Signature
public static Void deleteGroup(String communityId, String groupId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  The ID for a group.

Return Value
Type: Void

deleteMember(communityId, membershipId)
Deletes the specified group membership.

API Version
28.0

Requires Chatter
Yes

Signature
public static Void deleteMember(String communityId, String membershipId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

membershipId
  Type: String
  The ID for a membership.
deletePhoto(communityId, groupId)

Deletes the photo of the specified group.

API Version
28.0

Requires Chatter
Yes

Signature
public static Void deletePhoto(String communityId, String groupId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

getAnnouncements(communityId, groupId)

Gets the first page of announcements in a group.

API Version
31.0
requires Chatter
Yes

Signature
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.AnnouncementPage

Usage
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the ConnectApi.Announcements class.

getAnnouncements(communityId, groupId, pageParam, pageSize)
Gets the specified page of announcements in a group. You can also specify the page size.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.
**groupId**
Type: String
The ID for a group.

**pageParam**
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.AnnouncementPage

Usage
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the ConnectApi.Announcements class.

**getBannerPhoto(communityId, groupId)**
Get a group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String groupId)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**groupId**
Type: String
The ID of the group.

Return Value
Type: ConnectApi.BannerPhoto
**getGroup(communityId, groupId)**

Returns information about the specified group.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterGroupDetail getGroup(String communityId, String groupId)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.
- **groupId**
  - Type: String
  - The ID for a group.

Return Value
Type: ConnectApi.ChatterGroupDetail

**getGroupBatch(communityId, groupIds)**

Gets information about the specified list of groups. Returns a list of BatchResult objects containing ConnectApi.ChatterGroup objects. Returns errors embedded in the results for groups that couldn’t be loaded.

API Version
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.BatchResult[] getGroupBatch(String communityId, List<String> groupIds)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupIds
  Type: List<String>
  A list of up to 500 group IDs.

Return Value

Type: BatchResult[]

The BatchResult.getResult() method returns a ConnectApi.ChatterGroup object.

Example

```java
// Create a list of groups.
ConnectApi.ChatterGroupPage groupPage = ConnectApi.ChatterGroups.getGroups(null);

// Create a list of group IDs.
List<String> groupIds = new List<String>();
for (ConnectApi.ChatterGroup aGroup : groupPage.groups){
    groupIds.add(aGroup.id);
}

// Get info about all the groups in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null, groupIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the number of members in each group.
        ConnectApi.ChatterGroup aGroup;
        if (batchResult.getResult() instanceof ConnectApi.ChatterGroup) {
            aGroup = (ConnectApi.ChatterGroup) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aGroup.memberCount);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

SEE ALSO:

getMembershipBatch(communityId, membershipIds)
getGroupMembershipRequest(communityId, requestId)

Returns information about the specified request to join a private group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMembershipRequest getGroupMembershipRequest(String
communityId, String requestId)

Parameters

requestId
Type: String
The ID of a request to join a private group.

Return Value
Type: ConnectApi.GroupMembershipRequest

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

groupMembershipRequests (communityId, groupId)

Returns information about every request to join the specified private group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String
communityId, String groupId)
Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`groupId`
Type: `String`
The ID for a group.

Return Value
Type: `ConnectApi.GroupMembershipRequests`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

```java
getGroupMembershipRequests(communityId, groupId, status)
```
Returns information about every request to join the specified private group that has a specified status.

API Version
28.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String communityId, String groupId, ConnectApi.GroupMembershipRequestStatus status)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`groupId`
Type: `String`
The ID for a group.

`status`
Type: `ConnectApi.GroupMembershipRequestStatus`
`status`—Status of a request to join a private group.
- `Accepted`—Status of a request to join a private group.
- `Declined`—Status of a request to join a private group.
Return Value
Type: `ConnectApi.GroupMembershipRequests`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**getGroups(communityId)**
Returns the first page of all the groups. The page contains the default number of items.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterGroupPage getGroups(String communityId)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.ChatterGroupPage`

**getGroups(communityId, pageParam, pageSize)**
Returns the specified page of information about all groups.

API Version
28.0

Available to Guest Users
31.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `pageParam`
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.ChatterGroupPage`

```java
getGroups(communityId, pageParam, pageSize)
```

Returns the specified page of information about a set of groups with a specified group archive status.

API Version
29.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize, ConnectApi.GroupArchiveStatus archiveStatus)
```

Parameters

- `communityId`
  - Type: `String`
Use either the ID for a community, internal, or null.

**pageParam**

Type: Integer

Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**

Type: Integer

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**archiveStatus**

Type: `ConnectApi.GroupArchiveStatus`

Set of groups based on whether the groups are archived or not.

- **All**—All groups, including groups that are archived and groups that are not archived.
- **Archived**—Only groups that are archived.
- **NotArchived**—Only groups that are not archived.

If you pass in null, the default value is All.

**Return Value**

Type: `ConnectApi.ChatterGroupPage`

**getMember(communityId, membershipId)**

Returns information about the specified group member.

**API Version**

28.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.GroupMember getMember(String communityId, String membershipId)
```

**Parameters**

- **communityId**
  
  Type: String
  
  Use either the ID for a community, internal, or null.

- **membershipId**
  
  Type: String
  
  The ID for a membership.
Return Value
Type: `ConnectApi.GroupMember`

**getMembers(communityId, groupId)**
Get the first page of information about members of a group. The page contains the default number of items.

API Version
28.0

Available to Guest Users
36.0

Requires Chatter
Yes

Signature
`public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId)`

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `groupId`
  Type: `String`
  The ID for a group.

Return Value
Type: `ConnectApi.GroupMemberPage`

**getMembers(communityId, groupId, pageParam, pageSize)**
Get the specified page of information about members of a group.

API Version
28.0

Available to Guest Users
36.0
Requires Chatter
Yes

Signature
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId,
Integer pageParam, Integer pageSize)

Parameters

**communityId**
Type: String
Use either the ID for a community, **internal**, or **null**.

**groupId**
Type: String
The ID for a group.

**pageParam**
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in **null** or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

Return Value
Type: ConnectApi.GroupMemberPage

getMembershipBatch(communityId, membershipIds)

Gets information about the specified list of group memberships. Returns a list of BatchResult objects containing ConnectApi.GroupMember objects. Returns errors embedded in the results for group memberships that couldn’t be accessed.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getMembershipBatch(String communityId,
List<String> membershipIds)
Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **membershipIds**
  - Type: List<String>
  - A list of up to 500 group membership IDs.

Return Value

- Type: BatchResult[]

  The BatchResult `getResults()` method returns a ConnectApi.GroupMember object.

Example

```java
// Get members of a group.
ConnectApi.GroupMemberPage membersPage = ConnectApi.ChatterGroups.getMembers(null, '0F9D00000000oOT');

// Create a list of membership IDs.
List<String> membersList = new List<String>();
for (ConnectApi.GroupMember groupMember : membersPage.members){
    membersList.add(groupMember.id);
}

// Get info about all group memberships in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getMembershipBatch(null, membersList);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the first name of each member.
        ConnectApi.GroupMember groupMember;
        if(batchResult.getResult() instanceof ConnectApi.GroupMember) {
            groupMember = (ConnectApi.GroupMember) batchResult.getResult();
            System.debug('SUCCESS');
            System.debug(groupMember.user.firstName);
        }
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

SEE ALSO:

- `getGroupBatch(communityId, groupIds)`
**getMyChatterSettings(communityId, groupId)**

Returns the context user’s Chatter settings for the specified group.

API Version
28.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupChatterSettings getMyChatterSettings(String communityId, String groupId)
```

Parameters

- **communityId**
  
  Type: **String**
  
  Use either the ID for a community, internal, or null.

- **groupId**
  
  Type: **String**
  
  The ID for a group.

Return Value

Type: **ConnectApi.GroupChatterSettings**

**getPhoto(communityId, groupId)**

Returns information about the photo for the specified group.

API Version
28.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo getPhoto(String communityId, String groupId)
```

Parameters

- **communityId**
  
  Type: **String**
Use either the ID for a community, internal, or null.

**groupId**
Type: String
The ID for a group.

Return Value
Type: ConnectApi.Photo

**getRecord(communityId, groupRecordId)**
Returns information about a record associated with a group.

API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupRecord getRecord(String communityId, String groupRecordId)

Parameters
**communityId**
Type: String
Use either the ID for a community, internal, or null.

**groupRecordId**
Type: String
ID of the group record.

Return Value
Type: ConnectApi.GroupRecord

**getRecords(communityId, groupId)**
Returns the first page of records associated with the specified group. The page contains the default number of items.

API Version
33.0

Requires Chatter
Yes
Signature

public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  The ID for a group.

Return Value

Type: ConnectApi.GroupRecordPage

getRecords(communityId, groupId, pageParam, pageSize)

Returns the specified page from the list of records associated with a group.

API Version

33.0

Requires Chatter

Yes

Signature

public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId, Integer pageParam, Integer pageSize)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  The ID for a group.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.GroupRecordPage`

`inviteUsers(groupId, invite)`
Invite internal and external users to join a group.

API Version
39.0

Requires Chatter
Yes

Signature
`public static ConnectApi.Invitations inviteUsers(String groupId, ConnectApi.InviteInput invite)`

Parameters
`groupId`
Type: `String`
ID of the group.

`invite`
Type: `ConnectApi.InviteInput`
A `ConnectApi.InviteInput` body.

Return Value
Type: `ConnectApi.Invitations`

`postAnnouncement(communityId, groupId, announcement)`
Posts an announcement to the group.

API Version
31.0

Requires Chatter
Yes
public static ConnectApi.Announcement postAnnouncement(String communityId, String groupId, ConnectApi.AnnouncementInput announcement)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

announcement
Type: ConnectApi.AnnouncementInput
A ConnectApi.AnnouncementInput object.

Return Value
Type: ConnectApi.Announcement

Usage
Use an announcement to highlight information. Users can discuss, like, and post comments on announcements. Deleting the feed post deletes the announcement.

To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the ConnectApi.Announcements class.

removeRecord(communityId, groupRecordId)
Removes the association of a record with a group.

API Version
34.0

Requires Chatter
Yes

Signature
public static Void removeRecord(String communityId, String groupRecordId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.
groupRecordId
  Type: String
  ID of the group record.

Return Value
Type: Void

requestGroupMembership(communityId, groupId)
Requests membership in a private group for the context user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMembershipRequest requestGroupMembership(String communityId, String groupId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  The ID for a group.

Return Value
Type: ConnectApi.GroupMembershipRequest

Sample: Requesting to Join a Private Group
This sample code calls ConnectApi.ChatterGroups.requestGroupMembership to request to join a private group.

String communityId = null;
ID groupId = '0F9x00000000hAZ';

ConnectApi.GroupMembershipRequest membershipRequest =
ConnectApi.ChatterGroups.requestGroupMembership(communityId, groupId);
**searchGroups(communityId, q)**

Returns the first page of groups that match the specified search criteria. The page contains the default number of items.

**Parameters**

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: String
  - `q`—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

**Return Value**

Type: `ConnectApi.ChatterGroupPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestSearchGroups(communityId, q, result)`
- Testing ConnectApi Code

**searchGroups(communityId, q, pageParam, pageSize)**

Returns the specified page of groups that match the specified search criteria.
API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
q—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterGroupPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchGroups(communityId, q, pageParam, pageSize, result)
Testing ConnectApi Code
**searchGroups(communityId, q, archiveStatus, pageParam, pageSize)**

Returns the specified page of groups that match the specified search criteria and that have the specified archive status.

**API Version**
29.0

**Available to Guest Users**
31.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q,
ConnectApi.GroupArchiveStatus archiveStatus, Integer pageParam, Integer pageSize)
```

**Parameters**

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **q**
  Type: `String`
  `q`—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

- **archiveStatus**
  Type: `ConnectApi.GroupArchiveStatus`
  `archiveStatus` Set of groups based on whether the groups are archived or not.
  
  - **All**—All groups, including groups that are archived and groups that are not archived.
  - **Archived**—Only groups that are archived.
  - **NotArchived**—Only groups that are not archived.

- **pageParam**
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**Return Value**

Type: `ConnectApi.ChatterGroupPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchGroups(communityId, q, archiveStatus, pageParam, pageSize, result)`
- Testing ConnectApi Code

`setBannerPhoto(communityId, groupId, fileId, versionNumber)`

Sets the group banner photo to an already uploaded file.

API Version
36.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId, String fileId, Integer versionNumber)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `groupId`
  - Type: `String`
  - The ID of the group.

- `fileId`
  - Type: `String`
  - The ID of the already uploaded file. The key prefix must be 069, and the image must be smaller than 8 MB.

- `versionNumber`
  - Type: `Integer`
  - Version number of the existing file. Specify either an existing version number or, to get the latest version, specify `null`.

Return Value

Type: `ConnectApi.BannerPhoto`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Photos are processed asynchronously and may not be visible right away.

**setBannerPhoto(communityId, groupId, fileUpload)**

Sets the group banner photo to a file that hasn’t been uploaded.

API Version
36.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId, ConnectApi.BinaryInput fileUpload)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **groupId**
  Type: `String`
  The ID of the group.

- **fileUpload**
  Type: `ConnectApi.BinaryInput`
  A file to use as the photo. The content type must be usable as an image.

Return Value

Type: `ConnectApi.BannerPhoto`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

**setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto)**

Sets and crops an already uploaded file as the group banner photo.

API Version
36.0
Requires Chatter
Yes

Signature

```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String groupId, ConnectApi.BannerPhotoInput bannerPhoto)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **groupId**
  - Type: String
  - The ID of the group.

- **bannerPhoto**
  - Type: ConnectApi.BannerPhotoInput
  - A ConnectApi.BannerPhotoInput object that specifies the ID and version of the file, and how to crop the file.

Return Value

Type: ConnectApi.BannerPhoto

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

Photos are processed asynchronously and may not be visible right away.

```
setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)
```

Sets the group banner photo to a file that hasn’t been uploaded and requires cropping.

API Version

36.0

Requires Chatter
Yes

Signature

```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String groupId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput fileUpload)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  The ID of the group.

bannerPhoto
  Type: ConnectApi.BannerPhotoInput
  A ConnectApi.BannerPhotoInput object specifying the cropping parameters.

fileUpload
  Type: ConnectApi.BinaryInput
  A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.BannerPhoto

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

setPhoto(communityId, groupId, fileId, versionNumber)
Sets the group photo to an already uploaded file.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo setPhoto(String communityId, String groupId, String fileId, Integer versionNumber)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.
groupId
Type: String
The ID for a group.

fileId
Type: String
ID of a file already uploaded. The key prefix must be 069, and the file must be an image that is smaller than 2 GB.

versionNumber
Type: Integer
Version number of the existing file. Specify either an existing version number or, to get the latest version, specify null.

Return Value
Type: ConnectApi.Photo

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

Sample: Updating a Group Photo with an Existing File
When a group is created, it doesn’t have a group photo. You can set an existing photo that has already been uploaded to Salesforce as the group photo. The key prefix must be 069 and the file size must be less than 2 GB.

```java
String communityId = null;
ID groupId = '0F9x00000000hAK';
ID fileId = '069x00000001Ion';

// Set photo
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, fileId, null);

setPhoto(communityId, groupId, fileUpload)

Sets the group photo to the specified blob.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo setPhoto(String communityId, String groupId, ConnectApi.BinaryInput fileUpload)
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  The ID for a group.

fileUpload
  Type: ConnectApi.BinaryInput
  A file to use as the photo. The content type must be usable as an image.

Return Value

Type: ConnectApi.Photo

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

Photos are processed asynchronously and may not be visible right away.

Sample: Uploading a New File and Using it as a Group Photo

When a group is created, it doesn’t have a group photo. You can upload a photo and set it as the group photo.

```java
String communityId = null;
ID groupId = '0F9x00000000hAP';
ID photoId = '069x00000001Ioo';

// Set photo
List<ContentVersion> groupPhoto = [Select c.VersionData From ContentVersion c where ContentDocumentId=:photoId];
ConnectApi.BinaryInput binary = new ConnectApi.BinaryInput(groupPhoto.get(0).VersionData, 'image/png', 'image.png');
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, binary);
```

setPhotoWithAttributes(communityId, groupId, photo)

Sets and crops an already uploaded file as the group photo.

API Version

29.0

Requires Chatter

Yes
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String groupId, ConnectApi.PhotoInput photo)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object that specifies the ID and version of the file, and how to crop the file.

Return Value
Type: ConnectApi.Photo

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

setPhotoWithAttributes(communityId, groupId, photo, fileUpload)
Sets and crops a binary input as the group photo.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String groupId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.
groupId
  Type: String
  The ID for a group.

photo
  Type: ConnectApi.PhotoInput
  A ConnectApi.PhotoInput object that specifies how to crop the file specified in fileUpload.

fileUpload
  Type: ConnectApi.BinaryInput
  A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

updateGroup(communityId, groupId, groupInput)
Update the settings of a group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroup updateGroup(String communityId, String groupId, ConnectApi.ChatterGroupInput groupInput)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  The ID for a group.

groupInput
  Type: ConnectApi.ChatterGroupInput
A ConnectApi.ChatterGroupInput object.

Return Value
Type: ConnectApi.ChatterGroup

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Use this method to update any settings in the ConnectApi.ChatterGroupInput class. These settings include the group title and text in the “Information” section, whether the group is public or private, and whether the group is archived.

Example
This example archives a group:

```java
String groupId = '0F9D00000000qSz';
String communityId = null;
ConnectApi.ChatterGroupInput groupInput = new ConnectApi.ChatterGroupInput();
groupInput.isArchived = true;
ConnectApi.ChatterGroups.updateGroup(communityId, groupId, groupInput);
```

**updateGroupMember(communityId, membershipId, role)**
Updates the specified group membership with the specified role in the specified community. This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroup updateGroupMember(String communityId, String membershipId, ConnectApi.GroupMembershipType role)

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **membershipId**
  Type: String
  The ID for a membership.
role
Type: `ConnectApi.GroupMembershipType`
The group membership type. One of these values:
- GroupManager
- StandardMember

Return Value
Type: `ConnectApi.ChatterGroup`

**updateMyChatterSettings(communityId, groupId, emailFrequency)**
Updates the context user’s Chatter settings for the specified group.

**API Version**
28.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.GroupChatterSettings updateMyChatterSettings(String communityId, String groupId, ConnectApi.GroupEmailFrequency emailFrequency)
```

**Parameters**

**communityId**
Type: `String`
Use either the ID for a community, *internal*, or null.

**groupId**
Type: `String`
The ID for a group.

**emailFrequency**
Type: `ConnectApi.GroupEmailFrequency`

`emailFrequency`—Frequency with which a user receives email.
- EachPost
- DailyDigest
- WeeklyDigest
- Never
- UseDefault

The value UseDefault uses the value set in a call to `updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)`. 
Return Value
Type: `ConnectApi.GroupChatterSettings`

`updateRequestStatus(communityId, requestId, status)`
Updates a request to join a private group.

API Version
28.0

Requires Chatter
Yes

Signature
`public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId, String requestId, ConnectApi.GroupMembershipRequestStatus status)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`requestId`
Type: `String`
The ID for a request to join a private group.

`status`
Type: `ConnectApi.GroupMembershipRequestStatus`
The status of the request:
- `Accepted`
- `Declined`
The `Pending` value of the enum is not valid in this method.

Return Value
Type: `ConnectApi.GroupMembershipRequest`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Sample: Accepting or Declining a Request to Join a Private Group

This sample code calls `ConnectApi.ChatterGroups.updateRequestStatus` and passes it the membership request ID and a `ConnectApi.GroupMembershipRequestStatus.Accepted` status. You can also pass `ConnectApi.GroupMembershipRequestStatus.Declined`.

```java
String communityId = null;
ID groupId = '0F9x00000000hAZ';
String requestId = '0I5x000000001snCAA';

ConnectApi.GroupMembershipRequest membershipRequestRep =
  ConnectApi.ChatterGroups.updateRequestStatus(communityId, requestId,
  ConnectApi.GroupMembershipRequestStatus.Accepted);
```

`updateRequestStatus(communityId, requestId, status, responseMessage)`

Updates a request to join a private group and optionally provides a message when the request is denied.

API Version
35.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId,
                      String requestId, ConnectApi.GroupMembershipRequestStatus status,
                      String responseMessage)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **requestId**
  Type: `String`
  The ID for a request to join a private group.

- **status**
  Type: `ConnectApi.GroupMembershipRequestStatus`
  The status of the request:
  - `Accepted`
  - `Declined`
  The `Pending` value of the enum is not valid in this method.

- **responseMessage**
  Type: `String`
Provide a message to the user if their membership request is declined. The value of this property is used only when the value of the status property is Declined.
The maximum length is 756 characters.

Return Value
Type: ConnectApi.GroupMembershipRequest

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

ChatterGroups Test Methods
The following are the test methods for ChatterGroups. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestSearchGroups(communityId, q, result)
Registers a ConnectApi.ChatterGroupPage object to be returned when the matching ConnectApi.searchGroups method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestSearchGroups(String communityId, String q,
ConnectApi.ChatterGroupPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
q—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

result
Type: ConnectApi.ChatterGroupPage
The test ConnectApi.ChatterGroupPage object.
Return Value
Type: Void

SEE ALSO:
searchGroups(communityId, q)
Testing ConnectApi Code

**setTestSearchGroups(communityId, q, pageParam, pageSize, result)**

Registers a ConnectApi.ChatterGroupPage object to be returned when the matching ConnectApi.searchGroups method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
28.0

Signature
public static Void setTestSearchGroups(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterGroupPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
q—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.ChatterGroupPage
The test ConnectApi.ChatterGroupPage object.
Return Value
Type: Void

SEE ALSO:
searchGroups(communityId, q, pageParam, pageSize)
Testing ConnectApi Code

**setTestSearchGroups(communityId, q, archiveStatus, pageParam, pageSize, result)**

Registers a `ConnectApi.ChatterGroupPage` object to be returned when the matching `ConnectApi.searchGroups` method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
29.0

Signature
```
public static Void setTestSearchGroups(String communityId, String q,
ConnectApi.GroupArchiveStatus, archiveStatus, Integer pageParam, Integer pageSize,
ConnectApi.ChatterGroupPage result)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**q**
Type: `String`
q—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

**archiveStatus**
Type: `ConnectApi.GroupArchiveStatus`
archiveStatus—Set of groups based on whether the groups are archived or not.
- `All`—All groups, including groups that are archived and groups that are not archived.
- `Archived`—Only groups that are archived.
- `NotArchived`—Only groups that are not archived.

**pageParam**
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
result
Type: ConnectApi.ChatterGroupPage
The test ConnectApi.ChatterGroupPage object.

Return Value
Type: Void

Testing ConnectApi Code

ChatterMessages Class
Access and modify message and conversation data.

Namespace
ConnectApi

Usage
Use Chatter in Apex to get, send, search, and reply to messages. You can also get and search conversations, mark conversations as read, and get a count of unread messages.

ChatterMessages Methods
The following are methods for ChatterMessages. All methods are static.

IN THIS SECTION:
getConversation(conversationId)
Returns a conversation the context user has access to.
getConversation(conversationId, pageParam, pageSize)
Returns a conversation the context user has access to.
getConversation(communityId, conversationId)
Returns a conversation the context user has access to across their available communities.
getConversation(communityId, conversationId, pageParam, pageSize)
Returns a conversation from a specific page with a specific number of results the context user has access to across their available communities.
getConversations()
Returns the most recent conversations the context user has access to.
getConversations(pageParam, pageSize)
Returns a specific page of conversations the context user has access to.
getConversations(communityId)
Returns the most recent conversations the context user has access to across their available communities.

getConversations(communityId, pageParam, pageSize)
Returns a specific page of conversations with a specific number of results the context user has access to across their available communities.

getMessage(messageId)
Returns a message the context user has access to.

getMessage(communityId, messageId)
Returns a message the context user has access to across their available communities.

getMessages()
Returns a list of the most recent messages the context user has access to.

getMessages(pageParam, pageSize)
Returns the specified page of messages the context user has access to.

getMessages(communityId)
Returns a list of the most recent messages the context user has access to across their available communities.

getMessages(communityId, pageParam, pageSize)
Returns the specified page of messages with the specified number of results the context user has access to across their available communities.

getUnreadCount()
Returns the number of conversations the context user has marked unread. If the number is less than 50, it will return the exact unreadCount, and hasMore = false. If the context user has more than 50, unreadCount = 50 and hasMore = true.

getUnreadCount(communityId)
Returns the number of conversations the context user has marked unread across their available communities. If the number is less than 50, it will return the exact unreadCount, and hasMore = false. If the context user has more than 50, unreadCount = 50 and hasMore = true.

markConversationRead(conversationId, read)
Marks a conversation as read for the context user.

markConversationRead(communityId, conversationID, read)
Marks a conversation as read or unread for the context user across their available communities.

replyToMessage(text, inReplyTo)
Adds the specified text as a response to a previous message the context user has access to.

replyToMessage(communityId, text, inReplyTo)
Adds the specified text as a response to a previous message the context user has access to across their available communities.

searchConversation(conversationId, q)
Returns the conversation the context user has access to with a page of messages that matches any of the specified search.

searchConversation(conversationId, pageParam, pageSize, q)
Returns the conversation the context user has access to with a page of messages that matches any of the specified search.

searchConversation(communityId, conversationId, q)
Returns the conversation the context user has access to with a page of messages that matches any of the specified search across their available communities.
searchConversation(communityId, conversationId, pageParam, pageSize, q)
Returns the conversation the context user has access to with a page of messages that matches any of the specified search across their available communities.

searchConversations(q)
Returns a page of conversations the context user has access to where member names and messages in the conversations match any of the specified search criteria.

searchConversations(pageParam, pageSize, q)
Returns a page of conversations the context user has access to where member names and messages in the conversations match any of the specified search criteria.

searchConversations(communityId, q)
Returns a page of conversations the context user has access to where member names and messages in the conversations match any of the specified search criteria across their available communities.

searchConversations(communityId, pageParam, pageSize, q)
Returns a specific page of conversations with the specified number of results the context user has access to where member names and messages in the conversations match any of the specified search criteria across their available communities.

searchMessages(q)
Returns a page of messages the context user has access to that matches any of the specified criteria.

searchMessages(pageParam, pageSize, q)
Returns a page of messages the context user has access to that matches any of the specified criteria.

searchMessages(communityId, q)
Returns a page of messages the context user has access to that matches any of the specified criteria across their available communities.

searchMessages(communityId, pageParam, pageSize, q)
Returns a specific page of messages with the specified number of results the context user has access to that matches any of the specified criteria across their available communities.

sendMessage(text, recipients)
Sends the specified text to the indicated recipients.

sendMessage(communityId, text, recipients)
Sends the specified text to the indicated recipients across their available communities.

getConversation(conversationId)
Returns a conversation the context user has access to.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String conversationId)
Parameters

conversationId
  Type: String
  Specify the ID for the conversation.

Return Value

Type: ConnectApi.ChatterConversation

getConversation(conversationId, pageParam, pageSize)

Returns a conversation the context user has access to.

API Version

29.0

Requires Chatter

Yes

Signature

public static ConnectApi.ChatterConversation getConversation(String conversationId,
  String pageParam, Integer pageSize)

Parameters

conversationId
  Type: String
  Specify the ID for the conversation.

pageParam
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.ChatterConversation

getConversation(communityId, conversationId)

Returns a conversation the context user has access to across their available communities.
API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

conversationId
  Type: String
  Specify the ID for the conversation.

Return Value
Type: ConnectApi.ChatterConversation
A Chatter conversation and the related metadata.

getConversation(communityId, conversationId, pageParam, pageSize)
Returns a conversation from a specific page with a specific number of results the context user has access to across their available communities.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId, String pageParam, String pageSize)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
**conversationId**
Type: String
Specify the ID for the conversation.

**pageParam**
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: ConnectApi.ChatterConversation
A Chatter conversation and the related metadata.

**getConversations()**
Returns the most recent conversations the context user has access to.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterConversationPage getConversations()
```

Return Value
Type: ConnectApi.ChatterConversationPage

**getConversations(pageParam, pageSize)**
Returns a specific page of conversations the context user has access to.

API Version
29.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterConversationPage getConversations(String pageParam, Integer pageSize)
```

Parameters

`pageParam`
Type: String

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: Integer

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.ChatterConversationPage`

### getConversations(communityId)

Returns the most recent conversations the context user has access to across their available communities.

API Version

30.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterConversationPage getConversations(String communityId)
```

Parameters

`communityId`
Type: String

Use either the ID for a community, `internal`, or `null`.

Return Value

Type: `ConnectApi.ChatterConversationPage`

A list of Chatter conversations on a specific page.

### getConversations(communityId, pageParam, pageSize)

Returns a specific page of conversations with a specific number of results the context user has access to across their available communities.
API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage getConversations(String communityId, String pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterConversationPage
A list of Chatter conversations on a specific page.

getMessage(messageId)
Returns a message the context user has access to.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage getMessage(String messageId)
Parameters

`messageId`
Type: `String`
Specify the ID for the message.

Return Value
Type: `ConnectApi.ChatterMessage`

`getMessage(communityId, messageId)`
Returns a message the context user has access to across their available communities.

API Version
30.0

Requires Chatter
Yes

Signature

```
public static ConnectApi.ChatterMessage getMessage(String communityId, String messageId)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`messageId`
Type: `String`
Specify the ID for the message.

Return Value
Type: `ConnectApi.ChatterMessage`
A Chatter message and all the related metadata.

`getMessages()`
Returns a list of the most recent messages the context user has access to.

API Version
29.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages()

Return Value
Type: ConnectApi.ChatterMessagePage

definition of getMessages

getMessages(pageParam, pageSize)
Returns the specified page of messages the context user has access to.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages(String pageParam, Integer pageSize)

Parameters
pageParam
Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterMessagePage

definition of getMessages

getMessages(communityId)
Returns a list of the most recent messages the context user has access to across their available communities.

API Version
30.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterMessagePage getMessages(String communityId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

Return Value

- Type: `ConnectApi.ChatterMessagePage`
  - The Chatter messages on a specific page.

**getMessages(communityId, pageParam, pageSize)**

Returns the specified page of messages with the specified number of results the context user has access to across their available communities.

API Version

30.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterMessagePage getMessages(String communityId, String pageParam, Integer pageSize)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `pageParam`
  - Type: `String`
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.ChatterMessagePage`
The Chatter messages on a specific page.

**getUnreadCount()**
Returns the number of conversations the context user has marked unread. If the number is less than 50, it will return the exact unreadCount, and `hasMore = false`. If the context user has more than 50, `unreadCount = 50` and `hasMore = true`.

**API Version**
29.0

**Requires Chatter**
Yes

**Signature**
```
public static ConnectApi.UnreadConversationCount getUnreadCount()
```

**Return Value**
Type: `ConnectApi.UnreadConversationCount`

**Example**
```
ConnectApi.UnreadConversationCount unread = ConnectApi.ChatterMessages.getUnreadCount();
```

**getUnreadCount(communityId)**
Returns the number of conversations the context user has marked unread across their available communities. If the number is less than 50, it will return the exact unreadCount, and `hasMore = false`. If the context user has more than 50, `unreadCount = 50` and `hasMore = true`.

**API Version**
30.0

**Requires Chatter**
Yes

**Signature**
```
public static ConnectApi.UnreadConversationCount getUnreadCount(String communityId)
```

1346
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.UnreadConversationCount`
The number of unread messages in a conversation.

`markConversationRead(conversationId, read)`
Marks a conversation as read for the context user.

API Version
29.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversationSummary markConversationRead(String conversationId, Boolean read)
```

Parameters

`conversationId`
Type: `String`
Specify the ID for the conversation.

`read`
Type: `Boolean`
Specifies whether the conversation has been read (`true`) or not (`false`).

Return Value
Type: `ConnectApi.ChatterConversationSummary`

`markConversationRead(communityId, conversationId, read)`
Marks a conversation as read or unread for the context user across their available communities.

API Version
30.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversationSummary markConversationRead(String communityId, String conversationID, Boolean read)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `conversationId`
  Type: `String`
  Specify the ID for the conversation.

- `read`
  Type: `Boolean`
  Specifies whether the conversation has been read (true) or not (false).

Return Value

Type: `ConnectApi.ChatterConversationSummary`

The summary of a Chatter conversation, including the members of the conversation, Chatter REST API URL, and contents of the latest message.

**replyToMessage(text, inReplyTo)**

Adds the specified text as a response to a previous message the context user has access to.

API Version
29.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterMessage replyToMessage(String text, String inReplyTo)
```

Parameters

- `text`
  Type: `String`
  The text of the message. Cannot be empty or over 10,000 characters.
inReplyTo
  Type: String
  Specify the ID of the message that is being responded to.

Return Value
Type: ConnectApi.ChatterMessage

replyToMessage(communityId, text, inReplyTo)
Adds the specified text as a response to a previous message the context user has access to across their available communities.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage replyToMessage(String communityId, String text, String inReplyTo)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

text
  Type: String
  The text of the message. Cannot be empty or over 10,000 characters.
inReplyTo
  Type: String
  Specify the ID of the message that is being responded to.

Return Value
Type: ConnectApi.ChatterMessage
A Chatter message and all the related metadata.

searchConversation(conversationId, q)
Returns the conversation the context user has access to with a page of messages that matches any of the specified search.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation searchConversation(String conversationId,
String q)

Parameters
conversationId
Type: String
Specify the ID for the conversation.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversation

searchConversation(conversationId, pageParam, pageSize, q)
Returns the conversation the context user has access to with a page of messages that matches any of the specified search.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation searchConversation(String conversationId,
String pageParam, Integer pageSize, String q)

Parameters
conversationId
Type: String
Specify the ID for the conversation.
**pageParam**  
Type: `String`  
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**  
Type: `Integer`  
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**q**  
Type: `String`  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**Return Value**  
Type: `ConnectApi.ChatterConversation`

**searchConversation(communityId, conversationId, q)**  
Returns the conversation the context user has access to with a page of messages that matches any of the specified search across their available communities.

**API Version**  
30.0

**Requires Chatter**  
Yes

**Signature**  
```java
public static ConnectApi.ChatterConversation searchConversation(String communityId, String conversationId, String q)
```

**Parameters**

**communityId**  
Type: `String`  
Use either the ID for a community, `internal`, or `null`.

**conversationId**  
Type: `String`  
Specify the ID for the conversation.

**q**  
Type: `String`  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.ChatterConversation`
A Chatter conversation and the related metadata.

`searchConversation(communityId, conversationId, pageParam, pageSize, q)`
Returns the conversation the context user has access to with a page of messages that matches any of the specified search across their available communities.

API Version
30.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterConversation searchConversation(String communityId, String conversationId, String pageParam, Integer pageSize, String q)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `conversationId`
  Type: `String`
  Specify the ID for the conversation.
- `pageParam`
  Type: `String`
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.
- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
- `q`
  Type: `String`
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.ChatterConversation`
A Chatter conversation and the related metadata.
searchConversations (q)

Returns a page of conversations the context user has access to where member names and messages in the conversations match any of the specified search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage searchConversations(String q)

Parameters
q
Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage

searchConversations (pageParam, pageSize, q)

Returns a page of conversations the context user has access to where member names and messages in the conversations match any of the specified search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage searchConversations(String pageParam, Integer pageSize, String q)

Parameters
pageParam
Type: String

null
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`q`
Type: `String`

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.ChatterConversationPage`

**searchConversations(communityId, q)**

Returns a page of conversations the context user has access to where member names and messages in the conversations match any of the specified search criteria across their available communities.

API Version
30.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterConversationPage searchConversations(String communityId, String q)
```

Parameters
`communityId`
Type: `String`

Use either the ID for a community, internal, or null.

`q`
Type: `String`

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.ChatterConversationPage`

A list of Chatter conversations on a specific page.
searchConversations(communityId, pageParam, pageSize, q)

Returns a specific page of conversations with the specified number of results the context user has access to where member names and messages in the conversations match any of the specified search criteria across their available communities.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage searchConversations(String communityId, String pageParam, Integer pageSize, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage
A list of Chatter conversations on a specific page.

searchMessages(q)

Returns a page of messages the context user has access to that matches any of the specified criteria.

API Version
29.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterMessagePage searchMessages(String q)
```

Parameters

q
- Type: `String`
- Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.ChatterMessagePage`

```java
searchMessages(pageParam, pageSize, q)
```

Returns a page of messages the context user has access to that matches any of the specified criteria.

API Version

29.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterMessagePage searchMessages(String pageParam, Integer pageSize, String q)
```

Parameters

pageParam
- Type: `String`
- Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
- Type: `Integer`
- Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

q
- Type: `String`
- Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value

Type: `ConnectApi.ChatterMessagePage`

`searchMessages(communityId, q)`

Returns a page of messages the context user has access to that matches any of the specified criteria across their available communities.

API Version
30.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String q)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.ChatterMessagePage`

The Chatter messages on a specific page.

`searchMessages(communityId, pageParam, pageSize, q)`

Returns a specific page of messages with the specified number of results the context user has access to that matches any of the specified criteria across their available communities.

API Version
30.0

Requires Chatter
Yes
Signature

public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String pageParam, Integer pageSize, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage
The Chatter messages on a specific page.

sendMessage(text, recipients)
Sends the specified text to the indicated recipients.

API Version
29.0

Requires Chatter
Yes

Signature

public static ConnectApi.ChatterMessage sendMessage(String text, String recipients)

Parameters

text
Type: String
The text of the message. Cannot be empty or over 10,000 characters.
recipients
Type: String
Up to nine comma-separated IDs of the users receiving the message.

Return Value
Type: ConnectApi.ChatterMessage

sendMessage(communityId, text, recipients)
Sends the specified text to the indicated recipients across their available communities.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage sendMessage(String communityId, String text, String recipients)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

text
Type: String
The text of the message. Cannot be empty or over 10,000 characters.

recipients
Type: String
Up to nine comma-separated IDs of users to receive the message.

Return Value
Type: ConnectApi.ChatterMessage
A Chatter message and all the related metadata.

ChatterUsers Class
Access information about users, such as followers, subscriptions, files, and groups.
Namespace

ConnectApi

ChatterUsers Methods

The following are methods for ChatterUsers. All methods are static.

IN THIS SECTION:

- `deletePhoto(communityId, userId)`
  Deletes the specified user’s photo.

- `exportUserActivities(communityId, userId)`
  Export Chatter-related user activities, such as bookmarks, topic endorsements, and votes.

- `follow(communityId, userId, subjectId)`
  Adds the specified `userId` as a follower to the specified `subjectId`.

- `getChatterSettings(communityId, userId)`
  Returns information about the default Chatter settings for the specified user.

- `getFollowers(communityId, userId)`
  Returns the first page of followers for the specified user ID. The page contains the default number of items.

- `getFollowers(communityId, userId, pageParam, pageSize)`
  Returns the specified page of followers for the specified user ID.

- `getFollowings(communityId, userId)`
  Returns the first page of information about the followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

- `getFollowings(communityId, userId, pageParam)`
  Returns the specified page of information about the followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

- `getFollowings(communityId, userId, filterType)`
  Returns the first page of information about the specified types of followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

- `getFollowings(communityId, userId, filterType, pageParam)`
  Returns the specified page of information about the specified types of followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

- `getFollowings(communityId, userId, filterType, pageParam, pageSize)`
  Returns the specified page of information about the specified types of followers of the specified user. This is different than `getFollowers`, which returns the users that follow the specified user.

- `getGroups(communityId, userId)`
  Returns the first page of groups the specified user is a member of.

- `getGroups(communityId, userId, pageParam, pageSize)`
  Returns the specified page of groups the specified user is a member of.
getPhoto(communityId, userId)
Returns information about the specified user’s photo.

getReputation(communityId, userId)
Returns the reputation of the specified user.

getUser(communityId, userId)
Returns information about the specified user.

getUserBatch(communityId, userIds)
Gets information about the specified list of users. Returns a list of BatchResult objects containing ConnectApi.User objects. Returns errors embedded in the results for those users that couldn’t be loaded.

getUsers(communityId)
Returns the first page of users. The page contains the default number of items.

getUsers(communityId, pageParam, pageSize)
Returns the specified page of users.

purgeUserActivities(communityId, userId)
Start a job to purge Chatter-related user activities, such as bookmarks, topic endorsements, and votes.

searchUserGroups(communityId, userId, q)
Returns the first page of groups that match the specified search criteria.

searchUserGroups(communityId, userId, q, pageParam, pageSize)
Returns the specified page of users that matches the specified search criteria.

searchUsers(communityId, q)
Returns the first page of users that match the specified search criteria. The page contains the default number of items.

searchUsers(communityId, q, pageParam, pageSize)
Returns the specified page of users that match the specified search criteria.

searchUsers(communityId, q, searchContextId, pageParam, pageSize)
Returns the specified page of users that match the specified search criteria.

setPhoto(communityId, userId, fileId, versionNumber)
Sets the user photo to be the specified, already uploaded file.

setPhoto(communityId, userId, fileUpload)
Sets the provided blob to be the photo for the specified user. The content type must be usable as an image.

setPhotoWithAttributes(communityId, userId, photo)
Sets and crops the existing file as the photo for the specified user. The content type must be usable as an image.

setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Sets and crops the provided blob as the photo for the specified user. The content type must be usable as an image.

updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)
Updates the default Chatter settings for the specified user.

updateUser(communityId, userId, userInput)
Updates the “About Me” section for a user.

deletePhoto(communityId, userId)
Deletes the specified user’s photo.
API Version
28.0–34.0

**Important:** In version 35.0 and later, use `ConnectApi.UserProfiles.deletePhoto(communityId, userId)`

**Signature**

```java
public static Void deletePhoto(String communityId, String userId)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.

**Return Value**

Type: `Void`

---

### exportUserActivities(communityId, userId)

Export Chatter-related user activities, such as bookmarks, topic endorsements, and votes.

**API Version**

42.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.UserActivitiesJob exportUserActivities(String communityId, String userId)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: `String`
  - ID of the user.
Return Value
Type: ConnectApi.UserActivitiesJob

Usage
The following activities can be exported.
- Bookmark—User bookmarked a post.
- ChatterActivity—Total counts of posts and comments made and likes and comments received for a user.
- ChatterLike—User liked a post or comment.
- Comment—User commented on a post.
- CompanyVerify—User verified comment.
- DownVote—User downvoted a post or comment.
- FeedEntityRead—User read a post.
- FeedRead—User read a feed.
- Mute—User muted a post.
- Post—User made a post.
- TopicEndorsement—User endorsed another user on a topic or received endorsement on a topic.
- UpVote—User upvoted a post or comment.

follow(communityId, userId, subjectId)
Adds the specified userId as a follower to the specified subjectId.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Subscription follow(String communityId, String userId, String subjectId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.
subjectId
Type: String
The ID for the subject to follow.

Return Value
Type: ConnectApi.Subscription

Example
ChatterUsers.ConnectApi.Subscription subscriptionToRecord =
ConnectApi.ChatterUsers.follow(null, 'me', '001RR000002G4Y0');

SEE ALSO:
Unfollow a Record

catchChatterSettings(communityId, userId)
Returns information about the default Chatter settings for the specified user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserChatterSettings getChatterSettings(String communityId,
String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

Return Value
Type: ConnectApi.UserChatterSettings
getFollowers(communityId, userId)
Returns the first page of followers for the specified user ID. The page contains the default number of items.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId)

Parameters
communityId
   Type: String
   Use either the ID for a community, internal, or null.

userId
   Type: String
   The ID for a user.

Return Value
Type: ConnectApi.FollowerPage

getFollowers(communityId, userId, pageParam, pageSize)
Returns the specified page of followers for the specified user ID.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **userId**
  - Type: String
  - The ID for a user.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

- Type: `ConnectApi.FollowerPage`

**getFollowings(communityId, userId)**

Returns the first page of information about the followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

API Version

- 28.0

Available to Guest Users

- 32.0

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: String
Use either the ID for a community, internal, or null.

```java
userId
Type: String
The ID for a user.
```

Return Value
Type: `ConnectApi.FollowingPage`

### `getFollowings(communityId, userId, pageParam)`

Returns the specified page of information about the followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, Integer pageParam)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or null.

- `userId`
  Type: `String`
  The ID for a user.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

Return Value
Type: `ConnectApi.FollowingPage`
getFollowings(communityId, userId, pageParam, pageSize)

Returns the specific page of information about the followers of the specified user. This is different than getFollowers, which returns the users that follow the specified user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.FollowingPage

getFollowings(communityId, userId, filterType)

Returns the first page of information about the specified types of followers of the specified user. The page contains the default number of items. This is different than getFollowers, which returns the users that follow the specified user.

API Version
28.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId,
String filterType)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **userId**
  Type: String
  The ID for a user.

- **filterType**
  Type: String
  Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

Return Value

Type: `ConnectApi.FollowingPage`

```java
getFollowings(communityId, userId, filterType, pageParam)
```

Returns the specified page of information about the specified types of followers of the specified user. The page contains the default number of items. This is different than `getFollowers`, which returns the users that follow the specified user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType, Integer pageParam)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for a user.

filterType
  Type: String
  Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

Return Value

Type: ConnectApi.FollowingPage

getFollowings(communityId, userId, filterType, pageParam, pageSize)

Returns the specified page of information about the specified types of followers of the specified user. This is different than getFollowers, which returns the users that follow the specified user.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes
Parameters

**communityId**
- Type: String
  - Use either the ID for a community, internal, or null.

**userId**
- Type: String
  - The ID for a user.

**filterType**
- Type: String
  - Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

**pageParam**
- Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
- Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.FollowingPage

**getGroups (communityId, userId)**

Returns the first page of groups the specified user is a member of.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

`public static ConnectApi.UserGroupPage getGroups(String communityId, String userId)`

Parameters

**communityId**
- Type: String
Use either the ID for a community, internal, or null.

**userId**
Type: String
The ID for a user.

Return Value
Type: ConnectApi.UserGroupPage

**getGroups(communityId, userId, pageParam, pageSize)**
Returns the specified page of groups the specified user is a member of.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupPage getGroups(String communityId, String userId, Integer pageParam, Integer pageSize)

Parameters
**communityId**
Type: String
Use either the ID for a community, internal, or null.

**userId**
Type: String
The ID for a user.

**pageParam**
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: ConnectApi.UserGroupPage

**getPhoto(communityId, userId)**
Returns information about the specified user's photo.

API Version
28.0–34.0

**Important:** In version 35.0 and later, use ConnectApi.UserProfiles.getPhoto(communityId, userId).

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.Photo getPhoto(String communityId, String userId)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.
- **userId**
  Type: String
  The ID for a user.

Return Value
Type: ConnectApi.Photo

**getReputation(communityId, userId)**
Returns the reputation of the specified user.

API Version
32.0

Available to Guest Users
32.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.Reputation getReputation(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: **String**
  - Use either the ID for a community, internal, or null.

- **userId**
  - Type: **String**
  - ID of the user.

Return Value

Type: **ConnectApi.Reputation**

**get_user(communityId, userId)**

Returns information about the specified user.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.UserSummary getUser(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: **String**
  - Use either the ID for a community, internal, or null.

- **userId**
  - Type: **String**
  - The ID for a user.
Return Value
Type: `ConnectApi.UserDetail`

Usage
If the user is external, the properties that the `ConnectApi.UserDetail` output class shares with the `ConnectApi.UserSummary` output class can have non-null values. Other properties are always `null`.

`getUserBatch(communityId, userIds)`
Gets information about the specified list of users. Returns a list of `BatchResult` objects containing `ConnectApi.User` objects. Returns errors embedded in the results for those users that couldn’t be loaded.

API Version
31.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.BatchResult[] getUserBatch(String communityId, List<String> userIds)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- `userIds`
  Type: `List<String>`
  A list of up to 500 user IDs.

Return Value
Type: `BatchResult[]`

The `BatchResult/results() method returns a `ConnectApi.User` object.

Example
```java
// Get users in an organization.
ConnectApi.UserPage userPage = ConnectApi.ChatterUsers.getUsers(null);
```
// Create a list of user IDs.
List<String> userList = new List<String> ();
for (ConnectApi.User user : userPage.users) {
    userList.add (user.id);
}

// Get info about all users in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterUsers.getUserBatch (null, userList);
for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print each user's username.
        ConnectApi.UserDetail user;
        if (batchResult.getResult () instanceof ConnectApi.UserDetail) {
            user = (ConnectApi.UserDetail) batchResult.getResult ();
        }
        System.debug ('SUCCESS');
        System.debug (user.username);
    }
    else {
        // Operation failed. Print errors.
        System.debug ('FAILURE');
        System.debug (batchResult.getErrorMessage ());
    }
}

getUsers(communityId)

Returns the first page of users. The page contains the default number of items.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserPage getUsers(String communityId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
Return Value
Type: ConnectApi.UserPage

**getUsers(communityId, pageParam, pageSize)**
Returns the specified page of users.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.UserPage getUsers(String communityId, Integer pageParam, Integer pageSize)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.
- **pageParam**
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.
- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.UserPage

**purgeUserActivities(communityId, userId)**
Start a job to purge Chatter-related user activities, such as bookmarks, topic endorsements, and votes.

API Version
42.0
Requires Chatter

Yes

Signature

```java
public static ConnectApi.UserActivitiesJob purgeUserActivities(String communityId,
String userId)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.
- **userId**
  Type: String
  ID of the user.

Return Value

Type: `ConnectApi.UserActivitiesJob`

Usage

The following activities can be purged with this method.

- **Bookmark**—User bookmarked a post.
- **ChatterActivity**—Total counts of posts and comments made and likes and comments received for a user.
- **ChatterLike**—User liked a post or comment.
- **CompanyVerify**—User verified comment.
- **DownVote**—User downvoted a post or comment.
- **FeedEntityRead**—User read a post.
- **FeedRead**—User read a feed.
- **Mute**—User muted a post.
- **TopicEndorsement**—User endorsed another user on a topic or received endorsement on a topic.
- **UpVote**—User upvoted a post or comment.

To delete a user’s posts and comments, use these methods, respectively.

- `deleteFeedElement(communityId, feedElementId)`
- `deleteComment(communityId, commentId)`

**searchUserGroups(communityId, userId, q)**

Returns the first page of groups that match the specified search criteria.

API Version

30.0
Available to Guest Users

32.0

Requires Chatter

Yes

Signature

public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String userId, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: ConnectApi.UserGroupPage
A paginated list of groups the context user is a member of.

searchUserGroups(communityId, userId, q, pageParam, pageSize)

Returns the specified page of users that matches the specified search criteria.

API Version

30.0

Available to Guest Users

32.0

Requires Chatter

Yes
public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String userId, String q, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.UserGroupPage
A paginated list of groups the context user is a member of.

searchUsers(communityId, q)
Returns the first page of users that match the specified search criteria. The page contains the default number of items.
Signature

```java
public static ConnectApi.UserPage searchUsers(String communityId, String q)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: String
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: `ConnectApi.UserPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchUsers(communityId, q, result)`
- [Testing ConnectApi Code](#)

```java
searchUsers(communityId, q, pageParam, pageSize)
```

Returns the specified page of users that match the specified search criteria.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.UserPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchUsers(communityId, q, pageParam, pageSize, result)
Testing ConnectApi Code

searchUsers(communityId, q, searchContextId, pageParam, pageSize)
Returns the specified page of users that match the specified search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes
**Signature**

```java
public static ConnectApi.UserPage searchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

- **searchContextId**
  - Type: `String`
  - A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**Return Value**

- Type: `ConnectApi.UserPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)`
- Testing ConnectApi Code

**setPhoto(communityId, userId, fileId, versionNumber)**

Sets the user photo to be the specified, already uploaded file.

**API Version**

28.0–34.0
Important: In version 35.0 and later, use `ConnectApi.UserProfiles.setPhoto(communityId, userId, fileId, versionNumber)`

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo setPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.

- `fileId`
  - Type: `String`
  - ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

- `versionNumber`
  - Type: `Integer`
  - Version number of the existing file. Specify either an existing version number, or `null` to get the latest version.

Return Value

- Type: `ConnectApi.Photo`

Usage

Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, userId, fileUpload)**

Sets the provided blob to be the photo for the specified user. The content type must be usable as an image.

API Version

- 28.0–34.0

Important: In version 35.0 and later, use `ConnectApi.UserProfiles.setPhoto(communityId, userId, fileUpload)`
Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo setPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.

- `fileUpload`
  - Type: `ConnectApi.BinaryInput`
  - A file to use as the photo. The content type must be usable as an image.

Return Value

Type: `ConnectApi.Photo`

Usage

Photos are processed asynchronously and may not be visible right away.

```java
setPhotoWithAttributes(communityId, userId, photo)
```

Sets and crops the existing file as the photo for the specified user. The content type must be usable as an image.

API Version

29.0–34.0

**Important:** In version 35.0 and later, use

```java
ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo)
```

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
The ID for the context user or the keyword `me`.

`photo`
Type: `ConnectApi.PhotoInput`
A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

`setPhotoWithAttributes(communityId, userId, photo, fileUpload)`
Sets and crops the provided blob as the photo for the specified user. The content type must be usable as an image.

API Version
29.0–34.0

⚠️ Important: In version 35.0 and later, use

`ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo, fileUpload)`

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
The ID for the context user or the keyword `me`.
photo
  Type: ConnectApi.PhotoInput
  A ConnectApi.PhotoInput object specifying the cropping parameters.

fileUpload
  Type: ConnectApi.BinaryInput
  A file to use as the photo. The content type must be usable as an image.

Return Value
  Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)
Updates the default Chatter settings for the specified user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserChatterSettings updateChatterSettings(String communityId,
String userId, ConnectApi.GroupEmailFrequency defaultGroupEmailFrequency)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

defaultGroupEmailFrequency
  Type: ConnectApi.GroupEmailFrequency
defaultGroupEmailFrequency—Frequency with which a user receives email. Values:
  • EachPost
  • DailyDigest
  • WeeklyDigest
• Never
• UseDefault

Don’t pass the value UseDefault for the defaultGroupEmailFrequency parameter because calling updateChatterSettings sets the default value.

Return Value
Type: ConnectApi.UserChatterSettings

**updateUser(communityId, userId, userInput)**
Updates the “About Me” section for a user.

API Version
29.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.UserDetail updateUser(String communityId, String userId, ConnectApi.UserInput userInput)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **userId**
  Type: String
  The ID for the context user or the keyword me.

- **userInput**
  Type: ConnectApi.UserInput
  Specifies the updated information.

Return Value
Type: ConnectApi.UserDetail

**ChatterUsers Test Methods**
The following are the test methods for ChatterUsers. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.
**setTestSearchUsers(communityId, q, result)**

Registers a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature
```
public static Void setTestSearchUsers(String communityId, String q, ConnectApi.UserPage result)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **q**
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **result**
  Type: `ConnectApi.UserPage`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchUsers(communityId, q)`
- Testing ConnectApi Code

**setTestSearchUsers(communityId, q, pageParam, pageSize, result)**

Registers a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature
```
public static Void setTestSearchUsers(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.UserPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchUsers(communityId, q, pageParam, pageSize)
Testing ConnectApi Code

setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)
Registers a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature

public static Void setTestSearchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.
q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

searchContextId
  Type: String
  A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
  Type: ConnectApi.UserPage
  The object containing test data.

Return Value
  Type: Void

SEE ALSO:
  searchUsers(communityId, q, searchContextId, pageParam, pageSize)
  Testing ConnectApi Code

Communities Class
Access general information about communities in your organization.

Namespace
ConnectApi

Communities Methods
The following are methods for Communities. All methods are static.

IN THIS SECTION:
  getCommunities()
  Returns a list of communities the context user has access to.
  getCommunities(communityStatus)
  Returns a list of communities the context user has access to with the specified status.
getCommunity(communityId)
Returns information about the specific community.

getCommunities()
Returns a list of communities the context user has access to.

API Version
28.0

Requires Chatter
No

Signature
public static ConnectApi.CommunityPage getCommunities()

Return Value
Type: ConnectApi.CommunityPage

getCommunities(communityStatus)
Returns a list of communities the context user has access to with the specified status.

API Version
28.0

Requires Chatter
No

Signature
public static ConnectApi.CommunityPage getCommunities(ConnectApi.CommunityStatus communityStatus)

Parameters

communityStatus
Type: ConnectApi.CommunityStatus

communityStatus—Status of the community. Values are:
- Live
- Inactive
- UnderConstruction
Return Value
Type: `ConnectApi.CommunityPage`

**getCommunity(communityId)**
Returns information about the specific community.

API Version
28.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
```
public static ConnectApi.Community getCommunity(String communityId)
```

Parameters
```
communityId
Type: String
```
Specify an ID for `communityId`. You cannot specify `null` or `'internal'`.

Return Value
Type: `ConnectApi.Community`

**CommunityModeration Class**
Access information about flagged feed items and comments in a community. Add and remove flags from comments and feed items.
To view a feed containing all flagged feed items, pass `ConnectApi.FeedType.Moderation` to the `ConnectApi.ChatterFeeds.getFeedElementsFromFeed` method.

**Namespace**
`ConnectApi`

**CommunityModeration Methods**
The following are methods for `CommunityModeration`. All methods are static.
IN THIS SECTION:

- `addFlagToComment(communityId, commentId)`
  Add a moderation flag to a comment.

- `addFlagToComment(communityId, commentId, visibility)`
  Add a moderation flag of the specified visibility to a comment.

- `addFlagToComment(communityId, commentId, type)`
  Add a moderation flag of the specified type to a comment.

- `addFlagToComment(communityId, commentId, note)`
  Add a moderation flag with a note to a comment.

- `addFlagToComment(communityId, commentId, type, note)`
  Add a moderation flag of the specified type with a note to a comment.

- `addFlagToComment(communityId, commentId, type, visibility)`
  Add a moderation flag of the specified type and visibility to a comment.

- `addFlagToComment(communityId, commentId, visibility, note)`
  Add a moderation flag of the specified visibility with a note to a comment.

- `addFlagToComment(communityId, commentId, type, visibility, note)`
  Add a moderation flag of the specified type and visibility with a note to a comment.

- `addFlagToFeedElement(communityId, feedElementId)`
  Add a moderation flag to a feed element.

- `addFlagToFeedElement(communityId, feedElementId, visibility)`
  Add a moderation flag with specified visibility to a feed element.

- `addFlagToFeedElement(communityId, feedElementId, type)`
  Add a moderation flag of the specified type to a feed element.

- `addFlagToFeedElement(communityId, feedElementId, note)`
  Add a moderation flag with a note to a feed element.

- `addFlagToFeedElement(communityId, feedElementId, type, note)`
  Add a moderation flag of the specified type with a note to a feed element.

- `addFlagToFeedElement(communityId, feedElementId, type, visibility)`
  Add a moderation flag of the specified type and visibility to a feed element.

- `addFlagToFeedElement(communityId, feedElementId, visibility, note)`
  Add a moderation flag of the specified visibility with a note to a feed element.

- `addFlagToFeedElement(communityId, feedElementId, type, visibility, note)`
  Add a moderation flag of the specified type and visibility with a note to a feed element.

- `addFlagToFeedItem(communityId, feedItemId)`
  Add a moderation flag to a feed item. To add a flag to a feed item, Allow members to flag content must be selected for a community.

- `addFlagToFeedItem(communityId, feedItemId, visibility)`
  Add a moderation flag with specified visibility to a feed item. To add a flag to a feed item, Allow members to flag content must be selected for a community.

- `getFlagsOnComment(communityId, commentId)`
  Get the moderation flags on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.
getFlagsOnComment(communityId, commentId, visibility)
Get the moderation flags with specified visibility on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnComment(communityId, commentId, pageSize, pageParam)
Get a page of moderation flags on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnComment(communityId, commentId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnFeedElement(communityId, feedElementId)
Get the moderation flags on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnFeedElement(communityId, feedElementId, visibility)
Get the moderation flags with specified visibility on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of moderation flags on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnFeedElement(communityId, feedElementId, visibility, pageParam, pageSize)
Get a page of moderation flags with specified visibility on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnFeedItem(communityId, feedItemId)
Get the moderation flags on a feed item. To get the flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnFeedItem(communityId, feedItemId, visibility)
Get the moderation flags with specified visibility on a feed item. To get the flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnFeedItem(communityId, feedItemId, pageParam, pageSize)
Get a page of moderation flags on a feed item. To get the flags, the context user must have the Moderate Communities Feeds permission.

removeFlagFromComment(communityId, commentId, userId)
Remove a moderation flag from a comment. To remove a flag from a comment the context user must have added the flag or must have the Moderate Communities Feeds permission.

removeFlagFromFeedElement(communityId, feedElementId, userId)
Remove a moderation flag from a feed element. To remove a flag from a feed element, the context user must have added the flag or must have the Moderate Communities Feeds permission.

removeFlagsOnFeedItem(communityId, feedItemId, userId)
Remove a moderation flag from a feed item. To remove a flag from a feed item, the context user must have added the flag or must have the Moderate Communities Feeds permission.

addFlagToComment(communityId, commentId)
Add a moderation flag to a comment.

API Version
29.0
Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
commentId
Type: String
The ID for a comment.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

addFlagToComment(communityId, commentId, visibility)
Add a moderation flag of the specified visibility to a comment.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
commentId
Type: String
The ID for a comment.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

**addFlagToComment(communityId, commentId, type)**
Add a moderation flag of the specified type to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.
- **commentId**
  Type: String
  The ID for a comment.
- **type**
  Type: ConnectApi.CommunityFlagType
  Type of moderation flag.
  - FlagAsInappropriate—Flag for inappropriate content.
  - FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

addFlagToComment(communityId, commentId, note)
Add a moderation flag with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, String note)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.
addFlagToComment(communityId, commentId, type, note)
Add a moderation flag of the specified type with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, String note)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.
  If a type isn’t specified, it defaults to FlagAsInappropriate.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

addFlagToComment(communityId, commentId, type, visibility)
Add a moderation flag of the specified type and visibility to a comment.
API Version
38.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **commentId**
  Type: `String`
  The ID for a comment.

- **type**
  Type: `ConnectApi.CommunityFlagType`
  Type of moderation flag.
  - `FlagAsInappropriate`—Flag for inappropriate content.
  - `FlagAsSpam`—Flag for spam.
  If a type isn’t specified, it defaults to `FlagAsInappropriate`.

- **visibility**
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types.
  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: `ConnectApi.ModerationFlags`

Usage

To add a flag to a comment, `Allow members to flag content` must be selected for a community.

```java
addFlagToComment(communityId, commentId, visibility, note)
```

Add a moderation flag of the specified visibility with a note to a comment.
API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility, String note)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

addFlagToComment(communityId, commentId, type, visibility, note)
Add a moderation flag of the specified type and visibility with a note to a comment.

API Version
38.0
Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility, String note)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, internal, or null.

- `commentId`
  - Type: String
  - The ID for a comment.

- `type`
  - Type: `ConnectApi.CommunityFlagType`
  - Type of moderation flag.
  - FlagAsInappropriate—Flag for inappropriate content.
  - FlagAsSpam—Flag for spam.
  - If a type isn’t specified, it defaults to FlagAsInappropriate.

- `visibility`
  - Type: `ConnectApi.CommunityFlagVisibility`
  - Visibility behavior of a flag for various user types.
  - ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
  - SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

- `note`
  - Type: String
  - A note of up to 4,000 characters about the flag.

Return Value

- Type: `ConnectApi.ModerationFlags`

Usage

To add a flag to a comment, Allow members to flag content must be selected for a community.

```java
addFlagToFeedElement(communityId, feedElementId)
```

Add a moderation flag to a feed element.
API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.ModerationCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

addFlagToFeedElement(communityId, feedElementId, visibility)
Add a moderation flag of the specified visibility to a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types. One of these values:
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

addFlagToFeedElement(communityId, feedElementId, type)
Add a moderation flag of the specified type to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

addFlagToFeedElement(communityId, feedElementId, note)
Add a moderation flag with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, String note)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

note
Type: String
A note of up to 4,000 characters about the flag.
Return Value
Type: `ConnectApi.ModerationCapability`

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

```java
addFlagToFeedElement(communityId, feedElementId, type, note)
```
Add a moderation flag of the specified type with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, String note)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.
- `feedElementId`
  Type: `String`
  ID of the feed element.
- `type`
  Type: `ConnectApi.CommunityFlagType`
  Type of moderation flag.
  - `FlagAsInappropriate`—Flag for inappropriate content.
  - `FlagAsSpam`—Flag for spam.
  If a type isn’t specified, it defaults to `FlagAsInappropriate`.
- `note`
  Type: `String`
  A note of up to 4,000 characters about the flag.

Return Value
Type: `ConnectApi.ModerationCapability`
Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

`addFlagToFeedElement(communityId, feedElementId, type, visibility)`
Add a moderation flag of the specified type and visibility to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`feedElementId`
Type: `String`
ID of the feed element.

`type`
Type: `ConnectApi.CommunityFlagType`
Type of moderation flag.
- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.
If a type isn't specified, it defaults to `FlagAsInappropriate`.

`visibility`
Type: `ConnectApi.CommunityFlagVisibility`
Visibility behavior of a flag for various user types. One of these values:
- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationCapability`
Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

`addFlagToFeedElement(communityId, feedElementId, visibility, note)`
Add a moderation flag of the specified visibility with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagVisibility visibility, String note)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.
- `feedElementId`
  Type: `String`
  ID of the feed element.
- `visibility`
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types. One of these values:
  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.
- `note`
  Type: `String`
  A note of up to 4,000 characters about the flag.

Return Value
Type: `ConnectApi.ModerationCapability`

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.
addFlagToFeedElement(communityId, feedElementId, type, visibility, note)

Add a moderation flag of the specified type and visibility with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility, String note)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.

If a type isn't specified, it defaults to FlagAsInappropriate.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types. One of these values:
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationCapability
Usage

To add a flag to a feed element, Allow members to flag content must be selected for a community.

**addFlagToFeedItem(communityId, feedItemId)**

Add a moderation flag to a feed item. To add a flag to a feed item, Allow members to flag content must be selected for a community.

API Version
29.0–31.0

⚠️ **Important:** In version 32.0 and later, use `addFlagToFeedElement(communityId, feedElementId)`.

Requires Chatter
Yes

Signature

```
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId)
```

Parameters

* **communityId**
  
  Type: `String`

  Use either the ID for a community, `internal`, or `null`.

* **feedItemId**
  
  Type: `String`

  The ID for a feed item.

Return Value

Type: `ConnectApi.ModerationFlags`

**addFlagToFeedItem(communityId, feedItemId, visibility)**

Add a moderation flag with specified visibility to a feed item. To add a flag to a feed item, Allow members to flag content must be selected for a community.

API Version
30.0–31.0

⚠️ **Important:** In version 32.0 and later, use `addFlagToFeedElement(communityId, feedElementId, visibility)`.
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.
- `feedItemId`
  - Type: `String`
  - The ID for a feed item.
- `visibility`
  - Type: `ConnectApi.CommunityFlagVisibility`
  - Visibility behavior of a flag for various user types.
    - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
    - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: `ConnectApi.ModerationFlags`

```java
getFlagsOnComment(communityId, commentId)
```

Get the moderation flags on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version

29.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId)
```

Parameters

- `communityId`
  - Type: `String`
Use either the ID for a community, internal, or null.

**commentId**
Type: String
The ID for a comment.

Return Value
Type: `ConnectApi.ModerationFlags`

`getFlagsOnComment(communityId, commentId, visibility)`
Get the moderation flags with specified visibility on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version
30.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**commentId**
Type: String
The ID for a comment.

**visibility**
Type: `ConnectApi.CommunityFlagVisibility`
Visibility behavior of a flag for various user types.
- **ModeratorsOnly**—The flag is visible only to users with moderation permissions on the flagged element or item.
- **SelfAndModerators**—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationFlags`
getFlagsOnComment(communityId, commentId, pageSize, pageParam)
Get a page of moderation flags on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version
40.0
Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, Integer pageSize, String pageParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
commentId
Type: String
The ID for a comment.
pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.
pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

Return Value
Type: ConnectApi.ModerationFlags

getFlagsOnComment(communityId, commentId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a comment. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version
40.0
Requires Chatter
Yes
Signature

```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize, String pageParam)
```

Parameters

**communityId**
- Type: String
- Use either the ID for a community, `internal`, or `null`.

**commentId**
- Type: String
- The ID for a comment.

**visibility**
- Type: `ConnectApi.CommunityFlagVisibility`
- Visibility behavior of a flag for various user types.
  - ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
  - SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

**pageSize**
- Type: Integer
- Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

**pageParam**
- Type: String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

Return Value

- Type: `ConnectApi.ModerationFlags`

### getFlagsOnFeedElement(communityId, feedElementId)

Get the moderation flags on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version
- 31.0

Requires Chatter
- Yes
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId)

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`feedElementId`
Type: String
ID of the feed element.

Return Value

Type: ConnectApi.ModerationCapability Class
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

**getFlagsOnFeedElement(communityId, feedElementId, visibility)**
Get the moderation flags with specified visibility on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version
31.0

Requires Chatter
Yes

Signature

public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility)

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`feedElementId`
Type: String
ID of the feed element.

`visibility`
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types. One of these values:
• Modera torsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationCapability Class
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of moderation flags on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

Return Value
Type: ConnectApi.ModerationCapability Class
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.
getFlagsOnFeedElement(communityId, feedElementId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a feed element. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize, String pageParam)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

visibility
  Type: ConnectApi.CommunityFlagVisibility
  Visibility behavior of a flag for various user types.
  • ModeratorsOnly — The flag is visible only to users with moderation permissions on the flagged element or item.
  • SelfAndModerators — The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

Return Value
Type: ConnectApi.ModerationCapability Class
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.
getFlagsOnFeedItem(communityId, feedItemId)
Get the moderation flags on a feed item. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version
29.0–31.0

⚠️ Important: In version 32.0 and later, use getFlagsOnFeedElement(communityId, feedElementId).

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedItemId
Type: String
The ID for a feed item.

Return Value
Type: ConnectApi.ModerationFlags

getFlagsOnFeedItem(communityId, feedItemId, visibility)
Get the moderation flags with specified visibility on a feed item. To get the flags, the context user must have the Moderate Communities Feeds permission.

API Version
30.0–31.0

⚠️ Important: In version 32.0 and later, use getFlagsOnFeedElement(communityId, feedElementId, visibility).

Requires Chatter
Yes
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedItemId
Type: String
The ID for a feed item.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.

• ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: ConnectApi.ModerationFlags

removeFlagFromComment(communityId, commentId, userId)

Remove a moderation flag from a comment. To remove a flag from a comment the context user must have added the flag or must have the Moderate Communities Feeds permission.

API Version
29.0

Requires Chatter
Yes

Signature

public static ConnectApi.ModerationFlags removeFlagFromComment(String communityId, String commentId, String userId)
commentId
Type: String
The ID for a comment.

userId
Type: String
The ID for a user.

Return Value
Type: Void

**removeFlagFromFeedElement(communityId, feedElementId, userId)**
Remove a moderation flag from a feed element. To remove a flag from a feed element, the context user must have added the flag or must have the Moderate Communities Feeds permission.

API Version
31.0

Requires Chatter
Yes

Signature
```java
public static void removeFlagFromFeedElement(String communityId, String feedElementId, String userId)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, `internal`, or `null`.

**feedElementId**
Type: String
ID of the feed element.

**userId**
Type: String
The ID for a user.

Return Value
Type: `ConnectApi.ModerationCapability Class`
If the feed element doesn’t support this capability, the return value is `ConnectApiNotFoundException`. 
removeFlagsOnFeedItem(communityId, feedItemId, userId)
Remove a moderation flag from a feed item. To remove a flag from a feed item, the context user must have added the flag or must have the Moderate Communities Feeds permission.

API Version
29.0–31.0

⚠️ Important: In version 32.0 and later, use removeFlagFromFeedElement(communityId, feedElementId, userId).

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags removeFlagsOnFeedItem(String communityId, String feedItemId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedItemId
Type: String
The ID for a feed item.

userId
Type: String
The ID for a user.

Return Value
Type: Void

ContentHub Class
Access Files Connect repositories and their files and folders.

Namespace
ConnectApi

ContentHub Methods
The following are methods for ContentHub. All methods are static.
Use ContentHub methods to work with Files Connect repositories.
IN THIS SECTION:

**addRepositoryItem(repositoryId, repositoryFolderId, file)**
Add a repository item.

**addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)**
Add a repository item in a community.

**addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)**
Add a repository item, including the binary file.

**addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)**
Add a repository item, including the binary file, in a community.

**getAllowedItemTypes(repositoryId, repositoryFolderId)**
Get the item types that the context user is allowed to create in the repository folder.

**getAllowedItemTypes(repositoryId, repositoryFolderId, filter)**
Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

**getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)**
Get the item types that the context user is allowed to create in the repository folder in a community.

**getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)**
Get the item types, filtered by type, that the context user is allowed to create in the repository folder in a community.

**getFilePreview(repositoryId, repositoryFileId, formatType)**
Get a repository file preview.

**getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)**
Get a page or page range of a repository file preview.

**getFilePreview(communityId, repositoryId, repositoryFileId, formatType)**
Get a repository file preview in a community.

**getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)**
Get a page or page range of a repository file preview in a community.

**getItemType(repositoryId, repositoryItemTypeId)**
Get information about an item type associated with a repository.

**getItemType(communityId, repositoryId, repositoryItemTypeId)**
Get information about an item type associated with a repository in a community.

**getPreviews(repositoryId, repositoryFileId)**
Get information about a repository file’s supported previews.

**getPreviews(communityId, repositoryId, repositoryFileId)**
Get information about a repository file’s supported previews in a community.

**getRepositories()**
Get a list of repositories.

**getRepositories(communityId)**
Get a list of repositories in a community.

**getRepositories(pageParam, pageSize)**
Get a page of repositories.
getRepositories(communityId, pageParam, pageSize)
Get a page of repositories in a community.

getRepository(repositoryId)
Get a repository.

getRepository(communityId, repositoryId)
Get a repository in a community.

getRepositoryFile(repositoryId, repositoryFileId)
Get a repository file.

getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information.

getRepositoryFile(communityId, repositoryId, repositoryFileId)
Get a repository file in a community.

getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information in a community.

getRepositoryFolder(repositoryId, repositoryFolderId)
Get a repository folder.

getRepositoryFolder(communityId, repositoryId, repositoryFolderId)
Get a repository folder in a community.

getRepositoryFolderItems(repositoryId, repositoryFolderId)
Get repository folder items.

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
Get repository folder items in a community.

getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items.

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items in a community.

updateRepositoryFile(repositoryId, repositoryFileId, file)
Update the metadata of a repository file.

updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file.

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)
Update the metadata of a repository file in a community.

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file in a community.

addRepositoryItem(repositoryId, repositoryFolderId, file)
Add a repository item.

API Version
39.0
Requires Chatter

No

Signature

```java
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)
```

Parameters

repositoryId
- **Type:** String
- The ID of the repository.

repositoryFolderId
- **Type:** String
- The ID of the repository folder.

file
- **Type:** ConnectApi.ContentHubItemInput
- The item type ID and fields of the item type.

Return Value

**Type:** ConnectApi.RepositoryFolderItem

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example creates a file without binary content (metadata only) in a repository folder. After the file is created, we show the file’s ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bjIzTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = 'new folder item name.txt';
newItem.fields.add(fieldValueInput);

//Metadata: description field
```
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

final ConnectApi.RepositoryFolderItem newFolderItem =
ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: \'\'{0}\'\', name: \'\'{1}\'\', description:
\'\'{2}\'\', download URL: \'\'{3}\'\', external URL: \'\'{4}\'\',
new String[]{newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl,
newFile.downloadUrl});

SEE ALSO:
setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)
Testing ConnectApi Code

addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)
Add a repository item in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId,
String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
repositoryId
Type: String
The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.
file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

Return Value
Type: `ConnectApi.RepositoryFolderItem`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)`

Testing ConnectApi Code

```java
addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
```
Add a repository item, including the binary file.

API Version
39.0

Requires Chatter
No

Signature
```
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId,
String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput
fileData)
```

Parameters
- `repositoryId`
  Type: `String`
  The ID of the repository.
- `repositoryFolderId`
  Type: `String`
  The ID of the repository folder.
- `file`
  Type: `ConnectApi.ContentHubItemInput`
  The item type ID and fields of the item type.
- `fileData`
  Type: `ConnectApi.BinaryInput`
  The binary file.
Return Value

Type: `ConnectApi.RepositoryFolderItem`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example creates a file with binary content and metadata in a repository folder. After the file is created, we show the file’s ID, name, description, external URL, and download URL.

```java
class TestConnectApi{
    @TestMethod
    public static void testCreateFile() {
        final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bjIzTGFqSWs';

        final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
        newItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
        newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

        //Metadata: name field
        final String newFileName = 'new folder item name.txt';
        final ConnectApi.ContentHubFieldValueInput fieldValueInput = new ConnectApi.ContentHubFieldValueInput();
        fieldValueInput.name = 'name';
        fieldValueInput.value = newFileName;
        newItem.fields.add(fieldValueInput);

        //Metadata: description field
        final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new ConnectApi.ContentHubFieldValueInput();
        fieldValueInputDesc.name = 'description';
        fieldValueInputDesc.value = 'It does describe it';
        newItem.fields.add(fieldValueInputDesc);

        //Binary content
        final Blob newFileBlob = Blob.valueOf('awesome content for brand new file');
        final String newFileMimeType = 'text/plain';
        final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(newFileBlob, newFileMimeType, newFileName);

        final ConnectApi.RepositoryFolderItem newFolderItem = ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem, fileBinaryInput);
        final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
        System.debug(String.format('New file - id: \"{0}\", name: \"{1}\", description: \"{2}\", external URL: \"{3}\", download URL: \"{4}\"', new String[]{...
```

SEE ALSO:  
  setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, fileData, result)  
  Testing ConnectApi Code

**addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)**

Add a repository item, including the binary file, in a community.

**API Version**
39.0

**Requires Chatter**
No

**Signature**

```java
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)
```

**Parameters**

- **communityId**  
  Type: **String**  
  Use either the ID for a community, internal, or **null**.

- **repositoryId**  
  Type: **String**  
  The ID of the repository.

- **repositoryFolderId**  
  Type: **String**  
  The ID of the repository folder.

- **file**  
  Type: **ConnectApi.ContentHubItemInput**  
  The item type ID and fields of the item type.

- **fileData**  
  Type: **ConnectApi.BinaryInput**  
  The binary file.

**Return Value**

Type: **ConnectApi.RepositoryFolderItem**
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)`

Testing ConnectApi Code

`getAllowedItemTypes(repositoryId, repositoryFolderId)`

Get the item types that the context user is allowed to create in the repository folder.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.

Return Value

- Type: `ConnectApi.ContentHubAllowedItemTypeCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, result)`

Testing ConnectApi Code
getAllowedItemTypes(repositoryId, repositoryFolderId, filter)

Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)

Parameters
- repositoryId
  Type: String
  The ID of the repository.
- repositoryFolderId
  Type: String
  The ID of the repository folder.
- filter
  Type: ConnectApi.ContentHubItemType
  Item types. Values are:
  - Any—Includes files and folders.
  - FilesOnly—Includes files only.
  - FoldersOnly—Includes folders only.

Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example calls getAllowedItemTypes(repositoryId, repositoryFolderId, ConnectApi.ContentHubItemType.FilesOnly) to get the first ConnectApi.ContentHubItemTypeSummary.id of a file. The context user can create allowed files in a repository folder in the external system.

```java
final ConnectApi.ContentHubAllowedItemTypeCollection allowedItemTypesColl =
    ConnectApi.ContentHub.getAllowedItemTypes(repositoryId, repositoryFolderId,
```
ConnectApi.ContentHubItemType.FilesOnly);
final List<ConnectApi.ContentHubItemTypeSummary> allowedItemTypes =
allowedItemTypesColl.allowedItemTypes;
string allowedFileItemTypeIds = null;
if(allowedItemTypes.size() > 0){
    ConnectApi.ContentHubItemTypeSummary allowedItemTypeSummary = allowedItemTypes.get(0);
    allowedFileItemTypeId = allowedItemTypeSummary.id;
}

SEE ALSO:

    Testing ConnectApi Code

getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)
Get the item types that the context user is allowed to create in the repository folder in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId)

Parameters
communityId
    Type: String
    Use either the ID for a community, internal, or null.
repositoryId
    Type: String
    The ID of the repository.
repositoryFolderId
    Type: String
    The ID of the repository folder.

Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, result)

Testing ConnectApi Code

getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)

Get the item types, filtered by type, that the context user is allowed to create in the repository folder in a community.

API Version
39.0

Requires Chatter
No

Signature

public static ConnectApi.ContentHubAllowedItemCollection getAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

filter
Type: ConnectApi.ContentHubItemType
Item types. Values are:
- Any—Includes files and folders.
- FilesOnly—Includes files only.
- FoldersOnly—Includes folders only.
Return Value
Type: `ConnectApi.ContentHubAllowedItemTypeCollection`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter, result)`
- Testing ConnectApi Code

`getFilePreview(repositoryId, repositoryFileId, formatType)`
Get a repository file preview.

API Version
39.0

Requires Chatter
No

Signature
```java
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)
```

Parameters
- `repositoryId`
  Type: `String`
  The ID of the repository.
- `repositoryFileId`
  Type: `String`
  The ID of the repository file.
- `formatType`
  Type: `ConnectApi.FilePreviewFormat`
  Specifies the format of the file preview. Values are:
  - `Jpg`—Preview format is JPG.
  - `Pdf`—Preview format is PDF.
  - `Svg`—Preview format is compressed SVG.
  - `Thumbnail`—Preview format is 240 x 180 PNG.
  - `ThumbnailBig`—Preview format is 720 x 480 PNG.
  - `ThumbnailTiny`—Preview format is 120 x 90 PNG.
PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter *general* in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

Return Value

**Type:** ConnectApi.FilePreview

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example calls `getFilePreview(repositoryId, repositoryFileId, ConnectApi.FilePreviewFormat.Thumbnail)` to get the thumbnail format preview along with its respective URL and number of thumbnail renditions. For each thumbnail format, we show every rendition URL available.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFileId = 'document:1-zcA1BaeoQbo2_yNF1HCcK6QJTPmOke-kHFC4TYg3rk';
final ConnectApi.FilePreview filePreview = ConnectApi.ContentHub.getFilePreview(gDriveRepositoryId, gDriveFileId, ConnectApi.FilePreviewFormat.Thumbnail);
System.debug(String.format('Preview - URL: ','{0}','{1}', new String[]{ filePreview.url, filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())});
for(ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){
    System.debug('----- Rendition URL: ' + filePreviewUrl.previewUrl);
}
```

SEE ALSO:

`setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)`

Testing ConnectApi Code

`getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)`

Get a page or page range of a repository file preview.

API Version

39.0

Requires Chatter

No
Signature

```java
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

Parameters

**repositoryId**
Type: **String**
The ID of the repository.

**repositoryFileId**
Type: **String**
The ID of the repository file.

**formatType**
Type: **ConnectApi.FilePreviewFormat**
Specifies the format of the file preview. Values are:
- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter **general** in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

**startPageNumber**
Type: **Integer**
The starting page number in the range of file preview URLs.

**endPageNumber**
Type: **Integer**
The ending page number in the range of file preview URLs.

Return Value

Type: **ConnectApi.FilePreview**
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)
Testing ConnectApi Code

**getFilePreview(communityId, repositoryId, repositoryFileId, formatType)**
Get a repository file preview in a community.

API Version
39.0

Requires Chatter
No

Signature
```
public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**repositoryId**
Type: String
The ID of the repository.

**repositoryFileId**
Type: String
The ID of the repository file.

**formatType**
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:
- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.
PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

Return Value
Type: `ConnectApi.FilePreview`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, result)`

Requires Chatter
No

Signature
```java
public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `repositoryId`
  Type: `String`
  The ID of the repository.
- `repositoryFileId`
  Type: `String`
  The ID of the repository file.
**formatType**  
Type: `ConnectApi.FilePreviewFormat`  
Specifies the format of the file preview. Values are:  
- `Jpg`—Preview format is JPG.  
- `Pdf`—Preview format is PDF.  
- `Svg`—Preview format is compressed SVG.  
- `Thumbnail`—Preview format is 240 x 180 PNG.  
- `ThumbnailBig`—Preview format is 720 x 480 PNG.  
- `ThumbnailTiny`—Preview format is 120 x 90 PNG.  
PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you're concerned that feature-rich SVG previews don't work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

**startPageNumber**  
Type: `Integer`  
The starting page number in the range of file preview URLs.

**endPageNumber**  
Type: `Integer`  
The ending page number in the range of file preview URLs.

Return Value  
Type: `ConnectApi.FilePreview`

Usage  
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Requires Chatter

No

signature

public static ConnectApi.ContentHubItemTypeDetail getItemType(String communityId, String repositoryId, String repositoryItemTypeId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.
getPreviews(repositoryId, repositoryFileId)

Get information about a repository file's supported previews.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.FilePreviewCollection getPreviews(String repositoryId, String repositoryFileId)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.
Apex Developer Guide

ConnectApi Namespace

Return Value
Type: ConnectApi.FilePreviewCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method
with the same parameters or the code throws an exception.

Example
This example gets all supported preview formats and their respective URLs and number of renditions. For each supported preview format,
we show every rendition URL available.
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFileId =
'document:1-zcA1BaeoQbo2_yNFiHCcK6QJTPmOke-kHFC4TYg3rk';
final ConnectApi.FilePreviewCollection previewsCollection =
ConnectApi.ContentHub.getPreviews(gDriveRepositoryId, gDriveFileId);
for(ConnectApi.FilePreview filePreview : previewsCollection.previews){
System.debug(String.format('Preview - URL: \'\'{0}\'\', format: \'\'{1}\'\', nbr of
renditions for this format: {2}', new String[]{ filePreview.url,
filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())}));
for(ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){
System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
}
}

SEE ALSO:

Testing ConnectApi Code
getPreviews(communityId, repositoryId, repositoryFileId)

Get information about a repository file’s supported previews in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.FilePreviewCollection getPreviews(String communityId, String
repositoryId, String repositoryFileId)

1441


Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`repositoryId`
Type: `String`
The ID of the repository.

`repositoryFileId`
Type: `String`
The ID of the repository file.

Return Value

Type: `ConnectApi.FilePreviewCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)`
`Testing ConnectApi Code`

`getRepositories()`
Get a list of repositories.

API Version

39.0

Requires Chatter

No

Signature

`public static ConnectApi.ContentHubRepositoryCollection getRepositories()`

Return Value

Type: `ConnectApi.ContentHubRepositoryCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.
Example

This example gets all repositories and gets the first SharePoint online repository found.

```java
final string sharePointOnlineProviderType = 'ContentHubSharepointOffice365';
final ConnectApi.ContentHubRepositoryCollection repositoryCollection =
    ConnectApi.ContentHub.getRepositories();
ConnectApi.ContentHubRepository sharePointOnlineRepository = null;
for (ConnectApi.ContentHubRepository repository : repositoryCollection.repositories){
    if (sharePointOnlineProviderType.equalsIgnoreCase(repository.providerType.type)){
        sharePointOnlineRepository = repository;
        break;
    }
}
```

SEE ALSO:
- `setTestGetRepositories(result)`
- Testing ConnectApi Code

**getRepositories(communityId)**

Get a list of repositories in a community.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubRepositoryCollection getRepositories(String communityId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

Return Value

- Type: `ConnectApi.ContentHubRepositoryCollection`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetRepositories(communityId, result)`

`getRepositories(pageParam, pageSize)`

Get a page of repositories.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubRepositoryCollection getRepositories(Integer pageParam, Integer pageSize)
```

Parameters

- `pageParam`  
  Type: `Integer`  
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`  
  Type: `Integer`  
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

Return Value

Type: `ConnectApi.ContentHubRepositoryCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetRepositories(pageParam, pageSize, result)`

`getRepositoryFile(repositoryId, repositoryFileId)`
Get a repository file.

API Version
39.0

Requires Chatter
No

Signature
`public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId, String repositoryFileId)`

Parameters

`repositoryId`
Type: String
The ID of the repository.

`repositoryFileId`
Type: String
The ID of the repository file.
Return Value

Type: ConnectApi.RepositoryFileDetail

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFileId = 'file:0B01Tys1KmM3sTmxKNjVjYWZja00';
final ConnectApi.RepositoryFileDetail file = ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId);
System.debug(String.format('File - name: \'{0}\', size: {1}, external URL: \'{2}\', download URL: \'{3}\',
```

SEE ALSO:

Testing ConnectApi Code

gGetRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)

Get a repository file with or without permissions information.

API Version

39.0

Requires Chatter

No

Signature

public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo)

Parameters

repositoryId
  Type: String
  The ID of the repository.

repositoryFileId
  Type: String
  The ID of the repository file.
includeExternalFilePermissionsInfo

Type: Boolean

Specifies whether to include permission information, such as whether the file is shared and what are the available permission types. Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

Return Value

Type: ConnectApi.RepositoryFileDetail

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final String gDriveRepositoryId = '0XCxx0000000000DGAY', gDriveFileId = 'file:0B01Tys1KmM3sTmxKNJvJhWZjaO00';

final ConnectApi.RepositoryFileDetail file = 
ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId, true);
System.debug(String.format('File - name: \''{0}''', size: {1}, external URL: \''{2}''', download URL: \''{3}''', new String[]{ file.name, String.valueOf(file.contentSize), file.externalDocumentUrl, file.downloadUrl});)
final ConnectApi.ExternalFilePermissionInformation externalFilePermInfo = 
file.externalFilePermissionInformation;

//permission types
final List<ConnectApi.ContentHubPermissionType> permissionTypes = 
filePermissionInfo.externalFilePermissionTypes;
for(ConnectApi.ContentHubPermissionType permissionType : permissionTypes){
    System.debug(String.format('Permission type - id: \''{0}''', label: \''{1}''', new String[]{ permissionType.id, permissionType.label})
}

//permission groups
final List<ConnectApi.RepositoryGroupSummary> groups = 
filePermissionInfo.repositoryPublicGroups;
for(ConnectApi.RepositoryGroupSummary ggroup : groups){
    System.debug(String.format('Group - id: \''{0}''', name: \''{1}''', type:

Testing ConnectApi Code

**getRepositoryFolderItems** (repositoryId, repositoryFolderId)

Get repository folder items.

API Version

39.0

Requires Chatter

No
**Signature**

```java
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId)
```

**Parameters**

- `repositoryId`
  - **Type**: String
  - The ID of the repository.

- `repositoryFolderId`
  - **Type**: String
  - The ID of the repository folder.

**Return Value**

- **Type**: `ConnectApi.RepositoryFolderItemsCollection`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**Example**

This example gets the collection of items in a repository folder. For files, we show the file’s name, size, external URL, and download URL. For folders, we show the folder’s name, description, and external URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bjIzTGfqSWs';
final ConnectApi.RepositoryFolderItemsCollection folderItemsColl = ConnectApi.ContentHub.getRepositoryFolderItems(gDriveRepositoryId,gDriveFolderId);
final List<ConnectApi.RepositoryFolderItem> folderItems = folderItemsColl.items;
System.debug('Number of items in repository folder: ' + folderItems.size());
for(ConnectApi.RepositoryFolderItem item : folderItems){
  ConnectApi.RepositoryFileSummary fileSummary = item.file;
  if(fileSummary != null){
    System.debug(String.format('File item - name: '\'{0}''', size: {1}, external URL: '\'{2}''', download URL: '\'{3}''', new String[]{ fileSummary.name, String.valueOf(fileSummary.contentSize), fileSummary.externalDocumentUrl, fileSummary.downloadUrl}));
  }else{
    ConnectApi.RepositoryFolderSummary folderSummary = item.folder;
    System.debug(String.format('Folder item - name: '\'{0}''', description: '\'{1}''', new String[]{ folderSummary.name, folderSummary.description}));
  }
}
```

**SEE ALSO:**

- `Testing ConnectApi Code`
getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
Get repository folder items in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

Return Value
Type: ConnectApi.RepositoryFolderItemsCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, result)

getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items.

API Version
39.0
Requires Chatter
No

Signature
`public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)`

Parameters

- `repositoryId`  
  Type: `String`  
  The ID of the repository.

- `repositoryFolderId`  
  Type: `String`  
  The ID of the repository folder.

- `pageParam`  
  Type: `Integer`  
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`  
  Type: `Integer`  
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

Return Value

Type: `ConnectApi.RepositoryFolderItemsCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  - `setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize, result)`
  - Testing ConnectApi Code

`getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)`

Get a page of repository folder items in a community.

API Version
39.0
Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value
Type: ConnectApi.RepositoryFolderItemsCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize, result)

updateRepositoryFile(repositoryId, repositoryFileId, file)
Update the metadata of a repository file.
API Version
39.0

Requires Chatter
No

Signature

```java
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file)
```

Parameters

- `repositoryId`
  Type: `String`
  The ID of the repository.

- `repositoryFileId`
  Type: `String`
  The ID of the repository file.

- `file`
  Type: `ConnectApi.ContentHubItemInput`
  The item type ID and fields of the item type.

Return Value

Type: `ConnectApi.RepositoryFileDetail`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example updates the metadata of a file in a repository. After the file is updated, we show the file’s ID, name, description, external URL, download URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bJ1zTGFqSWs', gDriveFileId = 'document:1q9OatVpcyYBK-JWzp_PhrR75u1QgwhFP15zhkamKrRcQ';

final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
updatedItem.itemTypeId = 'document'; //see get AllowedTypes for any file item types available for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInputName = new
```

1458
ConnectApi.ContentHubFieldValueInput();
fieldValueInputName.name = 'name';
fieldValueInputName.value = 'updated file name.txt';
updatedItem.fields.add(fieldValueInputName);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputNameDesc = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInputNameDesc.name = 'description';
fieldValueInputNameDesc.value = 'that updates the former description';
updatedItem.fields.add(fieldValueInputNameDesc);

final ConnectApi.RepositoryFileDetail updatedFile =
ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFileId, updatedItem);
System.debug(String.format('Updated file - id: "{0}", name: "{1}", description: "{2}",
external URL: "{3}", download URL: "{4}", new String[]{
updatedFile.id, updatedFile.name, updatedFile.description, updatedFile.externalDocumentUrl,
updatedFile.downloadUrl});

SEE ALSO:
setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)
Testing ConnectApi Code

updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput
fileData)

Parameters
repositoryId
   Type: String
   The ID of the repository.
repositoryFileId
   Type: String
   The ID of the repository file.
file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.

fileData
  Type: ConnectApi.BinaryInput
  The binary file.

Return Value
  Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example updates the content and metadata of a file in a repository. After the file is updated, we show the file's ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bjIzTGFqSWS', gDriveFileId = 'document:1q9oatVpcyYBK-JWzp_PhrR75u1QghwFP15zhkamKrRcQ';

final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
updatedItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInputName = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputName.name = 'name';
fieldValueInputName.value = 'updated file name.txt';
updatedItem.fields.add(fieldValueInputName);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputNameDesc = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputNameDesc.name = 'description';
fieldValueInputNameDesc.value = 'that updates the former description';
updatedItem.fields.add(fieldValueInputNameDesc);

//Binary content
final Blob updatedFileBlob = Blob.valueOf('even more awesome content for updated file');
final String updatedFileMimeType = 'text/plain';
final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(updatedFileBlob, updatedFileMimeType, updatedFileName);

final ConnectApi.RepositoryFileDetail updatedFile =
  ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFileId, updatedItem);
```
SEE ALSO:

setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, result)

Testing ConnectApi Code

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)

Update the metadata of a repository file in a community.

API Version

39.0

Requires Chatter

No

Signature

public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

repositoryId

Type: String

The ID of the repository.

repositoryFileId

Type: String

The ID of the repository file.

file

Type: ConnectApi.ContentHubItemInput

The item type ID and fields of the item type.

ReturnValue

Type: ConnectApi.RepositoryFileDetail
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**Testing ConnectApi Code**

`updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)`

Update the content of a repository file in a community.

**API Version**

39.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFileId**
  - Type: `String`
  - The ID of the repository file.

- **file**
  - Type: `ConnectApi.ContentHubItemInput`
  - The item type ID and fields of the item type.

- **fileData**
  - Type: `ConnectApi.BinaryInput`
  - The binary file.
Return Value
Type: `ConnectApi.RepositoryFileDetail`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, result)`

**ContentHub Test Methods**

The following are the test methods for ContentHub. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

**setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)**

Registers a `ConnectApi.RepositoryFolderItem` object to be returned when the matching `addRepositoryItem(repositoryId, repositoryFolderId, file)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
40.0

**Signature**

```java
public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFolderItem result)
```

**Parameters**

- `repositoryId`
  Type: `String`
  The ID of the repository.

- `repositoryFolderId`
  Type: `String`
  The ID of the repository folder.

- `file`
  Type: `ConnectApi.ContentHubItemInput`
  The item type ID and fields of the item type.

- `result`
  Type: `ConnectApi.RepositoryFolderItem`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `addRepositoryItem(repositoryId, repositoryFolderId, file)`
- Testing ConnectApi Code

`setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)`

Registers a `ConnectApi.RepositoryFolderItem` object to be returned when the matching `addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestAddRepositoryItem(String communityId, String repositoryId,
String repositoryFolderId, ConnectApi.ContentHubItemInput file,
ConnectApi.RepositoryFolderItem result)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.
- `repositoryId`
  Type: `String`
  The ID of the repository.
- `repositoryFolderId`
  Type: `String`
  The ID of the repository folder.
- `file`
  Type: `ConnectApi.ContentHubItemInput`
  The item type ID and fields of the item type.
- `result`
  Type: `ConnectApi.RepositoryFolderItem`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)

Testing ConnectApi Code

`setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, fileData, result)`

Registers a `ConnectApi.RepositoryFolderItem` object to be returned when the matching
`addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)` method is called in a test
context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
`public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFolderItem result)`

Parameters
`repositoryId`
Type: `String`
The ID of the repository.

`repositoryFolderId`
Type: `String`
The ID of the repository folder.

`file`
Type: `ConnectApi.ContentHubItemInput`
The item type ID and fields of the item type.

`fileData`
Type: `ConnectApi.BinaryInput`
The binary file.

`result`
Type: `ConnectApi.RepositoryFolderItem`
The object containing test data.
Return Value
Type: Void

SEE ALSO:
addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
Testing ConnectApi Code

setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)

Registers a ConnectApi.RepositoryFolderItem object to be returned when the matching
addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData) method
is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestAddRepositoryItem(String communityId, String repositoryId,
String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput
fileData, ConnectApi.RepositoryFolderItem result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

fileData
Type: ConnectApi.BinaryInput
The binary file.

result
Type: ConnectApi.RepositoryFolderItem
The object containing test data.
Return Value
Type: Void

SEE ALSO:
    addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)
    Testing ConnectApi Code

**setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, result)**

Registers a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching `getAllowedItemTypes(repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```
public static Void setTestGetAllowedItemTypes(String repositoryId, String
repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)
```

Parameters
- **repositoryId**
  Type: String
  The ID of the repository.
- **repositoryFolderId**
  Type: String
  The ID of the repository folder.
- **result**
  Type: ConnectApi.ContentHubAllowedItemTypeCollection
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
    `getAllowedItemTypes(repositoryId, repositoryFolderId)`
    Testing ConnectApi Code
**setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, filter, result)**

Registers a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(repositoryId, repositoryFolderId, filter)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemType filter, ConnectApi.ContentHubAllowedItemTypeCollection result)
```

**Parameters**

- `repositoryId`
  - **Type:** String
  - The ID of the repository.

- `repositoryFolderId`
  - **Type:** String
  - The ID of the repository folder.

- `filter`
  - **Type:** `ConnectApi.ContentHubItemType`
  - Item types. Values are:
    - `Any`—Includes files and folders.
    - `FilesOnly`—Includes files only.
    - `FoldersOnly`—Includes folders only.

- `result`
  - **Type:** `ConnectApi.ContentHubAllowedItemTypeCollection`
  - The object containing test data.

**Return Value**

**Type:** Void

**SEE ALSO:**

- `getAllowedItemTypes(repositoryId, repositoryFolderId, filter)`
- Testing ConnectApi Code
**setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, result)**

Registers a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)
```

**Parameters**

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **repositoryId**
  Type: `String`
  The ID of the repository.

- **repositoryFolderId**
  Type: `String`
  The ID of the repository folder.

- **result**
  Type: `ConnectApi.ContentHubAllowedItemTypeCollection`
  The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)`
- Testing `ConnectApi` Code

**setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter, result)**

Registers a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
40.0

Signature

public static Void setTestGetAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemType filter, ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

filter
Type: ConnectApi.ContentHubItemType
Item types. Values are:
- Any—Includes files and folders.
- FilesOnly—Includes files only.
- FoldersOnly—Includes folders only.

result
Type: ConnectApi.ContentHubAllowedItemTypeCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)
Testing ConnectApi Code

setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)

Registers a ConnectApi.FilePreview object to be returned when the matching getFilePreview(repositoryId, repositoryFileId, formatType) method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
40.0

Signature
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.
formatType
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:
- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.
If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.
result
Type: ConnectApi.FilePreview
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFilePreview(repositoryId, repositoryFileId, formatType)
Testing ConnectApi Code
setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)

Registers a ConnectApi.FilePreview object to be returned when the matching getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber, ConnectApi.FilePreview result)

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

formatType
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:
• Jpg—Preview format is JPG.
• Pdf—Preview format is PDF.
• Svg—Preview format is compressed SVG.
• Thumbnail—Preview format is 240 x 180 PNG.
• ThumbnailBig—Preview format is 720 x 480 PNG.
• ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

startPageNumber
Type: Integer
The starting page number in the range of file preview URLs.

endPageNumber
Type: Integer
The ending page number in the range of file preview URLs.
result
  Type: ConnectApi.FilePreview
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
  Testing ConnectApi Code

setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, result)
Registers a ConnectApi.FilePreview object to be returned when the matching getFilePreview(communityId, repositoryId, repositoryFileId, formatType) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

repositoryId
  Type: String
  The ID of the repository.

repositoryFileId
  Type: String
  The ID of the repository file.

formatType
  Type: ConnectApi.FilePreviewFormat
  Specifies the format of the file preview. Values are:
  • Jpg—Preview format is JPG.
  • Pdf—Preview format is PDF.
• **Svg**—Preview format is compressed SVG.
• **Thumbnail**—Preview format is 240 x 180 PNG.
• **ThumbnailBig**—Preview format is 720 x 480 PNG.
• **ThumbnailTiny**—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber, ConnectApi.FilePreview result)
```

**Parameters**

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`repositoryId`

Type: `String`

The ID of the repository.

`repositoryFileId`

Type: `String`
The ID of the repository file.

**formatType**
Type: `ConnectApi.FilePreviewFormat`

Specifies the format of the file preview. Values are:
- `Jpg`—Preview format is JPG.
- `Pdf`—Preview format is PDF.
- `Svg`—Preview format is compressed SVG.
- `Thumbnail`—Preview format is 240 x 180 PNG.
- `ThumbnailBig`—Preview format is 720 x 480 PNG.
- `ThumbnailTiny`—Preview format is 120 x 90 PNG.

API Version

40.0

Signature

```java
public static Void setTestGetItemType(String communityId, String repositoryId, String
repositoryItemTypeId, ConnectApi.ContentHubItemTypeDetail result)
```

Parameters

```java
communityId
  Type: String
  Use either the ID for a community, internal, or null.
repositoryId
  Type: String
```
The ID of the repository.

repositoryItemType
Type: String

The ID of the repository item type.

result
Type: ConnectApi.ContentHubItemTypeDetail

The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getItemType(communityId, repositoryId, repositoryItemType)
- Testing ConnectApi Code

**setTestGetPreviews(repositoryId, repositoryFileId, result)**

Registers a ConnectApi.FilePreviewCollection object to be returned when the matching getPreviews(repositoryId, repositoryFileId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestGetPreviews(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewCollection result)
```

Parameters

- repositoryId
  Type: String
  The ID of the repository.

- repositoryFileId
  Type: String
  The ID of the repository file.

- result
  Type: ConnectApi.FilePreviewCollection
  The object containing test data.
setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)

Registers a ConnectApi.FilePreviewCollection object to be returned when the matching getPreviews(communityId, repositoryId, repositoryFileId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetPreviews(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewCollection result)

Parameters

communityId
   Type: String
   Use either the ID for a community, internal, or null.
repositoryId
   Type: String
   The ID of the repository.
repositoryFileId
   Type: String
   The ID of the repository file.
result
   Type: ConnectApi.FilePreviewCollection
   The object containing test data.

Return Value
Type: Void

SEE ALSO:
   getPreviews(communityId, repositoryId, repositoryFileId)
   Testing ConnectApi Code
**setTestGetRepositories(result)**

Registers a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories()` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestGetRepositories(ConnectApi.ContentHubRepositoryCollection result)
```

Parameters
- **result**
  - Type: `ConnectApi.ContentHubRepositoryCollection`
  - The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRepositories()`
- Testing ConnectApi Code

**setTestGetRepositories(communityId, result)**

Registers a `getRepositories(communityId)` object to be returned when the matching `ConnectApi.ContentHubRepositoryCollection` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestGetRepositories(String communityId, ConnectApi.ContentHubRepositoryCollection result)
```

Parameters
- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

1479
result
Type: ConnectApi.ContentHubRepositoryCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositories(communityId)
Testing ConnectApi Code

setTestGetRepositories(pageParam, pageSize, result)
Registers a ConnectApi.ContentHubRepositoryCollection object to be returned when the matching
getRepositories(pageParam, pageSize) method is called in a test context. Use the method with the same parameters
or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositories(Integer pageParam, Integer pageSize, ConnectApi.ContentHubRepositoryCollection result)

Parameters
pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

result
Type: ConnectApi.ContentHubRepositoryCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositories(pageParam, pageSize)
Testing ConnectApi Code
setTestGetRepositories(communityId, pageParam, pageSize, result)

Registers a ConnectApi.ContentHubRepositoryCollection object to be returned when the matching getRepositories(communityId, pageParam, pageSize) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositories(String communityId, Integer pageParam, Integer pageSize, ConnectApi.ContentHubRepositoryCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

result
Type: ConnectApi.ContentHubRepositoryCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositories(communityId, pageParam, pageSize)
Testing ConnectApi Code

setTestGetRepository(repositoryId, result)

Registers a ConnectApi.ContentHubRepository object to be returned when the matching getRepository(repositoryId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
public static Void setTestGetRepository(String repositoryId, ConnectApi.ContentHubRepository result)

Parameters

repositoryId
   Type: String
   The ID of the repository.
result
   Type: ConnectApi.ContentHubRepository
   The object containing test data.

Return Value
Type: Void

SEE ALSO:
   getRepository(repositoryId)
   Testing ConnectApi Code

setTestGetRepository(communityId, repositoryId, result)
Registers a ConnectApi.ContentHubRepository object to be returned when the matching getRepository(communityId, repositoryId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepository(String communityId, String repositoryId, ConnectApi.ContentHubRepository result)

Parameters

communityId
   Type: String
   Use either the ID for a community, internal, or null.
repositoryId
   Type: String
   The ID of the repository.
result
   Type: ConnectApi.ContentHubRepository
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepository(communityId, repositoryId)

TSTing ConnectApi Code

setTestGetRepositoryFile(repositoryId, repositoryFileId, result)

Registers a ConnectApi.RepositoryFileDetail object to be returned when the matching getRepositoryFile(repositoryId, repositoryFileId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.RepositoryFileDetail result)
```

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFile(repositoryId, repositoryFileId)

Testing ConnectApi Code
setTestGetRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)

Registers a ConnectApi.RepositoryFileDetail object to be returned when the matching getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo, ConnectApi.RepositoryFileDetail result)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

includeExternalFilePermissionsInfo
Type: Boolean
Specifies whether to include permission information, such as whether the file is shared and what are the available permission types. Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Testing ConnectApi Code

setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, result)

Registers a ConnectApi.RepositoryFileDetail object to be returned when the matching getRepositoryFile(communityId, repositoryId, repositoryFileId) method is called in a test context. Use the method with the same parameters or you receive an exception.
public static Void setTestGetRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.RepositoryFileDetail result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:

getRepositoryFile(communityId, repositoryId, repositoryFileId)
Testing ConnectApi Code

setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)

Registers a ConnectApi.RepositoryFileDetail object to be returned when the matching getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
public static Void setTestGetRepositoryFile(String communityId, String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo, ConnectApi.RepositoryFileDetail result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

includeExternalFilePermissionsInfo
Type: Boolean
Specifies whether to include permission information, such as whether the file is shared and what are the available permission types. Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)

setTestGetRepositoryFolder(repositoryId, repositoryFolderId, result)

Registers a ConnectApi.RepositoryFolderDetail object to be returned when the matching getRepositoryFolder(repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
**signature**

```java
public static Void setTestGetRepositoryFolder(String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderDetail result)
```

**parameters**

- `repositoryId`  
  **Type:** String  
  The ID of the repository.

- `repositoryFolderId`  
  **Type:** String  
  The ID of the repository folder.

- `result`  
  **Type:** `ConnectApi.RepositoryFolderDetail`  
  The object containing test data.

**return value**

- **Type:** Void

**see also:**

- `getRepositoryFolder(communityId, repositoryId, repositoryFolderId)`
- Testing `ConnectApi` Code

**setTestGetRepositoryFolder(communityId, repositoryId, repositoryFolderId, result)**

Registers a `ConnectApi.RepositoryFolderDetail` object to be returned when the matching `getRepositoryFolder(communityId, repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**api version**

40.0

**signature**

```java
public static Void setTestGetRepositoryFolder(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderDetail result)
```

**parameters**

- `communityId`  
  **Type:** String  
  Use either the ID for a community, `internal`, or `null`.

- `repositoryId`  
  **Type:** String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

result
Type: ConnectApi.RepositoryFolderDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFolder(communityId, repositoryId, repositoryFolderId)

**setTestGetRepositoryFolderItems**(repositoryId, repositoryFolderId, result)

Registers a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching
getRepositoryFolderItems(repositoryId, repositoryFolderId) method is called in a test context. Use the
method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestGetRepositoryFolderItems(String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

result
Type: ConnectApi.RepositoryFolderItemsCollection
The object containing test data.
setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, result)

Registers a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

result
Type: ConnectApi.RepositoryFolderItemsCollection
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
Testing ConnectApi Code

**setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize, result)**

Registers a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestGetRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

result
Type: ConnectApi.RepositoryFolderItemsCollection
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)

**setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize, result)**

Registers a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`.
- **repositoryId**
  Type: String
  The ID of the repository.
- **repositoryFolderId**
  Type: String
  The ID of the repository folder.
- **pageParam**
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.
- **result**
  Type: `ConnectApi.RepositoryFolderItemsCollection`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)

setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)

 Registers a ConnectApi.RepositoryFileDetail object to be returned when the matching
updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData) method
is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput
fileData, ConnectApi.RepositoryFileDetail result)

Parameters

  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  repositoryId
    Type: String
    The ID of the repository.

  repositoryFileId
    Type: String
    The ID of the repository file.

  file
    Type: ConnectApi.ContentHubItemInput
    The item type ID and fields of the item type.

  fileData
    Type: ConnectApi.BinaryInput
    The binary file.

  result
    Type: ConnectApi.RepositoryFileDetail
    The object containing test data.
Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(repositoryId, repositoryFileId, file)
Testing ConnectApi Code

**setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, result)**

Registers a ConnectApi.RepositoryFileDetail object to be returned when the matching updateRepositoryFile(repositoryId, repositoryFileId, file) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestUpdateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFileDetail result)
```

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

Datacloud Class
Purchase Data.com contact or company records, and retrieve purchase information.
Namespace
ConnectApi

IN THIS SECTION:
Datacloud Methods

Datacloud Methods
The following are methods for Datacloud. All methods are static.

IN THIS SECTION:
getCompaniesFromOrder(orderId, pageSize, page)
Retrieves a list of purchased company records for an order.
getCompany(companyId)
Retrieves a company record from an identification number.
getContact(contactId)
Retrieves a contact record from an identification number.
getContactsFromOrder(orderId, page, pageSize)
Retrieves a list of purchased contacts for an order.
getOrder(orderId)
Retrieves purchased records for an order.
getUsage(userId)
Retrieves purchase usage information for a specific user.
postOrder(orderInput)
Purchase records that are listed in an input file.

getCompaniesFromOrder(orderId, pageSize, page)
Retrieves a list of purchased company records for an order.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudCompanies getCompaniesFromOrder(String orderId, String pageSize, String page)
Parameters

**orderId**
Type: String
A unique number that identifies an order.

**page**
Type: String
The number of the page that you want returned.

**pageSize**
Type: String
The number of companies to show on a page. The default `pageSize` is 25.

Return Value
Type: ConnectApi.DatacloudCompanies

### getCompany (companyId)
Retrieves a company record from an identification number.

**API Version**
32.0

**Requires Chatter**
No

**Signature**

```java
public static ConnectApi.DatacloudCompany getCompany(String companyId)
```

**Parameters**

**companyId**
Type: String
A numeric identifier for a company in the Data.com database.

**Return Value**
Type: ConnectApi.DatacloudCompany

**Example**

```java
ConnectApi.DatacloudCompany DatacloudCompanyRep = ConnectApi.Datacloud.getCompany(companyId);
```

### getContact (contactId)
Retrieves a contact record from an identification number.
**getContact(contactId)**

**Signature**

```
public static ConnectApi.DatacloudContact getContact(String contactId)
```

**Parameters**

- `contactId`
  - **Type:** String
  - A unique numeric string that identifies a contact in the Data.com database.

**Return Value**

**Type:** ConnectApi.DatacloudContact

**Example**

```
ConnectApi.DatacloudContact DatacloudContactRep = ConnectApi.Datacloud.getContact(contactId);
```

---

**getContactsFromOrder(orderId, page, pageSize)**

Retrieves a list of purchased contacts for an order.

**Signature**

```
public static ConnectApi.DatacloudContacts getContactsFromOrder(String orderId, String page, String pageSize)
```

**Parameters**

- `orderId`
  - **Type:** String
  - A unique number that’s associated with an order.

- `page`
  - **Type:** String

---

1498
The number of the page that you want returned.

`pageSize`
Type: `String`
The number of contacts to show on a page. The default `pageSize` is 25.

Return Value
Type: `ConnectApi.DatacloudContacts`

**getOrder** *(orderId)*
Retrieves purchased records for an order.

API Version
32.0

Requires Chatter
No

Signature
```java
public static ConnectApi.DatacloudOrder getOrder(String orderId)
```

Parameters

`orderId`
Type: `String`
A unique number that identifies an order.

Return Value
Type: `ConnectApi.DatacloudOrder`

Example
```java
ConnectApi.DatacloudOrder datacloudOrderRep = ConnectApi.Datacloud.getOrder(orderId);
```

**getUsage** *(userId)*
Retrieves purchase usage information for a specific user.

API Version
32.0

Requires Chatter
No
getUsage(String userId)

Parameters

userId
Type: String
A unique number that identifies a single user.

Return Value
Type: ConnectApi.DatacloudPurchaseUsage

Example

ConnectApi.DatacloudPurchaseUsage datacloudPurchaseUsageRep =
ConnectApi.Datacloud.getUsage(userId);

postOrder(orderInput)

Purchase records that are listed in an input file.

API Version
32.0

Requires Chatter
No

Signature

public static ConnectApi.DatacloudOrder postOrder(ConnectApi.DatacloudOrderInput
orderInput)

Parameters

orderInput
Type: ConnectApi.DatacloudOrderInput
A list that contains IDs for the contacts or companies that you want to see.

Return Value
Type: ConnectApi.DatacloudOrder

Example

ConnectApi.DatacloudOrderInput inputOrder=new ConnectApi.DatacloudOrderInput();
List<String> ids=new List<String>();
EmailMergeFieldService Class

Extract a list of merge fields for an object. A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

Namespace

ConnectApi

EmailMergeFieldService Methods

The following are methods for EmailMergeFieldService. All methods are static.

IN THIS SECTION:

getMergeFields(objectApiNames)

Extract the merge fields for a specific object.

getMergeFields(objectApiNames)

Extract the merge fields for a specific object.

API Version

39.0

Requires Chatter

No

Signature

public static ConnectApi.EmailMergeFieldInfo getMergeFields(List<String> objectApiNames)

Parameters

objectApiNames

Type: List<String>

The API names for the objects being referenced.

Return Value

Type: ConnectApi.EmailMergeFieldInfo
ExternalEmailServices Class

Access information about integration with external email services, such as sending email within Salesforce through an external email account.

Namespace

ConnectApi

External Email Services Methods

The following are methods for ExternalEmailService. All methods are static.

IN THIS SECTION:

getUserOAuthInfo(landingPage)

Get information about whether an external email service has been authorized to send email on behalf of a user.

getUserOAuthInfo (landingPage)

Get information about whether an external email service has been authorized to send email on behalf of a user.

API Version

37.0

Requires Chatter

No

Signature

public static getUserOAuthInfo(String landingPage)

Parameters

landingPage

Type: String

The landing page that the user starts on when they are finished with the OAuth authorization process.

Return Value

Type: UserOAuthInfo

SEE ALSO:

Testing ConnectApi Code

Knowledge Class

Access information about trending articles in communities.
Namespace

ConnectApi

Knowledge Methods

The following are methods for Knowledge. All methods are static.

IN THIS SECTION:

getTopViewedArticlesForTopic(communityId, topicId, maxResults)
Get the top viewed articles for a topic.

defTrendingArticles(communityId, maxResults)
Get trending articles for a community.

defTrendingArticlesForTopic(communityId, topicId, maxResults)
Get the trending articles for a topic in a community.

getTopViewedArticlesForTopic(communityId, topicId, maxResults)
Get the top viewed articles for a topic.

API Version

41.0

Available to Guest Users

41.0

Requires Chatter

No

Signature

public static ConnectApi.KnowledgeArticleVersionCollection
defTopViewedArticlesForTopic(String communityId, String topicId, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

topicId
Type: String
ID of the topic.

maxResults
Type: Integer
The maximum number of articles returned for each topic ID. Values can be from 1 to 25. The default value is 5.

Return Value
Type: ConnectApi.KnowledgeArticleVersionCollection

getTrendingArticles(communityId, maxResults)
Get trending articles for a community.

API Version
36.0

Available to Guest Users
36.0

Requires Chatter
No

Signature
public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticles(String communityId, Integer maxResults)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

maxResults
Type: Integer
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value
Type: ConnectApi.KnowledgeArticleVersionCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTrendingArticles(communityId, maxResults, result)
Testing ConnectApi Code
getTrendingArticlesForTopic(communityId, topicId, maxResults)
Get the trending articles for a topic in a community.

API Version
36.0

Available to Guest Users
36.0

Requires Chatter
No

Signature
public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

topicId
Type: String
ID of the topic.

maxResults
Type: Integer
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value
Type: ConnectApi.KnowledgeArticleVersionCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)
Testing ConnectApi Code
Knowledge Test Methods

The following are the test methods for Knowledge. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestGetTrendingArticles(communityId, maxResults, result)

Registers a ConnectApi.KnowledgeVersionArticleCollection object to be returned when the matching ConnectApi.getTrendingArticles method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

36.0

Signature

public static Void setTestGetTrendingArticles(String communityId, Integer maxResults, ConnectApi.KnowledgeArticleVersionCollection result)

Parameters

- communityId
  - Type: String
  - Use either the ID for a community, internal, or null.

- maxResults
  - Type: Integer
  - The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

- result
  - Type: ConnectApi.KnowledgeArticleVersionCollection
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:

- getTrendingArticles(communityId, maxResults)
- Testing ConnectApi Code

setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)

Registers a ConnectApi.KnowledgeVersionArticleCollection object to be returned when the matching ConnectApi.getTrendingArticlesForTopic method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
36.0

Signature
public static Void setTestGetTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults, ConnectApi.KnowledgeArticleVersionCollection result)

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.
- **topicId**
  - Type: String
  - ID of the topic.
- **maxResults**
  - Type: Integer
  - The maximum number of articles returned. Values can be from 0 to 25. Default is 5.
- **result**
  - Type: ConnectApi.KnowledgeArticleVersionCollection
  - The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getTrendingArticlesForTopic(communityId, topicId, maxResults)
- Testing ConnectApi Code

ManagedTopics Class
Access information about managed topics in a community. Create, delete, and reorder managed topics.

Namespace
ConnectApi

ManagedTopics Methods
The following are methods for ManagedTopics. All methods are static.
IN THIS SECTION:

- `createManagedTopic(communityId, recordId, managedTopicType)`
  Creates a managed topic of a specific type for the specified community.

- `createManagedTopic(communityId, recordId, managedTopicType, parentId)`
  Creates a child managed topic for a community.

- `createManagedTopicByName(communityId, name, managedTopicType)`
  Creates a managed topic of a specific type by name for the specified community.

- `createManagedTopicByName(communityId, name, managedTopicType, parentId)`
  Creates a child managed topic by name for a community.

- `deleteManagedTopic(communityId, managedTopicId)`
  Deletes a managed topic from the specified community.

- `getManagedTopic(communityId, managedTopicId)`
  Returns information about a managed topic in a community.

- `getManagedTopic(communityId, managedTopicId, depth)`
  Returns information about a managed topic, including its parent and children managed topics, in a community.

- `getManagedTopics(communityId)`
  Returns the featured and navigational managed topics for the community.

- `getManagedTopics(communityId, managedTopicType)`
  Returns managed topics of a specified type for the community.

- `getManagedTopics(communityId, managedTopicType, depth)`
  Returns managed topics of a specified type, including their parent and children managed topics, in a community.

- `getManagedTopics(communityId, managedTopicType, recordId, depth)`
  Returns managed topics of a specified type, including their parent and children managed topics, that are associated with a given topic in a community.

- `getManagedTopics(communityId, managedTopicType, recordIds, depth)`
  Returns managed topics of a specified type, including their parent and children managed topics, that are associated with topics in a community.

- `getManagedTopics(communityId, managedTopicType, pageParam, pageSize)`
  Returns a page of managed topics.

- `reorderManagedTopics(communityId, managedTopicPositionCollection)`
  Reorders the relative positions of managed topics in a community.

---

`createManagedTopic(communityId, recordId, managedTopicType)`

Creates a managed topic of a specific type for the specified community.

**API Version**

32.0

**Requires Chatter**

No
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
ID of the topic.

managedTopicType
Type: ConnectApi.ManagedTopicType
Specify the type of managed topic.

• Content—Topics that are associated with native content.
• Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
• Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

Return Value

Type: ConnectApi.ManagedTopic

Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

createManagedTopic(communityId, recordId, managedTopicType, parentId)
Creates a child managed topic for a community.

API Version

35.0

Requires Chatter

No
Signature

```java
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType, String parentId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **recordId**
  - Type: `String`
  - ID of the topic.

- **managedTopicType**
  - Type: `ConnectApi.ManagedTopicType`
  - Specify `Navigational` for the type of managed topic to create a child managed topic.
  - You can create up to 25 `Featured` and 5,000 `Content` topics. You can create up to eight levels of `Navigational` managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 `Navigational` topics.

- **parentId**
  - Type: `String`
  - ID of the parent managed topic.
  - You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

Return Value

- Type: `ConnectApi.ManagedTopic`

Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

```java
createManagedTopicByName(communityId, name, managedTopicType)
```

Creates a managed topic of a specific type by name for the specified community.

API Version

- 32.0

Requires Chatter

- No
Signature

```java
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId,
        String name, ConnectApi.ManagedTopicType managedTopicType)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **name**
  - Type: String
  - Name of the topic.

- **managedTopicType**
  - Type: `ConnectApi.ManagedTopicType`
  - Specify the type of managed topic.
    - Content — Topics that are associated with native content.
    - Featured — Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
    - Navigational — Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

Return Value

- **Type**: `ConnectApi.ManagedTopic`

Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

```java
createManagedTopicByName(communityId, name, managedTopicType, parentId)
```

Creates a child managed topic by name for a community.

API Version

- 35.0

Requires Chatter

- No
Signature

```java
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId, String name, ConnectApi.ManagedTopicType managedTopicType, String parentId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- **name**
  - Type: `String`
  - Name of the topic.

- **managedTopicType**
  - Type: `ConnectApi.ManagedTopicType`
  - Specify `Navigational` for the type of managed topic to create a child managed topic.
  - You can create up to 25 `Featured` and 5,000 `Content` topics. You can create up to eight levels of `Navigational` managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 `Navigational` topics.

- **parentId**
  - Type: `String`
  - ID of the parent managed topic.
  - You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

Return Value

- Type: `ConnectApi.ManagedTopic`

Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

```java
deleteManagedTopic(String communityId, String managedTopicId)
```

Deletes a managed topic from the specified community.

API Version

32.0

Requires Chatter

No
Parameters

- **communityId**
  - Type: *String*
  - Use either the ID for a community, *internal*, or *null*.

- **managedTopicId**
  - Type: *String*
  - ID of managed topic.

Return Value

Type: Void

Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can delete managed topics.

### `getManagedTopic(communityId, managedTopicId)`

Returns information about a managed topic in a community.

API Version

32.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId)
```

Parameters

- **communityId**
  - Type: *String*
  - Use either the ID for a community, *internal*, or *null*.

- **managedTopicId**
  - Type: *String*
  - ID of managed topic.
Return Value
Type: ConnectApiManagedTopic

getManagedTopic(communityId, managedTopicId, depth)
Returns information about a managed topic, including its parent and children managed topics, in a community.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApiManagedTopic getManagedTopic(String communityId, String managedTopicId, Integer depth)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

managedTopicId
Type: String
ID of managed topic.

depth
Type: Integer
Specify an integer 1–8. If you specify 1, the children property of the ConnectApiManagedTopic output class is null. If you specify 2, the children property of the ConnectApiManagedTopic output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

Return Value
Type: ConnectApiManagedTopic

getManagedTopics(communityId)
Returns the featured and navigational managed topics for the community.
To get managed content topics for the community, use getManagedTopics(communityId, managedTopicType).
API Version
32.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.ManagedTopicCollection

getManagedTopics(communityId, managedTopicType)

Returns managed topics of a specified type for the community.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
ConnectApi.ManagedTopicType managedTopicType)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or `null`.

managedTopicType
Type: `ConnectApi.ManagedTopicType`
Type of managed topic.
- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the community.
A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.
If you specify Content, up to 50 topics are returned. If you want more than 50 Content topics, use `getManagedTopics(communityId, managedTopicType, pageParam, pageSize)`.

Return Value
Type: `ConnectApi.ManagedTopicCollection`

`getManagedTopics(communityId, managedTopicType, depth)`

Returns managed topics of a specified type, including their parent and children managed topics, in a community.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, Integer depth)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`managedTopicType`
Type: `ConnectApi.ManagedTopicType`
Type of managed topic.
- Content—Topics that are associated with native content.
• **Featured**—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.

• **Navigational**—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a **Featured**, **Navigational**, and **Content** topic.

**depth**

Type: **Integer**

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is **null**. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

**Return Value**

Type: **ConnectApi.ManagedTopicCollection**

### getManagedTopics(communityId, managedTopicType, recordId, depth)

Returns managed topics of a specified type, including their parent and children managed topics, that are associated with a given topic in a community.

**API Version**

35.0–37.0

⚠️ **Important:** In version 38.0 and later, use `getManagedTopics(communityId, managedTopicType, recordIds, depth)`.

**Available to Guest Users**

35.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, String recordId, Integer depth)
```

**Parameters**

**communityId**

Type: **String**

Use either the ID for a community, `internal`, or `null`.

**managedTopicType**

Type: **ConnectApi.ManagedTopicType**

Type of managed topic.
- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

**recordId**
Type: String
ID of the topic associated with the managed topics.

**depth**
Type: Integer
Specify an integer 1–8. If you specify 1, the children property of the ConnectApi.ManagedTopic output class is null. If you specify 2, the children property of the ConnectApi.ManagedTopic output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

Return Value
Type: ConnectApi.ManagedTopicCollection

### getManagedTopics(communityId, managedTopicType, recordIds, depth)
Returns managed topics of a specified type, including their parent and children managed topics, that are associated with topics in a community.

**API Version**
38.0

**Available to Guest Users**
38.0

**Requires Chatter**
No

**Signature**
```
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, List<String> recordIds, Integer depth)
```

**Parameters**
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.
managedTopicType
   Type: ConnectApi.ManagedTopicType
   Type of managed topic.
   • Content—Topics that are associated with native content.
   • Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
   • Navigational—Topics that display in a navigational menu in the community.
   A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

recordIds
   Type: List<String>
   A list of up to 100 topic IDs associated with the managed topics.
   If you list more than 10 topic IDs, you can’t specify 2–8 for depth.

depth
   Type: Integer
   Specify an integer 1–8. If you specify 1, the children property of the ConnectApi.ManagedTopic output class is null.
   If you specify 2, the children property of the ConnectApi.ManagedTopic output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

Return Value
   Type: ConnectApi.ManagedTopicCollection

getManagedTopics(communityId, managedTopicType, pageParam, pageSize)
   Returns a page of managed topics.

API Version
   44.0

Available to Guest Users
   44.0

Requires Chatter
   No

Signature
   public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, Integer pageParam, Integer pageSize)
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

managedTopicType
Type: ConnectApi.ManagedTopicType
Type of managed topic.
- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 50.

Return Value
Type: ConnectApi.ManagedTopicCollection

reorderManagedTopics(communityId, managedTopicPositionCollection)
Reorders the relative positions of managed topics in a community.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection reorderManagedTopics(String communityId, ConnectApi.ManagedTopicPositionCollectionInput managedTopicPositionCollection)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.
**managedTopicPositionCollection**

Type: `ConnectApi.ManagedTopicPositionCollectionInput`

A collection of relative positions of managed topics. This collection can include only **Featured** and **Navigational** topics and doesn't have to include all managed topics.

**Return Value**

Type: `ConnectApi.ManagedTopicCollection`

**Usage**

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can reorder managed topics.

You can reorder parent managed topics or children managed topics with the same parent. If you don’t include all managed topics in the `ConnectApi.ManagedTopicPositionCollectionInput`, the managed topics are reordered by respecting the positions indicated in the `ConnectApi.ManagedTopicPositionCollectionInput` and then by pushing down any managed topics that aren’t included in the `ConnectApi.ManagedTopicPositionCollectionInput` to the next available position.

**Example**

If you have these managed topics:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicA</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicB</td>
<td>1</td>
</tr>
<tr>
<td>ManagedTopicC</td>
<td>2</td>
</tr>
<tr>
<td>ManagedTopicD</td>
<td>3</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>4</td>
</tr>
</tbody>
</table>

And you reorder managed topics by including this information in `ConnectApi.ManagedTopicPositionCollectionInput`:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicD</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicD</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicA</td>
<td>1</td>
</tr>
</tbody>
</table>
Mentions Class

Access information about mentions. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

Namespace

ConnectApi

Mentions Methods

The following are methods for Mentions. All methods are static.

IN THIS SECTION:

getMentionCompletions(communityId, q, contextId)
Returns the first page of possible users and groups to mention in a feed item body or comment body. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)
Returns the specified page number of mention proposals of the specified mention completion type: All, User, or Group. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

getMentionValidations(communityId, parentId, recordIds, visibility)
Information about whether the specified mentions are valid for the context user.

getMentionCompletions(communityId, q, contextId)

Returns the first page of possible users and groups to mention in a feed item body or comment body. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.MentionCompletionPage getMentionCompletions (String communityId, String q, String contextId)
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

q
  Type: String
  A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

customId
  Type: String
  A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

Return Value

Type: ConnectApi.MentionCompletionPage

Usage

Call this method to generate a page of proposed mentions that a user can choose from when they enter characters in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetMentionCompletions(communityId, q, customId, result)
  Testing ConnectApi Code

getMentionCompletions(communityId, q, customId, type, pageParam, pageSize)

Returns the specified page number of mention proposals of the specified mention completion type: All, User, or Group. A mention is an “@” character followed by a user or group name. When a user or group is mentioned, they receive a notification.

API Version

29.0

Requires Chatter

Yes

Signature

public static ConnectApi.Mentions getMentionCompletions (String communityId, String q, String customId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize)
Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`q`
Type: String
A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

`contextId`
Type: String
A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

`type`
Type: ConnectApi.MentionCompletionType
Type of mention completion.
- All—All mention completions, regardless of the type of record to which the mention refers.
- Group—Mention completions for groups.
- User—Mention completions for users.

`pageParam`
Type: String
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

`pageSize`
Type: String
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.MentionCompletionPage

Usage
Call this method to generate a page of proposed mentions that a user can choose from when they enter characters in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)`
- Testing ConnectApi Code

**getMentionValidations(communityId, parentId, recordIds, visibility)**
Information about whether the specified mentions are valid for the context user.
API Version
29.0

Requires Chatter
Yes

Signature
`public static ConnectApi.Mentions getMentionValidations(String communityId, String parentId, List<String> recordIds, ConnectApi.FeedItemVisibilityType visibility)`

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **parentId**
  - Type: `String`
  - The feed item parent ID.

- **recordIds**
  - Type: `List<String>`
  - A comma separated list of IDs to be mentioned. The maximum value is 25.

- **visibility**
  - Type: `ConnectApi.FeedItemVisibilityType`
  - Type of users who can see a feed item.
    - **AllUsers**—Visibility is not limited to internal users.
    - **InternalUsers**—Visibility is limited to internal users.

Return Value

Type: `ConnectApi.MentionValidations`

Usage

Call this method to check whether the record IDs returned from a call to `ConnectApi.Mentions.getMentionCompletions` are valid for the context user. For example, the context user can't mention private groups he doesn't belong to. If such a group were included in the list of mention validations, the `ConnectApi.MentionValidations.hasErrors` property would be `true` and the group would have a `ConnectApi.MentionValidation.validationStatus` of `Disallowed`.

**Mentions Test Methods**

The following are the test methods for `Mentions`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see Testing `ConnectApi` Code.
**setTestGetMentionCompletions(communityId, q, contextId, result)**

Registers a `ConnectApi.MentionCompletionPage` object to be returned when `getMentionCompletions(String, String, String)` is called in a test context.

**API Version**
29.0

**Signature**
```java
public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionPage result)
```

**Parameters**
- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- **q**
  - Type: `String`
  - A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn't require a minimum number of characters. This parameter does not support wildcards.
- **contextId**
  - Type: `String`
  - A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.
- **result**
  - Type: `ConnectApi.MentionCompletionPage`
  - A `ConnectApi.MentionCompletionPage` object containing test data.

**Return Value**
Type: `Void`

**SEE ALSO:**
- `getMentionCompletions(communityId, q, contextId)`
- Testing ConnectApi Code

**setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)**

Registers a `ConnectApi.MentionCompletionPage` object to be returned when `getMentionCompletions(String, String, String, ConnectApi.MentionCompletionType, Integer, Integer)` is called in a test context.
API Version
29.0

Signature
public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize, ConnectApi.MentionCompletionPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

contextId
Type: String
A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

type
Type: ConnectApi.MentionCompletionType
Type of mention completion.
• All—All mention completions, regardless of the type of record to which the mention refers.
• Group—Mention completions for groups.
• User—Mention completions for users.

pageParam
Type: String
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: String
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.MentionCompletionPage
A ConnectApi.MentionCompletionPage object containing test data.
Return Value
Type: Void

SEE ALSO:
- `getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)`
- Testing ConnectApi Code

NextBestAction Class (Pilot)

Execute recommendation strategies and get propositions.

Note: We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the IdeaExchange.

Namespace
ConnectApi

NextBestAction Methods (Pilot)
The following are methods for NextBestAction. All methods are static.

IN THIS SECTION:
- `executeStrategy(strategyName, maxResults, contextRecordId)` (Pilot)
  Execute a strategy.
- `executeStrategy(strategyName, strategyInput)` (Pilot)
  Execute a strategy using an input body.
- `getProposition(propositionId)` (Pilot)
  Get a proposition.
- `setRecommendationReaction(reaction)` (Pilot)
  Record user reactions to recommendations.

`executeStrategy(strategyName, maxResults, contextRecordId)` (Pilot)
Execute a strategy.

Note: We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the IdeaExchange.
API Version

Requires Chatter
No

Signature
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId)

Parameters
strategyName
Type: String
Name of the strategy.

maxResults
Type: Integer
Maximum number of results. Valid values are from 1 to 25. The default is 3.

contextRecordId
Type: String
ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

Return Value
Type: ConnectApi.NBARecommendations

executeStrategy(strategyName, strategyInput) (Pilot)
Execute a strategy using an input body.

Note: We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Signature
public static ConnectApi.Proposition getProposition(String propositionId)
Parameters

`propositionId`
Type: String
ID of the proposition.

Return Value
Type: `ConnectApi.Proposition`

### setRecommendationReaction(reaction) (Pilot)
Record user reactions to recommendations.

**Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](https://ideahub.salesforce.com).

API Version
44.0

Requires Chatter
No

Signature

```java
public static ConnectApi.NBAReaction
setRecommendationReaction(ConnectApi.NBAReactionInput reaction)
```

Parameters

`reaction`
Type: `ConnectApi.NBAReactionInput`
A `ConnectApi.NBAReactionInput` object representing a reaction to a recommendation produced by a recommendation strategy.

Return Value
Type: `ConnectApi.NBAReaction`

### Organization Class
Access information about an organization.
Namespace

ConnectApi

This is the static method of the Organization class:

Organization Methods

The following are methods for Organization. All methods are static.

IN THIS SECTION:

getSettings()

Returns information about the organization and context user, including which features are enabled.

getSettings()

Returns information about the organization and context user, including which features are enabled.

API Version

28.0

Requires Chatter

No

Signature

public static ConnectApi. OrganizationSettings getSettings()

Return Value

Type: ConnectApi.OrganizationSettings

QuestionAndAnswers Class

Access question and answers suggestions.

Namespace

ConnectApi

IN THIS SECTION:

QuestionAndAnswers Methods

QuestionAndAnswers Methods

The following are methods for QuestionAndAnswers. All methods are static.
IN THIS SECTION:

getSuggestions(communityId, q, subjectId, includeArticles, maxResults)
Returns question and answers suggestions.

setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)
Registers a ConnectApi.QuestionAndAnswersSuggestions object to be returned when getSuggestions is called with matching parameters in a test context. You must use the method with the same parameters or the code throws an exception.

updateQuestionAndAnswers(communityId, feedElementId, questionAndAnswersCapability)
Choose or change the best answer for a question.

getSuggestions(communityId, q, subjectId, includeArticles, maxResults)
Returns question and answers suggestions.

API Version
32.0

Requires Chatter
No

Signature

public static ConnectApi.QuestionAndAnswersSuggestions getSuggestions(String communityId, String q, String subjectId, Boolean includeArticles, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

subjectId
Type: String
Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

includeArticles
Type: Boolean
Specify true to include knowledge articles in the search results. To return only questions, specify false.

maxResults
Type: Integer
The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.
Return Value
Type: `ConnectApi.QuestionAndAnswersSuggestions`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)`
  - Testing ConnectApi Code

**setTestGetSuggestions** *(communityId, q, subjectId, includeArticles, maxResults, result)*
 Registers a `ConnectApi.QuestionAndAnswersSuggestions` object to be returned when `getSuggestions` is called with matching parameters in a test context. You must use the method with the same parameters or the code throws an exception.

API Version
32.0

Signature
```
public static Void setTestGetSuggestions(String communityId, String q, String subjectId,
                                          Boolean includeArticles, Integer maxResults, ConnectApi.QuestionAndAnswersSuggestions result)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: String
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **subjectId**
  - Type: String
  - Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

- **includeArticles**
  - Type: Boolean
  - Specify `true` to include knowledge articles in the search results. To return only questions, specify `false`.

- **maxResults**
  - Type: Integer
  - The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.
result
Type: ConnectApi.QuestionAndAnswersSuggestions
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getSuggestions(communityId, q, subjectId, includeArticles, maxResults)
Testing ConnectApi Code

updateQuestionAndAnswers(communityId, feedElementId, questionAndAnswersCapability)
Choose or change the best answer for a question.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.QuestionAndAnswersCapability updateQuestionAndAnswers(String communityId, String feedElementId, ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapability)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

questionAndAnswersCapability
Type: ConnectApi.QuestionAndAnswersCapabilityInput
Specify the best answer (comment ID) for the question.

Return Value
Type: ConnectApi.QuestionAndAnswersCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.
Example

```java
ConnectApi.QuestionAndAnswersCapabilityInput qaInput = new ConnectApi.QuestionAndAnswersCapabilityInput();
qaInput.bestAnswerId = '0D7D00000000lMAKAY';

ConnectApi.QuestionAndAnswersCapability qa =
ConnectApi.QuestionAndAnswers.updateQuestionAndAnswers(null, '0D5D0000000XZjJ', qaInput);
```

Recommendations Class

Access information about recommendations and reject recommendations. Also create, delete, get, and update recommendation audiences, recommendation definitions, and scheduled recommendations.

Namespace

`ConnectApi`

Recommendations Methods

The following are methods for `Recommendations`. All methods are static.

IN THIS SECTION:

- `createRecommendationAudience(communityId, recommendationAudience)`
  Create an audience for a recommendation.

- `createRecommendationAudience(communityId, name)`
  Create an audience for a recommendation.

- `createRecommendationDefinition(communityId, recommendationDefinition)`
  Create a recommendation definition.

- `createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)`
  Create a recommendation definition with the specified parameters.

- `createScheduledRecommendation(communityId, scheduledRecommendation)`
  Create a scheduled recommendation.

- `createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)`
  Create a scheduled recommendation with the specified parameters.

- `createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)`
  Create a scheduled recommendation with the specified parameters.

- `deleteRecommendationAudience(communityId, recommendationAudienceId)`
  Delete a recommendation audience.

- `deleteRecommendationDefinition(communityId, recommendationDefinitionId)`
  Delete a recommendation definition.

- `deleteRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)`
  Delete a recommendation definition photo.

- `deleteScheduledRecommendation(communityId, scheduledRecommendationId, deleteDefinitionIfLast)`
  Delete a scheduled recommendation.
getRecommendationAudience(communityId, recommendationAudienceId)
Get information about a recommendation audience.

getRecommendationAudienceMembership(communityId, recommendationAudienceId)
Get the members of a recommendation audience.

getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)
Get a page of recommendation audience members.

getRecommendationAudiences(communityId)
Get recommendation audiences.

getRecommendationAudiences(communityId, pageParam, pageSize)
Get a page of recommendation audiences.

getRecommendationDefinition(communityId, recommendationDefinitionId)
Get a recommendation definition.

getRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)
Get a recommendation definition photo.

getRecommendationDefinitions(communityId)
Get recommendation definitions.

getRecommendationForUser(communityId, userId, action, objectId)
Returns the recommendation for the context user for the specified action and object ID.

getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)
Returns the user, group, file, record, custom, and static recommendations for the context user.

getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
Returns the user, group, file, article, record, topic, custom, and static recommendations for the context user.

getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)
Returns the recommendations for the context user for the specified action.

getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)
Returns the recommendations for the context user for the specified action.

getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)
Returns the recommendations for the context user for the specified action and object category.

getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)
Returns the recommendations for the context user for the specified action and object category.

getScheduledRecommendation(communityId, scheduledRecommendationId)
Get a scheduled recommendation.

getScheduledRecommendations(communityId)
Get scheduled recommendations.

getScheduledRecommendations(communityId, channel)
Get scheduled recommendations.

rejectRecommendationForUser(communityId, userId, action, objectId)
Rejects the recommendation for the context user for the specified action and object ID.

rejectRecommendationForUser(communityId, userId, action, objectEnum)
Rejects the static recommendation for the context user.
updateRecommendationAudience(communityId, recommendationAudienceId, recommendationAudience)
Update a recommendation audience.

updateRecommendationDefinition(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation)
Update a recommendation definition with the specified parameters.

updateRecommendationDefinition(communityId, recommendationDefinitionId, recommendationDefinition)
Update a recommendation definition.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileUpload)
Update a recommendation definition photo with a file that hasn’t been uploaded.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileId, versionNumber)
Update a recommendation definition photo with a file that’s already uploaded.

updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo)
Update a recommendation definition photo with a file that’s been uploaded but requires cropping.

updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo, fileUpload)
Update a recommendation definition photo with a file that hasn’t been uploaded and requires cropping.

updateScheduledRecommendation(communityId, scheduledRecommendationId, scheduledRecommendation)
Update a scheduled recommendation.

updateScheduledRecommendation(communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId)
Update a scheduled recommendation with the specified parameters.

createRecommendationAudience(communityId, recommendationAudience)
Create an audience for a recommendation.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, ConnectApi.RecommendationAudienceInput recommendationAudience)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationAudience
Type: ConnectApi.RecommendationAudienceInput
A ConnectApi.RecommendationAudienceInput object.
Return Value
Type: `ConnectApi.RecommendationAudience`

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

`createRecommendationAudience(communityId, name)`
Create an audience for a recommendation.

API Version
35.0

Requires Chatter
No

Signature
```
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, String name)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`name`
Type: `String`
The name of the audience.

Return Value
Type: `ConnectApi.RecommendationAudience`

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

`createRecommendationDefinition(communityId, recommendationDefinition)`
Create a recommendation definition.
API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinition
Type: ConnectApi.RecommendationDefinitionInput
A ConnectApi.RecommendationDefinitionInput object.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Recommendation definitions allow you to create custom recommendations that appear in communities, encouraging users to watch videos, take training and more.

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

These recommendations appear by default on the Customer Service template. Specifically, on the community home and question detail pages and in the feed in communities in the Salesforce mobile web. They also appear anywhere community managers add recommendations using Community Builder in communities using the Summer '15 or later version of the Customer Service template.

createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)
Create a recommendation definition with the specified parameters.

API Version
35.0

Requires Chatter
No
Signature

```java
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, String name, String title, String actionUrl, String actionUrlName, String explanation)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `name`
  - Type: `String`
  - The name of the recommendation definition. The name is displayed in Setup.

- `title`
  - Type: `String`
  - The title of the recommendation definition.

- `actionUrl`
  - Type: `String`
  - The URL for acting on the recommendation, for example, the URL to join a group.

- `actionUrlName`
  - Type: `String`
  - The text label for the action URL in the user interface, for example, “Launch.”

- `explanation`
  - Type: `String`
  - The explanation, or body, of the recommendation.

Return Value

- Type: `ConnectApi.RecommendationDefinition`

Usage

Recommendation definitions allow you to create custom recommendations that appear in communities, encouraging users to watch videos, take training and more.

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

These recommendations appear by default on the Customer Service template. Specifically, on the community home and question detail pages and in the feed in communities in the Salesforce mobile web. They also appear anywhere community managers add recommendations using Community Builder in communities using the Summer ‘15 or later version of the Customer Service template.

```java
createScheduledRecommendation(communityId, scheduledRecommendation)
```

Create a scheduled recommendation.
API Version
35.0

Requires Chatter
No

Signature
`public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)`

Parameters
- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.
- `scheduledRecommendation`
  - Type: `ConnectApi.ScheduledRecommendationInput`

Return Value
- Type: `ConnectApi.ScheduledRecommendation`

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

`createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)`

Create a scheduled recommendation with the specified parameters.

API Version
35.0 only

⚠️ Important: In version 36.0 and later, use `createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)`. 

Requires Chatter
No
Signature

```java
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **recommendationDefinitionId**
  - Type: String
  - ID of the recommendation definition.

- **rank**
  - Type: Integer
  - Relative rank of the scheduled recommendation indicated by ascending whole numbers starting with 1.

  Setting the rank is comparable to an insertion into an ordered list. The scheduled recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled recommendations after it is pushed down. See [Ranking scheduled recommendations example](#)

  If the specified `rank` is larger than the size of the list, the scheduled recommendation is put at the end of the list. The `rank` of the scheduled recommendation is the size of the list, instead of the one specified.

  If a `rank` is not specified, the scheduled recommendation is put at the end of the list.

- **enabled**
  - Type: Boolean
  - Indicates whether scheduling is enabled. If `true`, the recommendation is enabled and appears in communities. If `false`, recommendations in feeds in the Salesforce mobile web aren’t removed, but no new recommendations appear. In Customer Service and Partner Central communities, disabled recommendations no longer appear.

- **recommendationAudienceId**
  - Type: String
  - ID of the recommendation definition that this scheduled recommendation schedules.

Return Value

Type: `ConnectApi.ScheduledRecommendation`

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**Ranking scheduled recommendations example**

If you have these scheduled recommendations:
And you include this information in the Scheduled Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

`createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)`

Create a scheduled recommendation with the specified parameters.

API Version
36.0

Requires Chatter
No

Signature

```
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId, ConnectApi.RecommendationChannel channel)
```

Parameters

`communityId`

Type: String

Use either the ID for a community, internal, or null.
**recommendationDefinitionId**

Type: *String*

ID of the recommendation definition.

**rank**

Type: *Integer*

Relative rank of the scheduled recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled recommendations after it is pushed down. See [Ranking scheduled recommendations example](#).

If the specified `rank` is larger than the size of the list, the scheduled recommendation is put at the end of the list. The `rank` of the scheduled recommendation is the size of the list, instead of the one specified.

If a `rank` is not specified, the scheduled recommendation is put at the end of the list.

**enabled**

Type: *Boolean*

Indicates whether scheduling is enabled. If `true`, the recommendation is enabled and appears in communities. If `false`, recommendations in feeds in the Salesforce mobile web aren’t removed, but no new recommendations appear. In Customer Service and Partner Central communities, disabled recommendations no longer appear.

**recommendationAudienceId**

Type: *String*

ID of the recommendation definition that this scheduled recommendation schedules.

**channel**

Type: `ConnectApi.RecommendationChannel`

A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- **CustomChannel1**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- **CustomChannel2**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel3**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel4**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel5**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

Use these channel values; you can’t rename or create other channels.

**Return Value**

Type: `ConnectApi.ScheduledRecommendation`

1545
Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**Ranking scheduled recommendations example**

If you have these scheduled recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

**deleteRecommendationAudience(communityId, recommendationAudienceId)**

Delete a recommendation audience.

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```java
public static Void deleteRecommendationAudience(String communityId, String recommendationAudienceId)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationAudienceId
Type: String
ID of the recommendation audience.

Return Value
Type: Void

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**deleteRecommendationDefinition(communityId, recommendationDefinitionId)**

Delete a recommendation definition.

API Version
35.0

Requires Chatter
No

Signature

```java
public static Void deleteRecommendationDefinition(String communityId, String recommendationDefinitionId)
```

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinitionId
Type: String
ID of the recommendation definition.

Return Value
Type: Void
Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**deleteRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)**
Delete a recommendation definition photo.

API Version

35.0

Requires Chatter

Yes

Signature

```
public static Void deleteRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.
- **recommendationDefinitionId**
  - Type: String
  - ID of the recommendation definition.

Return Value

Type: Void

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**deleteScheduledRecommendation(communityId, scheduledRecommendationId, deleteDefinitionIfLast)**
Delete a scheduled recommendation.

API Version

35.0
Requires Chatter
No

Signature

public static Void deleteScheduledRecommendation(String communityId, String scheduledRecommendationId, Boolean deleteDefinitionIfLast)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.
scheduledRecommendationId
Type: String
ID of the scheduled recommendation.
deleteDefinitionIfLast
Type: Boolean
If true and if this is the last scheduled recommendation of a recommendation definition, deletes the recommendation definition. Default is false.

Return Value
Type: Void

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

Deleting a scheduled recommendation is comparable to a deletion in an ordered list. All scheduled recommendations after the deleted scheduled recommendation receive a new, higher rank automatically.

getRecommendationAudience(communityId, recommendationAudienceId)

Get information about a recommendation audience.

API Version
35.0

Requires Chatter
No
Signature

```java
public static ConnectApi.RecommendationAudience getRecommendationAudience(String communityId, String recommendationAudienceId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- `recommendationAudienceId`
  - Type: `String`
  - ID of the recommendation audience.

Return Value

Type: `ConnectApi.RecommendationAudience`

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

```
getRecommendationAudienceMembership(communityId, recommendationAudienceId)
```

Get the members of a recommendation audience.

API Version

35.0

Requires Chatter

No

Signature

```java
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- `recommendationAudienceId`
  - Type: `String`
  - ID of the recommendation audience.
Return Value
Type: ConnectApi.UserReferencePage

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)
Get a page of recommendation audience members.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationAudienceId
Type: String
ID of the recommendation audience.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of members per page.

Return Value
Type: ConnectApi.UserReferencePage
Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

getRecommendationAudiences(communityId)
Get recommendation audiences.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.RecommendationAudiencePage

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

getRecommendationAudiences(communityId, pageParam, pageSize)
Get a page of recommendation audiences.

API Version
35.0

Requires Chatter
No
### getRecommendationAudiences(communityId, pageParam, pageSize)

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of audiences per page.

**Return Value**

Type: `ConnectApi.RecommendationAudiencePage`

**Usage**

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

### getRecommendationDefinition(communityId, recommendationDefinitionId)

**Get a recommendation definition.**

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.RecommendationDefinition getRecommendationDefinition(String communityId, String recommendationDefinitionId)
```
recommendationDefinitionId
Type: String
ID of the recommendation definition.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

getRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)
Get a recommendation definition photo.

API Version
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo getRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)

Parameters

   communityId
     Type: String
     Use either the ID for a community, internal, or null.

   recommendationDefinitionId
     Type: String
     ID of the recommendation definition.

Return Value
Type: ConnectApi.Photo

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.
getRecommendationDefinitions(communityId)
Get recommendation definitions.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationDefinitionPage getRecommendationDefinitions(String communityId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.RecommendationDefinitionPage

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

getRecommendationForUser(communityId, userId, action, objectId)
Returns the recommendation for the context user for the specified action and object ID.

API Version
33.0

Requires Chatter
Yes

Signature
public static ConnectApi.RecommendationCollection getRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)
Parameters

\textit{communityId}

Type: \texttt{String}

Use either the ID for a community, \texttt{internal}, or \texttt{null}.

\textit{userId}

Type: \texttt{String}

The ID for the context user or the keyword \texttt{me}.

\textit{action}

Type: \texttt{ConnectApi.RecommendationActionType}

Specifies the action to take on a recommendation.

- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

\textit{objectId}

Type: \texttt{String}

Specifies the object to take action on.

- If \textit{action} is \texttt{follow}, \textit{objectId} is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If \textit{action} is \texttt{join}, \textit{objectId} is a group ID.
- If \textit{action} is \texttt{view}, \textit{objectId} is a user ID, file ID, group ID, record ID, custom recommendation ID (version 34.0 and later), the \texttt{enum Today} for static recommendations (version 35.0 and later), or an article ID (version 37.0 and later).

Return Value

Type: \texttt{ConnectApi.RecommendationCollection}

Usage

To test code that uses this method, use the matching set test method (prefix the method name with \texttt{setTest}). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- \texttt{setTestGetRecommendationForUser(communityId, userId, action, objectId, result)}
- Testing ConnectApi Code

\texttt{getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)}

Returns the user, group, file, record, custom, and static recommendations for the context user.

API Version

33.0–35.0

\textbf{Important:} In version 36.0 and later, use \texttt{getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)}. 

1556
Requires Chatter
Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `userId`
  Type: `String`
  The ID for the context user or the keyword `me`.

- `contextAction`
  Type: `ConnectApi.RecommendationActionType`
  Action that the context user just performed. Supported values are:
  - `follow`
  - `view`
  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

- `contextObjectId`
  Type: `String`
  ID of the object that the context user just performed an action on.
  - If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
  - If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.
  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

- `maxResults`
  Type: `Integer`
  Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value

Type: `ConnectApi.RecommendationCollection`

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`. 
This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)`

Testing ConnectApi Code

`getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)`

Returns the user, group, file, article, record, topic, custom, and static recommendations for the context user.

API Version

36.0

Available to Guest Users

38.0

Note: Only article and file recommendations are available to guest users.

Requires Chatter

Yes
Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**userId**
Type: String
The ID for the context user or the keyword me.

**contextAction**
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view
Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**contextObjectId**
Type: String
ID of the object that the context user just performed an action on.
- If `contextAction` is follow, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is view, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).
Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**channel**
Type: ConnectApi.RecommendationChannel
A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:
- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

maxResults
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value
Type: ConnectApi.RecommendationCollection

Usage
If you want to get recommendations based on a recent action performed, such as following a user, use contextAction and contextObjectId together. For example, if you just followed Pam, you specify follow for contextAction and Pam’s user ID for contextObjectId.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)
Testing ConnectApi Code

getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)
Returns the recommendations for the context user for the specified action.
API Version
33.0–35.0

**Important:** In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **userId**
  Type: String
  The ID for the context user or the keyword `me`.

- **action**
  Type: ConnectApi.RecommendationActionType
  Specifies the action to take on a recommendation.
  - follow—Follow a file, record, topic, or user.
  - join—Join a group.
  - view—View a file, group, article, record, user, custom, or static recommendation.

- **contextAction**
  Type: ConnectApi.RecommendationActionType
  Action that the context user just performed. Supported values are:
  - follow
  - view
  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

- **contextObjectId**
  Type: String
  ID of the object that the context user just performed an action on.
  - If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
  - If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.
Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**maxResults**
Type: `Integer`
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**Return Value**
Type: `ConnectApi.RecommendationCollection`

**Usage**
If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

Available to Guest Users
38.0

Note: Only article and file recommendations are available to guest users.

Requires Chatter
Yes

Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action,
ConnectApi.RecommendationActionType contextAction, String contextObjectId,
ConnectApi.RecommendationChannel channel, Integer maxResults)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **userId**
  Type: String
  The ID for the context user or the keyword me.

- **action**
  Type: ConnectApi.RecommendationActionType
  Specifies the action to take on a recommendation.
  - follow—Follow a file, record, topic, or user.
  - join—Join a group.
  - view—View a file, group, article, record, user, custom, or static recommendation.

- **contextAction**
  Type: ConnectApi.RecommendationActionType
  Action that the context user just performed. Supported values are:
  - follow
  - view
  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

- **contextObjectId**
  Type: String
  ID of the object that the context user just performed an action on.
• If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
• If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**

Type: `ConnectApi.RecommendationChannel`

A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

• `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
• `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• `CustomChannel3`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• `CustomChannel4`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• `CustomChannel5`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• `DefaultChannel`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

**maxResults**

Type: `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**Return Value**

Type: `ConnectApi.RecommendationCollection`

**Usage**

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

Testing ConnectApi Code

`getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)`

Returns the recommendations for the context user for the specified action and object category.

API Version

33.0–35.0

**Important**: In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
Type: String
- If action is follow, objectCategory is users, files, or records.
- If action is join, objectCategory is groups.
- If action is view, objectCategory is users, files, groups, records, custom, or apps.
You can also specify a key prefix, the first three characters of the object ID, as the objectCategory. Valid values are:
- If action is follow, objectCategory is 005 (users), 069 (files), or 001 (accounts), for example.
- If action is join, objectCategory is 0F9 (groups).
- If action is view, objectCategory is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), or 001 (accounts), for example.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view
Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
- If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
- If contextAction is view, contextObjectId is a user ID, file ID, group ID, or record ID.
Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

maxResults
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.
Return Value

Type: `ConnectApi.RecommendationCollection`

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Returns the recommendations for the context user for the specified action and object category.

API Version

36.0

Available to Guest Users

38.0
Note: Only article and file recommendations are available to guest users.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **userId**
  - Type: String
  - The ID for the context user or the keyword me.

- **action**
  - Type: ConnectApi.RecommendationActionType
  - Specifies the action to take on a recommendation.
    - follow—Follow a file, record, topic, or user.
    - join—Join a group.
    - view—View a file, group, article, record, user, custom, or static recommendation.

- **objectCategory**
  - Type: String
  - If action is follow, objectCategory is users, files, topics, or records.
  - If action is join, objectCategory is groups.
  - If action is view, objectCategory is users, files, groups, records, custom, apps, or articles (version 37.0 and later).

  You can also specify a key prefix, the first three characters of the object ID, as the objectCategory. Valid values are:
    - If action is follow, objectCategory is 005 (users), 069 (files), 0TO (topics), or 001 (accounts), for example.
    - If action is join, objectCategory is 0F9 (groups).
    - If action is view, objectCategory is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), 001 (accounts), or kA0 (articles), for example, (version 370 and later).

- **contextAction**
  - Type: ConnectApi.RecommendationActionType
  - Action that the context user just performed. Supported values are:
    - follow
    - view
Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

**contextObjectId**
Type: `String`
ID of the object that the context user just performed an action on.
- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

**channel**
Type: `ConnectApi.RecommendationChannel`
A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:
- `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel3`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel4`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel5`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

**maxResults**
Type: `Integer`
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**Return Value**
Type: `ConnectApi.RecommendationCollection`

**Usage**
If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam's user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

**getScheduledRecommendation (communityId, scheduledRecommendationId)**

Get a scheduled recommendation.

API Version

35.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ScheduledRecommendation getScheduledRecommendation(String communityId, String scheduledRecommendationId)
```

Parameters

- `communityId`
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- `scheduledRecommendationId`
  
  Type: `String`
ID of the scheduled recommendation.

Return Value

Type: ConnectApi.ScheduledRecommendation

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

getScheduledRecommendations(communityId)

Get scheduled recommendations.

API Version

35.0 only

⚠️ Important: In version 36.0 and later, use getScheduledRecommendations(communityId, channel).

Requires Chatter

No

Signature

public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

Return Value

Type: ConnectApi.ScheduledRecommendationPage

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

getScheduledRecommendations(communityId, channel)

Get scheduled recommendations.
API Version
36.0

Requires Chatter
No

Signature
```
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId, ConnectApi.RecommendationChannel channel)
```

Parameters
- `communityId`
  - Type: String
  - Use either the ID for a community, internal, or null.
- `channel`
  - Type: `ConnectApi.RecommendationChannel`
  - A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:
    - `CustomChannel1` — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
    - `CustomChannel2` — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
    - `CustomChannel3` — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
    - `CustomChannel4` — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
    - `CustomChannel5` — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

Return Value
- Type: `ConnectApi.ScheduledRecommendationPage`

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.
rejectRecommendationForUser(communityId, userId, action, objectId)
Rejects the recommendation for the context user for the specified action and object ID.

API Version
33.0

Requires Chatter
Yes

Signature
public static rejectRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation. Supported values are:
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

objectId
Type: String
Specifies the object to take action on.
- If action is follow, objectId is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If action is join, objectId is a group ID.
- If action is view, objectId is a custom recommendation ID, the enum Today for static recommendations, or an article ID (version 37.0 and later).

Return Value
Type: Void

rejectRecommendationForUser(communityId, userId, action, objectEnum)
Rejects the static recommendation for the context user.
API Version
34.0

Requires Chatter
Yes

Signature
public static rejectRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, ConnectApi.RecommendedObjectType objectEnum)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation. Supported values are:
• view—View a static recommendation.

objectEnum
Type: ConnectApi.RecommendedObjectType
Specifies the object type to take action on.
• Today—Static recommendations that don’t have an ID, for example, the Today app recommendation.

Return Value
Type: Void

updateRecommendationAudience(communityId, recommendationAudienceId,
recommendationAudience)
Update a recommendation audience.

API Version
35.0

Requires Chatter
No
**Signature**

```java
public static ConnectApi.RecommendationAudience updateRecommendationAudience(String communityId, String recommendationAudienceId, ConnectApi.RecommendationAudienceInput recommendationAudience)
```

**Parameters**

`communityId`
- Type: `String`
- Use either the ID for a community, `internal`, or `null`.

`recommendationAudienceId`
- Type: `String`
- ID of the recommendation audience.

`recommendationAudience`
- Type: `ConnectApi.RecommendationAudienceInput`

**Return Value**

- Type: `ConnectApi.RecommendationAudience`

**Usage**

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

**updateRecommendationDefinition(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation)**

Update a recommendation definition with the specified parameters.

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, String name, String title, String actionUrl, String actionUrlName, String explanation recommendationDefinition)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinitionId
Type: String
ID of the recommendation definition.

name
Type: String
The name of the recommendation definition. The name is displayed in Setup.

title
Type: String
The title of the recommendation definition.

actionUrl
Type: String
The URL for acting on the recommendation, for example, the URL to join a group.

actionUrlName
Type: String
The text label for the action URL in the user interface, for example, “Launch.”

explanation
Type: String
The explanation, or body, of the recommendation.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

updateRecommendationDefinition(communityId, recommendationDefinitionId, recommendationDefinition)
Update a recommendation definition.

API Version
35.0

Requires Chatter
No
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinitionId
Type: String
ID of the recommendation definition.

recommendationDefinition
Type: ConnectApi.RecommendationDefinitionInput
A ConnectApi.RecommendationDefinitionInput object containing the properties to update.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileUpload)
Update a recommendation definition photo with a file that hasn’t been uploaded.

API Version
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId, ConnectApi.BinaryInput fileUpload)
Parameters

*communityId*
  
  **Type: String**
  
  Use either the ID for a community, internal, or null.

*recommendationDefinitionId*
  
  **Type: String**
  
  ID of the recommendation definition.

*fileUpload*
  
  **Type:** `ConnectApi.BinaryInput`
  
  A file to use as the photo. The content type must be usable as an image.

Return Value

**Type:** `ConnectApi.Photo`

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

```java
updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileId, versionNumber)
```

Update a recommendation definition photo with a file that’s already uploaded.

API Version

35.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId,
  String recommendationDefinitionId, String fileId, Integer versionNumber)
```

Parameters

*communityId*
  
  **Type: String**
  
  Use either the ID for a community, internal, or null.

*recommendationDefinitionId*
  
  **Type: String**
  
  ID of the recommendation definition.
fileId
  Type: String
  ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

versionNumber
  Type: Integer
  Version number of the existing file. Specify either an existing version number, or null to get the latest version.

Return Value
  Type: ConnectApi.Photo

Usage
  Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo)
  Update a recommendation definition photo with a file that's been uploaded but requires cropping.

API Version
  35.0

Requires Chatter
  Yes

Signature
  public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo)

Parameters
  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  recommendationDefinitionId
    Type: String
    ID of the recommendation definition.

  photo
    Type: ConnectApi.PhotoInput
    A ConnectApi.PhotoInput object specifying the file ID, version number, and cropping parameters.
Return Value
Type: `ConnectApi.Photo`

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

`updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo, fileUpload)`
Update a recommendation definition photo with a file that hasn’t been uploaded and requires cropping.

API Version
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`recommendationDefinitionId`
Type: `String`
ID of the recommendation definition.

`photo`
Type: `ConnectApi.PhotoInput`
A `ConnectApi.PhotoInput` object specifying the cropping parameters.

`fileUpload`
Type: `ConnectApi.BinaryInput`
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi.Photo`
Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

updateScheduledRecommendation(communityId, scheduledRecommendationId, scheduledRecommendation)

Update a scheduled recommendation.

API Version

35.0

Requires Chatter

No

Signature

public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

scheduledRecommendationId

Type: String

ID of the scheduled recommendation.

scheduledRecommendation

Type: ConnectApi.ScheduledRecommendationInput

A ConnectApi.ScheduledRecommendationInput object containing the properties to update.

Return Value

Type: ConnectApi.ScheduledRecommendation

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

Ranking scheduled recommendations example

If you have these scheduled recommendations:
And you include this information in the Scheduled Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

`updateScheduledRecommendation(communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId)`

Update a scheduled recommendation with the specified parameters.

API Version
35.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, Integer rank, Boolean enabled, String recommendationAudienceId)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.
scheduledRecommendationId
  Type: String
  ID of the scheduled recommendation.

rank
  Type: Integer
  Relative rank of the scheduled recommendation indicated by ascending whole numbers starting with 1.
  Setting the rank is comparable to an insertion into an ordered list. The scheduled recommendation is inserted into the position specified by the rank. The rank of all the scheduled recommendations after it is pushed down. See Ranking scheduled recommendations example.
  If the specified rank is larger than the size of the list, the scheduled recommendation is put at the end of the list. The rank of the scheduled recommendation is the size of the list, instead of the one specified.
  If a rank is not specified, the scheduled recommendation is put at the end of the list.

enabled
  Type: Boolean
  Indicates whether scheduling is enabled. If true, the recommendation is enabled and appears in communities. If false, recommendations in feeds in the Salesforce mobile web aren’t removed, but no new recommendations appear. In Customer Service and Partner Central communities, disabled recommendations no longer appear.

recommendationAudienceId
  Type: String
  ID of the recommendation definition that this scheduled recommendation schedules.

Return Value
  Type: ConnectApi.ScheduledRecommendation

Usage
  Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for community recommendations. Users with the Modify All Data permission can also access, create, and delete recommendation audiences, recommendation definitions, and scheduled recommendations.

  Ranking scheduled recommendations example
  If you have these scheduled recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

  And you include this information in the Scheduled Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>
The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

**Recommendations Test Methods**

The following are the test methods for Recommendations. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

**IN THIS SECTION:**

- `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`
  Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)`
  Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)`
  Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)`
  Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result)`
  Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)`
  Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)`
  Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`
  Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
API Version
33.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectId,
ConnectApi.RecommendationCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

objectId
Type: String
Specifies the object to take action on.
• If action is follow, objectId is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
• If action is join, objectId is a group ID.
• If action is view, objectId is a user ID, file ID, group ID, record ID, custom recommendation ID, the enum Today for static recommendations, or an article ID (version 37.0 and later).

result
Type: ConnectApi.RecommendationCollection
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRecommendationForUser(communityId, userId, action, objectId)
Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)
Registers a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0–35.0

Important: In version 36.0 and later, use setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result).

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.
contextObjectId
Type: String
ID of the object that the context user just performed an action on.
- If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
- If contextAction is view, contextObjectId is a user ID, file ID, group ID, or record ID.
Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

maxResults
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
Type: ConnectApi.RecommendationCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)
Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)
Registers a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
36.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)
Parameters

**communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

**userId**
  Type: `String`
  The ID for the context user or the keyword `me`.

**contextAction**
  Type: `ConnectApi.RecommendationActionType`
  Action that the context user just performed. Supported values are:
  - `follow`
  - `view`

  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**
  Type: `String`
  ID of the object that the context user just performed an action on.
  - If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
  - If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**
  Type: `ConnectApi.RecommendationChannel`
  A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:
  - CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
  - CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  - CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  - CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  - CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

**maxResults**
  Type: `Integer`
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
  Type: ConnectApi.RecommendationCollection
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
  Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)

Registers a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0–35.0

⚠️ Important: In version 36.0 and later, use setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result).

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

action
  Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.

- **follow**—Follow a file, record, topic, or user.
- **join**—Join a group.
- **view**—View a file, group, article, record, user, custom, or static recommendation.

**contextAction**

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- **follow**
- **view**

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**

Type: `String`

ID of the object that the context user just performed an action on.

- If `contextAction` is **follow**, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is **view**, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**maxResults**

Type: `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**

Type: `ConnectApi.RecommendationCollection`

The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)`

`setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result)`

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**

36.0
Requires Chatter
Yes

Signature

```java
public static Void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType
contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer
maxResults, ConnectApi.RecommendationCollection result)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or `null`.

`userId`
Type: String
The ID for the context user or the keyword `me`.

`action`
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

`contextAction`
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`contextObjectId`
Type: String
ID of the object that the context user just performed an action on.
- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`channel`
Type: ConnectApi.RecommendationChannel
A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- **CustomChannel1**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- **CustomChannel2**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel3**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel4**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel5**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

**maxResults**
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**
Type: ConnectApi.RecommendationCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)
- Testing ConnectApi Code

**setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)**
Registers a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0–35.0

**Important:** In version 36.0 and later, use setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result).

Requires Chatter
Yes
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
Type: String
• If action is follow, objectCategory is users, files, or records.
• If action is join, objectCategory is groups.
• If action is view, objectCategory is users, files, groups, records, custom, or apps.
You can also specify a key prefix, the first three characters of the object ID, as the objectCategory. Valid values are:
• If action is follow, objectCategory is 005 (users), 069 (files), or 001 (accounts), for example.
• If action is join, objectCategory is 0F9 (groups).
• If action is view, objectCategory is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), or 001 (accounts), for example.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view
Use contextAction and contextObjectId together to get new recommendations based on the action just performed.
If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
• If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
• If `contextAction` is view, `contextObjectId` is a user ID, file ID, group ID, or record ID.

  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed.
  If you don’t want recommendations based on a recent action, specify `null`.

`maxResults`
  Type: `Integer`
  Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

`result`
  Type: `ConnectApi.RecommendationCollection`
  The object containing test data.

Return Value
  Type: `Void`

SEE ALSO:
  `getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)`

**Testing ConnectApi Code**

`setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)`

Registers a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**

36.0

**Requires Chatter**

Yes

**Signature**

```java
public static Void setTestGetRecommendationsForUser(String communityId, String userId, 
ConnectApi.RecommendationActionType action, String objectCategory, 
ConnectApi.RecommendationActionType contextAction, String contextObjectId, 
ConnectApi.RecommendationChannel channel, Integer maxResults, 
ConnectApi.RecommendationCollection result)
```

**Parameters**

`communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

`userId`
  Type: `String`
The ID for the context user or the keyword me.

**action**
Type: `ConnectApi.RecommendationActionType`
Specifies the action to take on a recommendation.
- **follow**—Follow a file, record, topic, or user.
- **join**—Join a group.
- **view**—View a file, group, article, record, user, custom, or static recommendation.

**objectCategory**
Type: `String`
- If **action** is follow, **objectCategory** is users, files, records, or topics.
- If **action** is join, **objectCategory** is groups.
- If **action** is view, **objectCategory** is users, files, groups, records, custom, apps, or articles (version 37.0 and later).

You can also specify a key prefix, the first three characters of the object ID, as the **objectCategory**. Valid values are:
- If **action** is follow, **objectCategory** is 005 (users), 069 (files), 0TO (topics), or 001 (accounts), for example.
- If **action** is join, **objectCategory** is 0F9 (groups).
- If **action** is view, **objectCategory** is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), 001 (accounts), or kA0 (articles), for example, (version 370 and later).

**contextAction**
Type: `ConnectApi.RecommendationActionType`
Action that the context user just performed. Supported values are:
- **follow**
- **view**

Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**
Type: `String`
ID of the object that the context user just performed an action on.
- If **contextAction** is follow, **contextObjectId** is a user ID, file ID, record ID, or topic ID.
- If **contextAction** is view, **contextObjectId** is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**
Type: `ConnectApi.RecommendationChannel`
A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:
- **CustomChannel1**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- **CustomChannel2**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

maxResults
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
Type: ConnectApi.RecommendationCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)
Testing ConnectApi Code

Records Class
Access information about record motifs, which are small icons used to distinguish record types in the Salesforce UI.

Namespace
ConnectApi

Records Methods
The following are methods for Records. All methods are static.

IN THIS SECTION:
getMotif(communityId, idOrPrefix)
Returns a Motif object that contains the URLs for a set of small, medium, and large motif icons for the specified record. It can also contain a base color for the record.

getMotifBatch(communityId, idOrPrefixList)
Gets a motif for the specified list of objects. Returns a list of BatchResult objects containing ConnectApi.Motif objects. Returns errors embedded in the results for those users that couldn’t be loaded.
getMotif(communityId, idOrPrefix)

Returns a Motif object that contains the URLs for a set of small, medium, and large motif icons for the specified record. It can also contain a base color for the record.

API Version
28.0

Requires Chatter
No

Signature
public static ConnectApi.Motif getMotif(String communityId, String idOrPrefix)

Parameters

  communityId
  Type: String
  Use either the ID for a community, internal, or null.

  idOrPrefix
  Type: String
  An ID or key prefix.

Return Value
Type: ConnectApi.Motif

Usage
Each Salesforce record type has its own set of motif icons. See ConnectApi.Motif.

getMotifBatch(communityId, idOrPrefixList)

Gets a motif for the specified list of objects. Returns a list of BatchResult objects containing ConnectApi.Motif objects. Returns errors embedded in the results for those users that couldn’t be loaded.

API Version
31.0

Requires Chatter
No
public static ConnectApi.BatchResult[] getMotifBatch(String communityId, List<String> idOrPrefixList)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

idOrPrefixList
Type: List<String>
A list of object IDs or prefixes.

Return Value

Type: BatchResult[]
The BatchResult.getResult() method returns a ConnectApi.Motif object.

Example

String communityId = null;
List<String> prefixIds = new List<String> { '001', '01Z', '069' };

// Get info about the motifs of all records in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.Records.getMotifBatch(communityId, prefixIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the color of each motif.
        ConnectApi.Motif motif;
        if (batchResult.getResult() instanceof ConnectApi.Motif) {
            motif = (ConnectApi.Motif) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(motif.color);
    }
    else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}

SalesforceInbox Class

Access information about Automated Activity Capture, which is available in Einstein and Salesforce Inbox.
Namespace

ConnectApi

SalesforceInbox Methods

The following are methods for SalesforceInbox. All methods are static.

IN THIS SECTION:

- `shareActivity(activityId, sharingInfo)`
  Share specific emails or events with certain groups of users.

**shareActivity(activityId, sharingInfo)**

Share specific emails or events with certain groups of users.

**API Version**

39.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.ActivitySharingResult shareActivity(String activityId, 
ConnectApi.ActivitySharingInput sharingInfo)
```

**Parameters**

- **activityId**
  Type: `String`
  The ID of the activity.

- **sharingInfo**
  Type: `ConnectApi.ActivitySharingInput`
  A `ConnectApi.ActivitySharingInput` object.

**Return Value**

Type: `ConnectApi.ActivitySharingResult`

**Usage**

This method is a feature of both Sales Cloud Einstein and Inbox. It lets users connect their email and calendar to Salesforce. Then, their emails and events are automatically added to related Salesforce records. Users can specify who their individual emails and events are shared with.
SocialEngagement Class

Manage information about social accounts or fan pages for social networks.

Namespace

ConnectApi

SocialEngagement Methods

The following are methods for SocialEngagement. All methods are static.

IN THIS SECTION:

getManagedSocialAccount(id)
Get a managed social account that is in the org and assigned to the user.

getManagedSocialAccounts()
Gets a list of managed social accounts.

getManagedSocialAccounts(socialNetwork)
Get a list of managed social accounts that are in the org and assigned to the user.

getManagedSocialAccount(id)

Get a managed social account that is in the org and assigned to the user.

API Version
44.0

Requires Chatter
Yes

Signature

public static ConnectApi.ManagedSocialAccount getManagedSocialAccount(String id)

Parameters

id
Type: String
Description: Internal SFDC ID for this managed social account.

Return Value

Type: ConnectApi.ManagedSocialAccount

getManagedSocialAccounts()

Gets a list of managed social accounts.
API Version
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.ManagedSocialAccounts getManagedSocialAccounts()

Return Value
Type: ConnectApi.ManagedSocialAccounts

getManagedSocialAccounts(socialNetwork)
Get a list of managed social accounts that are in the org and assigned to the user.

API Version
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.ManagedSocialAccounts getManagedSocialAccounts(ConnectApi.SocialNetworkProvider socialNetwork)

Parameters
socialNetwork
Type: ConnectApi.SocialNetworkProvider

Description: Filters results based on the social network. Values are:
- Facebook
- GooglePlus
- Instagram
- InstagramBusiness
- KakaoTalk
- Kik
- Line
- LinkedIn
- Messenger
- Other
Topics Class

Access information about topics, such as their descriptions, the number of people talking about them, related topics, and information about groups contributing to the topic. Update a topic's name or description, merge topics, and add and remove topics from records and feed items.

Namespace

ConnectApi

Topics Methods

The following are methods for Topics. All methods are static.

IN THIS SECTION:

assignTopic(communityId, recordId, topicId)
Assigns the specified topic to the specified record or feed item. Only users with the Assign Topics permission can add existing topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

assignTopicByName(communityId, recordId, topicName)
Assigns the specified topic to the specified record or feed item. Only users with the Assign Topics permission can add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

createTopic(communityId, name, description)
Creates a topic. Only users with the Create Topics permission can create a topic.

createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Create topic and article assignment rules by data category.
deleteTopic(communityId, topicId)
Deletes the specified topic. Only users with the Delete Topics or Modify All Data permission can delete topics.

getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
Returns information about the five groups that most recently contributed to the specified topic.

getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
Returns up to five topics most recently used in the specified group.

getRecentlyTalkingAboutTopicsForUser(communityId, userId)
Topics recently used by the specified user. Get up to five topics most recently used by the specified user.

getRelatedTopics(communityId, topicId)
List of five topics most closely related to the specified topic.

getTopic(communityId, topicId)
Returns information about the specified topic.

getTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory)
Get topic and article assignment rules by data category.

getTopics(communityId, recordId)
Returns the first page of topics assigned to the specified record or feed item. Administrators must enable topics for objects before users can add topics to records of that object type.

getTopics(communityId)
Returns the first page of topics for the organization.

getTopics(communityId, sortParam)
Returns the first page of topics for the organization in the specified order.

getTopics(communityId, pageParam, pageSize)
Returns the topics for the specified page.

getTopics(communityId, pageParam, pageSize, sortParam)
Returns the topics for the specified page in the specified order.

getTopics(communityId, q, sortParam)
Returns the topics that match the specified search criteria in the specified order.

getTopics(communityId, q, pageParam, pageSize)
Returns the topics that match the specified search criteria for the specified page.

getTopics(communityId, q, pageParam, pageSize, sortParam)
Returns the topics that match the specified search criteria for the specified page in the specified order.

getTopics(communityId, q, exactMatch)
Returns the topic that matches the exact, case-insensitive name.

getTopicsOrFallBackToRenamedTopics(communityId, q, exactMatch, fallBackToRenamedTopics)
If there isn’t an exact match, returns the most recent renamed topic match.

getTopicSuggestions(communityId, recordId, maxResults)
Returns suggested topics for the specified record or feed item. Administrators must enable topics for objects before users can see suggested topics for records of that object type.

getTopicSuggestions(communityId, recordId)
Returns suggested topics for the specified record or feed item. Administrators must enable topics for objects before users can see suggested topics for records of that object type.
getTopicSuggestionsForText(communityId, text, maxResults)
Returns suggested topics for the specified string of text.

getTopicSuggestionsForText(communityId, text)
Returns suggested topics for the specified string of text.

getTrendingTopics(communityId)
List of the top five trending topics for the organization.

getTrendingTopics(communityId, maxResults)
List of the top five trending topics for the organization.

mergeTopics(communityId, topicId, idsToMerge)
Merges up to five secondary topics with the specified primary topic.

reassignTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

reassignTopicsByName(communityId, recordId, topicNames)
Reassigns all the topics on a record or feed item, that is, removes all the assigned topics on a record or feed item and adds topics. Optionally, provides a list of suggested topics to assign to a record or feed item to improve future topic suggestions. Only users with the Assign Topics permission can remove topics from records or feed items and add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

unassignTopic(communityId, recordId, topicId)
Removes the specified topic from the specified record or feed item. Only users with the Assign Topics permission can remove topics from feed items or records. Administrators must enable topics for objects before users can add topics to records of that object type.

updateTopic(communityId, topicId, topic)
Updates the description or name of the specified topic or merges up to five secondary topics with the specified primary topic.

updateTopicsForArticlesInDataCategory(communityId, dataCategoryGroup, dataCategory, articleTopicAssignmentJob)
Assign topics to articles and unassign topics from articles in a data category.

assignTopic(communityId, recordId, topicId)
Assigns the specified topic to the specified record or feed item. Only users with the Assign Topics permission can add existing topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.Topic assignTopic(String communityId, String recordId, String topicId)
Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **recordId**
  - Type: String
  - The ID for a record or feed item.

- **topicId**
  - Type: String
  - The ID for a topic.

Return Value

Type: ConnectApi.Topic

**assignTopicByName(communityId, recordId, topicName)**

Assigns the specified topic to the specified record or feed item. Only users with the Assign Topics permission can add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

**API Version**

29.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.Topic assignTopicByName(String communityId, String recordId, String topicName)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **recordId**
  - Type: String
  - The ID of the record or feed item to which to assign the topic.

- **topicName**
  - Type: String
  - The name of a new or existing topic.
Return Value
Type: ConnectApi.Topic

createTopic(communityId, name, description)
Creates a topic. Only users with the Create Topics permission can create a topic.

API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.Topic createTopic(String communityId, String name, String description)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

name
Type: String
The name of the topic.

description
Type: String
The description of the topic.

Return Value
Type: ConnectApi.Topic

createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Create topic and article assignment rules by data category.

API Version
40.0

Requires Chatter
No
Signature

```java
public static ConnectApi.TopicPage createTopicDataCategoryRules(String communityId,
        String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)
```

Parameters

```java
communityId
    Type: String
    Use either the ID for a community, internal, or null.
```

```java
dataCategoryGroup
    Type: String
    The data category group used by articles.
```

```java
dataCategory
    Type: String
    The data category used by articles.
```

```java
topicNames
    Type: ConnectApi.TopicNamesInput
    A ConnectApi.TopicNamesInput object with the names of topics to assign to articles in a data category.
```

Return Value

```java
Type: ConnectApi.TopicPage
```

`deleteTopic(communityId, topicId)`

Deletes the specified topic. Only users with the Delete Topics or Modify All Data permission can delete topics.

API Version

29.0

Requires Chatter

No

Signature

```java
public static Void deleteTopic(String communityId, String topicId)
```

Parameters

```java
communityId
    Type: String,
    Use either the ID for a community, internal, or null.
```

```java
topicId
    Type: String
```
The ID for a topic.

Return Value
Type: Void

Usage
Topic deletion is asynchronous. If a topic is requested before the deletion completes, the response is 200: Successful and the isBeingDeleted property of ConnectApi.Topic is true in version 33.0 and later. If a topic is requested after the deletion completes, the response is 404: NOT_FOUND.

getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
Returns information about the five groups that most recently contributed to the specified topic.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupSummaryPage getGroupsRecentlyTalkingAboutTopic(String communityId, String topicId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

topicId
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.ChatterGroupSummaryPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetGroupsRecentlyTalkingAboutTopic(communityId, topicId, result)`
- Testing ConnectApi Code

```java
getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
```

Returns up to five topics most recently used in the specified group.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForGroup(String communityId, String groupId)
```

Parameters
- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or null.
- `groupId`
  - Type: `String`
  - The ID for a group.

Return Value
Type: `ConnectApi.TopicPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)

getRecentlyTalkingAboutTopicsForUser(communityId, userId)

Topics recently used by the specified user. Get up to five topics most recently used by the specified user.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForUser(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.TopicPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)
Testing ConnectApi Code

getRelatedTopics(communityId, topicId)
List of five topics most closely related to the specified topic.
Two topics that are assigned to the same feed item at least three times are related.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getRelatedTopics(String communityId, String topicId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

topicId
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.TopicPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRelatedTopics(communityId, topicId, result)`
- Testing ConnectApi Code

**getTopic(communityId, topicId)**

Returns information about the specified topic.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```java
public static ConnectApi.Topic getTopic(String communityId, String topicId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- **topicId**
  - Type: `String`
  - The ID for a topic.

Return Value

Type: `ConnectApi.Topic`

**getTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory)**

Get topic and article assignment rules by data category.

API Version

40.0
Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`dataCategoryGroup`
Type: String
The data category group used by articles.

`dataCategory`
Type: String
The data category used by articles.

Return Value
Type: `ConnectApi.TopicPage`

### getTopics(communityId, recordId)

Returns the first page of topics assigned to the specified record or feed item. Administrators must enable topics for objects before users can add topics to records of that object type.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String recordId)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID for a record or feed item.

Return Value
Type: ConnectApi.TopicPage

getTopics(communityId)
Returns the first page of topics for the organization.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, sortParam)
Returns the first page of topics for the organization in the specified order.

API Version
29.0

Available to Guest Users
32.0
Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, ConnectApi.TopicSort sortParam)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `sortParam`
  Type: `ConnectApi.TopicSort`
  Values are:
  - `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
  - `alphaAsc`—Sorts topics alphabetically.

Return Value

Type: `ConnectApi.TopicPage`

```java
getTopics(communityId, pageParam, pageSize)
```

Returns the topics for the specified page.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`
  Type: `String`
Use either the ID for a community, `internal`, or `null`.

**pageParam**
- **Type:** `Integer`
- Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
- **Type:** `Integer`
- Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**Return Value**
- **Type:** `ConnectApi.TopicPage`

**getTopics(communityId, pageParam, pageSize, sortParam)**

Returns the topics for the specified page in the specified order.

**API Version**
29.0

**Available to Guest Users**

No

**Signature**

```java
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)
```

**Parameters**

**communityId**
- **Type:** `String`
  - Use either the ID for a community, `internal`, or `null`.

**pageParam**
- **Type:** `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
- **Type:** `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
- **Type:** `ConnectApi.TopicSort`
  - Values are:
• popularDesc—Sorts topics by popularity with the most popular first. This value is the default.
• alphaAsc—Sorts topics alphabetically.

Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, q, sortParam)
Returns the topics that match the specified search criteria in the specified order.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId, String q, ConnectApi.TopicSort sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Specifies the string to search. The string must contain at least two characters, not including wildcards.

sortParam
Type: ConnectApi.TopicSort
Values are:
• popularDesc—Sorts topics by popularity with the most popular first. This value is the default.
• alphaAsc—Sorts topics alphabetically.

Return Value
Type: ConnectApi.TopicPage
getTopics(communityId, q, pageParam, pageSize)
Returns the topics that match the specified search criteria for the specified page.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Specifies the string to search. The string must contain at least two characters, not including wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, q, pageParam, pageSize, sortParam)
Returns the topics that match the specified search criteria for the specified page in the specified order.

API Version
29.0
Available to Guest Users
32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `q`
  Type: `String`
  Specifies the string to search. The string must contain at least two characters, not including wildcards.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`
  Type: `ConnectApi.TopicSort`
  Values are:
  - `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
  - `alphaAsc`—Sorts topics alphabetically.

Return Value

Type: `ConnectApi.TopicPage`

```java
getTopics(communityId, q, exactMatch)
```

Returns the topic that matches the exact, case-insensitive name.

API Version
33.0
public static ConnectApi.TopicPage getTopics(String communityId, String q, Boolean exactMatch)

Parameters

   communityId
   Type: String
   Use either the ID for a community, internal, or null.

   q
   Type: String
   Specifies the string to search. The string must contain at least two characters, not including wildcards.

   exactMatch
   Type: Boolean
   Specify true to find a topic by its exact, case-insensitive name.

Return Value

Type: ConnectApi.TopicPage

getTopicsOrFallBackToRenamedTopics(communityId, q, exactMatch, fallBackToRenamedTopics)

If there isn’t an exact match, returns the most recent renamed topic match.

API Version

35.0

Available to Guest Users

35.0

Requires Chatter

No
Signature

```java
public static ConnectApi.TopicPage getTopicsOrFallBackToRenamedTopics(String communityId, String q, Boolean exactMatch, Boolean fallBackToRenamedTopics)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: `String`
  - Specifies the string to search. The string must contain at least two characters, not including wildcards.

- **exactMatch**
  - Type: `Boolean`
  - Specify `true` to find a topic by its exact, case-insensitive name or to find the most recent renamed topic match if there isn’t an exact match.

- **fallBackToRenamedTopics**
  - Type: `Boolean`
  - Specify `true` and if there isn’t an exact match, the most recent renamed topic match is returned. If there are multiple renamed topic matches, only the most recent is returned. If there are no renamed topic matches, an empty collection is returned.

Return Value

- Type: `ConnectApi.TopicPage`

### getTopicSuggestions(communityId, recordId, maxResults)

Returns suggested topics for the specified record or feed item. Administrators must enable topics for objects before users can see suggested topics for records of that object type.

**API Version**

29.0

**Requires Chatter**

No

Signature

```java
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId, String recordId, Integer maxResults)
```

Parameters

- **communityId**
  - Type: `String`
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID for a record or feed item.

maxResults
Type: Integer
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value
Type: ConnectApi.TopicSuggestionPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTopicSuggestions(communityId, recordId, maxResults, result)
Testing ConnectApi Code

getTopicSuggestions(communityId, recordId)
Returns suggested topics for the specified record or feed item. Administrators must enable topics for objects before users can see suggested topics for records of that object type.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId, String recordId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID for a record or feed item.

Return Value
Type: ConnectApi.TopicSuggestionPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
   setTestGetTopicSuggestions(communityId, recordId, result)
   Testing ConnectApi Code

getTopicSuggestionsForText(communityId, text, maxResults)
Returns suggested topics for the specified string of text.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text, Integer maxResults)

Parameters
communityId
   Type: String
   Use either the ID for a community, internal, or null.
text
   Type: String
   String of text.
maxResults
   Type: Integer
   Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value
Type: ConnectApi.TopicSuggestionPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  `setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)`
  Testing ConnectApi Code

**getTopicSuggestionsForText(communityId, text)**

Returns suggested topics for the specified string of text.

API Version
29.0

Requires Chatter
No

Signature
```java
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **text**
  - Type: `String`
  - String of text.

Return Value

Type: `ConnectApi.TopicSuggestionPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  `setTestGetTopicSuggestionsForText(communityId, text, result)`
  Testing ConnectApi Code
**getTrendingTopics(communityId)**

List of the top five trending topics for the organization.

**API Version**

29.0

Available to Guest Users

32.0

Requires Chatter

No

**Signature**

```
public static ConnectApi.TopicPage getTrendingTopics(String communityId)
```

**Parameters**

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

**Return Value**

Type: `ConnectApi.TopicPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestGetTrendingTopics(communityId, result)`
- Testing ConnectApi Code

**getTrendingTopics(communityId, maxResults)**

List of the top five trending topics for the organization.

**API Version**

29.0

Available to Guest Users

32.0
Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTrendingTopics(String communityId, Integer maxResults)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
maxResults
Type: Integer
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value
Type: ConnectApi.TopicPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTrendingTopics(communityId, maxResults, result)
Testing ConnectApi Code

mergeTopics(String communityId, String topicId, idsToMerge)
Merges up to five secondary topics with the specified primary topic.

API Version
33.0

Requires Chatter
No

Signature
public static ConnectApi.Topic mergeTopics(String communityId, String topicId, List<String> idsToMerge)
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

topicId
  Type: String
  The ID for the primary topic for the merge. If this topic is a managed topic, it retains its topic type, topic images, and children topics.

idsToMerge
  Type: List<String>
  A list of up to five comma-separated secondary topic IDs to merge with the primary topic. If any of these secondary topics are managed topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic.

Return Value

Type: ConnectApi.Topic

Usage

Only users with the Delete Topics or Modify All Data permission can merge topics.

reassignTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)

Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

API Version

40.0

Requires Chatter

No

Signature

public static ConnectApi.TopicPage reassignTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

dataCategoryGroup
  Type: String
  The data category group used by articles.
dataCategory
Type: String
The data category used by articles.

topicNames
Type: ConnectApi.TopicNamesInput
A ConnectApi.TopicNamesInput object with the names of topics to reassign to articles in a data category.

Return Value
Type: ConnectApi.TopicPage

reassignTopicsByName(communityId, recordId, topicNames)

Reassigns all the topics on a record or feed item, that is, removes all the assigned topics on a record or feed item and adds topics. Optionally, provides a list of suggested topics to assign to a record or feed item to improve future topic suggestions. Only users with the Assign Topics permission can remove topics from records or feed items and add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage reassignTopicsByName(String communityId, String recordId, ConnectApi.TopicNamesInput topicNames)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID of the record or feed item to which to assign the topic.

topicNames
Type: ConnectApi.TopicNamesInput
A list of topics to replace the currently assigned topics. Optionally, a list of suggested topics to assign to improve future topic suggestions.
Return Value
Type: ConnectApi.TopicPage

unassignTopic(communityId, recordId, topicId)
Removes the specified topic from the specified record or feed item. Only users with the Assign Topics permission can remove topics from feed items or records. Administrators must enable topics for objects before users can add topics to records of that object type.

API Version
29.0

Requires Chatter
No

Signature
public static Void unassignTopic(String communityId, String recordId, String topicId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
recordId
  Type: String
  The ID for a record or item.

Return Value
Type: Void

updateTopic(communityId, topicId, topic)
Updates the description or name of the specified topic or merges up to five secondary topics with the specified primary topic.

API Version
29.0

Requires Chatter
No
Signature

```java
public static ConnectApi.Topic updateTopic(String communityId, String topicId, ConnectApi.TopicInput topic)
```

Parameters

- `communityId`
  - **Type:** String
  - Use either the ID for a community, `internal`, or `null`.

- `topicId`
  - **Type:** String
  - The ID for a topic.

- `topic`
  - **Type:** ConnectApi.TopicInput
  - A `ConnectApi.TopicInput` object containing the name and description of the topic or up to five comma-separated secondary topic IDs to merge with the primary topic.

Return Value

- **Type:** ConnectApi.Topic

Usage

Only users with the Edit Topics or Modify All Data permission can update topic names and descriptions. Only users with the Delete Topics or Modify All Data permission can merge topics.

```java
updateTopicsForArticlesInDataCategory(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.ArticleTopicAssignmentJobInput articleTopicAssignmentJob)
```

Assign topics to articles and unassign topics from articles in a data category.

API Version

40.0

Requires Chatter

No

Signature

```java
public static ConnectApi.TopicPage updateTopicsForArticlesInDataCategory(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.ArticleTopicAssignmentJobInput articleTopicAssignmentJob)
```
Parameters

```
communityId
  Type: String
  Use either the ID for a community, internal, or null.
```

dataCategoryGroup
  Type: String
  The data category group used by articles.

dataCategory
  Type: String
  The data category used by articles.

articleTopicAssignmentJob
  Type: ConnectApi.ArticleTopicAssignmentJobInput
  A ConnectApi.ArticleTopicAssignmentJobInput object that indicates the operation to take on which topics.

Return Value

```
Type: ConnectApi.TopicPage
```

**Topics Test Methods**

The following are the test methods for Topics. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

```
setTestGetGroupsRecentlyTalkingAboutTopic(communityId, topicId, result)
```

Registers a ConnectApi.ChatterGroupSummaryPage object to be returned when ConnectApi.getGroupsRecentlyTalkingAboutTopic is called in a test context.

**API Version**

```
29.0
```

**Signature**

```
public static Void setTestGetGroupsRecentlyTalkingAboutTopic(String communityId, String topicId, ConnectApi.ChatterGroupSummaryPage result)
```

Parameters

```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

topicId
  Type: String
  The ID for a topic.
```
result
Type: ConnectApi.ChatterGroupSummaryPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
Testing ConnectApi Code

setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)
Registers a ConnectApi.TopicPage object to be returned when the
ConnectApi.getRecentlyTalkingAboutTopicsForGroup method is called in a test context.

API Version
29.0

Signature
public static Void setTestGetRecentlyTalkingAboutTopicsForGroup(String communityId,
String groupId, ConnectApi.TopicPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

result
Type: ConnectApi.TopicPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
Testing ConnectApi Code
setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)

Creates a topics page to use for testing. After you create the page, use the matching `ConnectApi.getRecentlyTalkingAboutTopicsForUser` method to access the test page and run your tests. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
```
public static Void setTestGetRecentlyTalkingAboutTopicsForUser(String communityId, 
String userId, ConnectApi.TopicPage result)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: String
  - The ID for a user.

- `result`
  - Type: `ConnectApi.TopicPage`
  - Specify the test topics page.

Return Value
Type: Void

SEE ALSO:
- `getRecentlyTalkingAboutTopicsForUser(communityId, userId)`
- Testing ConnectApi Code

setTestGetRelatedTopics(communityId, topicId, result)

Registers a `ConnectApi.TopicPage` object to be returned when the `ConnectApi.getRelatedTopics` method is called in a test context.

API Version
29.0

Signature
```
public static Void setTestGetRelatedTopics(String communityId, String topicId, 
ConnectApi.TopicPage result)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

topicId
  Type: String
  The ID for a topic.

result
  Type: ConnectApi.TopicPage
  The object containing test data.

Return Value

Type: Void

SEE ALSO:

getRelatedTopics(communityId, topicId)
Testing ConnectApi Code

**setTestGetTopicSuggestions(communityId, recordId, maxResults, result)**

Registers a ConnectApi.TopicSuggestionPage object to be returned when the matching ConnectApi.getTopicSuggestions method is called in a test context. Use the method with the same parameters or you receive an exception. Use the method with the same parameters or you receive an exception.

API Version

29.0

Signature

public static Void setTestGetTopicSuggestions(String communityId, String recordId, Integer maxResults, ConnectApi.TopicSuggestionPage result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

recordId
  Type: String
  The ID for a record or feed item.

maxResults
  Type: Integer
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

**result**
- **Type:** ConnectApi.TopicSuggestionPage
- Specify the test topic suggestions page.

Return Value
- **Type:** Void

SEE ALSO:
- getTopicSuggestions(communityId, recordId, maxResults)
- Testing ConnectApi Code

### setTestGetTopicSuggestions(communityId, recordId, result)

Registers a ConnectApi.TopicSuggestionPage object to be returned when the matching ConnectApi.getTopicSuggestions method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
- 29.0

**Signature**

```java
public static Void setTestGetTopicSuggestions(String communityId, String recordId, ConnectApi.TopicSuggestionPage result)
```

**Parameters**

- **communityId**
  - **Type:** String
  - Use either the ID for a community, internal, or null.

- **recordId**
  - **Type:** String
  - The ID for a record or feed item.

- **result**
  - **Type:** ConnectApi.TopicSuggestionPage
  - The object containing test data.
Return Value
Type: Void

SEE ALSO:
- `getTopicSuggestions(communityId, recordId)`
- Testing ConnectApi Code

`setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)`

Registers a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestionsForText` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

Parameters

- `communityId`
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- `text`
  Type: String
  String of text.

- `maxResults`
  Type: Integer
  Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

- `result`
  Type: `ConnectApi.TopicSuggestionPage`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getTopicSuggestionsForText(communityId, text, maxResults)`
- Testing ConnectApi Code
**setTestGetTopicSuggestionsForText(communityId, text, result)**

Registers a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestionsForText` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

29.0

**Signature**

```java
public static Void setTestGetTopicSuggestionsForText(String communityId, String text,
ConnectApi.TopicSuggestionPage result)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `text`
  - Type: `String`
  - String of text.

- `result`
  - Type: `ConnectApi.TopicSuggestionPage`
  - The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

- `getTopicSuggestionsForText(communityId, text)`
- Testing ConnectApi Code

**setTestGetTrendingTopics(communityId, result)**

Registers a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getTrendingTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

29.0

**Signature**

```java
public static Void setTestGetTrendingTopics(String communityId, ConnectApi.TopicPage result)
```

1637
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

result
  Type: ConnectApi.TopicPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getTrendingTopics(communityId)
  Testing ConnectApi Code

**setTestGetTrendingTopics(communityId, maxResults, result)**

Registers a ConnectApi.TopicPage object to be returned when the matching ConnectApi.getTrendingTopics method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetTrendingTopics(String communityId, Integer maxResults, ConnectApi.TopicPage result)
```

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

maxResults
  Type: Integer
  Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

result
  Type: ConnectApi.TopicPage
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
- `getTrendingTopics(communityId, maxResults)`
- Testing ConnectApi Code

UserProfiles Class
Access user profile data. The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

Namespace
ConnectApi

UserProfiles Methods
The following are methods for UserProfiles. All methods are static.

IN THIS SECTION:
- `deleteBannerPhoto(communityId, userId)`
  Delete a user banner photo.
- `deletePhoto(communityId, userId)`
  Deletes the specified user’s photo.
- `getBannerPhoto(communityId, userId)`
  Get a user banner photo.
- `getPhoto(communityId, userId)`
  Returns information about the specified user’s photo.
- `getUserProfile(communityId, userId)`
  Returns the user profile of the context user.
- `setBannerPhoto(communityId, userId, fileId, versionNumber)`
  Set the user banner photo to an already uploaded file.
- `setBannerPhoto(communityId, userId, fileUpload)`
  Set the user banner photo to a file that hasn’t been uploaded.
- `setBannerPhotoWithAttributes(communityId, userId, bannerPhoto)`
  Set and crop an already uploaded file as the user banner photo.
- `setBannerPhotoWithAttributes(communityId, userId, bannerPhoto, fileUpload)`
  Set the user banner photo to a file that hasn’t been uploaded and requires cropping.
- `setPhoto(communityId, userId, fileId, versionNumber)`
  Sets the user photo to be the specified, already uploaded file.
setPhoto(communityId, userId, fileUpload)
Sets the provided blob to be the photo for the specified user. The content type must be usable as an image.

setPhotoWithAttributes(communityId, userId, photo)
Sets and crops the existing file as the photo for the specified user. The content type must be usable as an image.

setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Sets and crops the provided blob as the photo for the specified user. The content type must be usable as an image.

deleteBannerPhoto(communityId, userId)
Delete a user banner photo.

API Version
36.0

Requires Chatter
No

Signature
public static Void deleteBannerPhoto(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: Void

deletePhoto(communityId, userId)
Deletes the specified user’s photo.

API Version
35.0

Requires Chatter
No
Signature

```java
public static Void deletePhoto(String communityId, String userId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.

Return Value

Type: `Void`

**getBannerPhoto(communityId, userId)**

Get a user banner photo.

API Version

36.0

Requires Chatter

No

Signature

```java
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String userId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: `String`
  - ID of the user.

Return Value

Type: `ConnectApi.BannerPhoto`

**getPhoto(communityId, userId)**

Returns information about the specified user's photo.
API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
```java
public static ConnectApi.Photo getPhoto(String communityId, String userId)
```

Parameters
- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.
- `userId`
  - Type: `String`
  - The ID for a user.

Return Value
- Type: `ConnectApi.Photo`

SEE ALSO:
- Methods Available to Communities Guest Users

```java
getUserProfile(String communityId, String userId)
```

Returns the user profile of the context user.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.UserProfile getUserProfile(String communityId, String userId)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
The ID for a user.

Return Value
Type: `ConnectApi.UserProfile`

`setBannerPhoto(communityId, userId, fileId, versionNumber)`
Set the user banner photo to an already uploaded file.

API Version
36.0

Requires Chatter
No

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
ID of the user.

`fileId`
Type: `String`
ID of the already uploaded file to use as the user banner. The key prefix must be 069, and the image must be smaller than 8 MB.

`versionNumber`
Type: `Integer`
Version number of the file. Specify an existing version number or, to get the latest version, specify `null`. 
Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

setBannerPhoto(communityId, userId, fileUpload)
Set the user banner photo to a file that hasn't been uploaded.

API Version
36.0

Requires Chatter
No

Signature
```
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId,
ConnectApi.BinaryInput fileUpload)
```

Parameters
```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  ID of the user.

fileUpload
  Type: ConnectApi.BinaryInput
  A file to use as the photo. The content type must be usable as an image.
```

Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

setBannerPhotoWithAttributes(communityId, userId, bannerPhoto)
Set and crop an already uploaded file as the user banner photo.
API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId, String userId, ConnectApi.BannerPhotoInput bannerPhoto)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

bannerPhoto
Type: ConnectApi.BannerPhotoInput
A ConnectApi.BannerPhotoInput object that specifies the ID and version of the file, and how to crop the file.

Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

setBannerPhotoWithAttributes(communityId, userId, bannerPhoto, fileUpload)
Set the user banner photo to a file that hasn’t been uploaded and requires cropping.

API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId, String userId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput fileUpload)
Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`userId`
Type: `String`
ID of the user.

`bannerPhoto`
Type: `ConnectApi.BannerPhotoInput`
A `ConnectApi.BannerPhotoInput` object specifying the cropping parameters.

`fileUpload`
Type: `ConnectApi.BinaryInput`
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi.BannerPhoto`

Usage
Photos are processed asynchronously and may not be visible right away.

`setPhoto(communityId, userId, fileId, versionNumber)`
Sets the user photo to be the specified, already uploaded file.

API Version
35.0

Requires Chatter
No

Signature
```
public static ConnectApi.Photo setPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`userId`
Type: `String`
The ID for the context user or the keyword `me`.

**fileId**
Type: `String`
ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

**versionNumber**
Type: `Integer`
Version number of the existing file. Specify either an existing version number, or `null` to get the latest version.

Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, userId, fileUpload)**
Sets the provided blob to be the photo for the specified user. The content type must be usable as an image.

API Version
35.0

Requires Chatter
No

Signature
```java
public static ConnectApi.Photo setPhoto(String communityId, String userId,
ConnectApi.BinaryInput fileUpload)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**userId**
Type: `String`
The ID for the context user or the keyword `me`.

**fileUpload**
Type: `ConnectApi.BinaryInput`
A file to use as the photo. The content type must be usable as an image.
Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

setPhotoWithAttributes(communityId, userId, photo)
Sets and crops the existing file as the photo for the specified user. The content type must be usable as an image.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object specifying the file ID, version number, and cropping parameters.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Sets and crops the provided blob as the photo for the specified user. The content type must be usable as an image.
API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object specifying the cropping parameters.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

Wave Class
Send a query string to Wave Analytics and get the results as JSON.

Namespace
ConnectApi

Usage
The Wave class is part of the Wave Analytics Apex SDK. Use the executeQuery method to pass a SAQL query from an Apex page to Wave, and get a response in the form of JSON.
This example will send ‘your SAQL query’ to Wave:

```java
String query = '[your SAQL query]';
ConnectApi.LiteralJson result = ConnectApi.Wave.executeQuery(query);
String response = result.json;
```

Also refer to the classes in the `wave` namespace.

### Wave Methods

The following are methods for `Wave`. All methods are static.

**executeQuery(query)**

Send a SAQL query string to Wave Analytics, and get a response in the form of JSON.

**API Version**

40.0

**Requires Chatter**

No

**Signature**

```java
public ConnectApi.LiteralJson ConnectApi.Wave.executeQuery(String query)
```

**Parameters**

- **query**
  - Type: `String`
  - The SAQL query to send to Wave.

**Return Value**

Type: `LiteralJson`

### Zones Class

Access information about Chatter Answers zones in your organization. Zones organize questions into logical groups, with each zone having its own focus and unique questions.

**Note**: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring ’18](#).
Namespace

ConnectApi

Zones Methods

The following are methods for Zones. All methods are static.

IN THIS SECTION:

getZone(communityId, zoneId)
Returns a specific zone based on the zone ID.

getZones(communityId)
Returns a paginated list of zones.

getZones(communityId, pageParam, pageSize)
Returns a paginated list of zones with the specified page and page size.

searchInZone(communityId, zoneId, q, filter)
Search a zone by keyword. Specify whether to search articles or questions.

searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)
Search a zone by keyword. Specify whether to search articles or questions and specify the page of information to view and the page size.

searchInZone(communityId, zoneId, q, filter, language)
Search a zone by keyword. Specify the language of the results and specify whether to search articles or questions.

getZone(communityId, zoneId)

Returns a specific zone based on the zone ID.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version

29.0

Requires Chatter

No

Signature

public static ConnectApi.Zone getZone(String communityId, String zoneId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

zoneId
   Type: String
   The ID of a zone.

Return Value
Type: ConnectApi.Zone

getZones(communityId)
Returns a paginated list of zones.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.ZonePage getZones(String communityId)

Parameters
communityId
   Type: String
   Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.ZonePage

getZones(communityId, pageParam, pageSize)
Returns a paginated list of zones with the specified page and page size.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version
29.0
Requires Chatter
No

Signature
public static ConnectApi.Zone getZones(String communityId, Integer pageParam, Integer pageSize)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.
pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ZonePage

searchInZone(communityId, zoneId, q, filter)
Search a zone by keyword. Specify whether to search articles or questions.

Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
29.0

Available to Guest Users
37.0

Requires Chatter
No

Signature
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter)
Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **zoneId**
  - Type: String
  - zoneId—The ID of a zone.

- **q**
  - Type: String
  - q—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **filter**
  - Type: `ConnectApi.ZoneSearchResultType`
  - A `ZoneSearchResultType` enum value. One of the following:
    - Article—Search results contain only articles.
    - Question—Search results contain only questions.

Return Value

- Type: `ConnectApi.ZoneSearchPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchInZone(communityId, zoneId, q, filter, result)`
- Testing ConnectApi Code

**searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)**

Search a zone by keyword. Specify whether to search articles or questions and specify the page of information to view and the page size.

**Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version

- 29.0

Available to Guest Users

- 37.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `zoneId`
  - Type: `String`
  - `zoneId`—The ID of a zone.

- `q`
  - Type: `String`
  - `q`—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `filter`
  - Type: `ConnectApi.ZoneSearchResultType`
  - A `ZoneSearchResultType` enum value. One of the following:
    - Article—Search results contain only articles.
    - Question—Search results contain only questions.

- `pageParam`
  - Type: `String`
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.ZoneSearchPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)`
- Testing ConnectApi Code
searchInZone(communityId, zoneId, q, filter, language)

Search a zone by keyword. Specify the language of the results and specify whether to search articles or questions.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

37.0

Requires Chatter
No

Signature
```
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**zoneId**
Type: String
The ID of a zone.

**q**
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**filter**
Type: ConnectApi.ZoneSearchResultType
- Article—Search results contain only articles.
- Question—Search results contain only questions.

**language**
Type: String
The language of the articles or questions. The value must be a Salesforce supported locale code.

Return Value
Type: ConnectApi.ZoneSearchPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestSearchInZone(communityId, zoneId, q, filter, language, result)

Zones Test Methods

The following are the test methods for Zones. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

**setTestSearchInZone(communityId, zoneId, q, filter, result)**

Registers a ConnectApi.ZoneSearchPage object to be returned when searchInZone(communityId, zoneId, q, filter) is called in a test context.

**Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version

29.0

Signature

public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, ConnectApi.ZoneSearchPage result)

Parameters

**communityId**

Type: String

Use either the ID for a community, internal, or null.

**zoneId**

Type: String

zoneId—The ID of a zone.

**q**

Type: String

q—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**filter**

Type: ConnectApi.ZoneSearchResultType

A ZoneSearchResultType enum value. One of the following:

- **Article**—Search results contain only articles.
- **Question**—Search results contain only questions.
result
Type: ConnectApi.ZoneSearchPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchInZone(communityId, zoneId, q, filter)
Testing ConnectApi Code

setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)
Registers a ConnectApi.ZoneSearchPage object to be returned when searchInZone(communityId, zoneId, q, filter, pageParam, pageSize) is called in a test context.

Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
29.0

Signature
public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize, ConnectApi.ZoneSearchPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

zoneId
Type: String
zoneId—The ID of a zone.

q
Type: String
q—Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
Type: ConnectApi.ZoneSearchResultType
A ZoneSearchResultType enum value. One of the following:
• Article—Search results contain only articles.
- Question—Search results contain only questions.

pageParam
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

result
  Type: `ConnectApi.ZoneSearchPage`
  The object containing test data.

Return Value
  Type: Void

SEE ALSO:
  - `searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)`
  - Testing ConnectApi Code

`setTestSearchInZone(communityId, zoneId, q, filter, language, result)`

Registers a `ConnectApi.ZoneSearchPage` object to be returned when `searchInZone(communityId, zoneId, q, filter, language)` is called in a test context.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
  36.0

Signature
  `public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language, ConnectApi.ZoneSearchPage result)`

Parameters
  - `communityId`
    Type: String
    Use either the ID for a community, `internal`, or `null`.
  - `zoneId`
    Type: String
The ID of a zone.

$q$
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`filter`
Type: `ConnectApi.ZoneSearchResultType`
- Article—Search results contain only articles.
- Question—Search results contain only questions.

`language`
Type: String
The language of the articles or questions. The value must be a Salesforce supported locale code. In an `<apex:page>`, the default value is the language of the page. Otherwise, the default value is the user’s locale.

`result`
Type: `ConnectApi.ZoneSearchPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchInZone(communityId, zoneId, q, filter, language)`
- Testing ConnectApi Code

### ConnectApi Input Classes

Some ConnectApi methods take arguments that are instances of ConnectApi input classes.

Input classes are concrete unless marked abstract in this documentation. Concrete input classes have public constructors that have no parameters.

Some methods have parameters that are typed with an abstract class. You must pass in an instance of a concrete child class for these parameters.

Most input class properties can be set. Read-only properties are noted in this documentation.

### ConnectApi>ActionLinkDefinitionInput Class

The definition of an action link. An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

**Usage**

You can use context variables in the `actionUrl`, `headers`, and `requestBody` properties. Use context variables to pass information about the user who executed the action link to your server-side code. Salesforce substitutes the value when the action link is executed.
These are the available context variables:

<table>
<thead>
<tr>
<th>Context Variable</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>{!actionLinkId}</td>
<td>The ID of the action link the user executed.</td>
</tr>
<tr>
<td>{!actionLinkGroupId}</td>
<td>The ID of the action link group containing the action link the user executed.</td>
</tr>
<tr>
<td>{!communityId}</td>
<td>The ID of the community in which the user executed the action link. The value for your internal organization is the empty key &quot;000000000000000000&quot;.</td>
</tr>
<tr>
<td>{!communityUrl}</td>
<td>The URL of the community in which the user executed the action link. The value for your internal organization is empty string &quot;&quot;.</td>
</tr>
<tr>
<td>{!orgId}</td>
<td>The ID of the organization in which the user executed the action link.</td>
</tr>
<tr>
<td>{!userId}</td>
<td>The ID of the user that executed the action link.</td>
</tr>
</tbody>
</table>

### Property: `actionType`

ConnectApi.ActionLinkType

- **Description**
  - Defines the type of action link. Values are:
    - **Api**—The action link calls a synchronous API at the action URL. Salesforce sets the status to `SuccessfulStatus` or `FailedStatus` based on the HTTP status code returned by your server.
    - **ApiAsync**—The action link calls an asynchronous API at the action URL. The action remains in a `PendingStatus` state until a third party makes a request to `/connect/action-links/{actionLinkId}` to set the status to `SuccessfulStatus` or `FailedStatus` when the asynchronous operation is complete.
    - **Download**—The action link downloads a file from the action URL.
    - **Ui**—The action link takes the user to a web page at the action URL.

- **Required or Optional**
  - Required

- **Available Version**
  - 33.0

Use `Ui` if you need to load a page before the user performs an action, for example, to have the user provide input or view something before the action happens.
### Action Link Properties

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The action link URL. For example, a <code>Ui</code> action link URL is a Web page. A <code>Download</code> action link URL is a link to the file to download. <code>Ui</code> and <code>Download</code> action link URLs are provided to clients. An <code>Api</code> or <code>ApiAsync</code> action link URL is a REST resource. <code>Api</code> and <code>ApiAsync</code> action link URLs aren’t provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with <code>https://</code>. <strong>Tip:</strong> To avoid issues due to upgrades or changing functionality in your API, we recommend using a versioned API for <code>actionUrl</code>, for example, <code>https://www.example.com/api/v1/exampleResource</code>. If your API isn’t versioned, you can use the <code>expirationDate</code> property of the <code>ConnectApi.ActionLinkGroupDefinitionInput</code> class to avoid issues due to upgrades or changing functionality in your API.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td>excludedUserId</td>
<td>String</td>
<td>ID of a single user to exclude from performing the action. If you specify an <code>excludedUserId</code>, you can’t specify a <code>userId</code>.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>--------------</td>
<td>-------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td>true if this action is the default action link in the action link group; false otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Can be defined in an action link template.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>headers</td>
<td>List&lt;ConnectApi.RequestHeader&gt;</td>
<td>The request headers for the Api and ApiAsync action link types. See Action Links Overview, Authentication, and Security.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Can be defined in an action link template.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>labelKey</td>
<td>String</td>
<td>Key for the set of labels to show in the user interface. A set includes labels for these states: NewStatus, PendingStatus, SuccessStatus, FailedStatus. For example, if you use the Approve key, you get these labels: Approve, Pending, Approved, Failed. For a complete list of keys and labels, see Action Links Labels. If none of the predefined labels work for your action link, use a custom label. To use a custom label, create an action link template. See Create Action Link Templates.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Can be defined in an action link template.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| method       | ConnectApi.HttpRequestMethod  | One of these HTTP methods:  
  - HttpDelete—Returns HTTP 204 on success. Response body or output class is empty.  
  - HttpGet—Returns HTTP 200 on success.  
  - HttpHead—Returns HTTP 200 on success. Response body or output class is empty.  
  - HttpPatch—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.  
  - HttpPost—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success. | Required             | 33.0              |
<p>|              |                               | Can be defined in an action link template.                                                                                                                                                                 |                      |                   |</p>

**SEE ALSO:**

ConnectApi.ActionLinkGroupDefinitionInput Class

**ConnectApi.ActionLinkGroupDefinitionInput Class**

The definition of an action link group. All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define stand-alone actions in their own action group.

Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinks</td>
<td>List&lt;ConnectApi.ActionLinkGroupDefinitionInput&gt;</td>
<td>The action links that make up this group. Within an action link group, action links are displayed in the order listed in the actionLinks property of the ConnectApi.ActionLinkGroupDefinitionInput class. Within a feed item, action link groups are displayed in the order specified in the actionLinks property.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To instantiate this action link group without a template. To instantiate from a template, don’t specify a value.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>

<tr>
<td>------------------------</td>
<td>-----------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>actionLinkGroupIds</td>
<td></td>
<td>actionLinkGroupIds property of the ConnectApi.AssociatedActions CapabilityInput class. You can create up to three action links in a Primary group and up to four in an Overflow group.</td>
<td>Optional</td>
<td></td>
</tr>
</tbody>
</table>
| category               | ConnectApi.PlatformActionGroupCategory | Indicates the priority and relative locations of action links in an associated feed item. Values are:  
  - Primary—The action link group is displayed in the body of the feed element.  
  - Overflow—The action link group is displayed in the overflow menu of the feed element. | Required to instantiate this action link group without a template. To instantiate from a template, don’t specify a value. | 33.0               |
| executions Allowed     | ConnectApi.ActionLinkExecutionsAllowed | Defines the number of times an action link can be executed. Values are:  
  - Once—An action link can be executed only once across all users.  
  - OncePerUser—An action link can be executed only once for each user.  
  - Unlimited—An action link can be executed an unlimited number of times by each user. If the action link’s actionType is Api or ApiAsync, you can’t use this value. | Required to instantiate this action link group without a template. To instantiate from a template, don’t specify a value. | 33.0               |
| expirationDate         | Datetime                          | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, that represents the date and time this action link group is removed from associated feed items and can no longer be executed. The expirationDate must be within one year of the creation date.  
  If the action link group definition includes an OAuth token, it is a good idea to set the expiration date of the action link group to the same value as the expiration date of the OAuth token so that users can’t execute the action link and get an OAuth error. | Required to instantiate this action link group without a template. Optional to instantiate from a template. | 33.0               |
To set a date when instantiating from a template, see Set the Action Link Group Expiration Time.

A collection of key-value pairs to fill in binding variable values or a custom user alias from an action link template. To instantiate this action link group from an action link template that uses binding variables, you must provide values for all the variables. See Define Binding Variables.

The ID of the action link group template from which to instantiate this action link group.

A key-value pair to fill in a binding variable value from an action link template.

### ConnectApi.ActionLinkTemplateBindingInput

A key-value pair to fill in a binding variable value from an action link template.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>key</td>
<td>String</td>
<td>The name of the binding variable key specified in the action link template in Setup. For example, if the binding variable in the template is {!Binding.firstName}, the key is firstName</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ActivitySharingInput

Defines who a captured email or event is shared with.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>String</td>
<td>The value of the binding variable key. For example, if the key is <code>firstName</code>, this value could be <code>Joan</code>.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td>groupsToShareWith</td>
<td>List&lt;String&gt;</td>
<td>List of IDs for the groups that you share the activity with. Valid only if <code>sharingType</code> is <code>MyGroups</code>.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
<tr>
<td>sharingType</td>
<td>ConnectApi.ActivitySharingType</td>
<td>Type of sharing operation. Values are:</td>
<td>Required</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Everyone—The activity is shared with everyone.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• MyGroups—The activity is shared only with a selection of the context user’s groups.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• OnlyMe—The activity is private.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.AlternativeInput

Alternative representation for an extension on a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>textRepresentation</td>
<td>String</td>
<td>Text representation of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Thumbnail URL for the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AnnouncementInput Class

An announcement.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td><code>ConnectApi.Message</code></td>
<td>Text of the announcement.</td>
<td>Required for creating an announcement if <code>feedItemId</code> isn't specified Don't specify for updating an announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>expirationDate</td>
<td><code>Datetime</code></td>
<td>The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the <code>expirationDate</code>. However, you can use the time value to create your own display logic in your own UI.</td>
<td>Required for creating an announcement Optional for updating an announcement</td>
<td>31.0</td>
</tr>
<tr>
<td>feedItemId</td>
<td><code>String</code></td>
<td>ID of an <code>AdvancedTextPost</code> feed item that is the body of the announcement.</td>
<td>Required for creating an announcement if <code>body</code> isn't specified Don't specify for updating an announcement.</td>
<td>36.0</td>
</tr>
<tr>
<td>isArchived</td>
<td><code>Boolean</code></td>
<td>Specifies whether the announcement is archived.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>parentId</td>
<td><code>String</code></td>
<td>ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.</td>
<td>Required for creating an announcement if <code>feedItemId</code> isn't specified Don't specify for updating an announcement.</td>
<td>36.0</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

**See Also:**

postAnnouncement(communityId, groupId, announcement)

**ConnectApi.ArticleTopicAssignmentJobInput**

An article and topic assignment job.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>sendEmails</td>
<td>Boolean</td>
<td>Specifies whether the announcement is sent as an email to all group members regardless of their email setting for the group. If Chatter emails aren't enabled for the organization, announcement emails aren't sent. Default value is false.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**ConnectApi.AssociatedActionsCapabilityInput Class**

A list of action link groups to associate with a feed element. To associate an action link group with a feed element, the call must be made from the Apex namespace that created the action link definition. In addition, the user making the call must have created the definition or have View All Data permission.

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.
ConnectApi.Namespace

### ConnectApi.AudienceCriteriaInput

Recommendation audience criteria type.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:
- `ConnectApi.CustomListAudienceCriteriaInput`
- `ConnectApi.NewUserAudienceCriteriaInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| type                | `ConnectApi.RecommendationAudienceCriteriaType` | Specifies the recommendation audience criteria type. One of these values:  
  - CustomList—A custom list of users makes up the audience.  
  - MaxDaysInCommunity—New community members make up the audience. | Optional             | 36.0               |

SEE ALSO:
- `ConnectApi.RecommendationAudienceInput`
- `ConnectApi.BannerPhotoInput`

**ConnectApi.BannerPhotoInput**

A banner photo.
### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cropHeight</td>
<td>Integer</td>
<td>Height of the crop rectangle in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropWidth</td>
<td>Integer</td>
<td>Width of the crop rectangle in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropX</td>
<td>Integer</td>
<td>X position of the crop rectangle from the left edge of the image in pixels. Top left is position (0,0).</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropY</td>
<td>Integer</td>
<td>Y position of the crop rectangle from the top edge of the image in pixels. Top left is position (0,0).</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>fileId</td>
<td>String</td>
<td>ID of an existing file. The key prefix must be 069, and the file size must be less than 8 MB.</td>
<td>Required</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**Note:** Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used.

| versionNumber    | Integer    | Version number of an existing file. If not provided, the latest version is used. | Optional             | 36.0              |

### ConnectApi.BinaryInput Class

Create a `ConnectApi.BinaryInput` object to attach files to feed items and comments and to add repository files.

The constructor is:

```java
ConnectApi.BinaryInput(blob, contentType, filename)
```

The constructor takes these arguments:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>blob</td>
<td>Blob</td>
<td>Contents of the file to be used for input</td>
<td>28.0</td>
</tr>
<tr>
<td>contentType</td>
<td>String</td>
<td>MIME type description of the content, such as <code>image/jpg</code></td>
<td>28.0</td>
</tr>
<tr>
<td>filename</td>
<td>String</td>
<td>File name with the file extension, such as <code>UserPhoto.jpg</code></td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.BatchInput Class

Construct a set of inputs to be passed into a method at the same time.
Use this constructor when there isn’t a binary input:

```java
ConnectApi.BatchInput(Object input)
```

Use this constructor to pass one binary input:

```java
ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)
```

Use this constructor to pass multiple binary inputs:

```java
ConnectApi.BatchInput(Object input, List<ConnectApi.BinaryInput> binaries)
```

The constructors take these parameters:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>input</td>
<td>Object</td>
<td>An individual input object to be used in the batch operation. For example, for <code>postFeedElementBatch()</code>, this should be <code>ConnectApi.FeedElementInput</code>.</td>
<td>32.0</td>
</tr>
<tr>
<td>binary</td>
<td><code>ConnectApi.BinaryInput</code></td>
<td>A binary file to associate with the input object.</td>
<td>32.0</td>
</tr>
<tr>
<td>binaries</td>
<td><code>List&lt;ConnectApi.BinaryInput&gt;</code></td>
<td>A list of binary files to associate with the input object.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- Post a Batch of Feed Elements
- Post a Batch of Feed Elements with New (Binary) Files

**ConnectApi.BookmarksCapabilityInput**

Create or update a bookmark on a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput Class`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>isBookmarkedByUsername</code></td>
<td>Boolean</td>
<td>Specifies if the feed element should be bookmarked for the user (<code>true</code>) or not (<code>false</code>).</td>
<td>No</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.FeedElementCapabilitiesInput`

**ConnectApi.CanvasAttachmentInput Class**

⚠️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.CanvasCapabilityInput`.

Used to attach a canvas app to a feed item.
Subclass of `ConnectApi.FeedItemAttachmentInput` Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Optional. The description of the canvas app.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The developer name (API name) of the canvas app</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>Optional. The height of the canvas app in pixels. Default height is 200 pixels.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>Optional. The namespace prefix of the Developer Edition organization in which the canvas app was created.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>Optional. Parameters passed to the canvas app in JSON format. Example:</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Optional. A URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the link used to call the canvas app.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.CanvasCapabilityInput**

Create or update a canvas app associated with a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput` Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the canvas app. The maximum size is 255 characters.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The API name (developer name) of the connected app.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>The height of the canvas app in pixels.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>A unique namespace prefix for the canvas app.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>JSON parameters passed to the canvas app.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>A title for the canvas link.</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

*ConnectApi.FeedElementCapabilitiesInput*
## ConnectApi.ChatterStreamInput

A Chatter feed stream.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the stream, up to 1,000 characters.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the stream, up to 120 characters.</td>
<td>Required when creating a stream</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**subscriptions**

<table>
<thead>
<tr>
<th>subscriptionsToAdd</th>
<th>List&lt;ConnectApi.StreamSubscriptionInput&gt;</th>
<th>List of up to 25 entities whose feeds are included in the stream. Adding an entity that is already added results in no operation. Including the same entity in subscriptionsToAdd and subscriptionsToRemove results in no operation.</th>
<th>Optional</th>
<th>39.0</th>
</tr>
</thead>
<tbody>
<tr>
<td>subscriptionsToRemove</td>
<td>List&lt;ConnectApi.StreamSubscriptionInput&gt;</td>
<td>List of entities whose feeds are removed from the stream. Removing an entity that is already removed results in no operation. Including the same entity in subscriptionsToAdd and subscriptionsToRemove results in no operation.</td>
<td>Optional when updating a stream</td>
<td>39.0</td>
</tr>
</tbody>
</table>

## ConnectApi.ChatterGroupInput Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>announcement</td>
<td>String</td>
<td>The 18-character ID of an announcement. An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it’s deleted or replaced by another announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>canHaveChatterGuests</td>
<td>Boolean</td>
<td>true if this group allows Chatter customers, false otherwise. After this property is set to true, it cannot be set to false.</td>
<td>29.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>The &quot;Description&quot; section of the group.</td>
<td>29.0</td>
</tr>
<tr>
<td>information</td>
<td>ConnectApi.GroupInformationInput</td>
<td>The &quot;Information&quot; section of a group. If the group is private, this section is visible only to members.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
### isArchived

**Type:** Boolean

**Description:**
true if the group is archived, false otherwise. Defaults to false.

**Available:** 29.0

### isAutoArchiveDisabled

**Type:** Boolean

**Description:**
true if automatic archiving is turned off for the group, false otherwise. Defaults to false.

**Available:** 29.0

### name

**Type:** String

**Description:**
The name of the group.

**Available:** 29.0

### owner

**Type:** String

**Description:**
The ID of the group owner. This property is available for PATCH requests only.

**Available:** 29.0

### visibility

**Type:** ConnectApi.GroupVisibilityType

**Description:**
Group visibility type.

- **PrivateAccess**—Only members of the group can see posts to this group.
- **PublicAccess**—All users within the community can see posts to this group.
- **Unlisted**—Reserved for future use.

**Available:** 29.0

### ConnectApi.CommentInput

**Description:**
A comment.

**Available:**
Used to add rich comments, for example, comments that include mentions or file attachments.

### attachment

**Type:** ConnectApi.FeedItemAttachmentInput Class

**Description:**
Specifies an attachment for the comment. Valid values are:

- **ContentAttachmentInput**
- **NewFileAttachmentInput**
- **LinkAttachmentInput**

**Required or Optional:** Optional

**Available Version:** 28.0–31.0

### body

**Type:** ConnectApi.MessageBodyInput Class

**Description:**
Description of message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a describeSObjects() call on the FeedItem or FeedComment object and look at

**Required:** Required

**Available Version:** 28.0
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>

</thead>
<tbody>
<tr>
<td>the length of the Body or CommentBody field to determine the maximum number of allowed characters. To edit this property in a comment, use updateComment(communityId, commentId, comment). Editing comments is supported in version 34.0 and later. Rich text and inline images are supported in comment bodies in version 35.0 and later.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>capabilities</td>
<td>ConnectApi. CommentCapabilitiesInput</td>
<td>Specifies any capabilities for the comment, such as a file attachment.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>threadParentId</td>
<td>String</td>
<td>ID of the parent comment for a threaded comment.</td>
<td>Optional</td>
<td>44.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- Post a Comment with a Mention
- Post a Comment with a New File
- Post a Comment with an Existing File
- Post a Rich-Text Comment with Inline Image
- Post a Rich-Text Feed Comment with a Code Block
- Edit a Comment
- postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)

**ConnectApi.CommentCapabilitiesInput**

A container for all capabilities that can be included with a comment.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>content</td>
<td>ConnectApi. ContentCapability Input</td>
<td>Content to attach to the comment.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>

<td>ConnectApi. FeedEntityShareCapabilityInput</td>
<td>Feed entity to share to the comment.</td>
<td>Optional</td>
<td>42.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ContentAttachmentInput Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.ContentCapabilityInput`.

Used to attach existing content to a comment or feed item.

Subclass of `ConnectApi.FeedItemAttachmentInput Class`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>record</td>
<td><code>ConnectApi.RecordCapabilityInput</code></td>
<td>Existing knowledge article to attach to the comment.</td>
<td>Optional</td>
<td>42.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- `ConnectApi.CommentInput`

### ConnectApi.ContentCapabilityInput

Attach or update a file on a comment. Use this class to attach a new file or update a file that has already been uploaded to Salesforce.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput Class`.

To attach or remove files from a feed post (instead of a comment) in version 36.0 and later, use `ConnectApi.FilesCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contentDocumentId</td>
<td><code>String</code></td>
<td>ID of the existing content.</td>

### ConnectApi.ContentHubItemInput

The item type ID and fields of the item type.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fields</td>
<td>List&lt;ConnectApi.ContentHubFieldValueInput&gt;</td>
<td>List of fields for the item to be created.</td>
<td>Required</td>
<td>39.0</td>
</tr>
<tr>
<td>itemTypeID</td>
<td>String</td>
<td>ID of the item type.</td>
<td>Required</td>
<td>39.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.CustomListAudienceCriteriaInput

The criteria for the custom list type of recommendation audience.

Subclass of [ConnectApi.AudienceCriteriaInput](#).
### ConnectApi.DatacloudOrderInput Class

Input representation for a Datacloud order to purchase contacts or companies and retrieve purchase information.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>companyIds</td>
<td>String</td>
<td>A comma-separated list of identification numbers for the companies to be purchased. You can’t include any contact IDs or your purchase fails.</td>
<td>Required to purchase companies</td>
<td>32.0</td>
</tr>
<tr>
<td>contactIds</td>
<td>String</td>
<td>A comma-separated list of identification numbers for the contacts to be purchased. You can’t include any company IDs or your purchase fails.</td>
<td>Required to purchase contacts</td>
<td>32.0</td>
</tr>
<tr>
<td>userType</td>
<td>ConnectDatacloudUserTypeEnum</td>
<td>Indicates the Data.com user type to be used. There are two user types.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Monthly (default)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Listpool</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:  
postOrder(orderInput)
**ConnectApi.DirectMessageCapabilityInput**

Create or update the members of a direct message.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>membersToAdd</td>
<td>List&lt;String&gt;</td>
<td>List of user IDs for members to include in the direct message.</td>
<td>Required when creating a direct message (POST) or Optional when updating a direct message (PATCH)</td>
<td>39.0</td>
</tr>
<tr>
<td>membersToRemove</td>
<td>List&lt;String&gt;</td>
<td>List of user IDs for members to remove from the direct message.</td>
<td>Optional when updating a direct message (PATCH) or Not supported when creating a direct message (POST)</td>
<td>40.0</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>Subject of the direct message.</td>
<td>Optional when creating a direct message (POST) or Not supported when updating a direct message (PATCH)</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.FeedElementCapabilitiesInput

**ConnectApi.EntityLinkSegmentInput**

An entity link segment.

Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>ID of the entity to link to. Only users with access to the entity see it. It’s hidden for users without access.</td>
<td>Required</td>
<td>43.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ExtensionInput**

An extension.
**ConnectApi.ExtensionsCapabilityInput**

Create or update extensions associated with a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput` class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>alternative Representation</td>
<td><code>ConnectApi.AlternativeInput</code></td>
<td>Alternative representation of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>extensionId</td>
<td><code>String</code></td>
<td>ID of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>payload</td>
<td><code>String</code></td>
<td>Payload associated with the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>payloadVersion</td>
<td><code>String</code></td>
<td>Payload version that identifies the structure of the payload associated with the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

`ConnectApi.ExtensionsCapabilityInput`

**ConnectApi.FeedElementCapabilitiesInput**

A container for all capabilities that can be included when creating a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>itemsToAdd</td>
<td><code>List&lt;ConnectApi.ExtensionInput&gt;</code></td>
<td>List of extensions to associate with the feed element.</td>
<td>Required for creating an extension</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Optional for updating an extension</td>
<td></td>
</tr>
<tr>
<td>itemsToRemove</td>
<td><code>List&lt;String&gt;</code></td>
<td>List of attachment IDs to remove from the feed element.</td>
<td>Optional for updating an extension</td>
<td>41.0</td>
</tr>
<tr>

<td>ConnectApi. StatusCapabilityInput</td>
<td>Describes the status of the feed element.</td>
<td>Optional</td>
<td>44.0</td>
</tr>
</tbody>
</table>
### ConnectApi.FeedElementCapabilityInput Class

A feed element capability.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of capabilities. If a capability property exists on a feed element, that capability is available, even if the capability property doesn’t have a value. For example, if the ChatterLikes capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn’t exist, it isn’t possible to like that feed element. A capability can also contain associated data. For example, the Moderation capability contains data about moderation flags.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

This class is a superclass of:

- `ConnectApi.AssociatedActionsCapabilityInput`
- `ConnectApi.BookmarksCapabilityInput`
- `ConnectApi.CanvasCapabilityInput`
- `ConnectApi.ContentCapabilityInput`
- `ConnectApi.DirectMessageCapabilityInput`
- `ConnectApi.ExtensionsCapabilityInput`
- `ConnectApi.FeedEntityShareCapabilityInput`
- `ConnectApi.FilesCapabilityInput`
- `ConnectApi.LinkCapabilityInput`
- `ConnectApi.MuteCapabilityInput`
- `ConnectApi.PollCapabilityInput`
- `ConnectApi.QuestionAndAnswersCapabilityInput`
- `ConnectApi.ReadByCapabilityInput`
- `ConnectApi.RecordCapabilityInput`
- `ConnectApi.StatusCapabilityInput`
- `ConnectApi.TopicsCapabilityInput`

### ConnectApi.FeedElementInput Class

Feed elements are the top-level items that a feed contains. Feeds are feed element containers.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass of `ConnectApi.FeedItemInput Class`
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>capabilities</td>
<td>ConnectApi.FeedElementCapabilitiesInput</td>
<td>The capabilities that define auxiliary information on this feed element.</td>
<td>Optional</td>
<td>31.0</td>
</tr>
<tr>
<td>feedElementType</td>
<td>ConnectApi.FeedElementType</td>
<td>The type of feed element this input represents.</td>
<td>Required</td>
<td>31.0</td>
</tr>
<tr>
<td>subjectId</td>
<td>String</td>
<td>The ID of the parent this feed element is being posted to. This value can be</td>
<td>Required</td>
<td>31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>the ID of a user, group, or record, or the string me to indicate the context</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>user.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
- Post a Feed Element with a Mention
- Post a Feed Element with Existing Content
- Post a Feed Element with a New File (Binary) Attachment
- Define an Action Link and Post with a Feed Element
- Define an Action Link in a Template and Post with a Feed Element
- Share a Feed Element (in Version 39.0 and Later)
- Edit a Feed Element
- Edit a Question Title and Post
- Post a Rich-Text Feed Element with Inline Image

**ConnectApi.FeedEntityShareCapabilityInput**

Share a feed entity with a feed post or comment.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityId</td>
<td>String</td>
<td>ID of the feed entity to share with the feed post or comment.</td>
<td>Required</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FeedElementCapabilitiesInput

**ConnectApi.FeedItemAttachmentInput Class**

⚠️ **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use ConnectApi.FeedElementCapabilityInput Class.

Used to attach a file to a feed item.
This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:
- ConnectApi.CanvasAttachmentInput Class
- ConnectApi.ContentAttachmentInput Class
- ConnectApi.LinkAttachmentInput Class
- ConnectApi.NewFileAttachmentInput Class
- ConnectApi.PollAttachmentInput Class

ConnectApi.FeedItemInput Class

Used to create rich feed items, for example, feed items that include @mentions or files.

Subclass of ConnectApi.FeedElementInput Class as of version 31.0.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td>ConnectApi.FeedItemAttachmentInput Class</td>
<td>Specifies the attachment for the feed item. The feed item type is inferred based on the provided attachment.</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>body</td>
<td>ConnectApi.MessageBodyInput Class</td>
<td>Message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a describeSObjects() call on the FeedItem or FeedComment object and look at the length of the Body or CommentBody field to determine the maximum number of allowed characters. If you specify originalFeedElementId to share a feed item, use the body property to add the first comment to the feed item. To edit this property in a feed item, use updateFeedElement(communityId, feedElementId, feedElement). Editing feed posts is supported in version 34.0 and later.</td>
<td>Required unless the feed item has a link capability or a content capability.</td>
<td>28.0</td>
</tr>
<tr>
<td>isBookmarked</td>
<td>Boolean</td>
<td>Specifies if the new feed item should be bookmarked for the user (true) or not (false).</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>
## original FeedElementId

**Type:** String

- **Description:** To share a feed element, specify its 18-character ID.
- **Required or Optional:** Optional
- **Available Version:** 31.0–38.0

**Important:** As of API version 39.0, use the `capabilities.feedEntity Share.feedEntityId` property.

## original FeedItemId

**Type:** String

- **Description:** To share a feed item, specify its 18-character ID.
- **Required or Optional:** Optional
- **Available Version:** 28.0–31.0

**Important:** In API version 32.0–38.0, use the `originalFeedElementId` property. In API version 39.0 and later, use the `capabilities.feedEntity Share.feedEntityId` property.

## visibility

**Type:** ConnectApi.FeedItem VisibilityType Enum

- **Description:** Type of users who can see a feed item.
  - `AllUsers`—Visibility is not limited to internal users.
  - `InternalUsers`—Visibility is limited to internal users.
- **Default values:**
  - For external users, the default value is `AllUsers`. External users must use this value to see their posts.
  - For internal users, the default value is `InternalUsers`. Internal users can accept this value or use the value `AllUsers` to allow external users to see their posts.

  If the parent of the feed item is a user, group, or direct message, the `visibility` of the feed item must be `AllUsers`.

### ConnectApi.FileIdInput

Attach a file that has already been uploaded or remove a file from a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of a file that has already been uploaded.</td>
<td>Required</td>
<td>36.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>--------------</td>
<td>-------------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>operationType</td>
<td><code>ConnectApi.OperationType</code></td>
<td>Operation to carry out on the file. Values are:</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Add—Adds the file to the feed element.</td>
<td>If not specified, defaults to Add.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Remove—Removes the file from the feed element.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Remove operations are processed before Add operations. Adding content that is already added and removing content that is already removed result in no operation.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FilesCapabilityInput

**ConnectApi.FilesCapabilityInput**
Attach up to 10 files that have already been uploaded or remove one or more files from a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.FileIdInput&gt;</td>
<td>List of file IDs and operations to be carried out on those files.</td>
<td>Required</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**ConnectApi.GroupInformationInput Class**

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>The text in the “Information” section of a group.</td>
<td>28.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the “Information” section of a group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.ChatterGroupInput Class

**ConnectApi.HashtagSegmentInput Class**

Used to include a hashtag in a feed item or comment.
Subclass of ConnectApi.MessageSegmentInput
**ConnectApi.InlineImageSegmentInput**

An inline image segment.
Subclass of `ConnectApi.MessageSegmentInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alt text for the inline image.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>If not specified, the title of the inline image file is used as the alt text.</td>
<td></td>
</tr>
<tr>
<td>fileId</td>
<td>String</td>
<td>ID of the inline image file.</td>
<td>Required</td>
<td>35.0</td>
</tr>
</tbody>
</table>

**See ALSO:**
- `Post a Rich-Text Feed Element with Inline Image`
- `ConnectApi.MessageBodyInput Class`

---

**ConnectApi.InviteInput**

An invitation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invitees</td>
<td>List&lt;String&gt;</td>
<td>List of email addresses to send the invitation to.</td>
<td>Required</td>
<td>39.0</td>
</tr>
<tr>
<td>message</td>
<td>String</td>
<td>Message to include in the invitation.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LinkAttachmentInput Class**

⚠️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.LinkCapabilityInput`. 
Used as part of a feed item attachment, to add links.

Subclass of **ConnectApi.FeedItemAttachmentInput** Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to be used for the link</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Title of the link</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LinkCapabilityInput**

Create or update a link on a feed element.

This class is a subclass of **ConnectApi.FeedElementCapabilityInput** Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>Link URL. The URL can be to an external site.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Description of the link.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- [ConnectApi.FeedElementCapabilitiesInput](#)

**ConnectApi.LinkSegmentInput Class**

Used to include a link segment in a feed item or comment.

Subclass of **ConnectApi.MessageSegmentInput**

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to be used for the link</td>

**ConnectApi.ManagedTopicPositionCollectionInput Class**

A collection of relative positions of managed topics.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedTopicPositions</td>
<td>List&lt;ConnectApi.ManagedTopicPositionInput&gt;</td>
<td>List of relative positions of managed topics. This list can include Featured and Navigational managed topics and doesn't need to include all managed topics.</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>
For more information about reordering managed topics, see the example in `reorderManagedTopics(communityId, managedTopicPositionCollection)`.

### ConnectApi.ManagedTopicPositionInput Class

Relative position of a managed topic.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedTopicId</td>
<td>String</td>
<td>ID of existing managed topic.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>position</td>
<td>Integer</td>
<td>Relative position of the managed topic, indicated by zero-indexed, ascending whole numbers.</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>

<td>Markup segments with a <code>markupType</code> of <code>Code</code> can include only text segments.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- [Post a Rich-Text Feed Element with Inline Image](#)
- [ConnectApi.MessageBodyInput Class](#)

**ConnectApiMarkupEndSegmentInput**

The end tag for rich text markup.

Subclass of [ConnectApi.MessageSegmentInput](#)
### MarkupType

**Type:** `ConnectApi. MarkupType`

Type of rich text markup.

- **Bold**—Bold tag.
- **Code**—Code tag.
- **Italic**—Italic tag.
- **ListItem**—List item tag.
- **OrderedList**—Ordered list tag.
- **Paragraph**—Paragraph tag.
- **Strikethrough**—Strikethrough tag.
- **Underline**—Underline tag.
- **UnorderedList**—Unordered list tag.

### ConnectApi.MentionSegmentInput Class

Include an @mention of a user or group in a feed post or comment. When creating a feed post or comment, you can include up to 25 mentions.

Subclass of `ConnectApi.MessageSegmentInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>id</code></td>
<td>String</td>
<td>ID of the user or group to mention. To mention a user, use either <code>id</code> or <code>username</code>. You can’t include both. To mention a group, you must use <code>id</code>.</td>
<td>28.0</td>
</tr>
<tr>
<td><code>username</code></td>
<td>String</td>
<td>User name of the user to mention. To mention a user, use either <code>id</code> or <code>username</code>. You can’t include both.</td>
<td>38.0</td>
</tr>
</tbody>
</table>

### ConnectApi.MessageBodyInput Class

Used to add rich messages to feed items and comments.
### ConnectApi.MessageSegmentInput

**Description:**

Used to add rich message segments to feed items and comments.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

**Superclass for:**

- ConnectApi.EntityLinkSegmentInput
- ConnectApi.HashtagSegmentInput Class
- ConnectApi.InlineImageSegmentInput
- ConnectApi.LinkSegmentInput Class
- ConnectApi.MarkupBeginSegmentInput
- ConnectApi.MarkupEndSegmentInput
- ConnectApi.MentionSegmentInput Class
- ConnectApi.TextSegmentInput Class

Use the [ConnectApiHelper repository on GitHub](https://github.com/ConnectApi) to simplify many of the tasks accomplished with ConnectApi.MessageSegmentInput, such as posting with inline images, rich text, and mentions.

```text
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>messageSegments</td>
<td>List&lt;ConnectApi.</td>
<td>List of message segments contained in the body</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td>MessageSegmentInput&gt;</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
```
### ConnectApi.MessageSegmentType

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>ConnectApi.MessageSegmentType</td>
<td>The type of message segment. Values are:  - EntityLink  - FieldChange  - FieldChangeName  - FieldChangeValue  - Hashtag  - InlineImage  - Link  - MarkupBegin  - MarkupEnd  - Mention  - MoreChanges  - ResourceLink  - Text</td>
<td>Required</td>
<td>23.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- Edit a Comment
- Edit a Feed Element
- Edit a Question Title and Post
- Post a Rich-Text Feed Element with Inline Image
- ConnectApi.MessageBodyInput Class

### ConnectApi.MuteCapabilityInput

Mute or unmute a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isMutedByMe</td>
<td>Boolean</td>
<td>Indicates whether the feed element is muted for the context user. Default value is false.</td>
<td>Required</td>
<td>35.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- setIsMutedByMe(communityId, feedElementId, isMutedByMe)

### ConnectApi.NBAReactionInput (Pilot)

A reaction to a recommendation produced by a recommendation strategy.
**Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Einstein Next Best Action isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](https://reformly.com).

<table>
<thead>

<td>reactionType</td>
<td>ConnectApi.NBAStrategyReactionType</td>
<td>Type of reaction to a recommendation. Values are: Accepted, Rejected</td>
<td>Required</td>
<td>44.0</td>
</tr>
<tr>
<td>strategyName</td>
<td>String</td>
<td>Name of the recommendation strategy.</td>
<td>Required</td>
<td>44.0</td>
</tr>
<tr>
<td>targetActionId</td>
<td>String</td>
<td>ID of the target action.</td>
<td>Optional</td>
<td>44.0</td>
</tr>
<tr>
<td>targetActionName</td>
<td>String</td>
<td>Name of the target action.</td>
<td>Required</td>
<td>44.0</td>
</tr>
<tr>
<td>targetId</td>
<td>String</td>
<td>ID of the recommendation that is being reacted to.</td>
<td>Required</td>
<td>44.0</td>
</tr>
</tbody>
</table>

**ConnectApi.NBAStrategyInput (Pilot)**

A recommendation strategy.

**Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Einstein Next Best Action isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the [IdeaExchange](https://reformly.com).

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contextRecordId</td>
<td>String</td>
<td>ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.</td>
<td>Optional</td>
<td>44.0</td>
</tr>
</tbody>
</table>
ConnectApi.NewFileAttachmentInput Class

Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.ContentCapabilityInput.

Describes a new file to be attached to a feed item. The actual binary file, that is the attachment, is provided as part of the BinaryInput in the method that takes this attachment input, such as postFeedItem or postComment.

Subclass of ConnectApi.FeedItemAttachmentInput Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>maxResults</td>
<td>Integer</td>
<td>Maximum number of results. Valid values are from 1 to 25. The default is 3.</td>
<td>Optional</td>
<td>44.0</td>
</tr>
<tr>
<td>strategyContext</td>
<td>Map&lt;String, String&gt;</td>
<td>Variable and value mappings for the strategy.</td>
<td>Optional</td>
<td>44.0</td>
</tr>
</tbody>
</table>

ConnectApi.NewUserAudienceCriteriaInput

The criteria for the new members type of recommendation audience.

Subclass of ConnectApi.AudienceCriteriaInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>Double</td>
<td>The maximum number of days since a user became a community member. For example, if you specify 30, anyone who became a community member in the last 30 days is included in the new members audience.</td>
<td>Required</td>
<td>36.0</td>
</tr>
</tbody>
</table>

ConnectApi.PhotoInput Class

Use to specify how crop a photo. Use to specify an existing file (a file that has already been uploaded).

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cropSize</td>
<td>Integer</td>
<td>The length, in pixels, of any edge of the crop square.</td>
<td>29.0</td>
</tr>
<tr>
<td>cropX</td>
<td>Integer</td>
<td>The position X, in pixels, from the left edge of the image to the start of the crop square. Top left is position (0,0).</td>
<td>29.0</td>
</tr>
</tbody>
</table>
### ConnectApi.PinCapabilityInput

Pin or unpin a feed element to a feed.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>ID of the entity to pin or unpin. In version 41.0 and later, entityId must be a feed item ID. In version 41.0–42.0, only one feed item can be pinned per feed. In version 43.0 and later, three feed items can be pinned per feed.</td>
<td>Required</td>
<td>41.0</td>
</tr>
<tr>
<td>isPinned</td>
<td>Boolean</td>
<td>Specifies whether to pin (true) or unpin (false) the entity.</td>
<td>Required</td>
<td>41.0</td>
</tr>
</tbody>
</table>

### ConnectApi.PollAttachmentInput Class

⚠️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.PollCapabilityInput.

Used to attach a poll to a feed item.

Subclass of ConnectApi.FeedItemAttachmentInput Class
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pollChoices</td>
<td>List&lt;String&gt;</td>
<td>The text labels for the poll items. Polls must contain between 2 to 10 poll choices.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.PollCapabilityInput**

Create, update, or vote on a poll on a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>choices</td>
<td>List&lt;String&gt;</td>
<td>The choices used to create a new poll. You must specify 2–10 poll choices for each poll.</td>
<td>Required for creating a poll</td>
<td>32.0</td>
</tr>
<tr>
<td>myChoiceId</td>
<td>String</td>
<td>ID of an existing choice on the feed poll. Used to vote on an existing poll.</td>
<td>Required for voting on a poll</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FeedElementCapabilitiesInput

**ConnectApi.QuestionAndAnswersCapabilityInput**

Create or edit a question feed element or set the best answer of the existing question feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bestAnswerId</td>
<td>String</td>
<td>A comment ID to use as a best answer for a question feed element. The best answer comment must already exist on the question feed element.</td>
<td>Required to update a feed element. Not supported when posting a feed element.</td>
<td>32.0</td>
</tr>
<tr>
<td>questionTitle</td>
<td>String</td>
<td>Title for a question feed element. To edit the title of a question, use updateFeedElement(communityId, feedElementId, feedElement). Editing question titles is supported in version 34.0 and later.</td>
<td>Required to post a feed element. Not supported when updating a feed element.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- Edit a Question Title and Post
- ConnectApi.FeedElementCapabilitiesInput
ConnectApi.ReadByCapabilityInput

Mark feed elements as read by the context user.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isReadByMe</td>
<td>Boolean</td>
<td>Specifies to mark the feed element as read (true) for the context user.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>lastReadDateByMe</td>
<td>Datetime</td>
<td>Specifies the last date, in ISO 8601 format, when the feed element is marked as read for the context user. If you don't specify a date or you specify a future date, the current system date is used.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.FeedElementCapabilitiesInput

ConnectApi.RecommendationAudienceInput

A recommendation audience.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>criteria</td>
<td>ConnectApi. AudienceCriteria Input</td>
<td>The criteria for the recommendation audience type.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If not specified when creating a recommendation audience, the audience criteria type defaults to custom list.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>memberOperationType</td>
<td>ConnectApi. Recommendation AudienceMember OperationType</td>
<td>Important: This property is available only in version 35.0. In version 36.0 and later, use ConnectApi. CustomListAudienceCriteriaInput. The operation to carry out on the audience members.</td>
<td>Required to update a recommendation audience</td>
<td>35.0 only</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Add—Adds specified members to the audience.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Remove—Removes specified members from the audience.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>35.0 only</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Required or Optional</th>
</tr>
</thead>
<tbody>
<tr>
<td>Required to update a recommendation audience</td>
</tr>
<tr>
<td>Don’t use or specify null to create a recommendation audience</td>
</tr>
</tbody>
</table>

### Description

- **members**
  - **Type**: List<String>
  - **Description**: A collection of user IDs.
  - **Available Version**: 35.0 only
  - **Required or Optional**: Required to update a recommendation audience, Optional to create a recommendation audience

- **name**
  - **Type**: String
  - **Description**: The unique name of the recommendation audience.
  - **Available Version**: 35.0
  - **Required or Optional**: Optional to update a recommendation audience, Required to create a recommendation audience

---

**SEE ALSO:**

createRecommendationAudience(communityId, recommendationAudience)

### ConnectApi.RecommendationDefinitionInput

A recommendation definition.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>actionUrl</strong></td>
<td>String</td>
<td>The URL for acting on the recommendation, for example, the URL to join a group.</td>
<td>Required to create a recommendation definition</td>
<td>35.0</td>
</tr>
<tr>
<td><strong>actionUrlName</strong></td>
<td>String</td>
<td>The text label for the action URL in the user interface, for example, “Launch.”</td>
<td>Required to create a recommendation definition</td>
<td>35.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>explanation</td>
<td>String</td>
<td>The explanation, or body, of the recommendation.</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the recommendation definition. The name is displayed in Setup.</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the recommendation definition.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
  - `createRecommendationDefinition(communityId, recommendationDefinition)`

### ConnectApi.RecordCapabilityInput

Attach an existing knowledge article to a comment.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput` Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>ID of the existing knowledge article to attach.</td>
<td>Required</td>
<td>42.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RequestHeaderInput Class

An HTTP request header name and value pair.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the request header.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td>value</td>
<td>String</td>
<td>The value of the request header.</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
  - Define an Action Link and Post with a Feed Element
ConnectApi.ScheduledRecommendationInput

A scheduled recommendation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>channel</td>
<td>ConnectApi.RecommendationChannel</td>
<td>A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Use these channel values; you can’t rename or create other channels.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>----------------</td>
<td>-----------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>enabled</td>
<td>Boolean</td>
<td>Indicates whether scheduling is enabled. If true, the recommendation is enabled and appears in communities. If false, recommendations in feeds in the Salesforce mobile web aren’t removed, but no new recommendations appear. In Customer Service and Partner Central communities, disabled recommendations no longer appear.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>Relative rank of the scheduled recommendation indicated by ascending whole numbers starting with 1. Setting the rank is comparable to an insertion into an ordered list. The scheduled recommendation is inserted into the position specified by the rank. The rank of all the scheduled recommendations after it is pushed down. See Ranking scheduled recommendations example. If the specified rank is larger than the size of the list, the scheduled recommendation is put at the end of the list. The rank of the scheduled recommendation is the size of the list, instead of the one specified. If a rank is not specified, the scheduled recommendation is put at the end of the list.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>recommendation AudienceId</td>
<td>String</td>
<td>ID of the audience for this scheduled recommendation. When updating a scheduled recommendation, specify ALL to remove the association between a recommendation audience and a scheduled recommendation.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>recommendation DefinitionId</td>
<td>String</td>
<td>ID of the recommendation definition that this scheduled recommendation schedules. Required to create a scheduled recommendation. You can’t specify a recommendation DefinitionId when updating an existing scheduled recommendation.</td>
<td>Required</td>
<td>35.0</td>
</tr>
</tbody>
</table>
Ranking scheduled recommendations example

If you have these scheduled recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

SEE ALSO:

createScheduledRecommendation(communityId, scheduledRecommendation)

ConnectApi.StatusCapabilityInput

Change the status of a feed post or comment.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.
### ConnectApi.FieldsFeedEntityStatus

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityStatus</td>
<td>ConnectApi.FeedEntityStatus</td>
<td>Status of the feed post or comment. Values are:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Draft—The feed post isn’t published but is visible to the author and users</td>
</tr>
<tr>
<td></td>
<td></td>
<td>with Modify All Data or View All Data permission. Comments can’t be drafts.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• PendingReview—The feed post or comment isn’t approved yet and</td>
</tr>
<tr>
<td></td>
<td></td>
<td>therefore isn’t published or visible.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Published—The feed post or comment is approved and visible.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Posts that have a status of</td>
</tr>
<tr>
<td></td>
<td></td>
<td>PendingReview or Published can’t be changed to a status of Draft and vice</td>
</tr>
<tr>
<td></td>
<td></td>
<td>versa.</td>
</tr>
</tbody>
</table>

### ConnectApi.StreamSubscriptionInput

An entity to subscribe to for a Chatter feed stream.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>The ID of any feed-enabled entity, such as a group, record, or user, that</td>
</tr>
<tr>
<td></td>
<td></td>
<td>the context user can access. When subscribed, the entity’s feed is included</td>
</tr>
<tr>
<td></td>
<td></td>
<td>in the feed stream.</td>
</tr>
</tbody>
</table>

### ConnectApi.TextSegmentInput Class

Used to include a text segment in a feed item or comment. Subclass of ConnectApi.MessageSegmentInput
### ConnectApi.TopicInput Class

Update a topic’s name or description or merge topics.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the topic</td>
<td>29.0</td>
</tr>
<tr>
<td>idsToMerge</td>
<td>List&lt;String&gt;</td>
<td>List of up to five secondary topic IDs to merge with the primary topic</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If any of these secondary topics are managed topics, they lose their topic</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>type, topic images, and children topics. Their feed items are reassigned</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>to the primary topic.</td>
<td></td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the topic</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Use this property to change only the capitalization and spacing of the</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>topic name.</td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
- updateTopic(communityId, topicId, topic)

### ConnectApi.TopicNamesInput

A list of topic names to replace currently assigned topics. Also a list of suggested topics to assign.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>topicNames</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 10 topic names for a feed item or 100 topic names for a</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>record.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Plain text for this segment. If hashtags or links are detected in `text`, they are included in the comment as hashtag and link segments. Mentions are not detected in `text` and are not separated out of the text. Mentions require `ConnectApi.MentionSegmentInput Class`.

SEE ALSO:
- Edit a Comment
- Edit a Feed Element
- Edit a Question Title and Post
- Post a Rich-Text Feed Element with Inline Image
- `ConnectApi.MessageBodyInput Class`
- `ConnectApi.TopicInput Class`
### topicSuggestions

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>topicSuggestions</td>
<td>List&lt;String&gt;</td>
<td>A list of suggested topics to assign to a record or feed item to improve future topic suggestions.</td>
<td>Optional</td>
<td>37.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `reassignTopicsByName(communityId, recordId, topicNames)`
- `ConnectApi.ArticleTopicAssignmentJobInput`

### ConnectApi.TopicsCapabilityInput

Assign topics to a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contextTopicName</td>
<td>String</td>
<td>Name of the parent topic in the community to which the feed element belongs.</td>
<td>Optional</td>
<td>38.0</td>
</tr>
<tr>
<td>topics</td>
<td>List&lt;String&gt;</td>
<td>List of topics to assign to the feed element.</td>
<td>Required</td>
<td>38.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.FeedElementCapabilitiesInput`

### ConnectApiUpDownVoteCapabilityInput

Upvote or downvote a feed element or a comment.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>vote</td>
<td>ConnectApiUpDownVoteValue</td>
<td>Type of vote for a feed element or comment. Values are:</td>
<td>Required</td>
<td>41.0</td>
</tr>
<tr>
<td></td>
<td>• Down</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• None</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Up</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.UserInput Class

Used to update a user.
The `aboutMe` property of a `ConnectApi.UserDetail` output object. This property populates the “About Me” section of the user profile, which is visible to all members of a community or organization.

SEE ALSO:
`updateUser(communityId, userId, userInput)`

### ConnectApi Output Classes

Most `ConnectApi` methods return instances of `ConnectApi` output classes.

All properties are read-only, except for instances of output classes created within test code.

All output classes are concrete unless marked abstract in this documentation.

All concrete output classes have no-argument constructors that you can invoke only from test code. See Testing `ConnectApi` Code.

#### `ConnectApi.AbstractContentHubItemType`

An item type associated with a repository folder.

This class is abstract.

Superclass of:
- `ConnectApi.ContentHubItemTypeDetail`
- `ConnectApi.ContentHubItemTypeSummary`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| contentStream Support | `ConnectApi.ContentHub.StreamSupport` | Support for content streaming. Values are:  
  - `contentStreamAllowed`
  - `contentStreamNotAllowed`
  - `contentStreamRequired` | 39.0 |
| description   | `String` | Description of the item type. | 39.0 |
| displayName   | `String` | Display name of the item type. | 39.0 |
| id            | `String` | ID of the item type. | 39.0 |
| isVersionable | `Boolean` | Indicates whether the item type can have versions. | 39.0 |
| url           | `String` | URL to the detailed information of the item type. | 39.0 |

#### `ConnectApi.AbstractDirectoryEntrySummary`

A directory entry with summary information.

This class is abstract.

Superclass of:
### ConnectApi.RepositoryGroupSummary

- ConnectApi.RepositoryGroupSummary
- ConnectApi.RepositoryUserSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>domain</td>
<td>String</td>
<td>Domain of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>email</td>
<td>String</td>
<td>Email of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.ContentHub.DirectoryEntry.Type</td>
<td>Type of directory entry. Values are: GroupEntry, UserEntry</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AbstractExtensionInformation

Extension information.
This class is abstract.
Superclass of: ConnectApi.LightningExtensionInformation

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>extension</td>
<td>ConnectApi.ExtensionInformation.Type</td>
<td>Information type of the extension. Values are: Lightning</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AbstractMessageBody Class

This class is abstract.
Superclass of:
- ConnectApi.FeedBody Class
- ConnectApi.MessageBody Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isRichText</td>
<td>Boolean</td>
<td>Indicates whether the body is rich text.</td>
<td>35.0</td>
</tr>
<tr>
<td>messageSegments</td>
<td>List&lt;ConnectApi.MessageSegment&gt;</td>
<td>List of message segments</td>
<td>28.0</td>
</tr>
<tr>
<td>text</td>
<td>String</td>
<td>Display-ready text. Use this text if you don’t want to process the message segments.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AbstractNBAAction (Pilot)

A recommended action of recommendation strategy.
Note: We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Einstein Next Best Action isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the IdeaExchange.

This class is abstract.

Superclass of ConnectApi.NBAFlowAction (Pilot).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>parameters</td>
<td>List&lt;ConnectApi.NBAActionParameter (Pilot)&gt;</td>
<td>List of parameters to pass to the action.</td>
<td>44.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.NBAActionType</td>
<td>Type of action. Values are:</td>
<td>44.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Flow</td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.NBAReduction (Pilot)

ConnectApi.AbstractNBATarget (Pilot)

A recommendation target of a recommendation strategy.

Note: We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Einstein Next Best Action isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the IdeaExchange.

This class is abstract.

Superclass of ConnectApi.NBAPropositionRecommendation (Pilot).

ConnectApi.AbstractRecommendation Class

A recommendation.
This class is abstract.

Superclass of:
- ConnectApi.EntityRecommendation Class
- ConnectApi.NonEntityRecommendation Class

ConnectApi.NonEntityRecommendation Class isn’t used in version 34.0 and later. In version 34.0 and later, ConnectApi.EntityRecommendation Class is used for all recommendations.

**ConnectApi.AbstractRecordField Class**

This class is abstract.

Superclass of:

- `ConnectApi.BlankRecordField Class`
- `ConnectApi.LabeledRecordField Class`

A field on a record object.

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.
### ConnectApi.RecordViewSection Class

This class is abstract.

Subclass of `ConnectApi.ActorWithId Class`

Superclass of:
- `ConnectApi.RecordSummary Class`
- `ConnectApi.RecordView Class`

A view of any record in the organization, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type.

<table>

<td>String</td>
<td>The URL to the item.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ActionLinkDefinition Class**

The definition of an action link. Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The action link URL. For example, a Ui action link URL is a Web page. A Download action link URL is a link to the file to download. Ui and Download action link URLs are provided to clients. An Api or ApiAsync action link URL is a REST resource. Api and ApiAsync action link URLs aren’t provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with https://.</td>
<td>33.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>33.0</td>
</tr>
<tr>
<td>excludedUserId</td>
<td>String</td>
<td>ID of a single user to exclude from performing the action. If you specify an excludedUserId, you can’t specify a userId.</td>
<td>33.0</td>
</tr>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td>true if this action is the default action link in the action link group; false otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.</td>
<td>33.0</td>
</tr>
<tr>
<td>headers</td>
<td>List&lt;ConnectApi.RequestHeader&gt;</td>
<td>The request headers for the Api and ApiAsync action link types.</td>
<td>33.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The 18-character ID for the action link definition.</td>
<td>33.0</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>A custom label to display on the action link button. A label value can be set only in an action link template. Action links have four statuses: NewStatus, PendingStatus, SuccessStatus, and FailedStatus. These strings are appended to the label for each status: label, label Pending, label Success, label Failed. For example, if the value of label is “See Example,” the values of the four action link states are: See Example, See Example Pending, See Example Success, and See Example Failed. An action link can use either label or labelKey to generate label names, it can’t use both. If label has a value, the value of labelKey is None. If labelKey has a value other than None, the value of label is null.</td>
<td>34.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>--------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>labelKey</td>
<td>String</td>
<td>Key for the set of labels to show in the user interface. A set includes labels for these states: NewStatus, PendingStatus, SuccessStatus, FailedStatus. For example, if you use the Approve key, you get these labels: Approve, Pending, Approved, Failed. For a complete list of label keys, see <a href="#">Action Links Labels</a>.</td>
<td>33.0</td>
</tr>
</tbody>
</table>
| method        | ConnectApi.HttpRequestMethod | The HTTP method. One of these values:  
* HttpDelete—Returns HTTP 204 on success. Response body or output class is empty.  
* HttpGet—Returns HTTP 200 on success.  
* HttpHead—Returns HTTP 200 on success. Response body or output class is empty.  
* HttpPatch—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.  
* HttpPost—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.  
* HttpPut—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty. | 33.0              |
| modifiedDate  | Datetime     | An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.                                                                                                                                     | 33.0              |
| requestBody   | String       | The request body for Api and ApiAsync action link types.                                                                                                                                                     | 33.0              |
|               |              | **Note:** Escape quotation mark characters in the requestBody value.                                                                                                                                       |                   |
| requires      | Boolean      | true to require the user to confirm the action; false otherwise.                                                                                                                                             | 33.0              |

### ConnectApi.ActorWithId Class

This class is abstract.

**Subclass of:** ConnectApi.Actor Class

**Superclass of:**
- ConnectApi.AbstractRecordView Class
- ConnectApi.ArticleSummary
- ConnectApi.ChatterGroup Class
- ConnectApi.ContentHubRepository
- ConnectApi.File Class
- ConnectApi.RelatedFeedPost
- ConnectApi.User Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>Actor’s 18-character ID</td>
<td>28.0</td>
</tr>
<tr>
<td>motif</td>
<td>ConnectApi.Motif</td>
<td>An icon that identifies the actor as a user, group, file, or custom object. The icon isn’t the user or group photo, and it isn’t a preview of the file. The motif can also contain the object’s base color.</td>
<td>28.0</td>
</tr>
<tr>
<td>mySubscription</td>
<td>ConnectApi.Reference</td>
<td>If the context user is following the item, this contains information about the subscription, else returns null.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

#### ConnectApi.Address Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>city</td>
<td>String</td>
<td>Name of the city</td>
<td>28.0</td>
</tr>
<tr>
<td>country</td>
<td>String</td>
<td>Name of the country</td>
<td>28.0</td>
</tr>
<tr>
<td>formattedAddress</td>
<td>String</td>
<td>Formatted address per the locale of the context user</td>
<td>28.0</td>
</tr>
<tr>
<td>state</td>
<td>String</td>
<td>Name of the state, province, or so on</td>
<td>28.0</td>
</tr>
<tr>
<td>street</td>
<td>String</td>
<td>Street number</td>
<td>28.0</td>
</tr>
<tr>
<td>zip</td>
<td>String</td>
<td>Zip or postal code</td>
<td>28.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.Alternative

Alternative representation for an extension on a feed element.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>Text representation of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Thumbnail URL for the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the extension</td>
<td>40.0</td>
</tr>
</tbody>
</table>

ConnectApi.Announcement

An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>expirationDate</td>
<td>Datetime</td>
<td>The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the expirationDate. However, you can use the time value to create your own display logic in your own UI.</td>
<td>31.0</td>
</tr>
<tr>
<td>feedElement</td>
<td>ConnectApi.FeedElement Class</td>
<td>The feed element that contains the body of the announcement and its associated comments, likes, and so on.</td>
<td>31.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID of the announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>isArchived</td>
<td>Boolean</td>
<td>Specifies whether the announcement is archived.</td>
<td>36.0</td>
</tr>
<tr>
<td>sendEmails</td>
<td>Boolean</td>
<td>Specifies whether the announcement is sent as an email to all group members.</td>
<td>36.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL to the announcement.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.AnnouncementPage
- ConnectApi.ChatterGroup Class

ConnectApi.AnnouncementPage

A collection of announcements.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>announcements</td>
<td>List&lt;ConnectApi.Announcement&gt;</td>
<td>A collection of ConnectApi.Announcement objects.</td>
<td>31.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>31.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn't a previous page.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

ConnectApi.ApprovalAttachment Class

⚠️ Important: This class isn't available in version 32.0 and later. In version 32.0 and later, ConnectApi.ApprovalCapability Class is used.
### Subclass of ConnectApi.FeedItemAttachment Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>A work item ID.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ApprovalCapability Class

If a feed element has this capability, it includes information about an approval.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The work item ID. The work item ID is null if there isn’t a pending work item associated with the approval record.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
| postTemplateFields         | List<ConnectApi.
|                           | ApprovalPost
|                           | TemplateField>       | The details of the approval post template field.                            | 32.0              |
| processInstanceStepId      | String             | The process instance step ID. The associated record represents one step in an approval process. | 32.0              |
## ConnectApi Namespace

### ConnectApi.WorkflowProcess Status

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>status</td>
<td>ConnectApi.WorkflowProcess Status</td>
<td>The status of the approval.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FeedElementCapabilities Class

### ConnectApi.ApprovalPostTemplateField Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>displayName</td>
<td>String</td>
<td>The field name</td>
<td>28.0</td>
</tr>
<tr>
<td>displayValue</td>
<td>String</td>
<td>The field value or null if the field is set to null.</td>
<td>28.0</td>
</tr>
<tr>
<td>record</td>
<td>ConnectApi.Reference</td>
<td>A record ID</td>
<td>28.0</td>
</tr>
</tbody>
</table>

If no record exists or if the reference is null, this value is null.

SEE ALSO:
- ConnectApi.ApprovalCapability Class

### ConnectApi.ArticleItem Class

Article item in question and answers suggestions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>Id of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>rating</td>
<td>Double</td>
<td>The rating of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>urlLink</td>
<td>String</td>
<td>Link URL of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>viewCount</td>
<td>Integer</td>
<td>Number of votes given to the article.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.QuestionAndAnswersSuggestions Class

### ConnectApi.ArticleSummary

A knowledge article summary.

Subclass of ConnectApi.ActorWithId Class
### ConnectApi.AssociatedActionsCapability Class

If a feed element has this capability, it has platform actions associated with it.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>platformActionGroups</td>
<td>List&lt;ConnectApi.PlatformActionGroup&gt;</td>
<td>The platform action groups associated with a feed element. Platform action groups are returned in the order specified in the ConnectApi.AssociatedActionsCapabilityInput class.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FeedElementCapabilities Class

### ConnectApi.AudienceCriteria

Recommendation audience criteria.

This class is abstract.

This class is a superclass of:
- ConnectApi.CustomListAudienceCriteria
- ConnectApi.NewUserAudienceCriteria
### ConnectApi Namespace

#### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
</table>
| type          | `ConnectApi.RecommendationAudience.CriteriaType` | Specifies the recommendation audience criteria type. One of these values:  
  - CustomList—A custom list of users makes up the audience.  
  - MaxDaysInCommunity—New community members make up the audience. |

#### ConnectApi.BannerCapability Class

If a feed element has this capability, it has a banner motif and style.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>motif</td>
<td><code>ConnectApi.Motif</code></td>
<td>A banner motif.</td>
<td>31.0</td>
</tr>
</tbody>
</table>
| style         | `ConnectApi.BannerStyle` | Decorates a feed item with a color and set of icons. Possible value:  
  - Announcement—An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement. |

#### ConnectApi.BannerPhoto

A banner photo.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bannerPhotoUrl</td>
<td><code>String</code></td>
<td>URL to the banner photo in a large format. This URL is available only to authenticated users.</td>
<td>36.0</td>
</tr>
<tr>
<td>bannerPhotoVersionId</td>
<td><code>String</code></td>
<td>18-character version ID of the banner photo.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- `ConnectApi.RecommendationAudience`
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the banner photo.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.ChatterGroup Class

**ConnectApi.BaseManagedSocialAccount**

Base information describing a managed social account or fan page of a social network.

This class is abstract.

Superclass of ConnectApi.ManagedSocialAccount

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>defaultResponseAccountId</td>
<td>String</td>
<td>Default response account to use when replying to posts sent to this account.</td>
<td>44.0</td>
</tr>
<tr>
<td>displayName</td>
<td>String</td>
<td>Real name (or user name if real name not available) for this account on the social network.</td>
<td>44.0</td>
</tr>
<tr>
<td>externalPictureUrl</td>
<td>String</td>
<td>URL to the account's avatar image.</td>
<td>44.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>Internal SFDC ID for this managed social account.</td>
<td>44.0</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>Label for the social account.</td>
<td>44.0</td>
</tr>
<tr>
<td>profileUrl</td>
<td>String</td>
<td>URL to the account's profile.</td>
<td>44.0</td>
</tr>
<tr>
<td>socialNetwork</td>
<td>ConnectApi.SocialNetworkProvider</td>
<td>Social network that this account belongs to. Values are: Facebook, GooglePlus, Instagram, InstagramBusiness, KakaoTalk, Kik, Line, LinkedIn, Messenger, Other, Pinterest, QQ, Rypep, SinaWeibo</td>
<td>44.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>----------------</td>
<td>----------</td>
<td>-----------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>uniqueName</td>
<td>String</td>
<td>Unique name used for distinguishing same name fan pages; acts like a user name for a fan page.</td>
<td>44.0</td>
</tr>
<tr>
<td>username</td>
<td>String</td>
<td>Unique user name or handle for this account on the social network.</td>
<td>44.0</td>
</tr>
</tbody>
</table>

**ConnectApi.BasicTemplateAttachment Class**

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.EnhancedLinkCapability` is used.

Subclass of `ConnectApi.FeedItemAttachment Class`

Attachments in feed items with type `BasicTemplate` return objects of this type.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>An optional description with a 500 character limit.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>An optional icon.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>linkRecordId</td>
<td>String</td>
<td>If <code>linkURL</code> refers to a Salesforce record, <code>linkRecordId</code> contains the ID of the record.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>linkUrl</td>
<td>String</td>
<td>An optional URL to a detail page if there is more content that can’t be displayed inline. Do not specify <code>linkUrl</code> unless you specify a <code>title</code>.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>An optional title to the detail page. If <code>linkUrl</code> is specified, the title links to <code>linkUrl</code>.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.BatchResult**

The result of an operation returned by a batch method.

**Namespace**

`ConnectApi`
Usage
Calls to batch methods return a list of BatchResult objects. Each element in the BatchResult list corresponds to the strings in the list parameter passed to the batch method. The first element in the BatchResult list matches the first string passed in the list parameter, the second element corresponds with the second string, and so on. If only one string is passed, the BatchResult list contains a single element.

Example
The following example shows how to obtain and iterate through the returned ConnectApi.BatchResult objects. The code adds two group IDs to a list. One of group IDs is incorrect, which causes a failure when the code calls the batch method. After it calls the batch method, it iterates through the results to determine whether the operation was successful or not for each group ID in the list. The code writes the ID of every group that was processed successfully to the debug log. The code writes an error message for every failed group.

This example generates one successful operation and one failure.

```java
List<String> myList = new List<String>();
// Add one correct group ID.
myList.add('0F9D00000000oOT');
// Add one incorrect group ID.
myList.add('0F9D00000000izf');

ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null, myList);

// Iterate through each returned result.
for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the group ID.
        ConnectApi.ChatterGroupSummary groupSummary;
        if (batchResult.getResult() instanceof ConnectApi.ChatterGroupSummary) {
            groupSummary = (ConnectApi.ChatterGroupSummary) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupSummary.id);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

IN THIS SECTION:

BatchResult Methods

BatchResult Methods
The following are instance methods for BatchResult.
getError()
If an error occurred, returns a ConnectApi.ConnectApiException object providing the error code and description.

getErrorMessage()
Returns a String that contains an error message.

getErrorTypeName()
Returns a String that contains the name of the error type.

getResult()
Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call getMembershipBatch(), a successful call to BatchResult getResult() returns a ConnectApi.GroupMembership object.

isSuccess()
Returns a Boolean that is set to true if the batch operation was successful for this object, false otherwise.

gerError()
If an error occurred, returns a ConnectApi.ConnectApiException object providing the error code and description.

**Signature**
```java
public ConnectApi.ConnectApiException getError()
```

**Return Value**
Type: ConnectApi.ConnectApiException

getErrorMessage()
Returns a String that contains an error message.

**Signature**
```java
public String getErrorMessage()
```

**Return Value**
Type: String

**Usage**
The error message doesn’t make a round trip through a Visualforce view state, because exceptions can’t be serialized.
**Signature**

```java
public String getErrorTypeName()
```

**Return Value**

Type: String

**getResult()**

Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call `getMembershipBatch()`, a successful call to `BatchResult getResult()` returns a `ConnectApi.GroupMembership` object.

**Signature**

```java
public Object getResult()
```

**Return Value**

Type: Object

**isSuccess()**

Returns a Boolean that is set to `true` if the batch operation was successful for this object, `false` otherwise.

**Signature**

```java
public Boolean isSuccess()
```

**Return Value**

Type: Boolean

---

**ConnectApi.BlankRecordField Class**

Subclass of `ConnectApi.AbstractRecordField Class`

A record field displayed as a place holder in a grid of fields.

**ConnectApi.BookmarkSummary**

Summary of a bookmark.
Subclass of `ConnectApi.UserFeedEntityActivitySummary`

No additional properties.

**ConnectApi.BookmarksCapability Class**

If a feed element has this capability, the context user can bookmark it.
Subclass of `ConnectApi.FeedElementCapability Class`. 
### ConnectApi.BundleCapability Class

If a feed element has this capability, it has a container of feed elements called a **bundle**.

This class is abstract.

Subclass of **ConnectApi.FeedElementCapability Class**.

Superclass of:
- **ConnectApi.GenericBundleCapability Class**
- **ConnectApi.TrackedChangeBundleCapability**

#### Property Description

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bundleType</td>
<td>ConnectApi.BundleType</td>
<td>Defines this feed element's bundle type. The bundle type determines what additional information appears in the bundle.</td>
<td>31.0</td>
</tr>
<tr>
<td>page</td>
<td>ConnectApi.FeedElementPage</td>
<td>A collection of feed elements.</td>
<td>31.0</td>
</tr>
<tr>
<td>totalElements</td>
<td>Integer</td>
<td>The total number of feed elements that this bundle aggregates.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.CandidateAnswersStatus

The status of candidate answers on a feed element.

#### Property Description

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasCandidateAnswers</td>
<td>Boolean</td>
<td>Indicates whether candidate answers are available for a question.</td>
<td>41.0</td>
</tr>
<tr>
<td>hasCandidateAnswersPublished</td>
<td>Boolean</td>
<td>Indicates whether any candidate answers are published.</td>
<td>41.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>-----------------------</td>
<td>---------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>hasCandidateAnswersRated</td>
<td>Boolean</td>
<td>Indicates whether any candidate answers are rated.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.QuestionAndAnswersCapability Class

### ConnectApi.CanvasCapability Class

If a feed element has this capability, it renders a canvas app.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the canvas app. The maximum size is 255 characters.</td>
<td>32.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The API name (developer name) of the connected app.</td>
<td>32.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>The height of the canvas app in pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>The icon for the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>A unique namespace prefix for the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>JSON parameters passed to the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>A title for the canvas link.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.FeedElementCapabilities Class

### ConnectApi.CanvasTemplateAttachment Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.CanvasCapability Class is used.

Subclass of ConnectApi.FeedItemAttachment Class

Objects of this type are returned by attachments in feed items with type CanvasPost.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Optional. Description of the canvas app. The maximum length of this field is 500 characters.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>Specifies the developer name (API name) of the canvas app.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>Property</td>

<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page of streams.</td>
<td>39.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of streams in the collection.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ClientInfo Class**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>applicationName</td>
<td>String</td>
<td>Name of the connected app used for authentication.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
Available Version Description TypeName
--- --- --- --- ---

### applicationUrl

String Value from the Info URL field of the connected app used for authentication 28.0

SEE ALSO:
- ConnectApi.Comment
- ConnectApi.FeedItem Class

### ConnectApi.CloseCapability

If a feed element has this capability, users with permission can close it.

Users can’t edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can’t vote on it. Users can’t edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canContextUser</td>
<td>Boolean</td>
<td>Specifies whether the context user has permission to set the feed element to closed (true) or not (false).</td>
<td>43.0</td>
</tr>
<tr>
<td>UpdateIsClosed</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>isClosed</td>
<td>Boolean</td>
<td>Specifies whether the feed element is closed (true) or not (false).</td>
<td>43.0</td>
</tr>
</tbody>
</table>

**ConnectApi.CommentCapabilities**

A set of capabilities on a comment.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>comments</td>
<td>ConnectApi. CommentsCapability</td>
<td>If a comment has this capability, it has threaded comments.</td>
<td>44.0</td>
</tr>
<tr>
<td>content</td>
<td>ConnectApi. ContentCapability</td>
<td>If a comment has this capability, it has a file attachment.</td>
<td>32.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Most ConnectApi.ContentCapability properties are null if the content has been deleted from the feed element or if the access has changed to private.</td>
<td></td>
</tr>
<tr>
<td>edit</td>
<td>ConnectApi. EditCapability</td>
<td>If a comment has this capability, users who have permission can edit it.</td>
<td>34.0</td>
</tr>
<tr>
<td>feedEntityShare</td>
<td>ConnectApi. FeedEntity ShareCapability</td>
<td>If a comment has this capability, a feed entity is shared with it.</td>
<td>42.0</td>
</tr>
<tr>
<td>record</td>
<td>ConnectApi. RecordCapability</td>
<td>If a comment has this capability, it has a record attachment.</td>
<td>42.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi. StatusCapability</td>
<td>If a comment has this capability, it has a status that determines its visibility.</td>
<td>38.0</td>
</tr>
<tr>
<td>upDownVote</td>
<td>ConnectApi. UpDownVoteCapability</td>
<td>If a comment has this capability, users can upvote or downvote it.</td>
<td>41.0</td>
</tr>
</tbody>
</table>
### ConnectApi.CommentPage

A page of comments.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>comments</td>
<td>List&lt;ConnectApi.Comment&gt;</td>
<td>Collection of comments.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.Comment&gt;</td>
<td>Collection of comments for this feed element.</td>
<td>32.0</td>

**ConnectApi.ContentCapability**

If a comment has this capability, it has a file attachment.

Subclass of ConnectApi.FeedElementCapability Class.

For files attached to a feed post (instead of a comment) in version 36.0 and later, use ConnectApi.FilesCapability.

If content is deleted from a feed element after it’s posted or if the access to the content is changed to private, the ConnectApi.ContentCapability exists, however most of its properties are null.

</tr>
<tr>
<td>members</td>
<td>ConnectApi.UserReferencePage</td>
<td>The members of the recommendation audience.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**ConnectApi.DashboardComponentAttachment Class**

⚠️ Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, [ConnectApi.DashboardComponentSnapshotCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment Class](#)

Objects of this type are returned as attachments in feed items with type `DashboardSnapshot`.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>componentId</td>
<td>String</td>
<td>Component’s 18-character ID</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>componentName</td>
<td>String</td>
<td>Name of the component. If no name is saved with the component, returns the localized string, “Untitled Component.”</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>dashboardBodyText</td>
<td>String</td>
<td>Text displayed next to the actor in the body of a feed item. This is used instead of the default body text. If no text is specified, and there is no default body text, returns null.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>dashboardId</td>
<td>String</td>
<td>Dashboard’s 18-character ID</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>dashboardName</td>
<td>String</td>
<td>Name of the dashboard.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>fullSizeImageUrl</td>
<td>String</td>
<td>URL of the full-sized dashboard image</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>-----------------------</td>
<td>------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>lastRefreshDate</td>
<td>Datetime</td>
<td>ISO8601 date string, for example, 2011-02-25T18:24:31.000Z, specifying when this dashboard was last refreshed.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>lastRefreshDate</td>
<td>String</td>
<td>The text of the last refresh date to be displayed, such as, “Last refreshed on October 31, 2011.”</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>runningUser</td>
<td>ConnectApi.UserSummary</td>
<td>The user running the dashboard.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>URL of the thumbnail-sized dashboard image.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.DashboardComponentSnapshotCapability**

If a feed element has this capability, it has a dashboard component snapshot. A snapshot is a static image of a dashboard component at a specific point in time.

Subclass of **ConnectApi.FeedElementCapability Class**.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dashboardComponentSnapshot</td>
<td>ConnectApi.DashboardComponentSnapshot</td>
<td>The dashboard component snapshot.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

<td>phoneNumbers</td>
<td>ConnectApi.PhoneNumber</td>
<td>Telephone numbers for the contact, which can include direct-dial business telephone numbers, mobile telephone numbers, and business headquarters telephone numbers. The type of telephone number is also indicated.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the contact, such as CEO or Vice President.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi.DatacloudContacts

Lists all contacts that were purchased in the specific order, page URLs, and the number of contacts in the order.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contacts</td>
<td>List.CONNECTAPI.DatacloudContact</td>
<td>A detailed list of purchased contacts.</td>
<td>32.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page of contacts.</td>
<td>32.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>32.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>URL to the previous page of contacts. This value is null if there is no previous page.</td>
<td>32.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Number of contacts that are associated with this order. Can be greater than the number of contacts that are shown on a single page.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DatacloudOrder Class

Represents a Datacloud order.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityUrl</td>
<td>String</td>
<td>URL to a list of contacts or companies that were purchased with this order.</td>
<td>32.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>Unique number that’s used to track your order information.</td>
<td>32.0</td>
</tr>
<tr>
<td>purchaseCount</td>
<td>Integer</td>
<td>Number of contacts or companies that were purchased for this order.</td>
<td>32.0</td>
</tr>
<tr>
<td>purchaseDate</td>
<td>Datetime</td>
<td>Purchase date for this order.</td>
<td>32.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>GET request URL for this order.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DatacloudPurchaseUsage Class

Information about Data.com point usage for monthly and list pool users.
### ConnectApi.DateRecordField Class
Subclass of ConnectApi.LabeledRecordField Class

A record field containing a date.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dateValue</td>
<td>Datetime</td>
<td>A date that a machine can read. Ignore the trailing 00:00:00.000Z characters.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DigestJob

Represents a successfully enqueued API digest job request.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>period</td>
<td>ConnectApi.DigestPeriod</td>
<td>Period of time that is included in a Chatter email digest. Values are:</td>
<td>37.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• DailyDigest—The email includes up to the 50 latest posts from the previous day.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• WeeklyDigest—The email includes up to the 50 latest posts from the previous week.</td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.DirectMessageCapability

If a feed element has this capability, it's a direct message.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>memberChanges</td>
<td>ConnectApi. DirectMessage MemberActivityPage</td>
<td>Member activities of the direct message, with the most recent activity first.</td>
<td>40.0</td>
</tr>
<tr>
<td>members</td>
<td>ConnectApi. DirectMessage MemberActivityPage</td>
<td>Members included in the direct message.</td>
<td>39.0</td>
</tr>
<tr>
<td>originalMembers</td>
<td>ConnectApi. DirectMessage MemberActivityPage</td>
<td>Original members of the direct message.</td>
<td>40.0</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>Subject of the direct message.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilities Class

ConnectApi.DirectMessageMemberActivity
Direct message member activity.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityDate</td>
<td>Datetime</td>
<td>Direct message member activity date.</td>
<td>40.0</td>
</tr>
<tr>
<td>actor</td>
<td>ConnectApi. UserSummary</td>
<td>User who changed the direct message membership.</td>
<td>40.0</td>
</tr>
<tr>
<td>membersAdded</td>
<td>ConnectApi. DirectMessage MemberActivityPage</td>
<td>Members added to the direct message as part of the activity.</td>
<td>40.0</td>
</tr>
<tr>
<td>membersRemoved</td>
<td>ConnectApi. DirectMessage MemberActivityPage</td>
<td>Members removed from the direct message as part of the activity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.DirectMessageMemberActivityPage

ConnectApi.DirectMessageMemberActivityPage
A page of direct message member activities.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activities</td>
<td>List&lt;ConnectApi. DirectMessage MemberActivity&gt;</td>
<td>Collection of direct message member activities.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
### ConnectApi.DirectMessageMemberPage

A collection of direct message members.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Page token to access the current page of direct message members.</td>
<td>39.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page of direct message members.</td>
<td>39.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Page token to access the next page of direct message members.</td>
<td>39.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page of direct message members.</td>
<td>39.0</td>
</tr>
<tr>
<td>users</td>
<td>List&lt;ConnectApi.UserSummary&gt;</td>
<td>Collection of direct message members.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DownVoteSummary

Summary of a downvote.
Subclass of ConnectApi.UserFeedEntityActivitySummary
No additional properties.

### ConnectApi.EditCapability

If a feed element or comment has this capability, users who have permission can edit it.
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isEditRestricted</td>
<td>Boolean</td>
<td>Specifies whether editing this feed element or comment is restricted. If <code>true</code>, the context user can’t edit this feed element or comment. If <code>false</code>, the context user may or may not have permission to edit this feed element or comment. To determine if the context user can edit a feed element or comment, use the <code>isFeedElementEditableByMe(communityId, feedElementId)</code> or <code>isCommentEditableByMe(communityId, commentId)</code> method.</td>
<td>34.0</td>
</tr>
<tr>
<td>isEditableByMeUrl</td>
<td>String</td>
<td>The URL to check if the context user is able to edit this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>lastEditedBy</td>
<td>ConnectApi.Actor</td>
<td>Who last edited this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>lastEditedDate</td>
<td>Datetime</td>
<td>The most recent edit date of this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>latestRevision</td>
<td>Integer</td>
<td>The most recent revision of this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>relativeLastEditedDate</td>
<td>String</td>
<td>Relative last edited date, for example, “2h ago.”</td>
<td>34.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EmailAddress

An email address.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>displayName</td>
<td>String</td>
<td>The display name for the email address.</td>
<td>29.0</td>
</tr>
<tr>
<td>emailAddress</td>
<td>String</td>
<td>The email address.</td>
<td>29.0</td>
</tr>
<tr>
<td>relatedRecord</td>
<td>ConnectApi. RecordSummary Class</td>
<td>The summary of a related record, for example, a contact or user summary.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- [ConnectApi.EmailMessageCapability](#)
ConnectApi.EmailAttachment
An email attachment in an email message.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td>ConnectApi.RecordSummary</td>
<td>Record summary of the attachment.</td>
<td>36.0</td>
</tr>
<tr>
<td>contentType</td>
<td>String</td>
<td>Type of attachment.</td>
<td>36.0</td>
</tr>
<tr>
<td>fileName</td>
<td>String</td>
<td>Name of the attachment.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.EmailMessageCapability

ConnectApi.EmailMergeFieldInfo
The map for objects and their merge fields.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityToManyMergeFieldsMap</td>
<td>Map&lt;String, ConnectApi.EmailMergeFieldCollectionInfo&gt;</td>
<td>Map for multiple objects and their merge field collections.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

ConnectApi.EmailMergeFieldCollectionInfo
The merge fields for an object.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>mergeFields</td>
<td>List&lt;String&gt;</td>
<td>List of merge fields for a single object.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.EmailMergeFieldInfo

ConnectApi.EmailMessage Class

Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.EmailMessageCapability is used.

Subclass of ConnectApi.FeedItemAttachment Class
An email message from a case.
<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>direction</td>
<td>ConnectApi.EmailMessageDirection Enum</td>
<td>The direction of the email message.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Inbound—An inbound message (sent by a customer).</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Outbound—An outbound message (sent to a customer by a support agent).</td>
<td></td>
</tr>
<tr>
<td>emailMessageId</td>
<td>String</td>
<td>The ID of the email message.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>The subject of the email message.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>textBody</td>
<td>String</td>
<td>The body of the email message.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>toAddresses</td>
<td>List&lt;ConnectApi.EmailAddress&gt;</td>
<td>A list of email addresses to send the message to.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EmailMessageCapability

If a feed element has this capability, it has an email message from a case.

Subclass of `ConnectApi.FeedElementCapability` Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachments</td>
<td>List&lt;ConnectApi.EmailAttachment&gt;</td>
<td>The attachments in the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>bccAddresses</td>
<td>List&lt;ConnectApi.EmailAddress&gt;</td>
<td>The BCC addresses for the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>body</td>
<td>String</td>
<td>The body of the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>ccAddresses</td>
<td>List&lt;ConnectApi.EmailAddress&gt;</td>
<td>The CC addresses for the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>direction</td>
<td>ConnectApi.EmailMessageDirection</td>
<td>The direction of the email message. Values are:</td>
<td>32.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Inbound—An inbound message (sent by a customer).</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Outbound—An outbound message (sent to a customer by a support agent).</td>
<td></td>
</tr>
<tr>
<td>emailMessageId</td>
<td>String</td>
<td>The ID of the email message.</td>
<td>32.0</td>
</tr>
<tr>
<td>fromAddress</td>
<td>ConnectApi.EmailAddress</td>
<td>The From address for the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>isRichText</td>
<td>Boolean</td>
<td>Indicates whether the body of the email message is in rich text format.</td>
<td>36.0</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>The subject of the email message.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi.Document

An email document.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>textBody</td>
<td>String</td>
<td>The body of the email message.</td>
<td>32.0–35.0</td>
</tr>
<tr>
<td>toAddresses</td>
<td>List&lt;ConnectApi.EmailAddress&gt;</td>
<td>The To addresses of the email message.</td>
<td>32.0</td>
</tr>
<tr>
<td>totalAttachments</td>
<td>Integer</td>
<td>The total number of attachments in the email message.</td>
<td>38.0</td>
</tr>
</tbody>
</table>

**Important:** In version 36.0 and later, use the `body` property.

- ConnectApi.FeedElementCapabilities Class

### ConnectApi.Emoji

An emoji.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>category</td>
<td>String</td>
<td>Emoji category.</td>
<td>39.0</td>
</tr>
<tr>
<td>shortcut</td>
<td>String</td>
<td>Emoji shortcut.</td>
<td>39.0</td>
</tr>
<tr>
<td>unicodeCharacter</td>
<td>String</td>
<td>Emoji's unicode character.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.EmojiCollection

### ConnectApi.EmojiCollection

A collection of emojis.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>emojis</td>
<td>List&lt;ConnectApi.Emoji&gt;</td>
<td>A collection of emojis.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.SupportedEmojis

### ConnectApi.EnhancedLinkCapability

If a feed element has this capability, it has a link that may contain supplemental information like an icon, a title, and a description. Subclass of ConnectApi.FeedElementCapability Class.
### ConnectApi.EntityLabel

An entity’s label.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>Localized singular label of the entity.</td>
<td>40.0</td>
</tr>
<tr>
<td>labelPlural</td>
<td>String</td>
<td>Localized plural label of the entity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**  
ConnectApi.RecordSummary Class

### ConnectApi.EntityLinkSegment Class

Subclass of ConnectApi.MessageSegment Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>motif</td>
<td>ConnectApi.Motif Class</td>
<td>A set of small, medium, and large icons that indicate whether the entity is a file, group, record, or user. The motif can also contain the object’s base color.</td>
<td>28.0</td>
</tr>
<tr>
<td>reference</td>
<td>ConnectApi.Reference</td>
<td>A reference to the link object if applicable, otherwise, null.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EntityRecommendation Class

Represents a recommendation, including file, group, record, topic, user, and custom recommendations.  
Subclass of ConnectApi.AbstractRecommendation Class.
### ConnectApi.Namespace

#### ConnectApi.RecommendedObject

For user, file, group, topic, and record entity types, use this Chatter REST URL with a POST request to take action on the recommendation.

For `ConnectApi.RecommendedObject` entity types, such as custom recommendations, use the `actionUrl` property of the `ConnectApi.PlatformAction Class` to take action on the recommendation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actOnUrl</td>
<td>String</td>
<td>For user, file, group, topic, and record entity types, use this Chatter REST URL with a POST request to take action on the recommendation. For <code>ConnectApi.RecommendedObject</code> entity types, such as custom recommendations, use the <code>actionUrl</code> property of the <code>ConnectApi.PlatformAction Class</code> to take action on the recommendation.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>action</td>
<td><code>ConnectApi.RecommendedObject.ActionType</code></td>
<td>Specifies the action to take on a recommendation.</td>
<td>32.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• follow—Follow a file, record, topic, or user.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• join—Join a group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• view—View a file, group, article, record, user, custom, or static recommendation.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entity</td>
<td><code>ConnectApi.Actor</code></td>
<td>The entity with which the receiver is recommended to take action.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

---

### ConnectApi.Extension

An extension.

#### ConnectApi.Extension

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>alternativeRepresentation</td>
<td><code>ConnectApi. Alternative</code></td>
<td>Alternative representation of the extension.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachmentId</td>
<td>String</td>
<td>Attachment ID of the extension.</td>
<td>41.0</td>
</tr>
<tr>
<td>extensionId</td>
<td>String</td>
<td>ID of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>payload</td>
<td>String</td>
<td>Payload associated with the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>payloadVersion</td>
<td>String</td>
<td>Payload version that identifies the structure of the payload associated with the extension.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.ExtensionsCapability`

---

### ConnectApi.ExtensionDefinition

An extension’s definition.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canAccess</td>
<td>Boolean</td>
<td>Indicates whether users can access the extension when it’s associated with a feed element.</td>
<td>40.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------------</td>
<td>-------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>canCreate</td>
<td>Boolean</td>
<td>Indicates whether users can create a feed element with the extension in the org.</td>
<td>40.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Date when the extension was created.</td>
<td>40.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>iconUrl</td>
<td>String</td>
<td>URL to the icon for the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>informationCollection</td>
<td>List&lt;ConnectApi.AbstractExtensionInformation&gt;</td>
<td>Collection of extension information.</td>
<td>40.0</td>
</tr>
<tr>
<td>isEnabledInCommunity</td>
<td>Boolean</td>
<td>Indicates whether the extension is enabled in communities.</td>
<td>40.0 only</td>
</tr>
<tr>
<td>isEnabledInLightningPublisher</td>
<td>Boolean</td>
<td>Indicates whether the extension is enabled in the Lightning publisher.</td>
<td>40.0 only</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>position</td>
<td>Integer</td>
<td>Position in which the extension is displayed in the publisher.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

## ConnectApi.ExtensionDefinitions

A collection of extension definitions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>extensionDefinitions</td>
<td>List&lt;ConnectApi.ExtensionDefinition&gt;</td>
<td>Collection of extension definitions.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn't a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of extensions returned.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
**ConnectApi.ExtensionsCapability**

If a feed element has this capability, it has one or more extension attachments.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.Extension&gt;</td>
<td>List of extensions associated with the feed element.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

ConnectApi.FeedElementCapabilities Class

**ConnectApi.ExternalFilePermissionInformation**

External file permission information.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>external FilePermission Types</td>
<td>List&lt;ConnectApi.ContentHub.PermissionType&gt;</td>
<td>Available permission types for the parent folder of the external file, or null for non-external files or when includeExternalFilePermissionsInfo is false.</td>
<td>39.0</td>
</tr>
<tr>
<td>external FilePermissions Failure</td>
<td>Boolean</td>
<td>true if the retrieval of external file information failed or if includeExternalFilePermissionsInfo is false; false otherwise.</td>
<td>39.0</td>
</tr>
<tr>
<td>external FilePermissions InfoFailureReason</td>
<td>String</td>
<td>Explanation of the failure if a failure occurred and includeExternalFilePermissionsInfo is true; null otherwise.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
| external FileSharing Status                  | ConnectApi.ContentHub.ExternalItem.SharingType | Sharing status for the external file. Values are:  
  • DomainSharing—File is shared with the domain.  
  • PrivateSharing—File is private or shared only with individuals.  
  • PublicSharing—File is publicly shared.  
Value is null for non-external files or when includeExternalFilePermissionsInfo is false. | 39.0              |
Available public groups in the external repository or null for non-external files or when includeExternalFilePermissionsInfo is false.

<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Draft—Contains all the feed items that the context user drafted.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Files—Contains all feed items that contain files posted by people or groups that the context user follows.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Filter—Contains the news feed filtered to contain feed items whose parent is a specified object type.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Groups—Contains all feed items from all groups the context user either owns or is a member of.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Home—Contains all feed items associated with any managed topic in a community.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Landing—Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren’t many personalized feed items.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Moderation—Contains all feed items that are flagged for moderation, except direct messages. The Communities Moderation feed is available only to users with Moderate Community Feeds permissions.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Mute—Contains all feed items that the context user muted.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>News—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user. Contains every feed item and comment that mentions the context user or that mentions a group the context user is a member of.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>PendingReview—Contains all feed items and comments that are pending review.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>People—Contains all feed items posted by all people the context user follows.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Record—Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user’s record feed.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Streams—Contains all feed items for any combination of up to 25 feed-enabled entities, such as people, groups, and records, that the context user subscribes to in a stream.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>To—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
• **Topics**—Contains all feed items that include the specified topic.
• **UserProfile**—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user’s user profile feed.

### feedUrl
- **Type**: `String`
- **Description**: Chatter REST API resource URL for a specific feed
- **Available Version**: 30.0

### keyPrefix
- **Type**: `String`
- **Description**: A key prefix is the first three characters of a record ID, which specifies the entity type.
  - For filter feeds, this value is the key prefix associated with the entity type used to filter this feed. All feed items in this feed have a parent whose entity type matches this key prefix value. For non-filter feeds, this value is **null**.
- **Available Version**: 30.0

### label
- **Type**: `String`
- **Description**: Localized label of the feed
- **Available Version**: 30.0

**SEE ALSO:**
- `ConnectApi.FeedDirectory Class`
- `ConnectApi.FeedElement Class`

### ConnectApi.FeedElement Class

Feed elements are the top-level items that a feed contains. Feeds are feed element containers.

This class is abstract.

**Superclass of:**
- `ConnectApi.FeedItem Class`
- `ConnectApi.GenericFeedElement Class`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>

## ConnectApi.FeedElementCapabilities Class

A container for all capabilities that can be included with a feed element.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>approval</td>
<td>ConnectApi.ApprovalCapability Class</td>
<td>If a feed element has this capability, it includes information about an approval.</td>
<td>32.0</td>
</tr>
<tr>
<td>associated Actions</td>
<td>ConnectApi.AssociatedActions Capability</td>
<td>If a feed element has this capability, it has platform actions associated with it.</td>
<td>33.0</td>
</tr>
<tr>
<td>banner</td>
<td>ConnectApi.BannerCapability Class</td>
<td>If a feed element has this capability, it has a banner motif and style.</td>
<td>31.0</td>
</tr>
<tr>
<td>bookmarks</td>
<td>ConnectApi.Bookmarks Capability Class</td>
<td>If a feed element has this capability, the context user can bookmark it.</td>
<td>31.0</td>
</tr>
<tr>
<td>bundle</td>
<td>ConnectApi.BundleCapability Class</td>
<td>If a feed element has this capability, it has a container of feed elements called a bundle.</td>
<td>31.0</td>
</tr>
<tr>
<td>canvas</td>
<td>ConnectApi.Canvas Capability Class</td>
<td>If a feed element has this capability, it renders a canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>caseComment</td>
<td>ConnectApi.CaseCommentCapability Class</td>
<td>If a feed element has this capability, it has a case comment on the case feed.</td>
<td>32.0</td>
</tr>
<tr>
<td>chatterLikes</td>
<td>ConnectApi.ChatterLikesCapability Class</td>
<td>If a feed element has this capability, the context user can like it. Exposes information about existing likes.</td>
<td>31.0</td>
</tr>
<tr>
<td>close</td>
<td>ConnectApi.CloseCapability</td>
<td>If a feed element has this capability, users with permission can close it.</td>
<td>43.0</td>
</tr>
<tr>
<td>comments</td>
<td>ConnectApi.CommentsCapability Class</td>
<td>If a feed element or comment has this capability, the context user can add a comment to it.</td>
<td>31.0</td>
</tr>
<tr>
<td>content</td>
<td>ConnectApi.ContentCapability</td>
<td>If a comment has this capability, it has a file attachment.</td>
<td>32.0–35.0</td>
</tr>
</tbody>
</table>

Most `ConnectApi.ContentCapability` properties are null if the content has been deleted from the feed element or if the access has changed to private.

⚠️ **Important:** In version 36.0 and later, use the `files` property.

- `ConnectApi.FeedItemSummary`

`ConnectApi.FeedElementCapability Class`

A feed element capability, which defines the characteristics of a feed element.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of capabilities. If a capability property exists on a feed element, that capability is available, even if the capability property doesn’t have a value. For example, if the ChatterLikes capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn’t exist, it isn’t possible to like that feed element. A capability can also contain associated data. For example, the Moderation capability contains data about moderation flags.
This class is abstract.

This class is a superclass of:

- `ConnectApi.AssociatedActionsCapability Class`
- `ConnectApi.ApprovalCapability Class`
- `ConnectApi.BannerCapability Class`
- `ConnectApi.BookmarksCapability Class`
- `ConnectApi.BundleCapability Class`
- `ConnectApi.CanvasCapability Class`
- `ConnectApi.CaseCommentCapability Class`
- `ConnectApi.ChatterLikesCapability Class`
- `ConnectApi.CloseCapability`
- `ConnectApi.CommentsCapability`
- `ConnectApi.ContentCapability`
- `ConnectApi.DashboardComponentSnapshotCapability`
- `ConnectApi.DirectMessageCapability`
- `ConnectApi.EmailMessageCapability`
- `ConnectApi.EnhancedLinkCapability`
- `ConnectApi.ExtensionsCapability`
- `ConnectApi.FeedEntityShareCapability`
- `ConnectApi.FilesCapability`
- `ConnectApi.InteractionsCapability`
- `ConnectApi.LinkCapability`
- `ConnectApi.MediaReferenceCapability`
- `ConnectApi.ModerationCapability Class`
- `ConnectApi.MuteCapability`
- `ConnectApi.OriginCapability`
- `ConnectApi.PinCapability`
- `ConnectApi.PollCapability Class`
- `ConnectApi.QuestionAndAnswersCapability Class`
- `ConnectApi.ReadByCapability`
- `ConnectApi.RecommendationsCapability`
- `ConnectApi.RecordCapability`
- `ConnectApi.RecordSnapshotCapability`
- `ConnectApi.SocialPostCapability`
- `ConnectApi.StatusCapability`
- `ConnectApi.TopicsCapability Class`
- `ConnectApi.TrackedChangesCapability`
- `ConnectApi.UpDownVoteCapability`
- `ConnectApi.VerifiedCapability`

This class doesn’t have any properties.
**ConnectApi.FeedElementPage**

A paged collection of `ConnectApi.FeedElement` objects.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>elements</td>
<td>List&lt;ConnectApi.FeedElement Class&gt;</td>
<td>Collection of feed elements.</td>
<td>31.0</td>
</tr>
<tr>
<td>isModifiedToken</td>
<td>String</td>
<td>An opaque polling token to use in the <code>since</code> parameter of the <code>ChatterFeeds.isModified</code> method. The token describes when the feed was last modified.</td>
<td>31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important</strong>: This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.</td>
<td></td>
</tr>
<tr>
<td>isModifiedUrl</td>
<td>String</td>
<td>A Chatter REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates.</td>
<td>31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important</strong>: This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.</td>
<td></td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or <code>null</code> if there isn't a next page.</td>
<td>31.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.</td>
<td>31.0</td>
</tr>
<tr>
<td>updatesToken</td>
<td>String</td>
<td>A token to use in a request to the <code>ConnectApi.ChatterFeeds.getFeedElementsUpdatedSince</code> method.</td>
<td>31.0</td>
</tr>
</tbody>
</table>
A Chatter REST API feed resource containing the feed elements that have been updated since the feed was refreshed. If the feed doesn’t support this feature, the value is `null`.

**SEE ALSO:**
- ConnectApi.BundleCapability Class
- ConnectApi.Feed Class

### ConnectApi.FeedEnabledEntity

An entity that can have feeds associated with it.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>id</code></td>
<td>String</td>
<td>The 18-character ID of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td><code>motif</code></td>
<td>ConnectApi.Motif</td>
<td>Small, medium, and large icons indicating the record's type.</td>
<td>39.0</td>
</tr>
<tr>
<td><code>name</code></td>
<td>String</td>
<td>The localized name of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td><code>type</code></td>
<td>String</td>
<td>The type of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td><code>url</code></td>
<td>String</td>
<td>URL to the record.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.ChatterStream

### ConnectApi.FeedEntityIsEditable

Indicates if the context user can edit a feed element or comment.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>areAttachmentsEditableByMe</code></td>
<td>Boolean</td>
<td><code>true</code> if the context user can add and remove attachments on the feed element or comment, <code>false</code> otherwise.</td>
<td>36.0</td>
</tr>
<tr>
<td><code>feedEntityUrl</code></td>
<td>String</td>
<td>URL of the feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td><code>isEditableByMe</code></td>
<td>Boolean</td>
<td><code>true</code> if the context user can edit the feed element or comment, <code>false</code> otherwise.</td>
<td>34.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FeedEntityNotAvailableSummary

A summary when the feed entity isn’t available.
This output class is a subclass of `ConnectApi.FeedEntitySummary` and has no properties.

**ConnectApi.FeedEntityReadSummary**

Summary of the feed post or comment that was read.

Subclass of `ConnectApi.UserFeedEntityActivitySummary`

No additional properties.

**ConnectApi.FeedEntityShareCapability**

If a feed element or comment has this capability, a feed entity is shared with it.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>

<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntity</td>
<td><code>ConnectApi.FeedEntitySummary</code></td>
<td>The summary of the feed entity that is shared with the feed element or comment.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

  - `ConnectApi.FeedElementCapabilities Class`

**ConnectApi.FeedEntitySummary**

The summary of a feed entity that is shared with a feed element.

This class is abstract.

Superclass of:
  - `ConnectApi.FeedItemSummary`
  - `ConnectApi.FeedEntityNotAvailableSummary`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actor</td>
<td><code>ConnectApi.Actor</code></td>
<td>Entity that created the feed entity.</td>
<td>39.0</td>
</tr>
<tr>
<td>body</td>
<td><code>ConnectApi.FeedBody</code></td>
<td>Information about the feed entity.</td>
<td>39.0</td>
</tr>
<tr>
<td>createdDate</td>
<td><code>DateTime</code></td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, when the entity was created.</td>
<td>39.0</td>
</tr>
<tr>
<td>feedElementType</td>
<td><code>ConnectApi.FeedElementType</code></td>
<td>Type of feed entity.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
  - Bundle—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
FeedItem

A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.

Recommendation

A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>

<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> As of API version 32.0, use the capabilities property to determine what can be done with a feed item. See Capabilities.</td>
<td></td>
</tr>
</tbody>
</table>

One of these values:

- **ActivityEvent**—Feed item generated in Case Feed when an event or task associated with a parent record with a feed enabled is created or updated.
- **AdvancedTextPost**—A feed item with advanced text formatting, such as a group announcement post.
- **ApprovalPost**—Feed item with an approval capability. Approvers can act on the feed item parent.
- **AttachArticleEvent**—Feed item generated when an article is attached to a case in Case Feed.
- **BasicTemplateFeedItem**—Feed item with an enhanced link capability.
- **CallLogPost**—Feed item generated when a call log is saved to a case in Case Feed.
- **CanvasPost**—Feed item generated by a canvas app in the publisher or from Chatter REST API or Chatter in Apex. The post itself is a link to a canvas app.
- **CaseCommentPost**—Feed item generated when a case comment is saved in Case Feed.
- **ChangeStatusPost**—Feed item generated when the status of a case is changed in Case Feed.
- **ChatTranscriptionPost**—Feed item generated in Case Feed when a Live Agent chat transcript is saved to a case.
<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>

**ConnectApi.FeedItemAttachment Class**

⚠️ **Important**: This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.FeedElementCapability Class` is used.

This class is abstract.

Subclasses:

- ConnectApi.ApprovalAttachment Class
- ConnectApi.BasicTemplateAttachment Class
- ConnectApi.CanvasTemplateAttachment Class
- ConnectApi.EmailMessage Class
- ConnectApi.CaseComment Class
- ConnectApi.ContentAttachment Class
- ConnectApi.DashboardComponentAttachment Class
- ConnectApi.FeedPoll Class
- ConnectApi.LinkAttachment Class
- ConnectApi.RecordSnapshotAttachment Class
- ConnectApi.TrackedChangeAttachment Class

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

⚠️ **Important**: The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

**ConnectApi.FeedItemPage Class**

⚠️ **Important**: This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.FeedElementPage` is used.
A paged collection of `ConnectApi.FeedItem` objects.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>isModifiedToken</td>
<td>String</td>
<td>An opaque polling token to use in the <code>since</code> parameter of the <code>ChatterFeeds.isModified</code> method. The token describes when the feed was last modified. Important: This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>isModifiedUrl</td>
<td>String</td>
<td>A Chatter REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates. Important: This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>items</td>
<td><code>List&lt;ConnectApi.FeedItem&gt;</code></td>
<td>List of feed items</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or <code>null</code> if there isn't a next page.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>updatesToken</td>
<td>String</td>
<td>Token to use in an <code>updatedSince</code> parameter, or <code>null</code> if not available.</td>
<td>30.0–31.0</td>
</tr>
<tr>
<td>updatesUrl</td>
<td>String</td>
<td>A Chatter REST API resource with a query string containing the value of the <code>updatesToken</code> property. The resource returns the feed items that have been updated since the last request. Use the URL as it is—do not modify it. Property is <code>null</code> if not available.</td>
<td>30.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.FeedItemSummary**

A feed item summary.

Subclass of `ConnectApi.FeedEntitySummary`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>capabilities</td>
<td><code>ConnectApi.FeedElementCapabilities</code></td>
<td>Container for all capabilities that can be included with a feed item.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### ConnectApi.MessageBody

**header**
- **Type**: `ConnectApi.MessageBody`
- **Description**: Title of the post. This property contains renderable plain text for all the message segments. If a client doesn’t know how to render a feed element type, it should render this text.

**modifiedDate**
- **Type**: `Datetime`
- **Description**: When the feed item was modified in the form of an ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.

**originalFeedItem**
- **Type**: `ConnectApi.Reference`
- **Description**: Reference to the original feed item if this feed item is a shared feed item; otherwise, `null`.

**originalFeedItemActor**
- **Type**: `ConnectApi.Actor`
- **Description**: If this feed item is a shared feed item, information about the original poster of the feed item; otherwise, `null`.

**photoUrl**
- **Type**: `String`
- **Description**: URL of the photo associated with the feed item.

**visibility**
- **Type**: `ConnectApi.FeedItemVisibility`
- **Description**: Specifies who can see a feed item.
  - `AllUsers` — Visibility is not limited to internal users.
  - `InternalUsers` — Visibility is limited to internal users.

### ConnectApi.FeedItemTopicPage Class

**Important**: This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.TopicsCapability Class` is used.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canAssignTopics</td>
<td>Boolean</td>
<td>true if a topic can be assigned to the feed item, false otherwise</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>topics</td>
<td>List&lt;ConnectApi.Topic&gt;</td>
<td>List of topics</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FeedModifiedInfo Class

**Important**: This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isModified</td>
<td>Boolean</td>
<td>true if the news feed has been modified since the last time it was polled; false otherwise. Returns null if the feed is not a news feed.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
**isModifiedToken**  
String  
An opaque polling token to use in the *since* parameter of the ChatterFeeds.isModified method. The token describes when the feed was last modified.  

**nextPollUrl**  
String  
A Chatter REST API URL with a *since* request parameter that contains an opaque token that describes when the feed was last modified. Returns null if the feed isn’t a news feed. Use this URL to poll a news feed for updates.

### ConnectApi.FeedPoll Class

⚠️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.PollCapability Class is used.

Subclass of ConnectApi.FeedItemAttachment Class

This object is returned as the attachment of ConnectApi.FeedItem objects where the *type* property is PollPost.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>choices</td>
<td>List&lt;ConnectApi.FeedPollChoice&gt;</td>
<td>List of choices for poll.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>myChoiceId</td>
<td>String</td>
<td>ID of the poll choice that the context user has voted for in this poll.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>totalVoteCount</td>
<td>Integer</td>
<td>Total number of votes cast on the feed poll item.</td>
<td>28.0–31.0</td>
</tr>
</tbody>

- Bookmarks—Contains all feed items saved as bookmarks by the context user.
- Company—Contains all feed items except feed items of type TrackedChange. To see the feed item, the user must have sharing access to its parent.
- DirectMessageModeration—Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Communities Chatter Messages permissions.
- DirectMessages—Contains all feed items of the context user’s direct messages.
- Draft—Contains all the feed items that the context user drafted.
- Files—Contains all feed items that contain files posted by people or groups that the context user follows.
- Filter—Contains the news feed filtered to contain feed items whose parent is a specified object type.
- Groups—Contains all feed items from all groups the context user either owns or is a member of.
- Home—Contains all feed items associated with any managed topic in a community.
- Landing—Contains all feed items that best drive user engagement when the feed is
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>requested. Allows clients to avoid an empty feed when there aren’t many personalized feed items.</td>

<td>• NewValue—A new value</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• OldValue—An old value</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL value if the field change is to a URL field (such as a web address)</td>
<td>28.0</td>
</tr>
</tbody>
</table>

ConnectApi.File Class

This class is abstract.
Subclass of ConnectApi.ActorWithId Class
Superclass of ConnectApi.FileSummary Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>checksum</td>
<td>String</td>
<td>MD5 checksum for the file.</td>
<td>28.0</td>
</tr>
<tr>
<td>content</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z. File-specific modified date, which is updated only for direct file operations, such as rename. Modifications to the file from outside of Salesforce can update this date.</td>
<td>32.0</td>
</tr>
<tr>
<td>Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>------------------------</td>
<td>-----------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>contentSize</td>
<td>Integer</td>
<td>Size of the file in bytes.</td>
<td>28.0</td>
</tr>
<tr>
<td>contentUrl</td>
<td>String</td>
<td>If the file is a link, returns the URL, otherwise, the string null.</td>
<td>28.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>ISO 8601 date string when the file was created.</td>
<td>41.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the file.</td>
<td>28.0</td>

<tr>
<td>versionNumber</td>
<td>String</td>
<td>Version number of the file.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

`ConnectApi.InlineImageSegment`

**ConnectApi.FilePreviewUrl**

A URL to a file preview.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pageNumber</td>
<td>Integer</td>
<td>Preview page number starting from zero, or <code>null</code> for PDF files.</td>
<td>39.0</td>
</tr>
<tr>
<td>previewUrl</td>
<td>String</td>
<td>File preview URL.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

`ConnectApi.FilePreview`

**ConnectApi.FilesCapability**

If a feed element has this capability, it has one or more file attachments.

Subclass of `ConnectApi.FeedElementCapability Class`.
### ConnectApi.FileSummary Class

A file summary

Subclass of ConnectApi.File Class

No additional properties.

### ConnectApi.FollowerPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>followers</td>
<td>List&lt;ConnectApi.Subscription&gt;</td>
<td>List of subscriptions</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn't a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of followers across all pages</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FollowingCounts Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>people</td>
<td>Integer</td>
<td>Number of people user is following</td>
<td>28.0</td>
</tr>
<tr>
<td>records</td>
<td>Integer</td>
<td>Number of records user is following Topics are a type of record that can be followed as of version 29.0.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of items user is following</td>
<td>28.0</td>
</tr>
</tbody>
</table>

ConnectApi.GenericBundleCapability Class

If a feed element has this capability, the feed element has a group of other feed elements condensed into one feed element. This group is called a bundle.

Subclass of ConnectApi.BundleCapability Class.

ConnectApi.GenericFeedElement Class

A concrete implementation of the abstract ConnectApi.FeedElement class.

Subclass of ConnectApi.FeedElement Class

ConnectApi.GlobalInfluence Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>percentile</td>
<td>String</td>
<td>Percentile value for the user’s influence rank within the organization or community</td>
<td>28.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>Number indicating the user’s influence rank, relative to all other users within the organization or community</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.UserDetail Class

ConnectApi.GroupChatterSettings Class

A user’s Chatter settings for a specific group.
### ConnectApi.GroupInformation Class

Describes the Information section of the group. If the group is private, this section is visible only to members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>The text of the &quot;Information&quot; section of the group.</td>
<td>28.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the &quot;Information&quot; section of the group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

</tr>
</tbody>
</table>
### ConnectApi.UserSummary

*Description*: Information about the user requesting membership in a group.

*Type*: ConnectApi.UserSummary

*Available Version*: 28.0

---

### ConnectApi.GroupMembershipRequests Class

*a class description*

*Name* | *Type* | *Description* | *Available Version*
--- | --- | --- | ---
requests | List<ConnectApi.GroupMembershipRequest> | Information about group membership requests. | 28.0

total | Integer | The total number of requests. | 28.0

---

### ConnectApi.GroupRecord Class

*A record associated with a group.*

*Property* | *Type* | *Description* | *Available Version*
--- | --- | --- | ---
id | String | Record’s 18-character ID | 33.0

record | ConnectApi.ActorWithId | Information about the record associated with the group | 33.0

url | String | Record URL | 33.0

---

### ConnectApi.GroupRecordPage Class

*A paginated list of ConnectApi.GroupRecord objects.*

*Property* | *Type* | *Description* | *Available Version*
--- | --- | --- | ---
currentPageUrl | String | Chatter REST API URL identifying the current page. | 33.0

nextPageUrl | String | Chatter REST API URL identifying the next page, or **null** if there isn’t a next page. | 33.0

previousPageUrl | String | Chatter REST API URL identifying the previous page, or **null** if there isn’t a previous page. | 33.0

---

### ConnectApi.HashtagSegment Class
Subclass of ConnectApi.MessageSegment Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>tag</td>
<td>String</td>
<td>Text of the topic without the hash symbol (#)</td>
<td>28.0</td>
</tr>
<tr>
<td>topicUrl</td>
<td>String</td>
<td>Chatter REST API Topics resource that searches for the topic:</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>/services/data/v44.0/chatter/topics?exactMatch=true&amp;q=topic</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Chatter REST API Feed Items resource URL that searches for the topic in all feed items in an organization:</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>/services/data/v44.0/chatter/feed-items?q=topic</td>

</tbody>
</table>

### ConnectApi.Icon Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>height</td>
<td>Integer</td>
<td>The height of the icon in pixels.</td>
<td>28.0</td>
</tr>
<tr>
<td>width</td>
<td>Integer</td>
<td>The width of the icon in pixels.</td>
<td>28.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL of the icon. This URL is available to unauthenticated users. This URL does not expire.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.InlineImageSegment
An inline image in the feed body.
Subclass of ConnectApi.MessageSegment Class
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alt text for the inline image.</td>
<td>35.0</td>
</tr>
<tr>
<td>contentSize</td>
<td>Integer</td>
<td>Size of the file in bytes.</td>
<td>35.0</td>
</tr>
<tr>
<td>fileExtension</td>
<td>String</td>
<td>Extension of the file, such as gif.</td>
<td>37.0</td>
</tr>
<tr>
<td>thumbnails</td>
<td>ConnectApi.FilePreviewCollection</td>
<td>Information about the available thumbnails for the image.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the latest version of the inline image.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

**ConnectApi.InteractionsCapability**

If a feed element has this capability, it has information about user interactions.

Subclass of [ConnectApi.FeedElementCapability Class](#).  

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>count</td>
<td>Long</td>
<td>The number of individual views, likes, and comments on a feed post.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
[ConnectApi.FeedElementCapabilities Class](#)

**ConnectApi.Invitation**

An invitation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>email</td>
<td>String</td>
<td>Email address of the user.</td>
<td>39.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi.GroupViral.InvitationsStatus</td>
<td>Specifies the status of an invitation to join a group. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td>ActedUponUser—The user was added to the group. An email was sent asking the user to visit the group.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Invited—An email was sent asking the user to sign up for the org.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>MaxedOutUsers—The group has the maximum allowed members.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>MultipleError—The user wasn’t invited due to multiple errors.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>NoActionNeededUser—The user is already a member of the group.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Available Version | Description | Type | Property Name
--- | --- | --- | ---
| • NotVisibleToExternalInviter—The user is not accessible to the user sending the invitation. |  |  | 
| • Unhandled—The user couldn’t be added to the group for an unknown reason. |  |  | 

**userId** | String | ID of the user. | 39.0

#### ConnectApi.LabeledRecordField Class

This class is abstract.

Subclass of `ConnectApi.AbstractRecordField Class`

Superclass of:

- `ConnectApi.CompoundRecordField Class`
- `ConnectApi.CurrencyRecordField Class`
- `ConnectApi.DateRecordField Class`
- `ConnectApi.PercentRecordField Class`
- `ConnectApi.PicklistRecordField Class`
- `ConnectApi.RecordField Class`
- `ConnectApi.ReferenceRecordField Class`
- `ConnectApi.ReferenceWithDateRecordField Class`

A record field containing a label and a text value.

⚠️ **Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>A localized string describing the record field.</td>
<td>29.0</td>
</tr>
<tr>
<td>text</td>
<td>String</td>
<td>The text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field’s type property. If it isn’t recognized, render the text value as the default case.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.LightningExtensionInformation

Lightning extension information.

Subclass of `ConnectApi.AbstractExtensionInformation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>compositionComponent</td>
<td>String</td>
<td>Component to use in compose state.</td>
<td>40.0</td>
</tr>
<tr>
<td>headerTextLabel</td>
<td>String</td>
<td>Label for the extension’s header.</td>
<td>40.0</td>
</tr>
<tr>
<td>hoverTextLabel</td>
<td>String</td>
<td>Label for hovering over the extension.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
**ConnectApi.Namespace**

**ConnectApi.ExtensionDefinition**

**ConnectApi.LikeSummary**

Summary of a like.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>likeId</td>
<td>String</td>
<td>ID of the like.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LinkAttachment Class**

**Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, ConnectApi.LinkCapability is used.

Subclass of [ConnectApi.FeedItemAttachment Class](#).

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>title</td>
<td>String</td>
<td>Title given to the link if available, otherwise, null</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The link URL</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LinkCapability**

If a feed element has this capability, it has a link.

Subclass of [ConnectApi.FeedElementCapability Class](#).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>Link URL. The URL can be to an external site.</td>
<td>32.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Description of the link.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LinkSegment Class**

Subclass of [ConnectApi.MessageSegment Class](#).

### ConnectApi.LinkMetadata

Metadata for a link.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the link.</td>
<td>42.0</td>
</tr>
<tr>
<td>frameSource</td>
<td>String</td>
<td>HTML required to display the resource.</td>
<td>42.0</td>
</tr>
<tr>
<td>height</td>
<td>Integer</td>
<td>Height required to display the HTML.</td>
<td>42.0</td>
</tr>
<tr>
<td>originalUrl</td>
<td>String</td>
<td>Original URL that was used to request the metadata.</td>
<td>42.0</td>
</tr>
<tr>
<td>providerUrl</td>
<td>String</td>
<td>URL of the provider that the information is retrieved from.</td>
<td>42.0</td>
</tr>
<tr>
<td>source</td>
<td>ConnectApi.LinkMetadataSource</td>
<td>Source of the link metadata. Values are:</td>
<td>42.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the link.</td>
<td>42.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.LinkMetadataType</td>
<td>Type of link that the metadata represents. Values are:</td>
<td>42.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL of the image to display, if one is available.</td>
<td>42.0</td>
</tr>
<tr>
<td>width</td>
<td>Integer</td>
<td>Width required to display the HTML.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Chatter REST API URL to the managed topic.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.ManagedTopicCollection Class

ConnectApi.ManagedTopicCollection Class

A collection of managed topics.
**Available Version** | **Description** | **Type** | **Property Name**  
---|---|---|---
32.0 | Chatter REST API URL identifying the current page. | String | currentPageUrl  
32.0 | List of managed topics. | List<ConnectApiManagedTopic> | managedTopics  
44.0 | Chatter REST API URL identifying the next page, or null if there isn't a next page. | String | nextPageUrl

**ConnectApi MarkupBeginSegment**

The beginning of rich text markup.

Subclass of ConnectApi.MessageSegment Class

**Available Version** | **Description** | **Type** | **Property Name**  
---|---|---|---
35.0 | The HTML tag for this markup. | String | htmlTag  
35.0 | Type of rich text markup. | ConnectApiMarkupType | markupType  
  - Bold—Bold tag.  
  - Italic—Italic tag.  
  - ListItem—List item tag.  
  - OrderedList—Ordered list tag.  
  - Paragraph—Paragraph tag.  
  - Strikethrough—Strikethrough tag.  
  - Underline—Underline tag.  
  - UnorderedList—Unordered list tag.

**ConnectApi MarkupEndSegment**

The end of rich text markup.

Subclass of ConnectApi.MessageSegment Class

**Available Version** | **Description** | **Type** | **Property Name**  
---|---|---|---
35.0 | The HTML tag for this markup. | String | htmlTag  
35.0 | Type of rich text markup. | ConnectApiMarkupType | markupType  
  - Bold—Bold tag.  
  - Italic—Italic tag.  
  - ListItem—List item tag.  
  - OrderedList—Ordered list tag.  
  - Paragraph—Paragraph tag.  
  - Strikethrough—Strikethrough tag.  
  - Underline—Underline tag.  
  - UnorderedList—Unordered list tag.
### Available Version

- **Strikethrough**—Strikethrough tag.
- **Underline**—Underline tag.
- **UnorderedList**—Unordered list tag.

### ConnectApi.MediaReference

A media reference.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>mediaUrl</td>
<td>String</td>
<td>URL to stream or download the media.</td>

<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>URL of the media’s thumbnail, if one exists.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.FeedElementCapabilities Class
- ConnectApi.MediaReferenceCapability

### ConnectApi.MediaReferenceCapability

If a feed element has this capability, it has one or more media references.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>media</td>
<td>List&lt;ConnectApi.MediaReference&gt;</td>
<td>Collection of media references.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

### ConnectApi.MentionCompletion Class

Information about a record that could be used to @mention a user or group.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>additionalLabel</td>
<td>String</td>
<td>An additional label (if one exists) for the record represented by this completion, for example, “(Customer)” or “(Acme Corporation)”</td>
<td>29.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the record represented by this completion.</td>
<td>29.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the record represented by this completion. The name is localized, if possible.</td>
<td>29.0</td>
</tr>
<tr>
<td>outOfOffice</td>
<td>ConnectApi.OutOfOffice</td>
<td>If the record represented by this completion is a user, an additional out-of-office message, if one exists, for the user.</td>
<td>40.0</td>
</tr>
<tr>
<td>photoUrl</td>
<td>String</td>
<td>A URL to the photo or icon of the record represented by this completion.</td>
<td>29.0</td>
</tr>
<tr>
<td>Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>-------------</td>
<td>-----------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>recordId</td>
<td>String</td>
<td>The ID of the record represented by this completion.</td>
<td>29.0</td>
</tr>
<tr>
<td>userType</td>
<td>ConnectApi. Enum</td>
<td>If the record represented by this completion is a user, this value is the user type associated with that user; otherwise the value is null. One of these values: • ChatterGuest—User is an external user in a private group. • ChatterOnly—User is a Chatter Free customer. • Guest—User is unauthenticated. • Internal—User is a standard organization member. • Portal—User is an external user in a customer portal, partner portal, or community. • System—User is Chatter Expert or a system user. • Undefined—User is a user type that is a custom object.</td>
<td>30.0</td>
</tr>
</tbody>
</table>

ConnectApi.MentionCompletionPage Class

ConnectApi.MentionCompletionPage Class
A paginated list of Mention Completion response bodies.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>29.0</td>
</tr>
<tr>
<td>mentionCompletions</td>
<td>List&lt;ConnectApi. MentionCompletion&gt;</td>
<td>A list of mention completion proposals. Use these proposals to build a feed post body.</td>
<td>29.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>29.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

ConnectApi.MentionSegment Class
Subclass of ConnectApi.MessageSegment Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accessible</td>
<td>Boolean</td>
<td>Specifies whether the mentioned user or group can see the post in which they are mentioned (true) or not (false).</td>
<td>28.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the mentioned user or group</td>
<td>28.0</td>
</tr>
<tr>
<td>record</td>
<td>ConnectApi.ActorWithId</td>
<td>Information about the mentioned user or group</td>
<td>29.0</td>
</tr>
<tr>
<td>user</td>
<td>ConnectApi.User</td>
<td>Information about the mentioned user</td>
<td>28.0 only</td>
</tr>
</tbody>
</table>

**Important:** In versions 29.0 and later, use the `record` property.

---

#### ConnectApi.MentionValidation Class

Information about whether a proposed mention is valid for the context user.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>The ID of the mentioned record.</td>
<td>29.0</td>
</tr>
<tr>
<td>validationStatus</td>
<td>ConnectApi.MentionValidationStatusEnum</td>
<td>Type of validation error for a proposed mention, if any.</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Disallowed—The proposed mention is invalid and is rejected because the context user is trying to mention something that is not allowed. For example, a user who is not a member of a private group is trying to mention the private group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Inaccessible—The proposed mention is allowed but the user or record being mentioned isn’t notified because they don’t have access to the parent record being discussed.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Ok—There is no validation error for this proposed mention.</td>
<td></td>
</tr>
</tbody>
</table>

**SEE ALSO:**

[ConnectApi.MentionValidations Class](#)

---

#### ConnectApi.MentionValidations Class

Information about whether a set of mentions is valid for the context user.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasErrors</td>
<td>Boolean</td>
<td>Indicates whether at least one of the proposed mentions has an error (true), or not (false).</td>
<td>29.0</td>
</tr>
</tbody>
</table>
example, context users can’t mention private groups they don’t belong to. If such a group is included in the list of mention validations, hasErrors is true and the group has a validationStatus of Disallowed in its mention validation.

### ConnectApi.MessageBody Class

Subclass of ConnectApi.AbstractMessageBody Class

No additional properties.

SEE ALSO:
- ConnectApi.ChatterLikesCapability Class
- ConnectApi.ChatterMessage Class
- ConnectApi.Comment
- ConnectApi.FeedElement Class
- ConnectApi.FeedItemSummary

### ConnectApi.MessageSegment Class

This class is abstract.

Superclass of:
- ConnectApi.ComplexSegment Class
- ConnectApi.EntityLinkSegment Class
- ConnectApi.FieldChangeSegment Class
- ConnectApi.FieldChangeNameSegment Class
- ConnectApi.FieldChangeValueSegment Class
- ConnectApi.HashtagSegment Class
- ConnectApi.InlineImageSegment
- ConnectApi.LinkSegment Class
- ConnectApi.MarkupBeginSegment
- ConnectApi.MarkupEndSegment
- ConnectApi.MentionSegment Class
- ConnectApi.MoreChangesSegment Class
- ConnectApi.ResourceLinkSegment Class
- ConnectApi.TextSegment Class

Message segments in a feed item are typed as ConnectApi.MessageSegment. Feed item capabilities are typed as ConnectApi.FeedItemCapability. Record fields are typed as ConnectApi.AbstractRecordField. These classes

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>mentionValidations</td>
<td>List&lt;ConnectApi. MentionValidation&gt;</td>
<td>A list of mention validation information in the same order as the provided record IDs.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

⚠️ **Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>Text-only rendition of this segment. If a client encounters an unknown message segment type, it can render this value.</td>
<td>28.0</td>
</tr>
<tr>
<td>type</td>
<td><code>ConnectApi.MessageSegment.Type</code> Enum</td>
<td>The message segment type. One of these values:</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• EntityLink</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FieldChange</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FieldChangeName</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FieldChangeValue</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Hashtag</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• InlineImage</td>
<td></td>

- `ConnectApi.ModerationCapability` Class

**ConnectApi.ModerationCapability Class**

If a feed element has this capability, users in a community can flag it for moderation.

Subclass of `ConnectApi.FeedElementCapability` Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>moderationFlags</td>
<td><code>ConnectApi.ModerationFlags</code></td>
<td>The moderation flags for this feed element. Community moderators can view and take action on flagged items.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.FeedElementCapabilities` Class
ConnectApi.ModerationFlagItemDetail

Flag details on a feed item, comment, or file.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createdBy</td>
<td>String</td>
<td>ID of the user who flagged the item.</td>
<td>40.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Date when the item was flagged.</td>
<td>40.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the moderation flag.</td>
<td>40.0</td>
</tr>
<tr>
<td>moderationType</td>
<td>ConnectApi.CommunityFlagType</td>
<td>Type of moderation flag. Values are:</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FlagAsInappropriate—Flag for inappropriate content.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FlagAsSpam—Flag for spam.</td>
<td></td>
</tr>
<tr>
<td>note</td>
<td>String</td>
<td>Note from user who flagged the item.</td>
<td>40.0</td>
</tr>
<tr>
<td>visibility</td>
<td>ConnectApi.CommunityFlagVisibility</td>
<td>Visibility behavior of a flag for various user types. Values are:</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.</td>
<td></td>
</tr>
</tbody>
</table>

</tr>
<tr>
<td></td>
<td></td>
<td>• FlaggedByUserAsSpam—User flagged the item as spam.</td>
<td></td>
</tr>
</tbody>
</table>
### ConnectApi.ModerationFlagsCollection

A collection of flags on a feed item, comment, or file.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>flags</td>
<td>List&lt;ConnectApi.ModerationFlag.ItemDetail&gt;</td>
<td>List of flag details.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn’t a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>pageSize</td>
<td>Integer</td>
<td>Number of items per page.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.MoreChangesSegment Class

Subclass of ConnectApi.MessageSegment Class

In feed items with a large number of tracked changes, the message is formatted as: “changed A, B, and made X more changes.” The MoreChangesSegment contains the “X more changes.”

SEE ALSO:
- ConnectApi.Comment
- ConnectApi.File Class
- ConnectApi.ModerationCapability Class
- ConnectApi.ModerationFlags
- ConnectApi.MoreChangesSegment Class
ConnectApi.Motif Class

The motif properties contain URLs for small, medium, and large icons that indicate the Salesforce record type. Common record types are files, users, and groups, but all record types have a set of motif icons. Custom object records use their tab style icon. All icons are available to unauthenticated users so that, for example, you can display the motif icons in an email. The motif can also contain the record type’s base color.

Note: The motif images are icons, not user uploaded images or photos. For example, every user has the same set of motif icons.

Custom object records use their tab style icon, for example, the following custom object uses the “boat” tab style:

```json
"motif": {
    "color": "8C004C",
    "largeIconUrl": "/img/icon/custom51_100/boat64.png",
    "mediumIconUrl": "/img/icon/custom51_100/boat32.png",
    "smallIconUrl": "/img/icon/custom51_100/boat16.png",
    "svgIconUrl": null
},
```

Users use the following icons:

```json
"motif": {
    "color": "1797C0",
    "largeIconUrl": "/img/icon/profile64.png",
    "mediumIconUrl": "/img/icon/profile32.png",
    "smallIconUrl": "/img/icon/profile16.png",
    "svgIconUrl": null
},
```

Groups use the following icons:

```json
"motif": {
    "color": "1797C0",
    "largeIconUrl": "/img/icon/groups64.png",
    "mediumIconUrl": "/img/icon/groups32.png",
    "smallIconUrl": "/img/icon/groups16.png",
    "svgIconUrl": null
},
```

Files use the following icons:

```json
"motif": {
    "color": "1797C0",
    "largeIconUrl": "/img/content/content64.png",
    "mediumIconUrl": "/img/content/content32.png",
    "smallIconUrl": "/img/icon/files16.png",
},
```
Note: To view the icons in the previous examples, preface the URL with https://instance_name. For example, https://instance_name/img/icon/profile64.png.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>color</td>

</tr>
</tbody>
</table>

SEE ALSO:

- **ConnectApi.FeedElementCapabilities Class**

**ConnectApi.MuteSummary**

Summary of a mute.

Subclass of **ConnectApi.UserFeedEntityActivitySummary**

No additional properties.

**ConnectApi.NBAActionParameter (Pilot)**

A parameter for an action.

Note: We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Einstein Next Best Action isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the IdeaExchange.
### ConnectApi.NBAFlowAction (Pilot)

A recommended flow.

*Note:* We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the IdeaExchange.

Subclass of ConnectApi.AbstractNBAAction (Pilot).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>

### ConnectApi.PlatformAction Class

A platform action instance with state information for the context user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>For action links of subtype Ui or Download, direct the user to download or visit the UI from this link. Salesforce issues a Javascript redirect for the link in this format: /action-link-redirect/communityId/actionLinkId?_bearer=bearerToken. For Api action links and for all platform actions, this value is null and Salesforce handles the call.</td>
<td>33.0</td>
</tr>
<tr>
<td>apiName</td>
<td>String</td>
<td>The API name. The value may be null.</td>
<td>33.0</td>
</tr>
<tr>
<td>confirmationMessage</td>
<td>String</td>
<td>If this action requires a confirmation and has a status of NewStatus, this is a default localized message that should be shown to an end user prior to invoking the action. Otherwise, this is null.</td>
<td>33.0</td>
</tr>
<tr>
<td>executingUser</td>
<td>ConnectApi.User</td>
<td>The user who initiated execution of this platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td>true if this platform action is the default or primary platform action in the platform action group; false otherwise. There can be only one default platform action per platform action group.</td>
<td>33.0</td>
</tr>
<tr>
<td>iconUrl</td>
<td>String</td>
<td>The URL of the icon for the platform action. This value may be null.</td>
<td>33.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The ID for the platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>The localized label for this platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td>modifiedDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>33.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>------</td>
<td>-------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>platformAction Group</td>
<td><code>ConnectApi. Reference Class</code></td>
<td>A reference to the platform action group containing this platform action.</td>
<td>33.0</td>
</tr>
</tbody>
</table>
| status | `ConnectApi. PlatformAction Status` | The execution status of the platform action. Values are:  
  - `FailedStatus` — The action link execution failed.  
  - `NewStatus` — The action link is ready to be executed. Available for `Download` and `Ui` action links only.  
  - `PendingStatus` — The action link is executing. Choosing this value triggers the API call for `Api` and `ApiAsync` action links.  
  - `SuccessfulStatus` — The action link executed successfully. | 33.0 |
| subtype | `String` | The subtype of a platform action or `null`. If the `type` property is `ActionLink`, possible values are:  
  - `Api` — The action link calls a synchronous API at the action URL. Salesforce sets the status to `SuccessfulStatus` or `FailedStatus` based on the HTTP status code returned by your server.  
  - `ApiAsync` — The action link calls an asynchronous API at the action URL. The action remains in a `PendingStatus` state until a third party makes a request to `/connect/action-links/actionLinkId` to set the status to `SuccessfulStatus` or `FailedStatus` when the asynchronous operation is complete.  
  - `Download` — The action link downloads a file from the action URL.  
  - `Ui` — The action link takes the user to a web page at the action URL. | 33.0 |

**Note:** Invoking `ApiAsync` action links from an app requires a call to set the status. However, there isn't currently a way to set the status of an action link using Apex. To set the status, use Chatter REST API. See the Action Link resource in the Chatter REST API Developer Guide for more information.
### Available Version

**Description**

- **type**
  - The type of platform action. Values are:
    - **ActionLink**—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce UI.
    - **CustomButton**—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.
    - **ProductivityAction**—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can't edit or delete productivity actions.
    - **QuickAction**—A global or object-specific action.
    - **StandardButton**—A predefined Salesforce button such as New, Edit, or Delete.

ConnectApi.FeedElementCapabilities Class

ConnectApi.Proposition (Pilot)

A proposition.

Note: We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Einstein Next Best Action isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the IdeaExchange.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>acceptanceLabel</td>
<td>String</td>
<td>Text indicating user acceptance of the recommendation.</td>

<tr>
<td>url</td>
<td>String</td>
<td>URL to the proposition.</td>
<td>44.0</td>
</tr>
</tbody>
</table>

ConnectApi.QuestionAndAnswersCapability Class

If a feed element has this capability, it has a question and comments on the feed element are answers to the question.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bestAnswer</td>
<td>ConnectApi.Comment</td>
<td>Comment selected as the best answer for the question.</td>
<td>32.0</td>
</tr>
<tr>
<td>bestAnswerSelectedBy</td>
<td>ConnectApi.UserSummary</td>
<td>User who selected the best answer for the question.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi.QuestionAndAnswersSuggestions Class

Question and answers suggestions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>articles</td>
<td>List&lt;ConnectApi.ArticleItem&gt;</td>

</tr>
<tr>
<td>user</td>
<td>ConnectApi.UserSummary</td>
<td>Information about the user who read the feed element.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ReadByCapability

If a feed element has this capability, the context user can mark it as read.

Subclass of [ConnectApi.FeedElementCapability Class](#).
### isReadByMe
- **Type**: Boolean
- **Description**: Specifies whether the feed element has been read (true) or not (false) by the context user.
- **Available Version**: 40.0

### lastReadDateByMe
- **Type**: Datetime
- **Description**: Last date when the feed element was marked read for the context user in ISO 8601 format. Otherwise, null.
- **Available Version**: 40.0

### page
- **Type**: `ConnectApi.ReadByPage`
- **Description**: First page of information about who read the feed element and when.
- **Available Version**: 40.0

SEE ALSO:
- [ConnectApi.FeedElementCapabilities Class](#)

### ConnectApi.ReadByPage
A collection of information about who read the feed element and when.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page. The default is 25 items per page.</td>
<td>40.0</td>
</tr>
<tr>
<td>items</td>
<td>List&lt; <code>ConnectApi.ReadBy</code> &gt;</td>
<td>Collection of read-by information, including users and when they last read the feed element.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn’t a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>previousPageToken</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>40.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>40.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of users who read the feed element.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

- [ConnectApi.ReadByCapability](#)

### ConnectApi.RecommendationAudience
A recommendation audience.
### ConnectApi Namespace

#### ConnectApi.RecommendationAudience

The criteria for the recommendation audience type.

Type: `String`  
Available Version: 36.0

18-character ID of the recommendation audience.

Type: `String`  
Available Version: 35.0

Important: This property is available only in version 35.0. In version 36.0 and later, this property is available in `ConnectApi.CustomListAudienceCriteria`.

Number of members in the recommendation audience.

Type: `Integer`  
Available Version: 35.0

Important: This property is available only in version 35.0. In version 36.0 and later, this property is available in `ConnectApi.CustomListAudienceCriteria`.

Members of the recommendation audience.

Type: `ConnectApi.UserReferencePage`  
Available Version: 35.0 only

User who last modified the recommendation audience.

Type: `ConnectApi.User`  
Available Version: 36.0

An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.

Type: `Datetime`  
Available Version: 36.0

Name of the recommendation audience.

Type: `String`  
Available Version: 35.0

URL for the recommendation audience.

Type: `String`  
Available Version: 35.0

### ConnectApi.RecommendationAudiencePage

A list of recommendation audiences.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>audienceCount</td>
<td><code>Integer</code></td>
<td>The total number of recommendation audiences.</td>
<td>35.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td><code>String</code></td>
<td>URL to the current page.</td>
<td>35.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td><code>String</code></td>
<td>URL to the next page.</td>
<td>35.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td><code>String</code></td>
<td>URL to the previous page.</td>
<td>35.0</td>
</tr>
<tr>
<td>recommendationAudiences</td>
<td><code>List&lt;ConnectApi.RecommendationAudience&gt;</code></td>
<td>A list of recommendation audiences.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
ConnectApi.RecommendationsCapability

If a feed element has this capability, it has a recommendation.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.AbstractRecommendation&gt;</td>
<td>A list of recommendations.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.FeedElementCapabilities Class

ConnectApi.RecommendationCollection Class

A list of recommendations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recommendations</td>
<td>List&lt;ConnectApi.AbstractRecommendation&gt;</td>
<td>Collection of recommendations.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

ConnectApi.RecommendationDefinition

Represents a custom recommendation definition.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The URL for acting on this recommendation.</td>
<td>35.0</td>
</tr>
<tr>
<td>actionUrlName</td>
<td>String</td>
<td>The text label for the action URL in the user interface.</td>
<td>35.0</td>
</tr>
<tr>
<td>explanation</td>
<td>String</td>
<td>Explanation of the recommendation definition.</td>
<td>35.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID of the recommendation definition.</td>
<td>35.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the recommendation definition. The name is displayed in Setup.</td>
<td>35.0</td>
</tr>
<tr>
<td>photo</td>
<td>ConnectApi.Photo</td>
<td>Photo of the recommendation definition.</td>
<td>35.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the recommendation definition.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the Chatter REST API resource for the recommendation definition.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.RecommendationDefinitionPage`
- `ConnectApi.ScheduledRecommendation`

### ConnectApi.RecommendationDefinitionPage

Represents a list of recommendation definitions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recommendation Definitions</td>
<td>List&lt;ConnectApi.Recommendation Definition&gt;</td>
<td>A list of recommendation definitions.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the Chatter REST API resource for the recommendation definition collection.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecommendationExplanation Class

Explanation for a recommendation.

Subclass of `ConnectApi.AbstractRecommendationExplanation Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>detailsUrl</td>
<td>String</td>
<td>URL to explanation details or <strong>null</strong> if the recommendation doesn’t have a detailed explanation.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.AbstractRecommendation Class`

### ConnectApi.RecommendedObject

A recommended object, such as a custom or static recommendation.

Subclass of `ConnectApi.Actor Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>idOrEnum</td>
<td>String</td>
<td>ID of a recommendation definition for a custom recommendation or the enum value <strong>Today</strong> for static recommendations that don’t have an ID (version 35.0 and later).</td>
<td>34.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>motif</td>
<td><code>ConnectApi.Motif</code></td>
<td>Motif of the recommended object.</td>
<td>34.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecordCapability

If a comment has this capability, it has a record attachment.

Subclass of `ConnectApi.FeedElementCapability` Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>ID of the record.</td>
<td>42.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the record.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecordField Class

Subclass of `ConnectApi.LabeledRecordField` Class

A generic record field containing a label and text value.

**SEE ALSO:**

- `ConnectApi.CompoundRecordField` Class

### ConnectApi.RecordSnapshot (Pilot)

A record snapshot.

**Note:** We provide Einstein Next Best Action to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. Einstein Next Best Action isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for Einstein Next Best Action in the IdeaExchange.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the record.</td>
<td>44.0</td>
</tr>
<tr>
<td>nameAtSnapshot</td>
<td>String</td>
<td>Name of the record when the ID was recorded.</td>
<td>44.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- `ConnectApi.NBAReaction (Pilot)`

### ConnectApi.RecordSnapshotAttachment Class

**Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, `ConnectApi.RecordSnapshotCapability` is used.
Subclass of ConnectApi.FeedItemAttachment Class

The fields of a record at the point in time when the record was created.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordView</td>
<td>ConnectApi.RecordView</td>
<td>The representation of the record.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RecordSnapshotCapability**

If a feed element has this capability, it contains all the snapshotted fields of a record for a single create record event.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordView</td>
<td>ConnectApi.RecordView</td>
<td>A record representation that includes metadata and data so you can display the record easily.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.FeedElementCapabilities Class

**ConnectApi.RecordSummary Class**

Subclass of ConnectApi.AbstractRecordView Class

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityLabel</td>
<td>ConnectApi.EntityLabel</td>
<td>Label of the record’s entity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.EmailAddress
ConnectApi.EmailAttachment
ConnectApi.ReferenceRecordField Class
ConnectApi.ReferenceWithDateRecordField Class

**ConnectApi.RecordSummaryList Class**

Summary information about a list of records in the organization including custom objects.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>records</td>
<td>List&lt;ConnectApi.ActorWithId&gt;</td>
<td>A list of records.</td>
<td>30.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL to this list of records.</td>
<td>30.0</td>
</tr>
</tbody>
</table>
ConnectApi.RecordView Class

Subclass of ConnectApi.AbstractRecordView Class

A view of any record in the organization, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type. Contains data and metadata so you can render a record with one response.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>sections</td>
<td>List&lt;ConnectApi.RecordViewSection&gt;</td>
<td>A list of record view sections.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.RecordSnapshotCapability

ConnectApi.RecordViewSection Class

A section of record fields and values on a record detail.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>columnName</td>
<td>Integer</td>
<td>The number of columns to use to lay out the fields in a record section.</td>
<td>29.0</td>
</tr>
<tr>
<td>columnOrder</td>
<td>ConnectApi.RecordColumnOrder Enum</td>
<td>The order of the fields to use in the fields property to lay out the fields in a record section.</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• LeftRight—Fields are rendered from left to right.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• TopDown—Fields are rendered from the top down.</td>
<td></td>
</tr>
<tr>
<td>fields</td>
<td>ConnectApi.AbstractRecordField</td>
<td>The fields and values for the record contained in this section.</td>
<td>29.0</td>
</tr>
<tr>
<td>heading</td>
<td>String</td>
<td>A localized label to display when rendering this section of fields.</td>
<td>29.0</td>
</tr>
<tr>
<td>isCollapsible</td>
<td>Boolean</td>
<td>Indicates whether the section can be collapsed to hide all the fields (true) or not (false).</td>
<td>29.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.RecordView Class
### ConnectApi.Reference Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The ID of the record being referenced, which could be an 18-character ID or some other string identifier.</td>
<td>28.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL to the resource endpoint.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ReferenceRecordField Class

Subclass of `ConnectApi.LabeledRecordField Class`

A record field with a label and text value.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>reference</td>
<td><code>ConnectApi.RecordSummary</code></td>
<td>The object referenced by the record field.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ReferenceWithDateRecordField Class

Subclass of `ConnectApi.LabeledRecordField Class`

A record field containing a referenced object that acted at a specific time, for example, “Created By...”.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dateValue</td>
<td>Datetime</td>
<td>A time at which the referenced object acted.</td>
<td>29.0</td>
</tr>
<tr>
<td>reference</td>
<td><code>ConnectApi.RecordSummary</code></td>
<td>The object referenced by the record field.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RelatedFeedPost

This class is abstract.

Subclass of: `ConnectApi.ActorWithId Class`

Superclass of: `ConnectApi.RelatedQuestion`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>score</td>
<td>Double</td>
<td>Score of the related feed post that indicates how closely related it is to the context feed post.</td>
<td>37.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the related feed post.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
`ConnectApi.RelatedFeedPosts`
ConnectApi.RelatedFeedPosts
A collection of related feed posts.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>relatedFeedPosts</td>
<td>List&lt;ConnectApi.RelatedFeedPost&gt;</td>
<td>Collection of related feed posts.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

ConnectApi.RelatedQuestion
A related question.
Subclass of: ConnectApi.RelatedFeedPost

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasBestAnswer</td>
<td>Boolean</td>
<td>Indicates whether the question has a best answer.</td>
<td>37.0</td>
</tr>
<tr>
<td>interactions</td>
<td>ConnectApi.InteractionsCapability</td>
<td>The number of individual views, likes, and comments on a question.</td>
<td>38.0</td>
</tr>
</tbody>
</table>

ConnectApi.RepositoryFileDetail
A detailed description of a repository file.
Subclass of ConnectApi.AbstractRepositoryFile
No additional properties.

ConnectApi.RepositoryFileSummary
A summary of a repository file.
Subclass of ConnectApi.AbstractRepositoryFile
No additional properties.

SEE ALSO:
ConnectApi.RepositoryFolderItem

ConnectApi.RepositoryFolderDetail
A detailed description of a repository folder.
Subclass of ConnectApi.AbstractRepositoryFolder
No additional properties.

ConnectApi.RepositoryFolderItem
A folder item.
### ConnectApi.RepositoryFolderItemsCollection

A collection of repository folder items.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page.</td>
<td>39.0</td>
</tr>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.RepositoryFolderItem&gt;</td>
<td>Collection of items in a repository folder.</td>
<td>39.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page.</td>
<td>39.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>URL to the previous page.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RepositoryFolderSummary

A summary of a repository folder.

Subclass of ConnectApi.AbstractRepositoryFolder

No additional properties.

SEE ALSO:

ConnectApi.RepositoryFolderItem

### ConnectApi.RepositoryGroupSummary

A group summary.

Subclass of ConnectApi.AbstractDirectoryEntrySummary
<table>
<thead>
<tr>
<th><strong>Property Name</strong></th>
<th><strong>Type</strong></th>
<th><strong>Description</strong></th>
<th><strong>Available Version</strong></th>
</tr>
</thead>
</table>
| groupType        | `ConnectApi.ContentHub.GroupType` | Type of group. Values are:  
• Everybody—Group is public to everybody.  
• EverybodyInDomain—Group is public to everybody in the same domain.  
• Unknown—Group type is unknown. | 39.0 |
| name             | `String` | Name of the group. | 39.0 |

**SEE ALSO:**  
`ConnectApi.ExternalFilePermissionInformation`

### `ConnectApi.RepositoryUserSummary`

A user summary.  
Subclass of `ConnectApi.AbstractDirectoryEntrySummary`

<table>
<thead>
<tr>
<th><strong>Property Name</strong></th>
<th><strong>Type</strong></th>
<th><strong>Description</strong></th>
<th><strong>Available Version</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>firstName</td>
<td><code>String</code></td>
<td>First name of the user.</td>
<td>39.0</td>
</tr>
<tr>
<td>lastName</td>
<td><code>String</code></td>
<td>Last name of the user.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### `ConnectApi.Reputation Class`

Reputation for a user.

<table>
<thead>
<tr>
<th><strong>Property Name</strong></th>
<th><strong>Type</strong></th>
<th><strong>Description</strong></th>
<th><strong>Available Version</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>reputationLevel</td>
<td><code>ConnectApi.ReputationLevel</code></td>
<td>User’s reputation level.</td>
<td>32.0</td>
</tr>
<tr>
<td>reputationPoints</td>
<td><code>Double</code></td>
<td>User’s reputation points, which can be earned by performing different activities in the community.</td>
<td>32.0</td>
</tr>
<tr>
<td>url</td>
<td><code>String</code></td>
<td>A Chatter REST API URL to the reputation.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

`ConnectApi.User Class`

### `ConnectApi.ReputationLevel Class`

Reputation level for a user.

<table>
<thead>
<tr>
<th><strong>Property Name</strong></th>
<th><strong>Type</strong></th>
<th><strong>Description</strong></th>
<th><strong>Available Version</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>levelImageUrl</td>
<td><code>String</code></td>
<td>URL to the reputation level image.</td>
<td>32.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>---------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>levelName</td>
<td>String</td>
<td>Name of the reputation level.</td>
<td>32.0</td>
</tr>
<tr>
<td>levelNumber</td>
<td>Integer</td>
<td>Reputation level number, which is the numerical rank of the level, with the lowest level at 1. Administrators define the reputation level point ranges.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.Reputation Class

**ConnectApi.RequestHeader Class**
An HTTP request header name and value pair.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the request header.</td>
<td>33.0</td>
</tr>
<tr>
<td>value</td>
<td>String</td>
<td>The value of the request header.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.ActionLinkDefinition Class

**ConnectApi.ResourceLinkSegment Class**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to a resource not otherwise identified by an ID field, for example, a link to a list of users.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ScheduledRecommendation**
Represents a scheduled recommendation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>channel</td>
<td>ConnectApi.Recommendation.Channel</td>
<td>A way to tie recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are: • CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.</td>
<td>36.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>----------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>enabled</td>
<td>Boolean</td>
<td>Indicates whether scheduling is enabled. If true, the recommendation is enabled and appears in communities. If false, recommendations in feeds in the Salesforce mobile web aren’t removed, but no new recommendations appear. In Customer Service and Partner Central communities, disabled recommendations no longer appear.</td>
<td>35.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID of the scheduled recommendation.</td>
<td>35.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>The rank determining the order of this scheduled recommendation.</td>
<td>35.0</td>
</tr>
<tr>
<td>recommendation AudienceId</td>
<td>String</td>
<td>ID of the audience for the scheduled recommendation.</td>
<td>35.0</td>
</tr>
<tr>
<td>recommendation Definition Representation</td>
<td>ConnectApi.Recommendation Definition</td>
<td>Recommendation definition that this scheduled recommendation schedules.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ScheduledRecommendationPage

Represents a list of scheduled recommendations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>scheduledRecommendations</td>
<td>List&lt;ConnectApi.ScheduledRecommendation&gt;</td>
<td>A list of scheduled recommendations.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the Chatter REST API resource for the scheduled recommendation collection.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

### ConnectApi.SocialAccount

A social account on a social network.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>externalSocialAccountId</td>
<td>String</td>
<td>ID of the external social account, if available.</td>
<td>38.0</td>
</tr>
<tr>
<td>handle</td>
<td>String</td>
<td>Social handle, screen name, or alias that identifies this account.</td>
<td>36.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the account as defined by the account’s owner.</td>
<td>36.0</td>
</tr>
<tr>
<td>profileUrl</td>
<td>String</td>
<td>URL to the account’s profile.</td>
<td>36.0</td>
</tr>
<tr>
<td>socialPersonaId</td>
<td>String</td>
<td>ID of the social persona account, if the external social account ID isn’t available.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.SocialPostCapability

If a feed element has this capability, it can interact with a social post on a social network.

Subclass of ConnectApi.FeedElementCapabilities Class.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>author</td>
<td>ConnectApi.SocialAccount</td>
<td>Social account that authored the social post.</td>
<td>36.0</td>
</tr>
<tr>
<td>content</td>
<td>String</td>
<td>Content body of the social post.</td>
<td>36.0</td>
</tr>
<tr>
<td>deletedBy</td>
<td>ConnectApi.User Summary Class</td>
<td>User who deleted the social post.</td>
<td>38.0</td>
</tr>
<tr>
<td>hiddenBy</td>
<td>ConnectApi.User Summary Class</td>
<td>User who hid the social post.</td>
<td>41.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon Class</td>
<td>Icon of the social network.</td>
<td>36.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID associated with the social post Salesforce record.</td>
<td>36.0</td>
</tr>
<tr>
<td>isOutbound</td>
<td>Boolean</td>
<td>If true, the social post originated from the Salesforce application.</td>
<td>36.0</td>
</tr>
<tr>
<td>likedBy</td>
<td>String</td>
<td>External social account who liked the social post.</td>
<td>40.0</td>
</tr>
<tr>
<td>messageType</td>
<td>ConnectApi.SocialPost MessageType</td>
<td>Message type of the social post. Values are:</td>
<td>38.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Comment</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Direct</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Post</td>
<td></td>

<td>• PrivateMessage</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Reply</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Retweet</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Tweet</td>
<td></td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Title or heading of the social post.</td>
<td>36.0</td>
</tr>
<tr>
<td>postUrl</td>
<td>String</td>
<td>External URL to the social post on the social network.</td>
<td>36.0</td>
</tr>
<tr>
<td>provider</td>
<td>ConnectApi.SocialNetwork Provider</td>
<td>Social network that this social post belongs to. Values are:</td>
<td>36.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Facebook</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• GooglePlus</td>

</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recipient</td>
<td>ConnectApi. SocialAccount</td>
<td>Social account that is the recipient of the social post.</td>
<td>36.0</td>
</tr>
<tr>
<td>recipientId</td>
<td>String</td>
<td>ID of the recipient of the social post.</td>
<td>38.0</td>
</tr>
<tr>
<td>reviewScale</td>
<td>Double</td>
<td>Review scale of the social post.</td>
<td>40.0</td>
</tr>
<tr>
<td>reviewScore</td>
<td>Double</td>
<td>Review score of the social post.</td>
<td>40.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi. SocialPostStatus</td>
<td>Status of the social post.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

ConnectApi.FeedElementCapabilities Class

---

### ConnectApi.SocialPostStatus

The status of a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>message</td>
<td>String</td>
<td>Status message.</td>
<td>36.0</td>
</tr>
</tbody>
</table>
## ConnectApi.SocialPostStatusType

Status type. Values are:
- ApprovalPending
- ApprovalRecalled
- ApprovalRejected
- Deleted
- Failed
- Hidden
- Pending
- Sent
- Unknown

SEE ALSO:
- ConnectApi.SocialPostCapability

## ConnectApi.Stamp

A user stamp.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the stamp.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the stamp.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>imageUrl</td>
<td>String</td>
<td>Image URL of the stamp.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>Label of the stamp.</td>
<td>39.0–43.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.User Class

## ConnectApi.StatusCapability

If a feed post or comment has this capability, it has a status that determines its visibility.
Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityStatus</td>
<td>ConnectApi.FeedEntityStatus</td>
<td>Status of the feed post or comment. Values are: Draft—The feed post isn’t published but is visible to the author and users with Modify All Data or View All Data permission. Comments can’t be drafts.</td>
<td>37.0</td>
</tr>
</tbody>
</table>
### Available Version
- **PendingReview**—The feed post or comment isn’t approved yet and therefore isn’t published or visible.
- **Published**—The feed post or comment is approved and visible.

### isApprovableByMe
- **Type**: Boolean
- **Description**: Specifies whether the context user can change the status of the feed post or comment.
- **Available Version**: 37.0

SEE ALSO:
- `ConnectApi.CommentCapabilities`
- `ConnectApi.FeedElementCapabilities Class`

### ConnectApi.Subscription Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>community</td>
<td><code>ConnectApi.Reference</code></td>
<td>Information about the community in which the subscription exists</td>
<td>28.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>Subscription’s 18–character ID</td>
<td>28.0</td>
</tr>
<tr>
<td>subject</td>
<td><code>ConnectApi.Actor</code></td>
<td>Information about the parent, that is, the thing or person being followed</td>
<td>28.0</td>
</tr>
<tr>
<td>subscriber</td>
<td><code>ConnectApi.Actor</code></td>
<td>Information about the subscriber, that is, the person following this item</td>
<td>28.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Chatter REST API URL to this specific subscription</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.FollowerPage Class`
- `ConnectApi.FollowingPage Class`

### ConnectApi.SupportedEmojis

A collection of supported emojis.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>supportedEmojis</td>
<td><code>ConnectApi.EmojiCollection</code></td>
<td>A collection of supported emojis.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.TextSegment Class

Subclass of `ConnectApi.MessageSegment Class`
ConnectApi.TimeZone Class

The user's time zone as selected in the user’s personal settings in Salesforce. This value does not reflect a device's current location.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>gmtOffset</td>
<td>Double</td>
<td>Signed offset, in hours, from GMT</td>
<td>30.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Display name of this time zone</td>
<td>30.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.UserSettings Class

ConnectApi.Topic Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z</td>
<td>29.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the topic</td>
<td>29.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID</td>
<td>29.0</td>
</tr>
<tr>
<td>images</td>
<td>ConnectApi.TopicImages</td>
<td>Images associated with the topic</td>
<td>32.0</td>
</tr>
<tr>
<td>isBeingDeleted</td>
<td>Boolean</td>
<td>true if the topic is currently being deleted; false otherwise. After the topic is deleted, when attempting to retrieve the topic, the output is NOT_FOUND.</td>
<td>33.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the topic</td>
<td>29.0</td>
</tr>
<tr>
<td>nonLocalized Name</td>
<td>String</td>
<td>Non-localized name of the topic</td>
<td>36.0</td>
</tr>
<tr>
<td>talkingAbout</td>
<td>Integer</td>
<td>Number of people talking about this topic over the last two months, based on factors such as topic additions and comments on posts with the topic</td>
<td>29.0</td>
</tr>
</tbody>
</table>

ConnectApiTopicEndorsement Class

Represents one user endorsing another user for a single topic.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>endorsee</td>
<td>ConnectApiUserSummary</td>
<td>User being endorsed</td>
<td>30.0</td>
</tr>
<tr>
<td>endorsementId</td>
<td>String</td>
<td>18-character ID of the endorsement record</td>
<td>30.0</td>
</tr>
<tr>
<td>endorser</td>
<td>ConnectApiUserSummary</td>
<td>User performing the endorsement</td>
<td>30.0</td>
</tr>
<tr>
<td>topic</td>
<td>ConnectApiTopic</td>
<td>Topic the user is being endorsed for</td>
<td>30.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the resource for the endorsement record</td>
<td>30.0</td>
</tr>
</tbody>
</table>

ConnectApiTopicEndorsementCollection Class

A collection of topic endorsement response bodies.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>30.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>30.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>30.0</td>
</tr>
<tr>
<td>topicEndorsements</td>
<td>List&lt;ConnectApiTopic&gt;</td>
<td>List of topic endorsements</td>
<td>30.0</td>
</tr>
</tbody>
</table>
**ConnectApi.TopicEndorsementSummary**

Topic endorsement summary.

Subclass of `ConnectApi.UserActivitySummary`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>endorsementId</td>
<td>ID</td>
<td>ID of the topic endorsement.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**ConnectApi.TopicImages Class**

Images associated with a topic.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>coverImageUrl</td>
<td>String</td>
<td>URL to a topic’s cover image, which appears on the topic page. Both topics and managed topics can have cover images.</td>
<td>32.0</td>
</tr>
<tr>
<td>featuredImageUrl</td>
<td>String</td>
<td>URL to a managed topic’s featured image, which appears wherever you feature it, for example, on the communities home page.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
`ConnectApi.Topic Class`

**ConnectApi.TopicPage Class**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>29.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>29.0</td>
</tr>
<tr>
<td>topics</td>
<td>List&lt;ConnectApi.Topic&gt;</td>
<td>List of topics</td>
<td>29.0</td>
</tr>
</tbody>
</table>

**ConnectApi.TopicsCapability Class**

If a feed element has this capability, the context user can add topics to it. Topics help users organize and discover conversations.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canAssignTopics</td>
<td>Boolean</td>
<td><code>true</code> if a topic can be assigned to the feed element, <code>false</code> otherwise.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
## ConnectApi Namespace

### ConnectApi.TopicSuggestion Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>existingTopic</td>
<td>ConnectApi.Topic</td>
<td>Topic that already exists or null for a new topic</td>
<td>29.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Topic name</td>
<td>29.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.TopicSuggestionPage Class

### ConnectApi.TopicSuggestionPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>TopicSuggestions</td>
<td>List&lt;ConnectApi.TopicSuggestion&gt;</td>
<td>List of topic suggestions</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.TrackedChangeAttachment Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.TrackedChangesCapability is used.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changes</td>
<td>List&lt;ConnectApi.TrackedChangeItem&gt;</td>
<td>A list of tracked changes.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.TrackedChangeBundleCapability

If a feed element has this capability, it has a group of other feed elements aggregated into one feed element called a *bundle*. This type of bundle aggregates feed tracked changes.

Subclass of ConnectApi.BundleCapability Class.
### ConnectApi.TrackedChangeItem Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fieldName</td>
<td>String</td>
<td>The name of the field that was updated.</td>
<td>28.0</td>
</tr>
<tr>
<td>newValue</td>
<td>String</td>
<td>The new value of the field or null if the field length is long.</td>
<td>28.0</td>
</tr>
<tr>
<td>oldValue</td>
<td>String</td>
<td>The old value of the field or null if the field length is long.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.TrackedChangesCapability
- ConnectApi.TrackedChangeBundleCapability

### ConnectApi.TrackedChangesCapability

If a feed element has this capability, it contains all changes to a record for a single tracked change event.
Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changes</td>
<td>List&lt;ConnectApi.TrackedChangeItem&gt;</td>
<td>Collection of feed tracked changes.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FeedElementCapabilities Class

### ConnectApi.UnauthenticatedUser Class

Subclass of ConnectApi.Actor Class

No additional properties.
Instances of this class are used as the actor for feed items and comments posted by Chatter customers.

### ConnectApi.UnreadConversationCount Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasMore</td>
<td>Boolean</td>
<td>Specifies if there are more than 50 unread messages (true) or not (false)</td>
<td>29.0</td>
</tr>
</tbody>
</table>
ConnectApi.UpDownVoteCapability

If a feed post or comment has this capability, users can upvote or downvote it.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>downVoteCount</td>
<td>Long</td>
<td>Number of downvotes.</td>
<td>41.0</td>
</tr>
<tr>
<td>myVote</td>
<td>ConnectApi.UpDownVoteValue</td>
<td>Specifies the context user’s vote. Values are:</td>
<td>41.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Down</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• None</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Up</td>
<td></td>
</tr>
<tr>
<td>upVoteCount</td>
<td>Long</td>
<td>Number of upvotes.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.CommentCapabilities
ConnectApi.FeedElementCapabilities Class

ConnectApi.UpVoteSummary

Summary of an upvote.

Subclass of ConnectApi.UserFeedEntityActivitySummary

No additional properties.

ConnectApi.User Class

This class is abstract.

Subclass of ConnectApi.ActorWithId Class

Superclass of:
• ConnectApi.UserDetail Class
• ConnectApi.UserSummary Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>additionalLabel</td>
<td>String</td>
<td>An extra label for the user, for example, “Customer,” “Partner,” or “Acme Corporation.” If the user doesn’t have an extra label, the value is null.</td>
<td>30.0</td>
</tr>
<tr>
<td>communityNickname</td>
<td>String</td>
<td>User’s nickname in the community.</td>
<td>32.0</td>
</tr>
<tr>
<td>Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>-----------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>companyName</td>
<td>String</td>
<td>Name of the company. If your community allows access without logging in, the value is <code>null</code> for guest users.</td>
<td>28.0</td>
</tr>
<tr>
<td>displayName</td>
<td>String</td>
<td>User’s name that is displayed in the community. If nicknames are enabled, the nickname is displayed. If nicknames aren’t enabled, the full name is displayed.</td>
<td>32.0</td>
</tr>
<tr>
<td>firstName</td>
<td>String</td>
<td>User’s first name. In version 39.0 and later, if nicknames are enabled, <code>firstName</code> is <code>null</code>.</td>
<td>28.0</td>
</tr>
<tr>
<td>isChatterGuest</td>
<td>Boolean</td>
<td><code>true</code> if user is a Chatter customer; <code>false</code> otherwise.</td>
<td>28.0</td>
</tr>
<tr>
<td>isInThisCommunity</td>
<td>Boolean</td>
<td><code>true</code> if user is in the same community as the context user; <code>false</code> otherwise.</td>
<td>28.0</td>
</tr>
<tr>
<td>lastName</td>
<td>String</td>
<td>User’s last name. In version 39.0 and later, if nicknames are enabled, <code>lastName</code> is <code>null</code>.</td>
<td>28.0</td>
</tr>
<tr>
<td>outOfOffice</td>
<td>ConnectApi.OutOfOffice</td>
<td>Extra out-of-office message, if one exists, for the user.</td>
<td>40.0</td>
</tr>
<tr>
<td>photo</td>
<td>ConnectApi.Photo</td>
<td>Information about the user’s photos.</td>
<td>28.0</td>
</tr>
<tr>
<td>reputation</td>
<td>ConnectApi.Reputation</td>
<td>Reputation of the user.</td>
<td>32.0</td>
</tr>
<tr>
<td>stamps</td>
<td>List&lt;ConnectApi.Stamp&gt;</td>
<td>Collection of the user’s stamps. In version 44.0 and later, use SOQL to get a user’s stamps.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>User’s title. If your community allows access without logging in, the value is <code>null</code> for guest users.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
Available Version | Description | Type | Name
--- | --- | --- | ---
28.0 | Type of user. | Enum | userType

- ChatterGuest—User is an external user in a private group.
- ChatterOnly—User is a Chatter Free customer.
- Guest—User is unauthenticated.
- Internal—User is a standard organization member.
- Portal—User is an external user in a customer portal, partner portal, or community.
- System—User is Chatter Expert or a system user.
- Undefined—User is a user type that is a custom object.

### ConnectApi.UserActivitiesJob

User activities job.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>jobToken</td>
<td>String</td>
<td>Token that identifies the user activities job.</td>
<td>42.0</td>
</tr>
<tr>
<td>jobType</td>
<td>String</td>
<td>Type of user activities job. Value is export or purge.</td>
<td>42.0</td>
</tr>
<tr>
<td>message</td>
<td>String</td>
<td>Message describing the status and expected outcome of the job. When the job completes, you receive an email with information about the Salesforce file that contains ConnectApi.UserActivityCollection.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserActivityCollection

User activity collection.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityType</td>
<td>String</td>
<td>Type of user activity. Values are: Bookmark—User bookmarked a post.</td>

---

### ConnectApi.UserChatterSettings Class

A user’s global Chatter settings.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>defaultGroup</td>
<td>ConnectApi.GroupEmail Frequency Enum</td>
<td>The default frequency with which a user receives email from a group when they join it.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

---

### ConnectApi.UserDetail Class

Subclass of ConnectApi.User Class

Details about a user in an organization.

If the context user doesn’t have permission to see a property, its value is set to `null`.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aboutMe</td>
<td>String</td>
<td>Text from user's profile</td>
<td>28.0</td>
</tr>
<tr>
<td>address</td>
<td>ConnectApi.Address</td>
<td>User’s address</td>
<td>28.0</td>
</tr>
<tr>
<td>bannerPhoto</td>
<td>ConnectApi.BannerPhoto</td>
<td>User’s banner photo</td>
<td>36.0</td>
</tr>
<tr>
<td>chatterActivity</td>
<td>ConnectApi.ChatterActivity</td>
<td>Chatter activity statistics</td>
<td>28.0</td>
</tr>
<tr>
<td>chatterInfluence</td>
<td>ConnectApi.GlobalInfluence</td>
<td>User’s influence rank</td>
<td>28.0</td>
</tr>
<tr>
<td>email</td>
<td>String</td>
<td>User’s email address</td>
<td>28.0</td>
</tr>
<tr>
<td>followersCount</td>
<td>Integer</td>
<td>Number of users following this user</td>
<td>28.0</td>
</tr>
<tr>
<td>followingCounts</td>
<td>ConnectApi.FollowingCounts</td>
<td>Information about items the user is following</td>
<td>28.0</td>
</tr>
<tr>
<td>groupCount</td>
<td>Integer</td>
<td>Number of groups user is following</td>
<td>28.0</td>
</tr>
<tr>
<td>hasChatter</td>
<td>Boolean</td>
<td>true if user has access to Chatter; false otherwise</td>
<td>31.0</td>
</tr>
</tbody>
</table>
### ConnectApi.UserFeedEntityActivitySummary

User feed entity activity summary.

This class is abstract.

Subclass of **ConnectApi.UserActivitySummary**

Superclass of:

- ConnectApi.BookmarkSummary
- ConnectApi.ChatterActivitySummary
- ConnectApi.CompanyVerifySummary
- ConnectApi.DownVoteSummary
- ConnectApi.FeedEntityReadSummary
- ConnectApi.LikeSummary
- ConnectApi.MuteSummary
- ConnectApi.UpVoteSummary

#### Property Details

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityId</td>
<td>String</td>
<td>ID of the feed entity.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserGroupPage Class

A paginated list of groups the context user is a member of.
<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>groups</td>
<td>List&lt;ConnectApi.ChatterGroup Summary&gt;</td>
<td>List of groups</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or <code>null</code> if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of groups across all pages</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.UserOauthInfo**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>availableExternal EmailService</td>
<td>Connect.Oauth ProviderInfo</td>
<td>The available OAuth service provider.</td>
<td>37.0</td>
</tr>
<tr>
<td>isAuthenticated</td>
<td>Boolean</td>
<td>Specifies whether the user is authenticated (<code>true</code>) or not (<code>false</code>).</td>
<td>37.0</td>
</tr>
</tbody>
</table>

**ConnectApi.UserPage Class**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>Integer</td>
<td>Token identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>Integer</td>
<td>Token identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageToken</td>
<td>Integer</td>
<td>Token identifying the previous page, or <code>null</code> if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or <code>null</code> if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>users</td>
<td>List&lt;ConnectApi.UserDetail&gt;</td>
<td>List of user detail information. If the context user doesn’t have permission to see a property, the property is set to <code>null</code>.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
### ConnectApi.UserProfile Class
Details necessary to render a view of a user profile.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>capabilities</td>
<td>ConnectApi.UserCapabilities</td>
<td>The context user’s capabilities specific to the subject user’s profile</td>
<td>29.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The ID of the user attached to the profile</td>
<td>29.0</td>
</tr>
<tr>
<td>tabs</td>
<td>List&lt;ConnectApi.UserProfileTab&gt;</td>
<td>The tabs visible to the context user specific to the subject user’s profile</td>
<td>29.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL of the user’s profile</td>
<td>29.0</td>
</tr>
<tr>
<td>userDetails</td>
<td>ConnectApi.UserDetail</td>
<td>The details about the user attached to the profile</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserProfileTab Class
Information about a profile tab.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The tab’s unique identifier or 18–character ID</td>
<td>29.0</td>
</tr>
<tr>
<td>isDefault</td>
<td>Boolean</td>
<td>Specifies if the tab appears first when clicking the user profile (true) or not (false)</td>
<td>29.0</td>
</tr>
<tr>
<td>tabType</td>
<td>ConnectApi.UserProfileTabType Enum</td>
<td>Specifies the type of tab</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td>• CustomVisualForce—Tab that displays data from a Visualforce page.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• CustomWeb—Tab that displays data from any external web-based application or web page.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Element—Tab that displays generic content inline.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Feed—Tab that displays the Chatter feed.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Overview—Tab that displays user details.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>tabUrl</td>
<td>String</td>
<td>The current tab’s content URL (for non built-in tab types)</td>
<td>29.0</td>
</tr>
</tbody>
</table>

- ConnectApi.ZonePage Class
### ConnectApi Namespace

 Enums specific to the ConnectApi namespace.

 ConnectApi enums inherit all properties and methods of Apex enums.

 Enums are not versioned. Enum values are returned in all API versions. Clients should handle values they don’t understand gracefully.

#### ConnectApi Enums

<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectApi.ActionLinkExecutionsAllowed</td>
<td>Number of times an action link can be executed.</td>
</tr>
<tr>
<td>ConnectApi.ActionLinkType</td>
<td>Type of action link.</td>
</tr>
</tbody>
</table>

#### ConnectApi.ZoneSearch ResultType Enum

- **Article**—Search results contain only articles.
- **Question**—Search results contain only questions.

#### ConnectApi.ZoneSearchPage Class

## ConnectApi Namespace

### Enum

<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectApi.ActivitySharingTypeEnum</td>
<td>Type of sharing operation.</td>
</tr>
<tr>
<td>Everyone</td>
<td>The activity is shared with everyone.</td>
</tr>
<tr>
<td>MyGroups</td>
<td>The activity is shared only with a selection of the context user’s groups.</td>
</tr>
<tr>
<td>OnlyMe</td>
<td>The activity is private.</td>
</tr>
<tr>
<td>ConnectApi.ArticleTopicJobType</td>
<td>Type of operation to perform on articles and topics.</td>
</tr>
<tr>
<td>AssignTopicsToArticle</td>
<td>Assign topics to articles in a data category.</td>
</tr>
<tr>
<td>UnassignTopicsFromArticle</td>
<td>Unassign topics from articles in a data category.</td>
</tr>
<tr>
<td>ConnectApi.BannerStyle</td>
<td>Decorates a feed item with a color and set of icons.</td>
</tr>
<tr>
<td>Announcement</td>
<td>An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it’s deleted or replaced by another announcement.</td>
</tr>
<tr>
<td>ConnectApi.BundleType</td>
<td>Type of bundle.</td>
</tr>
<tr>
<td>GenericBundle</td>
<td>A bundle that contains no additional information and is just a collection of feed elements.</td>
</tr>
<tr>
<td>TrackedChanges</td>
<td>A bundle that represents a collection of feed tracked changes. The bundle includes summary information about the feed tracked changes that make up the bundle.</td>
</tr>
<tr>
<td>ConnectApi.CaseActorType</td>
<td>Type of user who made the comment.</td>
</tr>
<tr>
<td>Customer</td>
<td>if a Chatter customer made the comment</td>
</tr>
<tr>
<td>CustomerService</td>
<td>if a service representative made the comment</td>
</tr>
<tr>
<td>ConnectApi.CaseCommentEventType</td>
<td>Event type of a comment in Case Feed.</td>
</tr>
<tr>
<td>NewInternal</td>
<td>A case comment that has newly been marked Internal Only.</td>
</tr>
<tr>
<td>NewPublished</td>
<td>A newly published case comment.</td>
</tr>
<tr>
<td>NewPublishedByCustomer</td>
<td>A case comment by a customer that was newly published.</td>
</tr>
<tr>
<td>PublishExisting</td>
<td>An existing case comment that was republished.</td>
</tr>
<tr>
<td>PublishExistingByCustomer</td>
<td>An existing case comment by a customer that was republished.</td>
</tr>
<tr>
<td>UnpublishExistingByCustomer</td>
<td>An existing case comment by a customer that was unpublished.</td>
</tr>
<tr>
<td>UnpublishExisting</td>
<td>An existing case comment that was unpublished.</td>
</tr>
</tbody>
</table>

**Note:** Unfortunately, this typo is in the code, not the documentation. Use this spelling in your code.

<p>| ConnectApi.CommentType                    | Type of comment.                                                          |
| ContentComment                            | Comment holds a content capability.                                       |</p>
<table>
<thead>
<tr>

<tr>
<td>ConnectApi.DatacloudUserType</td>
<td>Type of user.</td>
</tr>
<tr>
<td>• Monthly—A user type that’s assigned monthly point limits for purchasing Data.com records. Only the assigned user can use monthly points. Points expire at the end of the month. Monthly is the default setting for DatacloudUserType.</td>
<td></td>
</tr>
<tr>
<td>• Listpool—A user type that allows users to draw from a pool of points to purchase Data.com records.</td>
<td></td>
</tr>
<tr>
<td>ConnectApi.DatacloudImport.StatusTypeEnum</td>
<td>Status of the import.</td>
</tr>
<tr>
<td>• Success—Indicates that selected records were added to the organization’s CRM.</td>
<td></td>
</tr>
<tr>
<td>• Duplicate—Marks a record that is already in the organization’s CRM. The API determines whether an organization allows the addition of duplicate records in its CRM.</td>
<td></td>
</tr>
<tr>
<td>• Error—Indicates that the selected records weren’t added to the organization’s CRM.</td>
<td></td>
</tr>
<tr>
<td>ConnectApi.DigestPeriod</td>
<td>Period of time that is included in a Chatter email digest.</td>
</tr>
<tr>
<td>• DailyDigest—The email includes up to the 50 latest posts from the previous day.</td>
<td></td>
</tr>
<tr>
<td>Enum</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>WeeklyDigest</td>
<td>The email includes up to the 50 latest posts from the previous week.</td>
</tr>
<tr>
<td>ConnectApi.EmailMessage Direction</td>
<td>Direction of an email message on a case.</td>
</tr>
<tr>
<td>Inbound</td>
<td>An inbound message (sent by a customer).</td>
</tr>
<tr>
<td>Outbound</td>
<td>An outbound message (sent to a customer by a support agent).</td>
</tr>
<tr>
<td>ConnectApi.ExtensionInformationType</td>
<td>Information type of the extension.</td>
</tr>
<tr>
<td>Lightning</td>
<td></td>
</tr>
<tr>
<td>ConnectApi.FeedCommentSortOrder</td>
<td>Order of comments.</td>
</tr>
<tr>
<td>CreatedDateLatestAsc</td>
<td>Sorts by most recently created comments in ascending order.</td>
</tr>
<tr>
<td>CreatedDateOldestAsc</td>
<td>Sorts by oldest comments in ascending order.</td>
</tr>
<tr>
<td>Relevance</td>
<td>Sorts by most relevant content.</td>
</tr>
<tr>
<td>ConnectApi.FeedDensity</td>
<td>Density of the feed.</td>
</tr>
<tr>
<td>AllUpdates</td>
<td>Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.</td>
</tr>
<tr>
<td>FewerUpdates</td>
<td>Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.</td>
</tr>
<tr>
<td>ConnectApi.FeedElementCapability Type</td>
<td>Capabilities of a feed element in API versions 31.0 and later. If a capability exists on a feed element, the capability is available, even if the value doesn’t exist or is null. If the capability doesn’t exist, it isn’t available.</td>
</tr>
<tr>
<td>AssociatedActions</td>
<td>The feed element includes information about actions associated with it.</td>
</tr>
<tr>
<td>Approval</td>
<td>The feed element includes information about an approval.</td>
</tr>
<tr>
<td>Banner</td>
<td>The body of the feed element has an icon and border.</td>
</tr>
<tr>
<td>Bookmarks</td>
<td>The context user can bookmark the feed element. Bookmarked feed elements are visible in the bookmarks feed.</td>
</tr>
<tr>
<td>Bundle</td>
<td>The feed element has a group of other feed elements that display as a bundle in the feed. The bundle type determines the additional data associated with the bundle.</td>
</tr>
<tr>
<td>Canvas</td>
<td>The feed element renders a canvas app.</td>
</tr>
<tr>
<td>CaseComment</td>
<td>The feed element has a case comment in the case feed.</td>
</tr>
<tr>
<td>ChatterLikes</td>
<td>The context user can like the feed element.</td>
</tr>
<tr>
<td>Close</td>
<td>The feed element can’t be edited, commented on, or deleted. If the feed element is a poll, it can’t be voted on.</td>
</tr>
<tr>
<td>Comments</td>
<td>The context user can add comments to the feed element.</td>
</tr>
<tr>
<td>Content</td>
<td>The feed element has a file.</td>
</tr>
<tr>
<td>DashboardComponentSnapshot</td>
<td>The feed element has a dashboard component snapshot.</td>
</tr>
</tbody>
</table>
- **DirectMessage**—The feed element is a direct message.
- **Edit**—Users who have permission can edit the feed element.
- **EmailMessage**—The feed element has an email message from a case.
- **EnhancedLink**—The feed element has a link that can contain supplemental information like an icon, a title, and a description.
- **Extensions**—The feed element has one or more extension attachments.
- **FeedEntityShare**—The feed element has a feed entity shared with it.
- **Files**—The feed element has one or more file attachments.
- **Interactions**—The feed element has information about user interactions.
- **Link**—The feed element has a URL.
- **MediaReferences**—The feed element has one or more media references.
- **Moderation**—Users in a community can flag the feed element for moderation.
- **Mute**—The context user can mute the feed element.
- **Origin**—A feed action created the feed element.
- **Pin**—Users who have permission can pin the feed element.
- **Poll**—The feed element has poll voting.
- **QuestionAndAnswers**—The feed element has a question, and users can add answers to the feed element instead of comments. Users can also select the best answer.
- **ReadBy**—The context user can mark the feed element as read.
- **Recommendations**—The feed element has a recommendation.
- **Record**—The comment has a record attachment.
- **RecordSnapshot**—The feed element has all the snapshot fields of a record for a single create record event.
- **SocialPost**—The feed element can interact with a social post on a social network.
- **Status**—The feed element has a status that determines its visibility.
- **Topics**—The context user can add topics to the feed element.
- **TrackedChanges**—The feed element has all changes to a record for a single tracked change event.
- **UpDownVote**—Users can upvote or downvote the feed element.
- **Verified**—Users who have permission can mark a comment as verified or unverified.

Feed elements are the top-level objects that a feed contains. The feed element type describes the characteristics of that feed element.

- **Bundle**—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
- **FeedItem**—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Recommendation—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.</td>
<td></td>
</tr>
<tr>
<td>ConnectApi.FeedEntity Status</td>
<td>Status of the feed post or comment.</td>
</tr>
<tr>
<td>• Draft—The feed post isn’t published but is visible to the author and users with Modify All Data or View All Data permission. Comments can’t be drafts.</td>
<td></td>
</tr>
<tr>
<td>• PendingReview—The feed post or comment isn’t approved yet and therefore isn’t published or visible.</td>
<td></td>
</tr>
<tr>
<td>• Published—The feed post or comment is approved and visible.</td>
<td></td>
</tr>
<tr>
<td>ConnectApi.FeedFavorite Type</td>
<td>Origin of the feed favorite.</td>
</tr>
<tr>
<td>• ListView</td>
<td></td>
</tr>
<tr>
<td>• Search</td>
<td></td>
</tr>
<tr>
<td>• Topic</td>
<td></td>
</tr>
<tr>
<td>ConnectApi.FeedFilter</td>
<td>Filter value for a feed.</td>
</tr>
<tr>
<td>• AllQuestions—Feed elements that are questions.</td>
<td></td>
</tr>
<tr>
<td>• AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.</td>
<td></td>
</tr>
<tr>
<td>• CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.</td>
<td></td>
</tr>
<tr>
<td>• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.</td>
<td></td>
</tr>
<tr>
<td>• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.</td>
<td></td>
</tr>
<tr>
<td>• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.</td>
<td></td>
</tr>
<tr>
<td>• SolvedQuestions—Feed elements that are questions and that have a best answer.</td>
<td></td>
</tr>
<tr>
<td>• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.</td>
<td></td>
</tr>
<tr>
<td>• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.</td>
<td></td>
</tr>
<tr>
<td>• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.</td>
<td></td>
</tr>
<tr>
<td>• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.</td>
<td></td>
</tr>
</tbody>
</table>
### Description
Attachment type for feed item output objects.

- **Approval**—A feed item requiring approval.
- **BasicTemplate**—A feed item with a generic rendering of an image, link, and title.
- **Canvas**—A feed item that contains the metadata to render a link to a canvas app.
- **CaseComment**—A feed item created from a comment to a case record.
- **CaseComment**—A feed item created from a comment to a case record.
- **Content**—A feed item with a file attached.
- **DashboardComponent**—A feed item with a dashboard attached.
- **EmailMessage**—An email attached to a case record in Case Feed.
- **Link**—A feed item with a URL attached.
- **Poll**—A feed item with a poll attached.
- **Question**—A feed item with a question attached.
- **RecordSnapshot**—The feed item attachment contains a view of a record at a single `ConnectApi.FeedItemType.CreateRecordEvent` event.
- **TrackedChange**—All changes to a record for a single `ConnectApi.FeedItemType.TrackedChange` event.

### Type of feed item

<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ConnectApi.FeedItemType</code></td>
<td>Type of feed item.</td>
</tr>
<tr>
<td><code>ActivityEvent</code></td>
<td>Feed item generated in Case Feed when an event or task associated with a parent record with a feed enabled is created or updated.</td>
</tr>
<tr>
<td><code>AdvancedTextPost</code></td>
<td>A feed item with advanced text formatting, such as a group announcement post.</td>
</tr>
<tr>
<td><code>ApprovalPost</code></td>
<td>Feed item with an approval capability. Approvers can act on the feed item parent.</td>
</tr>
<tr>
<td><code>AttachArticleEvent</code></td>
<td>Feed item generated when an article is attached to a case in Case Feed.</td>
</tr>
<tr>
<td><code>BasicTemplateFeedItem</code></td>
<td>Feed item with an enhanced link capability.</td>
</tr>
<tr>
<td><code>CallLogPost</code></td>
<td>Feed item generated when a call log is saved to a case in Case Feed.</td>
</tr>
<tr>
<td><code>CanvasPost</code></td>
<td>Feed item generated by a canvas app in the publisher or from Chatter REST API or Chatter in Apex. The post itself is a link to a canvas app.</td>
</tr>
<tr>
<td><code>CaseCommentPost</code></td>
<td>Feed item generated when a case comment is saved in Case Feed.</td>
</tr>
<tr>
<td><code>ChangeStatusPost</code></td>
<td>Feed item generated when the status of a case is changed in Case Feed.</td>
</tr>
<tr>
<td><code>ChatTranscriptionPost</code></td>
<td>Feed item generated in Case Feed when a Live Agent chat transcript is saved to a case.</td>
</tr>
<tr>
<td><code>CollaborationGroupCreated</code></td>
<td>Feed item generated when a new public group is created. Contains a link to the new group.</td>
</tr>
<tr>
<td><code>CollaborationGroupUnarchived</code></td>
<td>Deprecated. Feed item generated when an archived group is activated.</td>
</tr>
<tr>
<td><code>ContentPost</code></td>
<td>Feed item with a content capability.</td>
</tr>
</tbody>
</table>
### Enum

<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CreateRecordEvent</td>
<td>Feed item that describes a record created in the publisher.</td>
</tr>
<tr>
<td>DashboardComponentAlert</td>
<td>Feed item with a dashboard alert.</td>
</tr>
<tr>
<td>DashboardComponentSnapshot</td>
<td>Feed item with a dashboard component snapshot capability.</td>
</tr>
<tr>
<td>EmailMessageEvent</td>
<td>Feed item generated when an email is sent from a case in Case Feed.</td>
</tr>
<tr>
<td>FacebookPost</td>
<td>Deprecated. Feed item generated when a Facebook post is created from a case in Case Feed.</td>
</tr>
<tr>
<td>LinkPost</td>
<td>Feed item with a link capability.</td>
</tr>
<tr>
<td>MilestoneEvent</td>
<td>Feed item generated when a case milestone is either completed or reaches a violation status. Contains a link to the case milestone.</td>
</tr>
<tr>
<td>PollPost</td>
<td>Feed item with a poll capability. Viewers of the feed item are allowed to vote on the options in the poll.</td>
</tr>
<tr>
<td>ProfileSkillPost</td>
<td>Feed item generated when a skill is added to a user’s profile.</td>
</tr>
<tr>
<td>QuestionPost</td>
<td>Feed item generated when a question is asked.</td>
</tr>
<tr>
<td>ReplyPost</td>
<td>Feed item generated by a Chatter Answers reply.</td>
</tr>
<tr>
<td>RypplePost</td>
<td>Feed item generated when a user posts thanks.</td>
</tr>
<tr>
<td>SocialPost</td>
<td>Feed item generated when a social post is created from a case in Case Feed.</td>
</tr>
<tr>
<td>TextPost</td>
<td>Feed item containing text only.</td>
</tr>
<tr>
<td>TrackedChange</td>
<td>Feed item created when one or more fields on a record have been changed.</td>
</tr>
<tr>
<td>UserStatus</td>
<td>Deprecated. A user’s post to their own profile.</td>
</tr>
</tbody>
</table>

### ConnectApi.FeedItem VisibilityType

- **AllUsers** — Visibility is not limited to internal users.
- **InternalUsers** — Visibility is limited to internal users.

### ConnectApi.FeedSortOrder

- **CreatedDateAsc** — Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc** — Sorts by most recent creation date.
- **LastModifiedDateDesc** — Sorts by most recent activity.
- **MostViewed** — Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance** — Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectApi.FeedType</td>
<td>Type of feed.</td>
</tr>
<tr>
<td>Bookmarks</td>
<td>Contains all feed items saved as bookmarks by the context user.</td>
</tr>
<tr>
<td>Company</td>
<td>Contains all feed items except feed items of type TrackedChange. To see the feed item, the user must have sharing access to its parent.</td>
</tr>
<tr>
<td>DirectMessageModeration</td>
<td>Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Communities Chatter Messages permissions.</td>
</tr>
<tr>
<td>DirectMessages</td>
<td>Contains all feed items of the context user's direct messages.</td>
</tr>
<tr>
<td>Draft</td>
<td>Contains all the feed items that the context user drafted.</td>
</tr>
<tr>
<td>Files</td>
<td>Contains all feed items that contain files posted by people or groups that the context user follows.</td>
</tr>
<tr>
<td>Filter</td>
<td>Contains the news feed filtered to contain feed items whose parent is a specified object type.</td>
</tr>
<tr>
<td>Groups</td>
<td>Contains all feed items from all groups the context user either owns or is a member of.</td>
</tr>
<tr>
<td>Home</td>
<td>Contains all feed items associated with any managed topic in a community.</td>
</tr>
<tr>
<td>Landing</td>
<td>Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren't many personalized feed items.</td>
</tr>
<tr>
<td>Moderation</td>
<td>Contains all feed items that are flagged for moderation, except direct messages. The Communities Moderation feed is available only to users with Moderate Community Feeds permissions.</td>
</tr>
<tr>
<td>Mute</td>
<td>Contains all feed items that the context user muted.</td>
</tr>
<tr>
<td>News</td>
<td>Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user. Contains every feed item and comment that mentions the context user or that mentions a group the context user is a member of.</td>
</tr>
<tr>
<td>PendingReview</td>
<td>Contains all feed items and comments that are pending review.</td>
</tr>
<tr>
<td>People</td>
<td>Contains all feed items posted by all people the context user follows.</td>
</tr>
<tr>
<td>Record</td>
<td>Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user’s record feed.</td>
</tr>
<tr>
<td>Streams</td>
<td>Contains all feed items for any combination of up to 25 feed-enabled entities, such as people, groups, and records, that the context user subscribes to in a stream.</td>
</tr>
<tr>
<td>To</td>
<td>Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.</td>
</tr>
<tr>
<td>Topics</td>
<td>Contains all feed items that include the specified topic.</td>
</tr>
<tr>
<td>UserProfile</td>
<td>Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention...</td>
</tr>
</tbody>
</table>
### Enum | Description
--- | ---
ConnectApi.FieldChangeValueType | Value type of a field change.  
- **NewValue**—A new value  
- **OldValue**—An old value

ConnectApi.FilePreviewFormat | Format of the file preview.  
- **Jpg**—Preview format is JPG.  
- **Pdf**—Preview format is PDF.  
- **Svg**—Preview format is compressed SVG.  
- **Thumbnail**—Preview format is 240 x 180 PNG.  
- **ThumbnailBig**—Preview format is 720 x 480 PNG.  
- **ThumbnailTiny**—Preview format is 120 x 90 PNG.

ConnectApi.FilePreviewStatus | Availability status of the file preview.  
- **Available**—Preview is available.  
- **InProgress**—Preview is being processed.  
- **NotAvailable**—Preview is unavailable.  
- **NotScheduled**—Generation of the preview isn’t scheduled yet.

ConnectApi.FilePublishStatus | Publish status of the file.  
- **PendingAccess**—File is pending publishing.  
- **PrivateAccess**—File is private.  
- **PublicAccess**—File is public.

ConnectApi.FileSharingOption | Sharing option of the file.  
- **Allowed**—Resharing of the file is allowed.  
- **Restricted**—Resharing of the file is restricted.

- **None**—File is visible to anyone with record access.  
- **PrivateOnRecords**—File is private on records.

ConnectApi.FileSharingType | Sharing role of the file.  
- **Admin**—Owner permission, but doesn’t own the file.  
- **Collaborator**—Viewer permission, and can edit, change permissions, and upload a new version of a file.  
- **Owner**—Collaborator permission, and can make a file private, and delete a file.  
- **Viewer**—Can view, download, and share a file.  
- **WorkspaceManaged**—Permission controlled by the library.

**ConnectApi.HttpRequestMethod**

- **HttpDelete**—Returns HTTP 204 on success. Response body or output class is empty.
- **HttpGet**—Returns HTTP 200 on success.
- **HttpHead**—Returns HTTP 200 on success. Response body or output class is empty.
- **HttpPatch**—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.
- **HttpPost**—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.
- **HttpPut**—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty.

**ConnectApi.LinkMetadataSource**

- **None**—Link metadata wasn’t retrieved.
- **Sfdc**—Salesforce is the source.

**ConnectApi.LinkMetadataType**

- **Error**—Link metadata couldn’t be retrieved.
- **Link**—Represents a link.
- **None**—Link metadata wasn’t retrieved because the link isn’t a whitelisted domain.
- **Photo**—Represents a photo.
- **Rich**—Represents rich content, typically HTML content.
- **Unknown**—Link metadata was retrieved, but the type is unknown.
- **Video**—Represents a video.

**ConnectApi.MaintenanceType**

- **Downtime**—Downtime maintenance.
- **GenerallyAvailable**—Maintenance with generally available mode.
- **MaintenanceWithDowntime**—Scheduled maintenance with downtime.
- **ReadOnly**—Maintenance with read-only mode.

**ConnectApi.ManagedTopicType**

- **Content**—Topics that are associated with native content.
- **Featured**—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
- **Navigational**—Topics that display in a navigational menu in the community.

| ConnectApi.
OperationType                  | Operation to carry out on the file.                                         |
|                                          | • Add—Adds the file to the feed element.                                   |
|                                          | • Remove—Removes the file from the feed element.                            |
| ConnectApi.
PlatformAction
GroupCategory | Location of an action link group on an associated feed element.             |
|                                          | • Primary—The action link group is displayed in the body of the feed element.|
|                                          | • Overflow—The action link group is displayed in the overflow menu of the feed element.|
| ConnectApi.
PlatformActionStatus | Status of the action.                                                      |
|                                          | • FailedStatus—The action link execution failed.                           |
|                                          | • NewStatus—The action link is ready to be executed. Available for Download and Ui action links only.|
|                                          | • PendingStatus—The action link is executing. Choosing this value triggers the API call for Api and ApiAsync action links.|
|                                          | • SuccessfulStatus—The action link executed successfully.                  |
| ConnectApi.
PlatformActionType                | Type of platform action.                                                   |
|                                          | • ActionLink—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce UI.|
|                                          | • CustomButton—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.|
|                                          | • ProductivityAction—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can’t edit or delete productivity actions.|
|                                          | • QuickAction—A global or object-specific action.                          |
|                                          | • StandardButton—A predefined Salesforce button such as New, Edit, or Delete.|
| ConnectApi.
RecommendationActionType | Action to take on a recommendation.                                         |
<p>|                                          | • follow—Follow a file, record, topic, or user.                            |
|                                          | • join—Join a group.                                                       |
|                                          | • view—View a file, group, article, record, user, custom, or static recommendation. |</p>
<table>

### ConnectApi Exceptions

The `ConnectApi` namespace contains exception classes.

All exceptions classes support built-in methods for returning the error message and exception type. See `Exception Class and Built-In Exceptions` on page 2649.

The `ConnectApi` namespace contains these exceptions:

<table>
<thead>
<tr>
<th>Exception</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectApi.ConnectApiException</td>
<td>Any logic error in the way your application is utilizing <code>ConnectApi</code> code. This is equivalent to receiving a 400 error from Chatter REST API.</td>
</tr>
<tr>
<td>ConnectApi.NotFoundException</td>
<td>Any issues with the specified resource being found. This is equivalent to receiving a 404 error from Chatter REST API.</td>
</tr>
<tr>
<td>ConnectApi.RateLimitException</td>
<td>When you exceed the rate limit. This is equivalent to receiving a 503 Service Unavailable error from Chatter REST API.</td>
</tr>
</tbody>
</table>
Database Namespace

The Database namespace provides classes used with DML operations.

The following are the classes in the Database namespace.

IN THIS SECTION:

Batchable Interface
The class that implements this interface can be executed as a batch Apex job.

BatchableContext Interface
Represents the parameter type of a batch job method and contains the batch job ID. This interface is implemented internally by Apex.

DeletedRecord Class
Contains information about a deleted record.

DeleteResult Class
Represents the result of a delete DML operation returned by the Database.delete method.

DMLOptions Class
Enables you to set options related to DML operations.

DmlOptions.AssignmentRuleHeader Class
Enables setting assignment rule options.

DMLOptions.DuplicateRuleHeader Class
Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

DMLOptions.EmailHeader Class
Enables setting email options.

DuplicateError Class
Contains information about an error that occurred when an attempt was made to save a duplicate record. Use if your organization has set up duplicate rules, which are part of the Duplicate Management feature.

EmptyRecycleBinResult Class
The result of the emptyRecycleBin DML operation returned by the Database.emptyRecycleBin method.

Error Class
Represents information about an error that occurred during a DML operation when using a Database method.

GetDeletedResult Class
Contains the deleted records retrieved for a specific sObject type and time window.

GetUpdatedResult Class
Contains the result for the Database.getUpdated method call.

LeadConvert Class
Contains information used for lead conversion.

LeadConvertResult Class
The result of a lead conversion.

MergeResult Class
Contains the result of a merge Database method operation.
QueryLocator Class
Represents the record set returned by Database.getQueryLocator and used with Batch Apex.

QueryLocatorIterator Class
Represents an iterator over a query locator record set.

SaveResult Class
The result of an insert or update DML operation returned by a Database method.

UndeleteResult Class
The result of an undelete DML operation returned by the Database.undelete method.

UpsertResult Class
The result of an upsert DML operation returned by the Database.upsert method.

Batchable Interface
The class that implements this interface can be executed as a batch Apex job.

Namespace
Database

SEE ALSO:
Using Batch Apex

Batchable Methods
The following are methods for Batchable.

IN THIS SECTION:
execute(jobId, recordList)
Gets invoked when the batch job executes and operates on one batch of records. Contains or calls the main execution logic for the batch job.

finish(jobId)
Gets invoked when the batch job finishes. Place any clean up code in this method.

start(jobId)
Gets invoked when the batch job starts. Returns the record set as an iterable that will be batched for execution.

execute(jobId, recordList)
Gets invoked when the batch job executes and operates on one batch of records. Contains or calls the main execution logic for the batch job.

Signature
public Void execute(Database.BatchableContext jobId, List<sObject> recordList)
Parameters

jobId
Type: Database.BatchableContext
Contains the job ID.

recordList
Type: List<sObject>
Contains the batch of records to process.

Return Value
Type: Void

**finish(jobId)**
Gets invoked when the batch job finishes. Place any clean up code in this method.

Signature

```java
public Void finish(Database.BatchableContext jobId)
```

Parameters

jobId
Type: Database.BatchableContext
Contains the job ID.

Return Value
Type: Void

**start(jobId)**
Gets invoked when the batch job starts. Returns the record set as an iterable that will be batched for execution.

Signature

```java
public System.Iterable start(Database.BatchableContext jobId)
```

Parameters

jobId
Type: Database.BatchableContext
Contains the job ID.

Return Value
Type: System.Iterable
**start** *(jobId)*

Gets invoked when the batch job starts. Returns the record set as a QueryLocator object that will be batched for execution.

**Signature**

```java
public Database.QueryLocator start(Database.BatchableContext jobId)
```

**Parameters**

**jobId**

Type: `Database.BatchableContext`  
Contains the job ID.

**Return Value**

Type: `Database.QueryLocator`

**BatchableContext Interface**

Represents the parameter type of a batch job method and contains the batch job ID. This interface is implemented internally by Apex.

**Namespace**

`Database`

**SEE ALSO:**

- `Batchable Interface`

**BatchableContext Methods**

The following are methods for `BatchableContext`.

**IN THIS SECTION:**

- `getChildJobId()`  
  Returns the ID of the current batch job chunk that is being processed.

- `getJobId()`  
  Returns the batch job ID.

**getChildJobId()**

Returns the ID of the current batch job chunk that is being processed.

**Signature**

```java
public Id getChildJobId()
```
Return Value
Type: ID

**getJobId()**

Returns the batch job ID.

Signature

```java
public Id getJobId()
```

Return Value
Type: ID

**DeletedRecord Class**

Contains information about a deleted record.

**Namespace**

*Database*

**Usage**

The `getDeletedRecords` method of the `Database.GetDeletedResult` class returns a list of `Database.DeletedRecord` objects. Use the methods in the `Database.DeletedRecord` class to retrieve details about each deleted record.

**DeletedRecord Methods**

The following are methods for `DeletedRecord`. All are instance methods.

**IN THIS SECTION:**

- `getDeletedDate()`
  - Returns the deleted date of this record.

- `getId()`
  - Returns the ID of a record deleted within the time window specified in the `Database.getDeleted` method.

**getDeletedDate()**

Returns the deleted date of this record.

Signature

```java
public Date getDeletedDate()
```
Return Value
Type: Date

**getId()**

Returns the ID of a record deleted within the time window specified in the Database.getDeleted method.

**Signature**

```java
public Id getId()
```

Return Value
Type: ID

**DeleteResult Class**

Represents the result of a delete DML operation returned by the Database.delete method.

**Namespace**

Database

**Usage**

An array of Database.DeleteResult objects is returned with the `delete` database method. Each element in the DeleteResult array corresponds to the sObject array passed as the `sObject[]` parameter in the `delete` Database method; that is, the first element in the DeleteResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the DeleteResult array contains a single element.

**Example**

The following example shows how to obtain and iterate through the returned Database.DeleteResult objects. It deletes some queried accounts using Database.delete with a false second parameter to allow partial processing of records on failure. Next, it iterates through the results to determine whether the operation was successful or not for each record. It writes the ID of every record that was processed successfully to the debug log, or error messages and fields of the failed records.

```java
// Query the accounts to delete
Account[] accts = [SELECT Id from Account WHERE Name LIKE 'Acme%'];
// Delete the accounts
Database.DeleteResult[] drList = Database.delete(accts, false);

// Iterate through each returned result
for(Database.DeleteResult dr : drList) {
    if (dr.isSuccess()) {
        // Operation was successful, so get the ID of the record that was processed
        System.debug('Successfully deleted account with ID: ' + dr.getId());
    }
    else {
        // Operation failed, so get all errors
        for(Database.Error err : dr.getErrors()) {
```
System.debug('The following error has occurred.');
System.debug(err.getStatusCode() + ': ' + err.getMessage());
System.debug('Account fields that affected this error: ' + err.getFields());
}
}
}

DeleteResult Methods
The following are methods for DeleteResult. All are instance methods.

IN THIS SECTION:

getErrors()
If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

getId()
Returns the ID of the sObject you were trying to delete.

isSuccess()
A Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

getErrors()
If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

Signature
public Database.Error[] getErrors()

Return Value
Type: Database.Error[]

getId()
Returns the ID of the sObject you were trying to delete.

Signature
public ID getId()

Return Value
Type: ID

Usage
If this field contains a value, the object was successfully deleted. If this field is empty, the operation was not successful for that object.
### isSuccess()

A Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

**Signature**

`public Boolean isSuccess()`

**Return Value**

Type: `Boolean`

### DMLOptions Class

Enables you to set options related to DML operations.

**Namespace**

`Database`

**Usage**

`Database.DMLOptions` is only available for Apex saved against API versions 15.0 and higher. DMLOptions settings take effect only for record operations performed using Apex DML and not through the Salesforce user interface. The DMLOptions class has three child options.

#### DML Child Options

- **DmlOptions.AssignmentRuleHeader**—Enables setting assignment rule options.
- **DmlOptions.DuplicateRuleHeader**—Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.
- **DmlOptions.EmailHeader**—Enables setting email options.

#### DmlOptions Properties

The following are properties for `DmlOptions`.

**IN THIS SECTION:**

- **allowFieldTruncation**
  Specifies the truncation behavior of large strings.
- **assignmentRuleHeader**
  Specifies the assignment rule to be used when creating a case or lead.
- **emailHeader**
  Specifies additional information regarding the automatic email that gets sent when an event occurs.
- **localeOptions**
  Specifies the language of any labels that are returned by Apex.
- **optAllOrNone**
  Specifies whether the operation allows for partial success.
**allowFieldTruncation**
Specifies the truncation behavior of large strings.

**Signature**
```
public Boolean allowFieldTruncation {get; set;}
```

**Property Value**
Type: `Boolean`

**Usage**
In Apex saved against API versions previous to 15.0, if you specify a value for a string and that value is too large, the value is truncated. For API version 15.0 and later, if a value is specified that is too large, the operation fails and an error message is returned. The `allowFieldTruncation` property allows you to specify that the previous behavior, truncation, be used instead of the new behavior in Apex saved against API versions 15.0 and later.

**assignmentRuleHeader**
Specifies the assignment rule to be used when creating a case or lead.

**Signature**
```
public Database.DmlOptions.Assignmentruleheader assignmentRuleHeader {get; set;}
```

**Property Value**
Type: `Database.DMLOptions.AssignmentRuleHeader`

**Usage**

⚠️ **Note:** The `Database.DMLOptions` object supports assignment rules for cases and leads, but not for accounts or territory management.

**emailHeader**
Specifies additional information regarding the automatic email that gets sent when an event occurs.

**Signature**
```
public Database.DmlOptions.EmailHeader emailHeader {get; set;}
```

**Property Value**
Type: `Database.DMLOptions.EmailHeader`

**Usage**
The Salesforce user interface allows you to specify whether or not to send an email when the following events occur.
- Creation of a new case or task
Conversion of a case email to a contact
• New user email notification
• Lead queue email notification
• Password reset

In Apex saved against API version 15.0 or later, the Database.DMLOptions.emailHeader property enables you to specify additional information regarding the email that gets sent when one of the events occurs because of the code's execution.

localeOptions
Specifies the language of any labels that are returned by Apex.

Signature
public Database.Dmloptions.LocaleOptions localeOptions {get; set;}

Property Value
Type: Database.DMLOptions.LocaleOptions

Usage
The value must be a valid user locale (language and country), such as de_DE or en_GB. The value is a String, 2-5 characters long. The first two characters are always an ISO language code, for example 'fr' or 'en.' If the value is further qualified by a country, then the string also has an underscore (_) and another ISO country code, for example 'US' or 'UK.' For example, the string for the United States is 'en_US,' and the string for French Canadian is 'fr_CA.'

For a list of the languages that Salesforce supports, see Supported Languages in the Salesforce online help.

optAllOrNone
Specifies whether the operation allows for partial success.

Signature
public Boolean optAllOrNone {get; set;}

Property Value
Type: Boolean

Usage
If optAllOrNone is set to true, all changes are rolled back if any record causes errors. The default for this property is false and successfully processed records are committed while records with errors aren't.

This property is available in Apex saved against Salesforce API version 20.0 and later.

DmlOptions.AssignmentRuleHeader Class
Enables setting assignment rule options.
Namespace

Database

Example

The following example uses the useDefaultRule option:

```java
Database.DMLOptions dmo = new Database.DMLOptions();
dmo.assignmentRuleHeader.useDefaultRule = true;

Lead l = new Lead(company='ABC', lastname='Smith');
l.setOptions(dmo);
insert l;
```

The following example uses the assignmentRuleID option:

```java
Database.DMLOptions dmo = new Database.DMLOptions();
dmo.assignmentRuleHeader.assignmentRuleId = '01QD0000000EqAn';

Lead l = new Lead(company='ABC', lastname='Smith');
l.setOptions(dmo);
insert l;
```

DmlOptions.AssignmentRuleHeader Properties

The following are properties for DmlOptions.AssignmentRuleHeader.

**IN THIS SECTION:**

- **assignmentRuleID**
  
  Specifies the ID of a specific assignment rule to run for the case or lead. The assignment rule can be active or inactive.

- **useDefaultRule**
  
  If specified as true for a case or lead, the system uses the default (active) assignment rule for the case or lead. If specified, do not specify an assignmentRuleId.

**assignmentRuleID**

Specifies the ID of a specific assignment rule to run for the case or lead. The assignment rule can be active or inactive.

**Signature**

```java
public Id assignmentRuleID {get; set;}
```

**Property Value**

- **Type:** ID

**Usage**

The ID can be retrieved by querying the AssignmentRule sObject. If specified, do not specify useDefaultRule. If the value is not in the correct ID format (15-character or 18-character Salesforce ID), the call fails and an exception is returned.
**useDefaultRule**

If specified as `true` for a case or lead, the system uses the default (active) assignment rule for the case or lead. If specified, do not specify an `assignmentRuleId`.

**Signature**

```java
public Boolean useDefaultRule {get; set;}
```

**Property Value**

Type: Boolean

**Usage**

If there are no assignment rules in the organization, in API version 29.0 and earlier, creating a case or lead with `useDefaultRule` set to `true` results in the case or lead being assigned to the predefined default owner. In API version 30.0 and later, the case or lead is unassigned and doesn't get assigned to the default owner.

**DMLOptions.DuplicateRuleHeader Class**

Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

**Namespace**

Database

**Example**

The following example shows how to save an account record that's been identified as a duplicate. To learn how to iterate through duplicate errors, see [DuplicateError Class](#).

```java
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

**IN THIS SECTION:**

- [DMLOptions.DuplicateRuleHeader Properties](#)

**DMLOptions.DuplicateRuleHeader Properties**

The following are properties for `DMLOptions.DuplicateRuleHeader`. 
IN THIS SECTION:

**allowSave**

For a duplicate rule, when the Alert option is enabled, bypass alerts and save duplicate records by setting this property to `true`. Prevent duplicate records from being saved by setting this property to `false`.

**runAsCurrentUser**

Make sure that sharing rules for the current user are enforced when duplicate rules run by setting this property to `true`. Use the sharing rules specified in the class for the request by setting this property to `false`. If no sharing rules are specified, Apex code runs in system context and sharing rules for the current user are not enforced.

**allowSave**

For a duplicate rule, when the Alert option is enabled, bypass alerts and save duplicate records by setting this property to `true`. Prevent duplicate records from being saved by setting this property to `false`.

Signature

```csharp
public Boolean allowSave {get; set;}
```

Property Value

Type: Boolean

Example

This example shows how to save an account record that’s been identified as a duplicate.

```java
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

**runAsCurrentUser**

Make sure that sharing rules for the current user are enforced when duplicate rules run by setting this property to `true`. Use the sharing rules specified in the class for the request by setting this property to `false`. If no sharing rules are specified, Apex code runs in system context and sharing rules for the current user are not enforced.

Signature

```csharp
public Boolean runAsCurrentUser {get; set;}
```

Property Value

Type: Boolean
Usage

If specified as `true`, duplicate rules run for the current user, which ensures users can't view duplicate records that aren't available to them.

Use `runAsCurrentUser = true` to detect duplicates when converting leads to contacts. Typically, lead conversion Apex code runs in a system context and does not enforce sharing rules for the current user.

Example

This example shows how to set options so that duplicate rules run for the current user when saving a new account.

```java
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

DMLOptions.EmailHeader Class

Enables setting email options.

Namespace

Database

Usage

Even though auto-sent emails can be triggered by actions in the Salesforce user interface, the DMLOptions settings for `emailHeader` take effect only for DML operations carried out in Apex code.

Example

In the following example, the `triggerAutoResponseEmail` option is specified:

```java
Account a = new Account(name='Acme Plumbing');
insert a;

Contact c = new Contact(email='jplumber@salesforce.com', firstname='Joe', lastname='Plumber',
naccountid=a.id);
insert c;

Database.DMLOptions dlo = new Database.DMLOptions();
dlo.EmailHeader.triggerAutoResponseEmail = true;

Case ca = new Case(subject='Plumbing Problems', contactid=c.id);
```
DmlOptions.EmailHeader Properties

The following are properties for DmlOptions.EmailHeader.

IN THIS SECTION:

- triggerAutoResponseEmail
  Indicates whether to trigger auto-response rules (true) or not (false), for leads and cases.

- triggerOtherEmail
  Indicates whether to trigger email outside the organization (true) or not (false).

- triggerUserEmail
  Indicates whether to trigger email that is sent to users in the organization (true) or not (false).

**triggerAutoResponseEmail**

Indicates whether to trigger auto-response rules (true) or not (false), for leads and cases.

Signature

```csharp
public Boolean triggerAutoResponseEmail {get; set;}
```

Property Value

Type: Boolean

Usage

This email can be automatically triggered by a number of events, for example creating a case or resetting a user password. If this value is set to true, when a case is created, if there is an email address for the contact specified in ContactID, the email is sent to that address. If not, the email is sent to the address specified in SuppliedEmail.

**triggerOtherEmail**

Indicates whether to trigger email outside the organization (true) or not (false).

Signature

```csharp
public Boolean triggerOtherEmail {get; set;}
```

Property Value

Type: Boolean

Usage

This email can be automatically triggered by creating, editing, or deleting a contact for a case.
Note: Email sent through Apex because of a group event includes additional behaviors. A group event is an event for which IsGroupEvent is true. The EventAttendee object tracks the users, leads, or contacts that are invited to a group event. Note the following behaviors for group event email sent through Apex:

- Sending a group event invitation to a lead or contact respects the triggerOtherEmail option
- Email sent when updating or deleting a group event also respects the triggerUserEmail and triggerOtherEmail options, as appropriate

**triggerUserEmail**

Indicates whether to trigger email that is sent to users in the organization (true) or not (false).

**Property Value**

**Type:** Boolean

**Usage**

This email can be automatically triggered by a number of events; resetting a password, creating a new user, or creating or modifying a task.

**Note:** Adding comments to a case in Apex doesn't trigger email to users in the organization even if triggerUserEmail is set to true.

**Note:** Email sent through Apex because of a group event includes additional behaviors. A group event is an event for which IsGroupEvent is true. The EventAttendee object tracks the users, leads, or contacts that are invited to a group event. Note the following behaviors for group event email sent through Apex:

- Sending a group event invitation to a user respects the triggerUserEmail option
- Email sent when updating or deleting a group event also respects the triggerUserEmail and triggerOtherEmail options, as appropriate

**DuplicateError Class**

Contains information about an error that occurred when an attempt was made to save a duplicate record. Use if your organization has set up duplicate rules, which are part of the Duplicate Management feature.

**Namespace**

Database
Example

When you try to save a record that’s identified as a duplicate record by a duplicate rule, you’ll receive a duplicate error. If the duplicate rule contains the Allow action, an attempt will be made to bypass the error.

```java
// Try to save a duplicate account
Account duplicateAccount = new Account(Name='Acme', BillingCity='San Francisco');
Database.SaveResult sr = Database.insert(duplicateAccount, false);
if (!sr.isSuccess()) {

// Insertion failed due to duplicate detected
for(Database.Error duplicateError : sr.getErrors()){
    Datacloud.DuplicateResult duplicateResult =
        ((Database.DuplicateError)duplicateError).getDuplicateResult();
    System.debug('Duplicate records have been detected by ' +
                  duplicateResult.getDuplicateRule());
    System.debug(duplicateResult.getErrorMessage());
}

// If the duplicate rule is an alert rule, we can try to bypass it
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.AllowSave = true;
Database.SaveResult sr2 = Database.insert(duplicateAccount, dml);
if (sr2.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
}
```

IN THIS SECTION:
DuplicateError Methods

SEE ALSO:
SaveResult Class
DuplicateResult Class
Error Class

DuplicateError Methods

The following are methods for DuplicateError.

IN THIS SECTION:
getDuplicateResult()
Returns the details of a duplicate rule and duplicate records found by the duplicate rule.

getFields()
Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

getMessage()
Returns the error message text.
getStatusCode()  
Returns a code that characterizes the error.

getDuplicateResult()  
Returns the details of a duplicate rule and duplicate records found by the duplicate rule.

Signature  
public Datacloud.DuplicateResult getDuplicateResult()

Return Value  
Type: Datacloud.DuplicateResult

Example  
This example shows the code used to get the possible duplicates and related match information after saving a new contact. This code is part of a custom application that implements duplicate management when users add a contact. See DuplicateResult Class on page 1951 to check out the entire sample application.

Datacloud.DuplicateResult duplicateResult = duplicateError.getDuplicateResult();

getFields()  
Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

Signature  
public List<String> getFields()

Return Value  
Type: List<String>

getMessage()  
Returns the error message text.

Signature  
public String getMessage()

Return Value  
Type: String

getStatusCode()  
Returns a code that characterizes the error.
EmptyRecycleBinResult Class

The result of the emptyRecycleBin DML operation returned by the Database.emptyRecycleBin method.

Namespace

Database

Usage

A list of Database.EmptyRecycleBinResult objects is returned by the Database.emptyRecycleBin method. Each object in the list corresponds to either a record ID or an sObject passed as the parameter in the Database.emptyRecycleBin method. The first index in the EmptyRecycleBinResult list matches the first record or sObject specified in the list, the second with the second, and so on.

EmptyRecycleBinResult Methods

The following are methods for EmptyRecycleBinResult. All are instance methods.

IN THIS SECTION:

getErrors()
If an error occurred during the delete for this record or sObject, returns a list of one or more Database.Error objects. If no errors occurred, the returned list is empty.

getId()
Returns the ID of the record or sObject you attempted to delete.

isSuccess()
Returns true if the record or sObject was successfully removed from the Recycle Bin; otherwise false.

getErrors()
If an error occurred during the delete for this record or sObject, returns a list of one or more Database.Error objects. If no errors occurred, the returned list is empty.

Signature

public Database.Errors[] getErrors()

Return Value

Type: Database.Errors []
**getId()**
Returns the ID of the record or sObject you attempted to delete.

Signature

```
public ID getId()
```

Return Value
Type: ID

**isSuccess()**
Returns `true` if the record or sObject was successfully removed from the Recycle Bin; otherwise `false`.

Signature

```
public Boolean isSuccess()
```

Return Value
Type: Boolean

**Error Class**

Represents information about an error that occurred during a DML operation when using a Database method.

**Namespace**

`Database`

**Usage**

`Error` class is part of `SaveResult`, which is generated when a user attempts to save a Salesforce record.

SEE ALSO:
- `SaveResult Class`
- `DuplicateError Class`

**Error Methods**

The following are methods for `Error`. All are instance methods.

IN THIS SECTION:

- `getFields()`
  Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.
- `getMessage()`
  Returns the error message text.
getStatusCode()
Returns a code that characterizes the error.

getFields()
Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

Signature
public String[] getFields()

Return Value
Type: String[]

getMessage()
Returns the error message text.

Signature
public String getMessage()

Return Value
Type: String

getStatusCode()
Returns a code that characterizes the error.

Signature
public StatusCode getStatusCode()

Return Value
Type: StatusCode

Usage
The full list of status codes is available in the WSDL file for your organization (see Downloading Salesforce WSDLs and Client Authentication Certificates in the Salesforce online help.)

GetDeletedResult Class
Contains the deleted records retrieved for a specific sObject type and time window.

Namespace
Database
Usage

The `Database.getDeleted` method returns the deleted record information as a `Database.GetDeletedResult` object.

GetDeletedResult Methods

The following are methods for `GetDeletedResult`. All are instance methods.

IN THIS SECTION:

- `getDeletedRecords()`: Returns a list of deleted records for the time window specified in the `Database.getDeleted` method call.
- `getEarliestDateAvailable()`: Returns the date in Coordinated Universal Time (UTC) of the earliest physically deleted object for the sObject type specified in `Database.getDeleted`.
- `getLatestDateCovered()`: Returns the date in Coordinated Universal Time (UTC) of the last date covered in the `Database.getDeleted` call.

### getDeletedRecords()

Returns a list of deleted records for the time window specified in the `Database.getDeleted` method call.

**Signature**

```java
public List<Database.DeletedRecord> getDeletedRecords()
```

**Return Value**

Type: `List<Database.DeletedRecord>`

### getEarliestDateAvailable()

Returns the date in Coordinated Universal Time (UTC) of the earliest physically deleted object for the sObject type specified in `Database.getDeleted`.

**Signature**

```java
public Date getEarliestDateAvailable()
```

**Return Value**

Type: `Date`

### getLatestDateCovered()

Returns the date in Coordinated Universal Time (UTC) of the last date covered in the `Database.getDeleted` call.

**Signature**

```java
public Date getLatestDateCovered()
```
Return Value

Type: Date

Usage

If there is a value, it is less than or equal to the endDate argument of Database.getDeleted. A value here indicates that, for safety, you should use this value for the startDate of your next call to capture the changes that started after this date but didn't complete before endDate and were, therefore, not returned in the previous call.

GetUpdatedResult Class

Contains the result for the Database.getUpdated method call.

Namespace

Database

Usage

Use the methods in this class to obtain detailed information about the updated records returned by Database.getUpdated for a specific time window.

GetUpdatedResult Methods

The following are methods for GetUpdatedResult. All are instance methods.

IN THIS SECTION:

getIds()
Returns the IDs of records updated within the time window specified in the Database.getUpdated method.

getLatestDateCovered()
Returns the date in Coordinated Universal Time (UTC) of the last date covered in the Database.getUpdated call.

getIds()

Returns the IDs of records updated within the time window specified in the Database.getUpdated method.

Signature

public List<Id> getIds()

Return Value

Type: List<Id>

getLatestDateCovered()

Returns the date in Coordinated Universal Time (UTC) of the last date covered in the Database.getUpdated call.
**Signature**

```java
public Date getLatestDateCovered()
```

**Return Value**

Type: `Date`

**LeadConvert Class**

Contains information used for lead conversion.

**Namespace**

`Database`

**Usage**

The `convertLead` `Database` method converts a lead into an account and contact, as well as (optionally) an opportunity. The `convertLead` takes an instance of the `Database.LeadConvert` class as a parameter. Create an instance of this class and set the information required for conversion, such as setting the lead, and destination account and contact.

**Note:** The `Database.convertLead()` method can take one `LeadConvert` object or a list of `LeadConvert` objects.

**Example**

This example shows how to use the `Database.convertLead` method to convert a lead. It inserts a new lead, creates a `LeadConvert` object, sets its status to converted, then passes it to the `Database.convertLead` method. Finally, it verifies that the conversion was successful.

```java
Lead myLead = new Lead(LastName = 'Fry', Company='Fry And Sons');
insert myLead;

Database.LeadConvert lc = new Database.LeadConvert();
lc.setLeadId(myLead.id);

LeadStatus convertStatus = [SELECT Id, MasterLabel FROM LeadStatus WHERE IsConverted=true LIMIT 1];
lc.setConvertedStatus(convertStatus.MasterLabel);

Database.LeadConvertResult lcr = Database.convertLead(lc);
System.assert(lcr.isSuccess());
```

**IN THIS SECTION:**

- LeadConvert Constructors
- LeadConvert Methods

**LeadConvert Constructors**

The following are constructors for `LeadConvert`. 
IN THIS SECTION:

LeadConvert()

Creates a new instance of the Database.LeadConvert class.

**LeadConvert()**

Creates a new instance of the Database.LeadConvert class.

Signature

```java
public LeadConvert()
```

**LeadConvert Methods**

The following are methods for LeadConvert. All are instance methods.

IN THIS SECTION:

getAccountId()

Gets the ID of the account into which the lead will be merged.

getContactId()

Gets the ID of the contact into which the lead will be merged.

getConvertedStatus()

Gets the lead status value for a converted lead.

getLeadId()

Gets the ID of the lead to convert.

getOpportunityName()

Gets the name of the opportunity to create.

getOwnerId()

Gets the ID of the person to own any newly created account, contact, and opportunity.

isDoNotCreateOpportunity()

Indicates whether an Opportunity is created during lead conversion (false, the default) or not (true).

isOverWriteLeadSource()

Indicates whether the LeadSource field on the target Contact object is overwritten with the contents of the LeadSource field in the source Lead object (true), or not (false, the default).

isSendNotificationEmail()

Indicates whether a notification email is sent to the owner specified by setOwnerId (true) or not (false, the default).

setAccountId(accountId)

Sets the ID of the account into which the lead is merged. This value is required only when updating an existing account, including person accounts.

setContactId(contactId)

Sets the ID of the contact into which the lead will be merged (this contact must be associated with the account specified with setAccountId, and setAccountId must be specified). This value is required only when updating an existing contact.
setConvertedStatus(status)
Sets the lead status value for a converted lead. This field is required.

setDoNotCreateOpportunity(createOpportunity)
Specifies whether to create an opportunity during lead conversion. The default value is false: opportunities are created by default. Set this flag to true only if you do not want to create an opportunity from the lead.

setLeadId(leadId)
Sets the ID of the lead to convert. This field is required.

setOpportunityId(opportunityId)
Sets the ID of the opportunity into which the lead is merged. This value is required only when updating an existing opportunity.

setOpportunityName(opportunityName)
Sets the name of the opportunity to create. If no name is specified, this value defaults to the company name of the lead.

setOverwriteLeadSource(overwriteLeadSource)
Specifies whether to overwrite the LeadSource field on the target contact object with the contents of the LeadSource field in the source lead object. The default value is false, to not overwrite the field. If you specify this as true, you must also specify setContactId for the target contact.

setOwnerId(ownerId)
Specifies the ID of the person to own any newly created account, contact, and opportunity. If the application does not specify this value, the owner of the new object will be the owner of the lead.

setSendNotificationEmail(sendEmail)
Specifies whether to send a notification email to the owner specified by setOwnerId. The default value is false, that is, to not send email.

getAccountId()
Gets the ID of the account into which the lead will be merged.

Signature
public ID getAccountId()

Return Value
Type: ID

gETCHCONTACTID()
Gets the ID of the contact into which the lead will be merged.

Signature
public ID getContactId()

Return Value
Type: ID
**getConvertedStatus()**
Gets the lead status value for a converted lead.

Signature
```java
public String getConvertedStatus()
```

Return Value
Type: String

**getLeadID()**
Gets the ID of the lead to convert.

Signature
```java
public ID getLeadID()
```

Return Value
Type: ID

**getOpportunityName()**
Gets the name of the opportunity to create.

Signature
```java
public String getOpportunityName()
```

Return Value
Type: String

**getOwnerID()**
Gets the ID of the person to own any newly created account, contact, and opportunity.

Signature
```java
public ID getOwnerID()
```

Return Value
Type: ID

**isDoNotCreateOpportunity()**
Indicates whether an Opportunity is created during lead conversion (false, the default) or not (true).
Signature
public Boolean isDoNotCreateOpportunity()

Return Value
Type: Boolean

isOverWriteLeadSource()
Indicates whether the LeadSource field on the target Contact object is overwritten with the contents of the LeadSource field in the source Lead object (true), or not (false, the default).

Signature
public Boolean isOverWriteLeadSource()

Return Value
Type: Boolean

isSendNotificationEmail()
Indicates whether a notification email is sent to the owner specified by setOwnerId (true) or not (false, the default).

Signature
public Boolean isSendNotificationEmail()

Return Value
Type: Boolean

setAccountId(accountId)
Sets the ID of the account into which the lead is merged. This value is required only when updating an existing account, including person accounts.

Signature
public Void setAccountId(ID accountId)

Parameters
accountId
Type: ID

Return Value
Type: Void
**setContactId(contactId)**

Sets the ID of the contact into which the lead will be merged (this contact must be associated with the account specified with setAccountId, and setAccountId must be specified). This value is required only when updating an existing contact.

**Signature**

```java
public Void setContactId(ID contactId)
```

**Parameters**

- `contactId`
  - Type: ID

**Return Value**

Type: Void

**Usage**

If `setContactId` is specified, then the application creates a new contact that is implicitly associated with the account. The contact name and other existing data are not overwritten (unless setOverwriteLeadSource is set to true, in which case only the LeadSource field is overwritten).

⚠️ **Important:** If you are converting a lead into a person account, do not specify `setContactId` or an error will result. Specify only `setAccountId` of the person account.

**setConvertedStatus(status)**

Sets the lead status value for a converted lead. This field is required.

**Signature**

```java
public Void setConvertedStatus(String status)
```

**Parameters**

- `status`
  - Type: String

**Return Value**

Type: Void

**setDoNotCreateOpportunity(createOpportunity)**

Specifies whether to create an opportunity during lead conversion. The default value is `false`: opportunities are created by default. Set this flag to `true` only if you do not want to create an opportunity from the lead.

**Signature**

```java
public Void setDoNotCreateOpportunity(Boolean createOpportunity)
```
Parameters

createOpportunity
  Type: Boolean

Return Value
Type: Void

setLeadId(leadId)
Sets the ID of the lead to convert. This field is required.

Signature
public Void setLeadId(ID leadId)

Parameters
leadId
  Type: ID

Return Value
Type: Void

setOpportunityId(opportunityId)
Sets the ID of the opportunity into which the lead is merged. This value is required only when updating an existing opportunity.

Signature
public Void setOpportunityId(ID opportunityId)

Parameters
opportunityId
  Type: ID

Return Value
Type: Void

setOpportunityName(opportunityName)
Sets the name of the opportunity to create. If no name is specified, this value defaults to the company name of the lead.

Signature
public Void setOpportunityName(String opportunityName)
Parameters

*opportunityName*

  Type: String

Return Value

Type: Void

Usage

The maximum length of this field is 80 characters.

If `setDoNotCreateOpportunity` is true, no Opportunity is created and this field must be left blank; otherwise, an error is returned.

`setOverwriteLeadSource(overwriteLeadSource)`

Specifies whether to overwrite the `LeadSource` field on the target contact object with the contents of the `LeadSource` field in the source lead object. The default value is `false`, to not overwrite the field. If you specify this as `true`, you must also specify `setContactId` for the target contact.

Signature

```java
public Void setOverwriteLeadSource(Boolean overwriteLeadSource)
```

Parameters

*overwriteLeadSource*

  Type: Boolean

Return Value

Type: Void

`setOwnerId(ownerId)`

Specifies the ID of the person to own any newly created account, contact, and opportunity. If the application does not specify this value, the owner of the new object will be the owner of the lead.

Signature

```java
public Void setOwnerId(ID ownerId)
```

Parameters

*ownerId*

  Type: ID

Return Value

Type: Void
Usage

This method is not applicable when merging with existing objects—if setOwnerId is specified, the ownerId field is not overwritten in an existing account or contact.

**setSendNotificationEmail(sendEmail)**

Specifies whether to send a notification email to the owner specified by setOwnerId. The default value is `false`, that is, to not send email.

Signature

```java
public Void setSendNotificationEmail(Boolean sendEmail)
```

Parameters

`sendEmail`

Type: `Boolean`

Return Value

Type: `Void`

**LeadConvertResult Class**

The result of a lead conversion.

**Namespace**

`Database`

**Usage**

An array of LeadConvertResult objects is returned with the convertLead Database method. Each element in the LeadConvertResult array corresponds to the sObject array passed as the `sObject[]` parameter in the `convertLead` Database method, that is, the first element in the LeadConvertResult array matches the first element passed in the SObject array, the second element corresponds to the second element, and so on. If only one sObject is passed in, the LeadConvertResult array contains a single element.

**LeadConvertResult Methods**

The following are methods for `LeadConvertResult`. All are instance methods.

IN THIS SECTION:

- `getAccountId()`
  The ID of the new account (if a new account was specified) or the ID of the account specified when `convertLead` was invoked.

- `getContactId()`
  The ID of the new contact (if a new contact was specified) or the ID of the contact specified when `convertLead` was invoked.

- `getErrors()`
  If an error occurred, an array of one or more database error objects providing the error code and description.
getLeadId()
The ID of the converted lead.

getOpportunityId()
The ID of the new opportunity, if one was created when convertLead was invoked.

isSuccess()
A Boolean value that is set to true if the DML operation was successful for this object, false otherwise

getAccountId()
The ID of the new account (if a new account was specified) or the ID of the account specified when convertLead was invoked.

Signature
public ID getAccountId()

Return Value
Type: ID

getContactId()
The ID of the new contact (if a new contact was specified) or the ID of the contact specified when convertLead was invoked.

Signature
public ID getContactId()

Return Value
Type: ID

getErrors()
If an error occurred, an array of one or more database error objects providing the error code and description.

Signature
public Database.Error[] getErrors()

Return Value
Type: Database.Error[]

getLeadId()
The ID of the converted lead.

Signature
public ID getLeadId()
Return Value
Type: ID

**getOpportunityId()**
The ID of the new opportunity, if one was created when `convertLead` was invoked.

Signature
`public ID getOpportunityId()`

Return Value
Type: ID

**isSuccess()**
A Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

Signature
`public Boolean isSuccess()`

Return Value
Type: Boolean

**MergeResult Class**
Contains the result of a merge Database method operation.

**Namespace**
Database

**Usage**
The `Database.merge` method returns a `Database.MergeResult` object for each merged record.

**MergeResult Methods**
The following are methods for `MergeResult`. All are instance methods.

IN THIS SECTION:
- `getErrors()`
  Returns a list of `Database.Error` objects representing the errors encountered, if any, during a merge operation using the `Database.merge` method. If no error occurred, returns null.
- `getId()`
  Returns the ID of the master record into which other records were merged.
getMergedRecordIds()
Returns the IDs of the records merged into the master record.

getUpdatedRelatedIds()
Returns the IDs of all related records that were reparented as a result of the merge that are viewable by the user sending the merge call.

isSuccess()
Indicates whether the merge was successful (true) or not (false).

getErrors()
Returns a list of Database.Error objects representing the errors encountered, if any, during a merge operation using the Database.merge method. If no error occurred, returns null.

Signature
public List<Database.Error> getErrors()

Return Value
Type: List<Database.Error>

getId()
Returns the ID of the master record into which other records were merged.

Signature
public Id getId()

Return Value
Type: ID

getMergedRecordIds()
Returns the IDs of the records merged into the master record.

Signature
public List<String> getMergedRecordIds()

Return Value
Type: List<String>

getUpdatedRelatedIds()
Returns the IDs of all related records that were reparented as a result of the merge that are viewable by the user sending the merge call.
Signature

public List<String> getUpdatedRelatedIds()

Return Value
Type: List<String>

isSuccess()
Indicates whether the merge was successful (true) or not (false).

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

QueryLocator Class
Represents the record set returned by Database.getQueryLocator and used with Batch Apex.

Namespace
Database

QueryLocator Methods
The following are methods for QueryLocator. All are instance methods.

IN THIS SECTION:

getQuery()
Returns the query used to instantiate the Database.QueryLocator object. This is useful when testing the start method.

iterator()
Returns a new instance of a query locator iterator.

getQuery()
Returns the query used to instantiate the Database.QueryLocator object. This is useful when testing the start method.

Signature
public String getQuery()
Usage

You cannot use the `FOR UPDATE` keywords with a `getQueryLocator` query to lock a set of records. The `start` method automatically locks the set of records in the batch.

Example

```java
System.assertEquals(QLReturnedFromStart.getQuery(),
    Database.getQueryLocator(
        [SELECT Id FROM Account]).getQuery() );
```

`iterator()`

Returns a new instance of a query locator iterator.

**Signature**

```java
public Database.QueryLocatorIterator iterator()
```

**Return Value**

Type: `Database.QueryLocatorIterator`

Usage

⚠️ **Warning:** To iterate over a query locator, save the iterator instance that this method returns in a variable and then use this variable to iterate over the collection. Calling `iterator` every time you want to perform an iteration can result in incorrect behavior because each call returns a new iterator instance.

For an example, see `QueryLocatorIterator Class`.

**QueryLocatorIterator Class**

Represents an iterator over a query locator record set.

**Namespace**

`Database`

**Example**

This sample shows how to obtain an iterator for a query locator, which contains five accounts. This sample calls `hasNext` and `next` to get each record in the collection.

```java
// Get a query locator
Database.QueryLocator q = Database.getQueryLocator(
    [SELECT Name FROM Account LIMIT 5]);
// Get an iterator
Database.QueryLocatorIterator it = q.iterator();
// Iterate over the records
```
while (it.hasNext())
{
    Account a = (Account)it.next();
    System.debug(a);
}

QueryLocatorIterator Methods
The following are methods for QueryLocatorIterator. All are instance methods.

IN THIS SECTION:
  hasNext()
  Returns true if there are one or more records remaining in the collection; otherwise, returns false.
  next()
  Advances the iterator to the next sObject record and returns the sObject.

hasNext()
Returns true if there are one or more records remaining in the collection; otherwise, returns false.

Signature
public Boolean hasNext()

Return Value
Type: Boolean

next()
Advances the iterator to the next sObject record and returns the sObject.

Signature
public sObject next()

Return Value
Type: sObject

Usage
Because the return value is the generic sObject type, you must cast it if using a more specific type. For example:

Account a = (Account)myIterator.next();

Example
Account a = (Account)myIterator.next();
SaveResult Class

The result of an insert or update DML operation returned by a Database method.

Namespace

Database

Usage

An array of SaveResult objects is returned with the `insert` and `update` database methods. Each element in the SaveResult array corresponds to the sObject array passed as the `sObject[]` parameter in the Database method, that is, the first element in the SaveResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the SaveResult array contains a single element.

A SaveResult object is generated when a new or existing Salesforce record is saved.

Example

The following example shows how to obtain and iterate through the returned `Database.SaveResult` objects. It inserts two accounts using `Database.insert` with a false second parameter to allow partial processing of records on failure. One of the accounts is missing the Name required field, which causes a failure. Next, it iterates through the results to determine whether the operation was successful or not for each record. It writes the ID of every record that was processed successfully to the debug log, or error messages and fields of the failed records. This example generates one successful operation and one failure.

```java
// Create two accounts, one of which is missing a required field
Account[] accts = new List<Account>{
    new Account(Name='Account1'),
    new Account();
};
Database.SaveResult[] srList = Database.insert(accts, false);

// Iterate through each returned result
for (Database.SaveResult sr : srList) {
    if (sr.isSuccess()) {
        // Operation was successful, so get the ID of the record that was processed
        System.debug('Successfully inserted account. Account ID: ' + sr.getId());
    } else {
        // Operation failed, so get all errors
        for(Database.Error err : sr.getErrors()) {
            System.debug('The following error has occurred.
            System.debug(err.getStatusCode() + ': ' + err.getMessage());
            System.debug('Account fields that affected this error: ' + err.getFields());
        }
    }
}
```

SEE ALSO:

- Error Class
- DuplicateError Class
SaveResult Methods

The following are methods for SaveResult. All are instance methods.

IN THIS SECTION:

  getErrors()
  If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error
  occurred, returns an empty set.
  getId()
  Returns the ID of the sObject you were trying to insert or update.
  isSuccess()
  Returns a Boolean that is set to true if the DML operation was successful for this object, false otherwise.

getErrors()

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

Signature

public Database.Error[] getErrors()

Return Value

Type: Database.Error[]

getId()

Returns the ID of the sObject you were trying to insert or update.

Signature

public ID getId()

Return Value

Type: ID

Usage

If this field contains a value, the object was successfully inserted or updated. If this field is empty, the operation was not successful for that object.

isSuccess()

Returns a Boolean that is set to true if the DML operation was successful for this object, false otherwise.
**Signature**

```java
public Boolean isSuccess()
```

**Return Value**

*Type: Boolean*

**Example**

This example shows the code used to process duplicate records, which are detected when there is an unsuccessful save due to an error. This code is part of a custom application that implements duplicate management when users add a contact. See DuplicateResult Class on page 1951 to check out the entire sample application.

```java
if (!saveResult.isSuccess()) { ... }
```

**UndeleteResult Class**

The result of an undelete DML operation returned by the `Database.undelete` method.

**Namespace**

`Database`

**Usage**

An array of `Database.UndeleteResult` objects is returned with the `undelete` database method. Each element in the UndeleteResult array corresponds to the sObject array passed as the `sObject[]` parameter in the `undelete` Database method; that is, the first element in the UndeleteResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the UndeleteResults array contains a single element.

**UndeleteResult Methods**

The following are methods for `UndeleteResult`. All are instance methods.

**IN THIS SECTION:**

- `getErrors()`
  If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns null.

- `getId()`
  Returns the ID of the sObject you were trying to undelete.

- `isSuccess()`
  Returns a Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

**getErrors()**

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns null.
Signature
public Database.Error[] getErrors()

Return Value
Type: Database.Error[]

**getIds()**
Returns the ID of the sObject you were trying to undelete.

Signature
public ID getId()

Return Value
Type: ID

Usage
If this field contains a value, the object was successfully undeleted. If this field is empty, the operation was not successful for that object.

**isSuccess()**
Returns a Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

**UpsertResult Class**
The result of an upsert DML operation returned by the `Database.upsert` method.

**Namespace**
Database

**Usage**
An array of Database.UpsertResult objects is returned with the upsert database method. Each element in the UpsertResult array corresponds to the sObject array passed as the sObject[] parameter in the upsert Database method; that is, the first element in the UpsertResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the UpsertResults array contains a single element.
UpsertResult Methods

The following are methods for UpsertResult. All are instance methods.

IN THIS SECTION:

  getErrors()
  If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error
  occurred, returns an empty set.

  getId()
  Returns the ID of the sObject you were trying to update or insert.

  isCreated()
  A Boolean value that is set to true if the record was created, false if the record was updated.

  isSuccess()
  Returns a Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

getErrors()
If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred,
returns an empty set.

Signature
public Database.Error[] getErrors()

Return Value
Type: Database.Error []

getId()
Returns the ID of the sObject you were trying to update or insert.

Signature
public ID getId()

Return Value
Type: ID

Usage
If this field contains a value, the object was successfully updated or inserted. If this field is empty, the operation was not successful for
that object.

isCreated()
A Boolean value that is set to true if the record was created, false if the record was updated.
public Boolean isCreated()

Return Value
Type: Boolean

isSuccess()
Returns a Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

public Boolean isSuccess()

Return Value
Type: Boolean

Datacloud Namespace

The Datacloud namespace provides classes and methods for retrieving information about duplicate rules. Duplicate rules let you control whether and when users can save duplicate records within Salesforce.

The following are the classes in the Datacloud namespace.

IN THIS SECTION:

- AdditionalInformationMap Class
  Represents other information, if any, about matched records.
- DuplicateResult Class
  Represents the details of a duplicate rule that detected duplicate records and information about those duplicate records.
- FieldDiff Class
  Represents the name of a matching rule field and how the values of the field compare for the duplicate and its matching record.
- FindDuplicates Class
  Performs rule-based searches for duplicate records. The input is an array of sObjects. Each sObject represents a record you want to find duplicates of. The output identifies the detected duplicates for each input sObject based on active duplicate rules for the given object.
- FindDuplicatesByIds Class
  Performs rule-based searches for duplicate records. The input is an array of IDs. Each ID specifies records to search for duplicates among. The duplicates are detected based on the active duplicate rules applicable to the object type corresponding to the input IDs.
- FindDuplicatesResult Class
  Output for rule-based searches for duplicate records. FindDuplicatesResult contains results of detecting duplicates using instances of FindDuplicates or FindDuplicatesByIds classes.
- MatchRecord Class
  Represents a duplicate record detected by a matching rule.
MatchResult Class
Represents the duplicate results for a matching rule.

AdditionalInformationMap Class
Represents other information, if any, about matched records.

Namespace
Datacloud

IN THIS SECTION:
AdditionalInformationMap Methods

AdditionalInformationMap Methods
The following are methods for AdditionalInformationMap.

IN THIS SECTION:
getName()
Returns the element name.

Signature
public String getName()

Return Value
Type: String

gValue()
Returns the value of the element.

Signature
public String getValue()

Return Value
Type: String
DuplicateResult Class

Represents the details of a duplicate rule that detected duplicate records and information about those duplicate records.

Namespace

Datacloud

Usage

The DuplicateResult class and its methods are available to organizations that use duplicate rules.

DuplicateResult is contained within DuplicateError, which is part of SaveResult. SaveResult is generated when a user attempts to save a record in Salesforce.

Example

This example shows a custom application that lets users add a contact. When a contact is saved, an alert displays if there are duplicate records.

The sample application consists of a Visualforce page and an Apex controller. The Visualforce page is listed first so that you can see how the page makes use of the Apex controller. Save the Apex class first before saving the Visualforce page.

```xml
<apex:page controller="ContactDedupeController">
    <apex:form >
        <apex:pageBlock title="Duplicate Records" rendered="(!hasDuplicateResult)">
            <apex:pageBlockTable value="(!duplicateRecords)" var="item">
                <apex:column >
                    <apex:facet name="header">Name</apex:facet>
                    <apex:outputLink value="/ {!item['Id']}">{!item['Name']}</apex:outputLink>
                </apex:column>
                <apex:column >
                    <apex:facet name="header">Owner</apex:facet>
                    <apex:outputField value=" {!item['OwnerId']}"/>
                </apex:column>
                <apex:column >
                    <apex:facet name="header">Last Modified Date</apex:facet>
                    <apex:outputField value="={!item['LastModifiedDate']}"/>
                </apex:column>
            </apex:pageBlockTable>
        </apex:pageBlock>
        <apex:pageBlock title="Contact" mode="edit">
            <apex:pageBlockButtons >
                <apex:commandButton value="Save" action="(!save)"/>
            </apex:pageBlockButtons>
            <apex:pageBlockSection >
                <apex:inputField value=" {!Contact.FirstName}"/>
                <apex:inputField value=" {!Contact.LastName}"/>
                <apex:inputField value=" {!Contact.Email}"/>
                <apex:inputField value=" {!Contact.Phone}"/>
            </apex:pageBlockSection>
        </apex:pageBlock>
    </apex:form >
</apex:page>
```
This sample is the Apex controller for the page. This controller contains the action method for the Save button. The `save` method inserts the new contact. If errors are returned, this method iterates through each error, checks if it's a duplicate error, adds the error message to the page, and returns information about the duplicate records to be displayed on the page.

```apex
public class ContactDedupeController {

    // Initialize a variable to hold the contact record you're processing
    private final Contact contact;

    // Initialize a list to hold any duplicate records
    private List<sObject> duplicateRecords;

    // Define variable that's true if there are duplicate records
    public boolean hasDuplicateResult{get;set;}

    // Define the constructor
    public ContactDedupeController() {

        // Define the values for the contact you're processing based on its ID
        Id id = ApexPages.currentPage().getParameters().get('id');
        this.contact = (id == null) ? new Contact() :
            [SELECT Id, FirstName, LastName, Email, Phone, AccountId
            FROM Contact WHERE Id = :id];

        // Initialize empty list of potential duplicate records
        this.duplicateRecords = new List<sObject>();
        this.hasDuplicateResult = false;
    }

    // Return contact and its values to the Visualforce page for display
    public Contact getContact() {
        return this.contact;
    }

    // Return duplicate records to the Visualforce page for display
    public List<sObject> getDuplicateRecords() {
        return this.duplicateRecords;
    }

    // Process the saved record and handle any duplicates
    public PageReference save() {

        // Optionally, set DML options here, use “DML” instead of “false”
        // in the insert()
        // Database.DMLOptions dml = new Database.DMLOptions();
        // dml.DuplicateRuleHeader.allowSave = true;
        // dml.DuplicateRuleHeader.runAsCurrentUser = true;
        Database.SaveResult saveResult = Database.insert(contact, false);
    }
}
```
if (!saveResult.isSuccess()) {
    for (Database.Error error : saveResult.getErrors()) {
        // If there are duplicates, an error occurs
        // Process only duplicates and not other errors
        // (e.g., validation errors)
        if (error instanceof Database.DuplicateError) {
            // Handle the duplicate error by first casting it as a
            // DuplicateError class
            // This lets you use methods of that class
            // (e.g., getDuplicateResult())
            Database.DuplicateError duplicateError = 
                (Database.DuplicateError)error;
            Datacloud.DuplicateResult duplicateResult = 
                duplicateError.getDuplicateResult();

            // Display duplicate error message as defined in the duplicate rule
            ApexPages.Message errorMessage = new ApexPages.Message{
            ApexPages.Severity.ERROR, 'Duplicate Error: ' +
                duplicateResult.getErrorMessage();
            ApexPages.addMessage(errorMessage);

            // Get duplicate records
            this.duplicateRecords = new List<sObject>();

            // Return only match results of matching rules that
            // find duplicate records
            Datacloud.MatchResult[] matchResults = 
                duplicateResult.getMatchResults();

            // Just grab first match result (which contains the
            // duplicate record found and other match info)
            Datacloud.MatchResult matchResult = matchResults[0];

            Datacloud.MatchRecord[] matchRecords = matchResult.getMatchRecords();

            // Add matched record to the duplicate records variable
            for (Datacloud.MatchRecord matchRecord : matchRecords) {
                System.debug('MatchRecord: ' + matchRecord.getRecord());
                this.duplicateRecords.add(matchRecord.getRecord());
            }
            this.hasDuplicateResult = !this.duplicateRecords.isEmpty();
        }
    }

    // If there’s a duplicate record, stay on the page
    return null;
}

// After save, navigate to the view page:
return (new ApexPages.StandardController(contact)).view();

DuplicateResult Methods

SEE ALSO:

SaveResult Class
DuplicateError Class

## DuplicateResult Methods

The following are methods for DuplicateResult.

IN THIS SECTION:

- getDuplicateRule()
- getErrorMessage()
- getMatchResults()
- isAllowSave()

### getDuplicateRule()

Returns the developer name of the executed duplicate rule that returned duplicate records.

**Signature**

```
public String getDuplicateRule()
```

**Return Value**

Type: `String`

### getErrorMessage()

Returns the error message configured by the administrator to warn users they may be creating duplicate records. This message is associated with a duplicate rule.

**Signature**

```
public String getErrorMessage()
```

**Return Value**

Type: `String`

### getMatchResults()

Returns the duplicate records and match information.

### isAllowSave()

Indicates whether the duplicate rule will allow a record that’s identified as a duplicate to be saved. Set to `true` if duplicate rule should allow save; otherwise, `false`. 
Example
This example shows the code used to display the error message when duplicates are found while saving a new contact. This code is part of a custom application that lets users add a contact. When a contact is saved, an alert displays if there are duplicate records. Review DuplicateResult Class on page 1951 to check out the entire sample application.

```apex
ApexPages.Message errorMessage = new ApexPages.Message(
    ApexPages.Severity.ERROR, 'Duplicate Error: ' +
    duplicateResult.getErrorMessage());
ApexPages.addMessage(errorMessage);
```

getMatchResults()
Returns the duplicate records and match information.

Signature
```
public List<Datacloud.MatchResult> getMatchResults()
```

Return Value
Type: List<Datacloud.MatchResult>

Example
This example shows the code used to return duplicate record and match information and assign it to the matchResults variable. This code is part of a custom application that implements duplicate management when users add a contact. See DuplicateResult Class on page 1951 to check out the entire sample application.

```apex
Datacloud.MatchResult[] matchResults =
    duplicateResult.getMatchResults();
```

isAllowSave()
Indicates whether the duplicate rule will allow a record that’s identified as a duplicate to be saved. Set to true if duplicate rule should allow save; otherwise, false.

Signature
```
public Boolean isAllowSave()
```

Return Value
Type: Boolean

FieldDiff Class
Represents the name of a matching rule field and how the values of the field compare for the duplicate and its matching record.

Namespace
Datacloud
FieldDiff Methods

The following are methods for FieldDiff.

getDifference()
Returns how the field values compare for the duplicate and its matching record.

getName()
Returns the name of a field on a matching rule that detected duplicates.

getDifference()

Returns how the field values compare for the duplicate and its matching record.

Signature
public String getDifference()

Return Value
Type: String
Possible values include:
- SAME: Indicates the field values match exactly.
- DIFFERENT: Indicates that the field values do not match.
- NULL: Indicates that the field values are a match because both values are blank.

getName()

Returns the name of a field on a matching rule that detected duplicates.

Signature
public String getName()

Return Value
Type: String

FindDuplicates Class

Performs rule-based searches for duplicate records. The input is an array of sObjects. Each sObject represents a record you want to find duplicates of. The output identifies the detected duplicates for each input sObject based on active duplicate rules for the given object.
Namespace
Datacloud

IN THIS SECTION:
    FindDuplicates Methods

FindDuplicates Methods
The following are methods for FindDuplicates.

IN THIS SECTION:
    findDuplicates(sObjects)
    Identifies duplicates for sObjects provided and returns a list of FindDuplicatesResult objects.

findDuplicates(sObjects)
Identifies duplicates for sObjects provided and returns a list of FindDuplicatesResult objects.

Usage
Use FindDuplicates to apply active duplicate rules associated with an object to records represented by input sObjects. FindDuplicates uses the duplicate rules for the object that has the same type as the input sObjects.

Input
- All sObjects in the input array must be of the same object type, and that type must correspond to an object type that supports duplicate rules.
- The input array is limited to 50 elements. If you exceed this limit, an exception is thrown with the following message: Configuration error: The number of records to check is greater than the permitted batch size.

Output
- The output of FindDuplicates is an array of objects with the same number of elements as the input array, and in the same order. The output objects encapsulate record IDs for duplicate records. The output objects also contain values from the duplicate records.
- Each element contains an array of DuplicateResult objects. If FindDuplicates doesn’t find any duplicates, the duplicateRule field in DuplicateResult contains the name of the duplicate rule that FindDuplicates applied, but the matchResults array is empty.

Example

```java
Account acct = new Account();
acct.Name = 'Acme';
acct.BillingStreet = '123 Fake St';
acct.BillingCity = 'Springfield';
acct.BillingState = 'VT';
acct.BillingCountry = 'US';
List<Account> acctList = new List<Account>();
```
acctList.add acct;

if (Datacloud.FindDuplicates.findDuplicates(acctList).size() == 0) {
   // If the new account doesn't have duplicates, insert it.
   insert acct;
}

**Signature**

public static List<Datacloud.FindDuplicatesResult> findDuplicates(List<SObject> sObjects)

**Parameters**

sObjects
   Type: List<SObject>
   An array of sObjects for which you want to find duplicates.

**Return Value**

Type: List<FindDuplicatesResult>

---

**FindDuplicatesByIds Class**

Performs rule-based searches for duplicate records. The input is an array of IDs. Each ID specifies records to search for duplicates among. The duplicates are detected based on the active duplicate rules applicable to the object type corresponding to the input IDs.

**Namespace**

Datacloud

---

**FindDuplicatesByIds Methods**

The following are methods for FindDuplicatesByIds.

**Usage**

Use FindDuplicatesByIds to apply active duplicate rules associated with an object to records represented by the record IDs.
FindDuplicatesByIds uses the duplicate rules for the object that has the same type as the input record IDs. For example, if the record ID represents an Account, FindDuplicatesByIds uses the duplicate rules associated with the Account object.

**Input**
- All record IDs in the input array must be of the same object type, and that type must correspond to an object type that supports duplicate rules.
- The input array is limited to 50 elements. If you exceed this limit, an exception is thrown with the following message: Configuration error: The number of records to check is greater than the permitted batch size.

**Output**
- The output of FindDuplicatesByIds is an array of objects with the same number of elements as the input array, and in the same order. The output objects encapsulate record IDs for duplicate records. The output objects also contain values from the duplicate records.
- Each element contains an array of DuplicateResult objects. If FindDuplicatesByIds doesn’t find any duplicates, the duplicateRule field in DuplicateResult contains the name of the duplicate rule that FindDuplicatesByIds applied, but the matchResults array is empty.

**Example**

```java
Account acct = new Account(name='Salesforce');
insert acct;
List<Id> idList = new List<Id>();
idList.add(acct.id);

if (Datacloud.FindDuplicatesByIds.findDuplicatesByIds(idList).size() > 0) {
    System.debug('Found duplicates');
}
```

**Signature**

```java
public static List<Datacloud.FindDuplicatesResult> findDuplicatesByIds(List<Id> ids)
```

**Parameters**

- **ids**
  - Type: List<Id>
  - A list of IDs for which you want to find duplicates.

**Return Value**

- Type: List<Datacloud.FindDuplicatesResult>

**FindDuplicatesResult Class**

Output for rule-based searches for duplicate records. FindDuplicatesResult contains results of detecting duplicates using instances of FindDuplicates or FindDuplicatesByIds classes.
Namespace
Datacloud

IN THIS SECTION:
FindDuplicatesResult Properties
FindDuplicatesResult Methods

FindDuplicatesResult Properties
The following are properties for FindDuplicatesResult.

IN THIS SECTION:
duplicateresults
A list of DuplicateResult objects representing the results of calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids). Elements in the list correspond to sObjects or IDs in the input list.
errors
A list of Database.Error objects holding errors resulting from calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids).
success
Boolean signifying whether the call to FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids) was successful.

duplicateresults
A list of DuplicateResult objects representing the results of calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids). Elements in the list correspond to sObjects or IDs in the input list.

Signature
public List<Datacloud.DuplicateResult> duplicateresults

Property Value
Type: List<DuplicateResult>

errors
A list of Database.Error objects holding errors resulting from calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids).

Signature
public List<Database.Error> errors {get; set;}

1960
success
Boolean signifying whether the call to 
FindDuplicates.findDuplicates(sObjects) or 
FindDuplicatesByIds.findDuplicatesByIds(ids) was successful.

Signature
public Boolean success {get; set;}

FindDuplicatesResult Methods
The following are methods for FindDuplicatesResult.

IN THIS SECTION:
getDuplicateResults()
Returns a list of DuplicateResult objects representing the results of calling 
FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids). 
Elements in the list correspond to sObjects or IDs in the input list.

getErrors()
Returns a list of DatabaseError objects containing errors resulting from calling 
FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids), 
if errors were encountered.

isSuccess()
Returns a Boolean signifying whether the call to FindDuplicates.findDuplicates(sObjects) or 
FindDuplicatesByIds.findDuplicatesByIds(ids) was successful.

getDuplicateResults()
Returns a list of DuplicateResult objects representing the results of calling 
FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids). 
Elements in the list correspond to sObjects or IDs in the input list.

Example
```java
Account acct = new Account(name='Salesforce');
List<Account> acctList = new List<Account>();
acctList.add(acct);

Datacloud.FindDuplicatesResult[] results = Datacloud.FindDuplicates.findDuplicates(acctList);
for (Datacloud.FindDuplicatesResult findDupeResult : results) {
    for (Datacloud.DuplicateResult dupeResult : findDupeResult.getDuplicateResults()) {
```
for (Datacloud.MatchResult matchResult : dupeResult.getMatchResults()) {
    for (Datacloud.MatchRecord matchRecord : matchResult.getMatchRecords()) {
        System.debug('Duplicate Record: ' + matchRecord.getRecord());
    }
}

Signature
public List<Datacloud.DuplicateResult> getDuplicateResults()

Return Value
Type: List<DuplicateResult>

getErrors()  
Returns a list of Database.Error objects containing errors resulting from calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids), if errors were encountered.

Signature
public List<Database.Error> getErrors()

Return Value
Type: List<Database.Error>

isSuccess()  
Returns a Boolean signifying whether the call to FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids) was successful.

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

MatchRecord Class
Represents a duplicate record detected by a matching rule.

Namespace
Datacloud
IN THIS SECTION:

MatchRecord Methods

**MatchRecord Methods**

The following are methods for `MatchRecord`.

IN THIS SECTION:

- `getAdditionalInformation()`
  - Returns other information about a matched record. For example, a `matchGrade` represents the quality of the data for the D&B fields in the matched record.
- `getFieldDiffs()`
  - Returns all matching rule fields and how each field value compares for the duplicate and its matching record.
- `getMatchConfidence()`
  - Returns the ranking of how similar a matched record's data is to the data in your request. Must be equal to or greater than the value of the `minMatchConfidence` specified in your request. Returns -1 if unused.
- `getRecord()`
  - Returns the fields and field values for the duplicate.

**getAdditionalInformation()**

Returns other information about a matched record. For example, a `matchGrade` represents the quality of the data for the D&B fields in the matched record.

**Signature**

```java
public List<Datacloud.AdditionalInformationMap> getAdditionalInformation()
```

**Return Value**

Type: `List<Datacloud.AdditionalInformationMap>`

**getFieldDiffs()**

Returns all matching rule fields and how each field value compares for the duplicate and its matching record.

**Signature**

```java
public List<Datacloud.FieldDiff> getFieldDiffs()
```

**Return Value**

Type: `List<Datacloud.FieldDiff>`

**getMatchConfidence()**

Returns the ranking of how similar a matched record's data is to the data in your request. Must be equal to or greater than the value of the `minMatchConfidence` specified in your request. Returns -1 if unused.
Signature

public Double getMatchConfidence()

Return Value
Type: Double

gRecord()

Returns the fields and field values for the duplicate.

Signature

public SObject getRecord()

Return Value
Type: SObject

MatchResult Class

Represents the duplicate results for a matching rule.

Namespace

Datacloud

IN THIS SECTION:

MatchResult Methods

MatchResult Methods

The following are methods for MatchResult.

IN THIS SECTION:

gEntityType()  
Returns the entity type of the matching rule.

gErrors()  
Returns errors that occurred during matching for the matching rule.

gMatchEngine()  
Returns the match engine for the matching rule.

gMatchRecords()  
Returns information about the duplicates for the matching rule.

gRule()  
Returns the developer name of the matching rule.
getSize()
Returns the number of duplicates detected by the matching rule.

isSuccess()
Returns false if there's an error with the matching rule, and true if the matching rule successfully ran.

getEntityType()
Returns the entity type of the matching rule.

Signature
public String getEntityType()

Return Value
Type: String

getErrors()
Returns errors that occurred during matching for the matching rule.

Signature
public List<Database.Error> getErrors()

Return Value
Type: List<Database.Error>

getMatchEngine()
Returns the match engine for the matching rule.

Signature
public String getMatchEngine()

Return Value
Type: String

getMatchRecords()
Returns information about the duplicates for the matching rule.

Signature
public List<Datacloud.MatchRecord> getMatchRecords()
Return Value
Type: List<Datacloud.MatchRecord>

getRule()
Returns the developer name of the matching rule.

Signature
public String getRule()

Return Value
Type: String

gsize()
Returns the number of duplicates detected by the matching rule.

Signature
public Integer getSize()

Return Value
Type: Integer

isSuccess()
Returns false if there's an error with the matching rule, and true if the matching rule successfully ran.

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

DataSource Namespace
The DataSource namespace provides the classes for the Apex Connector Framework. Use the Apex Connector Framework to develop a custom adapter for Salesforce Connect. Then connect your Salesforce organization to any data anywhere via the Salesforce Connect custom adapter.

The following are the classes in the DataSource namespace.
IN THIS SECTION:

**AsyncDeleteCallback Class**
A callback class that the Database.deleteAsync method references. Salesforce calls this class after the remote deleteAsync operation is completed. This class provides the compensating transaction in the completion context of the delete operation. Extend this class to define the actions to execute after the remote delete operation finishes execution.

**AsyncSaveCallback Class**
A callback class that the Database.insertAsync or Database.updateAsync method references. Salesforce calls this class after the remote operation is completed. This class provides the compensating transaction in the completion context of the insert or update operation. Extend this class to define the actions to execute after the remote insert or update operation finishes execution.

**AuthenticationCapability Enum**
Specifies the types of authentication that can be used to access the external system.

**AuthenticationProtocol Enum**
Determines what type of credentials are used to authenticate to the external system.

**Capability Enum**
Declares which functional operations the external system supports. Also specifies required endpoint settings for the external data source definition.

**Column Class**
Describes a column on a DataSource.Table. This class extends the DataSourceUtil class and inherits its methods.

**ColumnSelection Class**
Identifies the list of columns to return during a query or search.

**Connection Class**
Extend this class to enable your Salesforce org to sync the external system's schema and to handle queries, searches, and write operations (upsert and delete) of the external data. This class extends the DataSourceUtil class and inherits its methods.

**ConnectionParams Class**
Contains the credentials for authenticating to the external system.

**DataSourceUtil Class**
Parent class for the DataSource.Provider, DataSource.Connection, DataSource.Table, and DataSource.Column classes.

**DataType Enum**
Specifies the data types that are supported by the Apex Connector Framework.

**DeleteContext Class**
An instance of DeleteContext is passed to the deleteRows() method on your Database.Connection class. The class provides context information about the delete request to the implementor of deleteRows().

**DeleteResult Class**
Represents the result of a delete operation on an sObject record. The result is returned by the DataSource.deleteRows method of the DataSource.Connection class.

**Filter Class**
Represents a WHERE clause in a SOSL or SOQL query.

**FilterType Enum**
Referenced by the type property on a DataSource.Filter.
IdentityType Enum
Determines which set of credentials is used to authenticate to the external system.

Order Class
Contains details about how to sort the rows in the result set. Equivalent to an ORDER BY statement in a SOQL query.

OrderDirection Enum
Specifies the direction for sorting rows based on column values.

Provider Class
Extend this base class to create a custom adapter for Salesforce Connect. The class informs Salesforce of the functional and authentication capabilities that are supported by or required to connect to the external system. This class extends the DataSourceUtil class and inherits its methods.

QueryAggregation Enum
Specifies how to aggregate a column in a query.

QueryContext Class
An instance of QueryContext is provided to the query method on your DataSource.Connection class. The instance corresponds to a SOQL request.

QueryUtils Class
Contains helper methods to locally filter, sort, and apply limit and offset clauses to data rows. This helper class is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

ReadContext Class
Abstract base class for the QueryContext and SearchContext classes.

SearchContext Class
An instance of SearchContext is provided to the search method on your DataSource.Connection class. The instance corresponds to a search or SOSL request.

SearchUtils Class
Helper class for implementing search on a custom adapter for Salesforce Connect.

Table Class
Describes a table on an external system that the Salesforce Connect custom adapter connects to. This class extends the DataSourceUtil class and inherits its methods.

TableResult Class
Contains the results of a search or query.

TableSelection Class
Contains a breakdown of the SOQL or SOSL query. Its properties represent the FROM, ORDER BY, SELECT, and WHERE clauses in the query.

UpsertContext Class
An instance of UpsertContext is passed to the upsertRows() method on your DataSource.Connection class. This class provides context information about the upsert request to the implementor of upsertRows().

UpsertResult Class
Represents the result of an upsert operation on an external object record. The result is returned by the upsertRows method of the DataSource.Connection class.

DataSource Exceptions
The DataSource namespace contains exception classes.
AsyncDeleteCallback Class

A callback class that the `Database.deleteAsync` method references. Salesforce calls this class after the remote `deleteAsync` operation is completed. This class provides the compensating transaction in the completion context of the delete operation. Extend this class to define the actions to execute after the remote delete operation finishes execution.

Namespace

DataSource

IN THIS SECTION:

AsyncDeleteCallback Methods

AsyncDeleteCallback Methods

The following are methods for `AsyncDeleteCallback`.

IN THIS SECTION:

`processDelete(deleteResult)`

Override this method to define actions that Salesforce executes after a remote `Database.deleteAsync` operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that’s stored in the Salesforce org.

`processDelete(deleteResult)`

Override this method to define actions that Salesforce executes after a remote `Database.deleteAsync` operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that’s stored in the Salesforce org.

Signature

```java
public void processDelete(Database.DeleteResult deleteResult)
```

Parameters

`deleteResult`

Type: `Database.DeleteResult`

The result of the asynchronous delete operation.

Return Value

Type: void

AsyncSaveCallback Class

A callback class that the `Database.insertAsync` or `Database.updateAsync` method references. Salesforce calls this class after the remote operation is completed. This class provides the compensating transaction in the completion context of the insert or update operation. Extend this class to define the actions to execute after the remote insert or update operation finishes execution.
Namespace

DataSource

IN THIS SECTION:

AsyncSaveCallback Methods

AsyncSaveCallback Methods
The following are methods for AsyncSaveCallback.

IN THIS SECTION:

processSave(saveResult)
Override this method to define actions that Salesforce executes after the remote Database.insertAsync or Database.updateAsync operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that's stored in the Salesforce org.

processSave(saveResult)
Override this method to define actions that Salesforce executes after the remote Database.insertAsync or Database.updateAsync operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that's stored in the Salesforce org.

Signature

public void processSave(Database.SaveResult saveResult)

Parameters

saveResult
Type: Database.SaveResult
The result of the asynchronous insert or update operation.

Return Value
Type: void

AuthenticationCapability Enum
Specifies the types of authentication that can be used to access the external system.

Usage

The DataSource.Provider class returns DataSource.AuthenticationCapability enum values. The returned values determine which authentication settings are available on the external data source definition in Salesforce.

If you set up callouts in your DataSource.Connection class, you can specify the callout endpoints as named credentials instead of URLs. If you do so for all callouts, return ANONYMOUS as the sole entry in the list of data source authentication capabilities. That way,
the external data source definition doesn’t require authentication settings. Salesforce manages all authentication for Apex callouts that specify a named credential as the callout endpoint so that your code doesn’t have to.

**Enum Values**

The following are the values of the `DataSource.AuthenticationCapability` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANONYMOUS</td>
<td>No credentials are required to authenticate to the external system.</td>
</tr>
<tr>
<td>BASIC</td>
<td>A username and password can be used to authenticate to the external system.</td>
</tr>
<tr>
<td>CERTIFICATE</td>
<td>A security certificate can be supplied when establishing each connection to the external system.</td>
</tr>
<tr>
<td>OAUTH</td>
<td>OAuth can be used to authenticate to the external system.</td>
</tr>
</tbody>
</table>

**AuthenticationProtocol Enum**

Determines what type of credentials are used to authenticate to the external system.

**Enum Values**

The following are the values of the `DataSource.AuthenticationProtocol` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NONE</td>
<td>No credentials are used to authenticate to the external system.</td>
</tr>
<tr>
<td>OAUTH</td>
<td>OAuth 2.0 is used to authenticate to the external system.</td>
</tr>
<tr>
<td>PASSWORD</td>
<td>A username and password are used to authenticate to the external system.</td>
</tr>
</tbody>
</table>

**Capability Enum**

Declares which functional operations the external system supports. Also specifies required endpoint settings for the external data source definition.

**Usage**

The `DataSource.Provider` class returns `DataSource.Capability` enum values, which:

- Specify the functional capabilities of the external system.
- Determine which endpoint settings are available on the external data source definition in Salesforce.

**Enum Values**

The following are the values of the `DataSource.Capability` enum.
With server-driven paging, the external system determines the page sizes and batch boundaries. The external system’s paging settings can optimize the external system’s performance and improve the load times for external objects in your org. Also, the external data set can change while your users or the Lightning Platform are paging through the result set. Typically, server-driven paging adjusts batch boundaries to accommodate changing data sets more effectively than client-driven paging.

If you enable server-driven paging on an external data source, Salesforce ignores the requested page sizes, including the default `queryMore()` batch size of 500 rows. The pages returned by the external system determine the batches, but each page can’t exceed 2,000 rows. Also, the Apex code must generate a query token and use it to determine and fetch the next batch of results.

### QUERY-pagination-server-driven

The external system can provide the total number of rows that meet the query criteria, even when requested to return a smaller batch size. This capability enables you to simplify how you paginate results by using `queryMore()`.

### QUERY-total-size

Requires the administrator to specify the endpoint in the URL field in the external data source definition.

### REQUIRE-ENDPOINT

Requires the endpoint URL to use secure HTTP. If `REQUIRE_ENDPOINT` isn’t declared, `REQUIRE_HTTPS` is ignored.

### REQUIRE-HTTPS

Allows creating of external data.

### ROW_CREATE

Allows deleting external data.

### ROW_DELETE

Allows API and SOQL queries of the external data. Also allows reports on the external objects.

### ROW_QUERY

Allows updating external data.

### ROW_UPDATE

Allows SOSL and Salesforce searches of the external data.

When the custom adapter declares the `SEARCH` capability, you can control which external objects are searchable by selecting or deselecting `Allow Search` on each external object. However, syncing always overwrites the external object’s search status to match the search status of the external data source.

Only text, text area, and long text area fields on external objects can be searched. If an external object has no searchable fields, searches on that object return no records.

### Column Class

Describes a column on a `DataSource.Table`. This class extends the `DataSourceUtil` class and inherits its methods.
Namespace

DataSource

Usage

A list of column metadata is provided by the `DataSource.Connection` class when the `sync()` method is invoked. Each column can become a field on an external object.

The metadata is stored in Salesforce. Updating the Apex code to return new or updated values for the column metadata doesn’t automatically update the stored metadata in Salesforce.

IN THIS SECTION:

- Column Properties
- Column Methods

Column Properties

The following are properties for `Column`.

IN THIS SECTION:

- `decimalPlaces`
  If the data type is numeric, the number of decimal places to the right of the decimal point.
- `description`
  Description of what the column represents.
- `filterable`
  Whether a result set can be filtered based on the values of the column.
- `label`
  User-friendly name for the column that appears in the Salesforce user interface.
- `length`
  If the column is a string data type, the number of characters in the column. If the column is a numeric data type, the total number of digits on both sides of the decimal point, but excluding the decimal point.
- `name`
  Name of the column in the external system.
- `referenceTargetField`
  API name of the custom field on the parent object whose values are compared against this column’s values. Matching values identify related records in an indirect lookup relationship. Applies only when the column’s data type is `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.
- `referenceTo`
  API name of the parent object in the relationship that’s represented by this column. Applies only when the column’s data type is `LOOKUP_TYPE`, `EXTERNAL_LOOKUP_TYPE`, or `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.
- `sortable`
  Whether a result set can be sorted based on the values of the column via an `ORDER BY` clause.
**type**
Data type of the column.

**decimalPlaces**
If the data type is numeric, the number of decimal places to the right of the decimal point.

Signature
```java
public Integer decimalPlaces {get; set;}
```

Property Value
Type: Integer

**description**
Description of what the column represents.

Signature
```java
public String description {get; set;}
```

Property Value
Type: String

**filterable**
Whether a result set can be filtered based on the values of the column.

Signature
```java
public Boolean filterable {get; set;}
```

Property Value
Type: Boolean

**label**
User-friendly name for the column that appears in the Salesforce user interface.

Signature
```java
public String label {get; set;}
```

Property Value
Type: String
**length**
If the column is a string data type, the number of characters in the column. If the column is a numeric data type, the total number of digits on both sides of the decimal point, but excluding the decimal point.

Signature
```java
public Integer length {get; set;}
```

Property Value
Type: Integer

**name**
Name of the column in the external system.

Signature
```java
public String name {get; set;}
```

Property Value
Type: String

**referenceTargetField**
API name of the custom field on the parent object whose values are compared against this column’s values. Matching values identify related records in an indirect lookup relationship. Applies only when the column’s data type is INDIRECT_LOOKUP_TYPE. For other data types, this value is ignored.

Signature
```java
public String referenceTargetField {get; set;}
```

Property Value
Type: String

**referenceTo**
API name of the parent object in the relationship that’s represented by this column. Applies only when the column’s data type is LOOKUP_TYPE, EXTERNAL_LOOKUP_TYPE, or INDIRECT_LOOKUP_TYPE. For other data types, this value is ignored.

Signature
```java
public String referenceTo {get; set;}
```

Property Value
Type: String
**sortable**

Whether a result set can be sorted based on the values of the column via an `ORDER BY` clause.

**Signature**

```csharp
public Boolean sortable {get; set;}
```

**Property Value**

Type: `Boolean`

**type**

Data type of the column.

**Signature**

```csharp
public DataSource.DataType type {get; set;}
```

**Property Value**

Type: `DataSource.DataType`

---

**Column Methods**

The following are methods for `Column`.

**IN THIS SECTION:**

- `boolean(name)`
  - Returns a new column of data type `BOOLEAN_TYPE`.

- `externalLookup(name, domain)`
  - Returns a new column of data type `EXTERNAL_LOOKUP_TYPE`.

- `get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces, referenceTo, referenceTargetField)`
  - Returns a new column with the ten specified `Column` property values.

- `get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces)`
  - Returns a new column with the eight specified `Column` property values.

- `get(name, label, description, isSortable, isFilterable, type, length)`
  - Returns a new column with the seven specified `Column` property values.

- `indirectLookup(name, domain, targetField)`
  - Returns a new column of data type `INDIRECT_LOOKUP_TYPE`.

- `integer(name, length)`
  - Returns a new numeric column with no decimal places using the specified name and length.

- `lookup(name, domain)`
  - Returns a new column of data type `LOOKUP_TYPE`. 

---

1976
number(name, length, decimalPlaces)
Returns a new column of data type NUMBER_TYPE.

text(name, label, length)
Returns a new column of data type STRING_SHORT_TYPE or STRING_LONG_TYPE, with the specified name, label, and length.

text(name, length)
Returns a new column of data type STRING_SHORT_TYPE or STRING_LONG_TYPE, with the specified name and length.

text(name)
Returns a new column of data type STRING_SHORT_TYPE with the specified name and the length of 255 characters.

textarea(name)
Returns a new column of data type STRING_LONG_TYPE with the specified name and the length of 32,000 characters.

textarea(name, length)
Returns a new column of data type URL_TYPE with the specified name and length.

textarea(name)
Returns a new column of data type URL_TYPE with the specified name and the length of 1,000 characters.

boolean(name)
Returns a new column of data type BOOLEAN_TYPE.

Signature
public static DataSource.Column boolean(String name)

Parameters
name
Type: String
Name of the column.

Return Value
Type: DataSource.Column

externalLookup(name, domain)
Returns a new column of data type EXTERNAL_LOOKUP_TYPE.

Signature
public static DataSource.Column externalLookup(String name, String domain)

Parameters
name
Type: String
Name of the column.
domain
   Type: String
   API name of the parent object in the external lookup relationship.

Return Value
Type: DataSource.Column
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>

<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
<tr>
<td>referenceTo</td>
<td>domain</td>
</tr>
<tr>
<td>referenceTargetField</td>
<td>null</td>
</tr>
</tbody>
</table>

get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces, referenceTo, referenceTargetField)
Returns a new column with the ten specified Column property values.

Signature

public static DataSource.Column get(String name, String label, String description, Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length, Integer decimalPlaces, String referenceTo, String referenceTargetField)

Parameters
See Column Properties on page 1973 for information about each parameter.

name
   Type: String

label
   Type: String

description
   Type: String
isSortable
  Type: Boolean
isFilterable
  Type: Boolean
type
  Type: DataSource.DataType

  Type: Integer
referenceTo
  Type: String
referenceTargetField
  Type: String

Return Value
Type: DataSource.Column

get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces)
Returns a new column with the eight specified Column property values.

Signature
public static DataSource.Column get(String name, String label, String description,
Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length,
Integer decimalPlaces)

Parameters
See Column Properties on page 1973 for information about each parameter.

name
  Type: String
label
  Type: String
description
  Type: String
isSortable
  Type: Boolean
isFilterable
  Type: Boolean
type
  Type: DataSource.DataType
length
   Type: Integer

decimalPlaces
   Type: Integer

Return Value
Type: DataSource.Column

get(name, label, description, isSortable, isFilterable, type, length)
Returns a new column with the seven specified Column property values.

Signature
public static DataSource.Column get(String name, String label, String description,
   Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length)

Parameters
See Column Properties on page 1973 for information about each parameter.

name
   Type: String

label
   Type: String

description
   Type: String

isSortable
   Type: Boolean

isFilterable
   Type: Boolean

type
   Type: DataSource.DataType

length
   Type: Integer

Return Value
Type: DataSource.Column

indirectLookup(name, domain, targetField)
Returns a new column of data type INDIRECT_LOOKUP_TYPE.
Signature

public static DataSource.Column indirectLookup(String name, String domain, String targetField)

Parameters

name
Type: String
Name of the column.
domain
Type: String
API name of the parent object in the indirect lookup relationship.
targetField
Type: String
API name of the custom field on the parent object whose values are compared against this column’s values. Matching values identify related records in an indirect lookup relationship.

Return Value

Type: DataSource.Column
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>

<tr>
<td>referenceTo</td>
<td>domain</td>
</tr>
<tr>
<td>referenceTargetField</td>
<td>targetField</td>
</tr>
</tbody>
</table>

**integer(name, length)**

Returns a new numeric column with no decimal places using the specified name and length.

Signature

public static DataSource.Column integer(String name, Integer length)
Parameters

name
Type: String
The column name.

length
Type: Integer
The column length.

Return Value
Type: DataSource.Column

lookup(name, domain)
Returns a new column of data type LOOKUP_TYPE.

Signature
public static DataSource.Column lookup(String name, String domain)

Parameters

name
Type: String
Name of the column.

domain
Type: String
API name of the parent object in the lookup relationship.

Return Value
Type: DataSource.Column
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.LOOKUP_TYPE</td>
</tr>
<tr>
<td>length</td>
<td>255</td>
</tr>
</tbody>
</table>
number(name, length, decimalPlaces)

Returns a new column of data type NUMBER_TYPE.

Signature

public static DataSource.Column number(String name, Integer length, Integer decimalPlaces)

Parameters

See Column Properties on page 1973 for information about each parameter.

- **name**
  - Type: String
- **length**
  - Type: Integer
- **decimalPlaces**
  - Type: Integer

Return Value

Type: DataSource.Column

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>

<td>length</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>decimalPlaces</td>
</tr>
</tbody>
</table>
**text(name, label, length)**

Returns a new column of data type STRING_SHORT_TYPE or STRING_LONG_TYPE, with the specified name, label, and length.

**Signature**

```java
public static DataSource.Column text(String name, String label, Integer length)
```

**Parameters**

- **name**
  - Type: String
  - Name of the column.

- **label**
  - Type: String
  - User-friendly name for the column that appears in the Salesforce user interface.

- **length**
  - Type: Integer
  - Number of characters allowed in the column.

**Return Value**

Type: DataSource.Column

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>label</td>
</tr>
<tr>
<td>description</td>
<td>label</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.STRING_SHORT_TYPE if length is 255 or less</td>
</tr>
<tr>
<td></td>
<td>DataSource.DataType.STRING_LONG_TYPE if length is greater than 255</td>
</tr>
<tr>
<td>length</td>
<td>length</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

**text(name, length)**

Returns a new column of data type STRING_SHORT_TYPE or STRING_LONG_TYPE, with the specified name and length.

**Signature**

```java
public static DataSource.Column text(String name, Integer length)
```
Parameters

**name**
Type: String
Name of the column.

**length**
Type: Integer
Number of characters allowed in the column.

Return Value

Type: DataSource.Column
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.STRING_SHORT_TYPE if length is 255 or less</td>
</tr>
<tr>
<td></td>
<td>DataSource.DataType.STRING_LONG_TYPE if length is greater than 255</td>
</tr>
<tr>
<td>length</td>
<td>length</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

**text(name)**

Returns a new column of data type STRING_SHORT_TYPE with the specified name and the length of 255 characters.

Signature

```java
public static DataSource.Column text(String name)
```

Parameters

**name**
Type: String
Name of the column.
Return Value

Type: DataSource.Column

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.STRING_SHORT_TYPE</td>
</tr>
<tr>
<td>length</td>
<td>255</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

**textarea(name)**

Returns a new column of data type `STRING_LONG_TYPE` with the specified name and the length of 32,000 characters.

Signature

```java
public static DataSource.Column textarea(String name)
```

Parameters

- **name**
  - Type: String
  - Name of the column.

Return Value

Type: DataSource.Column

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.STRING_LONG_TYPE</td>
</tr>
</tbody>
</table>
url(name, length)
Returns a new column of data type URL_TYPE with the specified name and length.

Signature
public static DataSource.Column url(String name, Integer length)

Parameters
name
Type: String
Name of the column.

length
Type: Integer
Number of characters allowed in the column.

Return Value
Type: DataSource.Column
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.URL_TYPE</td>
</tr>
<tr>
<td>length</td>
<td>length</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

url(name)
Returns a new column of data type URL_TYPE with the specified name and the length of 1,000 characters.
Signature

```java
public static DataSource.Column url(String name)
```

Parameters

- `name`  
  Type: `String`  
  Name of the column.

Return Value

Type: `DataSource.Column`  
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td><code>name</code></td>
</tr>
<tr>
<td>label</td>
<td><code>name</code></td>
</tr>
<tr>
<td>description</td>
<td><code>name</code></td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td><code>DataSource.DataType.URL_TYPE</code></td>
</tr>
<tr>
<td>length</td>
<td>1000</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

**ColumnSelection Class**

Identifies the list of columns to return during a query or search.

**Namespace**

`DataSource Namespace`

**Usage**

This class is associated with the `SELECT` clause for a SOQL query, or the `RETURNING` clause for a SOSL query.

IN THIS SECTION:

- `ColumnSelection Properties`

**ColumnSelection Properties**

The following are properties for `ColumnSelection`.  

1988
IN THIS SECTION:

**aggregation**
How to aggregate the column’s data.

**columnName**
Name of the selected column.

**tableName**
Name of the column’s table.

### aggregation
How to aggregate the column’s data.

**Signature**

```
public DataSource.QueryAggregation aggregation {get; set;}
```

**Property Value**

Type: `DataSource.QueryAggregation`

### columnName
Name of the selected column.

**Signature**

```
public String columnName {get; set;}
```

**Property Value**

Type: `String`

### tableName
Name of the column’s table.

**Signature**

```
public String tableName {get; set;}
```

**Property Value**

Type: `String`

### Connection Class
Extend this class to enable your Salesforce org to sync the external system’s schema and to handle queries, searches, and write operations (upsert and delete) of the external data. This class extends the `DataSourceUtil` class and inherits its methods.
Namespace

DataSource

Usage

Your DataSource.Connection and DataSource.Provider classes compose a custom adapter for Salesforce Connect. Changing the sync method on the DataSource.Connection class doesn’t automatically resync any external objects.

Example

global class SampleDataSourceConnection extends DataSource.Connection {

global SampleDataSourceConnection(DataSource.ConnectionParams connectionParams) {

}

override global List<DataSource.Table> sync() {
    List<DataSource.Table> tables = new List<DataSource.Table>();
    List<DataSource.Column> columns;
    columns = new List<DataSource.Column>();
    columns.add(DataSource.Column.text('Name', 255));
    columns.add(DataSource.Column.text('ExternalId', 255));
    columns.add(DataSource.Column.url('DisplayUrl'));
    tables.add(DataSource.Table.get('Sample', 'Title', columns));
    return tables;
}

override global DataSource.TableResult query(DataSource.QueryContext c) {
    return DataSource.TableResult.get(c, DataSource.QueryUtils.process(c, getRows()));
}

override global List<DataSource.TableResult> search(DataSource.SearchContext c) {

    List<DataSource.TableResult> results = new List<DataSource.TableResult>();
    for (DataSource.TableSelection tableSelection : c.tableSelections) {
        results.add(DataSource.TableResult.get(tableSelection, getRows()));
    }
    return results;
}

// Helper method to get record values from the external system for the Sample table.
private List<Map<String, Object>> getRows () {
    // Get row field values for the Sample table from the external system via a callout.
    HttpResponse response = makeGetCallout();
    // Parse the JSON response and populate the rows.
    Map<String, Object> m = (Map<String, Object>)JSON.deserializeUntyped(response.getBody());
    Map<String, Object> error = (Map<String, Object>)m.get('error');
    if (error != null) {
        throwException(string.valueOf(error.get('message')));
    }
    List<Map<String,Object>> rows = new List<Map<String,Object>>();
}
List<Object> jsonRows = (List<Object>)m.get('value');
if (jsonRows == null) {
    rows.add(foundRow(m));
} else {
    for (Object jsonRow : jsonRows) {
        Map<String, Object> row = (Map<String, Object>)jsonRow;
        rows.add(foundRow(row));
    }
}
return rows;

global override List<DataSource.UpsertResult> upsertRows(DataSource.UpsertContext context) {
    if (context.tableSelected == 'Sample') {
        List<DataSource.UpsertResult> results = new List<DataSource.UpsertResult>();
        List<Map<String, Object>> rows = context.rows;

        for (Map<String, Object> row : rows) {
            // Make a callout to insert or update records in the external system.
            HttpResponse response;
            // Determine whether to insert or update a record.
            if (row.get('ExternalId') == null) {
                // Send a POST HTTP request to insert new external record.
                // Make an Apex callout and get HttpResponse.
                response = makePostCallout("{"name":"" + row.get('Name') + "," + "ExternalId":"" + row.get('ExternalId') + ","};
            } else {
                // Send a PUT HTTP request to update an existing external record.
                // Make an Apex callout and get HttpResponse.
                response = makePutCallout("{"name":"" + row.get('Name') + "," + "ExternalId":"" + row.get('ExternalId') + "," + String.valueOf(row.get('ExternalId')));
            }

            // Check the returned response.
            // First, deserialize it.
            Map<String, Object> m = (Map<String, Object>)JSON.deserializeUntyped(response.getBody());
            if (response.getStatusCode() == 200) {
                results.add(DataSource.UpsertResult.success(String.valueOf(m.get('id'))));
            } else {
                results.add(DataSource.UpsertResult.failure(String.valueOf(m.get('id')), 'The callout resulted in an error: ' + response.getStatusCode()));
            }
        }
    }
    return results;
}
return null;
}

global override List<DataSource.DeleteResult> deleteRows(DataSource.DeleteContext context) {
    if (context.tableSelected == 'Sample') {
        List<DataSource.DeleteResult> results = new List<DataSource.DeleteResult>();
        for (String externalId : context.externalIds) {
            HttpResponse response = makeDeleteCallout(externalId);
            if (response.getStatusCode() == 200) {
                results.add(DataSource.DeleteResult.success(externalId));
            } else {
                results.add(DataSource.DeleteResult.failure(externalId,
                    'Callout delete error:'
                    + response.getBody()));
            }
        }
        return results;
    }
    return null;
}

// Helper methods

// Make a GET callout
private static HttpResponse makeGetCallout() {
    HttpResponse response;
    // Make callout
    // ...
    return response;
}

// Populate a row based on values from the external system.
private Map<String, Object> foundRow(Map<String, Object> foundRow) {
    Map<String, Object> row = new Map<String, Object>();
    row.put('ExternalId', string.valueOf(foundRow.get('Id')));
    row.put('DisplayUrl', string.valueOf(foundRow.get('DisplayUrl')));
    row.put('Name', string.valueOf(foundRow.get('Name')));
    return row;
}

// Make a POST callout
private static HttpResponse makePostCallout(String jsonBody) {
    HttpResponse response;
    // Make callout
    // ...
    return response;
}

// Make a PUT callout
private static HttpResponse makePutCallout(String jsonBody, String externalID) {
    HttpResponse response;
IN THIS SECTION:

Connection Methods

Connection Methods

The following are methods for Connection.

IN THIS SECTION:

delteRows(deleteContext)
Invoked when external object records are deleted via the Salesforce user interface, APIs, or Apex.

query(queryContext)
Invoked by a SOQL query of an external object. A SOQL query is generated and executed when a user visits an external object’s list view or record detail page in Salesforce. Returns the results of the query.

search(searchContext)
Invoked by a SOSL query of an external object or when a user performs a Salesforce global search that also searches external objects. Returns the results of the query.

sync()
Invoked when an administrator clicks Validate and Sync on the external data source detail page. Returns a list of tables that describe the external system’s schema.

upsertRows(upsertContext)
Invoked when external object records are created or updated via the Salesforce user interface, APIs, or Apex.

delteRows (deleteContext)
Invoked when external object records are deleted via the Salesforce user interface, APIs, or Apex.

Signature

public List<DataSource.DeleteResult> deleteRows (DataSource.DeleteContext deleteContext)
Parameters

`deleteContext`
- Type: `DataSource.DeleteContext`
- Contains context information about the delete request.

Return Value
- Type: `List<DataSource.DeleteResult>`
- The results of the delete operation.

`query(queryContext)`
Invoked by a SOQL query of an external object. A SOQL query is generated and executed when a user visits an external object’s list view or record detail page in Salesforce. Returns the results of the query.

Signature

```java
public DataSource.TableResult query(DataSource.QueryContext queryContext)
```

Parameters

`queryContext`
- Type: `DataSource.QueryContext`
- Represents the query to run against a data table.

Return Value
- Type: `DataSource.TableResult`

`search(searchContext)`
Invoked by a SOSL query of an external object or when a user performs a Salesforce global search that also searches external objects. Returns the results of the query.

Signature

```java
public List<DataSource.TableResult> search(DataSource.SearchContext searchContext)
```

Parameters

`searchContext`
- Type: `DataSource.SearchContext`
- Represents the query to run against an external data table.

Return Value
- Type: `List<DataSource.TableResult>`
sync()  
Invoked when an administrator clicks Validate and Sync on the external data source detail page. Returns a list of tables that describe the external system’s schema.

Signature  
public List<DataSource.Table> sync()

Return Value  
Type: List<DataSource.Table>  
Each returned table can be used to create an external object in Salesforce. On the Validate External Data Source page, the administrator views the list of returned tables and selects which tables to sync. When the administrator clicks Sync, an external object is created for each selected table. Each column within the selected tables also becomes a field in the external object.

class upsertRows(upsertContext)  
Invoked when external object records are created or updated via the Salesforce user interface, APIs, or Apex.

Signature  
public List<DataSource.UpsertResult> upsertRows(DataSource.UpsertContext upsertContext)

Parameters  
upsertContext  
Type: DataSource.UpsertContext  
Contains context information about the upsert request.

Return Value  
Type: List<DataSource.UpsertResult>  
The results of the upsert operation.

ConnectionParams Class  
Contains the credentials for authenticating to the external system.

Namespace  
DataSource  

Usage  
If your extension of the DataSource.Provider class returns DataSource.AuthenticationCapability values that indicate support for authentication, the DataSource.Connection class is instantiated with a DataSource.ConnectionParams instance in the constructor.
The authentication credentials in the `DataSource.ConnectionParams` instance depend on the `Identity Type` field of the external data source definition in Salesforce.

- If `Identity Type` is set to `Named Principal`, the credentials come from the external data source definition.
- If `Identity Type` is set to `Per User`:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user’s authentication settings for the external system.
  - For administrative connections, such as syncing the external system’s schema, the credentials come from the external data source definition.

The values in this class can appear in debug logs and can be accessed by users who have the “Author Apex” permission. If you require better security, we recommend that you specify named credentials instead of URLs as your Apex callout endpoints. Salesforce manages all authentication for Apex callouts that specify a named credential as the callout endpoint so that your code doesn’t have to.

### IN THIS SECTION:

**ConnectionParams Properties**

The following are properties for `ConnectionParams`.

### IN THIS SECTION:

- `certificateName`
  - The name of the certificate for establishing each connection to the external system.
- `endpoint`
  - The URL of the external system.
- `oauthToken`
  - The OAuth token that’s issued by the external system.
- `password`
  - The password for authenticating to the external system.
- `principalType`
  - An instance of `DataSource.IdentityType`, which determines which set of credentials to use to access the external system.
- `protocol`
  - The type of protocol that’s used to authenticate to the external system.
- `repository`
  - Reserved for future use.
- `username`
  - The username for authenticating to the external system.

**certificateName**

The name of the certificate for establishing each connection to the external system.
Signature

```java
public String certificateName {get; set;}
```

Property Value
Type: String
The value comes from the external data source definition in Salesforce.

**endpoint**
The URL of the external system.

Signature

```java
public String endpoint {get; set;}
```

Property Value
Type: String
The value comes from the external data source definition in Salesforce.

**oauthToken**
The OAuth token that’s issued by the external system.

Signature

```java
public String oauthToken {get; set;}
```

Property Value
Type: String

**password**
The password for authenticating to the external system.

Signature

```java
public String password {get; set;}
```

Property Value
Type: String
The value depends on the **Identity Type** field of the external data source definition in Salesforce.

- If **Identity Type** is set to **Named Principal**, the credentials come from the external data source definition.
- If **Identity Type** is set to **Per User**:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user’s authentication settings for the external system.
For administrative connections, such as syncing the external system’s schema, the credentials come from the external data source definition.

**principalType**
An instance of `DataSource.IdentityType`, which determines which set of credentials to use to access the external system.

**Signature**
```csharp
public DataSource.IdentityType principalType {get; set;}
```

**Property Value**
Type: `DataSource.IdentityType`

**protocol**
The type of protocol that’s used to authenticate to the external system.

**Signature**
```csharp
public DataSource.AuthenticationProtocol protocol {get; set;}
```

**Property Value**
Type: `DataSource.AuthenticationProtocol`

**repository**
Reserved for future use.

**Signature**
```csharp
public String repository {get; set;}
```

**Property Value**
Type: `String`
Reserved for future use.

**username**
The username for authenticating to the external system.

**Signature**
```csharp
public String username {get; set;}
```

**Property Value**
Type: `String`
The value depends on the Identity Type field of the external data source definition in Salesforce.

- If Identity Type is set to Named Principal, the credentials come from the external data source definition.
- If Identity Type is set to Per User:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user’s authentication settings for the external system.
  - For administrative connections, such as syncing the external system’s schema, the credentials come from the external data source definition.

**DataSourceUtil Class**

Parent class for the `DataSource.Provider`, `DataSource.Connection`, `DataSource.Table`, and `DataSource.Column` classes.

**Namespace**

`DataSource`

**IN THIS SECTION:**

- `DataSourceUtil Methods`

**DataSourceUtil Methods**

The following are methods for `DataSourceUtil`.

**IN THIS SECTION:**

- `logWarning(message)`
  - Logs the error message in the debug log.

- `throwException(message)`
  - Throws a `DataSourceException` and displays the provided message to the user.

**logWarning(message)**

Logs the error message in the debug log.

**Signature**

```java
public void logWarning(String message)
```

**Parameters**

- `message`
  - Type: `String`
  - The error message.
returnValue

Type: void

**throwException (message)**

Throws a `DataSourceException` and displays the provided message to the user.

**Signature**

```java
public void throwException(String message)
```

**Parameters**

`message`

Type: `String`

Error message to display to the user.

**Return Value**

Type: void

---

**DataType Enum**

Specifies the data types that are supported by the Apex Connector Framework.

**Usage**

The `DataSource.DataType` enum is referenced by the `type` property on the `DataSource.Column` class.

**Enum Values**

The following are the values of the `DataSource.DataType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BOOLEAN_TYPE</td>
<td>Boolean</td>
</tr>
<tr>
<td>DATETIME_TYPE</td>
<td>Date/time</td>
</tr>
<tr>
<td>EXTERNAL_LOOKUP_TYPE</td>
<td>External lookup relationship</td>
</tr>
<tr>
<td>INDIRECT_LOOKUP_TYPE</td>
<td>Indirect lookup relationship</td>
</tr>
<tr>
<td>LOOKUP_TYPE</td>
<td>Lookup relationship</td>
</tr>
<tr>
<td>NUMBER_TYPE</td>
<td>Number</td>
</tr>
<tr>
<td>STRING_LONG_TYPE</td>
<td>Long text area</td>
</tr>
<tr>
<td>STRING_SHORT_TYPE</td>
<td>Text area</td>
</tr>
<tr>
<td>URL_TYPE</td>
<td>URL</td>
</tr>
</tbody>
</table>
DeleteContext Class
An instance of DeleteContext is passed to the deleteRows() method on your Database.Connection class. The class provides context information about the delete request to the implementor of deleteRows().

Namespace
DataSource

Usage
The Apex Connector Framework creates context for operations. Context is comprised of parameters about the operations, which other methods can use. An instance of the DeleteContext class packages these parameters into an object that can be used when a deleteRows() operation is initiated.

IN THIS SECTION:
  DeleteContext Properties

DeleteContext Properties
The following are properties for DeleteContext.

IN THIS SECTION:
  externalIds
  The external IDs of the rows representing external object records to delete.
  tableSelected
  The name of the table to delete rows from.

**externalIds**
The external IDs of the rows representing external object records to delete.

Signature
```java
public List<String> externalIds {get; set;}
```

Property Value
Type: List<String>

**tableSelected**
The name of the table to delete rows from.

Signature
```java
public String tableSelected {get; set;}
```
DeleteResult Class

Represents the result of a delete operation on an sObject record. The result is returned by the `DataSource.deleteRows` method of the `DataSource.Connection` class.

Namespace

`DataSource`

Usage

A delete operation on external object records generates an array of objects of type `DataSource.DeleteResult`. Its methods create result records that indicate whether the delete operation succeeded or failed.

IN THIS SECTION:

- DeleteResult Properties
- DeleteResult Methods

DeleteResult Properties

The following are properties for `DeleteResult`.

IN THIS SECTION:

- `errorMessage`
- `externalId`
- `success`

**errorMessage**

The error message that’s generated by a failed delete operation. Recorded with a result of type `DataSource.DeleteResult`.

**externalId**

The unique identifier of a row that represents an external object record to delete.

**success**

Indicates whether a delete operation succeeded or failed.

**errorMessage**

The error message that’s generated by a failed delete operation. Recorded with a result of type `DataSource.DeleteResult`.

Signature

```java
public String errorMessage {get; set;}
```

Property Value

Type: `String`
**externalId**
The unique identifier of a row that represents an external object record to delete.

Signature
```
public String externalId {get; set;}
```

Property Value
Type: String

**success**
Indicates whether a delete operation succeeded or failed.

Signature
```
public Boolean success {get; set;}
```

Property Value
Type: Boolean

**DeleteResult Methods**
The following are methods for DeleteResult.

IN THIS SECTION:
- **equals(obj)**
  Maintains the integrity of lists of type DeleteResult by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

- **failure(externalId, errorMessage)**
  Creates a delete result indicating the failure of a delete request for a given external ID.

- **hashCode()**
  Maintains the integrity of lists of type DeleteResult by determining the uniqueness of the external object records in a list.

- **success(externalId)**
  Creates a delete result indicating the successful completion of a delete request for a given external ID.

**equals(obj)**
Maintains the integrity of lists of type DeleteResult by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

Signature
```
public Boolean equals(Object obj)
```
Parameters

\( \text{obj} \)
  Type: Object
  External object whose key is to be validated.
For information about the \( \text{equals} \) method, see Using Custom Types in Map Keys and Sets on page 110.

Return Value
Type: Boolean

failure(externalId, errorMessage)
Creates a delete result indicating the failure of a delete request for a given external ID.

Signature
public static DataSource.DeleteResult failure(String externalId, String errorMessage)

Parameters

externalId
  Type: String
  The unique identifier of the sObject record to delete.

errorMessage
  Type: String
  The reason the delete operation failed.

Return Value
Type: DataSource.DeleteResult
Status result of the delete operation.

hashCode()
Maintains the integrity of lists of type DataSource.DeleteResult by determining the uniqueness of the external object records in a list.

Signature
public Integer hashCode()

Return Value
Type: Integer

success(externalId)
Creates a delete result indicating the successful completion of a delete request for a given external ID.
**Signature**

```java
public static DataSource.DeleteResult success(String externalId)
```

**Parameters**

- `externalId`
  - **Type:** String
  - The unique identifier of the sObject record to delete.

**Return Value**

- **Type:** DataSource.DeleteResult
  - Status result of the delete operation for the sObject with the given external ID.

**Filter Class**

Represents a `WHERE` clause in a SOSL or SOQL query.

**Namespace**

DataSource

**Usage**

Compound types require child filters. Specifically, the `subfilters` property can't be null if the `type` property is `NOT`, `AND`, or `OR`.

**IN THIS SECTION:**

Filter Properties

**Filter Properties**

The following are properties for Filter.

**IN THIS SECTION:**

- `columnName`
  - Name of the column that's being evaluated in a simple comparative type of filter.
- `columnValue`
  - Value that the filter compares records against in a simple comparative type of filter.
- `subfilters`
  - List of subfilters for compound filter types, such as `NOT`, `AND`, and `OR`.
- `tableName`
  - Name of the table whose column is being evaluated in a simple comparative type of filter.
- `type`
  - Type of filter operation that limits the returned data.
**columnName**
Name of the column that’s being evaluated in a simple comparative type of filter.

Signature
```java
public String columnName {get; set;}
```

Property Value
Type: String

**columnValue**
Value that the filter compares records against in a simple comparative type of filter.

Signature
```java
public Object columnValue {get; set;}
```

Property Value
Type: Object

**subfilters**
List of subfilters for compound filter types, such as `NOT_`, `AND_`, and `OR_`.

Signature
```java
public List<DataSource.Filter> subfilters {get; set;}
```

Property Value
Type: `List<DataSource.Filter>`

**tableName**
Name of the table whose column is being evaluated in a simple comparative type of filter.

Signature
```java
public String tableName {get; set;}
```

Property Value
Type: String

**type**
Type of filter operation that limits the returned data.
Signature

```csharp
public DataSource.FilterType type {get; set;}
```

Property Value

Type: `DataSource.FilterType`

**FilterType Enum**

Referenced by the `type` property on a `DataSource.Filter`.

**Usage**

Determines how to limit the returned data.

**Enum Values**

The following are the values of the `DataSource.FilterType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>AND_</code></td>
<td>This compound filter type returns all rows that match all the subfilters.</td>
</tr>
<tr>
<td><code>CONTAINS</code></td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td><code>ENDS_WITH</code></td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td><code>EQUALS</code></td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td><code>GREATER_THAN</code></td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td><code>GREATER_THAN_OR_EQUAL_TO</code></td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td><code>LESS_THAN</code></td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td><code>LESS_THAN_OR_EQUAL_TO</code></td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td><code>LIKE_</code></td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td><code>NOT_</code></td>
<td>This compound filter type returns the rows that don't match the subfilter.</td>
</tr>
<tr>
<td><code>NOT_EQUALS</code></td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td><code>OR_</code></td>
<td>This compound filter type returns all rows that match any of the subfilters.</td>
</tr>
<tr>
<td><code>STARTS_WITH</code></td>
<td>Simple comparative filter type.</td>
</tr>
</tbody>
</table>

**IdentityType Enum**

Determines which set of credentials is used to authenticate to the external system.

**Usage**

The relevant credentials are passed to your `DataSource.Connection` class.
Enum Values

The following are the values of the `DataSource.IdentityType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANONYMOUS</td>
<td>No credentials are used to authenticate to the external system.</td>
</tr>
<tr>
<td>NAMED_USER</td>
<td>The credentials in the external data source definition are used to authenticate to the external system, regardless of which user is accessing the external data from your organization.</td>
</tr>
<tr>
<td>PER_USER</td>
<td>For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user’s authentication settings for the external system. For administrative connections, such as syncing the external system’s schema, the credentials come from the external data source definition.</td>
</tr>
</tbody>
</table>

Order Class

Contains details about how to sort the rows in the result set. Equivalent to an `ORDER BY` statement in a SOQL query.

Namespace

`DataSource`

Usage

Used in the `order` property on the `DataSource.TableSelection` class.

Order Properties

The following are properties for `Order`.

IN THIS SECTION:
- `columnName`
- `direction`
- `tableName`
**columnName**
Name of the column whose values are used to sort the rows in the result set.

Signature

```java
public String columnName {get; set;}
```

Property Value

Type: `String`

**direction**
Direction for sorting rows based on column values.

Signature

```java
public DataSource.OrderDirection direction {get; set;}
```

Property Value

Type: `DataSource.OrderDirection`

**tableName**
Name of the table whose column values are used to sort the rows in the result set.

Signature

```java
public String tableName {get; set;}
```

Property Value

Type: `String`

**Order Methods**
The following are methods for `Order`.

IN THIS SECTION:

- `get(tableName, columnName, direction)`
  Creates an instance of the `DataSource.Order` class.

- `get(tableName, columnName, direction)`
  Creates an instance of the `DataSource.Order` class.
Signature

```java
public static DataSource.Order get(String tableName, String columnName,
Data Source.OrderDirection direction)
```

Parameters

- `tableName`
  - Type: `String`
  - Name of the table whose column values are used to sort the rows in the result set.

- `columnName`
  - Type: `String`
  - Name of the column whose values are used to sort the rows in the result set.

- `direction`
  - Type: `DataSource.OrderDirection`
  - Direction for sorting rows based on column values.

Return Value

Type: `DataSource.Order`

**OrderDirection Enum**

Specifies the direction for sorting rows based on column values.

**Usage**

Used by the `direction` property on the `DataSource.Order` class.

**Enum Values**

The following are the values of the `DataSource.OrderDirection` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASCENDING</td>
<td>Sort rows in ascending order (A–Z).</td>
</tr>
<tr>
<td>DESCENDING</td>
<td>Sort rows in descending order (Z–A).</td>
</tr>
</tbody>
</table>

**Provider Class**

Extend this base class to create a custom adapter for Salesforce Connect. The class informs Salesforce of the functional and authentication capabilities that are supported by or required to connect to the external system. This class extends the `DataSourceUtil` class and inherits its methods.

**Namespace**

`DataSource`
Usage

Create an Apex class that extends `DataSource.Provider` to specify the following.

- The types of authentication that can be used to access the external system
- The features that are supported for the connection to the external system
- The Apex class that extends `DataSource.Connection` to sync the external system’s schema and to handle the queries and searches of the external data

The values that are returned by the `DataSource.Provider` class determine which settings are available in the external data source definition in Salesforce. To access the external data source definition from Setup, enter `External Data Sources` in the Quick Find box, then select `External Data Sources`.

IN THIS SECTION:

Provider Methods

Provider Methods

The following are methods for `Provider`.

IN THIS SECTION:

- `getAuthenticationCapabilities()`
  Returns the types of authentication that can be used to access the external system.
- `getCapabilities()`
  Returns the functional operations that the external system supports and the required endpoint settings for the external data source definition in Salesforce.
- `getConnection(connectionParams)`
  Returns a connection that points to an instance of the external data source.

`getAuthenticationCapabilities()`

Returns the types of authentication that can be used to access the external system.

Signature

```
public List<DataSource.AuthenticationCapability> getAuthenticationCapabilities()
```

Return Value

Type: `List<DataSource.AuthenticationCapability>`

`getCapabilities()`

Returns the functional operations that the external system supports and the required endpoint settings for the external data source definition in Salesforce.

Signature

```
public List<DataSource.Capability> getCapabilities()
```
Return Value
Type: List<DataSource.Capability>

**getConnection(connectionParams)**
Returns a connection that points to an instance of the external data source.

Signature
public DataSource.Connection getConnection(DataSource.ConnectionParams connectionParams)

Parameters
connectionParams
Type: DataSource.ConnectionParams
Credentials for authenticating to the external system.

Return Value
Type: DataSource.Connection

---

**QueryAggregation Enum**
Specifies how to aggregate a column in a query.

**Usage**
Used by the aggregation property on the DataSource.ColumnSelection class.

**Enum Values**
The following are the values of the DataSource.QueryAggregation enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AVG</td>
<td>Reserved for future use.</td>
</tr>
<tr>
<td>COUNT</td>
<td>Returns the number of rows that meet the query criteria.</td>
</tr>
<tr>
<td>MAX</td>
<td>Reserved for future use.</td>
</tr>
<tr>
<td>MIN</td>
<td>Reserved for future use.</td>
</tr>
<tr>
<td>NONE</td>
<td>No aggregation.</td>
</tr>
<tr>
<td>SUM</td>
<td>Reserved for future use.</td>
</tr>
</tbody>
</table>

---

**QueryContext Class**
An instance of QueryContext is provided to the query method on your DataSource.Connection class. The instance corresponds to a SOQL request.
Namespace

DataSource

IN THIS SECTION:

   QueryContext Properties
   QueryContext Methods

QueryContext Properties

The following are properties for QueryContext.

IN THIS SECTION:

   queryMoreToken
   tableSelection

queryMoreToken

Query token that's used for server-driven paging to determine and fetch the subsequent batch of results.

Signature

public String queryMoreToken {get; set;}

Property Value

Type: String

tableSelection

Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.

Signature

public DataSource.TableSelection tableSelection (get; set;)

Property Value

Type: DataSource.TableSelection

QueryContext Methods

The following are methods for QueryContext.
get(metadata, offset, maxResults, tableSelection)

Creates an instance of the QueryContext class.

Signature

```java
public static DataSource.QueryContext get(List<DataSource.Table> metadata, Integer offset, Integer maxResults, DataSource.TableSelection tableSelection)
```

Parameters

- **metadata**
  - Type: List<DataSource.Table>
  - List of table metadata that describes the external system’s tables to query.

- **offset**
  - Type: Integer
  - Used for client-driven paging. Specifies the starting row offset into the query’s result set.

- **maxResults**
  - Type: Integer
  - Used for client-driven paging. Specifies the maximum number of rows to return in each batch.

- **tableSelection**
  - Type: DataSource.TableSelection
  - Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.

Return Value

Type: DataSource.QueryContext

### QueryUtils Class

Contains helper methods to locally filter, sort, and apply limit and offset clauses to data rows. This helper class is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

### Namespace

DataSource

### Usage

The DataSource.QueryUtils class and its helper methods can process query results locally within your Salesforce org. This class is provided for your convenience to simplify the development of your Salesforce Connect custom adapter for initial tests. However, the DataSource.QueryUtils class and its methods aren’t supported for use in production environments that use callouts to retrieve data from external systems. Complete the filtering and sorting on the external system before sending the query results to Salesforce.
When possible, use server-driven paging or another technique to have the external system determine the appropriate data subsets according to the limit and offset clauses in the query.

IN THIS SECTION:
   QueryUtils Methods

QueryUtils Methods
The following are methods for QueryUtils.

IN THIS SECTION:
   applyLimitAndOffset(queryContext, rows)
   Returns a subset of data rows after locally applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

   filter(queryContext, rows)
   Returns a subset of data rows after locally ordering and applying filters from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

   process(queryContext, rows)
   Returns data rows after locally filtering, sorting, ordering, and applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

   sort(queryContext, rows)
   Returns data rows after locally sorting and applying the order from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

applyLimitAndOffset(queryContext, rows)
Returns a subset of data rows after locally applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

Signature

public static List<Map<String,Object>> applyLimitAndOffset(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)

Parameters

queryContext
   Type: DataSource.QueryContext
   Represents the query to run against a data table.

rows
   Type: List<Map<String, Object>>
   Rows of data.

Return Value

Type: List<Map<String, Object>>
**filter**(queryContext, rows)

Returns a subset of data rows after locally ordering and applying filters from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

**Signature**

```java
public static List<Map<String, Object>> filter(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)
```

**Parameters**

- `queryContext`
  - Type: `DataSource.QueryContext`
  - Represents the query to run against a data table.
- `rows`
  - Type: `List<Map<String, Object>>`
  - Rows of data.

**Return Value**

Type: `List<Map<String, Object>>`

---

**process**(queryContext, rows)

Returns data rows after locally filtering, sorting, ordering, and applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

**Signature**

```java
public static List<Map<String, Object>> process(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)
```

**Parameters**

- `queryContext`
  - Type: `DataSource.QueryContext`
  - Represents the query to run against a data table.
- `rows`
  - Type: `List<Map<String, Object>>`
  - Rows of data.

**Return Value**

Type: `List<Map<String, Object>>`
sort(queryContext, rows)

Returns data rows after locally sorting and applying the order from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

Signature

```java
public static List<Map<String, Object>> sort(DataSource.QueryContext queryContext,
List<Map<String, Object>> rows)
```

Parameters

- **queryContext**
  - Type: `DataSource.QueryContext`
  - Represents the query to run against a data table.

- **rows**
  - Type: `List<Map<String, Object>>`
  - Rows of data.

Return Value

- Type: `List<Map<String, Object>>`

---

**ReadContext Class**

Abstract base class for the `QueryContext` and `SearchContext` classes.

**Namespace**

`DataSource`

IN THIS SECTION:

- **ReadContext Properties**

---

**ReadContext Properties**

The following are properties for `ReadContext`.

IN THIS SECTION:

- `maxResults`
  - Maximum number of rows that the query can return.
- `metadata`
  - Describes the external system’s tables to query.
- `offset`
  - The starting row offset into the query’s result set. Used for client-driven paging.
**maxResults**
Maximum number of rows that the query can return.

Signature

```
public Integer maxResults {get; set;}
```

Property Value

Type: Integer

**metadata**
Describes the external system’s tables to query.

Signature

```
public List<DataSource.Table> metadata {get; set;}
```

Property Value

Type: List<DataSource.Table>

**offset**
The starting row offset into the query’s result set. Used for client-driven paging.

Signature

```
public Integer offset {get; set;}
```

Property Value

Type: Integer

**SearchContext Class**
An instance of SearchContext is provided to the search method on your DataSource.Connection class. The instance corresponds to a search or SOSL request.

**Namespace**

DataSource

IN THIS SECTION:

- SearchContext Constructors
- SearchContext Properties
SearchContext Constructors

The following are constructors for SearchContext.

IN THIS SECTION:

SearchContext(metadata, offset, maxResults, tableSelections, searchPhrase)
Creates an instance of the SearchContext class with the specified parameter values.

SearchContext()
Creates an instance of the SearchContext class.

SearchContext (metadata, offset, maxResults, tableSelections, searchPhrase)

Creates an instance of the SearchContext class with the specified parameter values.

Signature

public SearchContext(List<DataSource.Table> metadata, Integer offset, Integer maxResults, List<DataSource.TableSelection> tableSelections, String searchPhrase)

Parameters

metadata
Type: List<DataSource.Table>
List of table metadata that describes the external system’s tables to query.

offset
Type: Integer
Specifies the starting row offset into the query’s result set.

maxResults
Type: Integer
Specifies the maximum number of rows to return in each batch.

tableSelections
Type: List<DataSource.TableSelection>
List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

searchPhrase
Type: String
The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

SearchContext ()

Creates an instance of the SearchContext class.

Signature

public SearchContext ()
SearchContext Properties
The following are properties for SearchContext.

IN THIS SECTION:

searchPhrase
The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

tableSelections
List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

searchPhrase
The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

Signature
public String searchPhrase {get; set;}

Property Value
Type: String

tableSelections
List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

Signature
public List<DataSource.TableSelection> tableSelections {get; set;}

Property Value
Type: List<DataSource.TableSelection>

SearchUtils Class
Helper class for implementing search on a custom adapter for Salesforce Connect.

Namespace
DataSource

Usage
We recommend that you develop your own search implementation that can search columns in addition to the designated name field.
SearchUtils Methods

The following are methods for SearchUtils.

IN THIS SECTION:

searchByName(searchDetails, connection)
Queries all the tables and returns each row whose designated name field contains the search phrase.

searchByName(searchDetails, connection)
Queries all the tables and returns each row whose designated name field contains the search phrase.

Signature
public static List<DataSource.TableResult> searchByName(DataSource.SearchContext searchDetails, DataSource.Connection connection)

Parameters

searchDetails
Type: DataSource.SearchContext
The SearchContext class that specifies which data to search and what to search for.

collection
Type: DataSource.Connection
The DataSource.Connection class that connects to the external system.

Return Value
Type: List<DataSource.TableResult>

Table Class

Describes a table on an external system that the Salesforce Connect custom adapter connects to. This class extends the DataSourceUtil class and inherits its methods.

Namespace
DataSource

Usage
A list of table metadata is provided by the DataSource.Connection class when the sync() method is invoked. Each table can become an external object in Salesforce.

The metadata is stored in Salesforce. Updating the Apex code to return new or updated values for the table metadata doesn’t automatically update the stored metadata in Salesforce.
Table Properties

The following are properties for Table.

IN THIS SECTION:

- `columns`
  List of table columns.

- `description`
  Description of what the table represents.

- `labelPlural`
  Plural form of the user-friendly name for the table. The `labelPlural` becomes the object's plural label in the Salesforce user interface.

- `labelSingular`
  Singular form of the user-friendly name for the table. The `labelSingular` becomes the object label in the Salesforce user interface. We recommend that you make object labels unique across all standard, custom, and external objects in the org.

- `name`
  Name of the table on the external system.

- `nameColumn`
  Name of the table column that becomes the name field of the external object when the administrator syncs the table.

### columns

List of table columns.

**Signature**

```java
public List<DataSource.Column> columns {get; set;}
```

**Property Value**

Type: List<`DataSource.Column`>

### description

Description of what the table represents.

**Signature**

```java
public String description {get; set;}
```
**labelPlural**
Plural form of the user-friendly name for the table. The `labelPlural` becomes the object's plural label in the Salesforce user interface.

Signature
```java
public String labelPlural {get; set;}
```

**labelSingular**
Singular form of the user-friendly name for the table. The `labelSingular` becomes the object label in the Salesforce user interface. We recommend that you make object labels unique across all standard, custom, and external objects in the org.

Signature
```java
public String labelSingular {get; set;}
```

**name**
Name of the table on the external system.

Signature
```java
public String name {get; set;}
```

**nameColumn**
Name of the table column that becomes the name field of the external object when the administrator syncs the table.

Signature
```java
public String nameColumn {get; set;}
```
Table Methods

The following are methods for Table.

IN THIS SECTION:

get(name, labelSingular, labelPlural, description, nameColumn, columns)
Returns the table metadata with the specified parameter values.

get(name, nameColumn, columns)
Returns the table metadata with the specified parameter values, using the name for the labels and description.

gget(name, labelSingular, labelPlural, description, nameColumn, columns)
Returns the table metadata with the specified parameter values.

Signature

public static DataSource.Table get(String name, String labelSingular, String labelPlural, String description, String nameColumn, List<DataSource.Column> columns)

Parameters

name
Type: String
Name of the external table.

labelSingular
Type: String
Singular form of the user-friendly name for the table. The labelSingular becomes the object label in the Salesforce user interface.

labelPlural
Type: String
Plural form of the user-friendly name for the table. The labelPlural becomes the object’s plural label in the Salesforce user interface.

description
Type: String
Description of the external table.

nameColumn
Type: String
Name of the table column that becomes the name field of the external object when the administrator syncs the table.

columns
Type: List<DataSource.Column>
List of table columns.

Return Value

Type: DataSource.Table
get(name, nameColumn, columns)

Returns the table metadata with the specified parameter values, using the name for the labels and description.

Signature

public static DataSource.Table get(String name, String nameColumn,
List<DataSource.Column> columns)

Parameters

name
Type: String
Name of the external table.

nameColumn
Type: String
Name of the table column that becomes the name field of the external object when the administrator syncs the table.

columns
Type: List<DataSource.Column>
List of table columns.

Return Value

Type: DataSource.Table

The returned table metadata has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>labelSingular</td>
<td>name</td>
</tr>
<tr>
<td>labelPlural</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>nameColumn</td>
<td>nameColumn</td>
</tr>
<tr>
<td>columns</td>
<td>columns</td>
</tr>
</tbody>
</table>

TableResult Class

Contains the results of a search or query.

Namespace

DataSource
IN THIS SECTION:
TableResult Properties
TableResult Methods

TableResult Properties
The following are properties for TableResult.

IN THIS SECTION:
errorMessage
Error message to display to the user.
queryMoreToken
Query token that’s used for server-driven paging to determine and fetch the subsequent batch of results. This token is passed back to the Apex data source on subsequent queries in the queryMoreToken property on the QueryContext.
rows
Rows of data.
success
Whether the search or query was successful.
tableName
Name of the table that was queried.
totalSize
The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

errorMessage
Error message to display to the user.

Signature
public String errorMessage {get; set;}

Property Value
Type: String

queryMoreToken
Query token that’s used for server-driven paging to determine and fetch the subsequent batch of results. This token is passed back to the Apex data source on subsequent queries in the queryMoreToken property on the QueryContext.

Signature
public String queryMoreToken {get; set;}

2026
Property Value
Type: **String**

**rows**
Rows of data.

Signature
```java
public List<Map<String, Object>> rows {get; set;}
```

Property Value
Type: `List<Map<String, Object>>`

**success**
Whether the search or query was successful.

Signature
```java
public Boolean success {get; set;}
```

Property Value
Type: **Boolean**

**tableName**
Name of the table that was queried.

Signature
```java
public String tableName {get; set;}
```

Property Value
Type: **String**

**totalSize**
The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

Signature
```java
public Integer totalSize {get; set;}
```

Property Value
Type: **Integer**

2027
**TableResult Methods**

The following are methods for TableResult.

**IN THIS SECTION:**

- `error(errorMessage)`
  - Returns failed search or query results with the provided error message.

- `get(success, errorMessage, tableName, rows, totalSize)`
  - Returns a subset of data rows in a TableResult with the provided property values.

- `get(success, errorMessage, tableName, rows)`
  - Returns a subset of data rows in a TableResult with the provided property values and the number of rows in the table.

- `get(queryContext, rows)`
  - Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a TableResult.

- `get(tableSelection, rows)`
  - Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a TableResult.

---

**error(errorMessage)**

Returns failed search or query results with the provided error message.

**Signature**

```java
public static DataSource.TableResult error(String errorMessage)
```

**Parameters**

- `errorMessage`
  - Type: String
  - Error message to display to the user.

**Return Value**

Type: `DataSource.TableResult`

The returned TableResult has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>success</td>
<td>false</td>
</tr>
<tr>
<td>errorMessage</td>
<td><code>errorMessage</code></td>
</tr>
<tr>
<td>tableName</td>
<td>null</td>
</tr>
<tr>
<td>rows</td>
<td>null</td>
</tr>
<tr>
<td>rows.size()</td>
<td>0</td>
</tr>
</tbody>
</table>
get(success, errorMessage, tableName, rows, totalSize)
Returns a subset of data rows in a TableResult with the provided property values.

Signature
public static DataSource.TableResult get(Boolean success, String errorMessage, String tableName, List<Map<String, Object>> rows, Integer totalSize)

Parameters
success
Type: Boolean
Whether the search or query was successful.
errorMessage
Type: String
Error message to display to the user.
tableName
Type: String
Name of the table that was queried.
rows
Type: List<Map<String, Object>>
Rows of data.
totalSize
Type: Integer
The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

Return Value
Type: DataSource.TableResult

get(success, errorMessage, tableName, rows)
Returns a subset of data rows in a TableResult with the provided property values and the number of rows in the table.

Signature
public static DataSource.TableResult get(Boolean success, String errorMessage, String tableName, List<Map<String, Object>> rows)
Error message to display to the user.

tableName
  Type: String
  Name of the table that was queried.

rows
  Type: List<Map<String, Object>>
  Rows of data.

Return Value
  Type: DataSource.TableResult

get(queryContext, rows)
Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a TableResult.

Signature
public static DataSource.TableResult get(DataSource.QueryContext queryContext,
List<Map<String, Object>> rows)

Parameters
queryContext
  Type: DataSource.QueryContext
  Represents the query to run against a data table.

rows
  Type: List<Map<String, Object>>
  Rows of data.

Return Value
  Type: DataSource.TableResult

get(tableSelection, rows)
Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a TableResult.

Signature
public static DataSource.TableResult get(DataSource.TableSelection tableSelection,
List<Map<String, Object>> rows)

Parameters
tableSelection
  Type: DataSource.TableSelection
  Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.
rows
Type: List<Map<String, Object>>
Rows of data.

Return Value
Type: DataSource.TableResult

TableSelection Class
Contains a breakdown of the SOQL or SOSL query. Its properties represent the FROM, ORDER BY, SELECT, and WHERE clauses in the query.

Namespace
DataSource

IN THIS SECTION:
TableSelection Properties

TableSelection Properties
The following are properties for TableSelection.

IN THIS SECTION:

    columnsSelected
List of columns to query. Corresponds to the SELECT clause in a SOQL or SOSL query.

    filter
Identifies the query filter, which can be a compound filter that has a list of subfilters. The filter corresponds to the WHERE clause in a SOQL or SOSL query.

    order
Identifies the order for sorting the query results. Corresponds to the ORDER BY clause in a SOQL or SOSL query.

    tableSelected
Name of the table to query. Corresponds to the FROM clause in a SOQL or SOSL query.

columnsSelected
List of columns to query. Corresponds to the SELECT clause in a SOQL or SOSL query.

Signature
public List<DataSource.ColumnSelection> columnsSelected {get; set;}

Property Value
Type: List<DataSource.ColumnSelection>
**filter**
Identifies the query filter, which can be a compound filter that has a list of subfilters. The filter corresponds to the WHERE clause in a SOQL or SOSL query.

**Signature**
```
public DataSource.Filter filter {get; set;}
```

**Property Value**
Type: `DataSource.Filter`

**order**
Identifies the order for sorting the query results. Corresponds to the ORDER BY clause in a SOQL or SOSL query.

**Signature**
```
public List<DataSource.Order> order {get; set;}
```

**Property Value**
Type: `List<DataSource.Order>`

**tableSelected**
Name of the table to query. Corresponds to the FROM clause in a SOQL or SOSL query.

**Signature**
```
public String tableSelected {get; set;}
```

**Property Value**
Type: `String`

**UpsertContext Class**
An instance of `UpsertContext` is passed to the `upsertRows()` method on your `Datasource.Connection` class. This class provides context information about the upsert request to the implementor of `upsertRows()`.

**Namespace**
`DataSource`

**Usage**
The Apex Connector Framework creates the context for operations. Context is comprised of parameters about the operations, which other methods can use. An instance of the `UpsertContext` class packages these parameters into an object that can be used when an `upsertRows()` operation is initiated.
IN THIS SECTION:

**UpsertContext Properties**

**UpsertContext Properties**

The following are properties for `UpsertContext`.

IN THIS SECTION:

`rows`

List of rows corresponding to the external object records to upsert.

`tableSelected`

The name of the table to upsert rows in.

**rows**

List of rows corresponding to the external object records to upsert.

Signature

```java
public List<Map<String, ANY>> rows {get; set;}
```

Property Value

Type: `List<Map<String, Object>>`

**tableSelected**

The name of the table to upsert rows in.

Signature

```java
public String tableSelected {get; set;}
```

Property Value

Type: `String`

**UpsertResult Class**

Represents the result of an upsert operation on an external object record. The result is returned by the `upsertRows` method of the `DataSource.Connection` class.

**Namespace**

`DataSource`
Usage
An upsert operation on external object records generates an array of objects of type `DataSource.UpsertResult`. Its methods create result records that indicate whether the upsert operation succeeded or failed.

IN THIS SECTION:
- **UpsertResult Properties**
- **UpsertResult Methods**

UpsertResult Properties
The following are properties for `UpsertResult`.

IN THIS SECTION:
- `errorMessage`
- `externalId`
- `success`  

**errorMessage**
The error message that's generated by a failed upsert operation.

Signature
```
public String errorMessage {get; set;}
```

Property Value
Type: **String**

**externalId**
The unique identifier of a row that represents an external object record to upsert.

Signature
```
public String externalId {get; set;}
```

Property Value
Type: **String**

**success**
Indicates whether a delete operation succeeded or failed.
Signature

```java
public Boolean success {get; set;}
```

Property Value

Type: Boolean

**UpsertResult Methods**

The following are methods for UpsertResult.

IN THIS SECTION:

- `equals(obj)`
- `failure(externalId, errorMessage)`
- `hashCode()`
- `success(externalId)`

**equals(obj)**

Maintains the integrity of lists of type `UpsertResult` by determining the equality of external object records in a list. This method is dynamic and is based on the `equals` method in Java.

**failure(externalId, errorMessage)**

Creates an upsert result that indicates the failure of a delete request for a given external ID.

**hashCode()**

Maintains the integrity of lists of type `UpsertResult` by determining the uniqueness of the external object records in a list.

**success(externalId)**

Creates a delete result that indicates the successful completion of an upsert request for a given external ID.

**equals(obj)**

Maintains the integrity of lists of type `UpsertResult` by determining the equality of external object records in a list. This method is dynamic and is based on the `equals` method in Java.

Signature

```java
public Boolean equals(Object obj)
```

Parameters

- `obj`  
  Type: Object  
  External object whose key is to be validated.

Return Value

Type: Boolean

**failure(externalId, errorMessage)**

Creates an upsert result that indicates the failure of a delete request for a given external ID.
public static DataSource.UpsertResult failure(String externalId, String errorMessage)

Parameters
externalId
  Type: String
  The unique identifier of the external object record to upsert.
errorMessage
  Type: String
  The reason the upsert operation failed.

Return Value
Type: DataSource.UpsertResult
Status result for the upsert operation.

hashCode()
Maintains the integrity of lists of type UpsertResult by determining the uniqueness of the external object records in a list.

Signature
public Integer hashCode()

Return Value
Type: Integer

success(externalId)
Creates a delete result that indicates the successful completion of an upsert request for a given external ID.

Signature
public static DataSource.UpsertResult success(String externalId)

Parameters
externalId
  Type: String
  The unique identifier of the external object record to upsert.

Return Value
Type: DataSource.UpsertResult
Status result of the upsert operation for the external object record with the given external ID.
DataSource Exceptions

The DataSource namespace contains exception classes. All exception classes support built-in methods for returning the error message and exception type. See Exception Class and Built-In Exceptions.

The DataSource namespace contains these exceptions.

<table>
<thead>
<tr>
<th>Exception</th>
<th>Description</th>
<th>Methods</th>
</tr>
</thead>
<tbody>
<tr>
<td>DataSource.DataSourceException</td>
<td>Throw this exception to indicate that an error occurred while communicating with an external data source.</td>
<td>To get the error message and write it to debug log, use the String getMessage().</td>
</tr>
<tr>
<td>DataSource.OAuthTokenExpiredException</td>
<td>Throw this exception to indicate that an OAuth token has expired. The system then attempts to refresh the token automatically and restart the query, search, or sync operation.</td>
<td>To get the error message and write it to debug log, use the String getMessage().</td>
</tr>
</tbody>
</table>

Dom Namespace

The Dom namespace provides classes and methods for parsing and creating XML content. The following are the classes in the Dom namespace.

IN THIS SECTION:

- Document Class
  Use the Document class to process XML content. You can parse nested XML content that’s up to 50 nodes deep.

- XmlNode Class
  Use the XmlNode class to work with a node in an XML document.

Document Class

Use the Document class to process XML content. You can parse nested XML content that’s up to 50 nodes deep.

Namespace

Dom

Usage

One common application is to use it to create the body of a request for HttpRequest or to parse a response accessed by HttpResponse.

IN THIS SECTION:

- Document Constructors
Document Methods

SEE ALSO:
Reading and Writing XML Using the DOM

Document Constructors
The following are constructors for Document.

IN THIS SECTION:
Document()

Document()

Signature
public Document()

Document Methods
The following are methods for Document. All are instance methods.

IN THIS SECTION:
createRootElement(name, namespace, prefix)

- Creates the top-level root element for a document.

getRootElement()

- Returns the top-level root element node in the document. If this method returns null, the root element has not been created yet.

load(xml)

- Parse the XML representation of the document specified in the xml argument and load it into a document.

toXmlString()

- Returns the XML representation of the document as a String.

createRootElement(name, namespace, prefix)

- Creates the top-level root element for a document.

Signature
public Dom XmlNode createRootElement(String name, String namespace, String prefix)
Parameters

name
Type: String
namespace
Type: String
prefix
Type: String

Return Value
Type: Dom.XmlNode

Usage
For more information about namespaces, see XML Namespaces.
Calling this method more than once on a document generates an error as a document can have only one root element.

getElement()
Returns the top-level root element node in the document. If this method returns null, the root element has not been created yet.

Signature
public Dom XmlNode getElement()

Return Value
Type: Dom XmlNode

load(xml)
Parse the XML representation of the document specified in the xml argument and load it into a document.

Signature
public Void load(String xml)

Parameters
xml
Type: String

Return Value
Type: Void
Example

```java
doc.load(xml);
```

toXmlString()

Returns the XML representation of the document as a String.

Signature

```java
public String toXmlString()
```

Return Value

Type: String

XmlNode Class

Use the XmlNode class to work with a node in an XML document.

Namespace

Dom

XmlNode Methods

The following are methods for XmlNode. All are instance methods.

IN THIS SECTION:

- `addChildElement(name, namespace, prefix)`
  Creates a child element node for this node.

- `addCommentNode(text)`
  Creates a child comment node for this node.

- `addTextNode(text)`
  Creates a child text node for this node.

- `getAttribute(key, keyNamespace)`
  Returns `namespacePrefix:attributeValue` for the given key and key namespace.

- `getAttributeCount()`
  Returns the number of attributes for this node.

- `getAttributeKeyAt(index)`
  Returns the attribute key for the given index. Index values start at 0.

- `getAttributeKeyNsAt(index)`
  Returns the attribute key namespace for the given index.

- `getAttributeValue(key, keyNamespace)`
  Returns the attribute value for the given key and key namespace.
getAttributeValueNs(key, keyNamespace)
Returns the attribute value namespace for the given key and key namespace.

getChildElement(name, namespace)
Returns the child element node for the node with the given name and namespace.

getChildElements()
Returns the child element nodes for this node. This doesn’t include child text or comment nodes.

getChildren()
Returns the child nodes for this node. This includes all node types.

getName()
Returns the element name.

getNamespace()
Returns the namespace of the element.

getNamespaceFor(prefix)
Returns the namespace of the element for the given prefix.

getNodeType()
Returns the node type.

getParent()
Returns the parent of this element.

getPrefixFor(namespace)
Returns the prefix of the given namespace.

getText()
Returns the text for this node.

insertBefore(newChild, refChild)
Inserts a new child node before the specified node.

removeAttribute(key, keyNamespace)
Removes the attribute with the given key and key namespace. Returns true if successful, false otherwise.

removeChild(childNode)
Removes the given child node.

setAttribute(key, value)
Sets the key attribute value.

setAttributeNs(key, value, keyNamespace, valueNamespace)
Sets the key attribute value.

setNamespace(prefix, namespace)
Sets the namespace for the given prefix.

addChildElement(name, namespace, prefix)
Creates a child element node for this node.

Signature

public Dom.XmlNode addChildElement(String name, String namespace, String prefix)
Parameters

name
Type: String
The name argument can't have a null value.

namespace
Type: String

prefix
Type: String

Return Value
Type: Dom.XmlNode

Usage
• If the namespace argument has a non-null value and the prefix argument is null, the namespace is set as the default namespace.
• If the prefix argument is null, Salesforce automatically assigns a prefix for the element. The format of the automatic prefix is ns\text{i}, where \text{i} is a number. If the prefix argument is '', the namespace is set as the default namespace.

\textbf{addCommentNode(text)}
Creates a child comment node for this node.

Signature
\texttt{public Dom.XmlNode addCommentNode(String text)}

Parameters
text
Type: String
The text argument can't have a null value.

Return Value
Type: Dom.XmlNode

\textbf{addTextNode(text)}
Creates a child text node for this node.

Signature
\texttt{public Dom.XmlNode addTextNode(String text)}
Parameters

text
  Type: String
  The text argument can’t have a null value.

Return Value
Type: Dom.XmlNode

getAttribute(key, keyNamespace)
Returns namespacePrefix:attributeValue for the given key and key namespace.

Signature
public String getAttribute(String key, String keyNamespace)

Parameters
key
  Type: String
keyNamespace
  Type: String

Return Value
Type: String

Example
For example, for the <xyz a:b="c:d" /> element:
  • getAttribute returns c:d
  • getAttributeValue returns d

getAttributeCount()
Returns the number of attributes for this node.

Signature
public Integer getAttributeCount()

Return Value
Type: Integer

getAttributeKeyAt(index)
Returns the attribute key for the given index. Index values start at 0.
Signature
public String getAttributeKeyAt(Integer index)

Parameters
index
  Type: Integer

Return Value
Type: String

**getAttributeKeyNsAt(index)**
Returns the attribute key namespace for the given index.

Signature
public String getAttributeKeyNsAt(Integer index)

Parameters
index
  Type: Integer

Return Value
Type: String

**getAttributeValue(key, keyNamespace)**
Returns the attribute value for the given key and key namespace.

Signature
public String getAttributeValue(String key, String keyNamespace)

Parameters
key
  Type: String
keyNamespace
  Type: String

Return Value
Type: String
Example
For example, for the `<xyz a:b="c:d" />` element:

- `getAttribute` returns `c:d`
- `getAttributeValue` returns `d`

`getAttributeValueNs(key, keyNamespace)`

Returns the attribute value namespace for the given key and key namespace.

Signature

```java
public String getAttributeValueNs(String key, String keyNamespace)
```

Parameters

- **key**
  - Type: `String`

- **keyNamespace**
  - Type: `String`

Return Value

Type: `String`

`getChildElement(name, namespace)`

Returns the child element node for the node with the given name and namespace.

Signature

```java
public Dom.XmlNode getChildElement(String name, String namespace)
```

Parameters

- **name**
  - Type: `String`

- **namespace**
  - Type: `String`

Return Value

Type: `Dom.XmlNode`

`getChildElements()`

Returns the child element nodes for this node. This doesn’t include child text or comment nodes.
public Dom.XmlNode[] getChildren

Returns the child nodes for this node. This includes all node types.

public String getName

Returns the element name.

public String getNamespace

Returns the namespace of the element.

public String getNamespaceFor(String prefix)

Returns the namespace of the element for the given prefix.
Parameters

prefix
Type: String

Return Value
Type: String

**getNodeType()**
Returns the node type.

Signature

```java
public Dom.XmlNodeType getNodeType()
```

Return Value
Type: Dom.XmlNodeType

**getParent()**
Returns the parent of this element.

Signature

```java
public Dom.XmlNode getParent()
```

Return Value
Type: Dom.XmlNode

**getPrefixFor(namespace)**
Returns the prefix of the given namespace.

Signature

```java
public String getPrefixFor(String namespace)
```

Parameters

namespace
Type: String

The *namespace* argument can’t have a null value.

Return Value
Type: String
**getText()**

Returns the text for this node.

**Signature**

```java
public String getText()
```

**Return Value**

Type: String

**insertBefore(newChild, refChild)**

Inserts a new child node before the specified node.

**Signature**

```java
public Dom.XmlNode insertBefore(Dom.XmlNode newChild, Dom.XmlNode refChild)
```

**Parameters**

- **newChild**
  
  Type: Dom.XmlNode
  
  The node to insert.

- **refChild**
  
  Type: Dom.XmlNode
  
  The node before the new node.

**Return Value**

Type: Dom.XmlNode

**Usage**

- If `refChild` is `null`, `newChild` is inserted at the end of the list.
- If `refChild` doesn't exist, an exception is thrown.

**removeAttribute(key, keyNamespace)**

Removes the attribute with the given key and key namespace. Returns `true` if successful, `false` otherwise.

**Signature**

```java
public Boolean removeAttribute(String key, String keyNamespace)
```

**Parameters**

- **key**
  
  Type: String
keyNamespace
  Type: String

Return Value
Type: Boolean

removeChild(childNode)
Removes the given child node.

Signature
public Boolean removeChild(Dom.XmlNode childNode)

Parameters
childNode
  Type: Dom.XmlNode

Return Value
Type: Boolean

setAttribute(key, value)
Sets the key attribute value.

Signature
public Void setAttribute(String key, String value)

Parameters
key
  Type: String
value
  Type: String

Return Value
Type: Void

setAttributeNs(key, value, keyNamespace, valueNamespace)
Sets the key attribute value.
Signature

```java
public Void setAttributeNs(String key, String value, String keyNamespace, String valueNamespace)
```

Parameters

- `key`
  Type: `String`

- `value`
  Type: `String`

- `keyNamespace`
  Type: `String`

- `valueNamespace`
  Type: `String`

Return Value

Type: `Void`

```java
setNamespace(prefix, namespace)
```

Sets the namespace for the given prefix.

Signature

```java
public Void setNamespace(String prefix, String namespace)
```

Parameters

- `prefix`
  Type: `String`

- `namespace`
  Type: `String`

Return Value

Type: `Void`

**EventBus Namespace**

The EventBus namespace provides classes and methods for platform events.

The following are the classes in the EventBus namespace.

IN THIS SECTION:

- **TestBroker Class**
  Contains a method that delivers platform event messages in an Apex test.
TriggerContext Class
Provides information about the platform event trigger that’s currently executing, such as how many times the trigger was retried due to the EventBus.RetryableException.

SEE ALSO:
Platform Events Developer Guide

TestBroker Class
Contains a method that delivers platform event messages in an Apex test.

Namespace
EventBus

IN THIS SECTION:
TestBroker Methods

TestBroker Methods
The following are methods for TestBroker.

IN THIS SECTION:
deliver()

Delivers platform event messages to the test event bus. Use this method to deliver test event messages multiple times and verify that event subscribers have processed the test events each step of the way.

deliver()
Delivers platform event messages to the test event bus. Use this method to deliver test event messages multiple times and verify that event subscribers have processed the test events each step of the way.

Signature
public void deliver()}

Return Value
Type: void

Usage
Enclose Test.getEventBus().deliver() within the Test.startTest() and Test.stopTest() statement block.

Test.startTest();
// Create test events
// ...
// Publish test events with EventBus.publish()
SEE ALSO:
   Platform Events Developer Guide

TriggerContext Class
Provides information about the platform event trigger that’s currently executing, such as how many times the trigger was retried due to the EventBus.RetryableException.

Namespace
EventBus

IN THIS SECTION:
   TriggerContext Properties
   TriggerContext Methods

TriggerContext Properties
The following are properties for TriggerContext.

IN THIS SECTION:
   lastError
   retries

**lastError**
Read-only. The error message that the last thrown EventBus.RetryableException contains.

Signature
public String lastError {get;}

Property Value
Type: String
Usage

The error message that this property returns is the message that was passed in when creating the EventBus.RetryableException exception, as follows.

```java
throw new EventBus.RetryableException(
    'Condition is not met, so retrying the trigger again.');
```

retries

Read-only. The number of times the trigger was retried due to throwing the EventBus.RetryableException.

Signature

```java
public Integer retries {get;}
```

Property Value

Type: Integer

TriggerContext Methods

The following are methods for TriggerContext.

IN THIS SECTION:

- `currentContext()`

  Returns an instance of the EventBus.TriggerContext class containing information about the currently executing trigger.

currentContext()

Returns an instance of the EventBus.TriggerContext class containing information about the currently executing trigger.

Signature

```java
public static eventbus.TriggerContext currentContext()
```

Return Value

Type: EventBus.TriggerContext

Information about the currently executing trigger.

Flow Namespace

The Flow namespace provides a class for advanced Visualforce controller access to flows.

The following is the class in the Flow namespace.
IN THIS SECTION:

Interview Class

The Flow.Interview class provides advanced controller access to flows and the ability to start a flow.

Interview Class

The Flow.Interview class provides advanced controller access to flows and the ability to start a flow.

Namespace

Flow

Usage

SOQL and DML limits apply during flow execution. See Apex Governor Limits that Affect Flows in the Cloud Flow Designer Guide.

To create an Interview object, you have two options.

- Create the object directly in your class by using:
  - No namespace: Flow.Interview.\textit{flowName}
  - Namespace: Flow.Interview.\textit{namespace.flowName}

- Create the object dynamically by using \texttt{createInterview()}

\textbf{Note:} We recommend only using \texttt{createInterview()} if you need to reuse your method or class. Using \texttt{createInterview()} has these drawbacks.

- If you package a class that uses \texttt{createInterview()}, you have to add the associated flow manually.
- If you delete a flow, Salesforce doesn’t check if it’s referenced with \texttt{createInterview()}.

Examples: Starting Flow Interviews

The following examples are all sample controllers that start an interview for the flow from the Build a Discount Calculator project on Trailhead. Each shows a different permutation, based on:

- Whether the interview is created statically, with Flow.Interview.\textit{myFlow}, or dynamically, with \texttt{createInterview()}.  
- Whether the flow is managed or local.

Interview Created Statically for a Local Flow

```java
{  
  Map<String, Object> inputs = new Map<String, Object>();  
  inputs.put('AccountID', myAccount);  
  inputs.put('OpportunityID', myOppty);  
  Flow.Interview.Calculate_discounts myFlow = new Flow.Interview.Calculate_discounts(inputs);  
  myFlow.start();  
}
```
**Interview Created Dynamically for a Local Flow**

```java
public void callFlow(String flowName, Map<String, Object> inputs) {
    Flow.Interview myFlow = Flow.Interview.createInterview(flowName, inputs);
    myFlow.start();
}
```

**Interview Created Statically for a Managed Flow**

```java
{
    Map<String, Object> inputs = new Map<String, Object>();
    inputs.put('AccountID', myAccount);
    inputs.put('OpportunityID', myOppty);
    Flow.Interview.myNamespace.Calculate_discounts myFlow =
        new Flow.Interview.myNamespace.Calculate_discounts(inputs);
    myFlow.start();
}
```

**Interview Created Dynamically for a Managed Flow**

```java
public void callFlow(String namespace, String flowName, Map<String, Object> inputs) {
    Flow.Interview myFlow = Flow.Interview.createInterview(namespace, flowName, inputs);
    myFlow.start();
}
```

**Example: Getting Variable Values**

This sample uses the `getVariableValue` method to obtain breadcrumb (navigation) information from a flow. If that flow contains subflow elements, and each of the referenced flows also contains a `vaBreadCrumb` variable, you can provide users with breadcrumbs regardless of which flow the interview is running.

```java
public class SampleController {

    // Instance of the flow
    public Flow.Interview.Flow_Template_Gallery myFlow {get; set;}

    public String getBreadCrumb() {
        String aBreadCrumb;
        if (myFlow == null) { return 'Home';}
        else aBreadCrumb = (String) myFlow.getVariableValue('vaBreadCrumb');

        return (aBreadCrumb == null ? 'Home': aBreadCrumb);
    }
}
```

**Interview Methods**

The following are instance methods for `Interview`.

- `createInterview(namespace, flowName, inputVariables)`

  Creates an interview for a namespaced flow.
public static Flow.Interview createInterview(String namespace, String flowName, Map<String,ANY> inputVariables)

Parameters

namespace
Type: String
The flow’s namespace.

flowName
Type: String
The flow’s unique name.

inputVariables
Type: Map<String,Object>
Initial values for the flow’s input variables.

Return Value
Type: Flow.Interview

Usage
Use this method to dynamically create a Flow.Interview object for the start() method.

How you get output variable values from an interview depends on the type of the Apex variable where you’re storing the interview.

• If the variable is cast to a specific flow, you can use myFlow.myVar to access a variable, where myVar is the name of the variable.
  
  system.debug('My Output Variable: ' + myFlow.varName);

• If the variable is of type Flow.Interview but not cast to a specific flow, you must use getVariableValue() to access the flow’s variables.

  system.debug('My Output Variable: ' + myFlow.getVariableValue('varName'));

If the flow doesn’t exist in the current org, a TypeError is thrown.

createInterview(flowName, inputVariables)

Creates an interview for a flow.

Signature

public static Flow.Interview createInterview(String flowName, Map<String,Object> inputVariables)

Parameters

flowName
Type: String
The flow’s unique name.
**inputVariables**
Type: Map<String, Object>

Initial values for the flow's input variables.

**Return Value**
Type: Flow.Interview

**Usage**
Use this method to dynamically create a Flow.Interview object for the `start()` method.

How you get output variable values from an interview depends on the type of the Apex variable where you're storing the interview.

- If the variable is cast to a specific flow, you can use `myFlow.myVar` to access a variable, where `myVar` is the name of the variable.
  ```java
  system.debug('My Output Variable: ' + myFlow.varName);
  ```

- If the variable is of type Flow.Interview but not cast to a specific flow, you must use `getVariableValue()` to access the flow's variables.
  ```java
  system.debug('My Output Variable: ' + myFlow.getVariableValue('varName'));
  ```

If the flow doesn’t exist in the current org, a TypeException is thrown.

**getVariableValue(variableName)**
Returns the value of the specified flow variable. The flow variable can be in the flow embedded in the Visualforce page, or in a separate flow that is called by a subflow element.

**Signature**
```java
public Object getVariableValue(String variableName)
```

**Parameters**

- `variableName`
  Type: String
  Specifies the unique name of the flow variable.

**Return Value**
Type: Object

**Usage**
The returned variable value comes from whichever flow the interview is running. If the specified variable can’t be found in that flow, the method returns `null`.

This method checks for the existence of the variable at runtime only, not at compile time.

**start()**
Starts an instance (interview) for an autolaunched or user provisioning flow.
Signature

```java
public Void start()
```

Return Value

Type: Void

Usage

This method can be used only with flows that have one of these types.

- Autolaunched Flow
- User Provisioning Flow

For details, see "Flow Types" in the Cloud Flow Designer Guide.

When a flow user invokes an autolaunched flow, the active flow version is run. If there’s no active version, the latest version is run. When a flow admin invokes a flow, the latest version is always run.

**KbManagement Namespace**

The KbManagement namespace provides a class for managing knowledge articles.

The following is the class in the KbManagement namespace.

**IN THIS SECTION:**

PublisherClass

Use the methods in the KbManagement.PublisherClass to manage the lifecycle of an article and its translations.

**PublishingService Class**

Use the methods in the KbManagement.PublisherService class to manage the lifecycle of an article and its translations.

**Namespace**

KbManagement

**Usage**

Use the methods in the KbManagement.PublisherService class to manage the following parts of the lifecycle of an article and its translations:

- Publishing
- Updating
- Retrieving
- Deleting
- Submitting for translation
- Setting a translation to complete or incomplete status
- Archiving
Assigning review tasks for draft articles or translations

Note: Date values are based on GMT.

To use the methods in this class, you must enable Salesforce Knowledge. See Salesforce Knowledge Implementation Guide for more information on setting up Salesforce Knowledge.

PublishingService Methods

The following are methods for PublishingService. All methods are static.

IN THIS SECTION:

- archiveOnlineArticle(articleId, scheduledDate)
  Archives an online version of an article. If the specified scheduledDate is null, the article is archived immediately. Otherwise, it archives the article on the scheduled date.
- assignDraftArticleTask(articleId, assigneeId, instructions, dueDate, sendEmailNotification)
  Assigns a review task related to a draft article.
- assignDraftTranslationTask(articleVersionId, assigneeId, instructions, dueDate, sendEmailNotification)
  Assigns a review task related to a draft translation.
- cancelScheduledArchivingOfArticle(articleId)
  Cancels the scheduled archiving of an online article.
- cancelScheduledPublicationOfArticle(articleId)
  Cancels the scheduled publication of a draft article.
- completeTranslation(articleVersionId)
  Puts a translation in a completed state that is ready to publish.
- deleteArchivedArticle(articleId)
  Deletes an archived article.
- deleteArchivedArticleVersion(articleId, versionNumber)
  Deletes a specific version of an archived article.
- deleteDraftArticle(articleId)
  Deletes a draft article.
- deleteDraftTranslation(articleVersionId)
  Deletes a draft translation.
- editArchivedArticle(articleId)
  Creates a draft article from the archived master version and returns the new draft master version ID of the article.
- editOnlineArticle(articleId, unpublish)
  Creates a draft article from the online version and returns the new draft master version ID of the article. Also, unpublishes the online article, if unpublish is set to true.
- editPublishedTranslation(articleId, language, unpublish)
  Creates a draft version of the online translation for a specific language and returns the new draft master version ID of the article. Also, unpublishes the article, if set to true.
- publishArticle(articleId, flagAsNew)
  Publishes an article. If flagAsNew is set to true, the article is published as a major version.
restoreOldVersion(articleId, versionNumber)
Creates a draft article from an existing online article based on the specified archived version of the article and returns the article version ID.

scheduleForPublication(articleId, scheduledDate)
Schedules the article for publication as a major version. If the specified date is null, the article is published immediately.

setTranslationToIncomplete(articleVersionId)
Sets a draft translation that is ready for publication back to “in progress” status.

submitForTranslation(articleId, language, assigneeId, dueDate)
Submits an article for translation to the specified language. Also assigns the specified user and due date to the submittal and returns new ID of the draft translation.

archiveOnlineArticle(articleId, scheduledDate)
Archives an online version of an article. If the specified scheduledDate is null, the article is archived immediately. Otherwise, it archives the article on the scheduled date.

Signature
public static Void archiveOnlineArticle(String articleId, Datetime scheduledDate)

Parameters
articleId
Type: String

scheduledDate
Type: Datetime

Return Value
Type: Void

Example
```
String articleId = 'Insert article ID';
Datetime scheduledDate = Datetime.newInstanceGmt(2012, 12, 1, 13, 30, 0);
KbManagement.PublishingService.archiveOnlineArticle(articleId, scheduledDate);
```

assignDraftArticleTask(articleId, assigneeId, instructions, dueDate, sendEmailNotification)
Assigns a review task related to a draft article.

Signature
public static Void assignDraftArticleTask(String articleId, String assigneeId, String instructions, Datetime dueDate, Boolean sendEmailNotification)
Parameters

- **articleId**
  - Type: String
- **assigneeId**
  - Type: String
- **instructions**
  - Type: String
- **dueDate**
  - Type: Datetime
- **sendEmailNotification**
  - Type: Boolean

Return Value

Type: Void

Example

```java
String articleId = 'Insert article ID';
String assigneeId = '';
String instructions = 'Please review this draft.';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12, 1);
KbManagement.PublishingService.assignDraftArticleTask(articleId, assigneeId, instructions, dueDate, true);
```

**assignDraftTranslationTask(articleVersionId, assigneeId, instructions, dueDate, sendEmailNotification)**

Assigns a review task related to a draft translation.

Signature

```java
public static Void assignDraftTranslationTask(String articleVersionId, String assigneeId, String instructions, Datetime dueDate, Boolean sendEmailNotification)
```

Parameters

- **articleVersionId**
  - Type: String
- **assigneeId**
  - Type: String
- **instructions**
  - Type: String
- **dueDate**
  - Type: Datetime
- **sendEmailNotification**
  - Type: Boolean
cancelScheduledArchivingOfArticle(articleId)
Cancels the scheduled archiving of an online article.

Signature
public static Void cancelScheduledArchivingOfArticle(String articleId)

Parameters
articleId
Type: String

Return Value
Type: Void

Example
String articleId = 'Insert article ID';
KbManagement.PublishingService.cancelScheduledArchivingOfArticle(articleId);

cancelScheduledPublicationOfArticle(articleId)
Cancels the scheduled publication of a draft article.

Signature
public static Void cancelScheduledPublicationOfArticle(String articleId)

Parameters
articleId
Type: String

Return Value
Type: Void

Example
String articleId = 'Insert article ID';
KbManagement.PublishingService.cancelScheduledPublicationOfArticle(articleId);
Example

```java
String articleId = 'Insert article ID';
KbManagement.PublishingService.cancelScheduledPublicationOfArticle (articleId);
```

cancelScheduledPublicationOfArticle(articleId)

Puts a translation in a completed state that is ready to publish.

Signature

```java
public static Void completeTranslation(String articleVersionId)
```

Parameters

articleVersionId

Type: String

Return Value

Type: Void

Example

```java
String articleVersionId = 'Insert article ID';
KbManagement.PublishingService.completeTranslation(articleVersionId);
```

deleteArchivedArticle(articleId)

Deletes an archived article.

Signature

```java
public static Void deleteArchivedArticle(String articleId)
```

Parameters

articleId

Type: String

Return Value

Type: Void

Example

```java
String articleId = 'Insert article ID';
KbManagement.PublishingService.deleteArchivedArticle(articleId);
```
deleteArchivedArticleVersion(articleId, versionNumber)
Deletes a specific version of an archived article.

Signature
public static Void deleteArchivedArticleVersion(String articleId, Integer versionNumber)

Parameters
articleId
  Type: String
versionNumber
  Type: Integer

Return Value
Type: Void

Example
String articleId = 'Insert article ID';
Integer versionNumber = 1;
KbManagement.PublishingService.deleteArchivedArticleVersion(articleId, versionNumber);

deleteDraftArticle(articleId)
Deletes a draft article.

Signature
public static Void deleteDraftArticle(String articleId)

Parameters
articleId
  Type: String

Return Value
Type: Void

Example
String articleId = 'Insert article ID';
KbManagement.PublishingService.deleteDraftArticle(articleId);

deleteDraftTranslation(articleVersionId)
Deletes a draft translation.
**Signature**

```java
public static Void deleteDraftTranslation(String articleVersionId)
```

**Parameters**

- `articleVersionId`
  - Type: `String`

**Return Value**

- Type: `Void`

**Example**

```java
String articleVersionId = 'Insert article ID';
KbManagement.PublishingService.deleteDraftTranslation(articleVersionId);
```

---

**editArchivedArticle(articleId)**

Creates a draft article from the archived master version and returns the new draft master version ID of the article.

**Signature**

```java
public static String editArchivedArticle(String articleId)
```

**Parameters**

- `articleId`
  - Type: `String`

**Return Value**

- Type: `String`

**Example**

```java
String articleId = 'Insert article ID';
String id = KbManagement.PublishingService.editArchivedArticle(articleId);
```

---

**editOnlineArticle(articleId, unpublish)**

Creates a draft article from the online version and returns the new draft master version ID of the article. Also, unpublishes the online article, if `unpublish` is set to `true`.

**Signature**

```java
public static String editOnlineArticle(String articleId, Boolean unpublish)
```
Parameters

`articleId`
Type: String

`unpublish`
Type: Boolean

Return Value
Type: String

Example
```
String articleId = 'Insert article ID';
String id = KbManagement.PublishingService.editOnlineArticle (articleId, true);
```

`editPublishedTranslation(articleId, language, unpublish)`
Creates a draft version of the online translation for a specific language and returns the new draft master version ID of the article. Also, unpublishes the article, if set to `true`.

Signature
```
public static String editPublishedTranslation(String articleId, String language, Boolean unpublish)
```

Parameters

`articleId`
Type: String

`language`
Type: String

`unpublish`
Type: Boolean

Return Value
Type: String

Example
```
String articleId = 'Insert article ID';
String language = 'fr';
String id = KbManagement.PublishingService.editPublishedTranslation(articleId, language, true);
```

`publishArticle(articleId, flagAsNew)`
Publishes an article. If `flagAsNew` is set to `true`, the article is published as a major version.
public static Void publishArticle(String articleId, Boolean flagAsNew)

Parameters

articleId
    Type: String
flagAsNew
    Type: Boolean

Return Value

Type: Void

Example

String articleId = 'Insert article ID';
KbManagement.PublishingService.publishArticle(articleId, true);

restoreOldVersion(articleId, versionNumber)

Creates a draft article from an existing online article based on the specified archived version of the article and returns the article version ID.

Signature

public static String restoreOldVersion(String articleId, Integer versionNumber)

Parameters

articleId
    Type: String
versionNumber
    Type: Integer

Return Value

Type: String

Example

String articleId = 'Insert article ID';
String id = KbManagement.PublishingService.restoreOldVersion (articleId, 1);

scheduleForPublication(articleId, scheduledDate)

Schedules the article for publication as a major version. If the specified date is null, the article is published immediately.

2067
public static Void scheduleForPublication(String articleId, Datetime scheduledDate)

Parameters
articleId
Type: String
scheduledDate
Type: Datetime

Return Value
Type: Void

Example
String articleId = 'Insert article ID';
Datetime scheduledDate = Datetime.newInstanceGmt(2012, 12,1,13,30,0);
KbManagement.PublishingService.scheduleForPublication(articleId, scheduledDate);

setTranslationToIncomplete(String articleVersionId)
Sets a draft translation that is ready for publication back to "in progress" status.

Signature
public static Void setTranslationToIncomplete(String articleVersionId)

Parameters
articleVersionId
Type: String

Return Value
Type: Void

Example
String articleVersionId = 'Insert article ID';
KbManagement.PublishingService.setTranslationToIncomplete(articleVersionId);

submitForTranslation(String articleId, String language, String assigneeId, String dueDate)
Submits an article for translation to the specified language. Also assigns the specified user and due date to the submittal and returns new ID of the draft translation.
Signature

```java
public static String submitForTranslation(String articleId, String language, String assigneeId, Datetime dueDate)
```

Parameters

- `articleId`  
  Type: String

- `language`  
  Type: String

- `assigneeId`  
  Type: String

- `dueDate`  
  Type: Datetime

Return Value

Type: String

Example

```java
String articleId = 'Insert article ID';
String language = 'fr';
String assigneeId = 'Insert assignee ID';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12,1);
String id = KbManagement.PublishingService.submitForTranslation(articleId, language, assigneeId, dueDate);
```

**Messaging Namespace**

The **Messaging** namespace provides classes and methods for Salesforce outbound and inbound email functionality.

The following are the classes in the **Messaging** namespace.

**IN THIS SECTION:**

- **AttachmentRetrievalOption Enum**
  Provides options for including attachment metadata only, attachment metadata and content, or excluding attachments.

- **Email Class (Base Email Methods)**
  Contains base email methods common to both single and mass email.

- **EmailFileAttachment Class**
  EmailFileAttachment is used in SingleEmailMessage to specify attachments passed in as part of the request, as opposed to existing documents in Salesforce.

- **InboundEmail Class**
  Represents an inbound email object.

- **InboundEmail.BinaryAttachment Class**
  An InboundEmail object stores binary attachments in an InboundEmail.BinaryAttachment object.
InboundEmail.TextAttachment Class
An InboundEmail object stores text attachments in an InboundEmail.TextAttachment object.

InboundEmailResult Class
The InboundEmailResult object is used to return the result of the email service. If this object is null, the result is assumed to be successful.

InboundEnvelope Class
The InboundEnvelope object stores the envelope information associated with the inbound email, and has the following fields.

MassEmailMessage Class
Contains methods for sending mass email.

InboundEmail.Header Class
An InboundEmail object stores RFC 2822 email header information in an InboundEmail.Header object with the following properties.

PushNotification Class
PushNotification is used to configure push notifications and send them from an Apex trigger.

PushNotificationPayload Class
Contains methods to create the notification message payload for an Apple device.

RenderEmailTemplateBodyResult Class
Contains the results for rendering email templates.

RenderEmailTemplateError Class
Represents an error that the RenderEmailTemplateBodyResult object can contain.

SendEmailError Class
Represents an error that the SendEmailResult object may contain.

SendEmailResult Class
Contains the result of sending an email message.

SingleEmailMessage Methods
Contains methods for sending single email messages.

AttachmentRetrievalOption Enum
Provides options for including attachment metadata only, attachment metadata and content, or excluding attachments.

Namespace
Messaging

Usage
Use these enum values with the renderStoredEmailTemplate(templateId, whoId, whatId, attachmentRetrievalOption) method.

Enum Values
The following are the values of the Messaging.AttachmentRetrievalOption enum.
Email Class (Base Email Methods)

Contains base email methods common to both single and mass email.

Namespace

Messaging

Usage

Note: If templates are not being used, all email content must be in plain text, HTML, or both. Visualforce email templates cannot be used for mass email.

Email Methods

The following are methods for Email. All are instance methods.

IN THIS SECTION:

setBccSender(bcc)
Indicates whether the email sender receives a copy of the email that is sent. For a mass mail, the sender is only copied on the first email sent.

setReplyTo(replyAddress)
Optional. The email address that receives the message when a recipient replies.

setTemplateID(templateId)
The ID of the template to be merged to create this email. You must specify a value for setTemplateId, setHtmlBody, or setPlainTextBody. Or, you can define both setHtmlBody and setPlainTextBody.

setSaveAsActivity(saveAsActivity)
Optional. The default value is true, meaning the email is saved as an activity. This argument only applies if the recipient list is based on targetObjectId or targetObjectIds. If HTML email tracking is enabled for the organization, you will be able to track open rates.

setSenderDisplayName(displayName)
Optional. The name that appears on the From line of the email. This cannot be set if the object associated with a setOrgWideEmailAddressId for a SingleEmailMessage has defined its DisplayName field.
**setUseSignature(useSignature)**
Indicates whether the email includes an email signature if the user has one configured. The default is `true`, meaning if the user has a signature it is included in the email unless you specify `false`.

**setBccSender(bcc)**
Indicates whether the email sender receives a copy of the email that is sent. For a mass mail, the sender is only copied on the first email sent.

Signature

```java
public Void setBccSender(Boolean bcc)
```

Parameters

`bcc`
Type: Boolean

Return Value

Type: Void

Usage

⚠️ **Note:** If the BCC compliance option is set at the organization level, the user cannot add BCC addresses on standard messages. The following error code is returned: `BCC_NOT_ALLOWED_IF_BCC_COMPLIANCE_ENABLED`. Contact your Salesforce representative for information on BCC compliance.

**setReplyTo(replyAddress)**
Optional. The email address that receives the message when a recipient replies.

Signature

```java
public Void setReplyTo(String replyAddress)
```

Parameters

`replyAddress`
Type: String

Return Value

Type: Void

**setTemplateID(templateId)**
The ID of the template to be merged to create this email. You must specify a value for `setTemplateId`, `setHtmlBody`, or `setPlainTextBody`. Or, you can define both `setHtmlBody` and `setPlainTextBody`.

2072
**setTemplateID**

**Signature**

```java
public Void setTemplateID(ID templateId)
```

**Parameters**

- `templateId`
  - Type: ID

**Return Value**

Type: Void

**Usage**

- Note: setHtmlBody and setPlainTextBody apply only to single email methods, not to mass email methods.

### setSaveAsActivity(saveAsActivity)

**Optional.** The default value is true, meaning the email is saved as an activity. This argument only applies if the recipient list is based on targetObjectIds or targetObjectId. If HTML email tracking is enabled for the organization, you will be able to track open rates.

**Signature**

```java
public Void setSaveAsActivity(Boolean saveAsActivity)
```

**Parameters**

- `saveAsActivity`
  - Type: Boolean

**Return Value**

Type: Void

### setSenderDisplayName(displayName)

**Optional.** The name that appears on the From line of the email. This cannot be set if the object associated with a setOrgWideEmailAddressId for a SingleEmailMessage has defined its DisplayName field.

**Signature**

```java
public Void setSenderDisplayName(String displayName)
```

**Parameters**

- `displayName`
  - Type: String
Return Value
Type: Void

**setUseSignature(useSignature)**
Indicates whether the email includes an email signature if the user has one configured. The default is `true`, meaning if the user has a signature it is included in the email unless you specify `false`.

**Signature**

```java
public Void setUseSignature(Boolean useSignature)
```

**Parameters**

useSignature
Type: `Boolean`

**Return Value**
Type: Void

---

**EmailFileAttachment Class**

EmailFileAttachment is used in SingleEmailMessage to specify attachments passed in as part of the request, as opposed to existing documents in Salesforce.

**Namespace**

`Messaging`

IN THIS SECTION:

- EmailFileAttachment Constructors
- EmailFileAttachment Properties

**EmailFileAttachment Constructors**

The following are constructors for `EmailFileAttachment`.

IN THIS SECTION:

- EmailFileAttachment()
  Creates a new instance of the `Messaging.EmailFileAttachment` class.

**EmailFileAttachment()**

Creates a new instance of the `Messaging.EmailFileAttachment` class.
EmailFileAttachment Properties

The following are properties for EmailFileAttachment.

IN THIS SECTION:

body
- Gets or sets the attachment itself.

contenttype
- Gets or sets the attachment's Content-Type.

filename
- Gets or sets the name of the file to attach.

id
- Read-Only. Gets the attachment ID.

inline
- Specifies a Content-Disposition of inline (true) or attachment (false).

body

- Gets or sets the attachment itself.

Signature

public Blob body {get; set;}

Property Value

Type: Blob

contenttype

- Gets or sets the attachment’s Content-Type.

Signature

public String contenttype {get; set;}

Property Value

Type: String

filename

- Gets or sets the name of the file to attach.
InboundEmail Class
Represents an inbound email object.

Namespace
Messaging

IN THIS SECTION:
InboundEmail Constructors
InboundEmail Properties

InboundEmail Constructors
The following are constructors for InboundEmail.
IN THIS SECTION:

**InboundEmail()**
Creates a new instance of the Messaging.InboundEmail class.

**Signature**
```java
public InboundEmail()
```

**InboundEmail Properties**
The following are properties for InboundEmail.

IN THIS SECTION:

- **binaryAttachments**
  A list of binary attachments received with the email, if any.
- **ccAddresses**
  A list of carbon copy (CC) addresses, if any.
- **fromAddress**
  The email address that appears in the From field.
- **fromName**
  The name that appears in the From field, if any.
- **headers**
  A list of the RFC 2822 headers in the email.
- **htmlBody**
  The HTML version of the email, if specified by the sender.
- **htmlBodyIsTruncated**
  Indicates whether the HTML body text is truncated (true) or not (false).
- **inReplyTo**
  The In-Reply-To field of the incoming email. Identifies the email or emails to which this one is a reply (parent emails). Contains the parent email or emails' message-IDs.
- **messageId**
  The Message-ID—the incoming email’s unique identifier.
- **plainTextBody**
  The plain text version of the email, if specified by the sender.
- **plainTextBodyIsTruncated**
  Indicates whether the plain body text is truncated (true) or not (false).
- **references**
  The References field of the incoming email. Identifies an email thread. Contains a list of the parent emails' References and message IDs, and possibly the In-Reply-To fields.
replyTo
The email address that appears in the reply-to header.

subject
The subject line of the email, if any.

textAttachments
A list of text attachments received with the email, if any.

toAddresses
The email address that appears in the To field.

**binaryAttachments**
A list of binary attachments received with the email, if any.

Signature
```java
public InboundEmail.BinaryAttachment[] binaryAttachments {get; set;}
```

Property Value
Type: `InboundEmail.BinaryAttachment[]`

Usage
Examples of binary attachments include image, audio, application, and video files.

**ccAddresses**
A list of carbon copy (CC) addresses, if any.

Signature
```java
public String[] ccAddresses {get; set;}
```

Property Value
Type: `String[]`

**fromAddress**
The email address that appears in the From field.

Signature
```java
public String fromAddress {get; set;}
```

Property Value
Type: `String`
**fromName**
The name that appears in the From field, if any.

Signature
public String fromName {get; set;}

Property Value
Type: String

**headers**
A list of the RFC 2822 headers in the email.

Signature
public InboundEmail.Header[] headers {get; set;}

Property Value
Type: InboundEmail.Header[]

Usage
The list of the RFC 2822 headers includes:
- Received from
- Custom headers
- Message-ID
- Date

**htmlBody**
The HTML version of the email, if specified by the sender.

Signature
public String htmlBody {get; set;}

Property Value
Type: String

**htmlBodyIsTruncated**
Indicates whether the HTML body text is truncated (true) or not (false).

Signature
public Boolean htmlBodyIsTruncated {get; set;}
inReplyTo
The In-Reply-To field of the incoming email. Identifies the email or emails to which this one is a reply (parent emails). Contains the parent email or emails' message-IDs.

Signature
public String inReplyTo {get; set;}

messageId
The Message-ID—the incoming email's unique identifier.

Signature
public String messageId {get; set;}

plainTextBody
The plain text version of the email, if specified by the sender.

Signature
public String plainTextBody {get; set;}

plainTextBodyIsTruncated
Indicates whether the plain body text is truncated (true) or not (false).

Signature
public Boolean plainTextBodyIsTruncated {get; set;}

Property Value
Type: Boolean
**references**
The References field of the incoming email. Identifies an email thread. Contains a list of the parent emails' References and message IDs, and possibly the In-Reply-To fields.

Signature

```java
public String[] references {get; set;}
```

Property Value
Type: `String[]`

**replyTo**
The email address that appears in the reply-to header.

Signature

```java
public String replyTo {get; set;}
```

Property Value
Type: `String`

Usage
If there is no reply-to header, this field is identical to the `fromAddress` field.

**subject**
The subject line of the email, if any.

Signature

```java
public String subject {get; set;}
```

Property Value
Type: `String`

**textAttachments**
A list of text attachments received with the email, if any.

Signature

```java
public InboundEmail.TextAttachment[] textAttachments {get; set;}
```

Property Value
Type: `InboundEmail.TextAttachment[]`
Usage

The text attachments can be any of the following:

- Attachments with a Multipurpose Internet Mail Extension (MIME) type of text
- Attachments with a MIME type of application/octet-stream and a file name that ends with either a .vcf or .vcs extension. These are saved as text/x-vcard and text/calendar MIME types, respectively.

**toAddresses**

The email address that appears in the To field.

Signature

```java
public String[] toAddresses {get; set;}
```

Property Value

Type: String[]

**InboundEmail.BinaryAttachment Class**

An InboundEmail object stores binary attachments in an InboundEmail.BinaryAttachment object.

**Namespace**

Messaging

**Usage**

Examples of binary attachments include image, audio, application, and video files.

IN THIS SECTION:

- InboundEmail.BinaryAttachment Constructors
- InboundEmail.BinaryAttachment Properties

**InboundEmail.BinaryAttachment Constructors**

The following are constructors for InboundEmail.BinaryAttachment.

IN THIS SECTION:

- `InboundEmail.BinaryAttachment()`
  
  Creates a new instance of the Messaging.InboundEmail.BinaryAttachment class.

- `InboundEmail.BinaryAttachment()`
  
  Creates a new instance of the Messaging.InboundEmail.BinaryAttachment class.
InboundEmail.BinaryAttachment Properties
The following are properties for InboundEmail.BinaryAttachment.

IN THIS SECTION:

body
The body of the attachment.

fileName
The name of the attached file.

headers
Any header values associated with the attachment. Examples of header names include Content-Type, Content-Transfer-Encoding, and Content-ID.

mimeTypeSubType
The primary and sub MIME-type.

**body**
The body of the attachment.

Signature

```
public Blob body {get; set;}
```

Property Value
Type: Blob

**fileName**
The name of the attached file.

Signature

```
public String fileName {get; set;}
```

Property Value
Type: String

**headers**
Any header values associated with the attachment. Examples of header names include Content-Type, Content-Transfer-Encoding, and Content-ID.
Signature

```csharp
public List<Messaging.InboundEmail.Header> headers {get; set;}
```

Property Value

Type: `List<Messaging.InboundEmail.Header>`

**mimeTypeSubType**

The primary and sub MIME-type.

Signature

```csharp
public String mimeTypeSubType {get; set;}
```

Property Value

Type: `String`

**InboundEmail.TextAttachment Class**

An InboundEmail object stores text attachments in an InboundEmail.TextAttachment object.

**Namespace**

`Messaging`

**Usage**

The text attachments can be any of the following:

- Attachments with a Multipurpose Internet Mail Extension (MIME) type of `text`
- Attachments with a MIME type of `application/octet-stream` and a file name that ends with either a `.vcf` or `.vcs` extension. These are saved as `text/x-vcard` and `text/calendar` MIME types, respectively.

**IN THIS SECTION:**

- `InboundEmail.TextAttachment Constructors`
- `InboundEmail.TextAttachment Properties`

**InboundEmail.TextAttachment Constructors**

The following are constructors for `InboundEmail.TextAttachment`.

**IN THIS SECTION:**

- `InboundEmail.TextAttachment()`
  Creates a new instance of the `Messaging.InboundEmail.TextAttachment` class.
**InboundEmail.TextAttachment()**

Creates a new instance of the `Messaging.InboundEmail.TextAttachment` class.

Signature

```java
public InboundEmail.TextAttachment()
```

**InboundEmail.TextAttachment Properties**

The following are properties for `InboundEmail.TextAttachment`.

IN THIS SECTION:

- **body**
  The body of the attachment.

- **bodyIsTruncated**
  Indicates whether the attachment body text is truncated (`true`) or not (`false`).

- **charset**
  The original character set of the body field. The body is re-encoded as UTF-8 as input to the Apex method.

- **fileName**
  The name of the attached file.

- **headers**
  Any header values associated with the attachment. Examples of header names include `Content-Type`, `Content-Transfer-Encoding`, and `Content-ID`.

- **mimeTypeSubType**
  The primary and sub MIME-type.

**body**

The body of the attachment.

Signature

```java
public String body {get; set;}
```

Property Value

Type: `String`

**bodyIsTruncated**

Indicates whether the attachment body text is truncated (`true`) or not (`false`).

Signature

```java
public Boolean bodyIsTruncated {get; set;}
```
**charset**
The original character set of the body field. The body is re-encoded as UTF-8 as input to the Apex method.

**FileName**
The name of the attached file.

**headers**
Any header values associated with the attachment. Examples of header names include `Content-Type`, `Content-Transfer-Encoding`, and `Content-ID`.

**mimeTypeSubType**
The primary and sub MIME-type.
InboundEmailResult Class

The InboundEmailResult object is used to return the result of the email service. If this object is null, the result is assumed to be successful.

Namespace

Messaging

InboundEmailResult Properties

The following are properties for InboundEmailResult.

IN THIS SECTION:

message

A message that Salesforce returns in the body of a reply email. This field can be populated with text irrespective of the value returned by the Success field.

success

A value that indicates whether the email was successfully processed.

message

A message that Salesforce returns in the body of a reply email. This field can be populated with text irrespective of the value returned by the Success field.

Signature

public String message {get; set;}

Property Value

Type: String

success

A value that indicates whether the email was successfully processed.

Signature

public Boolean success {get; set;}

Property Value

Type: Boolean

Usage

If false, Salesforce rejects the inbound email and sends a reply email to the original sender containing the message specified in the Message field.
InboundEnvelope Class

The InboundEnvelope object stores the envelope information associated with the inbound email, and has the following fields.

Namespace
Messaging

InboundEnvelope Properties

The following are properties for InboundEnvelope.

IN THIS SECTION:
  fromAddress
  The name that appears in the From field of the envelope, if any.
  toAddress
  The name that appears in the To field of the envelope, if any.

fromAddress
The name that appears in the From field of the envelope, if any.

Signature
public String fromAddress {get; set;}

Property Value
Type: String

toAddress
The name that appears in the To field of the envelope, if any.

Signature
public String toAddress {get; set;}

Property Value
Type: String

MassEmailMessage Class

Contains methods for sending mass email.

Namespace
Messaging
Usage
MassEmailMessage extends Email and inherits all of its methods. All base email (Email class) methods are also available to the MassEmailMessage objects.

IN THIS SECTION:
MassEmailMessage Constructors
MassEmailMessage Methods

SEE ALSO:
Email Class (Base Email Methods)

MassEmailMessage Constructors
The following are constructors for MassEmailMessage.

IN THIS SECTION:
MassEmailMessage()
Creates a new instance of the Messaging.MassEmailMessage class.

MassEmailMessage()

Creates a new instance of the Messaging.MassEmailMessage class.

Signature
public MassEmailMessage()

MassEmailMessage Methods
The following are methods for MassEmailMessage. All are instance methods. All base email (Email class) methods are also available to the MassEmailMessage objects. These methods are described in Email Class (Base Email Methods).

IN THIS SECTION:
setDescription(description)
The description of the email.

setTargetObjectIds(targetObjectIds)
A list of IDs of the contacts, leads, or users to which the email will be sent. The IDs you specify set the context and ensure that merge fields in the template contain the correct data. The objects must be of the same type (all contacts, all leads, or all users).

setWhatIds(whatIds)
Optional. If you specify a list of contacts for the targetObjectIds field, you can specify a list of whatIds as well. This helps to further ensure that merge fields in the template contain the correct data.

setDescription(description)
The description of the email.
Signature

```java
public Void setDescription(String description)
```

Parameters

description
  Type: String

Return Value

Type: Void

```java
public Void setTargetObjectIds(ID[] targetObjectIds)
```

Parameters

targetObjectIds
  Type: ID[]

Return Value

Type: Void

Usage

You can list up to 250 IDs per email. If you specify a value for the targetObjectIds field, optionally specify a whatId as well to set the email context to a user, contact, or lead. This ensures that merge fields in the template contain the correct data.

Do not specify the IDs of records that have the Email Opt Out option selected.

All emails must have a recipient value in at least one of the following fields:

- toAddresses
- ccAddresses
- bccAddresses
- targetObjectId

```java
public Void setWhatIds(ID[] whatIds)
```

Optional. If you specify a list of contacts for the targetObjectIds field, you can specify a list of whatIds as well. This helps to further ensure that merge fields in the template contain the correct data.
Parameters

`whatIds`
Type: ID[]

Return Value
Type: Void

Usage
The values must be one of the following types:
- Contract
- Case
- Opportunity
- Product

Note: If you specify `whatIds`, specify one for each `targetObjectId`; otherwise, you will receive an `INVALID_ID_FIELD` error.

**InboundEmail.Header Class**

An InboundEmail object stores RFC 2822 email header information in an InboundEmail.Header object with the following properties.

**Namespace**
 Messaging

**InboundEmail.Header Properties**
The following are properties for `InboundEmail.Header`.

IN THIS SECTION:

`name`
The name of the header parameter, such as `Date` or `Message-ID.`

`value`
The value of the header.

`name`
The name of the header parameter, such as `Date` or `Message-ID`.

Signature

`public String name {get; set;}`

Property Value
Type: String
value
The value of the header.

Signature
public String value {get; set;}

Property Value
Type: String

PushNotification Class
PushNotification is used to configure push notifications and send them from an Apex trigger.

Namespace
Messaging

Example
This sample Apex trigger sends push notifications to the connected app named Test_App, which corresponds to a mobile app on iOS mobile clients. The trigger fires after cases have been updated and sends the push notification to two users: the case owner and the user who last modified the case.

```apex
trigger caseAlert on Case (after update) {
    for(Case cs : Trigger.New)
    {
        // Instantiating a notification
        Messaging.PushNotification msg =
            new Messaging.PushNotification();

        // Assembling the necessary payload parameters for Apple.
        // Apple params are:
        // (<alert text>,<alert sound>,<badge count>,
        // <free-form data>)
        // This example doesn't use badge count or free-form data.
        // The number of notifications that haven't been acted
        // upon by the intended recipient is best calculated
        // at the time of the push. This timing helps
        // ensure accuracy across multiple target devices.
        Map<String, Object> payload =
            Messaging.PushNotificationPayload.apple(
                'Case ' + cs.CaseNumber + ' status changed to: '
            + cs.Status, '', null, null);

        // Adding the assembled payload to the notification
        msg.setPayload(payload);

        // Getting recipient users
        String userId1 = cs.OwnerId;
    }
}
```
String userId2 = cs.LastModifiedById;

// Adding recipient users to list
Set<String> users = new Set<String>();
users.add(userId1);
users.add(userId2);

// Sending the notification to the specified app and users.
// Here we specify the API name of the connected app.
msg.send('Test_App', users);

---

**IN THIS SECTION:**
- **PushNotification Constructors**
- **PushNotification Methods**

**PushNotification Constructors**
The following are the constructors for `PushNotification`.

**IN THIS SECTION:**
- **PushNotification()**
  Creates a new instance of the `Messaging.PushNotification` class.

**PushNotification(payload)**
Creates a new instance of the `Messaging.PushNotification` class using the specified payload parameters as key-value pairs. When you use this constructor, you don’t need to call `setPayload` to set the payload.

**PushNotification()**
Creates a new instance of the `Messaging.PushNotification` class.

**Signature**

```java
public PushNotification()
```

**PushNotification(payload)**
Creates a new instance of the `Messaging.PushNotification` class using the specified payload parameters as key-value pairs. When you use this constructor, you don’t need to call `setPayload` to set the payload.

**Signature**

```java
public PushNotification(Map<String,Object> payload)
```
Parameters

`payload`
Type: `Map<String, Object>`
The payload, expressed as a map of key-value pairs.

PushNotification Methods
The following are the methods for `PushNotification`. All are global methods.

IN THIS SECTION:

- `send(application, users)`
  Sends a push notification message to the specified users.
- `setPayload(payload)`
  Sets the payload of the push notification message.
- `setTtl(ttl)`
  Reserved for future use.

`send(application, users)`
Sends a push notification message to the specified users.

Signature

```java
public void send(String application, Set<String> users)
```

Parameters

`application`
Type: `String`
The connected app API name. This corresponds to the mobile client app the notification should be sent to.

`users`
Type: `Set`
A set of user IDs that correspond to the users the notification should be sent to.

Example

See the Push Notification Example.

`setPayload(payload)`
Sets the payload of the push notification message.

Signature

```java
public void setPayload(Map<String, Object> payload)
```
Parameters

payload
Type: Map<String, Object>
The payload, expressed as a map of key-value pairs.
Payload parameters can be different for each mobile OS vendor. For more information on Apple’s payload parameters, search for “Apple Push Notification Service” at https://developer.apple.com/library/mac/documentation/.
To create the payload for an Apple device, see the PushNotificationPayload Class.

Example
See the Push Notification Example.

```
setTtl(ttl)
```
Reserved for future use.

Signature
```
public void setTtl(Integer ttl)
```

Parameters
```
ttl
```
Type: Integer
Reserved for future use.

### PushNotificationPayload Class

Contains methods to create the notification message payload for an Apple device.

#### Namespace

Messaging

#### Usage

Apple has specific requirements for the notification payload, and this class has helper methods to create the payload. For more information on Apple’s payload parameters, search for “Apple Push Notification Service” at https://developer.apple.com/library/mac/documentation/.

Example
See the Push Notification Example.

## IN THIS SECTION:

PushNotificationPayload Methods
PushNotificationPayload Methods

The following are the methods for PushNotificationPayload. All are global static methods.

IN THIS SECTION:
apple(alert, sound, badgeCount, userData)
Helper method that creates a valid Apple payload from the specified arguments.
apple(alertBody, actionLocKey, locKey, locArgs, launchImage, sound, badgeCount, userData)
Helper method that creates a valid Apple payload from the specified arguments.

apple(alert, sound, badgeCount, userData)
Helper method that creates a valid Apple payload from the specified arguments.

Signature

public static Map<String, Object> apple(String alert, String sound, Integer badgeCount, Map<String, Object> userData)

Parameters

alert
Type: String
Notification message to be sent to the mobile client.

sound
Type: String
Name of a sound file to be played as an alert. This sound file should be in the mobile application bundle.

badgeCount
Type: Integer
Number to display as the badge of the application icon.

userData
Type: Map<String, Object>
Map of key-value pairs that contains any additional data used to provide context for the notification. For example, it can contain IDs of the records that caused the notification to be sent. The mobile client app can use these IDs to display these records.

Return Value

Type: Map<String, Object>
Returns a formatted payload that includes all of the specified arguments.

Usage

To generate a valid payload, you must provide a value for at least one of the following parameters: alert, sound, badgeCount.

Example

See the Push Notification Example.
apple(alertBody, actionLocKey, locKey, locArgs, launchImage, sound, badgeCount, userData)

Helper method that creates a valid Apple payload from the specified arguments.

Signature

```java
public static Map<String, Object> apple(String alertBody, String actionLocKey, String locKey, String[] locArgs, String launchImage, String sound, Integer badgeCount, Map<String, Object> userData)
```

Parameters

- `alertBody`
  Type: `String`
  Text of the alert message.

- `actionLocKey`
  Type: `String`
  If a value is specified for the `actionLocKey` argument, an alert with two buttons is displayed. The value is a key to get a localized string in a `Localizable.strings` file to use for the right button’s title.

- `locKey`
  Type: `String`
  Key to an alert-message string in a `Localizable.strings` file for the current localization.

- `locArgs`
  Type: `List<String>`
  Variable string values to appear in place of the format specifiers in `locKey`.

- `launchImage`
  Type: `String`
  File name of an image file in the application bundle.

- `sound`
  Type: `String`
  Name of a sound file to be played as an alert. This sound file should be in the mobile application bundle.

- `badgeCount`
  Type: `Integer`
  Number to display as the badge of the application icon.

- `userData`
  Type: `Map<String, Object>`
  Map of key-value pairs that contains any additional data used to provide context for the notification. For example, it can contain IDs of the records that caused the notification to be sent. The mobile client app can use these IDs to display these records.

Return Value

Type: `Map<String, Object>`

Returns a formatted payload that includes all of the specified arguments.
Usage

To generate a valid payload, you must provide a value for at least one of the following parameters: alert, sound, badgeCount.

RenderEmailTemplateBodyResult Class

Contains the results for rendering email templates.

Namespace

Messaging

IN THIS SECTION:

RenderEmailTemplateBodyResult Methods

RenderEmailTemplateBodyResult Methods

The following are methods for RenderEmailTemplateBodyResult.

IN THIS SECTION:

getErrors()

If an error occurred during the renderEmailTemplate method, a RenderEmailTemplateError object is returned.

getMergedBody()

Returns the rendered body text with merge field references replaced with the corresponding record data.

getSuccess()

Indicates whether the operation was successful.

getErrors()

If an error occurred during the renderEmailTemplate method, a RenderEmailTemplateError object is returned.

Signature

public List<Messageing.RenderEmailTemplateError> getErrors()

Return Value

Type: List<Messageing.RenderEmailTemplateError>

getMergedBody()

Returns the rendered body text with merge field references replaced with the corresponding record data.

Signature

public String getMergedBody()
Return Value
Type: String

**getSuccess()**
Indicates whether the operation was successful.

Signature
```java
public Boolean getSuccess()
```

Return Value
Type: Boolean

**RenderEmailTemplateError Class**
Represents an error that the `RenderEmailTemplateBodyResult` object can contain.

**Namespace**
*Messaging*

**IN THIS SECTION:**
- **RenderEmailTemplateError Methods**

**RenderEmailTemplateError Methods**
The following are methods for `RenderEmailTemplateError`.

**IN THIS SECTION:**
- **getFieldName()**
  Returns the name of the merge field in the error.
- **getMessage()**
  Returns a message describing the error.
- **getOffset()**
  Returns the offset within the supplied body text where the error was discovered. If the offset cannot be determined, -1 is returned.
- **getStatusCode()**
  Returns a Salesforce API status code.

**getFieldName()**
Returns the name of the merge field in the error.

Signature
```java
public String getFieldName()
```
Return Value
Type: String

**getMessage()**
Returns a message describing the error.

Signature
**public String getMessage()**

Return Value
Type: String

**getOffset()**
Returns the offset within the supplied body text where the error was discovered. If the offset cannot be determined, -1 is returned.

Signature
**public Integer getOffset()**

Return Value
Type: Integer

**getStatusCode()**
Returns a Salesforce API status code.

Signature
**public System.StatusCode getStatusCode()**

Return Value
Type: System.StatusCode

**SendEmailError Class**
Represents an error that the SendEmailResult object may contain.

**Namespace**
**Messaging**

**SendEmailError Methods**
The following are methods for SendEmailError. All are instance methods.
IN THIS SECTION:

getFields()
A list of one or more field names. Identifies which fields in the object, if any, affected the error condition.

getMessage()
The text of the error message.

getStatusCode()
Returns a code that characterizes the error.

getStatusObjectId()
The ID of the target record for which the error occurred.

getFields()
A list of one or more field names. Identifies which fields in the object, if any, affected the error condition.

Signature

public String[] getFields()

Return Value
Type: String[]

getMessage()
The text of the error message.

Signature

public String getMessage()

Return Value
Type: String

getStatusCode()
Returns a code that characterizes the error.

Signature

public System.StatusCode getStatusCode()

Return Value
Type: System.StatusCode
Usage

The full list of status codes is available in the WSDL file for your organization. For more information about accessing the WSDL file for your organization, see “Downloading Salesforce WSDLs and Client Authentication Certificates” in the Salesforce online help.

**getTargetObjectId()**

The ID of the target record for which the error occurred.

Signature

```java
public String getTargetObjectId()
```

Return Value

Type: `String`

SendEmailResult Class

Contains the result of sending an email message.

Namespace

`Messaging`

SendEmailResult Methods

The following are methods for `SendEmailResult`. All are instance methods.

**IN THIS SECTION:**

- `getErrors()`
  - If an error occurred during the `sendEmail` method, a `SendEmailError` object is returned.
- `isSuccess()`
  - Indicates whether the email was successfully submitted for delivery (`true`) or not (`false`). Even if `isSuccess` is true, it does not mean the intended recipients received the email, as there could have been a problem with the email address or it could have bounced or been blocked by a spam blocker.

**getErrors()**

If an error occurred during the `sendEmail` method, a `SendEmailError` object is returned.

Signature

```java
public SendEmailError[] getErrors()
```

Return Value

Type: `Messaging.SendEmailError[]`
**isSuccess()**

Indicates whether the email was successfully submitted for delivery (**true**) or not (**false**). Even if isSuccess is true, it does not mean the intended recipients received the email, as there could have been a problem with the email address or it could have bounced or been blocked by a spam blocker.

Signature

```java
public Boolean isSuccess()
```

Return Value

Type: **Boolean**

**SingleEmailMessage Methods**

Contains methods for sending single email messages.

**Namespace**

**Messaging**

**Usage**

SingleEmailMessage extends Email and inherits all of its methods. All base email (**Email** class) methods are also available to the SingleEmailMessage objects.

Email properties are readable and writable. Each property has corresponding setter and getter methods. For example, the toAddresses() property is equivalent to the setToAddresses() and getToAddresses() methods. Only the setter methods are documented. However, the getTemplateName() method doesn't have an equivalent setter method; use setTemplateId() to specify a template name.

**SEE ALSO:**

- **Email Class (Base Email Methods)**

**SingleEmailMessage Constructors**

The following are constructors for SingleEmailMessage.

**SEE ALSO:**

- **SingleEmailMessage()**

  Creates a new instance of the **Messaging.SingleEmailMessage** class.
**SingleEmailMessage()**

Creates a new instance of the `Messaging.SingleEmailMessage` class.

Signature

```java
public SingleEmailMessage()
```

**SingleEmailMessage Methods**

The following are methods for `SingleEmailMessage`. All are instance methods. All base email (`Email` class) methods are also available to the `SingleEmailMessage` objects. These methods are described in Email Class (Base Email Methods).

**IN THIS SECTION:**

- `getTemplateName()`  
  The name of the template used to create the email.
- `setBccAddresses(bccAddresses)`  
  Optional. A list of blind carbon copy (BCC) addresses or object IDs of the contacts, leads, and users you’re sending the email to. The maximum allowed is 25.
- `setCcAddresses(ccAddresses)`  
  Optional. A list of carbon copy (CC) addresses or object IDs of the contacts, leads, and users you’re sending the email to. The maximum allowed is 25.
- `setCharset(characterSet)`  
  Optional. The character set for the email. If this value is null, the user’s default value is used.
- `setDocumentAttachments(documentIds)`  
  (Deprecated. Use `setEntityAttachments()` instead.) Optional. A list containing the ID of each document object you want to attach to the email.
- `setEntityAttachments(ids)`  
  Optional. Array of IDs of Document, ContentVersion, or Attachment items to attach to the email.
- `setFileAttachments(fileNames)`  
  Optional. A list containing the file names of the binary and text files you want to attach to the email.
- `setHtmlBody(htmlBody)`  
  Optional. The HTML version of the email, specified by the sender. The value is encoded according to the specification associated with the organization. You must specify a value for `setTemplateId`, `setHtmlBody`, or `setPlainTextBody`. Or, you can define both `setHtmlBody` and `setPlainTextBody`.
- `setInReplyTo(parentMessageIds)`  
  Sets the optional In-Reply-To field of the outgoing email. This field identifies the email or emails to which this email is a reply (parent emails).
- `setOptOutPolicy(emailOptOutPolicy)`  
  Optional. If you added recipients by ID instead of email address and the Email Opt Out option is set, this method determines the behavior of the `sendEmail()` call. If you add recipients by their email addresses, the opt-out settings for those recipients aren’t checked and those recipients always receive the email.
- `setPlainTextBody(plainTextBody)`  
  Optional. The text version of the email, specified by the sender. You must specify a value for `setTemplateId`, `setHtmlBody`, or `setPlainTextBody`. Or, you can define both `setHtmlBody` and `setPlainTextBody`.  

2104
setOrgWideEmailAddressId(emailAddressId)
Optional. The ID of the organization-wide email address associated with the outgoing email. The object's DisplayName field cannot be set if the setSenderDisplayName field is already set.

setReferences(references)
Optional. The References field of the outgoing email. Identifies an email thread. Contains the parent emails' References and message IDs, and possibly the In-Reply-To fields.

setSubject(subject)
Optional. The email subject line. If you are using an email template, the subject line of the template overrides this value.

setTargetObjectId(targetObjectId)
Required if using a template, optional otherwise. The ID of the contact, lead, or user to which the email will be sent. The ID you specify sets the context and ensures that merge fields in the template contain the correct data.

setTemplateId(templateId)
Required if using a template, optional otherwise. The ID of the template used to create the email.

setToAddresses(toAddresses)
Optional. A list of email addresses or object IDs of the contacts, leads, and users you’re sending the email to. The maximum number of email addresses allowed is 100.

setTreatBodiesAsTemplate(treatAsTemplate)
Optional. If set to true, the subject, plain text, and HTML text bodies of the email are treated as template data. The merge fields are resolved using the renderEmailTemplate method. Default is false.

setTreatTargetObjectAsRecipient(treatAsRecipient)
Optional. If set to true, the targetObjectId (a contact, lead, or user) is the recipient of the email. If set to false, the targetObjectId is supplied as the WhoId field for template rendering but isn’t a recipient of the email. The default is true.

setWhatId(whatId)
If you specify a contact for the targetObjectId field, you can specify an optional whatId as well. This helps to further ensure that merge fields in the template contain the correct data.

getTemplateName()
The name of the template used to create the email.

Signature
public STRING getTemplateName()

Return Value
Type: String

Usage
There is no equivalent setter method for getTemplateName(). If the email didn't use a template, getTemplateName() returns nothing. If you use setTemplateId(), and then call getTemplateName(), the template name associated to the template ID is returned.
**setBccAddresses (bccAddresses)**

Optional. A list of blind carbon copy (BCC) addresses or object IDs of the contacts, leads, and users you're sending the email to. The maximum allowed is 25.

Signature

```java
public Void setBccAddresses(String[] bccAddresses)
```

Parameters

`bccAddresses`

Type: `String[]`

Return Value

Type: `Void`

Usage

All emails must have a recipient value in at least one of the following fields:

- `toAddresses`
- `ccAddresses`
- `bccAddresses`
- `targetObjectId`

If the BCC compliance option is set at the organization level, the user cannot add BCC addresses on standard messages. The following error code is returned: `BCC_NOT_ALLOWED_IF_BCC_COMPLIANCE_ENABLED`. Contact your Salesforce representative for information on BCC compliance.

**setCcAddresses (ccAddresses)**

Optional. A list of carbon copy (CC) addresses or object IDs of the contacts, leads, and users you're sending the email to. The maximum allowed is 25.

Signature

```java
public Void setCcAddresses(String[] ccAddresses)
```

Parameters

`ccAddresses`

Type: `String[]`

Return Value

Type: `Void`

Usage

All emails must have a recipient value in at least one of the following fields:
- toAddresses
- ccAddresses
- bccAddresses
- targetObjectId

**setCharset(characterSet)**
Optional. The character set for the email. If this value is null, the user's default value is used.

Signature

```java
public Void setCharset(String characterSet)
```

Parameters

characterSet
Type: String

Return Value
Type: Void

**setDocumentAttachments(documentIds)**
(Deprecated. Use `setEntityAttachments()` instead.) Optional. A list containing the ID of each document object you want to attach to the email.

Signature

```java
public Void setDocumentAttachments(ID[] documentIds)
```

Parameters

documentIds
Type: ID[

Return Value
Type: Void

Usage
You can attach multiple documents as long as the total size of all attachments does not exceed 10 MB.

**setEntityAttachments(ids)**
Optional. Array of IDs of Document, ContentVersion, or Attachment items to attach to the email.
public void setEntityAttachments(List<String> ids)

Parameters
ids
  Type: List<String>

Return Value
Type: void

setFileAttachments(fileNames)
Optional. A list containing the file names of the binary and text files you want to attach to the email.

Signature
public Void setFileAttachments(EmailFileAttachment[] fileNames)

Parameters
fileNames
  Type: Messaging.EmailFileAttachment[]

Return Value
Type: Void

Usage
You can attach multiple files as long as the total size of all attachments does not exceed 10 MB.

setHtmlBody(htmlBody)
Optional. The HTML version of the email, specified by the sender. The value is encoded according to the specification associated with the organization. You must specify a value for setTemplateId, setHtmlBody, or setPlainTextBody. Or, you can define both setHtmlBody and setPlainTextBody.

Signature
public Void setHtmlBody(String htmlBody)

Parameters
htmlBody
  Type: String

Return Value
Type: Void
**setInReplyTo(parentMessageIds)**
Sets the optional In-Reply-To field of the outgoing email. This field identifies the email or emails to which this email is a reply (parent emails).

**Signature**

```java
public Void setInReplyTo(String parentMessageIds)
```

**Parameters**

- **parentMessageIds**
  - **Type:** String
  - Contains one or more parent email message IDs.

**Return Value**

- **Type:** Void

**setOptOutPolicy(emailOptOutPolicy)**
Optional. If you added recipients by ID instead of email address and the Email Opt Out option is set, this method determines the behavior of the `sendEmail()` call. If you add recipients by their email addresses, the opt-out settings for those recipients aren’t checked and those recipients always receive the email.

**Signature**

```java
public void setOptOutPolicy(String emailOptOutPolicy)
```

**Parameters**

- **emailOptOutPolicy**
  - **Type:** String
  - Possible values of the `emailOptOutPolicy` parameter are:
    - SEND (default)—The email is sent to all recipients and the Email Opt Out option of the recipients is ignored.
    - FILTER—No email is sent to the recipients that have the Email Opt Out option set and emails are sent to the other recipients.
    - REJECT—If any of the recipients have the Email Opt Out option set, `sendEmail()` throws an error and no email is sent.

**Return Value**

- **Type:** void
Example

This example shows how to send an email with the opt-out setting enforced. Recipients are specified by their IDs. The FILTER option causes the email to be sent only to recipients that haven’t opted out from email. This example uses dot notation of the email properties, which is equivalent to using the set methods.

```java
Messaging.SingleEmailMessage message = new Messaging.SingleEmailMessage();
// Set recipients to two contact IDs.
// Replace IDs with valid record IDs in your org.
message.toAddresses = new String[] { '003D000000QDexS', '003D000000QDfW5' };
message.optOutPolicy = 'FILTER';
message.subject = 'Opt Out Test Message';
message.plainTextBody = 'This is the message body.';
Messaging.SingleEmailMessage[] messages =
    new List<Messaging.SingleEmailMessage> {message};
Messaging.SendEmailResult[] results = Messaging.sendEmail(messages);
if (results[0].success) {
    System.debug('The email was sent successfully.');
} else {
    System.debug('The email failed to send: ' + results[0].errors[0].message);
}
```

**setPlainTextBody(plainTextBody)**

Optional. The text version of the email, specified by the sender. You must specify a value for setTemplateId, setHtmlBody, or setPlainTextBody. Or, you can define both setHtmlBody and setPlainTextBody.

Signature

```java
public Void setPlainTextBody(String plainTextBody)
```

Parameters

`plainTextBody`

Type: String

Return Value

Type: Void

**setOrgWideEmailAddressId(emailAddressId)**

Optional. The ID of the organization-wide email address associated with the outgoing email. The object’s DisplayName field cannot be set if the setSenderDisplayName field is already set.

Signature

```java
public Void setOrgWideEmailAddressId(ID emailAddressId)
```
Parameters

**emailAddressId**

Type: ID

Return Value

Type: Void

**setReferences(references)**

Optional. The References field of the outgoing email. Identifies an email thread. Contains the parent emails’ References and message IDs, and possibly the In-Reply-To fields.

Signature

```java
public Void setReferences(String references)
```

Parameters

**references**

Type: String

Return Value

Type: Void

**setSubject(subject)**

Optional. The email subject line. If you are using an email template, the subject line of the template overrides this value.

Signature

```java
public Void setSubject(String subject)
```

Parameters

**subject**

Type: String

Return Value

Type: Void

**setTargetObjectId(targetObjectId)**

Required if using a template, optional otherwise. The ID of the contact, lead, or user to which the email will be sent. The ID you specify sets the context and ensures that merge fields in the template contain the correct data.

Signature

```java
public Void setTargetObjectId(ID targetObjectId)
```
Parameters

`targetObjectId`
Type: ID

Return Value
Type: Void

Usage
Do not specify the IDs of records that have the Email Opt Out option selected.
All emails must have a recipient value in at least one of the following fields:
- `toAddresses`
- `ccAddresses`
- `bccAddresses`
- `targetObjectId`

`setTemplateId(templateId)`
Required if using a template, optional otherwise. The ID of the template used to create the email.

Signature

`public Void setTemplateId(ID templateId)`

Parameters

`templateId`
Type: ID

Return Value
Type: Void

`setToAddresses(toAddresses)`
Optional. A list of email addresses or object IDs of the contacts, leads, and users you’re sending the email to. The maximum number of email addresses allowed is 100.

Signature

`public Void setToAddresses(String[] toAddresses)`

Parameters

`toAddresses`
Type: String[]
Return Value
Type: Void

Usage
All emails must have a recipient value in at least one of the following fields:
- toAddresses
- ccAddresses
- bccAddresses
- targetObjectId

`setTreatBodiesAsTemplate(treatAsTemplate)`
Optional. If set to `true`, the subject, plain text, and HTML text bodies of the email are treated as template data. The merge fields are resolved using the `renderEmailTemplate` method. Default is `false`.

Signature
`public void setTreatBodiesAsTemplate(Boolean treatAsTemplate)`

Parameters
`treatAsTemplate`
Type: `Boolean`

Return Value
Type: `void`

`setTreatTargetObjectAsRecipient(treatAsRecipient)`
Optional. If set to `true`, the `targetObjectId` (a contact, lead, or user) is the recipient of the email. If set to `false`, the `targetObjectId` is supplied as the `WhoId` field for template rendering but isn’t a recipient of the email. The default is `true`.

Signature
`public void setTreatTargetObjectAsRecipient(Boolean treatAsRecipient)`

Parameters
`treatAsRecipient`
Type: `Boolean`

Return Value
Type: `void`
Usage

Note: You can set TO, CC, and BCC addresses using the email messaging methods regardless of whether a template is used for the email or the target object is a recipient.

setWhatId(whatId)

If you specify a contact for the targetObjectId field, you can specify an optional whatId as well. This helps to further ensure that merge fields in the template contain the correct data.

Signature

public Void setWhatId(ID whatId)

Parameters

whatId
  Type: ID

Return Value

Type: Void

Usage

The value must be one of the following types:

- Account
- Asset
- Campaign
- Case
- Contract
- Opportunity
- Order
- Product
- Solution
- Custom

Metadata Namespace

The Metadata namespace provides classes and methods for working with custom metadata in Salesforce. Salesforce uses metadata types and components to represent org configuration and customization. Metadata is used for org settings that admins control or configuration information applied by installed apps and packages. Use the classes in the Metadata namespace to access metadata from within Apex code.

Metadata access in Apex is available for Apex classes using API version 40.0 and later.

For more information, see Metadata.

The following are the classes in the Metadata namespace.
IN THIS SECTION:

- **AnalyticsCloudComponentLayoutItem Class**
  Represents the settings for a Wave Analytics dashboard on a standard or custom page.

- **ConsoleComponent Class**
  Represents a custom console component on a section of a page layout.

- **Container Class**
  Represents a location and style in which to display more than one custom console component in the sidebars of the console.

- **CustomConsoleComponents Class**
  Represents custom console components (Visualforce pages, lookup fields, or related lists) on a page layout.

- **CustomMetadata Class**
  Represents records of custom metadata types.

- **CustomMetadataValue Class**
  Represents custom metadata values for a custom metadata component.

- **DeployCallback Interface**
  An interface for metadata deployment callback classes.

- **DeployCallbackContext Class**
  Represents context information for a deployment job.

- **DeployContainer Class**
  Represents a container for custom metadata components to be deployed.

- **DeployDetails Class**
  Contains detailed information on deployed components.

- **DeployMessage Class**
  Represents result information for the deployment of a metadata component.

- **DeployProblemTypeEnum**
  Describes the problem type for an unsuccessful component deploy.

- **DeployResult Class**
  Represents the results of a metadata deployment.

- **DeployStatus Enum**
  The result status of a deployment.

- **FeedItemTypeEnum Enum**
  The type of feed item in a feed-based page layout.

- **FeedLayout Class**
  Represents the values that define the feed view of a feed-based page layout. Feed-based layouts are available on Account, Case, Contact, Lead, Opportunity, custom, and external objects. They include a feed view and a detail view.

- **FeedLayoutComponent Class**
  Represents a component in the feed view of a feed-based page layout.

- **FeedLayoutComponentTypeEnum**
  Indicates the type of feed layout component.

- **FeedLayoutFilter Class**
  Represents a feed filter option in the feed view of a feed-based page layout. A filter can have only `standardFilter` or `feedItemType` set.
FeedLayoutFilterPosition Enum
Describes where the feed filters list is included in the layout.

FeedLayoutFilterType Enum
The type of feed layout filter.

Layout Class
Represents the metadata associated with a page layout.

LayoutColumn Class
Represents the items in a column within a layout section.

LayoutHeader Enum
Represents tagging types used for Metadata.Layout.headers

LayoutItem Class
Represents the valid values that define a layout item.

LayoutSection Class
Represents a section of a page layout, such as the Custom Links section.

LayoutSectionStyle Enum
Describes the possible styles for a layout section.

Metadata Class
An abstract base class that represents a custom metadata component.

MetadataType Enum
Represents the custom metadata components available in Apex.

MetadataValue Class
An abstract base class that represents a custom metadata component field.

MiniLayout Class
Represents a mini view of a record in the Console tab, hover details, and event overlays.

Operations Class
Represents a class to execute metadata operations, such as retrieving or deploying custom metadata.

PlatformActionList Class
Represents the list of actions, and their order, that display in the Salesforce mobile action bar for the layout.

PlatformActionListContextEnum Enum
Describes the different contexts of action lists.

PlatformActionListItem Class
Represents an action in the platform action list for a layout.

PlatformActionTypeEnum Enum
The type of action for a PlatformActionListItem.

PrimaryTabComponents Class
Represents custom console components on primary tabs in the Salesforce console.

QuickActionList Class
Represents the list of actions associated with the page layout.

QuickActionListItem Class
Represents an action in the QuickActionList.
RelatedContent Class
Represents the Mobile Cards section of the page layout.

RelatedContentItem Class
Represents an individual item in the RelatedContent list.

RelatedList Class
Represents related list custom components on the sidebars of the Salesforce console.

RelatedListItem Class
Represents an item in the related list in a page layout.

ReportChartComponentLayoutItem Class
Represents the settings for a report chart on a standard or custom page.

ReportChartComponentSize Enum
Describes the size of the displayed report chart component.

SidebarComponent Class
Represents a specific custom console component to display in a container that hosts multiple components in one of the sidebars of the Salesforce console.

SortOrder Enum
Describes the sort order of a related list.

SubtabComponents Class
Represents custom console components on subtabs in the Salesforce console.

SummaryLayoutStyleEnum Enum
Describes the highlights panel style for a SummaryLayout.

SummaryLayout Class
Controls the appearance of the highlights panel, which summarizes key fields in a grid at the top of a page layout, when Case Feed is enabled.

SummaryLayoutItem Class
Controls the appearance of an individual field and its column and row position within the highlights panel grid, when Case Feed is enabled. You can have two fields per each grid in a highlights panel.

UiBehavior Enum
Describes the behavior for a layout item on a layout page.

AnalyticsCloudComponentLayoutItem Class
Represents the settings for a Wave Analytics dashboard on a standard or custom page.

Namespace
Metadata

Usage
Use this class when accessing Metadata.Layout metadata components. For more information, see “AnalyticsCloudComponentLayoutItem” in the Metadata API Developer Guide.
AnalyticsCloudComponentLayoutItem Properties

The following are properties for AnalyticsCloudComponentLayoutItem.

IN THIS SECTION:

- assetType
  Specifies the type of Wave Analytics asset.
- devName
  Unique development name of the dashboard to add.
- error
  An error string that is populated only when an error occurred in the underlying dashboard.
- filter
  Dashboard filters for mapping data fields in the dashboard to the object’s fields.
- height
  Specifies the height of the dashboard, in pixels.
- hideOnError
  Controls whether users see a dashboard that has an error.
- showHeader
  If true, includes the dashboard’s header bar. If false, the dashboard appears without a header bar.
- showSharing
  If set to true, and the dashboard is shareable the dashboard shows the Share icon. If set to false, the dashboard doesn’t show the Share icon.
- showTitle
  If true, includes the dashboard’s title above the dashboard. If false, the dashboard appears without a title.
- width
  Specifies the width of the dashboard, in pixels or percentage.

**assetType**

Specifies the type of Wave Analytics asset.

**Signature**

```java
public String assetType {get; set;}
```

**Property Value**

Type: String
**devName**

Unique development name of the dashboard to add.

Signature

```java
public String devName {get; set;}
```

Property Value

Type: `String`

**error**

An error string that is populated only when an error occurred in the underlying dashboard.

Signature

```java
public String error {get; set;}
```

Property Value

Type: `String`

**filter**

Dashboard filters for mapping data fields in the dashboard to the object's fields.

Signature

```java
public String filter {get; set;}
```

Property Value

Type: `String`

**height**

Specifies the height of the dashboard, in pixels.

Signature

```java
public Integer height {get; set;}
```

Property Value

Type: `Integer`

**hideOnError**

Controls whether users see a dashboard that has an error.
Signature

```csharp
public Boolean hideOnError {get; set;}
```

Property Value
Type: Boolean

**showHeader**
If `true`, includes the dashboard's header bar. If `false`, the dashboard appears without a header bar.

Signature

```csharp
public Boolean showHeader {get; set;}
```

Property Value
Type: Boolean

**showSharing**
If set to `true`, and the dashboard is shareable the dashboard shows the Share icon. If set to `false`, the dashboard doesn’t show the Share icon.

Signature

```csharp
public Boolean showSharing {get; set;}
```

Property Value
Type: Boolean

**showTitle**
If `true`, includes the dashboard's title above the dashboard. If `false`, the dashboard appears without a title.

Signature

```csharp
public Boolean showTitle {get; set;}
```

Property Value
Type: Boolean

**width**
Specifies the width of the dashboard, in pixels or percentage.

Signature

```csharp
public String width {get; set;}
```
Property Value
Type: String

**AnalyticsCloudComponentLayoutItem Methods**

The following are methods for `AnalyticsCloudComponentLayoutItem`.

**IN THIS SECTION:**

- `clone()`
  
  Makes a duplicate copy of the `Metadata.AnalyticsCloudComponentLayoutItem`.

### `clone()`

Makes a duplicate copy of the `Metadata.AnalyticsCloudComponentLayoutItem`.

**Signature**

```java
public Object clone()
```

**Return Value**
Type: Object

---

**ConsoleComponent Class**

Represents a custom console component on a section of a page layout.

**Namespace**

`Metadata`

**Usage**

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “ConsoleComponent” in the `Metadata API Developer Guide`.

**IN THIS SECTION:**

- ConsoleComponent Properties
- ConsoleComponent Methods

**ConsoleComponent Properties**

The following are properties for `ConsoleComponent`. 

---

2121
IN THIS SECTION:

    height
The height of the custom console component in pixels.

    location
The location of the custom console component on the page layout. Valid values are right, left, top, and bottom.

    visualforcePage
The unique name of the custom console component.

    width
The width of the custom console component in pixels.

**height**
The height of the custom console component in pixels.

Signature

    public Integer height {get; set;}

Property Value

Type: Integer

**location**
The location of the custom console component on the page layout. Valid values are right, left, top, and bottom.

Signature

    public String location {get; set;}

Property Value

Type: String

**visualforcePage**
The unique name of the custom console component.

Signature

    public String visualforcePage {get; set;}

Property Value

Type: String

**width**
The width of the custom console component in pixels.
Signature

```java
public Integer width {get; set;}
```

Property Value
Type: Integer

**ConsoleComponent Methods**
The following are methods for `ConsoleComponent`.

**IN THIS SECTION:**

- `clone()`
  
  Makes a duplicate copy of the `Metadata.ConsoleComponent`.

**clone()**

Makes a duplicate copy of the `Metadata.ConsoleComponent`.

Signature

```java
public Object clone()
```

Return Value
Type: Object

**Container Class**

Represents a location and style in which to display more than one custom console component in the sidebars of the console.

**Namespace**

`Metadata`

**Usage**

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “Container” in the *Metadata API Developer Guide*.

**IN THIS SECTION:**

- Container Properties
- Container Methods

**Container Properties**
The following are properties for `Container`. 
IN THIS SECTION:

- **height**
  The height of the component’s container. The unit property determines the unit of measurement, in pixels or percent.

- **isContainerAutoSizeEnabled**
  If set to true, stacked console components in the sidebars autosize vertically.

- **region**
  The location of the component’s container (right, left, bottom, top).

- **sidebarComponents**
  Represents a specific custom console component to display in the components’ container.

- **style**
  The style of the container in which to display multiple components (stack, tab, accordion).

- **unit**
  The unit of measurement, in pixels or percent, for the height or width of the components’ container.

- **width**
  The width of the component’s container. The unit property determines the unit of measurement, in pixels or percent.

**height**
The height of the component’s container. The unit property determines the unit of measurement, in pixels or percent.

**Signature**

```java
public Integer height {get; set;}
```

**Property Value**

Type: Integer

**isContainerAutoSizeEnabled**
If set to true, stacked console components in the sidebars autosize vertically.

**Signature**

```java
public Boolean isContainerAutoSizeEnabled {get; set;}
```

**Property Value**

Type: Boolean

**region**
The location of the component’s container (right, left, bottom, top).

**Signature**

```java
public String region {get; set;}
```
**sidebarComponents**
Represents a specific custom console component to display in the components' container.

Signature
```
public List<Metadata.SidebarComponent> sidebarComponents {get; set;}
```

**style**
The style of the container in which to display multiple components (stack, tab, accordion).

Signature
```
public String style {get; set;}
```

**unit**
The unit of measurement, in pixels or percent, for the height or width of the components' container.

Signature
```
public String unit {get; set;}
```

**width**
The width of the component's container. The `unit` property determines the unit of measurement, in pixels or percent.

Signature
```
public Integer width {get; set;}
```

Property Value
Type: Integer

2125
Container Methods

The following are methods for Container.

IN THIS SECTION:
  clone()
  Makes a duplicate copy of the Metadata.Container.

clone()

Makes a duplicate copy of the Metadata.Container.

Signature

public Object clone()

Return Value

Type: Object

CustomConsoleComponents Class

Represents custom console components (Visualforce pages, lookup fields, or related lists) on a page layout.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “CustomConsoleComponents” in the Metadata API Developer Guide.

IN THIS SECTION:
  CustomConsoleComponents Properties
  CustomConsoleComponents Methods

CustomConsoleComponents Properties

The following are properties for CustomConsoleComponents.

IN THIS SECTION:
  primaryTabComponents
  Represents custom console components on primary tabs in the Salesforce console.
  subtabComponents
  Represents custom console components on subtabs in the Salesforce console.
**primaryTabComponents**
Represents custom console components on primary tabs in the Salesforce console.

Signature
```csharp
public Metadata.PrimaryTabComponents primaryTabComponents {get; set;}
```

Property Value
Type: `Metadata.PrimaryTabComponents`

**subtabComponents**
Represents custom console components on subtabs in the Salesforce console.

Signature
```csharp
public Metadata.SubtabComponents subtabComponents {get; set;}
```

Property Value
Type: `Metadata.SubtabComponents`

**CustomConsoleComponents Methods**
The following are methods for `CustomConsoleComponents`.

IN THIS SECTION:

- **clone()**
  Makes a duplicate copy of the `Metadata.CustomConsoleComponents`.

**clone()**
Makes a duplicate copy of the `Metadata.CustomConsoleComponents`.

Signature
```csharp
public Object clone()
```

Return Value
Type: `Object`

**CustomMetadata Class**
Represents records of custom metadata types.
Namespace

Metadata

Usage

Use `Metadata.CustomMetadata` to represent records of custom metadata types in Apex. For more information, see Custom Metadata Types in the Metadata API Developer Guide.

Example

```java
// Set up custom metadata to be created in the subscriber org.
Metadata.CustomMetadata customMetadata = new Metadata.CustomMetadata();
customMetadata.fullName = 'ISVNamespace__MetadataTypeName.MetadataRecordName';

Metadata.CustomMetadataValue customField = new Metadata.CustomMetadataValue();
customField.field = 'customField__c';
customField.value = 'New value';

customMetadata.values.add(customField);
```

Note: When you assign namespaces to records, provide full, qualified record names to the app. If both the type and the record are in `Namespace`, use something like:
```
customMetadata.fullName = 'Namespace__MetadataTypeName.Namespace__MetadataRecordName'
```

IN THIS SECTION:
- CustomMetadata Properties
- CustomMetadata Methods

CustomMetadata Properties

The following are properties for `CustomMetadata`.

IN THIS SECTION:
- `description`
  The description of the custom metadata.
- `label`
  The label of the custom metadata record.
- `protected_x`
  Property that describes whether the custom metadata record is a protected component.
- `values`
  A list of custom metadata values, such as custom fields, for the custom metadata record.
Signature
public String description {get; set;}

Property Value
Type: String

**label**
The label of the custom metadata record.

Signature
public String label {get; set;}

Property Value
Type: String

**protected_x**
Property that describes whether the custom metadata record is a protected component.

Signature
public Boolean protected_x {get; set;}

Property Value
Type: Boolean

**values**
A list of custom metadata values, such as custom fields, for the custom metadata record.

Signature
public List<Metadata.CustomMetadataValue> values {get; set;}

Property Value
Type: List<Metadata.CustomMetadataValue>

**CustomMetadata Methods**
The following are methods for CustomMetadata.

**IN THIS SECTION:**
- **clone()**
  Makes a duplicate copy of the Metadata.CustomMetadata.
clone()

Makes a duplicate copy of the Metadata.CustomMetadata.

Signature

public Object clone()

Return Value

Type: Object

CustomMetadataValue Class

Represents custom metadata values for a custom metadata component.

Namespace

Metadata

Usage

Use Metadata.CustomMetadataValue to access values for custom fields of custom metadata records.

Supported Apex primitive types are:

- Boolean
- Date
- DateTime
- Decimal
- Double
- Integer
- Long
- String

Example

```apex
// Set a custom field value for a custom metadata record
Metadata.CustomMetadataValue customField = new Metadata.CustomMetadataValue();
customField.field = 'CustomField1__c';
customField.value = 'New Value';
customMetadata.values.add(customField);
```

IN THIS SECTION:

- CustomMetadataValue Properties
- CustomMetadataValue Methods
CustomMetadataValue Properties

The following are properties for CustomMetadataValue.

IN THIS SECTION:

- **field**
  - The field name for the custom metadata value.

- **value**
  - The field value for the custom metadata value.

**field**

The field name for the custom metadata value.

Signature

```java
public String field {get; set;}
```

Property Value

Type: String

**value**

The field value for the custom metadata value.

Signature

```java
public Object value {get; set;}
```

Property Value

Type: Object

Supported Apex primitive types are:

- Boolean
- Date
- DateTime
- Decimal
- Double
- Integer
- Long
- String

When setting the value for relationship fields, use the qualified API name of the related metadata, not the ID.

For more information, see Primitive Data Types.
CustomMetadataValue Methods

The following are methods for CustomMetadataValue.

**IN THIS SECTION:**

- **clone()**

  Makes a duplicate copy of the Metadata.CustomMetadataValue.

**clone()**

Makes a duplicate copy of the Metadata.CustomMetadataValue.

Signature

```
public Object clone()
```

Return Value

Type: Object

DeployCallback Interface

An interface for metadata deployment callback classes.

**Namespace**

Metadata

**Usage**

You must provide a callback class for the asynchronous deployment of custom metadata through Apex. This class must implement the Metadata.DeployCallback interface.

Salesforce calls your DeployCallback.handleResult() method asynchronously once the queued deployment completes. Because the callback is called as asynchronous Apex after deployment, there may be a brief period where the deploy has completed, but your callback has not been called yet.

**IN THIS SECTION:**

- DeployCallback Methods

**DeployCallback Methods**

The following are methods for DeployCallback.

**IN THIS SECTION:**

- handleResult(var1, var2)

  Method that is called when the asynchronous deployment of custom metadata completes.
**handleResult(var1, var2)**

Method that is called when the asynchronous deployment of custom metadata completes.

**Signature**

```java
public void handleResult(Metadata.DeployResult var1, Metadata.DeployCallbackContext var2)
```

**Parameters**

`var1`
- **Type:** Metadata.DeployResult
- The results of the asynchronous deployment.

`var2`
- **Type:** Metadata.DeployCallbackContext
- The context for the queued asynchronous deployment job.

**Return Value**

**Type:** void

**DeployCallback Example Implementation**

This is an example implementation of the `Metadata_DeployCallback` interface.

```java
public class MyCallback implements Metadata.DeployCallback {
    public void handleResult(Metadata.DeployResult result,
                               Metadata.DeployCallbackContext context) {
        if (result.status == Metadata.DeployStatus.Succeeded) {
            // Deployment was successful
        } else {
            // Deployment was not successful
        }
    }
}
```

The following example uses this implementation for a deployment.

```java
// Setup callback and deploy
MyCallback callback = new MyCallback();
Metadata.Operations.enqueueDeployment(mdContainer, callback);
```

**DeployCallbackContext Class**

Represents context information for a deployment job.

**Namespace**

`Metadata`
Usage

After an asynchronous metadata deployment finishes, Salesforce provides an instance of Metadata.DeployCallbackContext in an asynchronous call to your implementation of handleResult() in your Metadata.DeployCallback class.

Example

```java
public void handleResult(Metadata.DeployResult result,
                        Metadata.DeployCallbackContext context) {
    // Check the callback job ID for the deployment
    Id jobId = context.getCallbackJobId();
    // ...process the results...
}
```

IN THIS SECTION:

DeployCallbackContext Methods

The following are methods for DeployCallbackContext.

IN THIS SECTION:

**clone()**

Makes a duplicate copy of the Metadata.DeployCallbackContext.

**getCallbackJobId()**

Gets the asynchronous Apex job ID for the callback job.

**clone()**

Makes a duplicate copy of the Metadata.DeployCallbackContext.

Signature

```java
public Object clone()
```

Return Value

Type: Object

**getCallbackJobId()**

Gets the asynchronous Apex job ID for the callback job.

Signature

```java
public Id getCallbackJobId()
```
Return Value
Type: Id

**DeployContainer Class**
Represents a container for custom metadata components to be deployed.

**Namespace**
*Metadata*

**Usage**
Use `Metadata.DeployContainer` to manage custom metadata components for deployment. A container must have one or more components before being deployed.

**Example**
```java
// Use DeployContainer for deployment
Metadata.DeployContainer mdContainer = new Metadata.DeployContainer();
mdContainer.addMetadata(customMetadata);
...
// Enqueue deploy
Metadata.Operations.enqueueDeployment(mdContainer, callback);
```

IN THIS SECTION:
* DeployContainer Methods

**DeployContainer Methods**
The following are methods for `DeployContainer`.

IN THIS SECTION:
* addMetadata(md)
  Add a custom metadata component to the container.
* clone()
  Makes a duplicate copy of the `Metadata.DeployContainer`.
* getMetadata()
  Retrieves a list of custom metadata components from the container.
* removeMetadata(md)
  Removes a metadata component from the container.
* removeMetadataByFullName(fullName)
  Removes a metadata component from the container using the component’s full name.
addMetadata (md)
Add a custom metadata component to the container.

Signature
public void addMetadata(Metadata.Metadata md)

Parameters
md
Type: Metadata.Metadata
A custom metadata component class that derives from Metadata.Metadata. Avoid adding components to a Metadata.DeployContainer that have the same Metadata.Metadata.fullName because it causes deployment errors.

Return Value
Type: void

clone()
Makes a duplicate copy of the Metadata.DeployContainer.

Signature
public Object clone()

Return Value
Type: Object

getMetadata()
Retrieves a list of custom metadata components from the container.

Signature
public List<Metadata.Metadata> getMetadata()

Return Value
Type: List<Metadata.Metadata>

removeMetadata (md)
Removes a metadata component from the container.

Signature
public Boolean removeMetadata(Metadata.Metadata md)
### Parameters

`md`  
Type: Metadata.Metadata  
Metadata component to remove.

### Return Value

Type: Boolean  
Returns `true` if the container changed as a result of the call.

#### removeMetadataByFullName(fullName)

Removes a metadata component from the container using the component’s full name.

**Signature**

```java
public Boolean removeMetadataByFullName(String fullName)
```

**Parameters**

`fullName`  
Type: String  
Full name of the component to remove.

**Return Value**

Type: Boolean  
Returns `true` if the container changed as a result of the call.

### DeployDetails Class

Contains detailed information on deployed components.

**Namespace**

Metadata

**Usage**

Use this class to obtain a list of the successfully and unsuccessfully deployed components after a completed deployment by Salesforce in your Metadata.DeployCallback results.

**IN THIS SECTION:**

- DeployDetails Properties
- DeployDetails Methods
DeployDetails Properties
The following are properties for DeployDetails.

IN THIS SECTION:

componentFailures
Contains a list of information about components that failed to deploy.

componentSuccesses
Contains a list of information about components that deployed successfully.

componentFailures
Contains a list of information about components that failed to deploy.

Signature
public List&lt;Metadata.DeployMessage&gt; componentFailures {get; set;}

Property Value
Type: List&lt;Metadata.DeployMessage&gt;

componentSuccesses
Contains a list of information about components that deployed successfully.

Signature
public List&lt;Metadata.DeployMessage&gt; componentSuccesses {get; set;}

Property Value
Type: List&lt;Metadata.DeployMessage&gt;

DeployDetails Methods
The following are methods for DeployDetails.

IN THIS SECTION:

clone()
Makes a duplicate copy of the Metadata.DeployDetails.

clone()
Makes a duplicate copy of the Metadata.DeployDetails.

Signature
public Object clone()
Return Value
Type: Object

DeployMessage Class
Represents result information for the deployment of a metadata component.

Namespace
Metadata

Usage
Use DeployMessage to access detailed information about component deployments. Salesforce provides a list of DeployMessages for a completed deployment via the DeployDetails and DeployResults instances sent in the DeployCallback.handleResult() callback.

IN THIS SECTION:
- DeployMessage Properties
- DeployMessage Methods

DeployMessage Properties
The following are properties for DeployMessage.

IN THIS SECTION:
- changed
- columnNumber
- componentType
- created
- createdDate
- deleted
- fileName

changed
Determines whether the component was changed after deployment. If true, the component was changed as a result of the deployment. If false, the deployed component was the same as the corresponding component already in the org.

columnNumber
Each component is represented by a text file. If an error occurs during deployment, this property represents the column of the text file where the error occurred.

componentType
The metadata type of the component in the deployment.

created
If true, the component was created as a result of the deployment. If false, the component was modified as a result of the deployment.

createdDate
The date and time when the component was created as a result of the deployment.

deleted
If true, the component was deleted as a result of the deployment. If false, the component was either new or modified as result of the deployment.

fileName
The name of the file in the metadata archive used to deploy the component.
fullName
Full name for the custom metadata component.

id
ID of the component that was deployed.

lineNumber
Each component is represented by a text file. If an error occurs during deployment, this field represents the line number of the text file where the error occurred.

problem
If an error or warning occurred, this field contains a description of the problem that caused the deployment to fail.

problemType
Indicates the problem type, for example, an error or warning.

success
Indicates whether the component was successfully deployed (true) or not (false).

changed
Determines whether the component was changed after deployment. If true, the component was changed as a result of the deployment. If false, the deployed component was the same as the corresponding component already in the org.

Signature

public Boolean changed {get; set;}

Property Value
Type: Boolean

columnNumber
Each component is represented by a text file. If an error occurs during deployment, this property represents the column of the text file where the error occurred.

Signature

public Integer columnNumber {get; set;}

Property Value
Type: Integer

componentType
The metadata type of the component in the deployment.

Signature

public String componentType {get; set;}
Property Value
Type: String

created
If true, the component was created as a result of the deployment. If false, the component was modified as a result of the deployment.

Signature
public Boolean created {get; set;}

Property Value
Type: Boolean

createdDate
The date and time when the component was created as a result of the deployment.

Signature
public Datetime createdDate {get; set;}

Property Value
Type: Datetime

deleted
If true, the component was deleted as a result of the deployment. If false, the component was either new or modified as result of the deployment.

Signature
public Boolean deleted {get; set;}

Property Value
Type: Boolean

fileName
The name of the file in the metadata archive used to deploy the component.

Signature
public String fileName {get; set;}

Property Value
Type: String
**fullName**

Full name for the custom metadata component.

Signature

```java
public String fullName {get; set;}
```

Property Value

Type: String

**id**

ID of the component that was deployed.

Signature

```java
public Id id {get; set;}
```

Property Value

Type: Id

**lineNumber**

Each component is represented by a text file. If an error occurs during deployment, this field represents the line number of the text file where the error occurred.

Signature

```java
public Integer lineNumber {get; set;}
```

Property Value

Type: Integer

**problem**

If an error or warning occurred, this field contains a description of the problem that caused the deployment to fail.

Signature

```java
public String problem {get; set;}
```

Property Value

Type: String

**problemType**

Indicates the problem type, for example, an error or warning.
Signature

```csharp
public Metadata.DeployProblemType problemType {get; set;}
```

Property Value

Type: Metadata.DeployProblemType

**success**

Indicates whether the component was successfully deployed (true) or not (false).

Signature

```csharp
public Boolean success {get; set;}
```

Property Value

Type: Boolean

**DeployMessage Methods**

The following are methods for DeployMessage.

**IN THIS SECTION:**

- **clone()**
  
  Makes a duplicate copy of the Metadata.DeployMessage.

**clone()**

Makes a duplicate copy of the Metadata.DeployMessage.

Signature

```csharp
public Object clone()
```

Return Value

Type: Object

**DeployProblemType Enum**

Describes the problem type for an unsuccessful component deploy.

**Enum Values**

The following are the values of the Metadata.DeployProblemType enum.
The deploy problem is an error.

Warning

The deploy problem is a warning.

DeployResult Class

Represents the results of a metadata deployment.

Namespace

Metadata

Usage

After an asynchronous metadata deployment finishes, Salesforce provides an instance of Metadata.DeployResult in a call to your implementation of handleResult() in your Metadata.DeployCallback class.

Example

```java
public void handleResult(Metadata.DeployResult result,
Metadata.DeployCallbackContext context) {
    if (result.status == Metadata.DeployStatus.Succeeded) {
        // Deployment was successful
    } else {
        // Deployment was not successful
    }
}
```

IN THIS SECTION:

DeployResult Properties

DeployResult Methods

DeployResult Properties

The following are properties for DeployResult.

IN THIS SECTION:

canceledBy
ID of the user who canceled the queued deployment.

canceledByName
Full name of the user who canceled the queued deployment.

checkOnly
Indicates whether the deployment checked only the validity of the deployed files without making changes in the org. A check-only deployment does not deploy components or change the org in any way.
completedDate
Date and time for when the deployment process ended.

createdBy
ID of the user who created the deployment job.

createdByName
Full name of the user who created the deployment job.

createdDate
Date and time the deployment job was first queued.

details
Provides the details for components in a completed deployment.

done
Indicates whether Salesforce finished processing the deployment.

details
Provides the details for components in a completed deployment.

errorMessage
Message corresponding to the values in the errorStatusCode property, if any.

errorStatusCode
If an error occurs during deployment, a status code is returned. The message corresponding to the status code is returned in the errorMessage field property.

id
ID of the deployment job.

ignoreWarnings
Specifies whether a deployment continues, even if the deployment generates warnings.

lastModifiedDate
Date and time of the last update for the deployment process.

messages
A list of all the detail messages for a deployment.

numberComponentErrors
The number of components that generated errors during the deployment.

numberComponentsDeployed
The number of components deployed in the deployment process. Use this value with the numberComponentsTotal property to get an estimate of the deployment’s progress.

numberComponentsTotal
The total number of components in the deployment. Use this value with the numberComponentsDeployed property to get an estimate of the deployment’s progress.

rollbackOnError
Indicates whether any failure causes a complete rollback (true) or not (false) of the deployment.

startDate
Date and time the deployment process began.

stateDetail
Indicates which component is being deployed.

status
Indicates the current state of the deployment.
success
Indicates whether the deployment was successful (true) or not (false).

canceledBy
ID of the user who canceled the queued deployment.

Signature
domestic String canceledBy {get; set;}

Property Value
Type: String

canceledByName
Full name of the user who canceled the queued deployment.

Signature
domestic String canceledBy {get; set;}

Property Value
Type: String

checkOnly
Indicates whether the deployment checked only the validity of the deployed files without making changes in the org. A check-only deployment does not deploy components or change the org in any way.

Signature
domestic Boolean checkOnly {get; set;}

Property Value
Type: Boolean

completedDate
Date and time for when the deployment process ended.

Signature
domestic Datetime completedDate {get; set;}

Property Value
Type: Datetime
**createdBy**
ID of the user who created the deployment job.

Signature
```
public String createdBy {get; set;}
```

Property Value
Type: String

**createdByName**
Full name of the user who created the deployment job.

Signature
```
public String createdByName {get; set;}
```

Property Value
Type: String

**createdDate**
Date and time the deployment job was first queued.

Signature
```
public Datetime createdDate {get; set;}
```

Property Value
Type: Datetime

**details**
Provides the details for components in a completed deployment.

Signature
```
public Metadata.DeployDetails details {get; set;}
```

Property Value
Type: Metadata.DeployDetails

**done**
Indicates whether Salesforce finished processing the deployment.
Signature

```csharp
public Boolean done {get; set;}
```

Property Value
Type: Boolean

**errorMessage**
Message corresponding to the values in the `errorStatusCode` property, if any.

Signature

```csharp
public String errorMessage {get; set;}
```

Property Value
Type: String

**errorStatusCode**
If an error occurs during deployment, a status code is returned. The message corresponding to the status code is returned in the `errorMessage` property.

Signature

```csharp
public String errorStatusCode {get; set;}
```

Property Value
Type: String

For a description of each status code value, see “StatusCode” under “Core Data Types Used in API Calls” in the SOAP API Developer Guide.

**id**
ID of the deployment job.

Signature

```csharp
public Id id {get; set;}
```

Property Value
Type: Id

**ignoreWarnings**
Specifies whether a deployment continues, even if the deployment generates warnings.
public Boolean ignoreWarnings {get; set;}

Property Value
Type: Boolean

lastModifiedDate
Date and time of the last update for the deployment process.

public Datetime lastModifiedDate {get; set;}

Property Value
Type: Datetime

messages
A list of all the detail messages for a deployment.

public List<Metadata.DeployMessage> messages {get; set;}

Property Value
Type: List<Metadata.DeployMessage>

numberComponentErrors
The number of components that generated errors during the deployment.

public Integer numberComponentErrors {get; set;}

Property Value
Type: Integer

numberComponentsDeployed
The number of components deployed in the deployment process. Use this value with the numberComponentsTotal property to get an estimate of the deployment's progress.

public Integer numberComponentsDeployed {get; set;}

2149
Property Value
Type: Integer

**numberComponentsTotal**
The total number of components in the deployment. Use this value with the `numberComponentsDeployed` property to get an estimate of the deployment's progress.

Signature
```java
public Integer numberComponentsTotal {get; set;}
```

Property Value
Type: Integer

**rollbackOnError**
Indicates whether any failure causes a complete rollback (true) or not (false) of the deployment.

Signature
```java
public Boolean rollbackOnError {get; set;}
```

Property Value
Type: Boolean

**startDate**
Date and time the deployment process began.

Signature
```java
public Datetime startDate {get; set;}
```

Property Value
Type: Datetime

**stateDetail**
Indicates which component is being deployed.

Signature
```java
public String stateDetail {get; set;}
```

Property Value
Type: String
**status**
Indicates the current state of the deployment.

Signature
```
public Metadata.DeployStatus status {get; set;}
```

Property Value
Type: Metadata.DeployStatus

**success**
Indicates whether the deployment was successful (true) or not (false).

Signature
```
public Boolean success {get; set;}
```

Property Value
Type: Boolean

**DeployResult Methods**
The following are methods for DeployResult.

**IN THIS SECTION:**
* clone()

  Makes a duplicate copy of the Metadata.DeployResult.

**clone()**
Makes a duplicate copy of the Metadata.DeployResult.

Signature
```
public Object clone()
```

Return Value
Type: Object

**DeployStatus Enum**
The result status of a deployment.
**Usage**

`Metadata.DeployResult.status` uses this enum to describe the results of the deployment.

**Enum Values**

The following are the values of the `Metadata.DeployStatus` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Canceled</td>
<td>The queued deployment was canceled.</td>
</tr>
<tr>
<td>Canceling</td>
<td>The queued deployment is being canceled.</td>
</tr>
<tr>
<td>Failed</td>
<td>The deployment failed.</td>
</tr>
<tr>
<td>InProgress</td>
<td>The deployment has been started and is in progress.</td>
</tr>
<tr>
<td>Pending</td>
<td>The deployment has been queued but not started.</td>
</tr>
<tr>
<td>Succeeded</td>
<td>The deployment succeeded.</td>
</tr>
<tr>
<td>SucceededPartial</td>
<td>The deployment succeeded, but some components might not have been successfully deployed. Check <code>Metadata.DeployResult</code> for more details.</td>
</tr>
</tbody>
</table>

**FeedItemTypeEnum Enum**

The type of feed item in a feed-based page layout.

**Enum Values**

The following are the values of the `Metadata.FeedItemTypeEnum` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ActivityEvent</td>
<td>Activity on tasks and events associated with a case. Available only on Case layouts.</td>
</tr>
<tr>
<td>AdvancedTextPost</td>
<td>Group announcements posted on a feed.</td>
</tr>
<tr>
<td>AnnouncementPost</td>
<td>Not used.</td>
</tr>
<tr>
<td>ApprovalPost</td>
<td>Approvals submitted on a feed.</td>
</tr>
<tr>
<td>AttachArticleEvent</td>
<td>Activity related to attaching articles to cases.</td>
</tr>
<tr>
<td>BasicTemplateFeedItem</td>
<td>Activity from the Log a Call action. Available only on layouts for objects that support Activities (tasks and events).</td>
</tr>
<tr>
<td>CallLogPost</td>
<td>Activity from the Log a Call action. Available only on layouts for objects that support Activities (tasks and events).</td>
</tr>
<tr>
<td>CanvasPost</td>
<td>Posts a canvas app makes on a feed.</td>
</tr>
<tr>
<td>CaseCommentPost</td>
<td>Activity from the Case Note action. Available only on Case layouts.</td>
</tr>
<tr>
<td>ChangeStatusPost</td>
<td>Activity from the Change Status action. Available only on Case layouts.</td>
</tr>
<tr>
<td>Value</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>ChatTranscriptPost</td>
<td>Activity related to attaching Live Agent chat transcripts to cases. Available only on Case layouts.</td>
</tr>
<tr>
<td>CollaborationGroupCreated</td>
<td>Creating a public group.</td>
</tr>
<tr>
<td>CollaborationGroupUnarchived</td>
<td>Not used.</td>
</tr>
<tr>
<td>ContentPost</td>
<td>Attaching a file to a post.</td>
</tr>
<tr>
<td>CreateRecordEvent</td>
<td>Creating a record from the publisher.</td>
</tr>
<tr>
<td>DashboardComponentAlert</td>
<td>Not used.</td>
</tr>
<tr>
<td>DashboardComponentSnapshot</td>
<td>Posting a dashboard snapshot on a feed.</td>
</tr>
<tr>
<td>EmailMessageEvent</td>
<td>Activity from the Email action. Available only on Case layouts.</td>
</tr>
<tr>
<td>FacebookPost</td>
<td>Not used.</td>
</tr>
<tr>
<td>LinkPost</td>
<td>Attaching a URL to a post.</td>
</tr>
<tr>
<td>MilestoneEvent</td>
<td>Changing the milestone status on a case. Available only on Case layouts.</td>
</tr>
<tr>
<td>PollPost</td>
<td>Posting a poll on a feed.</td>
</tr>
<tr>
<td>ProfileSkillPost</td>
<td>Adding skills to a user's Chatter profile.</td>
</tr>
<tr>
<td>QuestionPost</td>
<td>Posting a question on a feed.</td>
</tr>
<tr>
<td>ReplyPost</td>
<td>Activity from the Portal action. Available only on Case layouts.</td>
</tr>
<tr>
<td>RypplePost</td>
<td>Creating a Thanks badge in Work.com.</td>
</tr>
<tr>
<td>SocialPost</td>
<td>Activity on Twitter from the Social Post action.</td>
</tr>
<tr>
<td>TestItem</td>
<td>Creating a text post from the publisher.</td>
</tr>
<tr>
<td>TextPost</td>
<td>Making a change or group of changes to a tracked field.</td>
</tr>
<tr>
<td>TrackedChange</td>
<td>Not used.</td>
</tr>
<tr>
<td>Undefined</td>
<td>Undefined feed item.</td>
</tr>
<tr>
<td>UserStatus</td>
<td>Not used.</td>
</tr>
</tbody>
</table>

**FeedLayout Class**

Represents the values that define the feed view of a feed-based page layout. Feed-based layouts are available on Account, Case, Contact, Lead, Opportunity, custom, and external objects. They include a feed view and a detail view.

**Namespace**

Metadata
Usage
Use this class when accessing `Metadata.Layout` metadata components. For more information, see “FeedLayout” in the `Metadata API Developer Guide`.

IN THIS SECTION:
- FeedLayout Properties
- FeedLayout Methods

FeedLayout Properties
The following are properties for `FeedLayout`.

IN THIS SECTION:
- `autocollapsePublisher`
  Specifies whether the publisher is collapsed when the page loads (true) or not (false).
- `compactFeed`
  Specifies whether the feed-based page layout uses a compact feed (true) or not (false). If set to true, feed items on the page are collapsed by default, and the feed view has an updated design.
- `feedFilterPosition`
  Indicates where the feed filters list is included in the layout.
- `feedFilters`
  The individual filters displayed in the feed filters list.
- `fullWidthFeed`
  Specifies whether the feed expands horizontally to take up all available space on the page (true) or not (false).
- `hideSidebar`
  Specifies whether the sidebar is hidden (true) or not (false).
- `highlightExternalFeedItems`
  Controls whether to highlight external feed items (true) or not (false).
- `leftComponents`
  The individual components displayed in the left column of the feed view.
- `rightComponents`
  Lists the individual components displayed in the right column of the feed view.
- `useInlineFiltersInConsole`
  Indicates whether to use inline filters in the Salesforce console.

`autocollapsePublisher`
Specifies whether the publisher is collapsed when the page loads (true) or not (false).

**Signature**

```java
public Boolean autocollapsePublisher {get; set;}
```
**compactFeed**
Specifies whether the feed-based page layout uses a compact feed (true) or not (false). If set to true, feed items on the page are collapsed by default, and the feed view has an updated design.

Signature
```
public Boolean compactFeed {get; set;}
```

**feedFilterPosition**
Indicates where the feed filters list is included in the layout.

Signature
```
public Metadata.FeedLayoutFilterPosition feedFilterPosition {get; set;}
```

**feedFilters**
The individual filters displayed in the feed filters list.

Signature
```
public List<Metadata.FeedLayoutFilter> feedFilters {get; set;}
```

**fullWidthFeed**
Specifies whether the feed expands horizontally to take up all available space on the page (true) or not (false).

Signature
```
public Boolean fullWidthFeed {get; set;}
```
**hideSidebar**
Specifies whether the sidebar is hidden (true) or not (false).

**Signature**
```csharp
public Boolean hideSidebar {get; set;}
```

**Property Value**
Type: Boolean

**highlightExternalFeedItems**
Controls whether to highlight external feed items (true) or not (false).

**Signature**
```csharp
public Boolean highlightExternalFeedItems {get; set;}
```

**Property Value**
Type: Boolean

**leftComponents**
The individual components displayed in the left column of the feed view.

**Signature**
```csharp
public List<Metadata.FeedLayoutComponent> leftComponents {get; set;}
```

**Property Value**
Type: List<FeedLayoutComponent Class>

**rightComponents**
Lists the individual components displayed in the right column of the feed view.

**Signature**
```csharp
public List<Metadata.FeedLayoutComponent> rightComponents {get; set;}
```

**Property Value**
Type: List<FeedLayoutComponent Class>

**useInlineFiltersInConsole**
Indicates whether to use inline filters in the Salesforce console.
Signature

public Boolean useInlineFiltersInConsole {get; set;}

Property Value
Type: Boolean

FeedLayout Methods
The following are methods for FeedLayout.

IN THIS SECTION:
  clone()
  Makes a duplicate copy of the Metadata.FeedLayout.

clone()
Makes a duplicate copy of the Metadata.FeedLayout.

Signature
public Object clone()

Return Value
Type: Object

FeedLayoutComponent Class
Represents a component in the feed view of a feed-based page layout.

Namespace
Metadata

Usage
Use this class when accessing Metadata.Layout metadata components. For more information, see “FeedLayoutComponent” in the Metadata API Developer Guide.

IN THIS SECTION:
  FeedLayoutComponent Properties
  FeedLayoutComponent Methods

FeedLayoutComponent Properties
The following are properties for FeedLayoutComponent.
See `FeedLayoutComponent` in the *Metadata API Developer Guide*.

**IN THIS SECTION:**

- **componentType**
  - Represents a component in the feed view of a feed-based page layout. The type of component is required.

- **height**
  - The height, in pixels, of the component. Doesn’t apply to `standardComponents`

- **page_x**
  - The name of the Visualforce page used as a custom component.

**componentType**

Represents a component in the feed view of a feed-based page layout. The type of component is required.

**Signature**

```java
public Metadata.FeedLayoutComponentType componentType {get; set;}
```

**Property Value**

Type: `Metadata.FeedLayoutComponentType` on page 2159

**height**

The height, in pixels, of the component. Doesn’t apply to `standardComponents`

**Signature**

```java
public Integer height {get; set;}
```

**Property Value**

Type: `Integer`

**page_x**

The name of the Visualforce page used as a custom component.

**Signature**

```java
public String page_x {get; set;}
```

**Property Value**

Type: `String`

**FeedLayoutComponent Methods**

The following are methods for `FeedLayoutComponent`.
IN THIS SECTION:

clone()

Makes a duplicate copy of the Metadata.FeedLayoutComponent.

clone()

Makes a duplicate copy of the Metadata.FeedLayoutComponent.

Signature

public Object clone()

Return Value

Type: Object

FeedLayoutComponentType Enum

Indicates the type of feed layout component.

Enum Values

The following are the values of the Metadata.FeedLayoutComponentType enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CaseExperts</td>
<td>List of case experts.</td>
</tr>
<tr>
<td>CaseUnifiedFiles</td>
<td>List of all files attached to the case.</td>
</tr>
<tr>
<td>CustomButtons</td>
<td>Custom button.</td>
</tr>
<tr>
<td>CustomLinks</td>
<td>Custom link.</td>
</tr>
<tr>
<td>Followers</td>
<td>List of followers.</td>
</tr>
<tr>
<td>Following</td>
<td>Icon that toggles between a Follow button (if the user viewing a record doesn't already follow it) and a Following indicator (if the user viewing a record does follow it).</td>
</tr>
<tr>
<td>HelpAndToolLinks</td>
<td>Icons that link to the help topic for the page, the page layout, and, the printable view of the page. Available only on Case layouts.</td>
</tr>
<tr>
<td>Milestones</td>
<td>Milestone tracker, which lets users see the status of a milestone on a case. Available only on Case layouts.</td>
</tr>
<tr>
<td>SimilarCases</td>
<td>List of similar cases.</td>
</tr>
<tr>
<td>Topics</td>
<td>List of topics related to the record.</td>
</tr>
<tr>
<td>Visualforce</td>
<td>Custom Visualforce component.</td>
</tr>
</tbody>
</table>
FeedLayoutFilter Class

Represents a feed filter option in the feed view of a feed-based page layout. A filter can have only standardFilter or feedItemType set.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “FeedLayoutFilter” in the Metadata API Developer Guide.

IN THIS SECTION:

FeedLayoutFilter Properties
FeedLayoutFilter Methods

FeedLayoutFilter Properties

The following are properties for FeedLayoutFilter.

IN THIS SECTION:

feedFilterName

The name of a CustomFeedFilter component. Names are prefixed with the name of the parent object. For example, Case.MyCustomFeedFilter.

feedFilterType

The type of filter.

feedItemType

The type of feed item to display.

**feedFilterName**

The name of a CustomFeedFilter component. Names are prefixed with the name of the parent object. For example, Case.MyCustomFeedFilter.

Signature

```java
public String feedFilterName {get; set;}
```

Property Value

Type: String
Signature
public Metadata.FeedLayoutFilterType feedFilterType {get; set;}

Property Value
Type: FeedLayoutFilterType Enum

**feedItemType**
The type of feed item to display.

Signature
public Metadata.FeedItemTypeEnum feedItemType {get; set;}

Property Value
Type: FeedItemTypeEnum Enum

**FeedLayoutFilter Methods**
The following are methods for FeedLayoutFilter.

**IN THIS SECTION:**
- clone()
  - Makes a duplicate copy of the Metadata.FeedLayoutFilter.

**clone()**
Makes a duplicate copy of the Metadata.FeedLayoutFilter.

Signature
public Object clone()

Return Value
Type: Object

**FeedLayoutFilterPosition Enum**
Describes where the feed filters list is included in the layout.

**Enum Values**
The following are the values of the Metadata.FeedLayoutFilterPosition enum.
### FeedLayoutFilterType Enum

The type of feed layout filter.

#### Enum Values

The following are the values of the `Metadata.FeedLayoutFilterType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AllUpdates</td>
<td>Shows all feed items on a record.</td>
</tr>
<tr>
<td>Custom</td>
<td>Shows custom feed items.</td>
</tr>
<tr>
<td>FeedItemType</td>
<td>Shows feed items only for a particular type of activity on the record.</td>
</tr>
</tbody>
</table>

### Layout Class

Represents the metadata associated with a page layout.

#### Namespace

*Metadata*

#### Usage

Use this class to access layout metadata components. For more information, see `Layout` in the *Metadata API Developer Guide*.

**IN THIS SECTION:**
- Layout Properties
- Layout Methods

### Layout Properties

The following are properties for `Layout`.

**IN THIS SECTION:**
- customButtons
  - The custom buttons for this layout.
customConsoleComponents
Represents custom console components (Visualforce pages, lookup fields, or related lists) on a page layout.

eemailDefault
Default value for the email checkbox. Only relevant if the showEmailCheckbox property is set.

excludeButtons
List of standard buttons to exclude from this layout.

feedLayout
Represents the values that define the feed view of a feed-based page layout.

headers
Represents the layout headers used for tagging.

layoutSections
The main sections of the layout containing fields, s-controls, and custom links. The order here determines the layout order.

miniLayout
Represents a minilayout, which is used in the mini view of a record in the Console tab, hover details, and event overlays.

multilineLayoutFields
Fields for special multiline layout fields which appear in OpportunityProduct layouts.

platformActionList
The list of actions, and their order, that display in the Salesforce mobile action bar for the layout.

quickActionList
The list of quick actions that display in the full Salesforce site for the page layout.

relatedContent
The Related Content section of the page layout.

relatedLists
The related lists for the layout, listed in the order they appear in the user interface.

relatedObjects
The list of related objects that appears in the mini view of the console.

runAssignmentRulesDefault
Default value for the “run assignment rules” checkbox. Only relevant if the showRunAssignmentRulesCheckbox property is set.

showEmailCheckbox
Controls whether to show the email checkbox. Only allowed on Case, CaseClose, and Task layouts. The default state of checkbox is controlled by the emailDefault property.

showHighlightsPanel
If set, the highlights panel displays on pages in the Salesforce console.

showInteractionLogPanel
If set, the interaction log displays on pages in the Salesforce console.

showKnowledgeComponent
Only allowed on Case layouts. If set, the Knowledge sidebar displays on cases in the Salesforce console.

showRunAssignmentRulesCheckbox
Controls whether to show the Run Assignment Rules checkbox. Only allowed on Lead and Case layouts. The default state of checkbox is controlled by the runAssignmentRulesDefault property.
showSolutionSection
Only allowed on CaseClose layout. If set, the built-in solution information section shows up on the page.

showSubmitAndAttachButton
For Cast layouts only. If set, the Submit & Add Attachment button displays on case edit pages to portal users in the Customer Portal.

summaryLayout
The summary layout for this layout.

customButtons
The custom buttons for this layout.

Signature
public List<String> customButtons {get; set;}

Property Value
Type: List<String>

customConsoleComponents
Represents custom console components (Visualforce pages, lookup fields, or related lists) on a page layout.

Signature
public Metadata.CustomConsoleComponents customConsoleComponents {get; set;}

Property Value
Type: CustomConsoleComponents Class

defaultEmail
Default value for the email checkbox. Only relevant if the showEmailCheckbox property is set.

Signature
public Boolean emailDefault {get; set;}

Property Value
Type: Boolean

excludeButtons
List of standard buttons to exclude from this layout.

Signature
public List<String> excludeButtons {get; set;}

Property Value
Type: `List<String>`

**feedLayout**
Represents the values that define the feed view of a feed-based page layout.

Signature

```java
public Metadata.FeedLayout feedLayout {get; set;}
```

Property Value
Type: `Metadata.FeedLayout`

**headers**
Represents the layout headers used for tagging.

Signature

```java
public List<Metadata.LayoutHeader> headers {get; set;}
```

Property Value
Type: `List<Metadata.LayoutHeader>`

**layoutSections**
The main sections of the layout containing fields, s-controls, and custom links. The order here determines the layout order.

Signature

```java
public List<Metadata.LayoutSection> layoutSections {get; set;}
```

Property Value
Type: `List<Metadata.LayoutSection>`

**miniLayout**
Represents a minilayout, which is used in the mini view of a record in the Console tab, hover details, and event overlays.

Signature

```java
public Metadata.MiniLayout miniLayout {get; set;}
```

Property Value
Type: `Metadata.MiniLayout`
**multilineLayoutFields**
Fields for special multiline layout fields which appear in OpportunityProduct layouts.

Signature

```csharp
public List<String> multilineLayoutFields {get; set;}
```

Property Value
Type: `List<String>`

**platformActionList**
The list of actions, and their order, that display in the Salesforce mobile action bar for the layout.

Signature

```csharp
public Metadata.PlatformActionList platformActionList {get; set;}
```

Property Value
Type: `Metadata.PlatformActionList`

**quickActionList**
The list of quick actions that display in the full Salesforce site for the page layout.

Signature

```csharp
public Metadata.QuickActionList quickActionList {get; set;}
```

Property Value
Type: `Metadata.QuickActionList`

**relatedContent**
The Related Content section of the page layout.

Signature

```csharp
public Metadata.RelatedContent relatedContent {get; set;}
```

Property Value
Type: `Metadata.RelatedContent`

**relatedLists**
The related lists for the layout, listed in the order they appear in the user interface.
public List<Metadata.RelatedListItem> relatedLists {get; set;}

**relatedObjects**
The list of related objects that appears in the mini view of the console.

default value for the “run assignment rules” checkbox. Only relevant if the showRunAssignmentRulesCheckbox property is set.

public Boolean runAssignmentRulesDefault {get; set;}

**showEmailCheckbox**
Controls whether to show the email checkbox. Only allowed on Case, CaseClose, and Task layouts. The default state of checkbox is controlled by the emailDefault property.

public Boolean showEmailCheckbox {get; set;}

**showHighlightsPanel**
If set, the highlights panel displays on pages in the Salesforce console.
Signature

public Boolean showHighlightsPanel {get; set;}

Property Value
Type: Boolean

**showInteractionLogPanel**
If set, the interaction log displays on pages in the Salesforce console.

Signature

public Boolean showInteractionLogPanel {get; set;}

Property Value
Type: Boolean

**showKnowledgeComponent**
Only allowed on Case layouts. If set, the Knowledge sidebar displays on cases in the Salesforce console.

Signature

public Boolean showKnowledgeComponent {get; set;}

Property Value
Type: Boolean

**showRunAssignmentRulesCheckbox**
Controls whether to show the Run Assignment Rules checkbox. Only allowed on Lead and Case layouts. The default state of checkbox is controlled by the runAssignmentRulesDefault property.

Signature

public Boolean showRunAssignmentRulesCheckbox {get; set;}

Property Value
Type: Boolean

**showSolutionSection**
Only allowed on CaseClose layout. If set, the built-in solution information section shows up on the page.

Signature

public Boolean showSolutionSection {get; set;}

Metadata Namespace
**showSubmitAndAttachButton**

For Cast layouts only. If set, the Submit & Add Attachment button displays on case edit pages to portal users in the Customer Portal.

**Signature**

```java
public Boolean showSubmitAndAttachButton {get; set;}
```

**summaryLayout**

The summary layout for this layout.

**Signature**

```java
public Metadata.SummaryLayout summaryLayout {get; set;}
```

**Layout Methods**

The following are methods for `Layout`.

**IN THIS SECTION:**

- `clone()`
  - Makes a duplicate copy of the `Metadata.Layout`.

- `clone()`
  - Makes a duplicate copy of the `Metadata.Layout`.

**Signature**

```java
public Object clone()
```

**Return Value**

**Type:** Object
LayoutColumn Class

Represents the items in a column within a layout section.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “LayoutColumn” in the Metadata API Developer Guide.

IN THIS SECTION:

LayoutColumn Properties

LayoutColumn Methods

LayoutColumn Properties

The following are properties for LayoutColumn.

IN THIS SECTION:

layoutItems

The individual items within a column (ordered from top to bottom).

reserved

This field is reserved for Salesforce.

layoutItems

The individual items within a column (ordered from top to bottom).

Signature

public List<Metadata.LayoutItem> layoutItems {get; set;}

Property Value

Type: List<Metadata.LayoutItem>

reserved

This field is reserved for Salesforce.

Signature

public String reserved {get; set;}

2170
Property Value
Type: String

LayoutColumn Methods
The following are methods for LayoutColumn.

IN THIS SECTION:
clone()

Makes a duplicate copy of the Metadata.LayoutColumn.

cloned()

Makes a duplicate copy of the Metadata.LayoutColumn.

Signature
public Object clone()

Return Value
Type: Object

LayoutHeader Enum
Represents tagging types used for Metadata.Layout.headers

Enum Values
The following are the values of the Metadata.LayoutHeader enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PersonalTagging</td>
<td>Tag is set to private user.</td>
</tr>
<tr>
<td>PublicTagging</td>
<td>Tag is viewable to any user who can access the record.</td>
</tr>
</tbody>
</table>

LayoutItem Class
Represents the valid values that define a layout item.

Namespace
Metadata

Usage
Use this class when accessing Metadata.Layout metadata components. For more information, see "LayoutItem" in the Metadata API Developer Guide.
IN THIS SECTION:
  LayoutItem Properties
  LayoutItem Methods

LayoutItem Properties

The following are properties for `LayoutItem`.

 analyticsCloudComponent
  A Wave Analytics dashboard component on a page.
 behavior
  Determines the field behavior.
 canvas
  References a canvas app.
 component
  References a component.
 customLink
  The custom link reference.
 emptySpace
  Controls if this layout item is a blank space.
 field
  The field name reference, relative to the layout, for example “Description” or “MyField__c”.
 height
  For s-controls and pages only, the height in pixels.
 page_x
  Reference to a Visualforce page.
 reportChartComponent
  Refers to a report chart that you can add to a standard or custom object page.
 scontrol
  Reference to an s-control.
 showLabel
  For s-control and pages only, whether to show the label.
 showScrollbars
  For s-control and pages only, whether to show scrollbars.
 width
  For s-control and pages only, the width in pixels or percent. Pixel values are simply the number of pixels, for example, 500. Percentage values must include the percent sign, for example, 20%.

 analyticsCloudComponent
  A Wave Analytics dashboard component on a page.
Signature

```csharp
public Metadata.AnalyticsCloudComponentLayoutItem analyticsCloudComponent {get; set;}
```

Property Value

Type: Metadata.AnalyticsCloudComponentLayoutItem

**behavior**

Determines the field behavior.

Signature

```csharp
public Metadata.UiBehavior behavior {get; set;}
```

Property Value

Type: Metadata.UiBehavior

**canvas**

References a canvas app.

Signature

```csharp
public String canvas {get; set;}
```

Property Value

Type: String

**component**

References a component.

Signature

```csharp
public String component {get; set;}
```

Property Value

Type: String

**customLink**

The custom link reference.

Signature

```csharp
public String customLink {get; set;}
```
emptySpace
Controls if this layout item is a blank space.

Signature
public Boolean emptySpace {get; set;}

field
The field name reference, relative to the layout, for example “Description” or “MyField__c”.

Signature
public String field {get; set;}

height
For s-controls and pages only, the height in pixels.

Signature
public Integer height {get; set;}

page_x
Reference to a Visualforce page.

Signature
public String page_x {get; set;}

Property Value
Type: String

Property Value
Type: String

Property Value
Type: Boolean

Property Value
Type: String

Metadata Namespace
**reportChartComponent**

Refers to a report chart that you can add to a standard or custom object page.

Signature

```csharp
public Metadata.ReportChartComponentLayoutItem reportChartComponent {get; set;}
```

Property Value

Type: `Metadata.ReportChartComponentLayoutItem`

**scontrol**

Reference to an s-control.

Signature

```csharp
public String scontrol {get; set;}
```

Property Value

Type: `String`

**showLabel**

For s-control and pages only, whether to show the label.

Signature

```csharp
public Boolean showLabel {get; set;}
```

Property Value

Type: `Boolean`

**showScrollbars**

For s-control and pages only, whether to show scrollbars.

Signature

```csharp
public Boolean showScrollbars {get; set;}
```

Property Value

Type: `Boolean`

**width**

For s-control and pages only, the width in pixels or percent. Pixel values are simply the number of pixels, for example, 500. Percentage values must include the percent sign, for example, 20%.
Signature

```java
public String width {get; set;}
```

Property Value

Type: String

LayoutItem Methods

The following are methods for `LayoutItem`.

**IN THIS SECTION:**

- `clone()`
  
  Makes a duplicate copy of the `Metadata.LayoutItem`

- `clone()`
  
  Makes a duplicate copy of the `Metadata.LayoutItem`

Signature

```java
public Object clone()
```

Return Value

Type: Object

LayoutSection Class

Represents a section of a page layout, such as the Custom Links section.

Namespace

`Metadata`

Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “LayoutSection” in the `Metadata API Developer Guide`.

**IN THIS SECTION:**

- LayoutSection Properties
- LayoutSection Methods

LayoutSection Properties

The following are properties for `LayoutSection`.
IN THIS SECTION:

customLabel
Indicates if this section’s label is custom or standard (built-in).

detailHeading
Controls if this section appears in the detail page.

editHeading
Controls if this section appears in the edit page.

label
The label, either standard or custom, based on the customLabel property.

layoutColumns
Lists the layout columns. You can have one, two, or three columns, ordered left to right, are possible.

style
The style of the layout for this section.

customLabel
Indicates if this section’s label is custom or standard (built-in).

Signature

public Boolean customLabel {get; set;}

Property Value
Type: Boolean

detailHeading
Controls if this section appears in the detail page.

Signature

public Boolean detailHeading {get; set;}

Property Value
Type: Boolean

editHeading
Controls if this section appears in the edit page.

Signature

public Boolean editHeading {get; set;}

**Property Value**

Type: `Boolean`

**label**

The label; either standard or custom, based on the customLabel property.

Signature

```java
public String label {get; set;}
```

**Property Value**

Type: `String`

**layoutColumns**

Lists the layout columns. You can have one, two, or three columns, ordered left to right, are possible.

Signature

```java
public List<Metadata.LayoutColumn> layoutColumns {get; set;}
```

**Property Value**

Type: `List<Metadata.LayoutColumn>`

**style**

The style of the layout for this section.

Signature

```java
public Metadata.LayoutSectionStyle style {get; set;}
```

**Property Value**

Type: `Metadata.LayoutSectionStyle`

**LayoutSection Methods**

The following are methods for `LayoutSection`.

**IN THIS SECTION:**

- `clone()`
  
  Makes a duplicate copy of the `Metadata.LayoutSection`.

- `clone()`
  
  Makes a duplicate copy of the `Metadata.LayoutSection`.
Signature

```java
public Object clone()
```

Return Value

Type: Object

**LayoutSectionStyle Enum**

Describes the possible styles for a layout section.

**Enum Values**

The following are the values of the `Metadata.LayoutSectionStyle` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CustomLinks</td>
<td>Contains custom links only</td>
</tr>
<tr>
<td>OneColumn</td>
<td>One column</td>
</tr>
<tr>
<td>TwoColumnsLeftToRight</td>
<td>Two columns, tab goes left to right</td>
</tr>
<tr>
<td>TwoColumnsTopToBottom</td>
<td>Two columns, tab goes top to bottom</td>
</tr>
</tbody>
</table>

**Metadata Class**

An abstract base class that represents a custom metadata component.

**Namespace**

`Metadata`

**Usage**

You can’t create instances of this abstract class. Instead, create an instance of a specific custom metadata component class that derives from `Metadata`. Metadata, such as `Metadata.CustomMetadata`. For more information, see `Metadata` in the `Metadata API Developer Guide`.

**IN THIS SECTION:**

- Metadata Properties
- Metadata Methods

**Metadata Properties**

The following are properties for `Metadata`. 
IN THIS SECTION:

**fullName**
The full name of the custom metadata, which can include the namespace, type, and component name.

**fullName**
The full name of the custom metadata, which can include the namespace, type, and component name.

Signature
```
public String fullName {get; set;}
```

Property Value
Type: String
The format of the full name can include the namespace, metadata type, and metadata component name. If you’re updating components in a namespace, you also need to qualify the namespace for the component in the full name. For example, the full name for a custom metadata "MDType1__mdt" component named "Component1" that is contained in the "myPackage" namespace is "myPackage__MDType1__mdt.myPackage__Component1". For more information on full name formats for different metadata types, see reference documentation on the metadata types in the [Metadata API Developer Guide](#).

**Metadata Methods**
The following are methods for `Metadata`.

IN THIS SECTION:

**clone()**
Makes a duplicate copy of the `Metadata.Metadata`.

```
clone()
```

Makes a duplicate copy of the `Metadata.Metadata`.

Signature
```
public Object clone()
```

Return Value
Type: Object

**MetadataType Enum**
Represents the custom metadata components available in Apex.

**Enum Values**
The following are the values of the `Metadata.MetadataType` enum.
Records of custom metadata types

Layout

MetadataValue Class
An abstract base class that represents a custom metadata component field.

Namespace
Metadata

Usage
You can't create instances of this abstract class. Instead, create an instance of a specific custom metadata component value class that derives from Metadata.MetadataValue, such as Metadata.CustomMetadataValue.

IN THIS SECTION:
MetadataValue Methods

MetadataValue Methods
The following are methods for MetadataValue.

IN THIS SECTION:
clone()

clone()
Makes a duplicate copy of the Metadata.MetadataValue.

Signature
public Object clone()

Return Value
Type: Object

MiniLayout Class
Represents a mini view of a record in the Console tab, hover details, and event overlays.
Namespace

Metadata

Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “MiniLayout” in the *Metadata API Developer Guide*.

IN THIS SECTION:

- MiniLayout Properties
- MiniLayout Methods

MiniLayout Properties

The following are properties for `MiniLayout`.

IN THIS SECTION:

- fields
  - The fields for the mini-layout, listed in the order they appear in the UI. Fields that appear in the mini-layout must appear in the main layout.
  - relatedLists
    - The mini related lists, listed in the order they appear in the UI. You cannot set sorting on mini related lists. Fields that appear in the mini related lists must appear in the main layout.

**fields**

The fields for the mini-layout, listed in the order they appear in the UI. Fields that appear in the mini-layout must appear in the main layout.

Signature

```
public List<String> fields {get; set;}
```

Property Value

Type: `List<String>`

**relatedLists**

The mini related lists, listed in the order they appear in the UI. You cannot set sorting on mini related lists. Fields that appear in the mini related lists must appear in the main layout.

Signature

```
public List<Metadata.RelatedListItem> relatedLists {get; set;}
```
MiniLayout Methods

The following are methods for MiniLayout.

**IN THIS SECTION:**

- **clone()**
  Makes a duplicate copy of the `Metadata.MiniLayout`.

**Public**

**Signature**

```java
public Object clone()
```

**Return Value**

Type: Object

Operations Class

Represents a class to execute metadata operations, such as retrieving or deploying custom metadata.

Namespace

`Metadata`

Usage

Use the `Metadata.Operations` class to execute metadata operations. For more information on use cases and restrictions of metadata operations in Apex, see `Metadata`.

Example: Retrieve Metadata

The following example retrieves the “MyTestCustomMDType” custom metadata record from the subscriber org, and inspects the custom fields.

```java
public class ReadMetadata {
    public void retrieveMetadata () {
        // List fullnames of components we want to retrieve
        List<String> componentNameList = new List<String>{'ISVNamespace__TestCustomMDType.MyTestCustomMDType'};

        // Retrieve components that are records of custom metadata types 
        // based on name
        List<Metadata.Metadata> components = Metadata.Operations.retrieve(
```
Example: Deploy Metadata

The following example uses the Metadata API in Apex to update the customField custom field value of the MetadataRecordName custom metadata record and deploy this change into the subscriber org. Because the deployment is asynchronous, you must provide a callback class that implements the Metadata.DeployCallback interface, which is then used when the queued deployment completes.

```apex
public class CreateMetadata{
    public void updateAndDeployMetadata() {
        // Setup custom metadata to be created in the subscriber org.
        Metadata.CustomMetadata customMetadata = new Metadata.CustomMetadata();
        customMetadata.fullName = 'ISVNamespace__MetadataTypeName.MetadataRecordName';
        Metadata.CustomMetadataValue customField = new Metadata.CustomMetadataValue();
        customField.field = 'customField__c';
        customField.value = 'New value';
        customMetadata.values.add(customField);

        Metadata.DeployContainer mdContainer = new Metadata.DeployContainer();
        mdContainer.addMetadata(customMetadata);

        // Setup deploy callback, MyDeployCallback implements
        // the Metadata.DeployCallback interface (code for
        // this class not shown in this example)
        MyDeployCallback callback = new MyDeployCallback();

        // Enqueue custom metadata deployment
        Id jobId = Metadata.Operations.enqueueDeployment(mdContainer, callback);
    }
}
```

Example: Create Two Metadata Records Synchronously

Create a metadata record along with another one that references it in the same transaction. If the parent record was installed with a namespace, prefix the developer name with recordNs__.
Note: No custom metadata relationship can relate records of the same type to each other.

```java
public class CreateMetadata {

    public Id doCreate(
        String parentRecDevName,
        String parentRecLabel,
        String childRecDevName,
        String childRecLabel) {

        Metadata.DeployContainer mdContainer = new Metadata.DeployContainer();

        Metadata.CustomMetadata parentRecord = new Metadata.CustomMetadata();
        parentRecord.fullName = 'ParentType.' + parentRecDevName;
        parentRecord.label = parentRecLabel;
        mdContainer.addMetadata(parentRecord);

        Metadata.CustomMetadata childRecord = new Metadata.CustomMetadata();
        childRecord.fullName = 'ChildType.' + childRecDevName;
        childRecord.label = childRecLabel;
        Metadata.CustomMetadataValue relValue = new Metadata.CustomMetadataValue();
        relValue.field = 'Parent__c';
        relValue.value = parentRecDevName;
        childRecord.values.add(relValue);
        mdContainer.addMetadata(childRecord);

        Id jobId = Metadata.Operations.enqueueDeployment(mdContainer, null);
        return jobId;
    }
}
```

IN THIS SECTION:

**Operations Methods**

The following are methods for `Operations`.

IN THIS SECTION:

- `clone()`
  

- `enqueueDeployment(container, callback)`
  
  Deploys custom metadata components asynchronously.

- `retrieve(type, fullNames)`
  
  Retrieves a list of custom metadata components.
clone()

Signature

```java
public Object clone()
```

Return Value

Type: Object

enqueueDeployment(container, callback)

Deploys custom metadata components asynchronously.

Signature

```java
public static Id enqueueDeployment(Metadata.DeployContainer container,
                                   Metadata.DeployCallback callback)
```

Parameters

- **container**
  
  Type: Metadata.DeployContainer
  
  Container that contains the set of metadata components to deploy.

- **callback**
  
  Type: Metadata.DeployCallback
  
  A class that implements the Metadata.DeployCallback interface. Used by Salesforce to return information about the deployment results.

Return Value

Type: Id

ID of deployment request.

retrieve(type, fullNames)

Retrieves a list of custom metadata components.

Signature

```java
public static List<Metadata.Metadata> retrieve(Metadata.MetadataType type,
                                             List<String> fullNames)
```

Parameters

- **type**
  
  Type: Metadata.MetadataType
  
  The metadata component type.
**FullNames**

Type: `List<String>`

A list of component names to retrieve. For information on component name formats, see `Metadata.fullName()`.

**Return Value**

Type: `List<Metadata.Metadata>`

**PlatformActionList Class**

Represents the list of actions, and their order, that display in the Salesforce mobile action bar for the layout.

**Namespace**

Metadata

**Usage**

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “PlatformActionList” in the *Metadata API Developer Guide*.

**IN THIS SECTION:**

- PlatformActionList Properties
- PlatformActionList Methods

**PlatformActionList Properties**

The following are properties for `PlatformActionList`.

**IN THIS SECTION:**

- `actionListContext`
  - The context of the action list.
- `platformActionListItems`
  - The actions in the platform action list.
- `relatedSourceEntity`
  - When the `actionListContext` property is “RelatedList” or “RelatedListRecord”, this field represents the API name of the related list to which the action belongs.

**actionListContext**

The context of the action list.

**Signature**

```csharp
public Metadata.PlatformActionListContextEnum actionListContext {get; set;}
```
Property Value
Type: `Metadata.PlatformActionListContextEnum`

**platformActionListItems**
The actions in the platform action list.

Signature
```java
public List<Metadata.PlatformActionListItem> platformActionListItems {get; set;}
```

Property Value
Type: `List<Metadata.PlatformActionListItem>`

**relatedSourceEntity**
When the `actionListContext` property is “RelatedList” or “RelatedListRecord”, this field represents the API name of the related list to which the action belongs.

Signature
```java
public String relatedSourceEntity {get; set;}
```

Property Value
Type: `String`

**PlatformActionList Methods**
The following are methods for `PlatformActionList`.

IN THIS SECTION:
```java
clone()
```
Makes a duplicate copy of the `Metadata.PlatformActionList`.

```java
clone()
```
Makes a duplicate copy of the `Metadata.PlatformActionList`.

Signature
```java
public Object clone()
```

Return Value
Type: `Object`
PlatformActionListContextEnum Enum

Describes the different contexts of action lists.

Enum Values

The following are the values of the Metadata.PlatformActionListContextEnum enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ActionDefinition</td>
<td>Action definition context. Reserved for future use.</td>
</tr>
<tr>
<td>Assistant</td>
<td>Assistant context.</td>
</tr>
<tr>
<td>BannerPhoto</td>
<td>Banner photo context.</td>
</tr>
<tr>
<td>Chatter</td>
<td>Chatter context.</td>
</tr>
<tr>
<td>Dockable</td>
<td>Dockable context.</td>
</tr>
<tr>
<td>FeedElement</td>
<td>Feed element context.</td>
</tr>
<tr>
<td>Flexipage</td>
<td>Flexipage context.</td>
</tr>
<tr>
<td>Global_x</td>
<td>Global context.</td>
</tr>
<tr>
<td>ListView</td>
<td>ListView context.</td>
</tr>
<tr>
<td>ListViewDefinition</td>
<td>ListView definition context.</td>
</tr>
<tr>
<td>ListViewRecord</td>
<td>ListView record context.</td>
</tr>
<tr>
<td>Lookup</td>
<td>Lookup context.</td>
</tr>
<tr>
<td>MruList</td>
<td>MRU list context.</td>
</tr>
<tr>
<td>MruRow</td>
<td>MRU row context.</td>
</tr>
<tr>
<td>ObjectHomeChart</td>
<td>Object home chart context.</td>
</tr>
<tr>
<td>Photo</td>
<td>Photo context</td>
</tr>
<tr>
<td>Record</td>
<td>Record context.</td>
</tr>
<tr>
<td>RecordEdit</td>
<td>Record edit context</td>
</tr>
<tr>
<td>RelatedList</td>
<td>Related list context.</td>
</tr>
<tr>
<td>RelatedListRecord</td>
<td>Related list record context.</td>
</tr>
</tbody>
</table>

PlatformActionListItem Class

Represents an action in the platform action list for a layout.

Namespace

Metadata
Usage
Use this class when accessing Metadata.Layout metadata components. For more information, see “PlatformActionListItem” in the Metadata API Developer Guide.

IN THIS SECTION:
- PlatformActionListItem Properties
- PlatformActionListItem Methods

PlatformActionListItem Properties
The following are properties for PlatformActionListItem.

IN THIS SECTION:
- actionName
  - The API name for the action in the list.
- actionType
  - The type of action.
- sortOrder
  - The placement of the action in the list.
- subtype
  - The subtype of the action.

actionName
The API name for the action in the list.

Signature
public String actionName {get; set;}

Property Value
Type: String

actionType
The type of action.

Signature
public Metadata.PlatformActionTypeEnum actionType {get; set;}

Property Value
Type: Metadata.PlatformActionTypeEnum
**sortOrder**
The placement of the action in the list.

Signature
```
public Integer sortOrder {get; set;}
```

Property Value
Type: Integer

**subtype**
The subtype of the action.

Signature
```
public String subtype {get; set;}
```

Property Value
Type: String

**PlatformActionListItem Methods**
The following are methods for PlatformActionListItem.

**IN THIS SECTION:**

**clone()**

Makes a duplicate copy of the Metadata.PlatformActionListItem.

Signature
```
public Object clone()
```

Return Value
Type: Object

**PlatformActionTypeEnum Enum**
The type of action for a PlatformActionListItem.
Enum Values

The following are the values of the `Metadata.PlatformActionType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ActionLink</td>
<td>An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce Chatter feed UI.</td>
</tr>
<tr>
<td>CustomButton</td>
<td>When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.</td>
</tr>
<tr>
<td>InvocableAction</td>
<td>An invocable action such as posting to Chatter.</td>
</tr>
<tr>
<td>ProductivityAction</td>
<td>Productivity actions are predefined by Salesforce and are attached to a limited set of objects. You can't edit or delete productivity actions.</td>
</tr>
<tr>
<td>QuickAction</td>
<td>A global or object-specific action.</td>
</tr>
<tr>
<td>StandardButton</td>
<td>A predefined Salesforce button such as New, Edit, and Delete.</td>
</tr>
</tbody>
</table>

PrimaryTabComponents Class

Represents custom console components on primary tabs in the Salesforce console.

Namespace

`Metadata`

Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “PrimaryTabComponents” in the `Metadata API Developer Guide`.

IN THIS SECTION:

- `PrimaryTabComponents Properties`
- `PrimaryTabComponents Methods`

PrimaryTabComponents Properties

The following are properties for `PrimaryTabComponents`.

IN THIS SECTION:

- `component` Represents a custom console component (Visualforce page, lookup field, or related lists) on a section of a page layout.
- `containers` Represents a location and style in which to display more than one custom console component on the sidebars of the Salesforce console.
**component**
Represents a custom console component (Visualforce page, lookup field, or related lists) on a section of a page layout.

Signature
```
public List<Metadata.ConsoleComponent> component {get; set;}
```

Property Value
Type: `List<Metadata.ConsoleComponent>`

**containers**
Represents a location and style in which to display more than one custom console component on the sidebars of the Salesforce console.

Signature
```
public List<Metadata.Container> containers {get; set;}
```

Property Value
Type: `List<Metadata.Container>`

**PrimaryTabComponents Methods**
The following are methods for `PrimaryTabComponents`.

**IN THIS SECTION:**
- `clone()` makes a duplicate copy of the `Metadata.PrimaryTabComponents`.

**clone()**
Makes a duplicate copy of the `Metadata.PrimaryTabComponents`.

Signature
```
public Object clone()
```

Return Value
Type: `Object`

**QuickActionList Class**
Represents the list of actions associated with the page layout.
Namespace

Metadata

Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “QuickActionList” in the Metadata API Developer Guide.

IN THIS SECTION:
- QuickActionList Properties
- QuickActionList Methods

QuickActionList Properties

The following are properties for QuickActionList.

IN THIS SECTION:
- quickActionListItems
- quickActionListItems

quickActionListItems

List of QuickActionList objects.

Signature

```
public List<Metadata.QuickActionListItem> quickActionListItems {get; set;}
```

Property Value

Type: `List<Metadata.QuickActionListItem>`

QuickActionList Methods

The following are methods for QuickActionList.

IN THIS SECTION:
- clone()
- clone()

clone()

Makes a duplicate copy of the `Metadata.QuickActionList`.

Signature

```
public Object clone()
```
QuickActionListItem Class

Represents an action in the QuickActionList.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “QuickActionListItem” in the Metadata API Developer Guide.

IN THIS SECTION:

QuickActionListItem Properties

QuickActionListItem Methods

QuickActionListItem Properties

The following are properties for QuickActionListItem.

IN THIS SECTION:

quickActionName

The API name of the action.

**quickActionName**

The API name of the action.

Signature

```java
public String quickActionName {get; set;}
```

Property Value

Type: String

QuickActionListItem Methods

The following are methods for QuickActionListItem.
IN THIS SECTION:

clone()

Makes a duplicate copy of the Metadata.QuickActionListItem.

clone()

Makes a duplicate copy of the Metadata.QuickActionListItem.

Signature

public Object clone()

Return Value

Type: Object

RelatedContent Class

Represents the Mobile Cards section of the page layout.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “RelatedContent” in the Metadata API Developer Guide.

IN THIS SECTION:

RelatedContent Properties

RelatedContent Methods

RelatedContent Properties

The following are properties for RelatedContent.

IN THIS SECTION:

relatedContentItems

A list of layout items in the Mobile Cards section of the page layout.

relatedContentItems

A list of layout items in the Mobile Cards section of the page layout.
Signature

```csharp
public List<Metadata.RelatedContentItem> relatedContentItems {get; set;}
```

Property Value

Type: `List<Metadata.RelatedContentItem>`

**RelatedContent Methods**

The following are methods for `RelatedContent`.

**IN THIS SECTION:**

- `clone()`
  - Makes a duplicate copy of the `Metadata.RelatedContent`.

**clone()**

Makes a duplicate copy of the `Metadata.RelatedContent`.

Signature

```csharp
public Object clone()
```

Return Value

Type: Object

**RelatedContentItem Class**

Represents an individual item in the `RelatedContent` list.

**Namespace**

`Metadata`

**Usage**

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “RelatedContentItem” in the `Metadata API Developer Guide`.

**IN THIS SECTION:**

- RelatedContentItem Properties
- RelatedContentItem Methods

**RelatedContentItem Properties**

The following are properties for `RelatedContentItem`. 
IN THIS SECTION:

**layoutItem**
An individual layout item in the Mobile Cards section.

**layoutItem**
An individual layout item in the Mobile Cards section.

Signature

```csharp
public Metadata.LayoutItem layoutItem {get; set;}
```

**Property Value**

Type: Metadata.LayoutItem

**RelatedContentItem Methods**

The following are methods for RelatedContentItem.

IN THIS SECTION:

**clone()**

Makes a duplicate copy of the Metadata.RelatedContentItem.

**clone()**

Makes a duplicate copy of the Metadata.RelatedContentItem.

Signature

```csharp
public Object clone()
```

**Return Value**

Type: Object

**RelatedList Class**

Represents related list custom components on the sidebars of the Salesforce console.

**Namespace**

Metadata

**Usage**

Use this class when accessing Metadata.Layout metadata components. For more information, see “RelatedList” in the Metadata API Developer Guide.
IN THIS SECTION:

RelatedList Properties

The following are properties for RelatedList.

IN THIS SECTION:

hideOnDetail
When set to true, the related list is hidden from detail pages where it appears as a component to prevent duplicate information from showing.

name
The name of the component as it appears to console users.

**hideOnDetail**
When set to true, the related list is hidden from detail pages where it appears as a component to prevent duplicate information from showing.

Signature

```
public Boolean hideOnDetail {get; set;}
```

Property Value
Type: Boolean

**name**
The name of the component as it appears to console users.

Signature

```
public String name {get; set;}
```

Property Value
Type: String

**RelatedList Methods**
The following are methods for RelatedList.

IN THIS SECTION:

clone()

Makes a duplicate copy of the Metadata.RelatedList.
clone()

Makes a duplicate copy of the Metadata.RelatedList.

Signature

public Object clone()

Return Value

Type: Object

RelatedListItem Class

Represents an item in the related list in a page layout.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “RelatedListItem” in the Metadata API Developer Guide.

IN THIS SECTION:
  RelatedListItem Properties
  RelatedListItem Methods

RelatedListItem Properties

The following are properties for RelatedListItem.

IN THIS SECTION:
  customButtons
  A list of custom buttons used in the related list.
  excludeButtons
  A list of excluded related-list buttons.
  fields
  A list of fields displayed in the related list. Uses aliases instead of field or API names.
  relatedList
  The name of the related list.
  sortField
  The name of the field used for sorting.
  sortOrder
  When sortField is set, the sortOrder property determines the sort order.
customButtons
A list of custom buttons used in the related list.

Signature
public List<String> customButtons {get; set;}

Property Value
Type: List<String>
For more information, see “Define Custom Buttons and Links” in the Salesforce online help.

excludeButtons
A list of excluded related-list buttons.

Signature
public List<String> excludeButtons {get; set;}

Property Value
Type: List<String>

fields
A list of fields displayed in the related list. Uses aliases instead of field or API names.

Signature
public List<String> fields {get; set;}

Property Value
Type: List<String>

relatedList
The name of the related list.

Signature
public String relatedList {get; set;}

Property Value
Type: String
sortField

The name of the field used for sorting.

Signature

public String sortField {get; set;}

Property Value

Type: String

sortOrder

When sortField is set, the sortOrder property determines the sort order.

Signature

public Metadata.SortOrder sortOrder {get; set;}

Property Value

Type: Metadata.SortOrder

RelatedListItem Methods

The following are methods for RelatedListItem.

IN THIS SECTION:

clone()

Makes a duplicate copy of the Metadata.RelatedListItem.

clone()

Makes a duplicate copy of the Metadata.RelatedListItem.

Signature

public Object clone()

Return Value

Type: Object

ReportChartComponentLayoutItem Class

Represents the settings for a report chart on a standard or custom page.
Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “ReportChartComponentLayoutItem” in the Metadata API Developer Guide.

IN THIS SECTION:

ReportChartComponentLayoutItem Properties

ReportChartComponentLayoutItem Methods

ReportChartComponentLayoutItem Properties

The following are properties for ReportChartComponentLayoutItem.

IN THIS SECTION:

cacheData
Indicates whether to use cached data when displaying the chart. When the attribute is set to true, data is cached for 24 hours. When the attribute is set to false, the report is run every time the page is refreshed.

cacheFilterableField
Unique development name of the field by which a report chart is filtered to return data relevant to the page. If set, the ID field for the parent object of the page or report type is the chart data filter. The parent object for the report type and the page must match for a chart to return relevant data.

error
Error string that is populated only when an error occurs in the underlying report.

hideOnError
Controls whether users see a chart that has an error. When an error occurs and this attribute is not set, the chart doesn’t show any data except the error. Set the attribute to true to hide the chart from a page on error.

includeContext
If true, filters the report chart to return data that’s relevant to the page.

reportName
Unique development name of a report that includes a chart.

showTitle
If true, applies the title from the report to the chart.

size
Size of the displayed chart. The default is medium.

cacheData
Indicates whether to use cached data when displaying the chart. When the attribute is set to true, data is cached for 24 hours. When the attribute is set to false, the report is run every time the page is refreshed.
Signature

public Boolean cacheData {get; set;}

Property Value
Type: Boolean

contextFilterableField
Unique development name of the field by which a report chart is filtered to return data relevant to the page. If set, the ID field for the parent object of the page or report type is the chart data filter. The parent object for the report type and the page must match for a chart to return relevant data.

Signature

public String contextFilterableField {get; set;}

Property Value
Type: String

error
Error string that is populated only when an error occurs in the underlying report.

Signature

public String error {get; set;}

Property Value
Type: String

hideOnError
Controls whether users see a chart that has an error. When an error occurs and this attribute is not set, the chart doesn’t show any data except the error. Set the attribute to true to hide the chart from a page on error.

Signature

public Boolean hideOnError {get; set;}

Property Value
Type: Boolean

includeContext
If true, filters the report chart to return data that’s relevant to the page.
Signature

```csharp
public Boolean includeContext {get; set;}
```

Property Value

Type: Boolean

---

**reportName**

Unique development name of a report that includes a chart.

Signature

```csharp
public String reportName {get; set;}
```

Property Value

Type: String

---

**showTitle**

If true, applies the title from the report to the chart.

Signature

```csharp
public Boolean showTitle {get; set;}
```

Property Value

Type: Boolean

---

**size**

Size of the displayed chart. The default is medium.

Signature

```csharp
public Metadata.ReportChartComponentSize size {get; set;}
```

Property Value

Type: Metadata.ReportChartComponentSize

---

**ReportChartComponentLayoutItem Methods**

The following are methods for `ReportChartComponentLayoutItem`.

**IN THIS SECTION:**

- **clone()**
  
clone()

Signature

public Object clone()

Return Value

Type: Object

ReportChartComponentSize Enum

Describes the size of the displayed report chart component.

Enum Values

The following are the values of the Metadata.ReportChartComponentSize enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LARGE</td>
<td>Large chart size.</td>
</tr>
<tr>
<td>MEDIUM</td>
<td>Medium chart size.</td>
</tr>
<tr>
<td>SMALL</td>
<td>Small chart size.</td>
</tr>
</tbody>
</table>

SidebarComponent Class

Represents a specific custom console component to display in a container that hosts multiple components in one of the sidebars of the Salesforce console.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “SidebarComponent” in the Metadata API Developer Guide.

IN THIS SECTION:

SidebarComponent Properties

SidebarComponent Methods

SidebarComponent Properties

The following are properties for SidebarComponent.
componentType
Specifies the component type. Valid values are “KnowledgeOne”, “Lookup”, “Milestones”, “RelatedList”, “Topics”, “Files”, and “CaseExperts”.

createAction
If the component is a lookup field, the name of the quick action used to create a record.

enableLinking
If the component is a lookup field, lets users associate a record with this field.

height
The height of the component in the container. The unit property determines the unit of measurement, in pixels or percent.

knowledgeOneEnable
Indicates if the component is enabled for Knowledge One.

label
The name of the component as it displays to console users. Available for components in a container with the style of tabs or accordion.

lookup
If the component is a lookup field, the name of the field.

page_x
If the component is a Visualforce page, the name of the Visualforce page.

relatedLists
If the component is a related list component, the list of related list names.

unit
The unit of measurement (pixels or percent) for the height and width of the component in the container.

updateAction
If the component is a lookup field, the name of the quick action used to update a record.

width
The width of the component in the container. The unit property determines the unit of measurement, in pixels or percent.

**componentType**
Specifies the component type. Valid values are “KnowledgeOne”, “Lookup”, “Milestones”, “RelatedList”, “Topics”, “Files”, and “CaseExperts”.

**Signature**

```java
public String componentType {get; set;}
```

**Property Value**

Type: String

**createAction**
If the component is a lookup field, the name of the quick action used to create a record.
Signature

```java
public String createAction {get; set;}
```

Property Value

Type: String

**enableLinking**

If the component is a lookup field, lets users associate a record with this field.

Signature

```java
public Boolean enableLinking {get; set;}
```

Property Value

Type: Boolean

**height**

The height of the component in the container. The unit property determines the unit of measurement, in pixels or percent.

Signature

```java
public Integer height {get; set;}
```

Property Value

Type: Integer

**knowledgeOneEnable**

Indicates if the component is enabled for Knowledge One.

Signature

```java
public Boolean knowledgeOneEnable {get; set;}
```

Property Value

Type: Boolean

**label**

The name of the component as it displays to console users. Available for components in a container with the style of tabs or accordion.

Signature

```java
public String label {get; set;}
```
Property Value
Type: String

**lookup**
If the component is a lookup field, the name of the field.

Signature
```java
public String lookup {get; set;}
```

Property Value
Type: String

**page_x**
If the component is a Visualforce page, the name of the Visualforce page.

Signature
```java
public String page_x {get; set;}
```

Property Value
Type: String

**relatedLists**
If the component is a related list component, the list of related list names.

Signature
```java
public List<Metadata.RelatedList> relatedLists {get; set;}
```

Property Value
Type: List<Metadata.RelatedList>

**unit**
The unit of measurement (pixels or percent) for the height and width of the component in the container.

Signature
```java
public String unit {get; set;}
```

Property Value
Type: String
**updateAction**
If the component is a lookup field, the name of the quick action used to update a record.

Signature
```java
public String updateAction {get; set;}
```

**width**
The width of the component in the container. The `unit` property determines the unit of measurement, in pixels or percent.

Signature
```java
public Integer width {get; set;}
```

**SidebarComponent Methods**
The following are methods for `SidebarComponent`.

**IN THIS SECTION:**
- **clone()**
  Makes a duplicate copy of the `Metadata.SidebarComponent`.

**clone()**
Makes a duplicate copy of the `Metadata.SidebarComponent`.

Signature
```java
public Object clone()
```

**Return Value**
Type: Object

**SortOrder Enum**
Describes the sort order of a related list.
Enum Values

The following are the values of the Metadata.SortOrder enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Asc_x</td>
<td>Sort in ascending order.</td>
</tr>
<tr>
<td>Desc_x</td>
<td>Sort in descending order.</td>
</tr>
</tbody>
</table>

SubtabComponents Class

Represents custom console components on subtabs in the Salesforce console.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “SubtabComponents” in the Metadata API Developer Guide.

IN THIS SECTION:

- SubtabComponents Properties
- SubtabComponents Methods

SubtabComponents Properties

The following are properties for SubtabComponents.

IN THIS SECTION:

- component
  Represents a custom console component (Visualforce page, lookup field, or related lists) on a section of a page layout.
- containers
  Represents a location and style in which to display more than one custom console component on the sidebars of the Salesforce console.

component

Represents a custom console component (Visualforce page, lookup field, or related lists) on a section of a page layout.

Signature

```csharp
public List<Metadata.ConsoleComponent> component {get; set;}
```
Property Value
Type: List<Metadata.ConsoleComponent>

**containers**
Represents a location and style in which to display more than one custom console component on the sidebars of the Salesforce console.

Signature
```
public List<Metadata.Container> containers {get; set;}
```

Property Value
Type: List<Metadata.Container>

**SubtabComponents Methods**
The following are methods for SubtabComponents.

**IN THIS SECTION:**

```
clon()`
```
Makes a duplicate copy of the Metadata.SubtabComponents.

```
clon()`  
```
Makes a duplicate copy of the Metadata.SubtabComponents.

Signature
```
public Object clone()
```

**SummaryLayoutStyleEnum Enum**
Describes the highlights panel style for a SummaryLayout.

**Enum Values**
The following are the values of the Metadata.SummaryLayoutStyleEnum enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

**SummaryLayout Class**

Controls the appearance of the highlights panel, which summarizes key fields in a grid at the top of a page layout, when Case Feed is enabled.

**Namespace**

`Metadata`

**Usage**

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “SummaryLayout” in the `Metadata API Developer Guide`.

**IN THIS SECTION:**

- SummaryLayout Properties
- SummaryLayout Methods

**SummaryLayout Properties**

The following are properties for `SummaryLayout`.

**IN THIS SECTION:**

- `masterLabel`
  - The name of the layout label.
- `sizeX`
  - Number of columns in the highlights pane, between 1 and 4 (inclusive).
- `sizeY`
  - Number of rows in each column, either 1 or 2.
- `sizeZ`
  - If provided, the setting is not visible to users.
summaryLayoutItems
Controls the appearance of an individual field and its column and row position within the highlights panel grid, when Case Feed is enabled. At least one is required.

summaryLayoutStyle
Specifies the panel style.

masterLabel
The name of the layout label.

Signature
public String masterLabel {get; set;}

Property Value
Type: String

sizeX
Number of columns in the highlights pane, between 1 and 4 (inclusive).

Signature
public Integer sizeX {get; set;}

Property Value
Type: Integer

sizeY
Number of rows in each column, either 1 or 2.

Signature
public Integer sizeY {get; set;}

Property Value
Type: Integer

sizeZ
If provided, the setting is not visible to users.

Signature
public Integer sizeZ {get; set;}

**Property Value**

**Type:** Integer

**summaryLayoutItems**

Controls the appearance of an individual field and its column and row position within the highlights panel grid, when Case Feed is enabled. At least one is required.

**Signature**

```java
public List<Metadata.SummaryLayoutItem> summaryLayoutItems {get; set;}
```

**Property Value**

**Type:** List<Metadata.SummaryLayoutItem>

**summaryLayoutStyle**

Specifies the panel style.

**Signature**

```java
public Metadata.SummaryLayoutStyleEnum summaryLayoutStyle {get; set;}
```

**Property Value**

**Type:** Metadata.SummaryLayoutStyleEnum

**SummaryLayout Methods**

The following are methods for SummaryLayout.

**IN THIS SECTION:**

- **clone()**
  
  Makes a duplicate copy of the Metadata.SummaryLayout.

- **clone()**
  
  Makes a duplicate copy of the Metadata.SummaryLayout.

  **Signature**

  ```java
  public Object clone()
  ```

  **Return Value**

  **Type:** Object
SummaryLayoutItem Class

Controls the appearance of an individual field and its column and row position within the highlights panel grid, when Case Feed is enabled. You can have two fields per each grid in a highlights panel.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “SummaryLayoutItem” in the Metadata API Developer Guide.

IN THIS SECTION:

- SummaryLayoutItem Properties
- SummaryLayoutItem Methods

SummaryLayoutItem Properties

The following are properties for SummaryLayoutItem.

IN THIS SECTION:

- customLink
- field
- posX
- posY
- posZ

customLink

The custom link reference.

Signature

```java
public String customLink {get; set;}
```

Property Value

Type: String
field
The field name reference, relative to the page layout. Must be a standard or custom field that also exists on the detail page.

Signature
public String field {get; set;}

Property Value
Type: String

posX
The item's column position in the highlights panel grid. Must be within the range of sizeX.

Signature
public Integer posX {get; set;}

Property Value
Type: Integer

posY
The item's row position in the highlights panel grid. Must be within the range of sizeY.

Signature
public Integer posY {get; set;}

Property Value
Type: Integer

posZ
Reserved for future use. If provided, the setting is not visible to users.

Signature
public Integer posZ {get; set;}

Property Value
Type: Integer

SummaryLayoutItem Methods
The following are methods for SummaryLayoutItem.
IN THIS SECTION:

clone()
Makes a duplicate copy of the Metadata.SummaryLayoutItem.

clon()e
Makes a duplicate copy of the Metadata.SummaryLayoutItem.

Signature
public Object clone()

Return Value
Type: Object

UiBehavior Enum
Describes the behavior for a layout item on a layout page.

Enum Values
The following are the values of the Metadata.UiBehavior enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Edit</td>
<td>The layout field can be edited but is not required.</td>
</tr>
<tr>
<td>Readonly</td>
<td>The layout field is read-only.</td>
</tr>
<tr>
<td>Required</td>
<td>The layout field can be edited and is required.</td>
</tr>
</tbody>
</table>

Process Namespace
The Process namespace provides an interface and classes for passing data between your organization and a flow.

The following are the interfaces and classes in the Process namespace.

IN THIS SECTION:

Plugin Interface
Allows you to pass data between your organization and a specified flow.

PluginDescribeResult Class
Describes the input and output parameters for Process.PluginResult.

PluginDescribeResult.InputParameter Class
Describes the input parameter for Process.PluginResult.

PluginDescribeResult.OutputParameter Class
Describes the output parameter for Process.PluginResult.
Plugin Request Class
Passes input parameters from the class that implements the Process.Plugin interface to the flow.

Plugin Result Class
Returns output parameters from the class that implements the Process.Plugin interface to the flow.

Plugin Interface
Allows you to pass data between your organization and a specified flow.

Tip: We recommend using the @InvocableMethod annotation instead of the Process.Plugin interface.

- The interface doesn’t support Blob, Collection, sObject, and Time data types, and it doesn’t support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

Namespace
Process

IN THIS SECTION:
Plugin Methods
Plugin Example Implementation

Plugin Methods
The following are instance methods for Plugin.

IN THIS SECTION:
describe()
Returns a Process.PluginDescribeResult object that describes this method call.
invoke(request)
Primary method that the system invokes when the class that implements the interface is instantiated.

describe()
Returns a Process.PluginDescribeResult object that describes this method call.

Signature
public Process.PluginDescribeResult describe()

Return Value
Type: Process.PluginDescribeResult
**invoke(request)**

Primary method that the system invokes when the class that implements the interface is instantiated.

**Signature**

```java
```

**Parameters**

request

Type: `Process.PluginRequest`

**Return Value**

Type: `Process.PluginResult`

**Plugin Example Implementation**

```java
global class flowChat implements Process.Plugin {

    // The main method to be implemented. The Flow calls this at run time.
    global Process.PluginResult invoke(Process.PluginRequest request) {
        String subject = (String) request.inputParameters.get('subject');

        FeedItem fItem = new FeedItem();
        fItem.ParentId = UserInfo.getUserId();
        fItem.Body = 'Flow Update: ' + subject;
        insert fItem;

        // return to Flow
        Map<String, Object> result = new Map<String, Object>();
        return new Process.PluginResult(result);
    }

    // Returns the describe information for the interface
    global Process.PluginDescribeResult describe() {
        Process.PluginDescribeResult result = new Process.PluginDescribeResult();
        result.Name = 'flowchatplugin';
        result.Tag = 'chat';
        result.inputParameters = new List<Process.PluginDescribeResult.InputParameter>{
            new Process.PluginDescribeResult.InputParameter('subject',
                Process.PluginDescribeResult.InputParameterType.STRING, true)
        };
        result.outputParameters = new List<Process.PluginDescribeResult.OutputParameter>{);
        return result;
    }
}
```
Test Class

The following is a test class for the above class.

```java
@isTest
private class flowChatTest {
    static testmethod void flowChatTests() {
        flowChat plugin = new flowChat();
        Map<String,Object> inputParams = new Map<String,Object>();

        string feedSubject = 'Flow is alive';
        InputParams.put('subject', feedSubject);

        Process.PluginRequest request = new Process.PluginRequest(inputParams);

        plugin.invoke(request);
    }
}
```

PluginDescribeResult Class

Describes the input and output parameters for Process.PluginResult.

⚠️ Tip: We recommend using the @InvocableMethod annotation instead of the Process.Plugin interface.

- The interface doesn’t support Blob, Collection, sObject, and Time data types, and it doesn’t support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

Namespace

Process

IN THIS SECTION:
- PluginDescribeResult Constructors
- PluginDescribeResult Properties

PluginDescribeResult Constructors

The following are constructors for PluginDescribeResult.

IN THIS SECTION:
- PluginDescribeResult() Creates a new instance of the Process.PluginDescribeResult class.
PluginDescribeResult()

Creates a new instance of the Process.PluginDescribeResult class.

Signature

```java
public PluginDescribeResult()
```

PluginDescribeResult Properties

The following are properties for PluginDescribeResult.

IN THIS SECTION:

- **description**  
  This optional field describes the purpose of the plug-in.

- **inputParameters**  
  The input parameters passed by the Process.PluginRequest class from a flow to the class that implements the Process.Plugin interface.

- **name**  
  Unique name of the plug-in.

- **outputParameters**  
  The output parameters passed by the Process.PluginResult class from the class that implements the Process.Plugin interface to the flow.

- **tag**  
  With this optional field, you can group plug-ins by tag name so they appear together in the Apex plug-in section of the Palette within the Flow Designer. This is helpful if you have multiple plug-ins in your flow.

**description**

This optional field describes the purpose of the plug-in.

Signature

```java
public String description {get; set;}
```

Property Value

Type: String

Usage

Size limit: 255 characters.

**inputParameters**

The input parameters passed by the Process.PluginRequest class from a flow to the class that implements the Process.Plugin interface.
public List<Process.PluginDescribeResult.InputParameter> inputParameters {get; set;}

**name**
Unique name of the plug-in.

public String name {get; set;}

**outputParameters**
The output parameters passed by the Process.PluginResult class from the class that implements the Process.Plugin interface to the flow.

public List<Process.PluginDescribeResult.OutputParameter> outputParameters {get; set;}

**tag**
With this optional field, you can group plug-ins by tag name so they appear together in the Apex plug-in section of the Palette within the Flow Designer. This is helpful if you have multiple plug-ins in your flow.

public String tag {get; set;}

---

2223
Usage
Size limit: 40 characters.

**PluginDescribeResult.InputParameter Class**

Describes the input parameter for Process.PluginResult.

**Tip:** We recommend using the @InvocableMethod annotation instead of the Process.Plugin interface.

- The interface doesn’t support Blob, Collection, sObject, and Time data types, and it doesn’t support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

Namespace

**Process**

**IN THIS SECTION:**

- PluginDescribeResult.InputParameter Constructors
- PluginDescribeResult.InputParameter Properties

**PluginDescribeResult.InputParameter Constructors**

The following are constructors for PluginDescribeResult.InputParameter.

**IN THIS SECTION:**

- `PluginDescribeResult.InputParameter(name, description, parameterType, required)`
  Creates a new instance of the Process.PluginDescribeResult.InputParameter class using the specified name, description, parameter type, and required option.

- `PluginDescribeResult.InputParameter(name, parameterType, required)`
  Creates a new instance of the Process.PluginDescribeResult.InputParameter class using the specified name, parameter type, and required option.

**PluginDescribeResult.InputParameter(name, description, parameterType, required)**

Creates a new instance of the Process.PluginDescribeResult.InputParameter class using the specified name, description, parameter type, and required option.

**Signature**

```java
public PluginDescribeResult.InputParameter(String name, String description,
                                          Process.PluginDescribeResult.ParameterType parameterType,
                                          Boolean required)
```
Parameters

**name**
Type: `String`
Unique name of the plug-in.

**description**
Type: `String`
Describes the purpose of the plug-in.

**parameterType**
Type: `Process.PluginDescribeResult.ParameterType`
The data type of the input parameter.

**required**
Type: `Boolean`
Set to `true` for required and `false` otherwise.

`PluginDescribeResult.InputParameter(name, parameterType, required)`
Creates a new instance of the `Process.PluginDescribeResult.InputParameter` class using the specified name, parameter type, and required option.

Signature

```java
public PluginDescribeResult.InputParameter(String name,
Process.PluginDescribeResult.ParameterType parameterType, Boolean required)
```

Parameters

**name**
Type: `String`
Unique name of the plug-in.

**parameterType**
Type: `Process.PluginDescribeResult.ParameterType`
The data type of the input parameter.

**required**
Type: `Boolean`
Set to `true` for required and `false` otherwise.

`PluginDescribeResult.InputParameter Properties`
The following are properties for `PluginDescribeResult.InputParameter`.

IN THIS SECTION:

**Description**
This optional field describes the purpose of the plug-in.
Name
Unique name of the plug-in.

ParameterType
The data type of the input parameter.

Required
Set to true for required and false otherwise.

Description
This optional field describes the purpose of the plug-in.

Signature
public String Description {get; set;}

Property Value
Type: String

Usage
Size limit: 255 characters.

Name
Unique name of the plug-in.

Signature
public String Name {get; set;}

Property Value
Type: String

Usage
Size limit: 40 characters.

ParameterType
The data type of the input parameter.

Signature
public Process.PluginDescribeResult.ParameterType ParameterType {get; set;}

Property Value
Type: Process.PluginDescribeResult.ParameterType
**Required**
Set to `true` for required and `false` otherwise.

**Signature**
```csharp
public Boolean Required {get; set;}
```

**Property Value**
Type: `Boolean`

---

**PluginDescribeResult.OutputParameter Class**
Describes the output parameter for `Process.PluginResult`.

**Tip:** We recommend using the `@InvocableMethod` annotation instead of the `Process.Plugin` interface.

- The interface doesn't support Blob, Collection, sObject, and Time data types, and it doesn't support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

**Namespace**
Process

---

**IN THIS SECTION:**
- `PluginDescribeResult.OutputParameter Constructors`
- `PluginDescribeResult.OutputParameter Properties`

---

**PluginDescribeResult.OutputParameter Constructors**
The following are constructors for `PluginDescribeResult.OutputParameter`.

**IN THIS SECTION:**
- `PluginDescribeResult.OutputParameter(name, description, parameterType)`
  Creates a new instance of the `Process.PluginDescribeResult.OutputParameter` class using the specified name, description, and parameter type.
- `PluginDescribeResult.OutputParameter(name, parameterType)`
  Creates a new instance of the `Process.PluginDescribeResult.OutputParameter` class using the specified name, description, and parameter type.

---

**PluginDescribeResult.OutputParameter(name, description, parameterType)**
Creates a new instance of the `Process.PluginDescribeResult.OutputParameter` class using the specified name, description, and parameter type.
Signature

```java
public PluginDescribeResult.OutputParameter(String name, String description,
Process.PluginDescribeResult.ParameterType parameterType)
```

Parameters

**name**
Type: `String`
Unique name of the plug-in.

**description**
Type: `String`
Describes the purpose of the plug-in.

**parameterType**
Type: `Process.PluginDescribeResult.ParameterType`
The data type of the input parameter.

**PluginDescribeResult.OutputParameter(name, parameterType)**

Creates a new instance of the `Process.PluginDescribeResult.OutputParameter` class using the specified name, description, and parameter type.

Signature

```java
public PluginDescribeResult.OutputParameter(String name,
Process.PluginDescribeResult.ParameterType parameterType)
```

Parameters

**name**
Type: `String`
Unique name of the plug-in.

**parameterType**
Type: `Process.PluginDescribeResult.ParameterType`
The data type of the input parameter.

**PluginDescribeResult.OutputParameter Properties**

The following are properties for `PluginDescribeResult.OutputParameter`.

**IN THIS SECTION:**

- **Description**
  This optional field describes the purpose of the plug-in.

- **Name**
  Unique name of the plug-in.
**ParameterType**
The data type of the input parameter.

**Description**
This optional field describes the purpose of the plug-in.

Signature

```csharp
public String Description {get; set;}
```

Property Value
Type: String

Usage
Size limit: 255 characters.

**Name**
Unique name of the plug-in.

Signature

```csharp
public String Name {get; set;}
```

Property Value
Type: String

Usage
Size limit: 40 characters.

**ParameterType**
The data type of the input parameter.

Signature

```csharp
public Process.PluginDescribeResult.ParameterType ParameterType {get; set;}
```

Property Value
Type: `Process.PluginDescribeResult.ParameterType`

**PluginRequest Class**

Passes input parameters from the class that implements the `Process.Plugin` interface to the flow.
Tip: We recommend using the @InvocableMethod annotation instead of the Process.Plugin interface.

- The interface doesn’t support Blob, Collection, sObject, and Time data types, and it doesn’t support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

Namespace
Process

PluginRequest Properties
The following are properties for PluginRequest.

IN THIS SECTION:
inputParameters
Input parameters that are passed from the class that implements the Process.Plugin interface to the flow.

inputParameters
Input parameters that are passed from the class that implements the Process.Plugin interface to the flow.

Signature
public MAP<String,ANY> inputParameters {get; set;}

Property Value
Type: Map<String, Object>

PluginResult Class
Returns output parameters from the class that implements the Process.Plugin interface to the flow.

Tip: We recommend using the @InvocableMethod annotation instead of the Process.Plugin interface.

- The interface doesn’t support Blob, Collection, sObject, and Time data types, and it doesn’t support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

Namespace
Process

PluginResult Properties
The following are properties for PluginResult.
IN THIS SECTION:

outputParameters
Output parameters returned from the class that implements the interface to the flow.

**outputParameters**
Output parameters returned from the class that implements the interface to the flow.

**Signature**

```java
public MAP<String, ANY> outputParameters {get; set;}
```

**Property Value**

Type: `Map<String, Object>`

---

**QuickAction Namespace**

The `QuickAction` namespace provides classes and methods for quick actions.

The following are the classes in the `QuickAction` namespace.

IN THIS SECTION:

- **DescribeAvailableQuickActionResult Class**
  Contains describe metadata information for a quick action that is available for a specified parent.

- **DescribeLayoutComponent Class**
  Represents the smallest unit in a layout—a field or a separator.

- **DescribeLayoutItem Class**
  Represents an individual item in a `QuickAction.DescribeLayoutRow`.

- **DescribeLayoutRow Class**
  Represents a row in a `QuickAction.DescribeLayoutSection`.

- **DescribeLayoutSection Class**
  Represents a section of a layout and consists of one or more columns and one or more rows (an array of `QuickAction.DescribeLayoutRow`).

- **DescribeQuickActionDefaultValue Class**
  Returns a default value for a quick action.

- **DescribeQuickActionResult Class**
  Contains describe metadata information for a quick action.

- **QuickActionDefaults Class**
  Represents an abstract Apex class that provides the context for running the standard Email Action on Case Feed and the container of the Email Message fields for the action payload. You can override the target fields before the standard Email Action is rendered.
QuickAction Defaults Handler Interface

The QuickAction.QuickActionDefaultsHandler interface lets you specify the default values for the standard Email and Send Email actions in the case feed. You can use this interface to specify the From address, CC address, BCC address, subject, and email body for the Email action in the case feed. You can use the interface to pre-populate these fields based on the context where the action is displayed, such as the case origin (for example, country) and subject.

QuickActionRequest Class

Use the QuickAction.QuickActionRequest class for providing action information for quick actions to be performed by QuickAction class methods. Action information includes the action name, context record ID, and record.

QuickActionResult Class

After you initiate a quick action with the QuickAction class, use the QuickActionResult class for processing action results.

SendEmailQuickActionDefaults Class

Represents an Apex class that provides: the From address list; the original email’s email message ID, provided that the reply action was invoked on the email message feed item; and methods to specify related settings on templates. You can override these fields before the standard Email Action is rendered.

DescribeAvailableQuickActionResult Class

Contains describe metadata information for a quick action that is available for a specified parent.

Namespace

QuickAction

Usage

The QuickAction.describeAvailableQuickActions method returns an array of available quick action describe result objects (QuickAction.DescribeAvailableQuickActionResult).

DescribeAvailableQuickActionResult Methods

The following are methods for DescribeAvailableQuickActionResult. All are instance methods.

IN THIS SECTION:

getActionEnumOrId()

Returns the unique ID for the action. If the action doesn’t have an ID, its API name is used.

getLabel()

The quick action label.

getName()

The quick action name.

getType()

The quick action type.

getActionEnumOrId()

Returns the unique ID for the action. If the action doesn’t have an ID, its API name is used.
**Signature**

```
public String getActionEnumOrId()
```

**Return Value**
Type: `String`

---

**getLabel()**
The quick action label.

**Signature**

```
public String getLabel()
```

**Return Value**
Type: `String`

---

**getName()**
The quick action name.

**Signature**

```
public String getName()
```

**Return Value**
Type: `String`

---

**getType()**
The quick action type.

**Signature**

```
public String getType()
```

**Return Value**
Type: `String`

---

**DescribeLayoutComponent Class**
Represent the smallest unit in a layout—a field or a separator.

**Namespace**

`QuickAction`
DescribeLayoutComponent Methods

The following are methods for DescribeLayoutComponent. All are instance methods.

IN THIS SECTION:

- getDisplayLines()
  Returns the vertical lines displayed for a field. Applies to textarea and multi-select picklist fields.
- getTabOrder()
  Returns the tab order for the item in the row.
- getType()
  Returns the name of the QuickAction.DescribeLayoutComponent type for this component.
- getValue()
  Returns the name of the field if the type for QuickAction.DescribeLayoutComponent is textarea.

getDisplayLines()

Returns the vertical lines displayed for a field. Applies to textarea and multi-select picklist fields.

Signature

```
public Integer getDisplayLines()
```

Return Value

Type: Integer

getTabOrder()

Returns the tab order for the item in the row.

Signature

```
public Integer getTabOrder()
```

Return Value

Type: Integer

getType()

Returns the name of the QuickAction.DescribeLayoutComponent type for this component.

Signature

```
public String getType()
```

Return Value

Type: String
getValue()
Returns the name of the field if the type for QuickAction.DescribeLayoutComponent is textarea.

Signature
public String getValue()

Return Value
Type: String

DescribeLayoutItem Class
Represents an individual item in a QuickAction.DescribeLayoutRow.

Namespace
QuickAction

Usage
For most fields on a layout, there is only one component per layout item. However, in a display-only view, the QuickAction.DescribeLayoutItem might be a composite of the individual fields (for example, an address can consist of street, city, state, country, and postal code data). On the corresponding edit view, each component of the address field would be split up into separate QuickAction.DescribeLayoutItems.

DescribeLayoutItem Methods
The following are methods for DescribeLayoutItem. All are instance methods.

IN THIS SECTION:
- getLabel()
  Returns the label text for this item.
- getLayoutComponents()
  Returns a list of QuickAction.DescribeLayoutComponents for this item.
- isEditable()
  Indicates whether this item can be edited (true) or not (false).
- isPlaceholder()
  Indicates whether this item is a placeholder (true) or not (false). If true, then this item is blank.
- isRequired()
  Indicates whether this item is required (true) or not (false).

getLabel()
Returns the label text for this item.
Signature
public String getLabel()

Return Value
Type: String

getLayoutComponents()
Returns a list of QuickAction.DescribeLayoutComponents for this item.

Signature
public List<QuickAction.DescribeLayoutComponent> getLayoutComponents()

Return Value
Type: List<QuickAction.DescribeLayoutComponent>

isEditable()
Indicates whether this item can be edited (true) or not (false).

Signature
public Boolean isEditable()

Return Value
Type: Boolean

isPlaceholder()
Indicates whether this item is a placeholder (true) or not (false). If true, then this item is blank.

Signature
public Boolean isPlaceholder()

Return Value
Type: Boolean

isRequired()
Indicates whether this item is required (true) or not (false).

Signature
public Boolean isRequired()
Return Value
Type: Boolean

Usage
This is useful if, for example, you want to render required fields in a contrasting color.

DescribeLayoutRow Class
Represents a row in a QuickAction.DescribeLayoutSection.

Namespace
QuickAction

Usage
A QuickAction.DescribeLayoutRow consists of one or more QuickAction.DescribeLayoutItem objects. For each QuickAction.DescribeLayoutRow, a QuickAction.DescribeLayoutItem refers either to a specific field or to an "empty" QuickAction.DescribeLayoutItem (one that contains no QuickAction.DescribeLayoutComponent objects). An empty QuickAction.DescribeLayoutItem can be returned when a given QuickAction.DescribeLayoutRow is sparse (for example, containing more fields on the right column than on the left column).

DescribeLayoutRow Methods
The following are methods for DescribeLayoutRow. All are instance methods.

IN THIS SECTION:
getLayoutItems()  
Returns either a specific field or an empty QuickAction.DescribeLayoutItem (one that contains no QuickAction.DescribeLayoutComponent objects).

getNumItems()  
Returns the number of QuickAction.DescribeLayoutItem.

getLayoutItems()  
Returns either a specific field or an empty QuickAction.DescribeLayoutItem (one that contains no QuickAction.DescribeLayoutComponent objects).

Signature
public List<QuickAction.DescribeLayoutItem> getLayoutItems()
getNumItems()

Returns the number of QuickAction.DescribeLayoutItem.

Signature

```
public Integer getNumItems()
```

Return Value
Type: Integer

DescribeLayoutSection Class

Represents a section of a layout and consists of one or more columns and one or more rows (an array of QuickAction.DescribeLayoutRow).

Namespace

QuickAction

DescribeLayoutSection Properties

The following are properties for DescribeLayoutSection.

**collapsed**

The current view of the record details section: collapsed (true) or expanded (false).

Signature

```
public Boolean collapsed {get; set;}
```

Property Value
Type: Boolean

**layoutsectionid**

The unique ID of the record details section in the layout.

Signature

```
public Id layoutsectionid {get; set;}
```

Property Value
Type: Id
DescribeLayoutSection Methods

The following are methods for DescribeLayoutSection.

IN THIS SECTION:
- `getColumns()`: Returns the number of columns in the QuickAction.DescribeLayoutSection.
- `getHeading()`: The heading text (label) for the QuickAction.DescribeLayoutSection.
- `getLayoutRows()`: Returns an array of one or more QuickAction.DescribeLayoutRow objects.
- `getLayoutSectionId()`: Returns the ID of the record details section in the layout.
- `getParentLayoutId()`: Returns the ID of the layout upon which this DescribeLayoutSection resides.
- `getRows()`: Returns the number of rows in the QuickAction.DescribeLayoutSection.
- `isCollapsed()`: Indicates whether the record details section is collapsed (true) or expanded (false). If you build your own app, you can use this method to see whether the current user collapsed a section, and respect that preference in your own UI.
- `isUseCollapsibleSection()`: Indicates whether the QuickAction.DescribeLayoutSection is a collapsible section (true) or not (false).
- `isUseHeading()`: Indicates whether to use the heading (true) or not (false).

`getColumns()`

Returns the number of columns in the QuickAction.DescribeLayoutSection.

Signature

```java
public Integer getColumns()
```

Return Value

Type: Integer

`getHeading()`

The heading text (label) for the QuickAction.DescribeLayoutSection.

Signature

```java
public String getHeading()
```
Return Value
Type: String

**getLayoutRows()**
Returns an array of one or more `QuickAction.DescribeLayoutRow` objects.

Signature
```
public List<QuickAction.DescribeLayoutRow> getLayoutRows()
```

Return Value
Type: `List<QuickAction.DescribeLayoutRow>`

**getLayoutSectionId()**
Returns the ID of the record details section in the layout.

Signature
```
public Id getLayoutSectionId()
```

Return Value
Type: `Id`

**getParentLayoutId()**
Returns the ID of the layout upon which this `DescribeLayoutSection` resides.

Signature
```
public Id getParentLayoutId()
```

Return Value
Type: `Id`

**getRows()**
Returns the number of rows in the `QuickAction.DescribeLayoutSection`.

Signature
```
public Integer getRows()
```

Return Value
Type: `Integer`
isCollapsed()
Indicates whether the record details section is collapsed (true) or expanded (false). If you build your own app, you can use this method to see whether the current user collapsed a section, and respect that preference in your own UI.

Signature
public Boolean isCollapsed()

Return Value
Type: Boolean

isUseCollapsibleSection()
Indicates whether the QuickAction.DescribeLayoutSection is a collapsible section (true) or not (false).

Signature
public Boolean isUseCollapsibleSection()

Return Value
Type: Boolean

isUseHeading()
Indicates whether to use the heading (true) or not (false).

Signature
public Boolean isUseHeading()

Return Value
Type: Boolean

DescribeQuickActionDefaultValue Class
Returns a default value for a quick action.

Namespace
QuickAction

Usage
Represents the default values of fields to use in default layouts.
DescribeQuickActionDefaultValue Methods
The following are methods for DescribeQuickActionDefaultValue. All are instance methods.

IN THIS SECTION:
  getDefaultValue()
  Returns the default value of the quick action.
  getFieldName()
  Returns the field name of the action.

**getDefaultValue()**
Returns the default value of the quick action.

Signature
```
public String getDefaultValue()
```

Return Value
Type: String

**getField()**
Returns the field name of the action.

Signature
```
public String getField()
```

Return Value
Type: String

DescribeQuickActionResult Class
Contains describe metadata information for a quick action.

Namespace
QuickAction

Usage
The QuickAction describeQuickActions method returns an array of quick action describe result objects (QuickAction.DescribeQuickActionResult).

IN THIS SECTION:
  DescribeQuickActionResult Properties
DescribeQuickActionResult Methods

DescribeQuickActionResult Properties

The following are properties for DescribeQuickActionResult.

IN THIS SECTION:

- `canvasapplicationname`
The name of the Canvas application invoked by the custom action.
- `colors`
  Array of color information. Each color is associated with a theme.
- `contextobjecttype`
The object used for the action. Was `getsourceSobjectType()` in API version 29.0 and earlier.
- `defaultvalues`
The action’s default values.
- `flowdevname`
  If the custom action invokes a flow, the fully qualified name of the flow.
- `flowrecordidvar`
  If the custom action invokes a flow, the input variable that the custom action passes the record’s ID to.
- `height`
The height in pixels of the action pane.
- `iconname`
The name of the icon used for the action. If a custom icon is not used, this value isn’t set.
- `icons`
  Array of icons. Each icon is associated with a theme.
- `iconurl`
The URL of the icon used for the action. This icon URL corresponds to the 32x32 icon used for the current Salesforce theme, introduced in Spring ’10, or the custom icon, if there is one.
- `layout`
The section of the layout where the action resides.
- `lightningcomponentbundleid`
If the custom action invokes a Lightning component, the ID of the Lightning component bundle to which the component belongs.
- `lightningcomponentbundlename`
If the custom action invokes a Lightning component, the name of the Lightning component bundle to which the component belongs.
- `lightningcomponentqualifiedname`
The fully qualified name of the Lightning component invoked by the custom action.
- `miniconurl`
The icon’s URL. This icon URL corresponds to the 16x16 icon used for the current Salesforce theme, introduced in Spring ’10, or the custom icon, if there is one.
**showquickactioncheader**
Indicates whether the Lightning component quick action header and footer are shown. If `false`, then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren’t displayed.

**showquickactionvfheader**
Indicates whether the Visualforce quick action header and footer should be shown. If `false`, then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren’t displayed.

**targetparentfield**
The parent object type of the action. Links the target object to the parent object. For example, the value is Account if the target object is Contact and the parent object is Account.

**targetrecordtypeid**
The record type of the target record.

**targetsobjecttype**
The action’s target object type.

**visualforcepagename**
The name of the Visualforce page associated with the custom action.

**visualforcepageurl**
The URL of the Visualforce page associated with the action.

**width**
The width in pixels of the action pane, for custom actions that call Visualforce pages, Canvas apps, or Lightning components.

**canvasapplicationname**
The name of the Canvas application invoked by the custom action.

**colors**
Array of color information. Each color is associated with a theme.

**contextsobjecttype**
The object used for the action. Was `getsourceSobjectType()` in API version 29.0 and earlier.
Signature
public String contextsobjecttype {get; set;}

Property Value
Type: String

defaultvalues
The action’s default values.

Signature
public List<QuickAction.DescribeQuickActionDefaultValue> defaultvalues {get; set;}

Property Value
Type: List<QuickAction.DescribeQuickActionDefaultValue>

flowdevname
If the custom action invokes a flow, the fully qualified name of the flow.

Signature
public String flowdevname {get; set;}

Property Value
Type: String

flowrecordidvar
If the custom action invokes a flow, the input variable that the custom action passes the record’s ID to.

Signature
public String flowrecordidvar {get; set;}

Property Value
Type: String
Valid values are null or recordId

height
The height in pixels of the action pane.
Signature

```java
public Integer height {get; set;}
```

Property Value
Type: `Integer`

**iconname**
The name of the icon used for the action. If a custom icon is not used, this value isn’t set.

Signature

```java
public String iconname {get; set;}
```

Property Value
Type: `String`

**icons**
Array of icons. Each icon is associated with a theme.

Signature

```java
public List<Schema.DescribeIconResult> icons {get; set;}
```

Property Value
Type: `List<Schema.DescribeIconResult>`

If no custom icon was associated with the quick action and the quick action creates a specific object, the icons will correspond to the icons used for the created object. For example, if the quick action creates an Account, the icon array will contain the icons used for Account.

If a custom icon was associated with the quick action, the array will contain that custom icon.

**iconurl**
The URL of the icon used for the action. This icon URL corresponds to the 32x32 icon used for the current Salesforce theme, introduced in Spring ’10, or the custom icon, if there is one.

Signature

```java
public String iconurl {get; set;}
```

Property Value
Type: `String`
**layout**
The section of the layout where the action resides.

Signature

```java
public QuickAction.DescribeLayoutSection layout {get; set;}
```

Property Value

Type: `QuickAction.DescribeLayoutSection` on page 2238

**lightningcomponentbundleid**
If the custom action invokes a Lightning component, the ID of the Lightning component bundle to which the component belongs.

Signature

```java
public String lightningcomponentbundleid {get; set;}
```

Property Value

Type: `String`

**lightningcomponentbundlename**
If the custom action invokes a Lightning component, the name of the Lightning component bundle to which the component belongs.

Signature

```java
public String lightningcomponentbundlename {get; set;}
```

Property Value

Type: `String`

**lightningcomponentqualifiedname**
The fully qualified name of the Lightning component invoked by the custom action.

Signature

```java
public String lightningcomponentqualifiedname {get; set;}
```

Property Value

Type: `String`

**miniiconurl**
The icon's URL. This icon URL corresponds to the 16x16 icon used for the current Salesforce theme, introduced in Spring '10, or the custom icon, if there is one.
Signature

public String miniiconurl {get; set;}

Property Value
Type: String

**showquickactionlcheader**

Indicates whether the Lightning component quick action header and footer are shown. If `false`, then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren’t displayed.

Signature

public Boolean showquickactionlcheader {get; set;}

Property Value
Type: Boolean

**showquickactionvfheader**

Indicates whether the Visualforce quick action header and footer should be shown. If `false`, then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren’t displayed.

Signature

public Boolean showquickactionvfheader {get; set;}

Property Value
Type: Boolean

**targetparentfield**

The parent object type of the action. Links the target object to the parent object. For example, the value is Account if the target object is Contact and the parent object is Account.

Signature

public String targetparentfield {get; set;}

Property Value
Type: String

**targetrecordtypeid**

The record type of the target record.
Signature
public String targetrecordtypeid {get; set;}

Property Value
Type: String

targetsobjecttype
The action’s target object type.

Signature
public String targetsobjecttype {get; set;}

Property Value
Type: String

visualforcepagename
The name of the Visualforce page associated with the custom action.

Signature
public String visualforcepagename {get; set;}

Property Value
Type: String

visualforcepageurl
The URL of the Visualforce page associated with the action.

Signature
public String visualforcepageurl {get; set;}

Property Value
Type: String

width
The width in pixels of the action pane, for custom actions that call Visualforce pages, Canvas apps, or Lightning components.

Signature
public Integer width {get; set;}

2249
Property Value
Type: Integer

DescribeQuickActionResult Methods
The following are methods for DescribeQuickActionResult. All are instance methods.

IN THIS SECTION:
- getActionEnumOrId()
  Returns the unique ID for the action. If the action doesn't have an ID, its API name is used.
- getCanvasApplicationName()
  Returns the name of the Canvas application, if used.
- getColors()
  Returns an array of color information. Each color is associated with a theme.
- getContextSobjectType()
  Returns the object used for the action. Replaces getsourceSobjectType() in API version 30.0 and later.
- getDefaultValues()
  Returns the default values for an action.
- getFlowDevName()
  If the custom action invokes a flow, returns the fully qualified name of the flow invoked by the custom action.
- getFlowRecordIdVar()
  If the custom action invokes a flow, returns the input variable that the custom action passes the record's ID to.
- getHeight()
  Returns the height in pixels of the action pane.
- getIconName()
  Returns the actions' icon name.
- getIconUrl()
  Returns the URL of the 32x32 icon used for the action.
- getIcons()
  Returns a list of Schema.DescribeIconResult objects that describe colors used in a tab.
- getLabel()
  Returns the action label.
- getLayout()
  Returns the layout sections that comprise an action.
- getLightningComponentBundleId()
  If the custom action invokes a Lightning component, returns the ID of the Lightning component bundle to which the component belongs.
- getLightningComponentBundleName()
  If the custom action invokes a Lightning component, returns the name of the Lightning component bundle to which the component belongs.
getLightningComponentQualifiedName()
If the custom action invokes a Lightning component, returns the fully qualified name of the Lightning component invoked by the
custom action.

getMinIconUrl()
Returns the 16x16 icon URL.

getName()
Returns the action name.

getShowQuickActionLcHeader()
Returns an indication of whether the Lightning component quick action header and footer are shown.

getShowQuickActionVfHeader()
Returns an indication of whether the Visualforce quick action header and footer should be shown.

getSourceSobjectType()
Returns the object type used for the action.

getTargetParentField()
Returns the parent object’s type for the action.

getTargetRecordTypeId()
Returns the record type of the targeted record.

getTargetSobjectType()
Returns the action’s target object type.

type()
Returns a create or custom Visualforce action.

getVisualforcePageName()
If Visualforce is used, returns the name of the associated page for the action.

getVisualforcePageUrl()
Returns the URL of the Visualforce page associated with the action.

getWidth()
If a custom action is created, returns the width in pixels of the action pane.

getActionEnumOrId()
Returns the unique ID for the action. If the action doesn’t have an ID, its API name is used.

Signature

public String getActionEnumOrId()

Return Value

Type: String

canvasApplicationName()

Returns the name of the Canvas application, if used.
Syntax

```java
public String getCanvasApplicationName()
```

Return Value
Type: `String`

```java
getColors()
```

Returns an array of color information. Each color is associated with a theme.

Signature

```java
public List<Schema.DescribeColorResult> getColors()
```

Return Value
Type: `List<Schema.DescribeColorResult>`

```java
ggetContextSobjectType()
```

Returns the object used for the action. Replaces `getSourceSobjectType()` in API version 30.0 and later.

Signature

```java
public String getContextSobjectType()
```

Return Value
Type: `String`

```java
ggetDefaultValues()
```

Returns the default values for a action.

Signature

```java
public List<QuickAction.DescribeQuickActionDefaultValue> getDefaultValues()
```

Return Value
Type: `List<QuickAction.DescribeQuickActionDefaultValue>`

```java
ggetFlowDevName()
```

If the custom action invokes a flow, returns the fully qualified name of the flow invoked by the custom action.

Signature

```java
public String getFlowDevName()
```
Return Value
Type: String

**getFlowRecordIdVar()**
If the custom action invokes a flow, returns the input variable that the custom action passes the record’s ID to.

Signature
```
public String getFlowRecordIdVar()
```

Return Value
Type: String

**getHeight()**
Returns the height in pixels of the action pane.

Signature
```
public Integer getHeight()
```

Return Value
Type: Integer

**getIconName()**
Returns the actions’ icon name.

Signature
```
public String getIconName()
```

Return Value
Type: String

**getIconUrl()**
Returns the URL of the 32x32 icon used for the action.

Signature
```
public String getIconUrl()
```

Return Value
Type: String
getIcons()  
Returns a list of Schema.DescribeIconResult objects that describe colors used in a tab.

Signature
public List<Schema.DescribeIconResult> getIcons()

Return Value
Type: List<Schema.DescribeIconResult>

getLabel()  
Returns the action label.

Signature
public String getLabel()

Return Value
Type: String

getLayout()  
Returns the layout sections that comprise an action.

Signature
public QuickAction.DescribeLayoutSection getLayout()

Return Value
Type: QuickAction.DescribeLayoutSection

getLightningComponentBundleId()  
If the custom action invokes a Lightning component, returns the ID of the Lightning component bundle to which the component belongs.

Signature
public String getLightningComponentBundleId()

Return Value
Type: String
**getLightningComponentBundleName()**
If the custom action invokes a Lightning component, returns the name of the Lightning component bundle to which the component belongs.

Signature

```
public String getLightningComponentBundleName()
```

Return Value

Type: String

**getLightningComponentQualifiedName()**
If the custom action invokes a Lightning component, returns the fully qualified name of the Lightning component invoked by the custom action.

Signature

```
public String getLightningComponentQualifiedName()
```

Return Value

Type: String

**getMiniIconUrl()**
Returns the 16x16 icon URL.

Signature

```
public String getMiniIconUrl()
```

Return Value

Type: String

**getName()**
Returns the action name.

Signature

```
public String getName()
```

Return Value

Type: String
getShowQuickActionLcHeader()
Returns an indication of whether the Lightning component quick action header and footer are shown.

Signature
public Boolean getShowQuickActionLcHeader()

Return Value
Type: Boolean
If false, then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren’t displayed.

getShowQuickActionVfHeader()
Returns an indication of whether the Visualforce quick action header and footer should be shown.

Signature
public Boolean getShowQuickActionVfHeader()

Return Value
Type: Boolean
If false, then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren’t displayed.

ggetSourceSobjectType()
Returns the object type used for the action.

Signature
public String getSourceSobjectType()

Return Value
Type: String

gGetTargetParentField()
Returns the parent object’s type for the action.

Signature
public String getTargetParentField()

Return Value
Type: String
**getTargetRecordTypeId()**
Returns the record type of the targeted record.

Signature

```java
public String getTargetRecordTypeId()
```

Return Value
Type: `String`

**getTargetSobjectType()**
Returns the action’s target object type.

Signature

```java
public String getTargetSobjectType()
```

Return Value
Type: `String`

**getType()**
Returns a create or custom Visualforce action.

Signature

```java
public String getType()
```

Return Value
Type: `String`

**getVisualforcePageName()**
If Visualforce is used, returns the name of the associated page for the action.

Signature

```java
public String getVisualforcePageName()
```

Return Value
Type: `String`

**getVisualforcePageUrl()**
Returns the URL of the Visualforce page associated with the action.
Signature

public String getVisualforcePageUrl()

Return Value
Type: String

getWidth()
If a custom action is created, returns the width in pixels of the action pane.

Signature

public Integer getWidth()

Return Value
Type: Integer

QuickActionDefaults Class
Represents an abstract Apex class that provides the context for running the standard Email Action on Case Feed and the container of the Email Message fields for the action payload. You can override the target fields before the standard Email Action is rendered.

Namespace
QuickAction

Usage

Note: You cannot extend this abstract class. You can use the getter methods when using it in the context of QuickActionQuickActionDefaultsHandler. Salesforce provides a class that extends this class (See QuickAction.SendEmailQuickActionDefaults.)

IN THIS SECTION:
QuickActionDefaults Methods

QuickActionDefaults Methods
The following are methods for QuickActionDefaults.

IN THIS SECTION:
getActionName()
Returns the name of the standard Email Action on Case Feed (Case.Email).

getActionType()
Returns the type of the standard Email Action on Case Feed (Email).
getContextId()
The ID of the context related to the standard Email Action on Case Feed (Case ID).

getTargetSObject()
The target object of the standard Email Action on Case Feed (EmailMessage).

getActionName()
Returns the name of the standard Email Action on Case Feed (Case.Email).

Signature
public String getActionName()

Return Value
Type: String

getAddressType()
Returns the type of the standard Email Action on Case Feed (Email).

Signature
public String getActionType()

Return Value
Type: String

getContextId()
The ID of the context related to the standard Email Action on Case Feed (Case ID).

Signature
public Id getContextId()

Return Value
Type: Id

getTargetSObject()
The target object of the standard Email Action on Case Feed (EmailMessage).

Signature
public SObject getTargetSObject()
QuickActionDefaultsHandler Interface

The *QuickAction.QuickActionDefaultsHandler* interface lets you specify the default values for the standard Email and Send Email actions in the case feed. You can use this interface to specify the From address, CC address, BCC address, subject, and email body for the Email action in the case feed. You can use the interface to pre-populate these fields based on the context where the action is displayed, such as the case origin (for example, country) and subject.

Namespace

*QuickAction*

Usage

To specify default values for the standard Email action in the case feed, create a class that implements *QuickAction.QuickActionDefaultsHandler*.

The *QuickAction.QuickActionDefaultsHandler* interface works in Salesforce Classic and Lightning Experience.

When working in Lightning Experience, keep the following things in mind:

- The interface overrides email values set up with predefined IDs.
- The interface works with the out-of-the-box Email action provided on cases. You can also use the interface with custom Email actions for the case object.
- The interface in Lightning Experience doesn’t support:
  - Email attachments
  - Custom email fields
  - Visualforce email templates, which are a type of email template available in Salesforce Classic
- The From Address picklist isn’t customizable in Send Email action types via the *QuickActionDefaultsHandler* Interface.
- If your Apex interface adds content to the email body, merge fields display as unresolved. During preview and send, the merge fields resolve.

When you implement this interface, provide an empty parameterless constructor.

IN THIS SECTION:

- QuickActionDefaultsHandler Methods
- QuickActionDefaultsHandler Example Implementations

QuickActionDefaultsHandler Methods

The following are methods for *QuickActionDefaultsHandler*.

IN THIS SECTION:

- `onInitDefaults(actionDefaults)`
  Implement this method to provide default values for the standard Email action in the case feed.
onInitDefaults(actionDefaults)
Implement this method to provide default values for the standard Email action in the case feed.

Signature
public void onInitDefaults(QuickAction.QuickActionDefaults[] actionDefaults)

Parameters
actionDefaults
  Type: QuickAction.QuickActionDefaults[]
  This array contains only one item of type QuickAction.SendEmailQuickActionDefaults.

Return Value
Type: void

QuickActionDefaultsHandler Example Implementations
These examples are implementations of the QuickAction.QuickActionDefaultsHandler interface.

In this example, the onInitDefaults method checks whether the element passed in the array is for the standard Email action in the case feed. Then, it performs a query to retrieve the case that corresponds to the context ID. Next, it sets the value of the BCC address of the corresponding email message to a default value. The default value is based on the case reason. Finally, it sets the default values of the email template properties. The onInitDefaults method determines the default values based on two criteria: first, whether a reply action on an email message initiated the call to the method, and second, whether any previous emails attached to the case are associated with the call.

global class EmailPublisherLoader implements QuickAction.QuickActionDefaultsHandler {
  // Empty constructor
  global EmailPublisherLoader() {
  }

  // The main interface method
  global void onInitDefaults(QuickAction.QuickActionDefaults[] defaults) {
    QuickAction.SendEmailQuickActionDefaults sendEmailDefaults = null;

    // Check if the quick action is the standard case feed Send Email action
    for (Integer j = 0; j < defaults.size(); j++) {
      if (defaults.get(j) instanceof QuickAction.SendEmailQuickActionDefaults &&
          defaults.get(j).getTargetSObject().getSObjectType() ==
          EmailMessage.sObjectType &&
          defaults.get(j).getActionName().equals('Case.Email') &&
          defaults.get(j).getActionType().equals('Email')) {
        sendEmailDefaults =
          (QuickAction.SendEmailQuickActionDefaults)defaults.get(j);
        break;
      }
    }

    if (sendEmailDefaults != null) {
      
    }
  }
}
Case c = [SELECT Status, Reason FROM Case
    WHERE Id=:sendEmailDefaults.getContextId()];

EmailMessage emailMessage = (EmailMessage)sendEmailDefaults.getTargetSObject();

// Set BCC address to make sure each email goes for audit
emailMessage.BccAddress = getBccAddress(c.Reason);

/*
Set Template related fields
when the In Reply To Id field is null we know the Interface
is called on page load. Here we check if
there are any previous emails attached to the case and load
the 'New_Case_Created' or 'Automatic_Response' template.
When the In Reply To Id field is not null we know that
the interface is called on click of reply/reply all
of an email and we load the 'Default_reply_template' template */
if (sendEmailDefaults.getInReplyToId() == null) {
    Integer emailCount = [SELECT count() FROM EmailMessage
        WHERE ParentId=:sendEmailDefaults.getContextId()];
    if (emailCount!= null && emailCount > 0) {
        sendEmailDefaults.setTemplateId(
            getTemplateIdHelper('Automatic_Response'));
    } else {
        sendEmailDefaults.setTemplateId(
            getTemplateIdHelper('New_Case_Created'));
    }
    sendEmailDefaults.setInsertTemplateBody(false);
    sendEmailDefaults.setIgnoreTemplateSubject(false);
} else {
    sendEmailDefaults.setTemplateId(
        getTemplateIdHelper('Default_reply_template'));
    sendEmailDefaults.setInsertTemplateBody(false);
    sendEmailDefaults.setIgnoreTemplateSubject(true);
}

private Id getTemplateIdHelper(String templateApiName) {
    Id templateId = null;
    try {
        templateId = [select id, name from EmailTemplate
            where developername = :templateApiName].id;
    } catch (Exception e) {
        system.debug('Unable to locate EmailTemplate using name: '+
            templateApiName + ' refer to Setup | Communications Templates '+
            + templateApiName);
    }
    return templateId;
}

private String getBccAddress(String reason) {
    if (reason != null && reason.equals('Technical'))
    { return 'support_technical@mycompany.com'; }
}
else if (reason != null && reason.equals('Billing'))
    { return 'support_billing@mycompany.com'; }
else { return 'support@mycompany.com'; }

In this example, the onInitDefaults method checks whether the element passed in the array is for the standard Email action in the case feed. Then it performs a query to determine if the case Priority is set to High. If the Priority is set to High, the email address managers@acme.com is appended to the BCC field.

global class EmailPublisherForHighPriorityCases implements QuickAction.QuickActionDefaultsHandler {
    // Empty constructor
    global EmailPublisherForHighPriorityCases() {
    }

    // The main interface method
    global void onInitDefaults(QuickAction.QuickActionDefaults[] defaults) {
        QuickAction.SendEmailQuickActionDefaults sendEmailDefaults =
            (QuickAction.SendEmailQuickActionDefaults)defaults.get(0);
        EmailMessage emailMessage = (EmailMessage)sendEmailDefaults.getTargetSObject();
        Case c = [SELECT CaseNumber, Priority FROM Case WHERE Id=:sendEmailDefaults.getContextId()];

        // If case severity is “High,” append “managers@acme.com” to the existing (and possibly blank) BCC field
        if (c.Priority != null && c.Priority.equals('High')) { // Priority is 'High'
            emailMessage.BccAddress = 'managers@acme.com';
        }
    }
}

In this example, the onInitDefaults method checks whether the element passed in the array is for the standard Email action in the case feed. Then it performs a query to determine if the case Type is set to Problem. If the type is set to Problem, the First Response email template is inserted into the body of the email.

global class EmailPublisherForCaseType implements QuickAction.QuickActionDefaultsHandler {
    // Empty constructor
    global EmailPublisherForCaseType() {
    }

    // The main interface method
    global void onInitDefaults(QuickAction.QuickActionDefaults[] defaults) {
        QuickAction.SendEmailQuickActionDefaults sendEmailDefaults =
            (QuickAction.SendEmailQuickActionDefaults)defaults.get(0);
        EmailMessage emailMessage = (EmailMessage)sendEmailDefaults.getTargetSObject();
        Case c = [SELECT CaseNumber, Type FROM Case WHERE Id=:sendEmailDefaults.getContextId()];

        // If case type is “Problem,” insert the “First Response” email template into the body of the email
        if (c.Type != null && c.Type.equals('Problem')) { // Type is 'Problem'
            emailMessage.body = 'First Response email template';
        }
    }
}
if (c.CaseNumber != null && c.Type.equals('Problem')) {
    sendEmailDefaults.setTemplateId('Insert Email Template ID Here');  // Set the template Id corresponding to First Response
    sendEmailDefaults.setInsertTemplateBody(true);
    sendEmailDefaults.setIgnoreTemplateSubject(false);
}
}

In this example, the onInitDefaults method checks whether the element passed in the array is for the standard Email action in the case feed. Then it performs a query to determine if the email is a Reply or Reply All email. If email is a Reply or Reply All email, the corresponding email templates for these emails are inserted into the body of the email.

```apex
global class EmailPublisherForReplyAndReplyAll implements QuickAction.QuickActionDefaultsHandler {
    // Empty constructor
    global EmailPublisherForReplyAndReplyAll() {
    }
    // The main interface method
    global void onInitDefaults(QuickAction.QuickActionDefaults[] defaults) {
        QuickAction.SendEmailQuickActionDefaults sendEmailDefaults =
            (QuickAction.SendEmailQuickActionDefaults) defaults.get(0);
        EmailMessage emailMessage = (EmailMessage) sendEmailDefaults.getTargetSObject();

        // If the email is a “Reply” email, insert the “Reply Email Template” to the email body
        if (sendEmailDefaults.getActionName().equals('EmailMessage._Reply')) {
            sendEmailDefaults.setTemplateId('Insert Reply Email Template ID Here');
            sendEmailDefaults.setInsertTemplateBody(true);
            sendEmailDefaults.setIgnoreTemplateSubject(false);
        }
        // If the email is a “Reply All” email, insert the “Reply All Email Template” to the email body
        else if (sendEmailDefaults.getActionName().equals('EmailMessage._ReplyAll')) {
            sendEmailDefaults.setTemplateId('Insert Reply All Email Template ID Here');
            sendEmailDefaults.setInsertTemplateBody(true);
            sendEmailDefaults.setIgnoreTemplateSubject(false);
        }
    }
}
```

**QuickActionRequest Class**

Use the QuickAction.QuickActionRequest class for providing action information for quick actions to be performed by QuickAction class methods. Action information includes the action name, context record ID, and record.

**Namespace**

QuickAction
Usage
For Apex saved using Salesforce API version 28.0, a parent ID is associated with the QuickActionRequest instead of the context ID. The constructor of this class takes no arguments:

```java
QuickAction.QuickActionRequest qar = new QuickAction.QuickActionRequest();
```

Example
In this sample, a new quick action is created to create a contact and assign a record to it.

```java
QuickAction.QuickActionRequest req = new QuickAction.QuickActionRequest();
// Some quick action name
req.quickActionName = Schema.Account.QuickAction.AccountCreateContact;

// Define a record for the quick action to create
Contact c = new Contact();
c.lastname = 'last name';
req.record = c;

// Provide the context ID (or parent ID). In this case, it is an Account record.
req.contextId = '001xx000003DGcO';

QuickAction.QuickActionResult res = QuickAction.performQuickAction(req);
```

- QuickActionRequest Methods

SEE ALSO:
- QuickAction Class

QuickActionRequest Constructors
The following are constructors for QuickActionRequest.

IN THIS SECTION:
- QuickActionRequest()

```java
public QuickActionRequest()
```

Creates a new instance of the QuickAction.QuickActionRequest class.
QuickActionRequest Methods

The following are methods for QuickActionRequest. All are instance methods.

IN THIS SECTION:

getContextId()
Returns this QuickAction's context record ID.

getQuickActionName()
Returns this QuickAction's name.

getRecord()
Returns the QuickAction's associated record.

setContextId(contextId)
Sets this QuickAction's context ID. Returned by getContextId.

setQuickActionName(name)
Sets this QuickAction's name. Returned by getQuickActionName.

setRecord(record)
Sets a record for this QuickAction. Returned by getRecord.

getContextId()
Returns this QuickAction's context record ID.

Signature
public Id getContextId()

Return Value
Type: ID

getQuickActionName()
Returns this QuickAction's name.

Signature
public String getQuickActionName()

Return Value
Type: String

getRecord()
Returns the QuickAction's associated record.
Signature

```java
public SObject getRecord()
```

Return Value
Type: `sObject`

**setContextId(contextId)**
Sets this QuickAction's context ID. Returned by `getContextId`.

Signature

```java
public Void setContextId(Id contextId)
```

Parameters

- `contextId`
  Type: `ID`

Return Value
Type: Void

Usage
For Apex saved using Salesforce API version 28.0, sets this QuickAction's parent ID and is returned by `getParentId`.

**setQuickActionName(name)**
Sets this QuickAction's name. Returned by `getQuickActionName`.

Signature

```java
public Void setQuickActionName(String name)
```

Parameters

- `name`
  Type: `String`

Return Value
Type: Void

**setRecord(record)**
Sets a record for this QuickAction. Returned by `getRecord`. 
Signature

```java
public Void setRecord(SObject record)
```

Parameters

`record`
Type: `SObject`

Return Value

Type: `Void`

QuickActionResult Class

After you initiate a quick action with the `QuickAction` class, use the `QuickActionResult` class for processing action results.

Namespace

`QuickAction`

SEE ALSO:

- `QuickAction Class`

QuickActionResult Methods

The following are methods for `QuickActionResult`. All are instance methods.

IN THIS SECTION:

- `getErrors()`
  If an error occurs, an array of one or more database error objects, along with error codes and descriptions, is returned.

- `getIds()`
  The IDs of the QuickActions being processed.

- `getSuccessMessage()`
  Returns the success message associated with the quick action.

- `isCreated()`
  Returns `true` if the action is created; otherwise, `false`.

- `isSuccess()`
  Returns `true` if the action completes successfully; otherwise, `false`.

**getErrors()**

If an error occurs, an array of one or more database error objects, along with error codes and descriptions, is returned.

Signature

```java
public List<Database.Error> getErrors()
```
Return Value
Type: List<Database.Error>

**getIds()**
The IDs of the QuickActions being processed.

Signature
```java
public List<Id> getIds()
```

Return Value
Type: List<Id>

**getSuccessMessage()**
Returns the success message associated with the quick action.

Signature
```java
public String getSuccessMessage()
```

Return Value
Type: String

**isCreated()**
Returns true if the action is created; otherwise, false.

Signature
```java
public Boolean isCreated()
```

Return Value
Type: Boolean

**isSuccess()**
Returns true if the action completes successfully; otherwise, false.

Signature
```java
public Boolean isSuccess()
```

Return Value
Type: Boolean
SendEmailQuickActionDefaults Class

Represents an Apex class that provides: the From address list; the original email’s email message ID, provided that the reply action was invoked on the email message feed item; and methods to specify related settings on templates. You can override these fields before the standard Email Action is rendered.

Namespace

QuickAction

Usage

Note: You cannot instantiate this class. One can use the getters/setters when using it in the context of QuickAction.QuickActionDefaultsHandler.

IN THIS SECTION:

SendEmailQuickActionDefaults Methods

SendEmailQuickActionDefaults Methods

The following are methods for SendEmailQuickActionDefaults.

IN THIS SECTION:

getFromAddressList() Returns a list of email addresses that are available in the From: address drop-down menu for the standard Email Action.

getInReplyToId() Returns the email message ID of the email to which the reply/reply all action has been invoked.

setIgnoreTemplateSubject(useOriginalSubject) Specifies whether the template subject should be ignored (true), thus using the original subject, or whether the template subject should replace the original subject (false).

setInsertTemplateBody(keepOriginalBodyContent) Specifies whether the template body should be inserted above the original body content (true) or whether it should replace the entire content with the template body (false).

setTemplateId(templateId) Sets the email template ID to load into the email body.

**getFromAddressList()**

Returns a list of email addresses that are available in the From: address drop-down menu for the standard Email Action.

Signature

```java
public List<String> getFromAddressList()
```
Return Value
Type: List<String>

**getInReplyToId()**
Returns the email message ID of the email to which the reply/reply all action has been invoked.

Signature
```java
public Id getInReplyToId()
```

Return Value
Type: Id

**setIgnoreTemplateSubject(useOriginalSubject)**
Specifies whether the template subject should be ignored (true), thus using the original subject, or whether the template subject should replace the original subject (false).

Signature
```java
public void setIgnoreTemplateSubject(Boolean useOriginalSubject)
```
Parameters
**useOriginalSubject**
Type: Boolean

Return Value
Type: void

**setInsertTemplateBody(keepOriginalBodyContent)**
Specifies whether the template body should be inserted above the original body content (true) or whether it should replace the entire content with the template body (false).

Signature
```java
public void setInsertTemplateBody(Boolean keepOriginalBodyContent)
```
Parameters
**keepOriginalBodyContent**
Type: Boolean

Return Value
Type: void
**setTemplateId(templateId)**

Sets the email template ID to load into the email body.

**Signature**

```java
public void setTemplateId(Id templateId)
```

**Parameters**

*templateId*

Type: `Id`

The template ID.

**Return Value**

Type: `void`

---

**Reports Namespace**

The `Reports` namespace provides classes for accessing the same data as is available in the Salesforce Reports and Dashboards REST API.

The following are the classes in the `Reports` namespace.

**IN THIS SECTION:**

- **AggregateColumn Class**
  - Contains methods for describing summary fields such as Record Count, Sum, Average, Max, Min, and custom summary formulas. Includes name, label, data type, and grouping context.

- **BucketField Class**
  - Contains methods and constructors to work with information about a bucket field, including bucket type, name, and bucketed values.

- **BucketFieldValue Class**
  - Contains information about the report values included in a bucket field.

- **BucketType Enum**
  - The types of values included in a bucket.

- **ColumnDataType Enum**
  - The `Reports.ColumnDataType` enum describes the type of data in a column. It is returned by the `getDataType` method.

- **ColumnSortOrder Enum**
  - The `Reports.ColumnSortOrder` enum describes the order that the grouping column uses to sort data.

- **CrossFilter Class**
  - Contains methods and constructors used to work with information about a cross filter.

- **CsGroupType Enum**
  - The group level at which the custom summary format aggregate is displayed in a report.

- **DateGranularity Enum**
  - The `Reports.DateGranularity` enum describes the date interval that is used for grouping.
DetailColumn Class
Contains methods for describing fields that contain detailed data. Detailed data fields are also listed in the report metadata.

Dimension Class
Contains information for each row or column grouping.

EvaluatedCondition Class
Contains the individual components of an evaluated condition for a report notification, such as the aggregate name and label, the operator, and the value that the aggregate is compared to.

EvaluatedConditionOperator Enum
The Reports.EvaluatedConditionOperator enum describes the type of operator used to compare an aggregate to a value. It is returned by the getOperator method.

FilterOperator Class
Contains information about a filter operator, such as display name and API name.

FilterValue Class
Contains information about a filter value, such as the display name and API name.

FormulaType Enum
The format of the numbers in a custom summary formula.

GroupingColumn Class
Contains methods for describing fields that are used for column grouping.

GroupingInfo Class
Contains methods for describing fields that are used for grouping.

GroupingValue Class
Contains grouping values for a row or column, including the key, label, and value.

NotificationAction Interface
Implement this interface to trigger a custom Apex class when the conditions for a report notification are met.

NotificationActionContext Class
Contains information about the report instance and condition threshold for a report notification.

ReportCsf Class
Contains methods and constructors for working with information about a custom summary formula (CSF).

ReportCurrency Class
Contains information about a currency value, including the amount and currency code.

ReportDataCell Class
Contains the data for a cell in the report, including the display label and value.

ReportDescribeResult Class
Contains report, report type, and extended metadata for a tabular, summary, or matrix report.

ReportDetailRow Class
Contains data cells for a detail row of a report.

ReportDivisionInfo Class
Contains information about the divisions that can be used to filter a report.

ReportExtendedMetadata Class
Contains report extended metadata for a tabular, summary, or matrix report.
ReportFact Class
Contains the fact map for the report, which represents the report’s data values.

ReportFactWithDetails Class
Contains the detailed fact map for the report, which represents the report’s data values.

ReportFactWithSummaries Class
Contains the fact map for the report, which represents the report’s data values, and includes summarized fields.

ReportFilter Class
Contains information about a report filter, including column, operator, and value.

ReportFormat Enum
Contains the possible report format types.

ReportInstance Class
Returns an instance of a report that was run asynchronously. Retrieves the results for that instance.

ReportManager Class
Runs a report synchronously or asynchronously and with or without details.

ReportMetadata Class
Contains report metadata for a tabular, summary, or matrix report.

ReportResults Class
Contains the results of running a report.

ReportScopeInfo Class
Contains information about possible scope values that you can choose. Scope values depend on the report type. For example, you can set the scope for opportunity reports to **All opportunities**, **My team’s opportunities**, or **My opportunities**.

ReportScopeValue Class
Contains information about a possible scope value. Scope values depend on the report type. For example, you can set the scope for opportunity reports to **All opportunities**, **My team’s opportunities**, or **My opportunities**.

ReportType Class
Contains the unique API name and display name for the report type.

ReportTypeColumn Class
Contains detailed report type metadata about a field, including data type, display name, and filter values.

ReportTypeColumnCategory Class
Information about categories of fields in a report type.

ReportTypeMetadata Class
Contains report type metadata, which gives you information about the fields that are available in each section of the report type, plus filter information for those fields.

SortColumn Class
Contains information about the sort column used in the report.

StandardDateFilter Class
Contains information about standard date filter available in the report—for example, the API name, start date, and end date of the standard date filter duration as well as the API name of the date field on which the filter is placed.
StandardDateFilterDuration Class
Contains information about each standard date filter—also referred to as a relative date filter. It contains the API name and display label of the standard date filter duration as well as the start and end dates.

StandardDateFilterDurationGroup Class
Contains information about the standard date filter groupings, such as the grouping display label and all standard date filters that fall under the grouping. Groupings include Calendar Year, Calendar Quarter, Calendar Month, Calendar Week, Fiscal Year, Fiscal Quarter, Day, and custom values based on user-defined date ranges.

StandardFilter Class
Contains information about the standard filter defined in the report, such as the filter field API name and filter value.

StandardFilterInfo Class
